EMILIA PATENCI

OREGON STATE SANITARY AUTHORITY  
Organization Meeting, February 25, 1939

The first meeting of the State Sanitary Authority convened in the office of the State Board of Health, 816 Oregon Bldg., Portland, at 10:00 A.M. The following members were present:

Albert Burch, Medford	Charles E. Stricklin, State Engineer, Salem
Dr. Frederick D. Stricker, State Health Officer, Portland	John C. Veatch, Chairman, State Fish Commission, Portland
Harold Wendel, Portland	

Absence from the state prevented the attendance of Blaine Hallock, of Baker.

MOTION: After considerable discussion regarding chairmanship of the Authority, it was moved by Mr. Burch, seconded by Mr. Veatch, and unanimously carried, that Mr. Wendel be elected chairman of the Authority. Mr. Wendel then presided over the meeting.

The secretary was called upon to outline briefly the agenda of the meeting. A general discussion of the duties and scope of work of the Authority was engaged in by all members.

BUDGET: A proposed budget was next discussed in detail, item by item. MOTION: It was moved by Mr. Veatch, seconded by Mr. Stricklin, and carried, that a budget for the 1939-40 biennium, as follows:

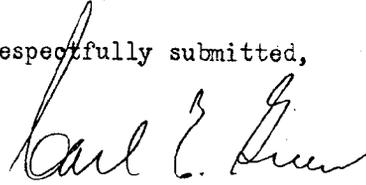

Personnel	\$ 19,440
General Expenses	15,315
Operating Expenses	1,445
Maintenance Expenses	250
Capital Outlays	<u>4,125</u>
	\$ 40,575

be approved with the provision that several items relating to general expenses and office space be investigated further by the secretary, and that adjustments be made if necessary.

MOTION: It was moved by Dr. Stricker, seconded by Mr. Veatch, and carried, that the secretary discuss the budget as soon as possible with the state budget director.

The meeting adjourned at 1:00 P.M., to reconvene at 10:00 A.M., Monday, March 20, 1939.

Respectfully submitted,

Carl E. Green, Secretary,  
State Sanitary Authority.

74137

STATE SANITARY AUTHORITY  
MINUTES OF SECOND MEETING

March 20, 1939

The second meeting of the State Sanitary Authority was called to order by chairman Harold F. Wendel, at 10:15 A.M., in the offices of the State Board of Health, 816 Oregon Bldg., Portland, with the following members present: Albert Burch, Blaine Hallock, Dr. Frederick D. Stricker, John C. Veatch and Harold F. Wendel. Mr. Charles E. Stricklin was absent.

MINUTES of the previous meeting were read and approved.

BUDGET: Chairman Wendel reviewed what had transpired in the hearing before the sub-committee of the Ways and Means Committee of the legislature on March 6, 1939. He emphasized the support given the Authority by representatives of the Oregon Business & Investors, Inc., the pulp and paper industry, woolen mills, fish and game interests, and others. The chairman read a telegram which he dispatched to chairmen Rennie and Walker, of the Joint Ways and Means Committee in support of the proposed Sanitary Authority budget.

Upon request of the chairman, the secretary read the duties of the Authority as outlined in the state law. The principal duties were next discussed by the chairman with particular reference to investigations, examination and approval of plans and the extent to which the sanitary engineering division of the State Board of Health had engaged in these activities in the past.

MOTION: After a discussion of what might be done with the \$7500 appropriation for the 1939-40 biennium, which had been approved by the Ways and Means Committee, it was moved by Mr. Burch, seconded by Mr.

Veatch, and carried, that the Authority employ an assistant sanitary engineer, effective July 1, 1939.

COOPERATION WITH FISH AND GAME COMMISSIONS: Mr. Veatch mentioned the desirability of the cooperation with and assistance from the State Fish and Game Commissions in carrying out the objectives of the Authority.

In order to expedite the Portland sewage disposal project, the secretary was instructed to prepare a letter to be addressed to the city of Portland, in which the interest of the Authority relative to the progress of the city's sewage treatment project would be made known.

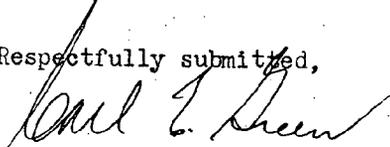

LETTERS AND QUESTIONNAIRES TO CITIES AND INDUSTRIES: The secretary, in consultation with Messrs. Veatch and Wendel, was directed to prepare letters for transmittal to all city officials and to all industries known to have waste disposal and water pollution problems. It was further agreed that such letters should apprise cities and industries of the legal requirements of submitting plans and specifications for sewerage, sewage treatment and industrial waste treatment or disposal projects for approval by the Authority before construction may begin, and, further, that such letters should solicit and encourage cooperation in a reasonable program of water pollution control.

MOTION: That the secretary and chairman be authorized to sign vouchers for the Sanitary Authority, if vouchers must be submitted as separate claims apart from the State Board of Health.

The secretary was instructed to prepare an abstract of the minutes of the meeting for release to the press.

The meeting adjourned at 12:00 Noon, to convene at 10:00 A.M., Monday, May 8, 1939.

Respectfully submitted,

  
Carl E. Green, Secretary,  
State Sanitary Authority.

STATE SANITARY AUTHORITY

MINUTES OF THIRD MEETING

May 8, 1939

The third meeting of the State Sanitary Authority was called to order by chairman Harold F. Wendel, at 10:30 A.M., in the offices of the State Board of Health, 816 Oregon Bldg., Portland. In addition to the chairman, members Albert Burch, Blaine Hallock and John C. Veatch were present. Mr. Charles E. Stricklin and Dr. Frederick D. Stricker were absent.

MINUTES of the March 20th meeting were read and approved.

Referring to the minutes, Mr. Burch stated that he had been informed that Mr. Wendel's telegram, dispatched to the Ways and Means Committee of the legislature, had not been delivered to chairmen Rennie and Walker.

EXPENDITURES: The secretary read a list of expenditures for the Authority, as follows:

Disbursements to April 30, 1939

- 1. Albert Burch, travel.....\$ 33.80
  - 2. Blaine Hallock, travel..... 17.15
  - 3. Supplies (postage, stationery,  
envelopes)..... 61.83
- \$ 112.78

PROGRESS REPORT, SEWAGE TREATMENT: Recent progress in the field of sewage and industrial waste treatment was reviewed briefly by the secretary. The following projects were discussed:

- 1. Eugene: Bonds voted; sewer service charges being collected.
- 2. Gold Hill: New city sewage treatment plant nearing completion.

3. Nyssa: Plans being prepared for a new city sewage treatment plant.
4. Roseburg: Plans being prepared and WPA project approved for construction of sewage treatment plant.
5. Silverton: New sewage treatment plant nearing completion.
6. Malin: Plans being prepared for construction of cheese factory waste treatment plant.

QUESTIONNAIRE DATA: Chairman Wendel discussed the data obtained from cities and industries, in response to the Authority's letter and questionnaire mailed on April 20. He also read a letter from Commissioner O. R. Bean, of the city of Portland, relative to the status of the Portland sewage treatment project. After consideration of the Portland project and Commissioner Bean's reply, the matter of approval of plans and specifications for the construction of sewers, sewage treatment plants, industrial sewers and industrial waste treatment plants was discussed at length. It was the consensus of opinion of all members present that formal action should be taken on all projects submitted for approval by the Sanitary Authority and that such action should appear in the minutes of the Authority meetings.

Questionnaires returned by cities and industries, in response to the Authority's letter of April 20, were considered next. The secretary reported that nineteen requests were made for field visits and consultation with a representative of the Authority. In addition, the data supplied in other questionnaires indicate a need for field investigations of eleven other industries.

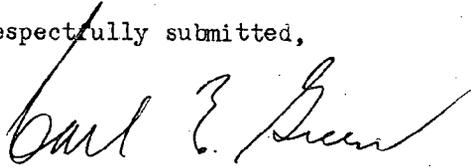

The secretary was instructed to tabulate the data received from cities and industries and to keep sewage and industrial waste treatment progress records.

FEDERAL WATER POLLUTION CONTROL LEGISLATION: The secretary reported that the U. S. Senate had passed the Barkley bill which provides for a division of water pollution control within the U. S. Public Health Service and which further provides for financial aid to state agencies engaged in water pollution control.

MOTION: It was moved by Mr. Veatch, seconded by Mr. Hallock, and unanimously carried, that the chairman and secretary be authorized to apply for funds for the Sanitary Authority from the U. S. Public Health Service, if the federal water pollution control bill passes and funds are made available to states.

MOTION: It was moved by Mr. Burch, seconded by Mr. Hallock, and unanimously carried, that the Sanitary Authority employ Curtiss M. Everts, Jr., as assistant sanitary engineer, effective July 1st or as soon thereafter as he is able to report for duty.

The meeting adjourned at 12:40 P.M. to convene at 10:00 A.M., on July 7, 1939.

Respectfully submitted,  
  
Carl E. Green, Secretary,  
State Sanitary Authority.

STATE SANITARY AUTHORITY  
MINUTES OF FOURTH MEETING

July 7, 1939

The meeting of the State Sanitary Authority was called to order by the chairman, Mr. Harold Wendel, at 10:10 A.M., in the offices of the State Board of Health, 816 Oregon Bldg., Portland. Other members present were Albert Burch and Dr. Frederick D. Stricker; Mr. D. J. McLellan represented Charles E. Stricklin. Messrs. Hallock and Veatch were absent.

MINUTES of the third meeting of the Authority, held on May 8, were read and approved. The secretary next read a list of expenditures for the Authority, up to July 1, 1939, as follows:

1939-40 Appropriation:

Disbursements:		\$ 7500.00
4/25	SA # 1 Albert Burch (Travel)	\$ 33.80
4/25	# 2 Blaine Hallock (Travel)	17.15
4/30	# 3 Dr. F. D. Stricker (Supplies)	61.83
5/9	# 4 Albert Burch (Travel)	27.80
5/17	# 5 Blaine Hallock (Travel)	18.55
5/31	# 6 State Printing Board (Supplies)	<u>13.28</u>
Total Disbursements		172.41 <u>172.41</u>
Balance		\$ 7327.59

QUARTERLY BUDGET: A quarterly budget for the Authority, as transmitted to the state budget director, was discussed next.

MOTION: It was moved by Mr. Burch, seconded by Doctor Stricker, and passed, that the Authority approve of the payment of half of the salary for a clerk, effective July 1.

MOTION: After discussion of the budget items, it was moved by Mr. Burch, seconded by Dr. Stricker, and passed, that the quarterly budget be approved as drawn.

FEDERAL WATER POLLUTION CONTROL LEGISLATION: The secretary next reviewed the status of federal stream pollution control legislation, and reported that letters had been transmitted to the Oregon senators and representatives by Dr. Stricker in behalf of the Barkley water pollution control bill before congress. Dr. Stricker read a wire received from Senator McNary, acknowledging his letter.

QUESTIONNAIRE RETURNS: The secretary read a summary of returns from the questionnaire addressed to cities and industries and discussed the need for field work to follow up requests for assistance and consultation. Discussion of the Portland sewage disposal project led to the conclusion that a member of the Authority, as well as the secretary, should meet with City Commissioner Bowes in order to apprise Mr. Bowes of the Authority's interest in the Portland project. The secretary read a letter addressed to Mr. Bowes, under date of July 1, in which inquiry was made regarding the status of the Portland project.

The secretary read a letter from the American Paper & Pulp Ass'n., regarding problems of water pollution by the pulp and paper industry in Oregon, and was instructed by the Authority to transmit the necessary information to the association.

ACTIVITIES OF PERSONNEL: A discussion of activities for the assistant sanitary engineer employed by the Authority, and matters of policy followed. It was decided that particular emphasis should first be given to the investigation of complaints and to water pollution surveys, which would result in the Authority's obtaining basic information for the intelligent planning of a stream pollution reduction program.

Chairman Wendel requested that the secretary obtain an interview with the Portland papers, regarding the activities of the Authority and matters discussed in its meeting, as well as information pertaining to Mr. Everts and his employment by the Authority.

DEFINITION OF POLLUTION: A letter from Mr. Blaine Hallock, who was unable to be present at the meeting, was read by the secretary. The matters raised by Mr. Hallock related, primarily, to the discharge of silt and similar material from mines into streams, and a definition of the term "pollution". Mr. Burch discussed Mr. Hallock's letter and described conditions in the Powder river valley of Baker county, as well as in other parts of the state. After considerable discussion by all members present, it was agreed that a definition of what constitutes "pollution" should not be attempted at this time, and that the secretary should discuss this matter with the state attorney general prior to the next meeting of the Authority.

HILLSBORO SEWAGE TREATMENT PLANT: Mr. Wendel requested the secretary to discuss investigations of the operation of the Hillsboro sewage treatment plant. The secretary advised the members of certain unsatisfactory conditions found at the plant and the fact that a report will be rendered to the city manager regarding findings of the sanitary engineer.

APPROVAL OF PROJECTS: Consideration was next given to the formal approval of plans for sewerage and sewage disposal projects submitted to the State Board of Health and the State Sanitary Authority, since January 1, 1939.

MOTION: It was moved by Mr. Burch, seconded by Dr. Stricker, and passed, that the Sanitary Authority approve of plans for projects submitted to and previously approved by the state sanitary engineer, as follows:

SEWERAGE PROJECT PLANS APPROVED  
BY  
STATE SANITARY ENGINEER

1939

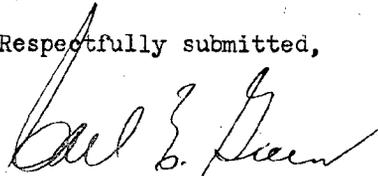

<u>DATE</u>	<u>LOCATION</u>	<u>TYPE OF PROJECT</u>
Jan. 3	Bandon	School sewage disposal system
18	Salem	Sewer system extensions
18	Silverton	Outfall sewer, lateral sewer extensions and sewage treatment plant
18	McMinnville	Sewer system extensions
19	Maupin	Sewers and sewage disposal system
26	Bull Run	Dodge Park sewage disposal system
28	Sunnyside (Linn County)	School sewage disposal system
28	Willamina	School sewage disposal system
28	Mapleton	School sewage disposal system
Feb. 2	Silver Creek Falls	State park sewage disposal system
3	Multnomah County	Wilkes school sewage disposal plans
6	Multnomah County	Skyline school sewage disposal system
7	Silverton	Low lift pumping station
10	Sweet Home	City park sewage disposal system
24	Lakeview	Sewer system reconstruction
March 2	Sheridan	Storm sewer system
4	Salem	Sewer system extensions
11	Camp Manning	Sewers and sewage treatment plant
25	Marshfield	Sewer system extensions
25	Nyssa	Sewer system extensions
27	Jefferson	City hall and library sewage disposal system
April 4	Salem	Sewer system extensions
11	Mount Angel	Sewer system extensions

April	14	Portland	Sewer system extensions
	14	Seaside	Intercepting sewers and sewage treatment plant
	25	Portland	Sewer system extensions
May	9	Dallas	Junior high school sewage disposal system
	18	Heppner	City swimming pool sewage disposal system
	22	Salem	Sewer system extensions
	24	Redmond	High school sewage disposal system
	25	Roseburg	Tentative approval, sewage treatment plant
June	23	Silverton	Outfall sewer and sewage pumping station
	27	Faloma	School sewage disposal system
	29	Cascadia	School sewage disposal
July	6	Salem	Sewer system extensions

After a discussion of the best time for the next meeting, it was decided that the Authority should meet on September 15, if this date should be suitable to Messrs. Stricklin, Hallock and Veatch, who were absent.

There being no further business to come before the Authority, the meeting adjourned at 12:00 Noon.

Respectfully submitted,

Carl E. Green, Secretary,  
State Sanitary Engineer.

## STATE SANITARY AUTHORITY

## MINUTES OF FIFTH MEETING

September 15, 1939

A meeting of the State Sanitary Authority was called to order by the chairman, Mr. Harold Wendel, at 10:00 A.M., in the offices of the State Board of Health, 816 Oregon Bldg., Portland. Other members present were Mr. Albert Burch, Dr. Frederick D. Stricker, Mr. Charles E. Stricklin and Mr. John C. Veatch. Mr. Hallock was absent.

MINUTES of the previous meeting, held on July 7, were read and approved.

DEFINITION OF POLLUTION: In response to a request from the chairman, the secretary reported upon his conference with the state attorney general, Mr. I. H. Van Winkle, regarding a definition of the term "pollution". The attorney general advised the Authority not to attempt to define "pollution" at this time, but, instead, to devote its time, primarily, to the control of sewage and industrial wastes which are known to cause water pollution.

PORTLAND PROJECT: Mr. Burch reported that, following the last Authority meeting on July 7, he and the secretary conferred with City Commissioner William A. Bowes, regarding the status of the Portland sewage disposal project. Mr. Bowes advised the Authority representatives that Portland had retained a Board of Engineering Review to study its sewage disposal problem and report to the city council. He also indicated his desire to cooperate with the Authority in every way possible.

FEDERAL WATER POLLUTION CONTROL LEGISLATION: The secretary advised the Authority that congress had adjourned without having enacted any of the federal bills pertaining to water pollution control.

ACTIVITIES: The secretary next read a report of activities for the months of July and August, and copies of the report were distributed to all members present.

PORTLAND SEWAGE DISPOSAL PROJECT: Commissioner of Public Works, William A. Bowes, and city engineer, Ben S. Morrow, of Portland, appeared before the Authority, at the city's request, to discuss the Portland sewage disposal project and to obtain from the Authority approval of its proposed plan to discharge Portland sewage into the Columbia river. Mr. Bowes and Mr. Morrow discussed recommendations of the city's Engineering Board of Review. Mr. Bowes stated that it was the desire of the city to have the approval of all federal and state agencies concerned with the problem of water pollution control, before the city proceeds with the sewage disposal project.

After a thorough discussion of matters pertaining to dilution, oxygen balance, effect on fish life and the uses of the Columbia river water below Portland, MOTION, it was moved by Mr. Burch, seconded by Mr. Veatch, and carried, that the discharge of Portland sewage into the Columbia river, after it has been given treatment in accordance with the recommendations set forth in the city's Engineering Board of Review report, dated August 19, 1939, be approved.

FIELD SURVEYS: The data collected during sanitary surveys of Columbia slough, and the Tualatin, Pudding and Sandy rivers were discussed briefly. Dr. Stricker reported that he had received a complaint regarding algae growths in the Tualatin river, and he requested that the secretary transmit to Governor Sprague data regarding the findings of sanitary surveys made on the stream.

COMMUNICATION FROM GOVERNOR SPRAGUE: Chairman Wendel

advised the Authority he had written to the governor, outlined what had been done by the Authority, and asked for suggestions from the chief executive. Mr. Wendel read Governor Sprague's reply, in which the governor indicated that he was satisfied with the work which was being done by the Authority, and that he realized that the Authority was handicapped by lack of sufficient funds to carry on an extensive program.

**QUARTERLY BUDGET:** The budget for the quarterly period of October, November and December was discussed in detail, after which it was moved by Dr. Stricker, seconded by Mr. Stricklin, and carried, that the budget be approved as prepared by the secretary.

The secretary was instructed to obtain a permanent record book in which to keep the minutes of all meetings. Permission was also granted for mimeographing copies of the Sanitary Authority law.

**STANDARDS OF PURITY:** Mr. Veatch initiated a discussion regarding the establishment of standards of purity for the various waters of the state. It was agreed that the secretary should gather as much data on this subject as possible, in order that the Authority may later give serious consideration to the establishment of standards.

**STIMULATION OF CITY SEWAGE TREATMENT PROJECTS:** The need for stimulation of sewage treatment projects in certain communities was raised by Chairman Wendel. The secretary was instructed to address letters to city officials who have not replied to the Authority's questionnaire, mailed on April 20, 1939. He was further directed to encourage or stress the need of treatment plants in such cities as his judgment may indicate desirable. It was also pointed out that the Authority's inability to provide detailed engineering services to cities, on such matters, should be made known.

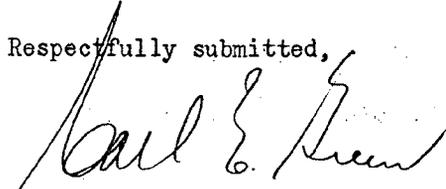

Chairman Wendel directed the secretary to call the Portland

papers regarding publicity on the meeting.

The meeting adjourned at 12:00 Noon, to convene at 10:00 A.M.,

December 15, 1939.

Respectfully submitted,

Carl E. Green, Secretary,  
State Sanitary Authority.

## STATE SANITARY AUTHORITY

## MINUTES OF SIXTH MEETING

December 15, 1939

A meeting of the State Sanitary Authority was called to order by the chairman, Mr. Harold Wendel, at 10:05 A.M., in the offices of the State Board of Health, 816 Oregon Bldg., Portland. Other members present were Mr. Albert Burch, Mr. Blaine Hallock, Dr. Frederick D. Stricker and Mr. Charles E. Stricklin. The secretary and assistant sanitary engineer, Mr. C. M. Everts, Jr., were also present. Mr. Veatch was absent.

MINUTES of the previous meeting held on September 15, were read and an omission noted by Mr. Burch. After correction of the omission, the minutes were approved.

ACTIVITIES REPORT: The members of the Authority reviewed an activities report by the secretary for the months of September, October and November, 1939. Mr. Everts discussed his field activities including contacts with officials of cities and industries. He reported that all industries, with one exception, had cooperated in supplying information as requested. Obviously, the financial condition of cities has an important bearing upon their ability to construct sewage treatment works. Financial data, therefore, is being obtained from cities, to supplement information relative to sewerage and sewage treatment plants. He further reported that city and industrial officials were desirous of knowing the date at which they would be required by the Authority to have treatment plants constructed and in operation.

PORTLAND SEWAGE DISPOSAL PROJECT: Chairman Wendel reported a conference with City Commissioner William A. Bowes, regarding the financial aspects of the Portland sewage disposal project. Mr. Hallock

cited his experiences in the Baker city case, in which the city was required by court injunction to construct a sewage treatment plant after a bond issue for its construction had been defeated. Mr. Hallock discussed the sewer service charge method of financing treatment plants on a revenue bond basis and its possible application to the city of Portland.

MOTION: It was moved, seconded, and carried, that the chairman appoint a committee, on which he serve, to confer with Portland city officials relative to the status of the Portland sewage disposal project. The secretary then telephoned City Commissioner William A. Bowes and arranged a luncheon meeting for the Sanitary Authority with Mayor Joseph K. Carson, City Commissioners William A. Bowes and R. E. Riley, and City Engineer Ben S. Morrow.

At the luncheon meeting, Mayor Carson and the other city representatives reviewed the financial condition of the city and stated that the city council would not, at this time, initiate any measure which would seek to raise additional funds to construct the Portland sewage disposal works either by means of a general obligation bond issue or a sewer service charge of approximately 50 per cent of the water bill of each residence or building. Mr. Hallock suggested that the mayor ask the Portland city attorney for an opinion as to various legal methods available to finance the construction of intercepting sewers and sewage treatment works. The mayor indicated that he thought such procedure was unnecessary at this time.

The luncheon meeting adjourned at 1:45 P.M., to reconvene in the offices of the State Board of Health at 2:00 P.M. Further discussion of the Portland project followed.

Mr. Hallock recommended that the state attorney general be requested to give an opinion regarding possible legal methods of financing the Portland sewage disposal project. Mr. Wendel asked Mr. Hallock to draft a letter on this subject for the secretary to transmit to the state attorney general.

**BUDGET:** The proposed budget for 1940, involving an expenditure of \$5,000, was submitted by the secretary. **MOTION:** It was moved by Mr. Stricklin, seconded by Mr. Burch, and carried, that the proposed budget be adopted.

**APPROVAL OF PROJECT PLANS:** The secretary presented a list of projects for which plans had been submitted and approval given for the period of July 7 to December 15. **MOTION:** It was moved by Mr. Burch, seconded by Dr. Stricker, and carried, that the Sanitary Authority approve of plans for the projects submitted and ratify the action of the secretary in granting approval of the projects listed below.

SEWERAGE PROJECT PLANS APPROVED  
BY  
STATE SANITARY ENGINEER

<u>DATE</u> 1939	<u>LOCATION</u>	<u>TYPE OF PROJECT</u>
July 7	Silverton	Sewer system extensions
8	Nyssa	Sewage treatment plant (With changes required)
11	Roseburg	Sewage treatment plant
19	Portland	Airport (Columbia R.) Sewers and sewage treatment plant (With changes required)
Aug. 15	Salem	Sewer system extensions
24	Taft	Taft high school sewage disposal system
Sept. 7	Coquille	Sewer system extension (As revised)

<u>DATE</u> 1939	<u>LOCATION</u>	<u>TYPE OF PROJECT</u>
Sept. 11	Marshfield	Sewer system extensions
13	Coquille	Sewer system extensions
19	Silver Creek Falls Recreational Area	Camp No. 3 Sewage disposal system
Oct. 10	Grants Pass	Sewerage system extensions, R.R. Addition
11	Pendleton	Sewerage system extensions, Harris Heights (As revised)
20	Salem	Sewerage system extensions, Rosedale and Brooklyn Additions
30	Gilchrist	Sewerage system
Nov. 16	Portland	WPA Blanket sewerage extension and repair project (Tentative approval)
22	Oswego	Sewerage system extensions (As revised)
Dec. 9	Seaside	Sewage disposal system for city park (Tentative)

FEDERAL LEGISLATION: Upon request by the chairman, the secretary discussed briefly the status of federal water pollution control legislation which is before the 76th Congress. MOTION: It was moved by Mr. Hallock, seconded by Mr. Burch, and carried, that the following resolution be adopted.

R E S O L U T I O N

WHEREAS, the Oregon State Sanitary Authority is engaged upon a reasonable cooperative program with cities and industries for the reduction and prevention of water pollution, and

WHEREAS, it is the belief of the Oregon State Sanitary Authority that the control of water pollution should be left to indivi-

dual states in cooperation with the federal government, and

WHEREAS, past experience has shown the futility of drastic prohibitory legislation for the control of water pollution, and

WHEREAS, Senate Bill No. 685 provides for the establishment within the U. S. Public Health Service of a division for the purpose of cooperating with states, cities and industries in an effort to solve the complex problems of water pollution which are of vital importance to the welfare of this country,

NOW, THEREFORE, BE IT RESOLVED, that the Oregon State Sanitary Authority at regular meeting assembled does endorse the type of legislation exemplified by the Barkley Bill, S. B. 685, 76th Congress, if there is to be legislation of this type enacted by the Congress, and

BE IT FURTHER RESOLVED, that its secretary shall transmit to the senators and representatives of the state of Oregon to the Congress of the United States, and to the chairman of the River and Harbors Committee of the House of Representatives of the Congress, a copy of this resolution.

---

ACTIVITIES, POLICIES AND STANDARDS OF WATER PURITY: Mr. Everts discussed the Tualatin, Pudding and Molalla rivers investigations, as well as that of the Columbia slough. A request was made for the establishment of a definite policy regarding the time at which cities and industries will be required to construct treatment plants. This subject led to a discussion of the establishment of standards of purity and the control of discharge of sewage and other wastes. Mr. Hallock read sections 39-603 and 40-213, of the Oregon Code, as well as the State Sanitary Authority Act which has to do with the control of the discharge of sewage and other wastes and the establishment of standards

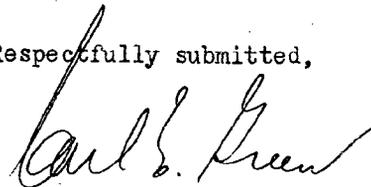

of purity.

Chairman Wendel suggested that cities or industries be asked to write a letter to the Authority setting forth their present financial condition and ability or inability to construct treatment works, together with a statement as to the time when the city or industry will be able to construct needed treatment facilities.

Mr. Stricklin advised that the League of Oregon Cities might be relied upon as a source of information regarding the financial condition of various municipalities. It was agreed that the secretary and the assistant sanitary engineer should continue work on the matter of establishment of standards of purity and that, prior to the next meeting, a list of tentative standards should be prepared for consideration by the Authority.

There being no further business to come before the Authority, the meeting adjourned at 3:20 P.M., to convene at 10:00 A.M., March 1, 1940.

Respectfully submitted,

Carl E. Green, Secretary,  
State Sanitary Engineer.

STATE SANITARY AUTHORITY  
MINUTES OF SEVENTH MEETING

March 1, 1940

The meeting of the State Sanitary Authority was called to order by the chairman, Mr. Harold Wendel, at 10:00 A.M., in the offices of the State Board of Health, 816 Oregon Bldg., Portland. Other members present were Mr. Albert Burch, Mr. Blaine Hallock and Mr. John C. Veatch. Dr. Frederick D. Stricker was not present at the beginning of the meeting, but came in at a later hour. The secretary and assistant sanitary engineer were also present.

MINUTES of the meeting of December 15, 1939, were read and approved.

ACTIVITIES REPORT: The members of the Authority next reviewed an activities report by the secretary for the months of December, 1939, and January and February, 1940. The secretary described briefly the work of the assistant sanitary engineer and himself in contacting city officials and promoting sewage treatment projects throughout the state.

Flow diagrams and compiled data for various industrial plants, obtained during field investigations, were examined by members of the Authority.

General discussion of the problem of policy with respect to dealings with city officials took place, particularly with reference to the matters such as financial condition which should be considered by representatives of the Authority in discussion of proposed sewage treatment projects with cities. It was agreed by the Authority that the secretary and assistant sanitary engineer should continue their discussions with various mayors, city councils and city managers, to the end that definite plans for

sewage treatment may be formulated by cities and submitted to the Authority for review and approval, revision or rejection.

PORTLAND SEWAGE DISPOSAL PROJECT: Chairman Wendel reviewed correspondence with the state attorney general and advised the members of the Authority that the information sought from the attorney general had not been obtained.

After discussion by Messrs. Hallock and Veatch, it was decided that they would study the legal methods available for the financing of the Portland project and report back to the Authority at its next meeting.

STATUS OF FEDERAL WATER CONTROL LEGISLATION: The secretary reported that the Barkley bill had been amended by the House of Representative's Committee on Rivers and Harbors, as follows:

1. Yearly appropriation of \$300,000 to the U. S. Public Health Service for water pollution control activities reduced to \$250,000.
2. Yearly appropriation of \$700,000 to the U. S. Public Health Service for allocation to state agencies on a cooperative water pollution control program eliminated from bill.
3. The provision for loans and grants in aid from funds of the U. S. Treasury eliminated and, in place thereof, a provision for loans from the Reconstruction Finance Corporation at a low rate of interest.

STANDARDS OF WATER PURITY: Following discussion of a report on standards of water purity prepared by the secretary, it was moved (MOTION) by Mr. Burch, seconded by Mr. Hallock, and carried, that conclusions of the report involving classifications of waters, be approved and

adopted by the Authority. The classifications adopted were as follows:

OREGON STATE SANITARY AUTHORITY  
GENERAL REGULATIONS FOR THE DISPOSAL OF SEWAGE

Pursuant to the duties imposed upon and the powers vested in the State Sanitary Authority, in Chapter 3, Laws of 1939, the waters of the state of Oregon are hereby divided into three classifications--A, B and C. All domestic or sanitary sewage, before being discharged into any of the waters of the state of Oregon, shall first be treated in accordance with the requirements herein set forth. The State Sanitary Authority shall determine in each instance what degree of sewage treatment shall be required and, in addition to the specifications included in the classifications A, B and C, it may, at its discretion, require chlorination or equally efficient disinfection of sewage treatment plant effluents wherever and whenever the discharge of unchlorinated sewage effluents shall or may affect the quality of water used for public or domestic water supplies, irrigation, shellfish growing areas, or swimming and recreational areas.

It may grant permits for the discharge of untreated sewage into certain waters of the state for a specific length of time whenever, in its judgment, the public interest will not be injured.

The waters of the state of Oregon are hereby classified in three divisions, as follows:

CLASS A

Bodies of water in relatively clean condition used, or which may be used, for public water supplies, swimming and recreation, for irrigation, for the propagation of game and commercial fish, and for the propagation of shellfish; or bodies of water which, because of insufficient flow, cannot receive without detriment, wastes other than those having been

given a high degree of treatment.

Municipal or sanitary sewage shall be so treated prior to discharge into a Class "A" water that the effluent from the treatment plant:

1. Shall be free of noticeable floating solids, oil, grease, sleek, and practically free of suspended solids.
2. Shall indicate an average five-day bio-chemical oxygen demand reduction of not less than 85 per cent and at no time shall the residual effluent B.O.D. be in excess of 50 p.p.m.
3. Shall not reduce the dissolved oxygen in the receiving body of water more than 10 per cent.
4. Shall not, at any time between May 15 and October 1 of each year, contain more than 500 coli-form organisms per 100 ml.

#### CLASS B

Bodies of water which are used or which may be used for public water supplies, swimming and recreation, for the propagation of game and commercial fish, or for the propagation of shellfish, and which, in the opinion of the State Sanitary Authority, provide sufficient dilution to obviate the necessity for the degree of treatment required under Class "A" waters.

Municipal or sanitary sewage shall be so treated prior to discharge into a Class "B" water that

1. The effluent from the treatment plant shall be
  - (a) Free of noticeable floating solids, oil, grease

and sleek.

2. The treatment plant shall effect:

- (a) A reduction in suspended solids of at least 55 per cent.
- (b) A reduction in the (five-day) bio-chemical oxygen demand of not less than 35 per cent, and at no time shall the residual effluent B.O.D. be in excess of 125 p.p.m.

#### CLASS C

Class "C" waters shall be those bodies of water into which the temporary discharge of untreated sewage may be permitted if, in the opinion of the State Sanitary Authority, such discharge may not be detrimental to any reasonable use of said waters. Temporary permits for the discharge of untreated sewage shall be obtained from the State Sanitary Authority, provided, however, that no such permit shall be valid for a period of time longer than three years and, further, that such permits may be revoked for cause at any time after the date of issuance thereof.

---

SEWERAGE AND SEWAGE TREATMENT PROJECTS LIST: The secretary presented a list of projects for which plans had been submitted and approval given by the secretary for December, 1939, and January and February, 1940. It was moved by Mr. Burch, seconded by Mr. Veatch, and carried, that the Sanitary Authority approve of plans for the projects listed and ratify the action of the secretary in granting approval of the projects listed below:

<u>DATE</u>	<u>LOCATION</u>	<u>TYPE OF PROJECT</u>
Dec. 9 (1939)	Seaside	Sewage disposal system for city park (Tentative approval)
1940		
Jan. 3	Klamath Falls	Sewer extensions (Revisions required)
15	Corvallis	City park sewage disposal, as revised
22	Silverton	Sewer extensions
24	Baker	Sewer extensions (Tentatively approved with changes specified)
30	Jessie M. Honeyman State Park	Sewage disposal
Feb. 6	Nyssa	Sewer extensions
16	McMinnville	Sewer extensions (As revised)
17	Rocky Butte Jail, Road Department development, Multnomah County	Preliminary plans for sewers and sewage disposal (Tentative approval)
20	Lakeview	Sewer extensions and replacements (As revised)

LEGISLATION AND BUDGETS: Chairman Wendel read a letter addressed to him by Governor Sprague, calling the attention of the Authority to the necessity for preparation of budgets and proposed legislation well in advance of the coming meeting of the legislature.

It was decided that the budget for the next biennium should be prepared and ready for consideration by the Authority at its next meeting, and that final action on the budget would be taken at a meeting to be held in the forepart of July.

A discussion of the status of the Sanitary Authority and the State Board of Health followed and the chairman requested the members to consider whether or not the Authority should draft any legislation to be introduced during the 1941 session of the legislature. Mr.

Burch pointed out the necessity for publicity regarding the work and the needs of the Sanitary Authority, if it is to secure sufficient funds from the next legislature to carry on the program outlined in the Sanitary Authority law. It was the consensus of opinion of the Authority members that such publicity should be obtained.

COOPERATIVE STUDIES, OREGON STATE COLLEGE ENGINEERING EXPERIMENT STATION: The secretary discussed the matter of the Oregon State College Engineering Experiment Station conducting stream pollution surveys, gathering basic data regarding quantity and strength of municipal sewages, and conducting research in the field of treatment or by-products recovery of industrial wastes. It was decided that the Authority should proceed cautiously in any recommendations to the state board of higher education, and that it should take no official action prior to receipt of a written request therefor. At Mr. Veatch's suggestion, he was directed to confer with Chancellor Hunter, of the state board of higher education, regarding these matters.

COOPERATION WITH INDUSTRY: The desirability of a meeting with representatives of industry, particularly concerning the problem of waste disposal and water pollution in this state, was raised by the secretary. Following a discussion of what might be accomplished at such a meeting, who should be invited to attend, etc., MOTION it was moved by Mr. Hallock, seconded by Mr. Veatch, and carried, that on the occasion of the next regular meeting of the Sanitary Authority, a group of about a half-dozen representatives from various industries be invited to attend and discuss matters of water pollution control and industrial waste disposal with the State Sanitary Authority.

SEWAGE DISPOSAL, STATE INSTITUTIONS: After a review of the problem of sewage treatment at various state institutions, it was moved (MOTION)

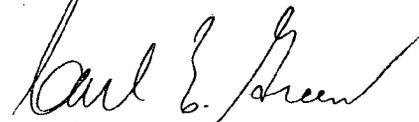

by Mr. Hallock, seconded by Mr. Burch, and carried, that Dr. Stricker, Mr. Wendel and the secretary confer with the State Board of Control, regarding the construction of sewage treatment works for the various state institutions, in order that budget estimates for this purpose may be submitted to the legislature in 1941.

MEETINGS: The secretary called to the attention of the Authority the annual meeting of the Pacific Northwest Sewage Works Association, to be held in Portland on May 8, 1940. It was decided that the Authority would hold its next meeting on May 7, in order that those members who might wish to attend the sewage works meeting might do so.

Mr. Wendel read a letter advising of the meeting of the Pacific Northwest Drainage Basin Committee, in Portland, on March 11 and 12, at which time water use problems would be discussed. It was decided that it was unnecessary for the Authority to attend this meeting, particularly since the secretary would be in attendance and will report any matters of interest to the Oregon water pollution control program.

The meeting adjourned at 12:40 P. M., to convene at 9:00 A. M., on May 7, 1940.

Respectfully submitted,

Carl E. Green, Secretary,  
State Sanitary Authority,  
State Sanitary Engineer.

## STATE SANITARY AUTHORITY

## MINUTES OF EIGHTH MEETING

May 7, 1940

The regular meeting of the State Sanitary Authority was called to order by Chairman Harold Wendel, in Room 720, Oregon Bldg., Portland, at 9:25 A. M., May 7, 1940.

MINUTES: The minutes of the previous meeting were read and approved. The members present at the beginning of the meeting were Messrs. Albert Burch, John C. Veatch and Harold Wendel. Mr. Blaine Hallock arrived at 10:00 A. M. Dr. Stricker and Mr. Stricklin were absent.

ACTIVITIES REPORT: The secretary distributed copies of the activities report for the months of March and April, 1940, and discussed briefly the contents of the report. After discussion, the activities report was approved.

PROJECT PLANS: The secretary next presented a list of projects for which plans were approved during the two months' period. MOTION: It was moved by Mr. Burch, seconded by Mr. Veatch, and carried, that plans for the projects listed below be formally approved by the Sanitary Authority.

SEWERAGE PROJECT PLANS  
APPROVED BY STATE SANITARY ENGINEER

March and April, 1940

<u>DATE</u> 1940	<u>LOCATION</u>	<u>TYPE OF PROJECT</u>
March 15	Silverton	Sewer system extensions, Unit No. 4
22	Salem	Sewer system extensions, Fairmont, Mill and Brooklyn Additions
23	Medford	Bear creek park sewage disposal system

<u>DATE</u> 1940	<u>LOCATION</u>	<u>TYPE OF PROJECT</u>
April 6	Portland	WPA project for location of existing sewers and sewer structures
8	Beaverton	Sewage disposal system, Northwest Home for the Aged
9	Coos County	Cape Arago State Park sewage disposal system
12	Silverton	Sewer system extensions, Unit No. 5
12	Marshfield	City park sewage disposal system approved (Latrine plans not approved)
19	Salem	Sewer extensions, Pleasant Home, Frickey's R. R. and Gravers Additions

INDUSTRIAL WASTE DISPOSAL HEARING: In response to an invitation by the State Sanitary Authority, representatives of pulp and paper industry, the meat packing industry, the woolen mill industry, and the fruit and vegetable processing and canning industry appeared before the board for a mutual discussion of the problems of waste disposal. The following persons were present: Mr. Frank Youngman, Crown-Zellerbach Paper Corp., Mr. Cassius Peck, Crown-Zellerbach Paper Corp., Mr. Irving T. Rau, St. Helens Pulp & Paper Co., Mr. E. A. McCornack and Mr. Arthur Rieling, Northwest Cannery Association, Mr. C. H. Carter, Portland Woolen Mills, Mr. D. W. Hoffman and Mr. E. T. Luther, Swift & Co., and Colonel William A. Aird, Oregon Business and Tax Research.

Chairman Wendel opened the hearing by referring to an article which appeared in the Oregon Journal, on April 27, which stated that stream pollution in the state was increasing and that fish are facing a losing fight for existence.

Mr. Peck, representing Crown-Zellerbach Paper Company, was asked to discuss the problem from the point of view of the company which

he represented. Mr. Peck pointed out that the industry had installed "Save-All" filters and other devices, for the reduction of fiber losses in "white water", and that if any further reduction were needed that the industry would be willing and able to provide for such equipment. He next discussed the problem of sulphite liquor disposal and mentioned that treatment or by-products recovery of this waste has not yet been found to be satisfactory under Oregon conditions. He cited the experience of his company on the Truckee river, in California, in which lack of a satisfactory method of sulphite waste disposal forced the company to dismantle a mill and cease operation. He further stated that it is a debatable question as to whether or not sulphite waste liquor does any harm to streams or stream life, provided it has proper dilution. He suggested that fishermen should be convinced that these wastes are not harming fish life. He would like the Sanitary Authority to carry on basic studies, collect facts, make analyses, etc., for the purpose of proving this contention.

Those persons appearing before the Authority stressed the opinion that industry should not be called upon to provide for waste treatment plants in advance of the construction of sewage treatment plants by cities and especially by the city of Portland.

(A complete transcript of the Industrial Waste Disposal Hearing appears in an appendix to these minutes.)

PORTLAND SEWAGE DISPOSAL PROJECT: Mr. Ed F. Averill, representing the Izaak Walton League, the Anti-Pollution Council, and the Stream Purification League, appeared before the Authority and asked consideration of the Portland disposal project. He asked that the Authority order the city of Portland to proceed with its proposed sewage treatment project to reduce pollution of the Willamette river.

Chairman Wendel reviewed the meeting which the Authority had

with Mayor Carson and City Commissioners Bowes and Riley, of Portland, on December 15, 1939.

Mr. Burch discussed the legal aspects of the case and pointed out the necessity of having adequate data before proceeding with a case in court. Mr. Hallock outlined the need for legal assistance for conducting any court hearing, and asked Mr. Everill whether or not the organizations which he represented might assist in the preparation of a legal brief. Mr. Averill promised to obtain such a brief.

Mr. Hallock suggested that the Authority issue a "show cause order", and cite the city of Portland to appear before the board.

MOTION: It was moved by Mr. Hallock that the Sanitary Authority forthwith promulgate and issue an order in the name of the state of Oregon on the relation of the State Sanitary Authority, directed and addressed to the city of Portland, its mayor and city commissioners, requiring them to appear before the Authority at a time and place therein named, and show cause, if any they have, why the nuisance resulting from the disposal of city sewage shall not be abated. The motion was seconded by Mr. Burch and unanimously carried.

The meeting recessed for lunch at 12:30 P. M., and reconvened at 2:00 P. M.

CLASSIFICATION OF WATERS: After a discussion of the classifications of waters, it was agreed by the members present that the general clause of the standards should remain as written by the secretary.

COOPERATIVE STREAM SURVEYS, O.S.C.: Mr. Veatch reported upon his conference with Chancellor Hunter, of the Oregon System of Higher Education, with reference to cooperative work with the Oregon

State College Engineering Experiment Station, and advised that no definite plan had been worked out as yet, and that Chancellor Hunter was to advise him further regarding these matters.

TUALATIN RIVER PRELIMINARY SURVEY REPORT: The findings and recommendations in the Tualatin river preliminary survey report, prepared by the secretary and the assistant sanitary engineer, were reviewed briefly, and Mr. Burch pointed out the need for sufficient data to warrant reaching definite conclusions.

The secretary advised that plans were being prepared for the use of the State Board of Health mobile bacteriological laboratory, during the summer of 1940, for the purpose of gathering more complete information regarding the bacteriological quality of the Tualatin river water. Chairman Wendel directed that the report submitted by the secretary be accepted and placed on file.

BUDGET 1941-42: In accordance with instructions given on March 1, the secretary prepared and submitted a tentative budget for consideration by the Authority. After a discussion of the various items included, the personnel, salaries, etc., incorporated in the budget estimate, and after having made a reduction of \$800.00 in general expense items of the original \$37,360 budget, (MOTION) it was moved by Mr. Hallock, seconded by Mr. Veatch, and carried, that a budget for the coming biennium of \$36,560 be approved and submitted to the state budget director, who in turn will forward it to the governor for review.

SUMMER ACTIVITIES: The secretary and assistant sanitary engineer discussed plans for work during the summer season of 1940, and advised the Authority of the possible opportunity of utilizing certain Title 6 funds of the Social Security Act which have been budgeted for the division of sanitary engineering of the State Board of Health. It was moved by Mr.

Burch, seconded by Mr. Veatch, and carried, that Chairman Wendel consult Dr. Stricker, state health officer, with reference to the possible use of any funds which may be available for stream pollution studies.

SALARIES: After a discussion of funds available from Sanitary Authority sources and of the salaries approved in the budget for the coming biennium, <sup>(MOTION)</sup> it was moved by Mr. Burch, seconded by Mr. Veatch, and carried, that out of the estimated surplus in Sanitary Authority funds for the year 1940, that the Sanitary Authority pay Mr. C. M. Everts, assistant sanitary engineer, \$260.00 per month for the months of November and December, 1940, and that it turn over to the State Board of Health \$65.00 per month for the months of November and December, 1940, for the payment of additional salary to Carl E. Green, state sanitary engineer, and secretary of the Authority, and that any additional funds which may be available shall be expended for conducting additional work of an investigational character during 1940.

QUORUM: MOTION: It was moved by Mr. Veatch, seconded by Mr. Hallock, and carried, that four members of the Sanitary Authority Board be considered a quorum for the transaction of business.

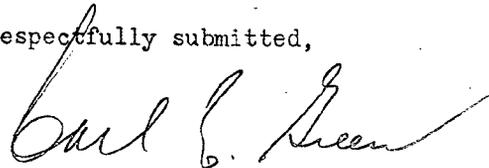

FISH AND GAME FUNDS TO FINANCE SANITARY AUTHORITY WORK? : Chairman Wendel next discussed the matter of the possible use of funds from the Fish and Game Commissions of the state of Oregon, for the purpose of carrying on the activities of the State Sanitary Authority, since, in a large measure, the work of the Sanitary Authority is for the protection and preservation of fish and aquatic life. This matter was thoroughly discussed by the members present, and it was the consensus of opinion that it would be unwise to sponsor a bill in the legislature for the purpose of diverting Fish Commission or Game Commission funds for the use of the Sanitary Authority. Chairman Wendel

asked the secretary to arrange for his appearance before the next regular meeting of the State Game Commission, in order that he might discuss these matters.

RE: PORTLAND SEWAGE DISPOSAL HEARING: It was decided that the city of Portland should be cited to appear before the Authority at 10:00 A. M., June 14, 1940, in compliance with the "show cause order" adopted by the Authority.

There being no further business, the meeting adjourned at 5:00 P. M., to convene at 9:30 A. M., June 21, 1940.

Respectfully submitted,

Carl E. Green, Secretary,  
State Sanitary Authority,  
State Sanitary Engineer.

STATE SANITARY AUTHORITY  
INDUSTRIAL WASTES DISPOSAL HEARING

May 7, 1940

(Appendix to meeting of May 7, 1940)

PERSONS PRESENT

State Sanitary Authority:

Harold F. Wendel, Chairman  
Albert Burch  
Blaine Hallock  
John C. Veatch

Carl E. Green, Secretary  
C. M. Everts, Assistant  
Sanitary Engineer

Industries:

Pulp and Paper: Irving T. Rau  
Cassius Peck  
F. N. Youngman

Fruit and Vegetable  
Processing and  
Canning: E. A. McCormack  
Arthur Rieling

Woolen Mills: C. H. Carter

Meat Packing: D. W. Hoffman  
E. T. Luther

Oregon Business & Tax Research, Inc.: Colonel William A. Aird

Chairman Wendel opened the hearing by referring to an article which appeared in the Oregon Journal, on April 27, 1940, which stated that stream pollution in the state was increasing and that fish are facing a losing fight for existence.

Mr. Peck, representing Crown-Zellerbach Paper Co., was asked to discuss the problem from the point of view of the company which he represented. Mr. Peck pointed out that the industry had installed "Save-All" filters and other devices, for the reduction of fiber losses in "white water", and that if any further reduction were needed that the industry would be willing and able to provide for such equipment. He next discussed the problem of sulphite liquor disposal and mentioned that treatment or by-products recovery of this waste has not yet been found to be satisfactory under Oregon conditions. He cited the experience of his company on the Truckee river, in California, in which lack of a satisfactory method of sulphite waste disposal forced the company to dismantle a mill and cease operation. He further stated that it is a debatable question as to whether or not sulphite waste liquor does any harm to streams or stream life, provided it has proper dilution. He suggested that fishermen should be convinced that these wastes are not harming fish life. He would like the Sanitary Authority to carry on basic studies, collect facts, make analyses, etc., for the purpose of proving this contention.

Mr. Peck mentioned the importance of the Portland city sewage disposal project in any cleaning up program in the Willamette river basin. He stated that if fish can get through the Portland harbor, they may also get by the Oregon City falls, at which two pulp and paper mills are located. He stated that if studies and tests should show that a real problem existed, his company would tackle the job and that it would be willing to cooperate with the Sanitary Authority in this connection.

Mr. Hallock asked Mr. Peck whether or not the company he represented had made any tests or conducted any studies of sulphite liquor. Mr. Peck replied that it had been done some years ago and that data are available.

Mr. Albert Burch asked, "What is the chemical composition of sulphite liquor?" Mr. Peck explained the process of the manufacture of pulp and paper by the sulphite process, and explained that chemicals, primarily sulphur and lime, were used in the extraction of wood fibers and that the waste liquor contained lignins and other compounds which were separated from the fibers.

Mr. Burch raised the question whether or not the company might cooperate with the Sanitary Authority in the collection of samples. Mr. Burch suggested that the industry might possibly appropriate monies to be used by the Sanitary Authority for studies connected with the disposal of pulp and paper mill wastes.

Mr. Hallock: The state did not appropriate much money with which to work. If we sent engineers to take samples above and below Willamette falls, would it be possible for you to furnish assistance in partly-skilled labor?

Mr. Peck: I would have to take it up with the principals concerned. I would like to see you make a proposition that industries make appropriation for studies of the Willamette river at Willamette falls. If we can't appropriate all the necessary funds, we might work together on a joint appropriation.

Mr. Hallock: That is just about what we thought.

Mr. Peck: Would suggest that the Sanitary Authority determine how much money it might need to make preliminary studies at Willamette falls, and ask those involved as to what they could do about it and how

71832

much help could be obtained.

Mr. Veatch: Who operates the pulp and paper plant at Newberg now?

Mr. Peck: The Spaulding Pulp & Paper Co. Mr. Emery is president of the board of directors and has an office in the Oregonian Bldg., Portland.

Mr. Veatch: You would suggest, then, that the Authority make water tests, probably with your assistance if necessary, if it is ascertained that you will cooperate to the end to eliminate or reduce pollution?

Mr. Peck: My suggestion was that a study be made to ascertain just what the problem is. If you wish our cooperative help in the matter, find out what the cost may be and place the proposition squarely before us. We will be happy to cooperate in every way.

Mr. Veatch: We all want to attack the problem together. However, the facilities we have now would make it too long to carry out. We are making progress with municipalities. If progress has to wait until the Sanitary Authority studies problems for each industry, it will take a lifetime before it is done. We want you to do as much as you can, as our limited personnel will not permit us to make all these investigations without help.

Mr. Burch discussed the questions raised by Mr. Veatch.

Mr. Veatch: I think that any report should be made through the Sanitary Authority.

Mr. Green: We should not lose sight of the fact that a great deal of investigational work has already been done in connection with the sulphite liquor wastes of the Willamette valley, and that much data are at hand.

Mr. Peck: There is this to be said, generally, about the

proposition. I do not want to become argumentative or offensive, but there is always the question of the relative values of industry and fishing. That is one of the questions you have to have in back of your head all the time. Any reasonable man can see that. The state of Pennsylvania has classified streams into three divisions, A, B and C. A, pure; B, intermediate, and C, those streams given over to the purpose of carrying away sewage and industrial waste. Class "A" streams are sportsmen's streams. There is no pollution in the first two, comparatively. Industries may locate on class "B" streams, provided they meet certain regulations and requirements.

Mr. Veatch: The Willamette river can't very well be put in just one class, for the reason that there is considerable amount of industries depending upon that one stream. Speaking of the commercial fishing industry alone, and not from a sportsman's standpoint. The Willamette river and its tributaries support over 80 per cent of the spring run of Chinook salmon of the entire Columbia river basin. It can be seen, therefore, that the Willamette river is very important to the maintenance of Chinook salmon runs in the Columbia river. We have the paper and fishing industries, both of which are very valuable to the state, which are dependent upon one particular stream, and it would be pretty hard to classify the stream for the interest of one industry and the detriment of the other.

Mr. Youngman: Isn't it a fact that salmon spawn higher up in tributaries?

Mr. Veatch: Salmon do not spawn below the Oregon City falls, but they must pass through the lower stretches of the stream to reach spawning grounds. The polluted condition which exists between Portland

and Oregon City during low water has practically eliminated one run of salmon. As industries increase along the Willamette river, their wastes might so seriously pollute the river that the spring Chinook run might be destroyed, as well as the fishing industry of the Columbia.

Mr. Peck: I think the increased volume of water which will flow in the Willamette river during the summer time, after completion of the Willamette valley project, will materially help to reduce pollution.

Mr. Veatch: It will cut off a tremendous amount of spawning grounds.

Mr. Peck: I am thinking of the oxygen content of the water which is no problem in the winter time.

Mr. Wendel called upon Mr. Rau, of the St. Helens Pulp & Paper Co., to discuss problems related to his industry.

Mr. Rau: While mills in Oregon City use acid processes of pulp and paper manufacture, the St. Helens Pulp & Paper Company mill uses the sulphate process. About three or four years ago, we made quite a few tests, to determine the dissolved oxygen content of the water in the Willamette slough from our plant to the St. Johns bridge in Portland. Dissolved oxygen at the mill was higher than it was under the St. Johns bridge. As you approach Portland, the content of oxygen gradually diminishes. The present spring run of Chinook salmon is now about over. I have seen salmon landed right at the mill at St. Helens. I think one thing which would help the fishing industry a great deal would be to install fish ladders at the Oregon City falls. We have records on hand, and Mr. Green is welcome to them. I think a complete study of the oxygen content of the river should be made on a systematic basis from below Longview up to Salem. You should take tests of the water every month of the year, so that you will have a complete record of just what the oxygen is at any state of

water during any month of the year. It would really give a true picture.

Mr. Wendel asked Mr. McCornack to discuss the waste disposal problems of canners.

Mr. McCornack: (Representing Northwest Canners' Association in absence of Mr. Burns) It is true that canners are offenders in the matter of stream pollution. Bills originally introduced in the legislature were too drastic and would have placed tremendous burdens upon industries contributing to pollution. The position we took at that time seemed to us the obvious position that industries were no different than municipalities as contributors of pollution. Canners are incorporated with municipalities in pollution of streams. Probably canners might be classified in two groups--(1) those who, in one way or another, discharge their waste directly into streams independently of the municipalities--and (2) those who are using the sewerage systems of the cities wherein they are located, for the discharge of the wastes. We do not feel that we should be called upon to provide for waste treatment any faster than our own communities will go along with us. Eugene sewage goes into the Willamette river. Wastes from our plant go into the Willamette river, through the Eugene sewer system. It is hardly fair on us, as canners, to crack down on us with drastic, prohibitory legislation or orders from your commission, when we may be contributing only 25 per cent of the contamination. Eugene, with its many other minor industries, is contributing the other 75 per cent. It is almost impossible for us to move until the city proceeds with a sewage treatment project. We are willing to join with them. We would be glad to join with Junction City in the construction of a sewage disposal plant, also Eugene. Canneries located outside of cities have another problem. I think you will find them working just as hard

to meet their problems, and I think they will meet them when and if there is a general movement made which will clean the rivers, but they do not feel like being the first to step out and spend a hatful of money cleaning up their own section of the river, when the major pollution is from other sources. The canning industry is willing to go right along with this movement, in any reasonable way.

Mr. Rieling discussed the fact that in some sections of the country, canneries are treating their wastes successfully. Yakima has installed a sewage disposal plant in the last three years which is used for the treatment of cannery waste with municipal sewage. I am stating this merely to show how the cooperation of the canning industry can be expected in Oregon. There are three canneries operating rather extensive plants in Yakima. Municipalities have some responsibilities. However, the canning industry is ready to go along in any reasonable way in solving this problem.

Mr. Veatch: Your problems, where you are connected to city sewers, would be pretty well solved by a municipal treatment plant.

Mr. McCornack: Municipalities must specify how much waste they will permit in their sewerage systems.

Mr. Hallock: What is the extent of your financial contribution at Eugene? Just a tax-payer and under no additional expense, other than a resident of the city?

Mr. McCornack: Yes.

Mr. Hallock: What amount of waste from your Eugene plant is discharged into the city sewer system, and how does it compare with the rest of the sewage of the city?

Mr. McCornack: 25 per cent of the contamination.

Mr. Hallock: Your contribution toward the disposal of this waste

is only such as is disclosed by you, as a tax-payer.

Mr. Wendel: Has your industry, as a whole, made any studies of your waste disposal problem?

Mr. McCornack: Studies have been made in other states, and information is now available. Cannery associations of other states have been making exhaustive studies, so it is known, for instance, the extent to which so many tons of waste from a pea cannery will exhaust oxygen from a stream. Similar information is available for tomato and pear canning wastes. We have that information.

Mr. Veatch: Do you have a state association of canners?

Mr. McCornack: Yes. We call it the Northwest Cannery Association.

Mr. Wendel called upon Mr. Carter, of the Portland Woolen Mills, to discuss problems related to water pollution by woolen mills.

Mr. Carter: It seems to me that, from the records we have obtained, the largest offenders are the cities themselves, not the industries. I think the textile industry will undoubtedly be glad to go along with the cleaning up of the Willamette river. I think we are all interested in cleaning streams, but I believe that it is useless to pick on industry first before the cities start, in view of the fact that it is recognized that the cities themselves are the greatest offenders. During the last six months, we hired Dr. Lazell, a chemist, to make analyses of our wastes and we had several men in our plant for five or six weeks. Dr. Lazell has all the records at his office and they are available to the Sanitary Authority. It cost us \$700. We have the largest woolen mill here on the coast. We probably dump more sewage into the river than all the rest combined. We have plants at Eugene, Stayton, Brownsville, Salem and Portland. All sewage finds its way

directly to the river. There are no sewers in the St. Johns district of Portland in which our plant is located, and we have our own sewer--about a 3 foot concrete sewer which carries all our sewage direct to the river. Wool scouring waste causes the greatest amount of pollution of all wastes from woolen mills. Our industries are represented by the Pacific Coast Wool Manufacturers' Association, Board of Trade Bldg., Portland. Our group is interesting in cleaning up the river, but we feel that the city of Portland is the biggest offender and should get busy. We feel that we are the least offenders and don't want to be picked on first. The payroll of the Portland Woolen Mill is \$800,000 a year.

Mr. Wendel: The State Sanitary Authority has obtained a commitment and the apparent cooperation of the State Board of Control for remedying unsatisfactory sewage disposal methods at state institutions.

Mr. Hallock: Do you feel industry can stand some expense in meeting this problem?

Mr. Carter: We expect to do our part. I do not know just what in particular we will do. No city sewers are now available to us, and we might have to build treatment plants. We are ready to go ahead when the time comes. Of course, it will come under your program, and we will have to submit our plans to you, but it will be up to us to build our own plant. I do not know how much it will cost, but a good many thousands of dollars.

Mr. Wendel next called upon representatives of Swift & Co., meat packers.

Mr. Hoffman: As far as we know, we are not a problem. We do not put anything into the river which we can utilize in the manufacture of our products. Sewage from our plant goes into the river. We have never had any complaints, as far as I know.

Mr. Green: We have made no investigation of the Swift & Co. packing plant, but it must be remembered that the waste from any meat packing plant causes pollution, even though most of the wastes are utilized for by-products.

Mr. Hoffman: Can't put anything into a stream, without causing some pollution.

Mr. Luther: We have some studies, Mr. Green, and you can use them any time you want to. There are a few questions I would like to ask. Have there been any tentative limits set as to what can be put into streams--that is, solids, suspended solids, etc.?

Mr. Green: We have attempted to formulate a standard, and Mr. Green can answer that question.

Mr. Green: The Sanitary Authority has adopted a classification of waters of the state insofar as the disposal of sewage is concerned, but no standards for industrial wastes have yet been established.

Mr. Hoffman: What is the scope of your authority as to the Columbia river?

Mr. Veatch: We would have jurisdiction over Columbia river on the Oregon side.

Mr. Hoffman: What progress is being made by the city of Portland?

Mr. Wendel: Progress has been slow because of financial problems.

Mr. Veatch: As I see this problem, from an industrial standpoint, it is not only a problem that the Authority and the state have to face, but a problem which industries will have to assist in solving, because each industry will have to work out the best method of meeting the particular problem that they have. I think industries

are perfectly right in feeling that public institutions and municipalities should lead the way, but when they do lead, industry is going to be face to face with the problem.

Mr. Carter: I think you will find industry is willing and ready to go along on any sane method. Other industries feel the same way as we do. I do not think industry will try to throw any "monkey wrench" into a reasonably cooperative program. Each line of industry has a little different problem. With the help of the Authority, it can be worked out.

Mr. Rau: Don't you think it would be a step in the right direction if the minimum oxygen content, maximum amount of solids, etc., were set, so there could be some knowledge of what might be ultimate limits?

Mr. Wendel: Mr. Green is working on those now.

Mr. Rau: Have you any data pertaining to stream flow and as to how long it will take for pollution to be dissipated?

Mr. Green: Many variable factors influence the self-purification of streams, and no specific answer can be given which applies in all cases. Every locality has a different problem and each must be studied if a satisfactory solution is to be obtained.

Mr. Wendel: Studies in the Tualatin river have shown that it takes about 25 miles for the stream to recover from an industrial waste load discharged at Hillsboro.

Mr. Peck: Perhaps I might make a suggestion. Representatives of the Hawley and Crown-Zellerbach paper companies might hold a conference for the discussion of a cooperative plan to be presented to the Sanitary Authority at its next meeting.

Mr. Wendel: We have been expending most effort on municipalities, because we knew it was up to public bodies to show the way and to start the program, and really astonishing progress has been made among smaller municipalities.

Hearing adjourned.

## STATE SANITARY AUTHORITY

## MINUTES OF NINTH MEETING

June 21, 1940

The meeting of the State Sanitary Authority convened at 9:30 A. M., on June 21, in Room 720, Oregon Bldg., Portland. Members present were chairman Harold Wendel, Messrs. Albert Burch, Blaine Hallock and John C. Veatch. Doctor Frederick D. Stricker arrived at 9:55 A. M. Mr. Charles E. Stricklin arrived at 10:15.

The meeting between 9:30 and 10:00 A. M. was given over to a discussion of matters pertaining to the Portland hearing scheduled for 10:00 A. M.

PORTLAND CITATION HEARING: In response to an order issued by the State Sanitary Authority, on the occasion of its previous meeting on May 7, representatives of the city of Portland appeared to show cause why the Sanitary Authority should not institute proceedings against the city for the abatement of a nuisance created by the discharge of the untreated Portland sewage into the waters of the state.

The city of Portland was represented by the following persons: Mayor Joseph K. Carson, Jr., Commissioner of Public Works William A. Bowes, Commissioner of Public Affairs James Bennett, City Engineer Ben S. Morrow, City Attorney Lyman Latourette, Assistant City Attorney David Sandberg, and L. G. Apperson, Construction Engineer.

Mr. Wendel opened the hearing by calling upon the city to present its case and City Attorney Latourette proceeded to outline what the city has done and explained the city's answer to the Sanitary Authority citation, which was later placed in the hands of all members of the Authority.

A general discussion of the matters pertaining to the proposed Portland sewage disposal project was engaged in by the representatives of the city and members of the Sanitary Authority.

The hearing was terminated at 12:00 noon.

A transcript of the proceedings appears as an appendix to the minutes of this meeting.

DISCUSSION, PORTLAND SEWAGE DISPOSAL PROJECT: At the conclusion of the Portland hearing, the Sanitary Authority opened the meeting for discussion on the part of any interested persons.

Mr. Ed F. Averill stated that the Portland city commissioners had not acted in good faith in carrying out the wishes of the people for the construction of needed sewage treatment facilities. Mr. Averill promised to supply the Sanitary Authority with copies of correspondence pertinent to the Portland project. He stated that it would not be necessary to issue bonds for the construction of the proposed project, but that it might be financed by an increase in sewer service charges above those previously authorized.

Mr. William Finley, naturalist, asked the Authority whether or not it had the legal right to force the city of Portland to proceed. Mr. Hallock replied that the Authority had the right to initiate proceedings in a court of competent jurisdiction. Mr. Finley asked whether or not the Sanitary Authority would proceed with such an action.

In response to this question, Messrs. Hallock and Wendel stated that the board would necessarily have to discuss such a matter and reach a decision before proceeding in any court action.

Mr. F. H. Young, representing Oregon Business and Tax Research, Inc., stated that in his opinion, an increase in sewer service charges is not necessary at this time.

COLUMBIA RIVER POLLUTION: Mr. James Cellars, representing the Columbia River Pollution Committee, appeared before the Authority to describe the pollution of fishermen's nets which has been observed in the Columbia River from Astoria to a point near Vancouver, Washington. He asked the assistance and cooperation of the Sanitary Authority in conducting studies of pollution of the Columbia river. Mr. Cellars stated that the condition complained of has existed for seven years, but that the pollution during the 1940 fishing season has been more aggravated than formerly. He outlined a meeting of interested persons at Kalama, Washington, on May 31, 1940, and the plea which had been made to the State Fish Commission of Washington, the Washington Pollution Commission and the Oregon Fish Commission, for financial assistance needed to carry on a thorough investigation of the Columbia river.

Mr. Wendel pointed out the very limited funds appropriated to the Authority by the 1939 legislature and the impossibility of using these limited funds for a study of the Columbia river.

The meeting adjourned for lunch at 12:45 P. M., to reconvene at 2:00 P. M.

MINUTES: At the conclusion of the hearing and discussions relative to the Portland project and the pollution of the Columbia river, Chairman Wendel called for a consideration of business on the agenda of the regular meeting. With consent of other members, the chairman dispensed with the reading of minutes of the previous meeting on May 7, 1940. Realizing the length of business remaining to be transacted, the chairman deferred further consideration and adjourned for lunch at 12:45 P. M., to reconvene at 2:00 P. M.

PORTLAND HEARING DISCUSSION: The Authority reconvened at 2:00 P. M., and a general discussion of the material presented by the Portland

officials took place. MOTION: It was moved by Mr. Hallock, seconded by Mr. Burch, that the Authority forthwith communicate in writing to the city of Portland, Oregon, its mayor and the members of its council, that the showing made in response to the Authority's citation and notice to show cause is neither satisfactory or convincing; that in the opinion of the Authority the proposed service charges as embodied in the pending Bowes' ordinance for the purpose of paying expenses of investigations, surveys, preparation of designs and plans, construction and/or maintenance and operation of a sewage disposal system under the provisions of Section 347 of the charter of said city are not adequate to accomplish the purposes thereby contemplated, and that the city of Portland and its appropriate officers and representatives be urged to initiate and bring to immediate conclusion such ordinance as shall provide for the imposition and collection of service charges in accordance with those recommended by the legal voters of said city on the occasion of the general election of 1938, and as interpreted by the Board of Equalization in its report of July 20, 1939.

While waiting for copies of the motion to be typed for examination by the members, prior to action, Mr. Wendel called for consideration of federal water pollution control legislation.

PROPOSED FEDERAL WATER POLLUTION CONTROL LEGISLATION: Mr. Ed F. Averill appeared before the board and asked the Authority to endorse the Barkley Bill, S. B. 685, as amended by Representative Mundt.

Mr. F. H. Young, representing Oregon Business and Tax Research, Inc., advocated disapproval of the Mundt amendments and approval of the original, unamended Barkley Bill, on the grounds that the Mundt amendments classed additional sources of pollution as public

and common nuisances and on the further ground that the passage of such a measure would encroach upon states' rights and would usurp powers already granted to the Oregon State Sanitary Authority.

Mr. Hallock referred to the previous action of the Authority in the form of a resolution, under date of December 15, in which the type of legislation as exemplified by the Barkley Bill was approved.

MOTION: It was moved by Mr. Stricklin, seconded by Mr. Burch, and carried, that the State Sanitary Authority not endorse the Mundt amendments to the Barkley Bill, S. B. 685, 76th Congress, Third Session.

PORTLAND PROJECT: After examination of the motion submitted by Mr. Hallock, it was moved by Chairman Wendel that the original motion be amended as follows:

Substitute "plans submitted" for "showing made", and "adequate" for "not satisfactory or convincing".

MOTION: The amendment being accepted by Messrs. Hallock and Burch, it was again moved by Mr. Hallock, seconded by Dr. Stricker, that the amended motion, as follows, be adopted.

"I move that the Sanitary Authority forthwith communicate in writing to the city of Portland, Oregon, its mayor and the members of its council, that the plan submitted in response to the Authority's citation and notice to show cause is not adequate; that in the opinion of the Authority the proposed service charges as embodied in the pending Bowes ordinance for the purpose of paying expenses of investigations, surveys, preparation of designs and plans, construction and/or maintenance and operation of a sewage disposal system under the provisions of Section 347 of the charter of said city are not adequate to accomplish the purposes thereby contemplated, and that the city of Portland and its appropriate officers and representatives be urged to initiate and bring to immediate conclusion such ordinance as shall provide for the imposition and collection of service charges in accordance with those recommended by the league of voters of said city on the occasion of the general election of 1938, and as interpreted by the Board of Equalization in its report of July 20, 1939."

Unanimously carried.

The secretary was then directed to send a communication to each person named in the Portland citation, as well as to the state attorney general and to the official Portland representatives who appeared at the hearing, and enclose a copy of the resolution adopted by the Authority.

PROJECT PLANS FOR APPROVAL: The Authority next considered a list of project plans approved by the state sanitary engineer, for the month of May, for official approval. MOTION: It was moved by Dr. Stricker, seconded by Mr. Veatch, and carried, that the following project plans be officially approved.

SEWERAGE AND SEWAGE DISPOSAL PROJECT PLANS

Approved by State Sanitary Engineer

<u>DATE</u> 1940	<u>LOCATION</u>	<u>TYPE OF PROJECT</u>
May 1	Baker	Hillcrest Addition, revised sewer plans
3	Portland	MacCleay park caretaker's residence sewage disposal system
3	Mill City	Fire hall revised sewage disposal system
13	Corvallis	Water department caretaker's house sewage disposal system
18	Salem	Sewer extensions; Rosedale, Simpson and Bouillard Additions
18	Glenada	Jessie M. Honeyman state park sewage disposal system
21	Silver Creek	Silver Creek falls state park sewage treatment project
22	Marion County	Keizer school sewage disposal system
22	Silverton	Sewer extensions, Felt St. and Chadwick Ave.

SHOULD SANITARY AUTHORITY POLLUTION ACTIVITIES BE FINANCED IN PARK BY STATE GAME COMMISSION FUNDS?: Chairman Wendel reported upon his conference with Chairman E. E. Wilson, of the State Game Commission, relative to the possible use of game commission funds to assist the Sanitary Authority in its work. He advised that he had been asked to attend the September meeting of the State Game Commission at which time a concrete proposal might be discussed. A general discussion of this matter and the policies involved followed, in which all members of the Sanitary Authority participated.

Mr. Burch recommended against asking the State Game Commission to divert funds to the Sanitary Authority, on the grounds that to do so might give the game commission some control over how the funds might be spent. Mr. Burch objected to Mr. Wendel's proposed appearance before the State Game Commission, but later stated that he would not object to an informal discussion of these matters.

Mr. Burch further stated that he would not object to diversion of game commission funds for use by the Sanitary Authority, if such were accomplished by means of legislation.

Mr. Wendel next asked whether or not the Authority would oppose or approve of a bill which would increase the Authority membership by the addition of the chairman of the State Game Commission. It was agreed such a plan would not be opposed. Mr. Veatch, Mr. Stricklin and Dr. Stricker expressed doubt that such a plan would meet with approval of the legislature and the various fish, game and sportsmen's organizations.

COLUMBIA RIVER POLLUTION: Chairman Wendel called upon the secretary to report regarding a meeting of persons interested in the control of pollution in the Columbia river which, it was claimed, had been affecting the nets of commercial fishermen.

Mr. Green reviewed briefly the meeting at Kalama, Washington,

71R32

which representatives of the Fishermen's Protective Union, the Columbia River Packers' Association, the Washington State Fish Commission and the Oregon Fish Commission attended.

Mr. Veatch next reported relative to these matters as presented to the State Fish Commission at its meeting on June 11, and outlined the requests made by James Cellars for the appropriation of funds by the Fish Commission to match funds and personnel, in the amount of \$3,000 offered by the Washington Fish Commission to conduct studies in the Columbia river.

Mr. Veatch reported that the Fish Commission had advised Mr. Cellars and others that it did not have funds available for the purpose at this time, but if any funds were made available that they should be expended through the State Sanitary Authority.

Doctor Stricker read a letter from the state budget director, David Eccles, relative to the public health aspects of Columbia river pollution.

Following discussion, it was agreed that the matter should be referred to Mr. Veatch and the State Fish Commission for action.

The secretary was directed to acknowledge letters to members of the Authority from A. C. Forrester, relative to pollution of the Columbia river.

The meeting adjourned at 4:15 P. M., to reconvene at 10:00 A. M., Friday, September 20, 1940.

Respectfully submitted,

Carl E. Green, Secretary,  
State Sanitary Authority.

OREGON STATE SANITARY AUTHORITY  
TRANSCRIPT OF  
CITY OF PORTLAND "SHOW CAUSE" CITATION HEARING

SUBJECT: PORTLAND SEWAGE DISPOSAL

June 21, 1940

Mr. Latourette: We have been going on the theory that it would be a suitable procedure for the city and the city officials to get a written statement and set forth, in a general way, what has been done in order to better conditions here, insofar as sanitation is concerned, especially with reference to the Willamette river and the Columbia slough. We have prepared a statement along that line, not going too far back in the history of the proceedings, but beginning about 1933 when this matter reached the active stage, although steps had been taken for years before that to get something done about our sanitary conditions in the city of Portland, with reference to the Willamette river not only in Portland, but also on upper reaches of the river around Oregon City and on up to Salem.

In 1933, the Baer report was made and steps were taken to bring about a definite program for sewage treatment. We have set out in the written statement that will be presented, a general program of events that happened from that time, following studies that were made, votes of the people that were taken on the subject with the view of financing the problem, the charter amendment that was turned down and the voters' amendment that was finally adopted, and steps that have been taken since the adoption of the charter amendment providing for sewer user service charge, in order to work out a program of construction and a program for financing.

ZEPH

Under the Baer plan, the system was estimated to cost about \$6,000,000 and self-liquidating bonds were to be used to finance the project. The project was submitted on a very indefinite basis as to construction, although the method of disposal was set out. Litigation followed and the State Supreme Court upheld the validity of the bonds, subject to certain qualifications. However, it was found that the bonds were not salable, and the project did not proceed. Another project on the basis of "pay as you go" was submitted to the people, turned down, and then another project was submitted to the people and quite a strong effort was made on the part of city officials to get it before the people in a light that would appeal to the people and, at the election, this was carried. That project provided, in a general way, for full authority on the part of the council to lay out a construction plan or method of sewage disposal. The council was restricted, as it had been under the previous plan, to any definite program. Studies were begun at once and engineers were obtained. One of them was Mr. Eddy, of Boston, a consulting engineer of high caliber, and local engineers were obtained to work up the details, so the matter progressed rapidly, insofar as the preparation of plans was concerned, up until the matter of making application of the sewer user service charge came up. The charter amendment provided for sewer user service charges to an extent of  $33 \frac{1}{3}$  per cent of the amount of the water bills. Hearings were held before the council prior to the adoption of a sewer service charge schedule, and various strenuous remonstrances were made, especially by citizens of Portland who were engaged in business enterprises of various kinds. As a result of this hearing, the council concluded that it would be necessary to have a Board of Equalization, in order to study more definitely the local conditions with reference to industries, business houses and residences. The city council then appointed

a Sewer Charge Equalization Board, of which Mr. Willard was chairman. The board met with various groups of property owners and water consumers, with the view of so synchronizing the charges that it would not be burdensome or confiscatory on any line of industry in the city Portland. Commissioner Bean, who was fathering and particularly pushing this project, was appointed to the position as state utilities commissioner. Commissioner Bowes was appointed to fill Mr. Bean's vacancy and, being uncertain as to the length of his service in the matter, the progress was delayed a little until after the May, 1940, election, when Commissioner Bowes was elected to the position of Commissioner of Public Works.

The report of the Board of Equalization was made in July 20, 1939, and was referred to the Commissioner of Public Works. He has prepared a report to the council, based on the report of the Board of Equalization, setting out temporary sewer user service charges on a basis of approximately half the amount that was authorized by the charter amendment. The proposed temporary charge now before the city council, in ordinance form, is for the purpose of financing the necessary engineering work.

A hearing has been had by the city council, and the council has adopted the report and read the ordinance the first and second reading, and it is scheduled for the third and final reading on July 5, which is the earliest date it can come up for final passage. That is a general picture of the situation.

We have come prepared to make a general showing in an attempt to answer, in a general way, all of the questions that may be submitted by the Authority. Any additional questions that members of the board wish answered that we are not prepared to answer at this time, we will be glad to answer in writing or at the time of a second hearing, if that

is the pleasure of this board.

I might say that the most difficult problem in this project is the financial problem. Efforts have been made all along the line since 1933, until now, to get aid from Congress or from some of the governmental agencies, to assist in financing a project suitable for Portland. This sewer user service charge, as authorized at the present time, from careful calculation that the Commissioner of Public Utilities has had made recently, will be inadequate to finance construction to the extent that is necessary on a "pay as you go" basis. It staggers the imagination of this city to figure out how we can pay for the proposed work on a "pay as we go" basis, because the charges, even if they go up to the maximum amount as authorized by the charter amendment, will be very difficult for many of the house owners, householders, property owners and merchants and industrial organizations to meet.

I am stating these matters not by close contact with them, because I have not personally followed the course of events. Mr. Morrow, city engineer, and Mr. Apperson, from the city engineer's office, are here, who have followed the details and construction methods much more closely. If there are any suggestions that the members of the commission have to make about this method of procedure, or any further statements that I should make at this time on whether we should proceed by question and answer, or by statements from the mayor and from the city engineer, Mr. Morrow, and Mr. Apperson, and from the different commissioners who are here, is a question for the members of the Sanitary Authority to advise us as to how we shall proceed.

Mr. Wendel: Thank you, Mr. Latourette. You realize that the people of Oregon have expressed their will in the enactment of legislation about stream purification and, in spite of the alibi which is generally

used throughout the state, astonishing progress is being made--the alibi, of course, being Portland. We will proceed on an informal basis.

Mr. Hallock: What will the proposed service charges yield annually?

Mr. Morrow: About \$130,000. While water bureau revenue is about \$1,600,000 annually, all sources of funds both inside and outside of the city are included, and this figure cannot be used for sewer revenue estimating purposes.

Mr. Hallock: Plans have been prepared. What is approximate cost for needed additional plans?

Mr. Morrow: Plans are preliminary in character and we could not proceed with construction. We have to have complete plans.

Mr. Hallock: What would be the approximate cost of assembling such data?

Mr. Morrow: Somewhere in the neighborhood of \$150,000.

Mayor Carson: Lots of people believe that the people of Portland voted and, by their vote, made an appropriation of money to carry on the work of sewage disposal. I say, flatly, that the people of Portland have never made an appropriation of money. There never has been any plans or specifications which were definite in character which could be submitted for bids for construction. Neither of those two things have ever been done. Anything that has been done by the people leaves legislative work for the council to do. Neither the act of 1938, nor the resolution of 1933, is self-executing. Neither makes an appropriation of money. Further legislative action on the part of the council would be necessary to proceed with the project.

Mr. Hallock: As I understand, the state law permits the levy of a tax of assessed valuation of not exceeding five mills for

the establishment of a sinking fund for sewage disposal. Assuming that the constitutional limitation of 6 per cent tax increase would not have prevented such a levy, one million dollars could have been levied yearly on a basis of an assessed valuation of \$200,000,000, and I am wondering if any study has been made in looking toward the establishment of such a levy.

Mayor Carson: There never has been a time, since 1931, that an advance of five mills on the city levy would not have greatly exceeded the 6 per cent tax limitation. In 1930, the operating budget for the city of Portland was, in round figures, \$5,000,000. I am just giving approximate figures, and I should say that the levy at that time was between \$3,900,000 and \$4,300,000. Six per cent of that sum would be in the neighborhood of \$250,000 a year. One mill on the present evaluation would yield \$265,000.

Mr. Hallock: Five mills is the maximum. I am wondering if Mr. Latourette, or anyone on behalf of the city, has information as to whether that statute can be construed as authorizing a levy over the constitutional limitation.

Mayor Carson: The budget deficit was almost \$250,000 in 1930; \$300,000 in 1931, and \$500,000 in 1932. Those deficits have been gradually decreased. We have balanced the budget insofar as income and outgo are concerned. I do not believe the council would have been justified at that time, nor do I believe people would have permitted such a levy to have been made in view of the cash budget deficits.

Mr. Hallock: The statute gives the council that authority without action by the voters and, furthermore, can we contemplate a deficit if we are considering tax levy which, if collected, speaks for itself. I do not see how that would affect your deficit. I am concerned with the

question as to whether or not that right to levy such a tax is in addition to the limitation or is governed by it.

Mr. Latourette: I remember that this matter was discussed. The conclusion that was reached in the question was that the constitutional limitation held against the legislature, as well as against the city council, and that the city council could not levy that 5 mill sinking fund tax of any part of it if it overran the 6 per cent increase specified as a maximum by the constitution.

Mr. Hallock: Was it briefed?

Mr. Latourette: We are now briefing it very carefully in connection with litigation pending in Judge Olson's court in the city of Portland regarding the public market. Portland has been running right along close to the margin on tax levies and bond issues for a good many years. Most of the time, the city has been under supervisory control of the Tax Advising and Conservation Commission.

Mr. Hallock: Assuming that that right to levy the tax up to a maximum of 5 mills is governed by constitutional limitation, it would seem, by the mayor's statement, it would not allow you to go to 5 mills but some figure less than 5 mills. Is that correct?

Mayor Carson: I do not know. I am not answering from a legal standpoint, but in a matter of dollars and cents.

Mr. Hallock: That gets back to the matter I have previously discussed. That is whether these possibilities and these limitations have been the subject of a study and a brief, so that the city might know to what extent they could go insofar as the 5 mill sinking fund levy will permit.

Commissioner Bennett: Has any city in Oregon levied a sinking fund tax for sewage disposal?

Mr. Green: No.

Mr. Wendel: Have preliminary plans been made going further than this preliminary step of providing necessary engineering data? Have any financial plans been made to carry out the project after the engineering studies and survey are completed?

Mayor Carson: No. No matter what the city council does in this regard, the people, if they wish, can invoke the referendum. At a hearing before the council, in 1938, conflicting statements regarding how the proposed work should be financed and who should pay most, led to the appointment of the Board of Equalization. Mr. E. C. Willard was made chairman of the Board of Equalization, because of his experience in years past with the operation of the water bureau. I believe he had something to do with setting up the accounting system. I knew facts insofar as the water was concerned, and it was a surprise to me and to others when the result of their investigation showed that \$275,000 to \$300,000 a year would be the maximum that would be raised by the schedule recommended by the Board and as authorized under the act of 1938. The lowest estimate of cost for the project we have had anyone submit, and they have been guesses, was \$6,000,000. It would take 20 years to construct the works, if their estimate was right, and, during those 20 or more years, you would have overhead expenses in the way of engineering services to carry on the work which would be needed, in addition to the amount paid contractors, etc., and, in the meantime, you would not have it completed until anywhere from 20 years to a quarter of a century under this plan.

Mr. Hallock: Do you feel that the people of this section of the state are confronted with a serious menace by the condition of the river? Should it be allowed to drift along?

(Note: The mayor here evaded and did not answer the question.)

Mayor Carson: The first thing we should have is a competent engineering job done to survey the whole terrain of 67 square miles emptying into the Willamette river and the Columbia slough, so that someone would know exactly what it would cost to construct the system. That has never been done, and that, of course, is the first thing. No one here knows where you would have to connect these outfalls; no one knows how much gravity system could be employed, how much pumping would be required, etc. These facts have not been ascertained. We asked the government for money to go ahead with government surveys and were unsuccessful in obtaining it.

Mr. Hallock: After data is assembled, would financial situation remain insuperable?

Mayor Carson: I don't know, but I do say that people should know how much it would cost and when and how it would have to be paid. You see, since 1928, including this year, the city of Portland will have paid in excess of \$20,000,000 in interest. The peak of the city's debt load will not drop precipitously until 1945. The assessed valuation is \$264,000,000 for the current year. At one time, the city of Portland bonds were not acceptable to government for postal savings. The city's credit is now second to no city in the United States. Part of this is due to the fact that the debt has been steadily decreased, which correspondingly makes less burden for the people to carry.

Mr. Veatch: If this ordinance, as has been introduced by Commissioner Bowes, is passed by the council, it will raise about \$130,000 a year. Is it contemplated that, assuming that the ordinance

passes, that this survey or start of the survey will be delayed until all the money is raised under this ordinance?

Mr. Morrow: No, that is not the intention. We would ask for authority to proceed immediately.

Mr. Veatch: The reason I ask is this. We have had a good many industries before this commission, and the answer to all questions relative to waste treatment is that they are not ready to proceed until Portland makes a move. Municipalities all over Oregon who are putting in disposal plants with heavy tax levies, all want to know if Portland is going ahead. The rates that small municipalities have levied for sewage treatment projects are much larger than those proposed for Portland. It is the impression of this board that the public not only of the state, but of the city, want this work done and are willing to stand considerable cost to get it.

Mr. Burch: Do you contemplate going ahead with your surveys and your estimates, in accordance with the recommendations of the board of engineering review that was employed last year, or do you think possibly that by making surveys you may work out a better method of disposal?

Mr. Morrow: We will follow the basic plans and studies outlined by the board of engineering review, in order that essential data, which is now lacking, may be obtained.

Mr. Hallock: Lakeview is charging annually for sewage treatment a minimum sewer service charge of \$10.20, and Nyssa \$12.00. Silverton charges canneries a minimum of \$90.00. Malin charges creameries \$200.00 and hotels a minimum of \$200.00 yearly. The service charges which are contemplated in Portland are but fractions of what are charged in smaller towns that are going along with their work.

Commissioner Bennett: I have prepared a very short statement

that I am going to read. Before I do that, I would like to make an observation. There are at least two governmental agencies involved in this matter. First is the Oregon legislature, and, second, is the city council of Portland, and this commission is a representative, indirectly, of the legislature. Therefore, we are all governmental bodies and there is no reason why we should not be frank with each other. With that in mind, I have prepared a statement, which I would now like to read.

"Statement issued to the Sanitary Authority of the State of Oregon in connection with their inquiry as to the attitude of Portland's city government in regard sewage disposal.

My attitude in this matter is as follows:

1. First and foremost, I am in favor of doing a complete job in the cleaning up not only of the Willamette River but the Columbia River as well.
2. The people of Portland have not issued a mandate to Portland's city government to proceed to eliminate sewage from these rivers. They have, by their vote, granted us the authority to attempt to do so either on our own or in cooperation with other governmental bodies.
3. It is my opinion now and will probably be my future policy as a member of the Council, to oppose any program that would lay the entire cost of this undertaking upon Portland taxpayers. If Portland was the only city guilty of polluting the rivers that would be one thing, and if that were the case, it might be an obligation of Portland only, but unfortunately, that is not the case. The Willamette River receives pollution not only from other cities but from the country-side as well.
4. Preliminary investigation and information received as the result of employment of nationally known and qualified engineers we know that the authority granted us by the people at the last election, which restricted the Council to the levying of a 33 1/3% increase in water rates as the only method of financing said undertaking, is inadequate. We also found as the result of hearings before the Council, that had we levied this 33 1/3% increase in water rates on the industries of Portland, that it would have driven many of them from our City. We also discovered that to relieve industry of its full share of the cost, and even though the full percentage should have been levied against the home owners, the total receipts would have been very little more than enough to have paid the operating overhead of the proposed program if and when completed.

The amount would have been so small that to have tried to build the ambitious plant planned, would have taken many, many years to complete.

5. Able engineers obtained by the City at a cost of \$200.00 a day each, have recommended a bond issue as the initial step in financing, and a sewer user charge as a sustaining method. Portland's city council at this time has no authority to meet this suggestion, and would not have without another vote of the people.

6. In closing this statement, I wish to reiterate the hope that someday in the near future the condition complained of will be remedied, but I believe that that will not be done until such time as financial assistance is received by the Federal Government, the State, or both, or until such time as the cleaning up of these rivers becomes an active statewide program in which case, then it could be expected, that the people of Portland would be required to meet their share of the cost in whatever manner they might select.

I have purposely refrained from discussing previous action of the people at the polls in this matter, feeling that whatever obligations the Council may have as the result of the directions given it by the people that the last, and what should be, in my opinion, the governing direction, was their vote in 1938.

(Signed) J. E. Bennett,  
Commissioner of Public Affairs."

(Note: The above statement submitted by Commissioner J. E. Bennett contains misstatements of fact.)

Mr. Burch: The Sanitary Authority was created by an initiative measure passed by the people of the state of Oregon, by a 3 to 1 vote, and not by the legislature.

Mr. Veatch: Cleaning up the Willamette river and other streams is a statewide program. Other municipalities who are contributing to pollution of the river have already taken steps to solve their pollution problems.

Commissioner Bennett: Are you levying tax in these counties?

Mr. Wendel: The Sanitary Authority has no tax levying powers.

Commissioner Bennett: What is being done to control pollution from barn-yards, pig-pens, etc., in the Willamette valley?

Mr. Burch: Mr. Bennett, if you have any complaint relative to

pollution by a barn-yard, pig-pen, or other place, you may advise this Authority, and it will be investigated.

Commissioner Bennett: Our sewage does not flow up the river, but the sewage from the upper valley flows down to us.

Mr. Veatch: Upper valley cities are taking steps to provide for treatment, and Portland is the only other city which is holding off and stalling. We want to find out what the city of Portland is going to do.

Commissioner Bennett: People should be told the truth about anything, especially when it comes to spending of public funds. I am of the opinion that the Portland project will cost \$20,000,000 at least, and if it is the sense of this sanitary board that the council should put up the question as to whether they should vote these bonds, I am willing to do this, but I am not willing, as a member of the city council, to levy a tax without consent of the people of the city of Portland.

Mr. Hallock: Why did the city not get federal aid in 1933-34?

Mayor Carson: There was no appropriation of money.

Mr. Hallock: Didn't federal agencies authorize a grant of \$2,240,000?

Mayor Carson: We were told that our bonds would have to be general obligation bonds. In the fall of 1934, a proposition to vote \$6,000,000 in general obligation bonds, to be used with a PWA grant of \$2,240,000, was decisively defeated.

Mr. Hallock: Under present war conditions, it is unlikely that federal aid may now be secured.

Mayor Carson: I conferred with Hopkins, who was WPA administrator, relative to the Portland project. As a result of this conversation, I wired our commissioner to begin surveys of the Columbia slough. Hopkins thought it was a good program. I think the local WPA administrator thought the same thing. However, the local office of PWA said they opposed construction by the WPA. In my opinion, had not the controversy occurred between PWA and WPA, we could have had several thousand men working on a useful project that would have at least started something and the city could possibly at that time have furnished sponsor's contribution necessary to carry on. We did not have 55% to match the 45% grant that had been proposed by the PWA, and had no authority to get it.

Mr. Wendel: Assuming, for the moment, that you can't see your way clear as to how the second step may be taken, have you given any thought to what practical value there might be in assessing a service charge up to the amount recommended by the Board of Equalization putting the excess over and above the cost of the survey into a sinking fund?

Mayor Carson: I have not given that phase of it any consideration, because on the basis of \$275,000, or a maximum of \$300,000 which might be collected, it would take several years before you would have enough money to do a substantial portion of the work, which would be a unit in itself. As a result of engineering studies, you would have to determine what particular area could be connected to a particular area could be connected to a particular intercepting facility and complete that as a unit. Otherwise, sewage might be run down a partly constructed intercepting facility to be put right back into the river.

Mr. Wendel: My question did not intend to bring out your immediate plans for spending this excess.

Commissioner Bowes: Until we had definite information, we

did not want to go ahead, but wanted to get necessary surveys first and then we could formulate a definite financial program.

Mayor Carson: Bennett pointed out that the survey made here by Wellington Donaldson, Abel Wolman, Mr. Corey and Mr. Green, that the initial cost of constructing the facilities would be, I think, \$7,000,000 plus for partial treatment and a minimum of \$10,000,000 if you had such a thing as activated sludge.

Mr. Morrow: The collecting system was estimated to cost \$7,000,000 and with partial treatment the cost was estimated to be about \$10,000,000. Activated sludge treatment would cost more.

Mayor Carson: The annual operating expense of these facilities has been overlooked. That is something you never hear anyone talking about. Lots of people think the activated sludge process works by itself. It has to have people constantly in attendance. The public was led to believe that sewage treatment could be done without any cost to the people, and that we were going to sell tons of fertilizer and utilize by-products of the sewage which would be translated into large sums of money. Experience at Milwaukie, and other places, does not bear out this contention. Our people have been led to believe that by some legerdemain, or by some performance, that money can be had from this mysterious source which will pay for sewage treatment. We know, from a practical engineering standpoint, that it will cost so much for annual operation, how much the plant itself will cost, what will be done with the sludge or the sewage after partial treatment or entire treatment, whatever it may be. Some say you can put multiple of sludge plants along the river and connect up to certain outfall sewers and save the expense of building larger facilities. The city of New York takes most of its sludge and barges it 15 miles out into the Atlantic

ocean. The more plants you have, the more sludge you will have to take out. Where will you put it? If you reduce it and make fertilizer out of it, you will have to stand expense for buildings, etc., and mix it with certain other ingredients. People, generally, in Portland have been led to believe that the Willamette river can be cleaned up with no substantial burden on the people here. It is not true. It is going to cost somebody real money, not only now but after its completion. It will cost lots of money annually to keep it up. I am not going to be party to not letting people know the truth.

Commissioner Bennett: At the time the people voted the sewer service charge that is now under discussion, and the only means by which they can raise revenue without going back to the people, the people were led to believe that that charge would be sufficient to do the job. Since that time, as a result of information we have received, we have found that it would not. The question I would like to ask is this: In view of the fact that we now know that the proposition that was put to the people was unworkable, are we justified in levying any money as the result of that vote of the people in 1938? Should we go back to the people with new proposition? I do not see how the council is justified in levying a new charge.

Mr. Hallock: The charter amendment gives the city council the power to proceed with project.

Commissioner Bennett: It is for one specific purpose, to be carried out in one way.

Mr. Hallock: I think the statute contemplates the very study we propose you make.

Mr. Wendel: The vote of the people of Portland indicates a desire to have the Willamette river cleaned up, and I would feel that every penny raised under that vote was a step nearer in giving the people what

they want. It may not be just as the people intended, but is carrying out wishes of the people.

Mayor Carson: Is it your view that the city should spend the necessary sum for complete engineering data, so it can adequately be determined how much it would cost to put a practical system into effect?

Mr. Wendel: I think we are all agreed that complete engineering data must be obtained. Whatever money is put into the sinking fund now will reduce the amount which must be collected later.

Mr. E. A. Averill: May I be heard on this project?

Mayor Carson: We were cited to appear here to show cause to you. Is this a public debate?

Mr. Wendel: I would not construe it as that. It is more or less an attempt to have a meeting of all minds who are concerned with this problem.

Mayor Carson: If this is to be a sounding board for a public discussion on this matter, I want to consult my colleagues before we proceed any further.

Mr. Hallock: I do not see how a discussion could prejudice this Authority. We have not attempted to stand on formalities.

Mr. Wendel: I believe Mr. Averill may be heard at the conclusion of this hearing.

Mr. Veatch: I understand that the council is proceeding with a definite plan for the purpose of raising money to conduct an engineering survey. Necessary data must be obtained before the city can go before the people with any plan. That is the program that is up right now.

Mayor Carson. That is true. That is what Mr. Bowes has in

mind.

Mr. Veatch: It is not the place of this Authority to try to tell the city council which method they should pursue. We cannot substitute ourselves for legislative authority for the council, and our only authority is to determine whether or not definite steps are being taken for accomplishing the purpose intended.

Commissioner Bowes: There has been quite a lot of misinformation given to the public, and one of the greatest pieces of misinformation is that the people of Portland have issued a mandate. The people of Portland have never issued a mandate to the council to do this.

Mr. Wendel: That is true. The situation is that people of Oregon have issued mandate.

Commissioner Bennett: Has the legislature the power to levy required tax throughout the state for this purpose?

Mr. Veatch: Would have power--yes.

Mayor Carson: One-third of taxable wealth of Oregon is in Multnomah county. It is the Willamette river, from its source to its mouth, that is under discussion. That portion of cost that might be borne by Portland if the state would undertake a project from the source of the river to its mouth, would certainly be as much or more than their share of such a tax.

(Mr. Averill had remained standing awaiting permission to speak.)

Mr. Wendel: I think Mr. Averill's discussion should be postponed until the end of the hearing.

Mayor Carson: If this hearing is intended to be a sounding board, it might be just as well heard before the city council of Portland. He then read the citation from the Sanitary Authority.

Mr. Veatch: Paper mills contribute much pollution to the Willamette river. If all treatment were to be taken care of by general tax levy, it would take care of pollution caused by private industries. Industries must pay their share of cost of stream pollution reduction.

Commissioner Bennett: Might be too much of a burden on one industry. The state possibly could pay cost of treatment for industries as well as cities.

Mr. Hallock: Where I come from, mining operators are responsible in a substantial way toward assisting us in reducing pollution on their own. They are doing it cheerfully. This is true of other industries, as well.

Mayor Carson: In the case of paper plants in Oregon City--- their refuse goes directly into the river from their plants and not through the sewer systems of Oregon City or West Linn. Industries in Portland, instead of discharging effluents into the river direct, use trunk sewers of the city of Portland. Under such conditions, the amount of pollution enters into a determination of what a particular industry should pay. What yardstick are you going to apply to a Portland industry which does not discharge effluent directly into the river, but is connected to one of the trunk sewers?

Mr. Hallock: Isn't that a detail which the city must work out and that equalization can accomplish ultimately?

Mayor Carson: If you think that is a detail when it is before the council, it will be a tortuous discussion.

Commissioner Bowes: It would have to increase basic water rate if this goes into effect.

Mr. Burch: Mr. Bennett, you speak of a state tax to take care of pollution throughout the state and the Willamette valley. All

the Authority is asking is that the city of Portland take care of the sewage of the city of Portland and nothing else.

Commissioner Bennett: I am of the opinion that all rivers of the state should be cleaned up.

Mr. Burch: Other cities are going ahead, and Portland is not.

Mayor Carson: The nature of your citation indicates that if we have not satisfied you, that appropriate proceedings of some kind, I presume legal in character, will be instituted against the city. We are here for a specific purpose. We don't want any extraneous matters brought up here if we are going to be faced with some action on the part of the Authority. We don't believe that this is an appropriate time to have any discussion that might detract, or add to, any action which may be taken by your body.

Mr. Wendel: I would not want to see that done. We thought perhaps ways might be found for getting the sewage disposal project under way. However, I am going to confine discussion, merely to the purposes of the hearing. Are there any other matters or questions to direct to the city?

Mr. Veatch: The only thing I am particularly interested in is to see that steps are going ahead to accomplish the purpose intended. The reason we issued the citation was because the city of Portland was doing nothing. We want to know what has been done and what is going to be done.

Mayor Carson: The matter before the council now is a legislative matter. The vote of any member of the council cannot be controlled by mandamus or any other action.

Mr. Veatch: What the city does is up to the good judgment of the council. In our capacity as the Sanitary Authority, we have certain duties to perform. If we find that pollution exists, we make inquiries as to what is going to be done to correct it, and I suppose that while that power has not been tested, that we would have authority to issue order to municipalities,

industries, or anyone else, to eliminate or reduce pollution. The Authority is not attempting to mandamus the vote or legislative action of the city council.

Mr. Latourette: The city and the Sanitary Authority are both confronted with the same problem. It is a matter for mutual study on all sides. City officials have studied it, and are still, and are making progress, as our statement will show. If there are any suggestions that will help us, we will be glad to make suggestions or receive them. I want to say that Commissioner Riley wanted a statement to be made here that he hoped to have been present at this hearing, but was unavoidably prevented, and Commissioner Clyde, as you know, is physically incapacitated. Riley will be glad to furnish data at his command, especially along the line of the financial resources of the city that might be available within his power.

Mr. Veatch: I do not think the Authority has any desire to tell the city how to pursue its problem. We only want to know if steps are being taken. We are approaching state institutions and other municipalities as well as everyone else who is contributing pollution.

Commissioner Bowes: About \$50,000 has already been spent on the project.

Mr. Averill interrupted to state that it was his desire to show the Sanitary Authority that the mayor and city council were not now, or ever had been, acting in good faith in trying to promote sewage disposal facilities for the city of Portland.

Mr. Wendel: Any persons desiring to discuss the matter before the Authority may remain for that purpose. The citation hearing is now closed.

STATE SANITARY AUTHORITY  
GENERAL DISCUSSION FOLLOWING  
PORTLAND CITATION HEARING

June 21, 1940

Mr. Ed. F. Averill: At the Multnomah Civic Club, Mayor Carson said that the people of the city of Portland, in 1933, did not vote any bonds. I have here a copy of a resolution that was passed by the council, 206-91, which refers to the bond issue. The statement was made that bonds were not salable. We met with the mayor and council and they made that statement. We told them that we would carry the matter to the supreme court. I, personally, furnished money to carry suit to supreme court. Supreme court held that the bonds were all right, and that they were salable, and then the city attorneys reversed their decision. They first said bonds were not salable; after supreme court's decision, said bonds were salable.

All agree there must be detailed plans and specifications. If Portland puts into effect a sewer user charge, the city will have enough money to make this survey and start a sinking fund, as referred to previously. The city could then start work on first unit of the plan, which is Columbia slough.

Mr. Wendel: Revenue bonds were only bonds ever voted by the city of Portland.

Mr. Averill: There is no necessity to have a bond issue to put in a sewage disposal system. It may be necessary to increase the sewer user charge, but it is not necessary to issue bonds. This method of sewer rental is in general use throughout the United States. (Read Cleveland data.) Massachusetts put it into effect in 1892, and in 1936, 328 cities in the state of Massachusetts were paying for sewage disposal by sewer

user charges.

If the council will proceed, in accordance with instructions given by the people and show that it is necessary to raise the charge, in order to finance project in reasonable length of time, I am sure the people will approve. The people were told it would take at least 10 years. If it takes 15 years, let us get started. Council has never presented any concrete plan for putting sewer service charges into effect. Those on the council now never will, unless forced to do it.

Mayor Carson refers to the fact that people did not appropriate any money. The people gave the council machinery to get money, if they would put it into motion. I may be mistaken, but I doubt if voters could do more than that.

Mayor Carson said the people may invoke the referendum. Why should they invoke referendum after having voted for the project?

Mayor Carson spoke of the necessity of raising water rates, in case certain industries were compelled to put in own water systems. Tax should be levied on those who do the polluting.

Mr. Wendel: Do you believe that the sentiment expressed here today is the attitude of the people?

Mr. Wm. Finley: This is something I am interested in, and have been for many years. I happened to be on a committee that met in 1937-38 to formulate legislation. In establishing this Authority, it was our understanding that the elimination or reduction of pollution would be finished in one year or two years. One question---I am not an attorney---do you legally have the right to enforce the city of Portland to clean up this river? Is that correct or not?

Mr. Hallock: Yes.

Mr. Finley: Will this Authority do it, or not, if the city

of Portland does not proceed to clean up?

Mr. Hallock: Will be left up to the Authority after a thorough discussion of the matter.

Mr. Wendel: It would seem folly to institute proceedings until the basic data has been obtained by the city. The Authority would then decide upon a course of action.

Mr. Finley: Have you taken any stand on other cities that are cleaning up?

Mr. Wendel: It has not been necessary. Cooperation has been manifested on the part of most everybody. Progress that is being made is astonishing.

Mr. Finley: I think it was a great mistake that the legislature did not give you more money, and I certainly think you ought to put up a fight in the next session of the legislature.

Mr. F. H. Young: Mr. Averill's argument is faulty, as he argued for sewer user charges suggested by Board of Equalization. Averill feels that the people of Portland will gladly approve of a substantial increase in sewer user charges. The city of Portland should first raise funds to conduct engineering studies to determine actual cost of the project.

Mr. Burch: Is the small proposed levy adequate for the purpose it is intended? If it were increased, the survey could be made much more rapidly, and the actual cleaning up of the river could be commenced sooner if larger levy was made at this time.

Mr. Young: The city would not have to wait for funds from this levy to accumulate before beginning the surveys.

Mr. Veatch: If ordinance is passed, the city will proceed immediately with the survey. I asked that specific question.

Mr. Young: Engineering survey would cost about \$150,000.

Mr. Burch: Is that going to be enough?

7/11/37

## STATE SANITARY AUTHORITY

## MINUTES OF TENTH MEETING

September 20, 1940

The meeting of the State Sanitary Authority was called to order at 10:05 A. M., September 20, in the offices of the State Board of Health, 816 Oregon Bldg., in Portland.

Those present were Chairman Harold F. Wendel, Dr. Frederick D. Stricker and the Messrs. Albert Burch, Blaine Hallock and John C. Veatch.

MINUTES: Copies of the minutes having been supplied to the members in advance, the chairman, with the consent of the board, dispensed with the reading of the minutes of the meeting of June 21.

ACTIVITIES REPORT: The secretary reviewed briefly the contents of the activities report for the months of May, June, July and August, 1940.

PROPOSED PORTLAND SEWAGE DISPOSAL PROJECT: Chairman Wendel read an opinion received from the state attorney general, relative to the Portland sewage disposal project, in which the Authority was advised that an order requiring sewage treatment could not be issued until after a public hearing had been held. Chairman Wendel also read a letter from Commissioner Wm. A. Bowes, of Portland, relative to the present status of the Portland project. He augmented this by a review of a conversation which he held with Commissioner Bowes, in which it was stated that the city council feared that an injunction suit might be filed against the city council if a higher sewer rental service charge were to be levied than that called for in Ordinance No. 74011, which became effective August 1, 1940. Mr. Burch suggested the possibility of holding a public hearing on the Portland project. Chairman Wendel advised waiting until after the city elections are over before holding

such a hearing. A general discussion of the matter followed, in which Mr. Hallock suggested working out the preliminary plans with the state attorney general, in order that a hearing might later be held. Mr. Burch recommended that an informal discussion with the city council be held after the November election, for the purpose of determining whether the council, as then constituted, may proceed more rapidly than at present.

MOTION: It was moved by Mr. Hallock, seconded by Mr. Veatch, and unanimously carried, that the Portland sewage disposal problem insofar as it concerns the Sanitary Authority, be allowed to remain in status quo for the present and until after the forthcoming November election, and then, at such time, the Sanitary Authority should ascertain the plans of the new city council in an informal discussion; that, following a determination of the council's intentions, the Sanitary Authority would then decide whether or not to proceed with a public hearing and legal action if the city council does not voluntarily proceed in a satisfactory manner.

Chairman Wendel requested the secretary to obtain additional data and make a study of the following matters:

1. A study of the Portland city charter amendment approved by the people, which permits the levying of sewer service charges for the purpose of ascertaining the maximum revenue that might be raised under the charter amendment.
2. A study of the proceedings and recommendations of the Board of Equalization, wherein the Board recommended sewer rental charges and estimated the amount of monies which might be collected under the proposed schedule.
3. An opinion as to whether or not the Board of Equaliza-

tion did not recommend a smaller charge than should have been recommended.

4. An estimate of the amount of money which may be raised by sewer service charges under the present city ordinance adopted July 5, 1940.
5. An estimate of cost for conducting surveys and for preparing preliminary plans for construction, and an estimate of cost for all engineering involved in completion of the entire project.

Mr. Wendel suggested a thorough study of the financial aspects of the project before proceeding too far with orders or public hearings, in order that the Sanitary Authority be sure of its ground in advance of public hearings. Mr. Hallock stated that the solution of the financial problems facing the city of Portland was a matter which the city of Portland should find a solution for, rather than the Sanitary Authority. Mr. Burch raised the question of whether or not the city had been using due diligence in carrying on the project. He contended that members of the city council were not using due diligence.

**PORTLAND SEWERAGE SYSTEM:** The secretary advised the Authority of plans for the construction of a trunk sewer to serve the Carson Heights-Burlingame districts of Portland, where inadequate sewage disposal has been a menace to the health of the people. The proposed trunk sewer will connect to existing sewers without the construction of an additional outfall.

**MOTION:** It was moved by Mr. Burch, seconded by Mr. Hallock, and unanimously carried, that the Sanitary Authority approve of the proposed work with the qualification that such approval in no way granted approval for the discharge of untreated sewage into the waters of the state.

ZRRZ

COLUMBIA RIVER POLLUTION SURVEY: At the request of Chairman Wendel, the secretary read a proposed interstate agreement between the Washington State Pollution Commission and the Oregon State Sanitary Authority, for the purpose of conducting a joint pollution survey of the Columbia river.

MOTION: It was moved by Mr. Veatch, seconded by Dr. Stricker, and unanimously carried, that the chairman of the Sanitary Authority be authorized to sign an interstate agreement on behalf of the State Sanitary Authority as and when the Columbia River Packers' Association, in writing, agrees to furnish, in cash and/or equipment, an amount equal to \$500.00.

In order to provide for the three representatives from Oregon on the Interstate Technical Advisory Committee, provided for in the agreement, the following motion was made:

MOTION: It was moved by Mr. Veatch, seconded by Mr. Burch, and unanimously carried, that the secretary serve on the Interstate Technical Advisory Committee, and that he be empowered to select two other members to represent the state of Oregon on this committee.

SEWAGE DISPOSAL - STATE BUILDINGS AND INSTITUTIONS: The secretary reviewed the status of proposed sewage treatment works for the various state institutions and buildings, and reported progress in this connection.

SOUTH SANTIAM RIVER POLLUTION: Chairman Wendel read a petition relative to pollution of Marks slough and the South Santiam river near Lebanon, signed by 154 persons and referred to the Sanitary Authority by Governor Charles A. Sprague. The secretary reported the results of field investigations conducted by the assistant sanitary engineer and himself, and advised the Authority that serious pollution was found to exist. After a discussion of the problem, the secretary was directed

to communicate with the mayor and city council of Lebanon relative to this matter and advise them that remedial measures must be instituted. He was also directed to communicate with the petitioners and advise them of the Authority's action.

**JOHNSON CREEK POLLUTION:** The secretary reported upon data obtained in an investigation of the pollution of Johnson creek, in Multnomah county, and was directed to notify the Gresham Berry Growers' Association that improvements must be made which will prevent the pollution of Johnson creek during the coming year. He was also directed to notify Mr. Frank Wire, State Game Supervisor, regarding the action of the Authority.

**TUALATIN RIVER AND PUDDING RIVER BASINS:** The secretary reported relative to the findings of field surveys in connection with the pollution by cities and industries of the Tualatin river and Pudding river.

MOTION: It was moved by Mr. Veatch, seconded by Dr. Stricker, and unanimously carried, that the secretary communicate with the various cities and industries involved and advise them of necessary improvements which should be initiated at an early date.

**PACIFIC CARBIDE & ALLOYS CO., PORTLAND, SEWAGE DISPOSAL AND INDUSTRIAL WASTE DISPOSAL:** The secretary reported regarding the installation of a sewer to the Columbia slough, for the new Pacific Carbide & Alloys Company plant, for the purpose of carrying cooling water and sanitary sewage to the slough.

MOTION: It was moved by Mr. Hallock, seconded by Mr. Veatch, and unanimously carried, that the Pacific Carbide & Alloys Co. be notified that it shall treat its sanitary sewage prior to discharge into the Columbia slough.

**MUNICIPAL SEWAGE DISPOSAL - MIDDLE COLUMBIA RIVER:** In response to questions raised by city officials at The Dalles and Hood River, the

secretary placed before the board the matter of sewage treatment requirements for cities in the mid-Columbia river area. After discussion, it was agreed that all new construction work to be undertaken by such cities should conform to a well-planned program for the interception and treatment of city sewage, but that it will not be the policy of the Authority to insist upon municipal sewage treatment at this time, but, rather, to encourage such construction at as early a date as is reasonably possible.

STATE GAME COMMISSION CONFERENCE: Chairman Wendel reported upon an informal discussion with the State Game Commission, on September 14. The State Game Commission expressed a willingness to cooperate with the Sanitary Authority and discussed the possibility of having representation on the Sanitary Authority.

#### WHISKEY CREEK POLLUTION AND LEGAL FUNCTIONS OF STATE

SANITARY AUTHORITY: The secretary read an opinion of the state attorney general, addressed to Mr. Frank E. Wire, State Game Supervisor, relative to pollution of Whiskey creek, a tributary of the Rogue river. The principle item discussed was the fact that, in accordance with the attorney general's opinion, specific statutes governing pollution and providing for criminal action, had not been repealed by passage of the State Sanitary Authority act. Mr. Burch discussed conditions in Whiskey creek, with which he was familiar, and advised that the mining company concerned had recently installed new equipment and methods for the prevention of cyanide poisoning in the stream, and that it would soon be installing additional equipment to further reduce or prevent water pollution.

EXPENDITURES AND BUDGET: After a discussion of salaries of the assistant sanitary engineer, Mr. C. M. Everts, and secretary

Carl E. Green, in which it was pointed out that Mr. Everts' salary had been increased on July 1, from \$200.00 to \$225.00 per month by the use of Social Security funds of the U. S. Public Health Service:

MOTION: It was moved by Mr. Hallock, seconded by Mr. Veatch, and unanimously carried, that effective October 1, the Sanitary Authority should pay Mr. Everts an additional salary of \$60.00 per month, making a total of \$260.00 per month, and that Mr. Green's salary should be increased \$65.00 per month, effective October 1, making a total of \$300.00 per month.

MOTION: It was moved by Mr. Burch, seconded by Mr. Hallock, and unanimously carried, that such funds as may be available during the remainder of the year unexpended for other purposes, be used for conducting the Columbia river pollution studies.

The meeting adjourned at 12:45 P. M., to reconvene on Friday, December 13, at 10:00 A. M.

Respectfully submitted,

Carl E. Green, Secretary,  
State Sanitary Authority.

STATE SANITARY AUTHORITY  
MINUTES OF ELEVENTH MEETING

December 13, 1940

The meeting of the State Sanitary Authority convened in the offices of the State Board of Health, 816 Oregon Building, Portland, at 10:15 A.M., December 13, 1940.

All members were present; namely: Chairman Harold F. Wendel, Dr. Frederick D. Stricker, and Messrs. Albert Burch, Blaine Hallock, Charles E. Stricklin and John C. Veatch.

MINUTES: Copies of the minutes having been supplied to the members in advance, the chairman, with the consent of the board, dispensed with the reading of minutes of the meeting of September 20.

ACTIVITIES REPORT: The secretary summarized the activities report for the months of September, October and November, 1940, and supplied all members with copies of the report.

APPROVAL OF PROJECT PLANS: After a review of project plans approved by the state sanitary engineer for the months of June, July, August, September, October and November, 1940, MOTION: it was moved by Mr. Hallock, seconded by Mr. Stricklin, and unanimously carried, that the project plans approved by the secretary be approved by the board. A list of the approved projects follows:

SEWERAGE AND SEWAGE DISPOSAL PROJECT PLANS

<u>DATE</u> 1940	<u>LOCATION</u>	<u>TYPE OF PROJECT</u>
June 7	McMinnville	City Park sewage disposal system

<u>DATE</u> 1940	<u>LOCATION</u>	<u>TYPE OF PROJECT</u>
June 11	West Slope	Northwest Home for Aged, sewage disposal system, as revised
July 24	Newport	Lincoln Co., Fairgrounds sewage disposal system as revised
Aug. 1	Klamath Falls	Moore Park sewage disposal system, as revised
12	Roseburg	Supplement project, sewage treatment plant
20	Ontario	Dist. #14 sewer extensions, as revised
22	Metzger	School sewage disposal system, as revised
Sept. 9	Silver Creek Falls State Park	Sewer System
27	Bend	County Court House sewer system
27	Butteville	School sewage disposal system, approved with provisos
Oct. 21	Prineville	Sewer system
29	Dallas	Sewer system extensions, as revised
29	Falls City	City Jail, sewage disposal system, as revised
Nov. 4	Silver Creek Recreational Area	Sewage disposal system
6	Lebanon	Evans Products Co. Sewer system and sewage treatment plant
14	Molalla	High School sewage disposal system, tentatively approved
14	West Slope	Water District sewage disposal system, approved as revised

Nov. 14	Salem	Sewer extensions, North Salem Addition
15	Salem	State Highway Commission Lot, Bldg., Sewer System
16	Wichita	School sewage disposal system, tentatively approved
20	Molalla	High School sewage disposal system, tentatively approved
20	Park Place	School sewage disposal system, approved as revised

BUDGET, 1941-43 BIENNIUM: The secretary advised the Authority that the budget request submitted by the Authority for \$36,540 had been cut to approximately \$25,000, by the state budget director. A general discussion of budget matters followed. Chairman Wendel stated that it would be wise to write to the governor and advise him relative to the Authority's position on budget matters. Mr. Veatch pointed out that we should record our stand on this matter. He also mentioned that he had asked the fishing industry of the Columbia River Basin to contribute \$10,000 to the Sanitary Authority, for its water pollution control work.

MOTION: After additional discussion by board members, it was moved by Mr. Hallock, seconded by Mr. Burch and unanimously carried, that the secretary address a letter to Governor Sprague, explaining in some detail how the proposed budget cut would curtail activity of the Sanitary Authority during the next biennium.

Chairman Wendel raised the question of what should be done if the Ways and Means Committee of the legislature should further reduce the budget for the next biennium. Mr. Stricklin, Dr. Stricker

and Mr. Burch advised that the budget, together with supporting data, should be discussed with the sub-committee of the Ways and Means.

MOTION: It was moved by Mr. Burch, seconded by Mr. Hallock and unanimously carried, that the secretary write to the chairman of the Ways and Means Committee of the legislature after it convenes, and ask for a hearing before the sub-committee and/or committee of the whole, in order that the budget requests of the Sanitary Authority might be explained and substantiated.

Chairman Wendel directed the secretary to advise all members of the Authority of the time and place of any such hearing, in order that as many members as possible may arrange to attend.

The secretary discussed the matter of a separate budget request for the continuation of the Columbia River pollution studies, which will be needed if the investigations are to continue for a period of one year or more. It was the consensus of opinion of the Authority that the Columbia River Packers, the Fishermen's union and other interested persons and organizations should prepare a bill and urge its passage, and that the request for such funds should not come from the Sanitary Authority.

PORTLAND SEWAGE DISPOSAL PROJECT: The secretary distributed a report in which various sewer service charges of the city of Portland as proposed and actually in effect were discussed. It was reported that some preliminary engineering work on the Portland project had been started, but that intensive work would not begin until early in 1941. Chairman Wendel described the colored motion pictures taken by representatives of the Wild Life Federation during the summer of 1940, which show pollution of the Willamette River at various points from Springfield

through Portland. He also mentioned a plan for showing the films at an evening gathering on December 13, to which the city commissioners were invited to attend.

SEWAGE DISPOSAL, STATE INSTITUTIONS: The secretary reviewed activities during recent months relative to plans and budget items for sewage disposal facilities of various state institutions at Salem, Woodburn and Pendleton. Estimates for the improvements have been included in budgets approved by the state budget director.

SOUTH SANTIAM RIVER AND TUALATIN RIVER POLLUTION: The secretary reported that he had addressed letters to the city officials of Lebanon, Forest Grove, Gaston and Hillsboro relative to the pollution of the South Santiam and Tualatin rivers, in which their attention was called to pollution of the two streams. The cities were asked to proceed with plans for the reduction of pollution of the two streams.

GRAND RONDE RIVER POLLUTION: A petition signed by 367 residents of Union County, relative to the discoloration and pollution of the Grand Ronde River by hydraulic mining operations in the upper watershed, was read by the secretary.

POLLUTION BY MINING WASTES: Mining operations and conditions generally in the Grand Ronde River Basin were discussed by all board members. Mr. Stricklin pointed out that certain soils when mixed with water form a colloidal solution which cannot be settled out. There is no practical way to eliminate discoloration of water when hydraulic mining operations are being conducted in soils of this type. Mr. Burch reviewed his experience, relative to hydraulic mining operations in southern Oregon and in northern California, and stated that there was no certain method for the removal or prevention of such wastes from streams,

short of stopping mining operations. Mr. Burch called attention to the fact that hydraulic mining operations may be so conducted as to coincide with periods of high flow in streams without interference with fishing and recreational uses, and that during the remainder of the year, hydraulic operations might have to be stopped. Mr. Hallock reviewed the success of certain mining operators in eastern Oregon in passing waste water from dredging operations through gravel deposits and tailings for the removal of silt before the water re-enters streams. Mr. Burch pointed out the fact that such gravel deposits gradually become plugged with the material removed, and, as a consequence, their life as filtration units is limited. Mr. Stricklin raised the question of whether or not the discoloration of waters by mining wastes should concern the Sanitary Authority. Mr. Hallock read sections of the State Sanitary Authority act which pertain to the Authority's jurisdiction over such matters.

GRAND RONDE RIVER COMPLAINT: Chairman Wendel directed the secretary to write a letter to the attorney representing the petitioners in the case for the purpose of obtaining the names of the persons or firms causing the pollution of the Grand Ronde River. Following receipt of such data, the secretary was directed to communicate with the persons conducting mining operations in the upper Grand Ronde River Basin and advise them that a complaint and request for action had been made of the Sanitary Authority, and further to inquire of such persons and firms what they can and will do to correct the conditions about which complaint has been made. The secretary was further directed to investigate the complaint when weather conditions will permit.

MARSHFIELD SEWERAGE PROJECT: The secretary advised the Authority that a request had been received from the city of Marshfield for a permit to discharge raw sewage into Coos Bay, from a proposed addition to the Marshfield sewer system. After discussion of the matter and a description of local conditions in Coos Bay by the secretary, MOTION: it was moved by Mr. Hallock, seconded by Mr. Veatch and unanimously carried, that a temporary permit for the discharge of raw sewage into Coos Bay be granted to the city of Marshfield, after such investigations as may be necessary have been made, and after having included in such permit any safeguards or provisos that the secretary may deem advisable.

INDUSTRIAL WASTE DISPOSAL PROBLEM: Chairman Wendel raised for discussion the matter of industrial waste disposal and mentioned that considerable progress had been made with municipalities, but that to date, little had been accomplished with industries. After a discussion in which all members of the Authority participated, MOTION: it was moved by Mr. Stricklin, seconded by Mr. Hallock and carried, that the secretary and assistant sanitary engineer be authorized to select an industry in consultation with Chairman Wendel, which could be used for a special study, and that the engineers should proceed with plans for the reduction of pollution by that industry, insofar as the time and resources of personnel will permit.

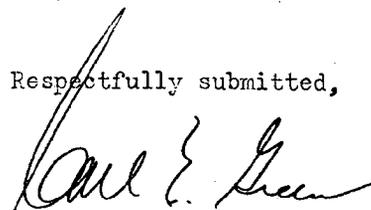

LEGISLATION: Chairman Wendel called attention to a letter from Governor Sprague regarding the submission of any legislation which should be sponsored by the Authority. It was reiterated that no legislation would be submitted at this time.

SALARIES: In connection with the refusal of the state budget

director to grant the full salary changes for the secretary and assistant sanitary engineer as previously requested by the Authority, the secretary was directed to again confer with the budget director in an endeavor to establish the salaries on a basis previously approved by the Authority.

There being no further business to come before the Authority, the meeting adjourned at 1:00 P.M., to re-convene Friday, March 14, 1941, at 10 A.M.

Respectfully submitted,

Carl E. Green  
State Sanitary Engineer  
Secretary

CEG/hs

STATE SANITARY AUTHORITY  
MINUTES OF THE TWELFTH MEETING  
March 14, 1941

The meeting of the State Sanitary Authority was called to order at 10:15 A.M., March 14, 1941, in the offices of the State Board of Health, 816 Oregon Building, Portland.

Those present were Chairman Harold F. Wendel, Dr. Frederick D. Stricker, and the Messrs. Albert Burch, Blaine Hallock, Charles Stricklin and John C. Veatch.

MINUTES: Copies of the minutes having been supplied to the members in advance, the chairman, with the consent of the board, dispensed with the reading of the minutes of the meeting of December 13, 1940.

ACTIVITIES REPORT: The secretary reviewed the contents of the activities report for the months of December, 1940, January and February, 1941. A general discussion of budget and appropriation matters followed. The secretary reported that \$23,574 had been allowed for the 1941-43 biennium, but that no additional funds had been appropriated for continuation of the Columbia River Pollution Survey.

PROJECT PLANS: After a review of project plans approved by the state sanitary engineer for the months of December, 1940, and January and February, 1941, MOTION: it was moved by Mr. Burch, seconded by Mr. Hallock and unanimously passed, that the project plans approved by the state sanitary engineer be approved by the board. A list of the approved projects follows:

SEWERAGE AND SEWAGE DISPOSAL PROJECT PLANS

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>
1940		
Dec. 4	Salem	Intercepting and outfall sewer and sewage treatment plant, preliminary designs

Dec.	9	Eugene	U. of O. sewer system reconstruction and additions
	14	Tygh Valley	School sewage disposal system as revised
	14	Marshfield	Sewerage Extensions
<u>1941</u>			
Jan.	9	Woahink Lake	Honeyman State Park sewage disposal system as revised
	11	Portland	Powell Valley Rd. Water Dist. Sewage disposal system, tentatively approved.
	16	Clear Lake (Marion Co.)	School sewage disposal system as revised
	24	Portland	Carson Heights, Burlingame, Capitol Hill sewer system extensions
	29	Woahink Lake	Honeyman state park Kitchen waste disposal system
Feb.	10	Klamath Falls	Sewer extensions, Hot Springs Addition
	12	Latham (Lane Co.)	School sewage disposal system
	17	Medford	Sewer extensions, Medford and Hillview Additions
	21	Portland	U. S. Army Air Base, Sewer system and sewage treatment plant, preliminary plans approved
	24	Albany	M & M Wood Working Co. Sewage disposal system Tentative approval
	27	Wichita (Clackamas Co.)	School sewage disposal system

LABORATORY AND OFFICE FACILITIES: The secretary advised that the 1941-43 appropriation provides money for a laboratory and additional office space. He raised the question of where the laboratory facilities might be

located because additional office space would be required if laboratory facilities were to be installed in space now occupied by desks. Dr. Stricker advised that there was no further space available on the 8th floor of the Oregon Building, but that some space was available on the 4th floor. After a thorough discussion by board members, MOTION: it was moved by Mr. Hallock, seconded by Mr. Veatch and unanimously carried, that a special committee consisting of Mr. Wendel, Dr. Stricker and the secretary be delegated to outline the requirements of the Authority as to office and laboratory space.

COLUMBIA RIVER POLLUTION SURVEY: The secretary distributed a statement of expenditures made in connection with the Columbia River Pollution Survey, in which it was shown that the total Washington state expenditures as of January 31, 1941, were \$1346.49 and the Oregon expenditures at the same time were \$1535.10. Oregon expenditures as of February 28, 1941, totaled \$1763.14.

The secretary then reported that Mr. M. T. Hoy, of the State Fish Commission, had advised him that the Fish Commission had been able to transfer only \$500 of the \$1500 previously allocated for the survey, because of limited funds in present Fish Commission accounts. Mr. John C. Veatch, Chairman of the State Fish Commission, explained that the Fish Commission must pay the State Tithing Fund and its share of the State Police Fund before money becomes available to the Commission for other purposes. After discussion by various board members, Mr. Veatch stated that the Fish Commission could draw a voucher for \$1000 to be paid the State Sanitary Authority, which voucher could be transmitted to the State Treasurer for payment as soon as the funds become available.

The secretary was asked how long the field staff could continue with present funds. He advised that sufficient funds were on hand to

continue operations through the months of March and April. Chairman Wendel stated that he would be glad to accompany the secretary on any visit to Salem for the purpose of collecting funds authorized by a State Fish Commission voucher.

PROPOSED REVISED AGREEMENT, COLUMBIA RIVER POLLUTION SURVEY: The secretary submitted a revised agreement for approval by the State Sanitary Authority and the Washington State Pollution Commission, from which had been removed all reference by name to persons employed for field work. The revision was made necessary by the resignation of two of the original field staff. Mr. Hallock pointed out that the new agreement did not make mention of the fact that it superseded the original agreement dated October 3, 1940. He suggested the inclusion of the following item:

"Item 7. Former Contract Superseded. This agreement shall stand in lieu of and shall supersede and be deemed as annulling the contract between the parties hereto, executed in behalf of the State Sanitary Authority on October 3, 1940, and in behalf of the Washington State Pollution Commission on October 4, 1940, but shall be considered effective as of the date of said prior contract."

Item 7 being acceptable to the Sanitary Authority, MOTION: it was moved by Mr. Burch, seconded by Mr. Veatch and unanimously carried that the revised agreement be adopted.

The secretary next reported on the status of the field work of the Columbia River Pollution Survey, and of the activities of the Interstate Technical Advisory Committee.

## MUNICIPAL SEWAGE TREATMENT PROJECTS

Portland: Chairman Wendel reported that he had discussed the project with Commissioner William A. Bowes, and that Mr. Bowes advised him of the city's efforts to employ a competent engineer to supervise the field investigations and the preparation of plans. Mr. Bowes reported that the city is considering five applicants. Mr. Bowes estimated that it would take six more months to complete the engineering surveys, and that data should be ready for consideration in October or November, 1941, following which, a method of financing may be submitted to the voters in May, 1942, unless a special election were called sooner. The secretary reported that six men are at present employed in gathering data pertaining to the Portland project.

Springfield: The secretary advised that a suit filed against the city of Springfield in November, 1940, by Mr. D. T. Bayly who operates a swimming resort at Eugene, had been thrown out of court on a demurrer. A copy of the decision of Judge Skipworth was read, and the secretary reported his plans to obtain further data regarding the case.

Eugene: The Authority was advised that plans were being prepared for the construction of a sewage treatment plant at Eugene during the summer of 1941.

Prineville: The new Prineville sewer system and sewage treatment plant were placed in operation since the last meeting of the Authority.

State Institutions: The secretary reported that the legislature had appropriated \$75,000 for sewage disposal of the various state institutions in and near Salem, and \$20,000 for the Eastern Oregon State Hospital, Pendleton.

GRAND RONDE RIVER POLLUTION: The secretary read correspondence which he had had with the Oroplata Mining Company, following which it was decided that nothing additional should be done at this time, but that a field investigation should be conducted as soon as a representative of the Authority happened to visit Union County.

SOUTH SANTIAM RIVER POLLUTION: The secretary read letters which he had written to the city of Lebanon in regard to pollution of the South Santiam River and advised that no action had yet been taken by the city. He also read a letter from Mr. George H. Randell, City Recorder of Lebanon, dated March 13, 1941. After a discussion by board members, MOTION: it was moved by Mr. Hallock, seconded by Mr. Veatch, and unanimously carried, that the secretary of the Sanitary Authority address a letter to the Mayor and City Council of Lebanon, advising them that unless they give immediate written assurance to the Sanitary Authority that they are employing a competent engineer and otherwise vigorously proceeding with a program calculated to abate the nuisance created by the discharge of sewage and industrial wastes into the South Santiam River, the Authority will issue a citation directing the city to appear before the Authority and show cause why the Authority should not proceed with an action for the abatement of a nuisance.

#### TUALATIN RIVER POLLUTION

Hillsboro: The secretary read correspondence between himself and Mr. J. W. Barney, the City Manager of Hillsboro, pertaining to the treatment and disposal of sewage and industrial wastes into the Tualatin River at Hillsboro. After a thorough discussion of the problem and a review of the data obtained by the Sanitary Authority engineers, MOTION: it was moved by Mr. Burch, seconded by Mr. Hallock and unanimously carried, that the secretary address a letter to the city of Hillsboro similar to that being addressed to

the city of Lebanon, in which the city would be advised that unless they proceed to carry out the instructions of the Sanitary Authority, the city would be cited to appear before the Authority and show cause why an order to abate a nuisance should not be issued.

Forest Grove and Gaston: The secretary was directed to write to the city officials of Forest Grove and Gaston, and request compliance with previous instructions calling for the installation and operation of chlorination equipment at their respective sewage treatment plants.

PUDDING RIVER POLLUTION: The secretary reported relative to his correspondence and conversations with Mr. Carl Huber, plant superintendent, and Mr. Arthur L. Reiling, production manager of the Ray Maling Company Cannery at Woodburn, relative to matters of waste treatment and pollution of the Pudding River. It was pointed out that no plan had yet been prepared for the reduction of pollution of the Pudding River and that the secretary had advised Mr. Reiling of the necessity for at least removing all cores, peelings, etc., by efficient fine screening. MOTION: It was moved by Mr. Hallock, seconded by Mr. Burch and unanimously carried, that a letter similar to that addressed to the cities of Lebanon and Hillsboro be sent to the Ray Maling Company.

POLLUTION COMPLAINT STUDIES FILE: The secretary raised the question of what type of complaint reference file the Authority members would like for their use. It was agreed that the secretary should keep a comprehensive file showing the status of all pollution complaints, and that board members should be supplied with a master index which would show the status of each complaint.

INDUSTRIAL WASTE PROBLEM STUDY: The secretary reported that the Authority was committed to a program of investigation of possible treatment

methods of flax waste at the Oregon State Penitentiary during the coming summer. In response to Mr. Veatch's inquiry, the secretary reported that the use of an inmate of the institution to assist in the research work had been discussed with the warden and a representative of the State Board of Control. After a discussion of the general problems of industrial waste treatment, it was stated by Chairman Wendel that in his opinion, it was not the place of the Sanitary Authority to work out all treatment or disposal methods for the many industries of the state.

OREGON SHIPBUILDING COMPANY: The secretary reported regarding his correspondence and investigations pertaining to sewage disposal from the Oregon Shipbuilding Company yards. MOTION: It was moved by Mr. Burch, seconded by Mr. Hallock and unanimously carried that a temporary permit be given to the Oregon Shipbuilding Company for the discharge of raw sewage into the Willamette River, until such time as the Portland sewage disposal project is constructed, and at that time provision for connection to the Portland system must be made or a treatment plant installed in accordance with plans acceptable to the Sanitary Authority.

PENDLETON: SEWAGE DISPOSAL: The secretary discussed the activities of Mr. Everts and himself pertaining to the disposal of sewage from the city of Pendleton, the Eastern Oregon State Hospital and the new Army Air Corps Base. The Authority was advised that plans were being prepared and money had been allocated for the complete treatment of sewage from the Eastern Oregon State Hospital and the Army Air Base, but that the Pendleton city treatment plant provided for only primary treatment. MOTION: It was moved by Mr. Stricklin, seconded by Mr. Hallock and unanimously carried that the city of Pendleton be required to treat its city sewage to the same extent

as that required of the U. S. Army and the Eastern Oregon State Hospital. Mr. Hallock suggested that if assurance was not obtained from the city officials that they would proceed in accordance with the requirements of the Authority, that steps be taken to issue a citation. Mr. Wendel stated that evidence of progress should be at hand at the time of the next meeting of the Sanitary Authority in June, 1941.

#### NEW POLLUTION COMPLAINTS

Fanno Creek: The secretary reported that a petition had been received complaining of the pollution of Fanno Creek, a tributary of the Tualatin River in Multnomah and Washington Counties. Mr. Everts reviewed his field investigations of the complaint and stated that milk wastes from the Elco, Alpenrose and Pleasant View Dairies were the principal cause for the complaint. It was found, however, that sanitary sewage from various places also was being discharged into the Creek, and that a more detailed investigation of such pollution was under way.

Chemawa Indian School: The secretary reported that a complaint had been received regarding faulty waste disposal by the Chemawa Indian School, that a field investigation had been made, and that the matter had been referred to the U. S. Public Health Service and the U.S. Indian Service for correction.

FEDERAL LEGISLATION AND MATCHING FUNDS: The secretary advised that HR-1110 had been introduced into the 77th Congress by Representative Spence. This bill is similar to the Barkley-Vinson bill of previous sessions of Congress.

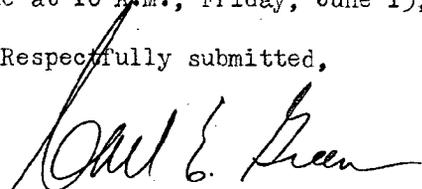

The possibility of obtaining federal funds on a matching basis for Sanitary Authority work was considered, following which MOTION: it was moved by Mr. Hallock, seconded by Mr. Veatch and unanimously carried, that any action on this matter be delegated to the chairman, Dr. Stricker and the secretary.

MERIT SYSTEM: Chairman Wendel advised that the U. S. Public Health Service had demanded that each state to which it allocates funds set up a merit system for employees. He discussed the merit system specifications for engineering personnel, and stated that he felt the Sanitary Authority should have been consulted regarding salaries of the staff. After a discussion of salaries for personnel, MOTION: it was moved by Mr. Hallock, seconded by Mr. Veatch and unanimously carried, that the salary ranges specified for Sanitary Authority personnel described in the proposed merit system of the State Board of Health should be as follows:

State Sanitary Engineer	\$260 to \$350 per mo.
Principal Assistant (Associate) Sanitary Engineer	\$235 to \$300 per mo.
Assistant Sanitary Engineer	\$200 to \$250 per mo.

There being no further business to come before the Authority, the meeting adjourned at 12:40 P.M. to visit the Columbia River Pollution Investigations Laboratory, and to reconvene at 10 A.M., Friday, June 13, 1941.

Respectfully submitted,

  
Carl E. Green  
State Sanitary Engineer  
Secretary

CEG/hs

STATE SANITARY AUTHORITY  
MINUTES OF THE THIRTEENTH MEETING

June 12, 1941

The meeting of the State Sanitary Authority was called to order at 10:30 A. M., June 12, 1941, in the offices of the State Board of Health, 816 Oregon Building, Portland.

Those present were Chairman Harold F. Wendel, Dr. Frederick D. Stricker, and the Messrs. Albert Burch, Charles Stricklin and John C. Veatch.

MINUTES: Copies of the minutes having been supplied to the members in advance, the chairman, with the consent of the board, dispensed with the reading of the minutes of the meeting of March 14, 1941.

ACTIVITIES REPORT: The secretary reviewed the contents of the activities report for the months of March, April and May, 1941. Mr. Green pointed out that Dr. Levin had been called to active duty in the Army thus creating a vacancy in the Interstate Technical Advisory Committee, and that this vacancy would probably be filled by Dr. Sears of the Medical School.

PROJECT PLANS: After a review of project plans approved by the State Sanitary Engineer for the months of March, April and May, 1941,

MOTION: it was moved by Mr. Burch, seconded by Mr. Veatch, and unanimously carried, that the project plans approved by the state sanitary engineer be approved by the Sanitary Authority. A list of the approved projects follows:

<u>Date</u> 1941	<u>Location</u>	<u>Type of Project</u>
March 4	Salem	Intercepting sewer and sewage treatment plant
7	Blue River	School sewage disposal system
17	Portland	Oregon Shipbuilding Corp. Temporary sewage disposal system
26	Portland	U.S. Army Air Base Sewer System
26	Pendleton	U.S. Army Air Base Sewer System
31	Portland	Oregon Shipbuilding Corp. Sewer System
31	Medford	Prescott Memorial Park Sewage disposal system
April 21	Silver Creek Falls State Park	Sewerage system extensions
28	Fall Creek	School Dist. #67 Sewage Disposal System
May 19	Pendleton	U.S. Army Air Base Sewage Treatment Plant
19	Eugene	Preliminary plans and specifications, sewage treatment plant.

#### TUALATIN RIVER POLLUTION

Hillsboro: Mr. J. W. Barney, City Manager of Hillsboro, came before the Authority to discuss problems of industrial waste disposal confronting his city. Mr. Barney described the treatment plant facilities operated by Hillsboro both for domestic sewage and industrial wastes. He mentioned that experimentation with ozone had been under way for some time, but that it was not yet known whether such treatment was practical. The difficulty of floating a bond issue for additional treatment units for cannery waste was outlined and the possibility of disposing of the

industrial waste by irrigation, ponding or both was described. The problem of controlling odors and insect breeding if ponds are to be used was discussed by Mr. Barney.

Upon being questioned by the Authority, Mr. Barney related that the city was more or less obligated to treat and dispose of the waste from the B. E. Maling Company cannery. A discussion of screening processes at the plant followed, in which it was stated that all cannery waste was passed through rotary fine screens before discharge into the city sewer.

Mr. Burch raised the question of whether or not vacuum filters had ever been considered for the removal of suspended solids. Mr. Green called attention to the fact that a device called a vacuator had recently been developed for the removal of suspended solids from industrial wastes. The waste after passage through such a unit would, however, still need additional treatment for the removal of solids in solution.

Further discussion of the possibility of ponding followed, and Mr. Barney stated that it would be necessary to acquire land for the purpose. The area considered usable is flooded each winter by high water in the Tualatin River.

Dr. Stricker asked if the Ray Maling Company cannery was still ponding wastes at Woodburn. Mr. Green replied that it was and that additional capacity of ponds was being considered at the present time. Attention was called to the fact that all solid wastes such as peelings and cores are ground up and added to the plant sewer at Woodburn, complicating treatment, whereas this was not the case at Hillsboro.

Upon inquiry by Mr. Wendel, Mr. Green reported that the activated sludge units treating Hillsboro sanitary sewage were being operated more efficiently.

Mr. Barney was asked if he might be able to outline some plan for more adequate treatment in the near future. Mr. Barney stated that he believed this might be done and that if such a plan could be approved by the Sanitary Authority and State Board of Health in advance of it being submitted to the city council of Hillsboro, there should be no difficulty proceeding with the project. He intimated the irrigation, ponding or a combination of both seemed to offer the cheapest solution to the problem.

Tualatin River - Turbidity: Mr. Charles D. Dolph, an attorney representing Avalon Park, appeared in behalf of Mr. John Frederick. The Authority advised Mr. Dolph that the operators of two gravel washing plants on Gales Creek had been directed orally and in writing to improve their operations and reduce the turbidity of Gales Creek and the Tualatin River. Mr. Green also reported that the State Highway Commission had been written about their gravel plant operations on Dairy Creek and that the situation would be investigated further, and any action necessary would be taken.

Mr. Green called attention to two letters and a petition signed by 38 persons relative to the turbidity of the Tualatin River.

OFFICE AND LABORATORY SPACE: Messrs. Wendel and Green and Dr. Stricker reported relative to new office space available on the 4th floor of the Oregon Building. After some discussion, it was agreed that arrangements should be made to obtain the space jointly with the Division of Sanitary Engineering of the State Board of Health.

MOTION: It was moved by Mr. Veatch, seconded by Mr. Stricklin, and carried that the space on the fourth floor of the Oregon Building be acquired.

PERSONNEL: Chairman Wendel advised the Authority that Mr. Green had submitted his resignation as State Sanitary Engineer. Dr. Stricker reported that the State Board of Health had appointed Mr. C. M. Everts, Jr. to succeed Mr. Green.

COLUMBIA RIVER POLLUTION SURVEY: The secretary called attention to the fact that the State Fish Commission had experienced some difficulty in obtaining sufficient funds to meet its entire \$1500 obligation to the Sanitary Authority. Five hundred dollars are still unpaid by the Fish Commission. The secretary suggested that any available Sanitary Authority funds unexpended at the end of June, 1941, be used to pay a portion of the cost of the Columbia River Survey. This suggestion was approved.

TUALATIN RIVER BASIN POLLUTION: The secretary reported that the city of Forest Grove had advised that a chlorinator would be installed as requested.

Oral commitments have been secured from representatives of the city of Gaston to likewise install a chlorinator.

#### SOUTH SANTIAM RIVER POLLUTION

Lebanon: The secretary read various letters written to the city of Lebanon and the one reply received from the city. After a thorough discussion, MOTION: it was moved by Mr. Burch, seconded by Mr. Veatch and carried that the secretary of the Authority be instructed to issue a citation to the city of Lebanon to appear and show cause, on a date to be later determined why the city should not cease pollution of the South Santiam River, and to serve such citation unless, in his judgment, proper progress is being made by the city of Lebanon towards carrying out the directions of the Authority.

#### PUDDING RIVER POLLUTION

Ray Maling Company Cannery: Mr. Everts reported relative to his

field investigations and discussions with Messrs. Reiling and Huber of the Ray Maling Company. The company proposes to reduce the volume of their waste about 40% and to install additional sedimentation and evaporation ponds for the purpose of reducing pollution of the Pudding River. Plans have not been submitted for this work, but the company's representatives are advised that it would be satisfactory to try the methods which they have in mind.

PORTLAND PROJECT STATUS: The secretary reported that City Engineer Ben S. Morrow and City Commissioner William Bowes were leaving shortly for the East for the purpose of visiting various sewage treatment plants and to interview two applicants for the position of engineer to assume charge of the Portland project investigations.

PENDLETON: The secretary reported that plans for sewer extensions in Curry's and Phelps' Additions in Pendleton had been submitted to the office for approval by the Pendleton Housing Corporation and that the plans were not approved for the reason that the city had not complied with instructions by the Sanitary Authority. Following this action, Mayor C. L. Lieuallen of Pendleton, who is also manager of the Housing Corporation, complained to Governor Sprague by telephone. The governor then called the office, and in the secretary's absence, discussed the situation with Mr. Everts. The secretary reported that he conferred with the governor regarding this matter on June 3, and that the governor had seen fit to substantiate the stand taken by the Sanitary Authority. In the discussion of this matter, it was pointed out by Mr. Everts and Mr. Green that the plans for sewer extensions had been examined, that certain changes necessary in the design had been indicated to Mr. Simms, engineer for the Housing Corporation, and that Mr. Simms had been advised to proceed with the work but not to connect to the city system until approval had been given.

After discussion by all board members, it was decided that a representative should visit Pendleton at the first opportunity, confer with the city officials and the Housing Corporation officials regarding the matter, and determine whether or not the city is proceeding in good faith.

**SIGNING OF CHECKS AND VOUCHERS:** The secretary called attention to the fact that with his resignation, it would be necessary to have authority from the board for the new secretary to sign vouchers and checks. Mr. Wendel advised that such a resolution would be prepared and transmitted to Salem.

**EXECUTIVE SESSION:** At the request of Chairman Wendel, the secretary and assistant sanitary engineer left the meeting while various matters were discussed in executive session. Following the executive session, Chairman Wendel reported the following actions by the Authority.

**PERSONNEL: MOTION:** It was moved by Mr. Burch, seconded by Mr. Veatch and carried, that the difference in salary of \$12.50 per month authorized by the State Budget Director and due Mr. Green for the months of April, May and June be paid.

Dr. Stricker reported that Mr. Everts had been appointed State Sanitary Engineer by the State Board of Health and would be paid \$235 per month from Board of Health funds.

**MOTION:** It was moved by Mr. Veatch, seconded by Mr. Burch, and carried, that Mr. Everts' salary be supplemented by \$37.50 per month from Sanitary Authority funds. The matter of later increases in salary for the State Sanitary Engineer was discussed informally.

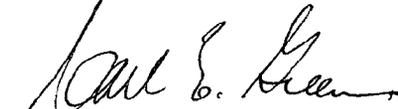

During a discussion of duties of the state sanitary engineer, it was recommended by Dr. Stricker that the state sanitary engineer continue to function as secretary and chief engineer for the Authority as in the past.

Discussion followed regarding moneys available for personnel and the amount which should be offered in obtaining an Associate Sanitary Engineer and the Assistant Sanitary Engineer. MOTION: it was moved by Mr. Veatch, seconded by Mr. Burch and carried, that the state sanitary engineer be authorized to offer up to \$250.00 per month as salary to be paid to an Associate Sanitary Engineer.

MOTION: It was moved by Mr. Burch, seconded by Mr. Stricklin and carried, that a salary up to \$200.00 per month be authorized for an assistant sanitary engineer.

ADJOURNMENT: There being no further business to come before the Authority, the meeting adjourned at 1:30 P.M. to convene on Friday, September 12, 1941, at 10 A.M.

Respectfully submitted,

Carl E. Green  
State Sanitary Engineer  
Secretary

TRANSCRIPT OF HEARING  
ON  
HILLSBORO INDUSTRIAL WASTE DISPOSAL

June 12, 1941

Those present at the hearing were:

STATE SANITARY AUTHORITY

Members:

Harold F. Wendel, Chairman  
Albert Burch  
Dr. Frederick D. Stricker  
Charles E. Stricklin  
John C. Veatch

Carl E. Green, State Sanitary  
Engineer and Secretary

Curtiss M. Everts, Jr.,  
Assistant Sanitary Engineer

--  
Mr. J. W. Barney, City Manager  
Hillsboro, Oregon

Mr. J. W. Barney, City Manager of Hillsboro, appeared before the State Sanitary Authority to discuss the matter of industrial waste disposal confronting his city.

Mr. Wendel: It is your desire to discuss with the Commission your plant at Hillsboro?

Mr. Barney: I want to talk to you about the disposal of our cannery wastes. You are probably not familiar with our problem in Hillsboro, but a few years ago, the city constructed an activated sludge plant to treat its domestic sewage. This plant, I believe, does a pretty good job. There is located in Hillsboro one of the largest canneries in the state, and the waste from this cannery is responsible for conditions in the Tualatin River, and it is this problem that I wish to discuss with you today. So far, we have been unable to find any method

for the disposal of cannery wastes that we believe would be efficient enough to improve conditions in the river. We have considered irrigation and ponding although we realize that following such a plan may cause complaint. We have experimented with ozone treatment, but our results were not conclusive, and some time may elapse before this treatment process is satisfactorily developed. There are great possibilities in the ozone method of treatment for cannery wastes, but as yet we do not have enough information concerning it. Due to the fact that we have just floated a bond issue, and a rather sizeable one for a city of our population, another bond issue will be difficult to obtain.

Mr. Burch: Does the cannery discharge into your sewer system?

Mr. Barney: Yes. We could divorce ourselves from the cannery and force them to take over, but we are more or less obligated to take care of that. We have been charging a service charge for the lines that we built to accommodate the plant and get it into our outfall line, so that I feel that if we break from the cannery, it's going to be disastrous for everyone. Might even run to a court fight.

Dr. Stricker: Do they screen all their wastes?

Mr. Barney: The screen as well as they can. They have been doing a pretty good job of screening this year. Much better than last year.

Dr. Stricker: Are they using grinding pumps? To grind up the solids?

Mr. Barney: No.

Mr. Burch: What type of screens do they use?

Mr. Barney: Rotary, fine mesh screens.

Mr. Burch: Have they ever tried vacuum filters?

Mr. Barney: I believe not.

Mr. Burch: They are expensive to install, but not expensive to operate. They take care of all solids.

Mr. Barney: After the material goes into our plant, we give it primary sedimentation and settle out all settleable solids.

Mr. Wendel: Have you seen the chart showing what these wastes do to the river?

Mr. Barney: No, but I've seen the river.

Mr. Wendel: Is there any hope of a solution in sight?

Mr. Barney: I was wondering how the State Board of Health would feel about irrigation. There is some property available, but there's too much water for the amount of land there. If ponding would be practical, we could control the odors and nuisance.

Mr. Green: Do you have a site?

Mr. Barney: We would have to buy the property owned by Mr. Trent. One farm of a little over a hundred acres.

Mr. Green: During the seasons when there is considerable spring rainfall, while it is more difficult to get rid of the waste, the damage in the stream might be less. The condition of the water during the recreational season is our main concern. Low flows usually occur during this season of the year. There has been developed in southern California a unit called a "vacuator," in which it has been demonstrated that high removal of solids such as cannery suspended solids can be removed in a fairly small unit. Such a unit is now under construction for a large plant in Palo Alto. It looks hopeful that it may be of benefit insofar as that phase is concerned. It may be that ground disposal may be the answer to the other problem.

Mr. Barney: We would simply have to buy the property adjacent.

Mr. Green: The Trent property?

Mr. Barney: Yes. If we use irrigation or ponding, we would have to buy that property. We have spent quite a little money already trying to appease Mr. Trent.

Mr. Burch: You could probably pond there during the summer months.

Mr. Barney: The cannery doesn't operate during the three winter months, and this particular site that we hope to use for ponding is covered by eight to twelve feet of water in the winter.

Mr. Burch: Then there'd be no need to drain it.

Mr. Barney: We might have to take some measures for odor and mosquito control. We could probably put over a plan employing ponding or irrigation. Our people are not at all opposed to cleaning up. In fact, I think we can boast of probably as progressive town as there is in the valley. I think Mr. Green will agree that the city of Hillsboro has tried to solve the problem as best they can. If we are forced to go into a more expensive treatment or disposal system, we will simply have to force the cannery to pay more.

Mr. Veatch: This would just concern cannery wastes only?

Mr. Green: There are two outfall lines, one for the city sewage and one for the cannery. These two lines are kept separate.

Mr. Wendel: As far as ponding would be concerned, that would be a State Board of Health problem.

Dr. Stricker: Are they ponding at Woodburn?

Mr. Green: Yes. They have some odor from that pond when pear packing is on, but the people take it for granted and don't object much.

Mr. Wendel: I think that the proposal that Mr. Barney makes is good.

Mr. Barney: At Woodburn, they grind all their wastes. I was just thinking that by use of screens perhaps we would get off easier. We would have much less solids to decay.

Mr. Burch: Use a vacuum filter for solids. Put in a press and sell for feed.

Dr. Stricker: The cost of packing doesn't pay for food value. Pear wastes are practically all cellulose. It is an expense for them to haul it away, and they don't like to do it any more than they have to.

Mr. Wendel: Do you feel that you're getting better efficiency in the treatment plant in Hillsboro?

Mr. Green: The activated sludge plant is doing better.

Mr. Wendel: I meant from the standpoint of operation.

Mr. Green: Yes. They have been working on ozone experiments, only on a small scale so far, but it might turn out to be something. Mr. Barney, could you go ahead sometime fairly soon with some sort of plan as discussed heretoday?

Mr. Barney: I think so. If we can work out something that isn't too expensive and will meet with the approval of the Sanitary Authority and the State Board of Health. In other words, when I can be able to tell my people that these are the requirements of the Sanitary Authority and the State Board of Health, and that when this is done, it will meet with their approval, I think they will be willing to cooperate.

Mr. Veatch: We want you to work out a practical plan for waste disposal.

Mr. Barney: The council knows nothing about things like this. They just don't know which way to turn, but as soon as something concrete is put before them, they will act upon it.

Dr. Stricker: Does the Carnation Company waste go through your outlet?

Mr. Barney: Yes, through our line. The waste goes through from their plant to our outfall sewer and the river.

Mr. Green: The milk wastes are not so strong as compared to the other wastes.

Mr. Barney: I understand that the ozone treatment of wastes is being used extensively in some places in Europe.

Mr. Green: It has been used in France for some time. There is a company in the United States using it, too.

Mr. Veatch: I knew a Belgian who was working on that. His laboratory tests were fine, but he never could produce it in sufficient quantities to be of practical use for sewage treatment.

Dr. Stricker: For swimming pools and water supplies, we would not recommend it at all. It is uncertain.

Mr. Barney: Probably take a number of years to develop it to where it might be used for sewage.

Mr. Wendel: Do you see a solution in sight?

Mr. Barney: I first thought of irrigation. But after the experience this spring, we find that irrigation alone won't take care of it.

Mr. Green: Have you consulted anyone at the Oregon State College Experiment Station?

Mr. Barney: No. I have looked up in books how much waste can be disposed of by irrigation on land. If conditions were ideal, a hundred acres would consume a lot of water.

Mr. Green: Dr. Powers is an expert on such things. There is a project now to dispose of pulp and paper mill wastes by irrigation on

Lands near Lebanon. You might be able to get some advice and assistance on your problems there. Dr. Powers knows the soils in the Valley, how much water may be applied to them, etc. Don't you think it's a good idea to contact Dr. Powers, Mr. Stricklin?

Mr. Stricklin: It's worth a trial.

Mr. Barney: This soil consists of gumbo and then quicksand. I even thought of digging down into the quicksand strata. It isn't very deep, 8 or 10 feet to the quicksand strata. The only trouble is we can't deal with the gentleman by the river.

Mr. Stricklin: How much water do you estimate it can handle during the summer?

Mr. Barney: 650,000 gallons each 24 hours. With the Carnation Company, it would be a million gallons a day of industrial wastes.

Mr. Stricklin: There are possibilities for irrigation.

Mr. Green: That is why I suggested Powers might be contacted.

Mr. Wendel: The paper mills are very cooperative. They are spending a thousand dollars on research this summer to try to find a way to dispose of their wastes. Why not take it up with the cannery, and see if they would do likewise?

Mr. Green: The college is doing the work. The pulp and paper mill is paying the costs.

Mr. Barney: I believe that if we get some system that is satisfactory all the way around, I think we can bring the cannery people to a reasonable settlement. Also the Carnation Company.

Mr. Stricklin: Mr. Green, why don't the three of you--your office, the city and the college--see if you can work something?

Mr. Green: I would be glad to take it up with the men at the

college, if that meets with your approval, Mr. Barney. They could give us advice as to the capacity of the land to carry water, the type of crops, etc.

Mr. Barney: Would it be feasible to set up for irrigating what we could, and pond the other? Pond half of it or something like that.

Mr. Green: You might be able to put someone on that property to farm it for you and defray some of the cost.

Mr. Barney: I'm afraid that if it was known that we had intentions of buying it, the cost might go up.

Mr. Burch: Some remote farmer might get an option on the place.

Mr. Veatch: Does this waste have any fertilizing value?

Mr. Green: Very little.

Mr. Barney: If we control this one farm, there would probably be 50 or 60 acres more of adjoining property we could irrigate.

Dr. Stricker: Seems to me Trent was rather indisposed to sell.

Mr. Barney: He said once that he would. We wouldn't want to put any money into it until we feel sure we can go ahead. I hope we can work out something that will meet with your approval and not cost too much money.

Mr. Wendel: Thank you, Mr. Barney.

MINUTES OF THE FOURTEENTH MEETING  
OF THE  
STATE SANITARY AUTHORITY

September 12, 1941

The meeting of the State Sanitary Authority was called to order by Chairman Harold F. Wendel, at 10:20 A.M., September 12, 1941, in the offices of the State Board of Health, 816 Oregon Bldg., Portland, Oregon.

Those present were Harold F. Wendel, Chairman, Dr. Frederick D. Stricker, and the Messrs. Albert Burch, Charles E. Stricklin and John C. Veatch.

MINUTES: Copies of the minutes having been supplied to the members in advance, the chairman, with the consent of the board, dispensed with the reading of the minutes of the meeting of June 12, 1941.

ACTIVITIES REPORT: The secretary reviewed the contents of the activities report for the months of June, July and August, 1941.

PROJECT PLANS: After a review of plans for sewerage projects submitted for examination and approved by the State Sanitary Engineer during the months of June, July and August, 1941, MOTION: it was moved by Mr. Burch, seconded by Mr. Stricklin, and unanimously carried, that the following sewerage project plans be approved by the Sanitary Authority:

<u>Date</u> 1941	<u>Location</u>	<u>Type of Project</u>
June 26	Silver Creek Recreational Area	Sewers and sewage disposal
26	Camp Ridge Road Clatsop County	Sewers and sewage disposal
26	Coquille	Trunk sewer relocations
July 2	Medford Army Cantonment	Preliminary sewage treatment

<u>Date</u> 1941	<u>Location</u>	<u>Type of Project</u>
July 11	The Dalles	Sewer extensions
14	Lebanon	Sewer extensions
31	Benton-Polk County Cantonment	Preliminary sewage treatment
Aug. 1	Salem	Extensions to Madison Street sewer
13	Milwaukie	Sewers
18	Pendleton Curry's & Phelps' Add.	Sewers
22	Roseburg	Sewage treatment plant by-pass
22	Mt. Vernon School Lane County	Sewage disposal

PROGRAM FOR SEWAGE TREATMENT PLANT CONSTRUCTION: Mr. Herman Kehrli, Executive Secretary, and Mr. Langtree, Field Representative of the League of Oregon Cities, appeared before the Authority to obtain the Authority's reaction to a program through which cities in Oregon might now begin to lay aside money to be later used to finance sewage treatment plant construction. Mr. Kehrli stated that he had received considerable amount of comment from municipal authorities on the question of stream purification and sewage treatment plant construction, and that he was interested in learning more about the program of the Sanitary Authority, in hopes that some plan might be devised under which cities, where sewage treatment was not of an immediate urgent necessity might begin now to lay the ground work for fiscal plans for future sewerage works construction. Mr. Kehrli reported that the League of Oregon Cities had cooperated with a number of municipalities in the outlining of financial plans for sewage treatment plants that have already been constructed, and in many instances, his organization had rendered assistance in the preparation of local sewer service charge rates.

In addition, the League of Oregon Cities has suggested that communities in which the construction of sewage treatment plants will be required in the future begin now to make plans for financing this work in advance. The general feeling seemed to be that both the people and local authorities realized that sewage treatment plant construction was inevitable, but to date, were apparently taking no action to proceed with any plans which would result in the construction of the needed facilities. It appeared to Mr. Kehrli that if the Sanitary Authority would suggest to cities in which there is no emergency situation requiring immediate construction that if they would immediately begin to finance the construction of their sewage treatment plants, such a plan would receive favorable consideration on the part of the Sanitary Authority. Then work on municipal treatment plant construction would possibly proceed at a much more rapid pace.

Under such a plan municipalities would avoid the creation of future bonded indebtedness by establishing a reserve. The present time did not appear to Mr. Kehrli to be a very good one for construction except where there is an emergency situation related to national defense, and at such a time as the Army may be demobilized and from the standpoint of general planning in the state and nation, worthwhile construction projects will be necessary. If money was available to finance these projects, it would be unnecessary to issue bonds, increase taxes or apply to the federal government for financial assistance to obtain funds for sewage treatment plant construction. Mr. Kehrli pointed out that Eugene had attempted such a plan and had now accumulated some \$40,000 to apply toward the construction of a sewage treatment plant when such facilities are required.

Mr. Wendel asked if any cities other than Eugene had indicated their willingness to follow such a plan. Mr. Kehrli replied that individually no city had approached them on the subject, but that numerous local

authorities were cognizant of the fact that sewage treatment plant facilities were needed, but because of the magnitude of the financial problem, no action was being taken. Mr. Kehrli stated further that he would like to be in a position to know whether he might say to a city that they would be required to construct a sewage treatment plant, and that they could show evidence of their good faith to the State Sanitary Authority by adopting a fiscal plan now under the 1931 act which authorizes municipalities to accumulate funds for work to be undertaken in the future.

Mr. Veatch believed that the Sanitary Authority should take the position that where any municipality is proceeding in good faith to work out its sewage disposal problem, it should be allowed a reasonable length of time to accomplish it. In addition, he stated that the Sanitary Authority should require all municipalities to attempt to devise some sort of plan which would result in a solution to the problem of sewage treatment.

In some further discussion of the matter, Mr. Wendel asked if a resolution adopted by the Sanitary Authority would be of assistance to Mr. Kehrli in his program. Mr. Kehrli replied that he was interested only in knowing the reaction of the Authority to the plan, in order that he might suggest such a procedure to local authorities in the periodical news letter sent out from the League of Oregon Cities office.

Mr. Wendel stated that the Authority, being extremely practical, realized the many problems that exist in the effort of communities to provide sewage disposal facilities. He pointed out that the Authority was extremely tolerant and would favor any program, particularly a financial one, which would look toward the definite end of providing sewage disposal facilities, and in the absence of any emergency or any situation which would demand immediate attention, the Authority would certainly work with

any community in which the plan proposed was being undertaken. Mr. Burch then pointed out that the plan should be approved in principle, but as to the question of time, each individual case should be presented to the Authority for review.

WILLAMETTE RIVER BASIN: The chairman then called on the secretary to discuss the problem arising out of the establishment of an Army cantonment in the upper Willamette River Basin near Corvallis and Albany. The secretary directed attention to Appendix B of the Activities Report, to which there was attached a sketch on which the location of the outfall sewers of cities who were discharging raw sewage into the Willamette River above the cantonment water supply intake was shown. It was pointed out that although a filtration plant would be constructed to treat the water supply for the Army cantonment, experience has shown that the discharge of raw sewage into a stream above a water supply intake will overload the filtration works, and that unless competent and efficient operation of the plant is practiced, the possibility of a disease outbreak would always be present. A reduction in domestic sewage pollution of the Willamette River would minimize any chance disease outbreak, should the filtration plant be temporarily out of service due to breakdowns.

Since the act under which the State Sanitary Authority was created charged the Sanitary Authority, as well as the State Board of Health, with the responsibility of protecting streams used for water supplies, it was believed that the Authority might wish to take some action relative to the matter.

The secretary further stated that he had contacted local authorities in all of the cities involved and advised them that if and when the cantonment was constructed that treatment of domestic sewage would be

required. After some discussion relative to the project, the secretary recommended to the Authority that a warning letter be forwarded to the communities involved advising them that if the cantonment water supply is taken from the Willamette River, that treatment of domestic sewage from their city would be required.

Dr. Stricker advised the Authority that in the event the cantonment was constructed in this area, that the State Board of Health would have to enforce existing state statutes and insist on the construction of sewage treatment plants in all communities discharging raw sewage in the Willamette River above this water supply intake.

Following the discussion relative to the matter of sewage treatment for the municipalities involved, MOTION: it was moved by Mr. Burch, seconded by Mr. Veatch, and unanimously carried, that letters be sent to the cities of Corvallis, Harrisburg, Eugene, Springfield and Cottage Grove stating that they are expected to have sewage disposal plants in operation by May 1 of next year in order to take care of the demands for the cantonment.

PORTLAND PROJECT: The chairman then requested the secretary to report on progress made by the city of Portland in connection with the Portland sewage treatment project. The Authority was advised that the city of Portland has now obtained the services of Mr. Bartow, Sanitary Engineer, to replace the late Mr. Smith, who was formerly in the Sewer Department. Mr. Bartow is spending full time on supervision of the design of intercepting sewers, gathering of data, etc. The plans for the east side intercepting sewer are practically complete, and design crews are now working on plans for the Columbia Slough and west side interceptors. Studies of metropolitan Portland are being made to make certain that any sewer construction will

have ample capacity for the additional load which may be imposed on it, should suburban areas later become a part of the city of Portland. Flow measurements are being taken at 20 stations, and analyses of physical and chemical characteristics of the sewage are being made by a private laboratory.

Following this report, there was some discussion as to whether or not the city of Portland had attempted any financial plan. It was generally agreed that no further action should be taken relative to the Portland project at this time.

**PERSONNEL:** It was reported by the secretary that considerable difficulty had been experienced in securing competent engineering personnel to fill the vacancies which now exist. Letters addressed to the heads of sanitary engineering departments at various colleges, to the Public Health Service, brought little encouragement, due to the fact that the Army, the Navy or the U. S. Public Health Service had employed all available sanitary engineers. Efforts will be continued, however, to secure qualified persons to fill the vacancies, and it was hoped that at least one of the positions would be filled within the next thirty days.

**COLUMBIA RIVER POLLUTION INVESTIGATIONS:** The secretary briefly outlined the work now under way in connection with the Columbia River Pollution Investigations and pointed out that all of the funds promised to the State Sanitary Authority for the conduct of the work would be received when the Oregon Fish Commission forwarded a final payment of \$250. It was reported that with the funds on hand, the work could probably be financed through October and possibly through part of November, but after that time, the project could no longer be supported from those funds. It was suggested that unused funds for salary and travel in the Sanitary Authority appropriation could be used to continue the investigations until they are

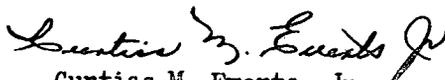

completed in an estimated period of from four to six months. It was generally agreed that the Sanitary Authority funds should be used for this purpose.

WILLAMETTE RIVER SURVEY: The secretary reported that in conference with U. S. Public Health Service personnel detailed to assist in the conduct of the Columbia River Investigations that there was a possibility that some assistance might be obtained from the Public Health Service in connection with a complete water pollution investigation of the Willamette River. The investigations would probably be justified on the basis of national defense, and further, the Public Health Service should be interested in such a survey, inasmuch as the river is now so badly polluted that any corrective measures adopted would obviously be apparent in the condition of the river in the future. After a brief discussion on the matter, the secretary was authorized to draw up a plan and submit it to the Surgeon General in the hope that such a survey could be undertaken.

WATER POLLUTION COMPLAINT REGISTER: The secretary told the members of the Authority that the water pollution complaint register was in the process of preparation and should be completed within the next week or ten days. Upon completion, copies of the register will be mailed to each of the members.

There being no further business, at 12:05 P.M., it was moved by Mr. Veatch, seconded by Mr. Stricklin and unanimously passed, that the meeting adjourn to reconvene at 10 A.M., Friday, December 12, 1941.

Respectfully submitted,

  
Curtiss M. Everts, Jr.  
State Sanitary Engineer  
Secretary

CME/hs

MINUTES OF THE FIFTEENTH MEETING  
OF THE  
STATE SANITARY AUTHORITY

December 12, 1941

The meeting of the State Sanitary Authority was called to order by Chairman Harold F. Wendel, at 10:15 A.M., December 12, 1941, in the offices of the State Sanitary Authority, 412 Oregon Building, Portland.

Those present were Harold F. Wendel, Chairman; Dr. Frederick D. Stricker, the Messrs. Albert Burch, Blaine Hallock, John C. Veatch, Col. Wm. A. Aird, representing the Oregon Business & Tax Research, Commissioner William A. Bowes and Senator Lew Wallace.

MINUTES: Copies of the minutes having been supplied to the members in advance, the chairman, with the consent of the board, dispensed with the reading of the minutes of the meeting of September 12, 1941, and the minutes were approved as prepared by the secretary.

ACTIVITIES REPORT: The secretary reviewed the contents of the activities report for the months of September, October and November, 1941.

PROJECT PLANS: After a review of plans for sewerage projects submitted for examination and approved by the State Sanitary Engineer during the months of September, October and November, 1941, MOTION: it was moved by Mr. Burch, seconded by Mr. Hallock, and unanimously carried, that the following sewerage project plans be approved by the Sanitary Authority:

<u>Date</u> 1941	<u>Location</u>	<u>Type of Project</u>
Sept. 16	Mt. Vernon School	Sewage disposal
23	Maple School	Sewage disposal
29	Myrtle Point	Sewer extensions (General Plan)

<u>Date</u> 1941	<u>Location</u>	<u>Type of Project</u>
Oct. 7	Willakenzie School	Sewage disposal
7	Elmira School	Sewage disposal
14	Independence	Sewer extensions Pumping stations

NEW INDUSTRIAL PLANT ESTABLISHMENTS: Because of the establishment of new industrial plants in the state, the secretary requested a statement of policy relative to sewage and industrial waste treatment facilities for new industries located in Oregon. Following some discussion on the subject, MOTION: it was moved by Mr. Veatch, seconded by Mr. Hallock, and unanimously carried, that industries which hereafter locate outside of corporate limits shall provide treatment for both domestic sewage and industrial wastes. Those industries which hereafter locate within the corporate limits of a municipality should make arrangements to dispose of domestic sewage into the municipal sewerage system if such sewerage system is available. The degree of treatment required for industrial waste discharged into municipal sewerage systems will depend upon the quantity, quality and characteristics of the waste. If municipal sewerage facilities are not available for the disposal of domestic sewage and industrial wastes either with or without pre-treatment, then adequate facilities for the treatment of these wastes must be provided.

PORTLAND PROJECT: The chairman then requested Commissioner Wm. A. Bowes to discuss the status and prospects of the Portland sewerage and sewage treatment project. Commissioner Bowes stated that surveys and engineering investigations were under way, but as yet were not complete due to the difficulties encountered in obtaining qualified engineers for sewerage investigations and design activities. Mr. Bowes reported further that an

engineer had been employed for a period of about four months to supervise the work of approximately 17 persons who are carrying on the necessary research and field investigations. Flow records are being obtained, and analyses of the physical and chemical characteristics of the Portland sewage have been determined. In addition, surveys are under way on high and low level intercepting sewers.

It was further reported by Mr. Bowes that the chief difficulty with which the city of Portland was now faced was the matter of obtaining a qualified and experienced engineer for the design of intercepting sewers and the sewage treatment plant. Experienced firms of consulting engineers have been retained by federal agencies and are no longer available for municipal work. Mr. Bowes stated that the city had now collected \$203,619 from sewerage service charges. Of this amount, some \$20,000 was used to pay for the services of consultants and \$17,981 for personal services, equipment, etc., required for the investigations conducted to date. A balance of some \$165,638 remains, which sum will be increased somewhat in March when collections from certain districts in the city have been completed. Because the council had given the impression that the charge would be discontinued when the money collected was sufficient to defray the cost of engineering investigations, it was Mr. Bowes' opinion that the charge should be discontinued until such time as the plans were ready and the financial structure set up and presented to the people for approval.

Mr. Hallock suggested that the charge be continued and a sinking fund established to accumulate moneys which might later be used for the construction of sewage treatment works.

It was Mr. Bowes' opinion that such a plan would not be acceptable to the people of the city of Portland.

Chairman Wendel suggested that the charge not only be continued but that it be increased to the maximum of  $33 \frac{1}{3}\%$  of the water charges, since it was his belief that the city would be proceeding lawfully both by city ordinance and by state statute, and that through such a plan, funds could be accumulated at a time when construction could not be undertaken. Chairman Wendel also pointed out that it would be much easier to finance the project with part of the money on hand. Mr. Bowes replied that if the charge were increased or continued, the ordinance would be repealed in the May primary.

Colonel Aird agreed with Mr. Bowes, and remarked that cooperation might be expected from industries in connection with the continuation of the charge, but that the individual home owner, although he wanted pollution of the Willamette River reduced, was unwilling to assume the cost of it.

Following some discussion relative to the advisability of continuing the service charge, State Senator Lew Wallace mentioned that the city of Lebanon was faced with a serious problem in which they were involved with the pollution of the South Santiam River, but that the city was proceeding to make plans for the construction of treatment works. Mr. Wendel pointed out to Senator Wallace that the State Sanitary Authority had threatened the city of Lebanon with court action before any studies were undertaken by that city.

At that time Mr. Bowes asked to be excused and stated that before any action was taken relative to the discontinuation of the service charges that he would call for a joint meeting of the city council and the State Sanitary Authority to discuss the matter.

**MUNICIPAL SEWAGE TREATMENT:** The secretary reviewed the plan presented to the Authority by Mr. Kehrli, Executive Secretary of the League of Oregon Cities, at the September meeting, and suggested that a letter be

sent to all municipalities for which sewage treatment is indicated, in which the local authorities would be advised that sewage treatment plants would be required in the future, and that the recommendation be made that service charges or the 5 mill tax be put into effect as early as possible in order to create a sinking fund to defray the cost of sewage treatment plant construction which might be undertaken at a later date.

Following some discussion on the matter, MOTION: it was moved by Mr. Hallock, seconded by Mr. Burch, and unanimously carried, that the chairman, the secretary and Mr. Veatch cooperate in the preparation and addressing to the various cities concerned, a communication containing the material suggested.

RULES AND REGULATIONS: The secretary requested authorization from the State Sanitary Authority to prepare rules and regulations governing the submission of engineering data on sewers, sewage treatment facilities, etc. for review and approval. The secretary mentioned that the State Board of Health approves plans, specifications, etc., for water supply systems and swimming pools, and that it was expected that the State Board of Health would adopt similar regulations, governing the submission of engineering plans for water works structures and swimming pools.

MOTION: It was moved by Mr. Hallock, seconded by Dr. Stricker, and unanimously carried, that regulations for the submission of engineering plans be prepared by the secretary in cooperation with Mr. Burch and Mr. Stricklin, preparatory to submission to the Sanitary Authority for adoption.

INDEPENDENCE PERMIT: The secretary then discussed his action in granting a temporary permit to the city of Independence to discharge untreated sewage into the Willamette River for a period not to exceed three years. It was explained that the permit was granted to enable the city to proceed

immediately with the installation of extensions and additions to the existing sewerage system. MOTION: It was moved by Mr. Burch, seconded by Mr. Hallock and unanimously carried, that the action of secretary in issuing a permit to the city of Independence to discharge untreated sewage into the Willamette River for a temporary period of time be approved.

PERSONNEL: Authority was granted to the secretary to use Sanitary Authority personnel, should any emergency arise in connection with water supply, sewage disposal, etc., in which engineering assistance in addition to those employed by the State Board of Health would be needed.

In connection with the employment of an additional engineer by the Sanitary Authority, it was generally agreed that the additional engineer should not be employed at this time. In the event of an emergency, however, the secretary was granted authority to employ an additional engineer.

Mr. Kenneth H. Spies, Associate Sanitary Engineer, who had reported for assignment on November 1, had been introduced to members of the Sanitary Authority prior to the meeting.

COLUMBIA RIVER POLLUTION INVESTIGATIONS: Members of the Authority were advised by the secretary that the investigations of the Columbia River were proceeding as well as could be expected with the difficulties encountered in obtaining equipment and maintaining personnel. Information relative to the location and factors responsible for the growth of slime organisms in the river were explained, and it was estimated that actual field work on the Survey should be completed within the next four months.

BUDGET: The secretary requested and received authority to begin preparation of the biennial budget for the two-year period beginning July 1, 1942.

PORTLAND PROJECT: Chairman Wendel raised the question as to whether

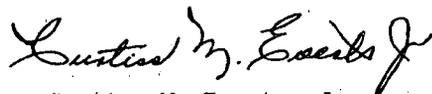

it was the consensus of opinion of those present that the Sanitary Authority should proceed further than merely recommending the continuation of the present minimum sewerage service charge for the city of Portland, or whether the Authority should recommend that the full service charge be placed in effect as authorized by city ordinance.

Mr. Hallock expressed the opinion that he was rather fearful of the advisability of suggesting an increase at this time, and it appeared that the opinion of the members in general was that it would not be wise to advocate an increase in the Portland sewer users' service charge at this time.

SALARY INCREASE: The chairman requested Miss Helen Shearer, Office Secretary, to retire from the meeting, in order that matters concerning her salary might be discussed. The chairman then read to the members of the Authority a letter addressed to him by the secretary, in which an increase in salary from \$85.00 to \$100 per month was recommended for Miss Shearer. Following a discussion on the matter, MOTION: it was moved by Mr. Veatch, seconded by Dr. Stricker and unanimously carried, that Miss Shearer's salary be increased to \$100 per month, provided it received the approval of the State Budget Director; otherwise that Miss Shearer's salary be increased to the maximum amount permissible.

There being no further business, the meeting adjourned at 1 P.M., to reconvene at the office of the State Sanitary Authority at 10 A. M., Friday, March 13, 1942.

Respectfully submitted,

Curtiss M. Everts, Jr.  
State Sanitary Engineer  
Secretary

## STATE SANITARY AUTHORITY

TRANSCRIPT OF DISCUSSION ON STATUS  
OF  
PORTLAND SEWERAGE PROJECT

December 12, 1941

## PERSONS PRESENT

## State Sanitary Authority:

Harold F. Wendel, Chairman  
Dr. Frederick D. Stricker  
Albert Burch  
Blaine Hallock  
John C. Veatch

Curtiss M. Everts, Jr.  
Secretary  
Kenneth H. Spies  
Associate Sanitary Engineer

--

City Commissioner Wm. A. Bowes  
State Senator Lew Wallace  
Col. Wm. A. Aird, representing  
Oregon Business & Tax Research, Inc.

Mr. Wendel: Commissioner Bowes, would you discuss the status and prospects of the Portland project?

Mr. Bowes: I think that our records are open, and I think you are fairly familiar with what we are doing.

Mr. Wendel: As we understand the matter, the sewer service charge fee has been levied now for a little over a year, and the surveys and engineering work is nearing completion.

Mr. Bowes: The data on the levy is right, but the surveys and engineering are not complete. About a year and a half ago our sewer engineer, Mr. C. H. Smith, died, and we immediately made plans to get another engineer. About that time this emergency appeared. The government through various agencies, and the Army and Navy employed qualified men almost as fast as they could get them, which made it very difficult for us to get a man. We visited Cincinnati and found a young fellow interested in the job. He took a Civil Service examination and came out within the first three. Mr. Morrow and I went to the east to see various plants and purposely to interview this man from Cincinnati, whose name is Bartow. He has been here about 4 months, has taken over the supervision of the city sewer system and has done all research work necessary to obtain information on the sewerage system. We have employed to date a total of 17 people who are continuing with the work. They have made flow records and are making analyses of the character and quality of the sewage. Surveys are being made of high level and low level intercepting systems. Now we are up to the point of engaging a high class designing engineer. You can't find any in the country available. We've had several people and several national organizations out here up to 4 or 5 months ago who wanted to take on the work. But now they notify us they are not interested during the emergency, and it appears that we're going to

be delayed for sometime on completing and drawing up plans. Our effort is being directed toward having our information complete and correct so that when we can find the man for the job, we can put him to work immediately. We visited nine different plants in the East. Some of them have problems very similar to our own. The man we really want is Mr. Schropfer in St. Paul. I believe he is one of the finest operators and has one of the most efficient plants in the United States, from our observations of other cities. We have also given consideration to a man in Detroit, but he now is working on the Burma Road. I don't know whether Mr. Schropfer is interested in accepting the Portland position or not. He loves his work, and I am uncertain whether we could get him to come out here. However, we're going ahead with what man power we can get which we believe is competent, and we're going to carry it forward as rapidly as we can even during the emergency. During this war if Portland is bombed, it might completely change our sewer system, so we're sitting on the fence. As long as we're in the position that we are at present, we're going ahead with the work. So far, \$203,619 has been collected from the service charges. Twenty thousand dollars was used to pay the expenses of Wolman and Eddy. We have spent actually on personal service and other minor expenses: equipment needed for testing, etc., \$17,981.00. There is a balance of \$165,638.00, which will be increased somewhat when the tax revenues are in from other districts. This total will not be complete until about the middle of March if we discontinue the service charge. That money is going to be used, and it was so stated that it would be used, to do all preliminary work, such as surveys and to prepare plans upon which a contractor could give us a bid. This would include the engagement of a high class man to do the work. That is the status of the project today. As to what we intend to do, although it did not so state

in the ordinance or in the matter on which the people voted, it was our understanding, and we were so advised by the city attorney it was in the Commission's discretion, to levy a sewer service charge. You are acquainted with our Equalization Board. A certain amount of money was needed to make the survey. It was the will of the council and recommendation of the engineer at the time that this thing went before the council, that we levy a minimum charge of 10 cents to raise a sufficient fund with which to prepare plans and make surveys. It was the intent of the Council and was discussed openly at council meeting, and I think it was the general understanding of everyone that when sufficient funds were raised to do this work that we would discontinue the sewer users' service charge unless we were in a position to proceed with actual construction of the plant. We have by publicity but not by ordinance put ourselves on record that when this money is sufficient, we would discontinue it until such time as we had those plans ready, and we had a financial structure set up and approved, upon which we could proceed to construct interceptors and plant.

Mr. Hallock: Why not continue that fund for this system right along and build up a fund?

Mr. Bowes: No matter if we put on the 33 1/3%, we would still need a very large amount of money to construct a plant and intercepting system which would have to be raised by government grant or a bond issue or both. The council is very much concerned about continuing this levy and building up a fund and then when the time comes, and we submit a bond issue or government loan, the people will say "No." If the Government said "No", and we had to go back to the people, and then the people said "No", which they might after this emergency is over, then we are in a position of having a fund upon our hands with which we could do nothing but argue about from time to time. We feel it is the better course to discontinue the charge as of the

first of January, and when the plans are complete and our financial structure is approved, then immediately put it back on at 10¢ or 33 1/3¢.

Mr. Hallock: Has anybody complained about paying the charges? I must say that it comes to me as an astonishing bit of logic that it is a mistake to accumulate funds on the theory that you might get the money and then some day be in the position where you can't utilize it.

Mr. Wendel: It appears to me, and I think I'm voicing the sentiments of the Authority, from discussions we have had at previous meetings, that were you to not only continue this charge but to increase it to the maximum, it would be proceeding lawfully both by the ordinance of the city and also according to the vote of the people in their desire to have the work done. You would be proceeding lawfully and wouldn't this period of emergency when nothing can be done in the way of construction be the time to accumulate funds which can be used eventually in defrayment of part of the cost of the work? Of course, I don't expect that all the money needed can come from this fund unless this is going to be a 10 or 15 year war, which I doubt. In the first place, it's just as if you and I were to go into business together and needed \$30,000 to establish the business. If we had \$10,000, it is much easier to borrow \$20,000. The city will find itself in that same position. If it attempts to float revenue bonds for 75% of the cost, it is much easier to do it. You would have a junior security of cash on hand. That is the first principle I would like to establish. The second principle is this: I would like to see Portland take the leadership in a program, as it has in many other respects, of trying to accumulate now some moneys for public works which can be used when the deflation comes.--Money on hand that can give employment at a time when it will be badly needed so that we will not have to borrow from the future for employment. It might be the salvation of the

entire country if we do this. Although it is only a drop in the bucket, it is setting the way and would have a salutary effect upon every other municipality in the state.

Mr. Hallock: It would also have a tremendous moral stimulus.

Mr. Bowes: There is another angle. This emergency has brought an additional burden on industrial and home owners. Unless this thing is discontinued or if we put on the maximum immediately, there would be a movement to repeal the sewer users' service charge which would be put on your May ballot, and if I'm any judge, it would be repealed, and we would be without any means of proceeding at all.

Mr. Wendel: I seriously question that.

Mr. Bowes: Such a movement is on foot now.

Mr. Burch: In my judgment, it will be ten years before you can finance the construction of sewerage facilities. After the war is over, there will be a period when bonds can't be floated. If the sewer users' charge is continued, you would have accumulated in the neighborhood of  $2\frac{1}{2}$  to 3 million dollars, which would help out a long, long ways toward financing the cost of construction.

Mr. Hallock: Following the depression of 1929 the municipalities who had money were in a position to move forward. It is a tremendous stimulating influence. The difficulty is that so many people were caught with nothing. They were just helpless. If I can sense the feeling of the people, I wouldn't be at all open to the possibility of the suggestion of repeal.

Mr. Wendel: If the time comes when repeal is attempted, you will have plenty of proponents who will take the stump for you which will far out-number those against it.

Mr. Bowes: Ben Morrow and the Board of Equalization have heard a

great deal of industries on this thing. You can't depend on the support of the fellow with a low income. Unless he is interested in pollution, the only thing he sees is the extra 30 or 40¢.

Mr. Wendel: I think when it is explained to these industries and small home owners that this is something which they in effect, ordered done and which is certainly desirable from other standpoints--when they understand, I think you're going to remove a large part of those objections.

Mr. Bowes: I hope you're right; and certainly that would be a logical argument--to create employment when the backlog comes such as in 1937. And we're going to need it.

Mr. Hallock: God help us if they put our domestic water supply out of commission, and we have to depend on the river for drinking water.

Col. Aird: We're not concerned about industries so much as about different home owners, etc. You can convince the industries as to the advisability of these things.

Mr. Wendel: It is my understanding that the housewives really wanted this thing cleaned up.

Col. Aird: They want it, but they're not willing to pay for it.

Mr. Veatch: Wasn't the small home owner the one who voted for the charge?

Mr. Wendel: I suppose the Commission, if we were to proceed blindly, could go ahead and order the city to do the work. The Commission has taken the attitude that as long as some reasonable progress continued to be made, the Commission is going to be content. Suppose we don't even require that progress which can be made to be made, I would feel personally, if the people of the state concurred in that, that we should go to the governor and resign our posts, and recommend that this law be repealed. Isn't that logical?

Mr. Veatch: I know we all get our reactions from individuals, but the reaction we've gotten around the state is that outside municipalities say you're letting Portland lay down on this thing. I think the facts that you gave here, Mr. Bowes, should be made public.

Mr. Bowes: We've made them public time and time again.

Mr. Veatch: I certainly agree with what has been said with regard to continuing of the charge, for as I look at it, you are, by a painless method at the present time, doing something which the people can do at the present time. Undoubtedly, you will have a substantial fund accumulated by the time the city is ready to use it.

Mr. Bowes: The Equalization Board met and reviewed the situation up to date, and they passed a motion, that, if in the judgment of the city engineer, he would recommend the discontinuance of the service charge to the council, the council could act upon his recommendation. The Equalization Board can do nothing more than make recommendations. If the city council wants to continue it or discontinue it, it's up to them. The city engineer will make his recommendations to them.

Mr. Wendel: This is a matter of policy and finance, not engineering.

Mr. Bowes: In the first place, someone came to Commissioner Clyde and wanted to know whether or not they would continue the charge when the sum had reached \$100,000 and inasmuch as we had accumulated that and more, why should it be continued? Mr. Morrow, the city engineer, discussed it with me. At my request, they called a meeting of the Equalization Board and discussed continuing and discontinuing of sewer service charges. I just wanted their judgment on the matter. It was their recommendation that the matter be left in the hands of the council and the city engineer. The council is the only one that can revoke the charge.

Mr. Wendel: Don't you believe that there is some logic and reasoning to our point of view?

Mr. Bowes: There are good arguments on both sides. You have stated a very sound policy this morning.

Mr. Hallock: Does it really seem to you there could be any semblance of just criticism which involves accumulating this fund which might resolve itself in a situation where you had a lot of money on hand and couldn't use it?

Mr. Bowes: I don't know how familiar you are with the people of Portland. The great majority are small home owners. I think you'd find out in a survey taken now, in my judgment at least, that they would repeal it. I may be wrong. I hope I am. I would hate to see it happen, and I would hate to see a fund built up that this council or some future council couldn't use because they wouldn't give us a bond issue.

I think the question before the council is whether they're going to continue the 10¢ service charge. I'm frank to tell you it would be utter foolishness to increase it to 27¢ today. If an attempt were made just at this time to double or treble the amount collected--you'd have it repealed at the May primary.

Mr. Wendel: I think if the reasons for it were given proper support and publicity--

Mr. Bowes: With this war, you couldn't give it adequate publicity. It's difficult right now to get any kind of publicity. Things that were headlines last week are not even getting local briefs now.

(Senator Lew Wallace made his appearance).

Col. Aird: We have an increase in property tax which is a very small increase, but there's a lot of people who object to the increase. They would probably object to this, too.

Mr. Wallace: You don't propose to cut that off?

Mr. Bowes: The council is the only one to do that.

Mr. Wallace: The people have voted this twice, one time to bond themselves. The people have expressed their opinion twice. I doubt if there will be any concentrated movement on the part of the people to object to this. When I'm elected governor, the pollution won't stay in the Willamette River.

Mr. Bowes: Sure as hell you're not going to be elected governor.

Mr. Wallace: Well, I'm in the Senate this year.

--

Mr. Burch: Well, why not go ahead with this thing, and then if you have to fight for it, fight for it.

Mr. Bowes: You're right.

Mr. Wendel: Unfortunately, Portland's rather on the spot with other cities in the state. When we tell them to put in treatment works, they say look at your own city of Portland. Portland is really a vulnerable point in our arguments.

Mr. Bowes: I think we are making progress.

Mr. Wallace: I was down at Lebanon, and I found because of the paper mill or pulp mill of some kind, there's quite a bit of pollution in the river there, and they seem to be going ahead with treatment works now. If these towns out in the state can do it, it's certainly going to make it pretty difficult for the city of Portland to back down.

Mr. Wendel: It took threatened court action on the part of the Sanitary Authority before Lebanon started work.

Mr. Hallock (to Mr. Bowes): I would just like to urge you to join our happy band and discourage any program which may be in contemplation

to discontinue these charges.

Mr. Bowes: The council has not discussed it yet. I don't know what action will be taken. Before any action is taken, a meeting of the council will be called and the matter will be discussed.

Mr. Wendel: Would it avail anything to have another joint meeting with the council?

Mr. Bowes: If you could get them all together.

Mr. Wendel: When will it come up before the council?

Mr. Bowes: The first of January or first of February. Before any action is taken to repeal the act, I will call for a meeting with the Sanitary Authority and as many representatives of the city government as possible, to get together before any action is taken. If any action comes up to repeal the charge, I will see that such a meeting is held.

--

Mr. Wendel: When Commissioner Bowes left, he promised to arrange a joint meeting before the city council, should they move to eliminate the charge. I would like some consideration given to the possibility of increasing the charge. I would have stopped Commissioner Bowes before he left and interjected that, had it not been for the presence of Mr. Wallace, it was my hope that we could go further than merely the continuation of the present minimum, which is only around \$150,000 a year. The total of  $33 \frac{1}{3}\%$  would still only bring in \$500,000 a year.

Mr. Hallock: I'm just a little fearful of the advisability of suggesting an increase at this time. The people are being bombarded from all sides with advice to save their money, and the increases in taxes, etc.

Mr. Wendel: The reason I favor this is because it is one form of saving, even with the  $33 \frac{1}{3}\%$  charge.

Dr. Stricker: The water rate will still be the lowest in the state.

Mr. Burch: It looks as though business conditions in Portland are likely to be better than they have been.

Mr. Hallock: In spite of all of their talk, the fact remains that that outfit at the city hall are definitely hostile to this thing. They embrace every opportunity to discourage us.

Mr. Wendel: Do you think it advisable that we should urge more than this minimum charge?

Mr. Burch: I don't think so unless it is too late for the May primary.

Mr. Veatch: The council always anticipates a lot of things that never happen, but I don't think as a matter of policy, it would be well to advocate an increase now.

Mr. Wendel: I'd like to see it done.

Mr. Hallock: So would I, but this doesn't seem to be the time.

Dr. Stricker: We should make certain that it isn't stopped completely.

Mr. Hallock: Once they take it off, we're definitely through.

Mr. Wendel: I take it you're opposed to doing anything further.

MINUTES OF THE SIXTEENTH MEETING  
OF THE  
STATE SANITARY AUTHORITY

March 13, 1942

The meeting of the State Sanitary Authority was called to order by Chairman Harold F. Wendel, at 10:20 A.M., March 13, 1942, in the offices of the State Sanitary Authority, 412 Oregon Building, Portland.

Those present were Harold F. Wendel, Chairman, Dr. Frederick D. Stricker, and the messrs. Albert Burch, Elaine Hallock, John C. Veatch, Curtiss M. Everts, Jr., Secretary, and Kenneth H. Spies, Associate Sanitary Engineer.

MINUTES: Copies of the minutes of the previous meeting having been supplied to the members in advance, MOTION: it was moved by Mr. Veatch, seconded by Mr. Hallock, and unanimously carried that the Authority dispense with the reading of the minutes of the December 12 meeting, and that the minutes stand approved as prepared by the secretary.

PREVIOUS BUSINESS: The chairman then advised the members of the Authority that two directives of the previous meeting had not yet been complied with. Because of the increased work due to the emergency, the letters which were to be forwarded to municipalities recommending a tax levy or a sewerage service charge to accumulate funds to be later used for sewage treatment plant construction were not completed.

Further, the rules and regulations governing the submission of engineering plans to the Authority for review and approval had been completed in rough draft but were not yet ready for submission to Mr. Burch and Mr. Stricklin for review.

The secretary reported that the letters to municipalities could

be taken care of in the immediate future and that in the meantime, an article in the State Board of Health Weekly Bulletin had been responsible for editorials in daily and weekly newspapers throughout the state, advocating the 5 mill tax levy or a sewerage service charge. It was also reported by the secretary that the rules and regulations would be submitted to Mr. Burch and Mr. Stricklin for review as soon as possible and that they would be presented for adoption at the next regular meeting of the Authority.

ACTIVITIES REPORT: The secretary reviewed the contents of the Activities Report for the months of December, 1941, January and February, 1942. During the discussion of activities, the order of the State Sanitary Authority dated September 29, 1941, and relating to sewage treatment for those cities located in the Willamette Valley above the Army Cantonment water supply intake was discussed, and from this discussion it was apparent that the installation of sewage treatment facilities in Corvallis, Eugene, Harrisburg, Springfield and Cottage Grove were of urgent necessity, in order to protect the water supply for the Army Cantonment.

MOTION: It was moved by Mr. Burch, seconded by Mr. Hallock and unanimously carried that the Secretary be directed to forward to the mayor and city council in each of the cities involved, a letter in which their attention was called to the fact that contracts for the cantonment had been let and that the Sanitary Authority would like a report as to what extent they have complied with the order dated September 29, 1941, and further that if in the judgment of the chairman, the replies from the cities to whom letters were sent were unsatisfactory, then the chairman would have authority to call a special meeting and issue a citation to the city to appear before the Sanitary Authority and show cause why the nuisance or public health hazard resulting from the disposal of city sewage should not be abated.

PENDLETON SEWAGE TREATMENT: In view of the fact that the State Sanitary Authority had previously ordered the city of Pendleton under date of March 19, 1941, to proceed with the construction of additional sewage treatment facilities and because the city had not proceeded to carry out the order of the Sanitary Authority, and further, since defense activities in the vicinity of Pendleton have greatly overloaded existing sewage treatment facilities, MOTION: it was moved by Mr. Hallock, seconded by Mr. Veatch and unanimously carried that the Sanitary Authority promulgate and issue an order in the name of the state of Oregon on the relation of the State Sanitary Authority, directed and addressed to the city of Pendleton, its mayor and city commissioners, requiring them to appear before the State Sanitary Authority at 10 A.M. on April 24, 1942, to show cause why the nuisance resulting from the disposal of city sewage shall not be abated.

PROJECT PLANS: Mr. Burch moved, Mr. Veatch seconded, and it was unanimously carried that the following project plans, which the State Sanitary Engineer had approved for the months of December, 1941, January and February, 1942, be approved by the State Sanitary Authority:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>
1941		
Dec. 16	Klemath Falls	Storm sewers
1942		
Jan. 12	Electrometallurgical Co., Portland	Sanitary sewers and sewage disposal
24	Hermiston	General plan, sewers and sewage treatment
27	Tongue Point Naval Housing Project	(Provisional approval) Sewage Disposal
Feb. 10	Medford	Gen. plan, sewage treatment plant extensions

Feb. 19	Eagle Point	Gen. Plan, sewers and sewage treatment plant
19	Central Point	Sewers and sewage treatment plant

PERMITS: The secretary discussed policy and procedure in the issuance of temporary permits for the disposal of untreated sewage into the waters of the state. Discussion on the matter was requested in order that some definite procedure might be outlined which would permit the secretary to act within a reasonable length of time to expedite certain defense housing projects, etc. All the members present were in agreement that the secretary should have authority to issue Class C permits since such permits were governed by regulation, were issued for a period of three years and might be revoked at any time by the Authority for just cause.

LABORATORY: The secretary requested authority to make plans for the establishment of a central Sanitary Authority laboratory. It was pointed out that in the present biennial appropriation, monies were budgeted for such a purpose, and that at the conclusion of the Columbia River Pollution Investigations, a certain amount of laboratory equipment would revert to the Sanitary Authority. It was added that the need for laboratory facilities at times was acute and that if any research work was to be undertaken concerning the treatment or disposal of flax retting wastes, that laboratory facilities would be required. The secretary was authorized to make estimates as to the cost of establishing a laboratory in order that expenditures for fixtures, equipment, etc., could be budgeted accordingly.

BIENNIAL BUDGET, 1943-45. In a discussion of the budget for the next biennium which must be approved by the legislature which meets in January of 1943, it was agreed that a mobile field laboratory should

be included and that the personnel requested should include a part-time chief engineer, one associate engineer, two assistant engineers and one secretary.

BIENNIAL REPORT: Members of the Authority were requested by the secretary to comment on the manner in which the last biennial report was prepared. It was generally decided that a report separate from that of the State Board of Health should be prepared, and a complete summary of accomplishments should be included in the report for presentation to the legislature.

PORTLAND PROJECT: The chairman pointed out that the city council in Portland had not discontinued the sewer service charge and mentioned that at the December 12 meeting of the Sanitary Authority, it was the opinion of those present that no effort should be made to ask the city council to increase the charge over its present level. Since it was not considered advisable to request an increase in the sewer service charge in Portland at this time, no further action on this matter was taken.

PERSONNEL: The chairman had previously announced to those present at the meeting that the secretary and chief engineer, Mr. Everts, had been called to active duty with the U. S. Army and that unless deferment could be obtained, it would be necessary for him to report on March 21. The matter of a successor was discussed; MOTION: it was moved by Mr. Burch, seconded by Dr. Stricker and unanimously carried, that Mr. Spies should act as Mr. Everts' successor.

In the discussion of personnel changes which followed, it was suggested by the secretary and approved, that Mr. Rice, who is now employed in the water supply sanitation section of the Division of Sanitary Engineering, State Board of Health, be transferred to the Sanitary Authority as assistant engineer.

There being no further business, the meeting adjourned at 12:30 PM to reconvene on Friday, April 24, at 10 A.M. at a special meeting at which time the city of Pendleton will appear to show cause why the nuisance resulting from the disposal of city sewage shall not be abated.

It was further decided that the next regular meeting of the State Sanitary Authority would be held in Portland, Oregon, on Friday, June 12, at 10 A.M.

Respectfully submitted,

MINUTES OF A SPECIAL MEETING  
OF THE  
STATE SANITARY AUTHORITY

April 24, 1942

A special meeting of the State Sanitary Authority was called to order by Chairman Harold F. Wendel at 10:15 A.M., April 24, 1942, in Room 422, Oregon Building, Portland. All members of the Authority were present, and included Harold F. Wendel, Chairman, Dr. Frederick D. Stricker, and the Messrs. Albert Burch, Blaine Hallock, John C. Veatch, Charles E. Stricklin, Curtiss M. Everts, Jr., Secretary, and Kenneth H. Spies, Associate Sanitary Engineer.

Visitors included the following:

Mayor Jay W. Moore, Harrisburg  
Mr. G. C. Gilbert, City Recorder, Harrisburg  
Two council men from Harrisburg

Dr. R. H. Wilcox, Umatilla County Health Officer  
Mr. C. W. Daley, Umatilla County Sanitarian

Mr. Wyatt, representing the League of Oregon Cities

Mr. R. H. Corey, Consulting Engineer, City of Pendleton  
Mr. Carl E. Green, Consulting Engineer, John W. Cunningham & Associates

Mr. Verne Reiersen, Clatsop County Sanitarian  
Mr. R. E. Dodson, Jr., Asst. Sanitary Engineer, State Board of Health

Mr. A. H. Rice, Jr. San. Engr., State Board of Health

PENDLETON CITATION: As this was a special meeting held for the purpose of citing the city of Pendleton to show cause for its delay in providing satisfactory disposal of its municipal sewage and wastes, the chairman proceeded to call upon Mr. Isaminger, City Attorney of Pendleton, to introduce the officials representing the city of Pendleton, and to present a brief of their case. The city of Pendleton was repres-

ented by Mayor C. L. Lieuallen, City Attorney B. Duval Isaminger and City Recorder Charles E. Burnett. Mr. Rex Kimmell represented the State Attorney General's office.

In the statement of facts presented by the city of Pendleton, it was claimed that the only knowledge the city had of the extent of pollution in the Umatilla River was that obtained from outside sources. Because of the fact that the city has not had a full time city engineer, they stated that it was impossible for them to make the necessary preliminary studies. The information was given, however, that upon the insistence of the State Sanitary Authority, a few data were collected by the city for determining the amount of sewage produced. It was also stated that the city had made application to the Federal Works Agency for the purpose of obtaining financial assistance from the federal government in constructing adequate disposal facilities. A consulting engineer had been retained by the city to make preliminary estimates and design, and to draw up this application. The city had failed, however, to submit the application and the engineering studies to the State Sanitary Authority for approval.

After considerable discussion, it was admitted by the city that a serious pollution problem does exist below the city of Pendleton because of the discharge of improperly treated wastes into the Umatilla River, that the large increase in population due to defense activities in this area greatly increases the danger of this public health hazard, that the city had failed to comply with previous recommendations made by the Sanitary Authority and had failed to cooperate in other respects with this official agency, and that the city should proceed as rapidly as possible to provide adequate treatment of its wastes just as soon as emergency conditions would permit.

Due to the present emergency, the shortage of critical construction materials, construction equipment and labor prompted the United States Public Health Service to refuse certification of the city's application for federal assistance under the Community Facilities Act. Realizing that without the assistance of the federal government, it would be impossible at this time for the city to go ahead with the actual construction of this project, it was agreed by both parties that the city of Pendleton would immediately organize a fiscal program which would be adequate to finance the construction of the sewage treatment plant after the war is over. It was also agreed by the city that the services of a consulting engineer would be retained for the purpose of making all the preliminary studies necessary to properly design the required plant expansion and improvements. These studies are to include treatment of the pea cannery wastes and the possibility of treating the wastes from the Eastern Oregon State Hospital, in conjunction with the city sewage. After these agreements had been reached, the citation proceedings were concluded.

At a private meeting of the members of the Sanitary Authority held after the adjournment of the citation proceedings, the following matters of business were discussed.

**MUNICIPAL SEWAGE TREATMENT:** The secretary informed the members of the Authority that each of the cities above the cantonment water supply intake in the Willamette Valley had been contacted by letter as directed at the previous meeting for the purpose of determining to what extent these cities had complied with the orders of the Sanitary Authority dated September 29, 1941. The members were also informed that with the exception of Corvallis, all of these cities were endeavoring to comply with the

orders. It was stated that there would undoubtedly be considerable difficulty in convincing the city council of Corvallis that treatment of their wastes would be necessary, especially in view of the fact that the United States Army showed no inclination toward requiring such treatment. It was stated that the United States Public Health Service had mentioned on several occasions that the city of Corvallis should comply with the orders of the State Sanitary Authority and install sewage treatment facilities.

After some discussion of this matter by the members, the secretary was instructed to obtain from the Army authorities a written statement of their stand. MOTION: It was moved by Mr. Burch, seconded by Mr. Hallock, and unanimously carried, that in the event the reports from the Army and from the city of Corvallis were not satisfactory, that the chairman and the secretary be authorized to issue a citation for the city of Corvallis to appear at the June meeting.

PERSONNEL: The secretary requested that Mr. Rice be transferred from the State Board of Health to the State Sanitary Authority as Assistant Engineer. This change was deemed advisable because of the fact that the secretary would be leaving in the very near future to accept active service with the United States Army. Permission to make this change in personnel was granted by the chairman.

COLUMBIA RIVER POLLUTION INVESTIGATIONS: The secretary informed the members of the Authority that at the beginning of this investigation, there was a mutual agreement between the states of Oregon and Washington that the expenses would be divided as equally as possible. Because of the fact that Washington had been carrying two men on their payroll to Oregon's one, at the time of the meeting, the state of Oregon was approx-

imately \$2,000 behind in its share of expenses. Therefore, the secretary requested that the Oregon State Sanitary Authority pay the salaries and expenses for one man during the month of April and for one man during the month of May. This would amount to approximately \$500. The members of the Authority agreed to pay for these expenses.

**MILWAUKIE DEFENSE HOUSING PROJECT:** The secretary requested of the members the authority to issue a temporary or Class "C" permit to discharge sewage into the Willamette River by the defense housing project located adjacent to McLoughlin Boulevard between the south city limits of Portland and the north city limits of Milwaukie. This is to be a temporary defense housing project, and if sewage treatment facilities were to be provided, they would cost in the neighborhood of \$50,000.

**MOTION:** It was moved by Mr. Hallock, seconded by Dr. Stricker, and unanimously carried, that a Class "C" temporary permit be granted to this defense housing project to discharge untreated wastes into the Willamette River.

The secretary then advised the members of the Authority that considerable misunderstanding had resulted from the procedures used by certain members of the United States Public Health Service in refusing to certify several projects in the state of Oregon for federal assistance under the Community Facilities Act. Because of these procedures, the public had been led to believe that in many cases sewage treatment would not be necessary. After considerable discussion of this subject, it was agreed that more conclusive evidence should be obtained before the Sanitary Authority took any action on the matter. The secretary was instructed to accumulate as much evidence as possible and to present it at the next

2RJJZ

regular meeting of the Authority.

The meeting was adjourned at 1 P.M.

Respectfully submitted,

*Kenneth H. Spies*

STATE SANITARY AUTHORITY  
 PENDLETON CITATION HEARING

April 24, 1942

PERSONS PRESENT

STATE SANITARY AUTHORITY

Mr. Harold F. Wendel, Chairman  
 Dr. Frederick D. Stricker  
 Mr. Blaine Hallock  
 Mr. John C. Veatch  
 Mr. Charles E. Stricklin  
 Mr. Albert Burch

Curtiss M. Everts, Jr., State  
 Sanitary Engineer & Secretary

Kenneth H. Spies, Associate  
 Sanitary Engineer

CITY OF PENDLETON

Mr. C. L. Lieuallen, Mayor  
 Mr. B. Duval Isaminger, City Attorney  
 Mr. Charles E. Burnett, City Recorder

STATE ATTORNEY GENERAL'S  
 OFFICE

Mr. Rex Kimmell

VISITORS

Mayor Jay W. Moore, Harrisburg  
 Mr. G. C. Gilbert, City Recorder, Harrisburg  
 Two councilmen from Harrisburg

Dr. R. H. Wilcox, Umatilla County Health Officer  
 Mr. C. W. Daley, Umatilla County Sanitarian

Mr. Wyatt, League of Oregon Cities

Mr. R. H. Corey, Consulting Engineer, City of Pendleton  
 Mr. Carl E. Green, Consulting Engineer, John W. Cunn-  
 ingham and Associates

Mr. Verne Reiferson, Clatsop County Sanitarian  
 Mr. R. E. Dodson, Jr., Asst. Sanitary Engineer, State  
 Board of Health

Mr. A. H. Rice, Junior San. Engr., State Board of Health

STATE SANITARY AUTHORITY  
PENDLETON CITATION HEARING

April 24, 1942

Mr. Wendel: Will you kindly tell us who is representing the city of Pendleton?

Mr. Isaminger then introduced to the members of the Sanitary Authority Mr. C. L. Lieuallen, Mayor of Pendleton, and Mr. Charles E. Burnett, City Recorder.

Mr. Wendel: I think it might be a good idea to read the history of this case. Would you gentlemen like to have it read?

Mr. Hallock: I happen to be quite familiar with it. I don't know if it would be an advantage to those from Pendleton or not.

Mr. Wendel: Are you gentlemen fully acquainted with the history of this case?

Mr. Lieuallen: I imagine we are. If there are any points of difference, I imagine they will come up later.

Mr. Wendel: I am sure you gentlemen are all acquainted with the law under which this Authority was established and the duties it has been charged with. I don't know that that requires further explanation unless anyone specifically wants it.

Mr. Isaminger: No, that will not be necessary.

Mr. Wendel: I would like to conduct this merely as an informal proceeding, and see if we can't bring about an understanding. Do any of the members of the Authority want to make any statement?

Mr. Hallock: No, I don't, Mr. Chairman.

Mr. Isaminger: If it isn't out of order, I have an answer--merely a statement of facts from our point of view--that I would like to file with

the Authority at this time if it is the proper time to do so.

Mr. Wendel: All right.

Mr. Isaminger: The original here is on top. There's a copy for each member of your board. I would have mailed it sooner but for the fact that I was trying to get a population census complete. It wasn't finished so I had to send this anyway. For purpose of the record, this answer is made for each and every council member, only a limited number of them being here today because of the expense of travel, and besides the presence of the entire council would serve no purpose.

Mr. Isaminger then read the city of Pendleton's reply to the State Sanitary Authority's citation.

--

Mr. Wendel: Have you gentlemen any questions about this answer?

Mr. Hallock: I'm interested quite definitely in one statement contained in the first page. "The City of Pendleton and its officers have no information or knowledge sufficient to form a belief as to whether or not the Umatilla River is being polluted by the City of Pendleton sewage disposal plant and therefore deny that said river is being polluted by The City of Pendleton in the operation of said sewage disposal plant." Now, is the Sanitary Authority to take that observation seriously? Is it possible that this condition that's been the subject of correspondence and conferences for so many years hasn't acquainted the city with what we had supposed to be obvious facts? In that connection we have copies of letters from Mr. Corey, who was mentioned in your answer to our citation, and from Dr. Wilcox, Umatilla County Health Officer, which make statements to the contrary. It seems to me that we ought to know whether the city does contend that there is no pollution of the Umatilla River.

Mr. Isaminger: Here's been our exact status on this thing. As you know, we don't regularly have a city engineer. We'd like to but we can't afford it. Therefore, the only information we have is what communications to us indicate. The Sanitary Authority has talked to us from time to time. Our Lanham Act applications indicate that we are trying to do something. We're still trying. We're in the position of being out in the open there. We came down here to try to get the situation worked out. We're not refusing to do anything. Just trying to get along. In other words, I don't know what Mr. Corey has written to you. I have no copies of those letters. What he said, I don't know.

Mr. Hallock: Well, I'd like to point out the fact that the condition is a serious one. Dr. Wilcox observes in one letter that unless something is done in the near future, those people might look forward to a serious epidemic of disease.

Mr. Isaminger: Dr. Wilcox isn't exactly an employee of the city either, you understand. That's one of those matching fund projects.

Mr. Hallock: To summarize the whole matter--can't we agree that there is a problem, really serious there and definitely dangerous to the people of Pendleton?

Mr. Isaminger: You run me clear out on a limb with a statement like that, and you know it. We've got a problem here--let's try to straighten it out.

Mr. Burch: From what I've heard, you don't need an engineer, you need a nose to tell you that there is pollution of the river.

Mr. Isaminger: Well, I don't know. We haven't any definite figures on what is going into the river from the disposal plant, if anything.

Mr. Burch: Why not? You were asked by the State Sanitary Engineer time after time to get out some figures on which you could base an application

for funds, and nothing was done except a weir measurement over a period of eight days.

Mr. Isaminger: I think that weir measurement was made at the time this application was being prepared to show the flow of sewage at the plant.

Mr. Lieuallen: Mr. Adams who was in the employ of the City Water Commission at that time made some studies. We got him to make those measurements for us.

Mr. Isaminger: You understand the Water Commission is distinct from the city of Pendleton. I don't know what they have done.

Mr. Burch: Did not Mr. Allen make some findings in this regard? Mr. Allen is the man employed by the State Department of Minerals and Geology, and he was borrowed to do work in connection with the water supply for Pendleton last year.

Mr. Isaminger: I don't know anything about that. Their files are in their office and unless we specifically ask for something, we naturally don't know about it.

Mr. Burch: His reports showed that there is a serious condition of pollution in the river.

Mr. Hallock: I would also like to read a paragraph or two from a letter dated February 12, 1942, addressed by Mr. Corey, whom we understand was employed by you at that time, to Mr. Durkee of the Defense Public Works Agency in connection with your application.

"The result of the population growth has been that since about last August the sewage of disposal plant has been overloaded to the extent that it has been necessary to bypass a part of the raw sewage without any treatment. This is a serious and dangerous condition for the citizens and the Air Base personnel. The State Sanitary Authority demanded the enlargement of the sewage disposal plant last year. With the approach of hot weather this spring conditions will probably be intolerable."

Now a paragraph from a letter addressed by Dr. Wilcox, Umatilla County Health Officer, to Mr. Durkee under date of March 3, 1942:

"Briefly then, Pendleton a city of an estimated 12,000 population is discharging its raw sewage into the Umatilla river. The river flows through Umatilla County and discharges into the Columbia river at the town of Umatilla. As water supplies for domestic use are either directly or indirectly dependent on the river and water tables maintained by the river, it is felt that a potentially dangerous situation exists. Water-borne epidemics are not a thing of the past and such epidemics are notably prevalent during time of great fluctuation in population."

"So, I say at the outset, we are referring to a problem and we are discussing it. Can't we concede, all of us, that there is in that problem a serious pollution menace to the Pendleton community now and has been for sometime past?

Mr. Isaminger: Here is just exactly our attitude. You've told us in the past that there is a problem. We have accepted your statements at face value. All right. We are now trying to go ahead and straighten that out. We are not the only polluters of that stream. We are trying to get this thing ironed out. It is our desire to give this sewage full treatment. That is our intention.

Mr. Lieuallen: Some man by the name of Doolittle or Dopmeyer from the Public Health Service came up there sometime ago and made a thorough survey in about 30 minutes. Nobody saw him. He reported to the U. S. Public Health Service that we had an increase due to the military base being there of 325 people. Now the report shows about 7,000 in the military base alone. We furnish water to them. That nitwit turned in a report like that and our Lanham Act money was thrown out the window. Can you help us with that? We know there's some sewage going into the river. We're not trying to sit here and tell you your engineers don't know anything. We know our plant is inadequate. Our population has increased one-fourth. It is overloading our plant. We're doing our damndest to get some money from the Lanham Act. The increase was caused by the influx of troops in there, their families and the workmen. Let's get together and help each other out on this deal instead of standing here with our horns locked. Can you help us straighten out that

report? If you can, you can be doing us a big favor and get this off your chest, too.

Mr. Wendel: Mr. Everts can clear up the matter as to whether we have tried to help on this.

Mr. Everts: May I read part of these letters? Here's a letter addressed to me on March 26 and signed by Dopmeyer. I think you would all be interested in this.

Mr. Everts then read the letter in question.

Mr. Isaminger: There are two applications. That first application provides for running a pipe line to the North fork of the Umatilla River. They have cut the original application for the water line to include a filtration plant and extra reservoir space.

Mr. Everts: After getting that letter, I replied to this extent under date of April 8, 1942.

Mr. Everts read his reply.

Mr. Hallock: Apropos of this matter of cooperation, Mr. Lieuallen, I think that the record indicates that the cooperation attempts have come from this end and haven't emanated to any extent from your end of the undertaking. Just to refresh your memory on that--You were addressed on the subject as early as November, 1938, and again March, 1939, outlining in a general way what the Authority would want. To these communications, there were no replies. You were addressed on January 28, 1941, relative to this matter, urging some action. No reply was received. On January 31, you were urged to take action and give us some assurance that plans would be carried out. No reply was received to that letter. On March 14, 1941, you were requested to proceed immediately with the preparation of plans and data. There was also a follow-up to that letter, to which there was no reply. There was the telephone conversation that you may remember you had with Mr. Everts. We got the impression rather definitely from that that whether or

not federal agencies made the money available, you would go ahead and make some affirmative action and keep this thing going along. After that, weir measurements were made for about a week. On August 22, we learned that without communicating with the Authority, some 900 ft. of pipe had been connected to the sewer. We requested information on that. No response. So you see, we haven't had any very encouraging assurance that our cooperation was wanted. I know we're not here to snarl at each other. We have requested so many times some cooperation from you up there. We requested that you furnish us with your preliminary plans and specifications which we assumed had been prepared in connection with your application to federal agencies, and they were never sent.

Mr. Lieuallen: Hasn't Mr. Corey given you those?

Mr. Isaminger: That was supposed to have been done and was not. There's no question about that. He told us he would take care of it. I have a copy of the plans here. I have the entire application file, and we're perfectly willing to have the Authority look through it. We understood that the plans were to have been given you.

Mr. Hallock: The facts are that we have received so little seeming cooperation from your section up there, it has proven quite discouraging.

Mr. Lieuallen: Our record that Mr. Isaminger read to you shows that we haven't been entirely idle on the proposition. We have been up against a difficult proposition. Conditions have changed so fast in a few month's period that plans which we had made had to be discarded.

Mr. Wendel: In regard to this situation, I can only comment that it is unfortunate we weren't appraised that you have been more active than you indicated to us. Let's forget all that for the time being. Let's start from where we are today. The Commission has taken this attitude--rightly or wrongly. In general, we are now in a war situation--there's priorities of

materials, and among certain works, no matter how badly needed, they're not going to be accomplished immediately. We have taken the attitude to request the municipalities of the state where these bad conditions exist, to do two things. One is prepare engineering plans and estimates of cost, and second, to embark on some sort of financial program which will, when the war ends, enable the municipalities to get the actual work under construction. In Portland, that has taken the shape of sewer service charges being collected with the water bills. In this way, they will accumulate funds which will help in the actual work when the war is over. Now, as badly as this work is needed, it is impossible to do it in most cases. I would like at least to see these two steps taken. I can't speak for the other gentlemen here, but it would seem that if that's all that can be done now, we would certainly be satisfied if you would do that.

Mr. Isaminger: You say, engineering plans. Do you want complete or preliminary plans? Just show in a general way what would be done? I don't quite know what is wanted.

Mr. Wendel: Perhaps Mr. Everts will answer that.

Mr. Everts: They should be fairly complete plans.

Mr. Isaminger: Would you look at these, Mr. Everts, and see if they come anywhere near what you need? This is a part of the application. While he's looking at that--you were talking about sewer connection matters. When we made application, I mentioned that we made arrangements to merely borrow money from the government. That would be our part. We would by ordinance levy a sewer connection charge. Then when the war's over, they say they'll cancel the obligation. Naturally, if we could get cancellation from them, we would benefit greatly. I think that's sound municipal management. I got this on the grapevine, but Hermiston went to the trouble of making provisions for a bond issue and then, from all I can find out, DPW

told them to forget the bonds and that they would work it out on another basis. If we can protect our city, I think it's our duty to do so. Regarding these sewer connection charges, I don't know. I understand Portland merely has an ordinance for the purposes of establishing a sinking fund.

Mr. Wendel: The money is being accumulated as a sinking fund for the purpose of taking care of sewage treatment works.

Mr. Isaminger: We approached the sinking fund problem in connection with this act.

Mr. Hallock: What is the present status of your application?

Mr. Isaminger: Frankly, I think it's denied, but nobody has told us a thing.

Mr. Hallock: I noticed that Mr. Lieuallen on March 25, 1942, was quoted in the Journal to the effect that the application had been rather summarily denied.

Mr. Isaminger: Our information was all oral. There isn't a scratch anywhere that tells us for sure.

Mr. Hallock: What is your source?

Mr. Burnett: Mentioning no names, one of the DPW employees mentioned this 4% business and said that they would help probably only to 4%. This was off the record. I can't tell you whether the application was denied or not, but apparently, they are willing to help us only to the extent of 4%.

Mr. Lieuallen: In March, we were told that the application would be denied unless we could make a better showing. I made a trip back to Washington, D. C. to see the U. S. Public Health Service officials back there and talked to them for the greater part of one morning. I corrected considerable information they had that wasn't true. They had a rather peculiar attitude, it seemed to me, that these were war times and that we were not patriotic asking for so much money, that we had better let the sewage go

into the river. That seemed to be this gentleman's attitude. He was a man in uniform similar to a Naval uniform, three gold stripes on his sleeve. I have his name, but not with me. I couldn't understand that attitude on the part of any public health official, and I told him then if that was being patriotic, we'd go the whole way and dump it all in the river. He said, No, they didn't want us to do that. After that, he changed his attitude and indicated to me that he wanted to help us all he could, and I thought things were going swell.

Mr. Hallock: I noticed in the answer to the citation you stated the fact that this increase in population has added to local burdens in the way of police force, water employees etc. Wasn't there an offsetting advantage in the stimulation of business?

Mr. Isaminger: Mr. Burnett can tell you about the city income.

Mr. Hallock: We all agree that under existing law, we would have authority to vote bonds for this purpose and avoid the 6% limitation. If it be true that as a result of what has happened and business has been stimulated, it seems to me the people of Pendleton might recognize that some assistance should be extended in the way of a bond issue.

Mr. Isaminger: I think Mr. Burnett can give you a pretty clear picture of all that.

Mr. Burnett: To start with, Pendleton has charter limitations of 11 mills for general purposes. Now the council issued the proposition last year to levy an additional 3 mills for general purposes for six months, and the people approved that measure on the 25th of August, last year for the period of January 1 to June 30, inclusive, 1942. The three mills was used to employ four additional firemen, badly needed, 4 additional police officers, also very badly needed. Even now, there are only 8 paid firemen and the fire chief, and 8 police officers, a matron and the chief. Then we put on

additional street men and there were other expenses--what with the rising cost of living conditions, etc. The council has again asked for three mills commencing July 1, 1942 to June 30, 1943, at the special election or primary on May 15, that 3 mills being for a year's time and having to keep employed the 4 additional firemen and policemen, street men, etc. It doesn't follow that because business has benefited in Pendleton on account of the air base being there that the city of Pendleton itself is benefited by the increase. The city has no greatly added increase in taxes, and that is the main source of revenue. Fines and what not don't amount to much. They won't provide for the creation of sinking funds for the added sewage disposal plant, etc.

Mr. Hallock: If the problem were presented to the people in an attractive way, don't you think they would view with some favor a long term bond issue?

Mr. Burnett: It's highly questionable. The 3 mill special tax levy carried by only 50 votes. And it's highly problematical, in fact, quite debatable, whether this present 3 mill tax will pass. They're quite willing to pay federal taxes, but they sort of take a crack at us here. This will create a total of  $16\frac{1}{2}$  mills for general purposes for the payment of principal and interest on bonds which the people voted. And still it's questionable whether it will carry.

Mr. Hallock: With all your war activities going on up there, we at Baker look with considerable envy on you at Pendleton.

Mr. Lieuallen: You're from Baker. You know those people up there. Even more so than Baker, we have a farm population in town. A man comes to town from the ranch where he had to pump water. He gets to town--that's still good enough for him. He's retired, got enough to live on the rest of his life if he's conservative. He wants us to be conservative, too. When

he goes to the polls, if he doesn't know much about what's to be voted on, he just votes "No" on general principles. It's just like pulling teeth because the people aren't especially enthusiastic about the increase in population in Pendleton.

Mr. Wendel (to Everts): Would you tell the gentlemen what the other municipalities are doing in connection with creating sinking funds through service charges, etc.?

Mr. Isaminger: I have borrowed a file from the League of Oregon Cities. We have been digesting all of these pamphlets in connection with the proposal of the government.

Mr. Hallock: We have had some really fine response.

Mr. Everts: On March 26, we mailed a letter to all municipalities in the state who do not now have sewage treatment plants or whose present sewage treatment plants are inadequate. We told them that they were going to have to put in sewage treatment facilities some day. We fully realized under present circumstances, emergencies excepted, that it would be difficult for them to get man power, construction equipment, materials, etc. The letters were mailed to communities in which no serious emergency exists. It was recommended that they levy either a 5 mill tax or set up a sewer service charge to establish a sinking fund to accumulate money for the ultimate use of construction of sewage treatment facilities, at a time when man power, equipment and materials are more readily available. Since that time we have received quite a number of responses. A number of those cities have already or are now making plans to establish sinking funds either through a tax levy or service charge. In some instances, they are setting aside money from the general fund. Albany is setting aside \$1500 a year, and it is so set up that any council in the future may increase the amount if they choose to do so.

Mr. Lieuallen: Would that be satisfactory to you fellows if we set up \$1500 a year out of the general fund?

Mr. Veatch: The only thing we had asked of any municipality is not that they do the impossible but that they work out preparations and plans and submit the definite adequate plan to take care of the problems that they have. And next that they attempt some means of financing so that it would appear that they are in good faith and that this plan will be carried out. We don't attempt to tell cities how to finance it. The problem has to be faced. We have only asked that they plan to take care of that by adequate financing, so that we can have something before us to see that they are adequate, and some means for reasonably assuring the carrying out of those plans. Here in Portland, for instance, it will be several years before the sewage disposal system can be constructed and completed. We had them down here before us and they have adopted a means whereby they can eventually finance and carry out their plan.

Mr. Lieuallen: Well, that's a reasonable request. If that would be satisfactory to you, we could set aside \$1500 a year out of the general fund and further guarantee that the understanding be made in good faith, and nobody mad about it. If we don't, you get a court order out and do something about it.

Mr. Hallock: What do you think about sewer service charges?

Mr. Lieuallen: There's a lot of good about an arrangement like that and some drawbacks, applying to our local citizens up there. We still have the same kind of people that we have had in the past and they don't care for any additional charges made to their sewerage, and we have the proposition of how to collect that without it costing us about half of what we collect. Unfortunately, we can't collect it on the water. The Water Commission is not responsible to the city. What sort of a penalty would apply to anyone who

refuses to pay their sewage disposal dues at the end of the month or quarterly whichever way you want to collect?

Mr. Hallock: That's been handled by ordinance or charter amendment in many of the Oregon cities. Do you have a list of those charges, Mr. Everts?

Mr. Everts: Not with me.

Mr. Hallock: All over the state they have set up these charges. Portland has accumulated over \$200,000.

Mr. Lieuallen: Unfortunately, under our charter we have been under the impression that we can't vote additional millage for longer than one year at a time. We think possibly we have worked out something to overcome that, if it can be done. Get it voted and set aside a certain amount out of the general fund is the most painless method.

Mr. Hallock: A service charge wouldn't be out of the general millage at all. It might have to be implemented by a charter amendment if the City Water Department is separate from the other departments.

Mr. Lieuallen: The Water Department can shut off the water if anyone doesn't pay, but you can't shut off a man's sewage. There will have to be an ordinance of some sort to collect that money and then we're up against the proposition of a referendum which might be put into effect. There's going to be some very disagreeable reverberations from it if we handle it that way. We have been trying to figure out some less evident way of collecting it--a little sugar on the pill--like the sales tax.

Mr. Hallock: It's astonishing what a small service charge will do, one implemented by appropriate ordinances.

Mr. Isaminger: Let me explain. The city of Pendleton has an old original charter. The Water commission has an original charter also. We have nothing to say about their activities. Therefore, it would require some sort of election to shift collection of the service charge into their

hands. That's the trouble. Under the Lanham Act setup, it was the understanding that we would take a vote and see what hapened.

Mr. Hallock: By setting aside your proposed \$1500 a year, on an estimated \$165,000 sewage disposal system, it would take 110 years to build up a sewage fund.

Mr. Isaminger: The next question is--is that entire plant necessary to take care of the thing you need at this time?

Mr. Wendel: How many water users have you in the city?

Mr. Lieuallen: Around 2400.

Mr. Isaminger: That's an estimate. In talking about this sewer service charge, we discussed the collection of 25¢ a month. That would bring us in \$5,000 to \$6,000 a year. You bring up the question of a plant. The Authority may think the plant we've planned is too big and expensive.

Mr. Burch: One reason we don't know about that is that we haven't seen the plans. We don't know what you're planning.

Mr. Isaminger: We thought it was submitted, and it wasn't.

Mr. Burch: In handling your application to the Lanham Act, if you had submitted your plans to us and asked us to help you out, you might have been a long ways further ahead than you are now. Perhaps something can be done now.

Mr. Lieuallen: We'll admit that that wasn't done, and I intend to find out why. Mr. Corey should have submitted these plans. I'm going to ask him about it.

Mr. Veatch: Whether those plans are approved or disapproved by the Lanham Act, they should be submitted to the Authority and any changes made which are necessary. Then when that is done, all we ask is that some definite plan be worked out for the eventual construction.

Mr. Lieuallen: In the matter of collecting the five or six thousand dollars a year as service charges. We have to have somebody to make those

collections. It's going to run pretty high, around \$1800 a year to collect \$5000. Cut it about 1/3 of the amount collected. Until we can figure out some less expensive way to collect the money, we better set it aside as a sinking fund or levy a tax.

Mr. Wendel: There's no way you can make a deal with the Water Commission to collect the charges?

Mr. Isaminger: I don't think we can legally do it. If it were all tied together, yes, but not as it now stands.

Mr. Hallock: I would imagine it could be worked out if there was the disposal to do so on the part of both groups. Arrangements could be made so that for a reasonable consideration, the Water Department could collect the added service charge.

Mr. Isaminger: Their charter provisions are very limited. Ties them down pretty close.

Mr. Hallock: Might make a charter amendment. I concur in what Mr. Veatch says--if we could get a reasonable program that appears to be reasonably accurate--that's the thing that would interest us very much.

Mr. Isaminger: Suppose we could get a Lanham Act approval, could we get materials even then?

Mr. Veatch: Probably couldn't right now.

Mr. Isaminger: It's a sweet setup for the city if we can get a sewer connection charge and maybe get our indebtedness relieved after the war.

Mr. Veatch: Get approval on the basis that funds will be available as soon as materials are available. There are a number of those approvals that are based on that contingency.

Mr. Lieuallen: Getting back to the proposition of information not getting to you. One excuse I have which probably isn't very good. We depend

a good deal on the engineer to take care of that. The Mayor and city council serve without salary.

Mr. Hallock: When you people took the matter up with the Governor, he wrote to Mr. Johns to this effect:

"I recognize, and I am sure the people of Pendleton do also, that you will have to improve your sewage disposal facilities promptly in order to take care of the steadily increasing flow. I think you should have engineers work on the plans and be prepared to assume the load as a City. Of course, if Federal funds are available, then you are that much better off but the planning should not be held up while you wait decision on the Lanham Act. You are going to need the sewage plant expansion regardless of who pays for it.

"I am asking the Sanitary Authority to cooperate with you to the end that there will be no delay in your housing program and I shall call on Pendleton to proceed with its sewage plant expansion at the same time."

Undoubtedly, he was willing enough to see your side of the matter, but he was disposed to recognize that the problem must be met. The city is confronted with an obligation so that if we could work out some plan by which funds could be accumulated regardless of the success of the pending application, we're that much further along. We had that same situation with Portland. They raised the matter of priorities, no engineering help, etc. That is all true, gentlemen, but keep right on with the plan of raising money anyway. When the time is ripe, you will be well toward having the entire fund collected.

Mr. Wendel: Do those plans, Mr. Everts, in general, strike you as being what you want?

Mr. Everts: I'm sorry, Mr. Chairman, but they aren't. The basic design data is lacking. It doesn't say in the application whether the cannery waste is to be treated or not or whether they contemplate treatment of wastes from the Eastern Oregon State Hospital.

Mr. Isaminger: The cannery waste business is not contemplated. We were going to talk to the Authority later about that. It doesn't include the State Hospital waste. Perhaps at a later time, a deal might be made

with the Board of Control to take care of it.

Mr. Lieuallen: The State Hospital through Mr. Mills, a representative of the Board of Control, offered to pay the city \$7500 to take care of the sewage, and we turned them down on that. We figured it was worth more than that to them. They said they would build their own.

Mr. Burch: Have they built one?

Mr. Lieuallen: No. They said they were going to do it for \$20,000. I was quite positive they couldn't. My attitude and that of the council is if we take care of their sewage, they should pay us close to what it would cost them to build their own plant. They are saving maintenance costs of the plant from now on. My notion was that they pay us about \$30,000. If they'd put that in the pot, we'd have something to start to work on. Mills was just too tight.

Mr. Burch: They can't do it under the law, can they?

Mr. Lieuallen: The legislature voted them \$20,000 at the last session, the 1941 legislature. They could have asked for a sufficient amount to build their own and give us the money and let us do it.

Mr. Hallock: We worked on that in the Ways and Means Committee.

Mr. Lieuallen: I imagine that you had the same information that they gave us. They said they could put in a plant for \$20,000. I called down to a WPA official and asked if it was possible to get labor to build the plant, and he said he could find only one man of the type they would have to have for that. You need skilled labor.

Mr. Veatch: Why wouldn't it be good to work out plans for the city of Pendleton and pay no attention to the state hospital. Then it's up to us to lay down on the state in regard to the hospital. They have to do it the same as Pendleton. They'll have to give a strict account of themselves. If you can't get together with them to work out a plan, work out your own plan.

Mr. Lieuallen: That's satisfactory to us. If they come in, we have to build a larger plant. If they don't come in, that's not our problem.

Mr. Isaminger: The way the matter now stands then, as Mr. Everts has stated, the present plans are not satisfactory. Would it be in order for Mr. Corey to call on Mr. Everts and find out what would be acceptable, and set up the plans accordingly?

Mr. Wendel: Certainly, if you would authorize Mr. Corey to do that.

Mr. Isaminger: Mr. Everts has some idea about what he thinks would be an adequate plan, more than that, he probably has a pretty exact idea. The two of them can sit down and work it out and without wasting anybody's time can get some sort of a plan which will be satisfactory to you.

Mr. Wendel: As I understand it, you will employ and authorize Mr. Corey to work out plans with Mr. Everts in an effort to make them satisfactory to the state sanitary engineer.

Mr. Lieuallen: We'll do that and ask him to contact Mr. Everts and work them out, then make his plans so that they will be what you want.

Mr. Wendel: That's all we want on that. There remains then the matter of finance. That's up to you. We're not fiscal agents. It seems to me that if you would arrive at a service charge and work out a method of collection and set aside some monies from the general fund, that would do it nicely. We can't determine what your financial program will be today.

Mr. Isaminger: I think first Mr. Everts and Mr. Corey should see what the plant will look like. Then we can tell more about how much it will cost. I think we can pretty well say from those facts as to what has to be done next. Then I think we can figure out a better method and procedure. Mr. Everts and Mr. Corey may find that the cost of this project is double what it should be--or not half enough.

Mr. Wendel: No matter what the cost is, it will take the maximum

you can lay by each month, and it will probably be your desire to lay aside the maximum each month regardless of the cost.

Mr. Lieuallen: You can appreciate that we have to be a little careful on the amount of money we spend. We're in wartime now, but we're not kidding ourselves that Pendleton will continue to boom after the war is over. We have to take those things into consideration and not build up a program now which we can't carry out if we go into a slump--which we probably will, as history has shown after every war.

Mr. Wendel: Will you then set about to try to devise a financial program?

Mr. Lieuallen: Yes, we certainly will.

Mr. Veatch: You have a little different problem there than the city of Portland. Pollution of the Willamette River was bad, but in Pendleton there is a real danger of an epidemic. We didn't have that danger here. It was put up to the citizens on the basis of cleaning up the river. The problem could be put up to the citizens of Pendleton not only as one of cleaning up the Umatilla River, but also as one of preventing an epidemic as well.

Mr. Lieuallen: If we can't get them to agree on some reasonable measure, we'll call on you for a court order.

Mr. Hallock: If you'll keep in touch with us and keep us informed of how things are going--

Mr. Isaminger: There will be a council meeting on May 1. We will have been able to scratch together the bare outlines of an idea by then. The council can indicate what it thinks best.

Mr. Wendel: We're probably exceeding our authority in talking about the effects of after the war, but we're taking that authority upon ourselves. I do want to see an earnest effort made to get the financial plan under way, because it will stand you in good stead after the war.

Mr. Lieuallen: Here's something off the record. We're not going to

try to set up any sewage connection tax till after election.

Mr. Wendel: I think we can understand that.

Mr. Lieuallen: One more item. This sewage from the pea cannery-- aren't we taking care of that pretty good?

Mr. Everts: Well, as I understand, you have listed that project with the Public Works Reserve for post-war construction. They've asked us to help them with it. I think construction of a separate plant will prove costly. It will have to be determined whether or not it is more economical to build a separate plant for that waste or to build a sewage treatment plant large enough to take care of it when you undertake that construction.

Mr. Lieuallen: It is quite a problem. The cannery when running at peak uses a million gallons of water a day. But isn't that a pretty good system we're using?

Mr. Everts: That's using land irrigation. That's all right except that you have complaints from the odors. They come back to the State Board of Health or the State Sanitary Authority, the Board of Health in the case of odors.

Mr. Hallock: The odor is organic, caused by something tangible.

Mr. Lieuallen: Does it affect health?

Mr. Wendel: Odor problems are under Dr. Stricker's jurisdiction. Have you a contract with the cannery? Are you required to dispose of it?

Mr. Lieuallen: Yes.

Mr. Isaminger: Is there any treatment where the odor can be stopped?

Mr. Lieuallen: That's another thing I put up to Corey. He thought that he could figure out something to eliminate the odor. He hasn't produced anything yet.

Mr. Wendel: That is a matter which I should imagine would be left

to the engineers. I'm sure Mr. Everts will give you as much help as possible.

Mr. Lieuallen: I kinda think he's steumped a little on that. I've talked to him about it.

Mr. Everts: In that particular area, you're limited as far as available land is concerned for disposal in the ground. If you would keep someone on the job continuously there and operate a land irrigation project, it might be possible to obtain satisfactory disposal.

Mr. Lieuallen: We took it down nearer to the sewage disposal plant.

Mr. Everts: By dividing that land into several sections so that no one section gets overloaded and begins to pond, you might eliminate the odor.

Mr. Lieuallen: We've been trying to figure out a way to eliminate that odor without spending a good many thousands of dollars to do it. The original plant that we worked out to take care of pea cannery sewage was to cost about \$25,000 and somewhere around \$2500 a year to operate. We thought if we could do it with lime and other chemicals, we'd try that way. That's a pretty staggering blow though to a city the size of Pendleton.

Mr. Spies: Is there any chance of that cannery becoming a full line cannery?

Mr. Lieuallen: It's possible. If it operated the year round, there wouldn't be any odor.

Mr. Wendel: Gentlemen, are you satisfied on this now?

Mr. Veatch: I think we have gotten to a working basis on this.

Mr. Lieuallen: Mr. Corey is here now. I'd like to go over it now for him. He is to contact Mr. Everts and work out in such detail as it is possible to do so at the present time, the construction of this sewage disposal plant, and then those plans are to be made and submitted to the Oregon State Sanitary Authority.

Mr. Hallock: That's one future, and you boys are going to give immediate attention to a financial program.

Mr. Isaminger: We'll worry about the money.

Mr. Burnett: Subsequent to May 15 on the finance. If they get too many things thrust at them before election day, it wouldn't work.

Mr. Burch: What I'm hoping is that with these more complete plans by Everts and Corey, we may be able to aid some in your application under the Lanham Act.

Mr. Lieuallen: I sincerely hope so. That report that that man turned in--I think that any member of the State Hospital could have done as well.

Mr. Hallock: Any inmate--yes. Do you have an engineer for the city of Pendleton?

Mr. Isaminger: No, we don't. We can't afford it. If this 3 mill tax goes through, we want to make a deal with the Water Commission and between us, hire a competent engineer. Whether or not we can get one, I don't know.

Mr. Hallock: I think that's important.

Mr. Wendel: Anything else, gentlemen?

Mr. Hallock: Mr. Chairman, I move we adjourn.

Mr. Burnett: Then I take it the State Sanitary Authority is still friendly with us.

## MINUTES OF THE SEVENTEENTH MEETING

OF THE

STATE SANITARY AUTHORITY

August 14, 1942

The regular business meeting of the State Sanitary Authority was called to order by Chairman Harold F. Wendel, at 1:40 P.M., August 14, 1942 in Room 720 Oregon Building, Portland, Oregon.

Those in attendance were Harold F. Wendel, Chairman, Dr. Frederick D. Stricker, and the Messrs. Albert Burch, Blaine Hallock, John C. Veatch, Charles E. Stricklin, Kenneth H. Spies, Secretary, and Archie H. Rice, Assistant Sanitary Engineer.

CORVALLIS CITATION HEARING: Officials of the city of Corvallis, having been cited to appear before the Authority to show cause why their city should not provide adequate treatment facilities for its municipal sewage as previously ordered by the Authority, were given a special hearing at 10:00 A.M. on this date and at the same location.

The city of Corvallis was represented by Mayor H. W. Hand, City Attorney J. L. Lewis, City Recorder Ralph P. Schindler, City Engineer V. L. Goodnight and Professor G. V. Copson, Head of the Bacteriology Department of Oregon State College.

Mr. Wendel opened the hearing by calling upon the secretary to give a brief history of the case. Some discussion then took place regarding statements which were claimed by the

city to have been made by certain federal authorities. Later Attorney Lewis and Mayor H. W. Hand presented arguments as to why the city had failed to comply with the original orders of the Authority. From their testimony it was evident that they did not consider the discharge of raw sewage into the river as producing polluted river conditions and that their considerations were based chiefly upon the word of Professor Copson. Professor Copson failed to produce evidence to the effect that serious pollution was not being caused by the Corvallis sewage.

Expert testimony as to the necessity for a sewage treatment plant at Corvallis was given by Lieutenant Colonel F. H. Stover, Sanitary Corps, Headquarters Ninth Service Command, Fort Douglas, Utah.

After further discussion of the facts in the case the Corvallis representatives agreed to obtain the approval of the City Council at its next regular meeting the following Monday night to expedite the project as much and as soon as possible by (1) submitting the necessary applications to the Federal Works Agency for priorities, monies, etc., (2) preparing the required engineering plans and specifications and (3) investigating every possible means of finance.

The hearing terminated at 12:30 P.M.

A transcript of the proceedings are attached to these minutes.

MINUTES: Copies of the minutes of the previous meeting having been submitted to the members in advance, MOTION: it was

moved by Mr. Hallock, seconded by Mr. Veatch, and unanimously carried that the Authority dispense with the reading of the minutes of the April 24 meeting, and that the minutes stand approved as prepared by the secretary.

ACTIVITIES REPORT: The secretary reviewed the contents of the Activities Report for the months of March, April, May and June, 1942. This report included a summary of the present status of municipal sewage disposal in the state of Oregon, as well as a discussion of sewage disposal facilities at military establishments and of certain trade waste problems. During the discussion of the activities the secretary asked for the opinion of the members regarding the progress being made by the City of Pendleton. It was agreed that \$3000 annually for the creation of a sinking fund was none too much, but that because of the emergency such an amount would be considered adequate for the time being. The city must, in addition to working out an adequate financial program, proceed with their engineering studies. Previous estimates had set the cost of improvements at \$169,000.

PROJECT PLANS: It was moved by Mr. Hallock, seconded by Mr. Veatch, and unanimously carried that the following project plans, which the State Sanitary Engineer had approved for the months of March, April, May and June, 1942, be approved by the State Sanitary Authority:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>
April 23	Camp White, Medford	Sewers
April 23	Camp White, Medford	Sewage Treatment

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>
April 18	Aluminum Co. of America Troutdale	Sewage Treatment
May 27	Sweet Home	Preliminary Report Sewers and Sewage treatment
June 2	Camp Adair, Corvallis	Sewage treatment
June 22	Swan Island, Portland	Sewer extension

COLUMBIA RIVER POLLUTION SURVEY: The secretary presented cost data for the study made of pollution in the lower Columbia River, such a study covering the period from December, 1940, to April, 1942. Total cost to the State of Oregon prior to June 30, 1942 was \$5215.41. Of this amount \$2,689.15 was paid by the Sanitary Authority. Other agencies contributing included the Columbia River Packers Association, the Oregon Game Commission and the Oregon Fish Commission.

BIENNIAL BUDGET: The Sanitary Authority Budget for the Biennium 1943-1945 was submitted for approval by the members. The total amount requested was \$36,605.00, or \$22,440.00 for salaries, \$10,120.00 for general operation and maintenance and \$4,045.00 for capital outlay. Agreeing that the budget should be based on activities conducted under normal times, MOTION: it was moved by Mr. Stricklin, seconded by Mr. Hallock and unanimously carried that the budget be approved as submitted. A financial statement for the present biennium was also presented to the members by the secretary.

PERSONNEL: Because of the large unexpended balance in the Sanitary Authority appropriation and because the secretary must spend at least half of his time on Sanitary Authority business it was requested by the State Board of Health that a larger share of the secretary's salary be paid from Sanitary Authority funds.

MOTION: it was moved by Mr. Hallock, seconded by Mr. Burch and unanimously carried that the Authority pay one half of the secretary's salary, starting August 1, 1942.

DISCUSSION OF CORVALLIS HEARING: It was agreed that the secretary should attend the city council meeting at Corvallis on August 17, 1942 to be sure that the council approved the actions promised by Mayor Hand. Because the city representatives claimed that no federal authorities had given them a statement outlining the necessity for priorities for the proposed sewage disposal works it was suggested that such a statement be obtained from Dr. W. T. Harrison, District Director, U.S.P.H.S., San Francisco, California.

For the purpose of transmitting the opinion of the State Sanitary Authority to the Federal Works Agency, the Vital Areas Board of Review and to any other persons or agencies concerned the following resolution was presented by Mr. Veatch, seconded by Mr. Hallock and unanimously carried.

RESOLUTION: It is resolved that the Sanitary Authority of the State of Oregon after complete investigation of the facts is of the opinion that the discharge of raw sewage into the Willamette River from the city of Corvallis is a menace to the health of the men to be stationed at Camp Adair and that the city of

Corvallis should proceed immediately toward the construction of an adequate sewage treatment plant. It is the opinion of the State Sanitary Authority that the construction of such a plant is necessary in the interest of the winning of the war.

MOTION: It was moved by Mr. Veatch, seconded by Mr. Stricklin and unanimously carried that the chairman and/or the secretary of the Sanitary Authority be authorized to certify a copy of this resolution and furnish any information which may be appropriate to any person or authority having jurisdiction over the furnishing of material for the construction of such a plant.

FUTURE ACTIVITIES: It was suggested, that if time permitted, the secretary should contact personally the various city councils and officials to determine what steps had been taken by the municipalities to comply with the orders issued March 19, 1942 by the Authority.

There being no further business, the meeting adjourned at 3:15 P.M. It was decided that the next regular meeting of the State Sanitary Authority would be held in Portland, Oregon, on Friday, November 13 at 10:00 A.M.

Respectfully submitted

Kenneth H. Spies  
Acting State Sanitary Engineer  
Secretary

## CORVALLIS CITATION

Meeting of the Oregon State Sanitary Authority

August 14, 1942

## Persons Present

## SANITARY AUTHORITY

Mr. Harold Wendel, Chairman  
 Mr. Blaine Hallock  
 Mr. Albert Burch  
 Dr. Frederick D. Stricker  
 Mr. John C. Veatch  
 Mr. Charles E. Stricklin

Mr. Kenneth H. Spies,  
 Acting State Sanitary Engineer  
 and Secretary

Mr. Archie H. Rice,  
 Assistant Sanitary Engineer

## CITY OF CORVALLIS

Mayor H. W. Hand  
 Mr. J. L. Lewis, City Attorney  
 Prof. G. V. Copson, Oregon State College  
 Mr. V. L. Goodnight, City Engineer  
 Mr. Ralph P. Schlinder, City Recorder

## STATE ATTORNEY GENERAL'S OFFICE

Mr. Rex Kimmel

## UNITED STATES ARMY

Lieutenant Colonel F. H. Stover  
 Fort Douglas, Utah

At 10:00 A.M. the Chariman called the hearing to order.

Mr. Wendel: Would any of you gentlemen care to have the history of the case read?

Mr. Lewis: Yes, this is our first opportunity to get any information.

Mr. Wendel: Then Mr. Spies, State Sanitary Engineer, will read it.

(Mr. Spies then read the history of the case to those present. This included parts of the memorandum dated July 20, 1942 and the letter to Authority members dated July 28, 1942.)

Mr. Spies: That brings the information pretty well up to date, except for the visit to Camp Adair of the Secretary and Colonel Dopmeyer of the U. S. Public Health Service. We visited Corvallis last Friday for the purpose of investigating the matter of war-time necessity of such a project at Corvallis. To date, no report from the U. S. Public Health Service has been received relative to this.

Mr. Lewis: Gentlemen, would we be permitted to supplement the record with something we feel is important. Last November, Dr. Stricker, State Health Officer, addressed to the city under date of November 13 a letter to the effect that Fred T. Foard, Regional Consultant of the United States Public Health Service, would visit Albany and Corvallis to make a survey in connection with the general sanitation; milk supply, water supply, etc., in the area. Dr. Stricker asked that we make a definite appointment for him with the city officials on the 18th of November, to which our municipal judge replied that the date would be satisfactory and fixed that as a definite meeting with Dr. Foard. Dr. Foard came to Corvallis to survey the whole situation--you understand that this came after your letter of September 29, which, frankly, we did not construe as an order--and he told us, in his opinion, in view of the fact that the water supply for Camp Adair was to be purified, that a sewage disposal plant was not necessary at Corvallis. I feel it is necessary to supplement your record in order to explain our position.

Mr. Hallock: Just who is this Dr. Foard?

Dr. Stricker: He's with the United States Public Health Service.

Mr. Lewis: It says here that he is the Regional Consultant of the--

Dr. Stricker: He changed the statement soon after, because he didn't have the facts and wasn't authorized to make a statement like that.

Mr. Lewis: I'm not offering that as being conclusive of anything, but since it did come from a man of apparent authority with whom we had, at the instance of Dr. Stricker, conferences on the subject, we felt that you should know of it. That was what he told us at the time. We haven't contacted him since, but, nevertheless, in order to understand the attitude of the city officials, I think it is proper that we bring it in.

Dr. Stricker: That opinion was not concurred by the State Board of Health at any time.

Mr. Wendel: Gentlemen, I think it is the feeling of this Board that the weight of evidence is to the effect that it is a decided hazard, and, waiving for the duration the duty of the Board to control the pollution of streams in the state, we feel that this plant is needed to protect the health and lives of the soldiers stationed at Camp Adair. I might add that the Sanitary Authority has been criticized already for not forcing action on the part of Corvallis.

Mayor Hand: Well, the city officials agree with the Authority in that we would like something done.

Mr. Wendel: We do feel that it is a menace to the health of the Army, and we are of the opinion that the matter should be

taken care of at once. We should like to hear from you gentlemen as to why nothing has been done.

Mayor Hand: The only answer I could give to that is, in the first place, the city of Corvallis does not have the money, and, in the second place, all the information that we have been able to gather, leaving the emergency out of the picture, throughout a period of years, is that examinations have shown that the contamination is not harmful to public health. Those examinations have extended over a period of years, and other tests that have been made more recently have shown the fact that contamination still exists. But, as far as the city of Corvallis is concerned, we couldn't just go out and build a plant. We have taken steps. We have made an application for a grant, and it is on file and will be considered as soon as possible. It is necessary that some financial aid must be secured if the sewage plant is built. It would be impossible, with the information we have, to float a bond issue. People would feel that it had been thrust upon us at the instigation of the Sanitary Authority and the Army, and, with this being a defense measure, it would be necessary for the federal government to be entirely responsible for the building of the plant. We should like very much to build a sewage disposal plant. It is a desirable thing to have and to do. At the same time, it demands much money, and the city of Corvallis couldn't do it. That is the position the city of Corvallis is in at the present time. It is not the idea of being arbitrary in the matter, but it is a matter of money. The expenditure would more than double the amount of indebtedness of the city, and we have reached the peak so far as taxation is concerned. We are not in the position to build the plant without material aid from the federal government.

*Note: Sheet No. 199-200 was missing  
from book. (K.H.S.)*

201

Your secretary mentioned the visit of Colonel Dopmeyer to the city. The Colonel told us at the time very plainly that we couldn't build a sewage disposal plant without it being a definite defense need. As I understand it, the Colonel hasn't rendered his verdict for a decision relative to the necessity of the plant, and the federal board of health must issue an order of necessity before priority can be authorized. Because they haven't reached that decision, it seems that nothing can be done at this time.

We did not construe the letter from Major General Joyce to mean that any immediate action must be taken. He, in effect, made the statement that, with the increase in the population of Corvallis, the amount of sewage would increase, but we could not construe his letter as demanding the building of a plant at this time.

Mr. Wendel: Has the city done anything yet along the lines of preparing engineering plans, estimates, etc.?

Mayor Hand: Preliminary estimates have been made. The actual planning has not been carried out. This matter of securing federal funds is going to take time. When we have some assurance that funds will be supplied, the entire engineering part of it will be carried out and will be completed.

Mr. Wendel: This would mean further delay, even if you got favorable action. The engineering plans being not yet in process would require further delay, would it not?

Mayor Hand: Our engineer, Mr. Goodnight, could probably answer that better than I.

Mr. Goodnight: We were told only recently that we should not spend any money for detail plans. The engineer that said that is practical. He's a man from Seattle, Evans, from the Federal Works Agency. You see, we worked out with them the plans we have. If we

made plans now, the cost of them couldn't be included in our grant. In the matter of estimates, due to present conditions the estimates that we make today may not be worth a thing in a short time.

Mr. Wendel: The plans do not change.

Mr. Goodnight: The plan has been approved tentatively by four or five engineers in the state. I've talked with Mr. Everts about them. I've also gone over them with Mr. Evans.

Mr. Hallock: This Mr. Evans told you not to prepare plans? Do you know his initials? You say he's from Seattle.

Mr. Goodnight: You know why he said that, because we are trying to get this loan. He was trying to help the city. If we spend that money now, before the agencies authorize the necessity of the plant, if they do, why the city will be out that money.

Mr. Lewis: I would like to supplement what has been said. While I realize that perhaps the financial end of it isn't the primary interest on the part of you gentlemen, it is of importance to the city. Assuming that it would cost \$300,000, which seems to be a conservative estimate at the present time, that is too big a project for the city of Corvallis to handle. Furthermore, it must be taken into consideration that the value of Oregon State College, a state institution, is one and one-half times the assessed valuation of the city of Corvallis. In that connection, we are of the opinion that it is a state as well as federal project. You have probably cooperated in the Salem plans. I don't know how far they have gone. I believe that they are on their way, and it is my understanding that they have a large grant to assist them. It would require a little checking, but it would be my guess offhand that the value of state property in Corvallis is probably as great a share of the total value in the city as it is in Salem. Therefore, we

naturally feel that this would be a project requiring some state participation, which, of course, would require legislative action. Now, that may not seem important to you gentlemen, but city officials of Corvallis have tried to handle the city affairs in a business-like way and have kept financial affairs pretty well straightened out. We have tried to keep the tax levy down, in spite of the fact that we have so much untaxable property within the city limits. If you would look, you'd find that Corvallis has a very low tax rate and that few cities stand with Corvallis in their tax situation. I think Pendleton is a little bit better perhaps. That is why this matter of financing is so important to the city.

I would say that your asking us to come here and show cause why we hadn't installed a sewage plant is an attitude which is not fair. In other words, the affirmative is entirely overlooked.

Mr. Veatch: Isn't that a matter of statutes which provide that you shall provide sewage disposal systems?

Mr. Lewis: I admit that there is a short portion of the law which has something to do with polluting of streams, but it is not very clear as to what authority there is.

Mr. Veatch: The very law under which this body was organized places upon you the duty of providing facilities for the disposing of sewage now discharged into the streams of the state. We are of the opinion that that law provides that certain things shall be done.

Mr. Hallock: May I ask you another question: You comment on the state institution in Corvallis and feel that you should receive state assistance the same as Salem. Has Corvallis attempted to secure any grant from the state?

Mr. Lewis: The legislature has not met since this came up.

Mr. Hallock: It has met since this law was put into effect. I wonder if the city has made any attempt to secure state aid from the legislature, since you knew sewage treatment would be required.

Mr. Lewis: I will answer it this way. Why should Corvallis be the one to go ahead with a project of this size when other cities are not doing much about it?

Mr. Hallock: On the contrary, a great many cities are moving along in a manner satisfactory to this body.

Mr. Lewis: Your city of Portland isn't, and it is the worst one.

Mr. Wendel: We have had the city of Portland before this Authority, and they are going forward at a rate satisfactory. 31% of the municipalities in the state are doing all that is possible at the present time. Their programs are satisfactory to the Sanitary Authority.

Mr. Lewis: We have no definite word that this project is necessary to the war effort. Major Joyce, in his letter, said that it would be desirable as soon as practicable. They certainly would not have planned Camp Adair and continued to a point of occupancy without ever directing a word to the city, if they felt that a sewage treatment plant was necessary. The very fact that they have constructed Camp Adair I think demonstrates conclusively that they have a satisfactory water supply when it's purified. It is my understanding on this that you can't get approval for con-

struction unless the project is going to directly assist the war effort. As far as we know to date, we couldn't possibly proceed if we did have the money. Our position, as outlined by Mayor Hand, is that if this is necessary it is only because of the construction of Camp Adair. It is not a necessary immediate project without bringing in Camp Adair.

Mr. Wendel: May I explain our position. Were it not for the war, our demands on municipalities for adequate sewage treatment would have been pressed a whole lot more vigorously on all those not complying with the law. Many of our municipalities are making a sincere effort. The city of Portland has had in effect for going on two years a service charge. The engineering plans are being made. Many other municipalities are doing the same thing. I explained at the outset that it would be virtually impossible, under the priorities that rule us, for the city to get the materials, if it were not a critical defense necessity. It is the belief of our technical staff that it is. Moreover, it is the belief of the Army that it is. If you should like to hear from Colonel Stover, who is here today representing the Army, I'm sure that the Colonel would be glad to tell you his opinion as to the necessity from a defense standpoint that this work should be undertaken at the present time. I interpreted General Joyce's letter in a different manner than your city apparently did. As to the critical status of this situation, I think perhaps Colonel Stover can--

Mr. Lewis: I'll make one more remark. We still feel that we should be allowed time to carry on our program the same as other cities. Not in a few days or months, but in a few years, as the city of Portland. There have been a great many surveys made

of this river, and we have those surveys, surveys made by the engineering department of the college and by another body of qualified men under state authority. It's the one that was made by a commission. I don't remember the members, except that Mr. Koon of Stevens and Koon was chairman. Of all these surveys, presumably with some foundation, not a single one of them reaches the conclusion that Corvallis causes any serious contamination of the river. We have a qualified bacteriologist with us today from the Oregon State faculty, if you wish to go into this fact.

Mr. Wendel: We believe, from all the information we have been able to secure, that it is a definite hazard to the Army, that is why we have called you gentlemen before us.

Mr. Lewis: We have nothing but your conclusions on that. On the other hand, we have numerous surveys to show you.

Mr. Stricklin: I interpret those reports contrary to the way you do.

Mr. Veatch: May I correct your statement that there is no city on the Willamette that has done anything on this. Albany, Eugene, Independence, Lebanon, Oregon City and Portland have submitted definite programs and are carrying them out.

Mr. Lewis: We would be interested in knowing what Albany has done.

Mr. Wendel: Albany has started to create a sinking fund for the purpose of financing the project at a later date.

Mr. Veatch: Just a minute ago you mentioned about the findings of this one committee. I was familiar with this committee, and I don't remember any findings which showed that the Willamette River was not being polluted by the cities along there. As a matter of fact, it was largely a result of the work of this committee that

the Sanitary Authority was created.

Mr. Lewis: I didn't say 'none of the cities'. My statement about the committee's report was that there was no conclusion that the sewage from Corvallis was creating a health hazard. There is a footnote there in that report in which it is stated that highly contaminated water can be safely used for domestic use if properly treated. There certainly was no conclusion in this report by this committee that there was any material contamination of the Willamette River from Corvallis. There was no conclusion that Corvallis was creating a definite health hazard. Highly contaminated water can be safely used for domestic use if properly treated.

Mr. Hallock: Mr. Lewis, the substance of your statement is that the city isn't particularly interested because the river isn't seriously contaminated, and, therefore, you're inclined to ignore the whole matter.

Mr. Lewis: I'm not a member of the council, and there might be a considerable difference of opinion.

Mr. Wendel: I don't think we're getting very far in this thing at all. If we're to be so practical, for the time being, of forgetting the law, then I see that our decision should be based upon the feeling of the Army as to whether it's a necessary project.

Mr. Lewis: Don't you think that's a bit out of order? We feel that we're entitled to at least a few details.

Mr. Hallock: Mr. Lewis, it's true that raw sewage from a population of eight or nine thousand people is rolling into one of our streams, seven miles below which our soldier boys are taking their drinking water from this same stream. Now, doesn't it seem that this is at least a prima facie showing, if there is some con-

sideration for their well-being.

Mr. Lewis: That is a feeling of only some of you that it is detrimental to their well-being. I only take the word of these qualified men I have mentioned, when I express my views. I should like to have Dr. Copson make a statement as to his views.

Prof. Copson: I happen to be the bacteriologist at the Oregon State College, and naturally the city turns to the college for assistance in matters of this nature. For that reason, I feel that I have a right to report the findings we have made in this matter.

The statement was made that the city of Corvallis reported that all traces of contamination from the city completely disappeared three to five miles down the river. I have never made that statement. It doesn't disappear. There is still some evidence. It takes the most delicate tests to determine it. By the river, the distance from Corvallis to the intake for Camp Adair is nine miles instead of seven, that makes a little difference.

To a layman, the contamination of raw sewage seems un-aesthetic, but, to a public health man, that isn't quite true. We make the statement, and I think that you have to agree with us in part, that we have a relatively small community on a large river. The situation in Cottage Grove and Eugene is a little more serious. This summer we have about 12,000 population.

Mr. Veatch: With the students in the fall, your population is about what?

Prof. Copson: There are around four to five thousand students.

Mr. Lewis: It should be mentioned here that you couldn't

include all the 4500 in a group to be added to the city's population, because a good many of those are enumerated in the Corvallis census.

Prof. Copson: We have, over a period of years, made a survey. All of our results show that the situation above Corvallis and three miles below are very little different. If they were going to end all human pollution in the Willamette, they would have to start above Corvallis.

(Prof. Copson then showed charts of analytical data of samples of water taken in the river.)

Prof. Copson: It's not quite as good now as it was a few years back.

Mr. Stricklin: Pardon me for interrupting, but do you know the flow about that time?

Prof. Copson: No, I don't.

Mr. Stricklin: Your low water flow is later in the season, around September, isn't it?

Prof. Copson: Perhaps it is, I'm not sure about that.

(Prof. Copson continued with his charts.)

Mr. Spies: May I interrupt? Are these data based on coli indexes per ml. or per 100 ml.?

(There followed a discussion between Prof. Copson and Mr. Spies on the matter of the way in which the reports were figured.)

Mr. Spies: According to this quotation from the report from which the data are taken, the coli indexes are based upon a certain number per ml. rather than per 100 ml. In other words, your values should be multiplied by 100 to express them as values per 100 ml.

Prof. Copson: That may be true.

Mr. Stricklin: As I understand it, then, the first two

charts are wrong.

Prof. Copson: They are correct, as far as they have gone. I gave the positive and negative tests. That the situation is a little more critical now is no more a big factor. There is a definite increase. It's natural with the added increase in population during the past few years.

(Colonel Stover, Mr. Spies and Prof. Copson discussed more about the method of determining the results of the tests made.)

Prof. Copson: We have total counts of the water per 100 cc of 16,700, 12,000, 10,000. Now if any public health authority would make a statement that bacterial count of water of that kind is dangerous for a filtration plant then I'll quit. Look at St. Louis, they take the water from the Missouri River. You know what that is, and it comes out absolutely pure. Grand Rapids the same way.

Mr. Hallock: But we don't want it in Oregon.

Prof. Copson: You don't want it in Oregon. This is not serious pollution. I'm just as much interested as any of you gentlemen in having clean streams. It isn't very nice to have dirty rivers. If you compare it with Bull Run water and Clear Lake water, you'd see quite a bit of contamination. If you're not public health trained, it doesn't sound good. Now if the Army has designed a filtration plant that couldn't carry a load like that, it's not a good plant. If the public health people make a statement that the load is so great that they couldn't handle it efficiently, then I would like to hear it. A total count like that of two or three thousand. If they couldn't take that out, I don't know what kind of a plant they built.

Mr. Spies: I still don't agree. We couldn't design any treatment plant that is going to be fool proof.

Prof. Copson: They say that the meagerest kind of filtration plant can take care of 5,000.

Mr. Lewis: Incidentally, the same man, Koon, recommended that we use river water to supplement the Corvallis water supply.

Prof. Copson: Well, up until this last influx of population, there has been no industry on the Willamette and there has been very little increase in population. The contamination is definitely more, but I've yet to see a public health man who states that it's a public health menace.

Mr. Spies: I didn't say it was a menace, but I do say it is a public health hazard.

Mr. Hallock: Doctor, I don't think we are so much concerned with whether we can gamble and get by as we are with assuring a safe water supply for the soldiers stationed at the camp.

In the little town of Baker some years ago we took it upon ourselves to find some means of disposing of the city's sewage, other than dumping the raw sewage into a stream. We attempted to float a bond issue. Our situation was much the same as yours. It didn't meet with too much success at first, as was to be expected, but we got our sewage disposal plant. The point I make is that if we're in earnest and make the people realize the need for facilities, we can find ways to finance it. In Baker we have no cantonment, and no domestic water supply comes from the stream, but we have the satisfaction of knowing we complied with the law. It was no great burden. We have our facilities, and we were just hoping that the city of Corvallis would want to approach this thing with much the same attitude, even if it involved nothing more than going ahead and assembling plans.

Prof. Copson: We are concerned about those soldiers at

Camp Adair, just as you are. The only contention I make is that, from our studies, it is shown that while the sewage pollution is definite and it is raw sewage it is only of minor consideration. The difference above and below Corvallis is slight. Any adequate filtration plant could handle it. As far as being a menace is concerned, I would charge that statement. The plant has got to take out the bacteria. Of course, the bacteria which we're concerned about are very easily destroyed by chlorination, and I can't see that they constitute a menace.

Mr. Wendel: You don't feel there's any hazard at all.

Prof. Copson: I don't like to use the word "hazard".

I would say that there is no danger, other than if the filter plant does not function properly.

Mr. Lewis: What is the extent of treatment at Baker?

Mr. Hallock: It is complete.

Mr. Spies: That's right. It's complete treatment, standard filtration.

Mr. Lewis: What type of treatment is arranged for the 50 or 60 thousand soldiers to be stationed at Camp Adair?

Mr. Spies: Primary treatment plus chlorination.

Mr. Lewis: I don't know what type of treatment you gentlemen think is necessary.

Mr. Veatch: May I explain that. This Authority has never taken an arbitrary view as to what municipalities should do. We don't set up any particular plan which you should follow. You submit to the Authority your plans and those are gone over. Then they are either approved or disapproved. The Sanitary Engineer or one of his assistants is always glad to consult with you. All that we ask is

that the municipalities adopt some plan. We're required to do that under the law. This act was passed by the people of the state for the purpose of protecting the streams. Most of the municipalities are going along on that basis. Many plants have been approved, and some are in operation. All we ask is that there be some evidence showing that a plan is being worked out for construction and installing the plant.

Mr. Lewis: We don't know about the amount or type of treatment. Suppose we planned for one type of treatment and then you changed it.

Mr. Veatch: Of course, you always have a Sanitary Engineer to consult with you as to what plant would be best to put in.

Mr. Lewis: It makes a lot of difference in the cost.

Mr. Wendel: I think we'd like to know the attitude of the Army in this matter, if Colonel Stover would give us their stand.

Colonel Stover: I would be glad to. The Army officials concerned, which included the Headquarters of the Ninth Corps Area, the Surgeon General's office and the Sanitary Corps, went on the assumption that the city considered the letter of last September an order and had started work in that direction. We were somewhat surprised that about April no compliance with the orders had been made and that nothing had been done. All of the Army people who have investigated this to any extent, Sanitary Authorities, Surgeon General's Office, etc. have felt the need of a plant at Corvallis. All letters from them, which I have, have indicated that the sewage from Corvallis should be purified. One from the Chief of Engineers is important when you realize the difficulty of obtaining critical materials, for they have gone on record to say that all possible assistance should be given toward getting purification of sewage from

Corvallis.

Our analyses from the figures shown in the last period have reported the water to be grossly contaminated. The reports this year are showing much higher bacteria count than that shown in previous periods, and they are showing a B coli index, based on 100 mls., of 10,000 in many cases. If any of you would be interested in seeing these results, I have copies of the reports up here.

In New Orleans they have no very close source of pollution. It's true that St. Louis and New Orleans take their water from polluted streams. Chicago is not taken from as bad a source as either of those. But none of them have sewage emptying into the river as close as yours will be to the intake for Camp Adair. The Ohio River is not as good as it should be. Under those conditions, extreme precautions have to be taken. It is possible, in these big plants, for them to hire technically trained operators. There is an acute shortage of personnel at this time, and it is very doubtful that the personnel handling the plant at Adair will be of any type approaching that of other cities. So you have the human element to consider. Too, under present conditions, there is the extreme difficulty of repairing things on short notice.

We have a number of supplies of this type around the Ninth Corps Area, which covers eight states, and I have been handling the sanitary work in all this territory. I do not know of any other supply in the area which is in as poor a condition as this one, as shown from our analysis.

Corvallis has undoubtedly been practicing poor municipal housekeeping for some time. It's obvious that emptying raw sewage from a municipality of from 10 to 14 thousand population eight or

nine miles from the source of a water supply is a bad factor, and the fact that the intake is on the same side of the river as the sewage is emptied from makes the situation even worse.

It is also very reasonable to expect that the city of Corvallis will greatly increase in population due to the cantonment. Our experience has been that you plan on perhaps about 50% of the number in a cantonment moving into surrounding communities. Of course, not all will be in Corvallis. The additional wastes from this additional population will aggravate present conditions.

So, with a summary of this data; the fact that all Army people have indicated the desirability of purifying the sewage discharged into the river by Corvallis and recent analyses showing a high degree of contamination, I think it is only within reason that whatever measures which can be taken should be taken to lighten the pollution of this plant.

Mayor Hand: As far as the increase in population goes, the city is already overcrowded. There would be no place for any more to move.

Colonel Stover: You'd be surprised. They can always seem to find places.

Mr. Hallock: You do expect a local stimulation in business, don't you?

Mr. Lewis: We are placed with a great many expenditures which they tell us are necessary. Our public health program has increased. We use to spend \$300 for a health officer, but now we are contributing \$2,656 for our share in the new county health department.

Mr. Hallock: Apparently you were able to raise it.

Mr. Lewis: We have an urgent demand right now that we spend

\$700 for an entertainment program for the soldiers. We have to hire a special -- recreational director, I think they call him.

Mr. Wendel: I think we appreciate those facts, of course, but I would just like to ask if the statements by the Colonel have affected your attitude.

Prof. Copson: I understand that the Army hasn't a very well equipped laboratory. I would like the Army to come in and be a guest of our department. We would furnish him facilities, and I would like him to come in and see the manner in which our tests are made.

Mr. Wendel: We realize that there is a diversion of opinion, but I think that we should consider the fact that, without proper treatment, the water at the intake is going to be a definite danger. I think that we are all impressed with the uncertainty connected with the proper operation of the treatment plant.

Prof. Copson: Of course, chlorination always takes care of it. Our swimming pools are sterilized with chlorine all the time, and people drink that water when they're in swimming. They can't help but get some of it in their mouths then.

Mayor Hand: I think we have endeavored to show you the position of Corvallis very clearly. When that first letter was received from the Sanitary Authority in September, we couldn't consider it an order. There was no hearing granted where the city of Corvallis had any opportunity to participate, conclusions were drawn without us having a chance to explain our position. There was, too, the fact of the uncertainty of the location of Camp Adair, which would lead us to feel that there was no great hurry. According to information I received from good authority, the action on the

location of the camp did not occur until March of this year. Now, with all these factors in mind, we have tried to explain to you gentlemen the position Corvallis is in, the motives to support our action.

We are now faced with the problem of financing a sewage disposal plant. That is something which, to a certain extent, is beyond our control. If the F.W.A. does not take favorable action on our application, it will take time to put a bond issue before the people.

Taking all these things into consideration, we rather feel that you gentlemen should have a better conception of the position the city of Corvallis is in and will feel that the city is making an effort to comply with the Sanitary Authority in this regard. There is nothing more we can do at the present time, as the federal representative who was in Corvallis last week has not decided as yet as to the necessity of the project. As I understand it, it is impossible to get priorities for materials without the approval of a federal agency such as that.

Do you gentlemen feel that Corvallis is proceeding along the lines of your request?

Mr. Wendel: I feel that Corvallis is not doing everything possible.

Mr. Birch: You are evidently depending entirely upon the federal government for financing it.

Mr. Hallock: I don't feel that you have done enough, Mr. Mayor. I feel that a general campaign for a bond issue at least sufficient to enable you to draw plans and get underway would be successful. I feel that plans should have been in preparation some time ago.

Mr. Wendel: We addressed a communication long ago to you. Many communities at that time proceeded with plans for sewage treatment. This board has always shown an attitude of working with communities. Now there are going to be thousands of boys down there, and it is a matter of protecting their welfare that we're interested in. If your attitude is changed, then I think you will make an effort immediately to draw up detailed plans so that if you're fortunate enough to obtain money from the federal government, you will be ready to go ahead.

Mayor Hand: It would satisfy the commission, then, if we went ahead with our plans.

Mr. Wendel: It would satisfy the commission if everything possible is being done. If you had started levying a service charge, as they did in Portland, you would have had enough money for the engineering work.

Mayor Hand: The board realizes that it is impossible to get much done before the first of the year.

Mr. Wendel: We realize that it takes time. The soldiers are already moving in--that is why it is regrettable that you didn't do something before.

Mr. Lewis: Colonel Dopmeyer hasn't made his report as yet, and, unless he says it is necessary for national defense, we couldn't built it even if we did have the money.

Mr. Spies: That was the understanding at first. However, I have received some other information, and it seems that the President of the United States has set up a new committee composed of members of the Army, Navy, Federal Works Agency, Federal Housing, etc., plus representatives at large from the states concerned. Any project

requesting federal assistance will go before this committee. I contacted the Oregon representative a couple of days ago, and he stated that our statement to the effect that it was necessary would probably carry more weight with that committee than the opinion of some federal agency. I took that to mean the Public Health Service would not have the final word, as was formerly the case.

Mayor Hand: Gentlemen, all I'm trying to bring out are some of the facts that will show you our position in this matter. We're not disinterested in this at all, we'd like to see something done.

I don't know what the council will say, naturally. All we can do is take back a report of this conference and present the matter to them.

Mr. Wendel: Why is it your council members are not here? Every one was served with a citation. We had hoped that you could tell us definitely today just what you would do about this.

Mayor Hand: Some of our members are in defense work. All have business's of their own and serve without compensation on the council. They couldn't just leave their work. I told Mr. Spies that I would get as many here as possible. When I talked to him, he said to bring the ones I could.

Mr. Hallock: Couldn't you gentlemen, without much delay, assure us that you will go ahead with your detailed plans? In other words, you could develop plans at the expense of the city instead of the federal government.

Mayor Hand: We'd have to put that before the city council, and they would have to take action on it.

Mr. Goodnight: We've taken studies of our sewage situation

in Corvallis over a long period, and it was from that information that I worked out the size of the interceptor. We have determined a little more than a rough estimate. The standards for a treatment plant is more or less uniform anyway. With all that we have, probably less than three weeks would be necessary to complete the plans.

Mayor Hand: Would it be satisfactory to the commission if Mr. Goodnight would complete the plan.

Mr. Wendel: Mr. Spies can answer that.

Mr. Spies: He's a registered engineer.

Mr. Wendel: How soon can you have a council meeting?

Mayor Hand: Monday night.

Mr. Wendel: What will your recommendations be to the council?

Mayor Hand: As Mayor, my recommendation would be that we proceed as rapidly as possible. We'll have our engineer prepare plans for your Sanitary Engineer to check, and we'll expedite the matter of a grant or loan from the F.W.A.

Mr. Wendel: Would you consider adding to that the investigation of every other means of finance?

Mayor Hand: Yes, but I don't know what other means there would be.

Mr. Wendel: I think that this commission is assured that you're going to do everything possible, is that not true?

Mayor Hand: The general thought of the council was that any service charges that might be passed would be for the purpose of maintenance.

Mr. Lewis: A service charge would take some time. Our water department is under a water commission which is entirely separate

from the city council. I might say that the members of the water commission do not always agree with the members of the city council. We might have a local problem in that respect.

Mr. Birch: We ran up against the same thing with Pendleton.

Mr. Hallock: Those things occur, but they can be worked out.

Mr. Wendel: No one wants to use material or labor for any project not vital to the war effort. The Army realizes the necessity of conserving every bit of man power and material, and yet they believe it is necessary to have this treatment plant.

Mr. Lewis: In that connection, Senator Holman considers it a project deserving federal assistance.

Dr. Stricker: He was instrumental in having this act passed in the first place.

Of course, the most grave thing is that if they should have an outbreak of dysentary down there, we would be responsible. Just think how an outbreak like that would effect the state of Oregon.

Mr. Lewis: What is Harrisburg doing?

Mr. Spies: They've made preliminary studies and have submitted an application to the F.W.A.

Mr. Goodnight: Another thing, the government is going to open Fern Ridge Dam, and that will alleviate the situation somewhat.

Mr. Wendel: Is there anything else?

Mr. Hallock: I would like some assurance as to when we will hear what action has been taken.

Mayor Hand: We'll advise you.

Mr. Birch: Why not have one of our men present at the meeting of the council?

Mr. Lewis: It's a public meeting.

Mr. Wendel: Well, I guess that's all, gentlemen. Thank you.

222

## MINUTES OF THE EIGHTEENTH MEETING

OF THE

STATE SANITARY AUTHORITY

November 13, 1942

The regular business meeting of the State Sanitary Authority was called to order by Chairman Harold F. Wendel, at 10:20 A. M., November 13, 1942, in Room 816 Oregon Building, Portland, Oregon. Those in attendance were Harold F. Wendel, Chairman, Dr. Frederick D. Stricker and the Messrs. Albert Burch, Blaine Hallock, John C. Veatch and Charles E. Stricklin, Members, Kenneth H. Spies, Secretary and Roy E. Dodson, Jr., Associate State Sanitary Engineer.

MINUTES: Copies of the minutes of the previous meeting having been submitted to the members in advance, MOTION: it was moved by Mr. Veatch, seconded by Mr. Burch and unanimously carried that the Authority dispense with the reading of the minutes of the August 14 meeting and that the minutes stand approved as prepared by the secretary.

ACTIVITIES REPORT: The secretary reviewed the activities of the engineering staff for the months of July, August, September and October. This report included chiefly the items pertaining to municipal sewage treatment and disposal, industrial wastes surveys, sewage treatment at military and defense establishments and educational activities.

CORVALLIS SEWAGE: A report was given summarizing the developments which had taken place since the citation hearing August 14, pertaining to the matter of Corvallis sewage disposal.

Most of this report was included in the activities report and, therefore, need not be included in these minutes.

It was recalled that the city officials at the August 14th meeting had promised the Sanitary Authority they would expedite an application to the Federal Works Agency for financial assistance in constructing the required facilities, they would prepare the necessary engineering plans and specifications and they would investigate all possible methods of finance. During the meeting Mayor H. W. Hand was reached by long distance telephone and it was learned that except for filing an application with the F.W.A., the city officials had not fulfilled these promises.

The new procedure for review of the Lanham Act applications was discussed. Formerly the applications were filed with the Seattle office of the Federal Works Agency but now all such projects submitted in the state of Oregon are first reviewed by the Portland office of the W.P.A. The Corvallis application had been sent to Seattle and the secretary was instructed to contact that office to see that the application would be forwarded to the W.P.A. immediately. After the application has been submitted to the W.P.A. for review, a certificate of necessity must be obtained from the United States Public Health Service. Several letters have already been written by the Sanitary Authority to this federal agency asking for such a certificate. The Public Health Service has not granted the certificate for the reason that they feel that since this project is entirely for the benefit of the Army, the Army itself should certify as to its need. After the application has been passed by the Portland office of the W.P.A., it must then be transmitted to Salt Lake City for review by the regional office, finally it goes to Washington, D. C., for review

either by the Facility Clearance Board or by the Facility Review Committee depending upon whether the estimated cost of the project exceeds or is less than \$500,000.

At the suggestion of the Portland Field Service Office of the War Production Board, the city of Corvallis was requested by the Authority to submit a request for priority assistance to the War Production Board. Form PD-200 was finally submitted by the city, but with many apologies.

The members of the Authority discussed at length the public health hazard existing in connection with the water supply at Camp Adair.

Because of the lack of cooperation on the part of the city of Corvallis and after much discussion regarding the most satisfactory legal steps which might be taken by the Authority, MOTION: it was moved by Mr. Hallock, seconded by Mr. Veatch and unanimously carried that the Sanitary Authority arrange to hold a public meeting upon due notice, summon witnesses, take testimony and examine the facts relating to the sewage situation at Corvallis, Oregon, publish its findings and recommendations as they may be developed, enter its order in the premises and take such other action as may be appropriate; and that for such purpose the Attorney General of the state of Oregon be immediately contacted and an expression sought from him respecting appropriate procedure to be followed, extent and character of cooperation to be expected and as to a convenient date and place for such hearing. The attorney general was contacted immediately by telephone. He informed the members of the Authority that Mr. Rex Kimmell, Assistant Attorney General, would be assigned as his representative to take charge of such a public hearing. The secretary was instructed to contact Mr. Kimmell as soon as possible regarding the matter of testimony, witnesses, summons, etc. It was re-

quested that the hearing be held in Portland during the month of December if possible.

PROJECT PLANS: It was moved by Mr. Hallock, seconded by Mr. Stricklin and unanimously carried that the following project plans which the State Sanitary Engineer had approved for the months of July, August, September and October, 1942, be approved by the State Sanitary Authority:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>
7-3-42	Pendleton	Sewer extensions
7-13-42	Swan Island Shipyards	Sewer extensions
9-9-42	Stanfield F.S.A.Camp	Sewage disposal additions
9-9-42	Fairview F.S.A.Camp	Sewage disposal
9-16-42	Air Support Command Base, Medford	Sewage disposal
9-16-42	Air Support Command Base, Corvallis	Sewage disposal
9-16-42	Air Support Command Base, Salem	Sewers
9-16-42	Operational Training Unit, Redmond	Sewage disposal
9-16-42	Bombing Range	Sewage disposal
9-16-42	Air Base, Portland	Sewer extensions
9-16-42	Umatilla Ordnance Depot	Sewage disposal
10-10-42	Operational Training Unit, Madras	Sewage disposal

Class C Permits were granted to discharge untreated sewage into the Willamette River from the Swan Island Bunkhouses project and into the North Portland Harbor (Oregon Slough) from the Kaiser Company War Apartment House Project.

PORTLAND SEWAGE: Mr. Wendel informed the members of the Authority that on September 28 the lead editorial of the Oregonian commented on the gross pollution of the Willamette River in the vicinity of Portland as reported to the Oregonian by Mr. Charles Castner of the quartermaster department, Terminal No. 4. The editorial asked the question "When are we

going to?" which meant when is Portland going to construct sewage disposal facilities? Mr. Wendel attempted to answer this question and his letter of October 6, which appeared in the Oregonian under the title of "Status of Anti-Pollution Project", discussed the activities of the Sanitary Authority in endeavoring to obtain the cooperation of the city council in abating this stream pollution problem. On November 5 a letter was addressed to the city council by the chairman and later personal interviews were held with them. Their attitude in the matter was that nothing would be done at the present time with respect to increasing the sewer service charges.

At the request of the chairman, MOTION: it was moved by Mr. Veatch, seconded by Mr. Burch and unanimously carried that the communication to the city dated November 5 be ratified by the Sanitary Authority. A copy of this communication is attached to these minutes.

It was decided by the members of the Authority that, except for increasing the sewer service charge to the maximum amount as authorized by the vote of the people and preparing engineering plans and specifications nothing could be done by the city of Portland at the present time to provide sewage disposal facilities. It was agreed, however, that an attempt should be made to secure the cooperation of the city council in this respect and in order to do this an educational program should be inaugurated.

MOTION: It was moved by Mr. Burch, seconded by Mr. Hallock and unanimously carried that an estimate be made of the cost of placing the desired information before the various influential clubs and organizations of the city relative to the Portland sewage situation, that the state budget director be asked to approve expenditure of money for such a purpose and that if the expenditure is approved, the chairman be authorized to

employ a person capable of conducting the desired educational program.

BIENNIAL REPORT: The secretary was instructed to contact the state printer regarding two suggested changes in the report of the Sanitary Authority for the last biennium. These changes were (1) include a discussion of the municipalities in the state which are creating sinking funds for financing sewage works by means other than the sewer user service charge, (2) revise the list of special hearings as held by the Sanitary Authority.

COLUMBIA RIVER POLLUTION REPORT: The written material of the final report covering the survey of the pollution in the lower Columbia River was submitted to the Sanitary Authority by the secretary for approval. The matter of publishing the report was discussed briefly and it was suggested that perhaps the Commercial Fisheries would be willing to finance the cost of printing. It was felt that the cost of this survey was most excessive and that the information obtained did not warrant any additional expenditures on the part of the state of Oregon. If the Authority desires to publish the report at a later date, it will probably be printed in abstract form.

BUDGET: The budget for the next biennium as recommended by the state budget director was submitted to the members for consideration.

There being no further business the meeting adjourned at 1:15 P.M. It was decided that the next regular meeting of the State Sanitary Authority would be held in Portland, Oregon, on Friday, March 12, 1943.

Respectfully submitted

*Kenneth H. Spies*

Kenneth H. Spies  
Acting State Sanitary Engineer  
and Secretary.

## MINUTES OF THE NINETEENTH MEETING

OF THE

STATE SANITARY AUTHORITY

March 12, 1943.

The regular business meeting of the State Sanitary Authority was called to order by Chairman Harold F. Wendel, at 10:20 A.M., March 12, 1943, in Room 816 Oregon Building, Portland, Oregon. Those in attendance were Harold F. Wendel, Chairman, Dr. Frederick D. Stricker and the Messrs. Blaine Hallock and John C. Veatch, Members, Kenneth H. Spies, Secretary, and Mr. William F. Selleck of Selleck and Company, Public Relations Counsel.

MINUTES: Copies of the minutes of the previous meeting having been submitted to the members in advance, MOTION; it was moved by Mr. Veatch, seconded by Mr. Hallock and unanimously carried that the Authority dispense with the reading of the minutes of the November 13, 1942, meeting and that the minutes stand approved as prepared by the secretary.

PORTLAND EDUCATIONAL CAMPAIGN: The chairman called upon Mr. Selleck to review, for the benefit of the members present, the preparations which had already been made relative to conducting the publicity campaign which is being waged for the purpose of obtaining favorable action on the part of the Portland City Council in the matter of increasing the sewer-user service charge to the maximum amount permitted by law. Mr. Selleck reported as follows: Prior to this time all activities had been centered around the assembling of pertinent data and information, the making of necessary preliminary contacts, and the finding out of the more important obstacles which would have to be overcome in order to reach the desired objective.

The tentative calendar for future activities was outlined by Mr. Selleck. From April 1 to April 25 the actual preparation of letters, editorials, cartoons and other publicity material would be undertaken. It was planned to complete by April 10 a printed booklet containing the more important data relating to the campaign. This booklet would serve as a manual for public speakers. Also during the month of April representatives of the Sanitary Authority would be requested to appear before certain influential groups for the purpose of requesting favorable resolutions which might be presented to the Portland City Council. From April 25 to May 4 publicity would be released to the public by means of newspapers, radio, etc. The peak of the campaign would last not more than 10 days or two weeks. On May 2 the release of publicity material would reach a climax. The main objective of this publicity would be to create public interest which in turn would convince the City Council that the people of Portland are in favor of an increased sewer-user service charge, levied for the specific purpose of financing the construction of needed sewage collection and disposal works.

Mr. Selleck stated that the efforts of the Public Relations Counsel were divided into two classifications; namely, appeals to the City Council and appeals to the general public. Under the former classification the following methods were being used:

- (1) Formal resolutions from approximately 50 different organizations or city clubs including, if possible, organized labor to be presented to the Council.
- (2) Informal letters from prominent individuals addressed to the City Council.
- (3) Informal communications from the general voters of the city.

Methods used for making the appeals to the public were to include:

- (1) Newspaper campaigns.
- (2) Discussions on radio.
- (3) Printed matter such as circulars, bulletins or manuals.
- (4) Presentation of formal talks or papers before various city groups and organizations.

The newspaper campaign would consist of copies of resolutions adopted by city clubs and presented to the Council, editorials in the two leading Portland daily newspapers, cartoons, letters to the editor and articles in some twenty neighborhood newspapers. Publicity released via the radio would include open forum discussions and news broadcasts. With regard to the use of other printed matter it was disclosed that the City Council had refused to permit the distribution of circulars with the water bills as a means of informing the public regarding this campaign. It was suggested to Mr. Selleck, however, that an attempt be made to revise slightly the present wording on the water bill in order that the consumer will understand more clearly and correctly the purpose for which the sewer service charge is being made.

A general discussion of the campaign by the members of the Authority followed the report of Mr. Selleck. The question was raised as to the present legality of the six million dollar revenue bond issue which had been approved by the Portland city voters several years ago. Mr. Veatch was requested to determine whether or not the previous bond issue was still in effect. Mr. Selleck stated that, based on the preliminary contacts which he had already made, opposition to the increased charge would be chiefly by certain industries and apartment house owners. Out of the approximately 90,000 accounts of the water department, only 40 consumers had registered serious complaints

regarding the present sewer charge. Many of these complaints were from the owners of large apartment houses.

The discussion brought out the fact that the value of the sewage collection and disposal project to organized labor should not be overlooked for the reason that the majority of the total cost of a project of this nature must necessarily go for labor. The chairman brought out the fact that the objective of this campaign follows closely the program of post-war planning advocated by President Roosevelt. He stated that "It is necessary that individuals plan for the future and communities should do likewise. Other communities in the Willamette Valley should also be interested in the creation of sinking funds to finance post-war construction."

In conclusion it was disclosed that the individual members of the City Council are all in favor of the program advocated by the Sanitary Authority. They insist, however, upon being convinced that the people of Portland are willing to assume at this time an additional charge.

**ACTIVITIES REPORT:** The secretary reviewed briefly the activities of the engineering staff conducted during the months of November and December 1942, and January and February 1943. This report consisted of the discussion of municipal sewage disposal, sewage disposal projects at military and war industry establishments and a presentation of the appropriation made by the recent session of the State Legislature for the 1943-1945 biennium.

**PROJECT PLANS:** It was moved by Mr. Veatch, seconded by Mr. Hallock and unanimously carried that the following project plans, approved by the State Sanitary Engineer during the months of November and December 1942, and January and February 1943, be approved by the State Sanitary Authority:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>
11/10/42	Hermiston	Sewage Treatment
11/20/42	Bend, Engineer Replacement Training Center (Construction Camp)	Sewage Disposal
11/23/42	Pendleton	Additions to city sewage plant
11/27/42	Vanport	Sewers and Pumping Facilities
11/28/42	Swan Island	Sewers and Pumping Station
1/30/43	Wood Village, Multnomah County	Sewage Disposal
2/2/43	Pendleton Air Field	Sewage Plant Additions
2/2/43	Bend, Camp Abbot	Sewage Disposal
2/19/43	Ordnance	Sewerage System

INDUSTRIES: For the past several months the activities of the Sanitary Authority engineering staff have dealt chiefly with municipal sewage disposal. It was suggested that more stress be given to the abatement of stream pollution which is now being produced by the various industries of the state. MOTION: It was moved by Mr. Hallock, seconded by Mr. Veatch and unanimously carried that the secretary check through the industrial waste correspondence files; review the past activities in this respect, and prepare another letter to all industries reminding them of the necessity which confronts them for providing adequate waste disposal facilities, and asking them for a report as to the progress already made and as to plans for future improvements in waste disposal methods.

COLUMBIA RIVER POLLUTION SURVEY REPORT: A letter from the Washington State Pollution Commission was presented requesting that the Oregon State Sanitary Authority finance the publication of this report. MOTION: It was moved by Mr. Hallock, seconded by Mr. Veatch and unanimously carried that the secretary investigate the cost of multilithing versus other methods of reproduction and that the secretary

and chairman be authorized to publish the report in the most economical manner.

MISCELLANEOUS: The secretary was instructed to proceed with the preparation of a rural sewage disposal bulletin and to contact the state printer regarding the publication of such a manual. The other members of the Authority requested that Dr. Stricker, State Health Officer, investigate the possibility of dividing more evenly between the Sanitary Authority and the State Board of Health the costs of maintaining the office quarters of the Division of Sanitary Engineering during the coming biennium.

There being no further business the meeting adjourned at 12:30 P.M. The next regular meeting of the State Sanitary Authority is scheduled to be held in Portland, Oregon, on Friday, June 4, 1943.

Respectfully submitted,

*Kenneth H. Spies*

Kenneth H. Spies  
Acting State Sanitary Engineer  
and Secretary

## MINUTES OF THE TWENTIETH MEETING

OF THE

STATE SANITARY AUTHORITY

June 18, 1943

The regular business meeting of the State Sanitary Authority, previously scheduled for June 4, was postponed until June 18, 1943, and was called to order on that date by Chairman Harold F. Wendel at 10:15 A.M., in the Library Room of the State Board of Health, Portland, Oregon. Those present were; Harold F. Wendel, Chairman, Dr. Frederick D. Stricker, and Messrs. John C. Veatch and Charles E. Stricklin, members, and Kenneth H. Spies, secretary.

MINUTES: Copies of the minutes of the March 12, 1943, meeting has been submitted to the members in advance, and the correction suggested in Mr. Stricklin's letter to the members and secretary had been subsequently made. The reading of the minutes was dispensed with, and they were approved as prepared and corrected by the secretary.

ACTIVITIES REPORT: The secretary reported briefly on the progress made during the months of March, April and May relative to the construction of sewage disposal facilities for both civilian and military personnel. These activities are also discussed in the written report for the quarter ending June 30, 1943.

It was reported that a sanitary district for the Ferncrest Addition in Multnomah County was being organized so that a sewerage system for approximately 100 persons could be provided. This, apparently, is the first district organized in the State of Oregon for such a purpose.

Sewage disposal data and preliminary sketches had been submitted by the secretary to the officials of Agate School, Jackson County, and of

Willowcreek School, Malheur County, to assist them in designing necessary sanitary facilities.

The sewage disposal facilities for the following war industry housing projects were either under construction or already completed:

- (a) Wood Village and Victory Homes, Multnomah County, serving 1500 persons.
- (b) Six Portland Public Housing Authority projects, Portland.
- (c) 5000-men barracks at Swan Island and Oregon Shipyards.
- (d) Ordnance, Umatilla County, serving 1500 persons.
- (e) F. P. H. A. Trailer Camp at Tillamook (150 trailers).
- (f) F. P. H. A. Trailer Camp at Astoria (150 trailers).
- (g) F. P. H. A. Apartment House project, Clatsop County (240 units).

Sewerage facilities had been approved for two war industries; namely. Oregon Electric Steel Rolling Mills and the Portland Tug and Barge Company, both of which are located in Portland.

Regarding the military establishments, it was reported that primary treatment by Imhoff tanks was being provided for the sewage from the U. S. Naval Air Station near Astoria, Clatsop County, but that no sewage treatment was intended at the Tillamook Naval Air Station, Tillamook County.

Inspections of waste disposal facilities had been made at the flour mill of the Preston Shaffer Milling Company, Athena; at the flax retting plant of the Molalla Flax Growers' Cooperative; and at the cherry packing plants of Hudson-Duncan Company, Dundee; and the Allen Fruit Company, Newberg. Reports had been sent to these companies recommending improvements and additions.

As instructed at the last regular meeting, the secretary sent letters to the industries which have serious trade waste disposal problems, asking them for a report of any progress which had been made and reminding

them of their responsibilities in solving such problems. Letters were sent to six pulp and paper companies and to one textile industry. At the time of the meeting, no replies had been received from the industries.

TILLAMOOK NAVAL AIR STATION (L.T.A.): Although detailed plans and specifications had been prepared and approved for sewage treatment facilities at this base, both Naval and U. S. Public Health Service officials had notified the Sanitary Authority that they were of the opinion that construction of such facilities should be postponed until after the present war emergency. A discussion of this subject by the members disclosed that the main reason for installing sewage treatment now would be to protect recreational uses of the Trask River.

The following resolution was then proposed and adopted: It is the understanding of the Sanitary Authority, that, because the actual population load will be less than one-half that originally estimated; because the need for treatment works at the present time is justified only on the basis of protecting the recreational uses; and because of the extreme shortage of labor, equipment and critical materials, the sewage from the Tillamook Naval Air Station (L.T.A.) is to be discharged raw and untreated into the Trask River during the present emergencies, and that if this project is maintained after these emergencies cease to exist, the Sanitary Authority will expect and insist upon the erection and maintenance of an adequate disposal plant. Copies of this resolution were to be sent to the Staff Headquarters of the 13th Naval District, the U. S. Public Health Service, and to the Officer in Charge of Construction at the Tillamook Station.

PROJECT PLANS: The following project plans reviewed during March, April and May 1943, were approved by the Sanitary Authority:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>
3/11/43	Tillamook Naval Air Station	Sewage Treatment
3/18/43	Agate School, Jackson County	Sewage Treatment
3/19/43	Swan Island Barracks, Group #2	Sewers
3/19/43	Oregon Shipbuilding Corp. Barracks	Sewers
3/19/43	Ordnance	Sewage Disposal
5/10/43	Oregon Steel Rolling Mills, Portland	Sewers
5/10/43	Pendleton	Sewer Extensions
5/12/43	Portland Public Housing Authority Project No. Ore. 35059	Sewers
	Ore. 35091	Sewers
	Ore. 35096	Sewers
	Ore. 35097	Sewers
	Ore. 35098	Sewers
	Ore. 35099	Sewers
5/12/43	Portland Tug and Barge Company	Class C. Permit

PUBLICATIONS: As instructed at the last meeting of the Authority, the secretary investigated the various methods available for printing the "Columbia River Pollution Survey Report". The bid of \$696.00 for printing 2000 copies was submitted by the State Printer. This method of reproduction was considered more satisfactory than the others, and because it was as economical, the bid of the State Printer was accepted. The report should be available for distribution by September 1, 1943.

ANNUAL BUDGET: The following budget for the fiscal year July 1, 1943, to June 30, 1944, was submitted by the secretary and approved by the members:

<u>Salaries and Wages</u>	
State Sanitary Engineer and Secretary	\$1500.00
Stenographer	1380.00
Per diem ( S.A. Members)	180.00

General, Operating & Maintenance

Travel, State Sanitary Engineer	\$350.00
Travel, S. A. members	250.00
Office rent	540.00
Miscellaneous	608.00
Capital Outlay	<u>100.00</u>

Total Budget . . . . . \$4,908.00

PORTLAND EDUCATIONAL CAMPAIGN: Mr. Wendel reviewed briefly the plans for this campaign which had been worked up with Wm. F. Selleck, Public Relations Counsel, retained by the Authority for this campaign. It had originally been scheduled for the month of March but was later postponed until the middle of April so as not to coincide with state and federal income tax collection dates. At the suggestion of Mr. Selleck, it was postponed again because of the possibility of the city having to increase the water rates. This increase in water rates was later found to be unnecessary, and Mr. Selleck was instructed to proceed immediately with the campaign. Finally, on June 15, Mr. Selleck informed Mr. Wendel that because of personal and other business matters, he would be unable to complete his contract with the Sanitary Authority and asked that his resignation be accepted.

It was agreed by the members that another public relations counsel should be retained, if at all possible, to carry on this work. It was moved and carried that any financial settlement made with Mr. Selleck be based entirely on the value of work performed by him which could be used by his successor in carrying on the program.

Because it would be impossible to complete this campaign before July 1, 1943, it was deemed advisable to make sure that the money set aside for this purpose from the 1941-1943 appropriation could still be used.

Mr. Young of the Secretary of State's Office was contacted by telephone, and it was his opinion that such money would still be available if a new contract were drawn up prior to July 1, 1943.

The secretary and chairman were instructed to obtain a written opinion regarding this and, if such funds were allowed, to retain a new public relations counsel and to proceed with the educational campaign as rapidly as possible.

There being no other business, the meeting adjourned at 12:00 noon. The next regular meeting of the Sanitary Authority is scheduled to be held in Portland, Oregon, on Friday, September 17, 1943, at 10:00 A.M.

Respectfully submitted,

*Kenneth H. Spies*

Kenneth H. Spies  
Acting State Sanitary Engineer  
and Secretary

## MINUTES OF THE TWENTY-FIRST MEETING

OF THE

STATE SANITARY AUTHORITY

September 17, 1943

The regular business meeting of the Oregon State Sanitary Authority was called to order at 10:15 A.M. on September 17, 1943 in the Library Room, 816 Oregon Building, Portland, Oregon. Those present were: Harold F. Wendel, Chairman; Dr. Harold Erickson, substituting for Dr. Frederick D. Stricker who was out of the city; Messrs. John C. Veatch, Blaine Hallock and Albert Burch, members; and Kenneth H. Spies, secretary.

MINUTES: Copies of the minutes of the June 18, 1943 meeting had been submitted to the members in advance and the reading of them was dispensed with. They were approved as prepared by the secretary.

ACTIVITIES REPORT: A copy of the Activities Report for March, April, May and June, 1943, was submitted to the members. A discussion of the activities of the field personnel for July and August was presented by the secretary. This discussion will be covered by the next Quarterly Report.

SEWAGE DISPOSAL FOR NAVAL AIR STATION: The U. S. Navy is planning to construct a 400-bed temporary convalescent hospital in Clatsop County, Oregon, at the confluence of the Walluski and Youngs Rivers, Section 28, T8N, R9W. Permission to discharge raw sewage from the hospital into Youngs River had been requested by the Naval Authorities. After much discussion of the local conditions and possible public health hazards of such a practice, the following motion was made and adopted. MOTION: The secretary is hereby instructed to inform the

Authorities of the Thirteenth Naval District, Seattle, Washington, that the discharge of raw sewage from the hospital into Youngs River constitutes a practice not to be recommended by the Sanitary Authority, however, because of the shortage of manpower and critical materials, due to the present war emergency, a Class C temporary permit will be granted for such discharge of raw sewage, but with the following provisions:

(1) That the U. S. Navy assume all responsibility for cases of communicable and infectious diseases which might be found to be transmitted as a result of such water pollution.

(2) That all precautions possible be taken by hospital attendants to thoroughly disinfect the stools of patients suffering with tropical or other diseases of intestinal origin, before such wastes are discharged into the sewers.

(3) That said temporary permit be granted for a period not to exceed three years and that if the hospital continues in service for a longer period of time, adequate sewage treatment facilities be installed.

(4) That plans showing the location of the outfall sewer be submitted to the Sanitary Authority for review before construction of the same is undertaken.

PORTLAND EDUCATIONAL CAMPAIGN: Because Mr. Charles Ohling, Public Relations Counsel, was ill and could not attend the meeting the progress report on the campaign to increase to the legal maximum the sewer user charge was presented by the Chairman. A brief outline of the report is as follows:

(1) On June 24, 1943, Mr. Charles P. Ohling, Public Relations Counsel, was retained to replace the services of William F. Selleck & Company.

(2) On July 7, 1943, a luncheon meeting was held at the Benson

Hotel with 25 representatives of the press, radio and other publicity agencies in attendance. The proposed campaign was presented to them and their assistance requested. They all committed themselves favorably.

(3) On the evening of July 9, 1943, a public meeting was held at the Library Hall. Approximately 75 persons were present. The chief opposition at this meeting was voiced by F. H. Young of the Oregon Investors and Taxpayers League, P. L. Cover, East Side Commercial Club, and A. C. Callan and Frank Hilton, Apartment House Owners Association.

(4) July 10, 1943. An editorial by C. C. Chapman in the Oregon Voter gave the approval of that publication.

(5) On July 14, the support of The Oregonian was expressed by the lead editorial "This Time, Let's Do It", and on July 15, the support of the Oregon Daily Journal by the lead editorial "Those Noisome Sewers that Empty Near Vanport City".

(6) August 5, 1943. A meeting arranged by Eugene Allen of the Labor Press was held with the Central Labor Council of Portland at the Aero Club. Each labor representative present was enthusiastically in favor of the proposal. Following this meeting the full support of the Labor Press was given editorially; and a resolution by the Central Labor Council was unanimously adopted.

(7) Resolutions in favor of the campaign have been endorsed by and received from numerous civic bodies and individuals. Harry Middleman of the Apartment House Owner Association has endorsed the program.

(8) About the middle of August the Portland City Council proposed to the Authority that if the issue were not pushed further at this time or before the election in May 1944, they would promise to support a bond issue and would retain an engineering firm as soon as possible. That proposal

was refused.

(9) The proposal to increase the service charge was submitted to the Portland Chamber of Commerce for their approval. It was in turn referred to the various sub-committees. Mr. Wendel appeared before the Trade and Commerce Committee and won their support. On September 8, 1943, the subject was debated by Mr. Wendel and Acting Mayor Bowes before the Retail Trade Bureau. That Bureau voted 10 to 1 in favor. Approval was also given by the Industries Committee and the Maritime Commerce Committee. The approval of the Executive Committee is expected in the near future.

(10) A favorable opinion was obtained from the bonding firm of Atkinson, Jones & Company regarding the advisability of the proposal from the financial standpoint.

(11) The Chairman of the Economic Committee of the Portland Post-War Planning Committee has endorsed it. Acting Mayor Bowes has expressed his surprise regarding the increased support given by factions which previously were presumed to be in opposition.

(12) The new City Council member, Mrs. Dorothy McCullough Lee, has also been contacted and informed of the Authority's attitude.

(13) A letter received from F. N. Youngman, Vice President, refutes the charge made by Joe Gerber, advertiser, that the Crown-Zellerbach Corporation opposes the construction of adequate sewage disposal facilities in Portland.

(14) The Executive Committee of the Wildlife Federation is planning a big dinner for the night of October 4.

Much discussion followed the above report and it was agreed by all the members present that in spite of the large number of favorable expressions from the public, the Portland City Council apparently still refuses to increase the sewer user charge as requested by the Authority

because they are afraid of the political consequences. It was then decided to adopt a definite course of action.

It was planned to contact representative of the Moses Post-War Planning Committee to make certain that the Portland sewerage project would be included at the top of their list.

The meeting adjourned at 1:00 P.M. to reconvene at 4:00 P.M. for further consideration of and action in the Portland problem. Mr. Hallock was requested to formulate during the intermission an appropriate resolution citing the City Council to appear before the Authority on a "show-cause" order.

At 4:00 P.M. the meeting of the Authority was resumed. Those present were; Mr. Wendel, Dr. Erickson, Mr. Burch, Mr. Hallock, members; and Kenneth H. Spies, secretary. The public was represented by Messrs. W. J. Smith, C. C. Chapman and E. B. MacNaughton.

The purpose of the meeting was stated briefly by the Chairman and then the opinions of Messrs. Smith, Chapman and MacNaughton were requested.

Mr. MacNaughton endorsed the plan to cite the City Council. He stated that if the City of Eugene and Lane County had courage enough to set up a \$5,000,000 program, the Portland Council should have courage enough to increase the service charge. He stated further that within one year after the cancelation or completion of shipyard contracts there would be 50,000 people released from work in the Portland area. In 1943 the employment in metropolitan Portland has been estimated at 416% of the 1937 total. Because of the change in shipping conditions, the record production of the present shipyards could not be continued. These facts were presented as arguments for building up a sinking fund to finance post-war construction and employment in the City of Portland.

Mr. Smith and Mr. Chapman were likewise of the same opinion and they gave their endorsement to the plan to attempt action on the part of the City Council.

The following resolution was then presented by Mr. Hallock and was unanimously adopted:

WHEREAS, under the law the Oregon State Sanitary Authority is empowered and directed to cause sewage disposal and other stream pollution abated, and,

WHEREAS, municipalities of the State of Oregon generally, including those along the Willamette River, exclusive of Portland, are co-operating with the said Authority in the matter of stream pollution abatement; but because of the failure of the City of Portland, which is the chief offender, to render co-operation, and its seeming disposition to obstruct the work of the Authority in the matter, the efforts of the Authority are seriously impaired and the will of the people thus thwarted, and,

WHEREAS, in the year 1938 the people of the City of Portland by their vote authorized the imposition and collection of sewage disposal charges to the extent of one-third of the monthly water charges, only a fraction of which has been levied by the City and even that following the insistent demands of the Authority, and,

WHEREAS, unless the funds so authorized shall be accumulated and made available for use in connection with the sewage disposal project during the post-war period, such project will have to be constructed through the employment of funds raised by general taxation and without the benefit of preliminary engineering data and capital reserve.

NOW, THEREFORE, be it resolved that the State Sanitary Authority forthwith cause notice and citation to issue to the City of Portland, its Mayor or acting Mayor, and the members of its Council, directing

said City to appear before said Authority in Room 720, Oregon Building, Portland, Oregon, at 10:00 o'clock A.M., on Tuesday, October 5, 1943, and then and there show cause, if any exists, why said City should not now take the steps available leading to compliance with the laws of Oregon relating to abatement of stream pollution, and why appropriate proceedings should not be instituted against the said City should it fail so to do.

The meeting adjourned at 5:50 P.M.

Respectfully submitted,

*Kenneth H. Spies*

OREGON STATE SANITARY AUTHORITY  
TRANSCRIPT OF  
CITY OF PORTLAND "SHOW CAUSE" CITATION HEARING

SUBJECT: PORTLAND SEWAGE DISPOSAL IN THE PUBLIC  
WATERS OF THE STATE OF OREGON

Meeting called to order at 10:15 A.M.

Mr. Wendel: The meeting is now called to order. For the record, will those representing the city kindly identify themselves.

William A. Bowes, acting Mayor and Commissioner of Public Works.

Fred Peterson, Department of Public Affairs.

Lyman Latourette, City Attorney.

Kenneth C. Cooper, Department of Finance.

Dorothy McCullough Lee, Commissioner of Utilities.

Ben Morrow, City Engineer.

L. G. Apperson, Engineering Bureau Chief.

Mr. Wendel: Will the secretary kindly read the resolution and citation?

Mr. Spies: (Reads the resolution and citation).

Mr. Wendel: We shall be glad to hear the answer of the City of Portland to this.

Mr. Bowes: I would like to read the prepared answer of the City of Portland to the citation.

Mr. Wendel: We are all familiar with the history involved, and it might save time if we were to dispense with the reading of the statement.

Mr. Bowes: I would like to enter it as part of our answer to the citation.

Mr. Hallock: The matter is pretty well summarized or "boiled down" in the statement on page 9. Greater progress might be made if we were to devote our time to the discussion of the disposition of the charges. It

could be entered as an exhibit.

Mr. Bowes: Perhaps we would save time, but it is my feeling that a complete statement should be made to each and every one here so that there will be no misunderstanding. There are a number of people present who, we feel, should hear this explanation; therefore, I would like to read the prepared statement. I have no objection to entering it as an exhibit. However, I believe for the benefit of those who have come to this public hearing, it should be presented to them.

Mr. Hallock: I have no desire to interfere with your presentation of the report.

Mr. Wendel: Kindly proceed with the statement.

Mr. Bowes: (Reads the answer of the City of Portland to the "Show Cause" Citation Hearing.)

(Mr. Bowes called special attention to Exhibit I, the Wolman Report; to Exhibit II, the Charter Amendment; to Exhibit III, Ordinance No. 71912; Exhibit IV, Resolution No. 21576 of the Council; Exhibit V, Report of the Board of Equalization; Exhibit VI, Report of Commissioner of Public Works; Exhibit VII, Ordinance No. 74011; Exhibit VIII, Statements of Receipts and Disbursements; Exhibit IX, part of the Wolman report; Exhibit X, Summary of the work accomplished by the Council; and, Exhibit XI, Documents filed with the City Council and the disposition of them. Following this, Mr. Bowes made an informal discussion of several of these.)

Mr. Wendel: Apparently, the chief difference that exists between the City Council and the State Sanitary Authority is in the conception of progress of compliance. From the history of the voting, the Authority feels that, if the public is asked to vote a general bond issue for substantially the full amount of the cost, it will not be approved. The Authority, more-

over, feels that federal aid is highly questionable and cannot be counted on, to say nothing of the merit of value. The city does not seem to believe in the present philosophy of planning and saving for the future; the financial program which the city advances is greatly inadequate; and in the minds of the Authority it is considered doubtful that any great progress will be made in the consummation of the plans. It is the opinion of the Authority that the state is entitled to the maximum compliance that can be made, being done lawfully and legally under the circumstances, toward making progress toward compliance. Therein seems to lie the chief difference between us. We feel it is regrettable that the maximum charge has not been levied during this entire period. If it had been we should now have over two millions of dollars in the treasury. A great deal has been said regarding the Board of Equalization and that Board's recommendations and the maximum levy of \$275,000 a year, but the City Council by their schedule produced but \$130,000. The Board of Equalization, by their own recommendation, would have produced more than twice the revenue contemplated by the city. The chief difference, then, lies in what constitutes compliance.

Mr. Hallock: I note that on the top of page 8 the City of Portland is not strongly in favor of sewer user service charges, and then on page 9, it is stated that in the opinion of the city the objective will be achieved more quickly by applying moderate sewer user service charges for the present. The commissioners contend that an application of the maximum amount permissible at this date would result in much popular disfavor and that a bond issue would certainly fail. Ignoring the fate of the bond issue, I personally would like to see a little more proof advanced on the contention that the people of Portland do not favor these levy charges and that any attempt to increase them would result in

substantial popular disfavor. Personally, I haven't learned enough of this to be convinced that that actually would be the case if the charges were levied right up to the maximum authorized by the voters. What has the City to advance? We feel there is a public clamor for the increase in charges to build up the fund.

Mr. Bowes: As far as the bond issues and the matter of financing, the matter of raising money, the Wolman Report gives a brief history of the vote of the people of Portland, and as to the maximum amount of sewer user service charge, we have heard but one side. It is our feeling and finding that the only way to handle this is to submit it to a vote. It is our finding through the collection agencies, the water bureau and various substations, that there is, even to the existing charge a great deal of opposition.

Mr. Hallock: Mr. Commissioner, if I am correctly informed, the charge if increased to the maximum would amount to the ordinary residences in the city to about the cost of two packs of cigarettes per month - - perhaps thirty cents per residence if this thing were carried to the maximum. Surely, that can't be a serious factor.

Mr. Wendel: At the time of the Wolman Report, concerning which a great deal has been said, war was not contemplated. Immediate action was contemplated following this Report, yet the interval between the Report and the present time has already been from four to five years. If this interval has been anticipated, the recommendations regarding financing the project would undoubtedly have been different. I mentioned that the recommendations in the Report of the Board of Equalization would have doubled the amount collected by the City Council. Regarding the public attitude toward the service charge, I took the City Council at its word and attempted to sound out public opinion on this score. Those I have contacted have been unanimously in favor of this program.

Mr. Bowes: What program?

Mr. Wendel: The one being discussed here, increasing the service charge to the legal maximum. We hope to have a resolution from the Chamber of Commerce on Friday endorsing it. This took five weeks because it was reported to the several sub-committees. However, each has approved and notified the board accordingly, and I am informed that the board will report immediately. We have heard favorably from the Central Labor Council, the Federation of Women's Clubs; Mr. Morton, president of 59 community clubs, states approval would be unquestioned. You, yourself, expressed to me how surprised you were at the complete reversal of public opinion. I believe you stated that the Post-War Planning Committee had approved this service charge unanimously.

Mr. Bowes: No, not the executive committee, just the sub-committee.

Mr. Wendel: In taking the City Council's word in good faith, we have attempted to sound out public sentiment. We definitely feel that there is practically unanimous approval. I can truthfully say the only objection has come from the members of the City Council. I don't remember of any other opposing voice. The Authority feels that this would constitute progress toward compliance, and for that reason is insisting that the City Council proceed with the program.

Mr. Bowes: Are you contending that we have made no progress?

Mr. Wendel: No. Just a minimum of progress.

Mr. Veatch: Opposition has been by people who apparently are very large industrial users, and there has been in the past also the Apartment House Owners' Association, but under the present tax rate, there will never be a time when it would hit them more lightly. Because

of the high rate of federal tax paid by most industries and businesses, the majority of the sewer user charge would be deductible from such taxes. From 70 to 80% of this increased charge is deductible from taxes as an expense of business. The actual increase would be only 15 to 20%. Now, if you go to put through a bond issue after the war, you have to have some "cushion" behind the bond issue. Every cent accumulated now is going to help that bond issue along. I can't see that this is going to be bettered by waiting until after the war. It isn't likely we can expect in the next few years a great deal of help from the government. You can work on the theory of getting a government loan, but the chances for federal grants are questionable. You can't pay that off by adding more to a debt. It has to come out of taxes. Taxes are still going to be levied and paid. There are going to be no gifts from the government. The present tax rate is making people realize that we have to pay our own bills. Now is the time to begin to lay by a little "nest egg" to do this. Regardless of how it is financed, Portland is going to have to clean up the river, to take care of the sewage condition from a purely practical standpoint, because other parts of the state are progressing along these lines. There has been a lot of criticism, especially in the Willamette Valley because no apparent progress has been made in Portland.

Mr. Bowes: Don't you think we have made progress?

Mr. Wendel: We don't say you haven't made progress. We do ask that you try to enforce our proposal. We wish to make <sup>the</sup> sewage situation as easy as possible. It seems to me that if we have got to incur a debt and put through a disposal program, which we undoubtedly have to do, the more funds we have on hand the easier it will be to raise the balance. This is a fund that can now be collected, a very substantial fund with as little injury as possible. I don't think the average householder would

raise serious objection. The average citizen is a fairly reasonable and reliable person and realizes that such a situation exists and must be taken care of. Neither individual users nor industrial users can ever pay this money as easily as at the present time.

Mr. Hallock: How about the post-war program under the direction of Mr. Moses? It will need a back-log of cash reserve. This is one project for which a cash reserve can be obtained easily. Don't we all agree that it was wise and proper to impose these charges? Although there was a delay, we have collected some money. Wouldn't we be in a far better condition if we had two million dollars instead of one-half million? (Which was collected under pressure.)

Mr. Bowes: Under pressure? I don't think pressure was ever necessary.

Mr. Hallock: Perhaps not, but it seemed so to the Authority. Now, we have the advantage of that little cash reserve, and everyone seemingly agrees that it is an advantage. Wouldn't it be a greater advantage if we had a larger cash back-log and our plans carried through to a further degree of completion. I can't see much merit in agreeing that we were fortunate that we accumulated this back-log of cash reserve unless we carry it further. I certainly don't believe we can finance it when the time comes with less difficulty. The service charge is a trivial burden, and when that burden is seemingly almost . . . .

Mr. Bowes: It is a matter of judgment as to whether it is trivial or not.

Mr. Latourette: I would like to make a brief statement, expressing more fully the views of the City Commissioners on the proposition. The sum of two million dollars as a back-log for the ultimate completion of the program is, as we view it, hardly a "Drop in the water pail."

These maps attached to the report by the City show the enormous amount of work it is going to require. Intercepting sewers will have to be built on both sides of the Willamette River, and river crossings will also be required. Their design will be difficult. Only the design and construction of the treatment plant will be fairly simple and easy; no great difficulty to finance. The great expense is in connection with intercepting sewers. The cost isn't known within several million dollars. Engineers estimate ten million dollars. They didn't have any data; borings had not been completed. Don't know whether there is rock or quicksand. As an example, when the City widened Front Avenue for just a short distance, quicksand was encountered. The contractors lost thousands of dollars on a 200-foot project. Not only did the contractors lose, but property owners had their buildings wrecked because of caving and the inability to shore up a trench. With these intercepting sewers to be constructed along the river, there may be hundreds of quicksand pockets, the whole project may have to be abandoned as it is planned. We will need millions of dollars more than the engineers estimated.

Mr. Veatch: Assuming that ten million dollars is correct as to what it is going to cost, two million dollars is 20%. Don't you think that is a mighty substantial step to accomplish? If you are going to finance a bond issue and are able to state "we have 20% on hand," it is much easier to finance than otherwise.

Mr. Latourette: My theory is that it is going to cost perhaps double that amount after the borings and estimates are made; also consideration of the cost will have to be based on post-war prices.

Mr. Veatch: Is it your idea that we should go ahead?

Mr. Latourette: That is the theory of myself and the members of the City Council.

Mr. Veatch: It must be done. We are faced with the proposition that we have got to do it sometime.

Mr. Latourette: We are aiming to get that result.

Mr. Veatch: Here's the place we have to go; wouldn't it be best to do everything possible now?

Mr. Latourette: If we take the step now to levy the maximum amount it will surely kill the project. It will alienate the voters. After the war had begun, a proposal was made to cut out the sewer users charge entirely. There was a strenuous campaign made; many people were there objecting to the sewer users charge, even to the small amount that is being imposed now. The City Commissioners voted down the proposal. But they got the idea that it wasn't very popular and they have to work with the view of carrying the voters along with them. If the service charge is increased, it is possible that an initiative measure or action would be taken to refund the sewer users charge.

Mr. Hallock: Do you mean at the City Council meetings?

Mr. Latourette: At the council meetings, various people appeared at that time to enter their objections to the sewer users charge. They were primarily residential owners who were against it. The list of the names of various people fills two pages on the large record, each page about one foot or more long, of names of those submitted at that time. It is referred to as Exhibit XII. If you wish, we will have copies made of the council records for the Sanitary Authority. There were some persons who were not opposed; but there were a great many more who were.

Mr. Wendel: That proposal was brought about at that time by the Board of Equalization. Since that time conditions have changed greatly. One of the organizations that was most active, the Apartment House Owners' Association, I am informed, is now viewing it favorably.

I have been told by one of their members that their ideas have changed; they have "flopped over" to this side because they realize it will be much more burdensome later on.

Mr. Bowes: The secretary of the Apartment House Owners' Association is here. We think they have taken action.

Mr. Plunkett: I might clarify this situation right now. I know there has been no change in the stand taken by our organization. A statement was prepared at a recent meeting. We went on record as opposing this charge and we still oppose it. Mr. Hilton is prepared to make that statement.

Mr. Wendel: I don't mind telling you who it was who made the statement I referred to. It was Mr. Middleman, one of the two biggest apartment house owners in the city, and he told me that. I haven't gotten around to your organization.

Mr. Plunkett: Apartment House owners are faced with a rental situation. On March, 1942, incomes were frozen and our costs are going up.

Mr. Wendel: I don't think that opposition will stand.

Mr. Plunkett: Not only apartment house owners, but laundry people are objecting as well, and all others who are high water users.

Mr. Wendel: We will be glad to bring them in line.

Mr. Latourette: There are one or two more points I would like to make as to whether or not it is fair to finance the major portion of the project with sewer users service charges. The engineers who made the study and the water report thought it would not be a fair basis of procedure because the project is so great and the construction will last through so many years that a large portion of the burden should be passed on to another generation. It is too heavy a burden at this time to pay within a few years if this project is to be constructed

now or within any reasonable time in the future. In the first place, the sewer users charge, if applied to the maximum would not provide for construction unless it was backed up by the city floating a bond issue and possibly with government aid. I don't bank on that. We tried in the past on this project but failed to get it. Possibly the government will see a greater need after the war. Along this line, the City Commissioners feel it is one of paramount concern that after the war, in order to give the boys coming home more opportunity for work, the government should participate in the project, not only because the effort is meritorious but because this sewer project is meritorious. Another thing in the matter of the construction is the necessity of keeping the people with us, because if we don't have public support it is going to fail. Our experience with the vote of the people and the appearance of the people before the City Council gave the Commissioners the feeling that it is best to proceed on a moderate charge, gathering data of what we are up against and laying plans definitely for financing. The City Commissioners are criticized because they have this money lying idle. If we had more money - - -

Mr. Wendel: Do you call money invested in war bonds "idle"?

Mr. Latourette: "Idle" was not an apt word; it was using a wrong choice of word. Our rate of interest here is very low. People may be better able to stand sewer users service charges later, but the people who have to stand them now are all the time hit with the matter of buying bonds, contributing to various different enterprises. Although they have more money, they would have to cut down on other meritorious purchases. It is our feeling that the people are not inclined to go with a heavier sewer users charge at this time.

Mr. Hallock: You suggest that we do not know yet the ultimate cost of this. You feel that putting a "drop in a bucket" isn't worthy

of favorable comment. Using that same phrase, isn't it better to put in three drops than one if the people want that thing done?

Mr. Latourette: I would say "no". The three drops very likely would kill the project because of the unfavorable sentiment.

Mr. Hallock: If the people do want the three drops, would it be objectionable?

Mr. Latourette: If they were to work out a plan.

Mr. Hallock: There seems to be a difference of opinion as to what the people do want.

Mr. Latourette: That is what it boils down to.

Mr. Wendel: Let me call to your attention a few things. It is said they object when they pay the water bill. The only information they have is the statement accompanying the water bill, which is not to the effect that this is a post-war accumulation of a "nest egg". I don't blame them for complaining after reading the statement on the water bill. That statement is not an explanation but an alibi for the water department. I should also like to call your attention to the annual expense which Commissioner Bowes pointed out from the Wolman Report will be necessary to operate and maintain this disposal project. It should be noted that the estimated annual expense consists of a minimum of 50% up to a maximum of 87% for fixed charges; that is, principal and interest. Every dollar that is collected now reduces the fixed charge that must be borne later on. I want to appeal to you gentlemen of the Council, so you not feel that if we let this period pass when people can pay this trivial amount and we reach the time when the City will be forced to do this and the people perhaps won't be able to do it so easily, don't you think there will be a great deal of criticism, whether or not the Commission remains the same?

Mr. Latourette: I would answer that along this line: the City

Commissioners are doing the best of their ability, following their best judgment on this subject, making headway according to the best method and what is going to happen in the future no one of us knows, but the City Commissioners are doing the best possible to achieve construction at the earliest time. Adopting another problem, unless they can get an assurance beforehand that they will receive public support, would seem to be killing the project rather than aiding it.

Mr. Hilton: Can a mere citizen speak his mind?

Mr. Wendel: If he deals with the facts, it is agreeable with the Authority.

Mr. Hilton: I shall try to deal with the facts, but I wish to differ very radically with the position as to the feeling of the people as to the propriety of levying of the 33-1/3% tax. I think the matter has got down to the point where the state feels that the public is unani-  
mously anxious that this increase be made, but Mr. Bowes has explained that the public doesn't feel that way. It has been expressed that by collecting 33-1/3% all along there would be two million dollars in the war chest. I think that is assuming that the people would have permitted that tax to continue. I think if they had, the Commissioners would have been recalled or would have been defeated at the election. At the present time, I definitely and positively know that the people feel that rather than an increase in the tax, it should be eliminated entirely until the war is over and comprehensive planning can be done. We admit by the statements of all here that we have not yet a plan that is at all satisfactory. The law permitting the present tax is a law enacted by the people under a positive misapprehension - - money taken under false pretenses. People didn't anticipate that the sewer tax would just be a drop in the bucket, accomplishing nothing; they thought it meant bringing about a self-liquidating sewer system. When they

voted, they voted on the belief that there wasn't to be any additional bond issue over the six million dollars and no general property tax. The city has spent \$69,000.00 for engineering at the present time - - -

Mr. Bowes: \$17,000.00 - - -

Mr. Wendel: Are you referring to preliminary reports - - -

Mr. Hilton: The City Commissioners have backed up the report that it would cost so much; investigations have shown that if the sewer tax of 33-1/3% had been assessed it would be inadequate for even operating expenses. These will be \$793,000 a year, and 33-1/3% would only bring in \$500,00<sup>0</sup>. This wouldn't take in enough to maintain the operating charges. You have stated what you think the people want; I am confident in my opinion that the people don't want that 33-1/3%. They don't want one-ninth of the tax for many good reasons. I will enumerate them later. Wouldn't it be just and fair to the people to permit them to express their desires? You are confident as to what the people want; Mr. Bowes and the City Council have their idea as to what the people want. Wouldn't it be proper that the City place on the ballot at the next election such a proposition as would permit the people to express themselves on the sewer tax and the continuance of the 33-1/3% levy, or change the entire project? The first duty of this Authority, under the law Section 116-1122, is to encourage voluntary cooperation of the people. Voluntary cooperation of the people is what the people voluntarily wish to do. How can we better get their wish or cooperation than by election. Both sides of the proposition merit discussion on all of these matters. Let the people vote. Then we will have the voluntary cooperation of the people. That Wolman Report is a report made in 1939; it was based on costs in 1939. I think everyone will admit that costs have not become one-half more, but have doubled. It will be more than ten million dollars. That project will not be the project the people voted upon then. They voted for a self-liquidating system,

activated sludge and various other things. Representations were made that the entire cost was not to exceed nine million dollars, (reported from six to nine million). The Wolman Report states it will be from ten to eleven million and is an entirely different project, one in which they don't activate the sludge, but will put it in the Columbia River. Since 1939, costs have doubled; the sewer project would cost twenty million dollars. Isn't that obtaining money under false pretenses, to continue collection without the people having an opportunity to speak, when it is collected for an entirely different project? If you have confidence in what the public thinks, let's let them express themselves. People were very much opposed to the employing of engineers at that time. Under the Wolman Report, thirty-four engineers were to be employed. It will be necessary to have that many more today. I wonder if you gentlemen aren't losing sight of the fact that we are still in war? We have a back-log of \$400,000. That is ample money for a back-log and let everything be held until you have a sensible project; when you know what you are going to do, start the project so the boys who come back from the war will have a job instead of giving work to the people who are here. You speak of public opinion. The radio is a good indication. Early in the morning, at the worst possible time, I spoke over the radio on this subject; I got twenty-five calls. All of the people were up in arms that there was to be an increase on this tax. When you get that many people calling at such an unfavorable time you can be certain they represent the public's attitude. The Apartment House Owners' Association went on record against this proposal the other night. I could point out that those resolutions of the various organizations were brought about by solicitation and mean nothing. When the people vote, they vote the other way. I am satisfied those resolutions referred to were brought about largely by solicitation, but we doubt that they express the wishes of the people. I am willing to

take a chance on an election. Stop this petty larceny, paying money under pressure. Old persons of incomes from \$40.00 - \$60.00 - \$70.00, those are the people contributing to this annual fund. The dollar that comes out of them means less food. They are bitterly opposed to that additional tax - - - It taxes only a small part of Portland and leaves the rest go "Scott free".

Mr. J. E. Bennett: I am not here for the purpose of defending our present City Council. Fact of the matter is, I think they are deserving of condemnation. They promised the people one thing and turned around and taxed them for something entirely different, and that is exactly what is being done today. The Sanitary Board is responsible just as much as the City Council. I was a member of the City Council that hastily considered the project to produce jobs. It was left pretty much up to Commissioner Bean to prepare a program that was workable. We put this up as a proposition that was to be "pay-as-you-go". No bond issue, no additional taxes. There wasn't going to be anything except this charge on the water bill. In return, the people of Portland were to secure a Willamette River in which they could take a bath and also drink the water if they saw fit. Those statements were all untrue. We discovered that the scheme the council used in order to push the issue was a mistake. We are now also presenting a program that is not workable. The Sanitary Authority is equally responsible. It was my position and is now that the minute we discovered that we had presented a scheme that was unworkable, we should have stopped collection of money. Fact of the matter is, I believe every nickle collected could be seriously questioned if anybody took the trouble to do it. It seems to me it is about time that the city council and Sanitary Authority quit playing politics.

Mr. Hallock: What is this about politics? I would like to have you explain that.

Mr. Bennett: If a man told you he was going to sell you a horse for \$50.00, you would expect to get it for \$50.00.

Mr. Hallock: That is your explanation?

Mr. Bennett: (Did not answer the question regarding politics).

It is high time to quite be-fuddling the issue. Now, the City Council in connection with the Sanitary Authority can do two things; first, discontinue the collection of the charge - we have \$500,000. If they can't gather together enough plans to present a program for \$500,000, it is my estimation the City Council can't do it with five million dollars. This board should put up a program that would be workable, tell them the truth about what it is going to cost and that the Willamette River is not going to be clean. Tell the people what they are going to have. I am not in favor of dumping sewage into the river. It is not civilized to dump it into the river. Remedy is to present a plan and ask them by their vote to approve or disapprove. The Sanitary Board tries to browbeat this City Council into further committing a bigger crime under the present program under which they don't have a moral right to collect a single cent.

Mr. Smith: The simplest test would be to collect the maximum contemplated and see whether or not it meets with the approval of the citizens, and if it should meet with their disapproval, then, if they recalled the Council, it would save the cost of an election. I have during the past three to five years had quite a bit to do with this. I have shown the picture "Pollution in the Willamette", and as yet, there has not been a single group who have not offered their support to a program to clean up this river.

Mr. Bowes: Speaking for myself and not for the Council - Mr. Smith has shown the picture; I have seen the picture and it is a good picture, but there is no place that shows the fish dying below the falls.

- - - I am not condoning the dumping of sewage into the river. How do the

fish get to the falls, I don't know.

(There followed an explanation regarding fish life in the Willamette River by Mr. Smith, et al.)

Mr. Bowes: Mr. Smith appeared at a meeting and said we should have the engineering data. It was the intention and will of the Council and is yet the will of the Council to develop an adequate system based on engineering data. With the war, every competent engineer was taken in either one branch of the service or another. We have not been able to find anyone competent to do the work. Mr. Bennett spoke of lying to the people. Mr. Bennett didn't help me any when I took office. Mr. Bennett was a member of the Council when these matters were submitted to the people, and if Mr. Bennett were the competent man he claims to be, he would have known what the plans were. Now he comes back before this Sanitary Authority regarding deals while he was in the Council, and he was the one that voted for them. As far as I know, and so far as my department is concerned, we are honestly trying to develop a sewer system that will satisfactorily clean up the Willamette River. It is not the intention that sewage from the City of Portland should be dumped into the river. It will be intercepted and carried to a central point for treatment before being discharged into the Columbia River.

Mr. Hallock: If you do find that the people of the city want it, you will be the first to - - -

Mr. Bowes: We will not try to obstruct the collection, but in our best judgment, and we can be wrong (maybe we have been wrong and maybe we will be wrong again), we will not submit anything to the people of Portland until we definitely know what type is needed for a treatment plant that we know will do the job. We are going to have competent, able men tell us. Then we will work out a financial program.

Mr. Hallock: If in view of the fact that the plans are not complete, the people expressed themselves in favor of our proposal, would you view it favorably?

Mr. Bowes: If the people want it. We are committed to 33-1/3% and the Board of Equalization recommended one thing and the Council adopted another.

Mr. Hallock: If the people express themselves, you are not disposed to then conclude, because the plans are incomplete, that you will still oppose it?

Mr. Bowes: I didn't get the question.

Mr. Hallock: If we assume that some adequate method can be worked out to satisfy you that they want this charge increased and the money collected, the fact that the type of project has not been worked out wouldn't be permitted as a factor in the Council's viewing this unfavorably?

Mr. Bowes: I don't think it fair to the people of Portland that we levy the charge. We have been working on this sewage disposal thing under a handicap. First, the people voted on a pay-as-you-go plan, then they were asked to approve a general obligation bond issue. The original revenue bonds could not be sold. Other pay-as-you-go plans were submitted. The people are confused. I don't think it is fair to tell them we are going to give them another increase.

Mr. Hallock: Even though the people favor this increase?

Mr. Bowes: I don't think the people understand.

Mr. Wendel: There seem to be two issues: (1) engineering, type of plans, and (2) the financial plans. Suppose you are on a cash basis and you know you are going to have to buy a suit. Do you have to wait until you determine whether it will be a blue suit or a brown suit before you save the money to buy it with?

Mr. Bowes: If I have to have a suit, I buy it, sometimes on credit.

Mr. Wendel: Why can't the financial planning be done now?

Mr. Bowes: Because of the confused condition of the peoples' minds on the sewer disposal program. We are trying to keep the confidence of the people. The only way we are going to get it is first to have an adequate plan, a plan that will do the job, backed up by engineering.

Mr. Hilton: Do you think it is fair to the water users when they didn't vote for that kind of tax, when we don't know whether or not it will be ten or twenty million dollars?

Mr. Wendel: We do know that it is the law of the State of Oregon that it must be done.

Mr. Hilton: The law does not say that the pollution must cease?

Mr. Veatch: There is and has been for many years a law prohibiting the dumping of sewage.

Mr. Hilton: Portland is at the end of the Willamette River and above there are many places that are far worse. I know from the engineering reports the mills in Oregon City are far worse than sewage from Portland. Sewage from Portland can be collected to be dumped into the Columbia River. Are they in favor of that? What are the proposed plans?

Mr. Hallock: As mentioned before, it is the first duty to bring about voluntary compliance. It is fair to say that if we fail to get this - -

Mr. Hilton: Force compliance?

Mr. Wendel: We are trying to get the City of Portland to do this. If we fail at this hearing to produce cooperation, there is no further end to attain by such means. There has been the argument that the sewer users charge applies to but a few of the people. This thing spreads the charge, as far as I know, to all the people. Every nickle

raised now will lower the bond issue.

Mr. Veatch: Most everyone in Portland has to use water.

Mr. Hallock: What about Nyssa collecting a \$1.00 charge; Burns, \$0.75; Lakeview, \$0.85; Eugene, \$0.25; Ashland \$0.25, Silverton \$0.50? They are all collecting substantially more per capita than is Portland. They are accumulating funds to help after the war is over.

Mr. Hilton: Have they prepared their plans?

Mr. Hallock: Most of them have no plans, nothing except the impulse and desire to clean up.

Mr. Wendel: For your information, I will tell you this: Following the meeting with the City Council at which we solicited the voluntary compliance, we were told they did not believe this plan had the support of the people. We then said we would try to bring about an expression. We have worked to that end, and we have been very much surprised ourselves at the unanimous success. Due to limitations of ability, we have not been able to contact all organizations. All we have contacted have been favorable.

Mr. Hilton: Have you told them both sides of the question?

Mr. Wendel: Perhaps we can't see the other side. However, we have told them the following. See if you think it has been fairly presented. We want to be honest; we don't want to misrepresent the facts. "There is a law in the State of Oregon that compels pollution to cease; obviously, that law cannot be enforced during wartime when men and materials are not available. However, preparation for compliance can be made, particularly in the finances. There is a city ordinance whereby the City Council can collect an average of  $29\frac{1}{2}\%$  per month up to  $33\frac{1}{3}\%$  of the water bill. The City Council is collecting approximately one-ninth. This one-ninth brings in from \$17,000 to \$18,000 a month;  $33\frac{1}{3}\%$  would amount to nearly \$50,000 a month, or one-half million dollars

a year. Doesn't it strike you as good business to accumulate this fund, this "nest egg", to be invested in war bonds"? That is what we have told the people, and if we have not presented the truth, we desire to be corrected.

Mr. Fred Foss: I would like to speak here as one of the individuals who helped to pay this sewer service charge. I am 46 years old at the present time. You are going to collect approximately \$10,000,000 to \$20,000,000. Do you think that I should pay for something that is going to be completed in twenty-five years? I heard some talk about that picture shown by Mr. Smith. I have here something that was written by Richard Smith. He might be the same Smith who owns Bonney View Park. This article says that on the Clackamas River the fish were so thick in 1940 you could almost walk on them. They must have gone through this polluted area. I am a fisherman, so I know something about the situation; it is not the pollution from the Portland area that is killing the fish. It is the offal from up and down the river which is so bad it tore up the nets. Waste from the paper mills. We haven't cleaned that up yet. I can't go for that increase; I am buying bonds, paying taxes and making contributions. Against the law to dump sewage into the Columbia River? Regarding fish life in the Willamette River, I will defy Mr. Smith or anyone else to go down to the waterfront and show me fish that have died there. You haven't seen it; it hasn't been there. They go back. We have an annual run of salmon. Give the people an honest chance. Mr. Latourette made a good statement on the matter of quicksand. I have worked on the construction of the Kaiser plant and there was very much quicksand. Our lines are breaking. It is a consistent matter of caving. Even the steel pipes are broken. We don't know -- this sewage disposal may cost \$40,000,000. Let them do more engineering; we want to win the war. If we have to, we can take the issue to the next legislature.

Mr. Wendel: Regarding the pollution from the paper mills, please don't think nothing has been done there; but as long as the City of Portland continues its pollution of the river, it will delay any relief we can get from the paper mills. The sooner Portland acts, the sooner these companies will get into line. The paper mills have been making a sincere effort.

Mr. Hilton: Wouldn't, under this plan, it take from 30 to 40 years to build the plant?

Mr. Veatch: I don't think that anyone at any time thought you could build a sewer system in a few years. Might take longer.

Mr. Hilton: Isn't it - - - - -

Mr. Veatch: I think that the purpose of collecting the sewer user charge is for the purpose of eventually applying it on the construction of a sewage disposal plant. Neither the City Council nor the Sanitary Authority can say what the kind of plant will be nor the cost. We are going to be faced with this situation; We are going to have a tremendous unemployment problem after the war. The state is taking steps and the City also to meet that situation. Something serious is going to face us. This is one of the projects that might help solve unemployment. But you can't do that unless you have some funds when the time comes to put it into effect! Now, there was a suggestion made that government aid might be obtained for the purpose of constructing the sewage disposal plant. From information I have gathered, there isn't going to be any more public grants. The future program will be government loans at a low rate of interest on the same general principle as the R.F.C. loans. They all require a certain percentage of the cost to be put up by the City, and I doubt very much if you are going to get a government loan unless the City can say "we have this much we can put into this now." If you sit by and don't have a fund collected, when the time comes to start the project you are not going to

get the financial help necessary.

Mr. Bowes: I believe you are correct; it will be a grant and not a loan. Loans are very much in the background, not very much in evidence. You go to Washington and ask for a loan or a grant. They are going to ask for an adequate plan; they are going to ask for a bond issue. Two or three million dollars isn't going to be what they are going to ask for; it is a bond issue that you have to have.

Mr. Bennett: When I made the remark regarding the unworkable program put through, I thought I confessed my sins in the beginning under the theory that an honest confession was good for the soul. The old City Council, of which both Mr. Bowes and I were members, made the mistake in not putting up a program that was workable. I am willing to take my condemnation. That matter was put to the people hurriedly and without the expenditure of a great amount of money. No excuse - - but if you look at it from the standpoint where I am now, I say Commissioner Bowes has spent \$100,000 of the taxpayers' money, and at this late date confesses he hasn't any program, and he expected me to have it without the expenditure of money. Cold facts are that these sewer user charges are out of proportion. Give employment to engineers; it would have some merit from that point, but usually "foreign" engineers are imported to do the work. I want to say to you Commissioners and the members of the Sanitary Board, if you care to take a look at the minutes, you will find that back in 1940 Commissioner Bean was the Commissioner in charge and I asked Bean this question: "If the Council grants you the authority to levy this tax under the authority of the people, how soon will you be able to work on this system?" He answered: "I have all the plans ready now." If Mr. Bean had them ready then, where are they now?

Mr. Smith: I would like to inject the fish back into the discussion. Mr. Bowes raised the question of the picture showing the fish

released. They didn't last one minute and they were good healthy trout. How did these salmon get up the river? Some of us overlook the fact that there are normally three salmon steelhead runs - spring, summer and fall, and thanks to pollution, you have only one run left in the Willamette. Flushing of the river by the winter floods makes it possible for some of the young fish to get out. During the low river flow in the late summer and early fall no fish can survive. You have been concerned about the Clackamas. There are no fish that will get through to this river at certain stages of the year.

Mr. Wm. Puustinen: I represent a body of people outside the City of Portland, and from the statements and arguments made here, I feel that this is a very selfish attitude for the City of Portland and the State of Oregon to take. It seems to me that you are overlooking the fact that while you have been holding up operations for cleaning up the river, you have been discriminating against the fishermen of the State of Oregon. While you have been considering only the City of Portland you have taken an unfair advantage of the rest of the state, for you are killing off one of the natural resources of the state - - more than that - - it is a national resource. I am speaking only as a commercial fisherman of that natural resource area. We are working on plans for post-war restocking the Willamette system. However, we are stopped from going ahead - - we can't go ahead unless somebody cleans up the Willamette River pollution. It prevents those fish from coming back later in the season - - that is the unfairness I have spoken of. All of your arguments are concerned with the City of Portland; you do not think of the vast amounts of fish that are present early in the season that are killed off because of this pollution. I will admit that the City of Portland have various arguments, but as a citizen of the State of Oregon, interested in conserving the natural resources, I am opposed to the City of Portland taking the attitude that they have a right to

dictate the policy of the fishermen. As to the Clackamas River, you have seen salmon piled up so thick you could walk on them. No salmon would have been there if a natural barrier had not been there. I have fished for 23 years, and I have given some of my time to scientific study. I am seriously and fairly trying to preserve a natural resource so that we may see a building up of a salmon industry of from \$45,000,000 to \$50,000,000 here. We have now remaining only one section of the run. We have steel-head fall runs and spring runs. Nature provides a big flush of water to get the fish over the sludge. Many of those little fish do get back to the sea. Right now the early rainy season will start. The impulse is generated in the fish to start down the river. They may be able to get back down. The warm temperature and lack of oxygen may kill them before they get back out of the Willamette. Even spring runs are going to be killed off. - - - I don't like the picture of the attitude of the City of Portland unless they consider their responsibility to the State of Oregon and the United States as a whole. The pollution in the Willamette is a definite barrier and manace to the fish industry in Oregon. You, as citizens of the City of Portland, I feel are responsible to help. If you will help us by cleaning up the pollution, we will restock the fish at Bonneville.

Mr. Bennett: I think you are not familiar with the plan. All the speakers are agreed on how shall we proceed. The plan as proposed and referred to the people did provide for the cleaning up of the river. You speak of intercepting sewers. The plan is to dump sewage into the Columbia River.

Mr. Pruustinen: I am glad you brought that up. There is a great fish run reaching Rainier and St. Helens. If you take this pollution and pipe it to the Columbia River it will not help at all.

Mr. Wendel: Let me make one statement to clear this up. The

State Sanitary Authority does not design or plan the sewage system for the city of Portland, but naturally, it would never approve plans that would include dumping the sewage into the Columbia.

Mr. Bowes: That is not the plan of the City of Portland.

Mr. Hallock: Aren't we getting far afield from the issue? Shall we continue the charge as it is now or shall be increase it?

Mr. Wendel: The State Sanitary Authority cannot enforce the compliance to the letter of the law, but it can enforce action which will lead to compliance and that is what we are after; that is why we are asking the maximum under the present authority.

Mr. Bennett: Is this commission willing to go on record as endorsing a program whereby people are taxed for something entirely different from that which the tax was authorized for?

Mr. Veatch: This commission is required to enforce the law compelling the cities to adopt some kind of pollution abatement system. The kind of plan is up to the city, and that must be submitted to us for review; then we can approve or disapprove.

Mr. Hilton: Why undertake the taxing of the city? - - -

Mr. Veatch: One of our functions is to make investigations to see that everything possible is being done to carry out the program.

Mr. Bennett: Your plan is that it is to be financed by the city alone, that the cleaning up of the Willamette should be stood by the people alone. The very minute we found we had a program that was not workable we should have stopped the program. It should have been referred back to the people. Now Mr. Bowes has spent \$100,000 - - -

Mr. Wendel: This is not a meeting to air grievances between members of the City Council or any other group. Have the arguments and statements presented thus far had any effect upon your minds, City Com-

missioners? Does it seem to you that such a program is better than a tax burden later on when people won't be able to afford it as well as now? Regardless of the details of the plan, money will be required. Plan No. 2 has been estimated at a total cost of \$10,287,500.

Mr. Bowes: Costs have increased.

Mr. Wendel: They may decrease after the war. The annual cost is estimated at \$793,000, of which \$514,000 was for interest and amortization. If we had two million dollars on hand now, that would reduce the amortization. If the war continues another year, we will have another million dollars. If it takes another two years to get it into operation, your annual cost will be reduced tremendously. That is plan No. 2. Doesn't it seem to you the part of wisdom to act now?

Mr. Hilton: If you are so confident, why not submit it to a vote?

Mr. Wendel: We have already lost four years. The people would be saving this now.

Mr. Bennett: Suppose the City Council should undertake the enforcement. Would that ordinance be subject to the referendum?

Mr. Latourette: That depends upon the emergency clause.

Mr. Bennett: Referendum could be invoked and the entire charge stopped. The State Sanitary Authority is no more at fault than the City Council; both are responsible.

Mr. Hallock: I am weary of these abuses.

Mr. Bennett: Dr. Stricker, I would like to ask you a question regarding health and sanitation.

Dr. Stricker: I won't have time to answer it now; come to my office and I will discuss the matter with you.

Mr. Wendel: As Dr. Stricker does not care to discuss this matter at this meeting, I must declare you out of order, Mr. Bennett.

Can any further facts be developed here that will change the opinion of the City Council? Any government body that is able to lay up money to be spent in the period of famine is contributing to the guarantee of our future. That is the plea I most sincerely make of the City Council.

Mr. Bowes: We shall be glad to consider it.

Mr. Wendel: Is there any further discussion?

Mr. Peterson: First of all, Mr. Wendel, I would like to clear up a few things regarding this tax. As was stated, it would be an advancement and a help to the war effort if the said sewer users charge could be made and most of it could be charged to taxes. That may sound patriotic; tax money is free money to the government and does not have to be returned with interest. Second, you made a statement to the members of the city council -- you made it in the form of a question: "Is the city council willing to increase the collection charge or does the City Council want to be forced"?

I made a suggestion at that time which did not meet with your favor. It was to include with the water bill a circular asking the people to vote; to send in this vote if they were willing for the charge to be increased. We could get a positive statement from the water users themselves. You were the one who dissented to the suggestion. Then you refer to page 8, that the council is not strongly in favor of sewer users charges.

Mr. Wendel: I did not make that statement.

Mr. Hallock: I made the statement.

Mr. Peterson: Had he read the preceding page he would have found that it was not the City Council but the voters of this city who are not in favor of the bond issue and that they voted down the issue. I don't think there is any member of this Council not in favor of cleaning up the river. I don't think we, as representatives of the people, as the people themselves do not want the increase, have a right to decide since they have extended that privilege to us. I say this advisedly as I have collected

many thousands of water bills and have personally contacted many people and, therefore, have been the recipient of many complaints regarding even this ten-cent charge. They didn't believe it was adequate to pay for this project. You mentioned use of water bills to propagandize the program.

Mr. Wendel: I asked if the water bills could be used to propagandize or educate the public and you said you cannot use the bills.

Mrs. Lee: I have no doubt that the Authority is most sincere in its purpose. Of course, I have only been a member of the City Council for four or five weeks. Even in that time I have become aware of a vital difference of opinion between your Sanitary Authority and the Council. Now, speaking for myself alone, I don't think there is any question about the fact that the City of Portland has to clean up the river. I think every member feels the same way. I have talked with them, and I have tried to read the reports. I haven't read half of them. It is a tremendous job. I think, however, that the members of the Council are agreed that the river has to be cleaned up and in some suitable manner. The difference of opinion between these two bodies seems to be on how to accomplish it. You gentlemen feel that by raising this sewer user charge to the full maximum charge and by accumulating this fund you would be laying up a fund for use at the end of the war. There is no use speaking of what might have been collected in the past - - that is water over the dam. You believe by collecting this charge until the end of and for the duration of the war you could have several million dollars more than otherwise. You gentlemen feel that it is the most advisable way of hastening the day to have the funds available to construct the project after the war. The Council seems to feel that this is only a drop in the bucket. From what investigations I have made I am inclined to agree with the other mem-

bers that it is only a drop in the bucket - I don't think it will do very much good. I don't think there is any possibility to clean up the Willamette River without federal aid. I feel that this will be part of the postwar "must program" and that "Fathers in Washington" will see it that way. They will probably view it from the health and sanitation theory. That is going to be the type of project I believe it is going to be. That is going to be what they will lend a sympathetic ear to. I don't think Portland in and of itself could finance it. From what little I have gathered Portland can't finance its share without a bond issue. We are going to have to deal with large figures. The question is how to get the greatest public reception for a bond issue to reduce the larger portion of its share. But raising the sewer users' charge wouldn't do much good, but would serve as an irritant to the people. You can't travel ahead of the people, and I don't think you should. People, generally speaking, have very good judgment. We don't want to do something that will irritate them so that they will be against the whole picture. That has been the query in my mind. You both have the same objectives. I haven't been convinced when you say public opinion favors the raising of the sewer user charges. The people in the water bureau and the letters I get don't say so. The only person who has been in favor of it has been you, Mr. Wendel. Even some of the people who were in favor of the  $33\text{-}1/3$  are now against it. I wouldn't be willing to raise it. It would just make the people mad and lose the larger issue. I don't think we can raise the tax now, and I don't think we should. There are a lot of "bugs" in this method. If your body is convinced that it is right in that the people favor an increase as authorized by the sewer user service charge law why not submit it to the people and get an expression of their opinion to see who is right, the Sanitary Authority or the City Council. Get the public opinion on this situation. A referendum vote should be taken. If we agreed upon a statement, such a statement could

be issued as agreed upon jointly by this group in order to set the issue before the people. If you are judging the people right and they do want to build up the fund, I would certainly then vote to put on the maximum amount. I can't agree that you are right as I see the picture now, and I don't think the Council should increase the charge.

Mr. Finley: Several years ago that law was passed by the people of this city to make it 33-1/3%. Shouldn't that law be carried out?

Mrs. Lee: Are you questioning me?

Mr. Finley: Yes.

Mrs. Lee: From my investigation I find that in 1936 they put a measure on the ballot for 1/3 of the current water rate and this they revoked by a large vote. In 1938 the law was enacted that the City Council on the advice of the Equalization Board could levy a sewer service charge in an amount not to exceed 33-1/3%. The thing that worries me is that when in 1938 the people voted for that charge they thought it was self-liquidating. Then they got competent engineers on the job and found that it never could be self-liquidating.

Mr. Finley: We have been working for thirty years to clean up the river, and it is the law of the state that they can't pollute the river; yet the city council has for many years refused to clean up the river. In the Oregonian of October 1940, when Bowes and Bennett were in the Council, Bennett wrote an article stating that "Most of the people know, I believe, that should we levy the full 33-1/3% tax on the water user charge that it would be detrimental to the industries, and the industries have told us that in no uncertain terms, notwithstanding Mr. Finley's letter". We cannot understand why with the growing feeling of the city that the river has not been cleaned up. They could have cleaned it up before. I hope that these people will do something so as to help clean

up this river because it is a great detriment, and it is public property.

Mr. Cooper: I think I can clear up and possibly add a little useful information here. I am the author of the statement on page 9. I want to explain that statement further. You mentioned that the R.F.C. might loan us money. I think that is true. However, the interest rate of the City of Portland is low - - we enjoy the lowest interest rate in the United States - - even lower than the U. S. Government. I would like to clear the atmosphere. The full amount of the sewer users' service charge would not suffice. A bond issue would be required to build this. I want to build it now, or just as soon as the war is over. I want to see construction of this project. We have enough money for the engineering now and for the plans and specifications as soon as they are completed. If it isn't enough, we could go out and borrow money unless we saw we had in our hands self-liquidating funds to liquidate the debt. The Chairman did make the statement that we didn't want to mortgage our future. If we are going to borrow money, let us take this thing back to the people. Make the sewer users' service charge large enough and then we can get money within the limitations we have. At the same time, vote a bond issue and get the money.

Mr. Wendel: That kind of a program won't help a bond issue. We must have money accumulated in order to finance a program of this kind. We must have cash on hand.

Mr. Cooper: The City of Portland enjoys a very low rate of interest charge now. It is my personal ambition to get this bond issue on the ballot and get this at the low rate of interest, and after the war we can go before the public for this money. We are now getting money at 1-1/2%.

Mr. Wendel: Borrow the money?

Mr. Cooper: At a low rate of interest, yes.

Mr. Bennett: You can sell the bonds now while the interest rate is favorable and invest in Government bonds.

Mr. Hallock: Mr. Cooper, you have handled a lot of securities. Isn't it your recommendation and impression that the prospective borrower who can come before a financier with a program that is economically sound -- with several million dollars clear -- that he can get a better credit?

Mr. Cooper: Portland wouldn't be able to get a better rating.

Mrs. Lee: Does your state commission feel it is going to be advisable to build a plant without a bond issue?

Mr. Wendel: No.

Mrs. Lee: Assuming that we are agreed that the bond issue is going to have to carry the real load - the big end of it - say 5/6, to get the bond issue is to get the vote of the people. If you gentlemen felt that by raising the sewer user charge now it would irritate the people, would you still want it?

Mr. Veatch: No, not if we felt it was going to irritate the people. The average person is reasonable. Collection could be made if presented properly.

Mr. Cooper: Wouldn't it be a lot better to wait until after the coming election? I believe it wrong to deliberately irritate them.

Mr. Veatch: Several other cities beside Portland have not begun this program. Their almost unanimous answer is "What is the City of Portland doing? Why go after us - a little place like us?"

Mr. Cooper: Industry?

Mr. Veatch: We are up against that same thing with industry. Outside of the City of Portland, the cities are adopting definite programs toward putting in a sewage disposal system. What I can't get at here is, if it isn't logical to make this collection of 33-1/3%, why collect 10% - - why collect anything? If you want to collect anything, why not the maximum

amount, because there will never be a time when you have a better chance.

Mrs. Lee: This is debatable. A lot of people are feeling the pinch. Small business with ceilings on their products and inefficient labor. I had clients who were not making any money at all. The ones that own their own property and live in their own homes are paying the sewer users' service charge and if we raise it the property owner cannot pass it on. There is a great deal of inequality.

Mr. Veatch: The water bill is charged up to expense. So much of it will go into taxes. No one will operate at a loss.

Mrs. Lee: Almost.

Mr. Veatch: The increase in the water bill would ordinarily go into taxes to the Federal Government and would not be much of an increase in expense.

Mr. Wendel: If we waited a time when each one of the 400,000 people in the City of Portland was sharing some degree of prosperity, that time would never come to be. The figures show, according to Mr. McNaughton who made the statement, that the income this year was 417% of what it was in 1939. That was for Portland and vicinity, I believe. The County of Lane is accumulating \$5,000,000 for postwar improvements, and among its projects is sewage disposal for the City of Eugene. They are collecting money by means of a sewer charge. If the city took the leadership and explained the situation to the people, I believe they would all be willing to pay the 29¢ now and accumulate a fund to be used when it will be harder to pay. If we don't do this now, we are going to have to resort to compulsory measures when the war is over.

Mrs. Lee: Industrial payrolls are up, but isn't it a fact that the great bulk comes from shipbuilding plants? These people live in housing projects. All the utilities are paid by the Federal Government.

Mr. Morrow: Or by housing authorities.

Mr. Hallock: They are passed on to the renter. The city is paid.

Mrs. Lee: What was your objection to Mr. Peterson's plan of contacting the people through the water bill?

Mr. Wendel: I personally would like to have the city take the leadership.

Mr. Hallock: If we felt that the communication from the city would emanate from the city instead of emanating from the state; couched in a way so that the city would be sponsoring the utterances.

Mr. Peterson: You wouldn't want us to make any statement other than the facts?

Mr. Bennett: I would suggest putting the statements in the form of two questions, "Should the sewer charge be increased" and "Should the sewer charge be removed".

Mr. Peterson: I am sure the Sanitary Authority and the City Council can work out a satisfactory statement.

Mr. Veatch: Follow the procedure of getting the facts in the water bills, giving the facts to the consumers.

Mr. Cooper: What would the attitude of the Sanitary Authority be in putting this on the ballot in May?

Mr. Wendel: You don't think it should be started now?

Mr. Cooper: This isn't the time.

Mr. Finley: The State Sanitary Authority was set up Nov. 8, 1938. People of the state organized this board for the purpose of getting you to clean up the river, to stop the pollution, and you have done it in some certain cities. Have you not some rights? You say that you can't clean it up until after the war; they ought to do some

definite work now so that they can begin after the war is over.

Have you that authority?

Mr. Wendel: We believe we have that authority.

Mr. Finley: The people have the right to speak. It is for the future, and there is an election coming up. Maybe the people can do something then.

Mr. Peterson and Mr. Cooper: That is a threat. Put that in the records.

Mr. Cooper: I want that in the records.

Mr. Wendel: It will appear in the records.

Mr. Smith: I think there is an interesting situation, as expressed by the individual members. There is an agreement in favor of cleaning up the river. I can also see that the question of how is a factor. I am also aware of the constant bickering that has been going on for years. It would seem that the greatest contribution we could make is to evidence some leadership by getting the public in the frame of mind, by preparing plans to get the job done. The Council should assume that leadership. Time and time again Commissioner Bowes has said that he doesn't favor this and apparently he hasn't changed his mind. If you are agreed that the job should be done, it behooves the city to take the leadership.

Mr. Bowes: I don't know how many times the City Council has to say they are in favor of the cleaning up of the River. The people have never approved an obligation bond issue. When you put on an obligation clause they turned it down. Mr. Finley has been loud on what we ought to do. He wouldn't know a sewerage plant if it walked by his door. Every member of the City Council wants to clean up the Willamette River, when we find competent engineers. We are trying to proceed on the basis of the Wolman Report. It is a sound approach to the problem. We have

taken that step by step and are proceeding just as rapidly as we can in getting competent engineers and people to do the work and we should have been a long way on the program if it were not for the war and we could get people.

Mr. Bennett: They have spent \$100,000 already on engineering.

Mr. Bowes: Money has been spent on work in connection with the sewerage project. We also pay the Water Bureau for collecting the charges, actual personal services, materials and supplies needed in carrying out the recommendations of the Wolman Report - approximately \$68,000 up to this date. I hope that it is understood that your present City Council are in favor of cleaning up the river as rapidly as we can finance it and can construct it.

Mr. Hilton: Even if the Sanitary Authority insists that money be collected illegally by means of the service charge?

Mr. Bowes: I think it is only fair that this question be settled when the Sanitary Authority and the City Council sit down and work out a statement. They should see that it is fair and submitted to the people.

Mr. Finley: Don't you think you should immediately do this?

Mr. Bowes: We are suggesting that program now.

Mr. Hilton: I would like to see the people advised of the facts.

Mr. Bowes: You can sit in on the meeting if you want to.

Mr. Veatch: I move that we adjourn, unless you wish to appoint someone now on the committee to meet with the Council.

Mr. Wendel: We will consider that later. Is there a motion to adjourn?

Mr. Veatch: Move we adjourn.

Dr. Stricker: Second the motion.

Mr. Wendel: All signify by saying "aye".

(Meeting adjourned at 1:35 P.M.)

## MINUTES OF THE TWENTY-SECOND MEETING

OF THE

STATE SANITARY AUTHORITY

December 16, 1943

The regular meeting of the Oregon State Sanitary Authority was called to order at 10:20 A. M., on December 16, 1943 in the Library Room, 816 Oregon Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Frederick D. Stricker; Messrs. John C. Veatch, Blaine Hallock, Charles E. Stricklin, and B. A. McPhillips, members (Mr. B. A. McPhillips having been appointed to fill out the unexpired term of the late Albert Burch); Kenneth H. Spies, secretary; and Messrs. Charles Ohling, W. J. Smith and Marshall N. Dana.

MINUTES: The minutes of the September 17, 1943 meeting were read by the secretary and were approved after the addition was made to paragraph (6), page (3) of the following statement: "and a resolution by the Central Labor Council was unanimously adopted".

ACTIVITIES REPORT: The Activities Report for the period July 1, 1943 to November 30, 1943 was submitted by the secretary. The fact that the Federal Public Housing Authority was not compelled, by Act of Congress, to submit plans and specifications to state authorities for approval was discussed. The validity of such an Act, setting aside state laws, other than for purposes of the war emergency was doubted by Mr. Hallock and Mr. Veatch.

Consideration was given to the postwar planning programs being undertaken by the municipalities of the state. Although some of the larger cities have already devised methods of financing such programs, it was doubted if many of the smaller communities had made much progress in this regard. Because of the primary importance of the financing, it

was thought advisable to request the assistance of the State Committee on Postwar Readjustment and Development to supplement the present activities of the League of Oregon Cities and the Sanitary Authority in acquainting city officials with the methods of finance available to them. The following motion was made by Mr. Veatch, seconded and unanimously carried. MOTION: That the State Sanitary Authority request the Governor's Committee on postwar planning to work with municipalities of the state for the purpose of devising financial plans by which construction on sewerage disposal systems can be started as soon as men and material are available for that purpose. Nearly all of the municipalities in the state of Oregon which have inadequate facilities, contemplate the construction of sewage disposal systems but a very small percentage have any financial program by which this construction could be started immediately after the war, although the Sanitary Authority has repeatedly requested the adoption of a financial program which would enable municipalities to begin immediate construction of such facilities. The plans so far adopted for financing would not enable construction to begin as soon as men and material are available, but if adequate financial plans were adopted by the municipalities it would provide immediate postwar employment for a large number of men.

PROJECT PLANS: The following project plans reviewed during the period of July 1, 1943 to November 30, 1943, by the secretary were given the formal approval of the State Sanitary Authority:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>
8/17/43	Sutherlin	Sewerage for war housing
10/23/43	Huntington	Sewerage for war housing
11/2/43	Grand Ronde	Sewerage for war housing
11/2/43	Myrtle Creek	Sewerage for war housing
11/2/43	Roseburg	Sewerage for war housing

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>
11/12/43	East Vanport	Sewers and Class C Permit
11/12/43	Fessenden;Portland	Sewers for war housing
11/22/43	Molalla	Sewerage for war housing
11/22/43	Klamath Falls	Sewerage for Naval Air Station

PERSONNEL: It was moved by Dr. Stricker and unanimously carried that an appropriate resolution be drafted by the secretary expressing to the members of the immediate family the sympathy of the Sanitary Authority regarding the death of Mr. Albert Burch.

The secretary reported that \$150.00 had been refunded by Wm. F. Selleck and Company to the State Treasurer and that the remaining \$100.00 would be refunded as soon as possible.

It was moved by Mr. Hallock, seconded by Mr. Stricklin, and carried, that at this time Mr. Ohling be paid \$250.00 on account, for services rendered.

PORTLAND SEWERAGE: Consideration was given to the problem of securing action on the part of the city council to do the utmost under present conditions toward compliance with the state law; namely, to prepare detailed construction drawings, cost estimates and specifications, and to accumulate an adequate sinking fund.

From the general discussion which followed and which was participated in by Mr. Marshall Dana of the Oregon Daily Journal, Mr. W. J. Smith of the Wildlife Federation, Mr. Charles Ohling, Public Relations Counsel, and the members of the Authority, it appeared that the city council still refuses to act in the matter of increasing the sewer service charges. It was thereupon moved by Mr. Hallock, seconded by Mr. Wendel, and unanimously carried that an opinion be secured from the Attorney General as to the validity of an order to be issued by the Sanitary Authority requiring the city of Portland to provide appropriate finances by increasing the

service charges to an amount not to exceed the legal maximum authorized by the voters, and to prepare detailed engineering plans and specifications for the construction of a sewage disposal system; and that if in the opinion of the Attorney General such an order would be valid, the Authority cause the same to be promptly issued.

Mr. Veatch and Mr. Hallock were directed to prepare for the Authority such a request to be communicated to the Attorney General.

Mr. Stricklin mentioned that Mr. Rex Kimmell of the Attorney General's office had, upon the request of the Sanitary Authority, started work drafting a form of ordinance which could be adopted by the city council for the purpose of increasing the sewer user charges.

Mr. Ohling submitted copies of a form of petition to be circulated among the Portland residents and he was directed to proceed with the matter of securing an expression of public opinion by securing signatures to the petition and to work in that connection with Mr. Smith.

There being no further business, the meeting adjourned at 12:45 P.M. The date of the next regular meeting was scheduled for March 17, 1944.

Respectfully submitted,

*Kenneth H. Spies*

Kenneth H. Spies  
Acting State Sanitary Engineer and  
Secretary.

## MINUTES OF SPECIAL MEETING

of the

STATE SANITARY AUTHORITY

February 4, 1944

The special business meeting of the Oregon State Sanitary Authority was called to order at 10:15 A.M., Friday, February 4, 1944, in the Library Room, 816 Oregon Building, Portland, Oregon. Those present were: Harold F. Wendel, chairman; Dr. Harold M. Erickson, substituting for Dr. Frederick D. Stricker who was ill; Messrs. Blaine Hallock, John C. Veatch, Charles E. Stricklin, and B. A. McPhillips, members; Kenneth H. Spies, secretary; and Mr. Charles Ohling, Public Relations Counsel.

MINUTES: Copies of the minutes of the December 16, 1943, meeting had been submitted to the members in advance and the reading of them was dispensed with. Changes in the minutes, as recommended by Mr. Hallock, were made and the minutes were then approved as corrected.

The purpose of the special meeting was to decide what action, if any, should be taken at this time regarding the issuance of an order to the city of Portland relative to abatement of pollution of the Willamette River.

The discussion was opened with a report by the Chairman that the Portland city council had finally proposed a definite course of action. It was reported that Public Works Commissioner, William Bowes, had introduced an ordinance by which a contract can be entered into with the local consulting engineering firms of Stevens & Koon and John W. Cunningham & Associates for the preparation of detailed plans and specifications including limited supervision. The contract price for such work is only \$200,000, for the reason that a credit of at least a like

amount has been allowed by the engineers for the data and studies already completed by the city engineering department. Action on this ordinance will undoubtedly be completed before the end of February.

It was reported further than Commissioners Lee, Peterson and Cooper have proposed submitting to the voters at the May primary election an act to authorize the issuance of \$12,000,000 in general obligation bonds. Action on this proposal scheduled for Wednesday, January 26, was postponed by the council until after a public hearing has been held on the subject, February 24. Commissioner Bowes apparently opposes this proposal because; (1) he considers it unwise to vote on a bond issue until after the engineering studies are fairly complete and more accurate cost estimates are available; and (2) he says the manner in which the bond issue has been written does not contain any adequate plan for establishing a sinking fund to take care of repayment.

A discussion of the bond proposal brought forth the following comments: (1) it is the easiest way for the council to take immediate action on the finance problem, but it places the responsibility upon the voters; (2) it will require considerable publicity and campaigning to get the bond issue passed by the voters, especially since the council itself is not unanimous in its support; (3) if the bond issue does carry, the problem of financing the Portland sewerage project will undoubtedly be solved; and, (4) increasing the sewer-user charge to the legal limit is still desirable and is considered to be the most businesslike method of attacking the problem of finance.

It was also the opinion of the members of the Authority after the matter had been considered at length that no order should be issued to the city council at this time for fear of aggravating the confusion which already exists in the public mind; and furthermore, that the Authority should not participate actively in the campaign for the bond issue. Action on the

part of the Authority was, therefore, postponed until the next regular meeting which is scheduled for Friday, March 17, 1944.

The Selleck account was discussed and it was agreed to make no further attempt to collect the balance, but instead to allow Mr. Selleck this balance of \$100 as payment for services performed.

There being no further business the meeting adjourned at 11:45 A. M.

Respectfully submitted,

Kenneth H. Spies  
Acting State Sanitary Engineer and  
Secretary

## MINUTES OF THE TWENTY-THIRD MEETING

of the

STATE SANITARY AUTHORITY

June 17, 1944

The regular meeting of the Oregon State Sanitary Authority was called to order June 17, 1944, at 10:00 a.m. in the Library Room of the State Board of Health, 816 Oregon Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Frederick D. Stricker, Messrs. John C. Veatch, B. A. McPhillips, and Charles E. Stricklin, Members; and Kenneth H. Spies, Secretary.

MINUTES: Copies of the minutes of the special meeting held February 4 had been submitted to the members in advance. A brief summary of them was presented by the secretary, and they were approved as prepared.

STREAM POLLUTION STUDIES IN OREGON: The secretary reported that on April 27 a proposal was received from the Engineering Experiment Station of Oregon State College to the effect that personnel would be available this coming summer and fall to conduct studies of water pollution in the Willamette River and its tributaries, and of domestic sewages and trade wastes. Such studies would be for the purpose of assembling data and information necessary for determining the degree of treatment required as well as the type of treatment facilities best suited for any particular sewage or waste. Furthermore, they would provide the basic data for design and, therefore, be of value to both the State Sanitary Authority and the consulting engineers retained by city and industry.

The need for these studies had been expressed by city engineers and representatives of the League of Oregon Cities at a meeting in Corvallis on Tuesday, May 23, 1944. At its regular annual conference held in Portland on May 25 and 26, the League of Oregon Cities formally adopted a resolution

71111

requesting that such studies be made as soon as possible in order that they might be of value in planning the postwar construction program.

Sufficient funds were not available for this purpose from either State College or State Sanitary Authority. Therefore, on June 3, 1944, a letter was sent to Governor Earl Snell by the State Sanitary Authority requesting that state money be provided from any sources which might be available. The estimated cost of the studies was between \$8,000 and \$9,000. In addition to this, State College would contribute approximately \$4,500 in services. In conclusion, the secretary reported that at the request of the Governor, Mr. Wendel and Mr. George Aiken, State Budget Director, appeared before the State Game Commission at its regular meeting on June 9 to solicit its support. No immediate or favorable action was taken by the Game Commission at that meeting, however. In the discussion which followed, the possibility of obtaining funds from the Emergency Board was mentioned. It was thought that the Board could legally appropriate money for this purpose, especially in view of the fact that the present budget of the Sanitary Authority had been reduced so drastically by the last legislature. It was further thought that a request to the Emergency Board at this time might also strengthen the position of the Authority in its request for a more adequate budget for the next biennium. It was finally agreed to again write Governor Earl Snell to inquire about obtaining funds from the Emergency Board and also to continue the efforts to secure the cooperation of the Game Commission. (The Game Commission apparently has considerable surplus of revenue at the present time; whereas, the State Fish Commission, the other agency vitally interested in stream pollution abatement, has a deficit.)

**POSTWAR PLANNING:** The secretary next reported as follows on the progress which has been made by municipalities in planning and preparing for postwar construction:

1. Portland approves \$12,000,000 bond issue by a vote of 53,712 to 25,848. (The work of the Citizens' Sewage Disposal Committee and the Portland Area Postwar Development Committee, as well as the cooperation of press, radio and others were cited for the part which they played in making this issue a success.)
2. Eugene votes a 5-mill tax levy for the next five years to accumulate \$325,000 for sewer improvements.
3. Salem votes  $2\frac{1}{4}$ -mill tax levy for the next three years to accumulate \$120,000 for a sewage disposal project. (This is in addition to \$200,000 already available in the form of general obligation bonds.)
4. Corvallis authorizes its city council to levy a sewer-user charge.
5. McMinnville authorizes its City Water Commission to proceed with the problem of sewage disposal and to levy a sewer-user charge.
6. Newberg collects a surtax on the water bills to create a sinking fund for financing its sewage disposal project.
7. Lebanon collects \$12,000 annually by means of a 10-mill tax levy.
8. Coquille sets aside \$20,000 from surplus funds to finance a post-war sewage disposal project.
9. Thirty-three cities list sewage disposal projects with the Postwar Readjustment and Development Committee at an estimated cost of more than \$14,000,000.

With regard to progress made by industries, the chairman reported that the pulp and paper industry is appropriating \$150,000 annually to the Mellon Institute to conduct research or studies for the purpose of determining the most economical and practical methods of disposing of their wastes, with the hopes that valuable bi-products can be reclaimed. The industry has promised full cooperation in abating stream pollution in Oregon.

Out of thirty-three letters sent by the secretary to canneries,

meat-packing plants, woolen mills, and other industries only nineteen replies had been received. From these replies it was learned that eleven industries discharged their waste into city sewers and that the other eight have individual waste disposal problems but have made no specific progress in the program for abatement. The secretary was instructed by the members to again contact the industries which failed to reply and to determine what progress, if any, is being made by them in this respect.

It was reported that all industries along the Columbia Slough will eventually be able to utilize the Portland municipal sewerage system for the disposal of their trade wastes.

It was moved by Mr. Veatch, seconded by Mr. McPhillips, and carried that the secretary be instructed to call upon the city of Corvallis and advise its officials that unless they carry out the authority recently granted them by the voters they are not keeping pace with other cities in the Willamette Valley for plans for postwar sewage disposal construction and that unless some real progress be made it will be necessary to cite them for failure to take action.

MISCELLANEOUS INDUSTRIES: The requirement tentatively adopted by the secretary that at least intermediate treatment be provided before discharging wastes from a proposed slaughterhouse into the Columbia River at a point above the Portland Air Base was approved by the members.

Pollution in Gales Creek and the Tualatin River resulting from the operation of sand and gravel companies was reported by the secretary. It was moved by Mr. Veatch, seconded by Mr. Wendel, and carried that said gravel companies be advised to conduct their operations in such a manner that the water in Gales Creek will not be polluted to the detriment of the interests of riparian owners downstream and that if this objective cannot be accomplished in any other way, their operations be suspended during the period from May 15 to October 1.

Pollution in Zolner Creek caused by a discharge of flax retting waste from the Mt. Angel Flax Growers Plant was reported. The secretary was instructed to notify the directors of Mt. Angel Flax Growers Association that all flax retting wastes shall be disposed of by lagooning in order to abate this water pollution.

PROJECT PLANS: The actions taken by the secretary regarding the following project plans were approved by the members:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
1/13/44	Siletz Housing #35273	Sewerage system	Approved
2/26/44	Lebanon	Sewer extensions	Approved
3/10/44	Tillamook Housing #35290	Sewer extensions	Approved
3/13/44	Veneta Housing #35292	Sewerage system	Provisional
3/9/44	Astoria Housing #35294	Sewer extensions	Approved
3/11/44	Toledo Housing #35271	Sewer extensions	Approved
3/15/44	The Dalles Housing #35293	Sewer extensions	Approved
3/20/44	Klamath Falls Housing #35295	Sewer extensions	Approved
3/27/44	Pendleton	Sewer extensions	Approved
3/15/44	Sweet Home F.H.A. Housing	Sewage disposal	Not approved
4/18/44	Salem Alumina Plant	Sewerage system	Approved
5/6/44	Pendleton	Cannery waste disposal	Recommendations made
5/29/44	Scottsburg Housing #35297	Sewerage	Prov. approval
6/16/44	Klamath Falls Housing #35296	Sewer extensions	Approved

ANNUAL BUDGET: The following annual budget for the period July 1, 1944, to June 30, 1945, was approved as prepared by the secretary:

Salaries and Wages

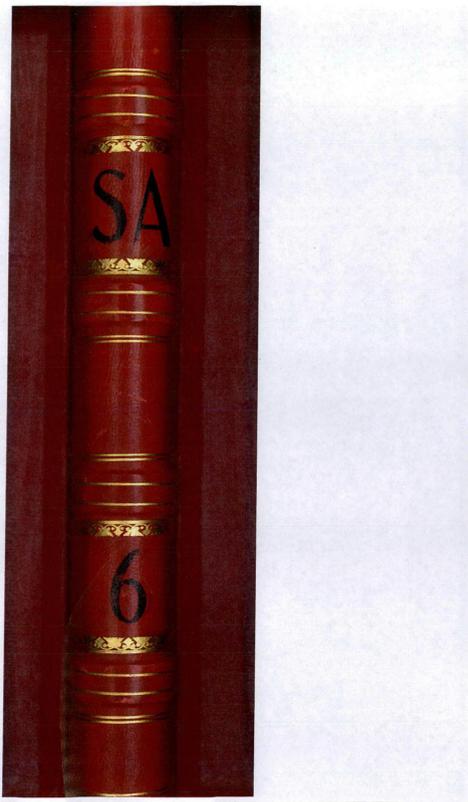

State Sanitary Engineer and Secretary	\$1800.00
Administrative Clerk and Office Secretary	1380.00
Per diem (S. A. Members)	180.00
	<u>\$3,360.00</u>

General, Operating and Maintenance

Travel, State Sanitary Engineer	\$350.00
Travel, Sanitary Authority Members	250.00
Rent	564.00
Office equipment and supplies	268.00
Scientific equipment and supplies	300.00
	<u>\$1,732.00</u>

Total budget	\$5,092
For previous year	<u>4,908</u>
Total Biennial	
Appropriation	\$10,000

MINUTES OF THE 113th MEETING  
of the  
Oregon State Sanitary Authority  
February 21, 1967

CCA403

The 113th meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:00 a.m., February 21, 1967, in Room 36, State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Chris L. Wheeler, Richard H. Wilcox, M.D., Herman P. Meierjurgan and Edward C. Harms, Jr., Members; Kenneth H. Spies, Secretary; John Denman, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; Dr. Warren C. Westgarth, Laboratory Director; Harold W. Merryman, Leo Baton and Joseph A. Jensen, District Engineers; H.W. McKenzie, Leo G. Farr, Associate Sanitary Engineers; Fred Katzel and C.K. Ashbaker, Assistant District Engineers; Clint Ayer, Lloyd Cox, James Sheetz, and Robert Sherwood, Assistant Sanitary Engineers; Glen Carter, Aquatic Biologist; and Bruce Snyder, Meteorologist.

Mr. Joseph Smith of Klamath Falls who has been appointed by Governor McCall to replace Mr. John Amacher as representative of the Game Commission on the Authority Board was unable to attend because of a prior business engagement.

MINUTES:

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried that the minutes of the December 20, 1966 meeting and the special meeting of January 13, 1967, be approved.

PROJECT PLANS:

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips, and carried that the action taken on the following 39 project plans and engineering reports for

water pollution control and 6 project plans for air quality control for the months of December 1966 and January 1967, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12/5/66	Josephine County	Harbeck Fruitdale Engr'g. Report	Approved
12/6/66	Joseph	Sewerage system	Prov. app.
12/8/66	Albany	Relief sewer	Prov. app.
12/9/66	Cape Perpetua, USFS	Sewage treatment	Prov. app.
12/9/66	Salem	Phase I, S.Salem relief sewer	Prov. app.
12/14/66	Paisley	Engineering report	Approved
12/16/66	Multnomah County	Fanno Creek Plant improvements	Prov. app.
12/20/66	Central Point	West Pine Villa Subd. sewers	Prov. app.
12/22/66	Coos County	Package plant for Day Motel	Prov. app.
12/27/66	Beaverton	S.P. Co. Service	Prov. app.
12/29/66	Beaverton	Sewer-Cressmoor Drive	Prov. app.
1/4/67	Gresham	Kelley Creek trunk	Prov. app.
1/5/67	Medford	Meadowcrest View Subd.	Prov. app.
1/5/67	Laurelwood Academy	Sewage treatment plant imprvmts.	Prov. app.
1/5/67	St. Helens	Port industrial sewer	Prov. app.
1/6/67	Central Point	Pine Crest Subd.	Prov. app.
1/6/67	Lake Oswego	Redwood Add.	Prov. app.

HARVEY ALUMINUM

The matter of Harvey Aluminum's request for a formal dismissal of the Order for Continuance of Public Hearing dated April 11, 1961, was continued from the December 20, 1966, meeting of the Sanitary Authority.

Mr. Patterson read a staff report which recommended that (1) the staff continue to monitor in The Dalles area during the 1967 growing season; (2) the Sanitary Authority dismiss the Order for Continuance of Public Hearing dated April 14, 1961; and (3) the Department of Health, Education and Welfare be requested to conduct studies to determine air quality criteria for fluorides including but not limited to the growth of apricots, cherries, peaches, prunes, alfalfa and pine trees. This report has been made a part of the Authority's permanent files in this matter.

Mr. Wendel asked if there had been any recent complaints in the area and Mr. Patterson replied no. Mr. Wheeler then asked if staff recommendation No. 1 intended to imply that monitoring would not be continued after 1967. Mr. Patterson said it was planned to monitor until the problem is completely solved. He pointed out that in addition to this the arbitrators will set up about 6 monitoring stations and the Experiment Station will have about 10 during 1967 in their study program. The staff will have access to all that data as soon as they are reported.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler and carried that the recommendations, with the deletion of the date 1967 in the first recommendation, be adopted.

WEYERHAEUSER COMPANY

The Secretary reported that on January 13 the Sanitary Authority had held a special meeting in the matter of air pollution in the vicinity of the Weyerhaeuser mill at Springfield. At that meeting the staff had submitted five recommendations and a motion had been made, seconded and carried that the company submit a reply or response within one month regarding these five recommendations. A letter from Mr. John McEwen addressed to the Secretary and dated February 9, 1967, which included a response to the five recommendations, was then read. A list was attached to the letter giving the names and titles of 29 current or recently completed kraft mill air protection research projects. The Secretary stated that he notified Weyerhaeuser Company that their letter would be considered by the Sanitary Authority Board at its meeting today and that the Authority staff would be most anxious to confer with them regarding the selection and retention of a qualified consultant. He said he had also requested more information regarding the 29 research projects which they listed.

In an attempt to find a consultant or group of consultants who would be both qualified and interested in working on this particular problem, a letter had recently been sent by the Secretary to some 16 people or organizations.

Mr. Merryman informed the members of his observations of conditions since January 13.

Mr. Farr reported that 79 complaints had been received since the last meeting.

Mr. Harms also reported on the observations he had personally made.

Mr. Meierjurgan questioned item 2, subsection 4, of the Weyerhaeuser reply and asked if the staff felt there had to be agreement on both the company's

CCA403

part and the Authority's part before the company would shut down in order to control the odor. Mr. Harms stated that he did not think it would be a binding agreement but that the Authority would have to depend upon the company's good faith and sense of public well-being.

Dr. Wilcox asked if the words "The Authority staff" would help.

Mr. Denman said he was concerned with the clarification of the statement under subsection 4.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried that the Secretary be directed to seek clarification of item 2, subsection 4, in the Weyerhaeuser letter of February 9, 1967.

Mr. Harms said he thought it was not the deletion of subsection 4, but the clarification from the standpoint as to how agreement had to be reached and how the staff would arrive at any criteria as to excessive air pollution that was needed.

Mr. Wheeler recalled that at the last meeting the staff was directed to approach other industries on this subject and wondered if any response had been received. The Secretary stated a letter had been received only from Boise Cascade.

It was MOVED by Mr. Harms, seconded by Dr. Wilcox, and carried that the requests that were contained in the staff recommendations concerning Weyerhaeuser Company be sent to the other pulp mills with a reminder that the Authority would like to have a response from them as this would apply to those firms that have not replied.

Mr. Harms requested that copies of the letter from Boise Cascade be sent again to the Authority members.

CITY OF TROUTDALE

An engineering report in the matter of raw sewage discharge by individuals in the city of Troutdale to the public waters of the Sandy River, State of Oregon, was read by Mr. Jensen.

Mr. Vosburg, attorney for the Hollingshead Estates, city of Troutdale, and Mr. C.W. Parrish were present to represent the Hollingshead Estate.

Mr. Vosburg said it was correct that they did not assume responsibility for this condition because in their opinion it was the obligation of the city of Troutdale, but they did recognize their responsibility as good citizens and therefore wished to help in any way they could.

It was called to the attention of the board that this sewer in addition to the sewage it carries, also acts as a storm sewer for the city of Troutdale with the street flow being directed into this particular sewer. Mr. Vosburg stated the Hollingshead Estate contributed minute amounts of sewage.

Mr. Denman asked and Mr. Vosburg acknowledged that the buildings owned by the Hollingshead estate include the hotel, cafe, barber shop, rummage shop, liquor store, food lockers, three vacant buildings and two homes. Mr. Denman then asked that if Hollingshead Estate being the lessor actually owns these properties, on what do they base their assertion that the city is responsible. Mr. Vosburg replied that it is in the public street so they assumed that the sewer is the property of the municipality.

Mr. Jensen stated the sewer discharges into the Sandy River not far from a park and swimming areas.

Mr. Wendel asked why it was impossible for the city of Troutdale to provide sewage treatment facilities. He was answered by Mr. Jensen who said that final engineering plans had to be prepared. He said the preliminary engineering report had been completed in November 1965, but he did not

CCA403

believe the city's engineers had been authorized to go ahead with the final design of the project.

Mr. C.W. Parrish stated that he spent a day in December with Mr. Wierson of CH2M and it was his understanding that Mr. Wierson had filed a supplemental report with the Sanitary Authority.

The Chairman asked Mr. Parrish about the city's financial plan.

Mr. Parrish replied that the city was going to have to have a bond issue and he was sure the residents all want a public sewerage system because they are under continual expense to pump out their individual septic tanks.

Mr. Harms said that he thought the city of Troutdale should be cited, particularly since it is a question of whether or not it is their sewer. It was Mr. Harms' suggestion that any motion made to adopt the staff's recommendations should include the words "city of Troutdale" in Recommendation #4.

Mr. Denman stated he thought that all parties which investigation may show could possibly be a part to this problem should be enjoined.

Mr. Parrish asked if it would be possible to hold this in abeyance for at least a year until the city's sewage treatment plant is in operation in order to not duplicate expenses.

Mr. Wheeler stated that it was his feeling unless the citation is issued and the city of Troutdale is included, that a year from now the situation would probably be the same as it is now.

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips and carried that the staff recommendations be adopted with the change that the citation include the city of Troutdale, trustees of the Hollingshead Estate, Mr. Robert Dix, Mr. Art Bunting and any others who may be contributing to this problem directing them to appear and show cause, if any exists, why an order should not be issued for abatement of this pollution.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the hearing or citation be conducted before a hearings officer.

CASCADE LOCKS

Mr. Milliken read a staff report dated February 21, 1967 which has been made a part of the Authority's permanent files in this matter. He said that early in July 1966 the city of Cascade Locks had been authorized to receive a priority for a grant for sewage construction under P.L. 660, that due to a turn over of almost all their city officials, the city of Cascade Locks has had a delay in their planning, and that CH<sub>2</sub>M has now been retained to design a sewage treatment plant for the city.

Mr. Milliken said the staff of the Sanitary Authority had previously set a date of March 1, 1967 as a deadline for the city to have its financing ready. He said the city had recently indicated that it wants to go ahead with its projects, but will need about 90 days additional time. Mr. Milliken therefore recommended that an extension of time to June 1, 1967 be granted for the city to complete its financing.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler and carried that the extension of time to June 1, 1967 be granted.

The meeting was then adjourned for noon recess and was reconvened at 1:35 p.m.

WIGWAM BURNER REGULATIONS

Mr. McKenzie read a report he had prepared on wigwam waste burners. This report has been made a part of the Authority's permanent files in this matter.

Mr. Wendel asked how much reason there was to believe that the proposed schedule for installation of alternative methods could be attained to which Mr. McKenzie replied he believed it could be attained. Mr. Wendel then said he thought it would be interesting to hear from industry.

CCA403

Mr. Robert Olinger, representing Associated Oregon Industries, gave a little background on what industry was attempting to do and said he hoped a solution could eventually be worked out. He mentioned H.B. 1376 introduced in the 1967 Oregon Legislature by Representatives Leiken and Ouderkirk which would increase the severance tax on timber for the sole purpose of financing wood waste disposal research studies at Oregon State University in an attempt to find solutions to air and water pollution problems. He said they had a meeting with representatives of the various associations, including Western Forest Industries Association, Western Wood Products Association, and the American Plywood Association. The representatives all voiced approval of the bill. Mr. Olinger stated they had to look at alternate ways of disposing of wood waste. He said that the staff of Forest Products Laboratory at Oregon State University has indicated they want to study various ways of disposing not only by burning but being able to get rid of it some other way. He stated there would be funds available in the neighborhood of \$245,000 for this particular study. They hope with this kind of financing to get some real good looks at ways and means of getting rid of this wood waste. It will be a completely new study and they do not even know if there are proper people available to conduct such a study. Mr. Olinger requested that the regulations be continued for another two years to allow time for the studies and also that the Authority extend variances with the idea that those mills that do not comply with the regulations be subject to immediate citation.

Mr. Harms asked Mr. Olinger if he had been present at the previous meeting of the Authority and seen the movies of the wigwam burners in the Medford area that were shown, to which he said he had not seen the pictures.

CCA403

Mr. Harms said that one of the problems that the staff has in enforcing the regulations is that burners which are complying with the construction requirements emit as much, if not more, air pollution than the ones which are not in compliance because of fuel variables and this type of thing. He said the Authority certainly is not interested in prosecuting somebody just from the standpoint of enforcing compliance with regulations if it isn't going to improve the air pollution situation.

Mr. Wheeler said from his reading of H.B. 1376 it could mean that water pollution could spend as much or more of the fund that was available than air pollution and that it was being directed to water, not air.

Mr. Wendel stated this program apparently would drag on for several years. He said it was his understanding there is a remedy right now that will do the trick and that is by the increase of temperatures, bottom and top, which industry claims is prohibitively expensive. He wanted to know just what the cost would be.

Mr. Olinger stated that was an unknown factor. He thought it would have to get into the area of auxiliary fuels and he did not know of any operation at the present time that has auxiliary fuels as part of the burner to maintain a temperature of 600 degrees.

Mr. Wendel then asked how they could say it would be prohibitively expensive if it has never been done.

Mr. Olinger replied that he was an association man, not a production man, and therefore could not answer that question, but he was sure that many of them have had estimates made of what the cost would be.

Mr. Meierjurgan asked if the proposed termination date would be for phasing out of the wigwam waste burners, to which Mr. McKenzie answered

that was correct and the September 30, 1967 date was for industry to present a program and time schedule for the development, demonstration and installation of alternative methods.

Mr. Wendel asked if there would be any real honest-to-goodness hope that they can come forth with a plan for alternative methods by September, and Mr. McKenzie stated that he thought they could come up with a program and schedule by that time.

Mr. McPhillips stated that since adopting the policy on December 18, 1963, it appeared very little had been done in those three years and now we are talking about another two-year program just on research, with no assurance that anything is going to come up. That will be five years since we started this with no assurance at this time that we are going to be any farther along than we are now.

After considerable discussion by the members of the Authority, Mr. Wendel asked what the desire of the Authority would be.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the Secretary advise the timber products industry of the Authority's intention to adopt a policy in the alternative which would either (1) add regulations providing for improved operation of wigwam waste burners, including providing minimum exit temperatures, recording pyrometers, use of auxiliary fuel, exit gas treatment devices and such other regulations as may be necessary to provide efficient combustion under varying rates of fuel feed without intermittent or batch loading, or (2) prohibit use of wigwam burners in accordance with staff recommendations of January 30, 1967.

Mr. Harms stated that industry should be called to a hearing on this so that they can express their view and see what they think and what can be done in the way of these regulations.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Wheeler, and carried that the hearing date be set some time in the third week of April of this year.

WAH CHANG CORPORATION, Albany

An engineering report dated February 21, 1967, which has been made a part of the permanent files in this matter, was presented by Mr. Lloyd Cox, Assistant Sanitary Engineer.

Mr. Ralph Nielsen, Chief Process Engineer for Wah Chang Corporation, stated that following the visit of the Sanitary Authority staff with the Wah Chang Corporation last May, the Company began a program of trying to determine what material in their waste is toxic. He said they have been trying to find someone to help them in this problem, but have been unable to do so and are, therefore, having to solve the problem themselves. Mr. Nielsen said that he had given to Mr. Cox a list of 14 different process streams with the chemical analysis which emanate from various parts of the plant. Each stream has been tested with guppies and the firm now has what they consider to be a satisfactory system for treating each of these streams and combining them so that the effluent discharged will not be toxic. At least this testing has worked in their laboratory. He said they are now prepared to lay out an engineering plan which they will present to the staff for approval in two to three months, but could not meet the April 1 deadline as requested.

In response to a question from the Secretary, Mr. Nielsen said they could have the required facilities installed and in operation in eight months.

CCA403

It was MOVED by Mr. Wheeler, seconded by Mr. Meierjurgan, and carried that the adoption of the staff's recommendations as follows be approved:

1. The Wah Chang Corporation immediately retain a qualified consulting firm to approach its waste disposal problem on a systematic basis with definite objectives and a specific timetable for the various phases of study, design and construction of the necessary treatment or control facilities.
2. The program objectives be developed around the requirements outlined in the Sanitary Authority's letter of January 19, 1967, to Wah Chang.
3. That the above program be submitted to the Sanitary Authority for approval by not later than April 1, 1967, and that the control, treatment and disposal facilities be constructed and in operation by not later than June 1, 1967.
4. In the event Wah Chang does not satisfactorily comply with any of the above requirements, that a hearing be authorized and Wah Chang be directed to appear and show cause why an order should not be entered directing it to permanently cease and desist in polluting the public waters of Truax and Murder Creeks and the Willamette River.

#### WESTERN KRAFT

The Chairman requested a brief report on Western Kraft due to the fact that the staff has received so many complaints about this Company's pulp mill at Albany, and also due to the fact that there had recently been so much in the newspapers about it.

Mr. Patterson said Western Kraft has an expansion modification program under way and has installed an additional recovery furnace to reduce the loading on the furnaces that they previously had. The firm is also checking

CCA403

out the oxidation towers to prevent more effectively the escapement of sulphur compound that cause the odor. He said the Company has proceeded along this line and in their last monthly report the recovery furnace was in 100% operation. Previous to that their efficiency was very low based on their test results on the oxidation tower. He stated that the Company had recently installed a connection from their boiler stack to their recovery stack in an attempt to heat up the emissions from the recovery furnace so that they would extend to the high cloud area.

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler and carried that those kraft mills who have not responded by the next meeting to the letter that was sent out be cited to a hearing.

DATE FOR WATER QUALITY STANDARDS HEARING

The Secretary stated that a date should be set for a final hearing on water quality standards for interstate waters and that the date should be set at this meeting.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan and carried that the date for the water quality standards hearing be set for May 16, 1967.

(Note: The date was later changed to May 23.)

There being no further business, the meeting adjourned at 3:30 p.m.

Respectfully submitted,

*Kenneth H. Spies*  
Kenneth H. Spies, Secretary  
State Sanitary Authority

MINUTES OF THE 114th MEETING  
of the  
Oregon State Sanitary Authority  
April 25, 1967

The 114th meeting of the Oregon State Sanitary Authority was called to order by Mr. B. A. McPhillips, Acting Chairman at 10:05 a.m., April 25, 1967, in Room 72, State Office Building, Portland, Oregon. The members and staff present were: B. A. McPhillips, Acting Chairman; Governor Tom McCall, Chris L. Wheeler, Herman P. Meierjurgan, Edward C. Harms, Jr. and Joseph W. Smith, Members; Kenneth H. Spies, Secretary; Leonard Pearlman, Legal Advisor; E. J. Weathersbee, Deputy State Sanitary Engineer; H. M. Patterson and H. E. Milliken, Assistant Chief Engineers; Dr. Warren C. Westgarth, Laboratory Director; A. D. Smythe, P.D. Curran, Harold W. McKenzie and Leo G. Farr, Associate Sanitary Engineers; Harold W. Merryman, Leo Baton, Fred Bolton and Joseph A. Jensen, District Engineers; Fred Katzel and C. K. Ashbaker, Assistant District Engineers; Clint Ayer, Lloyd Cox and Robert Sherwood, Assistant Sanitary Engineers; Glen Carter, Aquatic Biologist; Kenneth Englund, Sanitarian; R. B. Percy, Chief Chemist and Bruce Snyder, Meteorologist.

Dr. C. A. Jenike, State Health Officer, was unable to attend because of a State Board of Health meeting in Salem.

ELECTION OF CHAIRMAN:

The Acting Chairman stated that since the previous meeting of the Authority, Doctor Wilcox had resigned from the Board of Health to accept a position with the Public Health Service in California, that Doctor C. A. Jenike had taken his place as State Health Officer, and that Mr. John Amacher representing the Game Commission had asked to be relieved of his assignment to the Authority because of ill health and in his place the Governor had appointed Mr. Joseph Smith from Klamath Falls.

Mr. McPhillips then stated that Governor Tom McCall wished to make an announcement.

Governor McCall stated that as Governor of Oregon he knew of no more important task than to involve himself in air and water pollution. He then announced that he was appointing himself to succeed the late Harold F. Wendel as member of the Sanitary Authority to serve for a period of six months to end November 1, 1967. The Governor stated that the State had lost a firm hand in the death of the Chairman and that he hoped he could do something in this critical period.

The Acting Chairman thanked the Governor and welcomed him as a member of the Authority. Mr. McPhillips then said that a new Chairman should be elected.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Wheeler, and carried that Governor Tom McCall be elected as the new Chairman of the State Sanitary Authority.

RESOLUTION REGARDING HAROLD F. WENDEL:

The Governor then took over as Chairman and said the members of the Authority accept at this time with regret the resolution concerning the man who was such an outstanding Authority member, Mr. Harold F. Wendel.

The Secretary stated a resolution had been drawn up and called upon Mr. Wheeler to read it.

It was MOVED by Mr. Wheeler, Seconded by Mr. McPhillips, and carried that the following resolution regarding Harold F. Wendel be approved:

WHEREAS, The Almighty in His wisdom has removed from our midst Harold F. Wendel, a charter member, and since February 25, 1939, Chairman of the Oregon State Sanitary Authority; and

WHEREAS, the progress made during the past 28 years by the State Sanitary Authority in the abatement and control of pollution of Oregon's public waters and air resources was due in a large measure to his untiring efforts, his tenacious determination, and his interest, knowledge and wisdom in the development of policies and procedures; and

WHEREAS, his friendly manner, gentle humor, sharp wit and unswerving sense of responsibility to his nation, his state and his fellow man endeared him to all with whom he came in contact, and earned for him their respect and esteem; now therefore be it

RESOLVED, that we, the members of the Oregon State Sanitary Authority, express our deep sorrow and sense of personal loss in the passing of Harold F. Wendel, friend, comrade, and loyal citizen; and be it further

RESOLVED, that a copy of this resolution be sent to his beloved widow, Elise Wendel, and to the Governor of Oregon, and a copy be spread on the minutes of the Authority.

Dated this 25th day of April, 1967, in the City of Portland, Oregon.

Because more people were present than could be accommodated in Room 72 the meeting was then moved to Room 36 and reconvened at 10:30 a.m.

MINUTES:

It was MOVED by Mr. McPhillips, seconded by Mr. Harms, and carried that the minutes of the February 21, 1967, meeting be approved.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried

CC-403

that the action taken on the following 22 project plans and engineering reports for water pollution control and 15 project plans for air quality control for the months of February and March 1967, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
2-15-67	Tillamook	Prel. Report-Tillamook Cheese	Prov. app.
2-24-67	Springfield	Shell Oil Co. Lateral	Prov. app.
2-27-67	Springfield	Shelley Street Lateral	Prov. app.
2-28-67	Gresham	Aspen Highlands Unit 4	Prov. app.
2-28-67	Tualatin Hts. Co. S.D.	Sewer for P.C.C.	Prov. app.
3-2-67	West Slope San.Dist.	Lateral B 11a-1	Prov. app.
3-3-67	Oak Lodge #1	11th Avenue Lateral	Prov. app.
3-3-67	West Slope	Lateral BR-1 & BR-1-1	Prov. app.
3-3-67	S. Suburban San Dist.	Sunset Village Extension	Prov. App.
3-3-67	Parkdale	Engineering Report	Approved
3-7-67	Lake Oswego	LID #87	Prov. app.
3-3-67	Gresham	Devonshire Subd.	Prov. app.
3-3-67	Eugene	Extensions	Prov. app.
3-7-67	Springfield	Laterals	Prov. app.
3-8-67	Sandy	University and Sunset sewers	Prov. app.
3-8-67	S. Suburban	Lateral D-17-49, D-11	Prov. app.
3-13-67	Newport	Bonnie Brae Estates sewer	Prov. app.

Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
2-28-67	Columbia Co.	A & G Waste, Inc. Proposal for Landfill Operation	Add.inf.req.
3-9-67	Portland	Portland Air Quality Control amended application for grant under Clean Air Act (for second year)	approved
3-10-67	Multnomah Co.	David Douglas Intermediate Sch.-Incin.	Cond. app.
3-10-67	Portland	Request of PRAPA to assume responsibility for all smoke discharge sources in Multnomah County	Add.inf.req.
3-13-67	Portland	Portland Air Quality Control application for 3rd year federal grant under the Clean Air Act. April 1, 1967-68, \$142,523 of which \$72,598 are federal funds.	Approved
3-15-67	Detroit	Detroit High School Incinerator	Not app.
3-21-67	Oregon City	Publishers' Paper Co. incinerator	Add. inf. req.

WIGWAM WASTE BURNERS:

Mr. H. W. McKenzie read a report which he had prepared on wigwam waste burners and which has been made a part of the Authority's permanent files in this matter. He also showed some colored movies of wigwam waste burners in the Medford area, some in operation and others not, and stated that at the time they were photographed some of them were and others were not in compliance with the Authority's construction rules for wigwam burners. Mr. McKenzie stated the pictures show that burners can be in compliance with such rules and still be a public nuisance.

Mr. Meierjurgan then asked what was meant by compliance and Mr. McKenzie stated that he meant compliance with the regulations pertaining to construction. He pointed out that as far as operation is concerned, the regulations state only that as high a temperature as possible should be maintained. They do not specify a minimum temperature.

Mr. McPhillips said it seemed as though the Authority was going at this thing backwards because, in the pictures shown, mills that were in compliance were still polluting. He asked what would happen if the Authority just told the mill owners to cease polluting and leave it up to them as to how they would comply.

Mr. McKenzie said it would take an increased staff to properly carry out a program of this kind.

Mr. McPhillips stated that the Authority's problem is to stop pollution.

CCA403

Mr. Pearlman, Legal Counsel, stated that the regulations of the Authority provide that ambient air standards are also to be complied with in addition to the compliance with construction requirements.

Mr. McKenzie then said there are many burners that even if they are modified as required by the rules, still will not be able to operate within the regulations because of fuel problems.

Governor McCall reported that on April 6, 1967, a meeting had been held in his office with representatives of the lumber industry and Authority staff members. He said that was the first time that all segments of the industry had sat down together to discuss their mutual problems. He said further that on April 21, in response to his invitation, two air pollution authorities from Los Angeles County had conferred with him regarding the waste wood disposal problem. The Governor then read a letter that he had written to Mr. Patterson setting forth suggestions based on these conferences.

Mr. Robert Olinger of Associated Oregon Industries, who was present, said he was speaking for an industry committee which has been for some time trying to solve the wigwam waste burner problem. The committee is made up of representatives of the American Plywood Association, Western Forest Industries Association and Western Wood Products Association. He then read a prepared statement dated April 25, 1967, which has been made a part of the Authority's permanent files in this matter.

Mr. McPhillips asked Mr. Olinger if there had been any reduction in the emissions in 1966, compared to 1965, and Mr. Olinger said there had been no noticeable reduction.

Mr. Verner J. Adkison of the Lane County Air Quality Control Division asked Mr. Olinger what percent of mills had complied with the construction rules. Mr. Olinger replied that he did not know.

Mr. G. L. McKinley of Waldport said he represented the small operators on the coast. He stated that this waste disposal is definitely a problem in the entire world and that he did not think anybody has come up with a satisfactory answer anywhere. He said he had considerable experience in other states and the only efficient smokeless burner was a fantastically expensive one. He said he came to ask the Sanitary Authority to think pretty hard before putting out any binding rulings that would totally eliminate wigwam waste burners as they are the only means of burning the waste. He said he had worked for several years both in wood waste burning and garbage burning and that it seems to him a centrally located incinerator would be the most practical.

Mr. Don Barker introduced himself as President of Western Forest Industries Association and stated that he had two sawmills, one in Grants Pass and the other in Eugene. Mr. Barker said he had his burner at Grants Pass repaired and put in high-pressure fans, but frankly there was so much waste material that they couldn't burn it all. He said he hoped the Sanitary Authority could get enough financial support to get enough staff to come out into the field and help industry solve the problem.

Mr. Adkison of Lane County recommended that the Authority outlaw the intermittent use of wigwam burners for small or inadequate quantities of waste.

Mr. James Phillips read a letter he had written earlier to the Secretary.

Mr. Joseph Dixon of Weyerhaeuser Company of Tacoma stated that his company had only two burners left in the state of Oregon and hoped to get both of them out of operation before long.

The meeting was recessed at 12:15 p.m. and reconvened at 1:35 p.m.

After further discussion it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the current regulations governing construction of wigwam burners be rescinded except for the requirement that new wigwam waste burners must be approved by the Sanitary Authority before installation and that the staff be directed to seek abatement of the more serious wigwam waste burner generated air pollution problems through voluntary cooperation or appropriate enforcement action so that air quality and ambient air standards may be preserved, and further that the staff develop appropriate regulations prohibiting intermittent or casual use of wigwam burners.

WAH CHANG CORPORATION WASTE DISPOSAL:

A progress report dated April 25, 1967, which has been made a part of the permanent files in this matter, was presented by Mr. Lloyd Cox, Assistant Sanitary Engineer.

Mr. McPhillips asked if the 16 acres of additional land purchased for development of a permanent sludge storage would be apt to cause an odor problem.

Mr. Cox replied that he did not think so but would have to see the plans first.

Mr. Wheeler asked if the 16 acres would be adequate to provide permanent sludge storage.

Mr. Cox replied he did not know for sure but assumed that it would be. He said that submission of plans for review and approval would be required.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the request by Wah Chang Corporation, allowing them a 4 to 5 month construction period, be approved.

CCA403

WEYERHAEUSER COMPANY PULP MILL ODOR CONTROL:

An engineering report dated April 25, 1967, which has been made a part of the permanent files in this matter, was presented by Mr. Harold M. Patterson, Chief, Air Quality Control. Receipt was acknowledged of resolutions and letters supporting Weyerhaeuser Company from the Springfield Development Association, Springfield Area Chamber of Commerce, Eugene Board of Realtors and Lane County Chamber of Commerce.

Mr. H. W. Merryman said that he had been requested to report to the Sanitary Authority at today's meeting that numerous people living in the McKenzie area are still greatly concerned with the atmospheric discharges from the Weyerhaeuser pulp mill.

The Chairman said that some telegrams had been received from people living in that area.

The Secretary then read the 5 telegrams which had been received from Mrs. John Jaqua, Mr. F. Austin Colcord, Mr. Bill Bowerman and Mr. Lloyd Dolby of Eugene and Prince Helfrich of Vida and which have been made a part of the permanent files.

Mr. Harms asked about Recommendation #3 of Mr. Patterson's report which states that the Sanitary Authority employ its own expert consultant to assist the staff in evaluating the air pollution control facilities and procedures at each of the Oregon kraft mills.

Mr. Patterson replied that the idea would be to confer with prospective consultants to determine what assistance they could give and what their services would cost.

Mr. Harms asked if Mr. Patterson's recommendations were adopted would the staff be authorized to employ the consultant immediately, or would the staff refer the matter to the Authority members for final decision.

Mr. Patterson said the staff would refer it to the members.

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the adoption of the staff's recommendations as follows be approved:

1. That the staff continue and expand as may be warranted by future events, its program of monitoring and surveillance of air pollution conditions and mill operations.

2. That the staff meet periodically (suggested semi-annually) with industry-appointed representatives of the Kraft industry to discuss and evaluate efforts and progress being made relative to solution of the Kraft odor problem.

3. That the Sanitary Authority employ its own expert consultant to assist the staff in evaluating the air pollution control facilities and procedures at each of the Oregon Kraft mills and to help determine the feasibility and/or desirability of attempting to control or minimize the air polluting effects of Kraft mills by a program of production curtailment during periods of adverse atmospheric conditions. Such program would be considered as an interim procedure until a break-through in solving the basic Kraft odor problem is made.

The Secretary said it is his understanding the presidents of at least four of the larger kraft pulp companies throughout the United States have agreed the time has come for industry to solve the problem, and they have asked the National Council to a meeting on May 4 at which time they will attempt to map out a program which the National Council can embark upon to find a solution to this difficult task. It will then be necessary for the National Council to finance that study. The Secretary stated he is sure the National Council will do a thorough job because the magnitude of this problem requires the efforts of the entire industry.

CITY OF ALBANY:

A memorandum report dated April 24, 1967, which has been made a part of the permanent files in this matter was presented by Mr. Harold E. Milliken, Assistant Chief Sanitary Engineer.

Mr. Meierjurgan asked how Albany has been getting along with their plans.

Mr. Milliken replied that they are pretty much on schedule. He said that Albany had voted for a \$1,300,000 bond issue and completion of construction is scheduled for October 1968.

Mr. Wheeler asked if start of construction awaits the approval of a federal grant which the city has applied for under PL 84-660, will this be contingent upon the state participation as set forth in H. B. 1322.

Mr. Milliken replied that the city has enough funds to go ahead with the project without a state grant.

Mr. McPhillips asked what is the possibility of the city of Albany's not getting the federal grant, and if they don't get it, has the staff committed itself to additional sewer load.

Mr. Milliken said the city is almost certain to get the grant.

Mr. McPhillips asked what would be the timetable of completion of the 40 lots.

Mr. Milliken said it would be his guess probably 50% load within a year to year and a half.

CCA403

Mr. Harms said he believed that it is about as certain as anything can be that the federal appropriation will continue to be made. He said that the city's progress had been considerable.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the two more extensions of sewers of 20 lots each, as requested by the city, be approved.

SEWAGE DISPOSAL FOR HOUSEBOATS:

Mr. Weathersbee read a letter from Mr. Abbott W. Lawrence, Vice-President of the Waterfront Owners and Operators Association, Inc., which is a formal request for an extension of time under ORS 449.150, the so-called houseboat bill which is destined to become effective September 1, 1967. He said that Mr. Lawrence was requested to have a representative present at the meeting to answer questions and furnish information. Mr. Weathersbee then gave a memorandum report dated April 21, 1967, which has been made a part of the Authority's permanent files.

Mr. McPhillips asked if any new houseboat structures have been built or occupied on the river since the passage of ORS 449.150.

Mr. Weathersbee stated that some have been built but they haven't connected to any treatment or disposal facilities. He said that it is entirely possible to plumb a houseboat the same as a land residence.

Mr. McPhillips asked if Mr. Weathersbee knew of any that have complied with the staff's directive to take care of sewerage.

Mr. Weathersbee said he did not.

Mr. Abbott W. Lawrence, Vice-President of the Waterfront Owners and Operators Association was present and said that he has lived on the water for 12 years and that this is the life he prefers. He said the houseboat owners want to cooperate and clean up the pollution, but that this is a unique problem not understood by the average layman. He said the houseboats are scattered over the Columbia and Willamette Rivers. Jantzen Beach has 110 and these houseboats are outside the dike. He claimed it is illegal to puncture the dike and impossible to make a sewer connection over the dike or through it. There are relatively few moorages where the pump stations could possibly be worked out economically. Mr. Lawrence said the houseboat owners do have a problem, that they are willing to do anything, but there must be some method whereby a houseboater can take care of himself as a unit. He said the problem has no relationship to land-based structures.

Mr. Lawrence said that Mr. Weathersbee suggested getting an engineer. They have investigated this and have been quoted a price of \$1200. The answer is negative.

Mr. Meierjurgan said he cannot share Mr. Lawrence's concern as a land-based home would be required to refrain from doing what these people are doing. He said he felt that Mr. Lawrence's comments about taking care of people who want to live along the river under conditions which condone continuation of this business of polluting public waters is unthinkable. He said the obvious intent of 449.150 is to stop this sort of thing.

Mr. Lawrence said there is no known means of complying with the law.

After some discussion, it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the request by the Waterfront Owners and Operators Association, Inc. for an extension of time under ORS 449.150 beyond September 1, 1967, be denied.

#### CITY OF PORTLAND SEWAGE DISPOSAL

Mr. Norman Drulard, City Engineer, City of Portland, gave a progress report on the city of Portland sewage disposal. This report has been made a part of the permanent files.

The Secretary then stated that this report shows the city of Portland is really busy now working on completion of the sewerage project. He stated that what will be accomplished in the next two years has now been outlined. He asked Mr. Drulard when the interception of all sewage now going into the Willamette River would be completed.

Mr. Drulard said completion would be in the next fiscal year.

The Secretary then asked if the City had any further schedule for expansion of the treatment plant.

Mr. Drulard stated the City has the money in next year's budget.

#### PORTLAND METROPOLITAN AIR QUALITY CONTROL PROGRAM:

Mr. R. E. Hatchard, Air Pollution Control Officer, Portland Regional Air Pollution Authority, congratulated the new members of the Authority and offered his cooperation and assistance. He said that pressure from the public is being felt, the public is looking beyond our capabilities, and that teamwork approach is the only hope of developing the kind of air quality the public is expecting.

Mr. Hatchard said that the Portland Regional Air Pollution Authority came into being under existing state of Oregon law in which counties and cities contract with one another. He stated that application for a federal

CCA403

grant was submitted on the last day of October 1966 which provided for local funds of \$50,000, and a federal grant of \$150,000. He went on to say that unfortunately there will be a delay of some six months on the federal grant. He then submitted a proposal for the transfer from the Sanitary Authority to the Portland Regional Air Pollution Authority of the responsibility for controlling certain classes of pollution sources located in Multnomah County. He read from a letter dated April 25, 1967, which has been made a part of the permanent files, objectives of this transfer.

Mr. Patterson stated that as nearly as he could conclude, the staff is in agreement with the proposal, but that the staff would like time to look it over.

Mr. Hatchard said further he would urge the Sanitary Authority to review functions with the State of Washington, and that a cooperative and coordinated program be developed by the two states.

Mr. Howard Smith, Mid-Willamette Valley Air Pollution Authority, urged that the Sanitary Authority give this proposal serious consideration. He said his Authority would like some guidelines of what classes of pollution the Sanitary Authority proposed to withhold and what the regional authorities would be dealing with.

TILLAMOOK CHEESE PLANT:

An engineering report dated April 25, 1967, which has been made a part of the permanent files in this matter, was given by Mr. Fred G. Katzel.

Mr. McPhillips asked if there was time to cite the Tillamook County Creamery Association and the Tillamook Cheese and Dairy Association in for a hearing before the Sanitary Authority meeting on May 23.

Mr. Pearlman, Legal Counsel, said the two concerns must be given at least 20 days' notice.

The Chairman then said that some pressure should be put on these two concerns as this situation has gone on for years and years.

The Secretary stressed the fact that the hearing from the Water Quality Standards scheduled for May 23 is extremely important and that nothing should detract from it.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the Tillamook Creamery Association and Tillamook County Dairy Association be cited in for a hearing before the Sanitary Authority at the earliest practicable date. Date to be established by the Secretary with due consideration given to the May 23 Water Quality Standards hearing.

There being no further business, the meeting adjourned at 3:25 p.m.

Respectfully submitted,

*Kenneth H. Spies*

Kenneth H. Spies  
Secretary

MINUTES OF THE 115<sup>th</sup> MEETING  
of the  
Oregon State Sanitary Authority  
May 23, 1967

The 115<sup>th</sup> meeting of the Oregon State Sanitary Authority was called to order by Governor Tom McCall, Chairman at 2:05 p.m., May 23, 1967, in Room 36, State Office Building, Portland, Oregon. The members and staff present were: Governor Tom McCall, Chairman; Chris L. Wheeler, Herman P. Meierjorgen, Edward C. Harms, Jr., Dr. C. A. Jenike, B. A. McPhillips and Joseph W. Smith, Members; Kenneth H. Spies, Secretary; John O. Denman, Legal Advisor; H. M. Patterson and H. E. Milliken, Assistant Chief Engineers; Harold W. Merryman, Leo L. Baton, Fred M. Bolton, and J. A. Jensen, District Engineers; Dr. Warren C. Westgarth, Laboratory Director; H. W. McKenzie, Associate Engineer; Don McHarness and James Sheetz, Assistant Sanitary Engineers.

The meeting was preceded by a public hearing which began at 10:00 a.m. and ended at 12:10 p.m. regarding Standards of Quality for Public Waters of Oregon.

MINUTES:

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the minutes of the April 25, 1967 meeting be approved.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjorgen, and carried that the action taken on the following 23 project plans and engineering reports for water pollution control and 3 project plans for air quality control for the month of April, 1967, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
4/3/67	Port Orford	Add. #1 & 2, Rev. Plans & Specs.	Prov. app.
4/3/67	Tigard	Engineering Report	Prov. app.
4/3/67	Ontario	Engineering Report - Collection	Prov. app.
4/4/67	Springfield	S. 71st Street Lateral	Prov. app.
4/4/67	Gladstone	Clayton Way Sewer	Prov. app.
4/4/67	Roseburg	Sakura Yama Subd.	Prov. app.
4/5/67	Gresham	N. E. Bell Street Sewer	Prov. app.
4/6/67	Medford	Sewer extensions	Prov. app.
4/6/67	Springfield	Sewer S-80-66	Prov. app.
4/7/67	Winston	Tumlin Avenue Sewer	Prov. app.
4/7/67	West Linn	Parsons Avenue Add. Sewer	Prov. app.

CCA403

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
4/10/67	Sherwood	Gleneagle Subd. Sewer	Prov. app.
4/11/67	Beaverton	S. E. Cressmore Drive	Prov. app.
4/11/67	Estacada	H-S-3-S-E Laterals H-I=N, H-I=S	Prov. app.
4/13/67	Sublimity	Prel. Engineering Sewerage Rept.	Approved
4/17/67	Gresham	S. E. Burnside Sewer	Prov. app.
4/17/67	Sheridan	STP Expansion Study	Approved
4/19/67	Fairway Estates	Lateral A.	Prov. app.
4/19/67	S. Suburban S.D.	Pine Grove School Lateral	Prov. app.
4/21/67	Oak Hills	Townhouse Complex Sewer	Prov. app.
4/25/67	Gresham	Cleveland & Section Line Sewer	Prov. app.
4/27/67	Sweet Home	N. 12th Ave. San. Sewer	Prov. app.
4/27/67	Tigard	Panorama #II	Prov. app.

Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
4/14/67	Columbia County	Nuclear Power Plant Considerations	No action nec. under consideration
4/20/67	Washington County	Review of Proposed County Air Pollution Ordinance	Comments submitted
4/26/67	Clackamas County	Publishers' Paper Co. Waste Pulp Incinerator	Under cons.

WATER QUALITY STANDARDS:

The Chairman reported that at the public hearing held during the forenoon, considerable additional testimony had been received from the Fish and Game Commissions, from industry, from irrigators and from others, and consequently the Authority and its staff should evaluate this and see what parts of it, if any, ought to be reflected in the final rules that are to be sent on to Secretary Udall on or before the 30th of June. He said there would be a special meeting of the Sanitary Authority early in June to reconsider the rules in case there are any changes that ought to be made.

WIGWAM BURNER CONTROL:

The Chairman stated that the Associated Oregon Industries had prepared a statement of its program to reduce air pollution from operation of wigwam burners.

Mr. Robert Olinger then read the statement, a copy of which has been made a part of the Authority's permanent files. He stated that industry is supporting passage of H.B. 1376. Governor McCall pointed out it had passed the Senate yesterday and that he would sign it when it came across his desk.

CCA403

Governor McCall then suggested that the statement be discussed. He said that it is a considerably more detailed statement and had more hope in it than the one received on April 25. He referred to the second paragraph on the last page of the statement in regard to areas where there is a dense concentration of mills, and it is recommended that these mills collectively either through committees or other means continue to study and work toward alternative methods of disposal and not rely entirely on the research to be conducted at Oregon State University. He said the gentlemen from Los Angeles, who had conferred with him a few weeks ago, had indicated from their studies that there was a chance for some centralization in areas where there is a congestion of burners and that there could be some abatement through joint effort. He then asked the Secretary if it would be possible for him and his staff to work with Mr. Olinger in regard to joint action in the Eugene-Springfield and Medford areas, and was assured that it would be possible. He said there were many who were complying but the 65% who were not should be closed down or forced to cooperate.

Mr. Wheeler stated that it seemed possible that two or more mills close together could combine their loadings and burn in one burner instead of two or three.

Mr. McPhillips then asked Mr. Olinger how much cooperation could be expected from his organization and the sawmill operators in doing their own policing on this. He said the Authority does not have the staff now to go around and check all these mills.

Mr. Olinger assured Mr. McPhillips that the Associated Oregon Industries and this committee that has been formed would work very closely with the Authority.

Governor McCall mentioned that there will be about four million dollars in the emergency board fund and that if necessary it might be possible to train someone with an engineering background to assist in this survey and to finance it with funds from the emergency board.

Mr. Meierjurgan stated that he believed that construction of sanitary landfills or stockpiling for agricultural mulch would be ways of disposing of wood waste without burning it.

Mr. Olinger stated that maybe incineration would not be the answer to the problem and that perhaps a sanitary landfill, stockpiling or even hauling it back to the woods would be the feasible thing to do.

Governor McCall then suggested that this matter be left for the staff to work on and take up at the next meeting which would be within a week or so.

Mr. Steve McQueen of Medford asked to make a statement in regard to his mill in the Medford area. He said he had definitely looked into the matter of merchandising agricultural bark, and had made experiments in shipping it by carload bulk to the Los Angeles area and the Bay area. He said they even have gone so far as to put it in bags and shipping it in carloads and each of these proposals had been a flop financially. He claimed that if there is a large population that can use this mulch then it might be economically feasible; but if it has to be hauled any distance, a person cannot get the cost out of it. Even though one pays a good price for a sack of mulch at the corner grocery store, it doesn't necessarily mean that the mills are making a big profit.

Mr. Harms asked the Chairman if he knew if freight rates still affected the mills unfavorably, to which he said he was unfamiliar with the rates and that he had not heard of any large shipments of bark going out of the Eugene area.

Mr. McKenzie said that a revised rate had been received as far south as Arizona. He said he was not aware of what the rate was or to what extent it applied to shipment.

Mr. McQueen stated he was sure that a request from the Governor's office might help in getting reduced rates for shipping of bark at a lumber rate.

Mr. Patterson stated that he would like to keep the staff in the field as much as possible and that they would have some sort of check or inspection sheet for each mill that would show what each mill is doing in the way of complying. In this way they could concentrate on the areas on the map where conditions are worst and get at the problem sources.

The meeting adjourned at 2:30 p.m.

Respectfully submitted,

Kenneth H. Spies  
Secretary  
State Sanitary Authority

MINUTES OF SPECIAL MEETING  
Oregon State Sanitary Authority  
May 11, 1967

The Special meeting of the Oregon State Sanitary Authority was called to order by Governor Tom McCall, Chairman, at 4:00 p.m., May 11, 1967, in Room 36, State Office Building, Portland, Oregon. The members present were: Governor Tom McCall, Chairman; Chris L. Wheeler, Dr. C. A. Jenike, B. A. McPhillips, Herman P. Meierjurgan, and Edward C. Harms, Jr., Members; Kenneth H. Spies, Secretary; and John O. Denman and L. W. Pearlman, Legal Advisors. Mr. Joseph W. Smith was unable to attend because of other business.

A large delegation of houseboat owners was also present.

The Chairman stated that there had been several requests for reconsideration of the action taken by the members of the Authority at their meeting on April 25 regarding houseboats. He said that a proposed order had been drawn extending the compliance date in relation to ORS 449.140 and 449.150 and asked the Secretary to read the order which was as follows:

ORDER OF THE SANITARY AUTHORITY OF THE STATE OF OREGON  
EXTENDING COMPLIANCE DATE OF ORS 449.140 and 449.150.

The matter of an extension of time from certain provisions of ORS 449.140 and 449.150 having come before the Sanitary Authority of the State of Oregon on the 11th day of May, 1967, and evidence having been presented that strict compliance by September 1, 1967 with the requirements of the provisions of ORS 449.140 and 449.150 relating to plumbing fixture connections and to the disposal of kitchen, bath and laundry wastes but not including garbage or human excreta, would be unreasonable, unduly burdensome and impractical due to special physical conditions, and it appearing further that an extension of time from September 1, 1967 to later dates as hereinafter set forth should be granted as to said floating buildings and structures, houseboats, moorages, marinas or any boat used as such; a motion having been made as to the foregoing, seconded and carried and the Sanitary Authority being fully advised in the premises,

NOW, THEREFORE, IT IS HEREBY ORDERED:

(1) That as to floating buildings and structures, houseboats, moorages, marinas or any boat used as such, an extension of time from September 1, 1967 to January 1, 1968 be and the same is hereby granted for compliance with the requirements of ORS 449.140 and 449.150;

(2) That with respect to the connection of plumbing fixtures and to the disposal of kitchen, bath and laundry wastes (but not including garbage and human excreta), an extension of time from September 1, 1967 to January 1, 1971 shall be and the same is hereby granted; provided, however, that the extension of time mentioned in this paragraph may be terminated by the Sanitary Authority at any time if:

CCA403

(a) The owners, operators, lessees and occupiers of floating buildings and structures, houseboats, moorages, marinas or any boat used as such fail or refuse to submit a progress report on or before January 1, 1969 and January 1, 1970, respectively, demonstrating the exercise of due diligence in developing a satisfactory plan which would meet the approval of the Sanitary Authority for the disposal of kitchen, bath and laundry wastes; and

(b) Notwithstanding anything to the contrary contained herein, the extension of time granted in this paragraph (2) as to connection of plumbing fixtures and to the disposal of kitchen, bath and laundry wastes shall not apply with respect to any person who fails or refuses to comply with the requirements of the provisions of paragraph (3) relating to disposal of human excreta.

(3) Incinerator type toilets, approved by the Sanitary Authority may be used for the disposal of human excreta in the floating buildings and structures, houseboats, moorages, marinas or any boat used as such as mentioned in paragraph (1) notwithstanding the subsequent installation of plumbing fixtures for the disposal of kitchen, bath and laundry wastes as required by paragraph (2) hereof.

(4) The extension provided for in paragraphs (1) and (2) shall apply only to floating buildings and structures, houseboats, moorages, marinas or any boat used as such which are in existence or under construction prior to September 1, 1967.

DATED this \_\_\_\_\_ day of \_\_\_\_\_, 1967.

\_\_\_\_\_  
Chairman  
Sanitary Authority of the State of Oregon

ATTEST:

\_\_\_\_\_  
Secretary

The Chairman then asked for a motion of adoption of this order.

It was MOVED by Mr. McPhillips, seconded by Mr. Harms, and carried that the order as read regarding houseboats, extending the compliance date in relation to ORS 449.140 and 449.150, be adopted.

The Chairman then asked if there was anyone in the audience who wished to testify.

Mr. Alex Parks, Attorney for the Waterfront Owners and Operators Association, said that there are about 500 houseboat owners. He said most of these people will comply immediately with the provisions of the order, and that it would be unfair if those who do not comply are not prosecuted.

The Chairman said the Authority would enlist the help of the city of Portland Bureau of Health and the county health departments to make inspections to ensure total compliance.

Dick Milestone asked about what protection there would be against pollution from commercial transports, foreign ships, cruisers and yachts.

The Secretary stated the federal statutes require a report from the Federal Water Pollution Control Administration and that report is due to be presented to the Secretary of Interior by July 1, 1967. The report is to assess the problem and present proposals for providing adequate sewage collection and disposal for those vessels. He went on to say that the state law now provides that control of the use of marine toilets on pleasure craft is under the jurisdiction of the State Marine Board. This Board has the power to establish rules and regulations governing the use of such devices and these rules and regulations must meet the approval of the Sanitary Authority. The Sanitary Authority can ask, and will ask, the State Marine Board to provide adequate control over pleasure craft. The Secretary suggested the deadlines be the same as established for houseboat owners.

Mr. Earl Flamm asked about the Riverdale-Dunthorpe area which has been discharging raw sewage into the river; also the articles which have appeared in the paper from time to time that there are as high as 36 main city trunk lines dumping into the river.

The Secretary reported that the Riverdale-Dunthorpe area is incorporated as a county service district and sewers are now under construction by Multnomah County. When finished all of the homes in that area will be served by the system which will discharge into the interceptor which goes to the Tryon Creek sewage treatment plant owned and operated by the city of Portland. With regard to the City of Portland, all sewers will be intercepted by the end of 1968.

A member of the audience asked if the Sanitary Authority has under consideration a specific plan for sewage disposal for houseboats.

The Chairman referred her to the order which in effect extends the deadline from September 1, 1967 to January 1, 1968, and in return the houseboat owners are expected to install incinerator toilets. By January 1, 1971 suitable facilities are to be installed for disposal of the other wastes.

A question was also asked about the dikes along the Columbia and the Willamette which are a government project and cannot be disturbed.

The Chairman said that within the three-year extension of time granted by the order, it is hoped this problem can be solved.

CCA403

Another member of the audience thanked the members of the Sanitary Authority for reconsideration of the problem and asked that someone comment on Mr. Weathersbee's statement that the problem could be solved for an investment of about \$1350 per houseboat.

The Secretary replied that Mr. Weathersbee was referring to a proposal contained in a report by the Federal Water Pollution Control Administration which will be released shortly. This proposal contemplates the installation of treatment devices presently available which would be a floating structure and would involve the installation of approved type plumbing in each houseboat. It would require the transport of the waste from each houseboat to a central treatment plant. The cost would be shared among all of the houseboat owners who use this type of installation. He said these units have been in production for a long time but haven't been specifically designed for use in water, and would have to have facilities for it to float as part of the moorage. It would have to be engineered.

Mr. Jack Nunn said he represents a firm that manufactures such equipment which will be on the market shortly. He stated that an engineering study has just been completed at Jantzen Beach for Mr. Buehl and that each unit will cost \$434.00, including a year's free maintenance.

Another member of the audience who said he is Chairman of the Board of Directors for the Waterfront Owners and Operators Association stated that Mr. Nunn had appeared before the Association at a Director's meeting a short time ago. He said Mr. Nunn spoke about one proto-type device at that meeting which had never been put into operation either in the water on or land in full use. He stated that the Association does not feel that this is something that can be used now until it has been proven satisfactory.

Mr. Wheeler stated that he was of the opinion the houseboat owners could follow the same principle as some of the land communities have by hiring an engineer to design the system and the system will be either approved or provisionally approved, as the case may be, when properly submitted to the Authority for approval.

Mr. Lawrence said that he appeared before the Sanitary Authority meeting on April 25 and asked for a year's extension and that this was not granted by the Sanitary Authority. He believes the reason it was not granted was due to the fact that Mr. Weathersbee failed to make an explanation that his information came from a federal report that he had on February 13 but did not show

it to the Waterfront Owners and Operators Association. He said the press printed the information, putting the Association in a very bad light as being very uncooperative. Mr. Lawrence felt this is untrue. He said the houseboat owners are willing to buy anything that will do the job.

There was then some discussion regarding the problem of financing sewerage facilities by the houseboat owners.

The suggestion was made that it might be possible under the Bancroft Bonding Act used for sewer improvements, with a few appropriate amendments to be financing extended to moorages.

The Chairman said this would be recommended to the next Legislature if the Association so wished.

The meeting was adjourned at 4:40 p.m.

Respectfully submitted,

Kenneth H. Spies  
Secretary  
State Sanitary Authority

CCA403

MINUTES OF THE 116<sup>th</sup> MEETING  
of the  
Oregon State Sanitary Authority  
June 1, 1967

The 116<sup>th</sup> meeting of the Oregon State Sanitary Authority was called to order by Governor Tom McCall at 2:30 p.m., June 1, 1967, in Room 6, State Capitol, Salem, Oregon. The members present were Governor Tom McCall, Chairman; Chris Wheeler, Dr. C. A. Venike, B. A. McPhillips, Joseph Smith and Edward C. Harms, Jr., Members; Kenneth H. Spies, Secretary; John O. Denman, Legal Advisor; Dr. Warren C. Westgarth, Laboratory Director; Lloyd O. Cox, Assistant Sanitary Engineer; and Glen Carter, Aquatic Biologist. Mr. Herman Meierjurgan was unable to attend because of a prior appointment.

The Chairman stated that the purpose of this meeting was the final adoption of standards of quality for public waters of Oregon. He said that twelve hearings had been held by the Sanitary Authority on water quality throughout the State since October 1966. On May 23 the Board met for final adoption of these standards, but because of additional testimony which was introduced at that time, the decision to delay the adoption of the standards was made in order to consider the new testimony. The Secretary was then called upon to state what changes had been made.

The Secretary stated that in rule 11-008, Highest and Best Practicable Treatment and Control Required, this section originally required the best, highest and most practicable treatment where a higher standard can be achieved. The clause "where a higher standard can be achieved" has been eliminated and the words "highest or lowest desirable levels" have been changed to "highest or lowest possible levels."

The next change is in rule 11-015, Maintenance of Standards of Quality, subsection 2 which did read "At its discretion, the State Sanitary Authority may require chlorination or equally efficient disinfection of sewage and waste treatment plant effluents wherever and whenever the discharge of unchlorinated effluents shall or may affect the quality of water used for public or domestic water supplies, irrigation, shellfish growing areas, or swimming and recreational areas." This subsection has been changed to read "All sewage shall receive a minimum of secondary treatment or equivalent (equal to at least 85% removal of 5-day biochemical oxygen demand and suspended solids) and shall be effectively disinfected before being discharged into any public waters of the State." The Secretary said that this spells out clearly what the minimum degree of treatment shall be for domestic or municipal sewage.

On page 5, rule 11-016, General Water Quality Standards, subsection 1, previously read "No wastes shall be discharged and no activities shall be conducted which either alone or in combination with other wastes or activities will cause in any waters of the State: (1) The dissolved oxygen content of surface waters to be less than five (5) milligrams per liter unless specified otherwise by special standard." This has been changed to six (6) milligrams per liter.

On page 6, a new paragraph has been added at the request of the fisheries people which reads "Any measurable increase in temperature when the receiving water temperatures are 64° F. or above, or more than 2° F. increase when receiving water temperatures are 62° F. or less."

Mr. Wheeler asked what is meant by "measurable."

Mr. McPhillips said it was his impression this would mean taking the temperature of the stream at a reasonable distance above and below the outfall.

The Secretary referred the members to the wording on page 22 which reads "Any significant increase above natural background temperatures, or water temperatures to be altered to a degree which creates or can reasonably be expected to create an adverse effect on fish or other aquatic life." This is approaching it in a different manner, using words instead of specific values.

Mr. Denman asked if it couldn't be based on "unless otherwise approved by the Sanitary Authority" as is done in many cases.

Mr. Wheeler said that "measurable" means anything which can actually be measured with any temperature measuring device that is standard and in use.

Mr. Harms stated that a great deal of difficulty would be encountered going to court with a case in which the increase is insignificant; for example, one-tenth of a degree. He did not think that this poses a particular problem from a legal standpoint. It is his belief that the term "measurable" is satisfactory.

The Chairman said that if this is the common language that appears in such standards and is accepted by attorneys and people who are familiar with them, it is his belief the wording should stand as stated.

The Secretary then said the next change appears on page 8, rule 11-023 Special Water Quality Standards for Public Waters of the Main Stem Klamath River. At the suggestion of the State Game Commission, the station has been moved upstream approximately nine miles to Keno Regulating Dam.

CCA403

The next change reported by the Secretary is on page 21, rule 11-100, Water Quality Standards for the Marine and Estuarine Waters of Oregon. The dissolved oxygen standard for estuarine waters has been increased from five milligrams per liter to six milligrams per liter.

The final changes are on Table A, page 23, Salmonid Fish Rearing has been added as a beneficial use to the lower Willamette from the mouth to Willamette Falls, including Multnomah Channel. Navigation has been added as a beneficial use for the Columbia River, Willamette River three lower zones and for Marine and Estuarine Waters.

It was MOVED by Mr. Harms and seconded by Mr. McPhillips that the Standards of Quality for Public Waters of Oregon as set forth in the document handed to the Secretary marked Exhibit A, which is the same as those copies with the changes that have been presented to the Authority, be approved as Administrative Rules of the Authority and be filed with the Secretary of State.

The Chairman then said there would be discussion on the Standards, but that it would be limited to questions and answers between members of the Sanitary Authority and their staff.

Mr. Smith said that on page 8, paragraph 2, where the coliform standards go as high as 2400 per 100 ml, he was under the impression there had been some criticism about getting coliform bacteria standards as high as that, that he was somewhat familiar with the situation in the Klamath River and he questioned permitting a standard as high as 2400.

The Secretary stated that in the Klamath basin there is a terrific load of coliform bacteria from wildlife because there are thousands and thousands of birds in that basin. He said they can contribute more coliform bacteria than humans. He said there may also be a large contribution of coliform bacteria from return irrigation water which drains from the land. He said that Oregon has never had a specific standard for MPN but that the State Board of Health has used as a goal the figure of 240 for years. He further stated that the U. S. Public Health Service, although it has made studies for years regarding the significance of the coliform or MPN test, has never been able to get enough factual data together from its epidemiological studies to justify its recommending an MPN standard for recreational waters.

Mr. Smith said that he is concerned about the variances between one body of water and another. He asked what standards the Federal Government is suggesting for coliform count.

The Secretary said he had contacted the Federal people and they have no set standards.

Mr. McPhillips asked what the state of Washington is proposing for standards in the Columbia River.

The Secretary said the state of Washington has proposed the same standards as the state of Oregon, that the MPN be 240 down to the Interstate Bridge and 1000 from the Interstate Bridge to the mouth of the Columbia River.

The Secretary said there is one more point that should be brought out and that is the temperature requirement for the Columbia River. Oregon's proposal sets a standard of a maximum of 68° F. which would be 20° C. and the state of Washington is setting a maximum of 18½° C. Whether or not the Secretary of the Department of Interior will consider these compatible remains to be seen.

Mr. McPhillips asked if there were information available regarding the increase in the temperature caused by the Hanford plant.

Dr. Westgarth said this is something that has never really been proven.

The Chairman asked from the enforcement standpoint if the temperature gets above 68°, say 73°, what the penalty for exceeding this set standard would be.

The Secretary replied that the main significance of this set standard is when a proposal might be submitted for a nuclear power plant where there would be an extremely large heat load to be dissipated.

The Chairman then asked if there were any further comments, questions or clarification.

Mr. Harms said he would like to make one general comment and that is that these standards are based upon the best general scientific knowledge available at this time and that because of time limitations, budgetary limitations, and many other things, they are based upon general scientific knowledge, rather than specific application in every case. He said that these standards will undoubtedly require additional adjustments as time goes on, as knowledge, technology and our experience in applying them is enlarged and improved. Mr. Harms said that this is a starting point and in the future it is hoped that these standards may even be upgraded.

The motion made by Mr. Harms was then approved by the members.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the Implementation and Enforcement Plan submitted by the staff as Exhibit B be adopted as a policy of the Sanitary Authority.

CCA403

Mr. Denman said that there is an emergency clause on Exhibit A stating that the standards go into effect immediately upon filing with the Secretary of State.

The Chairman then stated that several offers had been made from the Professional Engineers of Oregon to assist in enforcement problems. The Secretary was asked to make a note of this and to thank the Professional Engineers of Oregon for the offer of this assistance.

The next meeting date was set for July 10, 1967.

There being no further business, the meeting adjourned at 4:00 p.m.

Respectfully submitted,

Kenneth H. Spies, Secretary

MINUTES OF THE 117th MEETING  
of the  
Oregon State Sanitary Authority  
July 10, 1967

The 117th meeting of the Oregon State Sanitary Authority was opened by Governor Tom McCall, Chairman, at 10:00 a.m., July 10, 1967, in Room 6, State Capitol Building, Salem, Oregon. He immediately announced that he was removing himself as a member and Chairman of the Authority, and that pursuant to legislation adopted by the 1967 Legislative Assembly he had appointed the following five members to make up the new board: Messrs. B.A. McPhillips and Edward C. Harms, Jr., to serve until June 30, 1971; Herman P. Meierjurgan to serve until June 30, 1970; John Mosser to serve until June 30, 1969, and Storrs Waterman to serve until June 30, 1968.

The Governor then made a statement on his resignation from the State Sanitary Authority, touching briefly on the legislation which had been enacted by the 1967 Legislature on air and water pollution control.

Mr. Ed Westerdahl II, Governor McCall's Executive Assistant, conducted the swearing in ceremony, after which the Governor handed each member a certificate.

The Governor was then asked by the news media what his expectations of the new Authority would be under existing laws and under any laws which might be enacted in the future.

Governor McCall replied that he expected the new Authority to be firm but just, that it will understand the laws, that it understands the temper with which these laws were born, and that he thought the whole philosophy would be to hold pollution where it is now and that existing pollution would be reduced as much as possible.

The news media asked if the heavy industry coming into Oregon is going to be compatible with liveability in the State, and would it cut down on tourist attraction because of the inherent pollution problems.

The Governor said it is the hope of this administration that it will be compatible with liveability and that it will not detract from tourist attraction. He said any new industry wanting to come into the State is told that they will have to meet the toughest standards of air and water quality of any state.

The Governor then asked Mr. McPhillips to take over as temporary Chairman.

CCA403

The members and staff present were John Mosser, Herman P. Meierjorgen, B.A. McPhillips, Edward C. Harms and Storrs Waterman, Members; Kenneth H. Spies, Secretary; Leonard Pearlman, Legal Advisor; Warren C. Westgarth, Laboratory Director; E.J. Weathersbee, Deputy State Sanitary Engineer; Joseph A. Jensen, Fred M. Bolton, Leo L. Baton and Harold W. Merryman, District Engineers; Fred G. Katzel, Assistant District Engineer; Harold E. Milliken and Harold M. Patterson, Assistant Chief Engineers; Patrick D. Curran and Harold W. McKenzie, Associate Sanitary Engineers.

Mr. McPhillips said the first order of business would be the election of a new Chairman.

It was MOVED by Mr. Harms, seconded by Mr. Meierjorgen and carried that John D. Mosser be elected as the new Chairman of the State Sanitary Authority. Chairman Mosser said he had no statement to make at this time because he had lots to learn. He said he believed the next thing would be to elect the Director of Air and Water Quality Control who would also serve as Secretary of the Sanitary Authority without a vote.

It was MOVED by Mr. Meierjorgen, seconded by Mr. McPhillips and carried that Mr. Kenneth H. Spies be appointed as the new Director of Air and Water Quality Control, automatically making him the Secretary of the State Sanitary Authority.

The Chairman then said he believed the members of the Sanitary Authority had the responsibility to fix a salary for this position and suggested that the salary be at the top of the range which is \$19,680 per year.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the Director of Air and Water Quality Control receive a salary of \$19,680 per year.

It was MOVED by Mr. Meierjorgen, seconded by Mr. Harms, and carried that Mr. B.A. McPhillips be elected as Vice-Chairman of the State Sanitary Authority.

#### MINUTES OF MEETINGS

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the minutes of the special meeting on May 11, 1967, the 115th meeting on May 23, 1967 and the 116th meeting on June 1, 1967, be approved as prepared.

FEDERAL GRANT APPLICATIONS FOR FISCAL YEAR 1968

Mr. Harold E. Milliken gave a staff report on the applications that had been received for sewage treatment works construction grants for fiscal year 1968. His report has been made a part of the permanent files in this matter.

The Secretary said he would like to mention that as soon as the analysis of grant applications had been completed by the staff, a letter was directed to the Oregon Congressional delegation in Washington, D.C, pointing out to them the fact that unless more federal money can be made available this fiscal year, it would probably mean that several of our urgently needed municipal sewage treatment projects would be unnecessarily delayed.

The Chairman asked if the applicants' financial needs were taken into consideration when making the priority listings.

Mr. Milliken replied that this had been done and pointed out the sheet in the notebooks showing the criteria for determining the priority points.

The Secretary stated that the staff must submit an annual plan to the Federal Water Pollution Control Administration which sets forth the whole plan of operation and lists the needed projects in the various basins.

The Chairman asked how far the staff would suggest going in allocating the State's three million dollars. He said he thought it best to hold back some money for some emergency or more critical need that might come up during the year.

Mr. Harms pointed out that nearly all of the money involved in the \$2,032,000 requests for the 10 hold-over projects is involved in the two Portland projects which are being financed not by a bond issue, but a pay-as-you-go plan for revenues, and that these two projects probably represent as significant a reduction in pollution as could be made in any one year if these could be put through. He said by trying to stretch the money for other projects would probably result in eliminating these two projects, thereby prolonging some pollution in the lower Willamette which the Authority is anxious to eliminate.

The Chairman said he realized this, and could see where the state and federal money would be fine for getting projects done as far as the money would go, but then could be a deterrent because the people would want to hold back until they can get a grant.

CCA403

The Secretary said the reason for the bind at the present time is due to the fact that Congress changed its rules materially as far as the maximum permissible grant is concerned. Originally the ceiling was \$600,000, then it went to \$1,200,000 and now the ceiling is off and it is a straight 30 or 50%, as the case may be, with no limitation. Until Congress actually approves the appropriation bill, all that can be approved for the state of Oregon is about one and three-quarters million dollars, because that is based on the amount received in 1967. He said when the amendments to the Federal Water Pollution Control Act were passed, it was stipulated that the maximum appropriations for each fiscal year would be \$450 million dollars nationwide for 1968, \$700 million dollars for 1969, one billion dollars for 1970 and one and one-quarter billion dollars for 1971.

After some discussion, it was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that priorities and grants be authorized for the ten projects on sheet 4 and those on sheet 5 through the Tigard project #236 for both state and federal grants as indicated, with the stipulation that any of those on page 4 that are receiving increased grants make a commitment to use the additional funds received to continue their water pollution control efforts wherever fund projects are pending for that entity.

The Chairman then asked if there was anyone in the audience who wished to be heard.

Mr. Bernard Stacy from the Port of Tillamook Bay said that they have the engineering completed on their project which totals an estimated figure of \$72,400, and that the project was let for bids on June 22. He said that they have the shellfish problem on Tillamook Bay, and that they are waiting approval of their grant before awarding the bid.

The Chairman asked Mr. Stacy if the Port could proceed before they actually received the money and maybe wait a year for federal reimbursement.

Mr. Stacy said that the Port is operating on a very tight budget and he thought waiting a year for the money would put them back where they have been for the last 20 years of polluting the Trask River.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Harms, and carried that the Port of Tillamook Bay project be moved up on the list and given early priority so that it would be sure to receive a grant this year.

WIGWAM WASTE WOOD BURNER REGULATIONS PROPOSAL

Mr. Harold W. McKenzie read a staff summary report dated July 10, 1967, which has been made a part of the Authority's permanent files, and which contains the proposed draft of changes to the existing regulations, together with a draft of the regulations as they would appear after adoption of these changes.

Mr. McPhillips said he had one question regarding new wigwam waste burners which must be approved by the Authority, and that is how far does that go in controlling the rebuilding of existing burners.

Mr. McKenzie said that if a burner has a major repair on the same site, same foundation, that it is technically classed as a repair. A new burner means one that did not exist before.

Mr. McKenzie stated that the reason for prohibiting intermittent and casual use was the problems created by batch loading which results in smothering and also the many waste burners serving mills that have obtained almost complete utilization of their waste products and are, therefore, used only for burning yard cleanup, etc. In order to operate to the best advantage, he said a wigwam burner must be fed continuously with as near ideal fuel as possible.

Mr. Harms stated that under the regulations governing construction and operation of wigwam burners, based upon a report which the Authority had previously received, there was considerable hope put forth that this would make the wigwam burner an acceptable method of disposing of waste without undo air pollution. He said that this was proved to be an incorrect assumption, and that some of the burners which had been constructed in compliance with these current regulations were actually causing more air pollution than those which were not in compliance. He said this was the reason for rescinding those regulations concerning construction and simply applying to wigwam burners the other air pollution standards which are included in Chapter 334 on smoke discharge, particle fallout rate and suspended particulate matter. He said that those items which were formerly regulations and which gave the people some assurance will be the starting point to the staff in approving new construction, whereas before there had been an area of reliance whereby if they did this it would not seem to make much difference how much air pollution it caused.

CCA403

Mr. Waterman asked if all burners in the state are equipped with a conveyor system.

Mr. McKenzie said there are a few exceptions, but basically this is the standard method.

Mr. Waterman then asked if this would mean a change in method of operation, rather than an installation of new equipment.

Mr. McKenzie said it would in effect curtail a mixed method of introducing waste into the burner.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the proposed change to OAR, Sections 24-005 through 24-025 be accepted, and that the staff be authorized to proceed with arrangements for a public hearing in accordance with OAR 449.790, "Hearings on Standards."

REQUEST TO EXTEND CERTAIN APC FUNCTIONS TO MULTNOMAH COUNTY (Portland Region)

Mr. Harold M. Patterson read a staff report dated July 10, 1967, which has been made a part of the Authority's permanent files. The Chairman then asked what the delay would be in organizing a regional air quality control authority.

Mr. Patterson said he thought the delay would be just the time required to get the counties together and organizing under SB 36. He said if the counties are going to reorganize, they will have to do so by January 1968 because the limited power they do have now will be repealed then.

Mr. McPhillips asked about how much time it would take to organize the regional air quality control authority.

Mr. Tom Donaca, Associated Oregon Industries, said there would be a meeting of the health officers soon and their counsel has been directed to draw up a form of proposal for all of the health officers. He thought the deadline of January 1, 1968 could be easily met.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the participants in the Portland Regional Air Pollution Authority be encouraged to immediately proceed to organize under SB 36 which will provide the Portland Regional Air Pollution Authority with much broader authority than under its present organization.

GRAND RONDE SEWAGE DISPOSAL

A memorandum report dated July 7, 1967, which has been made a part of the permanent files in this matter was presented by Mr. Fred G. Katzel, Associate District Sanitary Engineer.

Mr. Meierjurgan said that this case has been going on for years, that it has been brought to the attention of the staff quite a number of times, that the staff has gone through complaints in courts, that a consent order has been agreed to by Mr. Bunn and that he believed the request of the staff is reasonable.

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that contempt of court proceedings be initiated against Mr. Floyd Bunn and that he be enjoined from further discharging raw and inadequately treated sewage into Rock Creek.

CITY OF ALBANY REQUEST FOR ADDITIONAL SEWER EXTENSIONS

Mr. Harold E. Milliken brought the new board members up to date on what has transpired in the past regarding this matter.

Mr. Vincenzo Orsi, City Engineer for Albany, said he would like to speak in favor of the two minor extensions. He said the first area he would like to discuss was built up in the early 1950's. He stated that the unsuitable soil conditions, together with poor drainage in the area, have created problems with septic tanks; therefore, the people in the area have made a request to the city to annex in order to have municipal sewer service. Mr. Orsi said he has a letter from the Benton County Health Department supporting the annexation of the area. The second area is a new subdivision consisting of all vacant land. This area will probably be developed in three or four years.

Mr. Harms said it was his recollection that the last extension was only approved because there had been a misunderstanding between the staff and the engineering department in Albany.

Mr. Meierjurgan said it isn't so much a concern about the sewer lines that are in as it is about the capacity of the already overloaded treatment plant to absorb this added load.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the sewer extensions for the new lots be denied.

The Chairman said he would like to have more information on the other request made by the city of Albany, and therefore this matter will be referred to the staff and city for further investigation.

CCA403

DATE AND LOCATION OF PUBLIC HEARING RE: PROPOSED PULP MILL NEAR HALSEY

The Secretary said that this will be an informal hearing for the purpose of informing the public as to the proposal of the company and the reaction of the Sanitary Authority to that proposal, and to give the public an opportunity to express their views to the Sanitary Authority so that the Sanitary Authority will be in a position to make a final decision in the matter.

The Chairman asked if there had been any requests as to time and location.

Mr. Harms said that he had had several requests that the hearing be held in Eugene.

The Secretary stated that several requests had been received from the city of Corvallis that the hearing be held in Corvallis, and that it be delayed until after mid-September so that all the people who would want to testify would be available.

The Chairman asked if there were sufficient information available to hold a public hearing at that time.

The Secretary said the staff did not want to hold a public hearing until they are in a position to say with some degree of certainty what the air pollution problem may be in the community.

Mr. Dan Williamson from the consulting engineering firm for American Can Company, said they would like the hearing held as early as possible in order to take advantage of the good weather for start of construction.

It was Mr. Harms' suggestion that the hearing be held in Eugene and Mr. Meierjurgan's suggestion that the hearing be held in Corvallis.

The Secretary asked if it might be possible that two hearings should be held.

Sherman Washburn, informational representative, said that he believed from a public relations standpoint that two hearings should be held - one in Eugene and one in Corvallis.

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that the hearing be initiated in Eugene and finished in Corvallis on the same day.

CONTRACT BETWEEN STATE SANITARY AUTHORITY AND STATE WATER RESOURCES BOARD

The Secretary said that in 1965 the staff entered into an agreement with the State Water Resources Board to assist in the conduct of an Ultimate Water Needs Study for the state of Oregon. Under this contract money is

provided by the State Water Resources Board to the Sanitary Authority to employ staff to conduct certain investigations of the quality of waters throughout the State. He said this study has been going on now for two years and was originally estimated to take four years. He asked the board's approval to sign the extension of agreement which has already been approved by the State Water Resources Board.

It was MOVED by Mr. Meierjorgen, seconded by Mr. Waterman and carried that the extension of the agreement between the State Sanitary Authority and Water Resources Board for the Ultimate Water Needs Study be approved.

APPLICATION TO SANITARY AUTHORITY FOR RECOGNITION AS A REGIONAL AIR POLLUTION CONTROL PROGRAM FOR THE COUNTIES OF BENTON, LINN, MARION, POLK AND YAMHILL

Mr. Howard Smith read a letter addressed to the Sanitary Authority from Mr. H.B. Hildebrand, Chairman, Mid-Willamette Valley Air Pollution Authority regarding application to the Sanitary Authority for recognition as a Regional Air Pollution Control Program for the counties of Benton, Linn, Marion, Polk and Yamhill. This letter and exhibits have been made a part of the permanent files in this matter.

Mr. Smith said that they respectfully request consideration by the Authority to recognize them as a region. He went on to say that undo delay in this matter, unless payment could be made retroactive to the filing date, would cost them considerable sums of money out of the state matching fund.

The Chairman asked what this would provide.

Mr. Smith said it provides upon acceptance by the Authority that the Mid-Willamette Valley Air Pollution Authority take over the enforcement provisions, with whatever limitations the State may wish to place upon them.

The Chairman said he would like to be sure what the Sanitary Authority's existing standards are, as he felt the Mid-Willamette Valley Air Pollution Authority could be more strict than the Sanitary Authority, but wanted to be assured that they would not be any more lenient.

Mr. Meierjorgen said he concurred in this and would like the staff to forward to the individual members of the Sanitary Authority all of this documentation so that it might be studied.

Mr. Smith said there was no intention to ask the Sanitary Authority to act on it today.

The Chairman then referred the matter to the staff for analysis of the proposed documents and agreement, and requested that the board be furnished copies of the documents.

CCA403

COMMENTS BY CHAIRMAN

The Chairman then said he would like to make a few comments. He said one action that was taken in setting grants for state money should be construed as an indication of the board's intention. He felt many things would be coming out of the existing legislation.

The Chairman thought it advisable for the Sanitary Authority to get together with the State Board of Health at some time in the future to iron out a few things. He said he thought it the intention of the Sanitary Authority to continue working as harmoniously and as close as possible with the State Board of Health. The Chairman went on to say that a substantial amount of additional personnel was authorized and it was his belief the members of the Sanitary Authority should be kept apprised of the recruiting efforts.

He said the Sanitary Authority has had various offers of cooperation from various organizations in any way that they might be of help to the staff. There being no further business, the meeting adjourned at 2:10 p.m. The next meeting will be on call of the Chairman.

Respectfully submitted,

Kenneth H. Spies, Secretary

MINUTES OF THE 118th MEETING  
of the  
Oregon State Sanitary Authority  
September 6, 1967

The 118th meeting of the Oregon State Sanitary Authority was called to order by John D. Mosser, Chairman, at 10:05 a.m., September 6, 1967, in Room 72, State Office Building, Portland, Oregon. The members and staff present were: John D. Mosser, Chairman; Herman P. Meierjürgen, Edward C. Harms, Jr., B.A. McPhillips and Storrs Waterman, Members; Kenneth H. Spies, Secretary; John O. Denman, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; Fred M. Bolton and J.A. Jensen, District Engineers; Dr. Warren C. Westgarth, Laboratory Director; H.W. McKenzie, Associate Sanitary Engineer, Glen D. Carter, Aquatic Biologist; C.A. Ayer, Sanitary Engineer; and R. Bruce Snyder, Meteorologist.

MINUTES:

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the minutes of the July 24, 1967, meeting be approved.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Harms, and carried that the action taken on the following 110 project plans and engineering reports for water pollution control and the 27 project plans for air quality control for the months of May, June, July and August, 1967, be approved:

Water Pollution Control

<u>Date</u>	<u>Project</u>	<u>Location</u>	<u>Action</u>
5/4/67	Tigard	Farmers Ins. Co. Sewer	Prov. app.

#### LOWER WILLAMETTE

Mr. Mosser then stated he would like to take up the situation in the lower Portland Harbor although it was not on the agenda. He asked the secretary if he had a report on the present status of the fish run, the oxygen in the harbor and the steps that are being taken or should be taken in that respect.

The secretary explained that the hot weather that we have been experiencing here in the state of Oregon this summer has had some very serious effects upon water quality. As a result of the warm weather the temperature of the rivers and streams has been considerably higher than normal and because of this higher water temperature it has not been possible to improve materially the oxygen content. The DO for most of the summer in the Willamette River has been about the same as it was last year and occasionally it has been slightly lower in spite of the fact that the flow in the river has been slightly greater than it was a year ago and the pollution loads from the upstream cities and industries have been lower than last year. For example, during the second week in August reports indicated that the oxygen demand of the loads of the 7 pulp mills in the Willamette Basin was some 20,000 lbs. less than for the corresponding week last year. Because of the combination of circumstances, the DO in the lower Portland Harbor has been running about 3 ppm, whereas the standards that were adopted

on July 1 of this year specify a minimum of 5 ppm. A communication from the Fish and Game Commissions last week requested that the Authority try to improve this situation due to the fact that it is the time of the year when the fall run of Chinook salmon should be migrating upstream. Although the run is taking place in the main Columbia as has been proven by daily fish counts made at Bonneville Dam, so far no fish have been observed at the Willamette Falls in the Willamette River.

CC-403

Mr. Carter then passed out to the members a summary of fish run data while the Secretary added that in response to the communication from the Fish and Game Commissions he directed a letter to the Federal Water Pollution Control Administration asking them to support the Sanitary Authority in a request to the Corps of Engineers for an increase in the release of stored waters. As a result, the Army Engineers on September 5 agreed to release stored waters sufficient to maintain a low flow of 7500 cu. ft. per second at Salem. He said this would be an increase of more than 1500 cfs. He also pointed out that about 60% of the flow as measured at Salem has actually come from storage in the reservoirs.

Mr. Carter then explained that the main run of fish in the Columbia River the last of August and first week of September was Chinook Salmon. On September 4 and 5 more than 4,000 per day were counted at Bonneville. Since 1938 the run has peaked on an average about the 7th of September. He emphasized the point that high water quality must be maintained during the September period if we are to attract these fish. He said these fish will be peaking fast and if we are to get any of them started up the Willamette, we must improve the water quality immediately in order to attract them.

It was explained that it would take 7-8 days before the increased flow would get from the reservoirs down to the harbor although apparently there had been some additional releases for power generation over the week end as there already was an increased flow at Salem.

Mr. Kelly Conover of the Fish Commission then stated that from surveys made last year from the Molalla River to the Santiam it appears that the spawning occurred the first week in October and that since it is already the month of September he thought there could be no delay in getting the fish to their spawning grounds.

The Secretary stated that as a result of the shutdown of the pulp mills over the Labor Day week end, the DO at the first station below the falls had increased to over 8 ppm whereas previously it had been about 6 ppm. This increase was believed due to aeration of the water cascading over the falls.

Mr. Mosser then stated that in the river we have situations comparable to those in the forest and that there are times when we have to shut operations down in order to preserve our resources. He said he was not willing to cut off a lot of jobs and shut off production unless the people who are responsible for the affected resource are willing to take the positions that are necessary.

Mr. Conover then said it was the duty of the Fish Commission to see that these fish are taken care of adequately and therefore the Fish Commission would have to take the position of requesting a shutdown of the mills sufficient to improve water quality.

Mr. Harms stated that he thought perhaps 10 days would be a time to consider as that could include two weekends.

After further discussion it was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan and carried that based on present conditions the pulp mills at Oregon City and West Linn be requested to shut down immediately for 10 days with the provision that should in this 10-day period a sudden change in the weather or other factors result in improvement in the stream conditions the mills could be permitted to resume operations.

Mr. Mosser asked the Secretary to notify the mills of this action and to keep the companies advised of the conditions of the river and the members informed.

#### AMERICAN CAN CO.

Mr. Mosser said that there had been numerous requests to postpone a decision on the proposal of the American Can Company to build a pulp mill at Halsey. If it would be of any purpose to delay he would be happy to do so but he didn't feel that the Authority would have any more information in a month or three months than it has today. He stated he had spent the entire time since the hearings going through all the exhibits, the many communications that had been given to him and discussing the matter with the staff. He then read a prepared statement which is attached to and made a part of these minutes.

The Chairman then called on Mr. Harms who said that he agreed with much of what Mr. Mosser had said. He then read his prepared statement and as a final comment said that he was going to vote "No" on the American Can Company proposal. His statement likewise is attached to and made a part of these minutes.

Mr. McPhillips said that he did not have a prepared statement but had listened with great interest to the Chairman's and Mr. Harms' statements. He said he also had studied all of the testimony that was presented in written form and listened to the many witnesses who took the time to come and appear before the Authority at the Eugene and Corvallis hearings. He reviewed briefly the situation as he had seen it for the more than 23 years that he has served on the Sanitary Authority. He said he felt a good deal like Mr. Harms that we have almost reached the point of no return, giving full regard to the integrity of the American Can Company, the fact that we would have a new industry if a permit is granted which will boost our economy and will utilize our raw products but we must also think of the people who live here. He said he has spent his life in this valley and has seen the quality of the air and water depreciate year by year. He said because of the objectionable pollution caused by industry he was going to vote "No" on the proposal.

Mr. Meierjurgan said that he had no prepared statement either but that he spent a restless weekend studying the many pages of material and testimony that had been presented at the Eugene and Corvallis hearings. He said that he had given particularly close attention to the joint statement presented by the Fish and Game Commissions and that if he felt the proposed mill would in any way affect detrimentally the fishery resources of the Willamette he would be opposed to its construction. He said he was convinced that adequate controls could and would be provided to protect the water quality in the Willamette River. He expressed concern, however, about possible increases in nutrients. He also indicated that in his opinion industry should undertake aquatic research and that existing industry should clean up its pollution. After considering all of the letters and material presented he said that he was going to vote "For" the mill.

Mr. Waterman said he too had thoroughly examined and studied the staff report, the proposal of the American Can Company and all of the testimony that had been supplied by the people in the area involved. He stated that he had the utmost confidence in the State Sanitary Authority staff and he thought that they had done a fine job in putting together their report and that he concurred with their recommendations. He said he readily understood the problems involved with controlling air pollution as opposed

CCA403

to the problems of controlling water pollution, and that air pollution was much more difficult. He felt that American Can Company is a responsible organization and will be a good industrial neighbor in the community. He stated that he had an obligation to take a very personal interest in the installation and operation and the results of the control equipment. He said that he was "For" the approval of the plans.

The Chairman then stated the consensus seems to be 3 to 2 in favor of the installation. In deference to the members who stated they were opposed he asked if they had any suggestions for additional controls or steps to be taken other than those outlined in his remarks.

Mr. Harms said the difficulty in this position is that there are no additional controls beyond those that the Chairman had suggested, and that is one of the reasons why he had reached his conclusion.

Mr. McPhillips said he felt the same way as Mr. Harms. He pointed out that the controls we have thus far have not been effective. He said he hoped for the good of the country that more adequate controls are developed.

The Chairman said he felt very strongly that we should get on with the business of the establishment of air quality standards and not wait till the Federal Government tells us we have to do it. He pointed out it is a more difficult job than water quality standards because of the variety of emissions, the lack of information as to what goes into the air, how it mixes, etc.

It was MOVED by Mr. Mosser, seconded by Mr. Waterman and carried that the staff be instructed to start what undoubtedly would be a long and difficult task of developing air quality standards with perhaps priority given to problems of the kraft mills and considering the problems of the metal industries and all other sources of pollution.

In addition it was MOVED by Mr. Mosser, seconded by Mr. Waterman and carried that the staff be instructed to change its attitude to not concern itself with economic feasibility but instead to confine its study to technological feasibility, to bring to the Authority members the maximum recommendations, to let industry bring to the Authority members its problems and to let the members be the judge of where the balance lies.

It was MOVED by Mr. Mosser, seconded by Mr. Waterman, and carried that as indicated in the staff report and with the qualifications in Mr. Mosser's statement and the research remarks of Mr. Meierjurgan, the Authority approve the preliminary water quality control plans and the proposed provisions of the water quality permit as outlined in the staff report for the American Can Company. Mr. Harms and Mr. McPhillips voted "No". Mr. Harms stated that he wanted to make clear as he has stated before that he had no objection to the company's water quality control plans and that he thinks they are excellent.

It was MOVED by Mr. Mosser, seconded by Mr. Waterman, and carried that technically I don't think we have any power to approve or disapprove the air quality plans, but I think we should indicate that in our view the standards we propose to adopt and our basic policy of requiring all possible controls on the sulfide and mercaptan emissions, would involve the points raised in the staff report and in my remarks.

Meeting adjourned at 11:50 a.m.

STATEMENT BY JOHN D. MOSSER  
Chairman, Oregon State Sanitary Authority  
September 6, 1967

A chairman may sit back and wait for others to make motions and then vote only in the event it is necessary to break a tie. There may be times when I shall exercise those options; but this is not one.

As a new member of the Authority acting on a major application under revised laws not yet generally understood, it seems appropriate that I should give a full expression of my views. Although speaking with so little experience will undoubtedly expose my ignorance, it has seemed to me that this statement would better serve the public who will be regulated or affected by this and future decisions, the staff working for the Authority, and the Governor who appointed me, than a simple "yes" or "no" or even silence in these circumstances.

Before discussing the water and air quality details of the proposal, I would like to interject a comment on our procedure in this case.

#### THE HEARINGS

The Authority felt this proposal of sufficient importance to warrant advance publicity of it and the staff analysis of it as well as the holding of hearings to secure public comment, although the law apparently requires none of these procedures in advance of action.

CCA403

The great interest in the hearings is most encouraging, for public support is essential if we are to control and reduce pollution.

Even more important was the quality of much of the testimony. I would particularly commend the Citizens for a Clean Environment, whose analysis of the proposal is thorough, professional and constructive. They reinforce my already stated belief that by utilizing informed and willing volunteers we may greatly expand the progress that has been possible with the efforts of only a small full-time staff.

We shall continue to try to provide a maximum of public information and to work cooperatively with all who are willing to devote time and talent to the goal of clean air and water. Hopefully, better planning in the future will eliminate the inconvenience suffered by many members of the public who had to stand for hours through the hearings in Eugene. I apologize to them for those conditions.

#### WATER POLLUTION CONTROL

The water pollution laws of Oregon were greatly strengthened by the last Legislature. Significant discharge of wastes into any state waters without a permit or in violation of its conditions is prohibited after January 1, 1968. Any pollution harmful to beneficial uses is prohibited.

Not only are the requirements stringent but enforcement means are expanded. Plans for construction of pollution treatment facilities must be approved. Conditions may be attached to the required waste discharge permits. Injunction or abatement suits brought by the Authority are to receive priority in the courts. The State may sue for damage to fish and wildlife and their habitat as well as seeking criminal penalties.

The law does not require, however, that there be no waste discharges or that water taken from a river be returned unchanged. The Willamette Greenway Association and several individuals testified or wrote that such standards should be adopted by the Sanitary Authority. I do not believe the law authorizes us to do so. And if we could, the only means I would know for enforcing them would be to require the people of Oregon to leave the State.

The Sanitary Authority has adopted general water quality standards for all of the waters of the State including the Willamette River. These have won praise from Federal authorities as among the best in the nation.

They require that this portion of the river be kept pure enough not only for passage but also spawning and rearing of salmon, for swimming and all forms of aquatic recreation, for irrigation and other agricultural use, and, with minimal treatment, for domestic water supply and industrial uses requiring maximum purity.

The pollution limitations designed to preserve these high standards are based on extensive knowledge of river flows, water characteristics, and fish and plant life in the river. In addition, existing sources of waste discharge are known, so that total cumulative effects can be judged. While we have more to learn, we know enough to impose and enforce standards with expectation of success in the high goals we have set.

It is the conclusion of the Sanitary Authority staff that the treatment system proposed for this plant will preserve those high standards of quality.

There was no testimony to the contrary. Nevertheless, several areas of concern and suggestions for safeguards were expressed and deserve comment.

A joint statement by the Fish and Game Commissions, while not enthusiastic about any additional waste discharge in the river, found the treatment system adequate and the plant unobjectionable from a water quality standpoint provided the Authority pursues the clean-up of other more serious sources of pollution so that a net downstream reduction in total pollution of the river occurs. The Authority has already adopted an enforcement plan which will achieve this. I intend to see that it is vigorously pursued, even to the extent of closing some existing industry during extended low flow periods if that proves necessary. I should make clear my firm belief that it would be folly for Oregon to deny expanding or new, relatively clean, industries for the sake of preserving existing dirty ones. We cannot afford vested interest in pollution.

The Fish and Game Commissions also requested screening of the plant water intake. This is a standard requirement on all intakes and will apply at this point. They further expressed the desire for continuation of research programs instituted by American Can Company to monitor effects of the plant on fish life and habitat. I believe this should be a condition of the waste discharge permit.

CCA403

The Upper Willamette Valley Anti-Pollution League expressed concern for insect life. Prior to installation of secondary treatment at the Springfield mill, the effluent was damaging to both insect and other aquatic life. Recent inspections show abundant insect life as well as return of bottom snails and fish. Secondary treatment proposed by American Can is even more extensive than that proved successful at Springfield.

The Citizens for Clean Environment group made a number of suggestions. Several of these, although not covered by the original proposal of American Can Company, had been incorporated in the final proposal. Thus emergency storage to contain and treat all accidental spills has been provided and the entire secondary treatment basin has been divided into two parallel chambers either of which could operate independently in the event it became necessary to shut down one. With the division of the secondary treatment lagoon additional aerator capacity was also proposed. Secondary settling facilities, although only suggested by this group for future consideration, have been provided. The division of the lagoon also results in manifolding of the inlet piping to come up under two of the initial aerators, one in each lagoon. Doubling of this to provide manifold inlets to each lagoon chamber would more than meet the C<sub>2</sub>E suggestion. I believe we should require it.

The recommendation for test wells to monitor ground water quality in the vicinity of the lagoon is also entirely reasonable and should be required.

The suggestion of future utilization of treated effluent for irrigation should be investigated. However, preliminary investigation indicates that the soil in the immediate area of the proposed mill is impervious clay not suitable for irrigation. Possible reduction of river flow and increased temperature of irrigation returns to the river must also be considered and may be adverse to extensive diversion to irrigation here. Summer discharge through gravel bars also deserves experiment.

Only two of the group's water quality recommendations appear unreasonable and in fact not supported by their own task force findings. Thus, the task force gave general praise and approval to the method of water treatment. This is based upon natural processes and the effect of sunlight, oxygen, plant and animal action in reducing the organic matter in the settling basin. It works best at high temperature and sunshine

when the demand for high treatment is also greatest because of low river flows. In the opinion of the Sanitary Authority staff a requirement as suggested by the C2E Board of Directors of 95% efficiency in this process is simply not attainable on a continuous basis even under favorable conditions and certainly not on a year-round basis. The staff proposed requirement of minimum 90% efficiency during low flow periods and maximum efficiency at all times seems to be entirely proper and adequate. To reach a 95% treatment efficiency an entirely different process of treatment would have to be devised.

There similarly seems to be no justification in the background material for the suggestion of continuous biological assay of the lagoon effluent. Periodic sampling and tests, together with selective research projects as proposed by the Fish and Game Commissions, should be adequate.

One woman testified that this portion of the river was sometimes closed to swimming and that no further pollution should be allowed while that condition existed. To the extent that the area has been closed to swimming it was because until this year Eugene and Corvallis did not provide secondary treatment of their municipal sewage, the Albany plant has been badly overloaded and Monroe has been dumping raw sewage into the river. Happily, these conditions have already been largely cured with the new Corvallis and Eugene plants. Construction has been authorized and will soon be completed at Monroe and Albany. The proposed mill discharges will not contain the bacteria that has led to recreational closures.

In summary, the water pollution control facilities proposed by American Can Company seem not merely adequate but outstandingly good to me.

There is only one further qualification I would add to those in the staff recommendations and the comments I have already made. What is outstandingly good today may become inadequate in the future under increased pressures from growing use. I would limit the waste discharge permit at the indicated levels to five years, which in my opinion is the maximum period which we should allow in any permit at this time.

#### AIR POLLUTION CONTROL

The picture is far different when we turn from water to air. The laws, our standards, knowledge on which to base additional standards and available technology of control all leave something to be desired.

CCA403

The Authority has established standards only for smoke emission, particulate fallout and suspension and lime dust. These do not reach the most objectionable feature of kraft pulp mills -- the sulphide gas emissions-- at all.

The Upper Willamette Valley Anti-Pollution League urges that we should not approve this plant until we have standards for control of hydrogen sulphide, mercaptan and other emissions. Its spokesmen further contend that before we set such standards we must carefully gather evidence on each of the fourteen points mentioned in ORS 449.785(1).

Thus, they emphasize the inadequacy of the meteorological data available. Again, they point out that there has been no continuous monitoring of kraft recovery furnace stack emissions to furnish reliable data on the exact problem to be dealt with. Further, they note the lack of detailed economic studies of the probable effect of the proposed project.

With all of their observations on our lack of desirable data, I concur.

Weather data is largely confined to a few major population centers. Although the number of stations and breadth of data collected has increased in the past two years, it offers no precise formula for predicting the exact impact of this mill on even the large communities, much less the smaller ones that are equally deserving of consideration.

Since, as this summer amply demonstrates, weather is notoriously variable it may take years to accumulate data enough to develop the sophisticated formulas that would represent the precise predictions this group claims we must make.

There is no continuous monitoring of stack emissions simply because there is no equipment capable of doing it. Efforts to develop it are being carried out. Some experimental success has been had at the Crown Zellerbach Mill in Camas, but only under the expert personal control of its developers. The time when it can be installed in all mills may not be far off, but it is not here.

Most of the economic testimony was exceedingly superficial. The plant will add to the tax rolls. Obviously, however, it and its employees will also require services that cost tax dollars. It will affect other property values, both up and down. It will provide jobs, but may also eliminate some. The Sanitary Authority has neither a staff economist nor money to hire a consultant to furnish any refined weighing of these pluses and minuses.

All this does not mean that we know nothing or that we cannot act. At least I hope not or the result would be quite the opposite of that contended by the Eugene group.

The reason is quite simple. The air pollution statute is relatively weak. No permit is required to emit wastes into the air as it is to discharge them into the water. Several major sources of pollution are entirely exempt from regulation, a fact which must be considered in regulating others. The Authority can require plans for "any air cleaning device" to be submitted to it, but no approval is required. No special enforcement procedures or priority in the courts is given us.

Under the statute, the Eugene group is putting the cart before the horse. We must adopt standards, not before we can approve, but before we can set the stage for any effective control.

I do not read the statutes to require that we await the ultimate in information. ORS 449.765 expressly states that "The program for control of air pollution . . . shall be undertaken in a progressive manner."

Let us look at the fundamentals of information we have rather than the mass of detail we lack:

1. The people of Oregon and the nation want and use ever increasing quantities of paper.
2. The kraft process produces the strongest paper. Because of chemical recovery it produces it more economically and with less total pollution than other chemical processes.
3. The forest products industry is economically dependent on maximum utilization of wood. The sale of chips and sawdust is the margin of profit in many wood processing plants.
4. Forests are Oregon's chief raw material. The recent Water Quality Control and Management Study of the Willamette River Basin by the federal government forecasts expansion of the pulp and paper industry in the whole Willamette basin and particularly the middle and upper basins, each of which is expected to nearly double in available raw material before 2010.
5. There is no available technology to completely eliminate kraft mill air pollution. It is possible, as the new mill at Wauna demonstrates, to do a substantially better job of reducing this pollution than has been done in the older plants now in the Willamette Valley.

CCA403

6. The air pollution these mills cause is of two types:
  - a) Particulates (largely water) which affect visibility.
  - b) Sulphide gases, which stink.
7. The Willamette air shed presents both geographical and frequent temperature inversion barriers to pollutant dispersal that render any increase in air pollution in it a cause for concern.

These to me are the basic facts. Reasonable men may draw different conclusions from them; and in fact the members of this Authority do. My conclusions are these:

First, that the development of an integrated forest products industry with maximum utilization of this resource is too important to Oregon to adopt any blanket prohibition against expansion of the pulp industry in the Willamette Valley. If the people of Oregon wish to rule out this basic industry, it should be done by the Legislature or a state zoning authority under directive from the elected representatives of the people. Significantly, no county or city has to my knowledge exercised existing zoning power in such fashion.

Second, if we are not to rule them out, we must control kraft mills better. I think our basic policy should be that sulphide and mercaptan odors are so objectionable that both new and old mills be required to install every technologically feasible control as rapidly as possible after it becomes available. I would instruct our staff to cease thinking about costs and recommend to us every control they think feasible. Let the industry worry about proving to us that it is not economically feasible. In view of the Legislature's new policy of underwriting a substantial portion of such costs with tax credits, that burden of proof will be difficult to meet.

Third, we should instruct our staff to proceed at once with the studies necessary to establish ambient air standards limiting the concentrations of kraft odors in any location. I would hope that that standard can be held to threshold, or lowest detectable, levels. It is not enough to control each individual source if an undue concentration of sources reduces the best of controls to high pollution. This is one way to encourage the industry to initiate new technology, since without progress expansion at any site will be limited. It also will provide the foundation for control in the event of unusual weather or equipment function problems.

To the American Can Company, I would say everything in your record and your dealings with the Authority indicates you are an outstanding industrial citizen. If you can live with these proposals, I say welcome to you and this facility, though the welcome will always have reservations to Oregonians until we jointly eliminate this odor problem. Specifically the above proposals, in addition to the requirements suggested by the staff would mean:

1. Control of the oxidation tower by any feasible means.
2. Increase in precipitator efficiency from 99% to 99.5% unless you can persuade us it is not economically feasible.
3. Continuous monitoring of oxygen and combustion in the recovery furnace to prevent overloading.
4. Installation of further continuous monitoring devices and additional controls as fast as technology permits.

To the people and the Legislature, I would add that we may not always be fortunate enough to be dealing with a company as responsible as this. In this application review we have depended on its stated willingness to design not only for present limited air quality standards, but also others likely to be adopted. Clarification of the air pollution laws, provision for air waste discharge permits and stronger enforcement procedures will be needed to control air pollution just as much as water pollution.

STATEMENT BY EDWARD C. HARMS, JR.

Member, Oregon State Sanitary Authority

September 6, 1967

In arriving at my conclusion as to how I should cast my vote on the issue of approval of plans submitted by American Can Company for a proposed kraft pulp mill in the Halsey area, I have carefully examined all evidence available to us, including thoughtful consideration of almost thirteen hours of statements by the public, as I am sure other members of this Authority have also done.

The issue requires a balancing, a delicate balancing, of what each of us perceives to be the public interest.

ORS 449.765 provides: (Re: Air Pollution)

CCA403

"In the interest of the public health and welfare of the people, it is declared to be the public policy of the State of Oregon to maintain such a reasonable degree of purity of the air resources of the State to the end that the least possible injury should be done to human, plant or animal life or to property and to maintain public enjoyment of the State's natural resources and consistent with the economic and industrial well being of the State..."  
(underlines mine)

I have attempted to make a judgment consistent with that declared public policy.

I am not swayed by obtuse legal arguments which relate to the establishment of standards as contained in ORS 449.785 which we heard at such great length in Eugene. We are not concerned with the establishment of standards but rather with approval or disapproval of plans which may or may not comply with air purity standards which may in the future be adopted for this area. Nonetheless, I am convinced that the Sanitary Authority has given consideration to and taken into account the available facts concerning all of those items listed in that statute relating to standards in considering the matter now before it.

Certainly it is not required that the staff make formal findings and report on those matters apparent to all those who have eyes to see.

For example, it does not require an economist to determine that a new manufacturing industry employing 450 persons and requiring a capital investment of \$40 million is of some economic benefit to the area and the State.

I would like to compliment the people of the area on their interest in this matter of great public concern, as evidenced by the attendance at the Eugene and Corvallis public hearings. Obviously a great deal of thoughtful consideration had been given to many of the presentations made to us and I think particular recognition should be made to the Citizens for Clean Environment group in Corvallis for the comprehensive study which they have made of the problem. Since all pollution is in one way or another caused by people, it is only by such public interest that our problems in the area of water and air pollution may be solved in the future.

I must, however, also comment that I noted at the hearing what I felt was a distressing tendency on the part of many of our citizens to attribute to all those of differing view, ignorance or bad faith, or both; an assumption that no one was interested in the public good except themselves

and those agreeing with them without reservation; and implying that the applicant and the Sanitary Authority staff were guilty of incompetence at the least.

I reject all such implications and assumptions categorically, and my own opinion shortly to be expressed is not to be construed as even the slightest agreement with such non-thinking.

I believe that the American Can Company's plans for both air and water pollution control are the best, or very nearly so, that can be devised within the practical and economic limits of present technology.

I am satisfied with their plans for water pollution control and would vote for approval if that was all that was involved. I believe the staff report is complete and contains all information necessary to reaching a decision. My own conclusion is based upon it, not upon a rejection of it.

The staff points out, in the field of air pollution, numerous difficulties, as for example on page 10:

"Odorous gases will still escape. Kraft type odors will be detected adjacent to and at varying distances from the plant under varying meteorological conditions ..."

The staff further states on page 11:

"The effects of such phenomena as combining, oxidation, absorption, wash-out, topographic channeling or synergistic effects which might effect the concentration of materials once emitted to the atmosphere are not possible to predict."

On page 14 we read that "visible emissions will be present and these emissions can be expected to combine with the presently existing sources and somewhat reduce visibility in the valley."

In reference to odors, the staff stated that "the perimeters and distance that odors will be perceived and their frequency will depend upon wind direction and other meteorological factors and can only be estimated." It is important to emphasize that the staff did not necessarily recommend approval of American Can Company's plans. The staff merely recited facts and stated if the plans are approved, certain conditions should be imposed. These facts are known to us:

- (1) From observation on Tuesday, August 29, it is apparent that a considerable air pollution problem already exists in the valley, particularly in the summer months.

CCA403

- (2) If this plant is allowed, there will be odor of varying intensity and distances from the plant. (The extent of both the intensity and distances may be debated--the important fact is that it will exist.)
- (3) Visibility will be reduced even further in the valley.

Further, we have the unknown factor as to what the effect may be when the known additional pollutants from this plant, however minimal, are combined with existing air pollution sources. Certainly, it is reasonable to expect that the condition and quality of air in the upper valley will further deteriorate.

Considering these matters, I cannot in good conscience, as a resident of the area, beneficiary of its advantages, and sufferer of its disadvantages vote to approve another significant air pollution source in this area.

The fact is that we cannot keep adding more wastes into the air in an already pollution saturated air-shed, highly prone to inversion conditions. My witness is the past summer in particular and the noticeable progressive deterioration of air quality in the past several years, especially the last two or three.

It is said that "Man lives in delicate equilibrium with the biosphere on the precious earth-crust, using and re-using the waters, drawing breath from the shallow sea of air. While these can cleanse themselves, they can only do so to a finite point. That point is being reached and passed in many places in the United States." (A Strategy for a Liveable Environment, A Report to the Secretary of Health, Education and Welfare by the Task Force on Environmental Health and Related Problems, June, 1967). I believe that we have reached that point and are on the brink of passing it in our Willamette Valley.

We have not reached that point where the air is actually dangerous to health; however, we are treading on the thin edge, in my opinion. An individually acceptable amount of water pollution, added to a tolerable amount of air pollution, added to a bearable amount of noise and congestion can produce a totally unacceptable health environment. Health experts have repeatedly pointed out that grave, delayed physical manifestations can result from repeated exposure to concentrations of environmental pollutants so small

that they do not make one ill enough to send him to the doctor. Knowing that we already face grave problems, I am unwilling to take that risk in the Willamette Valley until some of the existing pollution is eliminated or until technology advances to reduce the risk of kraft pulp mills as a pollution source.

Economics deter us from eliminating many existing sources, industrial and private, and it would not make sense to me to shut down existing industries to make way for new ones or to find that we might have to shut them all down because we have placed that final disastrous overload on our natural environment. It is better to face the issue now to prevent the condition from becoming worse.

I recognize, as stated at the outset, that the matter requires a delicate balancing of the public interests; of economic advancement versus our greatest and most essential natural resource, the very air we breathe. Reasonable men may differ as to the conclusion. For myself, I must decide in favor of attempting to preserve what is left of our environment in a safe, if not pure, (for that is long gone) condition. If, in the next few years, technology advances to where the air pollution can be further reduced from kraft mills, then this technology should be applied to existing mills and required of them by this Authority, or, when field burning can economically be eliminated without undue hardship on agriculture; or, if new developments allow reductions by auto and other private sources, then and only then should new pulp mills be allowed in the valley. I think under present conditions we cannot impose this additional burden on the atmosphere, and on the people and industries presently dependent upon it.

This does not mean no new industry for the valley, so far as I am concerned. It does mean that I do not believe that the air in the valley can take this industry at this time.

I am therefore compelled to vote in opposition to approval of the proposed plans.

Respectfully submitted,

Secretary

CCA403

MINUTES OF THE 119th MEETING  
of the  
Oregon State Sanitary Authority  
October 5, 1967

The 119th meeting of the Oregon State Sanitary Authority was opened by Chairman John Mosser, at 10:00 a.m. in Room 36, State Office Building, Portland, Oregon. All members were present as follows: John Mosser, Chairman; B.A. McPhillips, Edward C. Harms, Jr., Herman P. Meierjurgan and Storrs Waterman, Members. Staff members present included Kenneth H. Spies, Secretary; Ely J. Weathersbee, Deputy State Sanitary Engineer; Harold Patterson and Harold Milliken, Assistant Chief Sanitary Engineers; Warren C. Westgarth, Director of Laboratories; Joseph A. Jensen, Fred Bolton, Leo Baton, and C.K. Ashbaker, District Engineers; Glen Carter and John Sainsbury, Aquatic Biologists; R.B. Snyder, Meteorologist; Harold Sawyer and Patrick Curran, Senior Sanitary Engineers; Harold McKenzie, Lloyd Cox, Dale Nunamaker, Ron Householder, Fredric Skirvin, and C.A. Ayer, Associate Sanitary Engineers; Don McHarness, Roger Sherwood and Richard Reiter, Assistant Engineers; James R. Sheetz, Assistant District Engineer; and Leonard Pearlman, Legal Advisor.

PROJECT PLANS

It was MOVED by Mr. McPhillips, seconded by Mr. Waterman, and carried that the actions taken by the staff on the following 16 project plans for water pollution control and 2 project plans for air quality control during the month of September 1967, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
9/1/67	Lebanon	Hansard Avenue sewer	Prov. app.
9/11/67	McMinnville	Wallace Road sewer	Prov. app.
9/11/67	Uplands S.D.	Emergency bypass pump station #3	Prov. app.
9/14/67	Canby	N. Grants sewer	Prov. app.
9/14/67	Gladstone	Donna-Lynn & Birchwood Terrace sewers	Prov. app.
9/15/67	Vernonia	East Avenue & D Street sewer	Prov. app.
9/20/67	Gresham	S.E. First Street sewer	Prov. app.
9/20/67	Springfield	Projects S-71-67, S-25-G-67	Prov. app.
9/20/67	Beaverton	Madeleine Apartments sewer	Prov. app.
9/25/67	Springfield	Laksoner Park Project S.P.-23	Prov. app.
9/25/67	Klamath Falls	1st Addn. Kelene Gardens sewer	Prov. app.
9/27/67	McMinnville	Windwood Subd. 24th Street sewer	Prov. app.
9/27/67	Forest Grove	Spring Garden Way Sewer	Prov. app.
9/27/67	Springfield	Orchid Lane Cascade Heights sewer	Prov. app.
9/27/67	Springfield	Island Park Professional Center	Prov. app.
9/27/67	Gresham	Pump station - S.E. First Street	Prov. app.

Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
9/12/67	Albany	Wah Chang Corp. Scrubber on Hafnium Reduction and Pure Chlorination	Cond. App.
9/20/67	Multnomah Co.	A-1 Sandblasting Dust Collection System	Cond. App.

WIGWAM BURNER REGULATIONS

Mr. H.W. McKenzie gave the staff report on the wigwam waste burner regulations. He pointed out that the hearing on the proposed revisions to the existing regulations had been held by Mr. Marion Lamb on August 11, 1967.

The Chairman asked if the adoption of these revised regulations at the same time repealed all of the detailed requirements that are in the present regulations on wigwam waste burners. Mr. McKenzie said that was correct but that they retained the paragraph which requires approval by the Sanitary Authority of plans and specifications for construction of new wigwam burners.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the wigwam waste burner regulations be revised and adopted as follows: 24-005 DEFINITIONS. (1) "Approved" means approved in writing by the Sanitary Authority staff.

(2) "Wigwam Waste Burner" means a burner which consists of a single combustion chamber, has the general features of a truncated cone, and is used for incineration of wastes.

(3) "Continuous-flow conveying methods" means methods which transport materials at uniform rates of flow, or at the rates generated by the production process.

24-010 WIGWAM WASTE BURNERS - PURPOSE. Section 24-010 through Section 24-020 are adopted for the purpose of controlling, preventing or reducing air pollution or public nuisance caused by smoke, gases and particulate matter discharged into the air from wigwam waste burners.

24-015 WIGWAM WASTE BURNER CONSTRUCTION PROHIBITED. Construction of wigwam waste burners is hereby prohibited after July 1, 1965, unless plans and specifications have been submitted to and approved by the Sanitary Authority prior to construction.

CCA403

24-020 WIGWAM WASTE BURNER USE RESTRICTED. No person shall use a wigwam waste burner for the incineration of other than production process wood wastes. Such wood wastes shall be transported to the burner by continuous-flow conveying methods.

APPLICATION OF MID-WILLAMETTE VALLEY AIR POLLUTION AUTHORITY

Mr. Patterson read the staff memorandum dated September 25, 1967, pertaining to the application of the Mid-Willamette Valley Air Pollution Authority for authorization to operate as a Regional Air Quality Control Authority. A copy of said memorandum has been made a part of the Authority's permanent files.

The Chairman asked if the salaries shown in the budget included in the application correspond to the salaries in state service for comparable positions. He said he did not want to get into a salary competition in this area.

Mr. Patterson responded that he would check with Howard G. Smith but as he recalled it the salaries were comparable to the state salary ranges.

Mr. McPhillips inquired if the necessary equipment was included in the budget to which Mr. Patterson stated that part of it was.

Mr. Patterson then stated that on page 3, item 2 of the staff memorandum the words "mobile sources" was not intended to include such portable equipment as asphalt plants, incinerators, and similar facilities as they are to be under the jurisdiction of the regional authority.

The Chairman then referred to Section 4 of SB 36 (Chapter 425, Oregon Laws 1967) and asked Mr. Pearlman if he thought the Sanitary Authority could assign only certain functions under the statutes mentioned in that section or would it have to assign all the functions covered by them.

Mr. Pearlman stated that it seemed to him the context of Chapter 425 indicates that the regional authority would have all the powers under those sections once they are vested with the authority to act.

The Chairman then asked if jurisdiction over motor vehicles were reserved by the Sanitary Authority if that meant that all jurisdiction would be reserved or could the Authority merely reserve jurisdiction to set standards for control of emissions from motor vehicles.

Mr. Pearlman stated that the Sanitary Authority may assume and retain control over any class of air contamination source if it finds such control beyond the reasonable capability of the regional authorities.

The Chairman asked why aluminum mills were reserved and something like Wah Chang was not. He asked what the basis was for leaving out particular sources and including certain others.

Mr. Patterson stated that this had been discussed with representatives of the Mid-Willamette Air Pollution Authority and they felt that they had the staff and capability to monitor and to effectively control the Wah Chang operations. He stated further that Wah Chang has submitted a proposal for a comprehensive survey of emissions and is furnishing data to the Sanitary Authority, that they have submitted plans and specifications for additional scrubbers on some of their equipment, and that the Authority staff had made an individual decision on this particular matter to turn it over to Mid-Willamette Valley Air Pollution Authority because it was thought they would be able to provide the surveillance necessary to monitor it and see that the program was effectively carried out.

The Chairman then asked why field burning was included in the reservations.

Mr. Patterson replied that it was proposed that field burning control be reserved by the Sanitary Authority because it affects more than one region and information has to be received from the U.S. Weather Bureau and passed on to the State Fire Marshal who in turn submits the information to the various fire districts, counties and agencies.

It was MOVED by Mr. Mosser, seconded by Mr. Waterman, and carried that the Authority accept the recommendation of the staff that the Mid-Willamette Valley Air Pollution Authority application be approved effective October 6, 1967, and the staff be directed to advise the Mid-Willamette Valley Air Pollution Authority to function pursuant to the provisions of Chapter 425, Oregon Laws, 1967, and items 2 and 5 of the staff memorandum dated September 25, 1967.

The Chairman then stated that in regard to regulations on motor vehicles, he did not feel it should be up to the Sanitary Authority to enforce them. He thought that responsibility should belong to the local Authority.

Howard Smith, Director of Mid-Willamette Valley Air Pollution Authority, then introduced the following members of his board who were present at the meeting: Mr. H.B. Hildebrand, Chairman from Polk County; Mr. Melvin S. Hawkins from Benton County; Mr. Floyd D. Jenks from Linn County; Mr. Harry Carson, Jr. from Marion County; Mr. M. Majors from Yamhill County; and Councilman John W. Buck from Corvallis. Councilman LaVerne Hemmer, the member representing Salem, was not at the meeting.

CCA403

The Chairman welcomed them to the meeting. He then asked if there were any applications from Lane County and the Portland metropolitan area.

Mr. Patterson stated that no formal applications had been received, but that he knew that Portland Regional Air Pollution Authority has been working toward this and hoped to submit an application before the deadline of January 1, 1968.

REVIEW OF PROPOSED APPLICATION FORM FOR TAX BENEFITS AND PRELIMINARY REPORT  
ON WASTE DISCHARGE PERMIT PROGRAM

Mr. Harold L. Sawyer presented a memorandum report dated October 5, 1967 and which has been made a part of the permanent files in this matter.

The Chairman said that there was some doubt in his mind as to whether land is eligible for tax exemption, as it was his opinion that land would not enter into the expenditure of funds for a facility.

The Chairman said another question he had in mind is that the Tax Commission does not get a formal notice of what is going on until they get a certificate of exemption.

Mr. Sawyer stated that in reviewing the tax procedures with the tax people they did not indicate any desire to be notified.

Mr. Tom Donaca from Associated Oregon Industries raised the question in part 2, page 2, C-4 of the application, which states "A report which gives an itemized breakdown of the actual costs of the facility and bears the certification of an independent public accountant or certified public accountant that the costs therein are true and correct representations, etc.", as to whether or not it had to be an independent certified public accountant and is there statutory authority for this requirement. Secondly, Mr. Donaca questioned that startup costs were not considered to be actual costs. He thought in some cases it might be an actual cost and in others it might not be.

The Chairman said that he thought in many cases the cost of operation of these facilities would exceed the cost of installation and that the Legislature had not given any credit for cost of operation but it had for installation. He thought this was a fair statement on the part of the staff, but that it would not stop anyone from contending that this isn't an operating or startup cost in that sense, but that it is part of installation of the equipment.

The Chairman then asked if the Tax Commission had authority as the statute is drawn to audit the certification of costs.

Mr. Frank Butler from the State Tax Commission was present and said that the Commission had not gone into it in any legal study, but that it was their understanding the bill did not permit the Commission to go behind the Authority's certification of costs.

The Chairman stated that he thought the Tax Commission's audit staff should have a chance to comment prior to the issuance of the certificate, since they would not have a chance to go behind it once it is issued, and that it was his opinion the Commission is the logical one to do any checking of this type.

With regard to the other question by Mr. Donaca, the Chairman said that at this time he thought it best to leave it an independent certified public accountant or public accountant, and if satisfactory relationships with the Tax Commission could be developed, this may be dropped as time goes on.

It was MOVED by Mr. Meierjürgen, seconded by Mr. Harms, and carried that approval of the printing of the application forms be given, subject to the adjustments in procedures and to investigate whether or not land is eligible for tax credit. Copies of the forms as approved are attached to and made a part of these minutes.

Mr. Sawyer then gave a brief summary of the waste discharge permit program, said summary having been made a part of the permanent files in this matter. In this summary he said that no "temporary" permit should be issued. In cases where construction or installation of treatment or control facilities is required in order to meet discharge standards, a reasonable schedule for completion of work should be incorporated into the permit.

The Chairman said some permits would be temporary since all applications cannot possibly be processed immediately. He said he thought it would perhaps be better to take a preliminary look at all the applications and set those aside for immediate review which might have some doubt about them. The staff would not have to then send out a revocation later.

Mr. Sawyer said some of the initial applications would be staggered, some being for one year and some for two years, and that the staff could go ahead and issue permits as rapidly as possible with no particular problem. However, the ones that the staff would have to request a schedule on might take a bit longer.

The Chairman said he thought it would be better to send everybody a permit with a definite termination date on it.

CCA403

Mr. Sawyer stated that when the Sanitary Authority fails to act in 60 days, the permit is temporary until such time as the Authority does act.

After further discussion, it was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the staff be authorized to prepare final application forms and make these available to the applicants by October 25, 1967, and that some permit be issued to all sources by January 1, 1968, if at all possible.

#### WAH CHANG - PROGRESS REPORT

Mr. Lloyd O. Cox presented a progress report on this matter, a copy of which has been made a part of the Authority's permanent files.

Mr. Cox commented that in the past the staff has worked closely with Mr. Nielsen and his technical staff from Wah Chang, but due to the fact that management is not backing their technical people, there is nothing they can do.

The Chairman asked how soon a show cause hearing could be held.

Mr. Pearlman said 20 days from the date of issue of the notice, and that it could be held before a meeting of the Authority or before a hearings officer.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan and carried that a show cause order be issued, making it returnable as rapidly as possible at a hearing before the Authority.

#### MINIMUM REQUIREMENTS FOR PAVING PLANTS

Mr. Patterson gave a staff report on asphalt paving plants, a copy of which has been made a permanent part of the Authority's permanent files.

Mr. C.A. Ayer than explained the problems caused by operation of these plants.

After considerable discussion, it was MOVED by Mr. Mosser, seconded by Mr. Harms and carried that Mr. Spies be authorized and directed first to notify industry that the Authority contemplates adopting prior to the start of the construction season next year, certain requirements pertaining to their operations, second to ask them to consult on design and the drafting of such regulations, and third as soon as the regulations have been drafted, to bring them to the Authority members for preliminary approval at which time a hearing will be scheduled.

#### S-ALBANY

A memorandum report dated October 5, 1967, which has been made a part of the permanent files in this matter was presented by Mr. Harold E. Milliken, Assistant Chief Sanitary Engineer. The staff asked that the city of Albany be allowed to expand its collection system to pick up the two loads mentioned in the report.

The Chairman said he did not think it was necessary that the city's proceeding should be contingent upon their receiving grants and that their situation requires they should move ahead and arrange local financing if necessary.

Mr. Weathersbee said what the staff intends to do is to make it very clear that the Authority will give the city permission to go ahead and add loads only if the city will agree to start construction of the needed sewage treatment facilities now with their own funds.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the staff recommendations be approved as follows:

That the city of Albany be allowed to expand its collection system to pick up the above mentioned existing loads and to plan for future expansion to be coordinated with the completion of the sewage treatment plant improvements now being planned, provided that the city will proceed with its construction project as rapidly as possible in anticipation of receiving a federal and state grant from funds which will be appropriated next fiscal year.

It was further agreed that the Oregon State Sanitary Authority specifically assure the city that it will retain its present priority position for the next fiscal year so that it will be assured of funds as long as federal appropriations continue to be made and that the Oregon State Sanitary Authority staff be directed to discuss the financial situation with the city to determine if construction can be commenced at an early date.

INTERIM REPORT ON LOWER WILLAMETTE RIVER WATER QUALITY

The Secretary presented an interim report on the 1967 water quality conditions in the lower Willamette River dated October 4, 1967, a copy of which has been made a part of the permanent files.

Mr. Sherm Washburn showed a short film on Publishers Paper Company's new installation.

The Chairman said he would like the staff to schedule some meetings with the sulphite pulp industry for the Sanitary Authority members. It was his feeling there would be problems as far as waste discharge permits are concerned and these difficulties should be discussed with the company officials. He mentioned the alternative of putting water over the falls as a condition of their discharge permit.

CCA403

The Chairman also asked that the staff investigate the possibility of establishing remote monitoring stations. The Secretary said there had been an item in the budget for two continuous automatic monitoring stations, but these had to be deleted because of the reductions made by the Administration and the Legislature. The Federal Government operates three continuous monitoring stations and the Authority uses their data from these stations. He said the advantage of these stations is that they give a continuous record, whereas the staff now gets only a grab sample at each station each day.

#### PERSONNEL

The Secretary stated that there were 7 new positions authorized for Air Quality Control, and 14 in Water Pollution Control under general funds and 3 under Federal funds. He gave a brief summary of the changes that have taken place in the Division of Sanitation and Engineering and introduced those new members of the staff who were present.

There being no further business, the meeting adjourned at 12:45 p.m.

OREGON STATE SANITARY AUTHORITY

APPLICATION FOR CERTIFICATION OF POLLUTION  
CONTROL FACILITY FOR TAX RELIEF PURPOSES

PART I. Application for Determination of Eligibility

#### General Instructions

The applicant is instructed to carefully read the attached copy of Chapter 592, Oregon Laws 1967, before completing Parts I and II of this application.

Section 4 of Chapter 592, Oregon Laws 1967, requires that the Sanitary Authority shall certify a pollution control facility or part thereof (as defined in said Act), for tax relief purposes if it finds that the following conditions are met:

- A. An application has been filed on a form provided by the Sanitary Authority as required under Section 3 of the Act.
- B. The facility was erected, constructed, or installed on or after January 1, 1967, and on or before December 31, 1978. (This is construed to mean that the act of erection, construction, or installation was completed and the facility placed in operation on or after January 1, 1967, and on or before December 31, 1978.)
- C. The facility is designed for, and is being operated or will operate for, the principal purpose of preventing, controlling or reducing air or water pollution.
- D. The facility is necessary to satisfy the intents and purposes of ORS Chapter 449, and regulations thereunder.

The application for certification consists of two parts which may be filed separately or together. Part I may be filed in advance of Part II if the applicant wishes a preliminary determination as to whether a facility is eligible for certification. If Part I is submitted separately in advance of Part II, the applicant will be notified of the results of the preliminary determination within a reasonable time. This preliminary determination is not final and may be modified when the facility is completed and Part II of the application is submitted. If Parts I and II are submitted together, certain portions of Part I may be omitted to avoid duplication in requested information. An application is not complete until both Parts I and II have been filed.

The Sanitary Authority may request additional information at any time during the process of reviewing and evaluating the application. Such information should be submitted promptly. It is to the advantage of the applicant to submit any additional or supporting information which may aid the Sanitary Authority in evaluating and processing the application.

Please submit both Parts I and II of the application in duplicate.

The applicant named and described in Section A of Part I of this application:

hereby submits Part I of the application only and requests that a preliminary determination be made as to whether or not the facilities identified and described in the documents which are attached to and made a part of this application under Section B are eligible for certification as a pollution control facility under the provisions of Chapter 592, Oregon Laws 1967.

hereby submits Parts I and II of the application together and requests that a determination of eligibility be made together with certification of the facility as requested in Part II.

A. Name and description of applicant.

1. Official name, division identification (if any), address, and telephone number of applicant. Indicate whether the applicant is owner or lessee.
2. Name, title, address and telephone number of official to whom communications should be directed.
3. Specific location of facility. (Include county, street address, city, or provide access directions.)

B. Supporting documents (to be attached).

1. A brief narrative statement describing the industrial or commercial process including (a) products raised, produced or processed, (b) methods of production, (c) wastes produced, and (d) all facilities used for pollution control at the site which are not claimed for certification in this application is made a part of this application and attached as exhibit \_\_\_\_\_ and consists of \_\_\_\_\_ pages.
2. A narrative statement describing (a) the facility for which a determination of eligibility for certification is requested, (b) the purpose of pollution prevention, control or reduction served by the facility, (c) the present or proposed operating procedures, (d) the quantities of pollutants or contaminants removed by the facility together with the average maximum quantities discharged to the atmosphere or waters of the state, (e) the location and method of disposal of all wastes and components removed or recovered by the facility, (f) the name and location of any stream, lake, or other waters of the state into which wastes are discharged or the owner of any sewer system into which wastes are discharged, and (g) the date construction or installation was started or is to be started and the actual or anticipated date of completion is made a part of this application and attached as exhibit \_\_\_\_\_ and consists of \_\_\_\_\_ pages.

CCA403

3. A copy of engineering plans which clearly identify and describe the facility for which a determination of eligibility for certification is requested is made a part of this application and attached as exhibit \_\_\_ and consists of \_\_\_ pages. If plans are available which also include facilities not claimed in the application, they are acceptable if clearly marked to show the facilities covered by this application. If Parts I and II of the application are filed at the same time, the as built plans required in Part II will be sufficient and those required under this section may be omitted.
  
4. A listing of all materials, machinery, and equipment incorporated or to be incorporated into and made a part of the facility presented by units or sections which can be easily related to the plans is made a part of this application and attached as exhibit \_\_\_ and consists of \_\_\_ pages. If Parts I and II of this application are submitted at the same time, the list required in Part II will be sufficient; the one required under this section may be omitted.
  
5. A detailed statement describing the nature and quantity together with the annual dollar value of all saleable or usable commodities recovered or reclaimed or to be recovered or reclaimed by the facility, or as a result of the facility having been installed, if any, and containing such other evidence as the applicant deems appropriate in justification of his claim that the facility for which the certification eligibility determination is sought is a "pollution control facility" within the definition of Section 2, Chapter 592, Oregon Laws 1967, is made a part of this application and attached as exhibit \_\_\_ and consists of \_\_\_ pages. If no saleable or usable commodities are recovered or reclaimed, please indicate so by entering the word "none" on this line \_\_\_\_\_.

As the applicant or his duly authorized representative, I certify that the information submitted in and as a part of Part I of this application is true and correct.

OREGON STATE SANITARY AUTHORITY  
 APPLICATION FOR CERTIFICATION OF POLLUTION  
 CONTROL FACILITY FOR TAX RELIEF PURPOSES

Part II. Application for Certification of Pollution Control Facility

General Instructions

The applicant is referred to the general instructions in Part I of the application. The facility must be completed and final costs known before Part II can be completed and filed.

Please submit this application in duplicate.

-----

In accordance with the provisions of Chapter 592, Oregon Laws 1967, the applicant named in Section A of Part II of this application requests certification for tax relief purposes of the facility which is fully described in Part I of the application and the documents which are attached to and made a part of Part II of the application.

A. Name and description of applicant.

1. Official name, division identification (if any), address, and telephone number of applicant. Indicate whether applicant is owner or lessee.
2. Name, title, address and telephone number of official to whom communications should be directed.
3. Specific location of facility. (Include county, street address, city, or provide access directions.)

B. Erection, construction, or installation was completed on \_\_\_\_\_ (date).

Operation commenced on \_\_\_\_\_ (date).

C. Supporting documents (to be attached).

1. A narrative statement describing any amendments to Section A, B-1, B-2, and B-5 of Part I of the application is made a part of the application and attached as exhibit \_\_\_ and consists of \_\_\_ pages. If Parts I and II are filed at the same time, this statement is not required.
2. A copy of plans and specifications which accurately show the pollution control facility, as built, for which certification is sought, is made a part of this application and attached as exhibit \_\_\_\_\_ and consists of \_\_\_ pages. If anything other than the facility claimed in the application is shown on the plans or described in the specifications, these documents must be clearly marked to indicate the facility claimed.
3. A detailed listing of all land, materials, machinery and equipment actually incorporated into and made a part of the facility for which certification is sought and presented by units or sections which can be easily related to the as built plans is made a part of this application and attached as exhibit \_\_\_ and consists of \_\_\_ pages. Materials expended in construction but not made a part of the permanent facility should not be included in this list.

CCA403

- 4. A report which gives an itemized breakdown of the actual costs of the facility and bears the certification of an independent public accountant or certified public accountant that the costs therein are true and correct representations of the actual cost of the facility is made a part of this application and attached as exhibit \_\_\_ and consists of \_\_\_ pages. The itemized breakdown of costs should include, but not be limited to, all of the items on the list required under Subsection 3 above. Actual costs are those directly related to the acquisition and installation of the eligible facility and may include engineering fees, legal fees, overhead, and other costs directly attributable to the facility. Startup and operation costs are not considered to be actual costs.

As the applicant or his duly authorized representative, I certify that the information submitted in and as part of this complete application is true and correct.

MINUTES OF THE 120th MEETING  
of the  
Oregon State Sanitary Authority  
November 17, 1967

CCA403

The 120th meeting of the Oregon State Sanitary Authority was called to order by John D. Mosser, Chairman, at 10:08 a.m., November 17, 1967, in Room 36, State Office Building, Portland, Oregon. The members and staff present were John D. Mosser, Chairman; B.A. McPhillips, Edward C. Harms, Jr., Herman P. Meierjurgan and Storrs Waterman, Members; Kenneth H. Spies, Secretary; Arnold B. Silver, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; Harold M. Patterson, Harold E. Milliken and Joseph A. Jensen, Assistant Chief Sanitary Engineers; Glen D. Carter, Water Quality Analyst; Harold L. Sawyer and Patrick D. Curran, Senior Sanitary Engineers and Lloyd O. Cox, Associate Sanitary Engineer.

Wah Chang Albany Corporation

In the matter of Wah Chang of Albany, a corporation, concerning water pollution in Linn County, state of Oregon, Mr. Silver stated that a notice to appear on this date to show cause, if any exists, why an order should not be entered directing the corporation to cease and desist polluting the public waters of the state of Oregon had been sent by him by registered mail on October 24, 1967, to the Wah Chang Albany Corporation.

The Chairman then stated that the record shall show that the show cause order was duly served. Mr. Orval Thompson, attorney for Wah Chang, stipulated that it had been received.

Mr. Thompson then asked that the hearing be continued and entered a motion for that purpose on the basis that Stephen W.H. Yih, president and principal witness of Wah Chang, had been stricken with a sudden illness on November 15, 1967, was still in the hospital, and so could not appear at the hearing on this date.

In response to a question by Mr. Meierjurgan, Mr. Thompson said that they would have other witnesses in addition to Mr. Yih.

The Chairman asked if the corporation had any plans to employ a consulting engineering firm to assist them in solving their waste treatment and disposal problem. Mr. Thompson replied that they now have authority to employ such a consultant and that they intend to do so. He then referred

to the problems that had arisen due to the recent change in ownership of the company. He said the Teledyne Corporation in July 1967 had taken over the original Wah Chang Corporation and that as a consequence they are now in a better financial condition to proceed with installation of required waste treatment and disposal systems.

The Chairman then said that this could be accepted as an explanation for the Company's delay, but not as an excuse for not solving the waste disposal problem.

Mr. Thompson replied that they now intended to go right ahead with their plans to abate the pollution.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjürgen, and carried that the hearing in the matter of Wah Chang, a corporation, concerning water pollution in Linn County, state of Oregon, be continued until 10:30 a.m., Friday, December 8, 1967.

A record of the above proceedings was made by a court reporter.

#### Minutes of Previous Meeting

Following a suggestion made by the Chairman it was MOVED by Mr. Meierjürgen, seconded by Mr. McPhillips and carried that the minutes of the September 6, 1967, meeting of the Authority be approved with the following correction having been made to the last paragraph:

Mr. Mosser then stated "technically I don't think we have any power to approve or disapprove the air quality plans, but I think we should indicate that in our view the standards we propose to adopt and our basic policy of requiring all possible controls on the sulfide and mercaptan emissions, would involve the points raised in the staff report and in my remarks. I so move." The motion was seconded by Mr. Waterman and carried 3-2. Mr. Harms and Mr. McPhillips voted "no".

It was MOVED by Mr. Meierjürgen, seconded by Mr. Waterman and carried that the minutes of the October 5, 1967 meeting of the Authority be approved as prepared by the Secretary. There being no further business on the agenda, the meeting adjourned at 10:30 a.m.

Respectfully submitted,

Kenneth H. Spies  
Secretary

MINUTES OF THE 121st MEETING  
of the  
Oregon State Sanitary Authority  
December 8, 1967

The 121st meeting of the Oregon State Sanitary Authority was called to order by John D. Mosser, Chairman, at 10:05 a.m., December 8, 1967, in Room 72, State Office Building, Portland, Oregon. The members and staff present were John D. Mosser, Chairman; B.A. McPhillips, Edward C. Harms, Jr., Herman P. Meierjurgan and Storrs S. Waterman, Members; Kenneth H. Spies, Secretary; Arnold B. Silver, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; Harold M. Patterson, Harold E. Milliken, and Joseph A. Jensen, Assistant Chief Sanitary Engineers; Glen D. Carter, Water Quality Analyst; Harold L. Sawyer and Patrick D. Curran, Senior Sanitary Engineers; Warren C. Westgarth, Laboratory Director; Lloyd O. Cox, A. Dale Nunamaker and Edgar R. Lynd, Associate Sanitary Engineers; John Sainsbury, Aquatic Biologist; Donald D. McHarness, Assistant Engineer; Charles Gray, Sanitarian; Fred M. Bolton, District Engineer; Richard Reiter, Ernest A. Schmidt, and Fred G. Katzel, Assistant District Engineers.

Houseboat Sewage Disposal

Mr. Ernest Schmidt read a staff summary report dated December 8, 1967, which has been made a part of the Authority's permanent files.

Mr. Meierjurgan asked how many houseboats the 22 moorages represented that were mentioned in the staff report.

Mr. Schmidt replied about 675 in and out of Multnomah County.

Mr. Meierjurgan asked if the incinerator type toilet had proved successful or not.

Mr. Schmidt stated that there had been only a few installations in the last week or two of the incinerator type toilet. He said there had been some older installations on dredges which the Corps of Engineers feels are working out satisfactorily, but they are not necessarily the resident type of installation.

Mr. Meierjurgan asked if the incinerator type toilet takes care of the accumulation of human wastes satisfactorily.

Mr. Schmidt replied that they did.

Mr. Meierjurgan asked if there was any explanation of why the seven moorages mentioned in the report have made no move to take care of their sewage disposal.

CCA403

88

Mr. Schmidt said the moorage owners claim there is no practical solution at this time.

Mr. Meierjurgan asked if the reason the houseboaters were having limited success in obtaining plumbers to do the work was due to no plumbing code.

Mr. Schmidt said it was his understanding it was due to insurance problems. If some accident happened while a plumber was working on one of the houseboats, his family would not be compensated for it.

The Chairman then asked if the present enforcement would be against the individual houseboat owner.

Mr. Silver said that is correct.

The Chairman then asked would this still be true if a moorage operator entered into an agreement with the Authority to install an overall sanitary system.

Mr. Silver said in his opinion that it would depend upon whether or not the moorage itself would be considered a legal entity as such to bind the individual parties who use the moorage.

Mr. Fred Pearce, President of the Waterfront Owners and Operators Association, was present and testified that what Mr. Schmidt stated in his staff report was basically the reason the houseboat owners were requesting an extension of time. He said the Association had requested a meeting with the Plumbing Advisory Council to get a code specifically for houseboats. He said new structures can be plumbed according to codes presently in force, but to replumb an older structure creates problems. He hoped they will be given permission to use plastic pipe. It is his understanding the meeting with the Plumbing Advisory Council is to be held in January 1968.

Mr. Pearce stated that he installed a 600 gallon per day sewage treatment unit which is a floating unit manufactured by the Cromoglass Company of Williamsport, Pennsylvania. He said he hoped this system would handle three to five houses. If this plant proves satisfactory, there is another unit which works on exactly the same principle and made by the same company which can handle up to ten houses. He stated that one of the problems the moorage owners face is that a great number are on leased property. This presents a problem in financing. In some instances there are several government agencies to go through to obtain permission to pump to shore and there are dikes through which the pipe has to go and approval must be obtained for this.

CCVAD3

Mr. Pearce stated his Association has been working diligently the last few months to get financing through the Small Business Administration and finally had to obtain the help of the Governor to get this means of financing through.

Mr. Pearce stated that the undecided houseboat owners are awaiting word from the Association as they do not want to go to the expense of putting in something that is not legal and will have to be taken out. He said that if the extension of time can be granted many will plumb and will be able to perform to the full extent of the law by September 1.

The Chairman asked Mr. Pearce's reaction to an extension conditioned upon an application by each individual moorage owner in which he would agree to install complete waste treatment by September 1.

Mr. Pearce said if the moorage owners are forced to sign something of this nature, he is afraid they will throw up their hands and say it is the problem of the individual houseboat owners. He said he would rather see a blanket extension.

Mr. McPhillips asked Mr. Pearce what the cost of his 600 gallon floating structure was, exclusive of the plumbing and houseboat itself.

Mr. Pearce replied \$600, excluding the chlorination system, or about \$750 total.

Mr. McPhillips asked if this would serve up to three houseboats.

Mr. Pearce said it is rated for eight persons per day capacity.

Mr. Meierjurgan asked Mr. Pearce how confident he was that he could speak for the 200 plus houseboat owners in the Association.

Mr. Pearce said that he is very confident that the owners will go to the additional expense at this time of plumbing an entire houseboat to take care of all waste water if they are given the extension of time.

Mr. L.W. Buell, President of the Hayden Island Corporation, who was also present said there are something like over 100 houseboats in their moorage, and that they did not want to get into the enforcement business of insisting that each houseboat owner plumb his house and hook it to the moorage line. He said they are perfectly willing to plumb the moorage and make it available to those people who want to hook up to it.

The Chairman asked Mr. Silver if the Authority could adopt a regulation which would require the houseboat owners to hook up to a central distribution system at a moorage if it were available.

CCA403

Mr. Silver said he did not know at this time and would need to study the matter before giving an opinion.

After some discussion it was MOVED by Mr. Mosser, seconded by Mr. Meierjurgan and carried that the houseboat owners be granted an extension of time till March 1, 1968, to either install a sanitary toilet or other treatment method, or that an application be filed by the moorage owner and operator requesting a waiver of that date and agreeing to have full treatment by September 1, 1968.

#### Wah Chang Corporation

The hearing in the matter of water pollution caused by the discharge of liquid effluents from the Wah Chang Albany Corporation plant located near Albany, Oregon, which had been continued at the previous meeting of the Authority was resumed on this date beginning at approximately 11:13 a.m.

Mr. Orval Thompson, Attorney for Wah Chang Corporation, briefly reviewed what had transpired since the hearing on November 17, 1967.

He then called on Stephen W.H. Yih, President, and Sam Worcester, Technical Director, both of Wah Chang Albany Corporation, to outline for the Authority members the processes used at the Albany plant for the production of exotic metals, the quantity and quality of wastes resulting therefrom, the steps being taken to treat or otherwise reduce the liquid effluents, and the plans and intentions of the Corporation to completely solve their water pollution problems.

The Chairman ruled that the witnesses need not be sworn. A complete record of the testimony was made by a court reporter and filed with the Authority.

It was MOVED by Mr. Mosser, seconded by Mr. Meierjurgan and carried that the hearing in the matter of Wah Chang Albany Corporation be continued until July 1968, at a time and place to be designated by the Chairman, that the waste discharge permit be limited to August 1968, and that the permit be subject to the following three conditions:

- (1) Filing of a report by the Corporation's consulting engineers, Cornell, Howland, Hayes and Merryfield, by July 1, 1968.
- (2) Such monitoring of both the waste streams and receiving streams and bioassays as the staff may request.

- (3) That no steps be taken to expand any production during the life of the permit which would contribute to these waste streams over the level that prevails in January 1968, and further that information to establish the January 1968 production base is to be furnished by the Company.

Applications for Regional Air Pollution Authorities

The Chairman said due to the press for time, the reports prepared by the staff on the Columbia-Willamette Regional Air Pollution Authority and the Lane County Regional Air Pollution Authority applications could be handed out to the members for review.

Mr. Patterson said that the applications indicate taking effect January 1, 1968. He went on to say that under the Columbia-Willamette Regional Air Pollution Authority, there is an even number of board members and they will have to meet to appoint another member.

The Chairman said he had received a complaint relating to two rendering plants in North Portland. He said if the Regional Authority did not feel equipped to go ahead immediately with hearings or enforcement, he would want to schedule the hearings for the Sanitary Authority.

Mr. Richard E. Hatchard who was present, said he felt certain, speaking for the Columbia-Willamette Regional Air Pollution Authority, that they would be delighted to assist in whatever arrangements the Sanitary Authority wished to work out.

The Chairman asked Mr. Hatchard if he would prefer that the Sanitary Authority go ahead and schedule a hearing.

Mr. Hatchard said whichever in the opinion of the Sanitary Authority would bring about a solution quickly would be fine with him and that they would cooperate in any way possible.

The Chairman then read a letter from Acting Mayor Francis Ivancie in which he listed the two major causes of complaints as being Western States Rendering Company and Portland Rendering Company. He asked Mr. Patterson if the staff concurs that there is a problem.

Mr. Patterson concurred that there is a problem.

Based on that the Chairman requested that a cease and desist order be issued for some date in January for all rendering plants in the North Portland area that are creating a problem.

CCA403

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the waste discharge permit applications be considered by the Sanitary Authority at their meeting on December 28, and 29 if necessary, and that the show cause order hearing on Western States Rendering Company, Portland Rendering Company and any other major sources of air pollution from rendering plants in the North Portland area, be held on January 19, 1968.

The meeting on December 28 is to start at 9:30 a.m.

There being no further business, the meeting was adjourned.

Respectfully submitted,

Kenneth H. Spies

Secretary

MINUTES OF THE 122nd MEETING  
of the  
Oregon State Sanitary Authority  
December 28, 1967

The 122nd meeting of the Oregon State Sanitary Authority was called to order by the Vice-Chairman at 9:35 a.m., December 28, 1967, in Room 36, State Office Building, Portland, Oregon. The members and staff present were B.A. McPhillips, Vice-Chairman; Edward C. Harms, Jr., Herman P. Meierjurgan and Storrs S. Waterman, Members; Kenneth H. Spies, Secretary; Leonard Pearlman, Legal Counsel; E.J. Weathersbee, Deputy State Sanitary Engineer; Harold M. Patterson and Joseph A. Jensen, Assistant Chief Sanitary Engineers; Warren C. Westgarth, Laboratory Director; Lloyd O. Cox, C.A. Ayer, Ron Householder, Fred Skirvin and Harold McKenzie, Associate Sanitary Engineers; Harold L. Sawyer and Pat Curran, Senior Sanitary Engineers; Roger Sherwood and Don McHarness, Assistant Engineers; Harold W. Merryman, Leo Baton and Fred M. Bolton, District Engineers; Ernie Schmidt, Richard Reiter and Fred Katzel, Assistant District Engineers; Ed Lynd, Supervisor Municipal Waste Treatment Program; Glen D. Carter, Water Quality Analyst; Robert Percy, Chemist; John Sainsbury, Aquatic Biologist; R. Bruce Snyder, Meteorologist; and Charles Gray, Sanitarian.

CCA403

MINUTES

It was MOVED by Mr. Meierjurgan, seconded by Mr. Waterman, and carried that the minutes of the 120th and 121st meetings of the Sanitary Authority be approved as prepared.

PROJECT PLANS

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the actions taken by the staff on the following 46 project plans for water pollution control and 7 project plans for air quality control during the months of October and November 1967, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>

APPLICATIONS FOR REGIONAL AIR QUALITY CONTROL AUTHORITIES

The Secretary stated that at the last meeting of the Authority copies of the applications and staff reports pertaining to the Lane County and Columbia-Willamette Regional Air Pollution Authorities were distributed to the members for review.

Mr. Patterson read a memorandum report dated December 8, 1967, on the Lane Regional Air Pollution Authority which has been made a part of the Authority's permanent files in this matter.

Mr. McPhillips asked where the laboratory for the Lane County Regional Authority is located.

Mr. Patterson stated that the administrative offices are housed in the city hall complex in Eugene, that the laboratory work is currently being accomplished at the Eugene municipal sewage treatment plant, that prior to the last two months the Sanitary Authority laboratory had been doing all of the analyses for the Lane County program, but they are now slowly taking over this work except for the most complicated tests which will continue to be run by the Authority's laboratory.

The Secretary asked Mr. Patterson to state the staff's findings with regard to retaining certain classes of pollutants. Mr. Patterson said the bases for the staff's recommendations were as follows:

Aluminum Reduction

- (1) Presently all plants are located, and future plants are expected to be located along the Columbia River, and consequently will be interstate problems involving negotiations with the state of Washington.
- (2) Criteria for fluorides have not been completely developed.
- (3) Methods of measurement of gaseous fluorides are not yet standard procedures.

Motor Vehicles (Mobile sources)

- (1) The Federal government has pre-empted the field on new vehicles.
- (2) The States will be expected to establish some type of inspection procedure (likely in conjunction with safety inspections).
- (3) Motor vehicles move from area to area and standards and regulations should be uniform throughout the State.

Nuclear Power

- (1) Because of the nature of these facilities, retention of this possible air pollution source seemed advisable.
- (2) The laboratory and staff capabilities are available in the Board of Health for monitoring and evaluation.

CCA403

(3) Potential water vapor problems have not been defined or resolved.

Pulp and Paper

(1) The kraft odor is a problem throughout areas and regions of the State, and may travel outside local regions.

(2) At this time, methods of measurement and analysis are not known to be available within regional capabilities.

(3) Adequate ambient air or source emission standards are not available.

(4) Adequate ambient air monitoring for pulp mill effluents requires equipment which at the present time is beyond the budget capabilities of the regional programs involved.

Agricultural Field Burning

(1) It is presently exempt under statutes pertaining to control of air pollution by the Sanitary Authority and the regional programs.

(2) Under (House Bill 1028) amendments to ORS 478, central and uniform forecasts are the basis for a workable program.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Waterman, and carried that the adoption of the following staff recommendations with regard to the application of the Lane Regional Air Pollution Authority be approved:

1. The Lane Regional Air Pollution Authority be granted control authority as provided by Oregon Law 1967, Chapter 425.
2. The Sanitary Authority retain source types including pulp and paper, nuclear power, motor vehicles (mobile sources), agricultural field burning, and primary metals.
3. Monies be granted in accordance with Section 19, Oregon Law 1967, Chapter 425, in the amount of \$9,677 for the period January 1, 1968 to June 30, 1968, as requested.

Mr. Harms said in view of the fact that as attorney he had represented one of the participating agencies in the drafting of the documents for the Lane Regional Air Pollution Authority, he would like the record to show that he did not participate in the discussion on this matter, nor did he vote on the question of approval of the application.

Mr. Patterson then read a memorandum report dated December 8, 1967, on the Columbia-Willamette Air Pollution Authority which has been made a part of the Authority's permanent files in this matter.

Mr. Waterman asked if there was any reason in recommendation #2 of the Lane Air Quality report why the term "primary metals" was used, whereas in the Columbia-Willamette report the term "aluminum reduction" was used.

Mr. Patterson said that in general aluminum reduction is to be retained, except for the Lane County program where primary metals are retained due to the fact that there is only one such plant like that in Lane County.

Mr. McPhillips asked the reason why the Lane Regional Air Pollution Authority's proposed budget runs from 1-1-68 to 6-30-68 and the Columbia-Willamette budget runs from 1-1-68 to 1-1-69.

Mr. Patterson stated that the officials of the Lane Authority had some difficulty in drawing their budget due to the fact that they had anticipated a state grant, plus monies from a federal grant, neither of which resulted. He said the Lane Air Pollution Authority officials are hopeful that when action is taken by the Sanitary Authority and they hear about their federal grant, they can revise their budget and submit another one for an extended period of time.

Mr. Pearlman asked if the reasons for retention of certain sources of pollutants are the same for both regions.

Mr. Patterson said essentially, yes.

It was MOVED by Mr. Waterman, seconded by Mr. Harms and carried that recommendations of the staff with regard to the application of the Columbia-Willamette Air Pollution Authority for authorization to operate as a Regional Air Quality Control Authority be approved as follows:

1. The Columbia-Willamette Regional Air Pollution Authority be granted control authority as provided by OL 1967, Chapter 425.
2. The Sanitary Authority retain source types including pulp and paper, nuclear power, motor vehicles (mobile sources), agricultural field burning, and aluminum reduction.
3. Monies be granted in accordance with Section 19, OL 1967 Chapter 425 in the amount of \$30,180 for the period January 1, 1968 to January 1, 1969.

#### TAX BENEFITS FOR INDUSTRIES

A status report dated December 28, 1967, which has been made a part of the Authority's permanent files in this matter, was presented by Mr. Harold Sawyer.

Mr. McPhillips asked if the legal staff had approved the forms.

Mr. Pearlman said that they had.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that the Notice of Election and Pollution Control Facility Certificate forms (Exhibits A & B attached) be approved for printing.

\* See files

CCA403

WASTE DISCHARGE PERMITS(a) Temporary Permits

Mr. Harold L. Sawyer read a memorandum report on this matter which has been made a part of the Authority's permanent files.

Mr. Sawyer said he felt this is a matter in which the staff needed some definite instructions because applications for temporary permits will continue to come in.

Mr. Harms asked if there is any reason why the staff should wait until the end of January for applications to be received from cities and industries before they are notified that they are in violation.

Mr. Sawyer said this was discussed and that applications from some of the cities and industries are expected to come in within the next week or two. Also, there will be quite a workload mailing out the permits acted upon at this meeting.

Mr. Pearlman asked if the intent was that the temporary permit would be issued during the interim period that the application was being studied for the permanent permit.

Mr. Sawyer said the statute says that if the Authority does not act within 60 days, a temporary permit is automatically granted until such time as final action is taken on the application. It was thought advisable, however, that temporary permits be issued now so that those who have filed applications would not be penalized due to the inability of the staff to act on them and therefore for the 60-day period be in violation of the deadline. The temporary permits would authorize cities and industries to continue as they are until such time as the staff has had a chance to act on their application and issue a regular permit.

After some discussion, it was MOVED by Mr. Harms, seconded by Mr. Meierjürgen, and carried that the Secretary be authorized to issue temporary permits for periods not to exceed 60 days, upon receipt of adequately completed applications subject to the approval of the Authority at its next meeting.

It was MOVED by Mr. Harms, seconded by Mr. Meierjürgen, and carried that the Secretary of the Authority be authorized to sign the regular permits following their approval for issuance by the Authority.

It was the recommendation of the members of the Authority that the end of January should not be specified as the time by which the applications should be received, but rather notify industries and cities that if they do not get their applications in immediately, legal action may be instituted.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Waterman, and carried that those cities and industries which have not filed applications by January 1 be notified as soon as practical of the necessity for filing, and at the same time be advised that they may be prosecuted for failure to apply for a permit as required by law by January 1, 1968.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the staff recommendations regarding issuance of temporary permits to 439 applicants be approved as presented (Exhibit C attached hereto and by this reference incorporated herein).

(b) Regular Permits

The Secretary said the first group of regular permits to be considered include the pulp mills in the Willamette basin.

Mr. Weathersbee read the staff report outlining provisions for each pulp mill and recommended that regular permits with provisions as proposed by the staff be issued the following applicants (Exhibit D attached hereto and by this reference incorporated herein).

- (1) Weyerhaeuser, Springfield - 5-year permit;
- (2) Crown Zellerbach, Lebanon - 1½ year permit;
- (3) Western Kraft, Albany - 2½-year permit;
- (4) Boise Cascade, Salem - 2-year permit;
- (5) Publishers Paper Co., Newberg - 2-year permit;
- (6) Publishers Paper Co., Oregon City - 2-year permit;
- (7) Crown Zellerbach, West Linn - 2-year permit.

After some discussion, it was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that permits be granted these 7 mills subject to the provisions specified in the staff report, with the exception that for each permit subsection (2) of the provision pertaining to termination of the permit be changed to read "(2) that there has been a violation of any of the conditions thereof."

(8) Evans Products Company, Corvallis - Mr. Weathersbee gave the report on this application. After some discussion, it was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that a permit of only seven months' duration be approved; that the wording of paragraph 9, subsection 2 of the staff report (Exhibit E attached hereto and by this reference incorporated herein) read "that there has been a violation of any of the conditions thereof;" and that the following paragraph be inserted in the report: "All plant processes and equipment and all waste treatment and control facilities shall be operated and maintained at all times at maximum efficiency and in a manner which will minimize waste discharges."

\* See files

CCA403

(9) Wah Chang, Albany - Mr. Weathersbee gave the staff report on this application. It was MOVED by Mr. Harms, seconded by Mr. Meierjorgen and carried that the staff report (Exhibit F attached hereto and by this reference incorporated herein) be approved with the exception of paragraph 15, subsection 2 which should read, "That there has been a violation of any of the conditions thereof."

(10) Tillamook County Creamery Association - Mr. Joe Jensen gave the staff report on this application.

It was MOVED by Mr. Harms, seconded by Mr. Meierjorgen, and carried that a waste discharge permit be issued to expire on November 1, 1968, subject to conditions (a) through (f) in the staff report (Exhibit G attached hereto and by this reference incorporated herein).

Tillamook Cheese and Dairy Association - Mr. Joe Jensen gave the staff report on this.

It was MOVED by Mr. Harms, seconded by Mr. Meierjorgen, and carried that a waste discharge permit be denied and that the legal staff be instructed to institute legal proceedings against the Tillamook Cheese and Dairy Association if a satisfactory application is not received by January 1, 1968.

Troutdale - Mr. Joe Jensen gave a staff summary report on this which has been made a part of the Authority's permanent files in this matter.

After some discussion it was MOVED by Mr. Harms, seconded by Mr. Meierjorgen, and carried that the permit be denied to the Hollinshead Estate to discharge raw sewage into the Sandy River.

#### MUNICIPAL PROGRAMS

The Secretary said that the Chairman asked at the last Sanitary Authority meeting that a determination be made of the status of municipal programs, keeping in mind that some of them are going to require a bond election in order to finance the required sewage treatment works. He went on to say that at the last session of the Legislature a bill was approved which specified that any municipality that is ordered by the Sanitary Authority to put in sewage treatment works, if bonds are needed to finance the project, the municipality is required to submit the issue to the voters for approval within one year. If within 8 months it appears this is not going to be done, the Sanitary Authority can go to the circuit court and ask for a court order directing the municipality to hold a bond election. If the bond election is turned down, the Sanitary Authority can go back to the circuit court and ask for a court order directing the issuance of revenue bonds without voter approval. The Secretary said the

Chairman thought if this could be done early enough, so that if there were instances where the Sanitary Authority had to go to court to have a bond election, this election could be held in connection with the general election in November 1968.

The Secretary then reviewed a memorandum report prepared by Mr. Edgar Lynd on the status of sewage works projects either scheduled for completion during 1968, or considered eligible for grant funds from the July 1967 priority list. This report has been made a part of the Authority's permanent files in this matter.

The Secretary said he would like an expression from the members as to whether or not these communities should be permitted to wait until grant funds become available, or should the staff ask them to go ahead and finance their projects entirely on their own so that the work can be started and then they would be eligible for reimbursement from the Federal Government when the grant funds finally become available.

Mr. Waterman said he thought the projects should be started right away, or as rapidly as possible, as there is no way of knowing when the Federal funds would become available. He then asked how soon a general election could be held.

The Secretary said if the municipalities are going to submit a bond issue to the voters, they can get it on the primary ballot in May. He said the Sanitary Authority can take action only in those instances in which a formal hearing had been held and an order issued.

Mr. McPhillips said he would be afraid the program would be jeopardized if the communities waited for the funds from the Federal Government to become available.

Mr. Harms said he thought in some instances a difficult political problem had already been created and that he could see no alternative but to go ahead.

Mr. Weathersbee said failure of Congress to appropriate sufficient money would seriously retard and delay the program.

No motion was made but the staff was instructed to proceed on the basis that the communities finance their own projects without waiting for federal and state grants. There being no further business, the meeting adjourned at 12:30 p.m.

Respectfully submitted,

Secretary

CC-403

MINUTES OF THE 123rd MEETING  
of the  
Oregon State Sanitary Authority  
January 19, 1968

The 123rd meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:08 a.m., January 19, 1968, in Room 36, State Office Building, Portland, Oregon. Members present were John D. Mosser, Chairman; Herman P. Meierjurgan and Storrs Waterman. Members absent were B.A. McPhillips, because of illness, and Edward C. Harms, Jr., because of a prior commitment.

Participating staff members present were: Kenneth H. Spies, Secretary; Arnold Silver, Legal Counsel; Ely J. Weathersbee, Deputy State Sanitary Engineer; Harold M. Patterson, Harold E. Milliken and Joseph A. Jensen, Assistant Chief Sanitary Engineers; Fred M. Bolton, Portland District Engineer; Edgar R. Lynd, Supervisor Municipal Waste Treatment Program; Harold L. Sawyer, Supervisor Waste Discharge Permit Program; R. Bruce Snyder, Meteorologist; and Leo G. Farr, Associate Engineer.

Public Hearing - North Portland Air Pollution

A Show Cause Order having been duly served by registered mail on Brander Meat Company, Kenton Packing Company, Pacific Meat Company, Portland Rendering Company, Associated Meat Company, Western States Rendering Company and Wilbur Ellis Company, the Chairman opened the hearing in the matter of air pollution allegedly caused in North Portland by malodorous emissions from said companies.

The Chairman stated that the hearing would pertain only to atmospheric emissions and that any associated problems of water pollution would be handled by separate action under the waste discharge permit program.

Mr. George Mead, Attorney, was present to represent Kenton Packing, Pacific Meat and Associated Meat Companies. In a brief opening statement Mr. Mead denied that the operations of these companies were emitting odors other than those normally associated with slaughtering and rendering.

The other company representatives who were present but who incidentally did not wish to testify were Carney R. Pace (Western States Rendering), Howard Nelson (Pacific Meat), Walter Steele (Brander Meat), Nimrod Wood (Portland Rendering) and Eugene Koko (Wilbur Ellis).

CCA403

More than 100 residents of the North Portland area were also present and all who wished were given the opportunity to make statements.

The hearing proceedings were recorded by a court reporter. With one exception, all testimony was presented under oath.

Mr. Silver introduced as Exhibit 1 a certified copy of the State Sanitary Authority's administrative rules.

Mr. Harold M. Patterson was the first witness for the Sanitary Authority. After being sworn in by the court reporter, Mr. Patterson presented and Mr. Silver introduced as Exhibit 2 a large map of the North Portland area showing the location of the plants in question and as Exhibit 3 a flow diagram showing the processes involved in a typical batch rendering plant. In response to questions by Mr. Silver, Mr. Patterson explained the flow diagram, pointed out the major sources of odors, described the type or nature of the odors, and discussed possible methods of treatment and control.

He stated that good housekeeping and collection and burning of all non-condensibles resulting from the cooking processes are essential for odor control. He said that thus far only one of the plants, Portland Rendering, had attempted to burn the non-condensibles.

Mr. Patterson then summarized the activities of the Sanitary Authority staff in this matter since 1963 when a petition signed by 25 residents of the area had been received. He pointed out that because of the widespread odor problem caused by the rendering plants, the staff in October 1964 prepared and distributed to all the companies involved an informational bulletin which outlined and recommended methods of odor control.

He said that in spite of the efforts of the staff of the Sanitary Authority, the companies had not provided effective controls of the odors and as a consequence 32 additional complaints were received by the Authority in 1965, eight more complaints were received in 1966, and 42 complaints and two petitions bearing 1014 signatures were received in 1967. The most recent investigations of the individual rendering plants were made by the Authority's staff in November-December 1967.

Mr. Patterson then presented the files of the Authority pertaining to these companies and the files were introduced by Mr. Silver as Exhibits 4, 5, 6, 7, 8, 9, 10 and 11.

Mr. Mead asked if the staff had held conferences with the individual plants, and Mr. Patterson replied that conferences had been held with Portland Rendering.

The second Sanitary Authority witness called by Mr. Silver was R. Bruce Snyder, staff meteorologist. He testified that wind systems had been operated in the St. Johns area in December 1966 and January 1967 and that analyses of weather data from the Portland International Airport, which are considered to be representative of the area in question, had been made. Wind roses, based on these data, were presented by Mr. Snyder and introduced by Mr. Silver as Exhibit 12 for the month of January and Exhibit 13 for the month of July.

Exhibit 12 showed that during January for the period 1951-1960 light winds of three miles per hour or less were experienced 19% of the time, and the wind directions were predominately E, SE and S.

Exhibit 13 showed that in July for the same period winds of three miles per hour or less were experienced 22% of the time with the wind direction being from the NW 42% of the time.

The third staff member to testify for the Authority was Leo G. Farr who from September 1965 to September 1967 was with the Air Quality Control program and who since that time has been with the Public Water Supply program. Mr. Farr in response to questions by Mr. Silver discussed his findings and observations resulting from the several surveys made by him of the North Portland rendering plants and odors emitted by them. He testified that adequate facilities had not yet been installed to destroy non-condensibles.

The hearing was then recessed by the Chairman from 11:08 to 11:26 a.m. during which time 93 persons who were present signed a register and indicated whether they wished to testify or merely by their signature to register a complaint about the air pollution in North Portland.

Because they could not be present at the hearing after the noon recess, the following seven residents of the area were permitted by the Chairman to testify next:

Mr. Russell E. Pope, 3838 N. Kiska  
Mr. R.M. Ray, 2408 N. Baldwin  
Mr. Eugene James, 8306 N. Chautauqua  
Mrs. Gertrude Niehuser, 8806 N. Wilbur  
Mrs. Erna Garbe, 6949 N. Knowles  
Mrs. Mary Jordan, 7844 N. Washburn  
Mrs. Mercedes F. Deiz, 9144 N. Chautauqua

CCA403

According to their testimony the odors are most noticeable during the summer months when the prevailing winds are from the northwest and have gotten worse in the past 2 to 4 years. The odors prevent the enjoyment of outdoor areas and facilities in the summer, they occasionally permeate the interior of homes, especially during the night, making it difficult to sleep; they cause upset stomachs. The odor nuisances caused by the rendering plants have also depreciated property values. These witnesses described the odors as frequently being unbearable, similar to that of decaying and rotting wastes, worse than a skunk. Mrs. Garbe said the odors reminded her of the bombed areas with their decaying bodies during World War II in Europe.

Mr. Ron Husemann, who from September through December 1967 was employed by the Sanitary Authority and who during that period had made detailed studies of the rendering plants, was the next witness called by Mr. Silver. He explained the facilities used by each plant and described the conditions observed by him during his surveys. In a memorandum dated December 12, 1967, he had listed recommended improvements or additions for each plant for the purpose of abating and controlling the odors.

State Representative Wally Priestly of 2207 N.E. Ainsworth then testified that there is no question about the odors coming from the rendering plants. He said the complaints have increased in recent years, the odors reach more than a mile from the plants and demoralize the community, and the people have a right to live in their homes without being subjected to these repeated odors.

The hearing was recessed at 12:00 noon and reconvened at 1:28 p.m.

Before having to leave for another appointment, Mr. George Mead, Attorney, then spoke briefly for the companies that he represented. He claimed that the largest and most significant source of the odors was the operations that handle dead animals. He said his clients are not adverse to cooperating with the Sanitary Authority to completely eliminate the problem. He said they are willing to go along and do everything possible to comply with the recommendations of the Authority's staff.

The Chairman asked if the companies had any plans for odor control of which the Authority or its staff might not be aware. Mr. Mead stated that Kenton Packing Company had employed engineers who have made a proposal.

The Chairman then explained the reason for and the purpose of holding the hearing at this particular time. He said it was most important that corrective actions be started immediately so that the problem could be solved before the warm weather this coming summer.

Additional testimony and complaints were then presented under oath by the following witnesses:

Mrs. Jeri De Sylvia, 3921 N. Attu  
Mrs. Kitty Bilyeu, 7408 N. Washburne  
Mrs. Henry Ellis, 7725 N. Emerald  
Mrs. Russell Schnell, 7303 N. Chautauqua  
Mr. Howard Walker, 8704 N. Chase

The statements made by these five witnesses were similar to those made previously by the other residents of the area. Mr. Walker said Portland is known as the city of roses, but in his section of the city the residents cannot smell the roses because of the obnoxious odors from the North Portland rendering plants.

Mr. Bill Luch of 9212 N. Reno then requested permission, which was granted, to make a statement without being sworn. He referred to a report by Dr. Thomas Meador, Portland City Health Officer. He asked that the odors be eliminated before May 1968 or else shut down the plants responsible for the odors.

There being no one else present who wished to testify, the hearing was recessed by the Chairman at 2:10 p.m.

After reconvening the hearing at 2:17 p.m., the Chairman made the following statement:

"We have definitely established a serious nuisance odor condition by the testimony heard without attempting to pinpoint which plant is the primary source, that it is related to the operations of all of these plants in some degree, on some days, perhaps more to a particular plant than others, but that all of them are involved in it and that action needs to be promptly taken to end this nuisance before the onset of the next summer. I recognize at the same time that these companies have not had the chance to review or to hear before this meeting the staff recommendations as to what should be done. For that reason, I would propose that a draft order be submitted to these companies for their reactions at our next meeting, but that the order in essence provide that by our next meeting, which will be on February 29, they have engineering plans and housekeeping improvement programs to comply with the recommendation of the staff and looking towards installation of equipment for facility improvements prior to June 1, 1968.

CCA403

Now the reason that this is not a final order and is subject to any comments they may have is that they may have better ideas on how to control or slightly different ideas they may wish to propose. It has always been the policy of this Authority that we are not design experts in all of the problems of every plant. It is up to us to say that a solution is required and what needs to be done but not to propose the details of the solution. The staff recommendations will be made available immediately after this hearing to the companies in the form of a draft order and will be reviewed on February 29 at which time they (the companies) are to have plans either to comply with the draft order or with what they think is adequate substitute action, equal to or better than the order, and looking also as far as equipment purchases that they may wish to begin placing tentative orders for or things of this kind for installation and operation by June 1, 1968. I so MOVE."

The above motion was seconded by Mr. Waterman and carried. The staff was directed to work with the companies. The hearing was then adjourned until February 29, 1968.

#### Project Plans

It was MOVED by Mr. Waterman, seconded by Mr. Meierjurgan, and carried, that the actions taken on the following 12 projects for Water Pollution Control and 8 projects for Air Quality Control for the month of December, 1967 be approved:

#### Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12/6/67	Eugene	Cl <sub>2</sub> Facilities for Airport Lagoon	App.
12/6/67	Canby	Wait Dr. & Neff Rd.	Prov. app.
12/13/67	Dallas	Sewage treatment plant	Prov. app.
12/15/67	Klamath County	Sanitary sewer system Weyerhaeuser Complex	Prov. app.
12/26/67	Metzger Sanitary District	Sewer extension	Prov. app.
12/26/67	West Slope Sanitary Dist.	Sewer extension	Prov. app.
12/26/67	Green Sanitary District	Sewer lateral	Prov. app.
12/27/67	Springfield	Sanitary sewer	Prov. app.
12/27/67	Scio	Chlorination facilities	Prov. app.
12/27/67	East Salem #1	Sanitary sewer	Prov. app.
12/28/67	La Grande	Sewer main	Prov. app.
12/28/67	Springfield	Sanitary sewers	Prov. app.

Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12/7/67	St. Helens	Boise Cascade, E.S. Precipitator; Chemco SF venturi scrubber for lime kiln	Cond. app.
12/8/67	Lane County	Lane Regional APA Federal Clean Air Grant Application for \$21,066	Approved
12/14/67	Washington County	Cooper Mt. Elementary School incinerator	Add. inf. requested
12/14/67	Lane County	Crow High School incin. (Note: 12/29 - Architects advised us incinerator had been deleted. Central collection will be utilized)	Add inf. requested
12/14/67	Washington Co.	Walter L. Henry Elem. School incinerator	Add. inf. requested
12/14/67	Clackamas County	Linwood Grade School incinerator	Add. inf. requested
12/28/67	Lane Regional Air Pollution Authority	Application for control authority and State grant of \$9,677	Approved
12/28/67	Columbia Willamette Air Pollution Authority	Application for control authority and State grant of \$30,180	Approved

State Grants for Municipal Sewage Treatment Works Projects

A memorandum report dated January 19, 1968, which he had prepared was read by Mr. Milliken and has been made a part of the Authority's permanent files in this matter.

It was MOVED by Mr. Mosser, seconded by Mr. Meierjurgan, and carried that the Secretary be authorized to sign and deliver an agreement with the city of Amity for a 25% state grant in the amount of \$24,540.

It was MOVED by Mr. Mosser, seconded by Mr. Waterman, and carried that the Secretary be authorized to request the State Emergency Board to release \$709,902 for 25% state grants to Halfway, Monroe, Portland (211), Gladstone, Port of Tillamook Bay, Twin Rocks Sanitary District and Oakridge, dependent upon the 50% federal grants being available and to sign agreements for approval of these grants.

The Chairman then inquired about the status of the local financing for the Multnomah County Central Service District project which was the next one on the list prepared by Mr. Milliken. Mr. Jack Kalinoski, Assistant Engineer for Multnomah County, was present. He said that following a recent Attorney General's opinion that general funds of the county could not be used for this purpose, the Board of Commissioners had adopted a

CCA403

resolution to establish under the provisions of ORS 451.540 a revolving fund by levying a one-half mill tax per year for five years on all property outside of municipalities that would ultimately be served by the county's master sewerage system. He claimed that this would provide sufficient funds to finance the district's share of the cost of the proposed project No. 193. He said the money should be available sometime after July 1, 1968, or in the next fiscal year.

The Chairman also asked Mr. Kalinoski about the status of construction of the remainder of the sewers for the Dunthorpe-Riverdale County Service District which were supposed to have been completed a long time ago. Mr. Kalinoski replied that a contract for the remainder of this project is expected to be awarded in February.

#### Tax Credit Applications

A memorandum report dated January 19, 1968, and prepared by him regarding the application for certification of a pollution control facility for tax relief purposes, No. T-1, submitted by Publishers Paper Co., Newberg Division, was read by Mr. Harold Sawyer.

Mr. John Bledsoe, Attorney, and Mr. Pete Schnell were present to represent the applicant.

Because the accountant's report stated that the costs for this project were shown in the records of the Spaulding Pulp and Paper Company, rather than the Publishers Paper Company, there was some discussion as to whether or not the latter was eligible for the tax credit. Mr. Bledsoe stated that it was.

Mr. Sawyer said that he had taken the application to the Tax Commission in Salem and had discussed it with Mr. Thure A. Lindstrom and Ted Cady and they had no objections to the issuance of this certificate.

It was MOVED by Mr. Mosser, seconded by Mr. Meierjurgan, and carried that the certificate for tax relief purposes for the Publishers Paper Co. Newberg Division water pollution control facility costing \$660,555 be approved in accordance with the findings of the staff.

A memorandum report dated January 19, 1968, and prepared by him regarding the application No. T-2 submitted by Columbia Steel Casting Co., Inc., for certification of air pollution control facilities for tax relief purposes was presented by Mr. Sawyer.

It was MOVED by Mr. Mosser, seconded by Mr. Meierjorgen, and carried that a pollution control facility certificate for tax relief purposes be issued to the Columbia Steel Casting Co., Inc., for its facility costing \$61,715.48 in accordance with the findings of the staff.

Waste Discharge Permits

A memorandum report dated January 19, 1968, and prepared by him regarding the subject "Temporary Permits" was presented by Mr. Sawyer. (See Exhibit A attached hereto and by reference incorporated herein.)

He stated that since the last meeting on December 28, 1967, 61 additional permit applications had been received, that 59 of these applications have been sorted according to categories (See Exhibit A), that one of the applications was received from N.W. Aluminum Company and action on it is to be deferred until detailed plans are submitted and approved, and that one other application filed by Mr. Ivan Bice should be considered separately.

It was MOVED by Mr. Mosser, seconded by Mr. Waterman and carried that temporary permits be issued the 59 applicants listed by Mr. Sawyer and according to the recommendations of the staff contained in Mr. Sawyer's memorandum (Exhibit A attached).

Permit Application #483 Filed by Mr. Ivan Bice

A memorandum report dated January 19, 1968 and prepared by Mr. Sawyer has been made a part of the permanent files in this matter. In a letter dated January 17, 1968, Mr. J.R. Nunn, President, Bio-Pure, Inc., requested that the waste discharge permit application be withdrawn; however, because the application was signed by Mr. Bice, it was questioned whether the request for withdrawal by Mr. Nunn could be accepted.

It was MOVED by Mr. Mosser, seconded by Mr. Waterman, and carried that application #483 be laid on the table until it is determined that Mr. Nunn has the authority to speak for Mr. Bice.

City of Silverton Waste Discharge Permit

With regard to the proposed and urgently needed expansion of the sewage treatment plant for the city of Silverton, Mr. Fred M. Bolton, District Engineer, read a staff report dated January 19, 1968, a copy of which has been made a part of the Authority's permanent files in this matter. He stated that the city has a temporary waste discharge permit which will expire March 31, 1968.

\* See files

CCA403

The Chairman asked if there was anyone present from the Stayton Canning Company and the city of Silverton to which Mr. Bolton replied there were representatives from both the industry and the city.

Mr. Kenneth Brown, Attorney for the city of Silverton, was present and said he had been asked by the City Council to make a presentation which he had typed and was going to read, but since the staff report presented by Mr. Bolton covered many of the same points, he would briefly summarize it. He said the present sewage treatment plant was expanded and completed in 1961, and although projected for 20 years, it already can no longer take care of the increased industrial waste load. The city became aware of this fact in 1965-1966 and in April of 1967 the city of Silverton engaged CH<sub>2</sub>M to proceed with plans for further expansion. The city of Silverton submitted to the Authority a proposed project schedule which showed the completion of the new improvement to be August 1, 1968. This was based on the representations by the Kolstad Cannery that their pack over the next 10 years would not exceed a 20% increase over the 1967 pack. He said the City Council met with the cannery in December to establish waste loads and discovered that the owners were in the process of selling the cannery to the Stayton Cooperative. The Council then immediately scheduled a meeting with members of the latter company, but unfortunately they could not tell the city what their demands or what their requirements would be. They claimed they would have to have one year's pack to determine what the capabilities of the Silverton Cannery might be.

The Chairman then asked if the city had a contract with the cannery or an ordinance that would limit the quantity and quality of wastes that could be handled by the city plant. Mr. Brown replied that they had no such contract with the cannery, but that they do have an ordinance. The discussion that followed disclosed that the waste discharges from the Kolstad Cannery have been in excess of the limits prescribed by the ordinance, and that the city has not attempted to enforce the ordinance.

Mr. Brown said the new requirement which went into effect last summer required the city to remove 98% of the BOD as against 85% that the plant was originally designed for. He stated that after this problem came up they asked for a meeting with the cannery owners again and representatives from the Sanitary Authority were invited to attend. They discussed the situation but were unable to get any type of estimate or figure from the cannery. He said the city has spent many thousands of dollars for engineering studies over the years. They are willing to build this addition

but it is not economical for the city at this stage to go ahead to build what had been contemplated when the chances are 99 to 100 that they will have to expand it again next year.

The Chairman then asked if any of the staff had talked to CH<sub>2</sub>M regarding the Silverton situation and what the \$200,000 estimated by them as the cost of facilities would cover.

It was stated that Fred Bolton and Ed Lynd had both attended meetings of the city, cannery and CH<sub>2</sub>M. Mr. Lynd said the plan that the engineers propose for the expansion involves the construction of additional treatment facilities at the sewage treatment plant. They propose to install an extended aeration device and then acquire more land and put in a holding pond. The holding pond would be more for the purpose of regulating the flow discharges to the stream rather than a treatment device so probably most of the money will be spent on expansion of facilities at the present plant. He was asked if the holding area would be a city facility. Mr. Lynd replied yes, it would be in conjunction with the present city-owned plant. They will require some 26 acres.

After considerable discussion of the waste discharge permit conditions proposed by the staff in Mr. Bolton's memorandum, it was decided to defer action until the next Authority meeting.

The Chairman asked the staff to try to draw up something which will require the city to keep within what the staff feels are acceptable limits, to define the effluent standards for this summer, and to propose a satisfactory time schedule so that the final language of the permit can be adopted at the next meeting of the Authority on February 29.

#### Tillamook Cheese and Dairy Association

A memorandum report dated January 19, 1968, was presented by Mr. Jensen and has been made a part of the Authority's permanent files in this matter. In this report it was recommended by the staff that the waste discharge permit for Tillamook Cheese and Dairy Association be identical with the one issued at the December 28, 1967 meeting for the Tillamook County Creamery Association which will expire November 1, 1968. In addition it was recommended that Tillamook Cheese and Dairy Association continue to provide effective chlorination of the domestic flow emanating from its plant.

It was MOVED by Mr. Mosser, seconded by Mr. Meierjurgan, and carried, that a waste discharge permit through November 1, 1968, with the conditions as recommended by the staff be issued to Tillamook Cheese and Dairy Association.

CCA403

Boise Cascade Kraft Pulp and Paper Mill at St. Helens

Mr. Weathersbee reported that the Boise Cascade Corporation pulp mill at St. Helens which presently has a capacity of 420 T/D of kraft pulp (280 T/D of this is bleached) is being expanded to 810 T/D of kraft pulp and 772 T/D of this will ultimately be bleached. He said their paper production will go to around 500 T/D initially and eventually they will add more paper making capacity. The company has asked for BOD discharge limits of 41,000 lbs/D and suspended solids of about 23,000 lbs/D. The Authority staff, however, proposes that the waste discharge permit limit the BOD discharges to 26,000 lbs/D and solids discharges to 12,000 lbs/D, and that these limits would apply after June 30, 1968. He pointed out that the company is presently installing both production and control facilities and will not have these installed and started up properly until that time. He said that in the interim period the No. 3 provision of the permit that all plant processes and equipment and all waste treatment control facilities be operated and maintained at all times at maximum efficiency and in a manner which will minimize waste discharges would govern.

He said further the next important provision other than the ones routinely incorporated in all of the permits is No. 6 which requires that a specific and detailed program be developed and submitted by July 1, 1969, for providing by not later than July 1, 1970, year round control of total mill wastes equivalent to secondary treatment.

It was MOVED by Mr. Mosser, seconded by Mr. Waterman and carried that a permit be issued to Boise-Cascade, St. Helens mill to June 30, 1970, subject to the conditions recommended by the staff (See Exhibit B attached hereto and by reference incorporated herein).

Kaiser Gypsum, St. Helens

A proposal was presented by Mr. Weathersbee regarding recommendations for a waste discharge permit for this mill (See Exhibit C attached hereto and by reference incorporated herein).

This mill discharges to Scappoose Bay which is a little inlet off the Multnomah Channel. At times of tide reversal and very low flow in the summertime, it becomes almost a dead body of water. There is a fairly severe DO depression in this bay and very bad (heavy) sludge deposits have accumulated over a period of years from this operation. This mill has done a real good job of in-plant reuse of water. They have primary treatment facilities in operation and they take a good share of the water back into the process. The proposed permit conditions call for a BOD limitation

of 6,000 lbs. per day and suspended solids limitation of 1,000 lbs. per day. Item 6 requires that a detailed program and time schedule be submitted by July 1, 1968, for providing either a completely closed system or year round secondary treatment for total residual mill wastes by June 30, 1969.

It was MOVED by Mr. Mosser, seconded by Mr. Meierjürgen, and carried that the permit as recommended by the staff be issued to Kaiser Gypsum (See Exhibit C).

The Chairman requested the staff to check on the waste discharge permit application forms to see how many have been sent out and how many returned.

He said also that since the houseboat and moorage owners had until March 1 to comply with the Sanitary Authority requirements and the next meeting would be on February 29, the staff should be thinking about what the enforcement plans will have to be as only 3 or 4 moorages have replied to the agreement which was sent out.

The Chairman stated the Sanitary Authority would plan to meet the last Friday of every month and with the load anticipated that some months they might have to have two meetings.

Room 36 has been reserved for the last Friday in March, April, May and June and the last Thursday in February.

The Chairman asked if permit applications had been sent to federal installations. Mr. Sawyer said no and the Chairman requested this be done.

The meeting adjourned at 4:40 p.m. The next meeting was set for February 29, 1968.

Respectfully submitted,

Kenneth H. Spies  
Secretary

• See files

CCA403

MINUTES OF THE 124th MEETING  
of the  
Oregon State Sanitary Authority  
February 29, 1968

The 124th meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:05 a.m., February 29, 1968, in Room 36, State Office Building, Portland, Oregon. Members present were John D. Mosser, Chairman; B.A. McPhillips, Edward C. Harms, Jr., Herman P. Meierjurgan and Storrs Waterman.

Participating staff members present were: Kenneth H. Spies, Secretary; Arnold Silver, Legal Counsel; Ely J. Weathersbee, Deputy State Sanitary Engineer; Harold M. Patterson, Assistant Chief Engineer; Fred M. Bolton, Portland District Engineer; Edgar R. Lynd, Supervisor, Municipal Waste Treatment Program; Lloyd O. Cox, Supervisor, Industrial Waste Control Program; Harold L. Sawyer, Supervisor, Waste Discharge Permit Program; and E.A. Schmidt, Assistant Portland District Engineer.

MINUTES

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried, that the minutes of the December 28, 1967, and January 19, 1968, meetings be approved as prepared.

PROJECT PLANS

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that the actions taken by the staff on the following 13 sets of project plans for water pollution control and 2 projects for air quality control for the month of January 1968, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1/4/68	Gresham	Tiara Subd., Phase II	Prov. app.
1/5/68	Mill City	Septic tank & drainfield	Prov. app.
1/10/68	Oak Lodge S.D.	Sewer Main B-1	Prov. app.
1/11/68	Mt. Hood Meadows	Sewerage system	Prov. app.
1/11/68	West Slope	Lats. PG-1-1-2 & PG-2	Prov. app.
1/11/68	Roseburg	Comprehensive sewerage plan	Approved
1/16/68	Moro	Report on Sewage Disposal	Approved
1/16/68	Forest Grove	Forest Meade Subd.	Prov. app.
1/17/68	Yachats	Report-Sewage Collection and Treatment	Approved
1/17/68	Wasco	Report-Sewage Treatment	Prov. app.
1/22/68	Hines	Sewer laterals-Tennyson Avenue and King Street	Prov. app.
1/26/68	Junction City	Pump Station Improvements	Prov. app.
1/29/68	Diamond Lake	Sewerage system	Prov. app.

Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1/8/68	Hillsboro	Walter L. Henry Elementary School - Incinerator	Cond. app.
1/19/68	Portland	Columbia Steel Casting Co. Tax Relief Application \$61,715.48	Approved

NORTH PORTLAND RENDERING PLANTS

The public hearing in this matter having been held by the Authority on January 19, 1968, and having been continued until this meeting, and in the meantime a draft order having been prepared and forwarded to the seven companies involved, the hearing was continued on this date and the Chairman called on Mr. Patterson for staff reports pertaining to the individual companies.

(1) Portland Rendering Company

Mr. Patterson read a staff report dated February 29, 1968, of the Portland Rendering Company which has been made a part of the Authority's permanent files in this matter. He stated that Section (b) was included in the staff's recommendations because the company does bring in material from outside the metropolitan area and it should not be stored for any long periods of time during the hot weather.

The Chairman asked if the use of the boiler as an afterburner was going to be satisfactory, to which Mr. Patterson stated that at the present time the staff had concluded that it would be satisfactory. He stated that this would not be true in a normal plant but Portland Rendering Company is essentially two plants operated on a continuous basis with the boiler capacity designed in relation to plant production needs. He stated further that the staff had collected gases out of the stack on top of the building, had run some dilution tests on them and based on these tests it appears that it is working satisfactorily.

(2) Wilbur-Ellis Company

Mr. Patterson read a staff report dated February 28, 1968, of the Wilbur-Ellis Company which has been made a part of the Authority's permanent files in this matter. He stated that Section (b) was put in the staff's recommendations because during the hot summer months the raw products might deteriorate and cause an odor problem which is not occurring at the present time.

CCA403

The Chairman asked what, if any, provisions were contemplated for monitoring.

Mr. Patterson stated that he would assume the staff would have to make the initial measurements.

The Chairman said that a time schedule ought to be submitted so that the Authority could follow through and not have to wait until complaints are received.

Mr. Kokko of Wilbur-Ellis Company explained that their operations are different from the rendering plants, because they merely dry blood which they obtain from the adjacent slaughter houses. He gave a brief description of the process that they use for this purpose.

(3) Western States Rendering Company

Mr. Patterson read a staff report dated February 29, 1968, on Western States Rendering Company which has been made a part of the Authority's permanent files in this matter.

The Chairman asked if the company had any feeling that there would be any problem and if they would be able to meet the June deadline.

Mr. Patterson said he had called the engineering firm that had submitted the original plans and was assured that they would be able to submit the necessary information in 7 to 10 days.

(4) Pacific Meat Company

Mr. Patterson read a staff report dated February 29, 1968, on Pacific Meat Company which has been made a part of the Authority's permanent files in this matter.

The Chairman asked if the company had retained an engineering firm to design the required facilities and if the company had agreed that the time schedule could be met.

Mr. Howard Nelson, representing Pacific Meat Company, was present and replied that it could be met.

(5,6,7) Associated Meat Company, Kenton Packing Company, and Brander Meat Co.

Mr. Patterson read staff reports dated February 29, 1968, on Associated Meat Company, Kenton Packing Co., and Brander Meat Co., which have been made a part of the Authority's permanent files in this matter.

Mr. Patterson stated that the staff had initially recommended that gases from the percolating pans and presses be collected at these plants, but the companies have retained Tom Metz of the Metz Engineering Company and his conclusion is that such facilities are not warranted at the present time.

The Chairman asked that if it develops that he is wrong and that to control the odors the gases from the percolating pans and press will have to be collected, what kind of a time schedule would be involved if we wait until late May or June to find this out.

Mr. Metz stated that it would not be much of a problem, probably an additional week or so.

The Chairman stated that he recognized the fact that we are largely concerned with the general public but he also inquired about the people who have to work under these conditions.

Mr. Patterson stated that it depended upon the method of accomplishment. He said that most of the plants were old and have a great many windows and doors and the only way of effective control would be to hood the various areas.

After much discussion in regard to storage and refrigeration, it was decided that a general regulation should be adopted. Mr. Patterson submitted a proposed draft and requested to proceed with the holding of a public hearing and adoption of a regulation of the Authority which could be enforced both by the Authority and the regions of the state and would present a uniform policy and require afterburners on all reduction facilities. It was decided that housekeeping measures should also be included in the regulation, as well as a requirement for the reporting of any breakdowns.

It was MOVED by Mr. Mosser, seconded by Mr. Harms and carried that (1) steps including the holding of a public hearing be taken for the adoption of a regulation pertaining to the reduction of animal matter and embodying the concepts contained in the draft prepared by the staff, plus provisions for reporting breakdowns or special situations and for compliance with necessary monitoring requirements; (2) an order for the specific plants in the North Portland area be entered and contain the special provisions proposed by the staff with an effective date of June 1, 1968 for completion of any additional construction and earlier dates for submission of plans in those cases in which plans are required but not yet complete; and (3) the companies be required to report to the staff immediately upon completion of the installation so that an initial monitoring program by either the staff or company can be established for evaluation as soon as hot weather arrives.

CC-403

FEDERAL AND STATE GRANTS FOR SEWAGE TREATMENT WORKS

The Secretary referred to his memorandum of February 9, 1968, entitled "Federal Grants for Sewage Treatment Works Projects" which had been sent on that date to the members of the Authority and which has since been made a part of the Authority's permanent files in this matter. He reported that following their review of that memorandum, the Authority members had by telephone on February 13 voted to issue priority certificates for Dallas (#231) and Albany (#215) making them eligible for 50% federal and 25% state grants, and to approve an increase in the federal grant from 30% to 50% for the Multnomah County project (#193) which had previously been issued a priority certificate. The latter project therefore was also eligible for a 25% state grant which likewise had been approved by telephone.

He informed the members that on March 1 the Emergency Board would be considering the request of the Authority for the transfer of \$1,567,114 from the State Emergency Fund (Section 1, Chapter 15, Oregon Laws 1967, special session) to the Sewage Treatment Works Construction Account in accordance with the provisions of Chapter 423, Oregon Laws 1967. This transfer will provide funds for 25% state grants for the following 11 projects: Albany (#215), Dallas (#231), Gladstone (#189), Halfway (#171), Lincoln City (#185), Monroe (#201), Multnomah County (#193), Oakridge (#208), Portland (#211), Port of Tillamook Bay (#227), and Twin Rocks Sanitary District (#247).

The Secretary asked that the vote taken by telephone on February 13, 1968, be confirmed and that in addition approval be given to include the state grant for the Lincoln City project as this had been inadvertently omitted from the February 9 memorandum and had not been included in the action taken at the previous board meeting on January 19, 1968.

It was MOVED by Mr. Meierjorgen, seconded by Mr. Waterman and carried that the action taken by telephone on February 13 be confirmed, and also be expanded to include the state grant for Lincoln City, thereby approving increased or initial federal and 25% state grants for Multnomah County (#193), Dallas (#231), Albany (#215), and Lincoln City (#185).

Following the adoption of the above motion the Chairman commented that a controversy had recently developed between members of the Columbia Region Association of Governments (CRAG) concerning the proposal of Multnomah County for financing its project. He said that unless they cooperate fully with each other, it might be necessary in the future for the Authority to refuse to approve grants to the metropolitan area.

TAX CREDIT APPLICATIONS

Mr. Harold Sawyer presented memorandum reports dated February 29, 1968, regarding the following five tax credit applications (said reports have been made a part of the Authority's permanent files in this matter), and after reviewing the same the members took the actions as indicated below regarding them:

- (1) T-6 General Foods Corporation, Birds Eye Division, Woodburn

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that the General Foods Corporation, Birds Eye Division, Woodburn, Oregon, be issued a Pollution Control Facility Tax Certificate in the amount of \$159,890.11.

- (2) T-7 General Foods Corporation, Birds Eye Division, Woodburn

It was MOVED by Mr. Meierjurgan, seconded by Mr. Harms, and carried that the General Foods Corporation, Birds Eye Division, Woodburn, Oregon be issued a Pollution Control Facility Tax Certificate in the amount of \$2,348.43.

- (3) T-14 Weyerhaeuser Company, Springfield

It was MOVED by Mr. Meierjurgan, seconded by Mr. Waterman and carried that the Weyerhaeuser Company, Springfield, be issued a Pollution Control Facility Tax Certificate in the amount of \$8,581.

- (4) T-15 Weyerhaeuser Company, Springfield

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips and carried that the Weyerhaeuser Company, Springfield, be issued a Pollution Control Facility Tax Certificate in the amount of \$35,020.

- (5) T-16 Weyerhaeuser Company, Springfield

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips and carried that the Weyerhaeuser Company, Springfield, be issued a Pollution Control Facility Tax Certificate in the amount of \$10,812.

WASTE DISCHARGE PERMITS

- (1) Temporary Permits for applications received since the January 19 meeting:

A memorandum report dated February 29, 1968, regarding the subject "Applications Received Since Last Meeting" and regarding "Temporary Permits" was presented by Mr. Sawyer. He stated that since the last meeting on January 19, 1968, 72 permit applications had been received, that one of these applications was for a proposed new cannery and that action on it will be delayed until additional requested information is received.

CC-4403

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that temporary permits be issued the 71 applicants listed by Mr. Sawyer and according to the recommendations of the staff contained in Mr. Sawyer's memorandum report. \*(Exhibit A attached hereto and by this reference incorporated herein.)

(2) Regular Permits

(a) Dammasch State Hospital, Wilsonville

A memorandum report was given by Mr. E.R. Lynd on the Recommended Waste Discharge Permit Conditions for Dammasch State Hospital. \*(Exhibit B attached hereto and by this reference incorporated herein.)

It was MOVED by Mr. Waterman, seconded by Mr. Harms and carried that the recommended waste discharge conditions be adopted, and that Dammasch Hospital be issued a permit in accordance with the recommendations of the staff. \*(See Exhibit B).

(b) Port of Tillamook Bay

A memorandum report was given by Mr. E.R. Lynd on the Recommended Waste Discharge Permit Conditions for Port of Tillamook Bay. \*(Exhibit C attached hereto and by this reference incorporated herein.)

It was MOVED by Mr. Harms, seconded by Mr. Meierjürgen and carried that the recommended waste discharge conditions be adopted, and that the Port of Tillamook Bay be issued a permit in accordance with the recommendations of the staff. \*(See Exhibit C).

(c) Silverton

A memorandum report containing the recommended waste discharge permit conditions for the city of Silverton was given by Mr. Fred Bolton, District Sanitary Engineer. \*(Exhibit D attached hereto and by this reference incorporated herein.) This report has been made a part of the Authority's permanent files in this matter.

Mr. Bolton explained that this was a reconsideration of waste discharge conditions which were discussed at the last meeting of the Authority.

Mr. McPhillips asked if plans had been drawn or are being drawn at the present time.

Mr. Bolton said they were not, due to the fact the cannery did not know exactly what capacity would be required of the treatment plant. He called attention to item #7 in the report which calls for the permittee to effectively monitor the operation and efficiency of the plant and the

\* See files

quantity and quality of the effluent discharged, and requires that a permanent record of all such data shall be maintained at the plant. He also called attention to item #3 C which defines the BOD load limit for 1968 and which will require a curtailment of past loads.

Mr. Ken Brown, city attorney for the city of Silverton, said that the city officials and he had met with the Stayton Canning Company officials and that a basic agreement had been reached for limiting the load to the present sewage plant. He said the intent is that for 1968 the total waste load to the city of Silverton treatment facility will be limited to the design capacity of the existing facility. He said further that the Canning Company realizes there is a problem and that they would cooperate in every way possible. He said the concern at this time is with this year's pack and the best way to control the situation is to control the pack itself. In the past there has been an overlap of the bean and corn canning and this will be eliminated this year. Also, it appears that a 20% reduction in the corn pack for the 1968 canning season is necessary. He went on to say that there will be improved plant operation for both the sewage plant and the cannery itself.

The Chairman asked what the city's present plans are for determining the size of expansion desirable.

Mr. Jack Brown, Silverton City Manager, said their plans are to proceed with an increase of 100% compared to the 20% originally designed before the sale of the cannery came up. He said that property owners in the area had been contacted in an attempt to obtain land for the lagoon and that this had been quite a problem.

Mr. F.M. Smith, manager of Stayton Canning Co., said the cannery wants to cooperate in every way possible, and that they are in a position to curtail their operations this canning season if necessary, because they have canneries in two other locations that can take some of the load.

After some discussion, it was MOVED by Mr. Waterman, seconded by Mr. McPhillips and carried that inasmuch as the Canning Company has committed itself to limit production to present design facilities, and both it and the City will be working together toward an expansion of the plant which will be adequate by 1969, the recommended waste discharge conditions be adopted and the city of Silverton be issued a permit in accordance with the recommendations of the staff\* (See Exhibit D).

\* See files

CCA403

(d) Birds Eye Division, General Foods Corporation, Woodburn

A memorandum report was given by Mr. Lloyd Cox covering recommended waste discharge permit conditions for the General Foods Corporation, Birds Eye Division, fruit and vegetable processing plant located at Woodburn. \* (Exhibit E attached hereto and by this reference incorporated herein.)

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the General Foods Corporation, Birds Eye Division, be issued a discharge permit in accordance with the recommendations of the staff. \* (See Exhibit E).

(e) Coos Head Timber Company

A memorandum report was given by Mr. Lloyd Cox covering recommended waste discharge permit conditions for the Coos Head Timber Company pulp mill located near the mouth of Coos Bay. \* (Exhibit F attached hereto and by this reference incorporated herein.)

Mr. Wiley Smith of the Company was present and reported that because of poor market conditions the plant was shut down for 120 days in 1967.

After considerable discussion, it was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the Coos Head Timber Company be issued a discharge permit in accordance with the recommendations of the staff. \* (See Exhibit F).

(f) Crown Zellerbach, Wauna

A memorandum report was given by Mr. Lloyd Cox covering recommended waste discharge permit conditions for the Crown Zellerbach Corporation pulp mill located at Wauna. \* (Exhibit G attached hereto and by reference incorporated herein.)

It was MOVED by Mr. Meierjurgan, seconded by Mr. Harms, and carried that Crown Zellerbach Corporation, Wauna, be issued a discharge permit in accordance with the recommendations of the staff. \* (Exhibit G).

The meeting was recessed for lunch at 11:55 a.m. and reconvened at 1:20 p.m.

(g) Georgia-Pacific Corporation, Toledo

A memorandum report was given by Mr. Lloyd Cox covering recommended waste discharge permit conditions for the Georgia-Pacific Corporation pulp mill located at Toledo. \* (Exhibit H attached hereto and by reference incorporated herein.)

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that Georgia-Pacific Corporation, Toledo, be issued a discharge permit in accordance with the recommendations of the staff. \* (See Exhibit H).

\* See files

## (h) International Paper Company, Gardiner

A memorandum report was given by Mr. Lloyd Cox covering recommended waste discharge permit conditions for the International Paper Company pulp mill located at Gardiner. \*(Exhibit I attached hereto and by reference incorporated herein.)

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that International Paper Company, Gardiner, be issued a discharge permit in accordance with the recommendations of the staff. \*(See Exhibit I).

## (i) Menasha Corporation, North Bend

A memorandum report was given by Mr. Lloyd Cox covering recommended waste discharge permit conditions for the Menasha Corporation pulp mill located near North Bend. \*(Exhibit J attached hereto and by reference incorporated herein.)

Mr. Manders who was present from the company stated that the plant has been in operation since June of 1961.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the Menasha Corporation, North Bend, be issued a discharge permit in accordance with the recommendations of the staff. \*(See Exhibit J).

## (j) Tektronix, Beaverton

A memorandum report was given by Mr. Lloyd Cox covering recommended waste discharge permit conditions for Tektronix Corporation plant at Beaverton. \*(Exhibit K attached hereto and by reference incorporated herein.)

It was MOVED by Mr. Meierjurgan, seconded by Mr. Harms and carried that Tektronix, Beaverton, be issued a discharge permit in accordance with the recommendations of the staff. \*(See Exhibit K).

HOUSEBOATS

A staff report to the Sanitary Authority members regarding the status of compliance of the houseboat owners or residents with requirements of ORS 449.150 was read by E.A. Schmidt and has been made a part of the Authority's permanent files in this matter. Mr. Schmidt commented that in connection with item (a) under Recommendations, consideration of "at least primary treatment" would include the acceptance of septic tank and chlorinators. Mr. Weathersbee stated it would require a two-compartment system - a septic tank with a chlorinator and a detention tank that would provide the necessary holding time to achieve the disinfection.

\* See files

CCA403

Mr. Schmidt estimated that about two-thirds of the houseboat owners and operators had replied to the application for an extension of time which had been sent out by the Authority staff. He discussed briefly the plans of the various moorages shown on the maps attached to his report for complying with the deadline established previously by the Authority.

It was pointed out that some houseboats on the Columbia River will be involved in the airport expansion project. It involves roughly the area from N.E. 47th to N.E. 112th. The owners in that area are requesting an extension of time until January. The Chairman asked if there would be any movement of houseboats to that area if an extension were granted.

Mr. Fred Pearce, President of the Waterfront Owners and Operators Association, was present and said he did not think there would be.

It was MOVED by Mr. Mosser, seconded by Mr. McPhillips, and carried that on the Columbia River where sewers are imminent, applications be accepted which agree to provide primary treatment and chlorination by September 1, 1968, and full treatment as soon as sewers are installed or by July 1, 1972, whichever occurs first.

It was MOVED by Mr. Mosser, seconded by Mr. Harms, and carried that for the houseboats located in the area that would be affected by the proposed extension of the airport if by May 20, 1968, the Port of Portland does determine to go ahead with an expansion of the airport, and does commit itself to establish a new moorage location with adequate treatment facilities, the deadline be extended to January 1, 1969, or otherwise the September 1, 1968 deadline stands.

The Chairman instructed the staff to check the applications received and for those not replying by Monday, March 4, 1968, and with no indication of what their plans are, that enforcement proceedings be instituted.

#### PROPOSED INSPECTION TRIPS TO ALUMINUM MILLS

The Secretary said it might be advisable for the Board to visit the two existing aluminum plants in Oregon located at Troutdale and The Dalles in order to observe the facilities first hand which they now have for controlling atmospheric emissions. He said the staff had checked with the two mills and they are willing to have the Board visit them.

It was decided to visit the two plants on Friday, March 22. The staff will complete the arrangements and provide transportation from the State Office Building.

WIGWAM BURNERS

Mr. Patterson stated that the draft of the staff report was completed and the meetings in Medford with the industry have been scheduled for March 5 and 6.

He said the staff will conduct the meetings with some presentation by Dr. Boubel. All mill owners and operators of the burners in the area have been invited to attend. Invitations have gone out supplemented by special invitation from the Southern Oregon Pine Association to make sure there is a good attendance. It is hoped there will be about 30 or 40 each day. After the meetings there will be follow-up surveys by the staff of all of the mills in that area. The staff will get data on each particular installation and will finish the Medford area before proceeding on to the next one. The staff will follow the surveys with an enforcement program, taking the worst violators first.

The Chairman asked that the members of the Sanitary Authority be kept informed of these meetings so that anyone who may wish to attend can do so.

ASPHALT PAVING PLANTS

The Chairman asked if there were any problems with the proposed regulations for asphalt paving plants or is everything going smoothly.

Mr. Patterson said the staff had met with the Committee of Associated General Contractors and they asked that the staff draw up a report on suggested regulations, how to meet them, what the problems were, etc. This the staff did and 10 copies were sent to the Committee. He said the staff met with the Highway Department and they do not see any reason why they cannot meet the proposed regulations.

The Chairman asked Mr. Patterson when he anticipated the regulations would be ready.

Mr. Patterson said hopefully by the next meeting date.

WESTERN KRAFT CORPORATION

The Chairman asked how Western Kraft is coming along with its big smoke stack installation.

Mr. Patterson said the Company is tying in nine major sources, that all three of the power boilers, all three of the recovery furnaces and two of the three smelt dissolving tanks are already tied in, and that the additional smelt dissolving tank is to be tied in within another week.

The Chairman asked if any sort of a monitoring program is being set up to see how effective this might be.

CCA403

Mr. Patterson said not at the present time.

The Chairman suggested that this should be done.

Mr. Patterson reported also that the oxidation tower has been installed and tests show that it is apparently operating satisfactorily.

#### WAH CHANG CORPORATION

The Chairman asked if any problems were developing with Wah Chang Corporation.

Mr. Weathersbee said responsibility for air pollution control in that area now belongs to the Mid-Willamette Regional Air Quality Control Authority. With regard to water pollution, he said the engineering report is due prior to July 1, monthly reports are coming in as per permit conditions, the Company is monitoring all the parameters and submitting data, conditions of the stream are being reported, bio-assays are being run, and conditions have not been bad due primarily to high water in the stream so far this season. After the February data are received, the staff will make another inspection and evaluate the Company's progress at this point.

#### NUCLEAR POWER PLANTS

The Chairman said that in view of the prospects that several large nuclear power plants will be built in Oregon within the next 20 years, it is important that consideration be given now to the problems of water pollution that might be caused by the operation of such facilities.

Reference was made to a policy statement that had been released by the Secretary of the Department of Interior on February 8, 1968, regarding water quality degradation, copies of which had been mailed by the Secretary to the Authority members prior to this meeting. Consideration was also given to a statement made by the Pacific Northwest Pollution Control Council following a meeting on February 26 at Spokane and regarding the thermal pollution problems associated with nuclear power plants.

It was pointed out that on June 1, 1967, comprehensive water quality standards were adopted by the Sanitary Authority for all public waters of the State and that one section of those standards specifies that notwithstanding the general and special water quality standards, the highest and best practicable treatment and/or control of wastes, activities and flows shall in every case be provided so as to maintain dissolved oxygen and overall water quality at the highest possible levels and water temperatures, coliform bacteria concentrations, dissolved chemical substances, toxic materials, radioactivity, turbidities, color, odor and other deleterious factors at the lowest possible levels.

CC-403

The Chairman said he had the impression from newspaper reports that some of the proponents of nuclear power plants are assuming that as long as the temperature is not raised more than 2°F. or above 68°F., they will not have to do anything about reducing their heat load. He said he thinks the standard requiring the highest and best practicable treatment should govern in such cases and that each installation should be required to provide treatment from the start. It was pointed out that if each installation is allowed to raise the temperature 2° and there are several plants on the same river, there will be a real problem. He said the time to stop is right now. He suggested that the Authority adopt a firm policy in this matter which could be compatible with the one stated by the Secretary of the Interior.

The Secretary then pointed out that Mr. R.F. Poston, Regional Director of the Federal Water Pollution Control Administration with offices in Portland, has taken a very determined stand and has already advised the power interests of the necessity to reduce or control the heat loads that will be produced by nuclear power plants.

Mr. Weathersbee reminded the members that with once through cooling a 1,000 megawatt plant will require 2,000 cfs and will raise the temperature of this amount of water 16°F.

There was then considerable discussion of the matter by all members of the Authority.

It was MOVED by Mr. Mosser, seconded by Mr. Harms and carried that it is the consensus of the Authority that we interpret regulation 11-010 (Oregon Administrative Rules, Chapter 334, Division 1, Subdivision 1) which requires the highest and best practicable treatment and control for the maintenance of the highest possible levels of water quality, to be applicable to nuclear power plants, that we will certainly apply it to the Willamette River and intend to apply it and will seek cooperation of the state of Washington to apply similar standards to the Columbia River, that the power industry be so notified, and that if they wish and request a hearing in the matter, one will be held.

There being no further business, the meeting adjourned at 3:00 p.m.

The date for the next meeting is Friday, March 29, 1968.

Respectfully submitted,

Kenneth H. Spies  
Secretary

MINUTES OF THE 125th MEETING  
of the  
Oregon State Sanitary Authority  
March 29, 1968

The 125th meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:10 a.m., March 29, 1968, in Room 36, State Office Building, Portland Oregon. Members present were John D. Mosser, Chairman; B.A. McPhillips, Edward C. Harms, Jr., and Storrs Waterman. Mr. Herman P. Meierjurgan was absent due to a prior commitment.

Participating staff members present were: Kenneth H. Spies, Secretary; Arnold Silver, Legal Counsel; Ely J. Weathersbee, Deputy State Sanitary Engineer; Harold M. Patterson, Assistant Chief Engineer; Edgar R. Lynd, Supervisor, Municipal Waste Treatment Program; Lloyd O. Cox, Supervisor Industrial Waste Control Program; Harold L. Sawyer, Supervisor, Waste Discharge Permit Program; Fredric A. Skirvin, Associate Sanitary Engineer; Joseph A Jensen, Assistant Chief Sanitary Engineer; Fred M. Bolton and Leo L. Baton, District Engineers.

MINUTES

It was MOVED by Mr. Mosser, seconded by Mr. Harms, and carried that the minutes of the February 29, 1967 meeting be approved as prepared.

PROJECT PLANS

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the actions taken by the staff on the following 13 sets of project plans for water pollution control and 9 projects for air quality control for the month of February 1968, be approved.

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
2/5/68	Pendleton	Sewers- Youngs 2nd Addn.	Prov. app.
2/6/68	Pendleton	Sewers- Garden Lane Apt. Development	Prov. app.
2/6/68	Coos & Douglas Counties	Brush Control Spray Elliott State Forest	Prov. app.
2/8/68	Lebanon	Sewers- F St., 7th to 10th	Prov. app.
2/8/68	Lebanon	Preliminary Report S.W. Area Plan	Prov. app.
2/8/68	Lake Oswego	Springbrook Interceptor	Prov. app.
2/9/68	Gresham	Sanitary Sewers GINKGO Subd.	Prov. app.
2/9/68	Aumsville	Preliminary Report Sewers for Aumsville	Prov. app.

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
2/9/68	Gresham	Sewers- Aspen Highlands Unit V	Prov. app.
2/15/68	Beaverton	Sewers- Normandy Place	Prov. app.
2/20/68	Union Oil Co. Portland	Oil-Water separator- asphalt plant. Discharge to Will. R.	Approved
2/29/68	Toledo	Preliminary Report Sewerage Study	Prov. app.
2/29/68	Salem	Sanitary Sewers Low Rent Housing Pr. 8-3	Prov. app.

#### Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
2/8/68	Island City	Wigwam waste burner for Boise Cascade Particle Board plant	Cond. App.*
2/18/68	Columbia River	E.E. Dimmick's proposal to barging and burning of material on river barge near Goble	Not App. (Insufficient Information)
2/23/68	Mult. Co.	Proposal of Associated Meat Co. afterburner and odor controls	Not App.
2/23/68	Mult. Co.	Proposal of Pacific Meat Co. for afterburner and odor control	Not App.
2/23/68	Mult. Co.	Proposal for Western States Rend- ering Co. for afterburner and control facilities	Not App.
2/28/68	Mult. Co.	Portland Rendering Co. after- burner control facilities	Cond. App.
2/28/68	Mult. Co.	Wilbur-Ellis Co. odor control facilities	Cond. App.
2/28/68	Mult. Co.	Brander Meat Co., proposal for afterburner and controls	Cond. App.
2/28/68	Mult. Co.	Kenton Packing Co., proposal for odor control facilities	Cond. App.

\* Boise Cascade Corporation notified the staff that alternative methods of disposal had been found and the waste burner would not be built.

#### City of Ashland - Waste Discharge Permit

A copy of the recommended waste discharge permit conditions for the city of Ashland as presented at the meeting by Mr. Sawyer has been made a part of the Authority's permanent files in this matter.

Mr. Gary L. Boshears, Ashland City Administrator, was present and stated that a letter had been sent to the Sanitary Authority under date of March 19 asking that item 2(a) and 2(b) of the recommended Waste Discharge Permit be reconsidered. He asked that the allowable monthly average quantity of 5-day 20°C BOD in the effluent discharged to the creek be increased to 850 pounds per day from the 700 pounds per day specified in the recommended permit, and that the allowable monthly average quantity of suspended solids in the effluent be increased to 800 pounds per day from the 700 pounds per

CCA403

day recommended by the Authority staff. He said there are approximately two months out of the year in which it would be difficult to meet the standards proposed by the Authority due primarily to industrial wastes during the canning season. He asked that the Authority reconsider the limitations set and either return to a percentage treatment basis or increase the pounds per day limitation imposed upon the city.

The Chairman asked if it were more people that the city wants or is it the expansion of the canneries or other industrial plants that is putting pressure on the system.

Mr. Boshears said it is both. He said if the city wishes to encourage other industry, they would like to be able to do so; but with this type of limitation it would be questionable as to what the city could permit.

Mr. Waterman asked if the industrial cannery waste going into the city system was pretreated.

Mr. Boshears said it was screened but not otherwise pretreated.

Mr. McPhillips asked what the plans are to increase capacity of the plant.

Mr. Boshears said from a hydraulic standpoint the plant currently is at only about 51% of design capacity, but under these new standards even at 50% capacity there will be problems meeting the BOD poundage limitation.

The Chairman asked what the city is actually discharging at this point.

Mr. Lynd said in 1967 the city had one month in which it exceeded 700 pounds. It was 710 pounds for the month of October.

Mr. Boshears said they do not have a particular problem other than during the canning season.

Mr. Waterman asked if the city of Ashland had any ordinance relating to the maximum BOD which can be accepted by the sewer system.

Mr. Boshears said they did not at this time, but that the city has had very good cooperation from the industries and the canneries have gone to tighter screening. He asked if it were reasonable to have a standard set that is below what they are actually running at this time with no room for expansion. He said if this is on a 12-month basis, it will create a rather serious problem. He asked if the Authority had considered dealing directly with the industries that are causing the problems.

Mr. Harms said he believed the cities are bound to be the intermediate agents; that if the cities permit the industrial effluents to go through their sewer systems, then the cities have to be the intermediate agents.

Mr. Boshears said the city is not arguing about the future, but that their main concern is the limitation below what they are doing now under a proper design limitation. He said if the Authority wants the city to go to a poundage limitation, this is fine, but that the city would like the Authority to set the limitations where they are now.

Mr. Sawyer said the staff's calculations have been based on the flow in Bear Creek at the confluence with Ashland Creek as far as the dilution is concerned. He said the flow in Bear Creek is extremely low; consequently, the staff feels the presently assigned loads cannot be increased and it will be necessary to reduce concentrations of BOD and suspended solids in the effluent to 20 ml./liter in the future.

Mr. Boshears asked if the Authority would consider reopening the study of increasing the flow in Bear Creek. He said the main reason why the flow is so low is because of the upstream diversion of water for irrigation purposes. He said if the city of Ashland is going to be held to tight standards because of the low flow in Bear Creek, the state should look at why the flow in Bear Creek becomes so low at that time of the year.

It was pointed out the Authority does not have the power to control quantity.

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the permit be issued containing the conditions outlined in the draft presented by Mr. Sawyer with the exception that the following be deleted from condition No. 1: "(equal to at least 85% reduction of 5-day Biochemical Oxygen Demand (BOD) and Suspended Solids)".

City of Astoria - Waste Discharge Permit

A copy of the recommended waste discharge permit conditions for the city of Astoria as presented by Mr. Sawyer at the meeting has been made a part of the Authority's permanent files in this matter.

Mr. Loren Thompson, from Stevens, Thompson and Runyan, Engineers, was present to represent the city of Astoria at this meeting. He said the city council from Astoria met with the staff of the Authority on Tuesday, March 26, and discussed the contents of the recommended waste discharge permit. He said condition No. 1(a) of the permit stated that a copy of a signed contract with a qualified engineering firm must be submitted to the Authority by not later than April 15, 1968. Such a contract, he said, had already been signed and a copy would be turned over to the Secretary of the Authority today. Next he referred to condition 1(b)

CCA403

of the recommended permit which specifies that a preliminary study be completed and a report be submitted to the Authority by not later than December 31, 1968. Mr. Thompson said this was going to take quite a bit of time as they wanted to measure both the dry weather flow this summer and some of the wet weather flows next winter. He did not believe his engineering firm could do this in less than 15 months, and, therefore, requested that this date be changed to July 1, 1969.

Mr. Thompson said according to the recommended permit, detailed plans and specifications for the interceptor and treatment works were to be submitted and approved and financing arranged by not later than June 1, 1969. He said the city does not have the funds for it at the present time, but there is a possibility the engineering might be authorized immediately after completion of the preliminary study. The other possibility is that the city present a bond issue to the people within 3 to 4 months after the preliminary plans are completed. This he estimated would take about 3 to 4 months to accomplish. He said it will take probably 12 to 15 months to complete the final engineering plans; and construction of the interceptor system and treatment works will probably take another 12 to 18 months. It was indicated that the project could be completed without question by July 1, 1972, contrasted to the recommended deadline of December 31, 1970.

Reference was then made to item 2 in the recommended permit which states that the city shall not expand and extend its sewer system until the required sewage disposal facilities are installed. Mr. Thompson said in light of the aluminum plant coming to Astoria, additional homes are anticipated and as long as the city is progressing in accordance with the schedule established, the city would like authority to proceed with construction of necessary extensions as are essential for development of the community.

In conclusion, Mr. Thompson said the city of Astoria would like the Sanitary Authority to issue a policy statement by the early fall of 1968 on the water quality standards now adopted for the lower Columbia River that would evaluate and determine for the city what might be considered as the equivalent of secondary treatment with reference only to disposal in the Columbia River.

Mr. Harms asked the staff members if they were satisfied with the July 1, 1969 date for the preliminary study.

The Secretary said that when the conditions of the proposal were drafted, the staff had in mind that Astoria was the largest city in the State presently having no sewage treatment works and for that reason a tight time schedule was presented. He said the staff fully agrees that adequate time should be given to make a thorough study of existing conditions, so that the design which is worked out will be adequate and provide facilities which will accomplish what is necessary. He said it is, therefore, the opinion of the staff that extending the time for the preliminary study to July 1, 1969 is reasonable.

Mr. Harms said he thought the permit expiration date should be changed from December 31, 1970 to July 1, 1969, and then at that time the Authority could take a look at requirements for detailed plans and specifications and project completion.

Mr. Dale Curry, City Manager for Astoria, said that if no additions to the existing sewer system were allowed until the disposal works were completed, this would immediately halt development of 40 acres of private housing and the city needs every bit of development it can get.

The Secretary asked that rather than make it a blanket rejection for any further construction, would it be reasonable to provide that no additional extensions be made to the system without first obtaining written approval from the Sanitary Authority.

After further discussion, it was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that a waste discharge permit be granted to the city of Astoria containing points No. 1(a) as originally drafted; No. 1(b) revised to read as follows: "Preliminary study completed and report submitted to the Sanitary Authority by not later than July 1, 1969"; No. 1(c) revised to read as follows: "Financing arranged by not later than November 1, 1970"; No. 1(d) deleted; No. 2 revised to read: "The city shall not expand or extend its sewer system or allow any new or additional industrial waste discharges to the city's sewerage system until adequate waste treatment or control is provided without prior written approval of the Sanitary Authority"; Nos. 3 and 4 as originally drafted, and the permit to expire November 1, 1970.

Following the noon recess, it was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the above motion be amended to change the date for completion of financing to November 1, 1969, and to make the expiration of the permit November 1, 1969.

CCA403

Springfield Utility Board - Waste Discharge Permit

A copy of the recommended waste discharge permit conditions for the city of Springfield as presented at the meeting by Mr. Sawyer has been made a part of the Authority's permanent files in this matter.

Mr. Jack R. Criswell, Superintendent of the city of Springfield Utility Board, was present to represent the city and said that it is impossible for the treatment plant to achieve the 85% removal of BOD and suspended solids at all times due to the heavy infiltration into the old sanitary sewer mains and laterals during periods of heavy rainfall. He said they are studying the causes for this and are doing everything possible to come up to the 85% removal of BOD and suspended solids.

After considerable discussion, it was MOVED by Mr. Mosser, seconded by Mr. Waterman and carried that the permit for the city of Springfield be issued containing the conditions as recommended in the draft presented by Mr. Sawyer, except that the words "(equal to at least 85% reduction of 5-day BOD and Suspended Solids)" be struck from paragraph 1 and added to the end of paragraph 2 so the latter will read "The average daily flow of sewage through the treatment facilities during any dry weather month shall not exceed the design flow of 6.9 million gallons per day and shall provide treatment equal to at least 85% reduction of 5-day BOD and Suspended Solids."

Mr. Harms said he wanted to have it shown in the minutes that he took no part in the discussion, nor did he cast a vote in this matter.

Oak Lodge Sanitary District - Waste Discharge Permit

A copy of the recommended waste discharge permit conditions for the Oak Lodge Sanitary District of Clackamas County as presented at the meeting by Mr. Sawyer has been made a part of the Authority's permanent files in this matter.

Mr. Harvey Scott, Manager of the Oak Lodge Sanitary District, was present and said he would like to make a few comments about the proposed permit for his district. He said paragraph 3 states the BOD concentration of 375#/day shall not be exceeded and the suspended solids shall not exceed 375#/day. He said last year this was exceeded three months out of the year, two in the winter and one in August. The only thing in his opinion that can be done would be to look to the future in improving the plant. As to the chlorine tank, he said it was designed for 20 minutes detention at the time the plant was designed in 1959. The contact time

now required is 60 minutes. He said the sanitary district will be very happy to provide a larger contact tank, but are in a quandry what to do as some think that the district should be combined with the new service district in that area.

Mr. Lynd said, as Mr. Scott pointed out, there is approximately only 20 minutes of contact time and this results in very high bacterial counts in the effluent. He said a possible solution might be to construct an additional tank to operate in series with the present tank.

The Chairman asked why 60 minutes contact time is a condition of the permit unless it can be provided immediately.

Mr. Sawyer said the permit was worded to say that the effectiveness of disinfection shall be equivalent to 0.5 mg/l residual after 60 minutes contact time. This does not say that 60 minutes contact time has to be provided, but rather that disinfection that is equivalent to what is obtained under that detention time.

After some discussion, it was MOVED by Mr. Mosser, seconded by Mr. McPhillips and carried that the temporary permit of the Oak Lodge Sanitary District be extended for another month (until April 30, 1968) and that in the meantime the staff try to work out a satisfactory time schedule for any improvements that they feel are necessary or consult further with the staff of the district so there is no misunderstanding as to what is required.

#### ASPHALT PAVING PLANTS

Mr. Patterson presented a draft of proposed discharge standards and minimum requirements for hot mix asphalt plants as previously requested by the Authority members. He said the proposed regulation would establish special control areas and requirements as follows: "Section A: Special Control Areas: Hot mix asphalt plants located in the following designated areas of the state shall provide systems or processes for the control of atmospheric emissions from the stack which shall comply with the emission limits established by Table I and with Sections 21-011, 21-016 and 21-021 of Subdivision 1.

1. In all areas of air quality control regions established under Oregon Laws 1967, Chapter 425.
2. In all areas of the state within six miles of any incorporated city (measured from the city limits).
3. In all areas of the state within 1/2 mile of any residence.

CCA403

Section B: Other Areas of the State: Hot mix asphalt plants located outside of special control areas designated in Section A shall provide systems or processes for the control of atmospheric emissions having a minimum overall collection efficiency of 80% by weight and except for portable asphalt plants temporarily located at such distance from public areas or agricultural lands that particulate matter creates no hazard to human, animal or plant life, shall comply with Section 21-011, 21-016 and 21-021."

The proposal also included amendments to the definitions contained in OAR Chapter 334, Division 2, Subdivision 1, Section 21-006 by adding Hot Mix Asphalt Plant, Efficiency of Collection, Process Weight Per Hour, Dusts and Condensed Fumes.

Mr. McPhillips asked why portable asphalt plants are exempted.

Mr. Patterson said that all of the paving plants would have to have a minimum overall collection efficiency of 80%, but if they are located in a remote area, then they would be exempt from the smoke discharge, the suspended particulate and the particle fallout standards.

The members of the Authority questioned the wording of Section B.

Mr. Silver said that he would like the record to show that he did not draft the proposed regulation, and suggested that it be redrafted before a public hearing is held.

Mr. John Compton, representing Associated General Contractors, said they request that paving plants located in remote areas where water is unavailable for washing and there is nothing to pollute be exempt. He said they would also like to have sufficient time for correcting existing plants so that they will comply. He introduced Mr. Leonard M. Hallock of Babler Bros.

Mr. Hallock said that for the past two years he has done quite a bit of research, but as yet has found no feasible way of controlling emissions except using large amounts of water to clean up the air emitted from an asphalt plant. The bag type of collector has been looked into but so far they are not economically feasible. He said that where the plant is located within 6 miles of a corporate city limits or one-half mile of a residence, they know the standards have to be met, but they are asking that plants located in remote areas be exempt from the rigid controls.

It was MOVED by Mr. Mosser, seconded by Mr. Harms and carried that the wording of Section B be made grammatically correct, that the hearing be scheduled for the adoption of these regulations, that the information regarding operation costs for the construction year be presented to the hearings officer, and the effective date be determined by the hearings officer in this matter.

The meeting was recessed at 12:00 noon and reconvened at 2:00 p.m.

TAX CREDIT APPLICATIONS

Mr. Harold Sawyer presented memorandum reports dated March 29, 1968, regarding the following four tax credit applications, said reports having been made a part of the Authority's permanent files in this matter. After reviewing the same, the members took the actions as indicated below regarding them:

- (1) T-17 Weyerhaeuser Company, Springfield

It was MOVED by Mr. Waterman, seconded by Mr. Harms and carried that the Weyerhaeuser Company, Springfield, be issued a Pollution Control Facility Tax Certificate in the amount of \$10,991.

- (2) T-18 Weyerhaeuser Company, Springfield

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the Weyerhaeuser Company, Springfield, be issued a Pollution Control Facility Tax Certificate in the amount of \$18,630.

- (3) T-21 Crown Zellerbach Company, Wauna

It was MOVED by Mr. Waterman, seconded by Mr. Harms and carried that the Crown Zellerbach Company, Wauna be issued a Pollution Control Facility Tax Certificate in the amount of \$1,421,049.

- (4) T-13 Rosboro Lumber Company, Springfield

Mr. Sawyer said that Rosboro Lumber Company had submitted part one only of the application requesting a preliminary determination as to whether its facility qualifies as a pollution control facility. He stated further that the company has installed a hammer hog which made it possible for them to eliminate the use of the wigwam burner by converting all their wood waste to hog fuel. They are selling the hog fuel that is produced by this installation. He said there is some question as a result of this as to whether the principal purpose was for control of pollution or whether it is to recover a saleable and usable commodity.

CCA403

Mr. Patterson said the company had an existing operation that produced hog fuel for their own inplant use and some for sale, that the existing equipment was adequate for that purpose, but in the process of eliminating the wigwam burner and its source of emission added costs were incurred. He said the additional revenue obtained would provide roughly 10% return per year.

After considerable discussion by Mr. Skirvin, other staff representatives and Authority members, it was MOVED by Mr. Mosser, seconded by Mr. Harms and carried that the Pollution Control Facility Tax Certificate for the Rosboro Lumber Company be denied with permission to reopen it on full application if the company wishes to pursue it further.

TEMPORARY WASTE DISCHARGE PERMITS

1) New applications received since the February 29, 1968 meeting:

A memorandum report dated March 29, 1968, regarding the subject "New Applications Received Since the February 29, 1968 Meeting" was presented by Mr. Sawyer. He stated that since the last meeting 16 permit applications have been received, two of which will be delayed until plans for the installations are reviewed and approved.

The Chairman said that the Sanitary Authority should review all new developments of any kind before they go into operation. He requested that the Tahoe Development be stricken from the list as this is a new development.

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the balance of the temporary permit applications be approved and that such temporary permits expire on December 31, 1968, for the following 13 applicants: John Day, Lincoln City (Oceanlake District), Powers, Greenleaf Dairy, Kennedy, Bob M., Oliver Fuel Co., Parkrose Water District, Pendleton, Ready Mix, Smith's Pacific Shrimp Company, American Can Company, Camac Veneer, North Side Lumber Company and San Juan Lumber.

2) Extension of expiration date of existing temporary permits:

A Memorandum report on this subject dated March 29, 1968, and which has been made a part of the Authority's permanent files, was presented by Mr. Harold Sawyer. He said that the staff had been unable to complete action on the 80 applications listed in said report for which temporary permits were issued to expire March 31, 1968, and, therefore, he requested that the expiration date for these 80 applicants be extended to June 30, 1968.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the extensions be approved as requested and that, in addition, the temporary permits for Corvallis and Fir Cove Sanitation Corporation be extended for 30 days only.

WASTE DISCHARGE PERMIT FOR MAINLINE FOODS

A memorandum report dated March 29, 1968, and which has been made a part of the permanent files in this matter was presented by Mr. Harold Sawyer. He stated that the company had presented a preliminary proposal for waste disposal, that the staff had reviewed the proposal and is of the opinion that if this system is properly designed and operated, it will provide means of disposing of the food processing wastes without causing a nuisance or water pollution problems. He said the staff had prepared recommended permit conditions on this basis, outlining the criteria which the company would have to meet. One of the conditions of this recommended permit is that plans be submitted and approved and that construction be completed in accordance with the approved plans and placed in operation prior to the 1968 processing season.

The Chairman said he assumed with the tight restrictions placed on this waste discharge permit and with no discharges whatsoever to the waters during the summer, that the staff feels the Little Pudding River could not take any discharge.

Mr. Sawyer said that is correct.

The Chairman then asked the name of the creek into which the wastes would be released during the winter.

Mr. Sawyer said as near as the staff could determine it is Fitzpatrick Creek.

The Chairman asked if the winter discharge to Fitzpatrick Creek would violate the standards adopted for the waters of the state of Oregon.

Mr. Weathersbee said the staff believes not.

The Chairman then asked if there would be any problem with contamination of any ground water supplies from the irrigation or the storage.

Mr. Weathersbee said the staff believed not.

The Chairman then pointed out that in the letter sent to the company it was stated that the company would need more than 150 acres for the irrigation with the strong wastes during the summer period because of the low rate of absorption of the soils. He stated that the company in their letter said that they do not want to develop more than 150 acres and if

CCA403

they find the soil would not take the rate of application that would be involved, the company would store any excess flow in aeration and holding ponds.

The Chairman asked if such storage would be adequate or whether it would create odor or other problems.

Mr. Weathersbee said this question has not been completely resolved, and that the staff does not know exactly how much waste the company is going to generate.

Mr. Lloyd Clark from Clark and Groff Engineers, said that his firm has been assisting in the design of treatment and disposal facilities for these wastes from Mainline Foods. He said with regard to the materials that will go into the holding pond, they will be wastes from the bean process line which are the low strength wastes. High strength wastes will not go to the holding ponds but instead to irrigation. He said on the basis of past irrigation rates, there should be sufficient ground available; but if the present 150 acres are not enough, more can be provided.

The Chairman then said that the letter from the company indicated they think they ought to be allowed to discharge to the water during the summer under certain conditions. He asked if that was a firm position on the part of the company.

Mr. Clark said it would seem that if the waste waters are in a condition so as not to depreciate the stream, the company should be allowed to discharge to the creek during the summer.

Mr. McPhillips asked what the tests would be for determining whether this water would adversely affect the public waters and who will determine this.

Mr. Clark stated that it is the company's understanding no waters will be released unless prior approval is granted by the Sanitary Authority.

The Chairman then asked Mr. Clark if the company is fairly confident there would be no odor problem. He said the reason he asked this question is because this area has a summer camp that will be in use and the city of Salem will probably be experiencing subdivision development before too long. He asked if the cannery realizes that if they have odor problems they may be shut down.

Mr. Clark said he thought they understood this.

It was MOVED by Mr. McPhillips, seconded by Mr. Waterman and carried that provisional approval of the preliminary proposal submitted by the company be approved, and the recommended permit be issued with the expiration date being March 31, 1969.

WASTE DISCHARGE PERMITS - INDUSTRIAL

Memorandum reports dated March 29, 1968 covering recommended waste discharge permit conditions for the following industrial firms were presented by Mr. Lloyd Cox. These reports have been made a part of the Authority's permanent files in this matter.

- 1) Klamath Tallow Company
- 2) La Grande Concrete Pipe Co.
- 3) Rogers Asphalt Paving Co. - Island City
- 4) Rogers Walla Walla, Inc. - Athena
- 5) Rogers Walla Walla, Inc. - Milton-Freewater
- 6) Shippers Car Line - Portland
- 7) Weyerhaeuser Company - Klamath Falls

After thorough discussion, it was MOVED by Mr. Mosser, seconded by Mr. Waterman and carried that permits with the recommended conditions be approved for the first 6 applicants listed, except the expiration date for Klamath Tallow Co. be changed from December 31, 1968 to June 30, 1968, and that the Weyerhaeuser Company, Klamath Falls, permit be deferred and instead the present temporary permit for that company be extended to May 31, 1968 in order to allow time for inclusion of requirements for controlling debris in the Klamath River.

WASTE DISCHARGE PERMITS - DOMESTIC - NO TREATMENT

Memorandum reports dated March 29, 1968, covering recommended waste discharge permit conditions for the following 3 cities were given by Mr. Harold Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- 1) Nehalem
- 2) Reedsport
- 3) Bandon

After some discussion, it was MOVED by Mr. Mosser, seconded by Mr. Harms, and carried that the permit for the city of Nehalem be authorized as recommended by the staff; the permit for the city of Reedsport be authorized as recommended by the staff, but with a change of expiration date from December 31, 1969 to June 30, 1968; and that the permit for the city of Bandon be approved in the amended form recommended by the staff but with an expiration date of August 31, 1969.

WASTE DISCHARGE PERMITS - DOMESTIC - MISCELLANEOUS BASINS

Memorandum reports dated March 29, 1968, covering recommended waste discharge permit conditions for the following 7 applicants located in miscellaneous basins were given by Mr. Harold Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

CCA403

- 1) Medford
- 2) Jacksonville
- 3) Knoxtown Sanitary District
- 4) Umatilla
- 5) Rice Hill
- 6) Pilot Rock
- 7) Lake Owyhee Resort

After discussion, it was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the permits be granted for the above 7 applicants as recommended by the staff, with the exception that the expiration date for Medford be changed from June 30, 1970 to September 30, 1968; and the words in parentheses in condition No. 1 of the Jacksonville permit be deleted.

WASTE DISCHARGE PERMITS - DOMESTIC - MAIN STEM WILLAMETTE RIVER

Memorandum reports dated March 29, 1968, covering recommended waste discharge permit conditions for the following 8 applicants located on the Main Stem Willamette River were given by Mr. Harold Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- |                           |  |
|---------------------------|--|
| 1) Eugene                 | 6) West Linn (Bolton)                            |
| 2) Harrisburg             | 7) Society of Sisters of Holy Names (Marylhurst) |
| 3) Salem                  | 8) Portland (Tryon Creek)                        |
| 4) Newberg                |  |
| 5) West Linn (Willamette) |  |

The Chairman stated that the city of Salem by letter had requested that consideration of its permit be deferred until a later meeting of the Sanitary Authority. He stated that if this is done, the temporary permit would have to be extended.

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the temporary permit for the city of Salem be extended until April 30, 1968, and action on the permanent permit be delayed until the April meeting of the Sanitary Authority.

After some discussion, it was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the permits for the other 7 applicants be granted as recommended by the staff, with the exception that the words in the parentheses in condition No. 1 of the Eugene, Harrisburg, Newberg, West Linn-Willamette, West Linn-Bolton and Portland-Tryon Creek permits be deleted, and the following words be added to condition No. 2 of the Eugene and Portland-Tryon Creek permits; "and shall receive treatment equal to at least 85% reduction of 5-day BOD and suspended solids."

WASTE DISCHARGE PERMITS - DOMESTIC - TUALATIN BASIN

Memorandum reports dated March 29, 1968, covering recommended waste discharge permit conditions for the following 10 applicants located in the Tualatin Basin were given by Mr. Harold Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- 1) Cornelius
- 2) Tektronix (Domestic)
- 3) Upland Sanitary District
- 4) Sunset Valley Sanitary District
- 5) Oregon Regional Primate Research Center
- 6) Aloha Sanitary District
- 7) Hillsboro (Rock Creek)
- 8) Metzger Sanitary District
- 9) Tigard (Tigard Plant)
- 10) King City

After some discussion it was MOVED by Mr. Mosser, seconded by Mr. Waterman and carried that the permits for the above 10 applicants be granted as recommended by the staff with the exception that the words in the parentheses in condition No. 1 of the Cornelius, Sunset Valley Sanitary District, Hillsboro, Metzger Sanitary District and Tigard permits be deleted, that in the Upland Sanitary District permit in condition No. 4 the words "to negotiate towards achieving" be inserted in place of the words "on the following schedule to ultimately achieve" and before "a" insert "The Sanitary Authority will be advised of any departure from the following schedule," and that the expiration dates for the Cornelius, Sunset Valley Sanitary District, Oregon Regional Primate Research Center, Aloha Sanitary District, Hillsboro and Metzger Sanitary District permits be changed to March 31, 1970.

WASTE DISCHARGE PERMITS - DOMESTIC - WILLAMETTE BASIN TRIBUTARIES

Memorandum reports dated March 29, 1968, covering recommended waste discharge permit conditions for the following 12 applicants located on Willamette Basin Tributaries were given by Mr. Harold Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- |  |                                   |
|--|-----------------------------------|
| 1) Oakridge                                | 7) Stayton                        |
| 2) Creswell                                | 8) Monmouth                       |
| 3) Vira Corporation (Country Squire Motel) | 9) Independence                   |
| 4) Corvallis Mobile Home Park              | 10) Salem Dev. Co. (Illahe Hills) |
| 5) Scio                                    | 11) Dallas                        |
| 6) Mill City                               | 12) Willamina                     |

After some discussion, it was MOVED by Mr. Mosser, seconded by Mr. Harms, and carried that the permits for these 12 applicants be approved

CCA403

as recommended by the staff, with the exception that the words in parentheses in condition No. 1 of the Stayton, Monmouth and Independence permits and in condition No. 2 of the Creswell, Scio and Dallas permits be deleted.

WASTE DISCHARGE PERMITS - DOMESTIC - WILLAMETTE BASIN TRIBUTARIES

Memorandum reports dated March 29, 1968, covering recommended waste discharge permit conditions for the following 11 applicants located on Willamette Basin Tributaries were given by Mr. Harold Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- |  |                                   |
|--|-----------------------------------|
| 1) Housing Authority of Yamhill County | 7) Woodburn                       |
| 2) Lafayette                           | 8) Molalla                        |
| 3) Dayton                              | 9) Thunderbird Mobile Park        |
| 4) Yamhill                             | 10) Gladstone                     |
| 5) Mt. Angel                           | 11) Happy Valley Mobile Home Park |
| 6) Gervais                             |                                   |

After some discussion it was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the permits for these 11 applicants be granted as specified, with the exception of Mt. Angel, Woodburn and Molalla in which the words "equal to at least 85% reduction of 5-day Biochemical Oxygen Demand (BOD) and Suspended Solids" is to be removed from condition No. 1.

MULTNOMAH COUNTY CENTRAL SERVICE DISTRICT

The Chairman said that a letter had been received from Multnomah County Commissioner M. James Gleason asking that a decision be delayed until April 12, 1968, on the Central County Service District No. 3 Sewage Treatment Plant in order to give them more time to complete their arrangements for financing construction.

After some discussion it was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the March 31 deadline be extended to April 15, 1968.

MISCELLANEOUS

The Secretary said that the staff had been advised that the Federal Water Pollution Control Administration has recommended to the Secretary of the Department of the Interior that the Water Quality Standards of the state of Oregon for Klamath River and Goose Lake be approved.

The Secretary also reported that a letter had been received from Western Kraft Corporation regarding the status of their improvements at Albany for reducing air pollution.

There being no further business, the meeting was adjourned at 4:45 p.m.

The next meeting is scheduled for Friday, April 26, 1968, beginning at 10:00 a.m. in Room 36, State Office Building, Portland.

Respectfully submitted,

Kenneth H. Spies, Secretary

MINUTES OF THE 126<sup>th</sup> MEETING  
of the  
Oregon State Sanitary Authority

The 126<sup>th</sup> meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:07 a.m., April 26, 1968, in Room 36, State Office Building, Portland, Oregon. Members present were John D. Mosser, Chairman; B.A. McPhillips, Edward C. Harms, Jr., Herman P. Meierjurgan and Storrs Waterman.

Participating staff members present were: Kenneth H. Spies, Secretary; Arnold Silver, Legal Counsel; Ely J. Weathersbee, Deputy State Sanitary Engineer; Harold M. Patterson, Assistant Chief Engineer; Fred M. Bolton and Harold W. Merryman, District Engineers; Patrick D. Curran, Senior Sanitary Engineer; Edgar R. Lynd, Supervisor, Municipal Waste Treatment Program; Lloyd O. Cox, Supervisor, Industrial Waste Control Program; Harold L. Sawyer, Supervisor, Waste Discharge Permit Program; and Fred Katzel and Richard Reiter, Associate Sanitary Engineers.

CCA403

MINUTES

It was MOVED by Mr. McPhillips, seconded by Storrs Waterman and carried that the minutes of the March 29 meeting be approved as prepared.

PROJECT PLANS

It was MOVED by Mr. McPhillips, seconded by Mr. Waterman, and carried that the actions taken by the staff on the following 24 sets of project plans and reports for water pollution control and 5 projects for air quality control for the month of March, 1968, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
3/6/68	E. Salem Sewer & Dev. Dist. #1	Oak Park Subd. sewers	Prov. app.
3/7/68	Springfield	Lots 69, 70, 71 Adams Plat	Prov. app.
3/7/68	Chatnicka Hts.	Holding pond - addition to existing plant	Prov. app.
3/11/68	Lake Oswego	Mountain Park sewers	Prov. app.
3/11/68	Roseburg	Overlook Lane sewers	Prov. app.
3/11/68	Lincoln Co.	Prel. plan for Pixieland S.T.P.	Prov. app.
3/12/68	Canby	N. Amrine Rd. sewers	Prov. app.
3/14/68	Gladstone	Stonybrook Subd. sewers	Prov. app.
3/19/68	Beaverton	Sewers-S.P. property north of Allen Avenue	Prov. app.
3/20/68	Multnomah Co.	Columbia South Shore Area Report	Recommendations submitted
3/21/68	Aloha San. Dist.	Butternut Park Subd.	Prov. app.
3/21/68	Pendleton	Broadway Finance property sewer	Prov. app.

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
3/21/68	Cedar Hills	"C" Area sewers Berkshire #4 sewers	Prov. app.
3/21/68	Raleighwood S. D.	Raleigh West san. sewer	Prov. app.
3/25/68	Oak Lodge S.D. #1	Ext. B-8, B-8-6, G-1-2, B-1-1	Prov. app.
3/25/68	North Bend	Oak St. sewer & improvement district #102-67-A	Prov. app.
3/25/68	West Slope S.D.	Malcolm Glenn Lat. L-1	Prov. app.
3/25/68	Springfield	4th Add. to Rambling Acres	Prov. app.
3/26/68	Beaverton	Holle Ridge sewers	Prov. app.
3/26/68	Neskowin	Lagoon - Tahoe Development Co. 1 acre-discharge to Neskowin Cr.	Prov. app.
3/28/68	West Linn	Report on relocation of sewers	Approved
3/29/68	Bend	Engineering report-sewage col- lection and treatment	Approved w/ comments
3/29/68	Garibaldi	Engineering report	Approved w/ comments
3/29/68	Bend	N. Pilot Butte First Addn.	Prov. app.

#### Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
3/29/68	Eugene	T-13, Rosboro Lumber Co. Tax Relief Application for determina- tion of hogger installation, \$36,877.33	Not app.
3/29/68	Springfield	T-17, Weyerhaeuser Co., collection and scrubber equipment for vapors from evaporator hot well, \$10,991.00	Approved
3/29/68	Springfield	T-18, Surface condensers, ejectors, hot wells, and scrubber on Nos. 1, 2 and 3 multiple effect evaporator sets, \$18,630	Approved
3/29/68	Ashland	Ashland Sr. High School incinerator	Add. inf. req.
3/29/68	Oswego	McEwen Elem. School incinerator	Add. inf. req.

#### EAST CENTRAL MULTNOMAH COUNTY PROJECT

The Chairman reported that although for awhile it appeared that over \$1 million in federal grants might be lost, the city of Portland and Multnomah County finally reached a joint agreement for financing and constructing the East Central Multnomah County sewerage works project. Each has enacted ordinances and they are entering into an agreement to construct the Central East Multnomah County treatment plant under a 20-year mutual agreement as far as financing is concerned. The Chairman took the opportunity to praise the city and county for their cooperation and also Mr. Chandler and CRAG for working diligently to get this financing problem solved.

#### TAX CREDIT APPLICATIONS

Mr. Harold Sawyer presented memorandum reports dated April 26, 1968, regarding the following seven tax credit applications. These reports have

been made a part of the Authority's permanent files in this matter. After reviewing the same, the members took the actions as indicated below regarding them:

- (1) T-4 Publishers Paper Company, Oregon City Division, Oregon City (Effluent collection system, pump stations, clarifier and solids disposal systems)

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that Publishers Paper Company be issued a Pollution Control Facility Certificate bearing the actual cost figure of \$1,302,971.

- (2) T-8 Western Kraft Corporation, Albany Mill Division, Albany (Mill effluent filter beds)

Mr. McPhillips raised a question regarding the possibility of seepage contamination of any wells or water supplies in the area. Mr. Felix Hammack, Resident Manager of the Albany Mill, replied that the only wells in the area are those drilled by the company to use for charting the migration of the effluent in the ground. He said that as of last year they had detected only a few feet of lateral migration.

Mr. Mosser pointed out that it was his interpretation that if this facility were replaced by permanent facilities or became plugged, or for any reason were taken out of service, that would end the tax credit on this facility because it is only while it is operating that the credit is available.

It was MOVED by Mr. Waterman, seconded by Mr. McPhillips, and carried that the Western Kraft Corporation be issued a Pollution Control Facility Certificate bearing the actual cost figure of \$95,913.66.

- (3) T-9 Western Kraft Corporation, Albany Mill Division, Albany (Liquor and stack salvage systems and effluent conductivity monitor system)

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the Western Kraft Corporation be issued a Pollution Control Facility Certificate bearing the actual cost figure of \$15,032.23.

- (4) T-10 Western Kraft Corporation, Albany Mill Division, Albany (No. 3 oxidation tower)

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that Western Kraft Corporation be issued a Pollution Control Facility Certificate bearing the actual cost figure of \$55,591.87.

- (5) T-11 Western Kraft Corporation, Albany Mill Division, Albany (Oxygen and combustible monitors for No. 1 and No. 2 recovery furnaces)

CCA403

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that Western Kraft Corporation be issued a Pollution Control Facility Certificate bearing the actual cost figure of \$6,516.92.

(6) T-12 Western Kraft Corporation, Albany Mill Division, Albany (Gas chromatograph)

Mr. McPhillips asked whether this instrument was as sensitive as the human nose in detecting odorous emissions.

Mr. Patterson indicated that this instrument was one of those which approaches the sensitivity of the human nose.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that Western Kraft Corporation be issued a Pollution Control Facility Certificate bearing the actual cost figure of \$2,979.62.

(7) T-19 Weyerhaeuser Company, Paperboard and Packaging Group, Springfield (Gas chromatograph)

It was MOVED by Mr. McPhillips, seconded by Mr. Waterman, and carried that Weyerhaeuser Company be issued a Pollution Control Facility Certificate bearing the actual cost figure of \$6,849.00.

#### TEMPORARY WASTE DISCHARGE PERMITS

A memorandum report dated April 26, 1968, regarding the subject "New Applications Received Since the March 29, 1968 Meeting" was presented by Mr. Sawyer. He stated that since the last meeting 9 permit applications have been received, 1 of which is for a new installation and will be considered for issuance of a regular permit at this meeting.

It was MOVED by Mr. Waterman, seconded by Mr. Harms, and carried that temporary permits to expire on December 31, 1968, be issued to the following 8 applicants: Lincoln County School District - Toledo High School, City of Riddle, City of Myrtle Creek; Wyne Poultry Farm, Brownsville; Road and Drive-way Company, Newport; Cloverdale Creamery Association, Cloverdale; Smith's Pacific Shrimp, Garibaldi; and Zip-O-Log Veneer, Eugene.

#### WASTE DISCHARGE PERMITS FOR NEW INSTALLATIONS

(1) TAHO Development Company (Neskowin Lodge)

A memorandum report dated April 26, 1968, which has been made a part of the Authority's permanent files in this matter and which contains recommended waste discharge permit conditions was presented by Mr. Harold Sawyer. This report stated that plans had been submitted to the Authority for waste disposal facilities to serve the new Neskowin Lodge at Neskowin and that these plans were approved by the staff by letter on March 26, 1968.

The facilities consist of a 2-cell lagoon with total surface area of one acre, a pump station and chlorination facilities. Treated wastes will be discharged to Neskowin Creek.

Mr. Sawyer pointed out that the recommended expiration date of June 30, 1969, was established to allow time for the owner to complete construction of the facilities and to place them in operation and for staff evaluation prior to renewal of the permit.

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that a permit containing the conditions recommended by the staff be issued.

Mr. McPhillips stated that it was his understanding that under the conditions of the permit discharge to the waters of Neskowin Creek between November 1 and June 1 was unrestricted. It was pointed out that the conditions require that at all times the facilities be operated at maximum efficiency; however, during the winter months with cooler temperatures, it may not be possible to achieve efficiencies as high as can be reached in the summer period.

Mr. McPhillips also raised a question about condition No. 5 which states that this permit allows the construction of sewer extensions and connections thereto provided the plans and specifications are submitted to and approved by the Oregon State Board of Health and the Sanitary Authority as required by ORS 449.245 and ORS 449.395. He wanted to know what was intended by including this condition - whether there was a housing development going in or what sewer connections might there be to this facility. It was pointed out by Mr. Katzel that there are two proposed subdivisions in the area. It was also noted that the quantity that can be connected to this facility before expansion of the facilities is required is minimal; however, some additional connections can be allowed.

Mr. McPhillips asked were there any other sewage systems in the Neskowin area.

It was pointed out that no other systems exist; all development is presently on septic tanks.

Mr. McPhillips then asked whether there was any raw sewage going to the waters of Neskowin Creek.

Mr. Katzel pointed out that as far as he knew none was.

Mr. Meierjurgan asked whether the staff had any knowledge of the soil in that area. He wondered whether the facility was located in gravel adjacent to the stream.

Mr. Katzel pointed out that the facility would be located above the old highway at a distance 700 or 800 feet from the creek, and that seepage into the creek bed would not be a problem.

CCA403

(2) Holly Hills, Inc. (Golden Door Motel, Wilsonville)

A memorandum report dated April 26, 1968, which has been made a part of the Authority's permanent files in this matter and which contains recommended waste discharge permit conditions was presented by Mr. Sawyer. He stated that a treatment plant of a proprietary nature has been installed to serve a motel and restaurant near Wilsonville, that the effluent has been disposed of by land irrigation for some months, but due to lack of suitable area for this purpose, permission has been requested to discharge the effluent to the Willamette River, and that plans and a performance bond of \$9,000 have been posted. He said, however, that it is the desire of the staff to observe further the operation of this plant before considering approval for this location.

The recommended permit conditions state that no waste shall be discharged to the waters of the state without said wastes first receiving treatment adequate to meet the following standards:

- (a) The monthly average effluent BOD concentration shall not exceed 30 milligrams per liter.
- (b) The monthly average effluent suspended solids concentration shall not exceed 30 milligrams per liter.
- (c) At all times the liquid effluent from the treatment facility shall receive adequate disinfection prior to discharge.

The recommended permit conditions also limit the flow through the existing facilities to the design flow of 0.012 mgd, and restrict the addition of any new source of waste without prior written approval from the Sanitary Authority.

It was pointed out that the expiration date has been set for September 30, 1968, to allow the staff time to further evaluate this facility.

It was MOVED by Mr. McPhillips, seconded by Mr. Waterman and carried that the recommended permit be issued with the expiration date being September 30, 1968.

(3) Oregon Trail Company (Pixieland)

A memorandum report dated April 26, 1968, which has been made a part of the permanent files in this matter and which contains recommended waste discharge permit conditions was presented by Mr. Sawyer. He stated that the Oregon Trail Company is presently developing a recreational park approximately 5 miles north of Lincoln City. Final plans for waste collection and treatment facilities have been submitted to the Sanitary Authority for review and

approval. The facilities consist of a gravity collection system, pump station, extended aeration treatment plant and an outfall line to the Salmon River. The staff is reviewing the plans at this time.

The recommended waste discharge permit conditions require the facilities to be operated at maximum efficiency at all times and that the BOD and suspended solids concentrations in the effluent not exceed 30 m/l. The conditions also call for adequate disinfection at all times.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that a permit containing the recommended conditions be issued to the Oregon Trail Company.

#### WILLAMETTE BASIN REPORT

Mr. Weathersbee briefly reviewed information previously forwarded to the Sanitary Authority members regarding the basis for permit restrictions for Willamette basin cities. He pointed out that on June 1, 1967, the Sanitary Authority had adopted water quality standards for the main stem of the Willamette River. He presented a graph with dissolved oxygen levels and waste loads plotted on a river mile scale. This graph showed a comparison between the established dissolved oxygen standards for the main stem of the Willamette River and the actual values observed during the month of August 1967. The significant points were as follows:

- (1) The dissolved oxygen levels were higher than the established standard at all times above the city of Corvallis.
- (2) Between Albany and Salem the dissolved oxygen levels were below the established standard in nearly all samples.
- (3) Between Salem and Oregon City the dissolved oxygen level was greater than or equal to the standard on the average with minimum values falling below the standard.
- (4) Dissolved oxygen levels were below the established standard in the lower Portland harbor.

A bar graph representing the major waste loads discharged to the river was also shown. These loads were from the city of Springfield, city of Eugene, Evans Products Company, city of Corvallis, city of Albany, Western Kraft Pulp and Paper Company, Boise Cascade Pulp and Paper Company, city of Salem, city of Newberg, Publishers Pulp and Paper Company at Newberg, Crown Zellerbach Pulp and Paper Corporation at West Linn, Publishers Pulp and Paper Company at Oregon City and the Portland harbor load.

CCA403

Mr. Weathersbee pointed out that programs are under way to reduce the magnitude of the loads discharged at all the pulp and paper mills, Evans Products Company and the city of Albany.

He then presented a second curve plotting the same data, dissolved oxygen and waste discharge loads, on a flow-time scale; the flow time being measured in days from Multnomah Channel. This graph presented an entirely different picture. It indicated that the major loads are concentrated in the upper reaches of the river when viewed on a flow-time basis, and showed that the loads from Springfield reach Newberg in about three days, those from Albany reach Newberg in about two days and those from Salem reach Newberg in one day. It takes these waste loads another seven days to flow from Newberg to the Multnomah Channel. These wastes remain in the river to exert their oxygen demand during this period. In essence the loads discharged in the upper river are rapidly transported to the lower river where they exert their oxygen demand.

A table was then presented to show the major municipal loads discharged to the Willamette River. These are Eugene, Corvallis, Albany and Salem. For each of these cities, the values shown were 1966 population, sewage treatment plant design capacity in population equivalent units (broken down into domestic and industrial waste components), connected load during the peak period in 1967 in population equivalent units, recommended waste discharge permit limitations in population equivalent units, ratio of discharge allowed by permit (expressed in P.E. units) to the 1966 population and the percentage of design capacity of facilities utilized. The data indicated that 15% of the designed capacity of the Salem treatment facilities is intended for domestic load with 85% being for industrial wastes. The data clearly indicated that the treatment facilities in these cities are rapidly becoming industrial waste treatment complexes. The figure also indicated that 73% of the designed capacity of the Salem facilities was utilized in 1967. The values for Eugene, Corvallis and Albany were 60%, 49% and 530% respectively. The city of Albany is presently constructing facilities to remedy this overloaded situation. The assigned waste discharge permit limitations on a population equivalent per capita basis range from 0.99 for Salem to a low of 0.66 for Eugene. This means that the allowed discharge load, based on oxygen demand, from the city of Salem under the recommended permit will be equivalent to discharging the wastes from the population of the city without treatment. Mr. Weathersbee also pointed out that the Albany plant which is presently

under construction is designed to serve a population equivalent of 232,200 and that the connected peak load during 1967 was 207,000. This indicates that the improved plant will be loaded very nearly to its design capacity when it is completed and placed in operation.

A final graph was presented which showed the total raw waste load generated and the component discharged, the industrial raw load generated and the component discharged and the municipal raw load generated and component discharged for the years 1957, 1967 and projected data for 1972. He pointed out that the total raw load is not expected to increase too much due to the pending closure of the Crown Zellerbach sulphite pulping operation at Oregon City. He further pointed out that a 90% reduction overall will be required to meet the established water quality standards and that the present program of the Sanitary Authority is set up to achieve 92% reduction of industrial loads and 85% of municipal waste loads based on the domestic sewage component only. That portion of the total municipal load which is industrial will have to be treated to reductions in the 90% bracket if standards are to be met.

The Chairman remarked that the presentation given by Mr. Weathersbee was very helpful. He commented that we are constantly concentrating on dissolved oxygen for very good reasons, but that similar presentations regarding bacterial levels, suspended solids levels, bottom deposits, etc. would be very helpful in providing a clearer picture of where we are headed and where the problem areas are.

#### WASTE DISCHARGE PERMITS - WILLAMETTE BASIN

Memorandum reports dated April 26, 1968, covering recommended waste discharge permit conditions for the following 10 applicants were given by Mr. Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- |                                |  |
|--------------------------------|--|
| 1) Salem                       | 6) Willamette Lutheran Homes           |
| 2) Corvallis                   | 7) Lane County Parks Dept. - Baker Bay |
| 3) Oak Lodge Sanitary District | 8) Lane County Parks Dept. - Camp Lane |
| 4) Amity                       | 9) Lane County Parks Dept. - Lowell    |
| 5) Pleasant Valley School      | 10) Fir Cove Sanitation Corporation    |

In discussion Mr. Harms asked whether anyone from Salem or the League of Oregon Cities was present. No representatives were present.

The Chairman pointed out that he had met with some of the mayors shortly after the last Sanitary Authority meeting. He stated that part of their attitude is explained by lack of understanding. Part of it is just

CCA403

the cost problems that they face in meeting the standards and part of it is not yet being convinced the people want clean rivers. So far as the misunderstanding is concerned, he stated he thought what they are afraid of is that the Sanitary Authority is making it very tough for them to attract industry but that industry would be able to go outside the city boundaries and come out better. They wondered what would be required if a new pulp mill wanted to locate in Corvallis or Albany instead of outside where they would have to provide their own waste treatment. He said that when he pointed out to them that the Authority was requiring something like 92 to 95% treatment for the new Halsey pulp plant, compared to only 85% for the cities, they began to get the picture - that it is really tougher on industry as a separate entity. He pointed out that what we are starting to do is apply that same standard to industry within the city.

The Chairman went on to say that part of the cities' concern, of course, is their cost problem. They are worried about the fact that if they build a plant with certain design capacity now, it begins to get obsolete too fast. Basically, looking ahead, they can see if we are going to get the river cleaned up and then hold it there, we are going to have to move from 85% to higher degrees of treatment.

Mr. Harms commented that he felt that the Chairman's meeting with the mayors was very helpful.

The Chairman stated that there are some real problems to be solved and that the permits will give more accurate information to work with. He stated that every time a new use comes into the area we cannot go back to everyone who already has a permit and ask them to tighten up one notch, but instead we are going to have to project probable increases and set our standards high enough so that we can accommodate a reasonable growth for a period of 5 or 10 years so that people can build plants and not have to count on remodeling them the next day. He said this will take some careful forecasting on the part of the Authority.

The Chairman asked how close the Oak Lodge treatment plant is to capacity.

Mr. Lynd pointed out the plant was right at capacity in terms of population equivalent.

The Chairman inquired as to the reason for the condition allowing additional connections to the system if they were near capacity, particularly when the permit does not call for a program or study for increasing the capacity.

Mr. Lynd pointed out that the expiration date was a relatively short time off to allow re-evaluation of their progress, and also that they have employed an engineer to study the possibilities of either phasing out the plant and going with Clackamas County, or enlarging it.

It was MOVED by Mr. Harms, seconded by Mr. Mosser and carried that the expiration date of the Willamette Lutheran Homes permit be changed to December 31, 1968.

Mr. Waterman asked when an area-wide system would be available to serve the Fir Cove installation.

Mr. Merryman pointed out there has been an area survey prepared by the engineering firm of CH<sub>2</sub>M regarding the extension of sewer service to this area. The results of this study are being evaluated by Lane County Planning people at this time.

Mr. Harms pointed out that the area would be served either by the city of Eugene or a Lane County Service District.

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that the ten recommended permits be granted as amended.

WASTE DISCHARGE PERMITS - TUALATIN BASIN

Memorandum reports dated April 26, 1968, covering recommended waste discharge permit conditions for the following five applicants located in the Tualatin basin were given by Mr. Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- |                       |                                   |
|-----------------------|-----------------------------------|
| 1) Beaverton          | 4) Multnomah County (Fanno Creek) |
| 2) Forest Grove       | 5) Tigard (Pinebrook)             |
| 3) Laurelwood Academy |                                   |

The Chairman inquired as to when the study of the Tualatin basin would be completed.

Mr. Curran pointed out that this study should be done sometime around the first of 1969.

The Chairman questioned the expiration date of some of the permits, pointing out that it may be desirable after reviewing the master plan for the basin to place a condition in these permits that the permittee adopt the plan by a certain date.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the expiration dates for the permits for Beaverton, Forest Grove and Laurelwood Academy be changed to March 31, 1969.

CCA403

The Chairman also expressed the desire that the expiration date for all future permits for the Tualatin basin be set so as to expire on or before March 31, 1969.

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that these five recommended permits be granted as amended.

WASTE DISCHARGE PERMITS - EASTERN OREGON

Memorandum reports dated April 26, 1968, covering recommended waste discharge permit conditions for the following six applicants were given by Mr. Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- |             |               |
|-------------|---------------|
| 1) Baker    | 4) Heppner    |
| 2) Boardman | 5) Ontario    |
| 3) Elgin    | 6) Prineville |

After some discussion, it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the permits for these six applicants be granted as recommended.

DATE FOR NEXT MEETING

The Chairman pointed out that it might be desirable in the near future to have a meeting with the staff to discuss legislation, budget needs, program needs, etc. He felt this meeting should be in addition to the regularly scheduled meeting for handling permits.

It was decided to move the regular meeting from the 31st of May to the 24th of May and schedule a conference with the staff for the 23rd of May.

At this point in the meeting the Secretary was excused to attend a meeting of the State Emergency Board in Salem.

WASTE DISCHARGE PERMITS - MISCELLANEOUS BASINS

Memorandum reports dated April 26, 1968, covering recommended waste discharge permit conditions for the following nine applicants were given by Mr. Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- |                 |                                     |
|-----------------|-------------------------------------|
| 1) Vernonia     | 6) North Roseburg Sanitary District |
| 2) Rainier      | 7) Roseburg                         |
| 3) Cannon Beach | 8) Talent                           |
| 4) Tillamook    | 9) Josephine County School District |
| 5) Newport      |                                     |

The Chairman pointed out that Rainier and other cities in similar conditions should be notified that if they wait until 1970 to get their plans under way, as called for in the permit, and file a federal grant application, they may not get a grant by the time the plant has to be

completed in 1972. He pointed out that it is in their best interest to get their plans done as soon as possible in order to be in a favorable position for obtaining grants.

The city of Tillamook, by letter, had submitted a schedule proposing completion of its needed facilities by mid-summer 1969, rather than by September 30, 1968, as recommended in the permit. It was pointed out that the city was informed of the September deadline sometime around December 1966. Representatives of the city were not present.

Mr. Harms pointed out that it did not appear to be possible to improve much on the schedule submitted by the city.

The Chairman agreed but pointed out that it might be desirable in redesigning a point system for allocating federal grants to give demerits for failure to comply with an established schedule, thereby dropping them to the bottom of the list. He commented that in his opinion one of the toughest jobs in the future will be the grants and grant administration, and that the priority point system should be revised to consider among other things how much the applicant has received in grants in the past, how much local effort they had made and even whether or not they comply with schedules.

It was MOVED by Mr. Harms, seconded by Mr. Mosser, and carried that the time schedule submitted by the city of Tillamook be incorporated into condition No. 1 of their permit, but with the specific dates added as follows:

1. Retain consulting engineer to prepare final plans and specifications May 1, 1968.
2. Submit P.L. 660 Application - June 15, 1968.
3. Complete final plans and specifications - October 1, 1968.
4. Present necessary bond issue to voters - December 1, 1968.
5. Award construction contract - March 15, 1969.
6. Complete construction by July 1, 1969.

It was MOVED by Mr. Mosser, seconded by Mr. Waterman, and carried that the expiration date of the Newport permit be changed to March 31, 1970.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that these nine recommended permits be approved as amended.

PROPOSED TERTIARY WASTE TREATMENT PLANT FOR THE CITY OF TUALATIN

A memorandum report prepared by Joseph A. Jensen, Chief, Water Pollution Control Program, regarding a proposed tertiary waste treatment plant for the city of Tualatin was reviewed by the members.

CCA403

Mr. Harms pointed out that he noted the recommendations of the staff were that the application be granted Sanitary Authority approval subject to the submission and approval of complete final plans and specifications for the treatment plant, construction of a lateral sewage collection system for the city and issuance of a waste discharge permit.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the staff recommendations be adopted.

STATUS REPORT - LEGAL ACTION FILED AGAINST THE STATE SANITARY AUTHORITY AND AMERICAN CAN COMPANY (Halsey)

Mr. Silver reported that the Circuit Court of Lane County had sustained the Authority's motion to quash service of process upon the Sanitary Authority and the American Can Company, and therefore the present status is as if no legal action had been filed at all.

Mr. Harms asked if the Authority had been served again and Mr. Silver replied that it had not.

The Chairman said the complainants would have to have another meeting before taking further legal action.

The meeting was recessed at 12:00 noon and reconvened at 1:15 p.m.

WASTE DISCHARGE PERMITS - INDUSTRIAL

Memorandum reports dated April 26, 1968, covering recommended waste discharge permit conditions for the following nine applicants were given by Mr. Lloyd Cox. These reports have been made a part of the Authority's permanent files in this matter.

- |                                       |   |
|---------------------------------------|---|
| 1) Amalgamated Sugar Co.              | 6) Lininger & Sons, Medford               |
| 2) Boise Cascade Corporation, Medford | 7) Sheridan Pressure Treated Lumber, Inc. |
| 3) Brawand Custom Meats               | 8) Willamette-Western Corp. (Ivon)        |
| 4) Cascade Eggs, Inc.                 | 9) Willamette-Western Corp. (River)       |
| 5) Kummer Meat Co., Inc., Hillsboro   |   |

Mr. Cox pointed out that during the last operating season the Amalgamated Sugar Company installed a closed system for the flume waters which carried beets into the plant. This step resulted in approximately 60 to 70% reduction in BOD discharged and a 95%+ reduction in suspended solids. It was the opinion of the staff that further waste load reductions can be accomplished by in-plant controls. The waste presently discharged consists largely of cooling water, contaminated with spillage from the flume system and other sources. Mr. Cox reported that the BOD discharged was approximately 25,000 lbs/day. Suspended solids in the effluent is approximately 11,000 lbs/day, pH 8.8 and a temperature of approximately 40° C. (approximately 100° F.).

CCA403

Mr. Bolton pointed out that the company's operating season is from October 1 to March 1. He said that approximately 3 years ago the company connected their domestic sewage to the Nyssa sewage treatment plant. He further stated that they now have controlled their waste streams through in-plant methods to the point where they can be treated and that further evaluation is needed to determine what steps to take next. For this reason the permit was written to require extensive monitoring and continuance of a program to further reduce the discharges by in-plant controls. Also, during this period the staff will plan to monitor the water quality in the river to assist in determining what additional treatment will be required. Mr. Bolton stated further that the company has cooperated very well with the staff in recent years.

Mr. Patterson pointed out that the major problem during the time he was district engineer in the Pendleton district, resulted from the aesthetics of the solids deposit at their discharge point in the river and the stream rising from the water. He also indicated that it was difficult to monitor any effect of the wastes on the water quality downstream due to the low temperatures, DO saturation, etc.

The Chairman asked whether the full 17 million gallons per day of waste discharge had a temperature of approximately 100° F.

Mr. Bolton answered that there are three separate discharges totaling approximately 14 MGD at present, two of which are predominantly cooling water. The temperature of the third stream which makes up less than half the waste flow is approximately 50° F.

It was MOVED by Mr. Mosser, seconded by Mr. Waterman, and carried that the expiration date on the recommended permit for Brawand Custom Meats be changed to March 31, 1973.

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that these 9 recommended permits be approved as amended.

STATUS REPORT - POLLUTION OF THE SANDY RIVER NEAR TROUTDALE

Mr. Silver presented a status report on the matter regarding the pollution of the Sandy River near Troutdale.

He stated that on April 16 a hearing was held under the direction of Marion B. Lamb, hearings officer, regarding the pollution of the Sandy River near Troutdale. Mr. Silver stated that the hearings officer has informed him that the Sanitary Authority carried its burden of proof in the matter and established the existence of pollution. Mr. Silver is now

waiting for a copy of the transcript. The order proposed by him will be presented to the Sanitary Authority for final action. He said that two of the individuals who were allegedly contributing to the pollution of the stream installed a septic tank and drainfield in February but did not notify the Authority about it.

STATE GRANT FOR MID-WILLAMETTE VALLEY REGIONAL PROGRAM

A memorandum report dated April 26, 1968, was presented by Mr. Patterson. This report has been made a part of the Authority's permanent files in this matter.

Mr. Patterson reported that the staff had received and reviewed the Federal Clean Air grant application of the Mid-Willamette Valley Regional Air Pollution Authority for the period July 1, 1968, to June 30, 1969. The application includes the request for state matching funds in the amount of \$9,024.00. He pointed out that the state matching funds provided by the Legislature for the biennium to support local and regional air quality programs amounts to \$90,680 after cuts. To date \$48,306 have been allocated.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that monies be allocated to the Mid-Willamette Valley Air Pollution Authority for the period July 1, 1968, to June 30, 1969, in the amount of \$9,024.00 in accordance with Oregon Laws 1967, Chapter 425.

The Chairman expressed the attitude that the staff should carefully review these applications and point out any significant items of interest to the board before action is taken. He specifically mentioned such items as buying equipment where the service could be provided better through the State Laboratory or a joint program, or if the regional program salaries are getting too far out of line with state salaries, or items of this type.

Mr. Patterson reported that so far the regional authorities have been cooperating closely with the state on such items as budgeting, salaries, etc.

Mr. Patterson pointed out that since no guideline presently exists, the staff has simply been trying to use their best judgment in reviewing these applications.

The Chairman stated that he thought that was the soundest thing to do. He further stated that he thought the staff should be thinking about where it could cooperatively do laboratory work for all the regions in the state on single equipment or man basis, maybe joint recruiting programs when it comes to staff and certainly some parity between salaries so that the different programs are not raiding each other.

NATIONAL AIR SAMPLING NETWORK ASSISTANCE CERTIFICATE

Mr. Weathersbee reported that the staff is the recipient for the state of Oregon of a certificate of appreciation for valuable assistance in gathering basic information on air pollution through participation in the National Air Sampling Network. He stated that this has been going on for 8 or 10 years. He said most of the work is being done by Robert Percy of the air quality section and his assistants and George Toombs of the Radiological Environmental Program. It was signed by John Gardner, Secretary, William H. Stewart, M.D., Surgeon General and Vern McKenzie, Chief Division of Air Pollution.

RESOLUTION BY JACKSON COUNTY CHAPTER OF IZAAK WALTON LEAGUE OF AMERICA

It was MOVED by Mr. Harms, seconded by Mr. Waterman and carried that this resolution be filed.

OTHER BUSINESS

In closing discussions the Chairman asked whether or not a date had been set for the asphalt hearings. Mr. Silver reported that we are still drafting the regulations and a hearing date has not been set. He felt that the hearing on the asphalt plant regulations could be scheduled sometime near the first of June.

Mr. Silver also reported that there will be a hearing before a hearings officer regarding meat rendering plant regulations on May 6.

Mr. McPhillips asked what the status of Mr. Bunn's situation at Grand Ronde was at this time.

Mr. Katzel reported that Mr. Bunn had successfully diverted waste flows from the river on this date. He said the wastes are no longer going to Rock Creek, but instead are going to a septic tank drainfield system. A contempt of court hearing proceedings was held on April 15 and Mr. Bunn was given essentially a week and a half to complete the work.

Mr. Waterman asked how many permits have been issued so far out of the 609 applications submitted.

Mr. Sawyer reported that prior to this meeting 83 permits had been issued.

Mr. Waterman stated that he thought progress was really being made.

The Chairman indicated that if necessary an extra meeting could be held at any time to act on permits if it is required.

The Authority members expressed the desire to make the May 23 conference with the staff an afternoon session with further discussions

CCA403

in the evening if necessary. The regular public meeting on the 24th was set for 9:30 a.m.

There being no further business, the meeting adjourned at 1:55 p.m.

The next meeting is scheduled for Friday, May 24, 1968, beginning at 9:30 a.m. in the Auditorium of the Public Service Building, Portland.

Respectfully submitted,

Kenneth H. Spies, Secretary

COPIES

MINUTES OF THE 127<sup>th</sup> MEETING

of the

## Oregon State Sanitary Authority

The 127<sup>th</sup> meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 9:30 a.m., May 24, 1968, in the second floor auditorium of the Public Service Building, 920 S.W. 6<sup>th</sup> Avenue, Portland, Oregon. Members present were: John D. Mosser, Chairman, B.A. McPhillips, Edward C. Harms, Jr., Herman P. Meierjurgan, and Storrs Waterman. Participating staff members present were: Kenneth H. Spies, Secretary; Arnold Silver, Legal Counsel; Ely J. Weathersbee, Deputy State Sanitary Engineer; Harold M. Patterson, Assistant Chief Engineer; Fred M. Bolton, Leo Baton, James Sheetz and Kent Ashbaker, District Engineers; Edgar R. Lynd, Supervisor, Municipal Waste Treatment Program; Lloyd O. Cox, Supervisor, Industrial Waste Program; Harold L. Sawyer, Supervisor, Waste Discharge Permit Program; and Fred Katzel, Richard Reiter and Ernie Schmidt, Assistant District Engineers.

MINUTES

It was MOVED by Mr. Waterman, seconded by Mr. Meierjurgan, and carried that the minutes of the April 26 meeting be approved as prepared.

PROJECT PLANS

It was MOVED by Mr. Meierjurgan, seconded by Mr. Waterman, and carried that the actions taken by the staff on the following 17 sets of project plans and reports for water pollution control and 3 projects for air quality control for the month of April 1968 be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
4-1-68	Netarts - Oceanside Sanitary District	Engineering Report, Sewerage System	Approved
4-5-68	Eugene	Miscellaneous sewers (4)	Approved
4-5-68	Milwaukie	Pump station at Omark Industry	Approved
4-5-68	Oak Lodge Sanitary District #1	Laterals D-5-1 & B-1-1	Prov. app.
4-5-68	Oak Lodge Sanitary District #2	Princess Homes Co. Lat. 2C-2-2	Prov. app.
4-5-68	Klamath Falls	Mt. View Sanitary Sewer #2 Sewer Unit #43	Prov. app.
4-5-68	Beaverton	S.E. area of Westbrook Subd.	Prov. app.

CCA403

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
4-8-68	West Linn	Report on Robinwood sewers	Approved
4-12-68	Forest Grove	Sewers for Valley View Addn.	Prov. app.
4-12-68	Beaverton	Sewers for Hyland Hills #5	Prov. app.
4-16-68	West Linn	Caufield St. sewer ext.	Prov. app.
4-16-68	Oregon City	Relocation of sewer Main St. & Hwy. 99E	Approved
4-16-68	Tigard	Sewers for Burlwood Subd.	Prov. app.
4-18-68	Southwood Park S.D.	Cl <sub>2</sub> contact tank	Prov. app.
4-18-68	Warm Springs	Kah-Nee-Ta #2 T & R Resort	Prov. app.
4-29-68	Wilsonville	Outfall for Golden Door Motel	Prov. app.
4-30-68	Oak Lodge Sanitary District #1	Lateral C-8-A	Prov. app.

#### Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
4-5-68	Milwaukie	Linwood School, Incinerator	Addn. inf. req.
4-24-68	Astoria	Astoria Jr. High Sch. Incin.	Cond. app.
4-26-68	Salem	Mid-Willamette Valley Air Poll. Authority Application for Allocation of \$9,024 of State funds for July 1, 1968, to June 30, 1969.	Approved

#### RENDERING PLANT REGULATIONS

Mr. Silver reported that pursuant to the directive of the Sanitary Authority a public hearing regarding the adoption of rendering plant regulations was held May 6, 1968, in the State Office Building, before Hearings Officer, Marion B. Lamb. The Hearings Officer's report was provided for the members' information and has been made a part of the Authority's permanent files in this matter.

Mr. Silver reported that it was the recommendation of the hearings officer that the regulations be adopted by the Sanitary Authority.

Mr. Silver then reported that subsequent to the hearing he personally had been requested to have a meeting with some representatives of the rendering plant industry, their attorney and a couple of engineers. A report regarding this meeting had been prepared by Mr. Silver and has been made a part of the Authority's permanent files in this matter.

Mr. Silver reported further that although a notice of the hearing was published according to the law and the parties knew of the hearing, they apparently were confused concerning its purpose and had asked if they could present arguments or objections at this meeting. He said that he had advised the industry representatives that the Sanitary Authority would probably allow them to make a statement at this meeting if they so

desired. Mr. Silver then advised that the regulations were subject to the Authority's adoption, rejection, or modification.

Mr. J.D. McCallum, Vice President of Darling-Delaware Company, Inc., in charge of the West Coast Division, of which Portland Rendering is a part, came forward and indicated that he had been asked by the rendering companies of Portland and the state to present their views and comments with respect to the proposed regulations for the reduction of animal matter in rendering plants.

Mr. McCallum then gave some background information to prove his familiarity with the rendering industry. He stated that there had been considerable confusion regarding the notice of the public hearing sent to the rendering companies prior to May 6. He indicated that most of them had jumped to the conclusion that this was a continuation of the order previously entered by the Sanitary Authority requiring the Portland renderers to provide effective air pollution control by June 1, 1968, and many believed that this was merely an extension to August 1 for this requirement. He said that then at some later date it was found that this was an administrative rule that was proposed for the entire state and the regulation of all rendering plants.

Mr. McCallum stated further that the people he represents believe the intent of the act is commendable, but that they would like to suggest some changes from the practical operating standpoint; that under the title "Control Facilities Required" paragraph (a) they feel that there are several ways of destroying the odors from a rendering plant, and that if one, such as incineration, is listed the others should also be listed, particularly since different types of rendering equipment dictate different odor control measures. Therefore he requested that paragraph (a) be eliminated from the rule.

He said that in the fourth paragraph of the rule they felt it should contain a better definition of gas-entrained effluents, and what type of devices that should be installed because most manufactured equipment contains temperature indicators, steam pressure gauges, etc., that are felt to be adequate. With reference to monitoring of reduction facilities they feel that monitoring data should be the responsibility of the Sanitary Authority, that the weights of the raw and finished products processed and the hours per day operated are private information, and that the narrative description accurately portraying control practices should also be the responsibility of the Sanitary Authority. He, therefore,

CCA403

requested that this section of the regulations be eliminated entirely.

With respect to housekeeping of plant and plant area, he said they realize that cleanliness is important in the control of odor, and all agree that good housekeeping is a must. However, in paragraph (a) they believe that the required washdown at least once each working day with steam or hot water and detergent or equivalent additives should be limited to equipment, facilities and building interiors that come in contact with raw materials. He said they felt that items (b) and (c) are left entirely to the judgment of the Sanitary Authority and therefore he suggested that some definite program should be outlined to give the Authority a specific yard stick by which to operate.

Under the heading "Application" Mr. McCallum stated that they would be interested to know why the regulations are limited to companies which operate within city limits or within two miles of the boundary of incorporated cities since the purpose of air pollution they feel cannot be geographically allocated but should be state-wide. He asked if fish reduction plants or poultry or feather dehydrating plants would also be covered by the regulations.

He said that they felt the effective date of August 1, 1968, would create a great hardship due to the fact that proper engineering, delivery and installation of the equipment takes much time, and consequently they suggested that the effective date be extended.

The Chairman asked Mr. McCallum what alternatives to incineration he would suggest that the Authority spell out. Mr. McCallum replied that there are many, that one would be air scrubbing with water, others would be air scrubbing with chemicals such as potassium permanganate or sulfuric acid solution. He said again that he felt that incineration favored one type of plant and if there are alternatives, why put incineration in. The Chairman asked if there was any harm in putting incineration in if it was merely a guide to the effectiveness of the treatment desired. The Chairman said further that if a comparable or better method is available he felt item (b) clearly allowed it. Mr. McCallum stated that the word "incineration" appeared to be discriminatory because it applies to only one manufacturer's equipment.

Mr. Patterson then pointed out that he had had inquiries from other equipment companies and had informed them that the intent was to obtain satisfactory odor control and that if they would submit data which would

indicate that their equipment would satisfactorily reduce the odors, the Authority would accept it as adequate treatment. He said that one representative had made inquiries to his home office to find out whether such data were available. However, no further contact had been made with the staff.

The Chairman then asked whether they would object to the furnishing of monitoring information requested under items (c) and (d) if it were to be retained as confidential information by the Authority. Mr. McCallum replied that they had no objection to the Authority or their staff gathering the data from their records. He felt that it would be a hardship for them to keep a separate set of records for the Sanitary Authority and that it was not their responsibility to do that.

Mr. McPhillips pointed out that the regulations would require data to be submitted only for plant operation periods and there would be no requirements to submit data for nights, weekends or periods when the plant was not in operation.

The Chairman stated that he could see why the companies would want to keep the production figures confidential and that whenever such information was required it would be kept confidential.

Mr. Patterson then commented that with regard to the objection to requiring washdown of building interiors, the intent was to require that any time materials got on walls or floors they should be washed down. He stated that to limit the definition to raw material would not be acceptable because some half-cooked materials are odorous also. He suggested that the wording could be revised to indicate surfaces which come in contact with raw or partially reduced materials. Mr. Weathersbee pointed out that there could also be condensed materials and that the intent was to clean those areas which need cleaning.

The Chairman stated that it was his understanding that the objection to the August 1 effective date came from the rendering plants outside the Portland area and that the Portland plants were still working for the June 1 deadline for controls. Mr. McCallum stated that this was true. He pointed out that this field is very limited so far as engineers and equipment manufacturers are concerned and that today it takes 12 months from the date of order to have rendering equipment operating.

Mr. Silver pointed out that the testimony regarding the effective date was presented at the hearing by a gentleman from Klamath Falls who

CCA403

suggested December 31, 1968. The Chairman expressed a desire to keep the August 1 date but to allow up to six months extension of time upon application prior to that time and demonstration of inability to meet the standards by that date. In this way each plant would have to justify the time required rather than have a blanket extension.

Mr. McCallum indicated they still had a question regarding the interpretation of the gas-entrained effluents under paragraph 4 of the rules. The Chairman indicated that the Authority would prefer to remain flexible regarding the types of gauges required and to pass judgment on this through the review of plans rather than specify it in regulation form, particularly since manufacturers may develop other gauges which would do an adequate job.

In summary the Chairman indicated his reaction was that the Authority would stick with paragraphs (a) and (b) as they are written leaving incineration as a guide, that under monitoring a sentence could be added indicating that upon request data submitted could be kept confidential by the Authority insofar as it related to quantity and rate of production, that something could be added to the language in the washdown provision to indicate that the intent was not to cover the whole plant, and that the effective date of August 1 would be maintained but a provision would be added to allow an extension up to March 1, 1969, by presentation of engineering plans by any company along with a schedule of equipment acquisition which showed the necessity for such extension, with such presentation being made prior to August 1. The Chairman pointed out specifically that the August 1 date or the extension did not apply to the order to the North Portland rendering plants. He suggested that final action on the regulations be delayed until later in the meeting so as to give the representatives of the industry a chance to consider the suggested modifications and Mr. Silver, Mr. Patterson and the industry representatives a chance to draft the final language for the modifications. The matter of the rendering plant regulations was, therefore, tabled temporarily.

Mr. Silver, Mr. Patterson and representatives of the rendering plants then adjourned to another room to develop the proper modifications to the proposed regulation. Following the noon recess Mr. Silver presented the revised wording. It was MOVED by Mr. Harms and seconded by Mr. Meierjurgan that the regulation as revised be adopted.

The Chairman then asked whether there was any discussion with the industry representatives regarding the August 1 date.

Mr. Silver reported that the matter was discussed and some of the industry representatives feel that they will not be able to meet the August 1 date. Mr. Silver stated that he did not know whether this was due to lack of engineering plans or to economics.

The Chairman stated he would like to move an amendment to the motion on the floor by adding "provided, however, that nothing in this motion shall be deemed to supersede any part of the existing order requiring the North Portland rendering plants to complete the installation of equipment which controls their problems by June 1, 1968." Mr. Meierjurgan seconded the motion for amending the original motion. The amendment was approved. The motion to approve the regulations as amended was also approved.

The Chairman then announced that he had instructed the staff to send a letter to all the people who appeared at the previous hearing on the North Portland rendering plants requesting them to submit any comments or problems that they find this summer. The Chairman also indicated that while delay might be expected in other parts of the State in solving similar problems, he did not expect any such delay in the North Portland area, and that he would expect enforcement if any problems develop. The regulation as adopted reads as follows:

#### REDUCTION OF ANIMAL MATTER

##### I. CONTROL FACILITIES REQUIRED:

A person shall not operate or use any article, machine, equipment or other contrivance for the reduction of animal matter unless all gases, vapors and gas-entrained effluents from such an article, machine, equipment or other contrivance are:

(a) Incinerated at temperatures of not less than 1200 degrees Fahrenheit for a period of not less than 0.3 seconds, or

(b) Processed in such a manner determined by the Sanitary Authority to be equally, or more, effective for the purpose of air pollution control than (a) above.

A person incinerating or processing gases, vapors or gas-entrained effluents pursuant to this rule shall provide, properly install and maintain in calibration, in good working order and in operation, devices as specified by the Sanitary Authority, for indicating temperature, pressure or other operating conditions.

For the purpose of this rule, "reduction" is defined as any heated process, including rendering, cooking, drying, dehydrating,

CCA403

digesting, evaporating and protein concentrating.

The provisions of this rule shall not apply to any article, machine, equipment or other contrivance used exclusively for the processing of food for human consumption.

II. MONITORING OF REDUCTION FACILITIES:

1. When requested by the Sanitary Authority for the purpose of formulating plans in conjunction with industries who are or may be sources of air pollution, and to investigate sources of air pollution, monitoring data shall be submitted for plant operational periods and shall include a) continuous or at least hourly influent and effluent temperature readings on the condenser, b) continuous or at least hourly temperature readings on the after-burner, c) estimated weights of finished products processed in pounds per hour, d) hours of operation per day, and e) a narrative description to accurately portray control practices, including the housekeeping measures employed.

When requested by the plant manager any information relating to processing or production shall be kept confidential by the Sanitary Authority and shall not be disclosed or made available to competitors or their representatives in the rendering industry.

2. Whenever a breakdown of operating facilities occurs or unusual loads or conditions are encountered that cause or may cause release of excessive and malodorous gases or vapors, the Sanitary Authority shall be immediately notified.

III. HOUSEKEEPING OF PLANT AND PLANT AREA:

The plant facilities and premises are to be kept clean and free of accumulated raw material, products, and waste materials. The methods used for housekeeping shall include, but not be limited to:

a) A washdown at least once each working day, of equipment, facilities and building interiors that come in contact with raw or partially processed material, with steam or hot water and detergent or equivalent additive.

b) All solid wastes shall be stored in covered containers and disposed of daily in an incinerator or fill, approved by the Sanitary Authority; or by contract with a company or municipal department providing such service.

c) Disposal of liquid and liquid-borne waste in a manner approved by the Sanitary Authority.

IV. APPLICATION:

This rule shall apply in all areas of the State which are within city limits or within two miles of the boundaries of incorporated cities.

V. EFFECTIVE DATE:

1. These regulations shall be effective August 1, 1968.

2. The Sanitary Authority will consider an extension for the time of compliance with these regulations up to March 1, 1969, for plants who encounter special problems due to engineering or technical design difficulties or delay in the preparation and receipt of engineering

plans, upon written application being submitted to the Sanitary Authority, prior to August 1, 1968, requesting an extension of time and the reasons therefor.

VI. EXISTING ADMINISTRATIVE AGENCY ORDERS:

1. The provisions of Sections I through IV and subsection (1) of Section V are in addition thereto and do not modify, amend, repeal, alter, postpone, or in any other manner affect any specific existing agency orders directed against specific parties or persons to abate air pollution.

2. The provisions of subsection (2) of Section V shall not be made applicable nor extend in any manner to any specific existing agency orders directed against specific parties or persons to abate air pollution.

PORT OF PORTLAND - HOUSEBOAT SEWAGE DISPOSAL

Mr. Weathersbee called attention of the members to a letter from the Port of Portland dated February 23, 1968, requesting an extension for providing sewerage facilities for the houseboats that would be affected if the Port of Portland went ahead with its airport expansion project. He also called attention of the Authority members to a reproduction of the minutes of the February 29 meeting where action was taken on the Port of Portland's original request. He indicated that Mr. Joe Kosloski of the Port of Portland was present to make an amended request relative to this project based on their planning which has progressed further than at the time when they made the original request.

Mr. Kosloski stated that at the February 29 meeting the Port of Portland was granted an extension until January 1, 1969, with two conditions: (1) that the Port of Portland Commission should make a determination for expansion at this location and (2) that the houseboats should be taken care of.

He said that at the April 26 meeting of the Port of Portland Commission a resolution was passed approving the principle of expansion at this location contingent on solving a series of technical problems. The four most serious problems are (1) that they make application to the Federal Aviation Agency for review and approval of preliminary plans. This has been done and preliminary approval has been received although the Federal Aviation Agency has not committed itself to the plan yet. (2) To make application to the Corps of Engineers for review and approval of the proposed changes in the channel of the Columbia River. The Corps of Engineers has established a

CCA403

June 12 public hearing date where this matter will be discussed. The Port has hired Bauer Engineering of Chicago to make the hydrology study for this and their preliminary findings have been that it is feasible and a workable solution to the handling of the south channel. (3) To make application to the proper authority for release of that portion of the military property required for the proposed development. They have been in contact with the military discussing problems and satisfactory progress is being made. (4) To satisfy the alleged noise problem in the urban areas in the vicinity of the airport on both sides of the river. The Port has hired the firm of Holt, Bryant and Newman to conduct a noise study. Their report is in and the findings are that the realignment and expansion of the airport will not substantially change the noise problem in the urban area. Mr. Kosloski stated that the Port feels reasonably confident that they will resolve all of these problems within a short time, hopefully within 60 days. Mr. Kosloski reported that in their initial contacts with the staff they were asked to comment on the water flow within the boat basin on the east side of the airport. Regarding this, the Port has adopted as its design criteria, the state of Oregon Water Quality Standards. Regarding the moorages, the Port will provide a location for relocating all moorages that now exist either within the boat basin or to the west along the existing river bank. The ultimate design of the Port envisions that there will be no houseboats within the boat basin. However, they cannot provide additional land for them outside the boat basin until about 1972 when the fill has had a chance to adequately settle and the utilities can be provided in the area. In the initial move, however, the Port feels they must accommodate these houseboats and will allow them to locate on a temporary basis with their moorages in the boat basin. He indicated that Rose City Yacht Club and the Sea Scouts have expressed a desire to relocate to the west of the airport outside the boat basin. Sewage treatment in that area would probably be by individual systems. He indicated that the Port has discussed waste disposal matters with the County Public Works Department relative to the latter's plans for the 122nd Avenue sewage treatment plant. This plant would be located south of the boat basin. The County has indicated this plant would be in operation by May 15, 1969. One of the alternatives for waste disposal would be a sewage collection system on N.E. Marine Drive serviced by the

122nd Avenue plant. The other alternatives are individual treatment in the area north of Marine Drive on a shelf which will be provided by hydraulic fill. In that area septic tanks and drainfields could be provided. The Port feels they need adequate time to explore these possibilities to determine the most economical and feasible route. He felt this would take approximately 6 months for the design and building. The 6-8 month's extension in time which the Port is requesting will coincide with the completion date of the 122nd Avenue plant. The Port is therefore requesting that the Authority extend the present deadline from January 1, 1969, to June 1, 1969. This would allow time for the property owners and Port of Portland to determine the most desirable solution, design the facilities and construct them. This would take care of the moorages both on the east side of the basin and the west side on the undisturbed bank.

Mr. Mosser asked where the discharge for the 122nd Avenue plant would be located. Mr. Oliver Domries, engineer for Multnomah County, who was present, indicated at the present time the contract calls for discharge into the south channel immediately adjacent to the plant. This would be within the boat basin as planned by the Port. He stated, however, that it is anticipated that the discharge line would be extended to the main river channel as work progressed on the Port expansion.

Mr. Mosser stated that because of his law firm's representation of the Port of Portland he would abstain from further discussion or voting on this matter and asked Mr. McPhillips to guide the discussion regarding this matter.

Mr. McPhillips asked whether any houseboats would be discharging into the boat basin during that period. Mr. Kosloski reported that the basin would not be formed until late 1969 after collection facilities have been completed. The houseboats will be in place in the basin by June 1, 1969; however, the physical formation of the basin itself will not be completed until September 1970. All facilities will be provided with treatment when the move is completed. Mr. Harms stated that although he did not like to see matters delayed he felt the Port of Portland had come forward with a firm and reasonable plan.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that the Port of Portland be allowed an extension until June 1, 1969, for completing facilities to serve the houseboats. Mr. Mosser did not vote on the motion.

CCA403

TAX CREDIT APPLICATIONS

Mr. Harold Sawyer presented memorandum reports dated May 24, 1968, regarding the following two tax credit applications. These reports have been made a part of the Authority's permanent files in this matter.

After reviewing the same the members took the actions as indicated below regarding them.

1. Application T-20 - Pacific Steel Foundry Company, Portland, Oregon.  
(Baghouse with associated hoods, ducts, motor, fan and controls)

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that Pacific Steel Foundry Company be issued a Pollution Control Facility Certificate bearing the actual cost figure of \$51,124.57.

2. Application T-25 - Weyerhaeuser Company, Springfield. (Modification and improvements made to the weak black liquor oxidation system)

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that Weyerhaeuser Company, Springfield, be issued a Pollution Control Facility Certificate bearing the actual cost figure of \$9,908.

REVISED IMPLEMENTATION PLANS - Klamath River and Goose Lake Basins

The Secretary reported that letters commenting on the proposed changes in the Implementation Plan for the Klamath River Basin had been received from the San Francisco office of the Federal Water Pollution Control Administration, the State Game Commission and the State Fish Commission. These letters have been made a part of the permanent files in this matter. He said each of these agencies expressed no objection to the proposed revisions of the Implementation Plan. The Federal Water Pollution Control Administration through its San Francisco office had urged adoption at this meeting of the revised Implementation Plans for both basins, so that the Federal Government can take final action on the respective water quality standards.

The Chairman asked whether the actual standards for the Klamath River Basin had been adopted by the Sanitary Authority.

The Secretary reported that the actual water quality standards and the first draft of the Implementation Plan were formally adopted by the Sanitary Authority on June 1, 1967, and that the matter for consideration today consists of proposed revisions in the Implementation Plan only.

The Chairman requested a brief recap of the revisions actually proposed.

The Secretary reported briefly the revised Implementation Plan is an updating of information and contains more detail concerning the requirements which individual dischargers must meet.

Mr. Weathersbee stated that it is an updating of the municipal programs in the Basin, bringing their schedules up to date and similarly with the industries within the Basin. He also reported that the programs and schedules within the Implementation Plan have been made compatible with the conditions of the waste discharge permits which are proposed for adoption also at this meeting. He reported that the revised plan has a much more detailed discussion of the log-handling and debris problem in Lake Ewauna and the Klamath River, and includes a program for clean up and control of the debris which was not in the original plan. He stated there is also more discussion on the impact of the agricultural projects in the Basin on the water quality of the Klamath River. He then read the summary statements found on page 20 in the revised Implementation Plan which outline the Sanitary Authority's proposed program in the Klamath Basin. The first statement requiring that all waste dischargers obtain permits from the Sanitary Authority as required by law is a new addition to the revised plan, since the permit law was enacted after the adoption of the original Implementation Plan.

Mr. Weathersbee reported that copies of the revised Klamath River Basin Implementation Plan had been distributed quite widely among the cities, industries, federal agencies, conservation groups and others who have expressed an interest in the water quality in this basin.

He said that the notice regarding adoption of the plan included the information that adoption did not require a formal hearing, but that written comments were invited and constructive testimony would be accepted at today's meeting. Written comments were received from the three agencies previously mentioned.

The Secretary reported that one additional letter had been received this morning from the State Engineer, Mr. Chris Wheeler. The Secretary read the contents of that letter.

The Chairman then stated that before action would be taken on the plans for the Klamath River and Goose Lake Basins and the Waste Discharge Permits, testimony would be heard from anyone present desiring to make a statement.

CCA403

Mr. Lewis Furber, President of the Klamath River Ranchers Protective Association and Pollution Chairman for the Klamath Chapter of the Oregon Fish and Game Council came forward to make a statement. He stated that he wanted to clear up a misconception which seemed to be held by the Sanitary Authority staff and others that the water quality as it leaves Upper Klamath Lake is bad. He stated that the groups he represents had originally pushed hard for a DO standard of 7 ppm and were disappointed at the adoption of the 5 ppm standard in that stretch of the river. He felt that 7 ppm could be achieved. He said that after the water leaves Upper Klamath Lake it goes through Link River and is aerated in passing through the Link River rapids and the Pacific Power and Light generators. He indicated that the water in this area contains some trout and bass, but mostly chubbs. He expressed the opinion that the wastes discharged into Lake Ewauna by the city of Klamath Falls, the log debris deposited by Modoc Lumber and other waste sources have caused Lake Ewauna, which is nothing more than a wide spot in the Klamath River, to act as a giant oxidation lagoon. Mr. Furber stated that the groups he represents believe that the degradation in this section of the river is not necessary and that the dischargers should be required to clean up. He said they hope that the Sanitary Authority will see fit to upgrade its dissolved oxygen standard in the Klamath River and Lake Ewauna, because they feel that when the Implementation Plan is in full effect a dissolved oxygen level of 7 ppm can be achieved. Mr. Furber then offered to show slides of the water quality problems in the area.

The Chairman indicated that the staff had previously shown the Authority members slides of all the pollution sources in the Klamath Basin which were similar to those described by Mr. Furber.

The Chairman asked Mr. Furber whether he had any specific comments on the enforcement plan as such, and indicated that the Authority understood his desire to have a higher dissolved oxygen standard and assured him that the Authority would take another look at the standard when the Implementation Plan had been completed.

Mr. Furber indicated he would appreciate the opportunity to make a few comments on the Implementation Plan itself. He stated he felt the revised Implementation Plan was a hundred percent improvement over the original plan. He cited discussion in the Implementation Plan regarding the log debris

problem which states that it is anticipated that in order to adequately control the log debris problem in Lake Ewauna and the Klamath River, logs will have to either be handled dry or handled in cleanable pond areas entirely separated from the waterway. Mr. Furber stated that his main question about the Implementation Plan was how the Authority intended to accomplish this control.

Mr. McPhillips asked a question about the pollution of Lake Ewauna caused by raw sewage from Klamath Falls.

Mr. Lynd reported that the city does have a secondary treatment plant; however, deficiencies in its design result in the by-passing of raw sewage to the river as many as 16 times per day. This by-passing occurs at the treatment plant itself. He indicated that the Implementation Plan calls for a correction of this problem and for providing full secondary treatment for all of the wastes.

Returning to the log debris problem, Mr. Furber stated that the groups he represents feel that the ultimate solution to the log debris problem will be the complete removal of log storage and handling from the Klamath River system. He stated that he knew the sawmills had announced a cleanup campaign and that Weyerhaeuser Company had cleaned up the log debris from the face of the dikes on its own property and property immediately across the river. However, they refused to remove the debris from other properties downstream from their operation.

Mr. Furber stated that today there was more fresh bark and debris floating in the river than at any other time in his memory. He indicated that the bark and debris cause considerable problems and damage to the farmers' irrigation pumps and equipment. He further stated that he did not believe it was physically possible for the sawmills to keep the debris out of the river while still handling logs in the river. He felt that controlled diked-off areas within the river or separate ponds would be required to control the debris problem. Mr. Furber stated that his group knows that the sawmills in the area are water oriented and that they do not wish to create a hardship for the industry; however, they feel that the Sanitary Authority should convince the sawmills and reach an understanding with them that they must come up with plans to change their log handling operations from the river to separate ponds and that they dredge these ponds and dispose of the debris in a proper manner so that it does

CCA403

not wash down the river as it does now. He emphasized that a piece-meal approach would not solve the problem, and that what was needed was a positive program.

Mr. Furber again offered to show slides of the problem in the area.

Mr. Harms stated that the Authority had viewed slides assembled by the staff and they were therefore familiar with the problems in the area.

The Chairman indicated that he would like to view the problems in the area firsthand and therefore suggested that either the August or September meeting be held in the Klamath Falls or Medford areas so the Authority could get a firsthand look at the problems in those areas.

Mr. Harms pointed out for Mr. Furber's benefit that the proposed permits prepared by the staff for the mills in the area require that a positive program be submitted by a specified date for controlling and removing the log debris.

The Chairman asked whether anyone else would like to make any comments on the Implementation Plan before the Authority turned to the permits. Since no one else expressed a desire to be heard, the Chairman stated that the Authority would consider the conditions of the permits and then come back to the matter of action on the Implementation Plan itself.

Mr. Lloyd Cox presented the recommended waste discharge permit conditions prepared by the staff for Klamath Plywood Corporation, Modoc Lumber Company and Weyerhaeuser Company, all of Klamath Falls. These recommended conditions have been made a part of the Authority's permanent files in this matter.

The Chairman noted that the wording of one condition referred to debris on property adjacent to or attributable to the company's operation. He asked how the Authority would follow this debris downstream to determine which source it was attributable to.

Mr. Weathersbee replied "the best we can."

The Chairman commented that in previous remarks he had mentioned the idea of legislation establishing a charge for discharging pollutants to public waters. He indicated that this might be a situation where the funds generated from such a charge could be used for cleanup purposes.

It was MOVED by Mr. Waterman, seconded by Mr. McPhillips and carried that a permit be issued to Klamath Plywood Corporation in accordance with the recommendations of the staff.

It was MOVED by Mr. McPhillips, seconded by Mr. Waterman and carried that a permit be issued to Modoc Lumber Company in accordance with the staff recommendations.

Mr. Furber asked whether the program outlined in the Weyerhaeuser Company permit would eliminate the odor which comes from their present pond system.

The Chairman replied that this program should eliminate the odor problem. He noted, however, that sometimes these facilities do not perform in accordance with expectation.

Mr. McPhillips asked the company representatives present whether there was any possibility of a cooperative effort for the removal of debris.

Mr. Joe Julson of the Weyerhaeuser Company was present and indicated that they intended to proceed on their own to clean up their own debris.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that a permit be issued to Weyerhaeuser Company, Klamath Falls, in accordance with staff recommendations.

The Chairman then suggested that the agenda item regarding the Tillamook County Creamery Association be considered before taking final action on the Implementation Plans because the representative of said Association had another appointment and could not stay until after the noon recess. Following the discussion of the Tillamook County Creamery Association matter and the noon recess the Chairman stated that he thought it was in the best interests of the Authority to adopt the Implementation Plan at this meeting and revise it later, if necessary, after the Authority members had visited the area because adoption of this Implementation Plan would complete the major work on the Standards and Implementation Plans for Waters of Oregon.

Mr. Furber requested to be heard regarding another problem concerning the Klamath River. He commented that at the present time a water management problem exists in the Klamath River. He indicated that this problem is basically that the water quantity is managed for power generation and irrigation purposes with no consideration given to water quality. He indicated that it is possible under present management practices to turn the Klamath River between the mouth of the Diversion Canal and Keno into a stagnant pond with no flow and that this is when the fish kills in the river occur. Mr. Furber expressed the opinion that he felt that through

CCA403

coordination and cooperation among the agencies with control over the flow of water that it would be possible to manage these flows such that there was flow in the Klamath River during the months of July and August when major problems occur and that this would improve the water quality considerably.

The Chairman commented that the Authority would concur with the understanding that water quantity is one of the ingredients of water quality and that the Authority has the same problem in many other areas.

The Secretary commented that the staff could confer with Mr. Chris Wheeler, the State Engineer, on the matter of flow control in the Klamath Basin, particularly through his representation on the Klamath Compact Commission.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the revised Implementation Plans for Klamath River and Goose Lake be adopted.

#### TILLAMOOK COUNTY CREAMERY ASSOCIATION

Mr. Warren McMinimee, Attorney representing Tillamook County Creamery Association, spoke regarding Waste Discharge Permit #10 issued to the Association with an expiration date of November 1, 1968. He pointed out that some of the correspondence they receive refers to both Tillamook County Creamery Association and Tillamook Cheese and Dairy Association. He wished to point out that at the present time there is a complete divorcement between these two organizations. He said that it did not appear at this time that the two organizations would ever be able to get together to work on a joint waste control project. He stated that with him at this meeting were Mr. Beal Dixon, plant manager, and Mr. James Coone, plant engineer, for Tillamook County Creamery Association. He then asked Mr. Dixon to outline the Company's problem.

Mr. Dixon indicated that they have engaged the services of Cornell, Howland, Hayes and Merryfield who prepared an engineering report in 1967. Progress on this system was delayed at the recommendation of the Authority staff in an attempt to get the two organizations together. During that delay the consulting engineers became so involved in other projects that they have now informed Tillamook County Creamery Association that they will be unable to complete the work in the time allotted by the deadline established in the waste discharge permit of November 1, 1968. He said

the engineers have indicated they propose to begin work on the design memorandum on the 15<sup>th</sup> of July. This work will then be completed by the first of August. The purpose of this memorandum will be to update the January 1967 report and will serve as a guide to final design.

Completion of final plans and specifications is scheduled for November 1, 1968. Completion of construction is proposed for September 1, 1969. Mr. Dixon indicated that some work in collecting wastes had already been completed. He further stated that they were bringing the whey in from the small plants in the county and condensing it at the main plant so that it is not now being discharged into small streams. He indicated this was being done at a financial loss to the company. He stated that they planned to consolidate the small associations so that processing will be done at a single plant instead of the several now located in the county. He felt this would be accomplished by the time the treatment facilities were completed.

Mr. McPhillips asked whether the present engineering was taking into account the proposed consolidation of facilities.

Mr. Dixon indicated that the Board had given CH<sub>2</sub>M instructions to take this into account and design a plant large enough to handle wastes from their total anticipated production.

Mr. Meierjurgan asked whether the outlying plants were discharging into streams without providing treatment at the present time.

Mr. Dixon indicated that no treatment was provided; however, some of them were not discharging to streams. He again pointed out that the whey was being hauled to the central plant for processing.

The Chairman stated that it was his understanding that the present permit has a November 1, 1968, expiration date and requires that secondary treatment be installed by that time. He further indicated that it was his understanding that under the present schedule final plans and specifications will not be prepared until November 1, 1968.

Mr. Dixon indicated that this was correct.

The Chairman recommended that the present permit for Tillamook County Creamery Association be left as is until its expiration date. At that time the matter would be reviewed in conjunction with the plans submitted and a course of action determined. The members of the Authority concurred with this recommendation.

CCA403

Mr. Dixon stated that he wanted to make sure that it was understood that the member associations (Mohler, Beaver, Hebo, Cloverdale, Central and Oretown Cheese Associations) are to be included in the over-all plans of Tillamook County Creamery Association. Each of these individual organizations has a present temporary permit which will expire June 30, 1968. He reiterated that their proposal is for one unified operation.

Mr. Sawyer pointed out that the other Associations presently have temporary permits which will expire on June 30, and that conditions for regular permits were currently being drafted.

Mr. Ernest Bonyhadi, representing Tillamook Cheese and Dairy Association, addressed the Board and referred to the letter dated May 16 which was included in the meeting notebooks for the members. He indicated that Tillamook Cheese and Dairy Association is presently limiting its production to jack cheese only. He stated that by November 1 the Company will know what the future will hold and is well prepared to present to the Sanitary Authority a schedule similar to that presented by Mr. Dixon of Tillamook County Creamery Association. He specifically requested that any consideration or extension of deadlines granted to the Tillamook County Creamery Association also be granted to Tillamook Cheese and Dairy Association.

Mr. McPhillips commented that he did not feel the situations which exist with the two plants are exactly similar. He noted that Tillamook Cheese and Dairy Association is asking for the same consideration as that given Tillamook County Creamery Association. However, Tillamook County Creamery Association is proposing to present completed engineering plans and specifications by November 1, whereas it appears that Tillamook Cheese and Dairy Association is only proposing to decide whether to go ahead or not by November 1.

Mr. Bonyhadi replied that the studies which had been made up to now by CH<sub>2</sub>M had been made for both Associations and therefore they would not be starting from scratch when the determination is made to proceed.

The Chairman indicated that it was his understanding that if Tillamook Cheese and Dairy Association decided to go ahead after November 1 they would build a new plant at a location where they could use the joint treatment facilities currently being designed by CH<sub>2</sub>M.

Mr. Bonyhadi indicated that this was not the case. He indicated that at the present time Tillamook Cheese and Dairy Association is not in the

CCA403

financial position to contract for a separate plant. They have curtailed their production to the single product of jack cheese. It is possible that the Tillamook County Creamery Association may acquire the Cheese and Dairy plant. However, he knows of no immediate possibility of this occurring. There is a possibility that the joint facility would be constructed. If, however, Tillamook Cheese and Dairy Association in the next few months saw its way clear to be able to construct its own facility, Tillamook Cheese and Dairy Association could exercise its option and have CH2M update the January 1967 joint study and construct their own facility if a permit can be obtained from the Sanitary Authority. He further indicated that Tillamook Cheese and Dairy Association is prepared to restrict their production until such time as adequate facilities meeting the Sanitary Authority's requirements would be provided.

The Chairman stated that he did not wish to have Tillamook Cheese and Dairy Association leave the meeting thinking that they would be permitted to go ahead and manufacture jack cheese until September no matter what decision they make. He also stated that he did not want Tillamook County Creamery Association to leave with the understanding that no matter what happens between now and November their permit will somehow be extended. The Chairman indicated that on November 1 when the present permits expire, the progress and status of each will be reviewed to see if they were as far along in their programs as they think they will be, but that no guarantee was being made that the permit for either would be extended.

In conclusion, Mr. McMinimee, representing Tillamook County Creamery Association stated that they did not wish to be identified with Tillamook Cheese and Dairy Association in their problems before the Sanitary Authority. He clearly stated that they did not want anybody riding on their coattails and they did not intend to ride on anyone else's.

Mr. McMinimee indicated that they were under direction of their board to pursue the formation of a county-wide organization. This would be accomplished by dissolving the present Associations and reorganizing under a single Association. It could be possible that the suppliers presently supplying Tillamook Cheese and Dairy Association would join the organization. He indicated that their engineers had been instructed to proceed with plans for them only and that they would be responsible to the Authority for solving their own problems.

The Chairman indicated that the Authority would treat the two organizations as individuals and would table the matter until the meeting prior to November 1 where further action would be considered.

The meeting was then recessed at 11:55 a.m. and reconvened at 1:25 p.m.

KLAMATH BASIN WASTE DISCHARGE PERMITS

Mr. Lynd presented the recommended waste discharge permit conditions prepared by the staff for the city of Chiloquin, Klamath County Schools - Henley High School, City of Klamath Falls, City of Klamath Falls Airport plant, City of Malin, City of Merrill and the South Suburban Sanitary District. The reports containing these recommended conditions have been made a part of the Authority's permanent files in this matter.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that a permit be issued to the city of Chiloquin in accordance with the staff's recommendations.

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that a permit be issued to Klamath County Schools - Henley High School in accordance with the staff's recommendations.

Regarding the staff recommendations for the city of Klamath Falls, the Chairman indicated that he thought intermediate checkpoints should be established regarding the submission of final plans and the arrangements of financing.

Mr. Lynd indicated that a preliminary engineering report had been completed and approved by the Sanitary Authority. He did not think the work had started on final plans yet and thought that they had a bond election scheduled for November.

Mr. McPhillips MOVED the adoption of the permit with the amendment that the city give the Authority a report on their engineering by October 1, 1968, and a report on the status of their financing by December 1, 1968. The motion was seconded by Mr. Meierjurgan. Motion carried.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that a permit be granted to the city of Klamath Falls Airport Plant in accordance with the staff recommendations.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that a permit be issued to the city of Malin in accordance with the staff recommendations.

It was MOVED by Mr. McPhillips, seconded by Mr. Waterman, and carried that a permit be issued to the city of Merrill in accordance with the staff's recommendations but with the expiration date changed to December 31, 1968.

It was MOVED by Mr. Waterman, seconded by Mr. McPhillips, and carried that a permit be issued to the South Suburban Sanitary District in accordance with the staff's recommendations.

AUGUST MEETING

The Chairman expressed a desire to hold a series of meetings the latter part of August in the Klamath Falls, Medford and Grants Pass areas. The suggestion was to go to Klamath Falls in the afternoon of one day, tour the area the next morning, hold a short meeting in the afternoon, and go on to Medford with a meeting there on the next day. Then on the following day perhaps a short meeting could be held in Grants Pass and return to Portland. The Secretary was instructed to make the necessary arrangements.

WASTE DISCHARGE PERMIT - CITY OF BEND

Mr. Lynd presented the recommended waste discharge permit conditions prepared by the staff for the city of Bend. The report containing these recommendations has been made a part of the Authority's permanent files in this matter.

Mr. Hal Puddy, city manager of the city of Bend, was present and stated that only about 8 percent of the city's population of 13,200 is now served by sewers. The city presently has an Imhoff tank for treatment of this quantity of wastes prior to discharge to a lava sink hole. He indicated the remainder of the community is served by individual septic tanks with the effluents being discharged to drill holes which extend into lava caves and crevices. He indicated that the city of Bend is particularly concerned about the policy which may be recommended for the immediate abandonment of that method of disposal, both within the city of Bend and the county itself. Mr. Puddy indicated that the city did intend to schedule a bond election for this fall to finance the construction of a secondary treatment plant for the sewage which is now partially treated by the Imhoff tank and then would start on a program of constructing sewers in the problem areas. Mr. Puddy indicated that the city's consulting engineers estimate that it would presently cost about \$9 million to sewer the entire community and provide treatment. He indicated that the city felt any program to provide sewers in the remainder of the city would have to be a long-term program. He also expressed the opinion that an extensive educational program would be required to condition the people to support a program of abandoning the existing septic tanks and drill holes and going to a sewer system.

Mr. McPhillips asked whether the existing sewers in the community were combined sewers or separate sanitary sewers.

CCA403

Mr. Puddy indicated that the existing sewers are separate sanitary sewers with storm drains either going directly to the river or discharging to drilled wells.

Mr. McPhillips asked whether the city's water supply came from domestic wells in the area or from some other source.

Mr. Puddy indicated that there are few private water supply wells in the area; however, the city does not obtain its water supply from wells at the present time. Mr. Puddy indicated that the city is presently drilling a well about 6½ miles out of town which they hope to use to augment their water supply. He indicated this well is being tested at the present time.

Mr. McPhillips asked what the size of the proposed treatment plant would be initially.

Mr. Puddy replied that it would be designed to treat 1 million gallons per day and would provide for some future expansion. This size plant would serve the presently sewered area as well as area for proposed future expansion of the sewer system. Mr. Puddy indicated that the bond issue which will be submitted to the people for approval this fall would be about \$500,000.

Mr. Harms commented that it was apparent that the officials of the city of Bend are aware of the problems they were facing and stated that he appreciated the straight-forward testimony of the city.

Mr. Mosser commented that with regard to a general policy for the cessation of waste disposal to drill holes in that area the Sanitary Authority would propose such a regulation and would schedule hearings in the Bend, Madras, and Prineville areas so as to get a full picture of the problem. He further stated that if the Authority decided to implement such a policy it would be a gradual approach which would require that new sources be connected to a sewer and that old sources would have to be gradually picked up or connected.

Mr. Puddy pointed out that a policy requiring new sources to be connected to sewers would cause some problem due to the lack of a sewer system in the area to which reasonable connection could be made.

The Chairman stated that he hoped the communities would give some thought to the type of implementation plan they would like to see regarding this matter. The Chairman pointed out that the first stage of the program might be to require the installation of sewers in all new subdivisions and then provide a common septic tank and drill hole as an interim disposal method until an interceptor was available.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that a permit be issued to the city of Bend in accordance with the staff's recommendations but with the expiration date changed to June 30, 1969.

The Chairman pointed out that sometime in the near future a meeting will be held in the Bend area to get a firsthand look at the problems which presently exist there.

WASTE DISCHARGE PERMIT - CITY OF MCMINNVILLE

The recommended waste discharge permit conditions prepared by the staff for the city of McMinnville were presented by Mr. Sawyer. A copy of the conditions has been made a part of the Authority's permanent files in this matter.

Mr. William Blum, city engineer for the city of McMinnville, was present and stated that consulting engineers Cornell, Howland, Hayes and Merryfield had prepared a report on the city's sewer system and proposed a program for line correction and plant expansion. He indicated that approximately 70% of the city is served by a combined system; therefore, the storm flows are quite high. He further indicated that it is the city's preference to proceed with a program to eliminate storm water from the sewer system before the treatment plant is expanded, but that he interprets the permit to say the plant must be expanded and upgraded first. Mr. Blum requested the guidance of the Authority on how to proceed.

The Chairman responded that the permit did not say they had to improve the plant first but merely states that they must submit a detailed program and time schedule by September 1, 1968, for providing adequate treatment by May 1, 1970, and that if adequate treatment facilities can be provided by separating storm water from the system this would be acceptable.

Mr. Blum indicated that the present effluent BOD and suspended solids concentrations are running in the neighborhood of 40-50 mg/L and reducing this to 20 would be a problem for the city. Although reduction of the storm flows would probably aid the efficiency of the plant, it probably would not increase it sufficiently to meet the 20 mg/L requirement.

The Chairman asked when Cornell, Howland, Hayes and Merryfield's report was made.

Mr. Blum replied it was completed in 1965.

The Chairman then asked whether the city had done anything toward solving the problem.

Mr. Blum indicated they had not but were now budgeting funds to get started. On the correction of several localized problems, Mr. Blum indicated that they felt the May 1, 1970, deadline should be extended to allow more time to explore the effects of the reduction of storm water.

CC-403

Mr. Harms pointed out that the main emphasis of the permit is for the city to submit a detailed program and time schedule by September 1, 1968, and noted that the permit will expire on March 30, 1969. At that time the program of the city will be evaluated and the May 1, 1970, target date could be modified if necessary.

Mr. Blum indicated that part of what was bothering them was the likelihood that they would not be able to get grant funds by the time they had to have the project completed.

The Chairman pointed out that because of the uncertainty of grants all cities are being informed that they should plan to be able to go ahead on their own financing if necessary.

Ed Lynd pointed out that the present McMinnville plant was designed to serve a population equivalent of 12,000. At present, however, the plant is serving a population equivalent of about 17,000.

Mr. Blum indicated that the city's waste is strong as a result of the Darigold plant.

It was MOVED by Mr. Waterman, seconded by Mr. Meierjurgan, and carried that a permit be issued to the city of McMinnville in accordance with the staff's recommendations.

WASTE DISCHARGE PERMIT - PENNSALT CHEMICALS CORPORATION

Mr. Waterman requested that because of his association with Pennsalt Chemicals Corporation he be excused from the discussion and voting regarding this permit.

The recommended permit conditions prepared by the staff were presented by Mr. Lloyd Cox. A copy of the report containing these conditions has been made a part of the Authority's permanent files in this matter.

The Chairman commented that the limitation on chlorides set at 100,000 pounds per day seemed to be quite high. He also noted that an extensive monitoring program was required and that the duration of the permit was quite short. He asked the staff what they contemplated for the future.

Mr. Cox reported that the purpose of the short duration was to acquire additional data on which to base future permits and also to allow time for some studies in the outfall area by the staff.

Mr. Meierjurgan asked what effect the chlorides would have on the river.

Mr. Weathersbee replied that if he recalled correctly it would raise the chloride level in the river only four parts per million at a flow of 6,000 second feet. He stated that at this location in the river it was not causing a problem.

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that a permit be issued to Pennsalt Chemicals Corporation in accordance with the staff's recommendation. Mr. Waterman did not vote on the motion.

WASTE DISCHARGE PERMITS - PACIFIC POWER AND LIGHT COMPANY

The recommended permit conditions prepared by the staff regarding Pacific Power and Light Company, Gold Ray, Medford, were presented by Mr. Lloyd Cox. The staff report containing these conditions has been made a part of the Authority's permanent files in this matter.

Mr. McPhillips asked if this was one of the sources of oil which has been causing problems in the Rogue River system.

Mr. Baton replied that it was not, that in fact there was no problem with this discharge.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that a permit be issued to Pacific Power and Light Company, Gold Ray, Medford, in accordance with the staff's recommendations.

The recommended permit conditions for Pacific Power and Light Company, Astoria Service Center, were presented by Mr. Sawyer. The staff report containing these conditions has been made a part of the Authority's permanent files in this matter.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that a permit be issued to Pacific Power and Light Company, Astoria Service Center, in accordance with the staff's recommendations.

TEMPORARY WASTE DISCHARGE PERMITS

A memorandum report dated May 24, 1968, regarding the subject of new applications received since April 26, 1968, meeting was presented by Mr. Sawyer. He stated that since the last meeting 8 permit applications had been received, one of which is for a new installation and will be considered for issuance of a regular permit at this meeting. One application was filed by the city of Salem regarding the proposed West Salem plant. Action will be delayed until a later meeting on this application.

It was MOVED by Mr. Harms, seconded by Mr. Waterman, and carried that temporary permits to expire on December 31, 1968, be issued to the following four applicants:

Bagley Canning Company, Ashland; Hoy Bros. Fish and Crab Company, Garibaldi; Allied J & H Lumber Company, Mist; and Moser Lumber Company, Kings Valley, and that temporary permits to expire on June 30, 1968, be issued to the following two applicants: Cascade Construction Company, Inc., Portland, and Klamath Lumber Company, Klamath Falls.

CCA403

WASTE DISCHARGE PERMITS FOR A NEW INSTALLATION

A memorandum report dated May 24, 1968, which has been made a part of the Authority's permanent files in this matter and which contains recommended waste discharge permit conditions was presented by Mr. Sawyer. He reported that the Twin Rocks Sanitary District located in Tillamook County has submitted final plans for a waste collection and treatment system which consists of a collection system, two pump stations, and a mechanical aeration type treatment plant followed by two holding ponds. The facility is designed to serve an ultimate population of 1,000 people. The expiration date was set at June 30, 1969, to allow time for construction to be completed and the facilities placed in operation prior to the renewal of the permit. Mr. Sawyer also noted that the most significant condition in the permit was the one requiring BOD and suspended solids levels not to exceed 20 mg/L in the effluent.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Waterman, and carried that a permit be issued to Twin Rocks Sanitary District in accordance with the staff's recommendations.

WASTE DISCHARGE PERMITS - INDUSTRIAL, GROUP 1

Memorandum reports covering recommended waste discharge permit conditions for the following 6 applicants were presented by Mr. Cox. These reports have been made a part of the Authority's permanent files in this matter.

1. Atlantic Richfield Company, Portland
2. Standard Oil Company, Portland
3. Gunderson Bros. Engineering Corporation, Portland
4. Oregon Steel Mills, Gilmore Steel, Portland
5. Harvey Aluminum of Oregon, The Dalles
6. Tillamook Rock Products, Tillamook

After some discussion it was MOVED by Mr. Waterman, seconded by Mr. Harms, and carried that the permits for these 6 applicants be granted as recommended by the staff.

WASTE DISCHARGE PERMITS - INDUSTRIAL, GROUP 2

Memorandum reports covering recommended waste discharge permit conditions for the following 6 applicants were given by Mr. Cox. These reports have been made a part of the Authority's permanent files in this matter.

1. Idaho Canning Company, Nyssa
2. Agnew Plywood, Grants Pass
3. Benham Concrete, Inc., Coquille
4. Bristol Silica Company, Rogue River
5. Clyde's Readymix Sand and Gravel, Cave Junction
6. M. C. Lininger & Sons, Ashland

CCA403

The Chairman asked whether Benham Concrete had constructed the settling pond which condition 2 called for.

Mr. Baton replied that to date they had not; however, he felt that the pond could be completed by the June 30, 1968, deadline.

The Chairman recommended that the expiration date be changed to July 31, 1968, and that if the conditions were not complied with action should be taken to shut him down.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Waterman, and carried that the expiration date for the permit for Benham Concrete be changed to July 31, 1968.

After some further discussion, it was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the permits for these 6 applicants be granted as recommended.

WASTE DISCHARGE PERMITS - WILLAMETTE BASIN

Memorandum reports covering recommended waste discharge permit conditions for the following 6 applicants were given by Mr. Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- 1. Chatnicka Heights, Salem
- 2. Milwaukie
- 3. Monroe
- 4. Multnomah County Exposition Center
- 5. Multnomah County Edgefield Center
- 6. Sandy

Mr. Waterman asked how close the Edgefield Center facility owned by Multnomah County was to the city of Wood Village.

Mr. Lynd replied that it was located about a quarter of a mile downstream from Wood Village.

Mr. Waterman asked if an area-wide system was available in the area that Multnomah County could connect to.

Mr. Lynd replied that there was not.

Mr. Spies asked whether the Troutdale proposal was to serve Edgefield Center and Wood Village.

Mr. Weathersbee replied that it should be but that the last he heard Multnomah County was not interested in going with Troutdale.

The Chairman asked whether the Edgefield Center plant was the equivalent of secondary treatment at the present time.

Mr. Lynd replied that the plant does not produce an effluent which is equivalent to secondary treatment, although it is a secondary plant.

The Chairman asked why no limits were placed on the quantity of BOD and suspended solids which could be discharged.

Mr. Lynd replied that the staff did not want the county to rebuild the plant at this location.

The Chairman commented that if the Authority puts the pressure on the county to improve their plant and the only way they can get grant money is cooperate in an area-wide system then maybe the county would begin to cooperate in such a system.

Mr. Weathersbee pointed out that Arata Creek, the stream into which the effluent is discharged, is a very small stream.

The Chairman expressed the opinion that with the small receiving stream a 20 mg/L BOD and suspended solids limitation should be included in the permit and the county should be given a deadline for meeting this effluent standard. Since the temporary permit for Edgefield Center expires on June 30, 1968, the Chairman suggested that action be delayed on this permit until that time to allow for the drafting of new conditions.

It was MOVED by Mr. Waterman, seconded by Mr. McPhillips, and carried that permits for these applicants be granted as recommended by the staff with the exception that Multnomah County Edgefield Center be tabled until the next meeting.

#### WASTE DISCHARGE PERMITS - SOUTHERN AND COASTAL OREGON

Memorandum reports covering recommended waste discharge permit conditions for the following 6 applicants were given by Mr. Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

1. Central Point
2. Gold Hill
3. North Bend
4. Toledo
5. Salishan Properties, Inc.
6. Seaside

The staff recommended that action on a permit for the city of North Bend be delayed until the next meeting since it has been learned that a consolidation election for the cities of Coos Bay and North Bend has been scheduled for the May 28 primary. In addition, the staff felt that the schedule for providing secondary treatment should be more specific and include several more items.

Mr. Waterman asked whether the 30 mg/L BOD and suspended solids limitation in the permit for Salishan Properties was adequate or whether

the limitation should be lower considering the discharge to Siletz Bay. The staff reported that they were aware of no problems regarding this discharge at the present time.

It was MOVED by Mr. Waterman, seconded by Mr. McPhillips, and carried that the permits for these applicants be granted as recommended with the exception that North Bend be delayed until next meeting.

WASTE DISCHARGE PERMITS - EASTERN OREGON

Memorandum reports covering recommended waste discharge permit conditions for the following 7 applicants were given by Mr. Sawyer. These reports have been made a part of the Authority's permanent files in this matter.

- 1. Arlington
- 2. Fossil
- 3. Hermiston
- 4. Hood River
- 5. Mt. Hood Meadows
- 6. Pendleton
- 7. Stanfield

The Chairman commented that he felt that July 1, 1970, was too long a time to allow for the permittee to submit a detailed program and time schedule for providing secondary treatment by July 1, 1972, as required by condition No. 1 in the permit for the city of Arlington. He felt that if they wait that long to develop the program then probably problems of financing or anything else could delay their progress to the point where they would not make the 1972 deadline. The Chairman suggested that the date for submitting the program and time schedule on the permits for Arlington and Hood River be changed to July 1, 1969, and that the expiration dates for these two permits be changed to December 31, 1969.

It was MOVED by the Chairman, seconded by Mr. Waterman, and carried that the permit previously approved for Seaside be changed to require a detailed program and time schedule to be submitted by July 1, 1969, and that the permit expire on December 31, 1969.

The Chairman suggested that the expiration date for the permit for the city of Pendleton be changed to December 31, 1968.

After some discussion, it was MOVED by Mr. Mosser, seconded by Mr. Waterman, and carried that the permits for these 7 applicants be granted as recommended with the following changes:

For Arlington, change the expiration date to December 31, 1969, and require that a detailed program and time schedule be submitted by July 1, 1969.

CCA403

For Hood River, change the expiration date to December 31, 1969, and require that a detailed program and time schedule be submitted by July 1, 1969.

For Pendleton, change the expiration date to December 31, 1968.

MISCELLANEOUS

The Chairman asked how many complaints the staff had received regarding the Fanno Creek sewage treatment plant during the last month.

Mr. Lynd replied that he thought there had been at least a half dozen complaints received.

The Chairman said to add another dozen complaints for those he had personally received.

The Chairman instructed the staff to tell anyone calling with a complaint on the Fanno Creek plant that there would be a hearing at the next meeting regarding the renewal of their waste discharge permit.

The Chairman instructed the staff to revise the report on Northwest Aluminum as discussed during the lunch hour and get it out so that the matter can be considered at the June meeting. He also instructed the staff that if testimony at the June meeting indicates the need for additional hearings they will be held, but otherwise the hearing at the June meeting will be sufficient.

Mr. Silver reported that if he gets the transcript back from the court reporter on the Troutdale hearing that action on this matter will be considered at the June meeting. He advised that this matter could take some time since attorneys for one of the individuals involved have filed a Bill of Exception.

There was some discussion regarding the matter of the ships which would be in the Harbor for the Rose Festival and the resulting waste disposal problems. It was the general concensus that this was a matter which would have to be dealt with by the Federal government first.

There being no further business the meeting was adjourned at 4:20 p.m.

Respectfully submitted,

Kenneth H. Spies, Secretary

SA

5

FRONT

MINUTES OF THE 105th MEETING

of the

Oregon State Sanitary Authority

May 6, 1965

The 105th meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman at 10:00 a.m., May 6, 1965, in Room 36, State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Chris Wheeler, Doctor Richard H. Wilcox, Herman P. Meierjurgan and John Amacher, Members; Kenneth H. Spies, Secretary; John Denman and Don Morrison, Legal Advisors; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; H.W. Merryman, Joseph A. Jensen, Fred Bolton and Leo Baton, District Sanitary Engineers; Bryan Johnson and Fred Katzel, Associate Sanitary Engineers; Howard G. Smith, Assistant Chief, Air Quality Control; Harold Sawyer, Patrick Curran and Ernie Schmidt, Assistant Sanitary Engineers; Ed Lynd, Water Pollution Control Technician; Glen Carter and Edison Quan, Aquatic Biologists.

Mr. Ed Harms, Member, was unable to attend because of a prior commitment.

Doctor Wilcox introduced the following members of the Board of Health who were also present: Herbert W. Goodman, D.D.S., President; Jack W. Grøndahl, M.D., Vice President; Charles S. Campbell, M.D., John G.P. Cleland, M.D., Gerhard B. Haugen, M.D., A.V. Jackson, D.O., Mr. A.G. McLain and Forrest E. Rieke, M.D. The Secretary introduced the staff members to both boards.

MINUTES:

It was MOVED by Mr. Wheeler, seconded by Mr. Amacher, and carried that the minutes of the February 18, 1965, meeting be approved as prepared.

CC-312

PROJECT PLANS

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the action taken on the following 53 project plans and engineering reports for water pollution control and 18 project plans for air quality control for the months of February, March and April, 1965, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>

REVIEW OF 1965 LEGISLATION:

The Secretary reported that there were three bills introduced into the 1965 Legislature specifically at the request of the Sanitary Authority, that two of them, SB 90 and SB 185 had been passed but the third one, SB 87, was tabled, and that of the two that passed, SB 90 had been signed into law by the Governor and the other, SB 185, was awaiting the Governor's signature.

Doctor Campbell, member of the State Board of Health, reported that the State Board of Health has intense and strong interest in SB 185 as proposed by the Sanitary Authority.

It was MOVED by Doctor Campbell, seconded by Doctor Cleland, and carried that the joint meeting of the State Board of Health and State Sanitary Authority strongly favors the enactment of SB 185 into law.

CC-4312

The Secretary explained that the purpose of SB 185 is to prohibit after September 1, 1967, the discharge into any public waters of the state of Oregon any sewage or refuse from any moorage, marina, floating structure or any other structure unless such wastes are treated in a manner approved by the State Board of Health and State Sanitary Authority. There was considerable opposition to the bill, particularly by the time it reached the House. One hearing was attended by members of the Sanitary Authority staff at which there were approximately 200 people present, most of them owners of houseboats throughout the State, who claimed they were in full agreement with the state's program for abatement and control of water pollution, but voiced their opposition to the bill because they were afraid that it was impractical or impossible for them to comply with its requirements. It was pointed out that great pressure was being brought upon the Governor by certain interests to veto it.

Doctor Goodman, President of the State Board of Health, stated that the members of his Board were in full agreement with Doctor Campbell's motion, but wondered if it would be better if these joint boards prepared a statement that might have a little more factual information, other than the fact that these two boards are on record as favoring the bill, that could be released to the press, the Governor and anybody else interested.

Doctor Wilcox stated that it was his opinion that the statement which had been read into the Legislative Committee's hearings is a matter of public record now. He said that statement could be redeveloped to support the motion if the members so wished. Doctor Wilcox went on to say that it was his opinion that it is very unfortunate this bill had taken the name of the houseboat marina bill because it is far broader than that. If the law is enforced it will eventually prevent human excreta that is carried into any plumbing fixtures from going into any public body of water in the state of Oregon. This applies to land, estuaries, rivers, etc. throughout the State.

The Secretary said that the other two pieces of legislation pertained to air pollution control.

Senate Bill 87, if it had been approved, would have removed from the present statutes the section which exempts from state control land clearing and land grading operations. At the present time neither the State Sanitary Authority nor any local air pollution control agency has any jurisdiction over land clearing or land grading operations. Since 1961 when the air pollution control law was amended, the clearing of land for the construction of highways and development of urban renewal projects has added materially to air pollution due to the fact that the contractors burn the buildings and other debris right on site.

Senate Bill 90 pertains to the metropolitan approach to air pollution control. It was pointed out that every home owner who has space heating and every automobile driver contributes to air pollution in his community, and that due to the multiplicity of these sources it is felt that it is almost impossible to effectively control air pollution entirely from the state level. It was proposed in SB 90 that the Metropolitan Study Commission, which was created by the 1963 Legislative Assembly, be expanded to include a study of air pollution, and to propose a statute which would allow establishment of regional control programs. Senate Bill 90 has been passed by the Legislature and signed by the Governor.

The Secretary also reported that at the request of the city of Portland, SB 242 had been introduced which if passed would have made it possible to establish regional air pollution control programs. In other words, two or more cities, or two or more counties, or cities and counties by agreement could establish one regional air pollution control district. After several attempts to amend this bill, it was tabled.

CC-312

House Bill 1272 would have provided for the state control of exhaust from automobiles and would have required the Sanitary Authority to establish standards for emissions and to certify devices which could be used on automobiles to control pollution from the crankcase, the exhaust and any other part of the vehicle. This bill was tabled. It was thought at the time of the hearing that Congress might enact some standards for control of automobile exhaust emissions on a national level, but at the present time this does not look too favorable.

Senate Bill 194 would establish a Columbia River Compact and contains a provision to give the Compact Commission authority to enforce requirements for the control and abatement of interstate pollution. It does not appear likely that this bill will pass this session.

Senate Bill 212 would provide for the certification of all sewage works operators by the State Board of Health. No action has been taken after two committee hearings.

House Bill 1312 pertains to abolition of the Rogue River Coordination Board. There were two amendments proposed. It has gone back to committee, and does not look like any action will be taken.

Several bills pertaining to financing of sewerage facilities in Oregon have been introduced in this 1965 session. One bill would require the State Highway Department to pay the cost of relocation of sewers and water mains and other utilities when it is necessary to relocate them due to highway construction. This bill was passed by both houses, vetoed by the Governor and is now being reconsidered.

There are two bills pertaining to the Bancroft Act which are designed to improve the financing of sewers and other utilities.

Senate Bill 403, which has been passed, authorizes cities and other public bodies such as sanitary districts to issue bonds for 40 years instead of 30

years. The purpose is to reduce the annual carrying charges for some of the smaller communities that have extreme difficulty in raising sufficient funds to undertake construction of both sewer systems and sewage treatment works.

House Joint Resolution 31 pertains to air pollution control and instructs the Sanitary Authority to give full consideration to a report which was prepared by Oregon State University pertaining to the wigwam burner problem in Southern Oregon. It states that "the Sanitary Authority shall cooperate with industry to the end that the recommendations contained in this report will be fully considered and implemented." It would require further that the Sanitary Authority report back to the next session of the Legislature informing that assembly of the extent of the implementation of such recommendations, and authorizes the Authority to make any recommendations that it sees fit for new legislation to assist in solving this particular air pollution problem. This bill has not passed either House.

House Joint Resolution 11 would create an interim committee to study the functions of the State Board of Health in relation to counties and other activities in general public health throughout the State. It has passed the House. \$30,000 would be appropriated to finance the study during the next biennium.

BUDGET FOR 1965-67 BIENNIUM:

The Secretary reported on the budget approved by the Legislature for the Division of Sanitation and Engineering for the 1965-67 biennium. He presented a comparison between the actual expenditures for the '61-'63 biennium, the estimated expenditures for the present biennium, the amount requested for these various programs for the next biennium, the amount recommended by the Governor and the amount that was actually approved by the Legislature. The amount approved was about \$150,000 less than the amount that had been requested two years ago for the present biennium.

CC-312

A chart was presented showing the reductions that were made by the Legislature in the budget as recommended by the Governor's office. Two positions were eliminated, one from the Air Quality Control program and one from the Environmental Sanitation program. The Secretary reported that the Ways and Means Committee had made blanket cuts of \$15,000 in the in-state travel and \$7,500 in the capital outlay budgets.

Another chart was presented which showed a detailed breakdown for the various programs of the Division of Sanitation and Engineering divided between salaries, services and supplies, and capital outlay.

Information was included concerning the staffing situation of the Division of Sanitation and Engineering as it existed in the past and how it will be for the next two years. In 1961 the Division had an average staff of  $57\frac{1}{2}$  positions, 1963 -  $63\frac{1}{4}$  positions, 1964 and 1965 due to cutback in budget the number of positions was below the 1961 operations. The Secretary stated that under the budget which was approved for the next two years, the Division should have a staff of slightly more than 66 positions. However, due to the manner in which the budgets are made, if a full staff is maintained, it will be necessary to go to the Emergency Board for additional money to finance the salaries and wages.

Most of the increase for the next biennium is in the Air Quality Control program. The Legislature and the Governor's office went along with the request for additional people in air pollution control due to the fact that there is a good possibility for Federal financial assistance through the Federal Clean Air Act which was passed by Congress in December 1963.

WILLAMETTE BASIN POLLUTION CONTROL PROGRAM:

The Secretary of the Sanitary Authority stated that about one year ago the members of the Sanitary Authority reviewed and approved a detailed report which had been prepared by the staff pertaining to the problem of water pollution control in the Willamette basin.

In the late 1930's and early 1940's the policy was established requiring primary treatment for all municipal projects on the main stem of the Willamette and secondary treatment on the smaller tributaries. By 1957 when the last city on the main stem of the Willamette had complied with that policy, it was found that due to the tremendous increase in population and industry that had taken place in the meantime, primary treatment was not adequate to restore and maintain an acceptable degree of purity in the main Willamette.

In 1950 the Authority held a public hearing in the matter of waste disposal by the pulp and paper industry due to the fact that that industry constituted the largest single source of oxygen demand. As a result of that hearing held in 1950, it was determined that each of the five sulphite pulp mills would have to devise facilities to keep out of the stream during the summer and fall months all of the concentrated wastes from the production of sulphite pulp. The deadline was 1952. In compliance with that order these mills did provide facilities for that purpose. By providing these facilities these mills were able to reduce their BOD loads about 65% on an average.

In 1957 it was found that primary treatment for city wastes was not enough and likewise this degree of treatment by the pulp mills was not adequate to maintain an acceptable dissolved oxygen concentration in the lower Willamette. Consequently, the Authority went on record last year as changing its policy to require a minimum of secondary treatment for all cities equal to 85% BOD removal, plus chlorination, and the same degree of reduction for the pulp mills during the period of critical stream flow, plus year round removal of settleable solids. In the original order in 1950 no mention was made of the settleable solids contained in the waste from the paper making operations. Only the concentrated wastes from the pulp mills were mentioned, and since then it has been found that the settleable solids in the waste cause extensive sludge deposits in certain

CCA312

sections of the river. The Secretary went on to state that if the sludge deposits can be eliminated, a significant source of oxygen demand on the rivers will be removed.

(1) Municipal Sewage Disposal -

Mr. Weathersbee gave a report on the status of sewage treatment works - planning and construction - in the Willamette basin for communities having less than secondary treatment. This report, dated May 1965, has been made a part of the permanent files.

Mr. Weathersbee stated that all communities on the Willamette River basin will not have full secondary treatment facilities by the December 1966 deadline which was adopted as policy by the Sanitary Authority at its March 1964, meeting. However, each community has an active program under way and it is believed that reasonable progress is being made by all at this time.

(2) Pulp and Paper Mills -

Mr. Weathersbee presented a summary of the pulp and paper mill waste disposal for the Willamette River basin. This report, dated May 1, 1965, has been made a part of the permanent files.

The four sulphite mills located at Salem, Newberg, Oregon City, and West Linn on the main stem of the Willamette River had been requested to submit proposals for effecting reductions in their waste discharges which would meet the treatment requirements outlined in the Sanitary Authority's Willamette River Report of May 1964, which the Authority adopted as policy at its meeting in Eugene on June 18, 1964. Mr. Weathersbee summarized these proposals which have been made a part of the permanent files as follows:

- (a) Boise-Cascade - Salem. This mill is already exceeding the Sanitary Authority's requirements for reduction in BOD. In addition, it proposes to provide in-plant changes and facilities that will materially reduce waste flows and solids losses, to construct a system for collecting and consolidating all of the waste sources throughout the mill, and to

construct and place in operation primary sedimentation facilities by the end of 1968.

- CC4312
- (b) Publishers' - Newberg. This mill has recently been purchased by the Publishers' Paper Company, and administrative control by that company was assumed April 1, 1965. Publishers' Paper Company has stated that it proposes to proceed with the former owner's plan of expanding the present lagoon capacity by 50% prior to this summer's low flow period. Publishers' Paper Company has not had time to develop a comprehensive program for waste reduction at this mill. They have stated that a study will be begun immediately and a definite proposal will be forthcoming in the near future.
- (c) Publishers' Paper - Oregon City. This company proposes to continue barging a portion of its strong cooking liquors to the Columbia River as a means of effecting reductions in its BOD discharge during critical low flow periods. By this means an average of 68% reduction in BOD was maintained during the critical flow period July through October of last year. In addition the company has tentatively proposed to install a gravity system for collecting all of its waste streams within the mill. They have projected costs for construction of primary sedimentation facilities and are investigating the proposal of long range recovery of cooking chemicals but have not committed themselves to carrying through any of these projects by any specific time.
- (d) Crown-Zellerbach - West Linn. This mill proposes to add 30 MG capacity to its existing 70 MG waste sulfite liquor lagoon. This will permit an effective reduction in total mill BOD loads of 77% for a 140-day period. It is estimated that they will obtain an additional 5% reduction in BOD through removal of settleable solids. This will bring them close to the requested 85% reduction in BOD. In addition they propose to make extensive

in-plant changes which will further reduce waste flows and solids losses, and to engineer, construct and place in operation primary sedimentation facilities by the end of 1967.

Following discussions of these proposals the Sanitary Authority took the following actions:

(a) Boise-Cascade - Salem. The Boise-Cascade proposal was accepted unanimously with the provision that all phases of the program, including the facilities for removing and disposing of settleable solids be completed and placed in operation by June 1, 1968.

(b) Publishers' - Newberg. It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler and carried that the Sanitary Authority request Publishers' Paper Mill at Newberg to construct, in addition to its proposed 50% increase in capacity of the existing lagoon by this summer, additional lagoon capacity, something on the order of 100 million gallons, and have it completed and in operation by June 1, 1966, and to have their solids problem solved by June 1, 1967.

(c) Publishers' - Oregon City. It was MOVED by Mr. McPhillips, seconded by Mr. Amacher and carried that we again communicate with this pulp mill by letter asking them to be specific in what they intend to do in regard to dates and plans, and failing to receive a satisfactory reply to our letter within a reasonable time, that they be asked to appear at the next Sanitary Authority meeting and explain why they are unable to do so.

(d) Crown-Zellerbach - West Linn. It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan and carried that the proposal submitted by this pulp mill be accepted but point out that they are somewhat below the required 85% BOD reduction and request them to carry on a program for further BOD reduction.

CHATNICKA HEIGHTS NO. 2 SUBDIVISION PERFORMANCE BONDS:

Mr. Milliken reported that Chatnicka Heights is a small subdivision in Polk County just outside of West Salem. The developer had requested a variance in the performance bond requirements for this project. The original Chatnicka Heights subdivision included 26 lots. The developer now wants to include 10 more lots. The present bond covers the 26 lots but only three houses have actually been occupied and 10 either built or under construction. In order to sell the houses the owner has to have a few more lots available for buyers. The subdivision is served by a sewage treatment plant with a capacity large enough to take care of 100 houses. The owner has volunteered to increase the bond when there are more than 26 houses built. Mr. Milliken recommended that the Sanitary Authority grant the request for leaving the bond as it is.

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips and carried that the Sanitary Authority allow this variance with the condition that if and when sewer service reaches 20 dwellings, the bond at that time will immediately be increased.

ROGUE RIVER:

Mr. McPhillips stated that he is concerned over conditions in the Rogue River. The Rogue River Coordination Board is charged with seeing that the Rogue River and its tributaries shall be maintained such that fishing conditions in Curry County are comparable to fishing conditions in Josephine County and to provide a medium through which placer mining interests and fishing interests on the river and its tributaries may cooperate for the mutual benefit of both. This part of the law has been disregarded by the Rogue River Coordination Board who has tried to solve this problem by making an agreement with the miners whereby they could operate five days a week, leaving the river, supposedly, two days a week for the rest of the people to use.

CC-312

Mr. McPhillips said that there are really two sources of pollution in the Rogue River - one of them is mining and the other is sand and gravel operations. At present there are no laws regulating placer mining and not too many regulating the other activities. Now is the time to start an active campaign on the Rogue River because there are no mines operating and will not be operating until next winter. Mr. McPhillips asked that the Sanitary Authority move in and get these gravel operations cleaned up, that a stand be taken on it, and that the offenders be notified that the Authority intends to stop them from muddying up the river.

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher and carried that the staff be instructed to notify the gravel operators on the Rogue River and its tributaries that they will have to conform to the laws regarding pollution control, and that the staff be further instructed that if there is any pollution, to proceed against the operators.

PORTLAND REFUSE DISPOSAL:

Howard Smith reported that a letter from Mr. Niedermeyer, attorney for Mr. Elmer Hawk, and a copy of a petition with 52 signatures had been received in regard to the open burning of refuse at the city of Portland public dump located off North Swift Boulevard near St. Johns. The petitioners demanded that the laws of the state of Oregon be enforced in accordance with Chapter 426, Oregon Laws 1961, in regard to the abatement of air pollution in the city of Portland, and specifically at the city's refuse disposal dump located along North Swift Boulevard. The Secretary pointed out that this same petition was sent to the Honorable Tom Lawson McCall, Secretary of State, and to Ray Smith, Auditor of the city of Portland.

Mr. Howard Smith reported that a staff member had inspected the operation at the city dump on April 15, 1965, and had noted that open burning of combustible material, such as tree trimmings, cardboard, cellulose and lumber, was being carried on at the time. Also a two-section lagoon of oil waste was

observed to be partly filled. Past practice by the city has been to open burn this oil at weekly intervals, usually at night. An average of 40-50 cubic yards per day of this rubbish material is open burned; however, some days much larger amounts of scrap lumber are brought in for disposal. Approximately 579,000 gallons per year of waste oil containing 20-30% water and sludge are disposed of at this site by open burning. Mr. Smith further stated that the city fire marshal requires a permit be issued for this open burning and tries to limit the time of burning to periods of favorable atmospheric dispersion and that there have been numerous conferences with officials of the city of Portland urging a study to find a way of eliminating this source of air pollution. One private civil suit has been heard on this matter in Circuit Court of Multnomah County, Oregon Re: Elmer Hawk vs. Terry D. Schrunk, et al No. 294-940. The requested temporary injunction against the city was denied by the court because the conditions complained of had existed for some time, and the Sanitary Authority was negotiating with the city to correct the conditions described.

Mr. McPhillips asked how these oil wastes would be disposed of other than by open burning, to which Mr. Smith replied that at the present time negotiations are going on between the city, Port of Portland, and Bureau of Docks for collection of these oil wastes to be barged for reclaiming. Time Oil Company is interested in this and there is hope that this problem can be resolved. Mr. Smith stated that there are alternate ways of disposing of these oil wastes. One is a designed incinerator that will take even a higher percentage of water sludge and still burn it without creating any air pollution. Mr. Wendel mentioned that one way would be to take it six miles from the city and burn it, and another would be sanitary landfills. He also asked what was being done about burning tires and Mr. Smith said

CCA312

this practice had been discontinued, also the burning of asphalt roofing, but that a number of tires are being taken by contractors for auxiliary fuel for land clearing.

Mr. R.E. Hatchard, Director, Portland Air Quality Control, reported that a new city engineer has been employed and will be in Portland July 1. He has been authorized in this interval before he comes to Portland to visit successful incinerators and accumulate basic information. He is in Ohio now. Detroit has made a dramatic solution to their refuse problem with a special incinerator; Atlanta, Georgia has another. Mr. Hatchard stated that this new city engineer would have responsibility for all city engineering work.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan and carried that the city of Portland submit to the Authority by July 1, 1965, a workable plan for conversion from the open burning of all refuse and oil waste at this site to an approved method of disposal, that the plan include a time schedule for conversion of each class of refuse now being open burned, and that in view of the long standing nature of this problem and continued receipt of petitions and complaints in this matter, the open burning of solid and liquid waste cease at this site by September 1, 1965.

WIGWAM WASTE WOOD BURNER REGULATIONS:

Mr. H.M. Patterson read the proposed regulations drafted under the date of May 4, 1965, and by means of a sketch gave an explanation of the operation of a wigwam waste wood burner. He then recommended that the proposed regulations be adopted in accordance with administrative procedures.

Mr. S.B. McQueen, Chairman of the Forest Products Air Quality Committee of Associated Oregon Industries pointed out that the regulations which Mr. Patterson had submitted had been developed after a considerable amount of time, money, effort, experimentation on the part of numerous individual groups; namely, the State Air Quality Control staff, Oregon State University

Engineering Department and the Forest Products Industry which sponsored this comprehensive report and study. Mr. McQueen stated that he had one slight disagreement with the regulations and this was in regard to exit gas temperatures. He felt that there was not a great deal of background information on this as yet. He mentioned that part of the regulation requires that each burner have a thermocouple and a pyrometer installed and that each burner will have a log kept daily of its operation which includes the exit gas temperature reading. He felt and said he was supported in this regard by Dr. Boubel of Oregon State University, who is the man who directed the study, that they would not be in a position to say whether the requirements for exit gas temperatures should be 900, 200, 500 or what have you until they have had an opportunity to see this from a practical long-range standpoint. He suggested that at the outset no temperature be specified, but that within the first year re-examination of the information contained in the background log data as provided by daily reports and the use of thermocouples and pyrometers on burners be used to give a good basic idea of what the temperature should be. Because of atmospheric conditions, altitude, prevailing winds, type of fuel, etc., in one particular airshed, 500 degrees might be impossible to attain and on the other hand, it may be that a smokeless burner could operate at temperatures below 400 degrees, possibly even 250 degrees. He said the Industry's Air Quality Committee recommends that the specific temperature be deleted at this time and in its place there be substituted words to the effect that the highest possible operating temperature be maintained. This could be reviewed at a later time when there is more basic information available from which to draw.

Mr. Meierjurgan said he believed there should be more study on it, and that in setting a definite temperature we might be trapping ourselves. He also mentioned various species of wood to be burned and that some species required a higher temperature than others.

CCA312

Mr. McQueen stated that the original study of Oregon State University was on Douglas Fir.

Mr. Wendel asked if it would suffice to say under Article (4) "burner exit temperatures will be maintained high enough to prevent the emission of objectionable smoke and particulate matter." He felt that different burners would differ, depending upon location and other factors.

Mr. Patterson stated that the regulations as drawn recognize the fact that there will be some emissions even if these regulations are complied with. These regulations have been drafted on the idea that this is a step in the direction to reduce air pollution but would not necessarily solve the problem. He said that we are reaching for a criteria that would give us some indication of the efficiency of combustion and we chose the degrees of exit gas temperature for that purpose. The regulation is actually drafted around the exit gas temperature requirement.

There was much discussion as to what the exit gas temperature should be to produce acceptable results.

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher and carried that the item "the burner exit temperature shall be maintained above 500 degrees Fahrenheit" be deleted and that instead it be agreed that the burner shall be operated at the highest possible temperature that can be maintained without damage to the burner.

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips and carried that the amended draft be presented at a hearing for final adoption by the Sanitary Authority.

STATUS REPORTS:

(1) Grand Ronde sewerage. A hearing has been authorized by the Authority and is scheduled for June 9, 1965, in Grand Ronde.

(2) Mill City sewerage. Satisfactory progress is being made for the present. A hearing has been authorized in the event satisfactory progress is not maintained.

(3) Arrow Meat Company waste disposal. Mr. Weathersbee stated that members of the staff had participated in the two-day trial March 2 and 3, 1965, and are now awaiting the court's decision.

(4) City of Portland sewage disposal. Since the last Authority meeting the city of Portland has authorized its consulting engineers to proceed with the preparation of final plans for the construction of interceptors and trunk sewers so that they can make application for a Federal grant from the next fiscal year's allotment. They have also assigned members of their engineering staff to make the necessary study of the east side interceptor so that a plan can be worked out whereby they can make the changes necessary to prevent the overflow or by-passing of raw sewage into the Willamette River. They hope to have the whole project done in 6 years and the sewers for the Linnton and Guilds Lake areas completed in 3 years.

Mr. Wendel and Mr. McPhillips both expressed their disappointment over the fact that it had taken the city of Portland so long to resume planning for completion of its project. Mr. Wendel expressed the opinion that the city should be required to submit a bond issue to the voters in order to speed up the financing so that it could be completed in less than 6 years.

(5) Dunthorpe-Riverdale sewerage. The Secretary stated that the contract had been awarded for the engineering, but the engineers have not actually been authorized to start preparation of plans due to the fact that the county intends to finance the engineering by an advance planning loan from HHFA. The county does not want to risk using its money because if a bond issue should fail to be passed by the voters, the money would have been spent without opportunity for recovery within a reasonable time. An application for a planning advance was filed many months ago but HHFA refused to act on it until the city and county had entered into a contract for the treatment of the sewage at the city's sewage treatment plant.

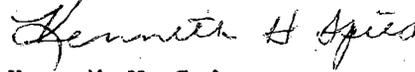

CCA312

Commissioner Gleason has said that they are working as fast and as diligently as they can, that they are meeting with the Advisory Committee for the county sewer district, and will be setting a date shortly for a bond election.

The next meeting date was set for June 24 in Portland with an executive meeting in the morning and regular meeting in the afternoon.

There being no further business, the meeting adjourned at 5:00 p.m.

Respectfully submitted,

Kenneth H. Spies  
Secretary

MINUTES OF THE 106th MEETING  
of the  
Oregon State Sanitary Authority  
June 24, 1965

The 106th meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman at 1:30 p.m., June 24, 1965, in Room 36, State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Chris L. Wheeler, Doctor Richard H. Wilcox, Herman P. Meierjurgan and Edward C. Harms, Jr., Members; Kenneth H. Spies, Secretary; John Denman and Don Morrison, Legal Advisors; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; H.W. Merryman, Joseph A. Jensen and Leo Baton, District Sanitary Engineers; Warren C. Westgarth, Director of Laboratories; Bryan M. Johnson, Robert F. Wood and Fred G. Katzel, Associate Sanitary Engineers; Howard G. Smith, Assistant Chief, Air Quality Control; Harold L. Sawyer, Patrick D. Curran and Ernie A. Schmidt, Assistant Sanitary Engineers; Edgar R. Lynd, Water Pollution Control Technician and Glen D. Carter and Edison L. Quan, Aquatic Biologists.

Mr. John Amacher, Member, was unable to attend because of prior commitments.

MINUTES:

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that the minutes of the May 6, 1965, meeting be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the action taken on the following 18 project plans and engineering reports for water pollution control and 4 project plans for air quality control for the month of May 1965, be approved.

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
5-4-65	Dayton	Sewerage system	Prov. app.
5-6-65	Central Point	Sewer extension (250' of 8")	Approved
5-6-65	Oak Lodge #2	Lateral B-0-4	Prov. app.

5-26-65	Portland	Tryon Pump Station specs.	Prov. app.

Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
May 17	White City	3M Company, incinerator for burning acetone and heptane	Test data was requested
May 18	Multnomah Co.	Del Brown Foundry	Recommended cond. approval
May 21	Columbia Co.	Shell Chemical Company Anhydrous ammonia and urea plants	Cond. approval
May 28	Jackson Co.	Sam's Valley Elementary School incinerator	More information requested

FEDERAL GRANTS

A list of the projects for which applications had been received prior to the June 15 deadline for federal grants under PL 660 from the 1966 fiscal year appropriation which Congress is expected to make shortly had previously been distributed to and reviewed by the members. It was pointed out in the accompanying memorandum dated June 24, 1965, that the appropriation had not yet been finally acted upon by Congress but that Oregon should receive a total of \$1,285,850 which in addition to the balance of \$9,330 from the present fiscal year appropriation would amount to \$1,295,180 to be allocated for new projects. The memorandum and list have been made a part of the Authority's permanent files.

It was MOVED by Mr. Harms, seconded by Dr. Wilcox, and carried that the applications for federal grants for fiscal year 1966 be approved in the order shown on sheet 4 of the memorandum and list with the exception that the city of Portland receive the balance in the fund unless the appropriation is increased sufficiently to more than cover Portland's request in which case the city of Springfield will receive the balance. The list and order of applications approved are as follows:

<u>Applicant</u>	<u>Project No.</u>	<u>Amount</u>
1. Eugene *	157	\$350,820
2. Aloha Sanitary District	181	104,413
3. Lincoln City	185	61,050
4. Multnomah County **	175	44,200
5. Hubbard	180	41,442
6. Corvallis	182	318,000
7. Multnomah County ***	173	13,400
8. Willamina	179	30,000

CCA312

<u>Applicant</u>	<u>Project No.</u>	<u>Amount</u>
9. Lebanon	177	37,370
10. Sweet Home	161	19,620
11. Banks	178	22,800
12. Huntington	176	13,950
13. Tigard	186	16,539
14. Independence	174	30,900
15. Portland	184	****
* Balance of request approved in 1964		
** For Sylvan interceptor sewer		
*** For Edgefield Center STP additions		
**** Balance of funds available up to a maximum of \$600,000		

#### WIGWAM WASTE WOOD BURNER REGULATIONS

Mr. Patterson reported that at the last Sanitary Authority meeting a motion was adopted that the proposed regulations be revised and be prepared for a hearing. Pursuant to that motion the regulations were subsequently revised and prepared for a hearing. The proposed regulations require the staff to review the plans and specifications for new wigwam waste wood burners and also require facilities to be added to existing burners for control of combustion.

In accordance with the administrative procedure act, the hearing was advertised and was completed on June 21. The report from Mr. Marion Lamb, the hearings officer, has been made a part of the Authority's permanent files. It is the recommendation of the hearings officer that the proposed rules be adopted.

Mr. Patterson then stated that before so doing the staff had some changes to request as follows:

- CC312
- (1) Page 1, under definitions, paragraph 4, eliminate the words "refuse or garbage" at the end of the sentence. It is the intent of the regulations to pertain only to waste wood burners.
  - (2) Page 3, section 4, subsection 1, change "22-011" to "21-011". This was a typographical error.
  - (3) Page 3, section 4, subsection 1, put a period after "suspended particulate matter" and delete the remainder of the paragraph. That part of the section, as legally interpreted, would necessitate the staff's reviewing by a specified date each individual burner to determine whether or not it should be given an extended variance.
  - (4) Page 3, section 4, subsection 2, change to read "--- may be granted variances from the provisions of Section Three pursuant to ORS 449.810." Delete the remainder of the paragraph. The original wording in this case does not provide any added clarity. This is outlined in the statute which is all that is necessary.

Mr. Wheeler asked Mr. Denman whether or not it would be necessary to hold a second hearing on the above changes.

Mr. Denman replied that it would not as long as the changes were kept within reasonable limits. He said the regulations can be changed and any comments considered which is the purpose of the hearing.

Mr. Wheeler then stated that before any action was taken on these regulations he had one comment he wished to make and have the minutes show the same. At the last meeting of the Authority he raised the question of practicality relative to Section 3, subsection 4, concerning exit gas temperatures. He stated that from a theoretical standpoint he thought the present wording may be as good or better than the previously specified 500 degrees, but that

without having some specific degree of exit gas temperature the Sanitary Authority does not have a regulation that is readily enforceable from the standpoint of the staff. He said that he wanted to register an objection to this point and to serve notice that in the near future he would expect that there would be some modification brought up and an amendment made to the rules later which would include either exit gas temperature or some other physically practical means of enforcement to the actual policing of the operation.

The Chairman then asked Mr. Denman if he agreed with this statement made by Mr. Wheeler.

Mr. Denman replied that he did agree with it as far as enforceability is concerned, that prior to this time a definite burner temperature had been set, and that as Mr. Wheeler said, it leaves something to be desired as far as strict enforcement of that particular phase.

Mr. McPhillips stated that it was his understanding that the Authority agreed that this was probably a starter and was as practical as we could go until we have tried it and had some sort of a background of experience. If it isn't workable it can be changed later. The Chairman then asked what the regulation as drafted would enable the staff to do.

Mr. Patterson replied that it would enable the staff to enforce the installation of the temperature control devices, record keeping, etc., so that the staff would be able to obtain information relative to the operation.

Mr. Meierjurgan said that he felt this proposed regulation is eminently fair and that within a couple of years the staff would probably gain in two areas; one the design of the burner and another in the establishment of standards on exit gases.

The Chairman then asked the effectiveness of Section 4, page 2 if a period were placed after the words "efficient combustion."

Mr. Harms was in favor of the Chairman's suggestion and stated that he didn't believe the rest of the phrase added anything.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the proposed regulations be adopted as written except for page 1, under definitions, paragraph 4, delete the words "refuse or garbage"; page 2, section 3, subsection 4, place a period after the word "combustion", and delete the remainder of the sentence; page 3, section 4, subsection 1, line 3, change "22-011 to 21-011"; page 3, section 4, subsection 1, put a period after "Suspended Particulate Matter" and delete the remainder of the paragraph; page 3, section 4, subsection 2, change to read "--- may be granted variances from the provisions of Section Three pursuant to ORS 449.810" and delete the remainder of the paragraph.

GRAND RONDE SEWAGE DISPOSAL

A public hearing had been held on June 9, 1965, in the matter of Floyd Bunn and the community of Grand Ronde concerning water pollution in Polk County, Oregon.

In a memorandum report by Hearings Officer, Marion Lamb, dated June 18, it was stated that testimony at the hearing established that raw or inadequately treated sewage was, and is, being discharged into Rock Creek causing pollution in Rock Creek and the South Yamhill River, in violation of Oregon Statutes and Administrative Rules.

Mr. Bunn had admitted ownership of the sewerage system involved and did not deny or refute any part of the facts set forth in the complaint.

It was the recommendation of the Hearings Officer that Mr. Floyd Bunn be given 60 days in which to secure an engineer's recommendation on an acceptable

CCA312

The Chairman then asked the effectiveness of Section 4, page 2 if a period were placed after the words "efficient combustion."

Mr. Harms was in favor of the Chairman's suggestion and stated that he didn't believe the rest of the phrase added anything.

It was MOVED by Mr. McPhillips, seconded by Mr. Meier Jurgens, and carried that the proposed regulations be adopted as written except for page 1, under definitions, paragraph 4, delete the words "refuse or garbage"; page 2, section 3, subsection 4, place a period after the word "combustion", and delete the remainder of the sentence; page 3, section 4, subsection 1, line 3, change "22-011" to "21-011"; page 3, section 4, subsection 1, put a period after "Suspended Particulate Matter" and delete the remainder of the paragraph; page 3, section 4, subsection 2, change to read "--- may be granted variances from the provisions of Section Three pursuant to ORS 449.810" and delete the remainder of the paragraph.

#### GRAND RONDE SEWAGE DISPOSAL

A public hearing had been held on June 9, 1965, in the matter of Floyd Bunn and the community of Grand Ronde concerning water pollution in Polk County, Oregon.

In a memorandum report by Hearings Officer, Marion Lamb, dated June 18, it was stated that testimony at the hearing established that raw or inadequately treated sewage was, and is, being discharged into Rock Creek causing pollution in Rock Creek and the South Yamhill River, in violation of Oregon Statutes and Administrative Rules.

Mr. Bunn had admitted ownership of the sewerage system involved and did not deny or refute any part of the facts set forth in the complaint.

It was the recommendation of the Hearings Officer that Mr. Floyd Bunn be given 60 days in which to secure an engineer's recommendation on an acceptable

plan of abatement; and, further, that the State Sanitary Authority determine the time for completion of this abatement method or installation.

Mr. Jensen, Portland District Engineer, reviewed the report of the hearings officer and said the staff would like to recommend that it be required that Mr. Bunn submit and obtain approval of engineering plans and specifications in addition to a construction time table by not later than September 1, 1965, and that pollution of Rock Creek in South Yamhill River by raw sewage or inadequately treated sewage effluent from Mr. Bunn's sewage system be abated in an approved manner by not later than January 1, 1966.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the recommendations of the Hearings Officer that Mr. Floyd Bunn be given 60 days in which to secure an engineer's recommendation on an acceptable plan of abatement be accepted.

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that the above motion be amended to set a date of September 1, 1965, for submission of engineering plans and January 1, 1966, for abatement of the pollution.

CHIPMAN CHEMICAL COMPANY

The Chairman stated that this matter was placed on the agenda because of the receipt of a complaint from Morris P. Kirk & Sons which apparently is a subsidiary of National Lead Company. After having been assured by the members of the Authority that they had read the complaint, the Chairman asked Mr. Patterson if he felt that the treatment of the lake and plant effluent will accomplish the desired purposes.

Mr. Patterson said that based on the information submitted to the staff, it will reduce the odor problem considerably, but that it is believed that the area odors will continue to be a problem as long as the lake is used as

CCA312

a holding or treatment device. He stated that he did not think this treatment would completely eliminate the odor problem, but that it would be a step in that direction.

The Chairman asked Mr. Patterson if he thought that all the odor came from the lake.

Mr. Patterson replied that not all of it comes from the lake, but it was the staff's belief that a substantial part does come from the lake, both in the immediate area and in the metropolitan area.

Mr. McPhillips asked if this was a new process, and if not, why hadn't it been tried before.

Mr. Patterson said that Chipman Chemical Company had just recently thought of this process following receipt of the last letter from the Authority staff. The company indicated that they would treat the effluent as it comes from the plant and also treat the lake with calcium hydroxide.

Mr. Harms said that even though this has been a recurring problem at almost every Sanitary Authority meeting for the past two or three years, he thought that the staff in effect indicated that the cooperation by Chipman Chemical has been quite good in the past couple of years.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the staff continue its study and review of the matter, reporting back to the Sanitary Authority at its next meeting regarding progress, and that Chipman Chemical Company be requested to proceed with all possible haste in the proposed treatment of the lake with calcium hydroxide.

Mr. McPhillips made the statement that while he was in sympathy with the motion made by Mr. Harms, and had the kindest feeling toward Chipman Chemical Company because they have been most cooperative, he wanted to point out that

the staff still has a job to do and Chipman should be informed that if they are not able to abate this nuisance in their present location, the Sanitary Authority will have to start abatement proceedings.

TILLAMOOK AIR BASE SEWAGE DISPOSAL

The Secretary stated that the Tillamook Air Base has had a sewage disposal problem for a good many years. During World War II the Air Base was built with a system for the collection of domestic sewage but because of the shortage of critical materials the installation of sewage treatment works was not required. As a consequence all the wastes from this base were discharged, untreated, directly into the Trask River which is a tributary of Tillamook Bay. Following the end of hostilities and at some later time, the operation of the base was turned over to Tillamook County with the result that several industries located on those properties. Beginning about 1956 the staff started working with Tillamook County, the Board of County Commissioners, in an attempt to get them to assume the responsibility for providing sewage treatment. This was refused on the grounds the county did not have full ownership of the system or the property. Not too long ago, following the initiation of the Job Corps program, a new development took place on the base on property that belonged to the Bureau of Land Management. The Job Corps Center was established and they now have about 275 persons at this center. The federal government was agreeable to providing sewage treatment to serve this new development; however, inasmuch as it is located on the base and is tributary to the whole sewer system, it was suggested by the Authority staff that the federal government not provide a plant for its own facility but agree to use its funds to help finance a treatment works which would serve the entire area. This the federal government agreed to do. At about that same time negotiations were completed between General

CCA312

Services Administration, the federal agency that handles federal properties, and Tillamook County, turning over the utilities and portions of the land to Tillamook County so according to present records the county now has full ownership of this facility. Immediately thereafter a letter was sent to the Board of County Commissioners advising them of this problem and asking them to retain engineers to get an engineering study prepared and plans developed so that sewage treatment for the entire base could be provided, thereby eliminating pollution caused in the Trask River and Tillamook Bay. This letter was turned over to the attorney for the Tillamook Airport Commission who replied that it was still a problem of the federal government. An immediate reply to that letter was sent pointing out that the Job Corps Center was only part of the problem and that the federal government was willing to solve its problem but that wouldn't solve the remainder of the problem. The staff's letter again directed the county to retain an engineer, have plans prepared and to proceed with construction of the required facilities. The County Commissioners were told that the staff would be glad to meet with them to discuss this matter and give them any assistance we could. That letter was dated May 21 and to date no reply from the county has been received and as far as is known no action has been taken. If no cooperation is received from the county, it is requested the staff be given permission to take appropriate steps to secure cooperation through the issuance of a citation for a public hearing before the Authority.

Mr. Meierjurgan asked what date had been set for asking for compliance or citing them in and the Secretary replied that no deadline was set, that they were merely advised that the Board would be in session today and requested that they advise the Authority before this so that the information could be

considered. No one was present to represent the airport. The Airport Commission acts as agents of the county government.

It was MOVED by Mr. Meierjorgen, seconded by Mr. Harms, and carried that the recommendation of the staff be accepted that if no cooperation is received by July 15, 1965, to employ an engineer and proceed with studies to solve the problem, a citation will be issued for the county to appear at the next regularly scheduled Sanitary Authority meeting.

WILLAMETTE RIVER PULP MILLS

Mr. Weathersbee reported that at the last meeting of the Authority proposals for treating the wastes from the four sulphite mills on the main stem of the Willamette River were considered. These mills were Boise-Cascade at Salem, Publishers Paper Company at Newberg (formerly Spaulding), Publishers at Oregon City and the Crown Zellerbach Corporation at West Linn.

He also stated that a request has since been sent to the Crown-Zellerbach mill at Lebanon for a proposal. None has been received yet but no specific deadline was given. A partial proposal, unsolicited, was made but the company was asked to provide for further reductions in the BOD and for submission of a definite proposal to this end. This had not yet been received but the company was known to be working on this proposal.

Mr. Weathersbee then briefly reviewed the reports presented at the last Sanitary Authority meeting. The Crown Zellerbach mill at West Linn had proposed to meet the treatment requirements as set by the Board by 1967. This was accepted. The Boise-Cascade Company at Salem proposed to meet the treatment requirements during 1968 which was accepted with the request that they advance their target date to June 1, 1968, instead of the end of 1968. A letter received June 24, 1965, from Boise-Cascade Company was read and has been made a part of the files. In a telephone conversation the company agreed

CCA312

essentially to make every effort to meet the June 1, 1968, deadline and intends to do so unless prevented by soil and water conditions on Minto Island.

The Spaulding mill at Newberg had submitted no proposal because that mill has just been taken over by the Publishers Company of Oregon City. A proposal for the Publishers mill at Oregon City was received but not acceptable. Pursuant to instructions by the Board a letter was directed to Publishers on May 14. A reply dated June 22 still gave no definite proposal.

Mr. Meierjurgan pointed out one sentence in the company's letter which reads, "This very substantial capital expenditure produces no revenue, and we are also planning on expansion and improvement of our revenue producing facilities both at Oregon City and Newberg." He then commented that in other words they are planning on expanding, there is nothing wrong with that but if they have that type of capital, it is also an important consideration they should be asked for a definite time schedule.

Mr. Weathersbee said the stage development suggested in their engineer's report submitted with their letter of June 22 would be as follows: Stage 1. Sanitary sewage facilities costing \$19,305. This would be picking up their remaining sanitary waste outfalls at this mill and tying them in with the Oregon City sewer system. Stage 2. The industrial effluent gravity collection system at a cost of \$257,920. Stage 3. Pumping stations, effluent pressure system and clarifier at an estimated cost of \$405,860. Stage 4. Solids dewatering and incineration equipment at an estimated cost of \$227,500. The total cost of these facilities is \$891,280. A definite commitment on carrying out Stage 1 during 1965 has been given. Getting detailed engineering studies of the gravity collection system for consideration and possible construction commencing in 1966 is in progress. After the collection system

is installed, collection of data will begin which will be used to design the pump stations, the pressure system and the clarifier, and beyond that solids dewatering and incineration equipment will be provided. No dates were given for Stages 3 and 4.

It was MOVED by Mr. Harms, seconded by Dr. Wilcox, and carried that Publishers Paper Company at Oregon City be cited to appear at the next Sanitary Authority meeting to show cause why an order should not be entered calling for completion of Stage 1 as shown in their engineering report by December 31, 1965, Stage 2 by June 15, 1966, and presentation of a definite time schedule for completion of Stages 3 and 4.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that unless Publishers Paper Company at Oregon City gives to the Authority by August 2, 1965, satisfactory assurance that the company will complete Stages 1 and 2 by the above mentioned deadlines and submits a definite time schedule on Stages 3 and 4, the matter be referred to a hearings officer for a hearing on the citation.

It was reported that Publishers Paper Company was enlarging the lagoon at the Newberg mill to approximately 80 million gallons capacity, the first stage of a satisfactory proposal for that installation. This is all that can be expected at this mill this year. A letter directed to the company set forth some other deadlines to be met for additional lagoon capacity beyond that which is being provided this summer and also for a proposal for providing primary sedimentation for solids removal. At the last Authority meeting the Board decided to ask Publishers to complete additional storage facilities by June 1, 1966. That would be the storage required to effect at least 85% BOD removal and to complete the installation of the facilities for settleable solids removal by June 1, 1967. It is a relatively simple problem there at

CCA312

the former Spaulding mill as there is only one outfall.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the staff be requested to direct another letter to Publishers Paper Company, Newberg, asking for a specific reply to the third paragraph on page 2 of Mr. Spies' letter of May 14, 1965, concerning the Newberg mill.

Mr. Weathersbee then mentioned that Western Kraft Corporation is planning expansion of its mill at Albany which will increase production to approximately 500 tons per day. This will be an increase of about 75 tons/day as the present capacity is 425 tons per day. The company has proposed to install earthen settling basins in sufficient capacity to give the requested fiber reduction. It is thought that aside from the possible aggravation of the odor situation this proposal is acceptable. It should not cause any serious water pollution problems.

Mr. Meierjurgan suggested that the Crown Zellerbach mill at Lebanon be included as an item on the agenda at the next meeting of the Authority. He stated it is a serious problem as far as fisheries resources of the South Sanitam River are concerned.

#### ROGUE RIVER

Mr. McPhillips reported he was not very happy with the progress being made on the Rogue River from the standpoint of the cooperation received from the contractors operating gravel dredging machinery on the upper Rogue River and its tributaries. He said the majority are located in one place for only a relatively short time but the turbidity being caused is a real problem. He felt that bringing these operators into court and fining them would not be the answer. They are well financed so paying a fine would not stop them, but perhaps a restraining order or injunction to stop them, at least in their immediate location, would help. He stated further that there are going to be

some dams built on tributaries of the Rogue River within the next few years; therefore, this is going to be a constantly recurring problem. It is going to take a lot of work and constant vigilance to make any progress.

Mr. Denman stated Oregon statutes carry the criminal penalty to which there is normally a fine provision attached and in most cases a possible jail sentence. Anyone, of course, finding a violation of one of the statutes can sign a complaint. The district attorney can issue the complaint in which case they would issue a warrant and call the particular person in. The court might levy a \$25.00 fine, but the complainants are not too impressed. In many instances the jail penalty is possible. This would be more effective than a mere fine.

Mr. McPhillips noted further that there is also the possibility of being faced with the problem of an apathetic district attorney or judge who would not be too impressed with our desire to clean up any given area.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the Authority instruct its staff to report any willful violations, particularly in the Rogue River, and that they be given authority to file information with the district attorney with a view to prosecution and see if some forward step can be taken on the Rogue River.

The question was then asked if there was a statute on the books that could apply. Mr. Harms replied that 449.110 related specifically to gravel operations. The Secretary noted that ORS 449.100 gives authority to declare an emergency and take immediate action. This would be seeking an injunction, however, for interfering with the recreational enjoyment of the waters of the state of Oregon.

Mr. Weathersbee asked for an opinion in regard to requiring permits to operate under 449.080, subsection 6; to which Mr. Harms said a procedure for

CCA312

the whole stream would have to be established. This would have to be a long range procedure and would not give immediate relief.

Mr. Baton, District Engineer at Medford, said he was fairly close to this problem and had gone with the fish and game commission people a few weeks ago to the district attorney and spent about two and one-half hours trying to get some kind of injunctive relief, temporary or otherwise, against the operator who had put about 25,000 yards of silt into Bear Creek which adversely affected the river. Unfortunately, no satisfactory method for taking legal action was found. Mr. Baton had been in contact with Commissioner Keating of Jackson County on this problem of the Rogue River and McNutt Construction. He thought this problem had been solved, but today more complaints were received. He said the Bateman Lumber Company is another problem. A fish kill was involved. The company was fined \$250.00 with the stipulation that if this should happen again within the next six months, it would be found in contempt of court. It seems that the district attorney will move pretty fast if a fish kill is actually caused or there is some definite proof of pollution, but not too fast if it is only a supposition that something might be detrimental. The Sanitary Authority has to eventually establish what becomes a detrimental limit.

Mr. McPhillips said he thought there must be some law under which this violation could be prosecuted. If they are not violating a law it should be admitted.

After considerable discussion, it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the staff be instructed to check closely on the Rogue River gravel and mining operations and to request the assistance of the fish and game commissions' representatives with a view to prosecution and/or abatement proceedings in every case where it can be proven and that this fact be conveyed immediately to the operators.

Before the subject of the Rogue River was closed Mr. Meierjurgan offered the assistance from the Fish Commission staff.

WASHINGTON COUNTY

The Sanitary Authority as well as the officials of Washington County having been presented with the report on "The Aspects of Water Pollution in Washington County, dated 1965" and in view of that report and the conclusions and recommendations that are made therein, it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the Sanitary Authority adopt the following policy; that all domestic sewage and industrial waste effluents released to the tributary streams of the Tualatin River be treated to a degree so that they will contain no more than 20 ppm of BOD and suspended solids and that in addition all domestic sewage effluents must be disinfected before being released to the receiving stream.

ARROW MEAT COMPANY

It was recalled that the Arrow Meat Company case finally went to trial on March 2 and 3, 1965. The suit was filed in 1959. To date no judgment has been reached. A letter received from Cecil Quesseth, Legal Advisor, was read. That letter advised against further action at least until after the first part of July to give the judge the customary 90 days to hand down a verdict. This letter has been made a part of the permanent files in this matter. No action was taken.

CITY OF PORTLAND - Sewage Treatment

It was brought out by the Chairman that at the last meeting of the Authority it was discussed the length of time that it would take the city of Portland to complete its job. It is understood that there is some 14 million dollars still to be spent and without federal help this may take up to 10 years; whereas, when the Sanitary Authority withdrew its suit and consented to let

CCA312

Portland go on a pay-as-you-go basis, it was supposed to be finished in 5 or 6 years. The Secretary said the staff would watch this with diligence, but at the present time the city's consultants are working on preparation of detailed plans for construction of the first unit for which they made application for a federal grant and that project will cost in the neighborhood of four million dollars. The plans are to be finished by the first of October of this year. The other big part of the project is to develop a solution to the bypassing of raw sewage and industrial waste from the southeast part of the city where the present interceptor system is inadequate to handle the peak flow. That, of course, will be a major undertaking and the city at our insistence presently is making a study of that problem. He said the Chairman is right in that it is going to take several years on this pay-as-you-go program that has been mapped out unless they can get a lot more federal help than is presently available.

Mr. Harms said he had understood that the Authority had agreed to the city's plans as to timing and he wasn't aware there had been any changes since that action. He stated that when and if they fail to comply with the schedule we have agreed to, then is the time to make additional requirements of the city.

#### CITY OF PORTLAND - Open Burning

The Chairman said that it was his understanding that the city of Portland had stopped its open burning at the city dump.

Mr. Smith replied that they did stop temporarily and refused to allow any wood waste to be brought in; however, the avenues of disposal closed in on them and so they went back on a temporary basis and the report that the staff has received is that the city of Portland does still intend to comply with the request of the Sanitary Authority to submit plans by July 1 and to stop open burning by September 1.

The Secretary stated that Commissioner Bowes had called him on June 23 and stated that the city had or was going to purchase the Hawk property and that the city would be able to comply with the Sanitary Authority's suggested date of September 1.

WATER RESOURCES BOARD AGREEMENT

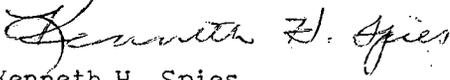

Copies of an agreement form along with the proposal for a comprehensive water study in cooperation with the State Water Resources Board were distributed to the members. Mr. Weathersbee stated this agreement related to the study to determine Oregon's ultimate water needs that was funded by the last Legislature. Some \$300,000 was made available for the biennium for this study and it is proposed that the water quality study be done by the Authority staff under an agreement with the Water Resources Board for up to \$100,000 for the biennium. The proposed agreement prepared by the staffs of the two agencies has been agreed on with the typed changes.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the Chairman or Secretary be authorized to sign on behalf of the Sanitary Authority and that the agreement be approved.

The date for the next meeting was set for August 26, 1965.

There being no further business, the meeting adjourned at 4:00 p.m.

Respectfully submitted,

  
Kenneth H. Spies  
Secretary

SPECIAL MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY  
August 16, 1965

A special meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:20 a.m., August 16, 1965, in Room 36, State Office Building, Portland, Oregon. The members and staff present were Harold F. Wendel, Chairman, B. A. McPhillips, Richard H. Wilcox, M.D., and Herman P. Meierjurgan, Members; Kenneth H. Spies, Secretary; John Denman and Don Morrison, Legal Advisors, E. J. Weathersbee, Deputy State Sanitary Engineer, Harold M. Patterson, Assistant Chief Engineer, Joseph A. Jensen, District Sanitary Engineer, Bryan Johnson and Patrick Curran, Associate Sanitary Engineers; Harold L. Sawyer, Don McHarness and Ernie Schmidt, Assistant Sanitary Engineers; Ed Lynd, Water Pollution Control Technician; Glen Carter and Edison Quan, Aquatic Biologists, and Warren C. Westgarth, Director of Laboratories.

Mr. Ed Harms and Mr. Chris Wheeler were unable to attend because of prior commitments. Mr. John Amacher is on a trip to Switzerland.

The Chairman opened the meeting by remarking that everyone present undoubtedly had seen and read the publicity in the newspapers about the conditions of the Willamette River. He stated that a lot of this was due to the low water and high temperature conditions that have prevailed this year, the first time in a good many years.

The Secretary pointed out that this year Oregon has had what might be classified as a serious drouth and as a consequence the flow in the main stem of the Willamette River has been lower than it has been for a good many years; in fact, considerably less than during any year since the cities and industries started the operation of their sewage and waste treatment facilities.

Under the program of the Corps of Engineers for the control of flow in the Willamette Basin, it has been their policy to maintain a minimum flow of 6,000 second feet in Salem. This is based on maintaining a firm figure of about 5,000 second feet at Albany. This goal is primarily for the benefit of navigation inasmuch as water quality control is not an authorized function of the Willamette reservoir projects. This year when

CC-812

it was indicated that the flow would probably be less than normal a letter was directed by the Secretary of the Authority to the District Engineer of the Corps of Engineers asking him to do everything possible to effect maximum augmentation of the low flows during the remainder of the summer. He replied that due to the lower than normal runoff which had prevailed since the floods last winter, they would not be able to reach their goal this summer and their present plan called for maintaining a firm flow of only 4,300 second feet at Albany, which they hoped would result in a flow of 5,500 second feet at Salem. It later developed that they were not able to maintain a flow of 5,500 second feet at Salem. During the last part of July and first part of August the flow at Salem actually ranged from 5,000 to 5,400 second feet. This naturally placed an extra heavy burden on the state's water pollution control program, but in spite of these extremely low flows, the water quality conditions in the Portland Harbor were approximately the same as they were during June and July of 1963.

It was pointed out that the cities and industries in the basin have recently increased the degree of control. For example, most of the larger cities in the Willamette Basin already have provided secondary treatment. There are 12 new secondary treatment plants located on the Willamette and several on tributary streams. Because of the installation of these facilities, primary plants which previously served four other communities have been abandoned. All of the other cities on the Willamette River are scheduled to install secondary treatment works which will supplement their existing primary plants. These facilities will be under construction either this fiscal year or next fiscal year.

The Secretary also stated that the pulp mills on the main Willamette all have programs under way at the present time for the construction within the next two years or by the end of 1967 of primary treatment works. They are also in the process of increasing the removal of oxygen demand from their strong wastes resulting from the production of pulp.

Due to the combination of low flow this summer and the high water temperature caused by the warm weather, plus an abnormally high waste load discharge for a period of several days from one of the pulp mills, the dissolved oxygen in the lower river did reach a minimum of about 1.6 ppm for a few hours during the latter part of July. There has been only one day that the average DO as measured by one of the monitoring stations was

less than 2 ppm. The Sanitary Authority since 1953 has maintained a system of sampling stations extending from Newberg to the SP & S railroad bridge. Seven stations are involved and these stations are sampled once daily. For the past three or so years the Public Health Service has operated two continuous automatic sampling, analyzing and recording stations. One is located at Swan Island and one at Marina Mart which is just above the Willamette Falls at Oregon City. This year the Sanitary Authority has a third continuous automatic monitoring station located just upstream from the city of Newberg.

The Chairman stated that the major contributors to the oxygen demand in July of this year were Crown Zellerbach at West Linn, 40,770#; Publishers' at Oregon City, 24,200#; Publishers' at Newberg, 84,400#; Boise-Cascade at Salem, 5,300#; and Western Kraft at Albany, 9,900#. Total from the 5 mills is 164,700#. For all other sources, including industries and municipalities, the oxygen demand in July 1965 was about 40,000#.

The Chairman said that last week he had written to Norman Chandler who is the head of the Times Mirror Publishing Co. of Los Angeles, owners of Publishers' Paper Company, and to Mr. Hunt, President of Crown Zellerbach, enclosing copies of recent news clippings and editorials from newspapers and stating that the Sanitary Authority does not want to go through another summer like this.

Mr. McPhillips stated that he was somewhat disturbed to see that the pollution load during July 1965 was the largest since 1957 and we have supposedly been going through a period of improvement. He said that he would like for industry to give the members of the Authority an explanation as to why there has been no improvement in almost 10 years.

The Secretary pointed out that one of the main reasons for the relative lower loads in 1958 and 1959 was due to the fact that during those years the mill at Newberg was only in partial operation. One explanation for the real high loading this year at the Newberg mill was the fact that they had under construction some improvements to the lagoon which they use to impound the wastes. While this construction was under way, the mill at Newberg was unable to store as much liquor as they normally did. It was pointed out further, however, that even after the project was finished and the amount of storage increased, the loading was still about 50% higher than last year.

Mr. R. L. Carlson from Crown Zellerbach, West Linn, stated that at last report about 38,000# were going into the river from their West Linn mill and that he anticipated next year it would be about the same.

The Chairman stated that if Crown Zellerbach at West Linn is not out of the river until the end of 1967, that would mean that we would get no relief from present conditions, under the same production, until the summer of 1968.

In answer to a question raised by Dr. Wilcox regarding the present river conditions, the Secretary said that he had some data gathered by the staff as of 8 a.m. this date. At Marina Mart which is just above the Falls, the DO was 6.2 ppm; Sportcraft which is the first station below the Falls, 6.3 ppm; Steel Bridge, 3.2 ppm; and SP&S railroad bridge, 3.3 ppm. He stated that this improvement probably is due in part to the additional water being released from the Clackamas River at the request of the U.S. Public Health Service and the Sanitary Authority. The additional releases from both the Clackamas and Willamette were started August 12.

Mr. Towne from the U. S. Public Health Service stated that the DO just above the Clackamas last Friday, August 13, was a little over 4 ppm and below it had increased to something over 5 ppm about a mile below where there was a chance for mixing. This additional flow from the Clackamas was shut off Sunday afternoon, August 15, at about 3 p.m. on the basis of higher oxygen readings at Oregon City.

Mr. Carlson stated that the major work at Crown Zellerbach is being engineered now and it does take time. The lagoon work is already done, but whether it is effective or not will not be known until the lagoon is filled at the end of the season. When the clarifier is completed, there will have to be trial periods to see exactly what the efficiency will be. He stated that this is a major construction project and is affected by high water in the winter time. He stated also that their fiber loss to the river in the last 2 or 3 months has been reduced by 17%, the liquor storage increased by 25% and overall there has been a substantial improvement.

Mr. James A. Wilson, Publishers' Paper Co., stated that the BOD demand last week at the Oregon City plant was something less than 21,000# and that is probably the minimum which can be obtained under present operations. He said that they took over the Newberg plant on April 1,

CCA312

1965. It was found that there had been some engineering work done by the former owners toward enlarging the lagoon which was supposed to have been 60 million gallons. Their own engineers were put on the job and decided this wasn't enough. Their engineers came up with a plan of something over 100 million gallons; however, some difficulties were encountered such as time problems, soil problems, etc. Shortly after the 1st of June the program of increasing the lagoon from 44 million gallons to 80 million gallons was started and this was completed about the middle of July. Another pump has been installed and the amount of effluent going to the lagoon has now been doubled. This would probably mean a storage problem later this season but he was sure they could work something out to keep the load down. Mr. Wilson said that it would be his chemist's guess that now there has been between 80 and 85% decrease in the load.

The Secretary asked Mr. Wilson what their rate of storage is now.

Mr. Wilson replied that it was about 1½ million gallons per day. He stated that they now have a thousand gallon per minute pump.

Mr. McPhillips asked about the company's long-range program for reduction in the load at Newberg.

Mr. Wilson replied that if more storage is needed they have the room for it.

The Secretary pointed out that the location of this mill is probably as critical as any other source of pollution on the river due to the fact that anything introduced at that point utilizes oxygen from the river as it flows through the Newberg pool as well as through the Portland Harbor. In other words a higher percentage of the oxygen demand of these wastes is satisfied by the river than from those discharged into the Harbor.

Mr. McPhillips stated that as a suggestion to help speed up the program the Authority might request a reduction in pulp production during the critical periods. He suggested a voluntary reduction at a certain point in the river flow and if the companies do not see fit to voluntarily go along with this, steps should be taken to see that production is curtailed to reduce this pollution during these periods.

The Chairman asked Mr. McPhillips if he would consider putting that in the form of a motion.

Mr. McPhillips replied that he would but first a few questions should be answered such as what are the limits of critical water quality, at what stream flow should reduction be requested, etc.

Mr. McPhillips said that the regular meeting of the Sanitary Authority is less than 10 days, August 26, and that a motion made by him at this time would have little effect. He stated that all the representatives of industry are at this meeting today and that he thought they ought to do a little soul searching among themselves as he expects to make a motion with specifications as to river flow at the regular meeting of the Sanitary Authority on August 26. Industry can expect this motion to be made and that everything possible will be done to encourage their voluntary cooperation in this matter.

The Secretary said that at the meeting the week before with the pulp mills, two major concerns were discussed: (1) to have enough dissolved oxygen as of that time to prevent any fish kills (the fisheries people present at that meeting had indicated 2 ppm), and (2) having enough oxygen not just to prevent fish kill, but to promote migration through the Harbor. Based on all the information that can be obtained from the fisheries biologists, it appears that  $4\frac{1}{2}$  to 5 ppm are needed in the Portland Harbor in order to get the upstream migrants to move through the area. The fisheries agencies had indicated that upstream migration should be expected to take place beginning about August 25.

Mr. McPhillips asked if there were any assurance that the Corps of Engineers would supply enough water under present working arrangements to keep enough oxygen in the river for the fish to migrate upstream through the Harbor and into the Clackamas River.

The Secretary stated that with the additional releases which were started August 12 the flow now is running a little over 6,000 second feet at Salem, that Bonneville Power Administration has indicated that they will probably call for power releases by September 7, and that if that comes to pass, there will be an additional 1,000 second feet.

The Chairman then stated that the indication is that this will be non-recurring, and that we cannot expect this in the future.

Mr. Poston from the U. S. Public Health Service was then called upon by the Chairman to say a few words. He stated that he had hoped the Sanitary Authority would go into the matter which was discussed at Thursday's meeting with the mills. He called to the attention of the Authority that the additional water which is being made available now to the river comes from water that was stored for power purposes. He said the Corps of Engineers and Bonneville Power Administration agreed to release this water

CCA312

upon assurance from the Secretary of the Authority and himself that industry would be approached as to whether or not they would agree to reimburse the Government for the benefits and for loss of power.

The Chairman stated that at Thursday's meeting the representatives from all the companies were told that Bonneville wanted a guarantee of reimbursement of a possible amount of \$13,000 to \$60,000 from somebody and that the Government would require this for giving the water in an unauthorized way - not authorized by Congress. The Chairman then asked if the representatives of the different companies had taken steps to allocate these funds.

Mr. Donald Benson from Northwest Pulp and Paper Association replied that the representatives of industry had gotten together on this, and were in accord to honor the request, but would like about five minutes to make a final decision.

Representatives of the mills then left the meeting for a few minutes after which Mr. Benson stated that the pulp mills would be very happy to support the Sanitary Authority this 1965 year for the 500 second feet that was asked for in additional flow from the reservoirs in the Willamette system to support the water quality conditions up through September 7. He went on to say that if it is found that conditions are satisfactory without the use of this water, that it be requested not to be released.

The Secretary then advised Mr. Benson that if the Sanitary Authority is to be relied upon to make a determination of the amount of water that has actually been released and the need for it, the Sanitary Authority in turn would have to rely upon the Corps of Engineers to confirm those releases. It would then be up to Bonneville Power Administration to determine whether or not the utilization of that water at this time actually has reduced their revenue at a later date. The Secretary asked when this date might be.

Mr. Towne replied that he did not know as he could not speak for Bonneville Power Administration, but it would probably be when they can determine from actuality rather than probability whether this is or isn't a low flow year.

Dr. Wilcox stated that he thought the industry should be commended for its willingness to assume this cost.

CCAS12

The Chairman then said that Mr. Robert Straub, State Treasurer, had paid him a visit recently at his office and that Mr. Straub had asked him if the Sanitary Authority was getting everything it needed from the Government at Salem to expedite its work. He said he had replied that he had no complaints at present at all, that the Sanitary Authority had asked for more money originally than it got, but that vacancies in the professional staff could not even be filled with the money which was appropriated. He stated further that to his great surprise there subsequently appeared in the paper an accusation by Mr. Straub that the Governor is responsible for the conditions on the Willamette. The Chairman went on to say that Mr. Straub did not get that from him and that the Sanitary Authority assumes full responsibility for the conditions in the Willamette.

There being no further business the meeting was adjourned at noon. The next scheduled regular meeting will be held on August 26.

Respectfully submitted,

*Kenneth H. Spies*  
Kenneth H. Spies  
Secretary

MINUTES OF THE 107<sup>th</sup> MEETING  
OF THE  
STATE SANITARY AUTHORITY  
August 26, 1965

The 107<sup>th</sup> meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:00 a.m., August 26, 1965, in Room 36, State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B. A. McPhillips, Chris L. Wheeler, Richard H. Wilcox, M.D., and Herman P. Meierjorgen, Members; Kenneth H. Spies, Secretary; John Denman and Don Morrison, Legal Advisors; E. J. Weathersbee, Deputy State Sanitary Engineer; Warren C. Westgarth, Director of Laboratories; H. M. Patterson, Assistant Chief Engineer; H.W. Merryman, Leo L. Baton and Joseph A. Jensen, District Engineers; Bryan M.

Johnson, Fred G. Katzel, Robert F. Wood, Pat D. Curran, and A. D. Smythe, Associate Sanitary Engineers; Howard G. Smith, Assistant Chief, Air Quality Control; Harold L. Sawyer and Ernie A. Schmidt, Assistant Sanitary Engineers, and Glen D. Carter and Ed L. Quan, Aquatic Biologists.

Mr. Edward C. Harms was unable to attend because of a prior commitment and Mr. John Amacher was in Switzerland on vacation.

Mr. Wendel stated that State Treasurer Robert Straub was present and because he wanted to get back to his Treasurer's job had asked to be heard at this time. Mr. Straub said he was well aware of the difficulties and the obstacles that had been thrown in the way of the Authority in attempting to reach the goal of cleaning up Oregon's waters and air. He said he knew the Sanitary Authority had operated in the past with very inadequate laws and there had been efforts on the part of certain industries to interfere with achieving the goal of an acceptable level of purity and cleanliness. Also, the Authority had operated during many periods of indifference on the part of the public.

Mr. Straub told Mr. Wendel that many people, he thought, owed a real debt to him for his long years of service on the Commission and for his dedication and efforts. The main message presented by Mr. Straub was of his strong feeling that the Authority now has the united backing of the people in Oregon for effective action in closing the gap in completing the job of cleaning up the rivers and the air. He said the time is here for the Authority to act against those who continue to violate the laws and those who continue to violate the regulations that have been issued by the Authority.

He recommended and urged that one of the measures that should be adopted in Oregon, or at least be recommended to the next legislature, is to empower the Sanitary Commission to issue revenue bonds in those cases where a municipality fails to act, or will not act, to install the necessary sewerage facilities, the revenue bonds then becoming an obligation of the property being benefitted.

It was also recommended by Mr. Straub that the Sanitary Authority hold regional meetings in each river basin to determine the incidents of violation. River basin hearings, he thought, would be very desirable, not only to pinpoint instances of violation, but to allow the public an opportunity to come to the hearings and express support for what the Authority is trying to do. We need to develop multiple-use benefits of water in Oregon, Mr. Straub said.

CCA312

Mr. McPhillips said he had recently talked to Mr. Straub in his office and was concerned with his criticisms of the Sanitary Authority which he thought were unjust. Several newspaper articles wherein Mr. Straub was critical of the Sanitary Authority were referred to by Mr. McPhillips. One of them in the Oregonian published Saturday, August 21, 1965, quoted Mr. Straub as having told the press on a boat tour that the Governor and the Sanitary Authority have the money as well as the power to combat the problem, but they move too slow and have done too little. Mr. McPhillips stated further that Mr. Straub and other Democrats have charged Governor Hatfield, a Republican, and the State Sanitary Authority with failure to press for a speedy end to contamination in streams such as the McKenzie. He stated that in another press release Mr. Straub had said that more industry would come to Oregon if anti-pollution laws were strongly enforced. Mr. McPhillips said that, of course, comes back to the Authority, and he was surprised that Mr. Straub would make the statement that the Authority has the money and the power to end this pollution because it does not have either, and the staff is not adequate to take care of all the complaints which are received. Mr. McPhillips said he was proud of the work the Sanitary Authority had done and he resented being in the middle of a political fight.

Mr. Straub said he believed attention and effort should now be concentrated on closing the gap and it was true that the rivers would be in much worse shape if the Commission had not done what it has, but it was his judgment the action should have been stronger and the public concern demands a higher priority and a higher level of action than it has had. He stated further that in his judgment the majority of industry in Oregon is very dedicated in being good neighbors in not polluting the river and not polluting the air, but there was a certain element of industry in legislative hearings in 1961, that attempted to weaken, to emasculate our water and air pollution laws so enforcement could be used only when it was economically feasible to industry. Mr. Straub said it should be remembered that the Legislature very strongly backed the Authority in not weakening the law. If the laws are not right, he said, they should be changed at the next Legislature.

Mr. McPhillips pointed out that the Authority has gone to the Legislature every session and has been cut down. These laws are now being enforced to the limit as set out by the Board of Health attorneys and it is intended to continue to do so.

Mr. Wendel then informed Mr. Straub that all of his suggestions were appreciated and would be given consideration.

He pointed out that the Authority in the past has held regional meetings, and that whenever regional hearings have been held they were most beneficial. Mr. Wendel added that aside from the fact of perhaps not getting the entire budget requested, the director of Finance, by the very nature of his work and the spirit of the Legislature, has had to cut here and there for every commission and every department in the state government, but aside from that, the Authority has had the full cooperation of the administration of this State from Governor Hatfield.

Mr. Wendel thanked Mr. Straub for coming and giving his suggestions and assured him they would be taken seriously.

MINUTES:

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried that the minutes of the June 24 meeting be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjorgen, and carried that the action taken on the following 41 project plans and engineering reports for water pollution control and 6 project plans for air quality control for the months of June and July, 1965, be approved.

CCCA312

WILLAMETTE RIVER POLLUTION:

The Secretary then reported that on August 16 a special meeting of the Sanitary Authority was held to consider the conditions which have existed in recent weeks in the lower Willamette River. In July due to a combination of unfortunate circumstances, namely, fairly high water temperatures, unusually low stream flows and an abnormally high discharge of wastes from one pulp mill, the latter necessitated by the fact that the company was undertaking construction of enlargement of its waste handling facilities, the dissolved oxygen in the lower Willamette dropped to less than 2 ppm. This occurred only on four different days and only for portions of those four days. The remainder of the time the DO was 2 ppm or greater. Because of the knowledge that the low flow in the river would continue, a communication had earlier been directed to the district engineer of the U. S. Corps of Army Engineers asking for augmentation to the greatest extent possible of the low flows for the remainder of the season. The staff had previously been advised that because of drought conditions which had prevailed in Oregon since the heavy rains of last winter, the storage in the upstream reservoirs would not be adequate to maintain the flows which had been set as a policy of the Engineers. This policy calls for the maintenance of a flow of 5,000 second feet at Albany or 6,000 second feet at Salem. Present plans, however, called for maintenance of only 4,300 second feet at Albany which it was hoped would result in 5,500 feet at Salem, but actually the minimum flow at Salem had proven to be less than 5,000 cfs.

Prior to the emergency special meeting of the Authority on August 16, a conference was held with officials of the pulp mills to advise them of the situation and to request their fullest cooperation in reducing the load being discharged to the river. A request had also been directed to the Corps of Engineers and Bonneville Power Administration asking that, if possible, more water be released. The authorized functions of the Willamette basin reservoirs, unfortunately, do not include water pollution control. They include only navigation, irrigation, flood control and power. There is, therefore, a serious conflict of interest. Any waters which are released for navigation can also be used for water quality control because they remain in the stream, but waters released for irrigation remain on land and therefore do not benefit water quality, and water demanded by power interests is kept in the reservoir during the period of critical stream flow and released later when power demands require it. It was

pointed out that Bonneville Power Administration had calculated that the release of 500 second feet additional water for a month during the summer might result in as much as \$13,000 to \$60,000 loss in revenue at a later date and because water quality control is not an authorized function of the projects, and power is, the agency was not authorized to make this sacrifice. It was agreed, however, that if the Sanitary Authority and Public Health Service could find compensation for any loss that actually occurred, the agency would cooperate. At the August 16 meeting of the Authority the pulp mills were requested and had agreed to compensate the federal government for any extra water which the Sanitary Authority found necessary to maintain acceptable conditions in the Willamette.

The Secretary reported that the mills had recently effected sizeable reductions in their loads being discharged to the river, that from August 12 to 15, at the request of the Public Health Service and Sanitary Authority, there was an additional release of water in the Clackamas River of 400 second feet from the facilities of Portland General Electric and from August 12 to August 17 an additional 600 second feet released from the Army Engineers projects in the upper Willamette Basin. These releases were discontinued on the dates indicated because water quality conditions had improved. Then on August 20 a further request was made to the Corps of Engineers to release an additional 500 second feet for the time being. Beginning about September 7 it is expected that Bonneville Power Administration will ask that water be released for power generating purposes and that should add considerably to the flow in the Willamette and should be of real benefit to maintaining acceptable water quality conditions during the remainder of the season.

As a result of the efforts of the mills in reducing their pollution loads and of the slight increase in stream flow due to the release of the additional waters, the quality of the water in the lower river had improved materially since July.

Because at the last meeting of the Sanitary Authority the mills had been asked to revise and speed up their schedules to provide adequate facilities for the treatment or disposal of their wastes, representatives of the industry were present at this meeting to give information regarding installation or completion of these facilities in the future.

Mr. Wendel then stated he had taken it upon himself to write Mr. Reed Hunt, President of Crown-Zellerbach Corporation, and had told him that due

CCA312

to the fact that after about four years of wet, cold weather we are now apparently entering into a dry, hot cycle, and inasmuch as Crown-Zellerbach at West Linn was contributing about 20% of the entire load of oxygen demand on the river, the company's proposal to meet the treatment requirements by 1967 was no longer acceptable. Because of the low stream flows of this past summer he had requested Mr. Hunt to have these installations completed by June 1966. A reply from Mr. Hunt stated, "In accordance with your request we will exert our best efforts to complete the work outlined above by June 1, 1966, subject, of course, to any delays caused by events beyond our control."

Mr. Richard Carlson, Assistant Resident Manager of the West Linn mill, was present and said the company had, during this year, been working on an inplant program to determine how to approach the basic problem of providing primary sedimentation. He stated that it had been shown that it would be feasible by using existing facilities in their mill to put in primary clarification and disposal by June 1, 1966. One of the pulp driers can be used for dewatering the sludge which is different from the usual practice but according to tests is feasible. It is planned to have it operating by next year.

Mr. Wendel said he had also written to Mr. Norman Chandler, President of the Times Mirror Company, who owns Publishers' Paper Company, Oregon City, and Spaulding at Newberg and had informed him that Publishers' contributed 22,000 lbs. and Spaulding 84,000 lbs., giving a total of 106,000 lbs. of oxygen demand to the river. He said Mr. Chandler had replied that the company was desirous of complying in every respect with the standards requested by the Authority.

Mr. James Wilson, who was present, reported that Publishers' had taken over the Spaulding mill at Newberg on April 1, 1965. Since then the capacity of the holding pond had been nearly doubled and it is now felt that this still is not large enough, so an additional pond is scheduled for construction for next year and should be in operation before low water season. At Publishers' in Oregon City it is planned to move the construction schedule up one year.

In response to an inquiry from Dr. Wilcox, the Secretary reported that the mill at West Linn operated by Crown-Zellerbach was presently effecting a reduction of 86%. It had reduced its load from over 40,000 lbs. in July to less than 28,000 lbs. at the present time. Boise Cascade at Salem, which

had reported an efficiency of 93% with a load of slightly less than 5,000 lbs., now reported 96% efficiency and a load of less than 4,000 lbs.

Publishers' Paper at Oregon City was still in the neighborhood of 22,000 lbs. for an overall efficiency of about 76%. Publishers' (Spaulding) at Newberg reported the previous load of 84,000 lbs. had been reduced to slightly in excess of 23,000 lbs. which gave an overall efficiency of about 84%.

Western Kraft at Albany had about the same load as in July, around 10,000 lbs. The total pulp mill load on the stream was reported as being about 86,000 lbs. at the present time, compared to 164,000 lbs. in July.

Dr. Alfred Kreft asked what the industry was doing in regard to chemistry of this effluent, if any research had been done to use these effluents since putting the waste into a lagoon does not answer the whole problem as sooner or later it will go to the river anyhow.

Mr. Donald Benson, Executive Secretary of the Northwest Pulp and Paper Association, said his organization and the National Council for Stream Improvement, plus the manufacturers of sulfite pulp in Wisconsin, have had this subject under study since 1939 when the Wisconsin League was started. Many uses for these liquors have been found, but the greatest problem is getting markets for the type of materials which have been produced. He said the research is being continued.

Mr. Kenneth Gates, Portland Chapter, Northwest Steelheaders, read a copy of a resolution adopted by the Portland Chapter, which has around 300 members, and stated this resolution will be forwarded to the Tri-State organization meeting in October at Lewiston, Idaho. A copy of the resolution was received and made a part of the permanent files.

Mr. Gates then gave a brief background of the Steelheaders organization and assured the Sanitary Authority of the support of this group in cleaning up the river.

Howard Morgan, representing himself, said that since Mr. Wendel's recent letter in the Oregonian had mentioned his name and invited anyone who had suggestions to make to come to the meeting and do so, he was here for that purpose. He said he was concerned with the things mentioned by Mr. Wendel in his letter regarding the great lengths of delay in litigation in these cases to come to court. When he was Utility Commissioner it was his recollection that utility cases, which are of great public interest, were given a certain degree of precedence in priority so litigation could be accomplished promptly and the public given relief, and it was his suggestion

CCA312

that the Authority ask the Legislature to give that classification to its court cases so that they could be concluded more rapidly.

Mr. Wendel, in reply to Mr. Morgan, said that in 1959 the Authority did take court action against the city of Portland; but after several years of legal delays and the case ~~not~~ coming to trial, an agreement was finally made with the city to drop the court action on the basis that they would proceed on a "pay-as-you-go" basis to complete the project.

Mr. Wendel said further that perhaps it was the Authority's fault for not realizing that the mills on the Willamette would have to put in additional treatment. At first it appeared that lagooning and barging would be sufficient to keep the river in a satisfactory condition as far as fish life was concerned, then it became apparent it was not. This was due partly to increased population and partly to industrial expansion which has almost doubled.

The Secretary pointed out that the mills were notified in 1958 that they were going to have to increase efficiency of their control facilities and they have been working on it ever since. Last year they were told specifically how much more reduction they would have to effect and as a result of those instructions came forth with the schedules referred to at this meeting.

Mr. Wendel assured Mr. Morgan there had been no thought of anyone on the Commission of any reluctance to go to court against the mills if it were so indicated and would have brought results.

Beulah Hand, State Representative from Clackamas County, stated that inasmuch as she represented the county that had the two largest mills being talked about, she was naturally interested and wanted to make some constructive suggestions as requested by Mr. Wendel's letter in the Oregonian. It was her opinion that because there was so much infiltration of water in the sewage collection systems, the treatment plants could not operate efficiently. She specifically referred to the Oak Lodge Sanitary District #1 system which has a secondary treatment plant. It is not a combined sewer but the area has no storm drainage system. Mrs. Hand was asked if she thought that the Sanitary Authority needed better inspection of the plans. She said not inspection of the plans but better execution of the plans. It was her suggestion that the Sanitary Authority do everything possible to see that adequate sewers are built and to go to the Legislature to get such authority if necessary as well as request additional money.

Mr. William Westerholm, Executive Secretary of the Columbia River Fishermen's Protective Association, was present to represent that group. He stated the pollution began to show in the Columbia River on July 16 of this year in the Milkmaid Drift, the Reeder Drift and also the Bachelor Drift above St. Helens, with some showing in the lower river 20 miles above Astoria. It was his belief that the high temperature of the water released by the industries contributed greatly to this condition. He said there were about 18 fishermen turning in reports to the Public Health Service. He stated further that he had been fighting pollution for 35 years and he hoped it would soon be abated.

The Chairman then asked if anyone from the Boise Cascade Corporation mill at Salem wished to be heard. They had no report to make.

Mr. Russ Sheffer, representing Western Kraft Corp., reported that the installation of the settling basins for their mill at Albany would be completed in another week.

Mr. W. W. Towne of the U. S. Public Health Service reported further on the additional releases made from the reservoirs on the Clackamas and upper Willamette Rivers. He said the reason the releases were resumed on August 20 was that the fisheries people had predicted that the upstream migration of salmon would begin this week. An effort was therefore being made to increase the DO as much as possible and preferably to 5 ppm. He expressed appreciation for the cooperation of the mills in reducing their pollution loads. He also pointed out the value of the low flow augmentation accomplished by the release of waters from the Willamette Basin reservoirs even though water pollution control is not one of the authorized functions.

In response to an inquiry from the Chairman, Mr. Towne expressed the opinion that as a result of the restudy of the Willamette Basin now under way by the several state and federal agencies, it might be possible to get Congress to amend the law to include water pollution control as an authorized function of the existing reservoirs. He said it would very definitely be considered in connection with reservoirs built in the future.

In answer to a question by Dr. Wilcox, Mr. Towne stated that the U.S. Public Health Service had not studied the possible effects of navigation on the quality of water in Portland Harbor, but from the bacterial standpoint he thought it might be very significant.

In reply to another question from Dr. Wilcox, Mr. Towne discussed the role of the federal government in the field of research and the attempts

CCA312

being made to find solutions to the problems caused by industrial growth and population increase.

Mr. Wheeler referred to the DO data compiled by the Authority staff during the past 12 years and pointed out that they show that considerable progress has been made in abating pollution of the Willamette, and that in spite of the low stream flows this year the condition of the river was better than it had been in certain other years.

Mr. McPhillips then stated that at the August 16 meeting he had indicated that at this meeting he would present a motion for consideration by the Authority members dealing with this emergency situation in the Willamette. He stated further that the emergency now was pretty well over and that in addition, due primarily to Mr. Wendel's efforts in contacting the heads of the corporations, the principal mills in this case have promised to step up their schedules by one year for making the required improvements.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox and carried that if at any time the Sanitary Authority determines that irreparable damage may be caused to fishery resources or other beneficial uses of the Willamette River or its tributaries as a result of the discharge of wastes from the pulp and paper mills, the Sanitary Authority shall take steps to effect immediately the necessary reduction of such pollution loads.

CROWN-ZELLERBACH CORP. MILL, LEBANON:

Mr. Weathersbee presented a staff memorandum dated August 26, 1965, regarding the matter of pollution in the South Santiam River caused by the discharge of wastes from the Crown Zellerbach Corp. pulp mill at Lebanon. This memorandum has been made a part of the Authority's permanent files in this matter.

He pointed out that although the company has been able to reduce its pollution load by as much as 85%, the receiving stream on occasions during the summer or fall is still seriously polluted due primarily to the fact that during the summer months much of the natural flow in the river is diverted above the mill into a ditch which carries the water to Albany. As a result there is not enough flow left in the stream below the mill to handle the residual pollution.

In reply to a question from the Chairman, Mr. Wheeler stated that there is little likelihood that the amount of diversion will be reduced in the future because the waters are used for domestic and industrial water supply purposes and power development at Albany. In all probability if the power

use should ever decrease the diverted waters would be used for irrigation and so would still not be available in the lower river.

Dr. Herman Amberg, Research Manager, and Mr. W. F. Cyrus, Resident Mill Manager, were present to represent Crown Zellerbach Corp.

Dr. Amberg reviewed the pollution abatement measures undertaken by the company at the Lebanon mill during the period 1950 to 1964 and then discussed plans for further improvements proposed to be made during 1965 and 1966. A copy of his written report dated August 26, 1965, has been made a part of the Authority's permanent files in this matter.

He reported that although pulp production has increased from 55 tons/day in 1952 to 95 tons/day in 1964, the pollution load was reduced from 26,000 lbs./day in 1952 to about 9,000 to 10,000 lbs./day in 1964. Capital investment for pollution abatement measures since 1950 at this mill has been about \$402,000. He claimed that in order to maintain satisfactory water temperature conditions in the downstream portion of the South Santiam River during the warm summer months, the minimum stream flow should be increased to about 300 cfs.

He estimated that with the addition of facilities for removal of settleable solids and with other proposed improvements, the BOD load of the mill effluent in 1966 would be reduced to about 4,000 lbs./day.

Following the presentation of Dr. Amberg's report there was a discussion about the possibility of maintaining a minimum flow of 300 cfs in the river below the Albany diversion through the release of impounded waters from the Green Peter and Foster reservoirs which are presently under construction by the Army Engineers. Mr. Wheeler stated that apparently no one knows for sure yet how much flow augmentation there would actually be below the mill. Mr. Weathersbee stated that all indications are that the low flow will be on the order of 100 cfs and that such a flow cannot assimilate more than about 2,000 lbs./day of BOD without causing gross pollution.

In response to a question from Dr. Wilcox, Dr. Amberg and Mr. Cyrus assured the Authority that they are confident they can reduce the BOD loading of the mill effluent down to 4,000 lbs./day as proposed in their report. They stated that any substantial further reduction would constitute an extreme economical hardship.

Mr. Weathersbee pointed out that the proposal as outlined by Dr. Amberg at this meeting was slightly different from what had previously been discussed with the Authority's staff and therefore would require further review. With

CCAB12

regard to the fishery resource of the South Santiam and the effect of high water temperatures he reported the following information had been obtained from the State Fish Commission. They estimate that an average of about 1,400 spring Chinook adult salmon pass through this portion of the river each year between April and the end of July and that the tail end of this run has been blocked by low DO. The young of these fish are in the river the year round but are excluded from the portion below the mill in the summer by the low DO. They also estimate that an average of 2,600 winter steelhead trout migrate through this zone during the period of high water but their young likewise are in the river the year round.

In order to allow the staff more time to review the company's proposal and to make further inquiry into possible augmentation of low flow in the future, action by the Authority members in this matter was deferred until the next meeting.

The meeting was recessed at 12:35 p.m. and reconvened at 2:00 p.m.

FRONTIER LEATHER CO., SHERWOOD:

Mr. Eugene E. Marsh, Attorney, was present to represent the Frontier Leather Company of Sherwood. He reviewed briefly the problems of odors from the company's waste treatment lagoons and of the high chloride content of the tannery effluent. In spite of his many efforts to control the odors from the lagoons, the company's manager had still not been able to eliminate the public nuisance caused by them. Mr. Marsh said this problem was complicated by the fact that the chloride content of the tannery effluent was higher than previously expected and as a consequence the city would not accept the pretreated wastes in the municipal sewer system and treatment works.

The tannery reportedly processes some 150,000 deer and elk hides per year which are received from all over the west. They are preserved in salt and this accounts for the high chloride content of the plant effluent. There is no practical way that this content can be appreciably reduced.

The contract which the company has with the city of Sherwood for final treatment of its wastes at the municipal sewage plant specifies a maximum chloride content of 800 ppm. Mr. Marsh reported that in recent weeks the effluent from the tannery lagoons has had a chloride content as high as 4,200 ppm and it is expected that it will further increase to 5,000 ppm.

The main objection to these high chlorides is their possible harmful effects on the use of the downstream waters of Cedar and Chicken Creeks

for irrigation purposes. The Authority's staff has recommended maximum concentrations of 500 ppm in the winter time and 100 ppm in the summer for the effluent from the city treatment plant, since much of the time it constitutes most of the flow in these receiving streams.

Mr. Marsh stated that about 75,000 lbs. of sodium nitrate had been added to the lagoons in an attempt to control the odors. This had been only partially successful. He said if they cannot solve the chloride problem, there is no use in trying to solve the odor problem.

Mr. John Filbert of Cornell, Howland, Hayes & Merryfield Engineers, consultants for the tannery, then discussed the efforts made to abate the odor nuisance. Prior to the fall of 1964 all wastes from the tannery were discharged to the Sherwood sewerage system. At that time the tannery's two oxidation ponds were placed into operation. It was another six months (about March of 1965), however, before the aerated lagoon was completed, so in the meantime all pretreatment had to be accomplished by just the two oxidation ponds. This worked fairly well until late in February when the first odor nuisance developed due to the release of hydrogen sulfide. Some 25,000 pounds of sodium nitrate were then added to the two ponds. This treatment plus the use of the aerated lagoon seemed to control the situation until June when odors again became a nuisance. An additional 7,500 lbs. of sodium nitrate was then added to each of the two oxidation ponds which seemed to help, but only until July 14 when more sodium nitrate was added to increase the available oxygen in the pond water. Further additions were made on July 24, August 6, 7, 24 and 25. The nuisance continued to exist, however.

Mr. Filbert stated that the company has been considering the possibility of building a fertilizer plant as part of its tannery operations. This would reduce the organic loading of the tannery effluent on the oxidation ponds to approximately 5 or 10 lbs. of BOD per acre per day. The normal design loading for a facility of this type is 30 lbs. per acre per day. This should completely eliminate the odor problem but would not solve the chloride problem.

In reply to a question from the Chairman, Mr. Filbert stated that the existing pretreatment facilities reduce the BOD loading of the tannery effluent by 98%, from 2,000 ppm down to 40 ppm. The average daily flow of wastes is 70,000 gallons. He said they could increase the treatment efficiency even more by the installation of another aerated lagoon.

CCA312

In response to a question from Mr. McPhillips, Mr. Marsh said the fertilizer plant could be built and in operation within about six months, but the company did not want to make that expenditure unless the chloride problem could also be solved. He claimed the city would agree to revising its contract and would allow a chloride content as high as 5,000 ppm which is not considered harmful to the municipal treatment plant.

Mr. Jensen then explained the concern of the Authority's staff regarding the effects on the irrigation use of the creek waters and pointed out that it was recommended that the concentration during the irrigation season should not be more than 100 ppm.

Mr. Warren Smith, a resident of the area, testified regarding the odor nuisance created this summer by the oxidation ponds.

According to Mr. Filbert odor masking compounds had also been used but without success.

After further discussion of both the odor problem and the possible effects of the tannery effluent on Cedar and Chicken Creeks (no tannery effluent has been discharged to any creek for the past two and one-half months), Mr. McPhillips asked Mr. Marsh if he could assure the Authority that the problem would be solved within six months one way or another - either by mechanical or chemical means or by relocation of the plant.

Mr. Marsh said he could not comment on relocating the plant. He complained that it was not until the company had spent some \$150,000 on waste treatment and disposal that they were made aware of the chloride problem. He said they could remove the BOD but not the chlorides.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler and carried that the Authority's staff immediately investigate further the chloride-irrigation problem and report back at the next meeting.

It was agreed that the chlorides had no significance as far as fish life is concerned.

#### TILLAMOOK AIR BASE SEWAGE DISPOSAL:

Mr. Jensen reported that by letter dated August 6, 1965, the Tillamook County Board of Commissioners had promised to proceed with plans for the installation of required sewage treatment and disposal facilities for the Tillamook Air Base. In response to Mr. Jensen's recommendation, it was MOVED by Mr. Meierjorgen, seconded by Mr. McPhillips and carried that the preliminary study of the required project must be completed by January 1, 1966, and that construction must be completed by the summer of 1966.

The Secretary pointed out that the Bureau of Land Management and the Federal Government had given every indication that they would cooperate fully with the county in this matter.

CONFEREES FOR SEPTEMBER 8 CONFERENCE:

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler and carried that the Secretary of the Authority be designated as the conferee to represent the State Board of Health and State Sanitary Authority at the third session of the conference on pollution in the lower Columbia River to be held in Portland on September 8, 1965, by the Department of Health, Education and Welfare of the Federal Government and by the states of Washington and Oregon. The first two sessions of this conference were held September 1958 and September 1959.

The Oregon industries involved in the conference include Boise Cascade Corporation at St. Helens, Kaiser Gypsum at St. Helens, Publishers' Paper Company at Oregon City (because they barge wastes to the Columbia), Shell Chemical Company at St. Helens and Crown Zellerbach Corporation at Wauna. All Oregon municipalities are considered to be in full compliance with the requirements and action program developed at the second session of the conference. The Portland discharges into the Willamette River are not considered as contributing to the Columbia River problem.

All members of the Authority were invited to attend the conference on September 8.

CHIPMAN CHEMICAL COMPANY:

Mr. Bryan Johnson presented a memorandum report dated August 26, 1965, on the subject of the salmon tainting problem and Doane Lake. A copy of this report has been made a part of the Authority's permanent files in this matter. Studies conducted thus far have indicated that the effluent from Doane Lake which receives the discharges from the Chipman Chemical Company plant is probably the primary cause of the tainting of salmon that occurred during March and April of this year. Complaints were received of 181 tainted fish caught during that period - 166 from the Willamette and Multnomah Channel (between Swan Island and St. Helens) and 15 from the Columbia. No complaints were received from commercial fishermen.

In response to a question from Mr. Meierjurgan, Mr. Gitschlag of Chipman Chemical Company stated that they did not know what constituent was responsible for this problem. He said some of his company's officials were not sure that their wastes were the cause of the tainting. He then discussed their

CCA312

efforts to treat the contents of Doane Lake. Whereas they had previously calculated that about 100 tons of lime would be required to neutralize the pH, they had thus far actually used 400 tons and were about 90% finished.

In his report Mr. Johnson recommended that March 1, 1966, be established as the deadline at which time the effluent discharge from the plant and Doane Lake will not produce an off-flavor in the spring run of salmon.

Mr. Gitschlag said he is hopeful that the steps they are prepared to take will solve the fish taste problem, but he did not know if it could be accomplished by March 1, 1966. He asked that no definite date be established at this time. The Chairman replied that the Authority would have to set a deadline.

Mr. Weathersbee pointed out that the date recommended by Mr. Johnson was selected because it is the time when the problem will occur again unless something is done in the meantime.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan, and carried that the recommendation of the staff be adopted.

Mr. Patterson then discussed the problem of odor control. He stated that the 2-4,D plant had been down since July 24 and the 2-4,DB plant had been down since May. Unfortunately, the 2-4,D plant is scheduled to resume operation before the company completes the lake treatment, so it will be difficult to evaluate completely the effectiveness of the latter treatment. Mr. Patterson said that six complaints had been received since the June Authority meeting. Five of them were after the 2-4,D plant shut down. He indicated that there may be some other plants in the area that are contributing to the problem.

No further action was taken by the members regarding this matter.

AIR POLLUTION NEAR WINCHESTER:

Mr. H.M. Patterson presented a petition complaint bearing 74 signatures which had been presented to him by Mr. Amacher and which reads as follows:

To: The Sanitary Authority of the State of Oregon  
 c/o John P. Amacher, Secretary  
 968 Portland State Office Building  
 Portland, Oregon

WHEREAS, The undersigned are residents and inhabitants of Winchester, Douglas County, Oregon, and live in an area immediately adjacent to the North Umpqua River and the source of supply for the domestic water users of Roseburg and Winchester, Oregon.

WHEREAS, The Beaver State Sand and Gravel and the Douglas County Lumber Company conduct their respective industrial operations in locations North-West of the North Umpqua River at Winchester, Oregon.

WHEREAS, Dust produced by the operation of the Beaver State Sand and Gravel and sawdust and ashes produced by the operation of the Douglas County Lumber Company have recently been deposited on the land and in the water adjacent to Winchester, Oregon.

WHEREAS, The dust, sawdust and ashes being deposited by said industrial operations is polluting the air and water, creating a nuisance, and causing damage to plant and fish life in the area of Winchester, Oregon,

NOW, THEREFORE, In order to protect the domestic water supply, preserve fish life, and prevent further loss of plant life and nuisance to the inhabitants of Winchester, Oregon, we respectfully request that the Sanitary Authority of the State of Oregon take such action as shall be necessary and proper concerning the injurious operations of the Beaver State Sand and Gravel and the Douglas County Lumber Company.

Dated, July 30, 1965.

He stated the staff had begun an investigation and found that Beaver State Sand and Gravel mentioned in the complaint should have been R. L. Houck and Sons Corporation. Mr. Patterson also stated that some sampling and further field work would be necessary in relation to the Douglas County Lumber Company. Mr. Wendel inquired if these same 74 people had a water complaint too to which Mr. Patterson replied that the emissions from the wigwam waste burner and from the asphalt plant in operation were falling into the water and that as soon as the air part of it was controlled, the water part would be controlled also. No action on the part of the Authority members was considered necessary at this time.

IDEAL CEMENT COMPANY - Gold Hill:

Mr. Baton read a review and current report on Ideal Cement Company, which has been made a part of the Authority's permanent files in this matter. The staff recommended that an informal invitation be extended to Mr. Hooton and the company to attend the next meeting of the Sanitary Authority to determine the progress of the company and their proposed program.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler and carried that the Authority adopt the staff recommendation with the provision that the Chairman write to the President of Ideal Cement Company to see if he could get some action, in view of the fact that the Chairman has been so successful in writing directly to heads of the companies.

CCA312

PERSONNEL:

The Secretary announced with regrets the resignations of three staff members. Mr. Howard Smith, Assistant Chief of the Air Quality Control Section, has accepted the position of director of the new five-county Mid-Willamette Air Pollution Authority. Mr. Robert F. Wood, Associate Engineer, will be taking graduate work to prepare himself for a career as an educator in the field of public health engineering. Mr. Harold L. Sawyer, Assistant Engineer, will continue his graduate studies at the University of Washington.

The Secretary also reported that Mr. Joseph A. Jensen has been granted a nine-months leave of absence to take graduate work at the University of Washington. He will return to the staff next July.

Mr. A. D. Smythe, Associate Engineer, was introduced as the new staff member in charge of water supply sanitation. Other new staff members introduced were Don McHarness and E. A. Schmidt.

No date was set for the next meeting.

There being no further business the meeting adjourned at 3:40 p.m.

Respectfully submitted,

Kenneth H. Spies  
Secretary

MINUTES OF THE 108th MEETING  
of the  
Oregon State Sanitary Authority  
December 17, 1965

The 108th meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:00 a.m., December 17, 1965, in Room 36, State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Chris L. Wheeler, Richard H. Wilcox, M.D., Herman P. Meierjurgan, John Amacher and Edward C. Harms, Jr., Members; Kenneth H. Spies, Secretary; Don Morrison, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; Warren C. Westgarth, Director of Laboratories; H.E. Milliken and H.M. Patterson, Assistant Chief Engineers; Bryan M. Johnson, Fred G. Katzel, Harold McKenzie, Pat D. Curran and A.D. Smythe, Associate Sanitary Engineers; Ernie A. Schmidt, Clinton A. Ayer, Leo G. Farr, Lloyd O. Cox and Don McHarness, Assistant Sanitary Engineers; Edgar R. Lynd, Water Pollution Control Technician; Glen D. Carter and Edison L. Quan, Aquatic Biologists, and Edward W. Stauffer, Engineering Aide.

MINUTES:

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried that the minutes of the August 16, 1965 special meeting and August 26, 1965 regular meeting be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the action taken on the following 104 project plans and engineering reports for water pollution control and 8 project plans for air quality control for the months of August, September, October and November, 1965, be approved:

#### WEYERHAEUSER COMPANY, SPRINGFIELD:

A report dated December 13, 1965, and entitled "Air and Water Pollution in the Vicinity of the Weyerhaeuser Mill, Springfield, Oregon," copies of which had been distributed to the members of the Authority prior to the meeting was read by Mr. Weathersbee. This report has been made a part of the Authority's permanent files in this matter.

Mr. Weathersbee stated that Mr. Harold Merryman, district engineer, was present to comment and give his personal observations of this problem, that Mr. Patterson had kept an accurate account of the complaints of the odor problem and that Glen Carter, aquatic biologist, had made a survey of the river the day before the meeting and would describe the conditions that he found in the river below the Weyerhaeuser outfall at that time.

Mr. Carter said he wanted to verify the information presented in the report as still persisting in the river. The bacterial slime and algae growth conditions are compounded by the fact that there is considerably less water than normally expected at this time of the year. The accumulation of slime could and probably would impede the penetration of the water into the bottom gravels so that some very critical conditions might result. He added that this is not a toxic situation but one of physical barrier of the passage of water and oxygen. Mr. Carter then showed the Authority members some samples of the material collected from the bottom of the river on this survey. He stated it created a general nuisance condition and it was not good from the aesthetic standpoint. He stated further that this section of the McKenzie is not a major spawning area, but the slime and fiber create a detriment to fish food productivity.

Mr. Wendel noted that several citizens of the area had sent to the meeting a file of complaints on this problem. The Secretary, at the request of the Chairman, then read several of the letters which have been made a part of the Authority's permanent file. The letters read had been submitted by Mrs. John Jaqua, J.F. Bosse, W.Wm. Puustinen, W.J. and B.Y. Bowerman, Wm. J. Forest, W.H. and L.M. Hebert, C. Dudley Miller and F.A. Colcord.

CCA312

Representatives of Weyerhaeuser Company were then given the opportunity to be heard. Mr. John M. McEwen, Manager of Weyerhaeuser Company, Springfield Branch, stated he had come to the meeting with the intent of filling in the Sanitary Authority on any questions that they might wish to ask but did not have a prepared statement. He said the company was in agreement with the facts set forth in the report presented by Mr. Weathersbee. He stated that unfortunately certain phases of the company's program for air and water pollution control had not worked out as planned. Many of the things outlined in the planning, for example to take no more water from the river but to reuse the water available, have worked out satisfactorily. One of the main points in the design of the new mill was the complete reuse of condensates which heretofore had been sprayed on land in the irrigation program. Some of the design features in the new mill which have not been as effective as expected are now being redesigned. He said the company has a continuing problem (7 days a week, 24 hours a day) and a periodic problem (namely, breakdowns). In a new mill there are an abnormal amount of mechanical breakdowns of equipment, the problem of training people to operate the equipment, and human failures. It was found in the operation of the enlarged mill that abnormally high quantities of clean water in the pond diluted and filled it up so the pond could not be used for surging as effectively as it should. The drainage system is now being repiped to put the clean waters directly into the sewers which bypass the ponds so dilution will not be so high.

The company has also had a problem with the new Kamyr digester which was not anticipated. This digester is 200 feet high so when it becomes necessary to drain it there are the contents of some 200 feet of 8-inch line which have to go some place. The plant was designed to divert this

material to the retention pond but when the retention pond already has substantial amounts of clean water in it, there is not enough storage capacity left to hold the pipe contents and to permit discharge under controlled conditions. This system is now being revamped to put a sump in at a low level so this line can be drained into the sump and the sump pumped back into the system. The company is now reusing all its condensates which are high in oxygen demand. The irrigation system is being expanded to include 45 acres of land all seeded and ready to go in addition to the 70 acres already in operation. A 200-acre farm has been purchased and an irrigation pipe line is being installed. The company is planning to spend \$100,000 if necessary just to put a pipe line to this farm in case it is needed for emergency conditions. In addition to the above changes, a surface aerator has been ordered and will be used to reduce the oxygen demand in the log pond. The company plans to experiment with this aerator first by using it in the retention pond. If this works satisfactorily, another aerator will be purchased for the log pond. This briefly is the plan for solution of the problem of slime growth.

Mr. Harms questioned Mr. McEwen about the odor problem which he felt was much more serious than it had been since 1950. Mr. McEwen replied that there were two major aspects to the odor problem. One, the vaposphere diaphragm in the old mill had worn out after two years of service and after replacing this diaphragm it was found inadequate and had to be replaced again; and two, the new mill design was based on a certain amount of sulfide in the liquor and with the new type of continuous digester the liquor is richer than expected so the oxidation system is now being redesigned and enlarged to accommodate it.

Mr. Meierjurgan asked what percentage of the effluent would be used for irrigation and Mr. McEwen answered approximately 20 to 25% at maximum capacity. Mr. Oliver corrected Mr. McEwen by saying that he felt it would be about 10 to 15% on a volume basis.

Mr. Harms asked if it were true that the odiferous parts of the emission were not visible. Mr. McEwen replied that it was true that the visible emission was steam.

Mr. Meierjurgan asked if it was a fairly accurate estimate that 19,000# of fiber per day was being discharged into the river.

Mr. McEwen replied that they were not averaging that much, but the average daily discharge during the maximum week was probably that much. In response to a question Mr. Carter stated it would probably take only one good rain this time of year to wash out the slime already on the river bottom.

Mrs. Jaqua, Eugene resident, stated she had brought in a letter written by an attorney that she wanted read. This letter by Neil Brown, Eugene Attorney, was read by the Secretary and has been made a part of the permanent files.

Mr. Wendel asked Mr. McEwen how long it would take the company to correct the situation and to restore conditions at least as good as those that prevailed before the increase in production, and as promised in the company's statement that neither air nor water would be adversely affected compared to what it had been before enlargement of mill capacity. Mr. McEwen said that assuming present plans will solve the problem it should be done by low water time next year.

For the record, the following part of the Sanitary Authority's approval letter of September 14, 1964, which was based on the review of the company's proposal presented at the September 10, 1964, meeting was read by the Secretary: "Because of the several indeterminate factors involved, your proposal was only tentatively approved subject to the following conditions: 1. That if proposed

methods for controlling air and water pollution are not entirely successful as represented, such further control, disposal, or treatment of air and water polluting wastes will be provided as required to prevent or eliminate validly objectionable air and water pollution."

The Secretary then stated that Mr. McEwen by letter dated November 19, 1965, had outlined four additional steps being proposed, or in the process of being taken by the company, in an attempt to abate the water pollution. The four steps were (1) Install a system to recover the strong spills. (2) Remove clean water from the flows that go to the retention pond in order to increase the pond's efficiency. (3) Add to the irrigation by purchasing an additional 197 acres of land which would cost \$100,000 to install the necessary piping. (4) The installation of a mechanical surface aerator. Mr. Wendel stated that in future considerations of similar situations a paragraph or sentence should be added to the effect that they will not operate until all conditions are met.

Mr. McPhillips commented that he did not feel the people who use the McKenzie River for recreation, those who live on the McKenzie or the Sanitary Authority should be asked to share the responsibility of the Weyerhaeuser Company because their projected plans did not work out. He said the responsibility rested entirely with the company.

Mr. Wheeler asked the staff if the air pollution part of this problem had been basically caused by pollutants from stack discharges or by decomposition and odors coming from the river surface. Mr. Patterson said the staff had made about 42 odor surveys from random sampling stations, one of which is on the McKenzie. About 9 out of 20 complaints mentioned both air and water pollution, the others referred primarily to odors from the river. He said that on occasion there is an odor associated with river water.

CCA312

The meeting was then recessed at 12:15 p.m. and reconvened at 2:00 p.m.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjürgen, and carried that at the earliest possible time Weyerhaeuser Company be cited to appear at a public hearing before the Authority to show cause if any exists why an order should not be entered directing it to abate and control the pollution of the McKenzie River and of the atmosphere as required by the public policy of the state of Oregon.

CROWN ZELLERBACH - LEBANON:

A report dated December 14, 1965, and entitled "Pollution of the South Santiam River," copies of which had been distributed to the members prior to the meeting, was read by Mr. Weathersbee. He also referred to a letter dated October 12, 1965, from Mr. W.F. Cyrus, Manager of the Crown Zellerbach plant at Lebanon, which outlined a proposed time schedule. Mr. Weathersbee said the staff had considered this letter and had given conditional approval in a letter dated November 26 for construction of the settling basin. Mr. Meierjürgen asked the capacity of the sludge settling basin that is already built and was told it was about one-half day's detention of the waste discharge with no mechanical means for sludge removal. It is proposed to construct a dike partly out into the basin so the flow will move around it for settling. Mr. Weathersbee said the staff does not accept it as an entirely adequate settling facility. Mr. Cyrus who was present to represent the company said the company plans to effect additional inplant improvements in the nature of recycling, general screening and better recovery facilities, and that the company further proposes to observe the flows to be augmented by the Green Peter Dam reservoir; and based on those flows, design adequate facilities to meet the Sanitary Authority requirements by the summer of 1969. Mr. Cyrus stated it would be by either a concrete basin

with continuous sludge removal by mechanical scraping mechanism or construction of a two-cell earthen basin with approximately 24 hours detention time. It was stated that the Authority's staff feels 1969 is too long and that the company can actually do it by 1968. It was also pointed out that the purpose of constructing dams did not include water quality control and, therefore, the company should not be dependent on the flow from these federal dams in the design of its facilities. Mr. Meierjurgan stated the Fish Commission anticipates having a hatchery on the South Santiam before the time limit set for Crown Zellerbach to solve its problem and the Commission is very interested in seeing this taken care of if it is physically possible to do so. Mr. Wheeler stated that in regard to the flow problem there are certain water rights existing and it is possible that those rights would dry up the stream as far as the natural flow is concerned, but that they would not have the authority to take released flows from the reservoir unless specifically released for that purpose. He then asked Mr. Weathersbee in regard to 1968 if this was to be a final facility and not necessarily just a settling basin which will be in operation next year. Mr. Weathersbee corroborated this fact and said the final design would be constructed in 1968 and may or may not include a secondary treatment plant. Mr. Meierjurgan asked if the problem can't be solved, what would be the conclusions of the staff. Mr. Weathersbee stated it would be concluded that the company would either continue the problem, curtail production or close the mill. Mr. Cyrus, mill manager, said the company planned to meet the 1968 deadline whatever the alternative might be.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Wheeler, and carried that the program and timetable proposed by Crown Zellerbach in its letter of October 12, 1965, be generally approved as modified by the Sanitary Authority letter of November 26, 1965.

CCA312

CHIPMAN CHEMICAL COMPANY:

A report dated December 15, 1965, and entitled "Progress Report on the Tainted Salmon Problem" was read by Bryan Johnson and has been made a part of the permanent file in this matter.

Mr. Wheeler asked if the dichlorophenol which would be eliminated from the effluent if the plant is rebuilt would be reused or recovered or how was it to be disposed of. Mr. Gitschlag replied it was going to be processed in a confidential way so that it would be reused.

No action by the Authority was required.

FRONTIER LEATHER COMPANY, SHERWOOD:

A report dated December 3, 1965, and entitled "A Report on the Frontier Leather Company at Sherwood, Oregon," copies of which had been distributed to the members prior to the meeting, was read by Mr. Weathersbee and has been made a part of the permanent files in this matter.

No action by the Authority was necessary at this time.

UNITED GROWERS INC., SALEM:

Mr. Milliken read a memorandum report dated December 15, 1965, which has been made a part of the permanent files in this matter. The report stated that on December 9 a petition signed by 61 persons living in the vicinity of United Growers was received. Mr. Milliken informed the Authority members that a district engineer visited the plant recently and found that the company had complied with the recommendations of the Sanitary Authority staff that all wastes be discharged to the city sewer which became available about July 9, 1965. Thus the problems complained about in the above mentioned petition have been solved. He said a letter has been received from the manager indicating that the company will continue the practice of putting all wastes

into the sewer except the cooling water. This should solve the stream pollution problem. Mr. Wheeler noted that the Capitol Journal, a Salem newspaper, carried a report from Mr. Randall, plant manager, that the company was now and will be in the future dumping all sewage into the sewer system and that the Sanitary Authority was being informed of this action. Therefore all signers of the petition should be aware the problem has been solved.

GRAND RONDE:

A memorandum report dated December 15, 1965, was read by Mr. Milliken and has been made a part of the files in this matter. In this report authorization was requested by the staff to take further legal steps to obtain abatement of the pollution problem at Grand Ronde since no plans have been received as directed in the order of the Authority adopted at its meeting on July 24, 1965.

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that necessary court action be instituted to bring about abatement of this pollution problem.

FEDERAL WATER POLLUTION CONTROL ACT:

The Secretary reported that on October 2, 1965, President Johnson signed into law PL 89-234, better known as the Muskie Amendment to the Federal Water Pollution Control Act. He said one of the most important sections of this amendment has to do with promulgation of standards for interstate streams. Section 10 of the amended act pertaining to this subject was distributed to the members for their information.

Briefly, this section requires that the governor of a state or the official water pollution control agency within one year of the effective date of the Act file with the Secretary of Health, Education and Welfare a letter of intent stating that before June 30, 1967, water quality criteria

CCA312

will be adopted applicable to all interstate waters or portions thereof within the state, and that a plan to implement and enforce the water quality criteria will be adopted.

If a letter of intent is not filed or if the standards which are adopted or the plan submitted does not meet the approval of the Secretary of Health, Education and Welfare, then it will be up to the federal government to proceed to adopt standards. After standards have been adopted and promulgated by Health, Education and Welfare, 30 days are given the state in which to file any objections. The Secretary asked the Board if it should be the intent of the Oregon State Sanitary Authority to comply with this requirement; that is, to establish water quality criteria standards for all interstate streams and to submit a plan for the implementation and enforcement of those standards. It was pointed out that interstate waters include coastal waters, although a more definite definition as to what actually is meant by coastal waters is needed. If it covers all tributary streams that discharge into the ocean and estuarian waters, the staff will have a big task to establish said water criteria for them. These criteria pertain only to interstate streams; that is, streams which form a boundary between two states or flow from one state into another. This would include the Columbia, Snake and Klamath Rivers. Mr. Harms asked what the procedure would be if the criteria for the two states differed. The Secretary replied that it would be to the advantage of both states to jointly work out the problem and also make sure that anything suggested for adoption be approved by the federal government, because it is required by federal law as well as state law to hold public hearings before any standards are adopted. If these standards are violated thereafter, it immediately becomes subject to federal enforcement. The Authority has been given the opportunity to assume the task of establishing the standards which is our right and responsibility.

It was MOVED by Dr. Wilcox, seconded by Mr. Harms and carried that the Authority signify its intent to create standards for interstate waters and that the Governor be asked to send such a letter.

RIVERDALE-DUNTHORPE:

The Secretary reported that early this year the voters in the Riverdale-Dunthorpe area approved by an overwhelming majority of 4 to 1 issuance of a sewer bond in the amount of \$700,000 to finance construction of sewers and those bonds have now been sold by Multnomah County to the First National Bank of Oregon at an interest rate of 3.8%. Preparation of final plans is now nearing completion and construction will be started as soon as weather conditions permit in the spring.

CITY OF PORTLAND:

Mr. Wendel requested a report on the progress being made by the city of Portland in its sewer program. It was stated by the Secretary that final plans and specifications have been received from the city's consulting engineers for the construction of the first phase of the interceptor system to serve the northwest portion of the city; namely, Linnton-Guilds Lake area and specifically the plans cover the installation of a river crossing, a tunnel leading through the peninsula to the existing treatment plant and the first leg of the interceptor sewer on the west side of the river which when completed will intercept two of the present city outfall sewers in that area. Other phases to follow will be the construction of the pump station which will be needed in order to lift the sewage across the river and the other necessary extensions to the interceptor system to serve the rest of the Linnton-Guilds Lake area. Following that there will be enlargement to the present treatment plant and enlargement of the outfall sewer leading to the main Columbia River. Other portions

CCAB312

that remain to be improved are sections of the S.E. section of the main interceptor system in order to prevent overflow on occasion of raw sewage and industrial wastes to the Willamette River. It is proposed to meet with the city engineer and his staff to get more up-to-date information on the final time schedule. The last proposal which was received from them indicated that some of the interceptor project would be deferred as much as 9 or 10 years which certainly is entirely too long.

Mr. Harms stated that the Authority had approved a plan which would require it to be done in about 6 years and wondered if the city was behind schedule. The Secretary said the city had in mind to construct a large interceptor to serve the southwest portion of the city going out the Johnson Creek area which will take a considerable portion of revenue which they accumulate by means of the sewer user charge. It has to be admitted that the city has intercepted some 90 to 95% of the total load on the city and is treating that at the main plant. It cannot be said that the city of Portland is not doing a fairly good job. It is going to take probably fourteen million dollars more to complete the interception of the remainder of the waste going to the river and the enlargement of facilities to provide for adequate capacity for the future. As far as the time schedule presented to the Authority about a year ago is concerned, the city is not yet behind schedule. Mr. Wendel requested the Secretary to get a schedule in writing from the city for each member of the Authority by not later than the next meeting to see if it is going to be agreeable.

ST. JOHNS CITIZENS COMMITTEE FOR CLEAN AIR:

A delegation of citizens from the St. Johns area being present, the Chairman called upon Mr. Wally Priestley to speak first. Mr. Priestley said that he would like the people to speak for themselves; however, he said that they had formed a "St. Johns Citizens Committee for Clean Air." He presented petitions with 523 signatures which had been collected in the past three weeks. He showed a photograph which had been taken from the Port of Portland showing smoke pouring forth from certain stacks. He then introduced Mr. Howard Galbraith who spoke for the committee. Mr. Galbraith said he had lived in St. Johns for 26 years and that he had a brief written statement to present. Copies of his statement were distributed to the Authority members. He then read the statement, a copy of which has been made a part of the Authority's files in this matter.

Mr. William Luch then spoke about the particular problem in the area caused by Union Carbide. He said recently they had held two meetings in St. Johns to attempt to estimate the feelings of the citizens and that the people present at this meeting of the Authority were here as a direct result of those two earlier meetings. He said the Air Quality Control staff had been attempting since 1951 to get Union Carbide to install adequate equipment and institute the practices necessary to bring this area substantially cleaner air. During the past 14 years, two of the three furnaces have been covered and much correspondence has been exchanged. He said that due to one circumstance or another, and there always seems to be a circumstance within the plant, there has been a series of delays. He then referred to a statement made by the company in a letter dated July 14, 1965, and addressed to the Authority which began as follows: "If at any time atmospheric conditions are unfavorable in our judgment \*\*\*\*." He stated that the citizens had

CCAS12

lost any faith they might previously have had in Union Carbide's judgment. He said, "We don't want to leave it to their judgment. Paragraph four states 'We are proceeding with plans.' We are tired of proceeding with plans; we want some action. We refer you to these paragraphs to show you what we feel is the continual ambiguity of Union Carbide's attitude. So far no step phase program set forth by Union Carbide plant has met with the approval of the Air Quality Control staff as adequate to bring air quality in this area within the Sanitary Authority regulations. St. Johns has many problems of air pollution and Union Carbide is by no means the largest plant, but they are the largest offender."

Mr. Luch then introduced Reverend Edwin Judd of the Conquerors Bible School who explained that fallout is carried by winds across the St. Johns area and across the river to Linnton if the wind is directly from the east. He claimed that such conditions make it difficult to enjoy outdoor living. He stated that the Air Quality Control staff has had stations on top of the Bible School Building. He then showed a photograph taken in 1965 and expressed the fact that there should be no doubt as to source of pollution. He also stated that the Bible School owned some nine acres of land on which they expect to develop a campus for 200 students. They presently maintain 50,000 sq. ft. of building space. Adjoining their property is the Harvest Rest Home with accommodations for over 50 elderly persons and directly across Lombard Street is a new Dan Davis Industrial Park now under development which constitutes 30 acres being developed into light, clean industry and warehousing. Reverend Judd stated he was here to approach the Board members about the economic factors involved with anybody locating in this area even in the zoned industrial areas here from the standpoint of building maintenance.

The added expense of building maintenance of the Bible College and all the firms resulting from this intensely heavy industrial filth cannot be ignored. He said fallout from Union Carbide accumulated in the gutters of the college to depths of one-half inch during the past summer. He personally took many wheelbarrow loads from the roof in mid-September. He also stated that the dirtying and damaging of exterior paint necessitates frequent cleaning and repainting of buildings, and that while repainting the buildings, fallout settled in and defaced the fresh paint before it could dry. He claimed there is also damage sustained to the cars that are parked in the area. The chemical deposits from this source of pollution seem to accelerate corrosion of chrome and definitely damage painted automobile surfaces. Insurance companies accept the responsibilities under comprehensive coverage for such damage but refuse to honor repeated claims. During hot days many hundreds of car owners have a choice of two evils. They can either close their windows tight and let the interior bake, or leave the windows open and find the interiors saturated with dust. He stated that beyond the shadow of a doubt the chief source of this pollution is Union Carbide Company. He said he hoped that they had made it clear that action is needed now.

A memorandum dated December 17, 1965, to the Sanitary Authority from the St. Johns Citizens Clean Air Committee was presented for consideration. It contained a request for a comprehensive air quality control program, setting minimum standards, and setting a completion date for the Union Carbide Metals Company plant at 11920 N. Burgard Road, Portland, Oregon. A copy of this memorandum has been made a part of the Authority's files in this matter.

Mr. Luch then spoke as a home owner and said they were fed up and also were sick and tired of filth and dirt falling on lawns, patio furniture, washings, cars, window sills, tired of pitted aluminum doors and screens, cracked and peeling paint and nasty odors. He said that the Citizens Committee had come up with a request for a comprehensive air quality control program setting minimum standards and setting a completion date for the Union Carbide Metals Plant to comply with, that it is the conclusion of the St. Johns Citizens Clean Air Committee that Union Carbide does not adequately treat the air emanating from its plant; and further, that failure to treat the air adequately creates a situation in parts of the St. Johns community in violation of the stated public policy of the state of Oregon to maintain such a reasonable degree of purity of the air resources of the State to the end that the least possible injury should be done to human, plant or animal life.

UNION CARBIDE METALS COMPANY, PORTLAND:

Mr. Wendel then asked for a report from the staff and Mr. Patterson read a memorandum dated December 17, 1965, a copy of which has been made a part of the Authority's permanent files in this matter. Mr. Wendel asked if anyone had any idea as to the length of time it would take to comply with the staff's conclusions. Mr. Joe Vogelberger, plant engineer for Union Carbide, said he was not prepared to comment on the report, but stated that they are working on the installation of the new offtake for furnace No. 4 and will be prepared to discuss Mr. Patterson's conclusions at a very early date. He thought all three measures would require discussion with Mr. Patterson.

Mr. Wendel then asked if it would be a matter of days, weeks, months or years to do these three things.

Mr. Patterson stated that it could be done in one year and that there is equipment that will do the job. It is only a question of determining what is acceptable.

Doctor Wilcox then asked if in a matter of days an agreement could be made which would meet item 2 of the St. Johns Citizens Committee's memorandum; namely, that the company agree to an overall air quality control program acceptable to the Authority.

Mr. Patterson said that determining the proposal that will meet ambient air standards will take some time. It was pointed out that the company may have under consideration the transfer of part of their production to other plants, since it is more economical to produce elsewhere some of the minor products that they presently produce here over a short period of the year. This requires having to confer with their main office in the East.

Doctor Wilcox asked if there presently were devices manufactured that control this type of emission, to which Mr. Patterson answered that there are precipitators or bag-type dust collectors for this type of emission. He stated that the cost of equipment would be very high because their exhaust gases are very high in quantity.

Doctor Wilcox asked if the product was valuable and Mr. Patterson stated that it is in demand but that the market fluctuates considerably. This year they had an unusual demand for silicomanganese. This year they produced for a 2-months period, whereas last year they produced only for a shorter period of time.

Mr. McPhillips asked if it would be possible to report back to the Sanitary Authority within 60 days as to whether an agreement with the plant would be reached on the recommendations as outlined by the staff.

CCAS12

Mr. Patterson was sure he could do this on behalf of the staff but thought that the company should speak for itself.

Mr. McPhillips asked for an opinion from the company's representative as to whether he thought they could possibly come to an agreement so the Board would know where we stand as to whether or not they would be able to conform to the recommendation made by the staff within a 60-day period. He wanted to know regarding their intent to comply. Mr. Joe Vogelberger of Union Carbide again said they would have to discuss with Mr. Patterson in regard to proper equipment and if the air quality in the St. Johns area would be reduced as a result of this.

Mr. Priestley said that since there is no plan or no program that they, the St. Johns residents, wanted to go on record to insist that a plan be submitted. They asked that a plan be submitted to the Air Quality Control Division and that this be done within 30 days, and that this plan be agreed upon with Union Carbide by June 30, and further that the plan be instituted and completed by June 30, 1967. He said they would like the Authority to adopt their recommendations, and to insist upon a plan and see that the plan is accomplished.

Mr. Wendel then asked if the members felt that these requests were reasonable.

Mr. McPhillips said he didn't believe it would be possible to accomplish the first step in 30 days.

Mr. Joe Vogelberger of Union Carbide then said that they had been negotiating with Mr. Patterson and staff to the fullest extent in solving their problem. They have not had time to go over or evaluate and come up with any kind of a program as to which methods or facilities will best accomplish the job.

Mr. Wendel asked how long it would take to come to an agreement with Mr. Patterson.

Mr. Patterson said the big decision is the type of equipment that will be installed to meet the problem and inasmuch as they propose to install a new offtake on the No. 4 furnace in January, allowing 60 or 90 days on item No. 1 would not upset their program.

Mr. McPhillips agreed that 30 days didn't give much time and suggested that Mr. Patterson report back in 90 days to the Sanitary Authority as to what progress has been made.

Mr. Patterson stated that once they have projected the overall program, then item 2 will require more detailed engineering. He did not know how the company would feel in regard to this but the initial program is the one that takes the most time.

Mr. Vogelberger commented that with a few recent exceptions almost all of the \$650,000 expenditure that the company has made thus far on pollution control equipment, both air and water, has been done at Union Carbide's initiative. There were instances when complaints were lodged and this was the primary motivation in the installation of this equipment.

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips, and carried that the Union Carbide Company be requested to submit by March 1, 1966, a plan and time schedule for an overall air quality control program, that such a program acceptable to the Authority be agreed to by the company by June 30, 1966, and further that construction of the required facilities proceed as soon as feasible under normal construction and installation practices.

Mr. Priestley asked for a definite completion date and suggested no later than June 30, 1967, or perhaps December 31, 1967.

CC-312

Mr. Luch said if it becomes necessary to hold any type of formal hearing, that it be held in the St. Johns area so that the people can get a chance to come and testify.

Mr. Wendel then asked if the citizens from the St. Johns area have felt the improvement from the city of Portland dump yet.

Mr. Luch answered that they have. He said that the city was still burning oil and that they were not supposed to do that unless the wind was blowing toward Clark County; but, unfortunately, they have not always complied with this requirement. He said the city has stopped burning trash.

Mr. Wendel asked that before March 1, 1966, Mr. Patterson bring information to the attention of the Authority members regarding other industries within the area.

Mr. Patterson said there are other problems in the area and that this past week and prior to that the staff had written to a number of owners of open burning operations in relation to auto salvage operations.

REQUESTS FOR VARIANCES FROM WIGWAM WASTE WOOD BURNER REGULATIONS:

Mr. Patterson first introduced the new members of his staff: Mr. Clinton A. Ayer, Chemical Engineer; Harold W. McKenzie, Mechanical Engineer and Leo G. Farr, Sanitary and Civil Engineer.

Mr. Patterson then stated that Mr. McKenzie has been working with the lumber industry and wood waste problem and would give the report on this item.

Mr. McKenzie stated that on August 17, 1965, regulations on wigwam burners had been adopted which would go into effect on January 1, 1966. The regulations require that certain things be done to improve the operation of the burners.

He reported that only six requests for variances had been received thus far as follows:

- CCAB312
- (1) Murphy Creek Lumber Company, Grants Pass, located in sparsely populated area; one of three burners to be terminated by July 1, 1966. Recommendation: Three burners involved. (a) Sawmill refuse burners, variance not be granted; (b) Resaw slab burner: Variance be granted to July 1, 1966, at which time burner is to be discontinued and dismantled; (c) Planer refuse burner: Variance not be granted.
  - (2) Tygh Valley Timber Co., Tygh Valley, located in sparsely populated area. Recommendation: Variance be granted until July 1, 1966.
  - (3) Modoc Lumber Co., Klamath Falls, new mill being built; scheduled completion August 1, 1966. Present burner to be discontinued at that time and new burner to be in full compliance. Recommendation: Variance not be granted.
  - (4) Hult Lumber and Plywood Co., Junction City. Burner located at Horton, Oregon, and is in sparsely populated area. Burner at Junction City no longer used. Recommendation: Horton burner - variance be granted until July 1, 1966. Junction City burner - variance be granted for such period of time as the burner is not operated; full compliance required before returning the burner to service.
  - (5) Park Lumber Co., Estacada, variance requested for three months only, due to pressure of renovation work. Recommendation: Variance be granted until April 1, 1966.
  - (6) Evans Products Co., Gold Beach, located in sparsely populated area. Recommendation: Variance not be granted.

It was MOVED by Doctor Wilcox, seconded by Mr. Meierjorgen, and carried that the Authority adopt the recommendations of the staff and notify the mills of the action of the Sanitary Authority.

DOUGLAS COUNTY LUMBER COMPANY:

Mr. Amacher asked what had been done about the petition which had been sent to the Sanitary Authority in August regarding the air pollution from the above named company.

Mr. Patterson said that a petition signed by 66 persons in the Winchester area had been received complaining about soot carbon, charcoal cinders and airborne floating materials. Prior to that, as a result of a previous petition received by the Sanitary Authority, a communication was received from the Douglas County Lumber Company to the effect that they were completing construction of holding bins which would enable them to sell materials and not put them in the wigwam waste wood burners. They said that a large part of their problem was caused by bark going through a hogger which caused the fine particles to be emitted to the atmosphere. The company plans to discontinue the use of the hogger. The company also has plans to rebuild the sawmill and will eliminate the remanufacturing plant so that all the materials suitable for chips will be sold and not burned, thereby eliminating the second waste burner.

Mr. Harms asked if the Sanitary Authority could have a report on this situation at its next Board meeting. Mr. Amacher said this would be agreeable to him.

REGISTER OF COMPLAINTS:

The Chairman said that when the Sanitary Authority was first organized many years ago, a register of complaints was kept. Every complaint which came in was recorded and given a number. He would like this system reinstated - one for air pollution and one for water pollution - to see how many complaints come in on any one given infraction.

The Secretary asked if it would be all right to transmit this information to the members of the Authority by putting it in the monthly activity reports.

This was agreeable with the Chairman.

The date of the next meeting was set for February 18, 1966. There being no further business the meeting adjourned at 4:30 p.m.

Respectfully submitted,

*Kenneth H. Spies*  
Kenneth H. Spies, Secretary

MINUTES OF THE 109th MEETING  
of the  
Oregon State Sanitary Authority  
February 17, 1966

The 109th meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 4:45 p.m., February 17, 1966, in the conference room of the Eugene State Office Building, Eugene, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Chris L. Wheeler, Richard H. Wilcox, M.D., Herman P. Meierjungen, and Edward C. Harms, Jr., Members; Kenneth H. Spies, Secretary; John Denman, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson, Assistant Chief Engineer; Bryan M. Johnson, Associate Sanitary Engineer; Leo G. Farr, Assistant Sanitary Engineer; Glen D. Carter, Aquatic Biologist, and Harold W. Merryman, District Engineer.

MINUTES:

It was MOVED by Mr. Wheeler, seconded by Dr. Wilcox and carried that the minutes of the December 17, 1965, meeting be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler and carried that the action taken on the following 23 project plans and engineering reports for water pollution control and 4 project plans for air quality control for the months of December 1965 and January 1966, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12-3-65	Forest Grove	Pump Station and Sewers	Prov. App.
12-7-65	Seaside	Force Main Change Order	Approved
12-8-65	Albany	Sewers	Prov. App.
12-8-65	Jackson County	Wm. Wood Lagoon	Not App.

CCA312

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12-9-65	Douglas County	Camas Valley School Lagoon	Prov. App.
12-10-65	Oak Hills Subd.	Sewer Extension Units 3 & 4	Prov. App.
12-16-65	Portland	Guilds Lake Interceptor	Prov.App.
12-29-65	Oregon City	Publishers Paper Co. Industrial Effluent Collection	Prov. App.
1-3-66	Woodburn	Sewer Extension OSH 214	Prov. App.
1-6-66	Arlington	Sewage treatment plant	Prov. App.
1-11-66	Lakeview Sub. San. Dist.	Sanitary sewers	Prov. App.
1-13-66	Eugene	Weaver Dev.-pump sta. & pressure line	Prov. App.
1-17-66	Clatskanie	Crownview Subd. sewers	Prov. App.
1-18-66	Multnomah County	Lateral sewer	Prov. App.
1-24-66	Grants Pass	Lateral D - Allendale School	Prov. App.
1-24-66	Boardman	Sewer for UPRR	Prov. App.

REQUEST OF CITY OF LAKE OSWEGO FOR PUBLIC HEARING REGARDING OREGON-PORTLAND CEMENT COMPANY

Mr. Patterson read a letter from the city of Lake Oswego dated January 19, 1966, asking that a public hearing be called regarding the matter of air pollution allegedly caused in that city by the operations of the Oregon-Portland Cement Company. This letter has been made a part of the Authority's permanent files in this matter.

Mr. Patterson then read a staff summary report dated February 17, 1966, which likewise has been made a part of the Authority's permanent files.

Mr. Fred Yerke, attorney for the company, stated that the Oregon-Portland Cement Company commenced operation in 1916 in Oswego with one kiln operating. This went on for about 30 years. In 1946 or 1947 the operation expanded to two kilns. At that time the company installed electrostatic precipitators to take care of the increased emissions expected from the addition of the second kiln. In 1955 Mr. McCaslin, president of the company, announced publicly that there would be further expansion by addition of a third kiln.

At that time Mr. Leche, first vice-president, Mr. McCaslin and Mr. Yerke met with Mr. Everts and Mr. Hatchard over a period of some months and discussed the matter and tried to work out something that would satisfy the requirements of the Sanitary Authority and that would also be economically feasible from the company's standpoint. The result was that the company was authorized to go ahead with the construction of the third kiln, provided that a new electrostatic precipitator was put in to cover the emissions expected by reason of the increased capacity. At the same time it was agreed to rebuild the old precipitator and connect it up so that it would take care of the two existing kilns. The requirement imposed at that time was that the company have a 99.5% efficiency as far as recovery was concerned. The new kiln operated at about 180,000 cu. ft. per minute, whereas the old kiln operated at around 80,000 cu. ft. per minute. Mr. Yerke reported that through the years since 1946 total capital

CCA312

expenditures have been \$1,029,811 and the operation and maintenance have cost \$932,198.34.

Mr. Yerke went on to say that the company worked out with Mr. Everts and Mr. Hatchard the 99.5% efficiency figure, and that the company has continued to adhere to it through the years. The problem now is the matter of the air quality standard which was set up by the Authority after the precipitators were put in, which limits the amount of lime dust and calcium oxide to not more than 20 micrograms per cubic meter above the normal background value. In summary, he stated that the company has operated at the efficiency set by the Sanitary Authority, that production has not been increased, and that the amount of fallout collected at the two stations probably comes from some other source.

Mr. Erik Voldbaek, vice-president in charge of operation for the company, presented a data sheet to the Sanitary Authority members which showed the production from 1961 to 1965, the value of stack emissions for the same period and the fallout rates as measured by the Authority for the same period. He pointed out that emissions in 1965 were somewhat higher than in 1964, but less than 1963 and 1961. He said in 1962 the company had a low production due to the fact that for five months there were only two kilns running. He went on to say that the emissions in the stack in pounds per day have been reduced mainly through the efforts of the company to change its production procedures and other reasons.

The fallout rate as measured in 1965 was, for some reason or other, extremely high. There seems to be no correlation between production and emission from the stack to the fallout rate. The company feels that there is some other reason for the increase in the fallout rate in 1965, one reason being during the flood period in December about two to three inches of silt and other materials were deposited in the whole area.

Mr. Yerke said he believed this is an area problem because there are cement trucks coming and going, people coming in to buy cement, etc. The wind rose that was set up from the plant to the Pinafore Restaurant showed that there was only one month (March) in which it predominated and for a period of 4 or 5 months the wind was blowing from the restaurant to the plant. Therefore, he said, there must be some other cause.

It was stated that the company does intend to go ahead and try to carry out the plant modernization that was discussed with Mr. Patterson at the February 9 meeting. Mr. Yerke said he believed that more could be gained if the Air Quality Control staff and the company staff sat down with the Oswego City Council and went over all of this.

Mr. Patterson pointed out that in the letter of April 13, 1955, it was initially stipulated that the emissions at the plant would be 60# per hour or 1440# per day which would equal an 80% reduction of the earlier 1955 emissions. Later, conferences and the letter of May 31, 1955, agreed that it would be necessary to have a 99.5% efficiency.

Mr. Patterson pointed out that the median total fallout for 1955 and 1961 was 25 tons per square mile per month and the calcium oxide was 7.3 and 6.0, respectively, at the Oswego Elementary School. In 1964 and 1965 the median total fallout was 40 and 62 tons, respectively, and calcium oxide was 8.8 and 21.4, respectively, at the Pinafore Cafe. There has been an increase in fallout over the earlier data. The earlier emission limitation intent was upon an emission basis, not a percentage basis, because if the stack emissions go up as they did, then the pounds being emitted is also going to go up, even though the collection efficiency remains very high. The staff believes this is why complaints are being received because the emissions are higher.

The Chairman then asked Mr. Patterson that if the company is successful with their financing and do what they say they will do, did he feel that the problem would be solved.

CCA312

Mr. Patterson said he believed that the Authority's regulations would be met if the company carried out what they said they proposed to do.

Dr. Wilcox asked if a joint meeting with the City Council and the Authority's staff, prior to a hearing, would accomplish anything.

Mr. Patterson thought that it would. He stated, however, that the staff had met with the city and advised them of the intent of Oregon Portland Cement Company as far back as last October, and that the city had also been advised that the company was having difficulties completing their financing.

The Chairman then asked if the financing would be arranged for shortly.

Mr. Voldbaek said that is very difficult to say. At the present time the draft for the loan agreement is being worked out by an attorney in New York. After it is returned from New York it then goes to the borrowing institution and it is not known how long they will retain it. He said the company does have the commitment for the loan.

Mr. McPhillips asked how long after the papers are finalized and the loan agreement is completed that construction would be started.

Mr. Voldbaek said that at the present time the delivery on the major equipment would be about nine months after placing the order. Completion would be about 12 to 14 months after the orders are placed.

Mr. McPhillips asked Mr. Patterson if he thought that the operations at the plant are being carried on at peak efficiency or if there could be an improvement.

Mr. Patterson stated that from brief observations he thought it could be improved. However, some of the company's good asphaltic roads are broken down and the company hesitates to put any money into them at this time if they are going to expand the facilities.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that a public hearing be called to request Oregon-Portland Cement Company to appear and show cause why air pollution should not be abated, the date for such hearing to be set by the staff at sometime subsequent to April 1.

REQUESTS FOR VARIANCES FROM WIGWAM BURNER REGULATIONS:

The requests for variances received since the last meeting, together with staff recommendations pertaining to them, were reported by Mr. Patterson as follows:

- (1) Beaver Lumber Co., Clatskanie, located in a sparsely populated area.  
Recommendation: Variance should be denied.
- (2) Cabax Mills, Eugene, infrequent material to reach desired exit temperatures except for very brief periods of time. Recommendation: Grant a conditional variance until May 15, 1966, at which time use of the burner is to be discontinued entirely.
- (3) Cone Lumber Company, Goshen, anticipated 100% utilization in spring of 1966. Recommendation: Variance be denied.
- (4) Diamond Lumber Co., Tillamook, located in sparsely populated area.  
Recommendation: Variance be denied.
- (5) Ellingson Timber Co., Izee, located in sparsely populated area.  
Recommendation: Variance be granted until August 11, 1966.
- (6) Ellingson Timber Co., Seneca, located in sparsely populated area.  
Recommendation: Variance be granted until August 11, 1966.
- (7) Ellingson Lumber Co., Halfway, relative isolation from habitation or population centers. Recommendation: Variance be granted until August 11, 1966.
- (8) Ellingson Lumber Co., Unity, relative isolation from human habitation or population centers. Recommendation: Variance be granted until August 11, 1966.
- (9) Forest Grove Lumber Co., Forest Grove, decision pending (by March 1) as to whether to install barker and hog. Such installation, if made, would result in total utilization and discontinued use of the waste burner. Owner does not wish to be in violation of the law in the interim.

CCA312

Recommendation: Grant conditional variance until July 1, 1966, at which time use of burner is to be completely discontinued.

- (10) Johnson Brothers Lumber Co., Silverton, located in sparsely populated area. Recommendation: A variance be granted until July 1, 1966, at which time the success of petitioner's efforts toward sale or disposal of the shavings by other means will be subject to review. Director Smith of Mid-Willamette Valley Air pollution Authority concurs in this recommendation.
- (11) Loveness Company, Malin, located in sparsely populated area. Recommendations: Grant a variance until August 11, 1966.
- (12) Miele Logging Co., Eugene, time is needed to observe working of a thermocouple and pyrometer in conditions similar to those in petitioner's plant. Recommendation: Variance be denied.
- (13) Quality Lumber Co., Athena, none stated, other than "...we wish to go on record requesting variances from the provisions of Section 24-020 pursuant to ORS 449.810." Recommendation: Variance be denied.
- (14) Swanson Brothers Lumber Company, Noti, located in remote and sparsely populated area. Recommendation: Variance be denied. Director Adkison of the Lane County Air Quality Control program concurs in this recommendation.
- (15) Zip-O-Log Mill, Inc., Eugene, infrequent use (one or two days per month). Recommendation: Grant a conditional variance until May 15, 1966, at which time use of the waste burner is to be discontinued entirely.

It was MOVED by Mr. Harms, seconded by Dr. Wilcox and carried that the Authority adopt the recommendations of the staff and notify the mills of the action of the Sanitary Authority.

Mr. Harms said he thought it was significant to note, since there was some concern in the lumber industry about the wigwam burner regulations, that the action of the Authority upon the recommendations of the staff today was to grant variances to 9 out of 15 cases. He said it is true that some of these are for very short periods, but it indicates that the staff and the Authority are treating this in a reasonable manner.

DOUGLAS COUNTY LUMBER COMPANY, WINCHESTER

Mr. Patterson stated that there was no report written on Douglas County Lumber Company because a great deal has not been accomplished. He said that Mr. Hallmark, general manager, has been investigating what he should do at the mill in order to curtail air pollution.

Mr. Meierjurgan asked if a pyrometer had been installed in the waste burner.

Mr. Patterson said not yet. He said Mr. McKenzie spent a half day trying to operate the wigwam waste burner to get it up to a high enough temperature. The waste burner has a different fire system - a tunnel system - and this may have to be changed.

Dr. Wilcox asked if there is any action indicated.

Mr. Patterson said the staff does not recommend any action at this time, and hoped that the company will act in all sincerity and will make improvements shortly.

UNION CARBIDE METALS COMPANY, NORTH PORTLAND:

Mr. Patterson said that his staff had met with Union Carbide, that they are making progress, and that as a result of the last Sanitary Authority meeting they are to submit a plan by March 1, 1966. He said it appears that they are on schedule.

CHIPMAN CHEMICAL COMPANY:

A memorandum report dated February 17, 1966, which has been made a part of the permanent files in this matter was given by Bryan M. Johnson, Associate Sanitary Engineer.

Mr. Johnson also stated he had met briefly with Mr. Gitschlag the morning of February 17 and had obtained some additional information regarding the fish bioassays. Effluent concentrations of 100 ppm of treated wastes produce no off flavor in the test trout and only a slight off flavor was noted in effluent concentrations of 1,000 ppm. This is a dilution of 1,000 to 1. It was further noted that the lake level has risen only 1 inch since February 10

CCA312

and now stands at 38 inches by the gauge. This is a gain of approximately 400,000 gallons. Mr. Johnson stated the project of extending the effluent line to the river for the treated waste is progressing rapidly with only one more easement being required along the easement line. The pipe has already been ordered.

Mr. Gitschlag was present and answered questions from the Board members. Mr. Meierjurgan asked if the effluent would be treated at the plant before being discharged to the pipe line now being installed. Mr. Gitschlag replied that it would. The installation is being started and plans should be ready to be submitted either Monday or Wednesday for the outfall piping.

Dr. Wilcox asked what level or amount of chlorination was being introduced at the plant and the answer was about 600 parts per million. Mr. Meierjurgan wanted to know the size of the pipe being installed and Mr. Gitschlag said it would be a 6 inch line. The company has two temporary 30,000 gallon tanks for retention of the effluent and later plan to install two 200,000 gallon tanks.

Mr. Wendel asked if the company still had protracted periods of shut down and was told the 2,4-D plant runs the year round except for about one month.

Mr. Johnson said he thought the company was on schedule in making the necessary corrections but some tainted fish may still result because of the seepage from Doane Lake.

Mr. Wheeler suggested a record of the test run on the effluent prior to its being dumped be filed with the Authority.

No further action was taken.

#### PORTLAND SEWAGE DISPOSAL:

The Secretary reported that a schedule submitted some time ago by the Portland City Engineer's office indicated that construction of some of the

interceptor sewer projects proposed by the city of Portland indicated a 1975 completion date. They were immediately advised this was not acceptable to the Sanitary Authority and the city was requested to review its whole program and work out a new schedule. The revised schedule was received February 16. Briefly, it calls for speeding up the repairs and additions to the existing interceptor system, construction of other interceptors needed to collect wastes from sewers which now discharge to the river and enlargement of the treatment plant. This is to be done for the most part by 1968. During the next 5 years the city expects to spend over \$14,000,000 on construction of new projects. In order to accomplish this the city would have to have about \$1,900,000 additional money from federal grants.

There are 7 outfalls on the west side of the Willamette, 7 outfalls on the east side and 2 outfalls on Columbia Slough that need to be improved. It is estimated the total cost of improving these 16 outfalls will be approximately \$700,000 which is proposed to be done in 1967 and 1968. The Linnton-Guilds Lake project will cost approximately \$5,800,000, some of which is already budgeted and the rest would be budgeted in 1967 and 1968. In addition to repairing the 16 outfalls and constructing the Linnton-Guilds Lake interceptor, river crossing and tunnel over to the existing primary plant, the city will also enlarge the plant at a cost of about \$1,400,000. Also, a portion of the main eastside interceptor system will have to be enlarged at a cost of about \$1,200,000. The city has budgeted for the present fiscal year almost \$4.4 million, for 1967 - \$3.2 million, and for 1968 - \$2.8 million. After 1968 the outfall to the Columbia River will have to be enlarged at an estimated cost of about \$2,800,000. This program has not yet been presented to the City Council.

It was MOVED by Mr. Harms, seconded by Dr. Wilcox, and carried that the Portland City Council be urged to adopt their engineer's revised construction schedule, which calls for a significant acceleration in its program, but that it be pointed out that while the Sanitary Authority will

CCA312

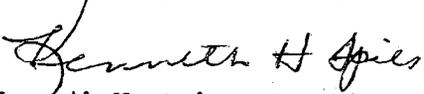

cooperate with the city in its application for federal funds, it cannot be guaranteed the federal funds will be available; and that the city be urged at the same time to investigate alternative ways of financing so it would not fall behind in its time schedule in the event it is unable to get the entire amount of federal aid otherwise needed.

ROGUE RIVER:

Mr. McPhillips reported the Rogue River had been running muddy all winter which was not due to natural causes. He asked the Chairman to have the staff investigate the situation and report back as he was prepared to ask the Chairman to call a special meeting for the purpose of citing in for a hearing any contractor who was violating the law in that area or the State Highway Department if necessary.

There being no further business the meeting adjourned at 6:30 p.m.  
No date was set for the next meeting.

Respectfully submitted,

  
Kenneth H. Spies, Secretary

MINUTES OF THE 110th MEETING  
of the  
Oregon State Sanitary Authority  
June 29, 1966

The 110th meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:30 a.m., June 29, 1966, in Room 36 of the State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, John P. Amacher, Chris L. Wheeler, Richard H. Wilcox, M.D., Herman P. Meierjurgan, and Edward C. Harms, Jr., Members; Kenneth H. Spies, Secretary; John Denman, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; Dr. Warren C. Westgarth, Laboratory Director; Bryan M. Johnson, H.W. McKenzie, Leo G. Farr and P.D. Curran, Associate Sanitary Engineers; Glen D. Carter and R.A. McHugh, Aquatic Biologists; Harold W. Merryman, Leo L. Baton, J.A. Jensen and Fred M. Bolton, District Engineers; Leonard Pearlman, Assistant Legal Advisor; Fred G. Katzel, Assistant District Engineer; R.B. Percy, Chief Chemist; Clint Ayer, E.A. Schmidt and Lloyd O. Cox, Assistant Sanitary Engineers; and Jim Willcox, Student Trainee.

MINUTES:

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips and carried that the minutes of the February 17, 1966, meeting be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the action taken on the following 63 project plans and engineering reports for water pollution control and 30 project plans for air quality control for the months of February, March, April and May, 1966, be approved:

CCA312

Water Pollution Control:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>

CC-312

CITY OF ALBANY

An engineering report prepared by the staff and dated June 28, 1966, was read by Mr. Weathersbee. This report has been made a part of the permanent files in this matter.

Mr. William C. Bollman, City Manager, was present to represent the city of Albany. He stated that he thought the report presented by Mr. Weathersbee was fairly complete on what had transpired to date. He said that as soon as the city's consulting engineers have completed or nearly completed the plans and specifications they would have fairly reliable information as to what the expansion of the Albany sewage treatment plant will cost and the city can then submit a bond issue to the voters for their approval. The city council is interested in trying to have a successful bond election the first time. He said that the possibility of holding an election in conjunction with the general election in November is being considered, although there is some feeling among council members that a special election should be held in August or September. He claimed Albany is in a particularly critical situation as far as sewage disposal is concerned as there are three food processing plants involved which have grown considerably and expect further growth and there is also the possibility of an additional food processing industry's being located in the city.

He said the estimated cost of the sewage plant expansion was originally \$1,612,500, but since then the estimate has been revised upward. Mr. Bollman stated that as a result of the initial study the engineering firm recommended a waste disposal ordinance be adopted which has been done and which contains a more adequate rate scale for industries. As an example, he said the rate for one industry had increased from \$2,000 per year under the old ordinance to \$14,000 per year under the new ordinance.

Dr. Wilcox asked that if the flows in the Willamette continue to drop during the summer season would the city be in a position to ask the industries to curtail production during the time of the canning season or shut down completely. Mr. Bollman replied that probably the city could have them shut down. He said those industries within the city could be regulated by the council, but those outside the city could not.

Mr. Wendel pointed out that the present flow in the river at Salem was reported to be only two-thirds of what it was a year ago, and it was critical enough then. He said anyone operating on the river ought to give consideration to this as it may be necessary to take emergency measures on the Willamette on very short notice.

Mr. Denman asked if some of the industries outside the city were using the plant, and Mr. Bollman replied that they were not using city facilities.

Mr. Meierjurgan asked if the city had contracted to serve the industries, and the answer was that the new ordinance had been adopted so that industries would pay more toward the cost of operation.

Mr. Bollman said the main industries in question in the city were two frozen food plants and a meat packing plant. Mr. Meierjurgan said that he noted by the report the present sewage plant was designed for a total PE of 32,400, of which 20,000 PE was for industrial wastes. Mr. Bollman said this was approximately so, but because of the increase in industrial waste loading the new plant is being designed for 200,000 PE.

The Chairman asked Mr. Bollman why the city delayed for a year and a half before retaining engineers to prepare final plans after completion of the preliminary report. Mr. Bollman replied that the city did not have money on hand for that purpose, and, therefore, had to make application to the federal government for a planning loan. He said the plans would cost \$71,400 to prepare.

CC-312

There was then considerable discussion by the members regarding the policy of making industry pay its fair share of the cost of waste treatment and disposal, regarding the possibility of providing temporary waste disposal facilities (lagoons) this summer, regarding the adequacy of the proposed sewage plant expansion, and regarding the responsibility of the city and community in not accepting new industry unless and until adequate waste disposal can be provided.

Mr. McPhillips then pointed out that the reason for having Mr. Bollman present at the meeting was to have him submit a proposed time schedule. Mr. Bollman said he could give only a tentative schedule, that the city hoped to hold a bond election this fall, get final plans by November and award contracts in the spring of 1967. He said it is expected the construction will take about a year.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the city of Albany be requested to submit a proposed program and timetable for financing, planning and construction to the Sanitary Authority staff within 15 days and in the event they do not, the Authority then consider citing Albany to show cause why they should not comply with the December 1966, deadline.

#### CITY OF MONROE

A supplemental engineering report prepared by the staff and dated June 29, 1966, was read by Mr. Merryman. This report has been made a part of the permanent files in this matter.

Mr. Steve Tyler, City Attorney, and Mr. John Dillard, Councilman, were present to represent the city of Monroe. Mr. Tyler stated the city presently has a population of 380 and an assessed valuation of \$304,000, that an engineering study and report by CH<sub>2</sub>M had been presented to the city council in August, 1965, at which time the maximum cost for treatment and disposal facilities was estimated at \$186,000.

Mr. Tyler stated further that the water system for the city now produces less than 30 gallons per minute which is enough for about four families and there are 103 water users, so they also have a water problem. He said there are presently about 60 connections to the city sewer system.

Mr. Tyler said in carrying out the recommendations of the engineers, the city had applied for loans or grants and a condemnation suit has been filed to acquire a site for a proposed lagoon.

After considerable discussion of problems of finance, it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the city of Monroe be requested to submit a revised time schedule within 15 days or the Sanitary Authority consider citing the city of Monroe to show cause why it should not abate pollution caused in the Long Tom River by the discharge therein of its raw or inadequately treated sewage.

#### CITY OF MILL CITY

An engineering report dated June 29, 1966, which has been made a part of the permanent files in this matter, was presented by Mr. Joe Jensen, Portland District Engineer.

The Chairman then asked what the pollution load is at the present time in terms of population.

Mr. Jensen replied there are approximately 13 commercial establishments on the north side of the North Santiam River, located between the highway and the river, that are contributing to this old sewer line, which discharges directly into the North Santiam River, with a population equivalent of approximately 75 to 100. Mr. Jensen went on to say that the south side of the river, where the main city is located, is sewered and all the sewage is treated in one big septic tank and a subsurface disposal field. That portion of the city seems to have no problems with its sewage disposal.

CCA312

Mr. J.C. Kimmel, Mayor, who was present to represent the city, stated that this sewage disposal problem was inherited from the Hammond Lumber Company. He said three years ago a study was made and an estimate of \$593,000 was quoted to put in a city-wide sewer system and disposal works. He stated that because this would only benefit 13 or 14 outlets, it was considered impossible to float a bond issue and have it pass. Mr. Kimmel said that if the Sanitary Authority or Marion County would in some way force these people to take care of their sewage, the problem would be solved, but the city is in a position where it has very little power to solve the problem.

Mr. Harms asked if a tax levy had been submitted to a vote of the people.

Mr. Kimmel replied that it had not because the people would be voting on a tax levy which would only be benefiting a small minority of the people.

Mr. Harms asked if the city has maintained the sewer line, to which Mr. Kimmel replied that they had not.

Mr. Denman then stated that apparently it is a private sewer serving those people who have connected their property to it.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan, and carried that the Sanitary Authority's legal counsel prepare injunction proceedings against the 12 or 13 violators at the earliest possible date.

#### FEDERAL GRANT APPLICATIONS

The following grant applications which had been submitted to the Authority on or before June 15, 1966, were considered for priorities for grants from the 1967 fiscal year appropriation:

<u>Priority Points</u>	<u>WPC No.</u>	<u>Applicant</u>	<u>Amount Requested</u>
	184	Portland	\$ 387,000
	185	Lincoln City	27,150
61	192	Lakeview Subdivision	12,600
59	191	Wedderburn	14,490
56	194	Port Orford	60,060
55	210	Cottage Grove	77,740
53	198	Junction City	75,600
53	196	Springfield	120,960
52	189	Gladstone	7,140
51	203	Gresham	27,450
51	207	N. Roseburg	97,050
50	197	Harrisburg	19,270
45	195	Multnomah County - Fanno Creek	119,700
43	205	Salem	109,200
42	206	Amity	19,350
41	201	Monroe	20,400
40	200	Yoncalla	54,000
40	199	Jefferson	47,700
39	190	Cascade Locks	40,350
39	188	Keizer Co. Sanitary District	4,270
38	208	Oakridge	37,200
38	211	Portland - Linnton-Guilds Lake	668,160
38	212	Portland Sewage Treatment Plant	549,000
38	193	Multnomah Co. Central County S.D.	141,970
34	202	Dundee	37,500
34	209	Manzanita	28,800
Total amount requested			<u>\$2,804,110</u>

Mr. Milliken pointed out that the current balance in Oregon's unallocated funds from the 1966 fiscal year appropriation for the PL 84-660 federal grant program was \$317,620, but that more than this amount is needed for the city of Portland's project No. 184 which was approved last year and is eligible for an increase of \$387,000. He pointed out further that the Lincoln City project No. 185, which also had been approved last year but which has not yet gotten under construction, has since been increased in scope and is now eligible for an increase of \$27,150.

He stated that although Congress has not yet approved the 1967 fiscal year appropriation bill, it is expected that Oregon's share of the new appropriation will be \$1,776,050, and that therefore there will be a total of only \$2,093,670 available, compared to the total requests of \$2,804,110.

CCA312

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the grant increases in the amounts of \$387,000 and \$27,150 for Portland project No. 184 and Lincoln City project No. 185, respectively, be approved, that for purposes of federal grant authorization Portland projects Nos. 211 and 212 be combined into one project and be assigned a priority for receipt of the balance in the 1967 federal funds remaining after grant offers have been made to all other eligible projects having equal or higher priority point totals, that priorities be authorized for the other projects listed except for Dundee and Manzanita, which are not ready to go, that the approval of applications and issuance of priorities for the Amity, Cascade Locks, Jefferson, Keizer County Service District, Monroe, Oakridge and Yoncalla projects be contingent upon their having obtained financing for their local share of the project cost by December 1, 1966, and that all grant offers be contingent upon appropriation of funds by Congress.

The meeting was recessed at 12:30 p.m. and reconvened at 2:10 p.m.

DOUGLAS COUNTY LUMBER COMPANY

Mr. Patterson read the staff report on air pollution caused by the Douglas County Lumber Company. This report dated June 29, 1966, has been made a part of the Authority's permanent files in this matter.

Mr. M.L. Hallmark, a partner and acting manager, said he had received a letter requesting that he be present to answer questions that might arise. He explained their situation and stated that each woodworking plant has an entirely different and separate problem. The Douglas County Lumber Company mill started out with a sawmill and had two burners. In those days they were burning all the slab wood as well as the bark. They were not barking the logs or shipping any of the materials. He said they had a problem then but did not think it was

as bad as it is now. They now convert practically all the waste wood into chips and sell 6 to 7 carloads of chips per day which is material they would formerly have burned but which is not being burned at the present time.

Mr. Hallmark stated that he realized the members of the Sanitary Authority had tough administrative problems and did not see how they could cope with some of them. He thought the Douglas Lumber Company problem was rather simple in comparison to some of the others. He claimed that no person or committee had ever approached him in regard to air pollution or a nuisance. He said their mill had been in the area for 25 years and in the present location 13 to 14 years, and they certainly do not want to pollute the air or be a nuisance to the public. He mentioned that there is a plywood mill about one-half mile north of them and another sawmill to the south from which he claimed there is smoke and fallout. He did not feel his mill should take the responsibility for every bit of fallout in the area. He said he had just been presented with a copy of a petition with about 150 signatures of people who claim that this fallout is harmful to fish life and plant life. Some of these people live several miles downstream and he did not think this fallout was bothering the fish or plant life. He said the problem is "how to stop it." He said none of the recommendations from the staff of the Authority had convinced him they had any merit. He claimed they have done all sorts of things to help control pollution. They have installed an automatic firing device in the boiler house which Mr. Hallmark thinks has reduced the smoke by at least 40%. He stated this was designed by an engineer and installed at considerable expense. He also stated that they had done all sorts of things to reduce the fallout. They have also installed a collector on the burner, the one that receives the bark dust, but he does not think that has helped much. In the last year they have spent \$3,500 on repair of the burners and have recently

CCA312

installed a core chipper at a cost of between \$15,000 to \$20,000 to chip the cores that are not saleable. They are now in the process of installing a dust collector on the barker so that they can remove the dust and not have to use water. He stated that nobody has come up with any kind of a definite engineering plan that will assure them that they are going to greatly minimize the fallout problem. He claimed they have talked with people who have the Medford Blowpipe System, which the Authority's staff had recommended they put in, and they cannot see technically any improvement whatsoever as a result of the installation of that system.

Mr. Hallmark stated that they were in the Sugarpine belt in Western Oregon and that they cut from 10 to 15 million feet of Sugarpine per year, and that they pay about \$70 to \$80 per thousand for those logs. The first 32 feet of those logs weighs about eight pounds per board foot and is so heavy it sinks. When bark which is wet is introduced into the burner and the wet Sugarpine sawdust is added, there naturally is a lot of smoke. He claimed that no matter what is done, there will always be smoke and fallout. Mr. Hallmark said he felt rather embarrassed to come to the meeting and he apologized to the Authority members. He said he thought the people who are complaining should have come to him rather than run to a commission and complain. He said he was not difficult to talk to and he felt the people instead of circulating a petition, should have come to him and discussed the matter. He said he was sure he could circulate a petition and get some of the same people who signed the complaint to sign his petition stating that the mill was not causing a hazard.

Mr. Meierjorgen then asked what other species they cut, to which Mr. Hallmark answered Hemlock, White Fir, Cedar, but mostly Douglas Fir. He said the mill runs almost half of its product on Sugarpine, Ponderosa Pine, and Idaho White Pine, and that they have a payroll of approximately 200 to 300 people in this

CCA312

plant. He stated that at the moment he did not know how they were going to eliminate this nuisance. He stated that they were selling quite a bit of bark mulch but not enough to help the problem too much, but they do have people who are hauling it away and selling it to gardeners, orchardists, etc. They have a proposition with a local orchardist and, at the mill's expense, are hauling this bark mulch to his orchard for covering some two to three acres to a depth of eight to ten inches. He is going to work that into the ground and then he is going to put some more on the top of the ground to try to determine if it is beneficial to the orchard. They have tried to find markets for the bark but the freight rate to California does not justify shipping it there. He said it was the bark that was causing all the trouble and he did not know at the present time how they were going to solve this problem.

Dr. Wilcox then asked if they had had an engineering study made.

Mr. Hallmark stated that they did not know of an engineer who was capable and that they have had calls from engineers, but they do not seem to be able to do anything about the situation. They are willing to spend the money if someone can recommend an engineer who can actually minimize the smoke and fall-out problem.

Mr. Wheeler asked if they had contacted any private engineering firms to solve the problem.

Mr. Hallmark stated that he was not familiar with firms or qualified engineers who do this type of work.

Mr. Denman asked if they had explored any of the multi-burning systems, to which Mr. Hallmark remarked he did not know what they were. He said he had read about some of the complex systems in the field, but did not think that would work here as they had a pretty big volume.

Mr. Wendel asked that if without the competition of California, would there be enough demand to affect the amount of material being burned.

Mr. Hallmark estimated that the installation of facilities to properly process this material and package it would cost approximately \$150,000. He said they have been trying to get the railroad to reduce the rates, but have had no results. He said again he would have felt a lot better if the people had come to him rather than place the burden on the Authority members.

Mr. Wendel asked if the people had come to him if they would have accomplished anything.

Mr. Hallmark replied that they would have worked harder to minimize the nuisance and that he still felt the people had a moral responsibility to have discussed this with him.

Mr. Patterson said he appreciated Mr. Hallmark's comments and said he thought the records should be clarified that the Authority has not necessarily required the use of wigwam waste burners for the disposal of wood waste and that the regulations of the Sanitary Authority in regard to wigwam waste burners were not initiated to solve the lumber industry problem, but were to reduce air pollution. Mr. Patterson referred to letters written to Mr. Hallmark which showed that the staff had made definite recommendations to the company that were never carried out.

Mr. Hallmark then said if it would be agreeable with the Authority the company would call in a competent consulting engineer and cause a study to be made, and that they would give a copy of his report to the Authority. He went on to say that he might not necessarily agree with the engineer's findings; but if he considered them reasonable and economical, the company would follow them.

Mr. Wendel then asked if it was the company's intention to do this immediately and Mr. Hallmark remarked that as soon as they could find someone who would work for them they would go ahead with the study.

Mr. Patterson then said there should be a reasonable time limit on this and Mr. Hallmark remarked that they would do this as quickly as possible and that he thought that within 60 days they should be able to report on the study.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox, and carried that the Sanitary Authority accept the proposition that Douglas County Lumber Co. will call in a competent consulting engineer and cause a study to be made and report back within 60 days, and that a copy of the engineering report be presented to the Authority members so that they could study it in advance of the next meeting; and further that if progress has not been made, which the members of the Sanitary Authority think is satisfactory by that time, the Douglas County Lumber Company will be cited for a hearing to show cause why they should not be enjoined from continuing the nuisance.

FRONTIER LEATHER COMPANY, SHERWOOD, AIR AND WATER POLLUTION

A memorandum report dated June 29, 1966, which has been made a part of the permanent files in this matter was presented by Mr. Bryan Johnson, Associate Sanitary Engineer.

Mr. John Filbert of Cornell, Howland, Hayes and Merryfield Engineers was one of those present to represent the company. He stated that the Frontier Leather Company air and water pollution has been a problem of long standing and that the air pollution has been a real problem since early last summer. He said that in discussions with the staff of the Sanitary Authority, the fact was brought out that Frontier Leather Company was going in for a long-range program to remove that portion of the process from Sherwood which generates the salts or high strength wastes which cause the odor problem.

CCA312

Mr. Filbert went on to say that a site had been purchased by Frontier Leather Company on the Columbia River at a cost of \$110,000, but that the company had run into a problem with regard to sewer, as the sewer wasn't where it was supposed to have been. The next problem then was working with the city of Portland on either discharging to the city's outfall, or building an outfall paralleling the city's. This matter is under consideration now.

Before construction of the building on the new site can be started, the area will have to be filled in and left to settle, which will take about six months. During that period planning can proceed; detailed design and construction would follow probably in the summer of 1967.

In the meantime since the Frontier Leather Company has a contract with the city of Sherwood, the company is going to make a change in the process to see if the limitation on chloride content can be met. Essentially, the company hopes to have the lagoons out of service as waste treatment ponds by the first of July. The ponds are producing odors now and the company is going to make every effort to stop this. In the past two weeks 24,000 pounds of sodium nitrate have been added. This is an accepted method of supplying oxygen in an environment similar to those in the ponds. So far the company has not met with much success by doing this. The company has another 8,000 pounds on hand and another 30,000 pounds ordered and due to arrive within another week. What the company proposes to do is to get the waste so that the city of Sherwood will accept it in order to get the company through the period the new plant is being built.

In summary Mr. Filbert said Frontier Leather Company realizes the problem that it has and is undertaking an active program to solve it.

Mr. Eugene Marsh, Attorney for Frontier Leather Company, stated that the company has recently employed a Mr. Don Nelson from Waukegan, Illinois, who is one of the top men in the tannery business. Mr. Nelson will soon join the firm and he feels that with some additional equipment and changes in the method of tanning, the chloride content can be brought down below 800 ppm. If this can be accomplished, the lagoons could be bypassed and the odor problem should clear up.

Mr. Weathersbee said that he thought Frontier Leather Company is doing about everything that it can do to solve this problem, and that the company will eventually solve it, but he did not know how long the people can or will wait for a solution.

The Chairman stated that it is recommended by the staff that prior to reopening the plant after the July 4 shutdown, an agreement be reached between the company and the Sanitary Authority on a definite method and schedule for abating this entire problem in one way or another, that no additional waste material be discharged to the holding lagoons after July 1, 1966, and that an intensive study of the ponds be immediately initiated to develop methods of hastening and achieving correction of the present odor problem and preventing it from recurring in the future.

The Chairman thought the above recommendations were pretty comprehensive.

Mr. Weathersbee stated that he believed the question is whether the members of the Sanitary Authority would want to establish a date by which time the company shall have solved the problem, or do they want to face up to the fact that they may have to terminate operations.

Dr. Wilcox asked if the city would accept the wastes from the tannery if the chloride content is brought down to 800 ppm.

CCA312

Mr. Weathersbee stated the company has a contract to that effect.

The Secretary then said that as he understood it, the company would be shutting down for two weeks the first part of July during which time they will do everything they can to alleviate or eliminate the odor from the existing lagoon. The Secretary's recommendation was that if Frontier Leather Company is not successful in eliminating the odor during that period of time, the company should not resume operations which would in any way aggravate the problem. Assuming that they are successful in eliminating the odor from the existing lagoons, resumption of operations should not in any way cause a new odor problem.

Dr. Wilcox asked if the company would have to have a test run in order to determine this.

Mr. Filbert said the company would have to have some sort of a test run in order to determine if the chloride content is down and also to determine the effectiveness of the treatment system additions.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the Authority approve the recommendations of the Secretary, with the exception that test runs be allowed upon prior notification to and approval of the staff.

#### WILLAMETTE CITY

The Secretary said that on June 24 he received a telephone call and on June 27 a letter from Mr. R.M. Paddock who resides in Willamette City, which is immediately adjacent to Oakridge in Lane County. In March of this year an election was held in that area for the purpose of annexing Willamette City to Oakridge. This was approved by the voters of Oakridge but rejected by the voters of Willamette City. In the Willamette City area no public sewers are

currently available and people have to use their individual septic tank systems which do not function satisfactorily due to unfavorable soil and drainage conditions. The letter received raises the following questions:

"Why should the city of Oakridge be forced to improve its sewage treatment facilities, while Willamette City can go on contributing as much or more to the pollution problems with inadequate septic tank systems? Why should there be a County Health Department or State Sanitary Commission if they are unwilling to step in and see to it that problem areas are cleaned up after residents of these areas have demonstrated that they do not regard the health and safety of their fellow citizens to be their responsibility?"

Mr. Paddock, resident from Willamette City, who was present at the meeting, said that the residents who signed this letter and worked on it feel very strongly that something needs to be done in the area. He claimed it is a health hazard through the winter as there are areas where open ditches have sewage running through them. He said samples were sent in to the State and the reports came back with a very high bacteria count. Mr. Paddock asked for assistance from the Sanitary Authority to solve this problem.

Mr. Harold W. Merryman, district engineer, stated that Mayor Hills from Oakridge has asked for any cooperation possible in the annexation of Willamette City to Oakridge, because the city officials are interested in the proper location of the sewage treatment plant.

The Secretary said that Willamette City is unincorporated. The people in this area did not see fit to annex to Oakridge. If this problem is going to require legal steps to spur the people into action to comply, then the only thing the state or county can do is to proceed against the individual property owners.

CCA312

Mr. Harms asked if this is a water pollution problem or a public health problem.

Mr. Merryman believed it is more of a public health problem.

The Secretary asked Mr. Paddock if this had been discussed with the Lane County Health Department recently.

Mr. Paddock replied that the Lane County Health Department had been contacted and believed this problem should be approached on an individual basis, but so far there has not been much action in that field.

Mr. Merryman suggested that the Sanitary Authority give whatever assistance it could to the people of the community toward annexation, because for the community of Willamette City to go to waste treatment on its own would be rather difficult financially.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that a letter be sent to the Lane County Health Department bringing this matter again to their attention, and pointing out that it has come to the attention of the Sanitary Authority and requesting Lane County to take appropriate action through the Health Department and the District Attorney's office in Lane County, and that the Authority have another report from Mr. Merryman at the next meeting.

BIGGER AND BETTER POULTRY, INC.

An engineering report dated June 28, 1966, which has been made a part of the permanent files in this matter was presented by Mr. Ernie Schmidt.

Mr. Leon Gabinet, Attorney for Bigger and Better Poultry, stated that a letter had been received from the Authority stating that a meeting would be held on this date at which time Mr. C.L. Holmes of Bigger and Better Poultry could come and be heard if he wished. He requested that Mr. Holmes be heard.

Mr. Holmes said that his firm had purchased 186 acres in the Canby area. Plans were drawn up and submitted for financing, but the people backing the financing said it was too much money, at which time plans were made for a smaller building. The new plant will be reduced from 27,000 to 17,000 square feet and should be ready to submit for bids in two to three weeks.

Mr. Weathersbee stated that the staff of the Sanitary Authority had not received the plans for the new disposal system and that they would want to look at them before construction is started.

Mr. Holmes said that as far as his present location is concerned he had another man in charge of the waste disposal system which is located up in the woods, is hard to get to and out of sight, and he was under the impression the waste was being sprinkled, rather than being discharged through an open pipe. Mr. Holmes stated that he personally has taken over the operation of the pipe line, inspecting it every day and making any repairs necessary and seeing that the waste is properly sprinkled.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that Mr. C.L. Holmes of Bigger and Better Poultry Company be cited to appear and show cause, if any exists, why an order should not be entered directing him to permanently abate the pollution of Kellogg Creek and drainageways tributary thereto, and that the hearing be held before a hearings officer at the earliest possible time. If the staff desires to further check the disposal facilities for proper operation, this could be done; and if necessary postpone the time of the hearing and report back to the Sanitary Authority at the next meeting.

#### WIGWAM WASTE BURNERS

Mr. Patterson explained that the regulations pertaining to waste wood wigwam burners had been adopted and became effective August 11, 1965, and that under said regulations certain variances from the Authority's present discharge

CCA312

regulations were automatically provided for one year from that time. If no action is taken by the Authority the variances from the discharge standards will automatically expire on August 11, 1966. Because of this the staff had prepared a status report on the waste wood wigwam burner question.

Mr. McKenzie then presented a report on waste wood wigwam burners dated June 29, 1966. This report has been made a part of the Authority's permanent files in this matter.

Mr. Wendel asked Mr. Patterson what he would advise the procedure to be.

Mr. Patterson said it is the feeling of the staff that the program is not proceeding fast enough to effect real reduction in air pollution in the communities such as Medford, Springfield, and the Eugene area. The staff, therefore, recommended that the variances expire on August 11, 1966.

Mr. McKenzie went on to explain that the variances with which the Authority members have been concerned to date have all had to do with another part of the regulations which allows a variance from the construction requirements by Authority action. Variances have been granted to mills located in remote areas. The part that the Authority need be concerned about now is the part which stipulates that by complying with the construction requirements of the regulations a mill is automatically given a variance from the requirements regarding smoke discharge, particle fallout rate and suspended particulate matter.

Mr. Wendel then asked if there would be so many in violation after August 11 that the Authority could not handle them.

Mr. Patterson replied that the alternative might be to start with the Associated Oregon Industries Lumbermen's Committee to try to develop a program within each area.

The Secretary pointed out that the deadline is established by regulation, so if nothing is done at this meeting, the deadline automatically goes into effect on August 11, 1966, but if the deadline is to be extended, the regulations would have to be amended.

Mr. Harms asked if any request had been received from any organization that the variance be extended.

Mr. Robert Olinger of Associated Oregon Industries said that at the time they were discussing this annual variance, it was their interpretation that for the year it would give them time to attempt to install the items required in the regulations. He stated that he hoped through studies they would be able to develop ways of solving this problem without putting the Sanitary Authority in a position of having to cite every burner operator in Oregon. He said they were in hopes that this variance would be continued at least to the end of the year.

It was MOVED by Mr. Meierjorgen, seconded by Mr. McPhillips and carried that the deadline established in OAR 24-025 (1) for granting certain variances on wigwam waste burners be extended to January 1, 1967.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjorgen, and carried that the Authority adopt the recommendations of the staff and notify the mills of the action of the Sanitary Authority regarding the following requests for variances:

- (1) Gilchrist Timber Company, Gilchrist, located in a sparsely populated area.  
Recommendation: Variance should be denied.
- (2) Hub Lumber Company, Roseburg, planer mill burner used only occasionally for yard cleanup. Recommendation: Variance should be denied.
- (3) Edward Hines Lumber Company, Westfir, burner seldom used and located in sparsely populated area. Recommendation: Variance should be allowed.

CCA312

Requests for extensions of variances previously granted:

- (1) Murphy Creek Lumber Company, Grants Pass, delays due to unexpected problems in design and the resulting comprehensive changes in sawdust layout which are prerequisite to chipper installation and subsequent waste burner termination. Recommendation: An extension until August 31, 1966, should be granted.
- (2) Tygh Valley Timber Co., Inc., Tygh Valley, renewal of variance granted due to location in a sparsely populated area. Recommendation: Extension until January, 1967, should be granted.
- (3) Hult Lumber and Plywood Co., Junction City, (burner at Horton), renewal of variance granted due to location in sparsely populated area. Recommendation: Extension until January, 1967, should be granted.
- (4) Park Lumber Co., Estacada, contractor's workload has precluded completion of renovation work as scheduled. Recommendation: Extension should be granted until August 1, 1966, as requested.
- (5) Cabax Mills, Plywood Division, Eugene, number of alternate methods of disposal have been investigated, but will require more time to materialize. Recommendation: Extension should be granted until October 1, 1966, by which time a proposed plan and schedule shall have been submitted to and approved by the Authority staff.
- (6) Johnson Bros. Lumber Company, Silverton, contract has been signed for sale of all waste. More time is needed to install the equipment needed. Recommendation: Extension should be granted to September 1, 1966, as requested.

- (7) Ellingson Timber Co., John Day, (burner at Seneca), renewal of variance granted due to location in a sparsely populated area. Recommendation: Extension until January 1, 1967, should be granted.
- (8) Ellingson Lumber Co., Baker, (burners at Unity and Halfway), renewal of variances granted due to location in a sparsely populated area. Recommendation: Variances should be extended for each of the burners until January 1, 1967.
- (9) Forest Grove Lumber Co., Forest Grove, delays in delivery of equipment for waste utilization program. Recommendation: Request should be denied for the reason burner is to be retained on a standby basis.
- (10) Zip-O-Log Mills, Inc., Eugene, use of burner has been eliminated to extent that it is on emergency standby basis. Recommendation: Request be denied for reason burner is to be retained on standby basis.
- (11) Loveness Company, Malin, renewal of variance granted due to location in sparsely populated area. Recommendation: Extension until January 1, 1967, should be granted.

#### UNION CARBIDE PROGRESS REPORT

A staff report dated June 29, 1966, was read by Mr. Patterson. This report has been made a part of the permanent files in this matter.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the Sanitary Authority grant conditional approval to Union Carbide's proposal of February 21, 1966, including current additions and plans subject to:

1. The company's meeting ambient air standards by June 1967.
2. Continued staff review of the company's proposal, construction progress, and measurement of ambient air.
3. Measurement by the company of the efficiency of the air cleaning equipment installed, and the company's providing the results of the tests together with grain loading and gas flow rates.

CCAS12

4. The company conduct a dust suppression program in the material storage, handling, and transportation area beginning with the current season.

MR. AMACHER

The Chairman then brought to the attention of the other members a very fine tribute to Mr. Amacher which had appeared in the lead editorial of the May 21, 1966, issue of the Roseburg News-Review.

There being no further business, the meeting was adjourned at 5:45 p.m.

Respectfully submitted,

Kenneth H. Spies  
Secretary

MINUTES OF THE 111th MEETING  
of the  
Oregon State Sanitary Authority  
September 13, 1966

The 111th meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:00 a.m., September 13, 1966, in Room 36 of the State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; John P. Amacher, Chris L. Wheeler, Richard H. Wilcox, M.D. and Herman P. Meierjurgan, Members; Kenneth H. Spies, Secretary; John Denman, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; Dr. Warren C. Westgarth, Laboratory Director; Bryan M. Johnson, H.W. McKenzie, Leo G. Farr, A.D. Smythe and P.D. Curran, Associate Sanitary Engineers; Glen D. Carter, Ed Quan and R.A. McHugh, Aquatic Biologists; Leo L. Baton, J.A. Jensen and Fred Bolton, District Engineers; Fred G. Katzel and C.K. Ashbaker, Assistant District Engineers; R.B. Percy, Chief Chemist; Clint Ayer, E.A. Schmidt, Don McHarness, Paul Rath, James R. Sheetz and Lloyd O. Cox, Assistant Sanitary Engineers; Edgar R. Lynd, Water Pollution Control Technician; Alan Hose, Chief Sanitary Chemist; and Bruce Snyder, Meteorologist.

Mr. B.A. McPhillips and Mr. Edward C. Harms, Jr. were unable to attend because of other commitments.

MINUTES:

It was MOVED by Mr. Meierjurgan, seconded by Dr. Wilcox, and carried that the minutes of the June 29, 1966, meeting be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. Meierjurgan, seconded by Mr. Wheeler, and carried that the action taken on the following 78 project plans and engineering reports for water pollution control and 15 project plans for air quality control for the months of June, July and August, 1966, be approved:

CCAB312

CCA312

TUALATIN RIVER BASIN:

An engineering report which has been made a part of the permanent files in this matter was presented by Mr. Joseph A. Jensen, Portland District Sanitary Engineer.

Mr. Darrell Jones, Clackamas County Commissioner, said that the Commissioners in Clackamas County are very perturbed about the condition of the Tualatin River. He stated that what the Commission is asking for in their letter to the Sanitary Authority is that a very serious study be made in some depth of the Tualatin Basin situation, and that any new construction along that stream be stopped. He stated that he has had physicians make statements to him personally that they have been treating large numbers of infections of the tender membranes, such as the eyes, ears, nose and throat. He claimed the people cannot continue to irrigate farms with water from the basin while waste products are still being dumped into it. He urged that the Sanitary Authority members adopt the policy recommended to them by the staff.

In connection with a discussion of the low flow in the Tualatin during the summer and fall, the Chairman asked Mr. Wheeler if water rights are perpetual.

Mr. Wheeler replied that they are perpetual as long as they are exercised, that they are subject to abandonment if they are not used for a period of five years, or they can be condemned by higher use in the courts. He said that under provisions of the existing law he is required to continue to grant rights for beneficial uses.

Clayton Nyberg, Chairman of the Washington County Board of Commissioners, said that they too are concerned about the problems of pollution control in the Tualatin Basin. He introduced Dr. James Stewart, Washington County Health Officer.

CCA312

Dr. Stewart stated that the sanitation staff of the Washington County Health Department had recently worked out with representatives of the State Sanitary Authority a plan for monthly on-site review and collection of effluent samples which will give a regular feedback of operating conditions and effluent quality being maintained in the small sewage treatment plants located in Washington County. He said this should give the Sanitary Authority the basic data it will need for aggressively upgrading the standards of plant maintenance and operation whenever regular visits and effluent analysis indicate deficiencies.

Dr. Stewart referred to the recent Congressional action regarding the Scoggins Creek dam project. He went on to say that the Board of County Commissioners of Washington County recommends that the Sanitary Authority delay any marked change in policy until there has been an opportunity to test the effectiveness of the new program of plant inspection by local sanitarians, until the final legislation on the Scoggins dam project has been completed and implemented, and until there is an opportunity to develop and evaluate the movement toward county sewer service districts.

Dr. Wilcox asked Dr. Stewart if under existing laws he thought that the district attorney in Washington County would proceed against persons responsible for insanitary sewage disposal.

Dr. Stewart said he thought the district attorney would be very cooperative as he has been in other public health nuisance problems that have been brought to him. He went on to say that his staff is now engaged in extensive dyeing operations to try and pinpoint the source of pollution in some of the streams, that his staff will provide the Sanitary Authority with all the information possible as to any identified sources of pollution in the Tualatin and that any action the law allows will be taken within Washington County.

Mr. John G. Wilson, Secretary of the Columbia River Sportsmens Council, said that the position of that Council and the Water and Dams Committee, Oregon Wildlife Federation, has been not to favor the use of additional waters for the dilution of pollution, and that their belief is to attack the problems of pollution at their source. He said that it is anticipated that requirements for municipal water will increase approximately two and one-half times by 1985, that it is the Council's belief that more emphasis is needed on water purification and that the effort of striving for purified water must never cease. He stated further the Council does not recognize that primary and secondary treatment are either sufficient or the ultimate in treating wastes.

Mr. Robert L. Zipprich, Mayor of the city of Tualatin, stated that the city of Tualatin has no municipal sewers, and, therefore, is not polluting the Tualatin River from a municipal system. He stated that the city does have sewage problems from within and that they are trying to cooperate with Washington County and the State as far as an overall study is concerned.

He said the city of Tualatin has joined with the city of Tigard in applying for a grant from HUD to perform a study for sewage facilities in the 22 square mile area adjacent to those two cities. He said further that this grant has been approved in the amount of \$7,500 to conduct the study which is expected to be completed sometime in February or March of 1967. He said that one of the biggest problems in the city of Tualatin is water and there is now under construction a hookup with the Lake Grove Water District to provide Bull Run water.

The Mayor stated further that Carl Green and Associates, Consulting Engineers, have been asked to look into the matter of sewage facilities, but haven't had a chance to complete the study as yet, and that the sewage problem

has been approached from two standpoints; one, from the overall basis working jointly with Tigard, and (2) with the city-county planning group in Washington County.

Mr. Carl Green, Consulting Engineer, then stated that the city of Tualatin is like many other political entities in the valley in that it faces a problem of sewage collection and treatment and must determine the best method by which sewage and industrial waste can be treated. It is his personal belief that the Scoggins dam project for storage of water in the upper basin might be looked at and considered more seriously as a means of flood control in the winter and to increase low flows in the summer. He stated that there is no solution to pollution short of more dilution, plus efficient treatment of wastes at their source.

Mr. Stan Skoko, Commissioner from Clackamas County, said that in 1963 the city of Tualatin was instructed by the Sanitary Authority to provide some means of correction of the raw effluent being discharged into the Tualatin River and to date this has not been done. He went on to say that at a recent meeting for annexation purposes, a city council member made the statement that within the city limits raw effluent was being discharged into storm sewers that does reach the river.

Dr. Wilcox said that the report presented by Mr. Jensen indicated that a correction order was issued on the storm sewer drains in Tualatin and that corrections were made.

Mr. Jensen said he had conferred with the city recorder and she indicated that correction orders were issued by the Council and that corrections were made. Mr. Jensen stated that the staff is not aware of any raw sewage being discharged into the river at Tualatin.

CCAB312

Mr. Zipprich stated that the councilman did make the statement, but at the time he was not aware of the fact that the Council had taken action to correct it and that it had been corrected.

Mr. Clayton Nyberg, Commissioner from Washington County, then stated that in Washington County great steps forward have been made in the treatment of sewage, that the city of Tualatin is trying to do a job of providing a sewerage system, and that the policy that the Sanitary Authority is proposing to adopt would eliminate the possibility of creating a system that would take care of the sewage that overflows from septic tanks. He stated that Washington County adopted the policy some years ago of not allowing sewage lagoons.

Mary Taylor, a resident of the city of Durham, submitted two samples of water from the Tualatin River. One was reportedly taken at the Tualatin City Park which was clear and the other was taken at the site where the Tualatin Bridge is being built, which appeared to be polluted. She complained about the condition of the lower Tualatin.

The Secretary stated that the process of tertiary treatment is still being developed, that thus far there have been no economical and practical methods developed for removing the last bit of pollution from effluents, and that it is the nitrogen and phosphates which trigger the growths of algae and plankton in the stream which produce an unsightly appearance and which are aesthetically unacceptable. He stated that there has to be a certain amount of dilution to handle that degree of pollution.

Bud Kyle, Tigard City Manager, said that federal funds had been applied for to conduct a study of the entire Tualatin Basin within Washington County. The city of Tigard would like the Sanitary Authority to urge the federal government to approve funds to study this problem and to point out to the

federal government the need for such a study. He said the Washington County Commission and the cities of Washington County agree that a problem does exist and want to solve it.

The Chairman asked what the estimated cost of the study would be.

Mr. Kyle said it would be about \$85,000 for both water and sewage treatment for just Washington County.

Mr. Lee Gensman, resident of the city of Tualatin and Chairman of the Citizens Water Committee, stated that it was the responsibility of that committee to raise funds from private sources to put in the Bull Run water mentioned earlier. He said the committee is convinced that, in addition, it can raise from \$200,000 to \$300,000 from private sources within the next two to four months for sewage collection and disposal, depending upon what can be planned in the way of sewage treatment for Tualatin, and depending upon the continuing availability of property for development in the vicinity of the city of Tualatin. He said that if a prohibition is made on any further development in the area, these funds of course would dry up.

Mr. James Steel, resident, stated that he lives half way between Tualatin and Sherwood and is very much concerned with the truck delivery of septic tank sludge for final disposal in a lagoon located on a 40-acre tract of land south of his property.

The Chairman asked if this had been brought to the attention of the Sanitary Authority.

Dr. Stewart said that this is a diked area, that there has been repeated checking of the area by his staff, and that it has not been allowed to go unobserved.

Mr. Jensen said the Authority's staff is aware of this situation and has investigated it several times, and that no problem has been found except during the 1964 flood.

CCA312

Senator John Inskeep of Clackamas County stated that he is sure the next session of the Legislature will take into consideration the matter of the necessity for area planning, the consolidation of districts, and the problems of financing and construction of sewerage facilities. He said all of these are of deep concern to him and he is sure a larger appropriation would be made by the Legislature which would give the Sanitary Authority a more adequate staff.

Mr. Donald J. Griswold, Lake Oswego Corporation, said the residents of Lake Oswego are interested in furnishing any information which they may have to the Sanitary Authority, and cooperating in any way possible. He said when the flow becomes low, the amount of water diverted from the river into Lake Oswego is reduced.

Mrs. Rosalie Morrison, who resides adjacent to the main Tualatin River, read a letter from Mr. John M. Dagsland of Lake Oswego to the members of the Sanitary Authority which told in part how offensive the Tualatin River smelled at times.

Mrs. Morrison presented two samples of water, one taken from the pipe at the Ramada Inn sewage treatment plant and the other from the river near the site of the new bridge.

The Secretary then pointed out that the staff of the Sanitary Authority has been trying for several years to get a master plan of sewage collection and disposal developed for the entire area or river basin. In 1956 the three counties of Clackamas, Multnomah and Washington developed the so-called Tri-County plan, but it did not cover the entire Tualatin Basin, just Fanno Creek and Upper Beaverton Creek sub-basins. That was 11 years ago and only part of the system has now been installed. There is still no master plan for the remainder of the Tualatin basin.

CCAB312

Mr. Larry Bissett, Director of the City-County Planning Commission in Washington County, stated that two years ago their advisory board recommended an overall master water and sewer plan for the cities in the Tualatin basin, as well as the unincorporated areas that are presently being urbanized. He said they have a commitment from the cities totaling \$9,000 for this study over the next two years, that they also have a commitment in an equal amount from the county in terms of services from the county personnel, that HUD offers a 2 to 1 match of federal funds, and that with the assistance of interested state agencies they have a total fund of about \$85,000. Approximately \$44,000 is to go into the sewage study. Mr. Bissett stated that the application is now in the hands of HUD and if it isn't approved within the very near future, the planning commission will have to go ahead on purely local funds because of the urgency of both water and sewer needs. He stated that within the limit of time and funds available to them, they cannot possibly get enough money or enough land to put in a system which will not discharge any water to the Tualatin River during the three or four months of the summer. He stated that the only thing which is practical to do now is to put in a system which is equal to the other systems up the river, and he asked that the state limit its requirements to this type of installation pending the completion of more study of this overall program and pending the completion of the joint study between Tualatin and Tigard.

Mr. Bissett went on to say that the Hervin Company, which is the primary contributor of waste effluent, is a substantial property owner and employer of the people in the Tualatin area. The other contributor is the Ramada Inn.

Mr. Jensen said that both the Hervin Company and the Ramada Inn employ aeration-type treatment plants. The last staff investigation showed that the Ramada Inn effluent was very acceptable, but that the Hervin Company plant which is strictly for industrial wastes has given some problems.

The Chairman asked what steps have been taken to see that the Hervin Company has complied with the law and has operated its waste treatment facilities efficiently.

Mr. Don McHarness replied that the staff of the Authority has been working with this company to try and improve the operation of its plant, but that thus far some of the operational problems have still not been solved.

Mr. Weathersbee pointed out that this is a fairly difficult waste to treat, that the engineer retained by the Herwin Company had made a study and proposed this plant, that after it was built there was quite a long period of shake down by the engineer changing some of the recirculation of the plant and making other revisions, that it has been a continual process of trying to get it to operate properly all during this period, and that it has caused a serious problem only recently because of the extreme low flow in the river.

Mr. Meierjurgan stated that he was of the opinion that there should not be any more pollution added to the present load and that in view of the fact that the Sanitary Authority required proper treatment and care of sewage from other sources in that community as well as other communities throughout the State, no exception should be made in this case.

After further statements by Lee Gensman, Commissioner Darrell Jones and Mary Taylor, it was MOVED by Mr. Meierjurgan, seconded by Dr. Wilcox and carried that the adoption of the staff recommendations as follows be approved: (1) That until a master plan of sewerage is developed and adopted no new sewerage or waste facilities, and no expansion of existing facilities, other than those previously committed, be approved for construction in the Tualatin Basin unless provisions are included to prevent discharge of the effluent to the Tualatin River or its tributaries during the low flow season, normally June 1 to November 1, and (2) those in charge of existing facilities located on tributaries of the Tualatin River be instructed to start immediately to comply, through improved operation and/or upgrading of treatment facilities, with the Sanitary

Authority policy directive adopted June 24, 1965; namely, to maintain plant effluents within the limits of 20 ppm BOD and suspended solids and to achieve proper disinfection before said effluents are released to the receiving stream.

SEWAGE WORKS OPERATORS CERTIFICATION:

Mr. James Burns, Co-Chairman of the Certification Committee for the Sewage Works Operators, said that the certification of sewage treatment plant operators in Oregon dates back to 1955, and that it is based on the fact that sewage treatment plants must have skilled and trained operators in order to produce the quality of treatment needed to protect the receiving streams and in order to protect the huge investments the plants represent.

He said that in 1955 a committee was formed to study certification programs being used by other states. After some study the committee suggested a program that would start as voluntary certification, and if successful, would later be changed to mandatory certification by the Legislature. The proposed program was accepted by the operators and a constitution and charter were adopted. The first voluntary certification examinations were held at the conclusion of the 1956 Sewage Works Short School and have been held each year since. This voluntary program is conducted by Oregon State University, Oregon State Board of Health and the operators' committee.

Because the voluntary certification has been so successful, in 1960 it was decided the program should be converted from the voluntary phase to the mandatory phase. Consequently, in 1961 a mandatory certification bill was presented to the Legislature. Because it was not properly written or researched, the bill was not passed. A revised bill was presented to the Legislature in 1963 and again in 1965, but each time it was tabled. Mr. Burns stated that the bill is now being prepared for the 1967 Legislature and the committee is asking the full support and cooperation of the Sanitary Authority.

CCA312

He said the only way you can get the very most out of the sewage treatment plants that are built today is to have qualified operators.

The Secretary strongly recommended that the Sanitary Authority give this bill its full support.

It was MOVED by Mr. Wheeler, seconded by Dr. Wilcox and carried that the Sanitary Authority go on record as strongly supporting the sewage works operators certification bill to be introduced at the 1967 Legislature.

DOUGLAS COUNTY LUMBER COMPANY STATUS REPORT:

Mr. H.M. Patterson read the staff report regarding the Douglas County Lumber Company, a copy of which has been made a part of the Authority's files in this matter.

Mr. Hallmark, General Manager of Douglas County Lumber Co. was called upon and he stated that immediately following the last meeting of the Sanitary Authority he had attempted to ascertain which engineering firms were qualified in this field, that he had called Mr. Spies in regard to the matter and several firms were recommended and one in particular was chosen, that a representative of this firm made two visits to the plant and the resolution was explained to him to the effect that the company had to report within 60 days; however, no report was received from the engineers, that he had called Mr. Spies again and explained the situation to him, that the next morning he was informed by the engineers that a preliminary report would be available by the latter part of the week, and that the report was finally delivered this morning just before the Sanitary Authority meeting, and consequently he had just barely had a chance to look at it. Mr. Hallmark stated he felt that he had not had any cooperation from the engineering firm, but that he had remedied the pollution situation to some degree. He said that they are selling all of their shavings now and that one other development had taken place since the last Sanitary Authority meeting,

namely, that they had been contacted by a large firm that burns a great deal of wood waste in the generation of steam and electricity and said firm is interested in purchasing all the bark, which is the mill's main waste. He said they have tried to finalize this deal but so far it is just a vague and indefinite thing.

Mr. Wendel, after hearing of the progress that had been made, stated that it looked as if the company had proceeded in good faith and suggested a postponement of any action.

Dr. Wilcox asked Mr. Patterson if he were aware that the engineering firm had entered into a contract in good faith and was going to do something, and Mr. Patterson stated there was no reason to believe otherwise at this point. Mr. Patterson also stated that there had been no recent complaints in regard to the Douglas County Lumber Co.

It was decided to put this matter over to the next meeting with notification to the firm of CH<sub>2</sub>M of the original motion.

Mr. Patterson stated that he had not had a chance to look at the report and so was willing to postpone this to the next meeting. Mr. Hallmark requested that the chairman send a copy of any resolution made so that the engineering firm will know of it.

The matter was, therefore, continued until the next meeting.

MILWAUKIE PLYWOOD, MILWAUKIE:

Mr. H.M. Patterson read the staff report on Milwaukie Plywood Corporation, a copy of which has been made a part of the Authority's files in this matter.

Mr. Wendel asked if any complaints had been received since March or June, to which Mr. Patterson answered there were possibly two, one of which was the Clackamas County Housing Development. Dr. Wilcox then asked if the depressed market had cut down on the smoke and soot, and Mr. Patterson said it has been

CCA312

a little difficult to tell. He said he called the Housing Development and the manager had been in the hospital and had just come back. He said they were continuing their program of washing down the houses because of the soot that is in the area.

Mr. G.W. Eggiman, plant manager of the Milwaukie Plywood Corporation, then spoke and said he was probably more concerned about the smoke and soot than was the Sanitary Authority Board. He said he had tried to reduce the soot problem which occurs during soot blowing. He had some figures from Larry Wellons Company, and another company, and it was Milwaukie Plywood's intention of putting some soot arrester equipment in last July at a cost of \$15,000. It meant that they would have to shut down for six weeks in order to change the design of the boiler. He stated that he had the drawings and the prints, and had fully intended to have this installation done, but that now he was just patching the boiler to keep it in operation because of the financial condition that the company finally got into this July. Mr. Eggiman discussed his fear that installation of the Wellons soot collection equipment with its induced draft fan would produce increased draft which would further deteriorate the refractories, and that major refractory work would thus be necessary during a shutdown as a part of the project. He said the cyclone for dust control in the area has been taken care of.

Mr. Julius Bartel, President of the Milwaukie Plywood Corporation then said it was their intention to start out with the project this spring, but that they had spent the bulk of their working capital on a peeling mill that they have out in Estacada. He stated that they were not trying to get out of solving this soot and dust problem, but that they were asking for a delay on it until they can get their finances restored.

Mr. Wendel then asked if they thought they could work it out in two or three months. Mr. Bartel was not sure that they could, but they would try.

Mr. Meierjurgan said he thought this was a rather pertinent situation and that the mill was there before the housing development, and that the latter were asking for this problem when they built right next door to an industrial plant.

Mr. Eggiman then explained in detail how the boiler would have to be rebuilt and that he would have to shut down in order to do this.

Mr. Patterson recommended that the request for a variance be continued.

It was MOVED by Mr. Wheeler, seconded by Mr. Meierjurgan, and carried that the request for variance for the Milwaukie Plywood Corporation be continued.

EDWARD HINES LUMBER CO.:

Mr. H.W. McKenzie read the staff report regarding the Edward Hines Lumber Company variance request.

It was MOVED by Mr. Wheeler, seconded by Mr. Meierjurgan, and carried that the variance for Edward Hines Lumber Company be granted until July 1, 1967, at which time a request for extension should be submitted for review.

GILCHRIST TIMBER COMPANY:

Mr. H.W. McKenzie read the report on the Gilchrist Timber Company. Mr. Meierjurgan asked if there had been complaints in regard to this mill and if not, how did this come to the attention of the Sanitary Authority. Mr. McKenzie said there had been no complaints but that a contractor had contacted them as to whether or not they would be in violation by accomplishing a major repair without submitting plans.

CCA312

Mr. Gilchrist, who was present, explained that they had done considerable modification and repair work. He said they use their burner to burn dry planer shavings, etc. from the mill. He said in 1965 they used their burner only 70 days and so far this year had used it on only 40 days. He said he did not feel that they were causing any air pollution problem in the area and felt that with the limited use of the burner and the location that they should be favorably considered for a variance. He explained that the green hog fuel goes into their power house and that they supply electricity and steam for the mill and the town.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan, and carried that a variance be granted to Gilchrist Timber Co. on the condition that continued demonstration of operation and performance is satisfactory to the Sanitary Authority and be effective until July 1, 1967, at which time a request for extension may be submitted for review.

ALBANY SEWAGE TREATMENT - Status Report:

Mr. Weathersbee reviewed the schedule for construction of sewage treatment plant additions for the city of Albany which had been submitted by Mr. William D. Bollman, City Manager, on July 15, 1966. It calls for a bond election on November 8, 1966, and completion of the project by May 1968. Mr. Weathersbee stated that in view of the problems involved in the expansion of the plant, the staff recommends the acceptance of this schedule. He went on to say that in the meantime the city of Albany might take on additional loads to its existing plant, and it is doubtful if the staff could do anything about it.

Dr. Wilcox asked if the staff could monitor the loading.

Mr. Weathersbee replied that the staff does monitor the loading to the river.

The Secretary said he believed some action could be taken by the staff to the effect that in the meantime there be no increase in the load to the plant.

He said that he did not believe anything would be accomplished by forcing them to speed up their proposed schedule, because even if they started construction in March of 1967, the project probably would not be in operation before winter. He stated that no matter what was done, there is still the summer of 1967 to worry about, but that the staff should not permit them to increase the load.

After some discussion it was MOVED by Mr. Meierjurgan, seconded by Mr. Amacher, and carried that provisional approval of the city's schedule be granted under the following conditions: (1) That in the meantime the load to the river will not be increased pending expansion and upgrading of the treatment facilities, and (2) that the schedule be reviewed again at the next Sanitary Authority meeting which will be held sometime after the November bond election to consider if further steps are necessary to ensure that the city's sewerage improvement program will proceed without undue delay.

Mr. Weathersbee said it was his understanding that this would mean the staff would approve no further sewer extensions in the city of Albany or any further connections of industrial plants for additional loads. He was advised that such was the case.

MONROE SEWAGE TREATMENT - Status Report:

Mr. Weathersbee stated that at the last Sanitary Authority meeting a motion was adopted requesting the city of Monroe to submit a revised time schedule. The city had previously submitted a schedule for providing adequate treatment of the effluent discharged to the Long Tom River, but had fallen behind in that schedule and so was asked to submit another one.

On September 12, a \$95,000 bond election was held and it passed by a vote of 45 to 39. The city did apply and was issued a priority for a federal grant for this fiscal year. Presuming they can sell their bonds, the city can now go ahead with this schedule which calls for preparation of final

CCA312

plans and specifications by February or March of next year and completion of construction by September 1967.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Wheeler, and carried that the revised time schedule presented by the city of Monroe be approved.

MILL CITY SEWAGE DISPOSAL - Status Report:

Mr. Jensen reported that at the last meeting, the Sanitary Authority authorized litigation against the individual property owners using the sewer line in Mill City. He said that on September 1, he met with the people of Mill City who now propose to take their problem to the City Council on September 14 and ask that the city assist them in forming a tax district and in hiring an engineer and going ahead with providing these facilities.

The staff will follow through on this matter and no action was deemed necessary at this time.

TILLAMOOK AIRPORT SEWAGE DISPOSAL:

Mr. Fred Katzel stated that at its meeting on August 26, 1965, the Authority adopted a motion requiring Tillamook County to provide preliminary plans by January 1, 1966, and to complete the construction of the needed sewerage facility for the Tillamook airport properties by this past summer. He reported that due to numerous difficulties involved, Tillamook County had been unable to comply with the directive.

On September 7, 1966, the staff learned that the Tillamook Naval Air Station had been transferred to the Port of Tillamook Bay. The Air Station is now under the administrative control of the Port of Tillamook Bay, except that the Bureau of Land Management has the Job Corps Center.

On September 12 the staff received from Mr. B.F. Stacy, Chairman of the Port of Tillamook Bay, a copy of a contract with CH<sub>2</sub>M for an engineering study and report of the sewerage needs which will be completed within three weeks.

In addition, a letter was received stating that the Port intends to comply fully with all regulations of the Sanitary Authority. Mr. Katzel stated further that there is waste from approximately 350 persons going untreated into the Trask River which eventually goes into Tillamook Bay which is an oyster growing area.

After considerable discussion of the matter, it was MOVED by Mr. Wheeler, seconded by Mr. Amacher, and carried that in view of the fact that the Port of Tillamook Bay has just recently acquired ownership of the former Tillamook Naval Air Station property, and considering that the Port has declared its intention to cooperate fully with the Sanitary Authority and to comply with its requirements, the Port be given an extension of time to provide adequate sewerage and waste treatment facilities for its airport and industrial park, and that it be directed to submit and obtain Sanitary Authority approval of its plans and proposed financing and construction schedule by March 1, 1967, and have its facilities completed and in operation by not later than December 31, 1967, and further that in the meantime no additions or increases to the existing waste loads be allowed.

WATER QUALITY STANDARDS FOR INTERSTATE WATERS:

Mr. Weathersbee stated that the Federal Water Quality Act of 1965, Public Law 89-234 amended the Federal Water Pollution Control Act to provide for establishment of water quality standards for interstate waters. It further provided that the States would have the opportunity to establish their own standards if they indicated by October 2, 1966, their intent to do so, and if they would establish or adopt standards and implement plans that would meet the requirements of the Federal Government. This all has to be done by June 30, 1967, or the Federal Government will establish its own standards.

CCAS12

On December 29, 1965, Governor Hatfield notified the Secretary of Health, Education and Welfare by letter that it would be the intent of the state of Oregon and the State Sanitary Authority to adopt standards for interstate waters. Mr. Weathersbee said that both the state and federal laws require that before standards are adopted public hearings be held. He said it was for the Sanitary Authority to decide whether or not the hearings would be held before a hearings officer, or try and attempt to have a quorum of the Sanitary Authority members present at each hearing. All members of the Sanitary Authority will receive copies of the reports, public notice and all information pertinent to the hearing just as soon as they are developed. Each member can then select the hearing he might be able to attend.

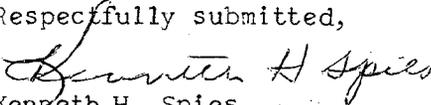

After some discussion, it was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan, and carried that the staff be directed to proceed with hearings as scheduled in the projected schedule, to retain a hearings officer to act and hear all of the hearings, and that any member of the Sanitary Authority who finds it reasonable and desirable to attend the hearings would do so.

It was left up to the Secretary and the Legal Counsel as to whether or not a court reporter would be retained or a tape recorder would be used at the hearings.

It was agreeable by all members present to have the next Sanitary Authority meeting on call of the Chairman.

There being no further business, the meeting was adjourned at 4:20 p.m.

Respectfully submitted,

  
Kenneth H. Spies  
Secretary

MINUTES OF THE 112th MEETING  
of the  
Oregon State Sanitary Authority  
December 20, 1966

The 112th meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:00 a.m., December 20, 1966, in Room 72 of the State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Chris L. Wheeler, Richard H. Wilcox, M.D., Herman P. Meierjurgan and Edward C. Harms, Jr., Members; Kenneth H. Spies, Secretary; John Denman, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; Dr. Warren C. Westgarth, Laboratory Director; H.W. McKenzie, Leo G. Farr, A.D. Smythe and P.D. Curran, Associate Sanitary Engineers; Harold W. Merryman, Leo L. Baton, J.A. Jensen and Fred M. Bolton, District Engineers; Leonard W. Pearlman, Assistant Legal Advisor; Fred G. Katzel and C.K. Ashbaker, Assistant District Engineers; Clint Ayer, E.A. Schmidt and James R. Sheetz, Assistant Sanitary Engineers; and Bruce Snyder, Meteorologist.

MINUTES:

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips, and carried that the minutes of the September 13, 1966 meeting be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the action taken on the following 16 project plans and engineering reports for water pollution control and 7 project plans for air quality control for the months of September, October and November, 1966 be approved:

WIGWAM BURNER REGULATIONS AND CONTROL

Mr. McKenzie read a report dated December 13, 1966, that he had prepared regarding the wigwam burner program. It has been made a part of the Authority's permanent files in this matter. The report pointed out that the regulations adopted by the Authority in June 1965 had not been successful in abating air pollution in critical areas of the state, and, therefore, a program for phasing out the use of wigwam burners in such areas was proposed by the staff.

Mr. McKenzie explained that the boundaries of the critical areas shown on the maps attached to the report were based on a study of topography, population concentrations, meteorological conditions and other pertinent factors. He stated that as further information is obtained, these boundaries might be changed or other areas added to the list.

It was also explained that under the regulations adopted in 1965, variances had been granted to mills in sparsely populated areas where the air pollution potential is slight. Such variances pertained to the construction requirements. In addition, those mills whose wigwam burners complied with the construction requirements were automatically granted a variance (initially until August 11, 1966, and later extended until January 1, 1967) to the ambient air standards (particle fallout, suspended particulates and smoke discharge).

It was further explained that under the proposal set forth in the report presented by Mr. McKenzie, it was intended that wigwam burners located outside of the designated critical areas would automatically be granted a variance to the construction requirements only.

After considerable discussion and questioning of the staff by the members, it was concluded that the wording of the proposed or recommended program as presented in the report was not as clear as it should be, and therefore it was MOVED by Mr. Meierjurgan, seconded by Dr. Wilcox, and carried that the recommendations contained in the report, together with the maps of the critical areas be worked over by the staff to the end that they will be clarified and that before the next meeting of the Authority, the recommendations of the staff be circulated among the members with adequate time to study them.

Before final action was taken on the above motion, Mr. S.V. McQueen, Chairman of Forest Industries Air Quality Committee of the Associated Oregon Industries read a prepared statement dated December 20, 1966, which has since been made a part of the Authority's permanent files in this matter, and copies of which were subsequently forwarded to each Authority member by mail.

CCA312

Mr. McQueen complained that the Authority's staff report gave no credit for any improvement made by the industry during the past year. He thought there had been considerable improvement and that therefore there should, at least for the present, be no change made in the existing regulations. He was requested by Mr. Wendel to ask the Association to get data from its members regarding the improvements each had made.

In response to questions from the members Mr. McQueen admitted that with a minimum exit gas temperature of 600°F, there probably would not be much smoke emissions; but he would not admit to the necessity of requiring such minimum temperature. He expressed the opinion that efficient combustion most usually is dependent on the quality of the fuel being burned although in some cases it could also be dependent on the quantity. He claimed that the use of auxiliary fuels would not be economical, but he had no definite data to prove it.

In response to a question raised by Mr. Vern Adkison of the Lane County Air Pollution Control Program, Mr. McQueen said he thought that if a new wigwam burner complied with all existing construction requirements, it should be permitted to be built and operated in a critical area such as Medford or Eugene-Springfield, even though serious air pollution already existed in the area.

Mr. Wheeler requested that the staff furnish the members with a tabulation of the 130 burners that had been surveyed indicating the degree of compliance.

#### SPRINGFIELD-EUGENE ODOR COMPLAINTS

This item had been placed on the agenda at the request of Mrs. John Jaqua of Eugene who had advised Mr. Merryman that some of the residents of the Eugene-Springfield area wanted to appear and be heard regarding air pollution caused by operation of the Weyerhaeuser Company kraft pulp mill.

CCA312

Mr. William O. Carey of 1150 N. 37th Street, Springfield, read the undated statement signed by 84 persons of the area: "Weyerhaeuser paper mill gives off odors and gases that make a person sick with the headache and breathing trouble. Also it eats up our cars and trailer houses." Mr. Carey also read a log that he had kept of telephone calls made to the Weyerhaeuser Company complaining about air pollution. He said, "I hope the big taxes paid by the Weyerhaeuser Company have not blinded the officers of the Oregon State Sanitary Authority to the damages done by the Weyerhaeuser Company."

Pastor Orval C. Johnson of Route 2, Box 142A, Springfield, claimed that thousands of people in the Eugene-Springfield area are completely dissatisfied with the pollution that is being caused but are afraid to do anything about it. Both he and Mr. Carey claimed the pollution was injurious to health. He said he had to move from a fine home located ten miles from the pulp mill in order to overcome a throat condition.

Mr. Leo F. Sytsma of 1850 "I" Street, Springfield, presented copies of a statement or petition bearing 271 signatures which read as follows: "We the undersigned believe the vast odor emitted by Weyerhaeuser Company originating from the pulp and paper plant and oxidation pond is an infringement on our rights as private property owners and citizens. We feel that this is a nuisance condition that must be immediately abated. We further agree to the utmost with Mr. Boekelheide's views as expressed in the December 1, 1966, edition of the Springfield News." (Note: At a meeting in Eugene on November 30, 1966, Dr. Virgil C. Boekelheide, according to the Springfield News, stated that allowing the Weyerhaeuser plant to operate is "inexcusable and borders on criminal negligence" and the chemicals which the plant discharges into the atmosphere are "life-shortening and life-inconveniencing.")

Mr. Robert L. Atkinson of 1110 Custom Way, Springfield, said he had helped get signatures on the petitions submitted by Mr. Sytsma. He claimed that some people also complained about damage to fruit trees and other vegetation allegedly caused by fallout from the pulp mill.

Mr. Vern Adkison, Lane County Air Pollution Control Officer, also testified regarding the air pollution problems caused by the Weyerhaeuser pulp mill. He showed some motion pictures he had taken recently in the area which he said depicted excessive smoke, fallout and examples of accelerated corrosion.

The Secretary then read a letter dated December 19, 1966, from Dr. Roderick W. Gillilan, Chairman of the Lane County Community Health Council, complaining about the pollution.

Mr. Harms said that if the above persons had not appeared and testified about the matter he would have brought it up himself because on the weekend of December 10 the odor was the worst that he could recall experiencing since the Weyerhaeuser Company started producing kraft pulp at Springfield in 1949.

Mr. Wendel then asked for comments from the staff. Mr. Patterson stated that the staff was in the process of arranging a conference with the company when it was decided to put the matter on the agenda for this meeting. He said the staff had been making some studies in the area and had just completed summarizing some of the data but had not yet had the time to evaluate the results. He pointed out the difficulty of getting sufficient data because of the limited staff. In answer to a question by Dr. Wilcox, Mr. Patterson said that eleven additional staff members had been requested for the 1967-69 biennium.

After considerable discussion it was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan and carried that a special meeting of the Authority be called

as soon as practical for the members of the Authority and officials of the Weyerhaeuser Company to get together to do something definite about solving this problem. The date of January 13, 1967, was suggested.

The meeting was then recessed at 12:20 p.m. and reconvened at 2:20 p.m.

REQUEST OF HARVEY ALUMINUM COMPANY FOR DISMISSAL OF COMPLAINT

Mr. Patterson reported that the staff had not had sufficient time to review thoroughly the request of the Harvey Aluminum Company that the complaint filed against it some time ago by the Sanitary Authority be dismissed.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that action on the request of the Harvey Aluminum Company be postponed until a future meeting of the Authority in order to give the staff time to evaluate the information submitted.

PROPOSED 1967 LEGISLATION PERTAINING TO AIR AND WATER POLLUTION CONTROL

1) S.B. 34 Withholding of tax relief

The Secretary stated that this bill would require property tax relief be withheld from taxpayers in municipalities that are under order of the Sanitary Authority or a court to construct sewerage facilities and have not complied with such order.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the Sanitary Authority go on record as supporting proposed Senate Bill 34.

2) S.B. 35 Agricultural and land clearing exemptions

The Secretary stated that this bill would require agricultural land clearing operations to conform to the air pollution laws by eliminating the statutory exemption of these operations. This bill would authorize the

CCA312

Sanitary Authority or its authorized representative to grant permits authorizing non-conforming agricultural operations under such conditions as the Sanitary Authority may impose, considering alternative methods of operation, weather conditions and such other factors affecting air quality as may be necessary.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the Sanitary Authority go on record as supporting proposed Senate Bill #35.

3) S.B. 36 Regional air quality control authorities

The Secretary stated that this bill would authorize the establishment by contiguous counties or cities, or both, of regional air quality control authorities, which if their rules and standards were approved by the Sanitary Authority, could exercise the functions of the Sanitary Authority in the region. In such regions the Authority would withdraw, subject to retaining control over certain types of pollution sources. The bill would also authorize regional authorities to apply for and receive federal funds and to require registration of certain air pollution sources; require the appointment of an advisory committee to advise the regional authority; authorize regional authorities to grant variances as permitted to do so by the Sanitary Authority, subject to review by the Authority; authorize the Sanitary Authority to withdraw authority from regional programs which are inadequate; and establish administrative procedures for enforcement of air pollution laws, rules and orders. Mr. Harms asked if this bill also includes the \$165,000 appropriation that would be required to give the aid required in this.

The Secretary replied that it did.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the Sanitary Authority go on record as supporting proposed Senate Bill #36.

4) S.B. 39 Amendments to water pollution control statutes

The Secretary stated that this bill revises definitions for water pollution statutes; prohibits waste discharge after January 1, 1968, without permit issued by Sanitary Authority; requires permit for various alteration in existing facilities; authorizes Sanitary Authority to summarily abate pollution or threatened pollution; authorizes recovery for damage for fish and wildlife and habitat thereof; extends other abatement powers of Sanitary Authority; revises certain specific prohibitions to conform to general prohibition and provides penalties.

The Secretary said that the bill provides that the amounts recovered under it shall be paid to the state agency having jurisdiction over the wildlife or habitat for which damages were recovered, and that the bill would require anyone discharging effluent into public waters of the State to obtain a permit from the Sanitary Authority. The Secretary estimated that it would take an additional five persons over and above the original request to handle this latter responsibility. He went on to say that under the permit system a tremendous responsibility would be placed on the staff, but at the same time the staff of the Sanitary Authority would have certain advantages as there would have to be records kept on every source of pollution.

Mr. Weathersbee said that the staff of the Sanitary Authority would have to satisfy themselves before a permit was issued that the waste treatment facilities of an industry or a city would be adequate so as to not violate the water quality standards that were established for that particular stream.

After some discussion, it was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the Sanitary Authority go on record as supporting proposed Senate Bill #39.

CCA312

## 5) Mandatory certification of sewage works operators

The Secretary stated that a proposed bill had been drafted which would provide for mandatory certification of sewage works operators. He said that similar bills had been introduced at the last three legislative assemblies and all of them had gone down to defeat. The proposed bill makes it possible for cities and owners of existing treatment plants to retain present employees who might not be able to meet the requirement for registration and provides an opportunity for any person now in that position to equip himself so that he could become qualified.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried that the Sanitary Authority support the principles of the sewage works operators certification bill. Mr. Harms abstained from voting on this motion.

## 6) State assistance to municipalities and industries

## (a) Proposal by League of Oregon Cities

The Secretary stated that the League of Oregon Cities is preparing a bill for submission to the next Legislative Assembly which would establish a fund for the purpose of assisting local communities in financing construction of sewage treatment works. The Federal Government is doing everything it can to promote local assistance under the Clean Waters Restoration Act of 1966 which was passed by Congress in October. There are provisions which provide incentives for state aid. One of the provisions would increase the federal participation which in the past has been limited to 30% of the reasonable cost of constructing sewage treatment works. It would increase that to 40% if the state put up 30% of the cost, which would mean that the local community or applicant would have to pay only 30% of the cost of the sewage treatment works.

CC-312

An additional provision of the new Federal law is the Federal share would be increased to 50% if the State put up 25% and in addition adopted water quality standards for receiving streams. In that case, the applicant would be paying only 25%. In addition to those contributions, if the project happened to be part of a metropolitan system or a system with a master plan, the Federal share would go up another 10%. In place of being 40% in the first case, it would actually be 44%. In the second case it would be 55%, so in the latter case then it would be 55% from the Federal Government, 25% from the State and 20% from the applicant.

The Secretary said that as a part of the Clean Waters Restoration Act which was passed by Congress this year, authorization for annual appropriations for the sewage treatment works construction grant program was greatly increased. Whereas in the past it has been limited to 150 million dollars a year for this program, for fiscal year 1968 it will go to 450 million dollars, the following fiscal year would go to 700 million dollars, the next fiscal year a billion dollars and the fourth fiscal year it would go to one and one-quarter billion dollars. The Secretary reminded the members of the Authority that this is merely authority to appropriate, but what Congress actually will appropriate, no one can say at this time.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the Sanitary Authority support the principles contained in this proposal, reserving the right to make specific suggestions when the members and staff are more familiar with the bill itself.

(b) Tax incentives

The Secretary stated that he had no personal knowledge of any special legislation regarding tax incentives for industry.

## 7) Other

## Revision in air pollution statutes

Mr. Patterson stated he felt very strongly that if the regional air pollution control programs are to function, they must be comprehensive programs; they must maintain an emission inventory, and be capable of going to an emission and permit system if necessary. He said he did not think it is necessary for the state program to go in the direction of the permit system immediately, but that the amendment was intended to provide authority to go in that direction. At this time these suggested changes in the statute have not been completely reviewed by the legal counsel. No action is necessary.

Sanitary Authority Budget Request

The matter of the Sanitary Authority budget request for the 1967-69 biennium was brought up by Mr. Harms.

The Secretary said that at the present time in air quality control the Authority has the equivalent of 14-3/4 full-time positions and that 11 additional new positions had been asked for, giving a total of 25-3/4 positions. He said that the Department of Finance and Administration and the Governor had recommended only 6 of the 11 new positions.

It was pointed out further that in water pollution control at the present time the Authority has the equivalent of 13 1/2 full-time positions, and that a total of 20-1/2 new positions had been asked for, which, with one more position being transferred from an existing position under another State Board of Health program, would bring the total to 35 positions in water pollution control.

The Department of Finance and Administration and the Governor recommended only 11-1/2 of these 20-1/2 positions, however.

The Secretary also stated that for air quality control a budget of \$639,000 plus had been requested for the next biennium, but the recommendation by Finance and Administration amounted to only slightly more than \$490,000.

In water pollution control the Authority requested approximately \$824,000 for the next biennium, whereas the recommendation by Finance and Administration amounted to just under \$610,000.

After some discussion it was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that the Secretary of the Sanitary Authority be directed to submit the original budget request to the Legislature and to try and get the full amount of money originally requested.

#### RESOLUTION OF SOCIETY OF AMERICAN FORESTERS

The Secretary reported that on November 1, 1966, a resolution supporting the Authority's air pollution control program was received from the Columbia River Section of the Society of American Foresters which that organization had adopted at its annual meeting. He said that receipt of the resolution had been acknowledged and that it would be brought to the attention of the Sanitary Authority members. This resolution has been made a part of the permanent files. No action was necessary.

#### STATUS OF FEDERAL GRANT AND OTHER PROJECTS WITH DECEMBER 1, 1966 DEADLINE

The Secretary stated that when tentative priorities for construction grant projects were assigned last June, some of the applicants did not have their fiscal plans completely arranged. Consequently, a deadline of December 1, 1966 was set to accomplish this. Also, early in 1964 by action of the Sanitary Authority, upgraded sewage treatment requirements for the Willamette Basin were adopted and a deadline of December 1, 1966 set more or less as a goal.

CCA312

Mr. Milliken then reported that when allocations of funds for 30% grants under P.L. 84-660 were made by the State Sanitary Authority last June, six of them were with the condition that bonds be voted to finance the communities' share of the project cost by December 1, 1966.

He said that four of these communities, Amity, Keizer County Service District, Monroe, and Oakridge, have since voted bonds, that Oakridge had made arrangements to go ahead with improving its sewage treatment plant, but the recent annexation of Willamette City now makes it necessary for Oakridge to change its plans, both engineering and financial, to include the annexed area, and that Cascade Locks has had a complete change in city government with much upheaval preventing the Council's taking action on a bond issue. He said the city had received approval from the Economic Development Administration for a grant of \$149,650 and a loan of \$190,000, but the city still had to vote bonds for the \$190,000 loan. Cascade Locks' consulting engineer, Norman Haner, has been informed that the city still desires to go ahead with the project and will hold a bond election as soon as possible.

Mr. Milliken reported further that Jefferson has found it impossible to get a federal grant for the collection system for its project and the city does not have the means to proceed without it. The city's financial consultant, Mr. Fred Paulus, has advised the Authority that Jefferson will not be able to use its authorized grant of \$47,700.

Mr. Milliken recommended that: (1) Oakridge be allowed until June 1, 1967 to complete its new financial arrangements to include Willamette City, (2) Cascade Locks be allowed until March 1, 1967 to hold a bond election, and if not successful, the allotment will be reallocated, and (3) the \$47,700 allotment for Jefferson be reallocated.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried that the above recommendations be adopted.

Mr. Milliken stated that at its meetings on March 19 and June 18, 1964, the Sanitary Authority voted to require secondary treatment of sewage with at least 85% removal of BOD and suspended solids from all sewage discharged into the Willamette River system. This action was based on a staff report which named the communities that were in violation. Of those communities, nine have since been improved or connected to other collection systems, five are under construction, three are completing financial arrangements and two small plants remain with only primary treatment.

Mr. McPhillips asked the status of Grand Ronde.

Mr. Milliken replied that legal action is being instigated to get the Grand Ronde system improved.

Mr. Milliken stated that both Eugene and Albany are making improvements in sewage treatment. Eugene's sewage treatment works is completed and Albany's is being planned.

#### DOUGLAS COUNTY LUMBER COMPANY

Mr. Patterson stated that a report of an engineering study had been received, and while the staff had not completely reviewed it, receipt had been acknowledged in a letter to Mr. Hallmark on December 16, 1966. In said letter Mr. Hallmark was requested to submit a time schedule for abatement of air pollution.

#### CITY OF ALBANY

This item was covered in Mr. Milliken's progress report on sewage treatment plant construction in the Willamette Basin.

CCA812

TILLAMOOK AIRPORT SEWAGE DISPOSAL

Mr. Katzel stated that Tillamook County is pretty much on schedule for its required sewerage works project. The Sanitary Authority at its September 13, 1966 meeting gave Tillamook County until March 1, 1967 to send in plans and specifications for approval.

Dr. Wilcox stated that the oyster growing areas in Tillamook Bay are monitored continuously by the Board of Health and that there is no threat to the public at this time.

MOTOR VEHICLE

Mr. Patterson said that a bill is to be introduced at the next Legislature to provide for an annual safety inspection of motor vehicles, which would include brakes, tires, horn, mufflers and lights. He said that consideration was being given by the Authority's legal counsel to amending the bill to include inspection of the motor vehicle air pollution control devices that will be on all new 1968 model cars next year and of the air pollution control devices now on existing cars. Mr. Patterson stated that the Department of Motor Vehicles' staff did not think it appropriate at this time to include this in the measure.

Mr. Denman said it was his belief that this particular item should come under the Department of Motor Vehicles as it is something that the Authority would not encompass in its statutes.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried that the Sanitary Authority approve the staff action in presenting the Authority's opinion that any inspectional program instituted for motor vehicles should include the existing and all future air pollution control devices.

The next meeting date was set for January 13, 1967.

There being no further business, the meeting adjourned at 3:45 p.m.

Respectfully submitted,

*Kenneth H. Spies*  
Kenneth H. Spies  
Secretary

## OREGON STATE SANITARY AUTHORITY

## Special Meeting

January 13, 1967 - Room 72, State Office Building Portland, Oregon

This special meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:10 a.m., January 13, 1967, in Room 72 of the State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; Chris L. Wheeler, Richard H. Wilcox, M.D., Herman P. Meierjurgan, B.A. McPhillips and Edward C. Harms, Jr., Members; Kenneth H. Spies, Secretary; John Denman, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; Dr. Warren C. Westgarth, Laboratory Director; H.W. McKenzie, P.D. Curran, Leo G. Farr, A.D. Smythe, Associate Sanitary Engineers; H.W. Merryman, District Engineer; R.B. Percy, Chief Chemist; Bruce Snyder, Meteorologist; and Clint Ayer, E.A. Schmidt, Don McHarness, James R. Sheetz and Lloyd O. Cox, Assistant Sanitary Engineers.

Mr. Wendel: This meeting has been called to hear what the Weyerhaeuser Company has to report to us in the matter of the operation of their Springfield plant. Mr. Spies, will you please open the discussion.

Mr. Spies: Mr. Chairman and members of the Authority: Prior to the last meeting of the Sanitary Authority, Mrs. John Jaqua, Route 2, Box 328A, Eugene, called our district engineer Mr. Harold Merryman, and reported that certain residents of the Eugene-Springfield area desired to appear and be heard in the matter of air pollution caused by the operations of the Weyerhaeuser Company pulp and paper mill located at Springfield. Accordingly, the following

CC-312

persons appeared and were heard at the Sanitary Authority meeting on Tuesday, December 20, 1966: Mr. William O. Carey, 1150 N. 37th, Springfield; Pastor Orville C. Johnson of Route 2, Box 142A, Springfield; Mr. Leo F. Sytsma, 1850 I Street, Springfield; Mr. Robert L. Atkinson, 1110 Custom Place, Springfield; and Mr. Vern Adkison, Lane County Air Quality Control Officer of Eugene. Mr. Carey presented an undated statement signed by 84 persons which read as follows: "Weyerhaeuser Paper Company gives off odors and gases that make a person sick with a headache and breathing trouble, also it eats up our cars and trailer houses." Mr. Sytsma presented copies of a statement or a petition dated December 10, 1966, and signed by 271 persons which read as follows: "We, the undersigned, believe the vast odor emitted by Weyerhaeuser Company originating from the pulp and paper plant and the oxidation pond is an infringement on our rights as private property owners and citizens. We feel that this is a nuisance condition that must be immediately abated. We further agree to the utmost with Mr. Boekelheide's views as expressed in the December 1, 1966, edition of the Springfield News." Mr. Adkison showed a motion picture film that he had made recently in the Springfield area. Following an extended discussion of this matter by members of the staff a motion was adopted that a special meeting of the Sanitary Authority be called as soon as practical for members of the Authority and officials of the Weyerhaeuser Company to get together and try to do something definite about this problem. So gentlemen, that is the background for this meeting. Your staff has prepared some information covering its observations during recent weeks which they will bring to your attention today and there are officials of the Weyerhaeuser Company here whom I am sure will have something to offer.

Mr. Wendel: Whom should we hear from first, the staff or the officials of the company?

Mr. Wheeler: I would appreciate hearing from the staff.

Mr. Spies: Mr. Patterson will present a staff report.

Mr. Patterson: I will read a staff report dated January 10, 1967.

(Read pages 1 and 2 of report) At this time I would like to have Dr. Westgarth show some pictures that were taken in the Springfield area because I think this is more demonstrative of conditions. Visibility effects are very difficult to describe on paper.

Dr. Westgarth: I have put a few pictures together on a sheet that I will initially describe so that you will have a picture of some of the things that we have observed the last few days. Let's pass this around the table so that you can look at it. We have a few slides and a few movie scenes that will be presented. They will be on this screen back here. (The slides and movie scenes were than shown.) (Mr. Patterson then resumed the reading of his report.)

Mr. Patterson (After he finished reading the report): With your permission, the staff did do some extensive survey work the past week. Dr. Warren Westgarth will explain some of the locations of the sampling equipment and some of the work that was done.

Dr. Westgarth: We prepared this map so that everyone could be oriented to the same particular problem. We set up the Weyerhaeuser plant as a focus and since this is what we are talking about, put line ratings so we could locate ourselves in the various octants around the plant. We have shown the various sampling stations. Each one of these circles is a station that is used for one or the other types of samples that we have collected.

CCA812

The ones that have a green half-circle are the high volume samples; the ones with the red half-circle are the locations of AISI machines which measure hydrogen sulfide, and the ones with the numbers are simple fallout stations. These have been put in what were believed to be strategically located stations to collect the information that was desired. Our last meeting indicated that we didn't have enough data to pinpoint this problem down tight enough but we did run an intensive survey for the past week, a little over a week in fact. This survey was made from two standpoints, one was complaints of various types and the other was our own odor survey. I made an overlay showing all of the complaints that were received up until about a week ago. These complaints shown in green are of odor. The ones in red are the ones that the people complained of corrosion, and the little black dots that are scattered sporadically through here are complaints of fallout. So we put these on the overlay to see if there was a pattern suggested, and it does appear from these corrosion points that there is significant pattern of complaint. So with that in mind we took our next step using our odor survey that we performed in the field and made envelopes of the area that was covered by these odor complaints. These envelopes are not an exactly true picture of everything that is or of every place that you might get complaints. But this is what we saw from our picture of what we studied when we made our intensive survey. We found odors of a detectable intensity in here. We found odors of pronounced intensity in this general area, and we found a few other pockets of pronounced intensity. In general there was perceptible odor in this area. Up through the Mohawk-Camp Creek area we did find some odor.

This pattern down here occurs in the summer months that is not prevalent during this particular period. This has given a picture of where the odors occur.

It seems significant to us that this corrosion envelope that we found looks pretty well over the mass of complaints. This is true in general. We also wanted to check this with any meteorological data that we could find so we looked at the wind patterns. We have a wind station at this point which is in the Mohawk Shopping Center in Springfield. Weyerhaeuser Company has pinpointed the wind in their operations and we have a wind pattern at the municipal airport. We put this just in quadrants and didn't try to show it in detail. The pattern in this direction is for the general winds. This one is within about 87% of the time in this particular quadrant. On the one we have here it is in this quadrant about 78% of the time and here it is about 85% of the time. So, in general, the wind for that particular period of time was in this quadrant, this quadrant out here and here, so that you can see that the wind patterns could cause the flow of air crossing this direction, it could cause it up in this direction. We did not find significant odor around in here the past week but during the past summer odors were highly significant out in that area.

Mr. Patterson: That essentially concludes what we have to present.

Mr. Meierjurgan: Mr. Chairman, may I ask Mr. Patterson some questions?

Mr. Wendel: Yes, indeed.

Mr. Meierjurgan: On page 3, item No. 2, I don't know as I thoroughly understand that. In speaking of light weight material to what do you refer?

CC-312

Mr. Patterson: Well, we refer to the complaints relative to the saltcake which we feel over a given spot is very fine material that comes down. We feel that this material coming down on a given area in a short period of time would be of very small weight compared to what we might collect in that fallout jar over a month's period from natural dust in the area, sawdust fallout in the area or any other natural fallout. What we are saying is that a chemical analysis does not show up the minor amounts of constituents that get into a fallout jar over a long period. It might be better if we sampled at the time of the fallout and made the chemical analysis then and measured the total weight.

Mr. Meierjurgan: What particles would be characteristic of the Weyerhaeuser fallout or have you been able to determine that? What I mean is, it wouldn't be sawdust or half burned things that you would expect from a waste burner, would it, or would you be looking for saltcake?

Mr. Patterson: Sodium sulfate. So we analyzed in our chemical analysis for both sodium and for sulfate.

Mr. Meierjurgan: I see, and those are sporadic as to volume. That is, I mean they don't all fall out; it is not a continuous thing that you can tie to; in some days there is more than other days.

Mr. Patterson: Well, in the past that has been our staff's observation and also I refer to the letter of Weyerhaeuser Company where they indicated on at least one occasion the precipitator was down and this caused an excessive discharge in the area.

Mr. Meierjurgan: Would that be the one shown here as received on January 6 that we have in our notebooks?

Mr. Patterson: Yes, January 5 and at the bottom of the second page the Koppers precipitator No. 3 recovery.

Mr. Meierjurgan: Now on the second page of this latter again, as I roughly add these things up (some of them look like they overlap) they had about 90 days of trouble between July 29 through the 30th of December of 1966.

Mr. Patterson: Yes, I think Weyerhaeuser will speak to this question, but essentially they had difficulty through that period and particularly with the oxidation unit which they got back in operation on December 10.

Mr. Meierjurgan: Now has the staff been able to go back and assess this increase, sporadic increase, now and then of particulate fallout in the light of these shutdowns, have you had time to do that?

Mr. Patterson: No, not in detail. We think we can explain some of it, we have not checked it in detail.

Mr. Meierjurgan: What was the range between a, shall we say a normal fallout, and a high fallout? I don't think I got that for some reason or another.

Mr. Patterson: Well, take one sampling station, No. 14, for total fallout. In 1964 it was 18.5 tons, the first part of 1965 it was 15.8 and the second half of 1965 it was 23. The first half of 1966 it was 20 and from July 1 to October 10, 1966, it was down to 19. This variation in total fallout is not unusual anywhere in the state.

CCA312

Mr. Meierjürgen: I was talking about the fallout that was characteristic with the Weyerhaeuser operations.

Mr. Patterson: I am talking about total fallout in an area in close proximity to Weyerhaeuser Company, where one of our sampling stations is. Are you referring to sodium and sulfates?

Mr. Meierjürgen: Yes, yes.

Mr. Patterson: At the same station I mentioned before, No. 14, the amount of sodium varied from .44 to 1.1 tons per square mile per month. The amounts of sulfate varied from 2.2 to 4.2 tons per square mile per month.

Mr. Meierjürgen: You haven't gone back and checked to see whether these large fallouts were characteristic of the days when they were having trouble?

Mr. Patterson: These are the long-term sampling periods which run generally over a month.

Mr. Meierjürgen: Had you known about the time that the trouble was going on at the plant as reported by this letter, would you have been able to go out and make short term samples to see what was happening when that equipment was shut off or broken down or out of order?

Mr. Patterson: We certainly would have been able to go out and make some observations.

Mr. Meierjürgen: Did you know about it?

Mr. Patterson: I don't believe I knew when the precipitator went down.

Mr. Meierjürgen: This April 14, 1966, report, I don't remember the details on that. When you state that particulate fallout or suspended particulate data collected since April 14, 1966, appear to support the

conclusions of the April 14, 1966, report, what conclusions were you referring to there? I guess I don't remember.

Mr. Patterson: Essentially in that report we concluded that up to that period of time since our studies started, from 1964 to April 14, 1966, the total fallout was not a problem attributable to Weyerhaeuser.

Mr. Meierjürgen: Now on page 4 under item 3 and I will read the little area I have marked, "White fallout material in high concentrations was observed during several investigations of corrosion complaints." These complaints were on the part of people about corrosion and someone went out and investigated them on the spot. "The laboratory analysis of samples of this material showed sodium concentrations in excess of 10% by weight. The high sodium concentrations are significant evidence that the fallout material is definitely from an unnatural source in the area." By that you mean that normally where you would take factory sources or plant sources that you would not expect that much fallout from sodium.

Mr. Patterson: That is right.

Mr. Meierjürgen: (Continuing to read) "We do not as yet, however, have sufficient information to conclusively link the fallout material or the observed corrosion with any particular source or effect." I take it by that that it can't be traced back. This abnormal amount has not been traced back to any particular plant, the Weyerhaeuser plant or anyone else?

Mr. Patterson: No, we have our opinion on the matter. The difficulty in analyzing this material is getting enough quantity of this particular sample.

Mr. Meierjürgen: With a little more time to work on this do you think we can pinpoint this?

CCA312

Mr. Patterson: I think there actually would have to be some corrosion studies made in the area, we probably should put out some corrosion plates of our own, and compare them with background areas and with other areas of the state to get the accelerated corrosion as soon as it occurred.

Mr. Meierjürgen: What I mean is you feel that it is within our capabilities of isolating or pinpointing this, finding the area where it is coming from?

Mr. Patterson: Yes. We can determine if accelerated corrosion is occurring in the area. There is difficulty in determining when one person complains of having damage to an automobile. It is difficult to assess it to a certain source or attribute it to a particular condition because you do not know all the details of the prior condition of and care of the car or whether the car has been on the coast or somewhere else in a prior period.

Mr. Meierjürgen: If we put out a sampling device of our own do you think it would be too difficult to pinpoint. It would not be difficult?

Mr. Patterson: That is right.

Mr. Meierjürgen: On page 5, near the bottom, "The maximum hydrogen sulfide concentration measured was less than 10 ppb." Relatively speaking, is that high or low?

Mr. Patterson: It is low but it is high for odor.

Mr. Meierjürgen: It is low for possible chemical effects, for toxicity, but high for odor?

Mr. Patterson: Yes.

Mr. Meierjurgan: What is the nature of this white precipitate?

Mr. Patterson: The white precipitate is the saltcake or sodium sulfate, it is very light and it is generally called saltcake.

Mr. Meierjurgan: Is it a salt or an ash or both?

Mr. Patterson: It is usually salt I would say, it is very difficult to describe. There might be other white fallout in the area.

Mr. Meierjurgan: I might be asking some stupid questions but is this stuff soluble?

Mr. Patterson: Yes.

Mr. Meierjurgan: Would you say it is soluble enough that some of these pictures we have seen of cars and leaves and one thing and another that this might be the source of it.

Mr. Patterson: We think so.

Mr. Meierjurgan: And again do you feel we should have a place out there where we can pick this up for samples? No. 4 on page 8, "that construction of a conventional primary clarifier with continuous sludge removal be considered as a substitute for the existing primary sedimentation pond", I don't know that I completely understand that. Does that have anything to do with air pollution or is that water?

Mr. Patterson: Well, this is part of the water treatment facility. I don't think these waste ponds were considered a problem during the early part of their operation but they appeared in a recent survey to be a local area problem, from the standpoint of odor.

CCA312

Mr. Meierjurgan: What you are talking about here, is the continuous sludge removal some sort of an arrangement to take solids out of it?

Mr. Patterson: Yes, they take the solids out of it so that it will be aerobic.

Mr. Meierjurgan: Is that comparable to some sort of a primary treatment?

Mr. Patterson: It would be essentially the same thing.

Mr. Meierjurgan: That's all the questions I have Mr. Chairman.

Mr. Wendel: Thank you for clearing up some of these points for us. Does anyone else have any questions to ask Mr. Patterson?

Dr. Wilcox: Just one. Do you feel that the sodium sulfide is soluble enough to be carried out in the stack emissions?

Mr. Patterson: Yes.

Dr. Wilcox: Is there any way of capturing stack emissions, that is, in measuring the amount of sulfides emitted?

Mr. Patterson: Yes, the Weyerhaeuser Company has done this and has submitted their analyses to us.

Mr. Wendel: Does anyone else have any questions? I think it is now time to hear from the company, if they wish to be heard.

Mr. McEwen: AS I make this presentation, if any of you would like to break in or ask questions, I want you to feel perfectly free to do so. My name is John M. McEwen (reads from report). We thought we would make specific reference to December 10 since at least according to the newspaper report this was discussed at the last Sanitary Authority meeting. Also, it brings out one of the things which we believe is a major factor in whether the mill smells or not and that is the wind and weather conditions.

You have, I believe, our report on the major failures that we have had. Included in that is the fact that the oxidation system went back into operation on the 10th. Although it was actually operating on the 10th, it had been off for some substantial time before and it takes some time after the oxidation system goes into operation to clear the system of the partially oxidized liquor which was in the system during the day of December 10. (Again reads from report.)

(Page 10 of the report - departed from text.) We have tested many, many types of scrubbers in our research pilot plants and in various operations. We have some of them installed in our operation - the best ones. We have investigated the distribution and the effectiveness of the pond and came up with improved distribution which should make our aeration pond even better. We have investigated various systems of combustion, some of which have been put into successful operation and some of which were not successful and we have not put them in operation. We have others that we are still studying. One of the big problems that we have in trying to evaluate odors emission and particulate fallout is good testing methods so that we can determine the source so that we can better solve the problems. We have worked very hard on improved testing methods in order to better identify the problem. When improvements are found or better systems are made, we have put them in. At some times we have put them in coincidentally with various meetings and hearings, and at other times they didn't happen to coincide with meetings and hearings and we put them in also. We are as seriously involved, if not more seriously involved, with this problem than you are. Certainly it is to our great advantage, if there is a better way to do it, to do it. We would like as much as you would to have this 96% recovery changed to 100%.

CCA312

The problem is how do you get from 96% to 100%. It is those last small quantities that are the most difficult. (Finished reading report.)

One of our strongest weapons, we believe, in the control of both air and water is the concern and ability of our workmen. I would be very happy to discuss my statement with you and answer what questions you would like, but we have a representative of our air and water protection committee here who would like to make a statement if it would please the Authority and then I could come back or you could have his statement after you have finished questioning me, whichever you would like.

Mr. Wendel: Let's have his statement.

Al Buell: (Read report)

Mr. McEwen: I assume you have some questions.

Mr. Meierjurgan: Mr. McEwen, do you have any technical staff down here today? What I want to ask here is this white flyash you spoke of on page 9 that built up in ledges on the bottom of the precipitators and eventually shorted out the unit, what is that, what is the chemistry of that?

Mr. McEwen: Primarily sodium sulfate, saltcake.

Mr. Meierjurgan: Is that something that is significant in your recovery program?

Mr. McEwen: We do recover this. We recover it in the furnace and we also have the special electrostatic precipitators which clean the air from the furnace and recover the sodium sulfate for reuse. This is reused.

Mr. Meierjurgan: It was the plant breakdown that caused this stuff to accumulate. Would you say that it might have been discharged from the stack during that time?

Mr. McEwen: It was discharged from the stack until we found it. In other words, we shut down when we found it.

Mr. Meierjurgan: On page 11 in summary here, "We have been working on the problem for a long time and have increased our control of the odor from about 90% retained before construction of the expansion in 1965 to about 96% retained at the present time." Is it proper to inquire what these percentages are related to?

Mr. McEwen: This computation was made by taking the total sulfides in the system during the day as the total that might be released, and comparing them with measured sulfides that went out of these various sources which were listed earlier in the report, the various stacks. Now, there may be some unmeasured, but this would be insignificant. We are emitting about 4% now.

Mr. Meierjurgan: These sulfides that are discharged, are they all of one nature, or are they a mixture?

Mr. McEwen: They are a mixture, but they are primarily hydrogen sulfide and methyl mercaptan. There are certain other minor quantities of sulfur compounds, but these are total sulfur compounds that we are talking about. But they are primarily hydrogen sulfide and methyl mercaptan.

Mr. Meierjurgan: This work that you have done on this, you may or may not be able to detail all of it. I understand it is highly technical - can you detail the nature of your efforts that you put in there; how are you attacking this problem? Hydrogen sulfide, for instance, let's take that - that is the one that causes most of the stink, isn't it? Is that a very difficult problem and what have you done to solve it?

Mr. McEwen: It is an extremely difficult problem, because hydrogen sulfide - the human nose is so sensitive to it. In other words, it is objectionable at odor levels that are far below that at which it becomes a health problem or anything like this - in fact, it is objectionable in areas

CCA312

that are very difficult to measure chemically or quantitatively. The way we have attacked the hydrogen sulfide problem is the black liquor, which comes from the digester, is oxidized. This changes the sulfide, which is the chemical form that sulfur is in when it is in as hydrogen sulfide, to a higher form such as sulfate - thio sulfate - which is not as volatile or as odorous as is hydrogen sulfide. Unfortunately, in the later part of the process more sulfides are generated. We need sulfide for cooking and this sulfide is made in the recovery furnace. So that the design of the recovery furnace is such that we must smelt with carbon to reduce the higher sulfur compounds to sulfides to form sodium sulfide for cooking chemicals. A small amount of the sulfide which was oxidized earlier in the system is regenerated as hydrogen sulfide. Actually our quantities are low as you can see from our percentages that only 4% is getting away, but that is where it is generated in the recovery furnace.

Mr. Wendel: If your production has increased 3-fold, in other words you are producing three times as much as you did before, and your efficiency is 96%, would that not mean that the volume of the odorous materials being emitted is 20% greater than it was before your expansion?

Mr. McEwen: It would be in this order of magnitude. In other words, if we were producing 400 tons before, times 10% getting out - that is a factor of 40 say, and if you take 1,000 tons times 4% now, that is a factor of 40, so we are in the order of magnitude now of where we were before. Now this is subsequent to December 10, because up until December 10, as you know from this report which we gave you, we were in and out with our oxidation system. Normally the difference between 90% which we had after the expansion the same as before the expansion, was due to the fact that we did not have an

adequate oxidation system. There have been some other minor things, but one of the big differences between the 90% that we had on the start up and prior to the new installation was this new oxidation system which we have on the big unit.

Mr. Wendel: What is the complaint situation since you have had the new equipment in operation?

Mr. McEwen: Complaints really reflect three things I would assume: (1) Being the weather conditions are substantial; (2) the amount of emission of course is a major factor and (3) is the publicity climate that exists at the time. Due to recent public utterances and to circulation of petitions and things like this, certainly this area has been accelerated, I mean there has been a lot more public interest, not only in air pollution here, but all over the country. I would say that since December 10 it would not - I couldn't say that there has been a substantial change in the complaints. Whether some of these other factors might well overcome the emission factor, you see.

Mr. Wendel: In general it has appeared to us that the complaints as the report states, that the emissions were much greater than the 20% that we have calculated and I wonder if that has been true since December 10, also.

Mr. McEwen: In our discussions with the staff they indicated that their studies were generally taken prior to December 10, I believe this is correct. In other words, I don't believe that your investigations reflect the new oxidation system, although there were times in October when the new oxidation system was working effectively before it broke down again. So there was a period when we were up around our 96% efficiency.

CCA312

Mr. Wendel: Is it your policy whenever you have a breakdown to shut down?

Mr. McEwen: We have to shut down in order to fix it.

Mr. Wendel: You say, when you discover the breakdown. How quickly does that occur?

Mr. McEwen: We like to discover it as soon as it happens, but we don't always. In this particular case we know there was some period of time when this shorted out which we didn't know until the thing built up, that there was abnormal emissions that we didn't know about. I might say that we are concentrating in this area. I indicated in the paper itself that we are concentrating on measuring and we are certainly giving considerable emphasis toward trying to find out as soon as practicable when these things happen so that we can correct them that much sooner. We feel that this is a big part of the problem.

Mr. Meierjurgan: When did you install these systems there at Springfield?

Mr. McEwen: There are many system. Some of the earlier systems were installed around 1950 or 1951. We have been adding constantly since that time. The last major item to go on stream was the oxidation system on the new part and we will be installing more improvements as the new aerator comes in. This has not arrived yet; it has been ordered, but it hasn't arrived. We still have the four aerators, so we have ample oxygen in the pond, but our standby aerator has not come yet.

Mr. Meierjurgan: This is on the pond you are talking about?

Mr. McEwen: That is right. I mean all of these things - you see, there is not one source. There are many sources and we have to work on all the sources.

Mr. Meierjürgen: I took your letter here outlining these breakdowns and troubles that you have had, and tried to run up a total of days in which you experienced trouble. Would - is 90 days pessimistic - is that wrong?

Mr. McEwen: I would think that that would - I haven't run through it that way, but I certainly wouldn't off hand say that this is not right. There are many, many items here - in other words the same - we didn't have the same problem necessarily all that time, but we had one problem or another.

Mr. Meierjürgen: Now in July - from July through December of 1966, what machinery gave you the most problems and when I asked a little while ago when was it installed, is that some new machinery you were talking about or was that some old stuff.

Mr. McEwen: No, this - the enlarged oxidation system was probably the one that gave us the most problem and has the most impact on the community at large.

Mr. Meierjürgen: Is it something - just normal bugs that can be ironed out, like motors?

Mr. McEwen: Partly, and we think we have it. I can go back into history if you want the detail as to what our problems were.

Mr. Meierjürgen: No.

Mr. McEwen: We did have some major problems, chemical as well as mechanical, but it has been running well since the 10th of December. We couldn't say that it is running now, but it was running when we left.

Mr. Meierjürgen: In connection with these breakdowns, insofar as I am personally concerned, you don't have to answer this, but do you have any comments or thoughts on this corrosion problem?

Mr. McEwen: I don't think there is any question but what we have reported certain breakdowns which would lead toward some saltcake emissions over short

CCA312

periods of time, and as Mr. Patterson stated, there would be considerable doubt of any direct connection between a breakdown and a substantial corrosion on an automobile for example.

Mr. Meierjurgan: Regarding our staff's recommendations, have you any comments that you would like to make?

Mr. McEwen: I don't believe that I could make any particular comments at this time - to make a meaningful comment you have to really think about it for a while. I don't know that there is any comment.

Mr. Meierjurgan: I only had one here on this second item - that a program of production curtailment or shutdown be followed if necessary to prevent - wait a minute am I on the right one? It is on the one that had to do with reporting of breakdown and then following that the second one. Let's take the first one first. How do you feel about that?

Mr. McEwen: We have done this in times past and we see no reason to be concerned.

Mr. Meierjurgan: You would be amenable to that?

Mr. McEwen: I am not able to make any official statement at this time, but certainly we have worked with the staff in times past and I can see no reason why we shouldn't continue to work with the staff. You may do it on an expanded scale if this is going to be helpful to solve the problem. We are trying to solve the problem. Actually I see no problem at all in item one.

Mr. Meierjurgan: Do you see any problem in item 2?

Mr. McEwen: I see no problem overall. There is no question about agreement in principle. There may be some problems as to when you get down to any specific decision as to whether this is logical or that is logical. In other words, there is always a matter of degree in these things, principle - no problem. This is what we have done many times, of course.

21.

Dr. Wilcox: Mr. Chairman, I wasn't quite clear on our staff report recommendations whether this curtailment or shutdown related to the entire production of pulp and paper by the plant or whether it related to the specific piece of machinery.

Mr. Patterson: We meant that part of it which is necessary to reduce emissions - any or all.

Mr. Wendel: Do you agree with items 3, 4 and 5?

Mr. McEwen: When you first see these things you are really not able to make a complete judgment on them. In other words, so far as 3, 4 and 5 are concerned, we see no particular problems involved at this time, but there may be some if we have a chance to study them. The same thing applies on all of this, I mean it is really - the words are reasonable words - really it is how you interpret the words.

Dr. Wilcox: Do you have any plans at all for future construction of a primary clarifier?

Mr. McEwen: We have been studying the problem which in our opinion is certainly one part of our odor control problem, but a minor part of our odor control problem of anaerobic conditions in the sedimentation pond which is our primary treatment system. We have several alternative methods, one of which is this as a solution and we would like to solve it in the most efficient and effective manner possible. This is certainly one of the methods we have been considering to solve this problem.

Dr. Wilcox: This is completely anaerobic - this primary sedimentation pond?

Mr. McEwen: Right.

Dr. Wilcox: And does emit considerable odor?

22.

Mr. McEwen: Well, we have had - let's say that I don't know any complainant could identify necessarily the source; however, we do recognize from our own studies that this anaerobic pond has some effect in the immediate area - it certainly is of concern to us and we feel this is something that will be amendable to solution. Our problem right now is to get the best and most logical solution. There are other alternatives to putting in this type of a system which would do the same thing of eliminating the odor from the pond.

Dr. Wilcox: Aeration?

Mr. McEwen: This is possible, but we haven't considered that too seriously. We have considered some other alternative pretty seriously though, as well as the possibility of putting in a conventional clarifier. You remember the reason we installed this type of thing was conventional equipment was not available in time to meet the low river runoff this last summer.

Mr. Wendel: One thing that concerns me is this number 5. It will take time probably to find qualified outside consultants, take time for them to become familiar with the problem and for them to find solutions, I suppose. In the meantime, what concerns me, you can't declare a moratorium on your efforts, you would continue the same ----

Mr. McEwen: We would propose to stay ahead of any consultant. That is what we would like to do. In other words, we feel that we have been in the forefront in fighting these problems for many years and that is exactly where we want to stay until we get to the final answers.

Mr. Spies: In our staff report we pointed out very clearly that we recognize down at Springfield that you are using essentially all known and proven techniques and facilities to control and minimize air pollution and you are doing as good a job, if not better, than any other kraft mill in

the country. So that in effect says that if we are going to do any better, we have got to have some new answers. Answers are found by research. You have referred to some of the research that you were doing locally. Could you or do you have anyone here who could tell us what the industry as a whole is doing in this field?

Mr. McEwen: Yes, I think that we do have - Russ Blosser who represents the National Council for Stream Improvement is here and I think he is knowledgeable of what is being done there and knowledgeable of the industry. If you would like to hear from him.

Mr. McPhillips: I have a question Mr. Chairman. One of the noticeable effects aside from the odor which we have been talking about principally is stack emission. Is there anything on the drawing board or what is your personal opinion as to the possibility of that being licked in the some-time determinate future?

Mr. McEwen: By stack emission - there are lots of emission from the stack - are you talking about the white steam coming out the stack?

Mr. McPhillips: Partially, and I wonder how much this has been referred to before. I noticed in the movies that were shown that one stack had considerable black smoke coming out and I also wonder as to the purely steam content of the rest because it would seem that steam would be dissipated in the atmosphere, but this seems to stay - it gets up there in the cloud and rolls back and forth with the prevailing wind, so that I would assume that a good share of that white stack emission must be something other than steam. Because it is noticeable and because it does have an effect on people living there, people driving there, you can't see the sun, it does cloud up the atmosphere, and I think it very important that that, as well

as the actual odor, be - something be done about it. I just wondered what your opinion was as to the possibility of improvement in that line.

Mr. McEwen: There - we are doing things to improve the black stack. The white stacks or the steam stacks - almost everything you see in that stack is steam. There is a small amount of organic material - the same as you might find out of a conventional fuel burning operation - but it is very minor compared to the amount of steam, way less than 1%. I don't know what percent it would be, but we do have the black stack which was observable in this group which is the stack from our power house which burns hogfuel. In this case we are working on this also; we have completed a rebuild of our number one boiler. We are in the process of rebuilding our number two boiler. We have three boilers that are similar. When we complete that if things go well and it works as we expect it to, we will go ahead and rebuild our number three boiler which are three similar hogfuel boilers to minimize the amount of black smoke coming out. So this is being done now - in other words, we are attempting to control the emissions from the power house which burns hogfuel. Insofar as the steam, it would be nice to say that we could solve that - we have considered various possibilities - none of them have looked promising to date. There are many inherent problems. No. 1. If you try to condense that quantity of steam it is going to take a vast amount of water and that amount of temperature going into the McKenzie River, I don't think you would find desirable. If you do condense the steam, then you lose the effect of dispersion of a high heat material that goes up rapidly, so then the things that were left - the non-condensable which are the odorous compounds - instead of being dispersed in the air would stay right around the area. At present we haven't looked with too much favor on condensing the steam. Those are some of the reasons.

Mr. McPhillips: Now to go back to the odor - it would appear from the complaints that we have received that most of them and the fact that probably what precipitated in the last discussion at this meeting was the extremely high odor which was involved around the fore-part of December. It would appear that that has happened more or less spasmodically - it isn't anything that was continuous at least in that range. It would appear that that has been due to some mechanical failures at your plant. Do you feel that you have those licked?

Mr. McEwen: We - you can never say you have solved your mechanical problems. Many of the things that we think are the best will fail us. We have certainly gone a long ways towards the solution of the particular problem that caused us trouble during this period that you allude to before December 10 at this time. These were mechanical problems with the design of the system which we had, but again this was a pioneering effort in an attempt to make a more effective system. It has to do with motor sizes, shaft sizes, things like this which I think that type of thing we can solve. If it is a question of mechanics, if it's not big enough when you build it, you put in a bigger one. The problems of that time were a combination of both weather and the fact that we were not up to our 96% efficiency, but were only down around 90% efficiency at that time. Certainly the occurrence of those things should be greatly reduced, but I certainly couldn't say here that it would never happen again.

Mr. Wendel: Wouldn't it be relatively easy to get rid of the emissions caused by your burning through the use of supplemental fuel to raise the temperature?

Mr. McEwen: We have made some studies in this line. They haven't looked particularly promising.

Mr. Wheeler: You indicated that you were doing everything you could in order to determine when equipment failures occurred so as to shut it off as

quickly as possible. Despite this, breakdowns had occurred that were not detected immediately. How far have you gone into the use of continuous gas analyzers or other continuous devices that would measure the amount of pollutant and thereby when it rose you knew something broke down immediately?

Mr. McEwen: We have made some inquiries. Now I may get slightly off base on here. I'll ask some of my technical experts to take me back if I do get off base on this. We have made inquiries on continuous gas emission analyzers, for example, which are covered in point three of your recommendation, and in order to get meaningful tests we are already low in quantities of these things. When we have asked for equipment that will measure the small quantities that we would deal with, the manufacturers have not been able to come up with it. In other words, they haven't been able to meet the specifications required for this small quantity in equipment. Now this doesn't mean that it may not be possible, and certainly we will investigate and we will concern ourselves with it, of having something floating on the line that isn't measuring anything but may give us a telltale when and if we do approach a substantial problem. We can have problems in the order of magnitude in which we are now operating and we cannot get continuous analyzers to get down to that level.

Mr. Wheeler: I notice a couple of the breakdowns you mention referred to the precipitators. It would seem there is a device ----

Mr. McEwen: This is something we have under consideration right now. A continuous monitoring system so far as the precipitators are concerned. I thought you had reference to point three. At the present time it looks more hopeful to have a continuous monitoring system before the precipitators will be available.

27.

Dr. Wilcox: Isn't there a relatively simple device that would show when it is shorted out?

Mr. McEwen: This might solve one thing if you had it put on the particular part that fails. There are so many different parts that to try to put a tell-tale on each one is not too practical. The thing we have in mind is a continuous monitoring system on the output so that no matter what goes wrong, you pick it up.

Mr. McPhillips: When might we expect a reply from Weyerhaeuser as to an acceptance of the recommendations of our staff?

Mr. McEwen: Since this is Friday, the 13th, suppose we propose Monday, February 13, one month from today for a reply.

Mr. Wendel: You know there are those who are going to say the Sanitary Authority is soft if we don't refer this to the courts right away, upon any further violations. It seems to me that would be the only alternative left; that is, upon any further violation and investigation of complaints that are found to be valid, to seek an injunction against the operation. Is there any other alternative besides that which we have considered today and that which I have just stated?

Mr. Meierjurgan: I doubt, and I am speaking strictly for myself, that throwing this thing into court would necessarily solve the smell down there, unless they shut the whole plant down. Very frankly I don't think that is going to come about without a lot more pain and agony. I don't think it is anything that anybody here wants. I would like to have some more commitments on just how hard we are going about this business, not only from Weyerhaeuser itself, but if the industry as a whole is actually entering into this thing or are we trying to temporize with it. I would like to get in to some of that and I don't set myself up as an expert to know what they are talking about

in these areas, but I would like to know for instance, how far have you gone in the plant area down there with trying to solve this. You spoke of a pilot research plant, have you got a research program going right there on your grounds?

Mr. McEwen: Our research is conducted at Longview. The primary research in this area is done at Longview, although we do a certain amount of research and their people come down and work in our plant, but the primary people in research are at our Longview plant where we have our centralized research department.

Mr. Meierjürgen: Does your technical staff apply itself to this problem or do you have a technical staff.

Mr. McEwen: We have five people full time on problems of air and water protection.

Mr. Meierjürgen: The monitoring of these devices. You had a previous gentlemen here, I've got his name here somewhere, I believe he works in the monitoring - the instrumentation, have you got good qualified people watching that?

Mr. McEwen: We feel we have.

Mr. Meierjürgen: Don't misunderstand me Mr. McEwen, I am not impugning the efforts of the Weyerhaeuser people - I am sure they would like to start the plant up tomorrow morning and have it smell like Chanel #5.

Mr. McEwen: I am afraid any smell at all would offend someone.

Mr. Meierjürgen: It would be comforting I am sure to know that Weyerhaeuser was really doing everything they felt was possible to solve this - Weyerhaeuser and/or the industry. I've talked to some of our staff and other people who are qualified in the business and they seem to think that given sufficient amount of time and a good healthy effort, that these things could be solved. Do you feel they can?

Mr. McEwen: I think they can eventually be solved.

Mr. Meierjurgan: Do you have any technical staff here that would differ with that or would like to comment?

Mr. McEwen: I see nothing but agreement as I look around. I was just advised that when you talk about trying to have technical people that I would be happy to try and answer whatever technical questions you may have because it happens that I happen to have a Ph.D. and am specialized in pulp and paper affairs and there is a technical association of the pulp and paper industry which has some 12,000 members all over the world, and currently I am president of that organization.

Mr. Wendel: Mr. McEwen I would not want to go through a situation where solution is left to an industry-wide group such as we went through with the paper mills in relation to water pollution. Every time we would bring that up they would say, "That is in the hands of the National Council." In other words, that provided the industry with a beautiful out because it was up to the entire industry to find a solution.

Mr. McEwen: We are looking for all the help that we can get. We appreciate it is our problem - our problem may be similar to others, but it is still our problem. I have been advised to outline somewhat the fact that the Weyerhaeuser organization has a technical staff at each of the mills and I indicated that we have five people full time, plus many people who spend a substantial amount of their time on the problem, but these people are assigned only to this area. In addition to that we have a research department which includes and it has been some time since I could talk about the numbers of people, but there are a substantial number of people in the research department. I would suppose maybe 75 to 100 that are located at Longview, Washington, under direction of Dr. Jack Reagh and one division of this department under Mr. DeHaas. He is particularly

knowledgeable in this field and they do work in the air area. Now another department they have is under Gene Haydu, under the water area, so they have one area for water and one area for air. In addition to that, we have a research department which is a subsidiary of the main department in Longview under Dr. Walseth at Everett, Washington, and they also have a staff of perhaps 25 people who work on these various problems. So it isn't that we don't have qualified people working on them. The problems are extremely difficult. We are working down towards this last 4% and that may be much more difficult than the first 96%.

Mr. Spies: Can you enumerate specific research projects that are being conducted by the industry, aimed specifically at kraft odor?

Mr. McEwen: I think it would probably be best to have the National Council people talk about this, rather than for me to talk about industry in general.

Mr. Wendel: The people of Oregon are very, very impatient. Undoubtedly, there will be those who will feel that this has accomplished nothing today - that we are not getting any further along. As I say, the only alternative is to seek an injunction against their operation, which certainly doesn't seem indicated.

Mr. Wheeler: You didn't respond that the Council should give a list of the research projects; I assume partly you may not feel that you could identify them all as you sat right here today. Could we expect a list of these projects, both by industry in general and by Weyerhaeuser Company in particular?

Mr. McEwen: We can certainly give you a list of the projects. There might be some that may be being worked on that we might not be able to put on the list. But there will be a substantial number of available projects.

Mr. Wheeler: I have kind of gotten the idea that basically much of the Weyerhaeuser work during this period of breakdowns and problems you have talked about has been in in-plant control.

Mr. McEwen: In this area. In Springfield, yes, because this is our primary mission. Where the more fundamental work is being done is at Longview by the research group there.

Mr. Wendel: Mr. Harms, has the condition in Springfield seemed better to you in January since they have gotten this new equipment working, than it did before?

Mr. Harms: As a personal observation, yes. That is why I would be most concerned and most interested in Weyerhaeuser's reply to the staff recommendations, particularly concerning point No. 2 regarding production curtailment in the event of breakdowns or malfunction, because it has been my own observation, and this is only a lay observation, but I live within the area marked by one of those red bands up there, so I think that it has some validity, that certainly it is not a uniform situation, but the conditions that existed during these periods of breakdown actually did approach the intolerable, particularly around the latter part of November and that is why I would be most interested in this. It has been as I say a personal observation and certainly not a scientific fact that for the past - since the first of the year there has been an improvement, a noticeable improvement from the standpoint of odor which is the only thing that I have personal experience with. I did take the opportunity to go out to the aeration lagoon about a week or 10 days ago, and I did not notice really any kraft odor at all. There was an odor and I would not say it was a pleasant odor. It was something that has been better than it was in the past when I

have been out in the area. I am hopeful the breakdowns do give some logical explanation of why it was so bad during this period since the latter part of this summer really to more or less varying degrees up until the middle of December.

Dr. Wilcox: Would it be - even though they have appealed for a month to reply to the entire recommendation of the staff - the 5 points - would it be unreasonable to invoke one and two at this time and apply it to all the kraft industry in the state and let the rest of the action follow and the report come in in a month's time? I think both of these points could be met at the present time if the management would agree.

Mr. McEwen: I see no particular problem for the interim, at least until we get a reply to you.

Mr. Wendel: Numbers 1 and 2 you agree upon now?

Mr. McEwen: Not completely. I say we will temporarily until we give you a reply. I mean this is what I think was requested.

Mr. Wendel: In other words, you agree to these until we hear from you further?

Mr. McEwen: That is right. In other words, what we are really saying is we will give you a reply on all of them. If you have particular concern for one and two, we will agree to them on a temporary basis, until you get a reply. In other words, I don't want to prejudge the reply at this time.

Dr. Wilcox: It seems to me that it would be entirely logical for all the kraft industry to adhere to those two points and if they are going to actually accomplish this during the interim and give us an opportunity to react one way or another after a month's period of time, this would accomplish a lot.

33.

Mr. Carey: Before you adjourn this meeting I want to be heard. I brought a petition containing 256 signatures. This concerns the news of the situation in hand. The situation in hand is the pollution by the Weyerhaeuser paper mill and we do hope that this committee has not been blinded by the high taxes of the corporation involved. We hope to get just treatment for this trouble in the area. We don't intend on waiting forever for a solution. This has been the past thing that has been carried out waiting and waiting. We have got a lot of lip service, we want some action. We have problems down there that are worse than this fellow McEwen states. I have lived there for some 12 years. Just passing through the area may not be so bad, but you live there for a period of time and I grant you you will have trouble and you don't have to go down to the coast to get your car eat up - you bring it over to my house and leave it for a month and I will show you. There will be spots of rust appear on that car. Weyerhaeuser themselves have employed the use of a car wash. They realize this problem exists and it is not something that someone alleges. This thing is a fact. If we have to go to a higher level to seek action, we are going to do this, because we are satisfied that this problem is a health hazard. I have a respiratory problem and I neither smoke nor drink to cause the problem. I am not the only person down there with this problem.

Dr. Wilcox: Mr. Chairman, I might respond to a portion of this by stating at the present time we are attempting to enlist the assistance of the Medical Association members in and around the Eugene-Springfield area in giving us their opinion of the number of conditions that they feel might be caused by air pollution, and with that statement I would MOVE at this time that this Sanitary Authority request Weyerhaeuser Company to proceed with a reply to the five recommendations made by the staff and by February 13, and particularly

214

34.

that in the interim that they adhere to points 1 and 2 and put them into practice immediately.

Mr. Harms: I second the motion.

Mr. Wendel: Is it your intention to have another meeting on February 13?

Mr. Harms: It would depend upon the nature of the reply.

Dr. Wilcox: If they agree to all five points, there wouldn't be much point in holding a meeting.

John Lucky: I am just a layman, but this is a national problem, state problem and a local problem. I feel that it is the responsibility of one of our biggest industries who are not only suffering the same as we are, but will suffer more if it isn't stopped, to set the lead in it. Not make excuses, but to take the lead.

Mr. Harms: Mr. Chairman, we might point out that that is exactly one of the things that we are requesting, that they give us a reply on which is this business of employment of qualified independent consultants or groups of consultants to study the problem in depth, suggesting possible improvements. Of course, the gentleman doesn't have the benefit of the staff recommendations in writing, but I think it should be of interest to him to know that that is exactly one of the five points that is being requested.

Mr. Wendel: Any further discussion on the motion? (The motion was approved.) Any further business to come before this meeting?

Mr. Wheeler: I would like to MOVE that as a policy of this body that the staff be instructed to request the other kraft industries in the state to comply with items one and two also.

Mr. Harms: I second the motion. (Motion carried)

Meeting adjourned at 12:20 p.m.

Respectfully submitted,

  
Kenneth H. Spies  
Secretary

## MINUTES OF THE TWENTY-EIGHTH MEETING

of the

## STATE SANITARY AUTHORITY

April 19, 1946

The regular meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:00 A.M., April 19, 1946, in Room 315, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson, Messrs. John C. Veatch, Charles E. Stricklin, and Blaine Hallock. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer, and Kenneth H. Spies, Associate Sanitary Engineer.

MINUTES: Copies of minutes having been supplied to the members in advance, the chairman with the consent of the board, dispensed with the reading of the minutes of the meeting of November 30, 1945, and the minutes were approved as prepared by the secretary.

PORTLAND SEWERAGE PROJECT: - The secretary reviewed briefly the progress of the Portland Sewerage Project. It was reported that plans and specifications for the Columbia Slough intercepting sewer had been completed and were to be submitted to the city council for action within a week. The council was expected to advertise for bids if the plans presented were satisfactory.

The board members then discussed the advisability of granting permission for the discharge of digested sludge into the Columbia River along with the sewage treatment works effluent. It was pointed out that the sludge could be held and disposed of as fertilizer or dried and incinerated, but that either of the two procedures would add an additional cost to the construction of the treatment plant. The discussion brought out the fact that the quantity of sludge to be discharged into the stream

ABG759

in relation to the stream flow was small and should not prove detrimental. The minutes of the June 22nd Meeting indicated that provisional approval only had been granted the city of Portland for the discharge of digested sludge into the Columbia River with the understanding that if at any time conditions demanded, other means for sludge disposal would be provided by the city.

The Chairman stated that in the future when the Sanitary Authority is called upon to approve sewage treatment plant plans that such approval should always be provisional and subject to change depending on the results obtained after the treatment plant is in operation. It was also the opinion of the Authority that plans for large sewage treatment works projects should be submitted to the Sanitary Authority for formal approval before any action is taken by their engineers.

WILLAMETTE WOOD CHEMICAL COMPANY: Mr. Clark Van Fleet, Production Manager, Willamette Wood Chemical Company, and Dr. Locke, Forest Products Laboratory, Corvallis, appeared before the State Sanitary Authority to present data concerning the operations of the wood alcohol plant at Springfield, Oregon. The plant is to be put on a production basis about July 1, 1946. They state that approximately 500,000 gallons of waste would be produced each day, and that no practical method for disposal or treatment had yet been devised. A lagoon of 3.25 million gallons is to be provided for storage of the waste prior to its discharge into the Willamette River. Some reduction in oxygen demand, although not appreciable, is expected during the six day retention period. The Oregon State Experiment Station and Oregon State College are conducting research on the production of yeast from still bottom wastes from the process. Mr. Van Fleet was advised that some method must be developed for reducing the BOD of the wastes from this plant. The Sanitary Authority

is to keep in touch with research developments on treatment of the waste and instructed its engineers to spend some time assisting the plant authorities in working out a solution to their problem.

MUNICIPAL SEWAGE TREATMENT PROGRAM: A review of the progress made by municipalities in planning for the construction and finance of sewage treatment works had been presented to the members of the State Sanitary Authority in advance in a report entitled "Summary of Present Status of Municipal Sewage Treatment." The report indicated that some municipalities had done nothing toward complying with the Sanitary Authority's requests; others had done very little. The secretary was authorized to write lagging communities and threaten them with a citation if satisfactory progress was not made.

The secretary was also instructed to write to the city of Central Point and request a report on the progress made in the adoption of an adequate fiscal plan to provide for the construction of sewage treatment works.

The matter of approving a proposal submitted by the consulting engineers for Oregon City providing for the discharge of digested sludge into the Willamette River during periods of high stream-flow was discussed. Motion by Mr. Veatch and seconded by Mr. Hallock that the discharge of digested sludge into the Willamette River was contrary to the policy of the State Sanitary Authority and that the request be not approved. Carried. The members stated, however, that the matter would be reconsidered if authorities at Oregon City or their consulting engineers wished a hearing at the next meeting.

GRESHAM BERRY GROWERS CO-OP: The secretary reported the receipt of complaints relative to the destruction of fish life in Johnson Creek last October. A field investigation indicated that waste from corn processing operations at the Gresham Berry Growers Co-op. Cannery at Gresham was

ABG759

responsible. The acting secretary, Kenneth H. Spies, had notified the industry of their responsibility for the abatement of this condition but no action had yet been taken by the Co-op. Motion by Mr. McPhillips, seconded by Mr. Hallock that the secretary instruct the Gresham Berry Growers Cooperative that they must abate the nuisance created by their pollution of Johnson Creek, or appropriate action would be taken. Carried.

INDUSTRIAL WASTE DISPOSAL: Following a discussion of a program and policies for industrial waste disposal, a Motion was made by Mr. Veatch and seconded by Mr. Hallock that the secretary notify all industrial plants responsible for pollution of streams that they must take immediate steps to correct this pollution problem and report their progress to the State Sanitary Authority, and where no progress is made by an industry, then appropriate action will be taken. Carried.

POLLUTION OF COASTAL WATERS: The Authority's attention was directed to the increase in the pollution of coastal waters, due chiefly to rapid real estate development on the Oregon coast. It was pointed out that the ground area available and soil conditions are not suitable for the use of cesspools or septic tanks and that as a result effluents are discharged into watercourses which eventually reach the beach. If the pollution increases, the beaches may no longer be safe for recreational purposes. Motion: It was moved by Mr. Stricklin and seconded by Mr. Hallock that the State Sanitary Authority extend an invitation to representatives for local service clubs, community organizations, and leading citizens from communities along the Oregon coast to attend the next meeting of the Sanitary Authority for the purpose of discussing adequate sewerage facilities for Oregon Coast communities. Carried.

STATE INSTITUTIONS: The secretary was instructed to communicate with the State Board of Control, and secure their cooperation in providing adequate sewage treatment facilities for all state institutions.

INDUSTRIAL WASTE SURVEY REPORT: Motion made by Mr. Stricklin, seconded by Mr. McPhillips that it be left to the discretion of the chairman and the engineers as to whether the Authority would participate in joint publication of the report on the Industrial Waste Survey conducted by the Oregon State College Engineering Experiment Station at an expenditure not to exceed \$400. Carried.

SANITARY AUTHORITY LABORATORY: Motion by Mr. Hallock, seconded by Mr. Veatch that the installation of necessary facilities for a Sanitary Authority Laboratory in the Behnke-Walker Building be authorized. Carried.

PROJECT PLANS: Motion by Mr. Stricklin, seconded by Mr. Hallock that the action of the secretary on sewerage project plans submitted be approved. Carried.

COOPERATION WITH GAME, FISH, & HIGHWAY COMMISSIONS: Motion by Mr. Stricklin and seconded by Mr. Hallock that the secretary be instructed to write the Chairman of the State Fish Commission, State Game Commission, and the State Highway Commission and request that when pollution complaints are received by their agencies, the State Sanitary Authority be notified; and that if investigations are to be conducted, a representative of the State Sanitary Authority be present to make recommendations on municipal and industrial waste disposal. Carried.

PERSONNEL: The secretary reported that the staff authorized by present appropriations would be filled when Mr. Rice returns from military service about July 1, 1946.

BUDGETS: The secretary was instructed to prepare budgets for 1947-49, for consideration by the State Sanitary Authority at their next meeting.

PUBLICITY: The secretary was instructed to furnish to both Portland papers suitable news releases on action taken by the Sanitary Authority at this meeting.

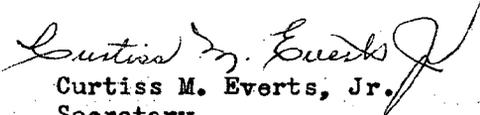

ABG759

AMOZONE PROCESS OF SEWAGE TREATMENT: The Sanitary Authority directed its engineers to keep in touch with the development and operation of the sewage treatment plant to be constructed at West Kelso by Amozone of Oregon, and to secure data on which to base action on any plans for this treatment process which may be proposed for installation in Oregon.

NEXT MEETING: The date of the next meeting was set for 10:00 A.M., June 14, 1946, in the offices of the State Board of Health, Portland, Oregon.

There being no further business, the meeting was adjourned at 1:20 P.M.

Respectfully submitted,

  
Curtiss M. Everts, Jr.  
Secretary

## MINUTES OF THE TWENTY-NINTH MEETING

of the

STATE SANITARY AUTHORITY

June 14, 1946

The regular meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:00 A.M., June 14, 1946, in the offices of the State Health Officer, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson; Messrs. John C. Veatch, Blaine Hallock, and Chas. E. Stricklin. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; and Kenneth H. Spies, Associate Sanitary Engineer.

MINUTES: The members of the Authority dispensed with the reading of the minutes of the preceding meeting of April 19, 1946, and the minutes were approved as prepared by the secretary.

OREGON CITY SEWAGE TREATMENT PROJECT: On the basis of a written request by Mr. John C. Gearhart of Stevens & Koon, Consulting Engineers, Portland, Oregon, the matter of sewage treatment facilities proposed for Oregon City was re-opened for discussion. Consulting engineers for Oregon City requested approval of the plan for by-passing domestic sewage into the Willamette River for approximately three or four days per year and also requested permission to discharge digested sewage sludge, that could not otherwise be disposed of, into the Willamette River during the wet season when the efficiency of sludge drying beds would be reduced. Mr. Hallock raised the question as to whether such an approval would be consistent with state statutes under which the Sanitary Authority was created, and under which it operates. It was also Mr. Hallock's opinion that approval in this case might be contrary to past policy and that it might establish a precedent. Mr. Veatch suggested that the Authority go

ABG759

on record as opposed to such a plan and that all persons concerned be advised that sewage sludge could not be discharged into streams. The probable effect that approval of plans prepared for Oregon City would have on plans of other cities in the Willamette Basin was also discussed. The general opinion of all members present was that only preliminary or tentative approvals of plans for sewage treatment works should be granted at the time the plans are reviewed and that final approval should not be granted until the treatment plant had been installed and its operating efficiency demonstrated. After further discussion on the subject, the chairman requested Mr. Hallock and Mr. Veatch to prepare a paragraph to be included in all letters related to the subject of approval of municipal or industrial waste treatment or disposal facilities. The material contained in this paragraph would grant tentative, conditional approval to sewage or industrial waste treatment facilities, but would indicate that such approval was not binding and that the Sanitary Authority would have the authority to request additional treatment or disposal facilities when the necessity for such was indicated.

The discussion again returned to the proposal submitted by consulting engineers for Oregon City and the following resolution proposed by Mr. Hallock was unanimously adopted: "That the Oregon State Sanitary Authority adopt the policy and precedent that the discharge of digested municipal sludge in the Willamette River is not to be permitted, but where circumstances require temporary conditional permits for this method of sludge disposal, permission may be issued on that basis. Such sludge is not to be discharged into the River under the authority granted by such a permit unless the State Sanitary Authority be notified each time in advance and grants approval for the discharge of sludge into the stream under the permit issued."

Mr. J. L. Franzen, city manager for Oregon City, and John C. Gearhart, representing Stevens & Koon, consulting engineers of Portland, then appeared before the Authority and presented additional data supporting their request for permission to by-pass the sewage treatment plant during periods of high water level in the Willamette River and for use of the River as a means of discharging digested sludge during the wet season of the year. The State Sanitary Authority's position in this matter was explained both to Mr. Franzen and Mr. Gearhart and it was pointed out to them that a temporary conditional approval of the plan would be granted with the understanding that additional sludge disposal facilities might be required at a later date.

PROJECT PLANS: MOTION by Mr. Hallock; seconded by Mr. Veatch, and carried - that the action of the Secretary and State Sanitary Engineer on sewerage project plans submitted be approved.

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
4/3/46	Coos Bay	Sewer extensions	Not approved
4/4/46	Portland	Preliminary eng'g report re: interceptors and disposal plant	No action taken (referred to members for approval)
4/5/46	Josiah Hall Tract	Sewage disposal	Not approved
4/10/46	Lake Tahkenitch	Sewerage system (Crown-Zellerbach Corp.)	Preliminary approval
4/11/46	Coos Bay	Sewer extensions	Approved
4/11/46	Phoenix	Preliminary report on sewers and disposal	Approved
4/11/46	Detroit	Design data for sewage disposal (U.S.E.D. construction village at Detroit dam site)	Prov. app.
4/11/46	Pendleton	Sewer extensions	Approved
4/26/46	St. Helens	Sewage disposal (Western Insulating Co.)	Approved

ABG759

## Project Plans - continued:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
4/30/46	North Bend	Sewer extensions	Approved
4/30/46	Weston	Cannery waste disposal	Disapproved
5/2/46	Cedar Hills (Washington County)	Sewer construction	Tentative app.
5/29/46	Sandy	Sewers and sewage disposal	Not approved
5/29/46	Manbrin Gardens(Salem)	Sewers and sewage disposal	Preliminary App.
5/29/46	The Dalles	Sewer extensions	Approved
6/4/46	Josephine County	Sewage disposal (Logge Motor Court)	Approved
6/6/46	Dallas	Sewer diversions	Approved

PERSONNEL: MOTION by Mr. Stricklin, seconded by Mr. Veatch, and carried - that the salary of Mr. Kenneth H. Spies, Associate Sanitary Engineer, be increased from \$350 per month to \$375 per month, effective July 1, 1946.

Inasmuch as Mr. Archie H. Rice, Associate Sanitary Engineer, will not be eligible for discharge from the army until August 1, 1946, the secretary was authorized to employ an additional engineer as soon as one could be obtained.

BUDGET: Copies of a proposed budget for 1947-1949 biennium were submitted to the members of the Authority in advance of the meeting for their review; MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that the budget proposed for this period be approved.

U. S. PUBLIC HEALTH SERVICE WATER POLLUTION SURVEY: A letter from Mr. F. E. De Martini, Sanitary Engineer, USPHS, Water Sanitation Investigation Laboratory, Cincinnati, Ohio, was read to the members of the Authority. This letter indicated that appropriations for the proposed water pollution surveys to be conducted by the Public Health Service in

several regions of the United States would probably not be made by the present Congress inasmuch as similar appropriations were set up under H.R. 6024 which is now under consideration by Congress. Mr. De Martini pointed out in his letter, however, that the Willamette Basin had received favorable consideration by the staff at Cincinnati, and should appropriations become available, the Willamette Basin would be recommended for a high priority for such a survey.

The secretary was authorized to keep in touch with this matter and if appropriations became available, to prepare for the chairman's signature a letter to the Surgeon General in which a survey of the Willamette Basin in cooperation with the State Sanitary Authority would be requested. This letter, however, was to include several conditions under which the cooperative survey would be undertaken.

SEWAGE DISPOSAL REGULATIONS: The rules and regulations relating to individual sewage disposal facilities had been reviewed by the members of the Authority in advance of this meeting and it was moved by Mr. Hallock; seconded by Mr. Veatch, and carried - that the regulations relating to the individual sewage disposal facilities be adopted, as per the attached.

NEXT MEETING: The date of the next meeting was set for September 13, 1946, in the offices of the State Board of Health, Portland, Oregon.

There being no further business the members of the Sanitary Authority then moved to the basement auditorium of the Behnke-Walker Building to review the film, "Clean Waters." At the completion of the film the meeting was adjourned at 12:00 noon.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.  
Secretary

ARG 759

## MINUTES OF THE THIRTIETH MEETING

of the

STATE SANITARY AUTHORITY

September 13, 1946

The regular meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:30 A.M., September 13, 1946, in the offices of the State Board of Health, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Messrs. John C. Veatch, B. A. McPhillips, and Chas. E. Stricklin. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineer; Mr. George C. Brewster, Attorney, Redmond, Oregon; and Mr. John W. Cunningham, Consulting Engineer, Portland, Oregon.

DESCHUTES RIVER INVESTIGATIONS: Consideration was given to the conclusions and recommendation contained in the report submitted by the Sanitary Authority's engineers on investigations of alleged pollution of the Deschutes River. The Chairman invited Mr. George C. Brewster, Redmond, Oregon, and Mr. John W. Cunningham to take part in the discussions and to submit any additional data they might have on the subject.

Mr. Brewster stated that he represented the city of Redmond, The Central Oregon Irrigation District, The Crook County Improvement District No. 1, and the Deschutes Reclamation & Irrigation District No. 1, and that in 1943 the city of Bend and the Bend School District proposed to develop a swimming area in the Deschutes River above the diversion points for the Redmond and Irrigation District water supplies. The city of Redmond, together with the Irrigation and Improvement Districts, requested that the city of Bend and the Bend School District abandon plans to establish a swimming area in the river, and further to make arrangements to

35-A

OREGON STATE SANITARY AUTHORITY

REGULATIONS GOVERNING SEWAGE AND WASTE DISPOSAL

Regulation 1. Sanitary Sewage Disposal Facilities Required. All human excreta, sewage, and other household wastes shall be disposed of in properly designed, constructed, and maintained community sewerage systems, individual septic tank systems, cesspools, privies, or by other means approved by the State Board of Health.

No human excreta, kitchen wastes, laundry water, sink water, or toilet wastes shall be allowed to discharge or flow upon the surface of the ground or into any ditch, gutter, street, roadway, or public place, nor shall such wastes discharge onto any private property so as to create a nuisance condition or health hazard.

Regulation 2. Pollution of Water Prohibited. No sewage, household wastes, or industrial or trade wastes shall be discharged into or disposed of in such a manner that access will be gained to any public waters of the state of Oregon unless such waste materials are first treated in a manner approved by the State Sanitary Authority, a division of the State Board of Health.

1. No abandoned or deep well shall be used for the disposal of sewage or as a receptacle for household wastes. No privy vault, cesspool, or septic tank disposal system, unless it be water-tight, shall be located in any water-bearing stratum which is, or may be, used as a source of domestic water supply, or shall be so otherwise located that pollution from the same can enter any domestic water supply.

Regulation 3. Submission of Plans and Specifications Required. Plans and specifications covering the construction of new systems of sewers, sewage or waste disposal, or of modified or extended existing systems from which effluent is to be discharged into any surface or ground water or which is to be used by any number of persons exceeding ten families or fifty persons, shall be submitted to and approved by the State Sanitary Authority before construction thereof may begin. The plans and specifications shall be submitted a sufficient length of time in advance of construction in order that the Authority may direct any changes deemed necessary. Preliminary plans and reports may be submitted in advance of final plans. Approval may be subject to modifications by the Authority upon due notice. Construction shall be according to the approved plans only.

Regulation 4. Disposal of Privy, Cesspool, and Septic Tank Contents. No part of the contents of any privy, cesspool, or septic tank shall be discharged upon the surface of the ground unless subjected to additional treatment in a manner approved by the health officer. Final disposal shall be by incineration, burial, or other means approved by the health officer. No person shall engage in the transportation and disposal of the contents of privies, cesspools, or septic tanks without first obtaining a written permit from the health officer in the county in which the privies, cesspools, or septic tanks are located

and from the health officer in the county in which final disposal of the material will take place. The permit shall designate where and in what manner the disposition of the material shall be carried out. The contents of privies, cesspools, and septic tanks shall be transported in a manner that will not create a nuisance or public health hazard.

Regulation 5. Individual Water-Carried Sewage Disposal Systems. All individual water-carried sewage disposal systems shall comply with the following requirements:

- 1. Design Capacity. The sewers and sewage treatment facilities shall have adequate capacity to properly dispose of the maximum daily sewage flow. If actual flow measurements are not available, the quantity of sewage shall be estimated according to the following table:

TABLE OF DAILY SEWAGE FLOWS

<u>Type of Establishment</u>	<u>Gallons per person per day</u>
Dwellings	50
Schools	15
Trailer Camps	20
Modern motor courts and tourist cottages	40
Industrial and commercial buildings	25
Hospitals and other institutions	100

The population of dwellings, motor courts, and tourist cottages shall be estimated at two persons per sleeping room and of trailer camps at 2-1/2 persons per trailer space.

- 2. House Sewer. The sewer line from the interior plumbing system to the cesspool, septic tank, or community sewer system shall comply with the following requirements:

- a. Location. No sewer shall be within 10 feet of any well, spring, or other source of domestic water supply. All sewers, drains, or parts thereof, which are located between 10 and 50 feet from a well, spring or other source of domestic water supply, shall be constructed of cast-iron soil pipe or cast-iron water pipe, and shall have water-tight lead joints.

Sewers and water lines shall not be laid in the same trench. Parallel water and sewer lines shall be at least 10 feet apart horizontally. Wherever it is necessary for house sewer and water service lines to cross each other, the crossing shall be at approximately a 90° angle and the sewer shall either be located at least 3 feet below the water line or shall be constructed of cast iron soil or water pipe with water-tight lead joints for a distance of 10 feet on both sides of the water line.

- b. Material. Only bell and spigot cast-iron, vitrified clay, or concrete sewer pipe, cement asbestos pipe, bituminized-fiber pipe, or pipe of other material approved by the State Plumbing Inspector shall be used. Extra-heavy cast-iron pipe shall be used for sewers located in roads or driveways with less than three feet of cover.
- c. Sewer Joints. All sewer joints shall be as watertight as possible and shall be protected against the entrance of tree roots wherever necessary. Jute, oakum, or other approved packing shall be used with either lead,

cement mortar, or approved bituminous joint material in all bell and spigot pipe joints.

- d. Minimum Diameter. No pipe less than four inches in diameter shall be used.
- e. Sewer Grade. All sewers shall be laid to an even grade and true alignment. The minimum grades for house sewers shall be 1/4 inch per foot for 4-inch pipe, 1/8 inch per foot for 6-inch pipe, 0.4 foot per 100 feet for 8-inch pipe, and 0.28 foot per 100 feet for 10-inch pipe.
- f. Cleanouts. Manholes or cleanouts shall be installed at every change in alignment in excess of 45° and at every change in grade in excess of 22-1/2°.

3. Septic Tanks. All septic tanks shall comply with the following requirements,

- a. Location. They shall be located at least 50 feet from any well, spring, or other source of domestic water supply, 25 feet from any stream, river, or lake, and 10 feet from any building or property line.
- b. Capacity. Every septic tank shall have a liquid capacity of at least the average volume of sewage flowing into it during a period of 24 hours, but in no case less than 500 gallons. In multi-compartment tanks, the inlet compartment shall have a capacity of not less than 2/3 the total capacity nor less than 500 gallons. Minimum capacities for septic tanks are given in the following table:

MINIMUM CAPACITIES FOR SEPTIC TANKS

Maximum number of persons served						Effective Liquid Capacity of Tank in gallons
Dwellings	Schools	Trailer Camps	Motor Courts	Commercial Buildings	Hospitals, etc.	
6	30	25	12	20		500
8	50	35	18	30		750
12	65	50	25	40		1000
14	80	60	30	50		1200
16	100	75	40	60		1500
24	140	100	50	80	20	2000
	170	130	65	100	25	2500
	200	150	75	120	30	3000
	230	170	85	140	35	3500
	270	200	100	160	40	4000
	300	230	115	180	45	4500
	350	250	125	200	50	5000

- c. Construction. Septic tanks shall be constructed of (1) reinforced concrete, or of (2) not less than 10 gauge iron coated inside and out with asphalt, or of (3) other sound and durable material approved by the State Board of Health.
  - a. The inside length of the single-compartment tank or the inlet compartment of a multi-compartment tank shall be not less than 5 feet. The total inside depth shall be not less than 5 feet and the liquid depth shall be not less than 4 feet.
  - b. The inlet and outlet pipes shall be located at opposite end of the tank and shall be at least 4 inches in diameter. They shall be of cast iron, vitrified

clay, or concrete bell and spigot tee or quarter bend fittings. The inlet shall be at an elevation one to three inches higher than the outlet.

c. Convenient access to the tank for inspection and sludge removal shall be provided by means of a manhole or removable cover. Where the top of the tank is more than 3 feet below the ground surface, a manhole shall be built up within 12 inches of the ground surface.

4. Subsurface Disposal Fields. Subsurface disposal fields shall not be used in heavy clay soil or in areas in which the ground water during any season of the year is within 24 inches of the ground surface.

a. Location. They shall be located at least 100 feet from any well, spring, or other source of domestic water supply, 25 feet from any stream, river, or lake, and 10 feet from a building or property line. Wherever it is necessary for any tile line in a subsurface disposal field to be located within ten feet of a water service line, it shall be constructed with water-tight joints.

b. Distribution Box. A distribution box shall be provided for each disposal field having more than one tile line or more than 100 feet of tile. Each lateral tile line shall be connected separately to the distribution box.

c. Minimum Seepage Area. The amount of bottom trench area required for each disposal field shall be determined by the character of the soil in accordance with the following table:

MINIMUM SEEPAGE AREAS FOR DISPOSAL FIELDS

Character of Soil	Effective Absorption Area (area of bottom of disposal trench) in sq. ft. per 100 gallons of daily sewage flow.
Clean coarse sand or gravel	50*
Clean fine sand	80*
Light loam	100*
Clay with considerable sand or gravel	150*
Clay with small amount of sand or gravel	240*
Heavy clay	Unsuitable

\*Note:- A minimum of 150 square feet of effective absorption area (100 lineal feet of 18-inch trench) shall be provided for each individual swelling unit.

d. Construction. The construction of subsurface disposal fields shall comply with the following requirements:

a. Maximum length of any lateral tile line shall be 100 feet.

b. Minimum width of bottom of trench shall be 18 inches.

c. Maximum depth of seepage trench shall be 36 inches.

d. Maximum grade of tile line shall be 6 inches per 100 feet.

- e. Minimum distance between lateral lines shall be 6 feet.
  - f. Minimum depth of filter material beneath tile shall be 6 inches.
  - g. Minimum total depth of filter material in trench shall be 12 inches.
  - h. Filter material shall be clean crushed stone, gravel, slag, or cinders ranging from 1/2 to 2-1/2 inches in size. The filter material shall be covered with building paper, straw, or similar material before trench is backfilled with earth.
  - i. Tile shall have a minimum diameter of 4 inches and shall be laid with 1/4 inch open joints or be otherwise perforated to permit seepage into the filter material. Open joints shall be protected on top by strips of asphalt-treated building or tar paper.
  - j. Grade boards shall be used beneath all short length drain tile.
  - k. Brick or concrete drop boxes or ells with cemented joints shall be used where necessary to maintain proper grade and cover.
5. Seepage Pits and Cesspools. Seepage pits and cesspools shall be used only in areas approved by the local health department. They shall not be used in limestone areas or in areas where shallow wells are used as a source of domestic water supply.
- a. Location. They shall be located at least 150 feet from a well, spring, or other source of domestic water supply, 25 feet from any stream, river, or lake, and 10 feet from a building or property line.
  - b. Construction. The minimum inside diameter shall be 4 feet and the minimum depth below the inlet shall be 15 feet. The effective absorption area shall penetrate at least 5 feet of clean coarse gravel or equally porous material. The lining shall be of stone, clay brick, building tile, or other material approved by the State Board of Health.

Regulation 6. Non Water-Carried Sewage Disposal Facilities.

1. Earth Pit Privies. The construction and maintenance of earth pit privies shall comply with the following requirements.
- a. Location. They shall be located at least 50 feet from a well, spring, or other source of domestic water supply, 25 feet from any stream, river, or lake, and 10 feet from any property line.
  - b. Construction. The pit shall have a minimum capacity of 50 cubic feet, shall be at least 5 feet deep, and shall be lined with lumber to prevent caving. The pit shall be covered by a building of substantial construction located on either a concrete or a creosote-treated wood sill or foundation. An earth embankment shall be placed around the sill to make it as fly-tight

and rodent-proof as possible from the outside. The floor and riser shall be built fly-tight or wood or concrete. The seat opening shall be covered with a lid, hinged and so constructed that when closed, it will exclude flies from the pit. Vents connected to the pit shall be covered with 16-mesh copper wire screen. The building shall have a tight-fitting door and substantial roof.

- c. Maintenance. The seat covers shall be kept closed during the fly season when the privy is not in use. The contents of a privy shall not be permitted to overflow onto the surface of the ground or be exposed to flies and rodents. When the pit becomes filled to within 18 inches of the ground surface, either the contents shall be removed and disposed of by burial or a new pit shall be excavated and the old one shall be backfilled with at least two feet of earth.
2. Privies with Water-Tight Receptacles. On the watersheds of public water supplies concrete vault privies, pail privies, or chemical toilets shall be used in the place of earth pit privies for the disposal of human excreta. The vaults and receptacles shall be constructed of reinforced concrete or metal and shall be water tight. They shall be maintained in a sanitary condition and the contents shall be disposed of by burial beneath at least one foot of earth in a location where the ground water will not be polluted.

APPROVED AND ADOPTED BY THE STATE BOARD OF HEALTH

APRIL 27, 1946

FILED WITH THE SECRETARY OF STATE MAY 22, 1946.

regular page 36)

MINUTES OF THE THIRTIETH MEETING

of the

STATE SANITARY AUTHORITY

September 13, 1946

The regular meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:30 A.M., September 13, 1946, in the offices of the State Board of Health, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Messrs. John C. Veatch, B. A. McPhillips, and Chas. E. Stricklin. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineer; Mr. George C. Brewster, Attorney, Redmond, Oregon; and Mr. John W. Cunningham, Consulting Engineer, Portland, Oregon.

DESCHUTES RIVER INVESTIGATIONS: Consideration was given to the conclusions and recommendation contained in the report submitted by the Sanitary Authority's engineers on investigations of alleged pollution of the Deschutes River. The Chairman invited Mr. George C. Brewster, Redmond, Oregon, and Mr. John W. Cunningham to take part in the discussions and to submit any additional data they might have on the subject.

Mr. Brewster stated that he represented the city of Redmond, The Central Oregon Irrigation District, The Crook County Improvement District No. 1, and the Deschutes Reclamation and Irrigation District No. 1, and that in 1943 the city of Bend and the Bend School District proposed to develop a swimming area in the Deschutes River above the diversion points for the Redmond and Irrigation District water supplies. The city of Redmond, together with the Irrigation and Improvement Districts, requested that the city of Bend and the Bend School District abandon plans to establish a swimming area in the river, and further to make arrangements to

prevent street washings and storm water from the business district of Bend from entering the stream. An unfavorable response from Bend prompted Mr. Brewster's clients to file suit in the state circuit court against the city of Bend and the Bend School District No. 1.

The petition of the plaintiffs was withdrawn but with the provisos that swimming in the river would not be sponsored by the defendants and that the case would be referred to the Sanitary Authority for final decision, both parties agreeing to abide by the ruling of the Authority. In compliance with the provisos, swimming in the stream was abandoned.

In the meantime, Dr. Rogers, Deschutes County Health Officer, made an investigation of the complaint, but found no serious hazards. Mr. Brewster's clients were dissatisfied with Dr. Roger's findings and requested a Sanitary Authority investigation. The Bend City Council and the Redmond City Council held a joint meeting, however; and, according to Mr. Brewster, the city of Bend agreed to drill wells and discharge street washings into subterranean caverns and further to eliminate pollution of the stream by domestic sewage from individual residences or business establishments along the river in the city.

Mr. Brewster agreed that the facts in the report were true, but that streets in Bend might be flushed more often than reported, and he also questioned the statement that storm water was not a source of pollution.

In answer to Mr. Wendel's question as to whether the city of Bend had installed the wells to provide for disposal of street washings, Mr. Brewster replied that they had not.

Mr. John W. Cunningham, Consulting Engineer, Portland, who was representing the city of Bend, advised the Authority that the city of Bend had a cooperative attitude toward the problem, had stopped swimming

ABG759

in the river, and it was their desire to protect the water supply of its neighbors. Mr. Cunningham pointed out that swimmers and livestock have access to and use the diversion canals outside the city of Bend, and that watercourses are the usual method for the disposal of storm water. He used as an example the Rogue River into which Medford, Ashland, Talent, and Gold Hill discharge storm water, but domestic sewage receives complete treatment before it reaches the stream. The Rogue River is used as a source of water supply by Grants Pass and Gold Hill, Oregon.

Mr. Brewster admitted that control over swimmers and livestock was difficult to obtain and stated that every effort was being made to eliminate swimming in irrigation canals and to prevent livestock from gaining access to them. He further stated that his clients were not too concerned about storm water but were concerned about street washings, and that the irrigation districts were the chief complainants.

Mr. Wendel asked if screening of the street washings was a practical solution to the problem.

Mr. Cunningham admitted that there was a collection of debris in the present storm sewer outfall grates, but this material would not constitute as serious pollution condition as some of the dissolved material in the washings. If screens were installed, dissolved material would not be removed and during periods of heavy rain storms overflows might occur which would permit material to reach the river.

Mr. Brewster mentioned that while the city of Bend had agreed to dispose of street washings in underground caverns, conclusions No. 2 in the report which stated that "the discharge of street and storm water drainage from the city of Bend into the Deschutes River does not constitute an unreasonable use of public waters \* \* \* \* \*" might cause the city of Bend to delay or abandon their plans for disposal of street washings.

Mr. Cunningham offered the information that the city of Bend did plan to proceed with construction of wells for the disposal of street washings as soon as well drillers are available.

A discussion as to the remaining items of the report followed in which it was agreed that the city of Bend should require the Oregon Trail Furniture Shops, Inc., to dispose of their domestic sewage by means of a connection to an adjacent city sewer. Mr. Brewster questioned the recommendation in which the city of Redmond was advised to provide additional water treatment facilities. No serious objection arose to this recommendation, however, when it was learned that even with the removal of street washings from the Deschutes River, the quality of the Redmond water supply would not be materially improved.

Mr. Stricklin added that when places for additional storage in existing reservoirs in the Deschutes Basin are complete, the only flow in the stream during the winter season will be an absolute minimum for domestic use. In view of these circumstances, the discharge of street washings might conceivably result in pollution of the river above the irrigation and domestic water supply intakes.

It was agreed by the members present that the secretary be instructed to prepare for transmission to the city of Bend a letter in which the conclusions and recommendations of the Sanitary Authority would be presented and in which appropriate recommendations for the disposal of street washings would be contained.

INDUSTRIAL WASTE DISPOSAL: Mr. Spies, Associate Sanitary Engineer, reported on his investigation of alleged pollution of the Siuslaw River by the Siuslaw Forest Products Company of Mapleton, Oregon. Inasmuch as logs, butt cuts, slashings, etc., were the chief cause of complaint, and since the use of the stream for the disposal of these materials

ABG759

was considered as a problem for stream navigation authorities, the members did not consider that the matter was one over which they had jurisdiction.

Mr. Spies also reported on his investigation of waste disposal facilities for the Willamette Wood Chemical Company, Springfield, Oregon. The plant management was reported to be awaiting the results of experimental work at Oregon State College before adopting any plans for waste disposal. Letters on the subject of waste disposal having been previously forwarded to the Willamette Wood Chemical Company, no further action was deemed necessary at this time.

Upon receipt of a report that no progress had been made by the Gresham Berry Growers Cooperative in the matter of providing for treatment of corn processing wastes prior to discharge to Johnson Creek, the secretary was authorized to issue a citation for the Manager of the Gresham Berry Growers to appear before the Sanitary Authority at their next meeting unless satisfactory evidence was presented immediately that definite progress has been made in the abatement of the nuisance caused by their pollution of Johnson Creek by wastes from corn processing operations at the cannery.

MUNICIPAL SEWAGE DISPOSAL: The secretary presented to the members a proposed letter of approval to be used for municipal sewage treatment plant and industrial waste disposal plant plans. After a brief review by those present, it was agreed that copies should be forwarded to all members for review and comment before it was officially adopted for use.

In view of complaints relative to the lack of sewage disposal facilities for the city of Salem, Oregon, which had come to the attention of members of the Authority, the secretary was instructed to write the mayor and city council and ascertain what progress was being made with respect to the construction of a sewage treatment plant.

After a discussion of the aspects of sewage disposal facilities for suburban housing projects, it was agreed by all members present that when the installation of septic tanks and seepage trenches or cesspools for residential sewage disposal facilities might result in the pollution of waters of the state, such facilities would not be approved and a community sewer system and treatment plant must be installed.

REPORTS: At the request of the secretary, comments and criticisms on the Summary of Activities and Quarterly Reports were invited. After some discussion it was agreed that reports rendered in the future should include a summary of activities for the period up to and including the last day of the month preceding a regular scheduled meeting.

PROJECT PLANS: Following a review of project plans, a MOTION by Mr. McPhillips, seconded by Mr. Stricklin, and carried - that the action of the State Sanitary Engineer on the following sewerage project plans submitted be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
6/10/46	Lebanon	Battery Separator Plant Sewerage	Not approved
6/14/46	Chiloquin	Sewage Treatment Plant	Not approved
6/15/46	Lebanon	Battery Separator Plant Sewerage	Approved
6/20/46	Stanfield	Sewerage, Preliminary Engineering Report	Approved
6/20/46	Forest Grove	Sewerage, Preliminary Engineering Report	Approved
6/27/46	Sandy	Sewer Plans	Approved
6/27/46	Sandy	Sewage Disposal Plant	Not approved
6/28/46	Chiloquin	Sewage Disposal Plant	Not approved
6/28/46	Washington County (Raleigh School)	Sewerage System	Approved
6/29/46	Junction City	Preliminary Sewer Plan	No action

ABG759

## Plans - continued :

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
7/1/46	Nehalem	Sewer System	Not approved
7/1/46	Wheeler	Sewer System	Not approved
7/1/46	Cedar Mills	Disposal Plant	Not approved
7/1/46	Tillamook	Outfall & Interceptor Sewer	No action
7/1/46	Lebanon	Sewer Extensions	No action
7/2/46	Ontario	Sewer Extensions	Approved
7/5/46	Cedar Mills	Disposal Plant	Approved
7/10/46	Chiloquin	Sewage Treatment Plant	Conditional app.
7/11/46	Sandy	Disposal Plant	Approved
7/11/46	Medford (Bear Creek Orchards)	Sewerage	Approved
7/11/46	Cedar Hills	Preliminary Plans	Approved
7/12/46	Eugene	Interceptor Sewer	Approved
7/13/46	Near Beaverton	Broadmoor Sewers & Plant	Not approved
7/15/46	Redmond	Housing Disposal Plant	Approved
7/17/46	John Day	Sewerage Report	Approved
7/18/46	Cedar Hills	Disposal Plant	Approved
7/23/46	Milwaukie	Sewer Extensions	Approved
7/31/46	Beaverton (Kaiser Housing Project)	Sewer System	No action
8/6/46	Myrtle Creek (Housing Sewer System Project, Fir Mfg. Co.)		Cond. app.
8/9/46	Ontario	Terrace Heights Sewers	Approved
8/13/46	Milton (Housing Project)	Sewerage	Tentative app.
8/13/46	Portland Meadows Race Track	Sewerage	Approved
8/13/46	Merrill	Sewer Extensions	Not approved
8/15/46	Washington County (Broadmoor)	Sewers & Sewage Treatment Plant	Approved

Plans - continued:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
8/15/46	Beaverton (E. P. Cole Tract)	Individual Sewage Systems for 20 houses	Approved
8/15/46	Medford	Interceptor Sewer	Approved
8/15/46	Milton	Industrial Waste Sewer	Approved
8/17/46	Lebanon	Sewer Extensions	Not approved
8/17/46	Albany	Sewer Extensions	Not approved
8/17/46	Foster	Lumber Mill Sewerage	Not approved
8/19/46	Eugene (Glenwood Area)	Sewerage	Prov. app.
8/22/46	Albany	Sewer Extensions	Approved
8/30/46	Corvallis	Lateral Sewer No. 28th St.	Approved

BUDGET: MOTION by Mr. Stricklin, seconded by Mr. McPhillips, carried - that the Chairman and the Secretary be authorized to revise budget estimates in order to adjust them to current expense allowances and proposed civil service salary ranges.

PERSONNEL: MOTION by Mr. McPhillips, seconded by Mr. Veatch, carried - that the Sanitary Authority authorize Mr. Spies to attend the annual meeting of the American Public Health Association in Cleveland, Ohio, November 11 to 15, at Sanitary Authority expense.

NEXT MEETING: The date of the next meeting was set for December 13, at 10:00 A.M. in Portland, Oregon.

There being no further business the meeting was adjourned at 1:00 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.  
Secretary

ABG759

## MINUTES OF THE THIRTY-FIRST MEETING

of the

STATE SANITARY AUTHORITY

December 13, 1946

The regular meeting of the Oregon State Sanitary Authority was called to order by the chairman at 10:00 A.M., December 13, 1946, in the offices of the State Board of Health, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson and Messrs. John C. Veatch and Chas. E. Stricklin, Members. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineer; and T. M. Gerow, Assistant Sanitary Engineer.

MINUTES: - Since the minutes of the June 14 and September 13 meetings had been supplied to the members in advance, the minutes of these meetings were approved as prepared by the secretary without formal reading.

MUNICIPAL SEWAGE TREATMENT:

Salem - The secretary reported that in accordance with the instructions of the Sanitary Authority at its September 13 meeting, a letter had been forwarded to the Mayor and City Council of Salem, Oregon, in which that city was requested to proceed with the construction of an intercepting sewer to abate the immediate nuisance caused by the discharge of untreated sewage into the Willamette River near Salem. It was further reported by the secretary that the city of Salem had employed additional engineering assistance to prepare data for the design of the interceptor sewer and that the city proposed to have plans ready for submission to the Sanitary Authority by March 1947. Inasmuch as the city will undergo a change in local government on January 1, 1947, it was recommended that no formal action be taken at this meeting until the new council and city manager had taken office and had been advised of the necessity for the interceptor sewer construction.

Baker - A letter from Mayor M. McKim of Baker, Oregon, was read in which the Mayor advised the Authority that repairs to the city sewage treatment plant were under way and that improvements would be made in accordance with the recommendations of the Sanitary Authority engineers. Complaints from the local health department and from riparian owners along the receiving stream resulted in an investigation of the maintenance and operation of the sewage treatment plant and the submission of a complete report to the city on the subject.

Prineville - Letters from Mrs. May F. Barney, Mayor, Prineville, and from Mr. R. H. Corey, Consulting Engineer, relative to sewer extensions in the city of Prineville were brought to the attention of the members of the Authority. In an explanation of the cause of the letters, the secretary stated that the city proposed to use six-inch sewer pipe on some extensions to the sanitary sewers, and that in view of the Authority's general policy of requiring eight-inch pipe as a minimum size, the Authority's engineers in the review of plans had not approved the use of the six-inch extensions. It was pointed out that when the system was originally constructed in 1940, the Authority had approved the use of six-inch laterals, and that the city might have some justification for the belief that the use of six-inch laterals would be satisfactory to the Authority at this time.

Mr. Stricklin stated that more definite information should be obtained as to whether the use of the six-inch pipe already installed had been satisfactory before permission to use this size in new extensions should be granted. It was pointed out by Mr. Stricklin that real-estate development in the area surrounding Prineville was progressing rapidly and that ultimately sewage from these areas must be discharged into the Prineville sewer system.

It was Mr. Veatch's opinion that no plans should be approved by the Authority which were not in accordance with sound engineering principles.

Mr. Wendel suggested that if the six-inch pipe were to be permitted in this

ABG759

instance, a letter should be forwarded to the city of Prineville in which the city was advised that the Sanitary Authority definitely recommends and approves the use of eight-inch pipe as the minimum size for sewer construction, but if the city of Prineville chooses to install six-inch pipe, the proper operation of the sewer system would be their own responsibility.

MOTION by Mr. Stricklin, seconded by Mr. Veatch, and carried:- that, inasmuch as six-inch sewer pipe had been used in a portion of the original Prineville sewer system with the approval of the Sanitary Authority, (1) permission be granted for the installation of six-inch pipe for lateral sewers in the proposed extensions to the city of Prineville's sewer system provided, however, that said six-inch pipe be installed only where future extensions will not be required or on dead end lines; (2) the city of Prineville be notified that the Sanitary Authority definitely recommends and approves the installation of eight-inch pipe as the minimum size of pipe for sewers, and if the city of Prineville uses six-inch pipe, they must accept full responsibility for proper operation and maintenance of the sewer system, and if any maintenance problems arise which are due to the use of six-inch pipe, the city must relay the lines with pipes of larger diameter; and (3) the city be further advised that all future plans should be drawn for the use of eight-inch pipe as the minimum size of pipe to be used in the sewer system.

FUTURE PROGRAM: A program to encourage cities to undertake studies of sewage flow and characteristics was outlined to the members of the Authority and the draft of proposed letters to municipalities was submitted for review and approval. MOTION by Mr. Veatch, seconded by Mr. Stricklin, and carried:- that the Authority endorse the program and that the letters prepared by the secretary be forwarded to all communities in which sewage treatment plants are to be constructed.

SEWER AND SEWAGE TREATMENT DESIGN STANDARDS: - It was then proposed by the secretary that the Authority consider the preparation and adoption of minimum standards for the design of sewers and sewage treatment plants, such standards to serve as a guide and be the Authority's minimum requirements for the design of sewers, sewage treatment works, and appurtenant structures. MOTION by Mr. Veatch, seconded by Mr. Stricklin, and carried:- that the Sanitary Authority's engineering staff be directed to prepare minimum standards for sewer and sewage treatment plant design and that these standards be presented for consideration at the next regular meeting. Mr. Stricklin suggested that the standards also be submitted to prominent consultants for their recommendations and advice before the next meeting.

INDUSTRIAL WASTE DISPOSAL:

Gresham Berry Growers Cooperative - The secretary reported that no method had yet been worked out by this Cooperative to dispose of the wastes from corn processing at their plant, although the Cooperative had assured the Sanitary Authority that they would do everything possible to solve the problem. It was Mr. Veatch's belief that strenuous/<sup>efforts</sup> should be made to prevent industries from polluting Johnson Creek, and it was his thought that the Authority should press action against all offenders until solutions are reached whereby wastes are properly treated before being discharged into streams. The secretary was instructed to review the file on this case, confer with Mr. Wendel, and prepare a strong letter to Gresham Berry Growers Cooperative advising them that the solution of their problem was their responsibility, and that it was imperative the wastes be not discharged into Johnson Creek until after they had been properly treated.

POLICIES: The secretary reported that industrial waste investigations had been started on the Columbia Slough, and that the Authority's engineers were about ready to begin work on Willamette Valley industries. The secretary requested suggestions as to method of working with industries pertaining to pollution of

ABG759

streams. It was Mr. Veatch's belief that leeway should be allowed old industries where honest effort to solve water pollution problems is being made, but such industries should be notified that they are expected to solve the problem of waste treatment as soon as they possibly can. It was the opinion of those present that all new industries should be advised that no waste detrimental to the waters of the state shall be permitted to discharge into such waters. Mr. Wendel stated that he also thought old established industries that were making no effort to solve their waste problem should be notified to take prompt action in the matter of waste disposal problems. The secretary was of the opinion that where no progress is being made at all by industries, they should be cited to appear before the Authority.

The secretary stated that industries using lagoons as a means for storage of wastes during the dry season should be required to secure a permit from the Sanitary Authority granting permission to discharge such wastes into a stream and outlining the conditions under which a stream could be used for disposal of wastes. The secretary was instructed to draw up minimum requirements for the discharge of lagoon-stored wastes into the streams and present them for consideration at the next meeting.

INTERSTATE WATER POLLUTION AGREEMENTS: A communication was presented from the Washington Pollution Control Commission in which it was suggested that the states of Washington and Oregon through their respective water pollution control agencies meet and arrive at some satisfactory standard of purity for the Columbia River. The engineering staff was authorized to meet with technical personnel from the Washington Pollution Control Commission and draw up standards for presentation to the Oregon Sanitary Authority at their next meeting. The secretary was also directed to communicate with the states of Idaho and California on the matter of standards of purity for interstate streams.

FEDERAL LEGISLATION: The question was raised as to whether the Authority should take active interest in federal legislation pertaining to stream pollution. A preliminary draft of a bill presented by the Conference of State Sanitary Engineers to the Association of State and Territorial Health Officers, November 22, 1946, for filing with the 80th Congress, was presented to the Authority with the statement that copies of this draft would be sent to each member of the Authority before the next meeting. It was the belief of those present that the Authority should give serious thought to all such bills so that appropriate action could be taken by the Authority relative to lending support to water pollution control legislation believed to be in the best interest of the state.

BUDGET 1947-1949: The request for appropriations for the 1947-1949 biennium as revised by the Budget Director was reviewed and was considered satisfactory by members of the Authority.

PROJECT PLANS: MOTION by Mr. Stricklin, seconded by Mr. Veatch, and carried:- that the action of the State Sanitary Engineer on the following project plans be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
Sept. 6	Eugene (Colin Kelly Jr. High School)	Sewerage	Approved
Sept. 6	Eugene	Sewer Extensions	Approved
Sept. 6	Merrill	Sewer Extensions	No action
Sept. 6	Merrill	Disposal Plant Additions	Approved
Sept. 7	Gladstone	Engineering Report on Sewage Disposal	No action
Sept. 16	Dorena	Sewerage for Dam Site	Not approved
Sept. 16	Milton	Sewer System	Approved
Sept. 19	Albany	Sewer Extensions	Approved
Sept. 19	Myrtle Creek (83-unit Housing Project)	Revised Sewer System	Returned for correction

Oct.

ABG759

PROJECT PLANS - continued

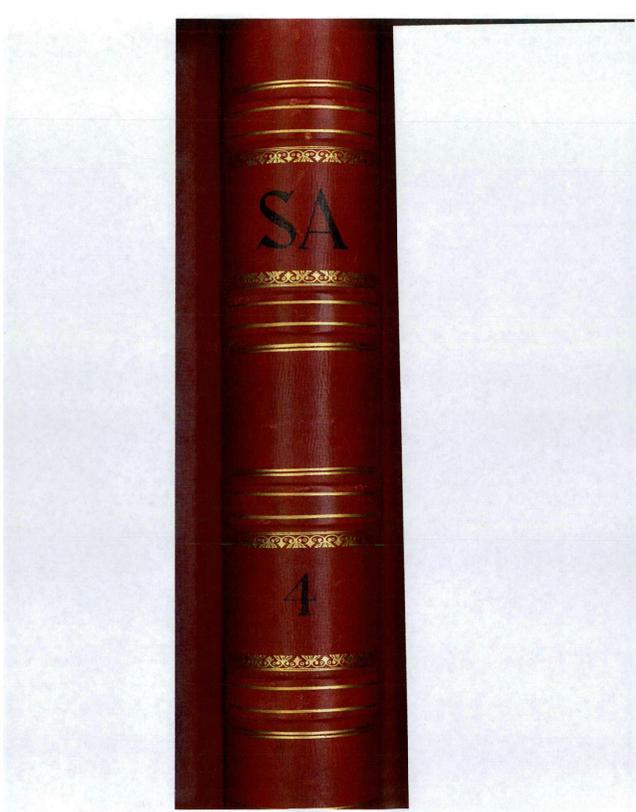

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
Sept. 23	Milton	Sewage Disposal Plant	Approved
Oct. 2	Myrtle Creek (Fir Mfg. Co.)	Sewer System	Approved
Oct. 2	Dorena (Dam Site)	Sewerage	Prov. approval
Oct. 7	Sweet Home	Sewers & Sewage Disp.	Approved
Oct. 14	Ontario	Sewer Extensions	Approved
Oct. 17	Mapleton (FPHA Project)	Sewage Plant Additions	Not approved
Oct. 17	Grande Ronde " "	" " "	" "
Oct. 28	Nyssa (Idaho-Oregon Rendering Co.)	Industrial Waste Disposal	No Action
Oct. 29	Mapleton (FPHA Project)	Sewage Plant Additions	Approved
Nov. 6	The Dalles	Sewer Extensions	Approved
Nov. 6	Prineville	Sewer Extensions and Pumping Stations	Not approved
Nov. 22	Prineville	Sewer Extensions	Prov. Approval
Nov. 20	Albany	Sewer Extensions	Approved
Nov. 30	Multnomah County (Vanguard Cannery)	Sewage & Industrial Waste	Approved

NEXT MEETING: Date for the next meeting was set for March 21, 1947 at 10:00 AM, in the offices of the State Board of Health, Portland, Oregon.

There being no further business, the meeting adjourned at 12:15 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.,  
Secretary

Sanitary Act  
1900 - 1905

**FRONT**

installed it will be necessary for the city to obtain additional property at the present plant sites and that steps have already been taken to obtain such property by condemnation proceedings. He stated that although no plans and specifications have yet been prepared by the city's engineers and a bond issue will probably be required for financing the proposed project, the city should be able to complete construction by 1962 in conformance with the schedule proposed by the Sanitary Authority.

City of Oregon City:

Mr. Alden Miller, city attorney, stated that the primary treatment plant now in use by the city of Oregon City can be converted into a secondary plant, that there is no problem of land but that there is a problem of money or how the project is to be financed. He stated further that conformance to the proposed time schedule would be a matter for the voters to decide because a bond issue will be required. Mr. C. R. Strohmeyer, city manager, then stated that the city at the present time is in the process of having plans prepared by Stevens and Thompson, consulting engineers, for extensive additions to the existing sewage collection system. The estimated cost of this project is approximately \$500,000. Plans for one-half of this project are to be completed by October 1, 1960, and the plans for the remainder are expected to be finished within another 90 days. Along with this project will be interceptor sewers and a sewage lift station which are to be financed by a general obligation bond issue. Mr. Strohmeyer reported further that much of their present sewage collection system contains combined storm and sanitary sewers and as a consequence a study should be made for a separate storm sewer system so that additions to the existing sewage treatment plant can be properly designed with capacity being based on handling only sanitary sewage. He admitted that no engineering work had yet been started on either the proposed storm sewer system or additions to the treatment plant.

IAA357

In response to questioning by the Authority members Mr. Strohmeier indicated that the city council could probably commit itself to a study of storm sewers and plant improvements within the next 90 to 120 days or by January 15, 1961. Mr. Marvin W. Runyan, consulting engineer, stated that it would take about six months to study the storm sewer needs before plans for the treatment plant could be completed.

Mr. McPhillips expressed the opinion that the city of Oregon City should be required to submit by December 15 a definite and satisfactory time schedule for carrying out its project. Mr. Strohmeier replied that he thought the city could present such a schedule to the Authority by that time.

Marylhurst:

Mr. W. J. Dorner, consulting engineer, stated that he had been requested by the Society of the Sisters of the Holy Names to represent them at this hearing but that he had not as yet been retained to prepare any plans for additions to the present primary sewage treatment works which serve the Christy Home, the College and the Convent at Marylhurst located on the west side of the Willamette River in Clackamas County. He stated that the present plant was built in 1955 and was designed to serve an ultimate population of 1100.

The present population being served by these facilities is approximately 600. A new residence hall for 150 students is now being built. Mr. Dorner stated that because it is a non-profit organization the Society has to depend on special funds to cover its budget.

Mr. McPhillips expressed the opinion that Marylhurst should be required to conform to the same deadline as the other communities and should be required to submit a proposed program before December 15, 1960.

City of Oswego:

Mayor Lee Stidd and City Administrator G. D. Gleason were spokesmen for the city of Oswego.

IAA357

Mayor Stidd commended the Authority on the work it has done in abating pollution of the Willamette River system and stated that the city of Oswego wishes to cooperate. He presented a report dated September 20, 1960, signed by Mr. W. J. Dorner, consulting engineer, containing estimated costs and a time schedule for the installation of secondary treatment units for the city of Oswego. According to the report by Mr. Dorner the city should be able to comply with the time schedule proposed by the Sanitary Authority. Mr. Stidd then discussed the possibility of connecting to the proposed Tri-County sewerage system. This, however, would probably require additional time. He stated that Oswego's present sewage plant could provide primary treatment for the city's sewage and that the effluent could be piped to the Tri-County plant for secondary treatment prior to being discharged into the Willamette River. He stated further that the city would like to be able to give serious consideration to this possibility inasmuch as the main trunk sewer of the Tri-County system will ultimately be constructed through the center of Oswego Lake and adjacent to the present Oswego sewage treatment plant. Mayor Stidd asked that the city be given an additional six months in view of this possibility.

Multnomah County Commissioner M. James Gleason who was also present at the hearing then reviewed briefly the present status of the so-called Tri-County master trunk sewer system. He reported that construction has already been started on the first phase of the project in the upper Fanno Creek basin, that contracts have been negotiated by Multnomah County with the West Slope and Raleighwood Sanitary Districts and that negotiations are currently under way for a contract with the city of Beaverton. He stated that it is proposed to request the next Legislative Assembly to amend the present laws so as to permit revenue type financing without voter approval.

Willamette View Manor:

Mr. Paul Biggs, attorney, as representative for the Willamette View Manor stated that it is the intention of said corporation to connect to the sewer system and secondary sewage treatment plant which are now being constructed by the Oak Lodge Sanitary District of Clackamas County. As soon as this system is built and connection can be made to it the primary sewage treatment works now serving Willamette View Manor will be abandoned. The Oak Lodge system is expected to be in operation early in 1961 and therefore Mr. Biggs reported that Willamette View Manor would have no difficulty in complying with the time schedule proposed by the Authority.

City of Milwaukie:

Mr. Earl S. Burdict, former city manager, presented the following statement on behalf of Earl M. Clay, Mayor of the city of Milwaukie:

Office of  
Mayor

CITY OF MILWAUKIE  
City Hall - 926 Main Street  
Milwaukie, Oregon

September 20, 1960

Oregon State Sanitary Authority  
State Office Building  
Portland, Oregon

Re: Milwaukie, Oregon  
Sewage Treatment

Gentlemen:

On behalf of the City of Milwaukie we are pleased to present the following report on progress which the City is making in connection with the treatment and disposal of its sewage.

In 1951 the City of Milwaukie placed in operation an interceptor sewer and a primary sewage treatment plant designed to serve a population of 8000 persons. Since the City of Milwaukie had at that time a number of combined sewers and a considerable amount of infiltration at various points in the system it was recognized that at times the plant would be overloaded and some sewage would have to be diverted to Willamette River.

According to the 1960 census the population of Milwaukie has now reached more than 9000 and it is anticipated that annexations will continue to increase this figure. For some time the City has recognized that expansion would be required to the sewage treatment plant, and that in order to conserve capacity in the plant corrective measures should be taken

to reduce the storm run-off and infiltration to the sewage collection system. The importance of reducing the flow to the plant became even more significant when consideration was given to converting the plant from a primary to a secondary type of plant . In the summer of 1959 preliminary estimates of the cost of modifications to the sewage treatment plant were made and upon retirement of the bonds for construction of the interceptor sewer and the primary treatment plant \$215,000 of new bonds were voted in October 1959 to enable improvements to the sewerage system.

Plans and specifications were prepared and in April 1960 a contract was awarded to P. S. Lord Contractors in the amount of \$138,948 to construct storm sewers in the downtown area so that separation of the storm water and sanitary sewage might be accomplished, thereby reducing the hydraulic load on the sewage treatment plant. Also, over \$6,000 has recently been spent on corrective measures to the existing sewage collection system to eliminate infiltration.

Preliminary plans for expanding the sewage treatment plant to provide for secondary units have been prepared by Stevens and Thompson, Consulting Engineers, and an application was submitted in June 1960 for federal aid funds in the amount of \$44,310 to assist in construction of the proposed facilities. Due to the limited funds available under the federal aid program the City has not as yet received an offer of funds for the 1960-1961 fiscal year. However, there is a possibility that if the funds are not all expended the City may yet receive a portion of these funds.

The storm sewer project is now about 80% complete and it is anticipated that during this winter it will be possible to determine how much of the flow to the treatment plant has been eliminated by this installation and the corrective work to reduce infiltration that has been done so far. Once it has been determined to what level the flow to the plant may be reduced it will be possible for the City's Consulting Engineers to economically design for the anticipated flow. It is contemplated that the design work may be accomplished on plant improvements so that bids could be called in 1961 provided the federal aid funds are made available.

The City of Milwaukee feels that they have constructively planned toward the needed improvements to their sewage disposal system by arranging financing and initiating steps to improve the collection system so that secondary treatment may be economically accomplished.

Respectfully submitted,

Earl M. Clay, Mayor  
City of Milwaukee

There being no other persons present who wished to be heard regarding this matter the meeting was recessed at 12:20 p.m.

IAA357

Following the noon recess the hearing was re-convened by Chairman Wendel at 2:30 p.m.

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher and carried, that based on the testimony and evidence submitted Mr. Quesseth prepare appropriate findings of fact and that the following order be adopted and entered:

1. That with the exception of the city of Salem and the community of Manbrin Gardens the following dates be established for compliance with the requirement of the Sanitary Authority that secondary treatment and effective chlorination, or equivalent, be provided for all domestic and municipal sewage effluents being discharged into the lower Willamette River:
  - (a) Completion of final plans and specifications on or before July 1, 1961.
  - (b) Completion of fiscal program on or before July 1, 1961.
  - (c) Completion of construction on or before July 1, 1962.
2. That for the city of Salem and the community of Manbrin Gardens the following dates be established for compliance with the requirement of the Sanitary Authority that effective chlorination, or equivalent, be provided for all sewage effluents from said city and community:
  - (a) Completion of final plans and specifications on or before February 1, 1962.
  - (b) Completion of fiscal program on or before August 16, 1962.
  - (c) Completion of construction on or before December 16, 1963.
3. That each city and community cited to appear at this hearing submit to this Authority on or before December 15, 1960, and at intervals of six months thereafter until construction of the required sewage treatment works has been completed a report of the progress made in the preparation of plans and specifications, the development of a fiscal program, and actual construction.

- 4. That the secretary of this Authority mail or serve a certified true copy of this order together with the findings of fact pertaining to said matter upon the duly authorized representatives of the aforementioned cities and communities.

Following the approval of the above motion Mr. Stanley, on behalf of the Authority, made the following statement of policy.

"This Authority in no way implies that it believes the primary pollution control program has been completed everywhere in the state. It would be a mistake for any community which has not yet taken any action to curb its pollution to assume that the Sanitary Authority's attention is now directed exclusively to improvement of existing treatment facilities. We want to make it very plain that our goal was and still is restoration of all our waterways to the cleanest possible condition. This means we are going to continue to keep after those major cities and industries which already have done part of the job, until they no longer are sources of pollution. But at the same time we intend to vigorously go after those offenders who have not yet seen fit to do their fair share of the clean-up job. Specifically we have in mind such communities as Waverly Heights, Dunthorpe and Riverwood. Either they must voluntarily take prompt action, or the Sanitary Authority will have no choice but to ask the Attorney General to seek compliance through the courts."

The following additional statement was made by Mr. McPhillips:

"We might also mention that this means ALL offenders, and that includes occupants of houseboats. There is a good-sized community made up solely of houseboat residents in the Columbia and Willamette Rivers near Portland alone, and the cumulative pollution is considerable. Means are available to dispose of these wastes without danger to the rivers or the people who use them for recreation or livelihood. Houseboat occupants are going to have to install

IAA357

8

these devices, just as people living in rural unsewered communities have to install septic tank or cesspool systems. It goes without saying that we hope this will be done voluntarily, but voluntarily or through legal action it IS going to have to be done, and done promptly."

WASCO COUNTY FRUIT GROWERS LEAGUE

Mr. Don Bailey, representative of the Wasco County and Produce Fruit League provided the Authority members with a copy of Oregon State College Agricultural Experiment Station report of "Comparison of Fluorine Levels in Crops Before and After Aluminum Factory Operations in The Dalles" and read the following statement on behalf of the League:

"We are a group of farmers from The Dalles area and are appearing here today as a special committee from the Wasco County Fruit & Produce League, an organization of about 250 fruit growers in Wasco County. This organization has recently begun an extensive effort through five special committees to raise funds and to take any action that appears necessary to stop the great damage being done to our horticultural industry near The Dalles.

In late July 1958 Harvey Aluminum Company began production at their plant at The Dalles. The plant location is shown on a map on page 3 of the Oregon State College Miscellaneous Paper 95 published August 1960. Oregon State College showed great forethought in making this study since within a 6 mile radius of this plant fruit crops with an annual value of about \$3,000,000 are raised. Most of this value is in sweet cherries. Other crops are apricots, peaches, prunes and grapes.

During the 1959 season spotty fluoride damage symptoms appeared on peaches and fluoride leaf burn on some apricots and prune leaves - refer page 6 Oregon State College paper 95. A great increase occurred in the fluoride content of affected leaves and foliage throughout the sample area. This increase averaged about ten times the previous level as per summary on page 27 but in some cases was twenty or thirty times the previous level. In 1960 the analyses

have not as yet been run on the leaf and fruit samples and are not shown in the above mentioned report. However, the evidence of damage was much more wide spread than in 1959. Leaf burn in some areas was very severe with some young apricot trees appearing to be killed. The fruit sizes of apricots and peaches was below normal and the crop tonnage and quality was reduced in the affected area.

In the publication from the American Society for Horticultural Science, Vol. 74, 1959 is an article by Mr. Nels Benson, Washington State University, containing some valuable data on damage by fluoride emission to peaches. On page 188, Table 1, he shows that experimental application of fluorides in increasing amounts caused more and more abnormal fruits till at higher levels trees were defoliated and the fruit caused to drop off.

The 1960 crop of sweet cherries at The Dalles appears to have been greatly reduced by fluoride damage. The crop of sweet cherries in the area near the plant was several thousand tons below normal with an apparent loss of one to two million dollars in value. The crop reduction pattern on sweet cherries coincides with the fluoride levels found in tests made by Oregon State College in 1959. Crops of only 25% of normal or less were grown near the Aluminum Plant and crops increased to normal or above normal production several miles distant from the plant.

To our knowledge no public tests have been made at the Harvey Aluminum Plant of fluoride emission during 1959 or 1960, although we understand periodic testing was a requirement set up by this State Sanitary Authority when the plant began operation in 1958. We also understand that tests were scheduled for August of 1960 but it seems that the Authority was unable to get their samples.

The fruit growers of Wasco County are very much concerned as to whether fume control equipment in the Harvey plant has been fully and properly operated,

IAA357

especially during the past year. We are also greatly concerned with whether adequate control of fluorine emission is to be practiced in the future. The Wasco County Fruit & Produce League on its part plans to provide financial assistance to Oregon State College for future testing and horticultural work on fluorine damage. If necessary we will also have further testing done by private laboratories.

We offer our cooperation to the Oregon State Sanitary Authority in helping to solve this most serious problem and specifically request the Authority to establish the facts of the problem, to assume jurisdiction, and to provide adequate protection to the end that the threatened destruction of the Horticultural industry in Wasco County may be avoided. Ours is not a problem of merely an objectionable odor or nuisance. We are faced with either having fluoride emission controlled or suffering loss of a multi-million dollar fruit industry.

We reserve the right to request a formal hearing at a later date after we have had an opportunity to study the data which we understand Harvey Aluminum has just released on fluorine emission at The Dalles Plant."

The Chairman asked Mr. Bailey if this published report represented the views of Oregon State College.

Mr. Bailey replied that it was a report from Oregon State College. He pointed out that Dr. O. C. Compton, one of the authors of the publication was at the meeting today and could answer questions concerning the published report. Mr. E. C. Harms stated that he was very interested in the college report and that after the members had time to review the information there may be some questions. The Chairman asked if the Authority's staff had been collecting samples in The Dalles vicinity.

Mr. Bailey said that he was not sure but understood they have had no measurements until very recently.

Mr. Hatchard reported that probably Mr. Bailey was referring to the most recent

series of samples; that the Air Pollution Control section and Harvey Aluminum have completed separate measurements; that the Authority's staff had started collecting air samples in 1956 and there have been over 900 air samples analyzed from several stations in the area. He reported that the most recent series have been collected at a station 1/4 mile east of the aluminum plant.

He stated that nearly all of the 900 air samples showed fluoride concentration within normal background values of a trace to 3 parts per billion; however, the samples collected from August 29, to September 6, showed elevated fluoride concentrations.

Mr. Bailey offered the explanation that he was referring to stack test sampling measurements only.

The Chairman stated that since no one else wanted to be heard, the Authority would move on to the next item.

CONSIDERATION OF PLANS FOR FUME CONTROLS - Harvey Aluminum Company.

The Chairman invited Mr. Claude Cook, representative Harvey Aluminum, to present any information he might wish to offer.

Mr. Cook stated he wanted to clear the point regarding their compliance with the Authority's request for stack sampling data. He stated that it has been the impression of the Fruit Growers League, based on information obtained from the Air Pollution Control staff, that Harvey Aluminum had never previously submitted stack sampling data. He stated that he believed Mr. Hatchard could confirm that data was submitted for tests made in July 1959; also that additional tests were run on periodic basis.

Mr. Cook said that last week Harvey Aluminum company representatives submitted further data on tests that were made in August 1960. Mr. Cook stated that Mr. Donald Bailey and 3 members of the Fruit Growers League Committee made a plant tour on 9-20-60 and observed improvements being made to the new pot line

IA 357

and other improvements being applied to the existing plant. He added that in a meeting following the tour the Growers and Harvey Aluminum agreed to exchange data and after this information is studied it was proposed to make the presentation to the Fruit Growers next week.

Mr. Cook stated that he thought the procedure was to solve a mutual problem; that Harvey Aluminum was spending several hundred thousand dollars to accomplish this end and will take all necessary actions to have a satisfactory operating business.

The Chairman stated that the recommendation adopted by the Authority at the 7-14-60 meeting regarding the fume controls to serve the 25% expansion of the aluminum production from 240 to 300 cell units were as follows:

"During the July 14, 1960 meeting the Authority members adopted recommendations regarding the review of plans and specifications for fume controls to serve the 25% expansion of the aluminum production from 240 to 300 cell units as follows, that:

1. The company proceed with stack sampling to the extent determined by the Authority staff at the earliest possible date and furnish the Authority monthly reports of its findings.
2. The company conduct in-plant area fluoride monitoring to the extent determined by the Authority staff, and furnish the Authority with monthly reports of its findings.
3. That approval for further plant expansion be deferred until it is established that fluoride emission controls for existing production facilities are adequate."

Mr. Hatchard stated the staff had received one report on July 19, 1959 and another on September 19, 1960 for stack sampling tests made on 7-12-60.

The Chairman asked Mr. Cook why such lapse of time had occurred.

Mr. Cook replied that considerable computation was involved; that this was a very

complicated procedure and part of this information had been held up in Torrance, California, company's headquarters. Mr. Cook admitted that this time period was a little longer than normally required.

The Chairman asked if any stack samples had been collected since 7-12-60.

Mr. Cook replied that two additional stack measurements were made.

The Chairman asked how much time would be needed to complete the report on these samples.

Mr. Cook stated that normally about 30 days.

The Chairman asked Mr. Hatchard if the staff had notified Harvey regarding the extent of in-plant testing required by recommendation #2 adopted at the 7-14-1960 meeting.

Mr. Hatchard replied that the staff had conferred with Dr. C. A. Rochon, Chief Chemist, Harvey Aluminum and developed an initial plan for sampling and that a letter dated 7-27-60 had been sent to Harvey Aluminum relative to the proposed plan. He reported that the staff in following the matter up had subsequently learned that the company was reluctant to proceed because of technical problems.

Mr. Cook stated that the in-plant sampling plan was not accepted by experts in the field; that erroneous data may be produced; however, the matter was considered further and it was his understanding that this requirement would be handled as an operational condition rather than a plan and specification requirement.

The Chairman requested Mr. Hatchard to present the staff report.

Mr. Hatchard stated that on July 26, 1960, the Air Pollution Control staff conferred with Dr. C. A. Rochon, Chief Chemist, Harvey Aluminum Company mill, The Dalles, regarding recommendations 1 and 2. An initial plan for beginning the measurements of fluoride concentrations in the space ventilation discharge was developed. The start of the in-plant sampling awaited notification from Dr. Rochon. In a letter dated 7-27-60 the Authority's staff requested stack sampling data for monthly measurement of 2 scrubber tower effluent concentrations of dust, total fluorides, sulfur dioxide and sulfur trioxide. On July 26, the plans and specifications for the 60 cell

IAA357

addition were also discussed with Dr. Rochon and Mr. R. Pearce, Fluor Products Co. In a letter of July 29, 1960 to Harvey Aluminum Co. the staff acknowledge receipt of the plans and stated no additional recommendations could be presented until the stack sampling data and the space ventilation information was available. The staff telephoned Dr. Rochon on August 5th and 17th, to determine if the sampling date could be arranged. The staff was notified that Mr. Elliott, Attorney for Harvey Aluminum, would be contacting the Authority regarding a conference to consider the matter further.

A conference was arranged at Mr. Elliott's request with Authority members Wendel, Harms and the Authority's staff. After considerable discussion it was established that Harvey Aluminum objected to the recommendation #2 concerning the in-plant area fluoride monitoring from the standpoint that there was no agreement concerning methods of measurement and evaluation.

The Authority's staff emphasized the importance of evaluating how much fluoride was emitted from this source. However, it was agreed that the matter would be handled as an operational requirement instead of a condition regarding the plans for the expansion project. It was also decided at this meeting that the requested stack sampling data and the revised plans and specifications would be considered at a subsequent conference.

On September 19, a conference with representatives of Harvey Aluminum Company and Fluor Products Company was held in Portland. A stack sampling report of measurements made on 7-12-60, for the effluent from towers 3N and 3S was submitted. The data presented did not include the dust emissions and concentrations of sulfur compounds. The revised plans and specifications for the 60 cell addition were also received and discussed. The fluoride concentrations found in 20 samples collected at a station 1/4 mile east of the Harvey mill during the period 8-29-60 to 9-6-60 were discussed. The maximum concentration found was 96.4 ppb, minimum 7.1 which averaged 26.7.

STAFF RECOMMENDATIONS:

The Air Pollution Control staff presents recommendations based upon the review of the revised plans and specifications, stack sampling data and the area fluoride concentrations for consideration as follows, that:

1. The Harvey Aluminum Company provide facilities for the 60 cell addition that remove at least 99% of the total fluoride entering the humidifier part of the control system.

2. The efficiency of the existing 16 scrubber towers serving the 240 cells be increased to provide removal of at least 99% of the total fluoride entering the humidifier part of the control system.

3. Additional improvements shall be made in the existing 240 cell collection system and control units as rapidly as possible. (These improvements include installation of the improved cell skirt enclosure, twin fume burners, larger motor size in the collection system and installation of Carpenter #20 stainless steel spray nozzles in the humidifier and tower scrubber.)

4. The Harvey Aluminum Company proceed as rapidly as possible with the measurements of fluoride concentrations present in the space ventilation discharge into the atmosphere and that continuous measurements of fluoride emissions be made in the stacks of fume controls and reports submitted to the Authority monthly. Mr. Harms asked if the fluorine concentrations reported were on a dry weight basis. Mr. Hatchard stated that standard Smith-Greenburg Impinger was used to collect the samples during continuous 6 hour periods and that the laboratory analysis method was widely used; that the fluoride concentration found was expressed as parts per billion fluoride and that the fluoride contaminants could be a combination of gaseous and fine particulate matter.

The Chairman asked if anyone else wished to be heard.

Mr. Walter Erickson stated that his committee of the Fruit Growers League dealt with air temperature and the weather and that he questioned the validity of reporting an

average fluoride concentration of 26.7 ppb found in the most recent series of samples since the wind direction from the aluminum plant to the sample station was very important. He stated the staff would obtain more accurate results by collecting consecutive samples and following the smoke around whichever direction it was drifting. He emphasized that the maximum fluoride concentration found should be the basis for the Authority's staff evaluation of the total discharge.

Mr. Hatchard stated that The Dalles is a very difficult location in which to collect samples because of the unusual weather conditions and that a total of 8 sampling stations had been used to measure the fluoride concentrations during typical weather conditions. Mr. Hatchard added that the staff was concerned mostly with the samples collected when the wind was directly from the source to the sample station. He explained that the most recent stations were located where the concern of the ranch owner is great and the fluoride concentrations of the foliage are the highest values found in the Oregon State College report. Mr. Hatchard stated that Mr. Erickson's statement regarding the average fluoride concentrations was sound since 12 samples of the series were still being analyzed in the laboratory and the values probably would change the average concentration.

The Chairman then asked if it was that maximum fluoride concentration caused the greatest concern, and called on Dr. O. C. Compton, Assoc. Horticulturist, Oregon State College Agricultural Experiment Station, for his comment.

Dr. Compton stated he would be more concerned with both the concentration and the time duration; and that a lower concentration over a long period of time would be much more damaging than high concentrations for short periods of time.

Mr. Bailey stated that he was pleased with what Harvey Aluminum was now doing to control the reduction cells; but that it was also his impression that all the fumes produced in the cells were not getting into the scrubbers.

The Chairman reminded him that the staff was also discussing the inplant emissions

which were about 10% of the total fumes according to Harvey Aluminum Company representatives.

Mr. Bailey asked if it was true that the staff had no measurements of the fluoride concentration in the space ventilation.

Mr. Hatchard replied that was correct and that the measurements should be completed as rapidly as possible.

Mr. Stanley asked if the measurements showed excessive emissions from the ventilation system, then were control methods available.

Mr. Cook stated he felt Harvey Aluminum now has the problem conquered; that they were working with their own engineers, Fluor Corporation and others and that if an excessive amount of fluoride not going into the collector system was found then something will be done about it. Mr. Cook stated that their contract with Fluor Corporation was for a 95% removal efficiency and that some stack tests have shown fluoride removal over 99% but Harvey Aluminum does not think it practicable to require 99% removal.

Mr. Bailey stated that he thought the request for measurements of the total emission was reasonable and that so far this data has not been available.

Mr. Hatchard stated that the question of routine stack sampling tests by Harvey Aluminum had been raised and that this matter was one of the conditions included in the Authority's conditional approval of the fume disposal system serving the original mill facilities. He read the following letter dated 4-16-58 from the Authority to Lawrence H. Harvey, Executive Vice President, Harvey Aluminum, Torrance, California.

"The plans and specifications describing the fume disposal system to serve your company's aluminum reduction mill in The Dalles were considered at the April 10, meeting of the Air Pollution Authority. After considering reports from Mr. Rene Legault and its staff the Authority decided to grant conditional approval providing your company agrees to:

1. Comply with the discharge standards in Chapter V of the Air Pollution Authority's regulations.

IAA357

2. Make representative stack sampling tests and analyses periodically and submit the data to the Authority.
3. Control any discharge into the atmosphere which is creating public nuisance conditions as provided in Section 449.730 Oregon Revised Laws.

Before the plant is in production our staff will confer with your representatives in The Dalles regarding the stack sampling information and area sampling by the Authority's staff.

Your cooperation in submitting the plans and specifications is appreciated."

Very truly yours,

CURTISS M. EVERTS, Secretary  
Oregon State Air Pollution Authority

Mr. Hatchard stated that the staff had conferred with Harvey representatives to urge stack sampling on several occasions and had followed up with several letter requests. He reported that only 2 stack tests have been received since the plant started operating in July 1958. Mr. Hatchard stated that a better approach would have been to have submitted the periodic stack sampling reports; then when the plant expansion project was being considered, this data could have been available for evaluation and that the staff's recommendation this spring would have included the 99% removal efficiency for fluorides. Mr. Hatchard stated that the technical and economic aspects involved with raising the fluoride removal from 95% to 99% was not a small matter. He stated that the sense of the staff recommendation was that the fluoride concentration in the mill emissions should be reduced to the lowest value possible.

Mr. Stanley replied that he could get some perspective of the situation if he could get a figure representing the 1959 fume control progress. He asked what the removal efficiency of fluoride was when the alleged damage was occurring.

Mr. Hatchard explained that the <sup>stack</sup> sampling report submitted by Harvey Aluminum in July 1959 showed a 95% removal efficiency.

Mr. Stanley asked if the only improvement needed was to increase the fluoride removal from 95% to 99%.

Mr. Hatchard replied that there was also the need for better collection of the fumes and vapors at the reduction cells to reduce the fluoride in the space

ventilation discharged to the atmosphere.

The Chairman stated that only one stack sampling test had been submitted since the 7-14-60 meeting and asked why the staff had not been getting monthly reports.

Mr. Hatchard stated the monthly testing was specified in a letter of 7-27-60 and that sulfur dioxide and sulfur trioxide concentrations were also requested.

Mr. Cook explained what was now being accomplished on the new aluminum reduction cell line and the existing facilities also. He reported that a flared skirt enclosure and an additional burner was being installed on each cell; that the fan capacity had been increased from 40 hp to 60 hp, etc. Mr. Cook stated that the point he was trying to make was that the actual fluoride removal efficiency might exceed 99% without any additional improvements. He stated that the Authority may be now imposing a condition on Harvey Aluminum that was very difficult to perform; that the 1% allowable fluoride discharge was very small and the cost would be fanastic. Mr. Cook stated that the new improved system would do the desired job.

The Chairman asked if Harvey did not want to conduct in-plant fluoride monitoring then was Mr. Cook also asking a waiver of the recommendation #1 and # 2.

Mr. Cook stated that Harvey Aluminum was proceeding with recommendation #3 and the rest of the work was proceeding rapidly but that they still had to deliberate over recommendation #4 and come up with a feasible method for executing it.

Mr. Cook stated that Harvey Aluminum plans to have the new line operating in February 1961.

The Chairman asked if this included the improvements to the old cell lines.

Mr. Cook stated that one cell building now had the double burner with fans already installed; that the other 3 buildings have the 60 hp fans and that other units were being added every day. Mr. Cook added that by March or April 1961 the work will be completed.

Mr. Harms stated to the chairman that his understanding of Harvey Aluminum's

IAA357

request was not that recommendation #1 and #2 be waived but the percentage for fluoride removal be 95% instead of 99%.

The Chairman asked when the orchards appear to be affected.

Mr. Bailey replied about the first of April; however, they are not sure when the injury to the fruit starts but that it was done shortly after the bloom.

Mr. Cook stated there had been nothing established at this location or any other location showing any damage to sweet cherries by fluorides. He stated he thought the damage that had been done to peach and apricots had started at a later date.

Mr. Erickson stated that he was a farmer and he had lost \$100,000 in a crop this year; that he had every reason to assume there would be a large crop this year; but that he had harvested a very small crop of cherries.

Mr. Cook said he did not want to get into an argument but that there were other factors involved regarding pollenization; that his statement was based on recognized world-wide authorities which have made a lifetime work on this subject. He stated he did not believe there was any one case of cherry damage established in the record.

The Chairman said he did not have a clear idea of the Wasco County Fruit Growers position in the matter. He asked the Growers what action they would like to see the Board take.

Mr. Bailey stated he objected to any change in the staff recommendation for raising the fluoride collection efficiency to at least 99% and that the company had not performed enough stack tests or measured the in-plant fluorides.

Mr. Bailey stated that the staff had left the testing of the plant emission go indefinitely and that this lack of activity his group felt was a poor policy and that some stack measurements were very important.

Mr. McPhillips asked what was thought of Mr. Cook suggesting the percentage being lowered from 99% to 95% until the in-plant sampling program could be worked out a little better.

Mr. Bailey stated his group would be leaving themselves short of knowledge with such a decision.

Mr. McPhillips stated he was inclined to agree with Mr. Bailey and he too wondered why the Authority should not insist on in-plant control.

Mr. Cook stated he believed this was a matter of semantics here. He said a cell could be opened, take a sample, multiply it by the number of feet of air and that Harvey Aluminum had to first meet with the Fruit Growers and agree and use uniform basis and find out the quantity of emissions escaping and if the quantity was excessive then to provide a solution.

Mr. McPhillips stated that he did not agree that Harvey Aluminum should be allowed to do this work on their own time; that the Fruit Growers can't wait indefinitely.

Mr. Cook stated he felt Mr. McPhillips misunderstood; that he must realize Harvey Aluminum were the ones most involved in the final analysis and if there was damage to the fruit growers that they will be compensated for it.

Mr. McPhillips said he did not believe the growers would be compensated unless damage suits were filed against Harvey Aluminum; that the orchardists have a capital investment also. Mr. McPhillips asked Mr. Harchard if he believed there is a reason why Harvey Aluminum can not take samples at periodic intervals.

The Chairman stated if X amount of emission was causing a certain amount of damage then the Authority does not want to approve X + Y amount of emission until X was corrected and that he thought this approach was very practical.

Mr. McPhillips stated he would be willing to compromise the 99% fluoride collection efficiency that the staff recommended but not to give up the in-plant sampling. He stated that he did not believe Harvey Aluminum has fully cooperated with the staff in supplying information; that the matter would be further along if Harvey had. He stated that it is quite possible that this percentage difference of 4% may not be as important as the staff thinks it is. He said he agreed also

IAA357

with Mr. Bailey that the total emission from the plant was the important value and not only what comes out of the stacks.

Mr. Cook stated he agreed.

The Chairman asked Mr. Hatchard if he was willing to change the recommendation in any respect.

Mr. Hatchard stated he felt that 99% in itself may not be high enough; that the maximum amount of fluoride from every source in the aluminum reduction plant in The Dalles should be controlled. He replied that the staff was not in a position to change the recommendations. However, as far as the costs involved, he explained the staff was not qualified to estimate the amount which would be involved to meet the recommendations.

Mr. Stanley asked if a 95% reduction could be obtained for a cost of 1/2 million dollars, and a 99% fluoride removal at a cost of perhaps 10 million, would you still stay with the 99% recommendation.

Mr. Hatchard stated the 10 million dollar cost would be unreasonable.

Mr. Stanley said that the Authority should know what costs for fluoride controls might be involved so the amount would not be unreasonable.

Mr. McPhillips stated that the fruit growers were operating in the vicinity first; and that the effects by air contaminants upon their crops should be considered.

Dr. Compton stated he was concerned with the total amount of fluorides emitted to the atmosphere and that it made no difference whether the contaminants originated from the stacks or space ventilation to cause damage to the orchards. He stated that he believed that all the information regarding injury to fruit crops was not known now. He stated that in The Dalles the injury was considered as fumigation of the crops; that the wind will quickly change the concentration in the orchard from a trace to a relatively high level. The fluoride injury would also depend on where the orchard is located; and that it would be difficult to integrate all of the factors. He stated that some results of fluoride injury to peach fruit

had been given in the publication by Dr. Nels E. Benson; that he had shown the concentration on the peach trees had been from 5 ppb to 20 to 30 parts per billion.

Mr. Stanley referred to page 27, table 15 of the Oregon State College report, "Comparison of Fluorine Levels in Crops Before and After Aluminum Factory Operation in The Dalles Area" published August 1960 and asked Dr. Compton why the build-up occurred over the years.

Dr. Compton said that it was really not a build-up; that 1 or 2 fluoride concentration readings may be high, however that so far they have not found injury to the leaves of peach trees in The Dalles. He stated that the apricot leaves were very sensitive. Dr. Wilcox asked Dr. Compton if the effects from this fluoride burn would be identifiable.

Dr. Compton stated typical fluoride burn or injury is characterized by a major burn on the leaves; that this too would apply to other plants also. He explained that his staff has had some experience with peach and apricot trees but to be certain samples of the leaves must be taken to the laboratory and analyzed for fluorine concentration. He added that wherever a leaf burn was found that high fluoride concentrations were also found.

Mr. Hatchard explained that he had not reported what reduction in the quantity of fluoride was involved by raising efficiency from 95% to 99%; that the staff was concerned with the total emissions of the 20 scrubber towers. He stated that based upon the stack sampling data of the improved cell fume collection conditions a total of 500 lbs. of fluoride was being discharged each day with the 95% removal and that with 99% removal this emission would be reduced to 100 lbs. per day.

Mr. Stanley again referred to the staff recommendation #4 and asked if the sampling data requested should not be more specific regarding the frequency and when the reports should be submitted.

Mr. Hatchard stated that 60 days should be long enough time to develop the implant sampling method and that monthly samples would be desirable initially.

IAA357

Dr. Wilcox asked if the staff had developed a satisfactory method of in-plant sampling.

Mr. Hatchard stated the staff had developed an approach thought to be satisfactory for the first run.

The Chairman asked if it was practical for the two major parties, the Fruit Growers and Harvey Aluminum and that it was agreed upon to have a monitor present to ascertain that the sampling was representative of actual mill operating conditions. He asked if this plan would be practical.

Mr. Hatchard replied it was very satisfactory to the staff; that primarily it was Harvey Aluminum Company's disagreement on the in-plant sampling program that had caused the delay.

It was MOVED by Mr. Stanley and seconded by Mr. McPhillips and carried that the Authority approve the staff recommendations with modification of recommendation #4 to require that the sampling be carried on periodically and at least once a month and that the results be reported to the Authority, that the company proceed with the measurement of fluoride concentrations present in the space ventilation discharged into the atmosphere within the next 60 days; and that at the next meeting of the Authority the members may reconsider the 99% requirement for fluoride removal, if information presented in the meantime by Harvey Aluminum Company and the Authority's staff, would substantiate any change in the present requirement.

Mr. McPhillips asked if this would include the fluoride emitted from the in-plant source as well as stack sampling of the discharge from the fume controls.

Mr. Stanley replied that recommendation #4 referred only to the in-plant concentrations.

Mr. McPhillips asked that if the measurements would include any discharge from the plant whether in-plant or stack source. Mr. McPhillips stated he was interested in all of the discharge sources that should be included in the over-all sampling

that Harvey Aluminum was being required to provide and on that basis he was willing to second the MOTION.

Mr. Stanley stated that if the stack sampling information was not adequate at the present time that this need should also be added to the motion.

The Chairman asked if there was any further discussion on the motion.

Mr. Cook stated he was not clear as to what is to be done about the 99% removal requirement.

The Chairman stated that the requirement stands as is at the present time.

Mr. Cook asked if it would be possible to present some data before the next Authority meeting in December, that Harvey Aluminum was proceeding with construction; that if Harvey Aluminum has to wait for three months this would cause quite a delay.

The Chairman suggested that the Authority could act upon the matter either by a special meeting or by mail authorization.

PETITION REGARDING SEWAGE DISPOSAL FOR CITY OF ESTACADA:

The Secretary read a letter signed by Dorothy Hamilton as president of the Currinsville Improvement Committee, regarding the proposal of the city of Estacada to install a raw sewage stabilization pond adjacent to the rural community of Currinsville. The secretary also read a petition signed by 66 residents and submitted by Miss Hamilton protesting the construction of said proposed sewage disposal system. The secretary then pointed out that no plans had yet been submitted to the Authority by the city's consulting engineers and therefore no action had been taken on the petition. It was agreed that in view of the controversy of this proposed project a public hearing should be held in the matter before final action is taken if and when plans are submitted.

It was suggested by Mr. Stanley that the Authority should obtain as much information as possible regarding ground water and soil conditions in the vicinity of the proposed lagoon installation.

IAA357

PROPOSED BUDGET FOR THE 1961-1963 BIENNIUM

Consideration was given by the members to the proposed budget as prepared by the business manager of the State Board of Health for the Water Pollution Control Program for the 1961-1963 biennium.

The total budget including supplemental requests will require a general fund appropriation of \$208,803 which, with the anticipated allocation of \$93,593 in federal funds, will make a total of \$302,393 for the two-year period. This budget, if approved, would provide for 3 1/2 new positions including one Public Health Engineer II, one Aquatic Biologist II and two chemists II, with the services of one of the latter being shared equally with the Air Pollution program for radiological health activities.

It was MOVED by Mr. Stanley, seconded by Mr. Harms, and carried that the proposed budget be approved.

There being no further business the meeting adjourned at 4:38 p.m. The Secretary was instructed to express to the State Game Commission the appreciation of the Authority members for the use of the auditorium for this meeting.

The date for the next meeting was scheduled for December 15, 1960, beginning at 10 a.m.

Respectfully submitted

CURTISS M. EVERTS  
Secretary & Chief Engineer

## MINUTES OF THE EIGHTY-SECOND MEETING

of the

Oregon State Sanitary Authority

December 15, 1960

The eighty-second meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:10 a.m., December 15, 1960, in the auditorium of the State Game Commission, 1634 S.W. Alder, Portland, Oregon. The other members and staff present were B.A. McPhillips, R. H. Wilcox, M.D., John P. Amacher and Herman P. Meierjurgan, members; Cecil H. Quesseth, Legal Advisor; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Assistant Chief Engineer; Donald J. Benson, Associate Engineer; Edgar R. Lynd, Water Pollution Control Technician; and Ronald R. Ott, Joseph E. Jensen and Robert Wood, Assistant Engineers; and Robert Percy, Chemist.

This meeting was held jointly with the State Board of Health with the following members being present: Carl L. Holm, M.D., President; Forrest E. Rieke, M.D., Leo C. Skelley, M.D., B. Brandt Bartels, M.D., Orville Corbett, Harbert W. Goodman, D.D.S., Gerhard B. Haugen, M.D., and A. V. Jackson, D.O.

MINUTES

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox and carried that the reading of the minutes of the eighty-first meeting held on September 22, 1960, be dispensed with and they be approved as prepared by the secretary.

PROJECT PLANS

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher, and carried that the action taken by the staff on the following 71 projects for water pollution control and 14 projects for air pollution control during the months of September, October and November 1960 be approved.

IAA357

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
9-1-60	Beaverton	Royal Woodlands sewer relocation.	Approved

AIR POLLUTION CONTROL

9-1-60	Linn County	Proposed fluoride control system. Wah Chang Corp.	Conditional approval
9-8-60	Salem	New refuse incinerator Fairview Homes	Rejected
9-9-60	Multnomah Co.	Dust control. Brass and Aluminum Foundry	Conditional approval.
9-9-60	Eugene	New refuse incinerator Albertson's Food Market	Conditional approval
9-12-60	Multnomah Co.	New incinerator. Crown Zellerbach Waxide Div.	Conditional approval
9-19-60	The Dalles	Proposed fume control facilities for the 60 cell addn. Harvey Aluminum Co.	Rejected. Provided additional recommendations.

9-19-60	The Dalles	Stack sampling report	Study
9-30-60	Monmouth	Proposed plans for open burning of the demolition of the steam plant building and fuel shed, Oregon College of Education.	Disapproved
10-5-60	Portland	Draft of air pollution control activities summary for the 1958-60 biennium.	Approved
10-10-60	Portland	Draft of Secretary of State's rules regarding air pollution control.	Approved
10-25-60	Oregon	Proposed municipal ordinance provisions.	Comments Submitted
11-3-60	Multnomah Co.	Proposed site for disposal of lumber from building demolition.	Conditional approval
11-30-60	Portland	Proposed Air Pollution Ordinance.	Recommendations to be submitted
11-30-60	The Dalles	Agricultural studies of fluoride concentration.	Study

#### CITY OF SHERWOOD

An engineering report dated December 15, 1960, pertaining to the matter of sewage and waste disposal by the city of Sherwood in the public waters of Cedar and Chicken Creeks, tributaries of the Tualatin River, was summarized by Mr. Benson as follows:

When the Frontier Leather Company which is located at Sherwood was built in 1947, the city agreed to assume responsibility for disposal of the wastes from this tannery although at that time the city did not have adequate treatment works for its own domestic sewage. Because serious stream pollution was soon caused by the discharge of the new industry's wastes, the city and tannery were cited to appear before the Authority at a public hearing on December 2, 1948. As a result of that hearing they were given 60 days to prepare plans for a satisfactory system of waste disposal.

In February 1949 a consulting engineering firm was retained by the city to make a preliminary study and report. Detailed plans and specifications

IAA357

were finally completed by the engineers and were approved by the Authority on March 17, 1950. The proposed treatment works were designed to serve the city, the tannery and the Portland Canning Company fruit and vegetable processing plant which is also located in Sherwood. Unfortunately, however, before the construction of the treatment works was even completed the tannery doubled the size of its operations thereby overloading the new sewage and waste treatment plant.

Because of this overload the new sewage treatment plant failed to perform satisfactorily from the start. As a result the receiving stream (Cedar Creek) was grossly polluted and also an odor nuisance in the vicinity of the plant was created. During the period 1951 to 1956 several inspections and surveys of the plant were made by the Authority staff. Based on the findings thus obtained numerous recommendations were submitted to the city and industry for improving the efficiency of the sewage and waste treatment facilities.

Finally in 1958 the city retained a consulting engineer to make a detailed study and report of the problem. However, no final plans were ever prepared.

Mr. Benson pointed out that although during the past nine years both the city and industry have made some effort to correct the problem of organic and hydraulic overload on the sewage treatment plant, the basic problems have not been solved and consequently water and air pollution is still being caused. He recommended that a public hearing be held in the matter.

After a discussion of the matter it was MOVED by Mr. McPhillips, seconded by Mr. Amacher and carried that the city of Sherwood be cited to appear before the Authority at the next regularly scheduled meeting to show cause, if any exists, why pollution of the public waters of the state of Oregon caused by the discharge of its inadequately treated sewage and industrial wastes should not be abated and further that the Frontier Leather Company be subpoenaed to appear at said hearing.

CITY OF ESTACADA

A memorandum dated December 14, 1960, regarding the sewage disposal problem confronting the city of Estacada was summarized by Mr. Spies.

This matter having been previously discussed at the September 22, 1960, meeting and following a further discussion at this meeting by members of both the Authority and Board of Health it was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan and carried that based on recommendations of the staff a public hearing in the matter of the city of Estacada's proposed sewage stabilization pond be held and the nearby residents who have objections to the proposed pond site be given an opportunity to be heard.

CITY OF PORTLAND

A letter dated December 14, 1960, from Commissioner William A. Bowes, outlining a proposal of the City of Portland for abatement of pollution in both the Willamette and Columbia Rivers was read by the secretary and made a part of the permanent files in this matter. The proposal states that the city will proceed with the following four major projects:

1. In regard to sterilization of plant effluent from the existing sewage treatment plant the City will provide facilities for chlorination. The target for the capability of these facilities will be for an effective bactericidal of chlorine at an average flow of about 60 mgd. The date at which we expect to have these facilities in operation will be sometime during the summer of 1961.
2. The construction of the Tryon Creek sewer including a secondary treatment plant on the Willamette River to service the presently unsewered Tryon Creek area of southwest Portland which can be served by this system. The Tryon Creek trunk sewer will be constructed of sufficient size and capacity to serve the ultimate needs of the entire drainage area. The treatment plant will be designed for the presently anticipated needs with reasonable capacity for normal growth.

IAA357

3. The construction of facilities for intercepting the sewage which originates near the Willamette River and Columbia Slough but below present diversion facilities, commonly referred to as sewer outfalls now discharging sewage into Willamette River. This work will proceed concurrently with the planning and construction of Items No. 1 and 2 above.
4. Major problems which remain to be resolved are (1) the future program for treatment of industrial wastes in northwest Portland north of Ankeny Street Sewage Pumping Station, (2) the expansion to the east resulting in anticipated increased flows to the present plant, and (3) whether or not at some future time to divert all west side sewage to a second major treatment plant to a site north of Linnton or expand the present plant and facilities to receive these additional flows. As a part of our overall program, studies will be begun immediately to determine the most feasible solution to these specific problems.

In the discussion which followed the reading of the above proposal it was pointed out that the Authority now has on file applications for a federal grant from both Multnomah County and the city of Portland for financial assistance for construction of interceptor sewers and treatment plant for the Tryon Creek basin. The Authority will therefore have to decide which applicant should be given a priority.

It was MOVED by Mr. Amacher, seconded by Dr. Wilcox, and carried that the proposed construction program as presented by the city of Portland be approved and that the city be commended for its cooperation.

It was MOVED by Dr. Wilcox, seconded by Mr. McPhillips, and carried that a committee of three members of the Authority be appointed by the chairman to meet with officials of the city of Portland and the county of Multnomah for the purpose of resolving the matter as to which agency will construct the Tryon Creek project and that representatives of the city of Oswego be invited to be present at such a meeting.

It was MOVED by Mr. Amacher, seconded by Mr. Meierjurgan, and carried that the court action in the matter of the city of Portland be dismissed.

PROGRESS REPORTS FROM LOWER WILLAMETTE COMMUNITIES

At the last meeting of the Sanitary Authority on September 22, 1960, a public hearing was held in the matter of sewage and waste disposal in the lower Willamette River by the cities of Canby, Milwaukie, Newberg, Oregon City, Lake Oswego, Salem and West Linn and the communities of the Society of the Sisters of the Holy Names (Marylhurst), Manbrin Gardens and Willamette View Manor. The order entered as a result of that hearing directed each of the 10 communities to submit progress reports on or before December 15, 1960.

As of this date progress reports had been received and reviewed by the staff from all the above named cities and communities except West Linn, Manbrin Gardens and Willamette View Manor.

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher, and carried, that the progress reports submitted by Canby, Milwaukie, Newberg, Oregon City, Lake Oswego, Salem and the Marylhurst school be accepted and the secretary be instructed to request reports from West Linn, Manbrin Gardens and Willamette View Manor no later than January 1961.

HARVEY ALUMINUM COMPANY - The Dalles

The Chairman stated that the Sanitary Authority had informally considered the problems associated with the control of air pollutants discharged from the existing 240 aluminum reduction cells and the 60 cell addition during the two previous meetings of the Authority and that the Authority's staff had presented recommendations concerning additional fluoride controls and the need for additional sampling by the company's representatives.

The Chairman requested Mr. Hatchard to present a summary of the staff's activities since the September 22 meeting. The following report prepared by the staff of the Authority was read by Mr. Hatchard:

IAA357

"The activities which have occurred since the 9-22-60 Sanitary Authority meeting relative to air pollution controls for the original 240 aluminum reduction cells and the 60 cell addition of the Harvey Aluminum Company mill in The Dalles as follows:

1. On September 27, 1960, a letter was sent to Harvey Aluminum Company advising them of the actions taken by the Authority, after considering reports presented at the 9-22-60 meeting by Harvey representatives. Dr. O. C. Compton, Associate Plant Horticulturist, Oregon State College Agricultural Experiment Station, representatives of the Wasco County Fruit Growers League and the Authority's staff.
2. The Authority had received no reply to their letter by November 28. The staff contacted Mr. Claude C. Cooke, Administrator, Harvey Aluminum Company, Torrance, California, to make a survey of the mill in The Dalles on December 1. The purpose of the survey was to determine what actions had been taken by the company in response to the Authority's letter of 9-27-60.
3. Staff members R.R. Ott and R.E. Hatchard were conducted on an inspection of the mill by A. Cronkrite, plant manager and Mr. C. Cooke. The information obtained relating to the items as listed in the Authority's letter of 9-27-60 is as follows:

(1) and (2) Harvey Aluminum Company questions the need for providing any additional fume control facilities to increase the fluoride removal efficiency above the 95% specified for the existing 240 aluminum reduction cells and the 60 cell addition.

Their views are based upon the practices of the aluminum reduction industry and did not appear to include any consideration of the specific condition in The Dalles concerning meteorological conditions, topography, agricultural operations or other local situations.

(3) The company has completed the installation of double fume burners, the change from 40 H.P. exhaust fans to 60 H.P. motors and about 50 of the 240 cells had been equipped with the new skirt enclosures which improves the fume collection at the cells. The remaining 190 cells were being converted to the new skirts at the rate of 4 cells per week. If the project continued at this rate, the work would be completed in about one year.

(See bottom  
of page 37)  
para. #4.

(5) No stack sampling measurements had been made since the 9-22-60 Authority meeting. The company claimed that the conversion projects prevented the collection of any measurements that would be representative of routine production conditions.

The Authority staff members emphasized the need for stack sampling even though the data obtained related only to the conditions present during a phase of the conversion project. The company was advised that any stack sampling data or other information must be submitted to the Authority no later than December 9, 1960 if the staff was expected to evaluate the information for the December 15, 1960 Authority meeting.

The staff urged the company to undertake the in-plant sampling and explained the critical need to evaluate the total fluoride quantity escaping. We discussed the assumptions that had been made because the actual fluoride values are unknown. Mr. Cook requested a copy of the calculations which was provided with the intent that the importance of the in-plant fluoride measurement would be shown.

The 60 cell addition project was nearing completion. The fume controls appeared to be installed in accordance with the plans and specifications; however, no approval has been given to the plans and specifications because essential basic data requested at the July 14, 1960 meeting has not been provided.

Most of the cells are in the "bake-out" phase which requires about 45 days. Aluminum is being produced and dense emissions from the 4 new fume towers were noted. The company has made no measurement of the new stacks and does not plan to until the cells are producing commercial grade aluminum, which is scheduled for February 1961.

4. In a letter dated 12-5-60, Harvey Aluminum Company was notified regarding the time and place for the December 15th meeting and our understanding was confirmed that the company would submit any stack sampling reports or any other information by December 9th, to allow review by the Authority's staff prior to the December 15th meeting.

5. On December 9, Mr. Cooke telephoned the staff to report that technical difficulties in the laboratory at The Dalles mill prevented completion of the stack sampling test. He requested a conference with the staff on December 13, 1960 and indicated that he would deliver the stack test data at that time.

6. On December 5th, 1960 a letter was received from Mr. Donald W. Bailey, Chairman, Wasco County Fruit Growers League, enclosing a laboratory report of fluoride concentrations found in leaf and foliage samples collected from eight orchards. The fluoride concentrations found appear to be about double the concentration found in August 28, 1959 and reported in the Oregon State College Agricultural Experiment Station, Paper #95 dated August 1960.

7. The staff completed the evaluation of a series of air samples collected at the Klindt station located 1/4 mile east of the Harvey Mill. A total of 98 samples were collected and analyzed from 8-29-60 to 9-6-60 and 9-30-60 to 10-17-60. The maximum fluoride concentration found was 96.4 parts per billion on 9-5-60, the minimum 5.9 on 9-4-60 and the average value was 21.0 ppb. The normal fluoride concentration was established as less than 3 ppb by sampling prior to the start of aluminum production.

(4) No in-plant sampling had been done to determine the quantity of fluoride discharged from the cells to the space ventilation. The cell-line space ventilation escapes to the atmosphere through a roof louvre which extends about 900 feet along the east side of each cell building. The company has formulated no additional plans for the sampling that would define the fluorides originating from this source. It appeared that the company intends to delay any consideration of plans for measurement until the entire 240 cells are equipped with the new skirt enclosures.

IAA357

The wind direction and velocity was recorded at the Klindt station and the high fluoride values correlate with the periods when the wind direction was from the mill to the station.

8. On December 13, 1960 the staff conferred with Mr. C. Cooke and other Harvey representatives. A stack sampling test for measurements made on towers 3N and 3S on 12-2-60 was delivered. The data provided was a summary of the final values and does not identify the sampling or analytical methods used or who performed the measurements. In its present form the test data does not meet the requirements of the Authority's regulations which require that such studies be conducted in a manner and with equipment approved by the Authority or with equivalent acceptable methods of measurement.

STAFF RECOMMENDATIONS:

Since the Harvey Aluminum Company has failed to provide essential data concerning the discharge of air contaminants from the mill in The Dalles the staff suggests that the Authority consider initiating the actions provided by Oregon Administration Rules Chapt. 334 Sect. 32-015 (9) concerning the existing 240 cell units and Chapt. 449.050 ORS concerning the new plant addition.

The Chairman asked if a representative of the Harvey Aluminum Company was present and wished to present a report.

Mr. Max Elliott, Attorney, stated that he represented Harvey Aluminum and would like to present a summary of the Harvey Aluminum Company's activities concerning the improvement in the control facilities. He reported that the company had arranged for a survey of The Dalles area by Dr. B. L. Richards, Horticultural Pathologist, and an expert on stone fruit, and that Dr. Richard's report shows no damage to cherry trees in The Dalles that could be attributed to fluorides. He pointed out that Dr. Richard's report did show some injury to the cherry trees apparently from the winter conditions and mite infestations.

Mr. Elliott reported that the company had substantially completed the installations referred to in recommendations #3 of the Sanitary Authority's letter of September 27, 1960 which included the installation of double fume burners, improved scrubber nozzles and the improved skirts. He explained that about 50 cells had been equipped with the improved skirt system and the conversion was continuing at about 4 cells per week. He stated that the company questioned the technical basis for the Sanitary

IAA357

Authority's requirement that the fluoride removal efficiency in the fume control system be increased from 95% to 99%. He reported that Harvey Aluminum company believes that the existing fume controls were as good as any other aluminum reduction mill and that Harvey could not obtain guarantees for a scrubber design that would assure a 99% removal. He reported that the Reynolds Metals Company's plant in Troutdale, Oregon does not provide a 95% removal of the fluoride concentrations. Mr. Elliott then introduced Dr. Robert Simonson, member of the Harvey Aluminum technical staff, at their headquarters in Torrance. Dr. Simonson supported the company's position that 99% removal of fluoride contaminants could not be achieved with a fume scrubber arrangement.

Mr. Elliott stated that responsible governmental agency recommendation or directive should be within the bounds of technical achievement and that he had requested the Authority's staff to suggest an engineer who could devise such a system or a company that produced equipment that removed 99% of the fluoride, that in reply to this inquiry the Authority's staff pointed out that it was not one of their functions to design such equipment and that they did not know of any specific engineer or manufacturer that could produce equipment that would remove 99% of the fluoride.

Mr. Elliott stated that the Authority had not provided any reports supporting its recommendation that 99% fluoride removal was required. However, Mr. Elliott stated that their company had obtained a copy of the staff report in connection with the plant survey in December which showed certain calculations based upon the Bosanquet-Pearson equation and that this information included a calculated fluoride concentration at a station one mile from the plant to be 91 parts per billion. Mr. Elliott pointed out that the Harvey technical staff found an arithmetical error that reduced the concentration to 8.1 ppb. He stated that the 8 ppb value was well within any recognized limit of fluoride.

Mr. Elliott explained that their company had not been able to complete some of the requested stack sampling measurements because the operating conditions at the mill were not representative. He explained that he was the person responsible for instructions to the company's technical staff to suspend stack sampling until the in-plant conditions were more normal. He stated that he had a responsibility as general counsel of the company to avoid incurring unnecessary liabilities. He pointed out that non-representative measurements would become available to any attorney for later use in liability suits. He stated that in early November the plant superintendent reported to him that the mill operating conditions had returned to normal and that stack sampling measurements could be made. Mr. Elliott reported that a stack sampling report had been submitted to the Authority on December 13, 1960. He stated that the Authority's staff report indicated that the measurements were not acceptable. However, the company had followed the same procedure as for previous measurements. He stated that the test showed a fluoride removal efficiency of 95% and that about 20 pounds of fluoride compounds were being emitted each day from each of the 16 scrubber towers. He stated that their company had made no measurements of the fluoride concentrations in the space ventilation; however, that equipment was being obtained and that their planning for such measurements was continuing.

He stated that the Sanitary Authority's staff had expressed some concern regarding the future expansion of the Harvey Aluminum Company's facilities in The Dalles. He reported that the company would be expanding in the northwest but that a location had not been decided. He emphasized that there were no present plans for further expansion of aluminum production cells in The Dalles area.

Mr. Edgar Dick, attorney for Harvey Aluminum stated that a public hearing should not be scheduled at this time since all the scientific

facts were not available and that actually such a hearing would be premature until this information could be obtained.

Mr. Hatchard stated that he was reluctant to believe that Mr. Elliott deliberately would present erroneous information. However, Mr. Hatchard pointed out that the staff report to which Mr. Elliott referred was not the supporting data to the Sanitary Authority requirements for increasing the fluoride efficiencies from 95% to 99%. He stated further that Mr. Elliott was informed of this fact but chose to misrepresent the report. Mr. Hatchard explained that the information included in the staff report was one of a series of calculations attempting to predict downwind concentration of fluoride by assuming fluoride concentrations in the space ventilation along with certain meteorological factors.

Mr. Hatchard stated that this information was made available to Harvey Aluminum in order to emphasize the importance of actually measuring the fluoride concentration in the space ventilation. It was intended to point out that the lack of this basic information created a necessity to make broad assumptions. Mr. Hatchard also stated that the supporting data to the Sanitary Authority's recommendations is the actual fluoride concentrations found in samples collected at the area station 1/4 mile east of the plant in The Dalles, together with the foliage fluoride concentrations reported in the Oregon State College Agricultural Experiment Station's miscellaneous paper #95 which was presented during the September 22, 1960 Sanitary Authority meeting.

Mr. Donald Bailey, Chairman of the Wasco County Fruit and Produce League, stated it was their contention that at the September Authority meeting that the 1960 cherry crop had been damaged. However, at that time there was no data available concerning the actual fluoride concentrations found in foliage samples. He reported that their organization had submitted foliage samples to the Charleton Laboratories and that the report of the analyses was now available. He stated that the laboratory results showed

IAA357

increased levels of fluorides in the leaves of The Dalles orchards which were substantially higher than the concentrations found during 1959.

Mr. Bailey stated that the Oregon State College Agricultural Experiment Station had begun studies related to the injury of cherry trees. Mr. Bailey explained that Dr. Richard had visited The Dalles area after the cherry crop had been harvested and would therefore hardly be in a position to determine whether or not any fluoride injury had occurred to the crop. Mr. Bailey also pointed out that Dr. Richards would not be able to recognize fluoride effects since his own report shows that he had never seen any fluoride effects on sweet cherries. Mr. Bailey stated that there had been no unusual frost damage in The Dalles area nor any other unusual wind conditions. He indicated there was a minor problem with mites.

He emphasized that Harvey Aluminum company was unable to provide the essential data regarding the quantity of fluorides in the space ventilation and Mr. Bailey urged that the Authority set a public hearing in order to obtain this information. He stated that the 60 cell addition was in operation and pointed out that this was an additional source of fluoride and that the growers were concerned about this development.

Dr. Wilcox stated that Mr. Elliott had said that this was not the time to hold a hearing. Dr. Wilcox asked when the Harvey Aluminum Company would be prepared to present the facts during a public hearing.

Mr. Cooke replied that the company was completing certain improvements which he expected would be completed before the next growing season and that the additional data would be needed to describe the space ventilation discharge. He indicated that the latter part of February might be a satisfactory time to review informally this additional information.

Mr. Bailey stated that his organization was worried about the additional delays because the continuing fluoride emissions would be affecting the 1961 cherry drop and the fact that the plant expansion project

substantially completed would continue in production.

IAA357

Dr. Forrest Rieke stated that it appeared there were two problems before the Sanitary Authority; the first matter was involved with the fume controls of the existing 240 cell production and the second problem associated with the control of fumes from the 60 cell addition project. He stated that both problems are concerned with actual measurement of the fluoride in the scrubber discharge and the building space ventilation which is also emitted into the atmosphere. He pointed out that the Harvey Aluminum company appeared reluctant to engage in any measuring activities because of the legal aspects associated with the possibility of such data being used in subsequent damage suits. He explained that this actually was a general problem of industry with the control of pollution and that as long as the industrial representatives feel that they must conduct themselves at hearings on the assumption that anything said may be used against them, then the public agency will not be receiving complete cooperation. Dr. Rieke asked if the Harvey Aluminum company intended to cooperate on the basis of considering all facts regarding the discharges into the atmosphere or was it their intention to limit their activities only to the protection of the company's liability. He pointed out that the existing statutes do require the Sanitary Authority to protect the public against injury from the aspects of air pollution.

Mr. Cooke replied that the company wanted to cooperate and had completed many improvements to the fume control facilities serving their plant in The Dalles.

He stated that it was his understanding that no data regarding plant measurements could be submitted to the Sanitary Authority as confidential information. He pointed out that this situation was a continuing problem.

The Chairman stated that there was a need for the company representatives and the Authority's staff to resolve these matters and produce a satisfactory agreement. He pointed out that the approaching growing season of the

orchards creates some urgency to bring about the agreements.

Mr. Meierjurgan asked if the company would attempt to submit the previously requested data.

Mr. McPhillips asked if the staff was willing to have another meeting with Harvey Aluminum company before the next Sanitary Authority meeting.

Mr. Hatchard replied that the staff has been waiting since July 27, 1960, to continue development of methods for measuring fluorides in the building space ventilation.

MOTION It was MOVED by Mr. McPhillips, seconded by Mr. Amacher and carried that the matter of issuing a citation to the Harvey Aluminum company to appear at a public hearing would be deferred at this time and that instead the unresolved points at issue be discussed informally prior to the next Authority meeting by representatives of the Harvey Aluminum company, Wasco County Fruit Growers and Produce League and the Authority's staff.

The date for the next meeting was set for Thursday, January 26, 1961, to begin at 10:00 A.M. in the State Office Building.

There being no further business the meeting was recessed for lunch at 12:40 P.M.

Respectfully submitted,

CURTISS M. EVERTS

Secretary & Chief Engineer

## MINUTES OF THE EIGHTY-THIRD MEETING

of the

Oregon State Sanitary Authority

January 26, 1961

The eighty-third meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:00 AM, January 26, 1961, in Room 36, State Office Bldg., Portland, Oregon. The other members and staff present were B.A. McPhillips, Lewis A. Stanley, Edward C. Harms, Jr., Richard H. Wilcox, M.D., John P. Amacher and Herman P. Meierjurgan, members; Cecil H. Quesseth, Legal Advisor; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Asst. Chief Engineer; Donald J. Benson and Ronald I. Culver, Associate Engineers; Joseph E. Jensen and Ronald R. Ott, Asst. Engineers; Edgar R. Lynd, Water Pollution Control Technician; and Howard G. Smith, Supervisory Sanitarian.

MINUTES:

It was MOVED by Mr. McPhillips, seconded by Mr. Harms, and carried that the minutes of the eighty-second meeting held on December 15, 1960, be approved as prepared by the secretary.

PROJECT PLANS:

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that the action taken by the staff on the following 8 projects for water pollution control and 4 projects for air pollution control during the month of December 1960 be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12-5-60	Gresham	Eldorado Estates Sewer Ext.	Prov. approval
12-8-60	Springfield	Prel. engineering report	Approved
12-8-60	Empire	Sewer extensions	Prov. approval
12-9-60	Eugene	Sewer extensions (5)	Prov. approval
12-19-60	McKay Park	Trunk sewer	Prov. approval
12-21-60	Yamhill County	Dayton Highschool	Prov. approval
12-20-60	Douglas County	Fullerton IV Grade School	Approved
12-22-60	Marion County	Seventh Day Adventist School	Not Approved
<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12-2-60	Oregon	Proposed bill on air pollution control.	Comments submitted.
12-7-60	La Grande	Final report regarding steam plant changes at Mt. Emily Lmbr. Division mill.	Comments Submitted.
12-30-60	Portland	3,000 lb. per hr. incinerator to serve the Lloyd Center Shopping Center.	Conditional approval.
12-30-60	Marion County	Report of the refuse disposal practices.	Study

IAA357

CITY OF SHERWOOD:

Pursuant to an official notice dated December 28, 1960, a public hearing in the matter of sewage and waste disposal by the city of Sherwood was held on this date by the Authority. The proceedings of the hearing were recorded by a court reporter.

Mr. Benson briefly reviewed an engineering report dated December 15, 1960, and prepared by him in the matter of sewage and waste disposal by the city of Sherwood in the public waters of the state of Oregon. A copy of said report has been made a part of the Authority's permanent file in this case.

Mr. Fred A. Anderson, City Attorney, was present to represent the city of Sherwood and Mr. William H. Dashney, Attorney, was present to represent Frontier Leather Company.

Mr. Guesseth stated that because this was a public hearing it would be held according to the Authority's rules of practice and procedure adopted pursuant to ORS Chapt. 183. He had been designated by the Authority as attorney and notary public to administer the oath to each person testifying.

Mr. Anderson, City Attorney, advised the Authority that the city was not in a position to put on formal witnesses as such. He stated the city's position was, in effect, one of nolo contendere; that they were not contesting the report but instead recognized the need for remedial action; that action so far not taken was not due to lack of good faith on the part of the city but it just takes time to get things done by democratic process; that the city does recognize its obligation to clear up the problem; that there seems to be a difference of opinion in respect to how this problem can be solved; that it seems a sound, detailed and exhaustive study on this problem should be made; that the tannery effluent is such that it requires a specialist, someone who has had actual experience with this type of waste, to determine what should be done; that he was not saying there are not competent engineers in this area to solve this problem but that it should be done thoroughly so when the city spends the money they will have remedial action and not have different problems in the future; that the city is limited in its powers; that each thing has to be done according to recognized methods; that the city filed injunctive proceedings against the tannery in order to put the problem on the proper plane; and that the city is not necessarily implying that they do not want the tannery but do feel entitled to proper consideration from this main contributor.

He then referred to the agreement between the tannery and city as a possible solution to this problem, pointing out that any agreement would be binding only as a good faith matter. He said the problem is to develop a means of treating the wastes sufficiently to meet the Authority's standards. Such a solution should also be adequate for future requirements. He had serious questions concerning the economic feasibility of meeting the standards which the Authority has set up but he thought it was only proper that the Authority fix the standards. He stated again that the big problem is to know what the city and industry have to do, that considerable engineering study will have to be done, and that a full and complete review of the whole problem is needed to protect everyone from spending a lot of money and not achieving the desired results. He mentioned that a conference had been held recently with the tannery, city officials and Mr. Benson. He said another question is whether the time table the Authority has proposed to establish is reasonable considering the complexity of the problem involved, that the city must first determine what is to be done, and that the city council has limitations of

public responsibilities involved, not only legally but economically and willingly. He reported that the engineering firm of Cornell, Howland, Hayes and Merryfield had been retained and that Mr. Ralph Roderick of that firm was present to take the stand regarding the time problem. Oath was given to Mr. Roderick.

Mr. Roderick then stated that the Frontier Leather Company had retained his firm to make an engineering study in an attempt to solve this problem. He stated further that the tannery's operations are tied into the city of Sherwood, that the tannery wastes are considerably different from city sewage and that the literature does not indicate treatment methods or degree of treatment required. He said that no one method can be prescribed without a detailed study of the problem and for that reason the time available to complete construction drawings is not adequate, that in addition to the determination of the type of treatment it will also require serious consideration and cooperative arrangement between all parties involved in working out a program, that, therefore, 4 months is not sufficient time to establish the type of treatment and to follow up with engineering plans and development of a fiscal program. He stated that September would probably be as soon as they could do it.

Mr. Stanley asked Mr. Roderick if he thought an adequate treatment method could be found. Mr. Roderick stated he thought a satisfactory solution could be found. Mr. McPhillips mentioned that the pulp mills are lagooning their wastes and asked Mr. Roderick if that were practical in this instance. Mr. Roderick said they had considered that possibility but there are two things in regard to lagoons that are a problem in this particular area. There is no adequate ground available that is level enough to provide the pond space required and there is some doubt that sufficient light could penetrate into the wastes. He said a small pond might well be used for treatment as a pilot operation. Dr. Wilcox then asked about possible air pollution problems. Mr. Roderick stated air pollution would not be a problem with proper types of treatment. He inferred it might be a problem with a lagoon system.

There was then a discussion regarding whether or not the existing city sewage treatment plant would be adequate to handle the sewage and other wastes if the tannery were not connected to the city system. It was concluded, however, that if at all possible the city and tannery should work together to solve the problem.

Mr. Wendel asked when plans could be completed. Mr. Roderick stated he could prepare plans and submit them to the city by September 1. Mr. Wendel asked if that would be satisfactory to the city of Sherwood. Mr. Anderson replied that the city council has only those powers specifically given it by charter and that he was not in a position at this time to state that they will do certain things. He suggested that the city even though it does contract to receive certain loadings can not bind itself to the Frontier Leather Company and that Frontier Leather must assume all the responsibility of meeting the standards in so far as its effluent is concerned. Mr. Queseth asked Mr. Anderson if he could state that the city officials to the best of their ability would cooperate toward meeting the time schedule. Mr. Anderson replied that to that extent he could state that the city is willing to cooperate within its limitations.

Mr. William Dasney, attorney for Frontier Leather Company, stated that officials of the company recognize there is a problem. He pointed out that the Frontier Leather Company at its own expense has employed Cornell, Howland, Hayes and Merryfield to make a study of the situation in order to determine if some solution financially feasible can be worked out. In a conference with Mr. Anderson and members of the Council, the Frontier Leather Company had expressed a willingness to participate in not only fixing its own facilities but perhaps

the city's. He stated further they would like a continuance of the hearing so that Mr. Roderick could make his study and determine whether they have enough money to solve the problem.

It was then MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the city of Sherwood and parties named on the citation be ordered to have approved plans and necessary financing completed by September 1, 1961.

#### Tryon Creek

A four-point program submitted by the city of Portland for construction of additional sewerage facilities was reviewed by the secretary. Mr. Meierjürgen, chairman of the committee appointed at the December 15, 1960, Sanitary Authority meeting to resolve the question as to whether the city or the county should build the Tryon Creek project gave a report on the findings and recommendations of this committee.

The committee had met on January 25, 1961, with Mr. William A. Bowes, Commissioner of Public Works, city of Portland, Mr. James Gleason, Multnomah County Commissioner, and Lee Stidd, Mayor of Lake Oswego. A field trip to the proposed site was also made on January 25. The committee's report was as follows:

"Your committee which was appointed pursuant to the action taken by the Sanitary Authority at its meeting on December 15, 1960, has carefully investigated and considered the matter of the construction of sewers and sewage treatment facilities in the Tryon Creek basin as proposed by both the city of Portland, Oregon, and by Multnomah County, Oregon, for the Tri-County Metropolitan Sanitation Committee of Clackamas, Multnomah, and Washington Counties. In addition, the committee met on January 4, 1961, and on January 25, 1961, with William A. Bowes, Commissioner of Public Works, City of Portland, with M. James Gleason, Chairman, Board of County Commissioners, Multnomah County, with Lee A. Stidd, Mayor, Lake Oswego, Oregon, and with other representatives of the city of Portland, Multnomah County and the city of Lake Oswego. A field trip to the proposed sites for sewage treatment facilities was also made on January 25, 1961.

The following observations, conclusions and recommendations are submitted for your consideration:

#### City of Portland:

The city of Portland has proposed to construct sewers and a sewage treatment plant to serve 4355 acres in the Tryon Creek basin and in addition intercept sewage from 1445 acres located in the city but in the Fanno Creek Basin.

The estimated cost of this project is \$1,165,000. The city of Portland has funds on hand to undertake planning and construction of the project immediately.

The city of Portland has an application on file with the Sanitary Authority dated June 15, 1960, for a federal grant in the amount of \$250,000 for the construction of the intercepting sewers and treatment works in the Tryon Creek Basin.

The city has prepared a preliminary engineering report on the proposed project, but has not completed final engineering plans and specifications.

#### Multnomah County:

Multnomah County has also proposed to construct sewers and a sewage treatment

plant to serve 4355 acres in the Tryon Creek area. The county proposal submitted, however, did not propose to serve that area in the city of Portland that is located in the Fanno Creek basin, apparently due to the fact that the county was unaware of the desire of the city of Portland to divert this sewage from the west side interceptor for treatment elsewhere.

Multnomah County does not have funds on hand at the present time to undertake construction of the project.

It has been reported that Multnomah County has caused plans and specifications for the project to be prepared. Except for the treatment plant, no such plans or specifications have yet been filed with the Sanitary Authority.

Multnomah County has on file with the Sanitary Authority an application dated April 4, 1958, for a federal grant in the amount of \$185,000 for the construction of intercepting sewers and sewage treatment works to serve the Tryon Creek basin.

City of Lake Oswego:

The Sanitary Authority in its order dated September 22, 1960, instructed the city of Oswego to provide secondary treatment of its sewage by July 1, 1962.

Regardless of which political subdivision constructs the treatment plant to serve the Tryon Creek basin, the city of Lake Oswego would be interested in negotiating for secondary treatment of its sewage at such a plant provided that a reasonable and satisfactory contract both for the present and future could be consummated.

The city of Lake Oswego at the January 4, meeting expressed concern as to whether treatment facilities constructed by the city of Portland would be sufficient to serve the west side area contemplated in the Tri-County master plan.

Verbal proposals by the city of Lake Oswego suggested expansion of the city's sewage treatment works for primary treatment of the sewage from the city and its environs as well as from the Tryon Creek area and the development of secondary treatment facilities for these wastes at either of the two sites proposed by the city of Portland or Multnomah County, but preferably at the Tri-County site which is located nearer to the Oswego sewage treatment works.

Recommendations:

In view of the urgent necessity for providing sewers in the Tryon Creek basin, and for providing sewage treatment facilities to serve not only the Tryon Creek basin, but the Dunthorpe and Riverwood areas as well, and because Multnomah County has thus far been unable to convince your committee that it can proceed with the construction of these facilities before the summer of 1963, it is recommended therefore that the Sanitary Authority:

1. Grant preliminary approval to the proposal submitted by the city of Portland for the construction of the Tryon Creek sewers and sewage treatment facilities provided that:
  - a. The plans and specifications for the sewage treatment facilities provide for expansion to serve additional areas as needed.

- b. That plans and specifications for sewers and sewage treatment facilities are submitted to the Sanitary Authority for review and approval before construction begins.
2. Authorize a tentative priority for a federal construction grant to the city of Portland for the construction of the Tryon Creek sewers and sewage treatment facilities provided that by June 15, 1961
    - a. The City of Portland consummates an agreement with the city of Lake Oswego to provide treatment for sewage from that portion of the city of Lake Oswego that is located in the Tryon Creek basin.
    - b. The city of Portland consummates an agreement with the city of Lake Oswego for secondary treatment of sewage from that city unless the city of Lake Oswego notifies the Sanitary Authority to the contrary.
    - c. That copies of such agreements or contracts are on file with the Sanitary Authority by the date specified."

A brief discussion of the Committee's report then followed.

In response to a question by Mr. Wendel, Commissioner Bowes, who was present to represent the city, assured the Authority that in undertaking the Tryon Creek project the city of Portland would not have to delay construction of the other portions of its required interceptor sewer and sewage treatment project.

The meeting was then recessed until 1:15 PM.

The meeting was reconvened at 1:15 PM. In the meantime Commissioner Bowes had written and submitted to the secretary a letter outlining his objections to certain provisions contained in the committee's recommendations. Mr. Bowes' letter dated January 26, 1961, was read by the Secretary and made a part of the Authority's files in this matter.

It was MOVED by Mr. Stanley, seconded by Mr. Harms and carried that the Sanitary Authority take the following action with regard to the program of the city of Portland relative to the construction of sewers and sewage treatment facilities in the Tryon Creek basin:

1. Grant preliminary approval to the proposal submitted by the city of Portland for the construction of the Tryon Creek sewers and sewage treatment facilities provided that:
  - a. The plans and specifications for the sewage treatment facilities provide for expansion to serve additional areas as needed.
  - b. That plans and specifications for sewers and sewage treatment facilities are submitted to the Sanitary Authority for review and approval before construction begins.
2. Authorize a tentative priority for a federal construction grant to the city of Portland for the construction of the Tryon Creek sewers and sewage treatment facilities provided that by June 15, 1961
  - a. The city of Portland consummates an agreement with the city of Lake Oswego to provide treatment for sewage from that portion of the city of Lake Oswego that is located in the Tryon Creek basin.

- b. The city of Portland consummates an agreement with the city of Lake Oswego for secondary treatment of sewage from that city unless the city of Lake Oswego notifies the Sanitary Authority to the contrary.
- c. That copies of such agreements or contracts are on file with the Sanitary Authority by the date specified.

#### ESTACADA

The public hearing in the matter of sewage disposal for the city of Estacada was called to order by the Chairman at 1:30 p.m. The purpose of the hearing was explained by Mr. Spies. Official notices had previously been mailed to all interested parties. The hearing was conducted according to the rules of practice and procedure adopted pursuant to ORS Chapter 183 and the proceedings were recorded by a court reporter whose transcript has subsequently been made a part of the Authority's files in this matter.

Mr. James O. Goodwin, attorney, was present to represent the Currinsville residents and Mr. John Caldwell, city attorney, was present to represent the city of Estacada. Mr. Carl E. Green, consulting engineer, was the first person to testify and outlined the proposed plan for the lagoon system to be constructed by the city in the Currinsville area. He stated that the proposed project for the city of Estacada goes back a number of years to the time when the Authority first advised the city to provide more treatment before discharging its sewage effluent to the river. After making a study of costs it had been determined that the best method to accomplish this would be a lagoon method of treatment rather than conventional type of filter or activated sludge. He stated a lagoon would be cheaper to construct and, more important, cheaper to operate with comparable results and a minimum of attention. The city has since acquired a 54-acre piece of property and plans to utilize this property for a lagoon. The proposed project includes an 18-inch outfall from the city, a trunk sewer along Lake Shore Drive, a pumping station at the present inadequate primary treatment plant to discharge to the 18-inch outfall leading to the lagoon. The proposed lagoon would have an area of 10 to 11 acres and a water depth of 3 to 5 feet. Its effluent would be chlorinated before discharge to the Clackamas River.

Mr. Stanley then presented as the next witness Mr. Jack Sceva, a geologist from the State Engineer's staff. Mr. Sceva at the request of the Authority had made an investigation of the proposed lagoon site and adjacent area and had prepared a report covering his findings. A copy of his report dated January 1961 was submitted at the hearing and has been made a part of the Authority's files in this matter. Mr. Sceva testified that the effect of the construction of the lagoon on the quality of the ground water supply in the Currinsville Terrace is not known. If leakage from the lagoon is substantial, a large part of the ground water reservoir lying north and northwest from the lagoon could become polluted. If the leakage is small, the effect of its construction on the ground water supply may not be discernible.

Mr. James Caufield, registered professional engineer, was the next witness to testify on behalf of the residents of the Currinsville area. He likewise had inspected the proposed lagoon site but had made no

IAA357

special tests. Based on his observations it was his opinion that the property in question could not be considered as an ideal site for a lagoon. In response to questioning he said he had no opinion as to the distance of travel or extent of possible pollution of the ground water table which might result from leakage from the lagoon. A copy of a letter dated October 25, 1960, written by Mr. Caufield to Mr. James O. Goodwin, was submitted as complainants exhibit No. 1.

Mr. William H. Tucker owner of property immediately west and southwest of the proposed lagoon site testified concerning the drainage of surface water and submitted a letter dated January 9, 1961, signed by David B. Anderson, soil conservationist of the U. S. Department of Agriculture. Said letter stated that the adjacent Tucker property because of the existing soil formation could not be considered as suitable for construction of an irrigation holding reservoir. The letter from Mr. Anderson was submitted as complainants exhibit No. 3.

Mr. Lawrence Looney, a resident and property owner in the Currinsville area then testified regarding the efforts of the community to dissuade the city of Estacada from building a lagoon on the site in question.

Mr. Chester Ireland representative of Portland General Electric testified that the company was concerned about the possibility of the outfall from the proposed lagoon system interfering with the safety of a spring ground water supply which serves the PGE property.

Mr. Irving Olsen, an engineer of Dames and Moore consultants in applied earth sciences then testified regarding his findings in connection with a survey of the soil formation at the lagoon site. He testified that he thought there should be about  $1\frac{1}{2}$  feet of seal on the bottom of the lagoon in order to prevent seepage, however, he could not state how much seepage might actually take place. He had made no permeability tests. A letter dated August 1, 1960, addressed to the city of Estacada by Mr. Olsen had previously been submitted by Mr. Goodwin as complainants exhibit No. 2.

The final witness was Mr. Green who presented additional information regarding the plans and specifications for the proposed project.

Following the testimony of Mr. Green the hearing was ended and the evidence turned over to the staff of the Authority for further consideration.

#### FEDERAL GRANT APPLICATIONS

A motion was made, seconded and carried to set June 15, 1961, as the deadline for submission of applications for federal construction grants from the 1962 fiscal year appropriation for public sewage treatment works.

#### HARVEY ALUMINUM COMPANY - The Dalles

The Chairman stated that the Authority had previously considered the air pollution problems associated with the Harvey Aluminum Company aluminum reduction mill near The Dalles. He explained that the discussion today was not a public hearing and called upon Mr. Hatchard to summarize the activities since the December 15, 1960, Authority meeting.

The following report prepared by the staff of the Authority was read by Mr. Hatchard.

SUBJECT: Interim report regarding air pollution control at the Harvey Aluminum Company's mill - The Dalles, Oregon

DATE: January 26, 1961

The activities which have occurred since the December 15, 1960, Sanitary Authority meeting relative to air pollution controls for the original 240 aluminum reduction cells and the 60 cell addition of the Harvey Aluminum Company mill in The Dalles are as follows:

1. On December 20, 1960, a letter was sent to Harvey Aluminum advising them of the actions taken by the Authority after considering reports presented at the December 15 meeting by Harvey representatives, The Wasco County Fruit and Produce League and the Authority's staff.
2. On December 27, 1960, a letter was sent by Cecil Quesseth, Sp. Assistant Attorney General to Mr. Edgar M. Dick, attorney for Harvey Aluminum Company, The Dalles suggesting that a meeting or conference be held in Portland or The Dalles on any one of several dates. This letter outlines the proposed meeting agenda and the suggested representatives of the company and the Authority's staff.
3. On December 29, 1960, a letter from Mr. Edgar M. Dick, acknowledged receipt of a letter of December 27, and indicated that the proposal for a meeting was being considered and a reply would be presented later.
4. On January 3, 1961, a letter was received from Mr. Claude C. Cook, Administrator, Harvey Aluminum to Curtiss M. Everts requesting a copy of the previous reports of the Air Pollution Section together with test results and testing procedures.
5. On January 4, 1961, a letter was received from Mr. Claude C. Cook, addressed to Cecil H. Quesseth replying to his letter of December 27, 1960, that the company had placed on order certain instruments needed to perform the in-plant sampling; that delivery would be about 60 days later. The letter advised that additional time would be needed to develop sampling methods and procedures and that therefore the meeting suggested in Mr. Quesseth's letter was premature and that the company requested the matter be removed from the January 26, 1961 agenda of the Authority.
6. On January 11, 1961 Cecil H. Quesseth acknowledge receipt of Mr. Cook's letter of January 4, 1961 and indicated the Authority was disappointed that the company was not ready to participate in a meeting prior to the January 26, 1961 Authority session.
7. On January 20, C. M. Everts transmitted a copy of 9 Air Pollution Section reports regarding Harvey fume control. A second letter was sent advising Harvey Aluminum Company that the matter would be on the agenda of January 26, 1961, Authority meeting.

8. On January 24, 1961 a letter was sent to F. E. Price, Dean, Oregon State College, Agricultural Experiment Station requesting that Dr. Compton attend the January 26 Authority meeting and present a summary of the available analyses of fluoride concentrations found in the foliage samples collected from The Dalles stations during the 1960 growing season.

9. The Authority has not received any stack sampling reports for measurements made of the scrubber tower emissions serving the existing 240 aluminum cells which have previously been requested to be submitted on monthly basis. Also, no additional information has been received regarding the company's plans for performing in-plant sampling.

#### STAFF RECOMMENDATION

No new information or action has occurred that will change the staff recommendation made at the December 15 meeting. Therefore, the staff suggests that the members of the Authority consider initiating the actions provided by Oregon Administrative Rules Chapter 334, Section 32-015 (9) concerning the existing 240 cell units and Chapter 449.050 ORS concerning the new plant addition.

The Chairman asked Attorney Quesseth what sort of action the Authority should consider.

Mr. Quesseth stated that he was not certain exactly what was expected from him at this time but that he felt the Chairman's recommendation for a public hearing was proper.

The Chairman called upon Mr. Hatchard for additional staff recommendations. He replied that the technical staff recommend other legal action regarding the plant expansion be considered since the company had not provided the requested additional data which the Authority required in order to review the plans for the fume controls serving the 60 cell addition. He reported that the construction project has proceeded and was now in a shakedown operation period and that even in this process, there was additional emission into the atmosphere.

The Chairman stated that at the December 15, 1961 meeting the Authority deferred action with the hope that the remaining issues could be cooperatively resolved.

The Chairman asked if there were any others present who wished to be heard.

Mr. Donald Bailey, President of Wasco County Fruit and Produce Growers, read the following report summarizing conditions in The Dalles:

For Presentation at January 26  
Meeting of  
Air Pollution Authority  
Wasco County Fruit and Produce League

The Wasco County Fruit & Produce League strongly requests action on the recommendation of the Air Pollution staff at this January 26, meeting of the Sanitary Authority for the following reasons:

There is strong and uncontroverted evidence that fluorine emission from the Harvey Aluminum plant is far in excess of the amount shown by their very meagre stack tests. This evidence of excess emission comes from many sources:

1. The wide spread fruit and leaf damage symptoms near The Dalles in 1960 substantiated by grading tests on damaged fruits by State and Federal Graders and the visual analysis of trees by State Horticulturists, especially on apricots and prunes.
2. Secondly the Oregon State College bulletin which shows evidence of greatly elevated fluorine emissions in leaf samples taken in 1958 and 1959 and some fruit and leaf damage to apricot, peaches and prunes in 1959.
3. Leaf analysis work by Charlton Laboratories in 1960 which showed double the fluoride levels of 1959.
4. The air sampling tests taken by the Air Pollution people in 1960 showing greatly elevated levels of fluorine.
5. The 1960 Oregon State College tests which also show greatly elevated fluorine content in leaves even over the damaging level present in 1959.
6. Another related bit of evidence is the strong resistance of Harvey Aluminum to inplant sampling of their fluorine emission.

Other aluminum plants in the northwest have found it necessary to put in space ventilation fume controls to avoid excessive damage to agriculture. Why has Harvey Aluminum not done this?

Time is of the essence. At the September meeting of the Sanitary Authority it was agreed that a solution must be found before the next blossom season, but almost no progress has been made since September. The fruit industry is risking several million dollars of loss in only two or three months time. As the many commercial canners here today can testify, canning sweet cherries are not available elsewhere and are badly needed by Oregon's Food Processing industry. The Dalles has been the largest local source of canning sweet cherries in the northwest and sometimes in the whole country. Due to our crop losses in 1960, canners got less than half of their needs in canning cherries from The Dalles, a gross loss to the industry of well over a million dollars. Similar losses were incurred due to crop losses of brining and shipping cherries.

Time is running out for the 1961 crop to be protected. Harvey Aluminum has not seen fit to put in an adequate fluorine control system.

The Air Pollution staff recommendations must be acted on now to extend the protection of Oregon law to the fruit industry at The Dalles which is being destroyed by the unregulated trespass of toxic fluorides from Harvey Aluminum Co.

At a meeting of the Wasco County Fruit and Produce League directors held January 17, 1961, the situation in regard to fluoride air pollution from Harvey Aluminum plant was reviewed. The developments were summarized as follows:

In 1958 when Harvey Aluminum began production, only conditional approval had been granted by the Oregon Sanitary Authority for Harvey Aluminum plans for air pollution control at their plant in The Dalles.

IAA357

In July 1960, after complaints from fruit growers in The Dalles area that they were being severely damaged by fluoride emissions, the Sanitary Authority ordered monthly stack tests and monthly inplant air samples to be submitted by Harvey Aluminum. The Authority delayed consideration of approval of plans for new plant facilities until excess emissions were corrected on the existing plant.

In September 1960, Oregon State College issued a bulletin showing that a great increase in fluoride content of fruit tree leaves had occurred at The Dalles after the beginning of the operation of Harvey Aluminum plant and that some leaf and fruit damage had been noted in 1959.

At the September 1960 meeting of the Sanitary Authority, The Dalles fruit growers again asked for protection and alleged serious fruit crop losses in 1960. The Authority repeated its monthly sampling order and set a sixty day minimum for beginning of inplant sampling.

In October 1960, The Dalles Fruit and Produce League committed \$2500 to Oregon State College to aid in fluoride testing work.

On December 3, 1960, The Dalles fruit growers submitted results of a September 1960 fruit leaf analysis which showed double the fluoride amounts over 1959 test levels.

On December 15, 1960, The Dalles fruit growers submitted a map of The Dalles area showing correlation between the fluoride levels found in fruit leaves and the shortage of the sweet cherry crop of 1960.

As neither stack samples nor inplant samples had been received from Harvey Aluminum, the Air Pollution staff recommended a citation hearing of the existing Harvey plant, and also injunction proceedings against the new unit for which plans had not been approved and which was beginning operation. The Sanitary Authority deferred action until the January 26, 1961, meeting.

On January 4, 1961, Harvey indicated by letter that it would be several months before the inplant sampling would begin and requested removal from the agenda of the January 26, 1961 meeting of consideration of the problem at The Dalles.

On January 17, 1961, the Wasco County Fruit and Produce League of The Dalles went on record supporting prompt action on the recommendations of the Air Pollution staff and suggested that the Air Pollution Authority conduct their own sampling at the Harvey plant of inplant emissions as the critical blossom period of The Dalles fruit orchards is only 2 months away, and further delays in taking protective action could be very damaging to the fruit industry at The Dalles.

The Chairman stated the Authority would now like to hear a report from Dr. O. C. Compton, Associate Horticulturist, Agricultural Experiment Station, Oregon State College.

Dr. Compton explained that it would be his purpose to report the fluoride concentrations found in various samples collected from test stations during the 1960 growing season in The Dalles. He explained that these results were preliminary since there had not yet been time to complete the final report. He stated that only 5 copies of the preliminary report dated 1-25-61, "Fluorine Levels in Crops at The Dalles in 1960" were available and one copy was for the Authority file. He stated that this information was a supplement to the report dated August 1960, "Comparison of Fluorine Levels in Crops Before and After Aluminum Factory Operations in The Dalles, Oregon" which was presented during the September 22, 1960 Authority meeting.

Dr. Compton said he believed it was necessary only to compare the fluoride concentrations found in the foliage samples in 1959 with the fluoride concentration found in 1960; that in June 1959 the range in fluoride concentrations was 6 to 106 ppm, averaging 26 ppm. He reported that samples were collected again in August 27 and 28, 1959 and that the range of fluoride found was from 18 ppm to 207 ppm fluoride, which averaged 73 ppm. He explained that the samples were collected from the same locations, the same fields and the same trees.

He reported that samples were collected on July 8, 1960, and the range of fluoride concentrations found in the analyses for all crops was 13.7 to 253 ppm. He stated that the analyses of 87 samples collected on this date averaged 82.8 ppm fluoride. He reported that a second series of samples were collected on September 20, 21 and 27, 1960 and the analyses of 95 samples had fluoride concentrations from 38.8 ppm to 432 ppm with an average for all samples of 176 ppm. This summary is shown on Table 2 of the 1960 preliminary report. He stated that in contrasting foliage samples collected in 1959 with samples collected in 1960 the maximum found in 1959 was 207 ppm while in 1960 the maximum was 432 ppm. The average fluoride concentration found in the second sample series collected in 1959 was 73 ppm compared to the average fluoride concentration of 176 ppm in the second series of foliage samples collected in 1960. He explained that his group had sampled in each direction on the Oregon Side of the river to a distance 6 miles from the aluminum plant. However, orchards were not located in all sectors; and that they were not able to get samples of leaves of cherries or samples of alfalfa in certain locations. He explained the sector they designated as SE and E had no orchards within the first 3 miles so no samples could be collected.

The Chairman asked Mr. Edgar Dick, Attorney representing Harvey Aluminum, if he wished to make a statement.

Mr. Dick stated that Mr. Quesseth had directed a letter to him dealing with the manner in which the problems should be handled and one alternative was to arrange for a conference with the company and Authority technical staff. He stated that Mr. Claude Cook and the Harvey Aluminum Company felt the technical people should deal with the problem in that way. Mr. Dick stated that apparently there was a misunderstanding of what the company's position was. He explained that Harvey had previously requested information and staff reports which were not received until Monday of this week, and that their plan was that when Harvey Aluminum had reviewed the Authority's information that they would meet and discuss staff sampling and other problems and come to an agreement.

He informed the Authority that in-plant sampling equipment has been ordered and it will arrive around the first of March and that this equipment will be installed and calibrated and the Harvey Aluminum staff will make the plant tests. He stated that this procedure would be developed on a routine basis. Mr. Dick stated that Harvey Aluminum Company informed him they stand ready at any time the Authority selects after the first day of February to get together with the technical staff and resolve the problems. He explained that it would take Harvey Aluminum staff approximately one week to review the Authority reports.

He informed the members that Mr. Cook could not attend the meeting as he was in Tennessee and would not return until next week. He said that a letter to the Sanitary Authority was sent from Torrance, California, which he presented to the Secretary. This letter was dated 1-25-61.

The Chairman asked if others would like to be heard.

Mr. George Scalas, Dole Corporation, Salem, Oregon Division, wished to be heard. He stated most of the cherries canned by his company were from The Dalles area, and that their tonnage from that area in 1960 was 1/3 of that in 1958; and that his company had become quite alarmed about this situation.

The Chairman asked Dr. Compton if this decrease could be attributable to the fluoride conditions.

Dr. Compton replied that it could be.

The Chairman said he had heard that fluorides do not injure the cherry crops, and asked Dr. Compton if he had heard similar stories.

Dr. Compton stated he had but that this did not necessarily mean it was true.

Mr. Del McCurvan, California Packing Company stated that his firm relied heavily upon cherries from The Dalles area; since it was the biggest supplier of cherries, perhaps 90%, and that it is very vital to his operation and would be a great loss to California Packing Co., if the cherry crop vanished.

Mr. E. L. Jones, Underwood Fruit and Warehouse Company, Underwood, Washington, said his company was a little more concerned about the fact that the tonnage has been declining in both Washington and Oregon. He felt a poor national reputation was being established and he emphasized that the market and the customers depending on these packers must not be lost since it is almost impossible to get them back.

The Chairman asked Mr. Jones if he was aware of any other reason for the crop reduction other than the contamination of the fruit.

He replied no and that in 1959 the decline of cherries was severe. He anticipated obtaining 400 tons and ended up with about half that amount and he added that as near as he could determine they had had a normal crop in most other areas.

Mr. Mark G. Gehlor, Mgr. Oregon Fruit Products Company, Salem, Oregon, stated his firm has processed canned cherries from The Dalles for about 23 years; that The Dalles was depended upon for a crop each year and that as reported in the last two years the cherry crop had not met the requirements of his company.

The Chairman asked if he had heard of any other factor contributing to the decline of the crop other than fluoride.

Mr. Gehlor replied not necessarily, that basically The Dalles orchards included young growing trees and that the crops should be prolific but that this had not occurred.

Mr. Ellison Whitaker of North Pacific Cannery and Packers stated he believed the questions being considered today were that agricultural crops were being damaged by fluoride emissions and this is of vital importance to the canners and freezing industry of Oregon. He added that Oregon has been considered the finest producer of fruits for years; which was now being threatened by fluoride damage and that the whole problem was of significant importance to the growers. He explained that

when the supply is interrupted then the canners and packers look to other sources and that this will take a big industry away from Oregon where it really belongs. Mr. Whitaker stated that during the 1960 season sweet cherries for canning amounted to only 9,000 actual cases compared with a normal pack of over 20,000 cases.

Mr. Ralph E. Yocum, U. S. Products Corporation, Salem, Oregon stated that his firm had processed most of their cherries in California prior to three years ago; that they had recently purchased a plant in Salem and that their company wanted to continue packing in the Northwest. He stated that three years ago his firm went to The Dalles for their cherry supply and they were sadly disappointed. He emphasized that he would like to see this matter brought to a head so we can continue canning cherries in Oregon.

Mr. H. D. Danielson, Libby McNeil and Libby replied that his company was in a different position as they buy the bulk of the cherries for the fruit cocktail pack; that in 1958 they received 600 tons for canning and approximately 1,000 tons for brining; however, that last year they had less than 350 tons for canning and less than 300 tons for brining.

The Chairman asked the Authority to consider what action was appropriate.

Mr. McPhillips said he believed that the Authority should cite Harvey Aluminum in to show cause why they should not abate any air pollution they were causing. He also asked Mr. Quesseth would the Authority have to prove that the emissions were responsible for the damage if such a hearing was to be successfully concluded.

Mr. Quesseth stated the Authority would have to show that there was injury to plant life or property damage and that a factual basis for any such order was required to abate a public nuisance as defined by our law.

Mr. McPhillips asked Mr. Hatchard if the staff could prove a loss and damage to the cherry crop through fluoride emissions. He stated that he believed that this would have to be proven to obtain effective action.

Mr. Hatchard stated the staff did not include an expert on the horticultural effects of fluoride; however, he pointed out that there had been other fluoride problems affecting other agricultural crops which have been investigated. He explained that the staff has measured high fluoride concentration at sampling stations in The Dalles, and that it would be the staff's assumption that the proof regarding injury to agriculture would have to be handled by agricultural experts. Mr. Hatchard stated the staff had reviewed reports concerning specific studies of fluoride concentrations; that it was the staff's understanding that the effect of fluorides on cherries have not been intensively studied. He stated that the staff assumed that the elevated fluoride levels found in the foliage probably would be evidence that could provide some of the proof together with the economics of the crop production.

Mr. McPhillips stated that there probably was a difference between technical men and he felt sure that Harvey Aluminum would provide a horticulturist to prove that there was no damage to cherries from high fluoride concentrations.

IAA357

Mr. Don Bailey stated the Wasco County Fruit and Produce League had brought evidence to the Authority regarding high fluoride concentrations and the effects of these concentrations upon crop production, that they had submitted evidence showing damage to prunes, peaches, etc., and that there was also evidence showing damage to the cherry crop.

Mr. McPhillips explained that the Authority was not unsympathetic to the growers and canners' position but remarked again that these facts had to be proven to the satisfaction of the court, and it did not appear to him that Harvey Aluminum was going to provide additional controls just because the Authority requested them to do so.

The Chairman asked Mr. Paul Rowell, Oregon Dept. of Agriculture if he wished to make a statement.

Mr. Paul Rowell, stated that it was his understanding from reports which he had reviewed that there was specific fluoride burn and he felt that was already determined; and that any time the leaves are burned it may be expected that there will be a decrease in the growth of the tree and hence a detrimental effect upon crops. He felt that this was a specific fact and there certainly were sufficient other indications that the importance of this production to the area and state as a whole would justify any action the State should take.

The Chairman asked Mr. Hatchard to re-state the staff recommendations.

Mr. Hatchard stated that the staff was suggesting that legal counsel advise the Authority if an action to seek an injunction regarding the plant expansion could be considered. He stated the second part of the staff recommendation related to the existing plant where field investigations had established that high fluoride concentrations were present in the area and the staff recommended that the Authority authorize a citation hearing to consider all facts of the matter.

Mr. Harms asked the Chairman if the Authority would require that the recommendation for the 99% fluoride removal would be included in the hearing.

Mr. Hatchard advised Mr. Harms this recommendation was adopted at the September 22 1960 Authority meeting.

Mr. Quesseth stated he would like Mr. Hatchard to review the first part of the staff recommendation. He asked if he was indicating that no fume control plans were received and approved and that the Authority attempt to obtain an injunction in court.

Mr. Hatchard said the staff was concerned regarding the 60 cell plant expansion project; that the plans were received but not approved and that the staff suggested that the Authority consider seeking an injunction to prevent operation of the plant expansion.

Mr. Quesseth stated that he would have to do additional research on this matter to determine if a sound legal basis existed for an injunction.

Mr. Hatchard said that in accordance with the existing rules that inasmuch as satisfactory air pollution controls have not been obtained within a reasonable time period that the staff recommended a citation hearing also be considered.

Addenda to Minutes of January 26, 1961, Sanitary Authority Meeting

An omission in the dittoed copy of the Sanitary Authority minutes regarding the members' consideration of the Sanitary Service Company, Marion County, and the open burning of building debris, Portland. These matters were considered following the Estacada subject which ends on page 9. The following addenda to the minutes should be made.

Sanitary Service Company -- Marion County

The Secretary stated that Robert W. DeArmond had submitted a letter dated January 20, 1961, requesting an extension of time to allow the Sanitary Service Company to cease the open burning of refuse at their site southeast of Salem.

The Chairman asked if Mr. DeArmond had a statement to present. Mr. DeArmond stated he was an attorney representing Mr. Wm. Schlitt and Carl Soos, owners of the Sanitary Service Company that have the franchise from the city of Salem for the collection and disposal of refuse. He stated that the Sanitary Service Company had received a letter in November 1960, notifying that the open burning practices were in violation of the Authority's regulations; that alternative disposal methods must be developed.

He stated that Marion County and the city of Salem had received similar letters. He explained that the owners of the Sanitary Service Company expected that a satisfactory program could be established with cooperative effort on a regional basis. He reported that the Inter-governmental Cooperation Council had authorized a study to develop such a program, that several meetings have been held and that additional time was needed to establish new disposal sites.

Mr. DeArmond stated that a second letter was received from the Authority notifying that open burning operations at the Sanitary Service Company's site must be stopped by February 10, 1961. He reported that a preliminary inspection by the representatives of the State Board of Health indicated that a modified sanitary landfill could be established at the existing site. However, site development work for drainage and clearing would be necessary. He reported that Clark and Groff, consulting engineers, Salem, had been retained to plan the site development work; that a contracting firm had already been contacted to proceed with the clearing and drainage installations. He stated that the Sanitary Service Company wants to cooperate with the Authority but that an extension of time was required. He indicated that the necessary work could be completed in approximately 6 months and he emphasized that if the time extension was granted that the company would take all necessary steps to conform with the Authority's requirements.

The Chairman asked Mr. Hatchard for any staff comments regarding the extension of time.

Mr. Hatchard stated that three disposal sites had been operating in Salem involving open burning and that two of the operations had converted to other disposal methods. He replied that the 6-month period appeared too long of an extension for the Sanitary Service Company and suggested that the Authority members may wish to consider granting a 30 day time extension and require that a progress report be submitted by the Sanitary Service Company outlining the site development work completed and the work remaining. He stated that the progress report would show the need for any additional time.

MOTION It was MOVED by Mr. Harms, seconded by Dr. Wilcox and carried that an extension of time for complying with the cessation of ~~open~~ open burning be granted for a 30 day period to the Sanitary Service Company at which time the company will submit a progress report of the work accomplished on the change to sanitary landfill methods and that the need for additional time would be based upon the remaining work to be completed, providing that the total time would not exceed 6 months.

Open burning of building debris, Portland

Mr. Thomas Young, representing the Associated General Contractors organization stated that he was attempting to work out a satisfactory solution to control the air pollution from burning of building demolition debris. He suggested that a meeting be arranged with the representatives of the city, the Authority and the Associated General Contractors to work out the details and report back to the Authority with a satisfactory program.

Mr. Wendel explained that several meetings had already been held with representatives of the city urban renewal staff and the Associated General Contractors and it appeared that no satisfactory change in the method was being proposed.

He emphasized that it appeared that little would be accomplished if the Authority allowed an additional 30 days delay since the Authority's regulations were adopted in April 1959 to become effective January 1960. The Authority has already provided nearly 2 years time in which to develop alternative methods.

Mr. Wendel asked if the staff had any additional comments.

Mr. Hatchard stated that there still was need to work out specific solutions for conforming with the Authority's regulations prohibiting the open burning of refuse. He suggested that the meetings be held but that no delays be authorized.

MOTION It was MOVED by Mr. Harms and seconded by Mr. McPhillips and carried that the request for a 30 day continuance of open burning by the Assoc. Gen'l Contractors be denied and that the staff be directed to work with the committee to work out a solution to the problems.

The Chairman stated that a citation to show cause why an order should not be issued could include both the plant expansion and the existing aluminum production mill.

MOTION: It was MOVED by Mr. McPhillips and seconded by Mr. Amacher and carried that the Harvey Aluminum Company be cited to appear at the next meeting of the Sanitary Authority and show cause why an order should not be entered requiring Harvey Aluminum to abate the nuisance they were creating by the discharge of excessive amounts of fluoride into the air from their aluminum reduction plant at The Dalles, Oregon.

Respectfully submitted,

CURTISS M. EVERTS  
Secretary and Chief Engineer

MINUTES OF EIGHTY-FOURTH MEETING

of the

Oregon State Sanitary Authority

March 2, 1961

The eighty-fourth meeting of the Oregon State Sanitary Authority was called to order by B. A. McPhillips, Acting Chairman at 10:30 a.m., March 2, 1961, in the auditorium of the State Game Commission, 1634 S. W. Alder St., Portland, Oregon. The other members and staff present were H. P. Meierjurgan, R. H. Wilcox, L. A. Stanley, E. C. Harms, Jr., members; Cecil H. Quesseth, Legal Advisor; Curtiss M. Everts, Secretary and Chief Engineer, K. H. Spies, Deputy State Sanitary Engineer and Richard E. Hatchard, Asst. Chief Engineer.

MINUTES:

It was MOVED by Mr. Harms, seconded by Dr. Wilcox and carried that the minutes of the eighty-third meeting held on January 26, 1961 be approved as prepared by the Secretary.

Public Hearing Regarding Harvey Aluminum Company, The Dalles

Chairman McPhillips stated that the public hearing in the matter of the Harvey Aluminum Company was instituted by the Sanitary Authority in a written notice to the company and its officers concerning the air pollution problem in

Wasco County. He explained that the public hearing of this matter would involve considerably more time than was originally anticipated and that the appointment of a Hearings Officer should be considered. After consideration of the matter by the Authority members, the following motion was adopted:

MOTION

It was MOVED by Mr. Stanley and seconded by Dr. Wilcox and carried that Mr. John D. Nichols be appointed by the Sanitary Authority as Hearings Officer in the matter of Harvey Aluminum, a corporation concerning air pollution in Wasco County.

The following attorneys made appearances before the Authority on behalf of the Harvey Aluminum Company:

Mr. Chas. A. Phipps, of Phipps, Phipps & Dunn, Pioneer Bldg., The Dalles, Oregon.

Mr. Geo. A. Rhoten & Mr. Samuel F. Speerstra, of Rhoten, Rhoten & Speerstra, 310 Pioneer Trust Bldg., Salem, Oregon

Mr. Maxwell Elliott, Torrance, California.

The following attorneys appeared before the Authority for the intervenor Wasco County Fruit & Produce League:

Mr. Robert M. Kerr, Mr. Lamar Tooze, Jr. & Mr. James W. Morrell, of Tooze, Kerr, Tooze & Morrell, 811 Equitable Bldg., Portland.

Petition to Intervene:

The Chairman stated that a petition to intervene had been filed with the Authority by the Wasco County Fruit & Produce League. He requested the Secretary to read the petition.

The Secretary read a Petition to Intervene, addressed to the Oregon State Sanitary Authority, 968 State Office Bldg., Portland 1, Oregon, dated February 20, 1961 which was received on February 21, 1961:

"Gentlemen:

In the Matter of Harvey Aluminum, a corporation, concerning air pollution in Wasco County, State of Oregon.

Wasco County Fruit & Produce League,  
Petition to Intervene.

"The Wasco County Fruit & Produce League, the members of which are

orchardists located in Wasco County, petitions for leave to intervene in the above captioned proceeding and to become a party thereto.

"The League and its members have an interest in the subject matter of said proceeding and have property and financial interest which may not be adequately represented by existing parties. Such intervention would not unduly broaden the issues or delay the proceedings.

"Very truly yours, Tooze, Kerr, Tooze & Morrell, signed by James W. Morrell, attorneys for Wasco County Fruit & Produce League, Petitioner."

Messrs. Rhoten and Elliott stated that Harvey Aluminum objected to the Wasco County Fruit and Produce League's petition to intervene because the organization has not shown any direct financial interest that might be affected by the proceedings, that definite charges have not been made nor had any statement been filed that the organization would be bound by the decisions reached during the proceedings.

After considering the statements of the attorneys for the intervenors and the statements of the attorneys representing Harvey Aluminum and advice from Cecil Quesseth the following motion was made:

MOTION

It was MOVED by Dr. Wilcox, seconded by Mr. Stanley and carried that the petition to intervene by the Wasco County Fruit and Produce League be granted.

Extension of time.

Chairman McPhillips stated that the Authority had received a motion for an extension of time filed from the Harvey Aluminum Company through its attorney, Charles A. Phipps on February 21, 1961 and requested that the Secretary read the motion.

The Secretary read the following:

"To the Sanitary Authority of the State of Oregon; Harold Wendel, Chairman, E. C. Harms, Jr., Curtiss M. Everts, Secretary and C. H. Quesseth, Attorney.  
"Based on the attached affidavit, Harvey Aluminum through its attorneys, Phipps, Phipps & Dunn and Rhoten, Rhoten & Speerstra, respectfully requests that the Authority extend for a period of not less than thirty (30) days from and after March 2, 1961, the time set for a public hearing on the above entitled matter as provided by the notice of the Authority dated February 7, 1961 and also

extend for a like period of time the time in which Harvey Aluminum has to appear and show cause, or otherwise appear in response to said notice as provided therein.

"Dated February 20, 1961.

"Phipps, Phipps & Dunn. Rhoten, Rhoten & Speerstra. By Charles A. Phipps, attorneys for Harvey Aluminum."

The Secretary stated that there was attached to the petition an affidavit in support of the motion for extension of time by Chas. A. Phipps; that Edgar M. Dick, former attorney appearing for Harvey Aluminum had resigned on February 16, 1961; that the law firm of Phipps, Phipps and Dunn, The Dalles, and Rhoten, Rhoten & Speerstra, Salem, were retained by Harvey Aluminum to appear for it in these proceedings; that these attorneys have filed with the Authority notice of their substitution in place of Edgar M. Dick; that the attorneys now representing Harvey Aluminum are not familiar with the matters involved in the proceedings and that it would not be possible for these attorneys to be prepared by March 2, 1961.

Messrs. Morrell and Kerr, attorneys representing the Wasco County Fruit and Produce League objected to Harvey Aluminum Company's petition for an extension of time because of the past delays by Harvey Aluminum in providing data and other information requested by the Authority and that there was conclusive evidence of substantial and irreparable damage and injury that was occurring daily because of the fluorides emitted from the mill.

After considering statements of attorneys for the Wasco County Fruit and Produce League and attorneys for Harvey Aluminum and advice from Mr. Queseth the following motion was made:

MOTION

It was MOVED by Mr. Stanley, seconded by Mr. Harms and carried that Harvey Aluminum be granted additional time for preparing their case and that the hearing be postponed until the first week in April 1961.

Mr. Quesseth stated that the subpoenas which the Authority had issued to Witnesses who were to appear at the public hearing would remain in force in the event that the hearings are resumed.

Mr. Morrell requested permission to intervene in behalf of the Citizens Pine Conservation Committee and the Livestock Association and presented verified copies of the petition to the Secretary.

MOTION

It was MOVED by Mr. Harms and seconded by Mr. Stanley and carried that the petition for the Pine Conservation Committee and the Wasco County Livestock Association be referred to the Hearings Officer for consideration.

The public hearing regarding Harvey Aluminum was concluded at 11:45 a.m.

Estacada

At the request of the Chairman, Mr. Kenneth H. Spies, Deputy State Sanitary Engineer, reviewed for the members of the Authority the testimony presented at the public hearing on January 26, 1961, on the matter of a sewage oxidation lagoon proposed for construction by the city of Estacada, Oregon. In order Mr. Spies presented pertinent points of the testimony offered at the hearing by Mr. Jack Sceva, ground water geologist, State Engineer's office; Mr. Irving Ohlsen, Consulting Engineer of Dames and Moore; Mr. James D. Caufield, Consulting Engineer, Mr. William H. Tucker and Mr. Lawrence Looney, adjacent property owners, and Mr. Carl E. Green, Consulting Engineer. He also commented on the statements made by Mr. Chester Irelan, Portland General Electric Company, and brought to the attention of the Authority a letter from the State Game Commission protesting the location of the outfall sewer from the lagoon which would be in the vicinity of a migrant fish passage facility.

In summarizing, Mr. Spies stated it appeared possible that ground water in the area could be polluted, although the nearest residence was approximately one

IAA357

mile from the proposed site. He stated that the staff was not concerned with bacterial pollution but was concerned with the possibility of contamination of the ground water system by non-biological contaminants in the city's sewage.

Mr. Stanley asked if it was true that detergents are not removed by conventional treatment methods.

Mr. Spies stated that Mr. Stanley's assumption was correct.

Mr. Harms asked if it would be possible to require a water-tight lagoon as a condition of approval.

Dr. Wilcox asked if a water-tight pond could be constructed short of providing a concrete basin and Mr. Meierjurgan asked if the sewage would receive any treatment prior to its discharge into the lagoon.

Questions on construction Mr. Spies referred to Mr. Stanley and stated that the sewage following its period of stabilization in the lagoon would be chlorinated. He also reported that some of the wells are probably presently contaminated, that the lagoon would receive approximately 100,000 gallons of sewage per day, and that he did not believe that there would be any great amount of diffusion of detergents contrary to the direction of ground water flow.

Mr. Stanley in stating his opinions on the matter said that the Sanitary Authority in its decision should certainly stay on the side of safety, that the testimony presented indicated that there would be some seepage from the lagoon, that the aquifer is used as a source of water supply and that in his opinion the city of Estacada had been delinquent in not furnishing the Sanitary Authority more information or data showing that the soil could be completely sealed. In conclusion, he recommended that the project be disapproved.

Mr. Quesseth then raised the question as to whether the approval could be conditional subject to the city providing a tight lagoon.

Mr. McPhillips then stated that as a matter of public policy should the Authority take any chance on contamination of the ground water supply in this area.

After a brief discussion, it was MOVED by Mr. Meierjurgan, seconded by Mr. Stanley and carried that the plans submitted by the city of Estacada for the construction of a sewage oxidation lagoon be disapproved; that the Authority's legal counsel and its staff be directed to prepare appropriate findings of fact and an order on this matter, the order to provide for the submission of amended plans to the Authority within 90 days, and the completion of the project by January, 1962.

Sherwood

At the request of the Chairman, the Secretary read the staff recommendations relative to additional conditions to be included in the order concerning sewage and industrial waste treatment for the city of Sherwood as follows:

It is suggested that Mr. Quesseth be instructed to prepare appropriate findings of fact and an order to augment the motion made and passed at the conclusion of the public hearing in regard to the city of Sherwood on January 26, 1961.

It is suggested further that besides the deadline for plans and necessary financing the order include the following:

1. A statement directing the abatement of pollution of Cedar Creek and the air by constructing operating and maintaining facilities with adequate hydraulic and organic capacity for treatment of the sewage and industrial waste flows to the extent that the effluent shall at all times have a chlorine residual of not less than 0.5 parts per million after 30 minutes contact and a 5-day biochemical oxygen demand of not more than 20 parts per million.

2. A deadline set for completing and placing into operation the facilities required. (September 1, 1962)

It was MOVED by Dr. Wilcox, seconded by Mr. Stanley and carried that the Authority's legal counsel and the staff be directed to prepare appropriate findings of fact and an order in the matter of sewage and industrial waste disposal for the city of Sherwood, including the following provisions:

1. That time for completion of construction and physical plans be set at September 1, 1961.
2. That the abatement of pollution of Cedar Creek and the air be accomplished by constructing and operating and maintaining facilities with adequate hydraulic and organic capacity for treatment of the sewage and industrial waste flows to the extent that the effluent shall at all times have a chlorine residual of not less than 0.5 parts per million after 30 minutes contact and a 5-day biochemical oxygen demand of not more than 20 parts per million.
3. That the project be completed and placed in operation by September 1, 1962.

#### Biennial Report

It was MOVED by Mr. Stanley, seconded by Mr. Meierjurgan and passed that the Authority publish its 11th Biennial Report on Water Pollution Control as per the new format proposed by Mr. Spies.

\* \* \* \* \*

Mrs. Gertrude Jensen, Columbia Gorge Commission, 30 S. E. 39th Avenue (Phone Be. 2-4652), appeared and asked to be heard in connection with the matter of fluoride emissions from the Harvey Aluminum plant at The Dalles, Oregon. The Chairman explained to Mrs. Jensen that this matter had been referred to Mr. John D. Nichols, hearings examiner, and that her testimony could be presented when public hearings on the subject were undertaken.

It was decided that the next meeting of the Authority should be scheduled for early May at the call of the Chairman.

There being no further business, the meeting was adjourned at 2:30 p.m.

Respectfully submitted,

CURTISS M. EVERTS  
Secretary and Chief Engineer

MINUTES OF THE EIGHTY-FIFTH MEETING

of the

Oregon State Sanitary Authority

April 4, 1961

The eighty-fifth meeting of the Oregon State Sanitary Authority was called to order by Chairman H. F. Wendel at 3:25 p.m., April 4, Room 36, State Office Building, Portland, Oregon. The other members and staff present were B. A. McPhillips, Lewis A. Stanley, Edward C. Harms, Jr., members, Curtiss M. Everts, Secretary and Chief Engineer, Cecil Quesseth, legal advisor, Richard E. Hatchard, Assistant Chief Engineer, and Donald J. Benson, Associate Engineer.

Public Hearing regarding Harvey Aluminum Company, The Dalles

Chairman Wendel stated that this meeting was called for the purpose of considering the request of Harvey Aluminum for postponement of the public hearing scheduled to begin April 6, 1961 on the basis of their proposal to engage in certain activities. The Chairman requested Mr. Maxwell Elliott, General Counsel, Harvey Aluminum, to present his statement.

Mr. Elliott stated that the Harvey Aluminum Company recognized the need to obtain additional data describing the emissions from fume scrubbers and from space ventilation in the cell buildings. He requested an indefinite postponement of the public hearing scheduled to resume on April 6, with the understanding that the following projects and activities will be undertaken by Harvey Aluminum:

IAA357

1. Furnish data to the Authority describing the stack samples on a monthly basis as requested and to continue on a monthly basis to provide additional data for the fume scrubber stacks as designated by the Authority's technical staff including the stack sampling data for the February and March measurements;
2. Submit within 2 weeks to the Authority measurements of the space monitor test samples and thereafter to continue the measurement at such reasonable intervals as the Authority's technical staff and Harvey's representatives agree;
3. Engage in cooperative activities with the Authority's technical staff with regard to the stack sampling operations, recommendations, suggestions, observations of laboratory analytical procedures and related matters;
4. Establish laboratory facilities in the Hood River vicinity to avoid any contamination of samples;
5. Instruct their technical staff to maintain the cooperative exchange of information with the Authority.

Mr. Elliott stated that there were some related activities which Harvey Aluminum will carry on separate from the details of this proposal. He reported that the company would engage in actions to bring about settlement of some 27 claims presented by the members of the Wasco County Fruit & Produce League concerning effects upon apricots and peaches. He reported that there was a similar problem with regard to livestock operations and alfalfa producers in The Dalles vicinity. He reported that Harvey Aluminum was prepared to make monetary agricultural assistance available to them to avoid losses.

Mr. Elliott reported that it has been well publicized that Harvey Aluminum has a contract with Bonneville Power Administration for power to operate a new aluminum plant in the northwest and that plans had been submitted to the Authority some time ago to obtain an expression of views. He stated that Harvey Aluminum would await determination of the existing matter before expecting a reply from the

Authority and that in the meantime Harvey Aluminum would engage in no new construction of aluminum reduction cells in The Dalles vicinity.

IAA357

Mr. James Morrell, attorney representing the intervenor, Wasco County Fruit & Produce League opposed the continuance of the public hearing based upon Harvey Aluminum Company's offer to provide additional data because the proposal did not incorporate all of the terms of the Sanitary Authority's proposed order which was included with the notice of public hearing. He stated that the Authority had been attempting to obtain stack samples and related information from Harvey Aluminum for nearly a year and that the company had failed to provide the information. Instead he stated the company had requested additional delays and extensions of time. Mr. Morrell explained that the Sanitary Authority's field surveys had already established that an air pollution problem exists in The Dalles and that injury to the million dollar fruit industry was continuing to occur. He suggested that Harvey Aluminum consent to the entry of an order by the Authority incorporating all of the terms in the notice of public hearing.

Mr. Rhoten, attorney, Harvey Aluminum, stated that he had hoped that the public hearing would not become involved with damage claims matters. He replied that the proposal presented by Mr. Elliott would produce the basic data required by the Authority. He stated that Harvey Aluminum would not agree to the adoption of an order incorporating the terms in the notice of public hearing since the charges made in the complaint included injury being caused to human, plant and animal life in The Dalles. He pointed out that this would be tantamount to an admission by Harvey that the mill effluents were causing injury to human, plant and animal life. He stated that Harvey Aluminum, however, would settle any legitimate claims of injury actually related to their mill operations.

Mr. Quesseth stated that the Sanitary Authority was not involved with the settlement of individual claims of injury and that the primary responsibility of the Authority was to bring about adequate control of air pollution as rapidly as possible.

After considering the statements of attorneys for Harvey Aluminum and the attorneys for Wasco County Fruit and Produce League, advice from Mr. Quesseth and statements from the Authority's staff the following motion was adopted:

MOTION

It was MOVED by Mr. Harms, seconded by Mr. Stanley and carried that the Sanitary Authority enter an order continuing the public hearing in the matter of Harvey Aluminum providing that Harvey Aluminum will perform the activities outlined by Mr. Elliott and submit the data to the Authority for evaluation.

Petition to Intervene

Mr. James Lonergan, attorney, stated that he represented about 400 employees of Harvey Aluminum and that the "Community Growth Through Industry Committee " wished to present a petition to intervene in the hearing.

"COMES NOW COMMUNITY GROWTH THROUGH INDUSTRY COMMITTEE, by their respective members, and requests leave to intervene in the above-entitled proceedings, and respectfully avers:

I

That this petitioner is a voluntary association of property owners in Wasco County, Oregon, and employees of Harvey Aluminum.

II

That this petitioner has a substantial property and financial interest involved in this proceeding which may not be adequately represented by the existing parties.

III

That such intervention would not unduly broaden the issues or delay the proceedings.

WHEREFORE, your petitioner asks leave to intervene in this proceeding."

COMMUNITY GROWTH THROUGH INDUSTRY COMMITTEE

By /s/ Donald M. Cunliffe

Title Co-Chairman

Address N.W. Floral St., The Dalles

The Secretary stated that attached to the petition was a verified affidavit signed by D. N. Cunliffe, Co-Chairman of the Committee.

Mr. Morell objected to the waiver of the ten days required by OAR 334-31-060 for submitting a petition to intervene.

MOTION

It was MOVED by Mr. Stanley, seconded by Mr. Harms and carried that the petition to intervene filed by the Community Growth Through Industry Committee be referred to the Hearings Officer for consideration.

City of La Grande

A proposal to issue a priority to La Grande for the funds remaining in the 1960-1961 Public Law 660 federal grant funds was presented by Mr. Benson. Favorable action would allow the city to proceed immediately with construction without becoming a pickup project with the 1961-1962 expected funds.

The following comments regarding this project were submitted by a memorandum to the Authority members:

This project is needed to replace an existing sewage treatment plant which was built in 1926, and which has since become inadequate to prevent pollution of Mill Creek, the principal receiving stream.

Bonds were previously rejected by the voters but the approval has since been granted in November 1960, by a vote of 2174 to 1147. This approval was for a bond issue of \$464,000. These bonds were purchased in January 1961 by Foster and Marshall at an effective interest rate of 3.69%.

An option has been taken on a 160 acre tract located to the east of the city limits in the "Y" between Highways 30 and 203. Purchase price of the land is \$64,000 and had been figured in the bond issue.

As of March 31, 1961, the state of Oregon has a balance of \$43,429 available from the 1961 fiscal year allotment. It would seem possible to appropriate a sum of about \$35,000 of this balance toward the LaGrande request of \$103,000. The remaining portion could be allotted from the 1962 fiscal year appropriation.

According to the provisions of the fiscal year 1961 priorities, alternates were to be chosen on the basis of priority points. This would allow consideration of La Grande next, on the basis of priority points and available financing.

IAA357

Discussion following the presentation revealed that the issuance of a priority from this year's funds would obligate the Authority for the major portion of La Grande's eligible grant from next year's expected funds. The Authority agreed that application for next year's expected funds should be considered at the same time and could not obligate those funds in this manner.

MOTION

It was MOVED by Mr. McPhillips, seconded by Mr. Harms and carried that the proposal be denied.

Next Meeting

The Chairman announced that the next meeting would be held on May 17th, 1961. There being no further business the meeting was adjourned at 4:45 p.m.

Respectfully submitted,

  
CURTISS M. EVERTS

Secretary and Chief Engineer

MINUTES OF THE EIGHTY-SIXTH MEETING

of the

Oregon State Sanitary Authority

May 17, 1961

The eighty-sixth meeting of the Oregon State Sanitary Authority was called to order by Chairman H. F. Wendel at 10 AM, May 17, Game Commission Building, 1634 S. W. Alder Street, Portland, Oregon. The other members and staff present were B. A. McPhillips, Edward C. Harms, Jr., Mr. H. E. Meierjurgan, Richard H. Wilcox, M.D., members, Curtiss M. Everts, Secretary and Chief Engineer, Cecil Quesseth, legal advisor, K. H. Spies, Deputy State Sanitary Engineer, R. E. Hatchard, Assistant Chief Engineer, Donald J. Benson, Associate Engineer, R. R. Ott, Chemical Engineer and R. B. Percy, Chemist.

MINUTES It was MOVED by Mr. McPhillips, seconded by Mr. Meierjorgen, and carried that the minutes of the March 2, 1961, and April 4, 1961, meetings be approved as prepared by the secretary.

Project Plans (January, February, March & April, 1961)

The Secretary summarized the project plans received during the months of January, February, March and April 1961 and recommended action taken by the staff on the attached project plans be approved by the Authority.

MOTION It was MOVED by Mr. McPhillips, seconded by Mr. Meierjorgen and carried that the project plans, as presented by the Secretary, be approved.

During the months of January, February, March and April 1961, 71 sets of plans, specifications and engineering reports for sewerage and waste disposal projects were received and reviewed by the staff and action taken as follows:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1-3-61	North Bend	Sewer extensions	Prov. approval
1-3-61	Pendleton	Edgewood pump station	Prov. approval
1-5-61	Multnomah County	Ventura Park Grade School	Approved
1-5-61	Hermiston	East Fifth St. sewer (rev. plans)	Prov. approval
1-6-61	Grants Pass	Digester mixer & heater	Approved
1-10-61	Multnomah County	Portland Trailer Park sewerage (Preliminary report)	Prov. approval
1-9-61	Yamhill County	Dayton High School sewerage (Revised plans)	Approved
1-13-61	Tualatin Hills S.D.	Plant additions	Comments submitted
1-16-61	Marion County	Willamette University	Approved
1-17-61	Multnomah County	Lincoln Park Grade School	Approved
1-17-61	Multnomah County	Mill Park Grade School	Approved
1-23-61	Portland	University of Portland sewers (Preliminary plans)	Approved

1-26-61	Florence	Sewage treatment works	Comments submitted
1-26-61	Eugene	7th Place sewer	Prov. approval
1-27-61	Pendleton	S.W. Kirk Avenue sewer	Prov. approval
1-31-61	Polk County	Capitol Manor Retirement Home sewage plant	Prel. approval
2-3-61	Coos County	Coast Guard Station, Charleston	Prov. approval
2-7-61	Toledo	Sewer extensions	Prov. approval
2-10-61	Eugene	Sewer extensions (2)	Prov. approval
2-14-61	Douglas County	John Fremont Jr. H.S. Addn.	Approved
2-14-61	Multnomah County	Centennial High School Addn.	Approved
2-16-61	Gilliam County	Condon High School	Approved
2-20-61	Lane County	Elmira School Addition	Approved
2-20-61	Lane County	Central School Addition	Approved
2-20-61	Multnomah County	Reynolds Grade School	Approved
2-20-61	Benton County	Philomath Grade School Addn.	Approved
2-20-61	Benton County	Philomath High School Addn.	Approved
2-20-61	Multnomah County	David Douglas High School Addn.	Approved
2-24-61	Eagle Point	Sewer system & lagoon	Comments submitted
2-24-61	Medford	Sewer extensions	Prov. approval
2-27-61	Tualatin Hills	Sewage plant additions	Comments submitted
2-27-61	Oak Lodge S.D. #2	Pumping station	Approved
2-27-61	Coos County	Coquille Grade School	Approved
3-2-61	Columbia San. Dist.	Sewer extensions	Prov. approval
3-7-61	West Linn	Sewer extensions	Prov. approval
3-8-61	Lane County	Colin Kelly Jr. High	Approved
3-8-61	Jefferson County	Warm Springs School	Prov. approval
3-8-61	Winston	Winston Grade School Addn.	Approved
3-8-61	Lakeview	Senior High School Addition	Approved

3-8-61	Lane County	McKenzie Grade School Addn.	Approved
3-8-61	Lane County	Cal Young Jr. High Addn.	Approved
3-10-61	Tualatin Hills	Sewer extensions	Prov. approval
3-10-61	Sherwood	High School Addn.	Approved
3-13-61	Oregon Primate Research	Sewer system	Prov. approval
3-15-61	Springfield	Sewer extensions	Prov. approval
3-17-61	Klamath Falls	Lucile O'Neill School	Approved
3-21-61	Eugene	Sewer extensions	Prov. approval
3-22-61	East Roseburg	Sewer project	Prov. approval
3-24-61	Seaside	Sewer extensions	Prov. approval
3-27-61	West Linn	Sewer extensions	Prov. approval
3-28-61	Florence	Pump station & treatment plant	Prov. approval
3-29-61	Orchid San. Dist.	Sewer extension	Prov. approval
3-29-61	Heppner	High School	Approved
3-29-61	Ramona Heights S.D.	Sewers	Prov. approval
3-30-61	Eagle Point	Pump station, lagoon	Prov. approval
4-3-61	Marion County	Chemawa Indian School Lagoon	Prov. approval
4-3-61	La Grande	EOCE Addition	Approved
4-3-61	Clackamas County	Canby High School Addn.	Approved
4-5-61	Washington County	Tigard Sr. High School Addn.	Approved
4-6-61	Uplands San. Dist.	Orchard Hill Development	App. withheld for final legal agreement
4-13-61	Coos Bay	Menasha Pulp & Paper Co. waste disposal facilities	Prov. approval
4-13-61	Sunset Valley S.D.	Sewer extensions	Prov. approval
4-14-61	Corvallis	OSU dormitory	Approved
4-14-61	Monmouth	Oregon College of Education Addn.	Approved
4-18-61	Seaside	Sewage treatment plant Addn.	Prov. approval

IAA357

4-18-61	Klamath Falls	Shippington sewers and pump station	Prov. approval
4-24-61	Lane County	New Pleasant Hill High School	Approved
4-24-61	Klamath County	New Bly Elementary School	Approved
4-28-61	Orchid San. Dist.	Sewer extensions	Prov. approval
4-28-61	Lane County	Husband & Smith Trailer Park lagoon	Prov. approval
4-28-61	West Linn	Sunset district sewer extension	Prov. approval

Harvey Aluminum Company

The Chairman read the following Motion regarding the public hearing concerning air pollution from Harvey Aluminum, The Dalles, adopted at the April 4, 1961, meeting.

" MOTION It was MOVED by Mr. Harms, seconded by Mr. Stanley and carried that the Sanitary Authority enter an order continuing the public hearing in the matter of Harvey Aluminum providing that Harvey Aluminum will perform the activities outlined by Mr. Elliott and submit the data to the Authority for evaluation. "

The Chairman requested R. E. Hatchard to report on what has been accomplished by Harvey Aluminum and the Authority staff since the April 4 meeting.

Mr. Hatchard presented the following report:

During the April 4th meeting of the Sanitary Authority an "Order for Continuance of Public Hearing" was adopted in the matter of Harvey Aluminum, a corporation concerning air pollution in Wasco County, Oregon. The order continued indefinitely, the public hearing scheduled to begin April 6, 1961, until further direction or order of the Sanitary Authority, provided Harvey Aluminum accomplished six items of technical measurement and activities.

The following summarizes the status of these six activities as of May 17, 1961, and are listed by letter designation appearing in the Order for Continuance.

A. A summary of 9 stack sampling measurements completed by Harvey Aluminum technical staff in February and March 1961 were submitted to the Sanitary Authority on April 28, 1961. This data shows the total fluoride discharged from the fume scrubber into the atmosphere. No separation of the quantity of particulate and gaseous fluoride was made in these measurements but this data has been obtained in subsequent tests.

B. Three Authority staff members participated in the concurrent test measurement of the cell building E fume scrubber and roof monitor cell building space ventilation. The test methods and procedures used were acceptable and the procedure included a separation of the quantity of fluoride found in the particulate and gaseous state. These test samples were submitted to a private consulting laboratory which had previous experience with the analysis of fluorides. Control samples were submitted to the laboratory by Harvey containing known concentrations of fluoride. The quantities/<sup>were</sup> unknown to the private laboratory and the analysis of these samples showed erroneous results according to Harvey's technical staff. Unfortunately the complete April 19 tests data was not accurate enough for use. Complete test runs were repeated on cell building E were made on May 4 and May 9. The test samples were submitted again to the private laboratory in Los Angeles for analysis but the Harvey technical staff had arranged for analyses by the laboratory manager. The Authority provided control samples to be submitted along with the May 9 series identified by a code designation similar to the test samples. Each control sample was divided into 3 portions to provide an independent check by Harvey Aluminum and the Authority's laboratory analyses.

The analytical data for the May 4 test run started to arrive on May 11. Telephone reports in the May 9 measurements were submitted by Harvey at 1 PM May 16. Evaluation of this data indicates the order of magnitude of the fluoride quantities contained in the roof monitor exhaust and the concurrent measurement of the fume scrubber discharge.

C. The measurement of the space ventilation fluoride concentrations began on April 7 with a technical conference with Harvey Aluminum and Sanitary Authority staff members to develop the methods and procedures. Cell building E was selected for the initial tests because all of the cell line installations related to air pollution were completed. Velocity measurements of air flow were obtained at 18 stations. Four representative stations were selected from tests runs on April 10 and the test run was repeated on April 13 from midnight to 3 AM to show any night time variations.

D. The additional laboratory in Hood River is expected by Harvey to be in operation by the end of May. This laboratory will perform analyses of foliage and air samples collected by Harvey to avoid any possibility of contamination by fluoride during the laboratory process.

Plans are being formulated between Harvey and the Sanitary Authority to perform analysis of the stack and monitor samples in the Harvey mill laboratory in The Dalles. The Authority will perform an adequate number of independent analysis of duplicate test samples to provide a check. This arrangement will eliminate the delays in obtaining the analysis from the Los Angeles private laboratory.

IAA357

E. The loss of the April 19 series of tests and the late date when data from the May 4 and May 9 tests became available delayed the conference to evaluate the data from the standpoint of what additional controls are required. The first conference was held in the afternoon of May 16 with H. Jennings, J. L. Byrne, representing Harvey technical staff and Dr. Louis McCabe, consultant and C. M. Everts, R. R. Ott and R. E. Hatchard. A broad discussion of the incomplete test data available did produce agreement regarding the additional data needed for evaluation of the mill fluoride emissions.

F. A cooperative exchange of data has developed between Harvey and the Authority staff in nearly all aspects of the complex project. The work has proceeded as a first priority project to obtain a maximum amount of information by May 17. The availability of experienced technical staff members continues to be a problem to both Harvey and the Authority.

A detailed list of data requirements was prepared by the Authority's staff on April 26, 1961, and provided to Harvey Aluminum. The major activities still to be completed include (1) the measurement of the roof monitor exhaust and fume scrubber serving a second cell building and (2) the available data on the material balance in fluorides involved in the aluminum reduction process.

Other related activities of the Authority's staff since the April 4 meeting includes the collection or analysis of 292 air samples collected at the Klindt station located 2000 feet east of the aluminum reduction mill. The following data summarizes the concentrations of fluoride found in the 6 hour impinger samples.

Sampling Period	Number of Samples	Fluoride Conc. in ppb.			
		Max	Min	Median	Ave
From: 8-29-60 To: 10-17-60	98	96.4	5.9	15.7	21.0
From: 3-10-61 To: 4-1-61	88	52.9	2.2	7.3	10.4
From: 4-1-61 To: 4-21-61	78	102.5	4.7	22.7	25.7
From: 5-4-61 To: 5-10-61	28	(Calculations not completed)			

The Oregon State University Agricultural Experiment Station is conducting field studies of fruit and pine tree conditions and requested air sample data at two field stations.

The following stations were established:

1. Agricultural Experiment Station:

1.8 miles S-SW of the Harvey mill. 222 air samples were obtained from 3-24-61 to 5-17-61. 169 samples have been analyzed but the calculations are not completed.

- 80
2. The station at the Geiger residence 3.4 miles S.E. from the mill site was re-established and 75 samples were collected between 3-31-61 and 4-19-61. These samples have not been analyzed for fluoride concentration.

Dr. Monroe Holmes, State Board of Health Veterinarian has continued preliminary survey activities in The Dalles with regard to the affects upon livestock and dairy cattle because of the ingestions of fluorides, contained in pasture grasses. Tentative arrangements were completed with the local veterinarian and Mr. Joseph Byrne for examination of additional animals later this spring.

On March 22 a letter was received from Mr. Leo M. Harvey, President, Harvey Aluminum, regarding their plans to construct the new 75,000 ton reduction plant in the Pacific Northwest. Plans and specifications were enclosed with his letter for the said facility to be erected adjacent to the present aluminum reduction plant near The Dalles.

The fume control installations included with the plans for expansion are similar to the facilities installed in the 60 cell addition of cell building E completed in December 1960. The staff is unable to present recommendations to the members of the Sanitary Authority until the comprehensive data regarding the existing 300 cell aluminum reduction mill is available for evaluation.

#### Staff Comments and Recommendations

1. The coordinated activities of Harvey's technical staff with the Authority's staff have proceeded as a first priority project. Insufficient data is available as of this date to make a determination regarding the need for additional controls on the existing plant.
2. The additional test sampling data needed has been discussed with Harvey's technical staff and it appears that this work will be completed within the next 30 days with the assumption that the project continues as priority work.
3. The incomplete measurements of the roof monitor space ventilation fluoride concentration indicates that a larger quantity of fluoride originates from the 5 cell buildings' space ventilation than is discharged from the total of the 20 fume scrubbers discharged into the atmosphere. The Authority's staff has suggested to the Harvey technical staff that control feasibility be investigated in order that this information would be available when the additional data is submitted.
4. The Authority's staff can not present recommendations regarding the proposed 75,000 ton per year aluminum expansion project until additional data is provided.

The Chairman asked Mr. Maxwell Elliott, General Counsel, Harvey Aluminum, if he wished to present at statement.

IAA357

Mr. Elliott stated he was very much interested in the staff report and that from the standpoint of the Harvey management it was of great value to receive an intelligent and objective report from an outside responsible source. Mr. Elliott stated that such a comprehensive report assisted the Harvey technical people to evaluate their own proceedings.

Secondly, he stated that with reference to the proposed 75,000 ton per year plant addition he appreciated the position taken by the Authority's staff and he again reiterated to the Authority the assurance that the Harvey management was prepared and ready to re-adjust its time schedule in order to meet the situation. He stated that the Harvey Aluminum staff was in agreement with the Sanitary Authority; that a realistic evaluation of the proposal can not be made until additional studies were completed and more information is available. Mr. Elliott stated that in February and March their staff sought a top expert in the United States in the field of fluoride problems and that they were fortunate to obtain the services of Dr. Louis C. McCabe as an independent consultant. He stated that Dr. McCabe visited The Dalles in March 1961 and the Harvey Aluminum staff reviewed the problem of fluoride with him; its magnitude and how to attack it and Harvey Aluminum had made arrangements with Dr. McCabe for periodic visits to The Dalles and continuing liaison by telephone and letters.

Mr. Elliott introduced Dr. McCabe as the first director of the Los Angeles Air Pollution Control District, a consultant to U. S. Public Health Service in the development of the Federal Community Air Pollution program and as a consultant to several cities and counties and the state of Maryland in the adoption of ordinances, regulations and program activities and that he was President of Resources Research, Inc., Washington, D.C.

The Chairman invited Dr. McCabe to present his statement.

Dr. McCabe said that the fluoride problem was a complex matter and many factors had to be considered. He referred to the Florida fluoride problem associated with the phosphate industry which his firm has been working on for three years; that the state of Florida also has a state-wide air pollution law and that the state health department has been studying the problem; that there was already a standard adopted limiting the fluoride concentration in pasture grass in Florida.

Also he stated that the cattle fluorosis problem had been intensively studied and there was general agreement on the safe ingestion level for cattle. He explained that livestock should not forage on alfalfa, hay or pasture grass with more than 50 ppm of fluorides.

He stated that tolerable levels of fluoride in gladiolis were available and that studies were currently underway regarding citrus fruits and that in a year or so more information will be available. He explained that his firm has 16 experts working in their Florida laboratory on a project supported by seventeen industries.

He explained he had been following the work done at the University of California regarding the citrus leaf exposure of fluoride; however, no suggested limit for injury to citrus leaves has been adopted yet. He stated that the problem from the standpoint of an industry, like Harvey Aluminum was similar near many aluminum reduction plants. The fluoride substances are collected and passed through scrubbers which remove about 95% of the fluorides; however, there was an additional problem with the monitors on the roof which ventilate the building because of gases and heat coming from the aluminum reduction cells. He explained that if the building were closed it would be impossible to work in it without air.

IAA357

Dr. McCabe stated the problem here was to find out what was the toxic limits for the crops grown in The Dalles area and that they did not have this information thus far; however, if the levels were set too high then it might be necessary later to install more control equipment but if the fluoride limits were too low the cost might be prohibitive.

Dr. McCabe stated he believed the study group in Riverside had done more than anyone else in the evaluation of the effects of fluorides on plants; that he felt their work would bring the first knowledge we have on certain types of crops and that reports may be expected in a year or so. He stated that there should be more measurements in the field of fluoride deposition and more sampling work in the plant from the sources of the fluorides and the data should distinguish between the soluble and insoluble fluorides.

He emphasized that there was a real need for additional data to prevent the installation from becoming prohibitive in cost. During this time, however, he acknowledged that the growers would be left unprotected; however, the current growing season had already occurred for this year and he doubted if there could be a complete evaluation of the present fluoride levels upon the agricultural crops. Dr. McCabe stated he felt that with another several months of work by the Sanitary Authority and Harvey Aluminum the standards could be decided and he stated in the meantime any farmer or rancher suffering injury could go to court. He emphasized that it would not be possible to set a realistic standard now with the available information.

He said that there were certain controls which other aluminum plants had adopted but they would not be effective in the Harvey mill. Dr. McCabe stated that in this particular location a high stack would not help since

the plume would hit on the plateau and there could be injury in a more significant way than there was now. He said the control problem must be approached in other ways.

The Chairman asked Dr. McCabe about the attitude of other states, who have comparable air pollution laws in permitting industries to operate where there was probable damage being done to animal life or crops before standards could be established.

Dr. McCabe stated that this was parallel to the experience in The Dalles in the state of Florida where extensive studies have been underway for several years. He reported that about 6000 samples per year on citrus were being analyzed for fluoride. He explained that he was not aware of any comparable studies on cherries. He said that in Louisiana there was no statewide legislation governing fluoride emissions but there will be before long and that California was ahead of the rest of the country in research work underway because of a large budget.

He reported that Los Angeles had done a good job on its air pollution problem except for the control of automobile exhaust. Dr. McCabe said this was a very large problem that can not be solved over night; however, that if there was injury to agricultural activities it must be recognized and most of the industries involved in this problem are doing something. He stated that in the matter of fluoride exposure fruit trees were generally more sensitive than cattle.

Dr. Wilcox asked Dr. McCabe if the California legislation on ambient air standards provided a time period for adopting regulations.

Dr. McCabe said he thought there was and that it was a year or so.

The Chairman asked if there was no violation of law until there was a violation of an established standard.

IAA357

Dr. McCabe stated there is no violation of any specific law where there is no standard established. The people would have then their recourse in the courts under the common law of nuisance.

The Chairman stated that the Wasco County Fruit and Produce League submitted a resolution to the Authority on April 10, 1961, and the Secretary read the following:

WHEREAS the fruit growers of Wasco County have since July 1960 been repeatedly requesting protection from excessive fluoride fume emissions into the atmosphere at The Dalles, and

WHEREAS by Oregon State Sanitary Authority minutes of July 1960 and by the repeated oral assurance of Curtiss Everts, its secretary, in August 1960, the fruit growers were assured that the proposed 60 cell addition to the Harvey Aluminum plant at The Dalles would not be allowed to operate without an approved and effective fume control system, but which addition has been allowed to operate without such approved system since December 1960, and

WHEREAS fruit growers were assured by the Sanitary Authority in July and September 1960 of action to provide protection from excessive fume emissions at least by the 1961 crop season, and

WHEREAS the fruit growers and other agricultural producers and property owners have been relying entirely upon the Sanitary Authority for protection as provided by law, and

WHEREAS the Wasco County Fruit and Produce League on assurance that a hearing would be held on this matter, has expended thousands of dollars and months of time and effort in preparing evidence of damage to apricots, peaches, prunes, pine trees, shrubbery, hay, livestock, sweet cherries and other crops in The Dalles area for hearings first scheduled March 2, 1961, which were recessed for over 30 days on Harvey Aluminum appeal, and then for the April 6, 1961, scheduled hearing which was indefinitely suspended by the Sanitary Authority action April 4, 1961, and

WHEREAS in completely accepting the April 4, 1961, proposal of Harvey Aluminum the Sanitary Authority abandoned for the present time all procedures for actual enforcement of abatement of excessive fluoride emission which it had previously proposed, and accepted merely an offer of "cooperation" and of monthly plant samples of emission levels which Harvey Aluminum had already been required to submit by order dated July 1960, but which had not been supplied by April 4, 1961, and

WHEREAS great and irreparable damage from excessive fluoride emission is accruing day by day to fruit orchards, pine trees, shrubs, hay crops, etc.,

THEREFORE BE IT RESOLVED by the Wasco County Fruit & Produce League directors this 8th day of April 1961, that the Oregon State Sanitary Authority be requested to reconsider immediately its action of April 4, 1961, and reassume its responsibility to the people of the State of Oregon by causing abatement without further delay of excessive fluoride emissions into the atmosphere at The Dalles.

Attest: Charles E. Molesworth  
Secretary

The Chairman asked Robert Kerr, attorney representing the Fruit Growers, if he wished to present a statement.

Mr. Kerr stated that it was the position of the League that there should be no further delay in putting into sworn testimony the data now available bearing on this issue. Gentlemen, we renew our request that the Authority proceed with all speed to reschedule and conduct the hearing on the "show cause order". He stated the growers are most concerned and alarmed by these sketchy results mentioned by Mr. Hatchard. He stated there was irreparable damage done in the Wasco County area; that his group sees no reason why anyone should object that this data be put into sworn form so the Authority may issue such order justified by the evidence requiring Harvey Aluminum to do something. If we wait, he averred, for the violationists to come up with standards and final analyses we may well have lost the agricultural industry in The Dalles. He added that there was no reason why the Authority can not fix standards. He said they believe, on the basis of data which was now available, this could be presented. He explained that every day the Authority delays in convening with the public hearing, they delay an order. We ask and urge that the Authority proceed with its public hearing! Let the information be presented with appropriate questioning, cross examination, etc., let all data be made available in sworn form to this Authority then let the chips fall where they may!! Then standards can be fixed and only then!

AA357

88

We believe in all sincerity that the Authority on the basis of evidence now available would be in a position to fix standards and then would be in a position to protect the state of Oregon.

The Chairman granted permission to Mr. Speerstra, attorney for Harvey Aluminum to be heard next.

Mr. Speerstra stated that he was not aware that this meeting was going to turn into an argument between barristers; since it was his understanding for presenting progress reports by the Harvey Aluminum and the Sanitary Authority. Mr. Speerstra stated he felt that Mr. Kerr's remarks were calculated to promote hysteria. He stated he felt other individuals were more reasonable and were attempting to explain the complex problem. He stated he understood by word of mouth that certain of the fruit growers have filed a suit in Federal Court.

Mr. Speerstra stated that he did not think the Sanitary Authority should be a sounding board for any one's losses; that if Mr. Kerr is seeking information by putting all under oath and attempting to get data by using the Sanitary Authority then I think it was a matter that must be recognized. Mr. Speerstra stated it was his understanding that there had been a policy in the past of the Authority that where parties are involved in litigation the Authority has allowed it to proceed; but that he did not recommend it here; that he thought both Harvey Aluminum and the Sanitary Authority were attempting to work out a common problem. He stated that this may be localized in The Dalles now but it is a problem that will eventually involve the whole of the state. He added that neither Harvey Aluminum nor the Authority should be swayed by hysteria. He said he believed that the Authority staff were satisfied; that the information which Harvey has furnished was the best available to the

Authority at this time. The Chairman asked Mr. Morrell, attorney for the Wasco County Fruit Growers if he wished to be heard.

IAA357

Mr. James Morrell then referred to the law suit Mr. Speerstra mentioned and explained that some of the growers in The Dalles area had filed a complaint in the Federal Court; that many of the growers who are plaintiffs were also intervenors in this proceeding and it was their intention to continue in good faith to cooperate with the Authority. He stated that due to the delays in the proceeding before the Authority and due to a complete lack of confidence in Harvey Aluminum on the part of the growers, the decision was reached to file the suit; that his clients asked the attorneys to file this injunction suit. He urged the Authority to proceed with its duty.

Mr. Elliott stated that Mr. J. Byrne, technical representative of Harvey Aluminum has had extensive experience with Standard Research Institute for 12 years, was a qualified engineer and chemist and had specialized in fluoride studies and that Mr. Byrne was in accord with Mr. Hatchard's findings. Mr. Elliott stated that Dr. McCabe told him that to the best of his knowledge and belief that no air pollution control group anywhere in the country has brought proceedings to curtail or shut down any industry in the absence of recognized standards as long as there were progress reports and studies being presented. Mr. Elliott stated that if he recalled correctly that at the April meeting of the Authority in answer to a question of Mr. McPhillips as to whether data was available, Mr. Morrell made a non-committal answer; that he used adjectives such as "disasterous", "irreparable", etc. He stated this evidence must be produced not in terms of lawyers speaking but in the terms of evidence in the U. S. Federal Court.

The Chairman acknowledged Mr. Donald Bailey's desire to be heard.

Mr. Donald Bailey, manager, Columbia Fruit Growers, stated he would like to remind the Authority that the Fruit Growers League has been requesting protection for their growing fruit for approximately a year now; that the Authority had issued various orders, etc., and none of the orders have been complied with so his group felt it was essential that some basis for an order should be established. He reiterated that they strongly urge that the public hearing be held so some protective measures be found that can be effective.

He stated that the levels of fluoride are higher than they were last Fall, and that the changes in the plant were not effective; that there were the same symptoms again this spring on the leaves. He added that he did not think the fruit industry could survive under the present conditions. He said that perhaps other types of agricultural activities affected by fluorides had lots of time but the fruit industry in The Dalles does not.

Mr. James Lonergan, attorney, stated that there were many residents and employees in The Dalles area who want to file a supplemental petition which, Mr. Lonergan stated, would be completed tomorrow. He asked if the original petition has been allowed.

The Chairman stated it has been referred to the Hearings Office. The Chairman asked the members what their feeling was for establishing a date for a hearing.

Mr. Harms stated that as he interpreted Mr. Hatchard's report today the Authority has received the cooperation and compliance from Harvey Aluminum which the state has sought; that if any action were taken it should have been taken before; that he did not think the Authority could schedule a hearing now.

Mr. Morrell stated that if the decision at the April 4 meeting was erroneous could it not be corrected this time?

The Chairman read the action taken at the April 4 Sanitary Authority meeting from the "Order for Continuance of the Public Hearing in the Matter of Harvey Aluminum".

The Chairman asked why it would be contrary to a sense to establish a date to resume the public hearing now.

Mr. Harms replied that Harvey Aluminum had complied with what was requested but that the Authority could consider a reversal if it wished, but he would not recommend it.

Mr. McPhillips stated that he was satisfied at the April 4 meeting and would recommend the matter stand as is and allow for an orderly study of the facts; that he had not heard anything today from anyone to change this opinion. He stated that a comment was made to the fruit growers that their recourse on damages was in the courts and this still stands.

MOTION It was MOVED by Mr. McPhillips and seconded by Mr. Harms and carried that the Authority let the decision regarding the hearing stand as passed at the April 4, 1961, meeting.

Mr. Bailey stated his group was concerned regarding the new 60 cell addition of Harvey Aluminum's plant with the same ineffective control system as the 240 cells in the original mill that he felt the fruit growers were in the same spot now as that of a year ago and that there was no progress toward a solution with Harvey Aluminum. He stated that contrary to the order of the Authority the plant addition was built in violation of the Authority and now another new plant is proposed that will wipe out the fruit industry in The Dalles. He asserted that the Authority was not in a position to protect the fruit growers; that the

IAA357

League had been working with the Authority for over a year and that under the present method of procedure there seems to be no effectiveness whatsoever.

Mr. Elliott stated that Mr. Bailey will have his day in court; that he was exaggerating and that Harvey Aluminum had not violated any order of the Sanitary Authority or any law. Mr. Elliott said he made the Harvey Aluminum company's position clear with reference to the new plant and that they have no idea of even starting excavation for the new plant unless Harvey resolved the matter of air pollution in cooperation with the Authority.

Mr. Morrell said that statement was made a year ago.

Mr. Elliott said he challenged Mr. Morrell to prove this statement.

Mr. Morrell proceeded to read from page 13 of the minutes of the July 14, 1960, Authority meeting.

Mr. Elliott said he understood this situation well; that this portion was put in operation without permission, however, he stated they were under the impression that the Authority never grants anyone final approval; that the Authority stated it would not give a "blank check" on all operations and that was what had been done.

The Chairman then read a letter written to Dr. Rochon dated July 27, 1960, and the chairman stated Harvey Aluminum proceeded to put the 60 cell addition into operation without approval; that the staff had been awaiting submission of stack sampling results and other data.

Dr. Wilcox asked Mr. Quesseth whether anything further could be served in the public hearing that can not be developed in the suit requesting the injunction.

Mr. Quesseth replied he thought not in reference to the suit filed in Federal Court by the fruit growers.

Mr. Kerr stated it was not known when this case would come to trial; that it may even be a year or so and that when an individual was injured

does the Authority withdraw from the matter. He stated that it should be automatic for this Authority to take a position in an issue which is before it, under its statutory duty and it should not let the private parties fight it alone.

Mr. Quesseth asked what type of additional action should be employed.

Mr. Kerr replied that the statutory duty of the Sanitary Authority was to proceed immediately with abatement proceedings.

Mr. Quesseth pointed out that this may not be the ultimate answer; that this approach may not stop air pollution since it would be the control installation actually that would stop air pollution.

Mr. Kerr emphasized that this case should go to court; that nothing effective had been accomplished thus far.

The Chairman stated he would like to resolve the question and stated that he would like to set a date and resume the formal hearing; that he did not wish to prolong the matter for a year or two or even to wait several more months for all the related technical data to be established.

Mr. Harms stated he would agree with the chairman if he felt some useful purpose would be served by resuming the public hearing but that he interpreted the statutory duty was to improve the standards of air and water pollution in the State of Oregon and that any activity which accomplishes this and abates pollution was part of the State's duties. He stated that it was also the duty of the Authority to take into consideration the whole public interest of the people in farming, in industry and in the public at large. Considering all this, he said, he failed to see how the Authority would gain anything at this time by setting a public hearing.

IAA357

Mr. Speerstra stated that the 1961 Legislature adopted a new law regarding air pollution which grants the Authority certain powers that were not set forth in the existing law when this proceeding was instituted. He stated that in view of the legislative action that it was necessary now to take a look at the whole situation in an orderly manner.

The Chairman asked what orderly manner would bring about the desired results.

Mr. McPhillips stated that the Authority should avail itself of the information collected and evaluation by the Authority's staff and the staff of Harvey Aluminum before the public hearing resumed. He stated he was not avoiding the hearing but that he did not want to go into the matter without adequate information.

MOTION It was MOVED by Mr. McPhillips, seconded by Mr. Harms, and carried that the petition of the Wasco County Fruit and Produce League for an immediate hearing not be granted at this time.

Mr. Morrell asked if a date would be set for the next progress reports.

Dr. Wilcox stated the members should set a date for a progress report from Harvey Aluminum regarding their data collected.

Mr. Hatchard replied that the staff report indicated that the critically needed data should be available within a 30-day period and that he suggested that an additional week would be required for evaluation.

The Chairman announced that the next Authority meeting would be held on June 28, 1961, to start at 10 a.m.

MOTION It was MOVED by Dr. Wilcox and seconded by Mr. Harms and carried that a progress report be presented by its staff and representatives of Harvey Aluminum during the Sanitary Authority meeting on June 28, 1961.

Salem Sanitary Service

The Chairman called on Mr. Hatchard for the staff report on the Sanitary Service Company.

Mr. Hatchard stated that the following report was prepared by Howard Smith, supervising sanitarian:

On July 26, 1960, a complaint was received petitioning our office to investigate an alleged nuisance condition in the vicinity of the site of Salem Sanitary Service's open burning dump approximately 3.5 miles southeast of the boundary of Salem. The complainant stated that residents in that area had tried for several years to gain abatement of this open burning from local authorities but had failed.

The initial field investigation by your staff was made on August 19, 1960, and re-inspections were made on September 23 and November 22, 1960.

On November 22, 1960, a meeting was held in Salem to discuss the solid waste disposal problem of Marion County. Those in attendance were:

- Kent Mathewson, City Manager, Salem, Oregon
- Robert F. Van Horn, ICC, Salem, Oregon
- Willard J. Stone, M.D., Marion County Health Officer
- R. E. Hatchard, Air Pollution Control
- H. G. Smith, Air Pollution Control

On November 28, 1960, notification of our findings was forwarded to the Salem Sanitary Service stating that the operation of the Salem Sanitary Service was in violation of Chapter 334, Section 22-010 and that alternate methods or a site relocation would be required to abate the condition. We asked to be notified by December 29, 1960, of action taken to conform to these regulations.

A letter of reply from Mr. William Schlitt, co-owner of the Salem Sanitary Service, was received on December 28, 1960, announcing efforts being made by local authorities to solve the solid waste disposal problem on a regional or area basis. On January 10, 1961, we informed Mr. Schlitt that the regional approach idea was fine on the long-term basis but due to complaints, cessation of open burning at his present site must be accomplished by February 9, 1961.

A survey of the Salem Sanitary Service dump was made January 20, 1961, by staff members of the State Board of Health, Marion County Health Department and Mr. Schlitt to determine the feasibility of operating the site as a modified sanitary landfill without open burning. Mr. Schlitt indicated a willingness to cooperate by having an engineering study made to accomplish this proposed conversion.

IAA357

On January 23, 1961, we received a letter of request from Mr. Robert DeArmond, attorney for Mr. Schlitt, asking the Authority for a temporary variance to continue open burning past the February 9, deadline.

At the January 26, 1961, meeting of the Sanitary Authority, Mr. DeArmond requested approval of a variance to the open burn regulations for a period of six months to allow time for Mr. Schlitt to convert the present operation to a modified sanitary landfill. Upon recommendation of the staff, the Authority granted a 30-day variance with the provision that additional time not to exceed six months could be given if written reports from Mr. Schlitt indicated that adequate progress was being made toward the cessation of open burning and that additional time was justified.

No progress report was received from Mr. Schlitt until March 27, 1961, when his attorney, Mr. DeArmond, informed the staff that due to inclement weather, no work had been done in connection with the landfill at the dump site.

On April 12, 1961, Mr. Quesseth, at the request of your staff, wrote Mr. DeArmond that the progress report received on March 27, 1961, did not show sufficient progress had been made by Mr. Schlitt to warrant any additional time as authorized by the terms of the variance. We again asked for a written statement from Mr. Schlitt outlining a schedule work and time table designed to eliminate the open burning of refuse.

On April 4 and 5 letters of complaint were received from nearby residents. Mr. Victor D. Wolfe, 6425 Joseph Street, S.E., Route 5, Salem; Mr. & Mrs. R. W. Cannon, Route 5, Box 104, Salem; and John and Pearl Killinger, protesting the condition of smoke odors, etc., from this dump and asking that immediate relief be given them by the Authority's action in ordering cessation of open burning at once.

An oral statement from Mr. Schlitt, to staff member H. G. Smith, on April 25, 1961, in Salem that he had decided against trying to convert the present site to a sanitary landfill due to cost involved was not substantiated by any written engineering report or study of cost feasibility.

#### RECOMMENDATION

It is the recommendation of the staff that:

1. No extension of the variance issued Mr. Schlitt on January 26, 1961, be granted.
2. Authorization be granted for holding a citation hearing to show cause why an order should not be adopted to abate the air pollution created by the Sanitary Service Company refuse disposal site southeast of the city of Salem.

The Secretary read a letter dated May 16, 1961, received from Attorney Robert DeArmond.

IAA357

Mr. DeArmond stated that Mr. Schlitt has tried to work out what appears to be a problem regarding open burning at his Sanitary Service dump; that the changes in disposal procedures suggested by the Sanitary Authority would not be feasible from a financial standpoint. Mr. DeArmond stated they had no specific information which could be submitted to the Authority regarding an engineering report; that part of their trouble was due to the weather. He further stated they had not received any report from the Water Pollution Control as to the sites that are now being considered. He further stated that he had examined the site and it was recognized that the location was within the 6-mile distance.

Mr. DeArmond stated that Mr. Schlitt invited the staff to view the scene to observe what the pollution was; that there are no private residences within 1/2 mile from the present site; that it was located in a ravine; that the corrections did not necessitate any immediate steps by this group for a "cease and desist order". Mr. DeArmond asked for an extension of time so Mr. Schlitt can continue to search and find some way which he can comply with the regulations, the law and the wishes of the Authority. He explained that they were the franchise holder for the city of Salem and must operate the dump; that they have no other place to go until a more suitable location can be developed; that they believe they had done as much as possible under the existing circumstances and that they were willing to do more and that he requested an extension of time be given.

The Chairman stated that unless there were a great many complaints that the matter could be postponed until the next meeting.

Mr. Quesseth asked Mr. DeArmond if he felt that by June 28 they would have the situation resolved.

Mr. DeArmond replied that he did; that they would have a progress report and would try to locate an acceptable site. He explained that sites are limited but that they would do their very best; that when they started talking about other sites they always ran into difficulty.

Mr. Hatchard recommended that no burning of refuse and garbage be allowed as of tomorrow; that the staff believed that this was a case that will not be solved until action was taken by the Authority members; that there have been many complaints in April 1961 calling the Authority to task for failure to bring this problem to a solution. He stated that there were residents living close to this operation who are affected and that there were alternate sites available. He explained that the Authority staff was not inferring that Mr. Schlitt had not been working on the problem but that his efforts had not been directed toward stopping the open burning. Mr. Hatchard stated the staff has attempted to cooperate in every way possible with Mr. Schlitt and now the action needed was to consider an immediate notification to cease burning.

He stated that Marion County has a problem similar to this one but that the county engineer in Marion County had ceased burning several months ago; that they complied with the statute and regulations; that the Sanitary Service could do likewise.

The Chairman asked Mr. Hatchard if he recommended citation of hearing to be held.

Mr. Hatchard stated that if Sanitary Service ceased burning there would be no need for citation.

Mr. DeArmond stated that Mr. Schlitt will cooperate if the Authority will withhold the matter until the June 28 meeting which was necessary for the Sanitary Service to dispose of the refuse and garbage now on hand.

The Chairman stated that now the Authority had heard both sides and asked for its decision.

Mr. McPhillips stated that if Mr. Schlitt would cooperate by June 28, then perhaps the Authority could cancel the hearing. He stated, however, he disliked going contrary to the recommendation of the staff.

Dr. Wilcox asked how many complaints were received.

Mr. Hatchard replied that there were many over an extended period of time and that this matter was causing repercussions around the state. He explained that the voters in Lane County had authorized a levy of \$225,000 per year for disposal facilities and still the largest private operator in the Willamette Valley was burning within 3.5 miles of the boundaries of Salem.

MOTION : It was MOVED by Mr. Meierjorgen and seconded by Mr. McPhillips and carried that the Authority adopt recommendations of the staff authorizing a citation hearing on the Sanitary Service Company problem during the Authority meeting on June 28, 1961.

Administrative Rules (Adoption of Chapter 334)

Mr. Quesseth stated that in substance the administrative rules are correct in the codified files of the Secretary of State; that he believed the staff had examined the rules as codified and that they conform to the rules adopted by the Authority. He explained that there was one minor correction and he believed it would be best for the Authority to authorize its Secretary to prepare the necessary certificate requested by the Secretary of State.

MOTION It was MOVED by Mr. Harms and seconded by Dr. Wilcox and carried that the Secretary prepare the necessary certificate as requested by the Secretary of State.

IAA357

City of Portland

The Secretary reported that on April 13, 1961, the Authority had received an application from the city of Portland for a federal construction grant to assist in financing the installation of chlorination facilities at the present sewage treatment plant, that the amount requested by the city is \$45,240 which is more than the balance presently remaining in Oregon's allotment from the previous appropriations, that if an offer were to be made now it would probably have to be limited to about \$40,000, and that application was submitted for consideration at this meeting because the city officials desire to start immediately on the project rather than wait until after the first of July when the next federal appropriation is expected to be available.

After considerable discussion and a review of the list of applications still pending from last year and those received thus far this year it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the application from the city of Portland be deferred for the time being and that it be considered at the next meeting of the Authority with all the other applications received prior to June 15, 1961.

Date for Next Meeting

The Chairman announced that the next Authority meeting would begin at 10:00 a.m., Wednesday, June 28, 1961.

The meeting was adjourned at 12:15 p.m.

Respectfully submitted

  
CURTISS M. EVERTS, Secretary  
and Chief Engineer

MINUTES OF THE EIGHTY-SEVENTH MEETING

of the

Oregon State Sanitary Authority

June 28, 1961

IAA357

The eighty-seventh meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman at 10:00 a.m., June 28, 1961, in Room 36 of the State Office Building, Portland, Oregon. The other members and staff present were B. A. McPhillips, R. H. Wilcox, M. D., John P. Amacher, Herman P. Meierjurgan, Lewis A. Stanley and E. C. Harms, Jr. members; Cecil H. Quesseth, Legal Advisor; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Assistant Chief Engineer, Ronald R. Ott and Joseph A. Jensen, Assistant Engineers; Glen Carter, Aquatic Biologist and Richard Johnson, Chemist.

MINUTES

It was MOVED by Mr. Harms, seconded by Mr. Stanley, and carried, that the reading of the minutes of the 86th meeting held on May 17, be dispensed with and they be approved as prepared by the secretary.

PROJECT PLANS

It was MOVED by Mr. Stanley, seconded by Dr. Wilcox, and carried that the action taken by the staff on the following 30 projects for water pollution control during the month of May 1961 be approved.

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
5-3-61	Gresham	Sewer ext., Calabria Subd.	Prov. approval
5-3-61	Empire	Sewer extensions	Prov. approval
5-3-61	Eugene	Sewer extensions	Prov. approval

5-3-61	Oregon City	Hazelwood Park sewer extension	Prov. approval
5-3-61	Douglas County	Sutherlin Jr. High School	Approved
5-3-61	Clackamas County	Mt. Hood Golf Club Terrace	Not approved
5-4-61	Baker County	East Baker Elem. School Addn.	Approved
5-4-61	Lane County	Thomas Jefferson Jr. High Addn.	Approved
5-4-61	Wasco County	The Dalles Jr. High School Addn.	Approved
5-4-61	Lane County	Francis Willard Grade School Addn.	Approved
5-4-61	Lane County	Meadowlark Elem. School Addn.	Approved
5-4-61	Lane County	Ellis Parker Elementary School	Approved
5-4-61	Wallowa County	Imnaha School Addition	Approved
5-4-61	Clackamas County	Ninety-one School	Approved
5-9-61	Winston	Sewer extensions	Prov. approval
5-11-61	Milwaukie	Ardenwald sewer ext., pump sta.	Prov. approval
5-15-61	Clackamas County	Redland Grade School	Not approved
5-15-61	Benton County	Oak Grove School	Approved
5-23-61	Lane County	Silver Lea Grade School	Approved
5-24-61	Tualatin Hills S.D.	Chlorine contact chamber	Approved
5-24-61	Cannon Beach	Elk Creek sewers and lift sta.	Prov. approval
5-25-61	McKay Park San. D.	Sewer extensions (5)	Prov. approval
5-25-61	Bonneville Dam	Improvements to six U.S.E.D. sewerage systems	Approved
5-25-61	Coos County	Greenacres Grade School	Not approved
5-25-61	Washington County	Sugar Plum Subdivision	Prel. approval
5-29-61	Tri-County	Fanno Creek Interceptor (MH 16 to MH 51 and MH 61 to MH 81)	Approved
5-29-61	Tri-County	Sylvan Trunk sewer	Approved
5-29-61	Beaverton	Preliminary engineering report	Deferred
5-29-61	Portland	University of Portland sewer	Prov. approval
5-31-61	Tillamook County	Beaver Grade School	Approved

HARVEY ALUMINUM (Inc) Progress Report

The Chairman requested representatives of Harvey Aluminum to present a report on their activities concerning air pollution that has occurred since the May 17 Authority meeting.

Mr. Byrne stated that the continuance for the public hearing that the Authority granted had included certain items of work to be undertaken by Harvey Aluminum. He reported that the fluoride discharges from cell buildings E and A have been measured in a series of tests. He explained the existing fume control units serving the 300 cell aluminum reduction mill and referred to photographs of the fume scrubber and multiclone systems. He reported that each scrubber served 15 cell units and that at least 95% of the fluoride entering the fume system was removed before discharge into the atmosphere.

Mr. Byrne pointed out that some of the fluoride produced at the cell enters the space ventilation and escapes into the atmosphere through the roof monitor. He stated that the monitor extends along the roof line of the cell building which is about 1,000 feet in length. He explained that the space ventilation is discharged through 5-foot vertical openings on each side of the monitor. He stated that the air flow through the monitor must be determined before any air samples are collected and that this was accomplished by locating 18 stations along the monitor and recording the velocity at 5 points at each of the 18 stations. Mr. Byrne pointed out that these preliminary measurements were obtained to establish if there was variation between night and day time conditions during outside temperatures, wind direction and velocity conditions. He reported that the total air flow from each cell building was 2 1/2 to 3 million cubic feet per minute, and that from this air flow data 4 representative stations

IAA357

were selected. At each of these stations the sampling units were located to obtain representative samples for analyses. Concurrently with the cell building space ventilation tests here reported that a series of samples were collected from the influent and effluent of the scrubber system. He stated that the complete test operations require the services of 8 people in addition to the laboratory personnel. He stated that the data from these measurements had been evaluated and that a design for a pilot project to develop a monitoring scrubbing system to serve one-half of a cell building had been developed. He reported that construction of the project would begin in about 2 weeks and the installation would be completed in about one month.

He stated that the next phase of the project would involve the testing and rechecking of nozzle locations and pressures along with miscellaneous mechanical operation details. Mr. Byrne anticipated that the Harvey staff would be prepared to resume the joint testing program with the Authority staff during September. He indicated that the proposed cell building space ventilation fluoride removal system would produce adequate fluoride removal efficiency.

The Chairman asked if Harvey Aluminum plans to install the control installation to the remaining part of the mill if the measurements show that the pilot project was successful.

Mr. Byrne replied "yes".

The Chairman requested Mr. Hatchard to report on the staff activities since the May 17 meeting.

Mr. Hatchard stated that the staff had participated in all of the Harvey Aluminum measurements to establish that representative mill operation conditions were present and that accepted methods of

measurements were being used. He reported that the extensive measurements had been completed, that samples were analyzed in the Harvey laboratories with random samples analyzed in the Authority laboratory as a check. The staff reviewed the reports submitted by the company and evaluated the quantities of fluoride found. He pointed out that there was still a need to develop the method used for analyzing fluoride concentrations in minute quantities. He explained that this was of no significance in the mill effluent studies but would be important to the determination of relatively low concentrations found in the area samples.

Mr. Hatchard reported that the items of work listed in the Authority's order for continuance had been accomplished with the exception of a couple of minor details. He stated that the staff had collected a series of samples from the Oregon State University Agricultural Experiment Station during the period March 27 to April 15 and that 131 samples for 6-hour periods showed the concentrations from 1 to 6 parts per billion with a maximum of measurements 8.2 ppb and a minimum during this period of 0.8 ppb. He stated that an additional 216 samples had been collected but the analyses were not completed.

He reported that a new area station had been located at the Mosier community located approximately 12 miles west of the Harvey Aluminum mill to obtain additional information on the background values. Other staff activities included the appraisal of the total fluoride emissions and predictions of concentrations downwind were made applying the diffusion techniques that have been used in other studies. Dr. Holmes, State Board of Health Veterinarian, has continued to obtain information regarding livestock conditions in The Dalles area.

IAA357

Mr. Stanley stated that he was interested in the progress reports and would like to obtain more information on the actual installation of controls at the mill.

Mr. Hatchard replied that probably Mr. Stanley was referring to the pilot project to develop the roof monitor scrubber system. He explained that these facilities would include a series of fog spray nozzles followed by a second series of sprays. The final stage in the process would be passage through the polyvinyl filter cloth. He explained further that proposed pilot project would involve about one-half of cell building E and that after the installation and adjustments were completed the Harvey and Authority staff members would be making stack measurements to determine if the pilot project was producing adequate fluoride removal.

The Chairman asked if representatives of the Wasco County Fruit Growers were present.

Mr. Morrell replied that he would like to ask Mr. Hatchard some questions. Mr. Morrell asked Mr. Hatchard if it was the staff's conclusion that there was a need for this type of scrubbers at the opening of the roof.

Mr. Hatchard replied "yes". Mr. Morrell asked if it was the staff's conclusion that the fluorides escaped from the mill originated mostly from the roof louvres rather than through the fume system.

Mr. Hatchard replied "yes".

Mr. Morrell asked if the Authority staff and Mr. Byrne would be able to present a report on the progress at the next meeting.

Mr. Hatchard replied "yes".

Dr. Wilcox asked Mr. Hatchard if the staff agreed with the Harvey report presented by Mr. Byrne. Mr. Hatchard replied that the staff was

in agreement with the report as presented. He stated that the Harvey technical staff have carried on the work as a priority item, that the measurements of the cell building space ventilation were difficult and time consuming, however, there was no other way to obtain the necessary data.

IAA357

Mr. Hatchard pointed out that the Authority staff had indicated even before the measurements were available that the space ventilation exhaust probably included a major quantity of the fluorides emitted into the atmosphere from the mill. He stated that one of the earlier staff reports included a recommendation that the fluoride removal efficiency of the fume scrubber system be increased from 95% to 99%. He explained that this recommendation had been based upon the data available then and there were no measurements made of the fluoride content in the space ventilation. He stated that at this time it was not logical to require changes in the existing fume controls since the measurements showed that the quantity of fluoride originated from the building space ventilation.

Dr. Wilcox asked if the staff believed that the Harvey Company was making satisfactory progress.

Mr. Hatchard replied that their activities were more than satisfactory, that actually good progress was being made.

Mr. Morrell asked Mr. Hatchard if the staff was satisfied that the existing scrubber towers were being operated by the company at their maximum removal efficiency. Mr. Hatchard replied that the question was a broad one to answer accurately and the staff would like to have measurements concurrently from all of the 20 fume scrubbers to establish that the removal efficiency was at least 95%. He replied that the staff believed that most of the time the fluoride removal efficiency of the scrubbers is

at least 95% based upon the available data. He explained that there may be short periods when a specific fume scrubber was not operating at this efficiency due to unusual operating conditions in the 15 cells connected to the system.

Mr. Morrell asked if the general over-all operation of the fume control system was efficient. Mr. Hatchard replied "yes".

Mr. Morrell asked if the Authority intended to continue the supervision on testing of the scrubbers to insure that the system was operated in the future at the required degree of fluoride removal.

Mr. Hatchard replied yes this had been one of their previous recommendations. He stated that the adequate supervision and maintenance of air pollution control systems was a continuing responsibility and the staff would continue with the measurements on a rotation plan which has been underway for all of 1961. He pointed out this was not a large staff time requirement to complete these measurements.

Mr. Morrell asked if the Authority staff planned to continue to collect area air samples from various stations to establish periodically the quantity of fluoride present in the air at these stations.

Mr. Hatchard stated that the staff planned to continue some of this, however, would like to select stations where there was a need for additional information rather than continue routine monitoring activities since there were a number of other projects in the state which needed staff time.

The Chairman asked if there was anyone else present who wished to be heard in this matter. Mr. Don Bailey, Manager of Columbia Fruit Growers stated that it was a problem of timing to complete all of this work that they are vitally interested in the progress made. They were happy with the indications of experimental work underway to develop a

IAA357

final solution. He pointed out, however, that the necessary fluoride reductions had not yet been achieved and it appeared that it would still be considerable time before the Fruit Growers in The Dalles vicinity would feel that conditions had improved. He stated that their Association hoped that there would be no delays after the pilot project tests were completed before the installations were undertaken on the remaining cell buildings.

Dr. Wilcox asked Mr. Bailey if he could comment upon the 1961 cherry crop and what was happening in the way of leaf burn. Mr. Bailey stated that he had brought a few samples of apricot and prune leaf burn with him which had occurred a few miles from the plant. He also brought a few samples of the new pine leaf growth which showed burn in the area near the plant. Mr. Bailey stated that in general the cherry crop was much better this year, however, there was a location known as the "Cherry Heights", which is the closest cherry orchard to the mill and again had a very small crop this year. Mr. Bailey pointed out that apparently the exposure of the cherry trees to fluorides this year had been considerably less when the fruit was being set, that these details are not really known scientifically but that studies were being made by Oregon State University.

Dr. Wilcox asked if it were possible to estimate the percentage of the 1961 cherry crop with reference to a known year.

Mr. Bailey replied that they estimated that 1961 was approximately 75% of a normal crop.

Dr. Wilcox asked how the normal was established. Mr. Bailey explained that there were several different methods of calculations but that in 1958 it was approximately 11,000 tons of cherries and this was probably a full production year. He explained there had been years when over 12,000

tons were produced but usually a figure of about 10,000 was considered a normal crop year. He estimated that about 7500 tons would be produced in 1961.

Mr. Speerstra stated that he was an attorney for Harvey Aluminum and that they had received unofficial estimates of a 12,000 ton cherry crop in The Dalles area this year. He explained that the total crop had not yet been picked but he understood generally that conditions were good.

Dr. Wilcox asked who made this estimate.

Mr. Speerstra replied that he could not release the source of information but pointed out it was not a Harvey Aluminum representative.

The Chairman asked Mr. Byrne when he would expect the entire installation for the cell building space ventilation control facilities to be completed on the total 5,000 feet of roof monitor.

Mr. Byrne replied that approximately 500 feet of cell building E would be involved in the initial pilot study and that it would depend upon the success and rapidity with which the pilot study could be completed. He explained that as soon as the pilot project was operating satisfactory and all the modifications had been made that the company would immediately go ahead with the remainder of the installation.

The Chairman asked if Mr. Byrnes' prediction was that the entire system could be concluded by the end of the year.

Mr. Byrne replied that at the present time he would have no way of knowing that it could be completed by that time.

The Chairman asked Mr. Hatchard if the staff had an opinion. Mr. Hatchard replied that the staff did not have an opinion based upon different information, however, that it was our impression that the pilot

IAA357

project activities would remain priority work with the Harvey representatives that when the system demonstrated that it removed an adequate quantity of fluoride that we would expect the installation on the remaining cell building roof monitor systems to be completed as rapidly as possible. He explained that if initial design of the pilot project was adequate and they did not experience lengthy technical difficulties the staff believed that the total installation could be completed by the end of the year or early in 1962.

The Chairman asked the Authority members about action they would like to take.

It was MOVED by Dr. Wilcox, seconded by Mr. Amacher, and carried that the matter of Harvey Aluminum be continued and that a progress report be made at the next Sanitary Authority meeting by Harvey Aluminum representatives and the Authority staff.

SALEM SANITARY SERVICE COMPANY

The Chairman called upon Mr. Hatchard to explain the status of open burning at the disposal site operated by the Salem Sanitary Service Company.

Mr. Hatchard stated that the notice of public hearing was mailed to the Sanitary Service Company by certified mail on June 7, 1961. Mr. Hatchard read to the members the Notice of Public Hearing and the staff report concerning air pollution from the Sanitary Service Company's operations, in Marion County.

In the Matter of Salem Sanitary Service,  
a corporation, concerning air pollution  
in Marion County, State of Oregon.

)  
)  
)

NOTICE OF PUBLIC HEARING

To THE SALEM SANITARY SERVICE COMPANY, its President, Officers and Agents including its Manager and Attorney:

YOU AND EACH OF YOU ARE HEREBY NOTIFIED that the State Sanitary Authority having considered the reports of the State Sanitary Engineer and the

surveys, investigations and findings of its staff, has under consideration the matter of the pollution by the Salem Sanitary Service Company of the atmosphere near the city of Salem in Marion County, State of Oregon; such pollution allegedly being caused and resulting from the discharge of air contaminants from your open burning refuse disposal site located adjacent to the Santiam Pass freeway and county road No. 847 at Deer Park Drive S.E., approximately 3.5 miles southeast of the city limits of Salem, Oregon. The specific charges are as follows:

1. That the open burning of solid and liquid waste by the Salem Sanitary Service Company at its dump above described, within six miles of the city limits of the city of Salem, Marion County, Oregon, from January 1, 1960, to January 26, 1961, and from May 17, 1961, to date hereof, was and is in violation of duly adopted regulations of this Authority, being Section 22-010 of OAR Chapter 334.
2. That the conditions included with the temporary variance granted to the Salem Sanitary Service Company by the Authority on January 26, 1961, to allow time for compliance with the regulations described in paragraph 1 above were not satisfactorily complied with by the Salem Sanitary Service Dump.
3. That the said dump is being operated within 1/4 mile of a dwelling house and within 1/4 mile of a county public highway by placing polluting substances without proper burial at said dump in violation of ORS 449.105 subsection (2).
4. That the said discharge of air contaminants by the said company as described above is a public nuisance contrary to the public policy of the State of Oregon.

YOU AND EACH OF YOU ARE FURTHER NOTIFIED THAT the Sanitary Authority at or following the hearing hereinafter stated, and after full consideration of all testimony and evidence, will consider the adoption of a Final Order requiring the Salem Sanitary Service Company, its Officers and Agents to immediately abate the pollution of the air by ceasing open burning of refuse at said site or such other and further orders as may be adduced from the evidence submitted in the public hearing.

IAA357

YOU AND EACH OF YOU ARE FURTHER NOTIFIED THAT the public hearing on the said alleged air pollution problem will be held before the State Sanitary Authority in the State Office Building, Room 36, 1400 S.W. 5th Avenue, Portland, Oregon, commencing at 10:00 o'clock a.m. Pacific daylight savings time, Wednesday, June 28, 1961. The hearing will be conducted in accordance with the Rules and Procedure duly adopted by the State Sanitary Authority. You are hereby directed to appear and show cause, if any exists, why the aforementioned proposed order should not be entered.

Dated this 7th day of June 1961.

SANITARY AUTHORITY OF THE STATE OF OREGON

By Harold F. Wendel  
Chairman

ATTEST:

Curtiss M. Everts  
Secretary

BEFORE THE SANITARY AUTHORITY

of the

STATE OF OREGON

In the Matter of Salem Sanitary Service, )  
a corporation concerning air pollution in )  
Marion County, State of Oregon )

STAFF REPORT

Based on the files of the Sanitary Authority the following information is presented in the matter of pollution of the atmosphere within six miles of the boundary of the city of Salem, Oregon, by the discharge of smoke, flyash and odors from the open burning of refuse at the Salem Sanitary Service Company's dump site:

1. The Salem Sanitary Service Company's refuse dump, owned and operated by Mr. William Schlitt and Mr. Carl Soos, 215 High Street S.E., Salem, Oregon, is located 3.5 miles southeast of the city limits of Salem, Oregon. The site abuts the southeast corner marker of county road No. 847 and Deer Park Drive S.E., and is less than 1/4 mile from occupied dwellings. The Salem Sanitary Service Company has a franchise from the city of Salem to collect refuse and garbage within the boundaries of the city and the fee charges for the service are set by local ordinance. It is an open burning refuse dump operation that has been conducted at this site since the early 1940's. The site consists of 23 acres of which approximately 8 acres have been used to date. The mixed refuse and garbage received at this site originates from about 70% of the population of the city of Salem and environs. The facility receives 18 packer truck loads, six regular truck loads and refuse from approximately 30 individual private haulers each day, six days per week.

2. On July 26, 1960, a complaint was received petitioning the Sanitary Authority to investigate an alleged nuisance condition existing in the vicinity of Salem Sanitary Service's open burning dump. The complainant stated that residents in that area had tried for several years to gain abatement of the open burning of refuse through local agencies but the effort had failed.

3. The initial field investigation by the Authority's staff was made on August 19, 1960, and re-inspections were made on September 23 and November 22, 1960.

4. On November 22, 1960, a meeting was held in Salem to discuss the development of a solid waste disposal problem of Marion County. The following persons participated in the discussions:

Kent Mathewson, City Manager, Salem, Oregon  
Robert F. Van Horn, ICC, Salem, Oregon  
Willard J. Stone, M.D., Marion County Health Officer  
R. E. Hatchard, Air Pollution Control  
H. G. Smith, Air Pollution Control

5. On November 28, 1960, the Salem Sanitary Service was notified that their open burning dump was in violation of OAR Chapter 334, Section 22-010 and that alternate disposal methods or relocation of the site would be required to abate the condition. The Sanitary Authority requested notification by December 29, 1960, of action taken to conform to these regulations.

6. A letter of reply from Mr. William Schlitt, co-owner of the Salem Sanitary Service was received on December 28, 1960, announcing that efforts were being made by local authorities to solve the solid waste disposal problem on a regional or area basis. On January 10, 1961, we informed Mr. Schlitt that the regional approach idea was needed for long-term basis but that due to continuous complaint the cessation of open burning at the present site must be accomplished by February 9, 1961.

7. A survey of the Salem Sanitary Service dump was made January 20, 1960, by staff members of the State Board of Health, Marion County Health Department and Mr. Schlitt to determine the feasibility of operating the site as a modified sanitary landfill without any open burning. Mr. Schlitt indicated a willingness to cooperate by having an engineering study made to accomplish the proposed conversion.

8. On January 23, 1961, a letter was received from Mr. Robert DeArmond, attorney for the Sanitary Service Company requesting the Authority to grant a temporary variance in order to continue the open burning past the February 9 deadline.

IAA357

9. At the January 26, 1961, meeting of the Sanitary Authority members Mr. DeArmond requested approval of a variance to the open burn regulations for a period of six months to allow time for Mr. Schlitt to convert the present operation to a modified sanitary landfill. Upon recommendation of the staff, the Authority granted a 30-day variance with the provision that additional time, not to exceed six months, could be given if the written progress reports submitted by Mr. Schlitt indicated that adequate progress was being made toward the cessation of open burning and that additional time was justified.

10. No progress report was received from Mr. Schlitt until March 27, 1961, when his attorney, Mr. DeArmond informed the staff that due to inclement weather no work had been done in connection with the conversion to a landfill at the dump site.

11. On April 12, 1961, Mr. Cecil Quesseth, Special Assistant Attorney General, at the request of your staff, wrote Mr. DeArmond that the progress report received on March 27, 1961, did not show sufficient progress had been made by Mr. Schlitt to justify a recommendation that any additional time be granted in accordance with the terms of the variance. We again asked for a written statement from Mr. Schlitt to outline a schedule of work to be accomplished within a time period designed to eliminate the open burning of refuse by a specified date.

12. On April 4 and 5 letters of complaint were received from nearby residents, Mr. Victor D. Wolfe, 6425 Joseph Street, S.E., Route 5, Salem; Mr. and Mrs. R. W. Cannon, Route 5, Box 104, Salem, and John and Pearl Killinger, protesting the presence of smoke, odors, etc., emitted from this dump and asking that immediate relief be given them by the Authority's action in ordering cessation of open burning at once.

IAA357

13. An oral statement was made by Mr. Schlitt to staff member H. G. Smith, on April 25, 1961, in Salem, that he had decided against trying to convert the present site to a sanitary landfill due to costs involved. However, his conclusion was not substantiated by any written engineering report or study of cost feasibility.

14. On May 10, 1961, a letter was sent to Attorney Robert DeArmond stating that the Authority's staff did not consider the progress of the Salem Sanitary Service Company was sufficient to warrant recommendation to the Authority for any extension of time on the variance.

15. On May 17, 1961, a letter was received from Mr. Robert DeArmond to which there was attached a copy of a report from the Stevenson Construction Company pertaining to the site preparation and costs to convert the present site to a landfill operation.

16. During the Authority meeting on May 17, 1961, the recommendations of its staff and a representative of the Salem Sanitary Service Company regarding the subject dump site were presented. After considering these reports, the Authority decided that no extension of time would be granted for the variance originally granted on January 26, 1961, and that a public hearing on the matter be held on June 28, 1961.

17. On May 22, 1961, an inspection of this dump site was made by staff members and open burning refuse was observed.

18. On June 6, 1961, a letter was received from Mr. Robert DeArmond regarding the June 28, 1961, public hearing and informing the Authority that in the meantime the Sanitary Service Company would continue the open burning of garbage and refuse.

19. On June 7, 1961, a notice of public hearing in this matter was sent by certified mail to Salem Sanitary Service and to Mr. Robert W. DeArmond, attorney for the said company.

20. Additional area surveys including photographing the dump site operations were made by staff members on June 1, June 4, and June 12, 1961.

Staff Recommendation:

The staff recommends that the Sanitary Authority take appropriate action to bring about immediate cessation of the open burning of refuse and garbage at the Sanitary Service Company's site to comply with the provisions of OAR Chapter 334 Section 22-010 and ORS 449.010 subsection (2).

Respectfully submitted this 22nd day of June 1961.

R. E. Hatchard, Chief  
Air Pollution Control

Mr. Quesseth stated that ordinarily at this stage a public hearing would be held in which witnesses under oath would be heard. He stated that he believed that under the rules that if there was any possibility to shorten the procedure and reach a settlement that the Authority would be willing to consider the proposal. Mr. Quesseth then read the following letter addressed to the Sanitary Authority dated June 28, 1961, from the Sanitary Service Company's attorney, Robert DeArmond:

"Gentlemen:

This is to advise that Sanitary Service Company has secured an Option for lease on the Cannon Gravel Pit and in connection with this Option has retained the engineering firm of Clark and Groff to conduct an engineering survey relative to the possible water pollution from the use of the Cannon dump for land fill garbage disposal.

In view of Sanitary Service Company's obligation to the City for the maintenance of the dump, we respectfully request that pending the engineering survey and for a period of 90 days from the 29th day of June 1961, and Sanitary Service Company be permitted to conduct its operations at its present site and burn at that site only lumber timbers and brush, but not the household garbage refuse.

We ask for this time so that our obligation to the public can be maintained and that we be permitted to ascertain the availability of the Cannon Gravel Pit for long-time use.

We respectively request your favorable consideration of this application.

Very truly yours, "

DeArmond and Sherman

By

/s/ Robert W. DeArmond

IAA357

Mr. Quesseth suggested to the Authority and to Attorney DeArmond and his client, Mr. Schlitt, that if the Authority was agreeable to this proposal and Mr. DeArmond willing to permit the entry of an order in this way that possibly this matter may be terminated without further testimony during the public hearings.

The Chairman called on Mr. DeArmond to discuss the proposal.

Mr. DeArmond stated that it was unfortunate that he and Mr. Quesseth were not able to confer earlier regarding the proposal but explained that both were on a vacation and were not able to discuss the matter before Monday, June 26, 1961. He explained that he and his client were not present to fight the Authority; that was not their attitude nor intention; that they had been trying to cooperate and have made some expensive surveys and inspections of other garbage and refuse disposal sites throughout the state as well as in Washington, etc.

The Chairman called on Mr. Schlitt to be heard.

Mr. Schlitt, owner of Salem Sanitary Service informed the Authority he wanted to cooperate and had looked at different sites for his refuse disposal operation, that when the word garbage was mentioned when trying to relocate, "people just throw up their hands". He admitted there has

been a bad problem in Salem but that he would keep searching for a more suitable site or something that could be agreed at the present location that would be acceptable to the Authority.

The Chairman stated it was his assumption that at this time the Authority was discussing the stipulation of the matter.

Mr. Victor Wolfe, resident of Salem, stated that most of the residents in the Willamette Valley do not have air conditioning in the homes and suffer considerably because of smoke, flyash and odors discharged from the open burning of garbage and refuse at the Sanitary Service Company's site.

Mr. Schlitt stated that early daylight burning was suggested but that this dump didn't get the material until around 3:30 or 4 p.m. when all the trucks report in for the day; and that usually by 9 or 10 o'clock in the evening there was a certain amount of smoke still present. He reiterated that he was trying everything he could and will keep working on this problem until some solution is reached.

The Chairman stated he believed that the problem of Mr. Wolfe's and other residents would be worked out in view of the fact that Mr. Schlitt stated that he was willing to cooperate and would agree to necessary changes.

Mr. H. G. Smith recommended that the burning of paper and cardboard material be excluded in the stipulation.

The Chairman suggested that the Authority's staff confer with Mr. DeArmond and Mr. Schlitt to develop an appropriate order that would resolve the matter.

Later during the Authority meeting the Chairman called upon Mr. Hatchard to present the proposed stipulations.

Mr. Hatchard stated that during the lunch recess the staff and Mr. Quesseth had conferred with Mr. DeArmond and Mr. William Schlitt. He presented the following proposed stipulation.

1. That the Salem Sanitary Service Company, its officers and agents shall abate the pollution of the air at its refuse disposal site located adjacent to the Santiam Pass freeway approximately 3.5 miles southeast of the city of Salem, Oregon, by ceasing the open burning of refuse within the time periods and in the manner and exception as follows:

A. On or before July 20, 1961, the said company shall cease burning of all refuse and garbage except brush, trees and lumber at the said site, provided that if unexpected difficulties are encountered in converting the said site to a modified sanitary landfill the said company may, upon proper showing to the staff of the Authority, be granted additional time until not later than August 1, 1961, to complete the said conversion.

B. That brush, trees and lumber only may be burned at the said site for a period of 30 days after the applicable date in paragraph A provided appropriate controls are applied and no nuisance condition results therefrom, that additional limited variance for additional periods, not to exceed a total of 90 days from the date of this order may be granted by the staff upon timely and adequate application.

C. That the Sanitary Service Company shall conduct its modified sanitary landfill operation in a manner that will prevent the occurrence of any fires by spontaneous combustion or in any other manner that would create any air pollution nuisance conditions.

The Chairman asked the Authority members what action they would like to consider in this matter.

1A857

MOTION It was MOVED by Mr. Harms and seconded by Dr. Wilcox and carried that an Order be prepared by Mr. Quesseth incorporating the stipulations presented and directed the Secretary to mail a certified true copy of this Order upon representatives and attorney for the Salem Sanitary Service Company.

GEORGIA PACIFIC - Newport Chamber of Commerce Complaint

By letter dated June 12, 1961, and signed by Mr. Robert L. Cooper, Vice President, the Newport Chamber of Commerce requested an opportunity to appear before the Sanitary Authority for the purpose of discussing the problem of air pollution caused by discharge into the Pacific Ocean of wastes from the Georgia Pacific Paper Company kraft mill located at Toledo.

Mr. Robert L. Cooper, Mr. L. G. Gardner and Mr. Ben Wade were, therefore, present at this meeting to represent the Newport Chamber of Commerce. Mr. Fred Yerke, Jr., attorney, and Mr. Roy Wiberg, technical director, were present to represent the Georgia Pacific Paper Company.

Mr. Cooper appeared before the Authority and recounted briefly the history of the problem of air and water pollution which had been experienced since the installation of the pulp mill at Toledo. He referred to statements and claims made by officials of the International Paper Company in connection with the proposed installation of another kraft mill at Gardiner, Oregon. He expressed the opinion that if the International Paper Company could build and operate a kraft mill without causing a pollution problem it should be possible for the Georgia Pacific Paper Company to do the same. He said that in spite of all the past efforts on the part of the Georgia Pacific Company the nuisance conditions at Newport were still as bad as ever.

IAA357

Mr. Gardner then appeared before the Authority and stated that in 1945 he bought a 15 unit motel at Newport. Because of his 29 years of experience from working in the Hawley Pulp and Paper Company mill at Oregon City he was very much opposed to the construction of a pipe line to the ocean at Newport when it was first proposed by Georgia Pacific. He said he knew it wouldn't work. He referred to the lagoon which was built at Toledo by Georgia Pacific and stated that it had not solved the pollution problem. He stated that the tourist industry at Newport was being severely damaged as a result of the odor nuisance, that local people were getting tired of the company's promises to solve the problem and that they hoped the Sanitary Authority could force the company to comply with state law. He reported that on Monday morning, June 26, the stench and foam conditions were terrible. He presented as evidence three black and white photographs showing the foam along the Newport beach adjacent to the mill outfall. He reported that a complaint had been filed in the Lincoln County circuit court by Mr. A. F. Tischer, a Newport Motel owner, but that as yet the case had not come to trial. Mr. Gardner also stated that the city of Newport is presently making plans to install adequate sewage treatment facilities and is doing everything it can in that regard.

At the request of the chairman, Mr. Spies then appeared before the Authority and reviewed briefly the actions which had been taken during recent months by the staff in this matter. At the July, 1960, meeting of the Authority following consideration of several complaints which had been received a motion was adopted to refer the matter to the Attorney General for action. Immediately following that meeting Mr. Quesseth wrote to the company officials notifying them of the intended action by the Authority. As a result of that notification the company agreed to take certain steps to abate the nuisance without further delay.

In response to their request the company officials were given additional time in which to improve the operations of the lagoon system at Newport, which they hoped would solve the problem. Following the completion of improvements to the lagoon it was found that the nuisance still existed. The company then proposed to install special facilities for the recovery of turpentine. Additional time was then given the company to make these improvements. The turpentine recovery facilities were finally completed and placed into operation in the spring of 1961. Although these facilities did some good they did not satisfactorily abate the odor nuisance. After conferring with officials of the Weyerhaeuser Company at Springfield, the Georgia Pacific Company decided to use chlorination for the purpose of oxidizing the odor producing sulphur compounds contained in the pulp mill effluent. On May 31 when an inspection was made by representatives of the Sanitary Authority staff it was found that equipment had been installed and was in operation at the Toledo mill site for applying up to 2,000 pounds of chlorine per day. Additional facilities had also been installed for the application of chlorine to the mill wastes at the valve station on the ocean outfall line at Newport. In spite of this treatment a definite odor nuisance was still observed on May 31. At a subsequent inspection by the Authority's staff on June 21 no objectionable odors were noticed even though the wind and weather conditions were quite similar to those existing on May 31 and less chlorine was being applied to the mill effluent. Mr. Spies reported further that the company had been running daily tests of the mill effluent to determine the concentration of various odor producing constituents and also had been making daily checks of the foam and odor conditions along the beach. He expressed the opinion that it should be possible to control the odor problem at Newport by the application of chlorine

since similar treatment had worked successfully at the Springfield mill of the Weyerhaeuser Company from which wastes were discharged into McKenzie River. He stated, however, that more adequate equipment would be required than had yet been installed by Georgia Pacific.

Mr. Yerke then appeared before the Authority. He stated that he had intended to review the history of the steps taken by Georgia Pacific in the past to prevent and abate water and air pollution but that previous witnesses had already covered it fairly completely. He reported that to date the company had spent approximately \$2 1/2 million for air and water pollution control, that presently from \$250,000 to \$300,000 per year was being spent for that purpose, that it is estimated that chlorine costs will amount to \$72,000 per year and that if chlorination will do the job successfully the company is willing to install whatever equipment is necessary and to apply the required amount of chlorine regardless of its cost. He said the present chlorination facilities had been in operation only since about June 1 and that it was the plan to make the equipment automatic. He said he had talked with Mr. W. J. Shelton, pulp mill manager, that morning and had been informed by Mr. Shelton that installation of the automatic equipment had already been authorized. He said that the company feels that it has the problem practically licked. Mr. Yerke stated that to his knowledge there had not been any instance in which the Georgia Pacific Company had refused to allow access to its books or plant which was evidence of its desire to cooperate with the Sanitary Authority staff.

The chairman then pointed out that this problem had been in existence for a **good** long time and that based on information which had been made available to him it was his opinion that the waste disposal facilities had been operated by the company in a rather slipshod manner. After considerable

IAA357

discussion it was MOVED by Mr. Harms, seconded by Dr. Wilcox and carried that the staff be requested to make an immediate investigation of the Georgia Pacific air pollution problem and submit a report to the secretary of the Authority and that the chairman be authorized to call a special meeting of the Authority if further action were found to be necessary in this matter.

#### KLAMATH RIVER BASIN

Following a review of the Senate Joint Resolution No. 6 recently adopted by the Assembly of the State of California and after discussion of the matter it was MOVED by Mr. Stanley, seconded by Mr. McPhillips and carried that the Sanitary Authority take the position that the Klamath River Compact Commission is the appropriate organization to provide co-ordination and leadership for the proposed study and to carry out the intent of this legislation and that a copy of this motion be delivered in person by a representative of the Authority staff to the Klamath River Compact Commission at its meeting on June 29.

#### FEDERAL GRANT PROGRAM

Applications which had been received from the following 20 communities for federal grants for assistance in financing construction of sewage treatment works during the 1962 fiscal year were reviewed by the Authority: Ashland, Bandon, Dufur, Grants Pass, Green Sanitary District, Lafayette, La Grande, Lake Oswego, Metzger Sanitary District, Milwaukie, Oregon City, Pendleton, Portland, Scio, Silverton, Springfield, Stayton, Sunset Valley Sanitary District, Taft and West Linn. The city of Portland had submitted requests for three different projects.

The total of the 22 requests was \$2,125,870. The amount of money to be allotted to Oregon for the 1962 FY was expected to be between \$662,000

and \$1,039,000 depending upon whether the appropriation by Congress was \$50 million or \$80 million, the latter being the new maximum authorized by Public Law 87-88.

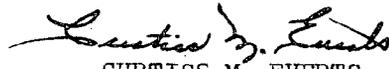

Following a full discussion of the matter it was MOVED by Mr. Harms, seconded by Mr. Amacher and carried that depending upon the amount of funds allotted to the state of Oregon priorities be awarded as follows: (1) Scio - \$10,700; (2) Green Sanitary District - \$32,700; (3) La Grande - \$119,700; (4) Taft - \$55,530; (5) Springfield - \$250,000; (6) Ashland - \$26,400; (7) Portland (Chlorination) - \$37,040; (8) Portland (Tryon) - \$250,000; (9) Milwaukie - \$54,630; (10) Lake Oswego - \$250,000; (11) West Linn - \$57,000; (12) Oregon City - \$109,500; (13) Pendleton - \$26,250; (14) Grants Pass - \$157,500.

The chairman then suggested that the criteria for determining priority points be revised so as to take into account outstanding bonded indebtedness of the applicant at the time the application was filed. Mr. Harms was appointed by the chairman to work with the secretary in making such a revision.

The next meeting of the Authority was scheduled for September 20, 1961, beginning at 10 a.m.

There being no further business the meeting adjourned at 2:05 p.m.

Respectfully submitted,

  
CURTISS M. EVERTS  
Secretary & Chief Engineer

IAA357

## MINUTES OF THE EIGHTY-EIGHTH MEETING

of the

Oregon State Sanitary Authority

September 20, 1961

The eighty-eighth meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman at 10:07 a.m., September 20, 1961, in the Auditorium of the State Game Commission Building, 1634 S. W. Alder, Portland, Oregon. The other members and staff present were R. H. Wilcox, M.D., John P. Amacher, Herman P. Meierjurgan, Lewis A. Stanley and E. C. Harms, Jr., members; John Denman and Cecil H. Quesseth, Legal Advisors; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Assistant Chief Engineer, Donald J. Benson, Associate Sanitary Engineer, Ronald R. Ott and Joseph A. Jensen, Assistant Engineers, E. J. Weathersbee, District Engineer, Ed Gaines, Assistant District Engineer, Howard Smith, Supervisory Sanitarian and Robert Percy, Chemist.

MINUTES

It was MOVED by Mr. Stanley, seconded by Dr. Wilcox, and carried, that the reading of the minutes of the 87th meeting held on June 28, be dispensed with and they be approved as prepared by the secretary.

PROJECT PLANS:

It was MOVED by Dr. Wilcox, seconded by Mr. Stanley, and carried, that the actions taken on the following 131 projects for water pollution control for the months of June, July and August, 1961, be approved.

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
6-1-61	Polk County	Capitol Manor treatment plant	Not approved
6-1-61	Winston	Sewer extensions	Prov. approval
6-2-61	Newport	Sewer extensions	Prov. approval
6-1-61	Coquille	Burns Acres Sanitary sewer	Prov. approval
6-5-61	N. Roseburg S.D.	Newton Oaks Manor sewers	Prov. approval
6-8-61	Clackamas County	Mt. Hood Golf Club Terrace sewerage	Not approved
6-8-61	Curry County	Gold Beach High School	Approved
6-8-61	Wasco County	Chenowith Grade School Addn.	Approved
6-8-61	Clackamas County	Oregon City High School Addn.	Approved
6-8-61	Multnomah County	Lynchview Grade School Addn.	Approved
6-8-61	Coos County	Milner Crest Grade School	Approved
6-8-61	Linn County	Lebanon Union High School Addn.	Approved
6-8-61	Marion County	Silverton Union High School Addn.	Approved
6-8-61	Linn County	Mill City Grade School Addn.	None required
6-9-61	Phoenix	Sewer extensions	Prov. approval
6-9-61	Lake Oswego	Uplands and Wembly Park sewers	Prov. approval
6-9-61	West Linn	Sewer extensions	Prov. approval
6-12-61	Marion County	Illaha Subd. sewerage works	Deferred
6-12-61	Metzger San. Dist.	Suburban Properties sewage plant	Prel. approval
6-13-61	Newport	Preliminary engineering report	Approved
6-13-61	Portland	Federal grant application No. 71	Approved
6-13-61	Creswell	Sewerage works	Prov. approval
6-13-61	Lane County	Trent Grade School	Prov. approval
6-12-61	Metzger San. Dist.	Luther's Market sewerage works	Prov. approval
6-14-61	Brookford Dist. #1	Sewer extension	Prov. approval
6-15-61	Baker County	Central Grade School Addn.	Approved

IAA357

HARVEY ALUMINUM Inc.

The Chairman requested Mr. Joseph Byrne to present a report on the activities of Harvey Aluminum since the June 28, Authority meeting.

Mr. Byrne stated that at the last meeting the Harvey Aluminum Company had agreed to develop and install a pilot project on a cell building roof monitor to remove the fluorides in the cell building space ventilation. He reported that the installation was started about July 10, on one-half of cell building E and that the installation was completed on August 11, 1961. He explained that the pilot project included a system of water sprays, fog nozzles and various combinations of poly-vinyl filter cloth. He stated that there were a total of 540 nozzles in the system which could be operated with approximately 800 gallons per minute of water.

Referring to photographs he showed the location of spray and fog nozzles with reference to the roof monitor installation. He pointed out the five foot vertical openings on each side of the monitor through which the cell building air is discharged. He explained that after the installation was completed the first problem was to develop an adequate measure of the air flow through the system and that since the configuration of the roof monitor had been changed, the previous air flow measurements were not applicable. He stated that after making numerous tests, the air flow through the pilot project was measured and their technical staff located average velocity points where representative air samples could be collected.

Mr. Byrne stated that there were many problems associated with standardization of test measuring conditions so that representative data could be obtained and that after this work was completed a series of tests were made to determine the optimum water pressure at the nozzles to obtain the best fluoride removal. He pointed out that in general when more turbulence is produced by the nozzles more scrubbing action will occur.

He explained that there were physical limits on the quantity of water that could be delivered to the roof monitor system. He reported that a total of ten tests have been completed under varying water pressures and that the range in which the installation can operate has been identified. He stated that the current phase involved the determination of the best filter cloth arrangements. He reported that several combinations have been selected and that the current series of tests would reflect the fluoride removal with each of the cloth combinations.

Mr. Byrne stated that arrangements had been made with the Sanitary Authority's staff for conducting joint tests during the week of October 30. He reported that the project plans at this time indicated that the entire pilot project tests would be completed by the end of December and that the data obtained would show the best combination of the facilities to produce a maximum removal of fluorides. He stated that Harvey Aluminum's management wanted the installation completed on the remaining 4 1/2 cell buildings as soon as possible, and that these installations could be completed by the spring of 1962 before the fruit blossom time occurs.

The Chairman asked if a representative of the Wasco County Fruit and Produce League wished to be heard at this time.

Mr. Donald W. Bailey, manager of Columbia Fruit Growers Association stated that there was less damage to the 1961 apricot crop in The Dalles but there was considerable leaf burn. He explained that the injury to the peach crops, however, was more severe, and that some orchards experienced a high loss from soft suture in the fruit. Mr. Bailey stated that the cherry crop in The Dalles vicinity was about 8,000 tons which was considerably better than the 1960 crop but less than the normal crop.

Mr. Hatchard reported that the staff had completed the analyses of the fluorides collected at the sampling station in the Mosier area and that

IAA357

several hundred samples had been analyzed for the Agricultural Experiment Station in The Dalles vicinity. He reported that the staff had made two surveys of the Harvey Aluminum pilot project and that the staff would maintain surveillance of the area conditions and would be participating in the test studies during the week of October 30 and in subsequent test runs.

The Chairman asked if the installation of the water spray system on the roof monitors of all cell buildings would substantially reduce the agriculture damage.

Mr. Byrne replied that the data from the tests of the control installation were promising. He pointed out that some of their tests showed a very good fluoride removal while other tests during identical test conditions showed considerably less fluoride removal. He explained that even after the entire control installation was completed the testing would continue and that additional improvements could be expected.

Mr. Bailey said that the growers here hopeful that improvements would be brought about but he emphasized that the problem was not solved yet.

The Chairman stated that the Authority accepted the progress reports and directed that reports be presented at the next meeting by Harvey Aluminum and the Authority staff.

#### MACLEAY REFUSE DISPOSAL SITE - MARION COUNTY

The Chairman requested H. Smith, Supervising Sanitarian, to present the staff report on the Macleay refuse disposal site problem.

Mr. Smith presented the following report which summarized the staff activities with investigation of air pollution from the Macleay refuse disposal site.

February 19, 1960 A complaint was received petitioning the Sanitary Authority to investigate an alleged nuisance condition existing at the

site of the Marion County owned dump approximately five miles east of the city limits of Salem, Oregon, and located just off Macleay Road. The complaint stated that the residents in that area were being subjected to public nuisance because of excessive smoke, flyash and odors.

February 26, 1960 A reply letter to the complainant acknowledging receipt of her letter and suggesting that the Marion County Health Department or the Board of County Commissioners also be contacted regarding the described conditions at the Macleay Dump site.

September 23, 1960 An inspection of the dump site was made by a staff member and it was noted that the operation of this dump site was in violation to Chapter 334 section 22-010 Oregon Administrative Rules.

November 2, 1960 A conference between staff members and Judge Rex Hartley, Marion County Court, was held in Salem and the regulations on the open burning of refuse were discussed and recommendations that the county develop alternate methods of operation were discussed.

November 22, 1960 A re-inspection of the Macleay dump was made and conditions were found to be much the same as on September 23, 1960.

November 29, 1960 Notice by letter was mailed to County Judge Rex Hartley regarding the violation to Sanitary Authority regulations on open burning of refuse within 6 miles of the city boundary of Salem, Oregon.

January 9, 1961 The staff notified Marion County Court to cease open burning of refuse at the Macleay dump by February 9, 1961. Open burning did cease on this date.

April 17, 1961 A letter was received from Richard W. Sabin, Deputy District Attorney for Marion County asking on behalf of the Marion County Court for a variance to air pollution control regulations to allow open burning until June 1, 1961, so that the county would have time to convert the dump to a sanitary landfill.

IAA357

April 20, 1961 A reply was sent to Deputy District Attorney Sabin requesting assurances from the Marion County Court that proposed recommendation of County Engineer John A. Anderson, dated 3-21-61, be adopted and that proper closure of the open burn site be made on expiration of the variance June 1, 1961.

May 17, 1961 Telephone complaint was received from Mr. Sam Miller of Four Corners Volunteer Fire District regarding the danger of break-out of fires in the dump site to adjoining properties.

June 26, 1961 Marion County started a modified sanitary landfill at Macleay dump but did not include all refuse into the fill.

August 10, 1961 An inspection was made of the Macleay dump and open burning of waste paper, wood and tree trimmings was noted. Water from a spring in the sanitary landfill cut was not properly intercepted and tiled from the refuse area thus causing pollution of a small stream that runs through the Four Corners Rod and Gun Club to the Pudding River.

August 11, 1961 A letter was sent to Marion County Court requesting cessation of all open burning at Macleay site.

August 29, 1961 A letter was received from Mr. Wallace A. Wharton, Executive Secretary to the Marion County Court, asking for a variance to the refuse regulations to allow open burning of certain materials such as paper, general refuse, etc.

September 7, 1961 A letter in reply to Mr. Wallace S. Wharton outlined the procedures to follow in applying for a variance, also notifying Mr. Wharton of the staff's intended recommendations to the Authority if open burning of refuse continued at the Macleay site.

September 11, 1961 A survey of the Macleay dump was made by staff members and open burning of refuse was noted. Also the county owned tractor was being removed from the dump operation to a road job for an

undetermined length of time leaving no equipment for the modified sanitary landfill.

September 15, 1961 The Air Pollution Control received a letter from Mr. Wharton indicating action taken by Marion County Court in informing Silverton Sanitary Service operator of the Macleay dump of the Sanitary Authority's notification to cease open burning.

September 15, 1961 Notice was sent to Marion County Commissioners that the matter of the Macleay dump operation would be on the agenda of the Sanitary Authority meeting to be held in Portland, Oregon, on September 20, 1961.

The Chairman invited Judge Rex Hartley representing the Marion County Court to present their statement.

Judge Hartley stated that the Marion County Court was interested in working out a satisfactory solution to the refuse disposal problems.

Judge Hartley presented the following report:

1. The Marion County Court in an effort to promote County-wide sanitation, believes it is presenting a reasonable request of a variance from the State Sanitary Authority regulations and is intervening in this matter of regulation of the Macleay dump for that reason.
2. The Authority is aware that the site is owned by the County and that the County has leased the site to Mr. Norman Nyhus, owner of the Silverton Sanitary Service for operation as a garbage disposal unit. This lease makes the Silverton Sanitary Service responsible for operation of the unit, and the lease includes the proviso that the operator shall comply with all sanitation laws of the State of Oregon.
3. The current lease expires 15 November of this year and now is being revised for continued operation by the Silverton Sanitary Service.
4. Through probable misunderstanding of opinions as to continuation of burning at the dump, by representatives of the Authority, burning was continued after 1 June 1961 in order to dispose of accumulated burnable material delivered prior to that date.
5. There has been and is no intent to flout the authority of the Sanitary Authority, inasmuch as we all are working to achieve the same goal, but it is our earnest hope that the Authority will recognize the problems peculiar to the operation by granting a variance to permit burning of such materials - principally paper products, wood and brush, which do not produce heavy carbon smoke, offensive odors or dangerous gases.

IAA357

6. Upon receipt of Mr. Everts letter of 11 August, Mr. Nyhus and his custodian at the dump were notified to stop burning. We also have been advised that a representative of the Authority also called on the custodian at the dump and gave similar instructions.

7. In this respect it is our contention that the Authority should deal directly with the operator, who, by terms of the lease is responsible, as leasee, for all operations at the dump, and report to the County only in case the operator disregards valid instructions of the Authority, which must be based firmly on law and reasonable regulation.

8. The revised lease will provide for a modified landfill garbage disposal operation at the site.

9. We do ask for a variance, as indicated in paragraph 5, above, for what we firmly believe are valid reasons and as necessary for proper and effective sanitation throughout the County. It should be borne in mind that this site serves approximately 70 percent of the County's population, those residing in the southern geographic half of the County, including the incorporated towns of Silverton, Turner, Sublimity, Aumsville, Jefferson and Stayton.

10. Much of the economic wealth and activity of Marion County is based on agricultural activities and these activities require proper disposal of brush and tree limbs resulting from land clearance, pruning and other essential activities of the farm and orchard. It is hardly necessary to call the Authority's attention to the fact that Chapter 426, Oregon Laws 1961, Section 5, subsection 1, states the provisions of the Act "do not apply to: - (1) Agricultural operations and the growing or harvesting of crops and the raising of fowls and animals," yet a large volume of the burnable material delivered to the dump by farmers comes from just such activities and the delivery and disposal at the dump is essential to reducing the fire hazards that would otherwise imperil field crops, livestock and farm buildings.

11. A case in point: One of our Commissioners last Monday received a call from a woman residing near Four Corners and who operates a small berry farm. She asked for a solution to her problem, which can be outlined as follows:

(a) The County Agent, acting in accordance with state law, ordered her to tear out and burn a considerable quantity of infected bushes to prevent spread of the plant disease to nearby plots.

(b) The Chief of the Rural Fire Protection District refused her a permit to burn the bushes on her own premises because of danger of fire spreading to neighboring fields and buildings. He also was acting in accordance with state law.

(c) As a result of the Sanitary Authority's "stop burning" order the Sanitary Service states they are forbidden to haul such material to the City Dump.

(d) As a result of the same order the material cannot be received at the Macleay dump.

12. This case, far from being the only one of its kind, clearly points up the problem arising from the lack of coordination of our various laws and also the necessity for clarification.

13. At this point it may be desirable to recall the statement of purpose in Chapter 426, as enacted by the Legislative Assembly. It reads:-

"In the interest of public health and welfare of the people, it is declared to be the public policy of the State of Oregon to maintain a reasonable degree of purity of the air resources of the state to the end that the least possible injury should be done to human, plant or animal life or to the property and to maintain public enjoyment of the state's natural resources and consistent with the economic and industrial well-being of the State. The program for the control of air pollution under this act shall be undertaken in a progressive manner, and each of its successive objectives shall be sought to be accomplished by a maximum of cooperation and conciliation among all parties concerned."

14. The parts stressed have been done so deliberately because it is believed they not only reflect the clearly stated intention of the Legislative Assembly but also because they show the way toward solving this problem.

15. And it must be borne in mind that this Act must be interpreted and executed with due regard to collateral laws pertaining to maintaining a sound and effective level of community and those to reduce and prevent the hazard of fire.

16. With this outline of the problem and the statement of what seems to be the guiding principles to solution as set forth by the Legislative Assembly for the benefit of the Sanitary Authority and all of us so vitally concerned with achieving the objectives of the Act, it is now well to consider the proposed solution as applicable to the Macleay dump.

17. The dump is 5 1/2 miles from Salem, one-half mile inside the six mile radius established by the Authority as the general radius for no-burning. Consideration of the following wind data and proposals for control of garbage disposal and controlled burning of combustible materials that do not produce noxious odors or dangerous gases it is felt will be ample to justify, if not impel, the Authority to grant the variance permitting burning of the kind of material indicated, especially since the half-mile is merely a geographic measure.

18. The County Court intends, as negotiations for new lease progress, to pass an order requiring the separation of garbage from other materials before delivery at the dump. This is a responsibility that must be met by people using the dump for disposal of garbage and trash.

19. It also is contemplated that burnable materials, as indicated above, are to be separated before delivery, and ready for unloading.

20. At this point it should be mentioned that the dump serves several state institutions and activities, among them Fairview Home, the Forestry Service, the State Hospital, the Penitentiary, and others. One of the problems at the dump arises from the fact that at Fairview Home meals are served on paper plates and are delivered mixed in with the garbage of the institution.

21. Disposal of paper and wood, including brush, by burning will approximately treble the useful life of the site for garbage disposal. This is a factor of considerable importance. It is important because the site is centrally located relative to users and thereby not only encourages its use, but results in economy in haulage.

22. Some of the qualified firemen in the area point out that controlled burning will materially reduce the fire hazard for the area, and especially provide greater protection against outbreak of fire from spontaneous combustion that could arise from burying a mixture of paper, oils and other materials that cause such an outbreak.

23. In studying the problem at Macleay in order to reach a solution that will reduce air pollution to a tolerable degree, reduce the fire hazard and yet to provide the absolutely necessary garbage and trash disposal so essential to good community sanitation, an analysis of winds in the area was made, based on data provided by the U. S. Weather Station at McNary field.

24. The findings are given in detail in the attached annex, entitled "Wind Analysis with Macleay Dump as a Point of Reference." This data should be given serious consideration jointly with the geographic factor of the dump being merely one-half mile within the six-mile no burning radius.

25. The wind analysis shows that the Salem area is affected by winds only blowing in the sector from East-Northeast to Southeast in relation to the Macleay dump, and that winds within this sector blow only 5.8 percent of the hours within any given year. Further the wind velocity is low and these winds are usually accompanied by rain which dampens smoke in a comparatively short distance from its origin.

26. It is significant and important to justification of granting the requested variance to realize that out of the 8,760 hours in a year that the principal winds are from the South, 1,586 hours, North 312 hours and Northwest 121 hours and that calm prevails for 1,685 hours. The other winds, save those mentioned in paragraph 25 and as shown by months in the annex, do not blow toward the Salem area.

27. A culture map prepared by the State Highway Commission is provided. It shows the location of the Macleay Dump as a red square and how the winds blowing from East-Northeast to Southeast impinge on the Salem area by red vector lines.

28. All of this data is germane to the problem and it is felt, with confidence and certainty, they will be given serious study by the Authority, along with the other factors outlined in this memorandum, and it is hoped aid in reaching a sound and justifiable decision to grant the requested variance.

29. It should be reiterated that this presentation is made on behalf of the Marion County Court as representing the people of the County and to that extent in support of the leasee who is the responsible operator.

30. Assurance can be given that Marion County and the lease-operator will cooperate to the fullest possible extent if the Sanitary Authority rules are clear and reasonable and in full recognition of the desire to maintain a high standard of community sanitation, of which air pollution is but one element.

18 September 1961

Wind Analysis with Macleay Dump as Point of Reference

1. This data obtained from the U. S. Weather Bureau Station at McNary Field.
2. Period Covered - 12 months August 1960 to July 1961.
3. Weather Bureau advises the data is typical for all years since weather records have been kept.
4. Data is valid throughout an area of 10 miles radius from the Weather Bureau station.
5. Total number of hours in year 8,760.
6. Total hours of calm in year 1,685.
7. Major wind of year is south wind - 1,586 hours.
8. Other principal winds - North, 312 hours - Northwest wind, 121 hours.
9. Sector affecting Salem area with Macleay Dump as point of reference includes winds from East-Northeast to winds from Southeast.
10. Monthly record of winds within this Sector in hours of recorded direction.

	Total Hrs.	ENE	E	ESE	SE	Calm
January	744	2 hrs	0 hr	2 hrs	35 hrs	152 hrs
February	672	1 hr	3 hrs	2 hrs	40 hrs	36 hrs
March	744	0 hrs	1 hr	3 hrs	58 hrs	117 hrs
April	720	2 hrs	8 hrs	8 hrs	43 hrs	105 hrs
May	744	4 hrs	4 hrs	5 hrs	29 hrs	108 hrs
June	720	1 hr	3 hrs	6 hrs	25 hrs	82 hrs
July	744	5 hrs	6 hrs	6 hrs	36 hrs	101 hrs
August	744	10 hrs	6 hrs	7 hrs	19 hrs	155 hrs
September	720	1 hr	3 hrs	2 hrs	4 hrs	241 hrs
October	744	2 hrs	4 hrs	4 hrs	33 hrs	207 hrs
November	720	1 hr	3 hrs	1 hr	43 hrs	132 hrs
December	744	2 hrs	10 hrs	4 hrs	15 hrs	249 hrs
<b>Total</b>	<b>8,760</b>	<b>31 hrs</b>	<b>51 hrs</b>	<b>50 hrs</b>	<b>380 hrs</b>	<b>1,685 hrs</b>

11. Total hours for all winds affecting Salem sector is 512 hours out of a total of 8,760 hours, or approximately 5.8 percent of the time each year.

IAA357

12. This degree of smoke nuisance in the Salem sector is further reduced by the fact the winds involved are usually, though not always, accompanied by rain which causes the smoke to cool and dissipate in a comparatively short distance from its source. Unfortunately data is not available to show the total number of hours of rain occurring while these winds are blowing, but occurrence data clearly indicates that it is considerably more than half the time.

13. Distances involved in this analysis produce some interesting results. With an east wind the distance from the dump to the Salem city limits is 6 1/2 miles; with a southeast wind, which does not impinge on the Salem city limits, the distance to Keizer is 8 miles and with an east-northeast wind the distance to Liberty 8 1/2 miles.

(Prepared by Executive Secretary of County Court - Wallace S. Wharton)

Judge Hartley assured the Authority that the Marion County Court and the lessor would cooperate to the fullest possible extent to eliminate air pollution.

Mr. Stanley asked Mr. Quesseth who would be legally responsible for conducting the refuse disposal operations.

Mr. Quesseth replied that ordinarily the lessor would be responsible but that he would need to review the lease agreement to determine this fact definitely.

Judge Hartley stated that the county was negotiating for a new lease at the present time and in this regard the operator would be asking for a variance to open burn refuse until a modified sanitary landfill could be organized.

The Chairman asked what type of refuse materials were they requesting a variance to burn.

Judge Hartley replied that a variance was requested to allow the burning of paper, brush and wood. He stated that the Marion County Court hoped that the Sanitary Authority or a sanitarian from the Marion County Health Department would maintain supervision of the refuse disposal operations.

Judge Hartley also pointed out that a considerable quantity of refuse delivered to the dump originates from agricultural operations such as tree trimmings, old lumber and similar materials. He stated that the farmers want to avoid fire hazard on their properties and the county would like to accommodate them at the dump site.

Judge Hartley stated the county could locate the dump further away from the community. However, this required more travel distance and was really no solution to the problem since within a few years there would be residences near the disposal site.

Mr. Hatchard stated that he was reluctant to speak in opposition to Judge Hartley; that the staff had enjoyed many cordial discussions with the Marion County Court regarding refuse disposal. He emphasized that when a community becomes concerned with the protection of its air supply usually one of the first sources of air pollution that should be controlled concerned refuse disposal. He pointed out that the capital city of Oregon was being observed throughout the state; that really there was no reason why an excellent sanitary landfill-type operation could not have been in operation many years ago. He stated that no air pollution problems are created by a well operated sanitary landfill and that the staff recommended that no variance be granted in this case since it would become a precedent throughout the state. He commented that the real question before the Authority was whether Oregon was going to take effective action to control air pollution. He stated the Sanitary Service Company was now operating a good modified sanitary landfill in Marion County and that the owner has succeeded in converting what was formerly an objectionable open burning dump into a satisfactory operation.

IAA357

Mr. Hatchard stated that the same improvements could be produced at the Macleay refuse disposal site.

Dr. Wilcox asked if the Sanitary Service Company had been granted a temporary variance to allow the burning of trees, shrubbery and lumber.

Mr. Hatchard replied that a variance had been granted for a period not to exceed 90 days; that it was the staffs' hope that this material would be incorporated in the dump without burning in the future.

Mr. Stanley asked if it was general practice to dispose of lumber and brush in sanitary landfills.

Mr. Smith replied "yes" that this is a common practice and there are proper methods for accomplishing it.

Mr. Quesseth asked if the Macleay dump site could be converted into a landfill operation.

Mr. Smith replied it was not an ideal site but could be used for a period of time but that there were other suitable locations within reasonable hauling distance. He explained that the Macleay site was a ravine location and that this would require additional operational care to produce a successful modified sanitary landfill.

Mr. Quesseth asked Mr. Hatchard if the staff had any objection to a temporary variance being granted until the county negotiated a new lease.

Mr. Hatchard stated that the staff would recommend against any variance to burn paper and cardboard-type of materials since it was almost impossible to separate this from other organic refuse and that burning this type of material would create an air pollution nuisance.

The Chairman stated that wouldn't the Authority's actions on refuse air pollution problems be related to the degree of nuisance created.

Mr. Hatchard replied that the number of complaints received was not a very good measure of the degree of nuisance produced. The staff was aware of many problems where nuisances were present and that no complaints have been made by the residents.

Judge Hartley stated that his 11 years as County Judge had given him some knowledge of public opinion and that he believed it would be very expensive to provide cover for all of the wood materials that are delivered to the dump. He stated that he hoped that a variance would be granted to allow the burning of wood materials.

Mr. Stanley stated that he agreed with Judge Hartley in some aspects; that he believed some burning of wood materials at refuse disposal sites in suburban areas may be desirable. He pointed out that such burning in heavy populated areas perhaps would have to be moved.

Mr. Stanley asked Judge Hartley if the disposal site could be moved.

Judge Hartley replied that another location could be found but he did not believe this was a long-term solution; that the Marion County dump preferred to solve the problem.

Mr. Harms said that it appeared that the Authority should grant some type of temporary variance restricted to trees, shrubbery and lumber materials similar to the terms included in the Sanitary Service Company's order.

Dr. Wilcox stated that he believed, as a public body, we should not be promoting open burning; that published information shows that the lung cancer rates are increasing and that some of this may be related to combustion products. He indicated that he would agree to a temporary variance.

The Secretary asked if a study had been made of the disposal site to determine how long it could be used as a modified sanitary landfill.

IAA357

IAA357

IAA357

IAA357

Judge Hartley replied that a complete engineering study had not been made but that it would appear they could operate for several years - 7 to 10 years if the wood materials could be burned.

Mr. Smith stated that the Marion County Road Engineer had prepared a preliminary report which showed the existing site included about 40 acres and that approximately 15 acres could be used as a modified sanitary landfill; that the existing site could be used for a period of about 4 years.

The Secretary asked if the County Planning and Zoning Commission had developed any plans for the adjacent areas which may require that the site be abandoned.

Judge Hartley replied he was not aware of any such study.

MOTION

It was MOVED by Mr. Harms and seconded by Mr. Amacher and carried that a temporary variance be granted for a period of 90 days to allow the burning of brush, trees and lumber similar to the order adopted in the matter of the Sanitary Service Company during the June 28, 1961, Authority meeting.

GEORGIA PACIFIC PAPER COMPANY

Mr. Ed Taylor, Technical Director, and Mr. Carlson, Attorney, were present to represent the Georgia Pacific Company.

Mr. Kenneth H. Spies presented a report dated September 15 giving some of the background and present status of the pollution problem caused by the Georgia Pacific Paper Company mill at Toledo. This report has been made a part of the permanent files in this case.

The conclusions made from the above information were that the nuisance is primarily an air pollution problem rather than a water pollution problem. The odor problem at Newport is still not solved but the company now appears to

be making a sincere and determined attempt to solve it. Whereas it previously had been believed that this problem could be satisfactorily solved by the use of chlorination it now appears that other treatment may also be required.

It was MOVED by Mr. Harms, seconded by Mr. Amacher, and carried, that the matter be continued and the staff go on with their investigations and report back at the next meeting.

SHERWOOD

Mayor Stanley Heater, H. G. Albert, City Recorder, and Fred A. Anderson, City Attorney, were present to represent the city of Sherwood. Mr. Eugene Marsh, Attorney, represented the Frontier Leather Company.

Donald J. Benson, Associate Sanitary Engineer, presented a memorandum-report dated September 18. This report has been made a part of the permanent files in this case.

Mr. Benson pointed out that the city of Sherwood has failed to comply with the section of the March 16, 1961, order which required that engineering plans be completed and an adequate fiscal program be developed by September 1, 1961.

Mr. Fred Anderson, city attorney, appeared and was heard. He stated that in a recent letter to Governor Hatfield it had been mentioned that the city had been something less than cooperative. He claimed that the position of the city with respect to the Sanitary Authority was not uncooperative, that the city recognizes its responsibility and that it realizes that the Sanitary Authority has been most patient and is entitled to action. He admitted, however, that thus far the city has failed to act. According to him the objectives of both the city and the Authority appear to be the same, namely, to overcome pollution of public waters and the air. He expressed the opinion that the city has been placed in the role of a scapegoat.

IAA357

Other statements made by Mr. Anderson included the following: This matter has gone on for more than 12 years. The present treatment plant was originally constructed to serve the city, the tannery and the cannery. The city assumed the obligation of handling the industrial wastes but it was not admitted that the city has any legal responsibility. The city had understood that the disposal of the tannery wastes would not be a problem. It constructed a plant with some help from the tannery pursuant to plans which had been approved by the Authority. Subsequent to construction of the plant the tannery increased its production. In 1960 the tannery discharged 2 1/2 times the amount that had originally been estimated. This increase in production accentuated the treatment problem. In 1953, 1955 and 1960 the tannery made increases and has otherwise been unreasonable in its use of the city's facilities. At the present time the city does not know what the tannery plans are.

Sherwood is only a small city with a population of some 600 persons. The city council recognizes that its first obligation is to the domestic users of the sewer system. In 1952 a special ordinance was passed to put the loading of the sewage plant in proper perspective. This ordinance may or may not be up to date at the present time. Requirements for pretreatment or reduction in pollution load have repeatedly been brought to the attention of the tannery. The actions of the tannery have been somewhat less than satisfactory.

Some time ago the city filed an injunction suit to restrain the tannery from using its sewers. This suit is pending at the present time. Mr. Eugene Marsh, attorney for the tannery, filed an answer on September 1. The city feels that the tannery has failed to meet its responsibility in this matter. Admittedly they have spent some money in an attempt to solve the problem but

IAA357

basically it is up to the tannery and not the city to make it possible to meet the effluent standards set by the Authority.

The tannery should employ the necessary technical assistance to design facilities capable of accomplishing this result. It is understood that the standards established by the Authority can be met but it is up to the tannery to let the city know where it stands. The city feels that it is premature for it to employ technicians until the tannery sets up a program to fulfill its requirements. The city is not financially able to underwrite this project for the tannery. The tannery must provide the engineering and other studies necessary to show that a solution is possible and acceptable to the Sanitary Authority. Until such time as the tannery has the capability and willingness to accomplish this the city has no alternative but to prosecute its suit.

Mr. Anderson concluded his statement by saying that the city is not asking the Sanitary Authority for anything except to put this matter in the proper perspective. He reiterated that the city cannot take proper steps until it has certain information from the tannery.

Mr. Eugene Marsh, attorney for Frontier Leather Company, then appeared and was heard in this matter. He stated that Mr. Mel Mason and Mr. E. Steiner were present to represent the Frontier Leather Company.

Mr. Marsh reported as follows: Mr. Anderson and he have met on various occasions regarding this matter. Because of the particular type of waste that is involved it is going to be difficult to provide proper treatment. Prior to the other hearing the tannery officials met with the city council and Mr. D. J. Benson, Sanitary Authority engineer. At that time it was suggested that the tannery employ a consulting engineer to make a study to see what further pretreatment was necessary at the tannery. In 1957 the Sherwood tannery had been purchased by Mr. Linke. It is the only one of its kind in the northwest. The present investment amounts to \$400,000. At the time it

was purchased it was realized by Mr. Linke that there was a sewer problem. Since that time Mr. Linke has spent \$32,499 in an attempt to provide adequate waste disposal.

It has been necessary for Mr. Bob Pailthorp of Cornell, Howland, Hayes and Merryfield, engineers for the tannery, to make a complete study of the problem. Unfortunately he was not able to come up with a quick answer. A pilot plant has been installed but because of several operating difficulties satisfactory test results had not yet been obtained. The city of Sherwood has an ordinance which prevents any user from discharging into the municipal sewer system any waste having a BOD content of more than 350 ppm. During July of this year the tannery was shut down and did not contribute any load to the city sewage treatment plant. However, at that time, the Portland Canning Company was processing blackberries and was discharging an effluent having a BOD of 375 ppm. It is unfortunate that the industrial waste loading is so great in comparison with the size of the sewage load. The tannery officials wish to assure everyone that they are acting in good faith but when the engineers get through with their studies it may be necessary to move the tannery from Sherwood. Mr. Linke has offered within reasonable amounts to pay half the cost for any improvements needed at the city sewage treatment plant for handling the tannery wastes. The tannery officials are willing to have their engineers make a study of the disposal plant and have suggested that the city employ their engineers for this purpose. The tannery will pay the expenses of this study if the city will accept the engineers recommendations. The tannery requests that more time be given to work out this problem. This is an engineering problem and it is doubted that any useful purpose would be served by going into court. Mr. Marsh concluded his statement by saying that engineers have been

employed to tell them what to do and as soon as the engineers have completed their study the tannery officials will then know whether or not they can afford to stay in Sherwood.

Following the statements by Mr. Anderson and Mr. Marsh several questions were asked by members of the Authority. It was then MOVED by Mr. Harms, seconded by Mr. Amacher, and carried that the Sanitary Authority withhold action on the existing violation of the March 16, 1961, order and that the staff report back at the next meeting of the Authority.

Mr. John Denman, who has been employed as full time attorney for the State Board of Health, was introduced to the Authority members. It was MOVED by Mr. Stanley, seconded by Mr. Amacher, and carried that the Authority express its sincere appreciation and thanks to Mr. Cecil H. Quesseth for the very excellent work which he has performed for the Authority during the past several years.

Date for the next meeting was set for January 11, 1962.

There being no further business the meeting adjourned at 1:00 p.m.

Respectfully submitted,

  
CURTISS M. EVERTS  
Secretary

## MINUTES OF THE EIGHTY-NINTH MEETING

of the

Oregon State Sanitary Authority

January 11, 1962

The eighty-ninth meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:05 a.m., January 11, 1962, in Room 36 of the State Office Building, 1400 S. W. Fifth, Portland, Oregon. The other members and staff present were R. H. Wilcox, M.D., John P. Amacher, Herman P. Meierjurgan, Lewis A. Stanley, E. C. Harms and B. A. McPhillips, Members; John Denman and Cecil H. Quesseth, Legal Advisors; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Assistant Chief Engineer; Donald J. Benson, Associate Sanitary Engineer; H. M. Patterson and E. J. Weathersbee, District Engineers; R. E. Gaines and R. I. Culver, Assistant District Engineers; Ronald R. Ott and Joseph A. Jensen, Assistant Sanitary Engineers; Edgar R. Lynd, Water Pollution Control Technician; Howard Smith, Supervisory Sanitarian, and Ed Quan, Assistant Aquatic Biologist.

MINUTES:

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that the reading of the minutes of the 88th meeting held on September 20, 1961, be dispensed with and they be approved as prepared by the secretary.

PROJECT PLANS:

It was MOVED by Mr. Harms, seconded by Mr. Amacher, and carried, that the actions taken on the following 126 projects for water pollution control and 12 projects for air pollution control for the months of September through December 1961, be approved.

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
9-1-61	Central Point	Sewer extensions	Prov. approval
9-1-61	Cedar Hills	Lynwood Addition sewers	Comments submitted
9-1-61	Estacada	High School septic tank	Prov. approval
9-5-61	Toledo	Georgia Pacific Lagoon Addition	Approved
9-5-61	Dufur	Preliminary Engineering report	Comments submitted
9-5-61	Baker County	Halfway Grade School Addition	Not approved
9-5-61	La Grande	Outfall sewer and lagoon	Deferred
9-6-61	Scio	Sewers and lagoon	Prov. approval
9-6-61	Canby	Sewage plant additions	Comments submitted
9-8-61	Sunset Valley S.D.	Timber Trailer Subd. sewers	Prov. approval
9-8-61	Molalla	Preliminary engineering report	Approved
9-8-61	Beaverton	Prel. plans for L.S. Brown sewers	Prel. approval
9-13-61	Marion County	Willamette Lutheran Homes	Comments submitted
9-18-61	Gresham	Sewer extensions	Prov. approval
9-18-61	Gov't Camp S.D.	Sewer extension	Prov. approval
9-15-61	Lane County	McKenzie High School Addition	Prov. approval
9-19-61	Forest Grove	Sewer extensions (3)	Prov. approval
9-19-61	Salem	Northgate Annex sewers	Prov. approval
9-19-61	Beaverton	Trunk sewers R and B	Prov. approval
9-19-61	Sherman County	Rufus Grade School	Approved
9-19-61	La Grande	Lagoon and pump station	Prov. approval
9-19-61	Mt. Hood Golf Club Terrace	Subdivision sewerage works	Prov. approval
9-19-61	Banks	Banks Grade School Addition	Approved
9-19-61	Clackamas County	Clackamas High School Addition	Approved
9-20-61	Ashland	Interceptor sewer	Deferred
9-20-61	Multnomah County	Tads Chicken & Dumpling Restaurant sewage disposal	Prov. approval

IAA357

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
9-20-61	Morrow County	Ione High School sewerage	Prov. approval

#### Waverly Country Club

A letter from Mr. Robt. L. Sabin, President, dated January 5, 1962, asking for a reduction in the amount of surety bond required under ORS 449.043 in connection with the Waverly Country Club's proposed sewage works project was discussed.

A memorandum dated December 21, 1961, regarding this subject had previously been sent to the Authority members by Mr. Spies. Mr. Sabin was present to represent the club.

It was MOVED by Mr. Harms, seconded by Dr. Wilcox, and carried, that an exception be made in the case of the Waverly Country Club and in view of the nature of the works the amount of the bond be set at \$1,000.

City of Salem

In a letter dated December 14, 1961, from Mr. Sidney S. Lasswell, consulting engineer, a request was made of the Authority to grant a 6-month's extension in time to the city of Salem for completion of that city's new sewage treatment plant. Mr. Lasswell was present to represent the city.

In response to a question from the chairman as to whether or not the Authority's staff had any objections to the requested extension of time the secretary replied that the only item of concern had to do with the date for the bond election. If the city intends to apply for a federal grant from the 1963 fiscal year appropriation it would be advisable to hold the bond election before November 1962. Mr. Lasswell stated that the city preferred to delay the bond election until final plans and specifications had been completed and a firm estimate of cost has been determined. Because of the amount of work involved this could not be accomplished before July 15. He stated further that because of the size of the project there would still be enough construction left during the '64 fiscal year to qualify the city for a maximum grant of \$600,000. Consequently it would not be necessary for the city to apply for a federal grant this year. After a discussion of the possible effects of the proposed delay on the development of the master plan in the Salem suburban area it was MOVED by Mr. Amacher, seconded by Mr. McPhillips, and carried, that an extension of time for completion of its project be granted to the city of Salem as per the following schedule outlined in Mr. Lasswell's letter of December 15, 1961:

Site purchased or options taken	- - - - -	December 15, 1961
Plans and Specifications completed		
and cost estimates made	- - - - -	July 15, 1962
Bond election held	- - - - -	November 1962, or before
Contracts awarded on plant and		
interceptor sewer	- - - - -	February 1963
Construction completed	- - - - -	June 1964

IAA357

City of Sherwood - Frontier Leather Company

Mr. Fred Anderson, city attorney, was present to represent the city. Mr. E. Steiner, E. J. Linke, Mel Mason and Eugene Marsh, attorney, were present to represent the Frontier Leather Company.

Mr. Benson reviewed briefly the action taken in this matter at the last Authority meeting and stated that representatives of the city and industry were prepared to make reports of the progress which had been made since that time.

Mr. Anderson then reported that an agreement had been reached between the city and the Leather Company under which the latter would finance the necessary studies to determine what improvements would be needed at both the tannery and the city plant for treatment and disposal of the combined sewage and industrial waste. Pursuant to the agreement which had been signed on November 8, 1961, the tannery had advanced to the city the sum of \$1,000 for this purpose. He reported further that Mr. James R. Boydston of Stevens and Thompson Engineers had been retained by the city of Sherwood to make the engineering study. It had been estimated by Mr. Boydston that due to the complexity of the problem it would probably take about six months to complete the preliminary engineering and another year will be required for design and completion of construction. Mr. Anderson reported further that a stipulation had been entered in connection with the suit which had previously been filed in the Washington County Circuit Court by the city of Sherwood against the Frontier Leather Company. Under the stipulation the tannery had agreed to provide up to \$5,000 for financing the city's engineering studies. As a part of the stipulation the trial in this matter had been postponed indefinitely subject to being reset at the discretion of the court upon the application of either party.

Mr. Anderson was asked by the Authority members what provisions, if any,

had been made by the city council to finance the engineering studies if the cost should exceed the \$5,000 which the industry had agreed to furnish. Mr. Anderson replied that no provisions had been made by the council in that regard and he was unable to state definitely what the city might or could do. In response to questions from the members he was unable to give information regarding the amount of income raised by the city's sewer service charge.

Mr. Eugene Marsh, attorney for the tannery, then confirmed the statements previously made by Mr. Anderson concerning the negotiations which had taken place since the last meeting. He stated that Cornell, Howland, Hayes & Merryfield had been retained by the tannery to make an engineering study of its waste treatment needs; such engineering services to be financed on a per diem plus overhead basis. It originally had been estimated that about one year would be required to complete the engineering studies of the tannery wastes. In addition to studying possible methods of waste treatment the engineers are also making a study of equitable sewer service charges. Mr. Marsh reported next on the pilot plant tests which had been made of a lagoon for treating the tannery wastes. According to these tests it appears that the strength of the tannery wastes can be reduced by lagoon treatment to approximately the strength of normal domestic sewage. Mr. Marsh indicated that the tannery's preliminary engineering work should be completed by about the last of June. He assured the Authority that the owners of the tannery have a sincere desire to get this problem solved.

After further discussion about the matter of additional financing of the engineering studies Mr. Harms stated that he did not think it would be possible for the city to develop a workable budget until the engineering studies had been completed. He expressed the opinion that perhaps budgeting

IAA357

was not as big a problem as anticipated. He stated further that if necessary the city could apply to the Housing and Home Finance Agency for a federal loan to finance the preparation of final plans and specifications.

It was, therefore, MOVED by Mr. Harms, seconded by Dr. Wilcox and carried that the city of Sherwood report back to the Sanitary Authority on the status of its engineering studies and plans as of July 1, 1962.

City of Stayton

A memorandum dated January 11, 1962, regarding the city of Stayton's need for a public sewerage system was read by Mr. Spies and has been made part of the Authority's permanent records in this matter.

Marcel Van Driesche, Mayor, John D. Davis, Planning Commission member, Harmon P. Drushella, Councilman, Lawrence E. Spraker, Publisher Stayton Mail and J. E. Powell, Stayton News, were present from the city of Stayton.

Mayor Driesche stated that the city council recognizes the problem of sewage disposal but does not admit that it is as serious as indicated on TV and in the newspapers. He stated that the next time the matter is submitted to a vote of the people they are going to be sure that the information is presented to the voters before it appears on television. He criticised the Authority and health department officials for allegedly not giving the city sufficient backing before the election on October 24, 1961, when a proposed bond issue was defeated by the voters. He admitted that there was a serious problem at the Santiam Memorial Hospital but claimed that it was presently being corrected by the installation of additional drain fields. He admitted also that the cannery has a definite problem of waste disposal and stated that this matter is being studied separately by consulting engineers and will be solved by facilities which are to be installed by the cannery rather than by the city. He

IAA357

stressed the fact that the pollution caused by the discharge of sewage effluent from adjacent properties into the Salem ditch did not constitute a hazard to the safety of the city's water supply because the city gets its water from deep wells which are located away from the town and any source of contamination. He claimed the pollution in the Salem ditch has been in existence for 30 years and is no worse now than it has been in the past. He reported that at the last meeting of the City Council action had been taken to levy a monthly sewer service charge of \$1.50 per residence to be used for financing the preparation of plans and construction of a public sewer system. He thought a cost of \$650,000 for a city sewer system was awfully high for a community of only 2,000 people but stated that nevertheless the city council was making plans to have another election in the near future. He thought that such an election could be held by May of this year. In response to a question from the chairman the Mayor stated that he did not think citing the city to appear before the Authority would help the council promote approval of the proposed bond issue. He said all the city needed was another chance.

It was then MOVED by Mr. Harms, seconded by Mr. Amacher, and carried, that the city of Stayton be requested to report back to the Authority by July 1, 1962, with plans for financing construction of a public sewerage system.

Georgia-Pacific Paper Company

Mr. Spies reported briefly on the action taken at the previous meeting of the Authority in the matter of waste disposal by the Georgia Pacific Paper Company from its Toledo mill. He also discussed briefly the actions taken by the staff in this matter since September 20, 1961. Mr. Fred Yerke, attorney, and Dr. C. Edward Taylor, Technical Director, were present to represent the company and he suggested to the chairman that they be asked

to report on the steps taken by the Georgia Pacific Company to solve this problem. Mr. Yerke then introduced Dr. Taylor who presented a detailed progress report on the Newport odor problem. Printed copies of the report dated January 11, 1962, were submitted to the Authority and have been made a part of the Authority's permanent records in this matter.

Following his report and in response to a question from the chairman Dr. Taylor stated that he felt that the company now has the foam problem under control. In response to another question he stated that at the present time the company has no plans for extending its outfall sewer farther out into the ocean. The company is confident that the new equipment which is to be installed for oxidizing the odor producing constituents by means of atmospheric oxygen will prove to be entirely satisfactory for eliminating odors at Newport. Dr. Taylor was commended for submitting such a complete report.

In view of the progress being made by the company no action was taken by the Authority.

#### Rogue River - Turbidity from Mining Operations

The members were advised that during the last month or 6 weeks several complaints had been received regarding excessive turbidity in Rogue River allegedly caused by placer mining operations. Under a statute adopted several years ago by the state legislature mining operations in the Rogue River basin come under the jurisdiction of the Rogue River Coordination Board.

This Board has the statutory responsibility to control such mining operations so that they will not interfere with angling and game fishing. During recent years the Rogue River Coordination Board has been rather inactive and until the 1961 Legislative session had for quite some time not even requested an appropriation to finance its activities. On

January 10, 1962, representatives of the Authority staff had accompanied members of the Coordination Board and others on an inspection tour of present mining operations, and that today, January 11, the Coordination Board was holding a meeting in Grants Pass for the purpose of determining what action, if any, to take in this matter. A memorandum in this matter dated January 5, 1962, and prepared by Mr. John O. Denman, Legal Advisor, was reviewed by the secretary.

After a discussion of the problem it was MOVED by Mr. Amacher, seconded by Dr. Wilcox and carried that a communication be sent by the secretary of the Authority to the Rogue River Coordination Board calling to the latter's attention the pollution problem which now exists and outlining the responsibilities of the Sanitary Authority in this matter.

It was also MOVED by Mr. McPhillips, seconded by Mr. Amacher and carried that if the pollution in the Rogue River can not be controlled by the Coordination Board and is not abated voluntarily by the mining operators, the chairman be authorized to call a public hearing and to issue citations to those responsible for such pollution to appear and show cause why orders should not be entered against them.

#### Oregon Reclamation Congress Resolution

Resolution No. 8 which had been passed by the Oregon Reclamation Congress at its annual meeting on September 21-22, 1961, in Salem, Oregon, was reviewed and placed on file by the Authority. A discussion brought out the fact that the amendments to the federal water pollution control act which were passed by Congress in 1961 and which authorize augmentation of low stream flows for pollution abatement specify most definitely that such augmentation shall not be in place of adequate sewage and waste treatment but shall be supplemental thereto. In passing such legislation Congress

IAA357

recognized the fact that no treatment process is 100 percent effective and that consequently there is always some residual pollution for which dilution must be provided.

Federal Construction Grants

It was MOVED by Mr. Harms, seconded by Mr. Amacher, and carried that June 15, 1962, be set as the deadline for receiving applications for federal grants from the 1963 fiscal year appropriation.

The meeting recessed at 12 noon and was reconvened at 1:45 p.m.

The meeting was reconvened at 1:45 p.m.

STATE PENITENTIARY - Variance on regulations

Mr. Hatchard reported that a letter dated December 12, 1961, had been received from Warden C. T. Gladden requesting a variance for the open burning of wood waste from the penitentiary furniture mill, at a site near the Farm Annex, located approximately 4 1/2 miles from the penitentiary. Mr. Hatchard stated that Warden Gladden had been notified that the penitentiary should install an incinerator at the institution or dispose of the wood waste through some other method. Since no funds were available in the present budget, Warden Gladden had requested a temporary variance until funds can be obtained.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that a temporary variance as recommended by the staff, be granted subject to review periodically by the Authority.

ADOPTION OF RULES ON AIR POLLUTION NOT IN CONFLICT WITH CHAPTER 426, O.L. 1961.

Mr. Denman advised the Authority that Section 17, Chapter 426, Oregon Laws, 1961, provides that regulations not in conflict with the 1961 Act shall be readopted by confirmation of the State Sanitary Authority.

Mr. Denman stated that the following sections of Oregon Administrative Rules, Chapter 334 were not in conflict with ORS 449.760 to 449.830:

Division 2, Air Pollution Subdivision 1

Section 21-005	Subsection (2) through (19). Definitions.
Section 21-010	Smoke discharge, Section (1) through (4).
Section 21-015	Particle fallout rate.
Section 21-020	Suspended particulate matter.
Section 21-025	Chemical substances.
Section 21-030	Measurement of pollutants at the source of discharge.

Subdivision 2

Refuse Disposal

Section 22-005	Purpose.
Section 22-010	Open burning at dumps prohibited.

Subsection (1) through (3).

Section 22-015	Accidental burning.
Section 22-020	Exceptions, subsections (4) through (6).

Subdivision 3

Relationship to Local Governmental Agencies

Section 23-005	Municipalities, subsection (1) through (4).
Section 23-010	Counties.
Section 23-015	Planning and zoning commissions or districts.

It was MOVED by Mr. Harms, seconded by Mr. Amacher, and carried that the regulations as cited be readopted in accordance with Section 17, Chapter 426, Oregon Laws, 1961.

Mr. Denman explained that the adoption of the new rules and regulations would require a public hearing before a hearings officer.

It was MOVED by Mr. Harms, seconded by Mr. Stanley, and carried that the Board authorize the Chairman to appoint a hearings officer to hold a public hearing concerning the proposed new regulations.

BAKER MILL AND GRAIN CO., HAINES

Mr. Harold M. Patterson, District Sanitary Engineer, Pendleton, read a report concerning dust emissions from the Baker Mill & Grain Co. in Haines, Oregon, as follows:

In September, 1959, the Sanitary Authority received a request from the Baker-Union Health Department for assistance with the investigation of complaints received by their office concerning dust emissions originating from the Baker Mill and Grain Company's mill in Haines, Oregon. Preliminary field surveys completed in November, 1959, established that dust deposition problems were present downwind from the hay-chopping process building, otherwise known as the Texas Tower. In December, 1959, a complainant letter signed by nine Haines residents was received in which it was alleged that public nuisance was being caused on their properties from dust emissions originating at the Texas Tower. Two particle fallout sample stations were subsequently established in February, 1960.

In April, 1961, the Authority staff conferred with representatives of the company to reach an effective cooperative solution of the company's air pollution problem. These negotiations were followed by a letter to the company dated May 1, 1961, advising them of the status of the complaint investigations.

Based upon information obtained from mill area surveys and air sampling on May 25 and 26, 1961, the company management was notified by our letter dated June 2, 1961, of the violation of statute and regulations. The analyses of air samples collected from a station or adjacent residential property downwind showed a suspended particulate concentration of 1,813 micrograms per cubic meter. Authority regulations permits an area concentration of 150 micrograms per cubic meter plus the normal background (usually 50 micrograms per cubic meter). Visual and odor observations further confirmed that dust emissions were causing public nuisance.

Plans for added facilities were reviewed by the Authority staff and subsequently installed with the understanding that these facilities were to be phased into the control of the Texas Tower emissions. Field follow-up

investigations made in October, 1961, have shown that the conditions and arrangements included with the approval were not in compliance. A survey further showed that even greater public nuisance conditions were present downwind from the Texas Tower. Two additional written complaints were received by the Authority in October and November, 1961.

On November 28, 1961, the company was again notified of their violation of the statute and regulations for both suspended particulate concentration and particle fallout deposition. The company was requested to notify the Sanitary Authority by December 4, 1961, regarding their proposed action to control the excessive hay dust emissions. Authority staff representatives again conferred with the President of the firm on December 12, 1961, in an effort to reach a cooperative solution to their problem. However, no proposal letter or plans have been received.

#### Recommendations

The staff presents the following recommendations for consideration:

- (1. That the Baker Mill and Grain Company comply with statute and regulations by their installation of adequate control facilities at their Haines, Oregon, mill.
- (2. That the company be directed to submit plans and specifications describing the installation of dust control facilities for the hay-chopping process by February 1, 1962; and
- (3. If the company fails to submit an adequate proposal, that the Authority authorize a citation for a public hearing at its next regular meeting to show cause why an order should not be adopted in accordance with the provisions of Section 11, Chapter 426, Oregon Laws, 1961.

Mr. Thomas Henry, President of the Baker Mill and Grain Company, stated after studying the matter very closely they concluded that they were not

IAA357

going to get adequate control from the Texas Tower, so as of yesterday the grinding of hay through this system was discontinued and that arrangements were made to buy hay and process it in another manner.

It was MOVED by Dr. Wilcox, seconded by Mr. Stanley, and carried that the Authority adopt the recommendations of the staff concerning the Baker Mill & Grain Company.

PRESENTATION OF OREGON PUBLIC HEALTH ASSOCIATION PLAQUE:

At this point, Mr. Kenneth Ross, President of the Oregon Public Health Association, was introduced to the Authority and read the attached resolution adopted by that association at its annual meeting in Corvallis on October 20, 1961:

OREGON PUBLIC HEALTH ASSOCIATION

RESOLUTION

WHEREAS, HAROLD F. WENDEL has given unselfishly of his personal time and effort to the control of pollution of air and of surface, underground and coastal waters, and

WHEREAS, he has led in the development of strong public and legislative support for the control of air and water pollution, and

WHEREAS, he has served the people of the State continuously as Chairman of the Oregon State Sanitary Authority since 1939, and

WHEREAS, he has contributed to the health and well-being of the citizens through his continued efforts to improve the quality of streams used for the development of aquatic resources, for recreation, and as sources of water supply, now therefore be it,

RESOLVED, that the Oregon Public Health Association express its sincere appreciation to Harold F. Wendel for his devoted service, and be it further

RESOLVED, that this resolution be recorded in the minutes and that copies be transmitted to the Governor of the State of Oregon, to the Oregon State Board of Health, and to the Oregon State Sanitary Authority.

/s/ Muriel David  
Secretary

/s/ Clair V. Langton  
President

Done at Corvallis  
this 20th day of  
October, 1961

Mr. Ross then presented Mr. Harold Wendel, Chairman of the State Sanitary Authority, with a framed copy of the resolution and a plaque making him an honorary lifetime member of the Oregon Public Health Association in recognition of his outstanding contribution to the water and air pollution control programs.

In accepting the honors Mr. Wendel paid tribute to the other members of the Authority who had served the state faithfully and well.

HARVEY ALUMINUM (Inc.) - The Dalles

Mr. Byrne, Technical Consultant, Harvey Aluminum, explained the design of the pilot project roof monitor control system that was installed and tested on 500 feet of cell building E. He stated that Harvey Aluminum requested approval for the installation of the same system in the remaining 4 1/2 cell buildings.

Mr. Morrell asked Mr. Byrne what his time estimate was for the completion of this project?

Mr. Byrne stated he could not set an exact completion date, but that when an approval was received from the Authority then Harvey's contractors would proceed with the installations and related work on the 4 1/2 cell building roof monitors. He indicated that he expected it would be installed by the early part of the growing season.

IAA357

Mr. Sam Speerstra, Attorney representing Harvey Aluminum, gave a brief resume' of what work has to be done and that he would hope that this spring will see a very substantial portion of this installation made.

The Chairman requested that Mr. Hatchard present the staff report of activities since the September 20, 1961, Authority meeting. Mr. Hatchard stated that the work had continued on a priority basis with the technical staff of Harvey Aluminum to obtain representative test measurements of the roof monitor fluoride discharged into the atmosphere. He reported that many tests had been completed with several combinations of spray nozzles, water pressure and aluminum cell operating conditions. He reported that all of the analyses of samples collected during these tests and the summarized data had been made available to the Authority staff and that the staff members had participated in the actual test runs on December 8, 1961, and January 4, 1962, and that portions of the samples were obtained for analyses in the Authority's laboratory.

Mr. Hatchard reported that Harvey Aluminum had submitted the data describing the fume scrubber test runs performed each month and that this information had been reviewed.

He stated that the Authority staff had reviewed the proposal for installing the roof monitor control system upon the remaining 4 1/2 cell buildings and presented the following recommendations for consideration by the Authority members:

1. Recommended approval of the project proposal with the following understandings:

a. That the best combination of water spray nozzle, pressure, piping, and related appurtenances to produce maximum fluoride removal will be installed consistent with good engineering design to meet the structural and mill operating conditions.

b. That the fluoride removal efficiency of the roof monitor control will be maintained at their highest efficiency consistent with good maintenance procedures.

c. That the test measurement of the roof monitor installations will be performed during the start-up period in order to produce data to show the highest operating efficiency, and that after the operating conditions have stabilized, tests will be made on a periodic basis similar to the monthly scrubber tower measurements.

Mr. Hatchard stated that the data from the pilot project test runs showed fluoride removal efficiency less than the quantity originally expected, and that this situation probably reflects more accurate data obtained from test runs where the variables were better controlled. He indicated that the fluoride removal efficiency was within the 60%-70% range.

2. Recommended that, concurrent with the installation of the roof monitor project, that the Harvey Aluminum management review the reduction of fluoride escaping from the individual cell operations.

He explained that it appeared that relatively larger quantities of fluorides escape from the cell units during certain cycles in the aluminum production processes. Mr. Hatchard explained that the Authority staff plans to resume the air sample surveys in The Dalles area when the monitor installations are completed and to arrange with the Oregon State University agriculture experiment station to collect and analyze foliage samples to determine the fluoride levels in the vegetation. Mr. Morrell asked if the test figures showing the amount of fluorides escaping from the plant were available to him.

Mr. Quesseth stated that he could get the figures by examining the files of the State Sanitary Authority.

IAA357

Mr. Morrell stated that he will submit the above questions in writing to the Authority.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the Authority adopt the staff recommendations.

DULIEN STEEL PRODUCTS - Request for variance

Mr. Howard Smith said that a letter had been received from Dulien Steel Products asking for a variance to open-burn railroad box cars on a three day a week basis for periods of two or three hours at a time that we might designate. Mr. Smith explained that some of these box cars were soaked with oil which produced a dense black smoke when burned. Before Dulien Steel started this operation, some of this work was being done by a concern at a location inside the city of Portland, and that at a meeting with the Authority staff members and city officials of Portland, this problem was discussed and the city fire marshal said he would withdraw the permit for this type of operation.

Mr. Smith stated that Dulien Steel Products Company then contracted to do this work just north of the city limits of Portland. On December 15 Dulien Steel Company was notified by letter that the open burning of railroad cars at this location was in violation of the statutes and regulations and recommended that other methods of disposal be adopted or move the salvage project to a location at least six miles from city boundaries of Portland or other locations where public nuisance would not be created. He presented the following staff recommendations for consideration:

1. That this request for a variance be denied.
2. That the Dulien Steel Products Company be notified to submit plans by February 1, 1962, of alternate methods of cessation of this operation.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the Chairman be authorized to set a date for a public hearing to show cause why an appropriate order should not be entered if Dulien Steel Products do not comply with the recommendations of the staff.

At this point Mr. Hatchard introduced Mike Godsil, the new Assistant Sanitary Engineer; and Mrs. Ruth Richey, the new secretary in the Air Pollution Control Program.

Boardman

Mr. Spies reported that because of the construction by the U. S. Corps of Engineers of the John Day dam and reservoir on the Columbia River it will be necessary to relocate the town of Boardman.

At the present time all residences and business establishments in this community of some 150 persons are served by individual sewage disposal systems. Because of unfavorable soil and drainage conditions experience with these existing facilities has shown that they can not be relied upon to provide a sanitary method of sewage disposal.

Following a review of the memorandum dated December 11, 1961, pertaining to this subject and which had been presented to the members of the State Board of Health at their meeting on January 11, 1962, it was MOVED by Mr. McPhillips, seconded by Mr. Amacher, and carried, that the Sanitary Authority adopt the following resolution:

WHEREAS, the construction of the John Day dam and reservoir by the U. S. Corps of Engineers on the Columbia River will necessitate the relocation of the town site of Boardman, Oregon, and

WHEREAS, at the present time all residences and business establishments in this community are served by individual sewage disposal systems consisting primarily of septic tanks and subsurface drain fields, and

IAA357

WHEREAS, because of unfavorable soil and drainage conditions several of these systems have in the past failed to function properly and as a result nuisance conditions and health hazards have been created by the surfacing of partially treated sewage effluent, and

WHEREAS, based on such past experience it is the opinion of the Sanitary Authority of the State of Oregon that a public sewer system with modern sewage treatment works should be installed for the new town of Boardman, now therefore,

BE IT RESOLVED by the Sanitary Authority of the State of Oregon

THAT, for the protection of public health and the prevention of pollution of ground waters a public sewerage system with approved sewage treatment facilities shall be constructed for the new town site of Boardman and that individual septic tank and subsurface disposal systems will not be accepted as an alternate.

There being no further business the meeting adjourned at 3:30 p.m.

For the purpose of considering the adoption of new air quality standards and rules of practice and procedure a special meeting was scheduled for Thursday, February 8, 1962, beginning at 10 a.m. in Room 732, State Office Building, Portland, Oregon.

Respectfully submitted,

CURTISS M. EVERTS  
Secretary & State Engineer

SPECIAL MEETING  
of the  
Oregon State Sanitary Authority  
February 8, 1962

IAA357

A special meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:05 a.m., February 8, 1962, in Room 732, State Office Building, 1400 S. W. 5th Avenue, Portland, Oregon. The other members and staff present were: R. H. Wilcox, M.D., Herman P. Meierjurgan and E. C. Harms, Jr., members; John Denman and Cecil H. Quesseth, Legal Advisors; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Assistant Chief Engineer, Donald J. Benson, Associate Sanitary Engineer, Ronald R. Ott, Assistant Engineer and Howard Smith, Supervisory Sanitarian.

The Chairman opened the meeting by stating that the main purpose of this special meeting was to adopt new rules and regulations relating to air pollution. There being no delegation present to be heard on the matter of the adoption of said rules and regulations for air pollution, the Chairman then proceeded on to the next matter.

Georgia-Pacific Paper Company

Mr. Bob Cooper, Vice-President and Manager of the Newport Chamber of Commerce, and several other residents of Newport and vicinity were present to register complaints regarding the odor nuisance which was still being caused by the discharge into the ocean of wastes from the Georgia Pacific Paper Company pulp mill at Toledo. Mr. Cooper had previously written and requested permission for the Chamber to have representatives present at this meeting.

He pointed out that he had attended the Sanitary Authority meeting last June 28 when this same matter was being discussed and at that time it had been suggested to the people of Newport that they wait and see what could be accomplished with chlorine treatment as a means of abating the nuisance. He said the chlorine had been of some help because during the latter part of last year conditions were not as bad as they were previously but the problem has still not been solved.

He reported that following a meeting last November with representatives of the paper company, the Chamber and people of Newport had raised \$1,000 to finance a special engineering study of the problem and of the company's attempts to solve it.

Mr. Cooper stated further that a large tourist trade is expected in Oregon this coming summer due to the World Fair at Seattle but unless they can get this odor nuisance solved at Newport they are hesitant to encourage people to travel along the Oregon Coast. He, therefore, asked that the Authority set June 1, 1962, as a deadline for the Georgia-Pacific Paper Company to have the situation completely corrected. Mr. Cooper said it is his opinion that the Georgia Pacific operations are more responsible than anything else for Lincoln County's being declared an economically depressed area.

He also stated that the city of Newport has a sewer problem which adds to the odor nuisance and he suggested that the city be given one year to complete construction of its required sewage treatment works project.

Mr. Cooper then introduced Mr. L. G. Gardner who recounted the history of the problem and repeated the statements which he had presented at previous Authority meetings. He said the people of Newport have

endured this condition for four years which he thought was long enough. He claimed that many of the existing 300 businesses in the Newport area are nearly bankrupt because of the air pollution problem. He also asked that the Authority set June 1, 1962, as a deadline for abatement of the odor nuisance.

IAA357

Mr. John Sutton, owner of Willers Motel, President of the Newport Chamber of Commerce and city councilman, was the next person to be introduced by Mr. Cooper. He stated that Mr. James Howland, the engineer retained by the Newport people to make a study of the problem had concluded that Georgia Pacific has not been doing everything that it could or should have been doing to solve the problem.

He reported that the city is in the process of making plans for early construction of its sewage treatment works. Negotiations are presently underway for a plant site. He estimated the cost of the city's project at \$500,000 and said that progress was a little slow due to the fact that they do not have a full time city engineer but he thought that the city's problem would be taken care of this year.

Mrs. Dobie Stadts, owner of the Newport Natatorium, then appeared and stated that the area needed Georgia Pacific but it also needed correction of the problem. She claimed that she had spent \$12,000 over a 3-year period improving the natatorium but in spite of that her gross income had been dropping about 20% each year. She said she wouldn't have purchased the natatorium if she had known at that time that Georgia Pacific was going to dump its wastes into the ocean right next to her property. She asked the Authority for help in correcting this situation.

Mrs. Blaisdell, owner of the El Rancho Motel, testified that the motel business at Newport suffers during the winter as well as in the

summer because of the air pollution. She claimed that there has been a noticeable absence of rock hounds during the last 3 years which she attributed to this problem.

Mrs. Ruth Sanford, another motel owner, was then introduced by Mr. Cooper and made an impassioned plea for help to get the nuisance solved. She reported that she and her husband had purchased a motel at Newport in 1956, that during 1956 and 1957 they worked hard to build up the motel and its clientele and as a result had a good business during those two years, that in 1958 after Georgia Pacific started operating their business slackened off, that in 1959 their business continued to drop until finally they had to get outside work to make ends meet and finally in 1961 they had to let the motel go back to the original owners. She asked that the Sanitary Authority do everything within its power to abate the odor nuisance caused by Georgia Pacific.

Mr. Ralph Roderick who was present to represent Mr. James Howland then reported that their firm (Cornell, Howland, Hayes and Merryfield) had reviewed the work being done by Georgia Pacific. He said the answer or answers to this problem are not simple. Time is required to work out a satisfactory solution. They feel, however, that the company is now on the right track and that the use of the surface aerator which the company has ordered has a good promise of success. He suggested that Georgia Pacific undertake a crash program and expressed the opinion that it would be helpful if the Authority would set a deadline.

The Chairman then asked Mr. Roderick if he felt that aeration of the wastes would provide the answer.

Mr. Roderick replied that there is good indication that this would alleviate to a major extent the odor problem that has occurred and that

while he could be wrong he felt this had been accomplished in other places and that the time factor in this instance was the important thing.

The Chairman next asked if their work would control the foam problem and Mr. Roderick replied that he thought that it would. A lady in the audience then rose to her feet and reported that foam along the beach is still a problem.

IAA357

Dr. C. Edward Taylor, Technical Director for Georgia Pacific was then called on by Mr. Cooper to report on the company's plans. Dr. Taylor said that they had contacted the manufacturers and had been assured that the surface aerator equipment would be shipped in about 4 weeks. Allowing one week enroute and one week for installation it should be in operation by April 1. He stated that an aeration and cooling system had been put into operation on January 13 on one small effluent stream within the mill and it was effective in reducing the water temperature from 165° to 170° F. down to about 100° F. It also reduced the odors of that particular waste to the extent that where originally a concentration of only about 5,000 ppm of waste in sea water would cause a noticeable odor, with this treatment the concentration had to be increased to 20,000 ppm to produce an odor.

He said two other aeration units on the evaporators and another combined cooling and aeration tower for the accumulator overflow would all be in operation by May 1. They will continue the use of chlorine application to remove any odors which might still be present in the final effluent.

Dr. Taylor said the foam problem was not serious and was sure that it could be completely controlled. He said that in addition to the above work they are also continuing their research studies.

The Chairman then asked Mr. Roderick if he felt that what Dr. Taylor had outlined would accomplish the objective.

Mr. Roderick replied that based on the results of the pilot plant studies he felt one aerator unit might possibly be satisfactory but if not a second one would be necessary. The Chairman then expressed the opinion that Georgia Pacific should order a second unit immediately rather than take any chance on one not being enough. In response to a question Dr. Taylor stated that it takes about ten weeks for delivery of such a unit after it is ordered because it is made specially and is not kept in stock.

Mrs. M. B. Hanson, wife of the Mayor of Newport, stated that during the past two weeks the odors had been particularly bad. Dr. Taylor replied that it was due to the fact that the company had been doing some experimenting.

Mr. Gardner claimed that if the company were ordered to abate the nuisance immediately they could do it without shutting down the mill because they could barge their wastes to the ocean.

Mr. Cooper then summarized the statements presented by the several witnesses. He stated that Dr. Taylor started working full time on this problem last August and that International Paper Company had offered their technicians to help solve the problem but to his knowledge Georgia Pacific had not taken advantage of that help.

After conferring with Mr. Quesseth the Chairman then stated that he wished to remind Georgia Pacific that there is an order outstanding against them to the effect that if the solution is not found this spring - - if it isn't corrected without any further action - - the Sanitary Authority can ask for an injunction.

Mr. Harms said he did not see the necessity for an additional order in view of the opinion by the counsel for the Authority.

Mr. Quesseth remarked the Authority might direct its secretary to send a letter to Georgia Pacific advising them that unless the matter is satisfactorily abated by a particular time, the matter will be referred to the Attorney General for immediate court action.

It was MOVED by Dr. Wilcox, seconded by Mr. Harms, and carried that if the odor problem at Newport is not solved by June 1, 1962, the matter be referred to the Attorney General with a request for action.

It was MOVED by Dr. Wilcox, seconded by Mr. Harms, and carried, that the next meeting of the Sanitary Authority be held in a public building in Newport.

#### CITY OF BEAVERTON

Mr. Bob Meyer, Consulting Engineer from Beaverton, stated that he was present concerning a 1958 order of the Sanitary Authority which authorized the city of Beaverton to expand their sewage treatment plant and carry on development of their sewage facilities provided that certain portions of the city sewerage system would ultimately be connected to the Tri-County system.

The city of Beaverton feels that the connection fee and monthly service charge established by Multnomah County were excessive, and that the city of Beaverton could construct additions to their present plant at a lower cost. They would, therefore, like to know whether or not they would be allowed to install their own facilities and treat their own sewage.

Mr. Spies was then called upon to testify. Mr. Spies stated that the staff was not completely prepared to give a definite answer since

IAA357

the plans had been received only two days before this meeting. Mr. Spies stated that the 1958 action by the Board was a decision that the city of Beaverton would not be eligible for Federal grants. The city of Beaverton was given permission to go ahead and add to their present plant with the understanding that at least a portion of the city would be disconnected from their own system and connected to the Tri-County system. Mr. Spies reported that Beaverton's present system is overloaded and that the city of Beaverton should not be permitted to connect this added load to their present treatment plant.

It was MOVED by Mr. Harms, seconded by Mr. Meierjorgen, and carried, that the matter be referred to the staff with the authority to take any necessary action.

Mr. Everts then reminded Mr. Meyer that the Authority must be furnished with a fiscal and construction schedule before action can be taken by the staff and pointed out that they had not yet been received.

#### HARVEY ALUMINUM

The Chairman asked that a letter received on February 8, 1962, from Harvey Aluminum, Inc., be read by each member of the Authority. After discussion it was pointed out that the Authority could not dismiss the show-cause proceeding until such time as the full operation of all cell units together with the controls in the roof was shown by laboratory and field studies to be within an accepted range of fluoride control.

It was MOVED by Mr. Harms, seconded by Mr. Meierjorgen, and carried that Harvey Aluminum Inc. be advised that when the installation of the roof monitor fluoride removal system has been completed and field tests show that the concentration of fluorides in the area of The Dalles have been reduced to acceptable limits the Authority would entertain a motion that the proceeding be dismissed after notice to all parties.

COMMUNITY OF BATES

Mr. Spies reported that Bates is a community of approximately 350 persons located in Grant County. It consists of 111 homes, a store, hotel, post office, school and lumber mill, all owned by the Oregon Lumber Company of Baker. This community is in need of a public sewerage system. Due to unfavorable soil conditions, subsurface disposal of domestic sewage has proven impractical. In October, 1959, plans and specifications prepared by Stanley G. Wallulis, consulting engineer, for a sewer system and sewage lagoon were approved by the Authority. Construction was to have started in 1960, but to date no further progress has been made in this matter.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the Chairman be authorized by the Authority members to issue a citation to the company officials to appear and show cause why they should not be directed to solve this problem if they do not do it voluntarily.

ADOPTION OF RULES AND REGULATIONS PERTAINING TO AIR POLLUTION CONTROL

The secretary reported that at the January 11, 1962, meeting of the Sanitary Authority, the Authority had authorized a public hearing on its proposed regulations governing air pollution and the Chairman was authorized to appoint a hearings officer. Subsequently, Mr. Marion Lamb, State Board of Health, was appointed as the hearings officer for the Authority. Prior to the date of the hearing, a legal notice of the public hearing was published in the Oregonian on January 17, 1962, and in the Oregon Journal on January 16. Subsequently copies of the notice, together with a copy of Chapter 426 Oregon Laws 1961, were forwarded to the cities of Albany, Astoria, Bend, Corvallis,

IAA357

Grants Pass, Klamath Falls, Medford, Pendleton, Roseburg, Springfield, The Dalles, Eugene, Portland and Salem, which included all cities in Oregon with a population of 10,000 or more which the new rules would affect in relation to open burning. A copy of the notice of public hearing was also forwarded to Howell Appling, Secretary of State, and the notice of this hearing was published on page 4 of the Secretary of State's Administrative Rule Bulletin dated February 1, 1962.

A public hearing on these rules was convened at 10:00 a.m., February 6 in Room 968, State Office Building, 1400 S. W. 5th Avenue, Portland, by Mr. Marion Lamb. At 10:30 a.m., February 6, no witnesses having appeared and no written testimony having been presented, the hearing was adjourned.

Mr. Quesseth said that he believed that ample notice had been given and he advised that the rules are subject to adoption.

It was MOVED by Mr. Harms, seconded by Dr. Wilcox, and carried, that the new rules, regulations and standards pertaining to the control, reduction or prevention of air pollution and the amendments to rules of procedure and practice before the Authority be adopted.

ROGUE RIVER - Turbidity from Mining Operations

Mr. Everts stated that a communication had been sent to the Rogue River Coordination Board relating to pollution of the Rogue River, and requesting the Board to take prompt and immediate action to correct the situation. As of this date we have had no reply from that Board. Their Board meeting was on January 11 and they have not had a meeting since that time and that an opportunity to hold another meeting should be given to the Rogue River Coordination Board before any action is taken unless the situation reaches the point where the Sanitary Authority cannot wait any longer. It was agreed by the members of the Authority to wait a little longer.

It was agreeable to the members of the Authority to hold the next meeting in Newport. Mr. Harms suggested that the secretary take a poll of the entire membership of the Authority to see which date (April 12 or 19) would be preferable for the next meeting in Newport.

There being no further business, the meeting was adjourned at 12:00 noon.

Respectfully submitted,

*Curtiss M. Everts*  
CURTISS M. EVERTS, SECRETARY  
Oregon State Sanitary Authority

MINUTES OF THE NINETIETH MEETING

of the

Oregon State Sanitary Authority

April 12, 1962

The ninetieth meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 1:30 p.m., April 12, 1962, in the City Hall at Newport, Oregon. The other members and staff present were R. H. Wilcox, M.D., Herman P. Meierjorgen, and B. A. McPhillips, Members; John Denman and Cecil H. Quesseth, Legal Advisors; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Assistant Chief Engineer, Donald J. Benson, Associate Sanitary Engineer; H. W. Merryman, District Engineer; Mr. R. I. Culver, Assistant District Engineer, and Howard Smith, Supervisory Sanitarian.

MINUTES

It was MOVED by Mr. Meierjorgen, seconded by Dr. Wilcox, and carried, that the minutes of the 89th meeting of the Sanitary Authority on January 11, 1962, be approved as prepared by the secretary.

IAA357

It was MOVED by Mr. Meierjurgan, seconded by Dr. Wilcox, and carried, that the minutes of the special meeting of the Sanitary Authority held on February 8, 1962, be approved as prepared by the secretary.

PROJECT PLANS

It was MOVED by Dr. Wilcox, seconded by Mr. McPhillips, and carried that the actions taken by the engineering staff on the following 68 projects for water pollution control and 7 projects for air pollution control for the months of January, February and March, 1962, be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1-2-62	Progress San. Dist.	Sewer system	Prov. approval
1-2-62	Arlington	Sewer extensions	Prov. approval
1-12-62	North Bend	Sewer extensions	Prov. approval
1-15-62	Medford	Market Street sewer	Prov. approval
1-17-62	Beaverton	"Homewood" sewers	Deferred
1-17-62	Beaverton	Royal Woodlands pump station	Prov. approval
1-24-62	Hermiston	Jr. High School Addition	Approved
1-24-62	Hermiston	New grade school	Approved
1-24-62	Multnomah County	Lynch Plaza Grade School	Approved
1-24-62	Stayton	High School Addition	Prov. approval
1-24-62	Klamath County	Bly Grade School	Approved
1-25-62	Seaside	Sewer extensions	Prov. approval
1-24-62	Washington County	William Wallace Grade School (Cedar Hills)	Approved
1-24-62	Clackamas County	Sunnyside Grade School	Approved
1-26-62	Gresham	Clovercrest sewers	Prov. approval
1-26-62	Columbia San. Dist.	Hewett Park sewer	Prov. approval
1-26-62	Newport	Sewer extensions	Prov. approval
1-26-62	Seaside	Sewer extensions	Prov. approval

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1-26-62	Douglas County	Hucrest Grade School	Approved
1-29-62	South Suburban S.D.	Sewer extensions A-5-3	Prov. approval
1-29-62	Uplands San. Dist.	Sewer extensions	Deferred
1-29-62	Jackson County	Crater High School Addition	Approved
1-29-62	Drain	High School Addition	Approved
2-1-62	Hermiston	Sewer extensions	Prov. approval
2-5-62	Klamath County	Chiloquin High School	Approved
2-6-62	Cottage Grove	Girard Avenue sewer	Prov. approval
2-7-62	Clackamas County	Happy Valley School	Prov. approval
2-9-62	West Slope S.D.	Sewer extensions	Prov. approval
2-15-62	Marion County	Oregon Fairview Home Addition	Approved
2-15-62	Umatilla County	Pilot Rock School Addition	Approved
2-15-62	Marion County	North Marion Grade School	Approved
2-16-62	Washington County	McKinley Grade School	Prov. approval
2-16-62	Sandy	Sewer extensions	Not approved
2-16-62	La Grande	Lagoon improvement	Approved
2-16-62	Marion County	Fairview Home	Approved
2-16-62	Benton County	John Adams Grade School	Approved
2-19-62	Clackamas County	Oak Acres Mobile Park sewage treatment plant addition (preliminary report)	Prov. approval
2-19-62	Empire	Sewer extension	Prov. approval
2-19-62	Brookings	Sewer extensions	Prov. approval
2-20-62	Manhattan S. D.	Preliminary engineering report	Comments submitted
2-23-62	Beaverton	Vose Grade School	Approved
2-23-62	Douglas County	Camas Valley High School	Not approved
2-28-62	Lake County	Adel Grade School	Prov. approval

IAA357

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
3-1-62	Yamhill	Prel. Engineering Report	Approved
3-2-62	Tigard	Sewer extension	Prov. approval
3-2-62	West Slope S.D.	Sewer extension	Prov. approval
3-5-62	Portland	Tryon Creek Interceptor Unit #2	Deferred
3-5-62	Multnomah County	Lynch Terrace Grade School	Approved
3-5-62	Marion County	Oregon Fairview Home Addition	Approved
3-6-62	Oak Acres Mobile Park	Additions to sewerage works	Prov. approval
3-7-62	Uplands San. Dist.	Sewer extension	Prov. approval
3-7-62	Sunset Valley S.D.	Sewer extension	Prov. approval
3-8-62	Milwaukie	Sewage plant additions (revised)	Approved
3-9-62	Newberg	Sewage plant additions	Comments submitted
3-9-62	Green San. Dist.	Sewerage project	Comments submitted
3-9-62	Washington County	Metzger Grade School Addition	Prov. approval
3-13-62	Gresham	Sewer extension	Approved
3-13-62	Clackamas County	Milwaukie High School	Not approved
3-14-62	Furlong San. Dist.	Sewage treatment plant (Preliminary Report)	Prov. approval
3-14-62	Linn County	Albany (Memorial) Jr. High School	Approved
3-16-62	Marion County	Woodburn Junior High Addition	Approved
3-20-62	Sweet Home	Sewer extensions	Not approved
3-23-62	Portland	Tryon Creek Interceptor Unit #2	Approved
3-23-62	Salem	Hartman Subd. sewers	Comments submitted
3-27-62	Beaverton	N. E. Canyon Road sewers	Deferred
3-29-62	Southwood Park	Sewer extension	Prov. approval
3-30-62	Beaverton	N. E. Canyon Road	Prov. approval
3-30-62	Oregon City	Sewer extensions	Prov. approval

AIR QUALITY CONTROL

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1-17-62	Oregon	Program projections for the period 1963-73 from the Governor's office	Comments submitted
1-24-62	The Dalles	Harvey Aluminum (Inc.) Proposed project to install roof monitor control in the remaining 4 1/2 cell buildings	Conditional approval
2-15-62	Haines	Proposed dust control plan of the Baker Mill & Grain Co.	Disapproved
2-19-62	Linn County	Bag house and scrubber installation proposal for the pure chlorination process	Conditional approval
2-20-62	Portland	Type 5 incinerator Lewis Meat Company	Conditional approval
2-27-62	The Dalles	Reviewed Harvey Aluminum Fume Scrubber tests measurement made on December 22, 1961, and January 31, 1962	Accepted
3-1-62	Lane County	Riveria Shopping Center Incinerator	Disapproved

BRIDAL VEIL SEWAGE DISPOSAL

No one was present to represent the community of Bridal Veil.

Mr. Culver presented a report pertaining to this matter, copies of which were distributed to the members of the Authority. This report has been made a part of the Authority's permanent files in this case.

In discussing said report Mr. Meierjurgan asked how long this problem had been going on and Mr. Culver replied "for several years." He stated that the Wershaw Company, owners of the homes in question, had been notified by letter on three separate occasions by first class mail. The sewer serving these homes had been installed several years ago by a privately owned box company. In response to a question Mr. Culver stated there is no reason why correction could not be accomplished by June 1.

IAA357

Dr. Wilcox suggested a deadline of May 15 since recreational waters of the Columbia River are involved and it is certainly a health hazard. Mr. McPhillips asked how long it would take to institute legal action and to obtain an injunction. Mr. Denman replied that it would take at least four weeks.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox, and carried, that the Wershaw Company be instructed again to abate said pollution and to remove the raw sludge deposit at the sewer outfall prior to May 15, 1962, and that if steps are not taken immediately to accomplish this, the company be cited to appear at the next meeting of the Authority to show cause, if any exists, why an order should not be entered requiring said pollution abatement.

RESOLUTION FOR REPEAL OF OAR, Chapter 334, Subdivision 2, Sections 32-005 to 32-020. The resolution for repeal of OAR, prepared by Mr. Quesseth, was read by the secretary as follows:

WHEREAS, the Sanitary Authority at its special meeting on February 8, 1962, adopted Rules and Regulations including Rules of Procedure; and

WHEREAS, under prior existing rules, certain "Complaint Procedures" in regard to air pollution were utilized by the Authority, which rules are compiled in Oregon Administrative Rules, Chapter 334, subdivision 2 as sections 32-005 to 32-020; and

WHEREAS, the said Complaint Procedures are no longer necessary or desirable by reason of the adoption of more recent Regulations by the Authority and by reason of conflict with procedures relating to air pollution in Chapter 426, Oregon Laws 1961, now therefore,

On motion duly made, seconded and passed,

It is hereby resolved and ordered as follows:

1. That the rules on Complaint Procedures with respect to air pollution heretofore contained in Chapter 334 subdivision 2, Oregon Administrative Rules, being sections 32-005 to 32-020 inclusive, be and the same hereby are repealed.

2. It is further resolved that the secretary of the Sanitary Authority shall send duplicate copies of this resolution to the Secretary of State for filing.

DATED this 12th day of April, 1962.

It was MOVED by Dr. Wilcox, seconded by Mr. McPhillips, and carried, that said resolution repealing rules and regulations pertaining to air pollution be adopted and duplicate copies be sent to the Secretary of State for filing.

SALEM SANITARY SERVICE

Mr. Hatchard reported that in a letter from the attorneys for the Sanitary Service Company, dated March 28, 1962, an indefinite extension of time to continue their present operations was requested. A memorandum prepared by Mr. Hatchard was distributed to the members. In this memorandum report the following recommendations were presented for consideration:

- (1) That any extension of time for a variance to allow the open burning of trees, brush and lumber be terminated not later than July 1, 1962, which is the approximate date that the closed fire season regulations of the rural fire department will be in effect. Our past experience indicates that any limited burning during the closed fire season occurs at the time of day during the early morning hours which is not acceptable from the standpoint of Air Quality Control, since stable air conditions cause ground level build up of smoke and odors in the

IAA357

- area. Also, the new Oregon Santiam Highway is located within 200 feet of the disposal site.
- (2) That any renewal of the Sanitary Service Company's request for a limited variance after the closed fire season ends this fall be considered at that time if the company can show that a need exists. A staff member inspected the Sanitary Service Company's disposal site on April 6, 1962, and at that time a very small quantity of brush and tree trimmings were being hauled to the site at this time of the year. The caretaker at the site stated that they were no longer receiving building demolition debris from the Salem vicinity.
- (3) That the request for an indefinite extension of variance to allow the open burning of trees, brush and lumber be denied.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox, and carried that any extension of time for a variance to allow the open burning of trees, brush and lumber be terminated not later than July 1, 1962, and the request for an indefinite extension of variance to allow open burning be denied.

DULIEN STEEL PRODUCTS COMPANY

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that Mr. Marion Lamb be appointed hearings officer for the Dulien Steel Products public hearing.

ST. JOHNS MOTOR EXPRESS CO.

Mr. Hatchard stated that St. Johns Motor Express Company was in the same area as Dulien Steel and has an open burning dump which is located less than 1/4-mile from the boundaries of the city of Portland. The staff recommended that the Authority authorize a public hearing on the same day as for Dulien Steel Products Co.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan, and carried that a hearing be held in the matter of the St. Johns Motor Express Company regarding open burning at their site on N. Portland Road, at the same time the hearing is held for Dulien Steel Products Co.

GEORGIA PACIFIC PAPER CO.

Mr. Bob Cooper, President of the Newport Chamber of Commerce, introduced Mr. Dan Allen, Executive Secretary, Committee on Natural Resources; Mr. Harry Clark; Mr. W. J. Shelton, plant manager, Georgia Pacific Paper Company; Dr. C. Edward Taylor of Georgia Pacific; Mr. James Howland of Cornell, Howland, Hayes & Merryfield, Consulting Engineers; and Mr. John Sutton, Newport Councilman. He welcomed the Sanitary Authority to the city of Newport. More than 100 residents of Newport and environs were also present. Mr. M. B. Hanson, Mayor of the city of Newport, welcomed the Sanitary Authority members and thanked them for meeting in Newport.

Mr. Wendel read excerpts from the minutes of the February 8, 1962, meeting regarding action taken by the Board at that time in the matter of waste disposal by the Georgia Pacific Paper Company. He stated the board members had toured the Georgia Pacific Paper Company mill in the morning prior to the meeting and had seen first-hand the facilities for pollution control in operation.

A report prepared by Cornell, Howland, Hayes and Merryfield, Consulting Engineers, was distributed to the members by Mr. Cooper. Dr. Taylor, Technical Director, then reported on progress made by the company since the February 8 meeting. On April 2 additional information had been sent by him to the Authority. His April 2 letter has been made a part of the permanent files in this case.

IAA357

Dr. Taylor stated that research studies made by the company had shown that aeration was effective in removing odor producing constituents from the paper mill's waste streams, that atmospheric oxygen is more effective than chlorine in this respect, that oxygen increases the pH of the waste, and that chlorine lowers the pH.

He displayed a chart which showed when the various waste treatment processes had been installed as follows:

- (a) Process water cooling tower: 3-28-62
- (b) Contaminated hot water aeration trough and cooling tower: 1-13-62
- (c) Heat accumulator cooling tower: 3-31-62
- (d) Tailwater from #1 evaporator aeration trough: 4-11-62
- (e) Tailwater from #2 evaporator aeration trough: 4-3-62
- (f) Chlorination of streams (c), (d) and (e) listed above: August '61
- (g) Turpentine condensate returned to system instead of being discharged to ocean: March '61
- (h) Chlorination of combined plant effluent at Toledo and Newport: June 1961
- (i) Surface aeration of combined effluent: 4-10-62

He reported further that during the July 4th shutdown this summer the installation of a new washer system will be completed at a cost of \$168,000 and that this new system will eliminate the discharge of wash water and fibers from that part of the mill process.

He then displayed a series of charts and graphs which showed the results of the various tests which his staff has been making of the waste treatment facilities. The first three charts showed the curves for measuring the concentration of sulfur compounds in the waste streams. Chart No. 4 showed test results for the contaminated hot water aeration system. The original concentration of 50 ppm dropped to 37 ppm after the aeration trough to about

25 ppm after the aeration tower. Chart No. 5 showed similar results for the evaporation tailwater aeration systems. Chart No. 6 showed a reduction from 60 ppm down to 25 ppm for the heat accumulator aeration tower. Chart No. 7 showed the results of the experimental Dorr Oliver aerator unit as follows: after 15 minutes of aeration the original concentration of 110 ppm dropped to 48 ppm, after 30 minutes to 37 ppm and after 1 hour to 30 ppm.

Dr. Taylor reported further that since July 1961 the company had had two odor monitoring devices in operation in the Newport area and that these devices had shown that in recent months, as a result of the above plant changes, there had been a considerable reduction in the frequency and degree of objectionable odors.

He explained why a gas powered engine was being used for the surface aerator at the present time and stated that electrical power would be provided later and also that standby equipment will be obtained as soon as possible.

In response to a question from Mr. Wendel, Dr. Taylor said he was confident that they would have the problem solved by June 1, the deadline established by the Authority.

Mr. Spies reported on behalf of the Sanitary Authority staff. He stated this was not a problem which has been confronted in other places. He said that before results can be confirmed we must just wait and see. The problem must be resolved by trial and error.

Mr. Howland stated that his firm had been employed by the Newport Chamber of Commerce and the company to study methods that might be employed to solve the problem but not to come up with design or recommendation of construction. From their study they had arrived at approximately seven methods that might be employed to reduce the odor problem. He felt some had more chance than others.

IAA357

He said that because of the long pipe line, the discharge into sea water and the turbulence of the sea water this problem was a unique one. He said that to solve the problem it would be necessary to essentially eliminate (90% or more) not just reduce the odor. His firm did not study the foam problem.

Dr. Wilcox stated he noted the studies were to be continued as rapidly as possible and asked when standby equipment was going to be secured. Dr. Taylor replied it would be available this summer.

Mrs. Leonard Dobbie Stadt, owner of the Newport Natatorium, complained of damage to business because of this odor condition. Mr. Andrew Bonnicksen, motel owner, testified as to odor problems.

Mayor Hanson testified to the intermittent nature of the odor problem. Dr. Wilcox asked Mayor Hanson if he saw any reason for variance of the action taken by the board at its February meeting at this time. Mayor Hanson said he saw no reason for variance.

Mr. L. G. Gardner, motel owner, stated he thought Georgia Pacific had made more progress since the February meeting than it had in four years previously in trying to solve the problem. He stated that he had attended every meeting held in regard to Georgia Pacific and that it was his opinion that injunction proceedings should be instituted if the company did not go ahead and meet the June 1 deadline.

Leonard Rowett, taxpayer of Lincoln County, also president of Local Union No. 724 UPP at Waldport, stated that he thought Georgia Pacific was doing a real good job.

Mr. Wendel summarized the actions to be taken and Dr. Wilcox, representing the Board of Health, thanked the citizens of Newport for their attendance and the Sanitary Authority members for having the meeting at the base of this problem.

CITY OF NEWPORT

IAA357

Mr. John Sutton, Councilman in charge of sewers, stated he had received a letter early in 1960 that certain health hazards were being created by the disposal of sewage from the city in the Pacific Ocean off Nye Beach. As a result the city hired Cornell, Howland, Hayes and Merryfield, Consulting Engineers, to make a preliminary study of the system of collection and disposal. This study cost approximately \$4,000 and proposed storm water separation and a treatment plant in two phases. Estimated cost of Phase 1 was \$162,900 and Phase 2 \$412,000. The city should be eligible for a federal grant for 1/3 of the cost of Phase 2. Total cost \$574,000. After consideration of the study three council members had made a person to person check of the feasibility of holding a bond election. The answer was apparent that the election would be defeated and the recent school election confirmed it. The Council then decided to make all the sewer corrections possible with funds available. They installed two new pumps in the main pumping stations, made a door to door survey and found 9 buildings that were not connected on to the sewer, and are now in the process of making such connections. A sewer district is being formed for one small beach front area. This requires a pumping station. The engineering firm recommended three possible locations for the treatment plant. The city has now come to an agreement on cost and payment for property. The sewer commission is now studying sewer use charges of comparable cities. Mr. Sutton stated they will have to increase the sewer user rates. He said it is the feeling of the sewer commission that a special bond election will have to be held.

Mr. Wendel asked for a show of hands by the Newport citizens present who would back their City Council. Practically all hands were raised.

A report prepared by the staff was then read by Mr. Benson. Mr. Bob Cooper then thanked the Sanitary Authority members for holding their meeting in the city of Newport. There being no further business the meeting adjourned at 3:15 p.m. The next meeting date to be selected later.

Respectfully submitted,

*Curtiss M. Everts*

CURTISS M. EVERTS, Secretary

MINUTES OF THE NINETY-FIRST MEETING

of the

Oregon State Sanitary Authority

June 5, 1962

The ninety-first meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 2:10 p.m. PDT, June 5, 1962, in the auditorium of the high school at The Dalles, Oregon. The other members and staff present were R. H. Wilcox, M. D., Herman P. Meierjurgan, B. A. McPhillips and John P. Amacher, members; John Denman, Legal Advisor; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Assistant Chief Engineer; Donald J. Benson, Associate Sanitary Engineer; Ronald I. Culver, Assistant District Engineer; Ronald Ott, Assistant Engineer and Howard Smith, Supervisory Sanitarian.

MINUTES

It was MOVED by Mr. Amacher, seconded by Mr. McPhillips, and carried that the minutes of the 90th meeting of the Sanitary Authority held on April 12, 1962, be approved as prepared by the secretary.

PROJECT PLANS

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjorgen and carried that actions taken on the following 87 project plans for the months of April and May, 1962, be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
4-2-62	Josephine County	Monument Jr. High School	Prov. approval
4-2-62	Douglas County	Highlands School Addn. (Reedsport)	Approved
4-2-62	Arlington	Sewer extensions & replacements (Revised plans)	Prov. approval
4-3-62	Oregon City	Sewer extensions	Prov. approval
4-3-62	Sunset Valley S.D.	Sewer extensions	Prov. approval
4-3-62	Beaverton	N. E. Canyon Road sewer	Prov. approval
4-3-62	Southwood Park S.D.	Woodland Park sewers	Prov. approval
4-3-62	Powers	Sewage treatment plant	Prov. approval
4-3-62	Josephine County	Lincoln-Savage Jr. High School	Prov. approval
4-3-62	Benton County	Corvallis High School Addition	Approved
4-3-62	Union County	La Grande High School Addition	Approved
4-4-62	Sweet Home	Milburn 2nd Addition sewers	Prov. approval
4-4-62	Sandy	Sewer extensions	Prov. approval
4-4-62	Medford	Brookhurst No. 3 sewers	Prov. approval
4-4-62	Country Club Homes	Pressure main relocation	Approved
4-5-62	Furlong San. Dist.	Sewer extensions	Deferred
4-5-62	Forest Grove	Sewer extensions	Prov. approval
4-5-62	Josephine County	Grants Pass High School Addn.	Approved
4-10-62	Thunderbird Trailer Park (Clackamas Co.)	Preliminary report	Comments submitted
4-10-62	Jackson County	Eagle Point High School Addn.	Approved
4-10-62	Cornelius	Sewer extensions (6th Street)	Prov. approval

IAA357

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
4-10-62	Wedderburn	Prel. engineering report	Prov. approval
4-10-62	Lane County	Walterville Grade School Addn.	Approved
4-10-62	Coos Bay	Kruse-Lockhart Avenue sewers	Prov. approval
4-11-62	Gaston	Prel. engineering report	Prov. approval
4-11-62	Furlong San. Dist.	Sewer extensions	Prov. approval
4-11-62	Lebanon	Sewer extension	Prov. approval
4-11-62	Green San. Dist.	Sewer system, lagoon, lift sta.	Prov. approval
4-12-62	Milwaukie	Sewage plant additions (rev.)	Approved
4-13-62	Pendleton	Sherwood Heights sewer extension	Prov. approval
4-13-62	Progress San. Dist.	(Revised location) trunk sewer	Prov. approval
4-13-62	Washington County	J. W. Poynter (Hillsboro) Jr. High School	Approved
4-17-62	Wilsonville	Thunderbird Mobile Park sewerage	Comments submitted
4-20-62	Coos County	Coos River School	Approved
4-20-62	Klamath County	Oregon Tech. Institute Addn.	Approved
4-23-62	Portland	Tryon Creek No. 2, Addendum #1	Approved
4-23-62	Lane County	Edgewood Elementary School	Approved
4-24-62	Newberg	Sewage plant additions, pump sta. Chehalem St. interceptor	Approved
4-25-62	Seaside	Contract modifications No. 1-9	Approved
4-27-62	Central Point	Royal Heights Subd. sewers	Prov. approval
4-27-62	Lane County	Henry D. Sheldon High School	Deferred
4-27-62	Lane County	Spencer Butte Jr. High Addn.	Approved
4-30-62	Polk County	Dallas Jr. High School (Remodel)	Approved
4-30-62	Polk County	Dallas High School	Approved
4-30-62	Clackamas County	Seth Lewelling School	Approved
4-30-62	Capitol Manor	Sewage treatment plant	Prov. approval

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
5-1-62	Corvallis	Lateral sewer #150	Prov. approval
5-1-62	Toledo	George Pacific Paper Co. waste treatment	Permission granted to proceed with construction
5-2-62	Clackamas County	Thunderbird Mobile Club sewerage (revised proposal)	Not approved
5-2-62	Beaverton	Pumping station, sewers	Prov. approval
5-3-62	St. Helens	Sewer extension	Prov. approval
5-4-62	Sunset Valley S.D.	Reconstruction Trunk "A"	Prov. approval
5-5-62	Coquille	Sewer "H"	Prov. approval
5-7-62	North Roseburg	Garden Valley sewer extension	Prov. approval
5-7-62	Umatilla County	Hermiston Elem. sewer connection	Approved
5-8-62	Union County	Dorian Hall, Eastern Oregon College (La Grande)	Approved
5-9-62	Cedar Hills	Sewage treatment plant addition	Prov. approval
5-9-62	Sweet Home	Lateral sewers	Prov. approval
5-9-62	Florence	Sewers, ejector station	Prov. approval
5-10-62	Canby	Sewer laterals	Prov. approval
5-10-62	Benton County	O.S.U. Dorm #6 and cafeteria	Approved
5-14-62	Estacada	Sewage treatment	Prov. approval
5-15-62	Lane County	Edison Elementary School	Approved
5-15-62	Josephine County	Grants Pass High Sch. Music Bldg.	Approved
5-22-62	Lebanon	Safeway sewers	Prov. approval
5-22-62	Port of Portland	Fire Station at Airport	Approved
5-23-62	Silverton	Sewage plant additions	Prov. approval
5-23-62	Lake Oswego	Sewer extension	Prov. approval
5-23-62	Springfield	Change Order #3	Approved
5-23-62	Uplands San. Dist.	Treatment plant additions	Prov. approval
5-24-62	Benton County	Fairmont Elementary School Addn.	Approved

IAA357

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
5-24-62	Lane County	Silver Lea Elementary School	Approved
5-24-62	Florence	Eastside sewers	Prov. approval
5-24-62	Eugene	Sewer lateral	Prov. approval
5-25-62	Corvallis	Sewer extensions	Prov. approval
5-25-62	Springfield	Low Rent Housing Project 6-3	Prov. approval
5-25-62	Springfield	Sewer extensions	Prov. approval
5-25-62	Clackamas County	Top-O-Scott sewerage facilities	Comments submitted
5-28-62	Cedar Hills	Sewer extensions	Prov. approval
5-28-62	Uplands San. Dist.	Berane Terrace sewers	Prov. approval
5-28-62	Portland	Tryon Creek Unit #1	Approved
5-28-62	Morrow County	Irrigon Grade School Addition	Approved.

5-29-62	Multnomah County	N. Rockwood Elem. School Addn.	Approved

HARVEY ALUMINUM CO. - The Dalles

About 500 persons, most of whom are residents of The Dalles area, were present to hear a discussion of the air pollution problem caused by the atmospheric discharges from the Harvey Aluminum Company plant.

The Chairman reported that the Authority had made a tour of the orchards through arrangements made by the Wasco County Fruit and Produce League and following this tour had visited the Harvey Aluminum mill to observe the control facilities and the aluminum production facilities.

The Chairman thanked both the League and the Company for arranging the tours.

Mr. Don Bailey, chairman of the League's Air Pollution Committee, thanked Chairman Wendel and members of the Authority for participating in the tour and welcomed them to The Dalles area. Members of the Wasco County Fruit Growers League then presented statements regarding their particular situations as follows:

Mr. William Elton said that his orchard is about 5 1/2 miles from the aluminum plant and that his crop had not been affected this year. Mr. Dick Renken, President of the Wasco County Fruit and Produce League, said he lived about 4 1/2 miles from the aluminum plant and that this year's crop estimate was probably 25% above last year. Mr. Dan Curtiss of the Mill Creek area (3 miles from the aluminum plant) estimated that his crop in 1960 was about 40 tons below normal and that he expected the cherry crop to be about 30 tons short in 1962. Mr. Ed Henrichs stated that he lives in the Cherry Heights district and that ever since 1959 his crops had been damaged depending upon the wind direction. He stated that this year he estimated his crop would be short about 30 tons. Mr. Dale Ellett who also lives in the Cherry Heights district about 2 miles southwest from the aluminum plant estimated his crop would be only 40% of the expected yield.

In the lower Mill Creek area, Mr. Walter Erickson, reported that his orchard is about 2 miles from the plant; that his crop was good in 1961; that during normal growing seasons the yield was about 4 tons to the acre; that with 100 acres he should have 400 tons but he estimated this year's crop at 99 tons. Mr. Charles Molesworth stated he had been a grower in The Dalles just since 1957; that from 1952 to 1958 the average annual production on his orchard was 89.9 tons, and that since the aluminum plant was built the average annual production had dropped to 58 tons or

IAA357

a loss of 35% of the crop per year. Mr. W. H. Meyers, Jr., whose orchard is located about two miles from the aluminum plant, stated that according to his records his peach crop in 1958 was 38 tons, in 1959 was 19 tons, in 1960 was 12 tons, in 1961 was 17 tons and in 1962 he estimated it would be only 2 tons. He stated further that his normal cherry crop was 60 tons (since 1937), that in 1955 it was 62 tons, in 1956 15 tons, in 1957 27 tons, in 1958 59 tons, in 1959 33 tons, in 1960 23 tons, in 1961 40 tons, and in 1962 he estimates it will be between 15 and 16 tons.

Mr. Joe Fleck stated that his orchards are located 1 1/2 to 1 3/4 miles from the aluminum plant, that he has been in business since 1915 and that this year at the start of the season they had the best prospects in history for a bumper crop.

Mr. Bailey then summed up the testimony presented by the previous speakers by commenting that on the orchards 5 to 5 1/2 miles from the aluminum plant a full crop of cherries was expected this year compared to only a 25 to 30% crop at orchards near the plant.

Mr. Jim Morrell, attorney, commented that representatives of the Wasco County Fruit and Produce League had presented reports at eleven previous San. Authority meetings and wanted to know when and what was going to be done to reduce the orchard crop loss.

Mr. Wendel asked if any other growers or individuals wished to be heard. Mr. James Lonergan, Counsel for the Community Growth Through Industry Committee, said he would like to have representatives of the committee present statements. He explained that the committee works at providing employment opportunities for young people, high school graduates and returned servicemen. Leslie Gardipie said he had lived in The Dalles all his life and since Harvey Aluminum came the population had increased. Mr. George Oates stated that the economy of The Dalles depends on the

Harvey mill where more than 600 persons are employed. Garth Yeakle stated that the aluminum plant had given them an opportunity to get better jobs. He said Harvey Company has employed over 60 people to install the roof monitoring system. Ed Sluder stated the best wages he had ever earned in his life were from Harvey Aluminum. Bud Hobart reported that he came to The Dalles in 1959 from Canada and had never heard of fluoride until he came to this area.

Mrs. Henry Rassi, teacher, claimed that the company was doing all that was humanly possible to get along and was willing to do everything scientifically possible to solve the problem.

Mr. Wendel commented that the Sanitary Authority had been functioning for 23 years, that during that time the state had never lost an industry because of the activities of this commission, and that Harvey Aluminum had never threatened to leave the community. He stated that many other large industries have worked out their pollution problems on a mutually satisfactory basis.

He pointed out further that the Authority had not written the law but that it had the responsibility to see that it was enforced.

Mr. Wendel said the Sanitary Authority was honored that State Senator Ben Musa and Representative Katherine Musa from Wasco County were present.

Representative Musa said that Senator Musa and she would like to see both sides in this controversy get together and work things out satisfactorily.

Mr. Max Elliott, General Counsel for Harvey Aluminum, said that Harvey was like any other competitive business and could compete only when conditions permit it to compete. He said further that Mr. Morrell who filed a suit against the company a year ago (the suit is now pending) to have the plant shut down was now calling upon this Authority to take action whereas only

IAA357

two weeks ago was urging the Federal District Court to delay the suit on the grounds that he did not wish to try it at this time.

Mr. Elliott reported that statistics show that in the four years since the aluminum plant has been operating, the average crop value has been \$1,000,000 more than the average of the preceding years. He stated that a member of the League had suggested that perhaps Harvey and the League could get together on some joint agricultural studies. He commented that this was a fine suggestion and that Harvey Aluminum was willing to cooperate. On January 6, 1962, the management of Harvey Aluminum wrote a letter offering to join with them in a comprehensive study and on such additional subjects as may mutually appear to be desirable but as yet no written answer to that letter had been received. He concluded that to the best of his knowledge there was no scientific proof that fluorides cause damage to cherries or loss of cherry crops.

Mr. Morrell commented that in regard to the court proceedings mentioned by Mr. Elliott the Wasco County Fruit and Produce League was seeking an injunction to restrain Harvey Aluminum from discharging contaminants that trespass upon these properties.

Mr. Morrell stated that the January minutes of the Authority included a report from Mr. Byrne that the roof monitor controls would be in operation during the spring and asked for a report on the status of the project.

Mr. Elliott stated he was not at the January meeting of the Authority but that he knew the monitor was basically installed and operating but that it was a highly complicated mechanism and that some time was required to arrive at the best operating conditions. He reported that the controls have been substantially installed on all 5 buildings. He estimated that the completion work would probably require another 30 days. He said he had not been in The Dalles area but had been told it was a rather cold

and rainy spring. In order to put in the roof monitor system the workers have to crawl up on the roof carrying heavy pipe and Harvey wasn't going to ask them to do that during the bad weather. He explained the control system was a professionally designed facility and that the Harvey staff had modified it from a European design.

Mr. Byrne stated that from his viewpoint they were a little bit behind schedule but not as far as might have been suggested by the notes of the January meeting. He reported that the company will be ready for the Sanitary Authority staff to make the tests with them when the operating conditions are representative.

Mr. McPhillips referred to the Authority's recommendation adopted at the Jan. 11, 1962, Authority meeting that concurrently with the installation of the roof monitor control project Harvey Aluminum review the reduction of fluoride escaping from the individual cell units and asked if this recommendation was being followed. Mr. Elliott replied that the project had not yet reached the stage when escapement tests could be made and that no tests other than the fume scrubber tests have been made since December 1961. Mr. McPhillips pointed out that one condition for approving the roof monitor installation project required that Harvey review the release of fluorides from the individual cells.

Mr. Byrne stated that Harvey had instituted several operational changes to minimize the fluoride release from the cell units; that no additional studies or measurements had been undertaken and that additional work would be done when staff members are available when the roof monitor controls are completed.

(The meeting recessed at 4 p.m. and reconvened at 4:10 p.m.)

Mr. Amacher asked Mr. Hatchard if the Authority staff had followed up the matter of installation of air pollution control facilities at the Harvey mill.

IAA357

Mr. Hatchard replied that they had contacted Mr. Byrne and observed the control installations as they progressed. In order to determine the level of fluorides air sampling devices operate continuously and two units have been employed since April 19.

Mr. Meierjürgen asked if any improvement had been noticed in fluoride emission since operating the sampling stations.

Mr. Hatchard replied that it was rather difficult to establish definitely that a reduction in the fluoride level was occurring due to weather conditions and other variables. He reported that the analyses of the effects of the first twelve samples collected from April 19 to 22 showed fluoride concentrations from 1.0 parts per billion to a high of 2.5 ppb at the Hendrick station and the Gilbert station in the S.E. district had a low of 0.3 ppb and a high of 1.4 ppb which is generally low for these periods.

Mr. Morrell asked Mr. Hatchard if he was familiar with the progress of the installation of the roof spray in each of the 5-cell buildings as to the degree of completion. Mr. Hatchard replied that on the tour in the morning only the roof monitor spray in cell building A was observed to be operating.

Mr. McPhillips asked Mr. Elliott if the reports on the roof monitor control installation could be made available every two weeks. Mr. Byrne said he would like to answer that with a question that because of the manpower burden could the company forego the monthly fume tests during the roof monitor testing phase? Mr. Byrne explained that the roof monitor system testing required that special methods be devised and this takes time and Harvey would like to free its staff from testing the fume scrubbers and utilize them in the roof testing. He stated that at any time reports are available the Authority staff is welcome to review them.

Mr. Hatchard commented that the fume scrubber data show that the variations between the monthly tests haven't been large, that the fluoride removal efficiency is higher than the specified 95% and that the staff would recommend suspending the scrubber tests until the roof monitor test measurements are completed.

Mr. Morrell then asked on behalf of the fruit growers League that the progress reports also be sent to them so they could observe the progress being made. The Chairman advised him that any and all information in the Sanitary Authority files was public property.

Dr. Wilcox asked what the approximate cost was of the installations now being completed in the Harvey mill. Mr. Elliott stated he would prefer not to make a statement at this time until all of the costs had been totaled but he said it was a very substantial amount.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjorgen and carried that the hearing in the matter of Harvey Aluminum be continued and progress reports be submitted on a 2-week basis.

Mr. Wendel thanked Don Bailey for reserving the auditorium and taking care of other arrangements pertaining to the meeting.

#### BRIDAL VEIL Sewage Disposal

Mr. Culver read a report which had been prepared prior to the meeting and distributed to the members of the Board. This report has been made a part of the permanent files in this case.

Mr. McPhillips asked how long it would take to complete the construction of required facilities. Mr. Culver replied that 30 days should be ample. Mr. McPhillips stated that because the sewer outfall is right above Rooster Rock State Park it should be corrected immediately.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox and carried that a citation be issued to the Machinery Sales Company in the matter of Bridal Veil sewage disposal problem giving 20 days to appear for a public hearing to show cause, if any, why an order should not be entered requiring abatement of pollution of the Columbia River.

EXTENSION OF VARIANCE ON OPEN BURNING - Oregon State Penitentiary

A letter dated April 26, 1962, from C. T. Gladden, Warden, Oregon State Penitentiary, requesting an extension of a temporary variance to allow open burning after July 1, 1962, was read by the secretary who stated that the staff recommended that no extension be granted after July 1, 1962, because the rural fire department prohibits the practice except during early morning hours and at that time usually atmospheric dilution capacity is low. Mr. Hatchard reported that land area was available at the Prison Annex to store the wood waste until fall.

It was MOVED by Dr. Wilcox, seconded by Mr. McPhillips, and carried, that the staff be instructed to recommend to the Board of Control that a request for funds to install an adequate incinerator be presented to the Emergency Board for consideration in order to comply with the statute and regulations.

NEWPORT - Odor Control - Georgia Pacific

Mr. Wendel read a news item from the June 4th, 1962, Oregonian regarding the improved odor conditions in Newport resulting from the recently installed controls at the Georgia-Pacific pulp mill. Mr. Benson presented a report of the progress made by Georgia Pacific since the last meeting.

Dr. Wilcox stated the progress had been commendable and asked what progress the city of Newport had made on its sewerage problem. Mr. Benson

replied that no progress had been made by the city of Newport on its pollution problem and reported that rather poor conditions were found in the Nye Beach area because of the city sewer discharge. He stated that the Chamber of Commerce had appeared before the city council and had recommended that a bond issue be placed on the ballot but this request was turned down by the council.

Mr. Benson stated he would investigate this matter as soon as he could and try to get some additional information. The staff was directed to follow up on the matter and submit a progress report.

The next meeting was set for July 18, 1962.

There being no further business the meeting adjourned at 5:10 p.m.

Respectfully submitted,

CURTISS M. EVERTS, Secretary

MINUTES OF THE NINETY-SECOND MEETING

of the

Oregon State Sanitary Authority

July 18, 1962

The ninety-second meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 1:30 p.m., PDT, July 18, 1962, in the auditorium of the State Game Commission Building, 1634 S. W. Alder, Portland, Oregon. The other members and staff present were B. A. McPhillips, Edward C. Harms, Jr., Herman P. Meierjurgan, Chris L. Wheeler, and John P. Amacher, members; John Denman, Legal Advisor; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Assistant Chief Engineer; Donald J. Benson, Associate Sanitary Engineer, Joseph A. Jensen, Assistant Sanitary Engineer, and Howard Smith, Supervisory Sanitarian.

IAA357

MINUTES:

It was MOVED by Mr. McPhillips, seconded by Mr. Harms and carried that the minutes of the 91st meeting of the Sanitary Authority held on June 5, 1962, be approved as prepared with the correction that the words "and carried" be inserted between the words "Mr. Meierjurgan" and "that" on page 12, second paragraph.

PROJECT PLANS

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that actions taken on the following 49 project plans for the month of June be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
6-4-62	Coos County	Green Acres Elementary	Approved
6-4-62	Coos County	Madison Street Elementary	Approved
6-4-62	Clatsop County	Clatsop College	Approved
6-4-62	Lebanon	Sewer laterals	Prov. approval
6-5-62	Washington County	Hillsboro Jr. High (proposed)	Prel. approval
6-7-62	Furlong San Dist.	Add. to treatment plant	Prov. approval
6-8-62	Washington County	Forest Grove High School	Approved
6-8-62	Brownsville	Engineering Report	Prov. approval
6-8-62	Lane County	Henry D. Sheldon School	Approved
6-11-62	Multnomah County	Fairview School	Approved
6-11-62	Columbia County	Vernonia High School	Approved
6-11-62	White City S. D.	Revised report	Comments sub.
6-12-62	Sweet Home	Milburn Second Addition	Prov. approval
6-12-62	Sunset Valley S.D.	Sue Meadows Subdivision	Prov. approval
6-12-62	Eugene	Sixth Avenue by pass	Prov. approval
6-13-62	Albany	South Residential sewer ext.	Prov. approval

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
6-13-62	Washington County	Raleigh Hills Elementary	Comments submitted
6-14-62	Lane County	Trent Elementary	Approved
6-15-62	Clackamas County	Oak Acres Mobile Park	Prov. approval
6-18-62	Lane County	Mapleton Elementary Addition	Approved
6-18-62	Harney County	Burns Elementary	Approved
6-18-62	Lane County	Creswell High School	Approved
6-18-62	Clackamas County	Wilbur D. Rowe H.S.	Approved
6-20-62	Gresham	Sewer extension	Prov. approval
6-20-62	Portland	Bridlemile pump station	Prov. approval
6-20-62	Beaverton	Pump station	Prov. approval
6-21-62	Beaverton	Shirewood Addition sewers	Prov. approval
6-21-62	Jackson County	Crater High School sewers	Approved
6-21-62	Jackson County	Ashland High School	Approved
6-21-62	Coos County	Summer School Addition	Approved
6-21-62	Forest Grove	Sewers	Prov. approval
6-21-62	Forest Grove	Sewer District #21	Prov. approval
6-21-62	North Bend	Pump Station #5	Prov. approval
6-21-62	Corvallis	Project SSL #76-A	Prov. approval
6-21-62	Creswell	Laterals 7E and 7F	Prov. approval
6-21-62	Portland	Addendum #2	Approved
6-22-62	Eugene	Sewer laterals	Prov. approval
6-25-62	Klamath Falls	Sewer Unit #31 OTI	Prov. approval
6-27-62	Raleigh Park S.D.	Sewers	Prov. approval
6-27-62	Sunset Valley S.D.	Sewer extension	Prov. approval
6-27-62	Albany	Sewer extension	Prov. approval
6-28-62	Fanno Park	Connection to Fanno Creek	Prov. approval
6-28-62	Country Club Homes	Sewer extension	Prov. approval

IA357

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
6-28-62	Oceanlake	Sewer ext. and pump station	Prov. approval
6-29-62	Lane County	Bailey Hill Elementary	Approved
6-29-62	Josephine County	Grants Pass Elementary	Approved
6-29-62	Jackson County	Phoenix High School	Approved
6-29-62	Lane County	Applegate High School	Approved
6-29-62	Columbia County	Scappoose High School Addn.	Approved

#### BRIDAL VEIL

Mr. Denman reported on the hearing held by Marion B. Lamb, hearings officer, on July 10, 1962, in the matter of pollution of the Columbia River caused by the discharge therein of untreated sewage from Bridal Veil. He stated that the charge was admitted by Mr. Stanley Mitchell, Attorney for Machinery Sales Company, Inc., owners, that it was agreed that a suitable and acceptable septic tank with chlorinator would be constructed and placed in operation by August 3, 1962, and that a stipulation establishing this agreement in a proposed order had been prepared for signatures of the respondent.

He then submitted the memorandum report of the hearings officer which recommended that an Order be entered which recognized the agreement and would be subject to completion of the stipulation by Machinery Sales Company.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that an order be entered against Machinery Sales Company to cease and desist the discharge of raw or improperly treated sewage into the Columbia River in the Bridal Veil area by August 3, 1962.

#### DULIEN STEEL PRODUCTS, INC.

Mr. Denman then reported on a hearing which was held on July 11, 1962, in the matter of pollution of air from open burning of box cars by Dulien Steel Products, Inc., and submitted a report by the hearings officer, Mr. Marion B. Lamb, which included the following information:

The company admitted the charge of open burning. Mr. Stanley Oslund, Manager, established the volume of burning at ten box cars per day in addition to an unspecified amount of "additional" material.

Mr. Oslund and Mr. Jack Dunn, attorney for Dulien, agreed that the company would retain an engineer to design a suitable steel enclosure and stack to reduce the atmospheric output of the operation. Plans for this unit will be submitted to the Authority by September 1, 1962. Submission of plans is only for the purpose of establishing intent and does not imply prior approval of the unit by the Sanitary Authority.

It was specifically understood that this unit would be in satisfactory operation by November 18, 1962, or the burning would be terminated. This agreement is subject to concurring action by the State Sanitary Authority on July 18, 1962.

It is recommended that the Authority enter an order for abatement, subject to four months time to permit Dulien Steel Products, Inc., and specifically until November 20, 1962, to design and construct an adequate and effective burning enclosure, with the submission of plans by September 1, 1962.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that an order be entered against the Dulien Steel Company to cease and desist from open burning by November 20, 1962.

ST. JOHNS MOTOR EXPRESS

In presenting the report of the hearings officer, Marion B. Lamb, Mr. Denman stated that the St. Johns Motor Express Company had appeared at a public hearing held before the hearings officer on June 29, 1962, in the matter of pollution of air caused by open burning. Mr. Homer Allen, counsel for the company, requested a continuance until the 14th day of August, 1962, in order that further testimony might be presented.

IAA357

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher, and carried, that a continuance of this case be granted until August 14, 1962.

GEORGIA PACIFIC PAPER COMPANY - Progress Report

A progress report on waste treatment and disposal methods developed by the Georgia Pacific Paper Company at Toledo was given by Dr. Ed Taylor. A copy of this report has been made a part of the permanent files in this case. Mr. Wendel stated that in every one of these operations there had been a breakdown and asked if everything was now in good operating condition. Dr. Taylor replied "yes" and reported that presently there is close to 2-2 $\frac{1}{2}$  days retention in the large lagoon, and that the effluent can be diverted into the large lagoon and pumped back later. When asked if they were getting the quantity and quality of equipment they wanted and needed in this respect, Dr. Taylor replied they were.

In a report by Donald J. Benson regarding this matter, it was indicated that the company has the equipment to do the job and it now remained for Georgia Pacific to operate it properly.

SHERWOOD

Mr. Eugene Marsh, attorney for Frontier Leather Company, Inc., which operates a tannery at Sherwood, stated that Mr. Robert Pailthorp of Cornell, Howland, Hayes and Merryfield, Consulting Engineers, had completed making tests and preliminary studies, and had made certain recommendations to Frontier Leather for treatment of the effluent from their tannery prior to discharge to the sewage treatment plant of the city of Sherwood. He also reported that Frontier Leather has purchased a 33 acre tract of land for a little less than \$50,000 to install a lagoon and is ready to proceed with construction. He stated that when the Sanitary Authority directed the city to improve its sewage treatment plant, the city brought a suit against the

IAA357

tannery to enjoin it from disposing of its effluent into the city sewer system, but the case has now been postponed until December. He reported that Frontier Leather is ready to proceed and follow the recommendations of its engineers, but that after spending between \$150,000 and \$200,000 to retain engineers, to purchase land, and to install new pretreatment facilities, the company wanted to receive the approval of the Sanitary Authority as to the plans and wanted some assurance from the city that the suit would be dropped.

Mr. Pailthorp explained the recommendations made to Frontier Leather Company and how it would affect the disposal system of the city of Sherwood. The engineering studies have been completed and the results indicate a stabilization pond would produce a reasonable effluent. For this summer the plans are to continue the present screen, the existing skimming facilities and the two settling tanks at the tannery, and to install an aerated pond and a polishing pond. The aerated pond, with a surface aerator, will have a detention time of about 6 days. Next year it is planned to add a mechanically cleaned clarifier ahead of the aerated pond so that the solids which settle can be more readily removed from the settled wastes. The company is now ready to proceed with construction.

Mr. Fred Anderson, City Attorney for Sherwood, stated Mr. James R. Boydston had been retained as engineer for the city to make certain studies. With respect to the report of Frontier Leather, he said the city could not give a formal endorsement to the plan as projected except on a tentative basis, and that the city could not approve any plans until it is sure they would be effective, because certain tests on pilot runs need to be done by Mr. Boydston on behalf of the city. Mr. Boydston then stated that the Authority was well aware that this problem has been in existence for a long time. The solution is not one that can be accomplished by means of a study

of literature because there are no establishments in small cities that have wastes of this type and strength. He stated that the proposal by the tannery is sound and will actually show some results during the next low water season, that he was confident they could assure the Authority that some definite progress would be forthcoming, and that progress depends on whether the facilities proposed by the tannery will be effective.

When he was asked to what degree and extent he desired assurance from the city, Mr. Marsh replied that perhaps it was a legal technicality of the lawsuit pending relative to the discharge of the tannery effluent into the city sewer system but the tannery would like to be assured the case would be dismissed. As far as to what the city would require and the expense involved, the tannery would be willing to contribute some of that. Mr. Wendel said that no industry ever knows for certain that the facilities are going to bring about correction required, and that the action of this Board has been measured by the amount of good faith being made.

It was reported that a preliminary estimate of repairing the present sewage treatment plant at a cost of about \$20,000 had been made, but whether it will be necessary to add an additional trickling filter or other facilities to meet the standards of the Authority is not yet known.

Mr. Pailthorp stated it would be impractical for the tannery to provide complete treatment of all its wastes because any duplication of municipal facilities would be very expensive.

Mr. Harms stated that the city had been ordered to have plans for solution to this problem by the first of July of this year and as yet the plans have not been submitted.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried, that plans be submitted by the city to the Authority by the 15th of August, 1962, or else a citation be issued to the city of Sherwood to show cause, if any exists, why the pollution should not be abated.

BATES

It was reported to the members that at the Authority meeting on February 8, 1962, a citation hearing was authorized for the community of Bates which has no sewer system. Mr. Harold Patterson, District Engineer, has worked with the community but so far no progress has been made.

It was MOVED by Mr. Amacher, seconded by Mr. McPhillips, and carried, that a hearing be held by a hearings officer in the matter of pollution caused by the community of Bates; the hearing be held in that community or in the county seat, and the hearings officer report his recommendations to the Authority at its next regular meeting.

HARVEY ALUMINUM CO. - Progress Report

Mr. Hatchard stated that progress reports dated July 10 and 13 had been sent to members of the Sanitary Authority prior to the meeting.

In the report dated July 13, 1962, it was noted that the installation of the fluoride removal systems were completed in cell buildings A, B, C and D. The roof monitor control systems are now in operation and are being operated continuously except when leaks develop that require patching to avoid difficulties in the cell operations.

In cell building E. the installation of water piping, nozzles and poly-vinyl screens is being completed.

The Harvey Aluminum technical staff has proceeded with initial air volume measurements of the discharge into the atmosphere from the roof monitor controls.

Joint measurement of the discharge from the cell building A's monitor has been scheduled for the week of July 23 with representatives of Harvey Aluminum and the Authority's staff participating.

CITY OF NEWPORT

A letter from E. R. Zurbuchen, City Recorder, dated July 9, 1962, was

IAA357

read by the secretary. This letter stated that the city had already acquired under land sale contract an approved site for a sewage disposal plant and that at a regular Council meeting on July 2, 1962, the Council passed the following motion:

"I hereby move that a Bond Measure be presented to this city's residents during the November general election to build sewage disposal facilities here. Also, that the amount of such a bond issue be as outlined for the city of Newport in a special study of the sewer system made by Cornell, Howland, Hayes and Merryfield, consulting engineers of Corvallis and dated May, 1961.

In addition, that between now and the November election, the new City Manager be instructed to apply to the Area Re-development Administration for as much aid as possible on these facilities."

#### OPEN BURNING AT GARBAGE DUMPS IN WASHINGTON COUNTY

Mr. Howard Smith, Supervisory Sanitarian, reported on the matter of open burning at two refuse disposal sites in Washington County which were in violation of state statutes.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried, that the Sanitary Authority accept the report and recommendations of the staff, and authorize a public hearing by a hearings officer to be held if open burning at the Shadybrook dump site does not cease by August 1, 1962.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the Sanitary Authority accept the report and recommendations of the staff, and authorize a public hearing by a hearings officer to be held if open burning at the Hillsboro Garbage and Disposal Site does not cease by August 1, 1962.

#### FEDERAL GRANTS

It was MOVED by Mr. Harms, seconded by Mr. Amacher, and carried, that the following applicants be given priorities for federal grants from the 1963 fiscal year appropriations for the construction of sewage treatment works:

- (a) Because financing is available and construction can be started within

60 days:

Beaverton	\$ 36,600	Silverton	\$ 76,350
Condon	8,520	West Linn	57,000
Grants Pass	176,000	Portland (NO.96)	18,250
Eugene (No. 89)	250,000		

- (b) Because financing is available and construction can be started by late fall:

Jacksonville	\$ 16,470
Oregon City	109,500
Pendleton	26,250

- (c) Because financing is available and construction can be started by the spring of 1963:

Gaston	\$ 29,520
Stayton	31,740
Wood Village	7,060
Portland (95)	142,770

- (d) Because bond elections are scheduled shortly and, if approved, construction can be started by late fall:

Yamhill	\$ 19,500
Monmouth	46,830

Priorities to Yamhill and Monmouth are to be awarded on the condition that bond issues are authorized at the elections to be held on August 15 and September 11, respectively.

Mr. Harms explained that although both had higher priority point totals, the Manhattan Sanitary District and Brownsville projects were not assigned priorities because bond elections would not be held until November and, even if approved then, construction could not be started until nearly the end of the fiscal year. It was therefore felt that these two projects could wait until next year. He explained also that the Metzger Sanitary District, Multnomah County, Portland Northeast, Bandon and Brookings projects were not approved because they were not ready to go this fiscal year due to

IAA357

shortage of funds. Also the Sunset Valley Sanitary District and Tigard projects, which had fairly high priority point totals, were not approved because they are needed primarily for future loads and therefore it was felt they could be deferred. In addition, it was felt that consideration should be given to consolidating the Tigard project with others which are proposed in the same general area of the Fanno Creek basin. In view of the shortage of federal funds, it was considered equitable to approve only one of the two requests submitted by the city of Eugene. Because Salem would still be eligible for a maximum grant of \$600,000 next year, and because bonds had not yet been voted, it was decided to defer this request until next year. Likewise there were not sufficient federal funds available to cover the Eastside, Woodburn, White City, Gold Beach and St. Helens requests.

Mr. Lloyd Clark, Consulting Engineer, appeared for the cities of Eastside and Woodburn stating he had been retained by these two cities and had helped prepare their applications. Mr. J. Wallace Gutzler, attorney for the city of Woodburn, stated that the city had passed all the necessary ordinances and was to have a bond election on July 27, 1962.

Mayor Wagner of Eastside spoke in reference to consolidation with Coos Bay, North Bend and Empire, and said a bond election was scheduled for July 24, 1962.

The Chairman asked that a letter and appropriate information be sent by the staff to each of the applicants that did not receive a priority explaining to them the reasons for their not receiving a federal grant this year.

It was MOVED by Mr. Amacher, seconded by Mr. Meierjurgan, and carried, that Mr. McPhillips be elected acting chairman during the absence of Mr. Wendel.

The next meeting date was set for September 13, 1962.

Respectfully submitted,

*Curtiss M. Everts*  
Curtiss M. Everts  
Secretary

## MINUTES OF THE NINETY-THIRD MEETING

of the

Oregon State Sanitary Authority

September 13, 1962

The ninety-third meeting of the Oregon State Sanitary Authority was called to order by B. A. McPhillips, Acting Chairman, at 1:35 p.m., PDT, September 13, 1962, in Room 36, State Office Building, Portland, Oregon. The other members and staff present were Richard H. Wilcox, M.D., Herman P. Meierjurgan, Chris L. Wheeler, members; John Denman, Legal Advisor; Curtiss M. Everts, Secretary and Chief Engineer; Harold E. Milliken and Richard E. Hatchard, Assistant Chief Engineers; Donald J. Benson, Associate Sanitary Engineer; Harold L. Sawyer, Ronald R. Ott and Lowell F. Ring (USPHS) Assistant Sanitary Engineers; and Howard Smith, Supervisory Sanitarian.

MINUTES:

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried, that the minutes of the 92nd meeting of the Sanitary Authority held on July 18, 1962, be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. Meierjurgan, seconded by Dr. Wilcox, and carried, that the actions taken on the following 54 project plans for water pollution control, and 8 project plans for air quality control, during the months of July and August be approved.

Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
7-2-62	Springfield	Proposed incinerator for Springfield Rest Home, Metz Engineering Company	Disapproved
7-6-62	Eugene	Proposed incinerator for Bob's Drive- in, Joseph Goder Model CSN-100	Approved

IAA357

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
7-16-62	Marion County	Incinerator for Pringle School	Requested additional information
7-23-62		Semi-enclosed portable incinerator, St. Johns Motor Express Company's refuse disposal operations	Submitted comments
7-26-62	Gold Hill	Stack sampling report of the emissions from the Ideal Cement Company's electrostatic precipitator	Study
8-16-62	Eugene	Proposed incinerator for Sheldon High School. Sargent Incinerator number SL-2377	Conditional approval
8-16-62	Multnomah County	Proposed incinerator for the burning of obsolete railroad box cars, Dulien Steel Products, Inc.	Requested additional information

#### Water Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
7-5-62	Florence	Change order on sewage treatment plant	Approved
7-5-62	Astoria	Sewer extensions (Kemsington Ave. and Valley St.)	Prov. approval
7-5-62	Powers	Changes in sewage treatment plant	Prov. approval
7-5-62	Dallas	Park sewer extensions	Prov. approval
7-5-62	Woodburn	Glen Hermanston Subd. sewers	Prov. approval
7-5-62	North Bend	Sewer extensions (Everett Ave.)	Prov. approval
7-9-62	Gold Beach	Prel. enrg. report on sewage collection and treatment addn.	Approved
7-10-62	Eugene	Madison Street outfall sewer	Prov. approval
7-11-62	Skylark S.D.	Sewage collection system	Prov. approval
7-11-62	Lake Oswego	Cherry Circle sewer extensions	Prov. approval
7-11-62	Bridal Veil	Sewage treatment plant	Prov. approval
7-11-62	Green S.D.	Change Order No. 1	Approved
7-13-62	Powers	Change Order No. 1	Approved

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
7-25-62	Portland	Portland International Airport washrack disposal	Prov. approval
7-26-62	Salishan Beach	Sewerage system	Not approved
7-26-62	Eugene	Willakenzie Area sewers	Prov. approval
7-30-62	Seaside	Sewers and pumping station #8	Prov. approval
7-30-62	Astoria	Sewer extensions	Prov. approval
7-31-62	Eugene	Sewer extensions	Prov. approval
7-31-62	Corvallis	Sanitary sewer lateral 6 E	Prov. approval
8-2-62	Bend	North Pilot Butte Addition sewers	Prov. approval
8-2-62	Eugene	Interceptor sewer for Willamette River crossing	Prov. approval
8-2-62	Grants Pass	Sewers and sewage treatment plant	Prov. approval
8-2-62	Silverton	Addendum No. 1	Approved
8-2-62	St. Helens	Nigger Creek sewers	Prov. approval
8-2-62	Portland	North Channel Avenue storm and sewer system	Prov. approval
8-2-62	West Linn	Sewage treatment plant addition	Comments submitted
8-2-62	Dallas	Sewer extensions	Prov. approval
8-3-62	Gresham	Sewer extensions	Prov. approval

8-22-62	Condon	Sewage treatment plant modifications	Prov. approval
8-23-62	N. Roseburg S.D.	Sewer extensions	Not approved
8-24-62	Hillsboro	Sewer extensions	Prov. approval
8-24-62	Springfield	Thurston High School sewer	Prov. approval
8-28-62	Milwaukie	S.E. 48th Avenue sewer	Prov. approval

CITY OF SHERWOOD:

Mr. Fred A. Anderson, City Attorney, was present to represent the city of Sherwood.

The secretary reported that on July 18, 1962, the Authority indicated that if plans for treatment work for the city of Sherwood were not submitted by August 15, the city would be brought before the Authority for appropriate action. In the interim the Authority had received a letter from Mr. Anderson and Mr. Boydston representing the city in which an extension of time was requested to permit the city's consulting engineers to undertake further studies in order to get the required data on which plans for an expansion of the city's sewage treatment plant would be based.

IAA357

Mr. Anderson added to the letter that the industry has undertaken the construction of settling ponds, and tannery has advised the city that they have ordered machinery and they are moving ahead. With pretreatment facilities, there will be some reduction in the loading when the pretreatment ponds are in operation. The pilot plant project for the city is underway and will be finished in approximately three months. The city is asking an extension of time until January 1 when the engineer will be able to tell what might have to be done. After that, there still remains the matter of financing construction. Dr. Wilcox asked when the city had directed Mr. Boydston, Engineer, to proceed with pilot plant studies. Mr. Anderson replied that from the beginning of his appointment the engineer was directed to do whatever was necessary.

It was noted that an order has been entered and one extension has already been granted the city. Plans were supposed to have been submitted by January 1, moved up to July and now another extension until January 1, 1963, is being requested.

When asked if the staff was of the opinion that the city is taking every action indicated, Mr. Benson stated that there had been a problem of getting information regarding type of treatment necessary. He said that Mr. Boydston is making synthetic waste of the quality that is expected from the tannery and mixing it with appropriate amount of synthetic sewage in order to determine how it reacts on type of plant the city of Sherwood now has. This data does not come in a short period of time and January 1 is probably a reasonable time. He recommended the January date be approved. Mr. Anderson stated additional time might be needed for financing arrangements once it was known what had to be done.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan, and carried, that the Authority grant the extension of time for submission of plans

requested by the city of Sherwood until January 1, 1963, and continue the original order with the extension subject to progress being made.

REPORT OF THE HEARINGS OFFICER

St. Johns Motor Express:

Mr. Denman presented the report of the hearings officer, Marion B. Lamb, stating that since the open burning was taking place as charged, the Authority should enter a proposed order directing St. Johns Motor Express to discontinue the open burning of refuse at the site in the vicinity of 10,000 North Portland Road. It was also recommended that a copy of the proposed order be sent to the attorney representing St. Johns Motor Express informing him of the proposal and that within fifteen days, he would submit to the Authority any objections. He stated that a final order could be considered at the next Authority meeting after study of the transcript of the testimony introduced at the public hearing; however, the Authority may wish to call a special meeting to avoid a delay of several months.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried, that the recommendation of the hearing officer be accepted and that a proposed order be considered after reading the transcript of the hearing and that the Authority members meet in a special session, if necessary to consider issuance of a final order.

Washington County:

Mr. Denman reported for Mr. Marion Lamb, Hearings Officer, on the status of the hearing on Shadybrook dump, owned and operated by Washington County. He stated that the public hearing had been scheduled on September 11, 1962. Prior to the hearing, however, through the efforts of the staff, Washington County Court had entered into a stipulation whereby they agreed to cease open burning at the site by September 21, 1962. Mr. Denman recommended that the Authority enter an order at this time directing the

said county to cease and desist from further burning at this dump site if the stipulation was approved by the chairman of the Authority.

Mr. Denman read the following stipulation:

IT IS HEREBY STIPULATED AND AGREED by and between the Sanitary Authority of the State of Oregon, their attorney, John O. Denman, and Washington County, Oregon, acting by and through the Washington County Court composed of Joseph A. Jaross, County Judge; Clayton Nyberg, Commissioner, and Barbara A. Wilcox, Commissioner; constituting the governing body of Washington County, Oregon, and their attorney, Francis Linklater, District Attorney for Washington County, Oregon, that an Order be entered by the Sanitary Authority of the State of Oregon at its September 13, 1962, meeting directing and ordering the said Washington County and the County Court thereof to desist from, cease and abate not later than September 21, 1962, the open burning of refuse and resulting discharge and emission into the atmosphere of smoke and other air contaminants at and from a dump located approximately six-tenths of a mile east, northeast of the intersection of Truitt Road and Shadybrook Road in Washington County, Oregon, and which said location is more particularly described as Section 29, Range 2 West, Township 2 North, Willamette Meridian; which said dump is operated under the direction and control of Washington County Court in and for Washington County, State of Oregon.

It was MOVED by Mr. Wheeler, seconded by Dr. Wilcox and carried, that the stipulation be accepted and that an order be entered directing Washington County Court to cease any open burning at the subject site.

R. J. Maier

Mr. Denman reported for Hearings Officer, Marion B. Lamb, on the status of Hillsboro Garbage Disposal dump, owned and operated by Reinhart J. Maier and Alta T. Maier, located about 1 1/4 miles southeast of Hillsboro,

IAA357

Oregon. He stated that a public hearing had been scheduled to be held on September 10, 1962, however, that Mr. and Mrs. R. J. Maier had entered a stipulation whereby they agreed to cease open burning at that dump site by September 21, 1962. Mr. Denman recommended that the Authority enter an order at this time directing Mr. and Mrs. R. J. Maier to cease and desist from further burning at this dump site if the stipulation was approved by the chairman of the Authority. Mr. Denman read the following stipulation:

IT IS HEREBY STIPULATED AND AGREED by and between the Sanitary Authority of the State of Oregon, their attorney, John O. Denman, and Reinhart J. Maier and Alta T. Maier jointly and severally and for the Hillsboro Garbage Disposal that an Order be entered by the Sanitary Authority of the State of Oregon at its September 13, 1962, meeting, directing and ordering the said Reinhart J. Maier, Alta T. Maier and the Hillsboro Garbage Disposal to desist from, cease and abate not later than September 21, 1962, the open burning of refuse and resulting discharge and emission into the atmosphere of smoke and other air contaminants at and from a dump located approximately one and one-fourth miles southeast of Hillsboro, Oregon, and about 450 feet west of Minter Bridge Road, Washington County, and more particularly described as Section 18, Range 2 West, Township 1 South, Willamette Meridian; which said dump is operated under the direction and control of Reinhart J. Maier and Alta T. Maier in Washington County, State of Oregon.

It was MOVED by Mr. Wheeler, seconded by Dr. Wilcox, and carried that the Authority accept the stipulation and that an order be entered directing Mr. and Mrs. R. J. Maier to cease any open burning at the subject site.

Report of Hearings Officer (Continued)City of Bates

Mr. Denman reported that the public hearing scheduled at Bates, Oregon, on September 6 had been continued for 30 days until the attorney for Hines Lumber Company could contact the home office in Chicago to determine whether they would want to undertake another engineering study. The home office counsel is to visit the site and attempt to acquire land needed for the sewage treatment facilities. The company has been advised that whether or not the land is acquired it must go ahead. Mr. Denman stated that the attorney for Hines Lumber Company believed that his client would be conducive to working out the problem but weather conditions this winter might interfere with construction. The staff has received a tentative plan which was not entirely acceptable and has asked to have a report from the company within 60 days from the hearing, possibly November. The hearing has been scheduled to be heard in Bates but as yet no date has been set.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan and carried, that an extension of time for approximately 30 days be given the community of Bates to prepare for the hearing authorized at the July 18, 1962, meeting of the Authority.

STAFF REPORTS AND RECOMMENDATIONSB & D PAVING PLANT - Hood River

Mr. Hatchard referred to copies of a letter dated September 6, 1962, which had been placed in the notebook of each member, from Mr. Vawter Parker, attorney for Mr. E. E. Berg, owner of the B & D Paving Company, Hood River, replying to the Sanitary Authority's letter of August 30, 1962, concerning air pollution caused by the B & D asphalt paving plant located about 1 mile S. E. from Hood River. Mr. Hatchard reported that the paving plant has operated at this site for several years, however, that this

IAA357

spring complaints were received regarding excessive smoke and dust conditions. He stated that the initial surveys made by our district office involved mostly the water pollution aspects and that some corrections were made; however, complaints from nearby residents regarding air pollution have continued. The paving plant owner, Mr. Ernest Berg, has been notified that he will have to install adequate control facilities or move the plant to a relatively remote location.

Mr. Vawter Parker, attorney for Mr. E. Berg, has advised the Authority that the owner was considering moving the plant to another location and that some of the discharges from the present operations were reduced. Mr. Hatchard stated that the staff recommends that the members authorize a public hearing and appoint a hearings officer if adequate improvements are not made by October 15, 1962.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan, and carried that the Sanitary Authority accept the report and recommendations of the staff and authorize a public hearing by a hearings officer if adequate progress is not made toward the control of the emissions from the paving plant by October 15, 1962.

ACME AUTO WRECKING COMPANY - Multnomah County

Mr. Hatchard stated that complaints were continuing regarding excessive smoke discharged from the open burning of stripped automobile bodies at the Acme Wrecking Company site on N. E. 148th Street in the Parkrose District, owned and operated by Mr. R. M. Rutherford. Mr. Rutherford has been notified by letter regarding the violations but the open burning practices have continued. Mr. Hatchard stated that the staff recommended that the members of the Sanitary Authority authorize a public hearing and appoint a hearings officer in this matter if adequate progress is not made toward control of the emissions from the open burning by October 1, 1962.

It was MOVED by Mr. Meierjorgen, seconded by Dr. Wilcox and carried that the reports and recommendations of the staff be adopted and that a public hearing by a hearings officer be authorized if adequate progress was not made toward control of the open burning at the Acme Auto Wrecking Company's site by October 1, 1962.

SARRETT SHINGLE COMPANY - Multnomah County

IAA357

Mr. Hatchard stated that complaints have continued regarding excessive smoke discharged from the open burning of wood wastes at the Sarrett Shingle mill, located on N. E. Union Avenue, north of Columbia Boulevard. He reported that there was an enclosure around the material being burned but that dense smoke was being discharged into the air. Mr. Orville Sarrett has been notified that open burning was in violation of the Sanitary Authority's regulations and he was requested to notify the Authority of his plans to control emissions; however, no reply has been received. Mr. Hatchard stated that the staff recommended that the Sanitary Authority authorize a public hearing by a hearings officer if satisfactory progress was not made to control smoke and flyash from the open burning of wood waste by the Sarrett Shingle Company by October 1, 1962.

It was MOVED by Mr. Meierjorgen, seconded by Dr. Wilcox, and carried that the staff report and recommendations be accepted and that a public hearing by a hearings officer be authorized if satisfactory progress was not made to control the smoke and flyash from the Sarrett Shingle Company by October 1, 1962.

McCLURE AUTO WRECKING COMPANY - Multnomah County

Mr. Hatchard reported that the Authority received complaints in March 1962 alleging that the open burning of refuse at the McClure Auto Wrecking Company, 8611 N. E. Union Avenue, had caused the discharge of excessive smoke and odors. He stated that investigations confirmed that a nuisance did exist

and notice was given Mr. W. C. McClure to cease open burning refuse at this landfill; however, he reported that additional field inspections have shown that the open burning has continued.

The staff recommended that the members of the Authority authorize a public hearing by a hearings officer if the open burning of refuse does not cease at this site by October 1, 1962.

It was MOVED by Mr. Wheeler, seconded by Dr. Wilcox, and carried that the staff report be accepted and a public hearing by a hearings officer be authorized if adequate progress towards control of open burning of refuse is not made by McClure Auto Wrecking Company by October 1, 1962.

EDWARDS BROTHERS SAWMILL - Albany

Mr. Hatchard reported that our district office had received complaints in June, 1962, alleging public nuisance conditions were present and were caused by particulate fallout discharged from the Edward Brothers Lumber Mill in Albany. He stated that field investigations were made and sampling in the area indicated that the fallout was as high as 200 tons per square mile per month. He stated that the staff recommended that the Authority authorize holding a public hearing by a hearings officer if satisfactory progress was not made toward control of excessive deposition of flyash and similar materials by October 1, 1962.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan, and carried, that the staff report be accepted and that a public hearing by a hearing officer be authorized if satisfactory progress toward control of the excessive deposition of flyash from the Edwards Brothers Lumber Mill was not made by October 1, 1962.

TREATMENT OF WASTES FROM MARINE TOILETS

The secretary reported that this matter was discussed by Mr. Spies with Interim Committee on Natural Resources at their meeting held on

Friday, August 24. The Committee was interested in knowing if the Authority could accomplish the same thing without additional legislation or if it would have to be by regulation. Mr. Spies had reported to the Committee that the Sanitary Authority staff was not equipped to handle a program of that magnitude. The Committee instructed the Authority and the Marine Board to see if a satisfactory approach to the problem could be worked out without legislation.

The secretary then referred to a letter addressed to the Authority by Mr. Rittenhouse, Director, State Marine Board, in which he asked that the Sanitary Authority work with their Board to develop a mutually satisfactory approach to the problem preferably without additional legislation if possible. Mr. Denman, legal counsel for the Authority, asked for more time to review current statutes before advising the Authority as to what course of action should be taken.

No action was taken, but the secretary was asked to place this item on the agenda for the next meeting.

#### BOND FOR SALISHAN

During an informal discussion on August 13th, the Authority agreed that if personal signatures of the principals were obtained, the bond for the Salishan project could be reduced to \$1,000.

It was MOVED by Mr. Meierjurgan, seconded by Dr. Wilcox, and carried, that a \$1,000 bond be accepted for the Salishan project after the personal guarantee of the principals in lieu of the usual bond value requirements have been received.

#### REQUESTS FOR VARIANCES

##### Oregon State Penitentiary

Mr. Howard Smith referred to a letter of August 20, 1962, from Warden C. T. Gladden, requesting the Authority to grant a temporary variance to

IAA357

allow the open burning of wood wastes from the prison furniture plant which have been stockpiled since the termination of burning on June 30, 1962. Mr. Gladden advised the Authority in his letter that funds for the installation of an adequate incinerator were included in the penitentiary budget for the 1963-65 biennial. Mr. Smith explained that the staff were advised by L. H. Kahle, business manager of the prison, that a transfer of funds within the penitentiary budget was being requested to allow the procurement of the incinerator during the next quarter of the current year (October-December, 1962) and that the temporary variance was needed for the period October 15, 1962, to February 1, 1963.

Mr. Smith stated that the staff recommended that variance be granted until February 1, 1963, with the understanding that any burning be done only when good atmospheric dilution was present.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjürgen, and carried that the recommendations of the staff be accepted provided that satisfactory progress reports be submitted by the penitentiary prior to the next meeting and that no further variance be granted beyond February 1, 1963.

SANITARY SERVICE COMPANY - Salem

A copy of a letter from attorney R. W. DeArmond, representing the Sanitary Service Company of Salem was reviewed by Mr. Smith in which the company requested that a variance be granted to open burn wood wastes at the site of the Sanitary Service Company landfill site, 3.5 miles S. E. of Salem, Oregon, until February 1, 1963. The staff recommended that a variance to open-burn regulations be granted from October 15, 1962, to February 1, 1963.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjürgen, and carried that the recommendations of the staff be adopted and that a final variance be granted to open burn wood waste and tree trimmings only for the period October 15, 1962, to February 1, 1963.

WASHINGTON COUNTY - Shadybrook Dump

Mr. Smith reported that a letter dated September 6, 1962, was received from Washington County Court regarding permission for a one time open burn of the accumulated refuse at the Shadybrook dump site. He explained that this letter was the result of activities carried on between the staff and the Washington County Court in the matter of converting the open burning at Shadybrook dump site, near North Plains, Oregon, to a landfill type operation.

It was MOVED by Mr. Wheeler, seconded by Mr. Meierjorgen, and carried that the recommendations of the staff be accepted and that the Authority grant the Washington County Court a one time variance for open burning the accumulated refuse at the Shadybrook site providing that no serious nuisance be created to nearby residents.

REVISION OF ADMINISTRATIVE RULES GOVERNING HEARINGS

Mr. Denman brought to the attention of the Authority several inconsistencies in the administrative rules governing hearings and orders and indicated that he would study the matter further and have a report with recommendations at the next meeting.

CITY OF SALEM

Mr. McPhillips then made a statement as follows on behalf of the Authority in the matter of a bond election for an interceptor sewer and sewage treatment plant for the city of Salem:

On Friday, September 21, the people of Salem will vote on a \$5,600,000 bond issue to finance the construction of interceptor and outfall sewers, and a new sewage treatment plant.

These projects are urgently needed to abate pollution which occurs in the Willamette River below Salem during the late summer months, and which is caused by inadequately treated sewage and cannery wastes from the city. As a matter of fact, studies show that the pollution load placed on the river by Salem at the critical season of the year accounts for as much as one-fifth of the total pollution load placed on the Willamette River by all cities and industries in the valley.

Early financing of the project is urgent so that the city can proceed in the sale of bonds, acquire the treatment plant site, and let construction contracts in time to complete the project before the summer of 1964. It

IAA357

is also important that the city move promptly so that its application for a federal grant to share in construction costs during the next year will not be jeopardized.

It is our sincere hope that the voters next Friday will take this forward step by supporting this urgently necessary public health facility.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjorgen, and carried, that the board adopt the statement as the official statement of the Authority in the matter of the vote of Salem bonds.

#### PORT OF PORTLAND

The Secretary read a letter dated August 17, 1962, from Mr. John J. Winn, Jr., General Manager, Port of Portland, requesting assistance from the Sanitary Authority in the development of performance type regulations for the River Gate area, after field surveys and air sampling data had been accumulated. Mr. Hatchard showed a map of the area referred to in the letter which included the area east of Willamette River and south of Columbia River and north of St. Johns. He reported that in the future, the project may involve about 9,000 acres and that for many years the staff has been working with planning and zoning agencies in the adoption of air pollution performance standards for industrial districts. Mr. Hatchard stated that the staff planned to prepare an outline of a report for the requested project for review of the members of the Sanitary Authority by November 15, 1962.

It was MOVED by Mr. Meierjorgen, seconded by Mr. Wheeler and carried that the Authority instruct its staff to prepare an outline of the project requested by the Port of Portland and submit the information for review by November 15, 1962.

#### BUDGET

Copies of the proposed budget for air and water quality control programs for 1963-1965 biennium were placed in the members notebooks. Mr. Everts stated the air quality control budget as proposed is to maintain the present

staff and have six additional members. The request for state funds for this period would be approximately \$297,000 including lab equipment, etc. Water quality control will maintain the present staff of 16 persons and ask for only one additional member, who would serve as laboratory director. The request for state funds will be approximately \$270,000.

HARVEY ALUMINUM

IAA357

Mr. Hatchard presented the following information regarding the status of the Harvey Aluminum fluoride control installations for the period August 23 to September 13, 1962, which was obtained from Mr. Joseph Byrne, Technical Consultant, Harvey Aluminum (Inc.):

1. The completion of the installation of the improved water troughs for the five cell buildings' roof monitor control systems is scheduled for September 14.
2. During a wind storm, the vertical panels of cell building A were damaged because of corrosion by the contact with the acid water effluent. The aluminum side paneling of each monitor for the five cell buildings will be removed and replaced with a noncorrosive plastic panel. Approximately 10,000 lineal feet of paneling will be replaced, and the project is scheduled to start on September 17 on cell building A. No completion date can be predicted at this time. None of the cell buildings roof monitor control system will be operating during the panel replacement project.
3. Preliminary test measurements of the roof monitor control system of cell building A will be made during the week of September 24. The roof monitor controls on cell building A will be in operation during this period. Cooperative activities with Harvey's technical staff and the Sanitary Authority representatives are underway.
4. The program to reduce fluorides produced at the individual cell operating units is continuing. The emphasis at the present time is on the improvement of the skirt design. No specific program has been completed to evaluate the reduction in fluorides emitted into the cell building space ventilation resulting from these changes.

Mr. Hatchard referred to the report of the annual sweet cherry crop in The Dalles which was provided by Mr. John Thienes. Wasco County Agricultural Agent, copies of which had been placed in each member's notebook.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan, and carried, that the staff report concerning progress by Harvey Aluminum (Inc.) on the installation of fluoride controls be accepted.

The secretary introduced new staff member Mr. Harold Sawyer to the members of the Board. Mr. Hatchard introduced Mr. Lowell Ring, air quality control engineer with the U. S. Public Health Service.

Mr. Everts stated letters had been received from the cities of Yamhill and Monmouth that their bond elections had carried so these cities were now eligible to receive priority certificates for federal grants.

No date was set for the next meeting.

The meeting adjourned at 4:00 p.m.

Respectfully submitted,

CURTISS M. EVERTS  
Secretary

MINUTES OF THE NINETY-FOURTH MEETING  
of the  
Oregon State Sanitary Authority  
January 4, 1963

The ninety-fourth meeting of the Oregon State Sanitary Authority was called to order by Mr. Harold F. Wendel, Chairman, at 10:00 a.m., January 4, 1963, in Room 36, State Office Building, Portland, Oregon. The other members and staff present were Richard H. Wilcox, M.D., Herman P. Meierjurgan, Chris L. Wheeler, B.A. McPhillips, Edward C. Harms, Jr., and John P. Amacher, members; John Denman, Assistant Attorney General, Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Harold E. Milliken and Richard E. Hatchard, Assistant Chief Engineers; Donald J. Benson, Associate Sanitary Engineer; Harold L. Sawyer and Ronald R. Ott, Assistant Sanitary Engineers; Harold W. Merryman, H.M. Patterson and E.J. Weathersbee, District Sanitary Engineers; Howard G. Smith, Supervisory Sanitarian, and Robert B. Percy, Chief Chemist.

MINUTES:

It was MOVED by Dr. Wilcox, seconded by Mr. Harms, and carried that the minutes of the ninety-third meeting of the Sanitary Authority held on September 13, 1962, be approved as prepared by the Secretary.

PROJECT PLANS:

It was MOVED by Mr. Harms, seconded by Mr. Amacher, and carried, that the actions taken by the engineering staff on the following 49 project plans for water pollution control, and 9 project plans for air quality control, during the months of September, October and November, 1962, be approved:

IAA357

Water Pollution Control -

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
9-5-62	Beaverton	Sewage treatment plant expansion	Comments submitted

HARVEY ALUMINUM (Inc.) - The Dalles

The Chairman asked that Mr. R.E. Hatchard give the present status of Harvey Aluminum (Inc.) air pollution problem.

Mr. Hatchard stated that since the September 13, 1962 Authority meeting, the staff has made four surveys of the Harvey Aluminum plant in The Dalles to determine the status of installation of controls, to observe the cell operating conditions and to participate in test measurements of discharge of fluorides into the atmosphere.

The mill survey on October 4 indicated that some deficiencies were present and the company was so notified in a letter of October 17. Subsequent surveys have shown improvements on most of these items.

Harvey Aluminum has retained Resources Research, Inc. as consultants to make different test measurements of the fluoride removal efficiencies of the roof monitor control installations. Staff members participated in test measurements made on November 19 and 20, 1962, involving the Building A roof monitor system. Four sampling points were used at each station. The November 19 tests were not representative because of high wind velocity which developed during the test runs. On November 20, two additional measurements were made. Air Quality Control staff members reported that the mill operating conditions during the test runs were

representative. Twenty-four aliquot samples were provided to the Air Quality Control representatives from the three test runs made on November 19 and 20.

The Air Quality Control analysis of the fluoride content found in the impinger samples compare favorably with the concentrations found by Resources Research laboratories.

The panel replacement project was completed by December 15 and four and a half of the roof monitor controls systems had been in operation during the month.

The field sample station at the Klindt farm was re-established on December 19, 1962. This station is located 2000 feet east of the aluminum mill and several series of samples were collected previously. A total of 29 samples for six-hour sampling periods were collected from the period December 19 to 27 and the analyses for this series is as follows:

<u>Date</u>	<u>No. Samples</u>	<u>Max.</u>	<u>Min.</u>	<u>Medium</u>	<u>Average</u>
8-29-60	98	96.4 ppb	5.9 ppb	15.7 ppb	21.0 ppb
10-17-60					
12-19-62	29	15.1	0.9	2.5	3.2
12-27-62	Incomplete				

The series of samples started December 19 is not complete and the summary of the sample analysis will change when additional samples are obtained. It is evident, however, that considerable reduction in the concentration of fluoride in The Dalles vicinity is being produced. A review of the preliminary information indicates that a reduction of at least 50 percent in the fluoride content has been produced.

Staff representatives had contacted Harvey Aluminum management in The Dalles to make surveys on October 15, December 19 and December 21, particularly to observe the fluoride controls during representative periods. Access could not be obtained because the approval of Harvey Aluminum's management in The Dalles must be obtained from Maxwell Elliott, General Counsel, Harvey Aluminum, at their headquarters in Torrance. Mr. Elliott was in the Eastern United States on these dates and was not available to grant permission. The provisions of Chapter 449.800, Subsection 7, provide that the Authority or any delegated officers or

IAA357

agents may enter and inspect after due notice at reasonable times any property, premises or place for the purpose of investigating either an actual or specified source of air pollution \*\*\*. Upon advice from legal counsel, the Authority staff have understood that in the case of mill operating 24 hours per day, seven days a week, the requirement of due notice is met by calling at the mill gate and advising the management that the Authority's representative wants to make a survey. The Harvey Aluminum requirement of individual approval by their Torrance headquarters has caused loss of time. It is not considered practicable to prearrange surveys two or three days in advance.

During the four surveys made since September 13, 1962, the staff members received the cooperation of Harvey's technical staff and have observed all phases of the operation. Questions pertaining to operations have been answered.

COMMENTS AND RECOMMENDATIONS -

- (1) The roof monitor installations are completed and are in full operation in five aluminum reduction cell buildings.
- (2) Test measurements based upon the November 20 data show that the fluoride removal efficiency was being produced based upon the expected performance from the pilot test runs on cell Building E.
- (3) Preliminary data from the Klindt sampling station show considerable reduction in fluoride concentration. Additional samples are needed to reflect the variable weather conditions occurring in The Dalles before reaching conclusions on the area wide reduction in fluoride concentrations. However, review of the preliminary information indicates that a reduction of at least 50 percent in the fluoride levels is being achieved.
- (4) There is a need for foliage sampling analysis to show the reduction in fluoride concentrations compared with previous periods. It is recommended that the staff be instructed to confer with the Oregon State University Agricultural Experiment Station staff to arrange a sampling program to get this need during the 1963 growing season.

(5) Harvey Aluminum maintains a staff of twelve maintenance personnel to provide maintenance for the 28 multiclones, 20 fume scrubber towers, humidifiers and the ducting systems connecting the units, 600 burners in addition to the five roof monitor control installations which include several miles of piping, thousands of high pressure spray nozzles and poly-vinyl screens. It is recommended that a regular periodical preventive maintenance program be developed by Harvey Aluminum to serve the roof monitor control installations in order to avoid any preventable operational shut downs.

(6) During the June 5, 1962 Authority meeting in The Dalles, permission was granted to Harvey Aluminum to suspend the requirement for making a monthly test measurement of the fume scrubbers on a rotation schedule. This request from Harvey Aluminum was granted in order to concentrate the staff time upon completion of the roof monitor installations. The Authority staff recommends that the monthly test measurements of one fume scrubber tower and one roof monitor installation be re-activated on a rotation schedule. This data is needed to establish the quantity of fluoride being emitted into the atmosphere.

(7) The staff recommends that Harvey Aluminum continue its projects to minimize the escape of fluoride in the cell operation itself. These projects have been under way for some time. However, no written reports of the reduction in fluoride reaching the cell building space ventilation have been submitted by Harvey. There is a need for periodical reporting regarding the status. It is recommended further that Harvey Aluminum review any research findings of other aluminum companies to determine if additional measures may be taken to reduce the quantity of fluoride leaving the cells and not being collected in the fume duct work.

(8) It is recommended that the Air Quality Control staff members be authorized to make surveys of the Harvey Aluminum mill at any time when operations are under way.

The Chairman then stated that a resolution had been received by the Sanitary Authority from the Wasco County Fruit and Produce League and upon request of the Chairman the Secretary read the resolution as follows:

IAA357

Wasco County Fruit & Produce League

RESOLUTION to Oregon State Sanitary Authority:

WHEREAS the fruit growers of Wasco County have since July of 1960 been repeatedly requesting protection from excessive fluoride emissions into the atmosphere at The Dalles, and

WHEREAS fluoride injury symptoms on peaches in September, 1962, were even more severe and widespread than in previous years in the area of Harvey Aluminum's plant at The Dalles, and severe damage to prunes, apricots, pine trees and sweet cherries continued through 1962 as in previous years, and

WHEREAS The Oregon State Sanitary Authority on June 5, 1962 again postponed a show cause hearing for Harvey Aluminum Company, the motion for such postponement being based upon an understanding that the monitor control system at the Harvey plant was in fact at that time installed and operating, though later inspection in June, 1962, by an independent engineer showed the monitor control system to be only about half completed, and

WHEREAS the original postponement of this hearing on April 4, 1961, was based upon an offer of cooperation and the hope that working with the industry without applying sanctions would produce a better and quicker solution to the air pollution problem at The Dalles, and

WHEREAS a recent statement on industrial air pollution control in the Oregonian, December 9, 1962, recognizes that: "Nobody is going to put in any kind of control devices that cost money unless he has to. There must be sanctions against industry or else it is going to pollute the air," and

WHEREAS a lack of effective progress to date, seven months after the so called completion date of June 5, 1962, or even any measurement of alleged progress in monitor fume control at the Harvey plant, clearly demonstrates the need of a more effective approach to solution of the problem, and

WHEREAS Harvey Aluminum Company continues to operate its additional pot line in defiance of the order of July, 1960, of the Sanitary Authority to not operate such facility without an approved air pollution control system,

THEREFORE BE IT RESOLVED by the Wasco County Fruit and Produce League directors this 28th day of December, 1962, that the Oregon State Sanitary Authority be requested to reconsider its action of April 4, 1961, and reassume its responsibility to the people of the State of Oregon by causing abatement without further delay of excessive fluoride emissions into the atmosphere at The Dalles.

Attest /s/ W.H. Myers, Jr.  
Secretary

Dr. Wilcox asked Mr. Hatchard if he felt that Harvey Aluminum was operating contrary to the Sanitary Authority's order of July, 1960.

Mr. Hatchard said that he would depend upon advice from our legal counsel, since the position of the Authority on the matter had been determined on the previous counsel's recommendation.

Mr. Harms explained that it was his understanding that the delay in considering conditional approval of the cell building E controls was related to the recognized need for the roof monitoring system for the whole operation, and that this would have the same conditional approval, since the Sanitary Authority cannot give any absolute approval.

Mr. Wendel then asked if there was anyone from the Wasco County Fruit and Produce League who wished to be heard on this subject.

Mr. Lamar Tooze, attorney for Wasco County Fruit and Produce League, advised the Chairman that Mr. Don Bailey, Chairman of the Wasco County Fruit and Produce League would like to make a statement.

Mr. Bailey gave a brief resume' of the past history of the problem. He stated that in June, 1962, a meeting of the Sanitary Authority was held in The Dalles, and at that time Harvey Aluminum reported that the monitoring system was completed and operating. Mr. Bailey stated that two weeks later an independent engineer visited the plant and found this statement to be erroneous. Mr. Bailey said they would like the privilege of having their engineer visit the plant again and inspect the system which has been installed, and that they would like to have copies of measurements made by the Sanitary Authority on the tests which were made last November and December, which showed certain efficiencies of the control system.

Mr. Bailey stated that the apricot and peach crops had been severely affected during the 1962 growing season, and that some of the cherry growers located within three miles of the aluminum mill in the Cherry Heights and Chenoweth areas had experienced heavy losses. He reported that cherry orchards farther away from the mill had produced a heavy crop. He emphasized that the orchardists in The Dalles could not continue to suffer these losses and stay in production. He requested the Authority to reconvene the hearing that has been postponed since April, 1961.

IAA357

The Chairman asked if representatives of Harvey Aluminum wanted to make a statement.

Mr. Joe Byrne, Technical Consultant for Harvey Aluminum, said that for the past several years Harvey Aluminum has had a program of settlement with fruit growers for any damage that the fruit growers believed was caused by fluorides; that Harvey Aluminum had settled claims on apricots, peaches and prunes; however, no claims for damage to the cherry crop have ever been presented.

Mr. Sam Speerstra, attorney for Harvey Aluminum, stated that a suit has been pending for some time in Federal court which involves about 24 members of the Wasco County Fruit and Produce League. They expect the suit will be terminated and many of the problems mentioned by Mr. Bailey can then be solved.

Mr. Speerstra stated that about a year ago Harvey Aluminum filed a motion of dismissal of the show-cause hearing in this proceeding; that Harvey Aluminum recognized there was a continuing responsibility to abate pollution; and that Harvey Aluminum has spent hundreds of thousands of dollars in research, testing and installing the control installations. Mr. Speerstra further stated that all of the equipment has been installed, tests have been taken, and that Harvey Aluminum has reached the point where this proceeding should be dismissed. Mr. Speerstra emphasized that he did not think it was necessary for this proceeding to go on further, and that with the permission of the Authority, Harvey Aluminum at this time would request the Authority for permission to file a motion to dismiss this show-cause proceeding. Mr. Speerstra stated that Harvey Aluminum would appreciate some expression from the Authority that they be permitted to file such a motion.

In the discussion that followed Mr. Bailey questioned the desirability of further expansion at Harvey Aluminum at The Dalles in view of the fact that present roof monitor controls reduce fluorides only 50%. If plant capacity was doubled, the current problem would not be solved.

Mr. Wendel asked if expansion of the plant was contemplated in view of the surplus of aluminum at the present time.

Mr. Byrne stated that Harvey Aluminum has recently opened a plant in Michigan and are constructing a second plant in Kentucky, and that these two plants will use all the aluminum that The Dalles plant can manufacture. He explained that Harvey Aluminum will have to buy aluminum for their own use unless the production facilities are expanded.

Mr. Wendel asked Mr. Tooze what additional actions the Wasco County Fruit and Produce League would like the Authority to consider at this time.

Mr. Tooze replied that the League was glad to learn of the recent progress in the completion and testing of the roof monitor controls. He stated that the reduction in the air fluoride content was encouraging but additional measurements were needed to reflect other seasonal weather conditions. He stated further that the League did not agree that the show-cause hearing should be concluded at this time, since the real test of the fluoride reduction would come from the analyses of foliage samples for fluoride content and the removal of injurious effects to the fruit crops.

Mr. Bailey stated that the evaluation of the fluoride removal must be continued to assure that the systems are being operated satisfactorily. He pointed out that some of the fruit growers had suffered losses for several years and that the losses from the fluoride injury must be stopped or they will be forced out of production.

Mr. Harms said that in his opinion the procedure outlined by the staff exactly meets what Mr. Bailey was suggesting, and that he did not think the Sanitary Authority would be fulfilling its duty if it dismissed the show-cause proceedings at this time.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the recommendations of the staff be approved, and that the show-cause public hearing proceedings be continued.

IAA357

ST. JOHNS MOTOR EXPRESS COMPANY - Portland

The Chairman asked Mr. Denman to advise the Authority members on the status of the public hearing concerning air pollution discharged by the St. Johns Motor Express Company's refuse disposal site.

Mr. Denman said the proposed order stating that the St. Johns Motor Express Company, its agents, and representatives cease, desist and abate immediately the open burning of refuse, was sent to Mr. Homer Allen, Attorney for St. Johns Motor Express Company. Mr. Allen was present at the meeting to submit objections to this proposed order as follows:

BEFORE THE SANITARY AUTHORITY  
of the  
STATE OF OREGON

In the matter of St. John's Motor )	
Express Company, a corporation, )	OBJECTIONS TO PROPOSED ORDER
concerning Air Pollution in )	
Multnomah County, State of Oregon )	

Comes now the St. John's Motor Express Company, a corporation, by and through its president, Louis F. Larsen and makes the following objections to the proposed Order of the State Sanitary Authority of the State of Oregon entered in the above-entitled matter on the 21st day of December, 1962:

I

The Sanitary Authority of the State of Oregon is an administrative body created, existing, and operating under and by virtue of Oregon Revised Statutes, Chapter 449.

II

That, ORS 449.815 (2) provides as follows:

"In case of failure by conference, conciliation and persuasion to correct or remedy any source or any cause of air pollution or air contamination which resulted in a violation of any rule, regulation or order of the Sanitary Authority, the Authority shall have cause to have issued and served upon the person complained against, a written notice, together with a copy of the complaint made by it or a copy of the complaint made to it, which shall specify the provisions of the rule, regulation or order of which such person is said to be in violation and a statement of the manner in and the extent to which such person is said to violate it, and shall require the person so complained against to answer the charges of such Complaint at a public hearing before the Authority at a time not less than fifteen days after the date of notice."

III

The Oregon Administrative Rules, section 31-047 promulgated by the State Sanitary Authority provides as follows:

(1) In case of failure by conference, conciliation and persuasion to correct or remedy any source or any cause of air pollution or air contamination which has resulted in a violation of any rule, regulation or order of the Sanitary Authority, the agency may institute a hearing by written notice issued and served upon the person complained against.

## (2) Contents of Notice:

The notice shall be in writing signed by the Chairman and attested by the Secretary or his assistant, and shall contain:

(a) A summary of the Complaint made by or to the agency; or in the alternative a copy of the Complaint shall be attached to the notice.

(b) Specify the provisions of the Statute or Rule, Regulation or Order of which the respondent is said to be in violation.

(c) A statement of the manner in and the extent to which such person is said to violate the Statute or Rule, Regulation or Order ....)

## IV

It will be noted that the Sanitary Authority has seen fit to eliminate from its procedural requirements that which was included in the Statutory requirements, namely the service of a Complaint in order to institute proceedings; and this respondent objects to the Order hereinabove mentioned on the ground that no copy of the Complaint has ever been served upon St. John's Motor Express or any of its officers, agents, operators or attorneys.

It will be further noted that both the Statutory requirements and the Administrative Rules require a statement in the Complaint, or in the case of the Administrative Rules, in the notice as to the extent to which the person accused is said to violate a rule or regulation of the commission, yet in the instant case no allegation was contained in the notice served upon St. John's Motor Express Company as to the extent to which St. John's Motor Express Company was alleged to have violated the rules of the Sanitary Authority.

It will be further noted that the OAR 31-047 (2) (A) requires a summary or a copy of the Complaint to be included in the notice; this was not done in the instant case.

## V

This entire proceeding has been directed against St. John's Motor Express Company, a corporation; however, there has never been any showing nor can there ever be that St. John's Motor Express Company, a corporation, owned or ever owned the property in question in this matter; or that St. John's Motor Express Company has ever had or has now any control over the property with which we are here concerned. Your Petitioner therefore, objects to the proposed Order mentioned hereinabove for the reason that there has never been any showing that the St. John's Motor Express Company its officers, agents or employees have at any time violated any rule or regulation of the State Sanitary Authority of the State of Oregon.

## VI

ORS 449.785 enumerates the factors to be taken into account in fixing standards of quality and purity of air and requires establishment of standards for any order of the Sanitary Authority to have validity. The Oregon Administrative Rules promulgated by the State Sanitary Authority, sections 21-001 through 21-031 sets out the standards fixed by the Authority for carrying out the policy and purpose of the laws of the State of Oregon pertaining to air pollution.

There is no showing in the present case that the factors enumerated in ORS 449.785 were observed in the present instance nor has there been any showing that the standards set out in the Oregon Administrative Rules, promulgated by the State Sanitary Authority, sections 21-011 through 21-031 were not met.

IAA357

On the contrary it was admitted at the hearing conducted on this matter that the factors enumerated in ORS 449.785 were ignored in the present instance and it was further admitted that no tests were made to ascertain whether the standards set out by Oregon Administrative Rules, section 21-011 through 21-031 were met or not.

As a matter of fact, the only showing that there has been any violation of a rule or regulation of the State Sanitary Authority has been the fact that evidence was produced to show open burning.

#### VII

Oregon Administrative Rules promulgated by State Sanitary Authority section 21-006 subsection (19) states as follows:

"Open burning means burning of combustible material wherein the products of combustion are admitted into the open air not directed through a stack or chimney." And 22-011 provides as follows

("Open burning at dumps prohibited. (1) The open burning of refuse and liquid wastes is hereby prohibited after January 1, 1960, at any location that is less than:

(a) Six miles from the municipal boundary of any city of more than 45,000 population, or

(b) Three miles from the municipal boundaries of any city of more than 10,000 population but less than 45,000 population ....")

The rules or regulations laid down in OAR 22-011 and 21-006 quoted above are unreasonable, arbitrary and capricious for the following reasons:

1. The same fire emitting the same contaminants becomes permissible when directed through a stack.

2. An arbitrary six miles limitation is placed upon "open burning" with no consideration of factors enumerated in ORS 449.785 for fixing standards for carrying out the policy and purposes of the law relating to air pollution or the standards set out in OAR 21-111 through 21-031.

#### VIII

ORS 449.775 (4) specifically excepts from the operation of the air pollution laws of the State of Oregon "Land clearing and/or land grading operations" as does OAR 22-020 (4).

The evidence in the instant case discloses that the operation herein complained of clearly falls within that exception; although it is contended by the Authority that OAR 21-006 (14) and (15) nullify the exception in the instant case.

It is the contention of respondent herein that the Sanitary Authority has no power to define the terms used by the legislature in setting up the air pollution laws of the State of Oregon.

It is further contended that the definition adopted by the Sanitary Authority for "land clearing and land grading" is unreasonable, arbitrary and capricious.

It is further contended that the definition adopted by the Sanitary Authority for "land grading and land clearing" attempts through Administrative fiat to reverse the Supreme Court of the State of Oregon which declared in Craig Vs. Crystal Realty Company 89 OR 25 that the term "Land Clearing" must have different significations in various localities of the State such as timber cutting and removal in one area, but in another area properly include

plowing---so here, it is respondents contention that "Land Clearing and Land Grading" also includes removal of and brush and filling to clear a swamp and prepare the site for industrial development.

## IX

ORS 449.765 declares the policy of the State of Oregon on air pollution to be as follows:

"In the interest of the public health and welfare of the people, it is declared to be the policy of the State of Oregon to maintain such a reasonable degree of purity of the air resources of the State to the end that the least possible injury should be done to human, plant or animal life or to property and to maintain public enjoyment of the State's natural resources and consistent with the economic and industrial well being of the State....)

ORS 449.770 declares the purpose behind the air pollution laws of the State of Oregon to be as follows:

"It is the purpose of ORS 449.760 to 449.830 to safeguard the air resources of the State by controlling or abating air pollution which exists on August 9, 1961; and preventing new air pollution, under a program which shall be consistent with the declaration of policy above stated and with ORS 449.760 to 449.830."

Respondent further objects to the Proposed Order entered herein for the reason that the evidence produced by the Sanitary Authority failed to show any conduct on the part of respondent which transgressed the policy and purposes of the State of Oregon in regard to air pollution, as set out in ORS 449.765 and ORS 449.770. For example, there has been no showing of any injury to human, plant, or animal life or to property; or that there has been any injury to the public enjoyment of the State's resources.

## X

To summarize, respondent's objections to the proposed order of the State Sanitary Authority entered herein on the 21st day of December, 1962, are as follows:

1. The procedural requirements of ORS 449.815 (2) have not been met.
2. The procedural requirements of OAR 31-047 have not been met.
3. The Sanitary Authority is without power to change the procedural requirements of the Statute.
4. (a) St. John's Motor Express Company, Incorporated, was not a proper party to this proceeding since it does not own nor have control of the property affected by this proceeding, nor has it ever had such ownership or control.  
(b) Nor has St. John's Motor Express Company ever had control of the operation complained of in this proceeding.
5. There has been no showing in this proceeding that St. John's Motor Express Company has violated any statute, rule or regulation of the State of Oregon or any of its agencies.

IAA357

6. The Sanitary Authority has failed to show that factors fixed by Statute to be used in fixing standards for maintaining purity of air have been considered.

7. There has been no showing that the standards fixed by the State Sanitary Authority have not been met.

8. The rules laid down in OAR 21-006 (19) and 22-011 are unreasonable, arbitrary and capricious.

9. The operation complained of here comes within the specific exception contained in ORS 449.775 (4).

10. The State Sanitary Authority has no power to define the terms used by the legislature in setting up the Oregon law on air pollution.

11. The definition of "Land Clearing and Land Grading" adopted by the State Sanitary Authority is unreasonable, arbitrary and capricious.

12. The definition of "Land Clearing and Land Grading" adopted by the State Sanitary Authority is an Administrative attempt to overrule the definition adopted by the Supreme Court of the State of Oregon.

WHEREFORE, respondent prays that an Order be entered herein dismissing this entire proceeding.

/s/ Louis F. Larsen, Pres.  
St. John's Motor Express Company, a  
corporation

Attorney for St. John's Motor Express Company  
Homer L. Allen  
292 1/2 N. Lombard Street  
Portland 17, Oregon  
BU 5-4523

Mr. Denman stated that a notice of public hearing was sent to St. Johns Motor Express Company and that the dump as it exists is a dump within the definition recognized by the Sanitary Authority, and that it was operating in such a manner as to become a nuisance. Mr. Denman further stated that a copy of the engineer's report setting forth findings of the staff based on inspection, was included with the hearing notice, and at the time of the hearing a copy of the engineer's report was introduced into evidence upon stipulation.

Mr. Denman stated that open burning of refuse from land grading and land clearing that is burned on site is excepted from the air pollution statute, whereas the material that is hauled into a dump from another area and burned in the open is prohibited by the regulations of the Authority.

Mr. Harms requested that when the transcript on the above had been received from the court reporter and distributed to members of the Authority, that the members also be given a copy of the objections as set forth by Mr. Allen.

It was MOVED by Mr. Harms, seconded by Mr. Amacher, and carried that the objections be filed.

ACME AUTO WRECKING COMPANY - Portland

Mr. Denman stated that this is an air pollution matter concerning the open burning of auto bodies. In January, 1960, a letter had been written to the Multnomah County Planning Commission by the Authority recommending that the above named concern be denied a permit to expand the auto wrecking operations, since the air pollution nuisance conditions had not been abated. Several visits have been made to the site by staff members and on several occasions there was evidence of burning of car bodies.

On September 18, 1962, a letter was sent to Mr. Rutherford, owner of the Acme Auto Wrecking Company, stating that the Authority at its meeting on September 13, 1962, had authorized that a public hearing be held if the open burning at his location was not abated by October 1, 1962. Notification was requested from the wrecking company by September 28, 1962, but no reply was received.

Mr. Denman reported that a deposition was obtained from Lowell Ring on December 27, 1962, to perpetuate his testimony and at that time Mr. R.M. Rutherford agreed to a stipulated order to stop the open burning at the Acme Wrecking Yard.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the Chairman of the Authority be authorized to execute the stipulated order on behalf of the Authority and that the order be entered.

IAA357

B & D PAVING COMPANY - Hood River

Mr. R.E. Hatchard stated that at the September 13, 1962 meeting of the Sanitary Authority, authorization was granted for a public hearing in the Hood River area on the matter of air pollution originating from B & D Paving Company plant located in that area. The owner of B & D Paving Company was notified, and he replied that he planned to move that part of his plant to a remote location where there would be no air pollution problem.

Members of the staff surveyed the new plot and found that Mr. E. Berg, owner of the B & D Paving Company, would have air pollution problems at the new location, and Mr. Berg was so advised.

It was MOVED by Mr. Amacher, seconded by Mr. Wheeler, and carried that a hearing be scheduled before a hearings officer, since there has been no progress toward control of air pollution caused by the B & D Paving Company.

The meeting was adjourned for lunch at 12:00 noon and resumed again at 2:10 p.m.

REQUESTS - Marion County Court (For delegation of Authority to grant variances for open burning)

The following is a copy of a letter received from the Marion County Court:

The Marion County Court herewith respectfully requests the State Sanitary Authority to delegate to the Court authority to grant variances to the operators of all garbage and refuse disposal sites to permit burning of specified substances when, in the opinion of the Court, such burning is desirable and necessary for the economic good of the community, and within the terms of Chapter 426, Oregon Laws 1961.

The reasoning justifying this request is set forth below:

1. On 21 May 1962 the Marion County Court adopted, in accordance with provisions, Section 4, Chapter 426, O.L. 1961, of garbage and refuse disposal sites in the County. A copy of the order is enclosed herewith - (Enclosure A).
2. In accordance with terms of this order, permits have been issued to the operators of eight sites, including the two sites owned by Marion County but operated by private parties under lease.
3. Only four of these sites are within the 6-mile limit of the City of Salem. One of these is the County-owned site near Macleay, operated by the Silverton Sanitary Service.
4. Section 5, Chapter 426, O.L. 1961, exempts from control of the air pollution law (1) agricultural operations, (2) machinery for agricultural operations, and (3) operations for land clearing.

5. As is well known, the Marion County economy is predominantly agricultural. Within the 6-mile zone, around the City of Salem, there are approximately 550 farms as defined by the U.S. Bureau of Census. The Census Bureau's definition is "a farm is a place operated as a unit of 10 or more acres from which agricultural sales total \$50 or more or a place less than 10 acres where the agricultural products total \$250 or more." These in the Salem area include specialized agricultural operations, especially fruit orchards, cane berry fields, various producing ornamental trees and shrubs and various other kinds of produce which requires pruning, cutting and the consequent disposal of debris seasonally, as well as occasional destruction of infected plants by burning.

6. In addition to this agricultural activity, there are several sectors within the 6-mile zone that come within the exemption for land clearing operations, and which require burning to dispose of the brush and debris resulting therefrom.

7. Due to the growth of the County, there also is considerable activity in the razing of older houses and buildings, to make way for new structures of various uses, which also requires burning to dispose of the materials from the razed structures which cannot be salvaged. This should be classed as land clearing.

8. Virtually all of the area within the 6-mile zone is in one of the several Rural Fire Protection Districts of the County. The intermingling of areas having as much building congestion as exists within the city with open fields and the specialized agricultural activities outlined above has made it necessary to exercise rigid control over open burning to prevent the spread of fire and it is the practice in all Fire Districts to require, under authority of State law governing the Fire Marshal's office, permits for burning. In many areas, open burning of the magnitude required by the agricultural or land clearing operation are prohibited because of the fire hazard to the surrounding areas.

9. Paragraph 2.20 of the Marion County Court order recognizes the situation and requires clearance by the Chief of the appropriate Rural Fire Protection District that the site has ample safe-guards regarding fire hazards. Consequently the sites are "safe" for burning. It should be realized that this is primarily applicable to the sites within the 6-mile zone, where the fire hazard from open burning of the disposal sites is unusually high.

10. Section 7, Chapter 426, O.L. 1961, states that in making its regulations and in granting variances, the State Sanitary Authority shall, among other factors, take into account (a) the character of the contaminates, (b) the physical situation and topography, (c) prevailing winds, (d) temperature and general weather conditions and (e) the economic and industrial development of the area.

11. A study was made of the prevailing winds relative to the County-owned disposal site near Macleay in September 1961, using data prepared by the U.S. Weather Bureau Station at McNary Field, Salem. One of the conclusions is that the Salem area is adversely affected by burning at the Macleay site approximately 5.8 percent of the time in any given year, or only 512 hours out of a total of 8,760 hours in the year. A copy of the summary of the wind analysis is enclosed herewith. (Enclosure B).

12. The Marion County Court is not only aware of the problems confronting the State Sanitary Authority relative to control of air pollution, but is in full accord with the main objective. The Court does feel that with its detailed knowledge and close contact with all phases of the problem within the County, it can be of material assistance in working out solutions that will be for the best interests of all concerned, including, of course, the public. The frequency of sessions of the Court make it possible to take prompt action in such matters.

IAA357

13. In conformance with this belief, the Court is anxious that there be cooperative effort between it and the Authority, as exemplified by the prompt acquiescence of the Authority's staff, to the Court's proposal to adopt a general variance to permit burning of storm debris caused by Typhoon Frieda. This general variance was an emergency measure, authorizing burning of debris for a 30 day period, which has long since expired.

14. In requesting the Authority to delegate to the Court the authority to grant variances as authorized by Section 15(a) Chapter 426, O.L. 1961, it is the intent of the Court that

a. Variances granted under the delegation be confined to disposal of agricultural refuse and as the leaf, woody and root parts of plants, shrubs, and trees, of wooden material and debris from construction, or razing projects, at such times as weather and wind conditions are favorable, within the purposes of Chapter 426, O.L. 1961.

b. There will be no variance to permit burning of oils, tires, hydrocarbon or other materials producing toxic or noxious fumes or smoke.

c. To utilize to the fullest extent possible the staff facilities of the Authority in administration of the air pollution control provisions of Chapter 426, O.L. 1961, and the Regulations of the Authority.

15. In view of the above, the Marion County Court formally requests the State Sanitary Authority to delegate to the Court authority to grant variances as outlined above.

16. This has been reviewed and approved by the County Health Officer and his staff of Sanitarians.

Respectfully,

/s/ Rex Hartley  
County Judge

/s/ Henry Ahrens  
County Commissioner

/s/ Pat McCarthy  
County Commissioner

Mr. Howard Smith reported to the Authority that open burning of refuse in Marion County, especially in and around the Salem area, was a source of complaint to the Sanitary Authority during the early part of 1960. Staff investigations were carried out, and in conferences with the Marion County Health Department and Marion County Court, the staff requested that the County operated dump off Macleay road cease to open burn refuse by February 9, 1961. A modified land-fill has been in operation at this site since July of 1961.

The privately owned and operated site known as the Salem Sanitary Service dump was ordered to cease open burning on June 28, 1961. When Salem Sanitary Service continued to burn, Circuit Judge George R. Duncan, granted a Temporary Restraining Order July 28, 1961, and open burning ceased.

Since these events, the Authority has granted temporary variances to Salem Sanitary Service Company to open burn tree trimmings and waste lumber. These variances have been extended twice for six month periods to allow the company to select a site more remote for open burning of this material. No progress on procurement of a new site or alternate method of disposal has been reported to date.

The members of the Sanitary Authority notified the Salem Sanitary Service Company and the Oregon State Penitentiary that no extension of the variances would be granted after February 9, 1963.

The program for the control of air pollution from open burning has been undertaken in a progressive manner, and the staff feels that this has been attained in most instances of open burning of refuse near our population centers of Oregon.

The staff recommends that Marion County Court's request be denied.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox, and carried that the recommendations of the staff be followed and the request to grant variances for open burning be denied.

#### WASHINGTON COUNTY COURT

The following is a copy of a letter received from the Washington County Court:

Washington County has complied with the stipulations of the State Sanitary Authority relating to closure of the County's burning dump. A sanitary landfill has been placed in operation.

Because we are aware of other violations whose abatement is delayed by the plea of hardship, we should like to review the background and the difficulties surrounding this compliance.

An insufficient tax base, which County voters have consistently refused to increase since 1956, has permitted us to budget only \$20,000 for the one emergency fund permitted by law. That budget presently stands at \$18,967.20, of which \$14,500 will be required for purchase of the tractor necessary for the landfill operation. That, with another required expenditure, leaves Washington County with only \$1700 emergency fund for the balance of the year. We believe you can agree that this is dangerously low for a County of some 98,000 people.

IAA357

Our point is not in objecting to the rules of the State Sanitary Authority since we believe they are in the public interest. We do wish, however, to express the hope that your authority will be brought equally and clearly to the attention of all other counties, communities, and industries which may be contributing to pollution of Oregon's natural environment.

We commend the Authority on its progress in pollution control and encourage your continued and firm insistence on state-wide compliance.

Yours very sincerely,

WASHINGTON COUNTY COURT

/s/ Joe A. Jaross  
Judge

/s/ Barbara A. Wilcox  
Commissioner

/s/ Clayton Nyberg  
Commissioner

It was MOVED by Mr. Meierjurgan, seconded by Mr. Amacher, and carried that the Sanitary Authority adopt a resolution expressing its appreciation to the Washington County Court.

R E S O L U T I O N

WHEREAS, the protection of air resources is important to the people and the communities in Washington County and in the State of Oregon; and

WHEREAS, there is a continuing need for strong support of programs designed to prevent and control sources of Air Pollution; and

WHEREAS, the Washington County Court has recognized its leadership role by providing an excellent example to the communities and other counties in the State of Oregon in controlling its sources of air pollution in the operation of a solid waste disposal; and

WHEREAS, this control effort required the expenditure of the County's limited emergency funds;

NOW THEREFORE BE IT RESOLVED, that the Sanitary Authority of the State of Oregon congratulate and commend the Washington County Court for its forthright leadership in the Control of Air Pollution in the Solid Waste Disposal Operations in Washington County, Oregon; and

BE IT FURTHER RESOLVED, that a copy of this resolution be included in the minutes of the Sanitary Authority, and that a copy be forwarded to the Washington County Court.

Adopted by the Sanitary Authority of the State of Oregon this 4th day of January, 1963.

Harold F. Wendel —  
Chairman

EDWARDS BROS. SAWMILL - Albany

IAA357

Mr. Harold W. Merryman, District Sanitary Engineer from Eugene, stated that in November, 1961, the air pollution problem from the wood waste burner of the Edward Bros. Sawmill was referred to the staff. In February, 1962, a fallout station was established about 0.4 of a mile south of the mill and was operated until August 1, 1962. During this period the samples of fallout collected did not show to be excessive. On August 2, 1962, the fallout station was relocated approximately 0.2 of a mile south of the above sawmill and was operated in this location until October 31. The fallout samples collected during August and September were found to exceed the allowable rate and is in violation of OAR-334-21-016. On August 13, 1962, the company was informed by letter that the mill was operating in violation of Chapter 449.765, Oregon Revised Statutes.

During the Authority meeting on September 13, 1962, the members instructed that the company be notified that if satisfactory progress was not made by the company toward controlling the air pollution discharged from the mill burner by October 1, 1962, a public hearing would be scheduled. The company was so advised in a letter dated September 19, 1962; however, no changes have been made in the waste wood burner to control the air pollution.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Wheeler, and carried that a public hearing be scheduled in Albany before a hearings officer in accordance with the authorization granted by the Sanitary Authority members during the September 13, 1962 meeting.

MC CLURE AUTO WRECKING COMPANY - Portland

Mr. Denman stated that a complaint had been received by the staff of the Sanitary Authority regarding a smoke and odor nuisance from open burning at the McClure Auto Wrecking Company. On April 5, 1962, an inspection was made by members of the Air Quality Staff and found the complaint to be true.

Verbal notice was given to Mr. McClure that this practice was in violation of Oregon Revised Statutes, Chapter 449 and Oregon Administrative Rules, Chapter 334, Section 22-011. On reinspections of the site it was found that the open burning of refuse was still being carried on.

During the September 13, 1962 Sanitary Authority meeting, the Authority authorized a public hearing by a hearings officer to be held if this matter of open burning did not cease by October 1, 1962. A letter to this effect was mailed to Mr. McClure on September 19, 1962.

Mr. Denman reported that a public hearing was held on November 28, 1962, before Hearings Officer Marion B. Lamb, and that W.C. McClure or his representative did not appear. The Authority staff presented evidence concerning the open burning of refuse at the McClure site near 8611 N.E. Union Avenue.

Mr. Denman stated that the transcript had not been received from the court reporter; however, in a default hearing a proposed order would not have to be submitted.

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher, and carried that an order be entered that McClure Auto Wrecking Company cease and desist the open burning of refuse at the particular dump in question.

SARRETT SHINGLE COMPANY - Portland

Mr. Denman stated that the transcript of the hearing on the above had been circulated to members of the Authority and had been reviewed by each member. The hearings officer recommended that the Sanitary Authority consider an order of abatement to terminate burning by April 30, 1963. Mr. Denman said the majority of the members of the Authority should decide whether they feel an order should be entered and, if so, what should be contained in the order.

It was MOVED by Mr. Amacher, seconded by Dr. Wilcox, and carried that if the above nuisance is not stopped by March 15, 1963, an order be entered that Sarrett Shingle Company cease and desist from open burning of refuse at the particular dump in question.

DULIEN STEEL PRODUCTS, INC. - Portland

Mr. Denman stated that within the last few days he had been notified by Mr. Jack Dunn, Attorney for Dulien Steel Products, Inc., that they had shut down the railroad car burning operation in November, and that during the October 12 windstorm two sheds were damaged which were burned later. Mr. Dunn stated that the operation was still shut down. Mr. Dulien had signed a stipulated order that there would be no air pollution from their operations after November 20, 1962.

Mr. Denman stated that it was the recommendation of the staff that in the event there was any subsequent burning in violation of the order, that the Authority authorize a court action to enforce the order.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried that the Authority's legal counsel seek an injunction in the event that another violation of the order occurred at the Dulien Steel Products, Inc.

CHENEY STUDS COMPANY - Central Point

In the absence of Mr. T.M. Gerow, Medford District Engineer, Mr. R.E. Hatchard gave the report regarding air pollution from the waste burner at Cheney Studs Company in Central Point. Mr. Hatchard asked that authorization be granted for scheduling a hearing before a hearings officer in Jackson County if the company does not control the discharge of cinders and flyash by March 15, 1963.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the recommendations of the staff be adopted, and if the problem is not corrected by March 15, 1963, that a public hearing before a hearings officer be held in that area.

IDEAL CEMENT COMPANY - Gold Hill

Mr. Ronald Ott stated that the staff activities regarding the investigations of lime dust deposition originating from the Ideal Cement Company located adjacent to Gold Hill, Oregon, are summarized as follows:

IAA357

1. In a letter dated April 7, 1959, the City Council of Gold Hill requested the Authority's assistance to reduce the dust deposition in Gold Hill which allegedly originated from the Ideal Cement Company's mill.
2. In an Authority letter dated September 21, 1959, the Ideal Cement Company was requested to control the emission of dust originating at their plant. A letter dated January 15, 1960, urged completion of the needed improvements to control the dust emissions released from the plant.
3. By early 1960, improvements by the Ideal Cement Company included certain maintenance changes and the installation of new bulk cement loading facilities equipped with a new baghouse dust collector.
4. In early 1961, the Jackson County Court requested the State Board of Health District Engineer to recognize the continuing air pollution problem originating at the Ideal Cement Company. In the Spring of 1961, three sample stations were established in Gold Hill.
5. In an Authority letter dated October 2, 1961, the Ideal Cement Company was notified that the dust deposition originating at their plant was in excess of that allowed by the Authority's regulations. This letter included the sample data that showed the violation of the regulations.
6. In a letter dated December 8, 1961, the Authority staff encouraged additional actions by the company to provide additional dust control facilities to be in conformance with Authority statutes and regulations.
7. Based upon information obtained during a comprehensive plant survey, several recommendations regarding the control of excessive dust emissions were sent to the company in a letter dated March 28, 1962. In a letter dated May 2, 1962, Mr. A.W. Hooton, Pacific Regional Production Manager for Ideal Cement Company replied that definite control measures would be taken and agreed to periodic stack sample tests.

- IAA359
8. The District Engineer replied to Mr. Hooton's letter and requested the company to submit monthly progress reports, make at least 4-hour duration stack sample tests, and install the control equipment on the No. 1 and No. 2 Compartment Ball Mills and Finish Mill Elevator in the near future.
  9. Mr. A.W. Hooton's letter dated June 14, 1962, stated that a stack sample report would be forthcoming. While the delivery date for the dust control equipment was mentioned, no specific dates were submitted for the installation of the equipment.
  10. Stack sample reports dated March 29 and July 2, 1962, by the company were received by the District Office on July 10, 1962. The tests were not run for the 4-hour time duration that had been previously requested.
  11. Monthly progress reports have not been submitted by the company. Conferences between the Authority staff and company representatives indicated that the company was not making satisfactory progress in the control of dust emissions originating in the plant (including the handling of agricultural lime.)
  12. The maximum lime dust content in 12 particle fallout samples collected from three stations in Gold Hill from July 3 to November 2, 1962, was 76 tons per square mile per month. The average for this period was 30 tons per square mile per month. The Authority's regulations (Chapter 334, Division 2, 21-025, Oregon Administrative Rules) permit one ton per square mile per month of lime dust plus the normal background value.

The staff recommended that the members of the Sanitary Authority authorize the Secretary to arrange a public hearing in Jackson County before a hearings officer if satisfactory progress is not made toward the control of the excessive dust emissions from the plant area by February 15, 1963.

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips and carried that the staff recommendations be accepted if satisfactory progress is not made by February 15, 1963.

CATHAY ROAD DUMP - Multnomah County

Mr. Howard G. Smith stated that this is an air pollution problem created by the open burning of garbage and refuse by Mr. M.C. Chew, Route 1, Box 51, Gresham, Oregon, at a dump located off Cathay Road. An inspection was made on September 24, 1962, by Mr. Harding Chinn, Sanitarian, Multnomah County Health Department and Mr. Howard G. Smith, Air Quality Control staff. Mr. Chew was contacted and given verbal notice that open burning of refuse must cease and proper compaction and cover of refuse material would be necessary to eliminate the odors of decaying garbage and refuse.

On October 17, 1962, a reinspection of the Chew dump site was made by members of the staff and the open burning of refuse was still occurring at the dump site.

It was recommended that members of the Authority authorize a public hearing and appoint a hearings officer in this matter if Multnomah County does not bring about abatement.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Wheeler and carried that the staff recommendations be adopted in this matter.

WATER POLLUTION CONTROL -

RESOLUTION COMMENDING PIONEER BROADCASTING CORP.

The following resolution was read by Mr. McPhillips:

WHEREAS, the protection of water and air resources is important to the people and the business community of the State of Oregon; and

WHEREAS, there is need for strong support of programs designed to control sources of air and water pollution; and

WHEREAS, support for pollution control activities can only be gained when the people and the industrial leaders of the state have been accurately informed of what has been accomplished and what problems remain to be solved; and

WHEREAS, the documentary production "Pollution in Paradise" developed by The Pioneer Broadcasting Company, KGW-TV of Portland, presents the problem of air and water pollution control in Oregon in a fair and unbiased manner; and

WHEREAS, the needs for water and air pollution control have been forcefully brought to public attention through the presentation of this documentary by KGW-TV;

NOW THEREFORE BE IT RESOLVED, that the Sanitary Authority of the State of Oregon congratulate and commend The Pioneer Broadcasting Company and television station KGW-TV for its forthright presentation of facts relating to water and air pollution problems to the people of the state; and

BE IT FURTHER RESOLVED, that a copy of this resolution be included in the minutes of the Sanitary Authority, and that a copy be forwarded to The Pioneer Broadcasting Company and television station KGW-TV.

Adopted by the Sanitary Authority of the State of Oregon this 4th day of January, 1963.

Harold F. Wendel  
Chairman

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox, and carried that a copy of the resolution be included in the minutes of the 94th meeting of the Sanitary Authority and a copy be forwarded to KGW-TV and the Pioneer Broadcasting Company.

#### CITY OF SHERWOOD

Mr. Benson gave a resume of the history of this case including up-to-date information. He stated that at the 83rd meeting of the Authority on January 26, 1961, a hearing was held and an order issued requiring that engineering plans and specifications be submitted by September 1, 1961, and construction of approved facilities be completed by September 1, 1962. At the 88th meeting held on September 20, 1961, the first part of the order had not been complied with by the city. The tannery had employed an engineer at that time to study its pretreatment needs. Action by the Authority was, therefore, postponed.

At the Authority meeting on January 11, 1962, it was reported that the preliminary engineering report by the tannery would be completed by the following June. The city was directed to report on its status by July 1, 1962.

IAA357

He stated further that Mr. Fred Anderson, city attorney, had appeared at the September 13, 1962 meeting, and asked that the city be given an extension of time until January 1, 1963 to submit plans. His request was approved. Mr. Benson concluded his summary by reporting that the plans and specifications have not yet been submitted by the city although pilot plant studies are now completed.

Mr. Anderson who was present then stated there was still a problem from the standpoint as to what was required. When the city of Sherwood built its present plant more than 10 years ago, it was thought its problem would be easily overcome. Since that time it has been proved that the tannery cannot be taken care of in the city system without pretreatment. This is the only tannery of its kind in the West.

The industry has gone as far as can be expected, employing engineers and making pilot plant studies. Additional time is being requested to analyze the results of pilot plant studies and to determine the quality of waste and methods of treatment. The problem has to be shared by the industry because the nature of the effluent as projected cannot be handled entirely by the city system.

It will be necessary for the city to request a sizable sum of money from a federal grant and have an agreement with the tannery formalized in writing. Only then can the city have final engineering plans and specifications prepared. Mr. Anderson requested the Authority grant an additional year to enable the city to comply with the Authority's requirements even though some of the things will be done in 1963.

He stated that tannery wastes contain toxic elements that poison the sewage treatment plant system. Pretreatment at the tannery is necessary prior to discharge to the plant. Basically, lime and sulfur constituents in the effluent cause the problem. The sewage treatment plant needs to be enlarged.

He said the preliminary engineering report or information prepared by the city's consultant had not been made available to the city until the day preceding this meeting, and, therefore, there had not yet been an opportunity to decide on a course of action.

IAA357

Mr. James R. Boydston of Stevens and Thompson Engineers, consultant for the city, stated that the tannery has made some progress in that they have already started construction of a lagoon for pretreatment of their wastes; that even without plant enlargement by the city there will be some improvement because of the steps taken by the tannery; that from the pilot plant studies it was found the city could accept the pretreated waste from the tannery with minor variations at the treatment plant; however, the city plant is not capable of handling this without enlargement; and that consequently there is going to be quite an expenditure for expansion.

Mr. Boydston reported further that the tannery itself will have quite extensive treatment as they will discharge wastes to a small aeration pond and finish in a large pond of about seven acres. Mr. Eugene Marsh, attorney for the tannery, then read a letter addressed to him from Mr. Robert Pailthorp, consulting engineer for the tannery.

Mr. Boydston said preparation of plans and specifications for the city's project might take three or four months and construction might take as much as one year.

In reply to a question by Mr. Wendel, Mr. Spies stated that the staff recommendation is that the city should have financing arranged for and engineering plans done by July 1, 1963, or a complaint should be filed.

It was MOVED by Dr. Wilcox, seconded by Mr. Meierjurgan, and carried that the city of Sherwood submit financial arrangement and engineering plans to the staff by July 1, 1963, or a complaint would be filed.

Mr. Anderson said he was disappointed in Mr. Spies' recommendation, that the city could not do this by July 1. Dr. Wilcox stated it was indicated by Mr. Boydston that plans could be ready by July 1, and the city could apply for a federal grant by that time. After more discussion, the motion carried.

ARROW MEAT COMPANY - Cornelius

A memorandum report prepared by the staff and distributed to the members was reviewed by Mr. Benson and has been made a part of the permanent files in this case.

Mr. Benson said this matter had been referred to the Authority members at their meeting on October 17, 1956. A hearing was authorized and held on February 6, 1959, and an order entered to abate the pollution and to submit plans by May 15, 1959. This deadline was not met and on July 8, 1959, the Authority referred the matter to the attorney general for action. A preliminary court hearing was held on December 2, 1960, and the matter was continued by the stipulation that plans and specifications be prepared and submitted by February 1, 1961. Promises to have the facilities under construction by the fall of 1961 were not kept by the company.

The case was again continued until June 1, 1962. The judge hearing the case was by that time insistent that action be taken to dismiss the case or continue the trial. It was concluded by the Authority's legal counsel at that time that legal action might as well start over again.

Since then the pollution continues at a greater rate than in past years because some of the unacceptable treatment devices have been removed to make room for the new proposed facilities not yet built. Mr. Benson recommended that legal action be resumed in this matter.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox and carried that the legal counsel be instructed to take the necessary steps to file an injunction and to prosecute the case.

EDWARD HINES LUMBER COMPANY - Bates

Mr. Harold Patterson, district engineer, reported that the formerly scheduled hearing in this matter had been postponed and that in the meantime the company had made some effort to acquire land which they proposed to use as a site for a sewage lagoon. In order to obtain this land, it would be necessary to transfer a water right. Mr. Wheeler stated that there should be no difficulty in effecting such a transfer.

Mr. Patterson stated further that information had been received that the company expects to complete the installation of its proposed sewerage project in stages, probably over a two or three year period. He said the staff of the Authority is not in favor of granting this amount of time.

He estimated that installation of a proper system will probably cost around \$60,000 or \$70,000. The company housing is now connected to a common septic tank with discharge on open ground above the school; several others discharge to a stream or ground surface, and a group of 6 or 7 houses discharge directly into a little creek. The school sewage also discharges into a ditch about 800 feet from the John Day River. Mr. Patterson stated that there are about 350 persons and about 110 houses in the community.

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher, and carried that the hearing already authorized be scheduled at Bates.

BIRDS EYE DIVISION, GENERAL FOODS - Woodburn

A memorandum report prepared by the staff and distributed to the members was reviewed by Mr. E.J. Weathersbee, district engineer. This report has been made a part of the permanent files in this case.

In this report it was concluded that the increase in production at the Birds Eye plant in 1962 greatly exceeded the capacity of the company's facilities to treat wastes; that to date the company has submitted no information relating to 1963 production and no plans which indicate that the company will provide sufficient waste treatment capacity to prevent a recurrence of the 1962 pollution problems in the Pudding River.

IAA357

It was MOVED by Mr. Amacher, seconded by Mr. Wheeler, and carried that the Birds Eye Division, General Foods Corporation, Woodburn, Oregon, be cited to appear and show cause, if any exists, why an order should not be entered directing said company to abate the pollution in the Pudding River.

UNITED GROWERS, INC. - Salem

A memorandum report prepared by the staff and distributed to the members was reviewed by E.J. Weathersbee. This report has been made a part of the permanent files in this case.

In his review Mr. Weathersbee stated this was a matter of pollution of the public waters of Pringle Creek in Marion County, Oregon, by the discharge of wastes from the United Growers, Inc., food processing plant. Pringle Creek flows in an easterly direction past the United Growers cannery and Judson Junior High School, then northerly through the Fairview Home area and the southern part of Salem, discharging into the Willamette River near the Columbia River Paper Company. The stream above the cannery is normally dry in the summer. The firm of Cornell, Howland, Hayes and Merryfield was retained in July of 1959, and a report was submitted by them in March, 1960. Several alternative methods of waste disposal were considered and spray irrigation on a minimum of 30 acres of land was selected as the most feasible. This system was approved by the Sanitary Authority on a temporary basis.

The irrigation system was installed and operated with minor difficulties during the 1961 canning season. Improvements were made before 1962 and the system again placed in operation. Wastes were discharged directly into Pringle Creek from the beginning of the canning season until the flow in the creek subsided.

It was concluded that the quantity of land under irrigation during the 1962 season was insufficient to adequately dispose of the wastes from the cannery; the control, observation and operation of the irrigation system during the 1962 season was inadequate, resulting in an increase in the magnitude of the problems experienced; the nature of the soil and ground water return

characteristics of the present irrigation operation seriously limit its future use for waste disposal; and although there has been some effort made by the company to reduce the slime and odor problems in Pringle Creek, it is apparent that this effort has not been adequate since the problem that was present in 1944 still exists.

It was MOVED by Dr. Wilcox, seconded by Mr. Amacher and carried that United Growers, Inc., be cited to appear before a hearings officer to show cause, if any exists, why an order should not be entered directing said company to abate the pollution in Pringle Creek, said hearing to be held in the Salem area.

PHILLIPS BROS. FARM - Marion County

A memorandum report prepared by the staff and distributed to the members was reviewed by Mr. Weathersbee, Portland district engineer. This memorandum has been made a part of the permanent files in this case.

In summarizing the report it was stated that this was a matter of pollution of the public waters of an unnamed stream, tributary to the Little Pudding River, in Marion County, Oregon, by discharge and escape of silage wastes from the Phillips Bros. Farm. This problem was first brought to the attention of the Authority in 1956. The problem has been acknowledged by the owner and correction was promised before 1962; however, on December 19, 1962, an observation was made and the stream below the Phillips Bros. Farm was literally filled with profuse slime growths. The water was discolored and exuded a strong objectionable odor.

It was concluded that gross pollution of a small tributary of the Little Pudding River is being caused, unnecessarily, by silage juices overflowing and seeping from open pit silos and juice ponds at the Phillips Bros. Farm to the detriment of downstream water uses.

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips, and carried that Phillips Bros. be cited to appear before a hearings officer in the Salem area and show cause, if any exists, why an order should not be entered directing them to abate said pollution in the public waters of the state of Oregon.

IAA357

COMMUNITY OF GRAND RONDE

A memorandum report prepared by the staff and distributed to the members was reviewed by E.J. Weathersbee, Portland district engineer. This report has been made a part of the permanent files in this case.

In his review Mr. Weathersbee stated this was a matter of pollution of the public waters of Rock Creek, a tributary of the South Yamhill River, in Polk County, Oregon, by the discharge of inadequately treated sewage from the community of Grand Ronde. The houses and the community water supply and sewerage systems are privately owned by a Mr. Floyd Bunn, Willamina, Oregon. Mr. Bunn purchased the townsite with full knowledge that the sewage treatment facilities were inadequate. These facilities consist of a 4,000 gallon septic tank, the effluent of which is discharged to Rock Creek.

On September 20, 1962, after discussing the matter with Mr. Bunn on September 14, a letter was sent to Mr. Bunn suggesting that he meet with representatives of the school district and of the commercial establishments in Grand Ronde to discuss the problem and consider possibilities for cooperative corrective action. We offered to have a representative attend any such meeting. We also requested that this office be notified by letter of any action taken regarding this matter.

No written answer has been received from Mr. Bunn; however, he has reported verbally that he had met with the school board and had not been able to make any progress toward solving this problem.

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that Mr. Floyd Bunn be cited to appear and show cause, if any exists, why an order should not be entered directing him to abate said pollution in the public waters of Rock Creek in Polk County, Oregon ---

CITY OF NEHALEM

A memorandum report prepared by the staff and distributed to the members was reviewed by Mr. Weathersbee. This report has been made a part of the permanent files of the state of Oregon.

Based on the investigations made by the staff, the following information is presented in the matter of pollution of the public waters of Nehalem Bay in Tillamook County, Oregon, by the discharge of raw sewage from the city of Nehalem.

This city is located on Nehalem Bay near the Pacific Ocean. The 1960 population was 233. Since 1946 sewers have been built to serve the major portion of the city. Sewage is discharged without treatment into the public waters of Nehalem Bay resulting in pollution of these popular fishing waters. The city was ordered by the Sanitary Authority in 1952 to abate pollution of Nehalem Bay by July 1, 1955, but the city pleaded poverty and nothing was done. Today, some seven years later, the city has made essentially no progress toward providing sewage treatment.

It was MOVED by Mr. Wheeler, seconded by Mr. Amacher, and carried that the legal counsel proceed on the findings of fact and order entered in 1952 to require abatement of pollution.

#### CITY OF WHEELER

A memorandum report prepared by the staff and distributed to the members in the matter of pollution of the public waters of Nehalem Bay in Tillamook County, Oregon, by the discharge of raw sewage from the city of Wheeler was reviewed by Mr. Weathersbee.

The city of Wheeler is located on Nehalem Bay near the Pacific Ocean and had a 1960 population of 237. Since 1946, sewers have been built to serve the major portion of the city. Sewage is discharged without treatment into the public waters of Nehalem Bay resulting in significant bacterial pollution of these popular fishing waters.

The city was ordered by the Sanitary Authority in 1952 to abate pollution of Nehalem Bay by July 1, 1955, but the city pleaded poverty and nothing was done. Today, some seven years later, the city has made essentially no progress toward providing sewage treatment.

IAA357

It was MOVED by Mr. Wheeler, seconded by Mr. Amacher, and carried that the legal counsel proceed on the findings of fact and order entered in 1952 to require abatement of pollution.

INPLY CORPORATION - Independence

A memorandum report in the matter of industrial waste disposal by the Inply Corporation in the public waters of the state of Oregon was reviewed by Mr. H.W. Merryman, Eugene district engineer. This report has been made a part of the permanent files in this case.

Mr. Merryman stated that the Inply Corporation operates a plywood mill located just outside of the north boundary of the city of Independence in Polk County, Oregon. It has three glue spreader machines which are operated three shifts per day, five days per week. The mill produces an average of 10,000,000 square feet of plywood per month. The main liquid effluent from this mill is the glue waste which after being pretreated in a settling tank overflows into an area drainageway, thence into the west ditch of Walnut Street which extends southerly from Polk to Picture Streets, thence diagonally in a southeasterly direction across several city blocks and into Ash Creek near Oak Street about 0.5 mile above the confluence of the latter with the Willamette River. Several complaints have been referred to the Sanitary Authority since June, 1960 regarding stream pollution and nuisance conditions caused by the discharge of glue wastes from said corporation. On April 10, 1961, and November 15, 1962, letters were sent to Mr. Roy Foy, General Manager of Inply Corporation, pointing out the necessity for immediate abatement. To date no reply has been received to either letter.

It was MOVED by Mr. Meierjurgan, seconded by Dr. Wilcox, and carried that the company be cited to appear before a hearings officer in the area and show cause, if any exists, why an order should not be entered directing said corporation to abate pollution caused by its wastes in the public waters of the state of Oregon.

WASTE DISPOSAL - RECREATIONAL WATERCRAFT

At the last meeting it was asked whether the Sanitary Authority would have authority to require that marine heads on boats used on recreational waters be sealed. Mr. Denman stated he had examined the statutes and the authority contained therein, and he was of the opinion that the Sanitary Authority does not have the power to require that marine heads be sealed as a condition precedent to allowing the boat on the waters of this State.

He stated that it further appears that the logical and most reasonable place for the control and enforcement of any statutes designed to prevent pollution by sewage from boats would be the State Marine Board, since the Board is the licensing agency for watercraft; therefore, the installation, use or restriction of use could be made a ground for the denial, suspension or revocation of the license for the boat.

Mr. Everts stated that the problem of marine craft polluting Oregon's streams is growing, but the state is handicapped by the lack of efficient and economic equipment which can be installed on recreational watercraft to treat sewage from toilet systems. He noted that the Authority's staff did not have the time nor equipment to work on development of equipment for treatment of wastes from small boats.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried that the staff be directed to explore the problem of sewage disposal for houseboats and pleasure craft with the possibility of seeking a grant for research on this problem.

PROPOSED LEGISLATION

For the purpose of submitting proposed legislation for the consideration of the 1963 Oregon Legislature, the Chairman appointed the following:

Committee on Legislation - B.A. McPhillips, Chairman; H.P. Meierjurgens; John P. Anacher and E.C. Harms.

IAA357

HEARINGS OFFICERS

It was MOVED by Mr. Amacher, seconded by Mr. Wheeler, and carried that Mr. Alfred T. Johnson and Mr. Marion Lamb be designated as hearings officers.

There being no further business, the meeting adjourned at 4:55 p.m.

Respectfully submitted,

*Curtiss M. Everts*  
CURTISS M. EVERTS, SECRETARY  
State Sanitary Authority

## MINUTES OF SPECIAL MEETING

of the

Oregon State Sanitary Authority

February 7, 1963

IAA357

A special meeting of the State Sanitary Authority was called to order by the Chairman at 1:30 p.m., February 7, 1963, in Room 422, State Capitol Building, Salem, Oregon. Present were Harold F. Wendel, Chairman; Herman P. Meierjurgan, E.C. Harms, Jr., B.A. McPhillips, Chris Wheeler and Dr. R.H. Wilcox, members; Curtiss M. Everts, Secretary and Chief Engineer; John Denman, Legal Advisor; Kenneth H. Spies, Deputy State Sanitary Engineer; and Richard E. Hatchard, Assistant Chief Engineer. Also present were Dan P. Allen, Executive Secretary, Committee on Natural Resources; Loren D. Hicks, Legal Counsel for the Governor; and Denis J. Curry, Management Analyst, Department of Finance and Administration.

LEGISLATION:-

The members then reviewed and discussed the drafts of proposed legislation which had been prepared by Mr. Denman, Assistant Attorney General, and discussed also the requirements for legislation in addition to the draft bills under consideration.

It was agreed that the words "counties or other political subdivisions" would be added to the amendments proposed for ORS 449.435 to broaden the intent of this legislation, and that in addition, ORS 190.040 would be amended to include the words "sewerage facilities" after the words "swimming pools" and before the words "other types".

The amendments proposed to ORS 449.100 and ORS 449.820 which would authorize the Authority to initiate legal action without the necessity of prior administrative procedures or hearing and entry of order were approved.

In the discussion that developed in relation to proposed legislation which would authorize the creation of a metropolitan form of government for the construction of sewerage facilities, it was pointed out by Mr. Harms that the Legislative Interim Committee on Local Government does not plan to submit such legislation for consideration at this session. Mr. Denman was requested to prepare legislation which would authorize the creation of metropolitan unit of government which would have the authority to construct sewerage facilities. It was suggested that he contact Representative Kennedy to determine whether or not the Legislative Interim Committee on Local Government had prepared a draft of such legislation.

Legislation which would require the State Board of Health to approve water supply and sewage disposal facilities in subdivisions before the plats could be filed and recorded was then discussed. Mr. Denman told the members present that House Bill 1234, which was introduced by Representative Ridderbusch at the request of the State Real Estate Commissioner, did not provide for prior approval of water and sewerage facilities for subdivisions. Mr. Denman was then requested to prepare such legislation for submission.

In view of the fact that the Legislative Interim Committee on Local Government had not submitted legislation providing for centralized authority to approve the boundaries of sanitary districts, Mr. Denman was also requested to prepare legislation on this subject.

The Chairman then discussed the desirability of removing the exceptions in the Air Pollution Control Act which relate to land clearing and land grading and certain agricultural operations. In the discussion that followed no concurrence was evident on submitting the deletion of the exceptions or one exception without including the others.

It was finally MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that no change in ORS 449.775 relating to agricultural operations and land clearing or land grading operations be submitted at this session.

Mr. Harms, in explanation of his motion, indicated that this motion was not intended to preclude the possibility of such legislation being considered in 1965.

The proposed amendments to ORS 449.830, which would authorize counties to engage in air pollution control activities, were reviewed and approved.

Legislation which had been suggested to make the administrative procedures in air pollution control conform to ORS, Chapter 183, was discussed and Mr. Denman stated that it was not desirable to suggest any revision at this time. The Authority decided that no legislation on this subject be prepared.

The amendments to ORS 449.800, which would authorize members of the Authority's staff to make inspections during operating hours rather than after due notice, was reviewed and approved for submission to the Legislature.

It was agreed that the proposed bills would be submitted to Senator Hallock, with the request that they be introduced by the Senate Committee on Health and Welfare at the request of the State Sanitary Authority. Senator Hallock was also to be advised of additional bills dealing with metropolitan commission for the construction of sewerage facilities, approval of water supply and sewage disposal facilities in subdivisions before plats are filed, and centralized authority to approve boundaries of sanitary districts would be submitted to him at an early date, with the request that they also be introduced by the Committee at the request of the Authority.

The Chairman then raised the question as to what action might be taken by the Authority to control open burning of refuse by the city of Portland at its site off North Swift Boulevard. He pointed out that a substantial amount of open burning was carried on at this site and that he did not believe that the Authority should initiate action against other operations until the largest and greatest offenders had been taken care of.

Mr. Hatchard stated that under the original rules that had been adopted by the Air Pollution Authority, cities had been authorized to grant variances by local ordinance for open burning, and that when the rules were readopted by the Sanitary Authority, this provision had been deleted. He also reported that he believed the city of Portland was not satisfied with the manner in which open burning was going on, and that perhaps some work could be done with city authorities to initiate a program which would control burning at this and other sites.

Following discussion on the matter, it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the staff be instructed to contact representatives of the city of Portland and attempt to work out a solution to the problem of open burning at the Swift Boulevard site.

Mr. McPhillips also suggested that perhaps a joint meeting of the members of the Authority with Commissioner Bowes would be helpful in resolving the problem. Mr. Harms suggested further that perhaps the Authority might wish to request the city of Portland to prepare an overall plan for refuse disposal for the community.

The Chairman then suggested that as a general policy an effort be directed to those municipalities and industries causing the greatest amount of air pollution, and about which the greatest number of complaints were received. The matter was discussed at some length. While the members were in general agreement, it was still believed that frequently where air pollution is occurring, such as Toledo and Albany, Oregon, the staff has been working on these problems, in spite of the fact that no substantial number of complaints have been made about conditions.

The Chairman asked if the letter of January 31, 1963, from Mr. James C. Niedermeyer relative to open burning in the city of Portland had been answered. The Secretary reported that subsequent to the receipt of this

letter, a formal petition had been filed by Mr. Niedermeyer on behalf of his client Elmer Hawk, and only one copy of the petition had been received, whereas the Administrative Rules require an original and two copies. He reported that the petition had been returned to Mr. Niedermeyer with the request that the required number of copies be supplied and that the matter would be referred to the Authority at their next regular meeting.

IAA357

The Secretary then brought to the attention of the Authority the matter of entering appropriate order requiring the abatement of air pollution caused by St. Johns Motor Express at a site north of Portland. On poll of the Chairman, all members of the Sanitary Authority present stated that they had read the transcript of the hearing, as well as the objections filed by counsel for St. Johns Motor Express at the January 4 meeting of the Authority.

It was MOVED by Dr. Wilcox, seconded by Mr. Wheeler, and carried that an order be entered requiring St. Johns Motor Express to cease and desist the open burning of refuse at the particular dump in question.

There being no further business, the meeting was adjourned at 3:30 p.m.

Respectfully submitted,

  
CURTISS M. EVERTS, SECRETARY  
State Sanitary Authority

## MINUTES OF THE NINETY-FIFTH MEETING

of the

Oregon State Sanitary Authority

April 11, 1963

The ninety-fifth meeting of the Oregon State Sanitary Authority was called to order by Mr. E. A. McPhillips, Acting Chairman, at 2:00 p.m., April 11, 1963, in Room 36, State Office Building, Portland, Oregon. The other members and staff present were Edward C. Harms, Jr., Chris L. Wheeler and John P. Amacher, members; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Harold E. Milliken and Richard E. Hatchard, Assistant Chief Engineers; Donald J. Benson, Associate Sanitary Engineer; Harold L. Sawyer, Assistant Sanitary Engineer; E. J. Weathersbee and T. M. Gerow, District Sanitary Engineers; Howard G. Smith, Supervisory Sanitarian; Edison L. Quan and Glen D. Carter, Aquatic Biologists and Edgar R. Lynd, Water Pollution Technician.

MINUTES:

It was MOVED by Mr. Amacher, seconded by Mr. Harms, and carried that the minutes of the ninety-fourth meeting of the Sanitary Authority held on January 4, 1963, and the special meeting of the Sanitary Authority held on February 7, 1963, be approved as prepared by the Secretary.

PROJECT PLANS:

It was MOVED by Mr. Harms, seconded by Mr. Amacher, and carried that the actions taken by the engineering staff on the following 64 project plans for water pollution control, and 9 project plans for air quality control, during the months of December, 1962, and January, February and March 1963, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12-4-62	Medford	Rogue Valley Estates sewers	Prov. App.
12-5-62	Brookford S.D.	Eckmann Addition sewers	Prov. App.

Mar. 20	Multnomah Co.	Sauvies Island Dehydrators Inc. - proposed alfalfa processing mill, recommended approval of the dust control facilities to the Multnomah County Planning Commission	Recommended approval

CITY OF WOODBURN

Mr. J. Wallace Gutzler, city attorney, was present to represent the city of Woodburn. He stated that last year an application for federal funds was submitted but not granted because of various circumstances and the lack of funds. In light of the fact that further additions to the city's sewer system have been denied until the sewage treatment plant has been enlarged another application is being submitted.

IAA357

Mr. Spies read from a memorandum report dated April 11, 1963, which has been made a part of the permanent files in this matter. He stated the new application was for a federal grant in the amount of \$75,990 and funds are available to cover this request. According to the city's application the plans can be completed in 60 days and construction contracts can be let in 90 days. The staff recommends that the application of the city of Woodburn be approved and a priority be issued with the understanding that construction of sewers in Subdivisions No. 4 and No. 5 will not be undertaken and no further sewer connections made in Subdivision 3 until a contract for construction of treatment facilities was signed.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler and carried that the staff recommendations be approved and a priority be issued to the city of Woodburn for a federal grant in the amount of \$75,990 with the express condition that construction of sewers in Subdivisions Nos. 4 and 5 will not be commenced and no further sewer connections will be made in Subdivision No. 3 until contracts have been awarded for sewage treatment facilities.

CITY OF SHERWOOD

A letter dated March 20, 1963, from City Attorney Fred A. Anderson was read by the secretary. An outline of the problem was given and the staff reported on the progress which has been made by the city. At the January 4 meeting the city had asked for additional time, until January 1, 1964, to prepare plans and a fiscal program but the Sanitary Authority decided that was too much time and set July 1, 1963, as a deadline for submission of plans and development of a fiscal program otherwise legal action would be taken.

Mr. Anderson's March 20th letter pointed out that Frontier Leather Company had agreed to cooperate with the city but Portland Canning Company officials did not feel they had had sufficient warning of this situation to have time to formulate a program. He pointed out that the city could not proceed without full participation of both industries and therefore again asked for an extension of time until January 1964, for completion of plans and fiscal program. No one was present to represent either the Portland Canning Company or the city of Sherwood. After a discussion of the matter it was concluded that the cannery had had sufficient time to reach a decision as to whether or not it wanted to participate in the project.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler and carried that no extension of time be granted to the city of Sherwood for completion of plans and fiscal program.

#### CITY OF SILVERTON

In a report given by E. J. Weathersbee, District Engineer, it was stated that the city of Silverton is currently enlarging and improving its existing sewage treatment plant and that in March all units were being worked on simultaneously with the result that sewage was being bypassed to Silver Creek without treatment. This had been going on for a considerable period of time and as a consequence conditions in the creek were particularly bad due to low stream flow. Based on the specifications approved by the Sanitary Authority for this project all work was supposed to be done with a minimum amount of interference with normal operation of the treatment plant. Primary treatment resumption as soon as possible had been requested of the city by the Authority staff. April 15, 1963, had been established as the deadline for providing primary treatment plus effluent chlorination so as to provide

for flushing of the stream prior to opening of trout season on April 20. A letter had been received from Mr. Borland, City Manager, indicating that all necessary work to restore primary treatment would be done by April 27.

Following a discussion of the matter it was recommended that the staff watch this situation and keep the Authority informed of accomplishments. The secretary was asked to inform the city that the Sanitary Authority is concerned with this situation, and every effort should be made to provide primary treatment and chlorination of the city's sewage by April 15.

OCEANVIEW LUMBER COMPANY

Mr. T. M. Gerow, District Engineer at Medford, reported on the matter of pollution caused by the Oceanview Lumber Company.

A complaint had been received in January of this year from the Oregon State Game Commission relative to discharge of log butts and mill wastes from the Oceanview Lumber Company into Hunter Creek approximately one mile south of Gold Beach, Oregon. During the latter part of March the District Attorney had met with the County Health Department and sportsmen regarding legal action which might be taken. Pictures of the mill, stream and debris being discharged were shown to the Authority.

Mr. Gerow said that the Oceanview Lumber Company had not been notified by his office that this matter was to be discussed by the Authority at this meeting. Mr. Amacher stated he was sure that the Game Commission staff in Curry County had approached the company regarding the pollution of Hunter Creek.

IAA357

It was MOVED by Mr. Amacher, seconded by Mr. Wheeler, and carried that the Oceanview Lumber Company be given 30 days to submit plans to clean up the situation and if compliance is not made authorize the staff to issue a citation for a public hearing.

FEDERAL GRANT PROGRAM

(a) Deadline for submission of applications:

It was MOVED by Mr. Wheeler, seconded by Mr. Harms and carried that June 15, 1963, be set as a deadline for submission of applications for federal grants from the 1964 FY appropriation for financial assistance in construction of sewage treatment works in Oregon.

(b) Proposed revision in priority point system:

A memorandum with proposed revisions of criteria for determining priority of eligible projects for federal construction grants under PL 84-660 had been prepared by the staff and distributed to the members prior to the meeting.

Mr. Harms suggested that with regard to possible future duplication of facilities an additional item should be added as follows:

IV. Efficient Utilization of Federal Funds (5 points maximum)

1. In accordance with coordinated area wide plan . . . . 5 points
2. In accordance with limited area plan . . . . . 2 points
3. In accordance with local plan. . . . . 1 point

It was MOVED by Mr. Harms, seconded by Mr. Amacher and carried that the proposed criteria for determining priority of eligible projects for federal construction grants under PL 84-660 with the above additions be adopted.

The new criteria are as follows:

In determining priority of eligible projects, the Oregon State Sanitary Authority will use the point system described below. No project will be considered eligible unless (a) it conforms with the state plan for control of water pollution, (b) its design conforms fully with the minimum requirements of the Authority, (c) the applicant gives adequate assurance that following the construction the sewage treatment works will be properly operated and maintained, and (d) the applicant is ready to start construction within the time required for encumbering the federal funds.

I. Points based on financial needs (20 points maximum)

A. Per capita assessed value (50% basis)

\$500-\$899 . . . . .	.10	\$2500-\$2899 . . . . .	.5
900-1299 . . . . .	.9	2900- 3299 . . . . .	.4
1300-1699 . . . . .	.8	3300- 3699 . . . . .	.3
1700-2099 . . . . .	.7	3700- 4099 . . . . .	.2
2100-2499 . . . . .	.6	4100- and above . . . . .	.1

B. Total project costs per capita

\$ 0-\$ 24 . . . . .	.1	\$125-\$174 . . . . .	.6
25- 49 . . . . .	.2	175- 224 . . . . .	.7
50- 74 . . . . .	.3	225- 274 . . . . .	.8
75- 99 . . . . .	.4	275- 324 . . . . .	.9
100- 124 . . . . .	.5	325- and above . . . . .	.10

II. Points based on water pollution control needs (20 points maximum)

A. Degree of treatment required

- (1) Primary only . . . . . 4
- (2) Intermediate . . . . . 6
- (3) Secondary . . . . . 8
- (4) More than 85% BOD removal . . . . . 10

B. Pollution abatement needs

- (1) Abatement of existing water pollution which constitutes a hazard to the safety of a public water supply, shellfish growing area or waters used for irrigating garden crops . . . . . 10
- (2) Formal order entered by Sanitary Authority directing applicant to abate pollution . . . . . 9
- (3) Abatement of existing health hazard on land due to inadequate sewage collection or disposal . . . . . 8
- (4) Protection of recreation (swimming, boating) . . . . . 7
- (5) Protection of animal, plant, fish and other aquatic life . . . . . 6
- (6) Sewage treatment needed for serving future or proposed residential and other developments . . . . . 5
- (7) Protection of agricultural and industrial water . . . . . 4
- (8) Abatement of local nuisance conditions . . . . . 3

IAA357

- III. Points based on readiness to construct (25 points maximum)
  - A. Fiscal program
    - (1) Bonds voted and sold or cash on hand . . . . .13
    - (2) Bonds voted but not sold . . . . .10
    - (3) Sinking fund being accumulated or bond election scheduled . . . . . 2
  - B. Engineering plans
    - (1) Final engineering plans and specifications completed. . . . .12
    - (2) Final engineering plans being prepared and scheduled to be completed within 30 days . . . . . 8
    - (3) Final engineering plans being prepared and scheduled to be completed within 90 days . . . . . 6
    - (4) Preliminary engineering (only) completed . . . . . 2
- IV. Efficient Utilization of Federal Funds (5 points maximum)
  - A. In accordance with coordinated area-wide plan. . . . . 5
  - B. In accordance with limited area-wide plan. . . . . 2
  - C. In accordance with local plan . . . . . 1

RESOLUTION ADOPTED BY OREGON RECLAMATION CONGRESS

The following Resolution No. 8 adopted by the Oregon Reclamation Congress at their annual meeting at Medford, Oregon, on November 28-30, 1962, was read by the secretary:

WHEREAS, it is the policy of the Oregon Reclamation Congress that the public waters be utilized to produce the maximum social and economic benefits; and

WHEREAS, it has come to the attention of the Congress that proposals are being made for including in authorizations of future multiple purpose projects, provision for storage capacity on a non-reimbursable basis, for the specific purpose of dilution of pollution; and

WHEREAS, this Congress believes that in most instances Oregon water supplies are too valuable for assignment to such purpose and that expenditures of money for pollution abatement should be directed toward elimination of pollution in the first instance rather than elimination by dilution;

NOW, THEREFORE, BE IT RESOLVED, that the Oregon Reclamation Congress urges that expenditures of public money for pollution abatement should be directed to elimination of pollution at its inception rather than by dilution.

BE IT FURTHER RESOLVED, that copies of this resolution be forwarded to the Chairmen of U. S. Senate and House Interior and Insular Affairs Committees, the U. S. Public Health Service, the Oregon State Sanitary Authority, and to all members of the Oregon Congressional delegation.

He stated receipt of the resolution had been acknowledged in a letter dated March 18, 1963, in which it was pointed out that the Water Pollution Control Statutes stipulate that the use of impounded waters for the purpose of augmentation of low stream flows is for water quality control and shall not be provided as a substitute for adequate treatment or other methods of controlling waste at the source.

This resolution has been made a part of the permanent files. No action by the Authority was considered necessary.

#### LEGISLATION

Mr. McPhillips reported on activities of this subcommittee. He stated they had made several trips to Salem and had appeared before the Committee on Local Government in support of SB 259. It was noted that SB 259 had passed the Senate, is now before the House State and Federal Affairs Committee and will be up for hearing on Wednesday, April 17. Senate Bill 254 has been tabled.

#### RESOLUTION RELATING TO LEGISLATION By Agness Community Council

The following resolution was read by the secretary and has been made a part of the permanent files in this matter. No action was taken.

"To the Honorable Senate and House of Representatives of the State of Oregon in assembled:

We, the Board of Directors of the Agness Community Council, most respectfully support Senate Bill 222, introduced by the Committee on Natural resources, relating to abolition of the Rogue River Coordination Board.

Whereas the Board has not met since Mar. 1st, 1962, and

IAA357

Whereas the placer mining is continuing and is destroying spawning beds and stopping recreation, and

Whereas the Rogue River Coordination Board appears to be an obstacle to the State Sanitary Authority in carrying out its objectives of pollution control, and

Whereas testimony that the turbidity was damaging to fishing was not disputed at any hearing held by the Interim Committee on Natural Resources, and

Whereas the State Sanitary Authority, the Water Resources Board and the State Engineer appear to have the tools to meet and solve those problems;

(1) Be it resolved by the Agness Community Council that it is our desire that you abolish the Rogue River Coordination Board at this Fifty-second legislative Assembly, and the State Sanitary Authority be instructed to enforce the pollution laws especially on Rogue River.

(2) The Secretary of the Agness Community Council send a copy of this resolution to Committee on Natural Resources, to Hon. Mark Hatfield, Governor of Oregon, to Representatives Back, Barton and Haight, and to Senator Elfstrom, and to the State Sanitary Authority."

Mr. McPhillips asked if it would be possible for the Authority to meet at Grants Pass or Medford so that residents in this area could have a chance to air their complaints to the Authority in person. A formal invitation from T. M. Gerow, District Engineer at Medford, was extended to the members to hold its next meeting at either Grants Pass or Medford.

A letter from the South Salem Sanitary District, signed by Judge Rex Hartley, Chairman, Marion County Commissioners, commending the Board of Health, Sanitary Authority and E. Jack Weathersbee for the help and cooperation received from them in their efforts to form this sanitary district was read by the secretary.

COMPLAINT PETITION FROM ELMER HAWK VERSUS PORTLAND ET AL

The Secretary reported that a complaint petition dated February 2, 1963 had been filed by James C. Niedermeyer, Attorney for Elmer Hawk, regarding the open burning of refuse and demolition material within the City of Portland.

Mr. Everts stated an original and two copies were submitted in accordance with the administrative rules which outline the procedures to be followed in this matter. He explained that the statute directs the Authority to make an investigation when a complaint is filed to determine if a violation of any rule, regulation or order of the Authority exists and if a violation is found to eliminate the sources of air pollution by conference, conciliation and persuasion and if necessary by a public hearing to make a finding of facts and enter an order.

Chairman McPhillips asked Mr. Hawk and Mr. Niedermeyer, Attorney for Mr. Hawk if they had any statement to present.

Mr. Niedermeyer stated that since February 1962 Mr. Hawk has been negotiating with the City of Portland to close the open burning operations at the N. Swift Blvd. refuse disposal site and that subsequently, he filed a complaint with City Air Pollution Officer and wrote letters to the Commissioners of the City of Portland. He reported that this correspondence had been received and placed on file four or five months ago.

Mr. Niedermeyer stated that he talked with Air Quality Control staff of the Authority and he has continued to attempt to get some cooperation

IAA357

from the city. He reported that the city states that they have the right to burn refuse within the city, although it is a clear violation of rules in OAR 334-22-011 which prohibit open fires within six miles from the municipal boundaries of any city of more than 45,000 population.

Mr. Niedermeyer stated that he made an inspection and found open burning at the City of Portland disposal site, at locations along the Willamette River and at many other locations within the city.

It was MOVED by Mr. Harms, seconded by Mr. Amacher and carried that the petitioners be notified that the filing has been accepted, and that the staff be instructed to make an investigation of the matter and submit a report at the next Authority meeting.

Mr. Hatchard suggested that in order to encourage the development of plans and policies that will provide control of air pollution from refuse disposal operations that a committee of the members of the Authority meet with the Commissioners of the City of Portland Bureaus of Health, Public Works and Public Utilities.

Mr. McPhillips asked the members if they wished to appoint a sub-committee of the Authority so that the members of the staff could report concerning this problem and to attempt to meet with the Commissioners of Portland who are involved with this problem. It was agreed that a sub-committee of the Authority would be appointed to meet with the City Commissioners of Portland.

Sanitary Service Company, Salem

Mr. Everts read a letter dated February 1, 1963 from Robert W. DeArmond, Attorney for Sanitary Service Company, requesting permission

to continue its operations at its dump, as presently being operated, with provisions that will permit the open burning of brush, tree trimmings and lumber at periodical periods not to exceed twice a month.

Mr. Smith, Air Quality Control staff, stated that on September 13, 1962 the Sanitary Authority upon recommendation of its staff, granted an extension of a Variance to the open burn regulations to the Salem Sanitary Service Company for the period October 15, 1962 to February 1, 1963. The previous Authority action included the condition that it was to be a final extension of a Variance for the present disposal site located 3.5 miles southeast of Salem. He reported that the staff had received complaints from residents in the area concerning the smoke from this operation after the last Variance was granted. The staff recommended that the request from the Salem Sanitary Service Company dated February 1, 1963 for a Variance to Oregon Administrative Rule, Chapter 334-22-011 be denied.

It was MOVED by Mr. Harms, seconded by Mr. Amacher and carried that the request from Sanitary Service Company for permission to continue operations at its dump, with provisions that will permit the open burning of brush, tree trimmings and lumber at periodical periods be denied.

REPORT ON DISPOSITION OF M. C. CHEW DUMP

Mr. H. G. Smith stated that during the January 4, 1963 Authority meeting a public hearing was authorized regarding air pollution from the M. C. Chew dump located off Cathey Road, south of Gresham. He reported that the Multnomah County Board of Commissioners had held a public hearing and after consideration of all testimony had ordered an abatement of the

IAA357

nuisance, and had instructed the District Attorney of Multnomah County to proceed with abatement actions. Mr. Smith stated that on April 1, 1963, Judge Davis, Multnomah County Circuit Court, ordered that the dump be closed immediately and that the nuisance be abated within 30 days; and if M. C. Chew decided to resume the business of refuse disposal, the operation must be conducted in accordance with rules for a sanitary landfill under the jurisdiction of the Multnomah County Health Department. Judge Davis stated that the court hoped that this matter would not come before it again and that no excuse would be accepted and that this should take care of the air pollution aspect.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the report be accepted.

The next Sanitary Authority meeting is to be held at Medford or Grants Pass on June 21, 1963.

There being no further business the meeting adjourned at 3:45 p.m.

Respectfully submitted,

CURTISS M. EVERTS  
Secretary & Chief Engineer

MINUTES OF THE NINETY-SIXTH MEETING

of the

Oregon State Sanitary Authority

June 21, 1963

The ninety-sixth meeting of the Oregon State Sanitary Authority was

called to order by Harold F. Wendel, Chairman, at 9:00 a.m. June 21, 1963, in the auditorium of the Jackson County Courthouse at Medford, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Chris Wheeler, Herman P. Meierjurgan, and J.P. Amacher, members; Curtiss M. Everts, Secretary; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Assistant Chief Engineer; T.M. Gerow, District Engineer; John Denman, Legal Advisor, Howard Smith, Supervisory Sanitarian and Joseph A. Jensen, Assistant Sanitary Engineer.

Mr. Wendel expressed the appreciation of the Sanitary Authority Board for the privilege of using the Jackson County Courthouse auditorium for its meeting.

Mr. Everts introduced Dr. A. Erin Merkel, Jackson County Health Officer.

MINUTES:

It was MOVED by Mr. Meierjurgan, seconded by Mr. Wheeler, and carried that the minutes of the 95th meeting held on April 11, 1963, be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher and carried that the action taken on the following 46 project plans for water pollution control and 11 project plans for air quality control be approved:

IAA357

## Water Quality Control:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
4-3-63	North Roseburg SD	Expansion of sewage treatment plant	Prov. appr.
4-4-63	Forest Grove	Sewer extensions	Prov. appr.
4-5-63	Phoenix	Hacienda Park Subd. sewers	Prov. appr.

May 20-29	Portland	Proposed Portland ordinance on air pollution control	Submitted comments and recommendations

#### WOODBURN - SENIOR ESTATES

At the April 11, 1963, meeting, the Authority had refused the Woodburn Senior Estates permission to construct trunk and lateral sewers in Subdivisions Nos. 4 and 5 and to connect any more houses in Subdivision No. 3 to existing sewers until the city of Woodburn had signed a contract for additions and improvements to its sewage treatment plant.

By letter dated May 2, 1963, the Senior Estates submitted a second request to proceed with its sewer construction because in the meantime the city had made satisfactory progress in planning for start of construction of its sewage treatment plant project. This request was subsequently submitted by mail to the Authority members and was approved. The Senior Estates was so notified by letter dated May 20, 1963.

It was MOVED by Mr. B.A. McPhillips, seconded by Mr. Meierjurgan and carried that the mail vote in the above matter be confirmed.

An additional request from the Senior Estates by letter dated June 17, 1963, was then read by the secretary.

It was MOVED by Mr. B.A. McPhillips, seconded by Mr. Meierjurgan and carried that the request of Senior Estates for permission to connect an additional 20 houses to the existing sewers be granted.

PROPOSED POLICIES REGARDING WATER SUPPLIES, ETC.

Mr. Spies reported the staff had drafted the following proposed policies for the protection of potable water supplies used in sewage treatment plants and sewage lift stations.

In order to protect the drinking water supply from contamination through back-siphonage of sewage in sewage treatment plants and sewage lift stations, the following policies have been adopted and will be used in reviewing plans for new installations and for revisions and expansions of existing plants:

1. General: An adequate supply of potable water under pressure shall be provided for use in the laboratory and general cleanliness around the plant. No piping or other connections shall exist in any part of the treatment works which, under any conditions, might cause the contamination of a potable water supply.
2. Direct Connections: Potable water from a municipal or separate supply may be used directly at points above grade for the following hot and cold water supplies:
  - a. Lavatory sink
  - b. Water closet
  - c. Laboratory sink
  - d. Shower
  - e. Drinking fountain
  - f. Outside hydrants

Note: If an outside hydrant might be used as a hose connection where the hose could be submerged in a sewage tank, it must be protected by an approved type vacuum breaker.

Hot water for any of the above units shall not be taken directly from a boiler used for supplying hot water to a sludge heat exchanger or digester heating coils.

3. Indirect Connections: Where a potable water supply is to be used for any purpose in a plant or sewage lift station other than those listed in paragraph 2, a break tank, pressure pump and pressure tank shall be provided. Water shall be discharged to the break tank through an air-gap at least six inches above the maximum flood line or the spill line of the tank, whichever is higher. In no case shall a potable water service outlet be located below grade where there is any possibility of flooding without being adequately protected against back siphonage.

A sign shall be permanently posted at every hose bib, faucet or sill cock located on the water system beyond the break tank to indicate that the water is not safe for drinking.

4. Separate Potable Water Supply: Where it is not possible to provide potable water from a public water supply, a separate well or other approved source may be provided. Location and construction of the well should comply with the requirements of the State Board of Health. Requirements governing the use of a separate supply are those contained in paragraphs 2 and 3.

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the proposed policies be approved.

#### FEDERAL GRANT APPLICATIONS

The staff presented for the review and consideration by the Authority members data and information regarding the 22 applications for federal grants for sewage treatment works construction which had been submitted to the Authority prior to the June 15, 1963, deadline. It was pointed out by Mr. Spies that Congress had not yet approved the appropriation bill for the 1964 fiscal year for the Federal Water Pollution Control construction grant program, and that, depending upon whether the appropriation actually passed by Congress is \$90,000,000 or \$100,000,000, the amount to be allotted to the state of Oregon will be \$1,154,610 or \$1,282,900.

Of the 22 applications which had been received, one was for an alternate project for the Aloha Sanitary District of Washington County. The total grants requested amounted to \$2,395,100 for 21 projects estimated to cost \$16,900,308.

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the Sanitary Authority approve priority certificates for federal grants up to the total amount of federal funds available in the following order:

- |                             |                           |
|-----------------------------|---------------------------|
| 1. Salem - \$600,000        | 8. Pendleton - \$6,300    |
| 2. Portland (NW) - \$39,840 | 9. Empire - \$74,100      |
| 3. Sherwood - \$56,700      | 10. Gold Beach - \$32,620 |
| 4. Brownsville - \$58,200   | 11. Tigard - \$95,630     |
| 5. Sunset Valley - \$70,260 | 12. White City - \$35,350 |
| 6. Manhattan - \$20,130     | 13. Talent - \$31,450     |
| 7. Dayton - \$24,000        |                           |

The grant requests of Corvallis (\$62,100), Lebanon (\$27,980), Dufur (\$18,000) and Huntington (\$11,400) were approved in that order as alternates in case the 1964 FY appropriation is sufficient to include them.

Mr. Spies pointed out that the Manhattan, Dayton, Tigard, Talent, Dufur and Huntington projects are dependent upon approval of bond issues by the voters.

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler and carried that October 1, 1963, be set as the deadline for approval of bond issues.

Mr. Wheeler noted that the Aloha Sanitary District project rated very high in priority points but it was not approved because the district had failed to complete the necessary contracts with adjacent political subdivisions and therefore the proposed project was not eligible at this time. He said that if they can complete the necessary contracts before the next fiscal year there is every reason to believe that they would receive a federal grant at that time, assuming of course, that Congress appropriates construction grant funds for the 1965 fiscal year.

BUDGETS AND OPERATION

The secretary informed the Authority members that the air and water pollution control programs for the next two years beginning July 1, will have to be curtailed because of lack of funds. He reported that the budget for the air pollution program will be \$11,345 short of the amount required to carry the staff as authorized and the water pollution program will be \$20,259 short of the amount required to carry the staff as authorized. The water supplies program will also be several thousand dollars short.

This means that as near as can be determined it will be necessary to leave two engineering positions vacant and to defer the employment of other staff personnel for a year and some for as much as 18 months. It will handicap both field activities and lab work during the next biennium.

IAA357

STAFF REPORTS:

Oceanview Lumber Company: Mr. T.M. Gerow reported that at the April meeting of the Authority he had been directed to investigate this problem. He stated the president of the Oceanview Lumber Co. had been advised of our intentions in this matter. No damage to fish or fish passage could be found at the time of the investigation. On June 17, it was found the stream was reasonably clear of any logs and debris. Mr. Payne was contacted and advised that the Sanitary Authority would continue to check this periodically, that the company should maintain the stream in a satisfactory condition and that it should provide a pond to collect any debris. No board action at this time was considered necessary by Mr. Gerow.

PESTICIDES:

Mr. Wendel stated there had been created a great deal of interest in pollution caused by insecticides not only because of Rachel Carson's book but because of Senator Hallock's letter in which he said the Sanitary Authority should start now to plan for control legislation for the next Legislative Assembly and if possible to try to obtain the backing of farmers. Senator Hallock's letter as follows:

Dear Mr. Wendel:

May 27, 1963

Not only because of Rachael Carson's book, but because of a growing number of news stories like the attached, I think that the Sanitary Authority should start planning now for legislation next session to control pesticides.

This may involve the Department of Agriculture as well, and it also will involve the Board of Pharmacy -- there was a war between the two regarding HB 1500 and its relevance to pesticides and antibiotics used on animals.

We should start by September so that whatever legislation is devised could somehow be circulated among Granges and Farm Bureau Federation members, to obtain the backing of farmers. Their interest is high as evidenced by amendments last week to a bill which prohibited stream pollution because of using animal or human waste as fertilizer; the farmers amended it to exclude organic fertilizers.

The Kennedy Administration is also duly concerned. Perhaps we could start by obtaining from the USDA or from HEW a list of pesticides and their chemical names together with any ideas on control which the Federal level may have.

Sincerely yours,

s/ Ted Hallock, State Senator

In the discussion that followed it was pointed out that the Sanitary Authority is very much concerned with this problem and it is believed it will entail a rather detailed study.

Mr. Everts was asked to reply to Senator Hallock and inform him the staff would be glad to participate to the extent of its ability and time to study this matter.

MISCELLANEOUS:

Colonel Paul H. Weiland, Director, Jackson County Izaak Walton League, was present and stated he had been very favorably impressed with what he had seen at this meeting.

Colonel Weiland said he was concerned with the pollution in Bear Creek, a tributary of the Rogue River. He stated further that (1) the waters of Bear Creek are more polluted now than they were a year ago, (2) there is need for more strict conformance with state laws, (3) the waters of Bear Creek are used not only for irrigation but also for domestic water supply, (4) silt is a common pollutant of Bear Creek, and (5) because Bear Creek is a small stream it is necessary to eliminate all pollutants such as sewage. He said the local Izaak Walton Chapter is willing and ready to help eliminate these sources of pollution, the people of the valley are ready to have this pollution eliminated and the pollution must be eliminated for the best interest of the public. The city of Medford is spending a lot of money in constructing a beautiful stream through its corporate limits.

IAA357

He claimed that the primary origin of the silt in Bear Creek is state highway construction, gravel operations on the stream and the overflow from the enlarged Emigrant reservoir. The Rogue River is one of the most famous fishing streams in the state of Oregon. The city of Grants Pass uses the Rogue River for domestic water supply. The streams that flow into that river should not be used for dumps.

Mr. Gerow reported he had investigated the problem of silt in Bear Creek and that a lot of the turbidity is caused from Emigrant reservoir. The county has budgeted \$25,000 this year and plans to employ a consulting engineer to make a water supply and sewerage study of the entire Rogue River Valley. It will cover probably a 12-mile stretch and will be a major undertaking.

Mr. E. J. Schneider requested permission to speak and stated that during the months of October and November, 1962, there was a lot of silt in the river due to the Savage Lake Dam and Emigrant Dam construction. With regard to pollution caused by placer mining, he stated that on November 12 a bulldozer was working on Coyote Creek, on the 12th day of April, 1963, it was still there, and on the 12th and 13th days of May it was still working. The Governor's office was contacted and the next day Mr. Everts was called. The following day the mining was stopped and he thanked the Authority for that. He claimed the miners have taken  $6\frac{1}{2}$  months out of the  $7\frac{1}{2}$  months of fishing season and that as a result the reservations at the lodges have dropped considerably.

Mr. Wendel informed Mr. Schneider that the Rogue River Coordination Board had primary jurisdiction over placer mining but if they didn't act the Authority would.

Mr. Carl Sorber and Mrs. R. G. Tabor were present representing the South Ashland area. Mrs. Tabor stated a group of persons south of Ashland, 1,000 acres in area with 800 people, want to solve their sewage disposal problem and therefore were interested in information regarding annexation,

formation of sanitary districts and applications for federal grants.

Mr. Gerow was requested by the chairman to provide Mrs. Tabor with such information.

CHENEY STUD MILL

Mr. Frank Koch, Central Point, was introduced. He stated that Cheney Stud Mill had been the subject of complaints going on about 10 years.

Mr. Hatchard, when asked if he was familiar with the problem, stated that a hearing had been authorized but no date set.

Mr. Gerow reported the staff was presently collecting data and so far the sampling data are inconclusive in that some results are out of reason. At times the data are 10 to 50 times higher than normal. Mr. Wendel told Mr. Koch the staff was pursuing this as fast as they could and that he would get some relief in due course. No further action was considered necessary at this time.

AIR POLLUTION ORDINANCE - Medford

Mr. Everts introduced Mr. Robert A. Duff, Medford City Manager, who expressed appreciation for the city of Medford for assistance received from the State Sanitary Authority staff personnel. Mr. Duff then introduced Mr. William Mansfield, City Attorney, who stated that the Authority staff had been most helpful in educating him regarding air pollution.

He explained that initially the Springfield form of ordinance was used as a basis for the proposed Medford ordinance. Specific limits were included in Sections 6 and 7 prohibiting the discharge of excessive pollutants at the source and directed the city attorney to institute proceedings to enjoin such nuisance. This approach was changed in the ordinance and the proceedings would follow the general nuisance approach in Section 10. The City Council would have to decide if a public hearing should be set to determine if public nuisance in fact was present.

IAA357

Mr. Hatchard said he believed it was an excellent ordinance and that the staff hoped that eventually there will be a joint city-county effort to prevent and control air pollution.

Mr. Wendel stated the Sanitary Authority would like to commend the city of Medford and express appreciation for the action which had been taken.

CHIPMAN CHEMICAL CO.

The Authority has received many complaints in and around Portland about the chlorophenol type odor emission from Chipman Chemical Company. Mr. Hatchard reported that starting about 1956 the company installed a new process for producing 2,4-D. Whenever the controls are not working adequately the odor is quite evident. The production of the chemical is a batch type operation usually concentrated in the period from September to June of each year. The Authority staff has periodically received complaints from the citizens of Portland and the company has been notified of its violation.

For over two years daily records of tests and analyses of the problem have been made. The company recently submitted a proposal which provides for the prevention of corrosion problems, some expansion of ducting at the 2,4-D production unit and a "catch basin" to collect the malodorous liquid wastes from their production operations. The staff advised the company that the plans did not meet the overall control requirements to eliminate the odor problem.

Since this matter is of such widespread concern to Portland, Mr. Wendel asked if the Board wished to consider calling a special meeting. He explained that so many public hearings are pending that a special meeting of the Authority could be authorized to consider the problem.

Chipman Chemical Company should be informed that additional air pollution will not be tolerated when the company resumes production. It was suggested that Chipman Chemical be cited to appear at a special meeting if an overall plan for elimination of the problem is not presented in the meantime. Mr. Wendel explained that under the 1963 statutes the company could be notified that when the operation is resumed, unless corrections have been made, the Authority would proceed directly to the courts for action.

Mr. Denman stated the new statutes are not effective until September 3, 1963, and that there was not time to have a special meeting before production resumes in July.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the chairman be authorized to call a special meeting in August for the purpose of conducting a hearing in the case of Chipman Chemical Company for violation of the pollution laws and they be so advised if plans for correction are not submitted by that time.

Mr. Spies brought to the attention of the Board that the water pollution control staff was presently investigating water pollution by Chipman Chemical Company.

WESTERN KRAFT CORPORATION - Albany

A summary report presented by Mr. Hatchard was taken from three documents: (1) June 19, 1963, Staff Report, (2) December 2, 1962, Interim Report, and (3) Western Kraft Corporation Proposed Expansion Report, October, 1962. These documents are a part of the permanent files in this matter.

Mr. Hatchard stated Western Kraft Corporation proposed to expand the pulp production from 250 tons per day to 375 tons per day. The company provided progress reports in March and May, 1963, regarding the studies and plans for additional control facilities. The expansion was originally

IAA357

scheduled to start in October, 1963, but the company is now ahead of schedule and hopes to start in August. He stated that the corporation had completed the installation of control facilities necessary for their expansion, with the exception of the recovery furnace particulate and hydrogen sulfide secondary scrubbers.

The completed installations include doubling of the oxidation tower (black liquor oxidation capacity), negative draft ducting of the evaporator non-condensate gases through the oxidation tower addition, a new Peabody scrubber at the new lime kiln, secondary air instrumentation and control at the recovery furnaces, and a new steam atomized Venturi scrubber at No. 1 furnace.

The staff recommended that the Sanitary Authority grant conditional approval to Western Kraft Corporation's Control Proposal, including the following conditions:

1. The No. 1 Recovery Furnace Boiler stack gas scrubber shall be installed and in satisfactory operation prior to increasing the pulp production to 375 tons per day.
2. The No. 1 Recovery Furnace Boiler stack gas scrubber unit shall be modified until maximum solids and hydrogen sulfide removals are achieved. A space allowance should be provided between the existing boiler stack and the new cyclone stack, for the installation of additional scrubber stages, as necessary.
3. When the No. 1 Furnace scrubber's final design has been determined, the company shall proceed as rapidly as possible with the installation of a similar scrubber unit to serve the No. 2 Recovery Boiler.
4. Progress reports regarding the operation and maintenance of the control processes and/or equipment, and the status of the Recovery Furnace controls shall be submitted monthly to the Authority.

Mr. R.M. Sheffer stated the company policy was to do all it possibly could to meet the conditions required by the Authority. He stated that the conditions outlined by the Authority staff will be done. This scrubber installation is an important step and additional operational information is desired.

Mr. Wendel asked if he thought the air conditions would be better after this expansion to 375 tons was completed compared with the 250 ton mill.

Mr. Sheffer stated he couldn't make any definite guarantee other than the company will work continuously towards the most effective control systems.

The proposed control facilities report covers both air and water pollution. Mr. Benson had met with representatives and discussed the water pollution control item.

Mr. Spies stated that the staff report included the requirement that the water pollution load of the new mill would be no more than the present load. He reported that there is a settling pond before the effluent discharges into the Willamette. Taking into consideration the present condition of the stream, Mr. Spies stated that the cooperation of Western Kraft with the Authority staff from the standpoint of water pollution control is satisfactory and the staff recommends that conditional approval of these plans be granted.

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips, and carried that the Western Kraft Corporation plans for control installations be granted conditional approval including the conditions 1-4 as recommended by the staff and the requirement that there will be no increase in air or water pollution.

STAFF REPORTS:

Harvey Aluminum: A summary report dated June 19, 1963, summarizing the staff activities since the January 4, 1963, Authority meeting was read by Mr. Hatchard and has been made a part of the permanent files in this matter. The conclusions reached in this report are as follows:

1. The fluoride content found in air samples collected in June, 1963, are as high as the fluoride content of samples collected before the installation of the roof monitor control system. These high values may be caused by operational and/or maintenance problems at the roof monitor controls, or by the discharge of higher amounts of fluoride from the aluminum production cells.

IAA357

2. The fluoride content of alfalfa samples collected during 1963, are at levels considered excessive by other state authorities.
3. Harvey Aluminum (Inc.) has not submitted requested information regarding the fume scrubber tests, the control systems operational experience, and the progress reports of projects intended to reduce the fluorides released at the individual cells.

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher and carried that Harvey Aluminum (Inc.) be notified that the Sanitary Authority will direct that the public hearing in this matter be reconvened.

Hawk Petition: re Portland Refuse Disposal. Howard Smith reported that the members of the Authority had requested the staff to make a survey of the areas listed in the petition. The following conditions were found to exist at the time of a survey made on April 24, 1963.

1. The city of Portland refuse disposal area, North Swift Blvd. - - open burning of combustible material was being carried on at this time.
2. 7800 St. Helens Road - - open burning of oil wastes.
3. Smith Lake area - - open burning of combustible wastes was observed.
4. East side of Broadway Bridge - - no open burning observed.
5. S.W. Macadam - - no open burning of refuse observed on the south side of Ross Island Bridge.

The Portland Bureau of Health staff and the Sanitary Authority staff are developing revisions of the city air pollution ordinances. He explained that the present responsibilities for air pollution from the open burning of refuse be transferred from the fire marshal back to the Air Pollution Control program in the health bureau.

Mr. Wendel stated that this brings up the question of open burning from land clearing. Should a test case be filed to determine in court what land clearing is? If the contention that building demolition on site is land clearing, is true, you will find many private enterprises utilizing open burning covering several days. If it is not considered land clearing, then other steps will have to be taken to dispose of the debris. After

discussing other alternatives, it was indicated that the Authority Subcommittee meet with Mayor Schrunk and Commissioners Bowes and Earl to work on a cooperative solution.

At the last meeting the chairman was authorized to appoint a subcommittee to meet with the city of Portland. Dr. Wilcox, Chris Wheeler and Mr. Wendel will serve on that subcommittee.

This report is to be considered as an interim report of the Sanitary Authority. No action was required at this time.

IDEAL CEMENT - Gold Hill

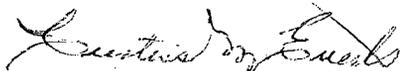

Mr. Wendel asked about the status of cement plant air pollution control activities. Mr. Gerow stated that the company is doing stack sampling monthly and have completed several improvements on dust control. The main problem is providing a new method of bulk storage of the collected dust from the precipitator.

The staff does not have additional recommendations at the present but will continue to work with the company to arrive at improved dust control.

The next Sanitary Authority meeting was set for Thursday, August 15, in Portland.

There being no further business the meeting adjourned at 12:30 p.m.

Respectfully submitted,

CURTISS M. EVERTS  
Secretary & Chief Engineer

MINUTES OF THE NINETY-SEVENTH MEETING  
of the  
Oregon State Sanitary Authority  
August 15, 1963

The ninety-seventh meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman at 10:00 a.m., August 15, 1963, in Room 36 of the State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Richard H. Wilcox, M.D., Edward C. Harms, Jr., and Herman P. Meierjurgan, Members; Curtiss M. Everts, Secretary; John Denman and Cecil Quesseth, Legal Advisors; Kenneth H. Spies, Deputy State Sanitary Engineer; Richard E. Hatchard, Assistant Chief Engineer; E.J. Weathersbee and T.M. Gerow, District Engineers; Joseph A. Jensen, Ronald R. Ott, Harold Sawyer, Robert F. Wood and D. Collins Martin, Assistant Sanitary Engineers; Glen Carter, Aquatic Biologist and Howard Smith, Assistant Chief Air Quality Control.

MINUTES:

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox, and carried that the minutes of the 96th meeting held on June 21, 1963, be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that the action taken on the following 73 project plans for water pollution control for the months of June and July, 1963, and six project plans for air quality control for the month of June be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>

SEWAGE DISPOSAL-DUNTHORPE-RIVERWOOD-RIVERDALE-PALATINE HILL AND LEWIS & CLARK

Mr. Thaddeus B. Bruno was present to represent the Dunthorpe Community, Mr. Robert E. Pamplin, represented Lewis and Clark College, and Commissioner William A. Bowes and City Attorney Alexander M. Brown represented the city of Portland in this matter.

A memorandum report dated August 15, 1963, and regarding pollution caused by sewage effluents being discharged into the public waters of the state of Oregon from the Dunthorpe-Riverwood-Riverdale-Palatine Hill area and Lewis and Clark College was presented by Mr. Spies and has been made a part of the permanent files in this matter.

This area is presently unincorporated and is located in Clackamas and Multnomah Counties on the west side of the Willamette River. There is no master public sewer system in the area but there are at least eight separate so-called community sewer systems each of which collect raw or inadequately treated sewage from one or more private homes and which discharge directly into the Willamette River. The Lewis and Clark College campus is served by its own sewer system and by a primary sewage treatment plant which discharges into a small stream that flows through choice residential property and then empties into the Willamette River.
