Except for those connected to the community sewers all other homes in the area and the Riverdale Public Grade school are presently served by individual septic tanks with subsurface drainage systems. Because of the steep terrain, rocky subsoil and other unfavorable drainage conditions, many of these individual systems do not function properly. Serious pollution is being caused in the public waters of the Willamette River by the overflow or discharge of raw or inadequately treated sewage.

The section of the Willamette River fronting along this area is used extensively in the summertime for pleasure boating and water skiing and immediately downstream from the area the Powers Marine Park beach is heavily used for swimming.

Until recently it was expected that it would be possible for this entire area to be served by connections to an interceptor sewer system which the city of Portland was planning to build this summer. The proposed interceptor was to discharge into the new Tryon Creek sewage treatment plant which is also to be built this year by the city of Portland. However, the interceptor project has been delayed because negotiations between the city and the prospective users have not been completed and now it is not known when the project will be constructed.

It was the recommendation of the staff that:

1. If by August 31, 1963, it does not appear likely that negotiations can be successfully completed for construction of the proposed interceptor sewer by the city of Portland, then the Sanitary Authority should request the U.S. Public Health Service to withdraw the federal grant offer of \$142,770 and to make such federal funds available to the next eligible applicant.
2. If by September 30, 1963, a definite and satisfactory plan for early construction of the required sewage collection and disposal facilities has not been developed by the property owners of the area, a public hearing should be held and a final order should be entered directing the people to abate said pollution.

Mr. Thaddeus B. Bruno, Chairman of the Riverdale Community Study Group, then presented a report dated August 14, 1963, copies of which were distributed to the Authority board. This report has been made a part of the permanent files in this matter and is summarized as follows:

IAA357

The State Sanitary Authority in 1958 notified the residents of the area that a solution to the sewage problem would have to be found or abatement proceedings might be instituted. No further action was taken because of the announcement of the Tri-County Master Plan of sewerage which was designed for Multnomah, Washington and Clackamas County participation. This plan was partially developed but was later abandoned before completion of that portion which would have served this area. The city of Portland with two grants of federal funds took over this project in-so-far as the Tryon Creek and Willamette Interceptors were concerned. These projects were considered by the State Sanitary Authority as basic to serve the area and because they were under way the Authority saw no reason to demand additional action from residents of the affected areas.

On December 13, 1962, a letter from Lewis & Clark College to the city of Portland confirmed an understanding that the city intended to proceed as rapidly as possible with the interceptor whether or not the college annexed to the city. Thus Portland and the college had apparently reached an understanding whereby the city agreed to allow the college to connect to the Willamette interceptor sewer without the necessity of annexing to the city. This agreement was well known to the neighborhood as a result of negotiations and agreements reached between the college and the Palatine Hills Citizens Zoning Committee.

On February 15, 1963, City Commissioner Bowes reported to Mr. Ted Bruno that the Willamette interceptor project was under way and that adjacent tracts could be given service by construction of sub-trunks and/or laterals. This information also outlined alternatives to annexation. Then on May 31, 1963, Commissioner Bowes asked Mr. Bruno to advise the neighborhood that the city would abandon plans to build the Willamette interceptor unless the area annexed to Portland.

On May 21 the college received notice from the city that an oral opinion of the city attorney questioning the legality of the city's participation in the building and maintaining of the Willamette interceptor made it impossible for the city to proceed with this project unless the area annexed to the city. At a meeting on June 25, 1963, the Riverdale Study Group was told by representatives of the college that they had been informed by the city of Portland that the Willamette interceptor would be built if the college annexed and that it was not necessary for the balance of the area to annex. This was later found to be in error. Mr. Bruno stated that the people of the area are desirous of solving their sewage disposal problem but they do not wish to be forced into the city of Portland.

City Attorney Alexander G. Brown and Commissioner William A. Bowes then explained the position of the city of Portland in this matter.

Mr. Brown stated that the city had been working with Lewis and Clark College for a long time in an attempt to solve the college's sewage disposal problem. If the college could annex to Portland the city would provide it with a connection to the municipal sewerage facilities, either to the Willamette interceptor if it is built or to the Tryon Creek interceptor. The college, however, is not contiguous to the city at the present time and therefore in order for it to annex the intervening property, which is the Riverview Cemetery, must also annex. The Riverview Cemetery officials are apparently reluctant to annex unless the adjacent private property owners in the Riverdale area are agreeable to such action.

He went on to explain that the proposed Willamette interceptor sewer was to be financed by general fund money and that therefore it was his opinion that the city could not spend such funds for this purpose unless the project were to serve some city property. The Tryon Creek project, much of which is outside the city, will serve a significant area within the city and so there was never any question about the city's authority to build it.

IAA357

If the college cannot annex to the city, it could still install its own lift station, pressure line and trunk sewer leading to the Tryon Creek interceptor. It would, in this case, have to contract with the city for sewer service. If it annexed, the city would pay for the lift station and pressure main but not the connecting trunk. The latter would have to be financed by assessment against the property directly benefited.

Mr. Brown mentioned that Portland now has a contract with the city of Lake Oswego to provide sewage treatment for the latter at the new Tryon Creek plant which will be built shortly.

Commissioner Bowes reviewed further the city's position in this matter. He stated that during the past two years or so several committees representing the Riverdale-Dunthorpe area had conferred with him regarding their sewage disposal problem. He had discussed with them the Willamette interceptor sewer, what area it could serve and under what arrangements. He stated that the city attorney's office had been represented at some of these conferences and had pointed out to the people that some of the area would have to annex to Portland if the community wished to be served by the interceptor. He said the city is willing, capable and anxious to build the interceptor but the council must comply with the advice of its attorney.

Mr. Robert Pamplin, Chairman of the Board of Trustees of Lewis and Clark College said the college was willing to annex or go to a sanitary district in order to solve its sewage disposal problem because it desires to work with the adjacent community of which it considers itself a part. He pointed out that the college has a deadline of September 1 to meet because at that time it hopes to start construction on a new 250-student dormitory. They need to start construction then in order to complete the project in time for the start of the 1964-1965 school year. In order to get a building permit from the county they need to have a solution to the sewage disposal problem worked out.

Mr. Bowes read a letter addressed to Mr. Pamplin which outlined the position of the city for providing sewer service to the college.

Mr. McPhillips asked Mr. Brown and Mr. Bowes how much of the area would have to annex in order to make it legal for the city to proceed with the Willamette interceptor sewer. Mr. Brown replied that from a strictly legal point he thought that if the college and intervening area were to annex the city could proceed. Neither he nor Mr. Bowes stated definitely what action the city council might take in such a case.

In reply to an inquiry by Mr. McPhillips, Mr. Spies stated that at least one additional year and maybe two would be required to provide sewerage service for the area if it were to form a sanitary district and build its own interceptor sewer instead of having the city build the system. Mr. Spies reiterated the fact, for the benefit of the people in the audience, that if the city built the interceptor the cost of it would be paid by the entire city of Portland and not by the local community, whereas if they built it themselves they would have to pay for the entire project.

Mr. Sprague Burdin, Consulting Engineer, reported that his firm had been retained by the Citizens Study Committee to prepare a map showing boundaries for a proposed sanitary district. He said no preliminary engineering studies had yet been made and that at least six months would be required to complete such a study in order to estimate costs of installing lateral, trunk and interceptor sewers and treatment works.

Mr. Don McCormick, attorney and member of the Citizen's Study Committee, questioned the size of the interceptor sewer which was being designed by the city of Portland. Mr. Spies stated that it was designed to serve only the area in question and presently outside of the city limits.

IAA357

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that if by August 31, 1963, it does not appear likely that negotiations can successfully be completed for construction of the proposed Willamette interceptor sewer by the city of Portland, the Sanitary Authority should request the U.S. Public Health Service to withdraw the federal grant offer of \$142,770 and to make such federal funds available to the next eligible applicant, and further that if by September 30, 1963, a definite and satisfactory plan for early construction of the required sewage collection and disposal facilities has not been developed by the property owners of the area, a public hearing should be held and a final order should be entered directing the people to abate said pollution.

WASHINGTON COUNTY - Request for Variance at Shady Brook Sanitary Landfill Operation

The following letter from Mrs. Barbara A. Wilcox, Chairman, Board of County Commissioners, Washington County, was read by Mr. Everts:

"Washington County respectfully requests permission for one burn at the site of the Shadybrook Sanitary landfill.

It appears we are the victim of inexperience in refuse disposal controls for we have had a fair amount of October 12 storm debris deposits at the site. We understand this has occurred because our fees are substantially less for this sort of debris disposal than those at other similar operations. This is being remedied immediately.

However, the fact remains there is one accumulation of stumps which cannot be covered, but must be burned. We would be grateful for permission to burn once, after the rainy season has begun.

We trust, barring another Columbus Day storm, this will not be necessary again."

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the variance be granted for a one-time burn of the accumulated storm debris with the understanding that the Board of County Commissioners has provided operational controls to avoid a similar problem in the future.

STAFF REPORTS

Mt. Emily Lumber Div., Boise Cascade Corp. - Cinders and flyash emissions from this lumber mill are continuing to cause excessive particle fallout on downwind properties in violation of OAR 334 21-016. Some improvements have been made but a final solution had been postponed for one year until the management completed mill reorganization studies. The Sanitary Authority had requested a report from Boise Cascade for consideration during this meeting. A letter dated August 7, 1963, was received from C.F. McDevitt, General Counsel, Boise Cascade Corp., which summarized the improvements in the mill; however, no plans for the installation of cinder control facilities were included. The complaints from residents near the mill have continued and the fallout samples show excessive deposition.

It was MOVED by Mr. McPhillips, seconded by Mr. Harms, and carried, that unless the Mt. Emily Lumber Div. submits plans and specifications for approval within thirty days and proceeds promptly with the installation of cinder control devices, the Authority has no alternative other than scheduling a public hearing before a hearings officer in the vicinity of La Grande.

Fairhurst Lumber Co. - Mr. Hatchard stated this cinder and flyash problem involved the Fairhurst Lumber Company located in the town of Athena. About a year ago, Mr. Harold M. Patterson, made a study of the waste wood burner to determine whether or not corrections were needed to reduce the flyash problem. There were delays by the mill management in the modification for burner facilities but there has been significant progress made mostly within the last month.

It was MOVED by Dr. Wilcox, seconded by Mr. McPhillips, and carried that the staff be authorized to hold a public hearing if the company does not continue to make satisfactory progress towards the control of air pollution.

IAA357

CHENEY FOREST PRODUCTS COMPANY - Central Point

A staff report dated August 14, 1963, was presented by Mr. T.M. Gerow, Medford District Engineer, and a copy was distributed to the members of the Authority which has been made a part of the permanent files in this matter.

The maximum monthly particle fallout content of five samples collected at a station located 460 feet ENE of the Cheney Co. wood-waste burner from January 3 to June 4, 1963, was 1182 tons per square mile per month. The median for this period was 537 with a minimum of 154 tons per square mile per month. The Authority's regulations (Chapter 334, Division 2, 21-016, Oregon Administrative Rules) permit 15 tons per square mile per month of total particle fallout plus the normal background value, which is 5 tons per square mile per month or less.

Area investigations made at Central Point in the early morning and night hours during the week of August 5, 1963, showed the occurrence of excessive cinder deposition downwind from the burner in a northeasterly direction.

The burner may operate at times without contributing area nuisance as shown by burner surveys during the day shift; however, since the burner is only used 16 out of 24 hours, the night and early morning burn-down periods appear to contribute substantially to the area particle fallout nuisance condition.

If the Cheney Products Company fails to reduce the discharge from the burner, the alternatives for other methods of waste disposal are increased utilization, disposal of waste at a relatively remote location, or installation of a multiple chamber type incinerator.

It was the recommendation of the staff that (1) the Cheney Forest Products Company be notified regarding the current fallout conditions; (2) the company be requested to submit a proposed plan within 30 days to control the excessive discharge from the waste burner; and (3) the authorization for the public hearing be continued dependent upon the company's proposal to provide adequate control.

Mr. Otto Frohnmayer, Attorney, Mr. Austin Evanson, Consulting Engineer, and Mr. Francis I. Cheney represented Cheney Forest Products Company.

Mr. Frohnmayer stated this mill has been located at the present site for 20 years and in January, 1962, the waste burner was renovated by the Cheney Company.

On March 9, 1962, Mr. T.M. Gerow and Mr. Ron Ott had met with company officials and reviewed what had been done to improve the burner operation. During this past week the company was apprised that the matter was included in the agenda of this Authority meeting and it was suggested that they attend.

Mr. Evanson stated that at Mr. Cheney's request he inspected the burner. He explained that the performance of the burner was dependent on the material being burned and that this mill produces fir lumber only. He reported that there was not time to make a detailed examination; however, on Monday, August 12, it seemed to be operating as well as a mill burner of this type could; there was no visible smoke. Mr. Evanson stated that tests will be made of the actual burner discharge so it can be determined what the contribution of this burner is to the particular area.

Mr. Cheney stated the mill would continue to cooperate in every manner possible to improve the fallout situation.

It was MOVED by Mr. Harms, seconded by Dr. Wilcox, and carried that the hearing originally authorized be postponed and that a report from the engineer employed by Mr. Cheney and from the Authority's staff be submitted at the next meeting.

#### UNITED GROWERS

Mr. Quesseth reported that on July 15, a public hearing was held in the matter of pollution of the public waters of the state of Oregon by United Growers. This hearing was held in the State Capitol Building in Salem, before Mr. Marion Lamb, Hearings Officer. A considerable number of people appeared and testified. The hearings officer has prepared his findings of fact and

IAA357

conclusions, but unfortunately the court reporter has not yet been able to complete the transcript of the proceedings.

In view of this Mr. Queseth recommended to the chairman that this matter be postponed until the next regular or special meeting at which time an appropriate motion can be made.

Mr. Weathersbee stated that presently there is no significant problem with United Growers of continuing pollution. They have acquired additional acreage for irrigation.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox and carried that if there is continued pollution a special meeting be called and an order entered to show cause why such pollution should not be abated.

#### PHILLIPS BROTHERS

Mr. Queseth reported that the public hearing in this matter had been held on July 15 in the State Capitol Building in Salem before Mr. Marion Lamb, Hearings Officer. Mr. Lamb has prepared his findings and conclusions but the court reporter has not yet been able to complete the transcript of the proceedings. In view of this Mr. Queseth recommended that this matter be postponed until the next regular or special meeting.

It was pointed out that the Phillips Brothers Farm does not have its corn operation this year. Mr. Sawyer said he had inspected this recently and there was some green slime in the creek. He said he could see no difference in its condition compared to before the hearing.

The meeting was adjourned at noon for lunch and was reconvened at 1:30 p.m.

#### IDEAL CEMENT COMPANY

Mr. Ronald R. Ott presented a status report dated August 15, 1963, prepared by the Air Quality Control staff which has been made a part of the permanent files in this matter.

At the January 4, 1963, meeting the members of the Sanitary Authority authorized the Secretary to arrange a public hearing if satisfactory progress were not made by February 15 toward the control of excessive lime dust emissions from the Ideal Cement Company plant located near Gold Hill, Oregon. The company submitted a letter dated February 7, 1963, outlining the dust elimination activities and since have submitted monthly progress reports.

The analyses of monthly fallout samples collected by the Authority staff at the Center's residence, located approximately 1,000 feet south of the cement plant have shown a reduction in lime dust. However, the average fallout rate is still in violation of the Authority's regulations (OAR 334 21-026). The results of surveys during the week of August 5 also have shown the presence of excessive concentrations of lime dust originating from the transport of the agricultural lime by-product within the mill storage areas.

Mr. Frank Sutcliffe, Manager of the Gold Hill mill, and Mr. A.W. Hooton, Regional Production Manager, San Francisco, represented the Company. Mr. Hooton stated this was the golden anniversary of the Gold Hill plant which has been in operation for the past 50 years. The company, has through the years, spent considerable money to install dust control equipment and the dust emission is small now compared with earlier years. He stated that the company was happy to see a reduction in the fallout during the past year of nearly 50% which indicates that the Authority has done some good work. He commented that the recommendations which the staff has presented were not reasonable and that the suggestions are appreciated.

Mr. McPhillips asked if the company's engineering staff could come up with recommendations that will help solve the problem within the 60 day period recommended. Mr. Hooton replied that a sound schedule of what the company is going to do step by step could be presented at that time; however, the company would like to be relieved of the responsibility of turning in a report every month.

TA 257

Mr. Harms noted that the attitude of the company was quite commendable.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox, and carried, that Ideal Cement Company be notified regarding the survey data defining the current conditions; that the company be requested to submit their proposals for additional dust control facilities and/or process changes within the next 60 days; and that the authorization for scheduling a public hearing be held in abeyance providing the company continues to make significant progress toward compliance with the Authority regulations.

ACTION ON PUBLIC HEARINGS

Edward Hines Lumber Co., Bates - The transcript of the court reporter for the public hearing held in this matter on July 19, 1963, having been read by a majority of the members, Mr. Quesseth briefly reviewed the case. The public hearing was conducted by Hearings Officer Marion Lamb in Canyon City. The conclusions of the hearings officer were that the charges have been proven by the evidence, that raw sewage is being discharged into the John Day River at Bates from the facilities under the direction of the Hines Lumber Company, that these acts constitute a public nuisance, that the Edward Hines Lumber Co. has had ample time to solve the problem but does not appear to be taking effective action, and that there is sufficient evidence to warrant an order requiring the abatement of the pollution by Hines Lumber Co.

Mr. R.E. Kriesien, attorney for Edward Hines Co., was present. He stated that the company had purchased the property in 1954 and had taken possession in 1955. The company furnishes these homes, that are the source of pollution in the John Day River, at a nominal rate to employees who work at the mill. There are approximately 150 men employed and the annual payroll is \$1,000,000. The findings of Mr. Lamb are substantially correct. After receipt of the Authority's memorandum of February 8, 1962, the company

IA357

commenced working on the sewage problem. In July 1962 a cost estimate was received from the company's engineers advising that a sewage disposal system could be built at a cost of \$50,000 with an initial cost of \$18,000. At the outset the program called for the installation of a lagoon on property not owned by the Hines Lumber Company. The present owners are willing to exchange the land provided a water right can be obtained. In July of this year the engineers were still engaged in working on final plans and specifications but the day before the hearing the company decided that an expenditure of \$80,000 the first year and a total expenditure of \$100,000 for the project was too much. The condition of the homes did not warrant the expending of this amount. Mr. Kriesien claimed that the conclusions of the hearings officer to the effect that the company has had ample time to solve the problem is not warranted. He said the company is now requesting that it be granted until September 1964 to accomplish this. If it is found it is not economical to build these facilities the employees will be moved from the town and situated in nearby communities. The company feels an order directing the Hines Lumber Company to abate this nuisance immediately will work an extreme hardship on the employees in that they will have to be evacuated to Prairie City and John Day. In all probability operation of the sawmill will be ceased. However, if the mill can continue to operate and if given one year, this source of contamination of waters of the creek can be taken care of properly. There are 100 to 110 houses, all occupied, to be considered in this matter. Mr. Kriesien stated he would recommend to the company officials that either proper disposal facilities be provided or the houses be evacuated.

It was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that an order of the Authority be entered approving the findings of fact and conclusions of the hearings officer and ordering the Hines Lumber Company to abate the pollution in the public waters of Clear Creek on or before September 1, 1964, that the secretary be directed to serve a copy of the

order when formally drawn up upon the lumber company, and further that the Sanitary Authority be furnished progress reports in intervals of not less than 60 days of the progress being made.

Mr. Kriesien stated he would obtain a communication from the company agreeing to furnish progress reports.

CHIPMAN CHEMICAL COMPANY

A staff report dated August 15, 1963, was presented by Ronald R. Ott regarding the current status of the control of odors released from the Chipman Chemical Company, 6200 N.W. St. Helens Road, Portland. This report has been made a part of the permanent files in this matter.

The Chipman Chemical Company's report dated July 19, 1963, was reviewed by the staff and recommendations were submitted to the company. Proposals for additional air quality control facilities were submitted on August 12, 1963, as an addendum to this report.

Based on this review the AQC staff recommended that the members of the Authority grant conditional approval providing the following requirements are met: (1) That air samples and related measurements be collected daily at down wind area stations to determine the concentration of DCP and other malodorous constituents and a summary report be sent to the Authority each week, (2) that any discrepancy in the operation and/or maintenance of equipment that could permit the release of mal-odors into the atmosphere be corrected immediately by the company and that any release of mal-odors be reported to the Authority staff, (3) that the 2,4-D plant not resume production until an Authority staff survey of the plant has been made to determine that all control measures have been installed or instituted; (4) that information concerning any process change be submitted to the Authority for review and approval before the change is made, and (5) that the data describing the quantity and quality of the water effluents be submitted to the Authority for review.

Mr. Ott explained that during the June 21, 1963, Authority meeting a public hearing was authorized if satisfactory control for odor reduction were not provided. He reported that the mill production processes will be shut down until about November 15, 1963, and that the proposed controls will be installed during this shutdown.

The staff recommends that the authorization for the hearing be continued for one year. If the company fails to comply with the conditions included in the plan review, the staff recommends that a public hearing or other enforcement action be taken promptly.

Mr. Tom Henshaw, chemical engineer for Chipman Chemical Company, stated that the modifications proposed would improve the odor control facilities. Chipman Chemical Company feels the recommendations that have been submitted by the Authority staff are fair and the company will try to comply 100%. Mr. Wendel asked if it would assist the odor control effort if the manufacturing process were on a stable production rate instead of being on intermittent operation which overtaxed the control facilities. Mr. Henshaw replied the company had tried to keep production through the season but the demand for the product is seasonal.

Mrs. Ira Keller then asked to be heard. She stated she lived at 4700 S.W. Northwood Avenue which is an area affected frequently by the odors from Chipman Chemical Company. This problem has been discussed with the Authority in past years and the company has always said that it was going to cooperate and correct this problem but each year it seems to be worse. Mr. Wendel stated he had conferred with Mr. B.J. Smith, Vice-President of Chipman, who had assured him the company would do every thing possible to correct this pollution.

A letter dated August 12, 1963, addressed to the Authority from Mrs. Grace Smith, 6509 N. Mississippi, was read by Mr. Everts and was made a part of the permanent files in this case.

IAA357

It was MOVED by Mr. Harms, seconded by Dr. Wilcox and carried that the authorization for a public hearing be continued for one year and if Chipman Chemical Company fails to control the release of significant mal-odors, the public hearing or other enforcement actions shall be taken promptly.

Water Pollution Control Problem - Chipman Chemical Co.

A report was given by Mr. E.J. Weathersbee to acquaint the board with the problem of water pollution as caused by Chipman Chemical, Industrial Air Products Co., and Morris P. Kirk and Sons, Inc., all of which discharge liquid industrial wastes into a privately owned land-locked lake. The problem is very complex due to the fact that several different types of wastes are discharged into this lake which is owned by Industrial Air Products Company, M. Kirk and Sons, and the Spokane, Portland and Seattle Railroad. Mr. Weathersbee said the staff is continuing its investigation of this problem and that until the investigation can be completed no action on the part of the Authority members is suggested. The members asked to be kept informed regarding this matter.

Mr. Wendel stated he would be out of the state during September and October.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Harms, and carried that Mr. McPhillips be appointed temporary chairman.

Dr. Wilcox stated he would like to know about contamination of the Wilson River. Mr. Carter stated he had stopped and observed a crude oil line leak but this has now been repaired.

There being no further business the meeting adjourned at 2:50 p.m.

Respectfully submitted,

CURTISS M. EVERTS

Secretary and Chief Engineer

MINUTES OF THE NINETY-EIGHTH MEETING  
of the  
Oregon State Sanitary Authority  
December 19, 1963

The ninety-eighth meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:00 a.m., December 19, 1963, in Room 540 of the State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Richard H. Wilcox, M.D., Edward C. Harms, Jr., Herman P. Meierjurgan, and Chris Wheeler, Members; Kenneth H. Spies, Secretary; John Denman and Cecil Quesseth, Legal Advisors; Ely J. Weathersbee, Deputy State Sanitary Engineer; Richard E. Hatchard and Harold E. Milliken, Assistant Chief Engineers; Joseph A. Jensen, Associate Engineer; Robert F. Wood, Assistant Engineer, and Howard Smith, Assistant Chief Air Quality Control.

MINUTES:

It was MOVED by Mr. McPhillips, seconded by Mr. Harms, and carried that the minutes of the 97th meeting held on August 15, 1963, be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that the action taken on the following 147 project plans for water pollution control for the months of August, September, October, and November, 1963; and 18 project plans for air quality control for the months of July, August, September, and October, 1963, be approved.

UNITED GROWERS

IAA357

Mr. Quesseth reported on the hearing concerning United Growers held in Salem before the hearings officer, Mr. Marion Lamb, on July 15, 1963. Findings of fact and conclusions by Mr. Lamb had been entered on July 29. The transcript was not available at the last Authority meeting in August; therefore, the matter was postponed until this meeting. Mr. Quesseth stated that all members of the Authority had since reviewed the transcript of testimony involved and had considered the findings of fact of the hearings officer. It therefore remained for the Authority to adopt a final order. Present were United Growers representatives, Mr. A.H. Randall, Manager, and Mr. Linfoot, Attorney. Mr. Randall stated that the area has been progressing toward sanitary sewers as rapidly as possible, that the company is now waiting the results of the bond election on January 21, 1964, which if passed will permit installation of a sanitary sewer to take care of the United Growers plant, that an area of 105 acres of land for sprinkler irrigation to get rid of the effluent has been made available to take care of the wastes during the interim between now and the time the sewers are ready, that the sprinkler system worked very successfully this year and that it should be satisfactory for the interval between now and the time sewers should be available in approximately two years.

Mr. Weathersbee added that during the past summer the problem was fairly well taken care of and there was little or no cause for nuisance complaints. Since the rains began and irrigation was no longer feasible there has been some slime in Pringle Creek. There is a holding pond which can hold 9 to 12 million gallons but during the rainy season it is the practice to discharge to the creek, Mr. Randall stated.

Mr. Randall reported that the wastes are sprinkled fresh and there is no odor as all solids are screened out and the screened solids are hauled away. The maximum daily volume is about 1/2 million gallons. Mr. Weathersbee reported that the level of complaints has gone up since the rainy season began and slime conditions have developed in Pringle Creek at the present time. The only possible way it could be improved would be to enlarge the capacity of the lagoon to allow more impounding when the flow in the creek is not large enough to take this effluent. This is not a year round operation and there will be no more processing until next June.

Mr. Lloyd Clark of Clark and Groff Engineers, estimated that if the bonds are voted on January 21 bids could be called for in the spring and construction started on the main interceptor sewer this summer.

Mr. Weathersbee said the staff would be in favor of issuing the order as recommended, without change, since if there is no pollution, the order would have no effect.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox, and carried, that the Findings of Fact and Conclusions dated July 29, 1963, of Hearings Officer, Marion Lamb, be approved, confirmed and adopted by the Authority, and that it be ordered by the Sanitary Authority, State of Oregon,

(1) That the United Growers, Inc., a corporation, its officers, agents and employees be and they hereby are ordered and directed to permanently refrain from discharging industrial wastes without prior adequate treatment into the waters of Pringle Creek in Marion County, Oregon, or to place or discharge to the said Creek or permit such waste to seep into the said waters of Pringle Creek in said County and State.

(2) That the said United Growers Company shall be authorized to continue to dispose of its industrial wastes by sprinkling and irrigation upon

properties adjacent to its canning and food processing plant at 4752 Liberty Road South, Salem, Marion County, Oregon, provided the same is properly maintained in such manner that no further seepage from cannery wastes shall go into the waters of said Pringle Creek.

(3) That the secretary of the State Sanitary Authority is hereby directed to serve a true copy of this Order upon the United Growers, Inc., and its representatives.

(4) That this order shall become final and constitute a final order as of January 15, 1964.

#### HARVEY ALUMINUM

The status of the Authority's public hearing in this matter was reported by Mr. Denman. The case of R.L. Renken, et.al., vs. Harvey Aluminum, Civil No. 61-207, was tried in federal district court in July 1963 with Judge John F. Kilkeny presiding. The decision in this case was expected any day, but it has not yet been received. Many of the issues in this case parallel those in the Authority's complaint; therefore, it was decided to await the court's decision before proceeding with the hearing.

Mr. Joe Byrnes stated that a report is being prepared for the Authority which would be submitted in about two weeks and that he was appearing today for Harvey Aluminum in order to answer any questions the Board might have at this time.

Mr. Byrnes stated that since the last meeting with the Authority members the roof monitor scrubbers have been installed and tested and air samples were taken during the growing season. Vegetation was sampled at a number of sites and these indicated a reduction of approximately 60 to 65% in levels of fluoride concentration in both air and vegetation. He said

IAA357

that some of the more significant field observations on apricot and prune trees showed the effects were markedly reduced and that the only effect allegedly due to fluorides was still noticeable on peaches.

Mr. Harms asked that the company's report be made available soon enough so that the Authority staff and members could review it before the next meeting. Mr. Hatchard said his staff would prepare a report for the Board members after Harvey's report had been reviewed.

PHILLIPS BROS. FARM

Mr. Quesseth reported on the hearing in this matter conducted July 15, 1963, before hearings officer Marion Lamb in the Capitol Building at Salem. Mr. Lamb had concluded that the specific charges had been proven and that sufficient evidence had been produced to support an order.

Mr. and Mrs. Kenneth Allen had been notified that this matter would be considered at this meeting but they were not present. The staff recommended that an order be entered. Mr. Weathersbee stated that there had been no adding of silage to the pits this year and there is no apparent pollution at this time but he agreed that the Authority should enter an order directing immediate and continuing abatement of pollution.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried, that the findings of fact and conclusions dated July 29, 1963, of Hearings Officer Marion Lamb be approved, confirmed and adopted by the Authority, and that it be ordered by the Sanitary Authority, State of Oregon:

(1) That Kenneth Allen and Gladys Phillips Allen, doing business as Phillips Bros. Farm, their agents and employees, be and they are hereby ordered and directed to abate the said pollution of the public waters of this state by permanently refraining from discharging silage juices into the Little Pudding River or its tributaries, and to refrain from operating

silage pits, silos and juice ponds at or near said stream in such manner as to permit such silage juices to be discharged or allowed to seep into sub-surface waters or into the waters of the tributary of the Little Pudding River adjacent to Phillips Bros. Farm in the County of Marion, State of Oregon.

(2) That this Order shall become effective from and after the 15th day of January, 1964.

(3) That the secretary of the State Sanitary Authority hereby is directed to serve a true copy of this Order upon the said representatives of Phillips Bros. Farm.

EDWARDS BROS. LUMBER CO.

The findings and conclusions by hearings officer Marion Lamb on October 7, 1963, were presented by Mr. Denman. The hearings officer had found that the charges were proved, that an order should be entered and that Edward Brothers should be directed to abate further pollution.

Due to the fact that lumber is a major industry in Oregon Mr. Hatchard stated he had prepared a memorandum concerning this subject and dated December 18, 1963. The memorandum was reviewed by the members. It since has been made a part of the permanent files in this matter.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that (a) an order be issued and that Edwards Bros. apply the pertinent improvements to the burner based upon OSU Bulletin #39 and submit a report of the modifications completed to the Sanitary Authority by February 20, 1964, (b) that the company develop additional plans for the adequate disposal of wood waste to be in compliance with state statutes and regulations regarding air pollution and that an engineering report be submitted to the Authority by April 1, 1964, and (c) that said order be effective January 15, 1964.

IAA357

WIGWAM WOOD WASTE BURNERS

A memorandum report dated December 18, 1963, regarding air pollution from Wigwam Burners serving the Lumber and Wood Products Industry, and which has since been made a part of the permanent files, was reviewed by Mr. Hatchard.

After considerable discussion of the subject, it was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the Sanitary Authority formulate a policy statement regarding wigwam burners as follows:

- (1) That prior to January 1, 1965, the Authority will consider adoption of regulations which will deny approval for proposed new wigwam burner installations after that date.
- (2) That the lumber industry and individual lumber mills located near Oregon communities are urged to develop improved disposal methods and phase out the use of wigwam waste burners, and
- (3) That the Authority instruct its staff to prepare additional regulations to produce an orderly phasing out of the existing wigwam burners causing air pollution problems.

CITY OF EASTSIDE

Mayor Clayton Hammond, City Attorney William Collver and Lloyd Clark of Clark and Groff Engineers, were present to represent the city. Mayor Hammond stated the city has solved its water pollution problem by putting in a city-wide sewerage system and treatment plant. It is now faced with pollution in the air by caustic gases and objectionable odors. At Mayor Hammond's suggestion, Mr. Collver described the situation after first thanking the Authority and staff for assisting the city in its application for federal funds for the sewer system which is now nearly completed. He stated that located to the southwest of the city of Eastside is the Georgia

Pacific plant, that during this time of year the prevailing winds which are from the southwest carry air-borne debris from said plant to the city, that city officials have met with Georgia Pacific on numerous occasions and it is known that the company has spent considerable money to correct this situation, that the city has just recently been petitioned by its people to rectify the problem, and that therefore the Authority is being asked to conduct some tests at this time.

Mr. William Moshofsky of Georgia Pacific stated that since 1957 when the company bought the sawmill and hardboard plant that \$80,000 had been spent for a cinder collector in the stacks and that in 1959 an additional \$80,000 was spent for other improvements in an attempt to control the problem. He reported that the company has changed its process of treating hardboard, that the hardboard is dipped in a solution of linseed oil and put in kilns and baked at 350°, that chips are used in the hardboard plant with the left overs used in generation of steam, and that a relatively small amount of material is going into the burner. He stated further that in June of this year the sawmill was rented to Coos Timber Co. They are not using power generated from waste and therefore are sending the wastes to the burner. Georgia Pacific is definitely planning a system of baling for sale the light fiber material which has been escaping through the screen.

Mr. Moshofsky said there is no objection by Georgia Pacific to cooperating with any study group to measure this material that is coming down.

The city had requested the Authority to make two tests -- one before and one after any changes.

IAA357

Mr. Hatchard stated that because of staff vacancies it would be difficult to maintain a schedule set up for several months. Some measuring can be done but it will be incomplete; therefore, the Authority's staff would encourage the Georgia Pacific technical staff to get at the sources if possible. The odor problems would be first and the fiber material second. Mr. Clark said the city was not necessarily concerned with the nature of the operation but the nature of the fallout and odors. If standards of the amount of fallout allowable are available, the city is interested in finding out what these standards are and whether or not the present fallout exceeds this amount.

DUNTHORPE

A memorandum report dated December 19, 1963, prepared by the staff and distributed to the Board members was reviewed by Mr. Spies. This report has been made a part of the permanent files in this matter.

Mr. Spies stated that certain steps had been taken by the community and in view of these actions a mail vote was taken by the Authority members on whether or not to hold a hearing. The vote was 4 to 2 in favor of deferring the hearing with the condition that satisfactory progress would continue to be made by the district.

It was MOVED by Dr. Wilcox, seconded by Mr. McPhillips, and carried that the mail vote be confirmed. Mr. Harms stated he wanted it to go on record that he had opposed the deferment.

Mr. Mosser, attorney, was present to represent the community of Dunthorpe. He stated the county engineers and Mr. Sully Ross, engineer for the district, are working out the matter of a physical connection between the city interceptor and the project. The main thing to work out will be an acceptable division of cost between the city and district for

the treatment of sewage. The city is to furnish further data to the consulting engineer. The county has set January 28, 1964, as the formal date for the hearing for formation of a county sewer district.

BIGGER-N-BETTER POULTRY

A report prepared by the staff and dated December 4, 1963, was reviewed by Mr. Weathersbee. This has been made a part of the permanent files in this matter.

After considering the conclusions and recommendations of the staff in this matter, it was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that Mr. C.L. Holmes be cited to appear and show cause, if any exists, why an order should not be entered directing him to provide an approved system of waste treatment and thereby abate the pollution of Kellogg Creek and drainage ways tributary thereto and that a public hearing be held before the Authority board at the next regular meeting of the Sanitary Authority.

ARROW MEAT COMPANY

Mr. Cecil Quesseth gave a status report on the case of the Sanitary Authority vs. the Arrow Meat Company. He stated the case now pending in circuit court involved a problem of long standing.

Arrow Meat Company permits its waste to discharge into Council Creek. They were to submit detailed plans and specifications for construction of a lagoon on adjacent property. Preliminary plans were presented but it has been a never ending problem of the staff to get any detailed specifications. Because of repeated delays the Authority authorized initiation of injunction proceedings. The first action was to write the defendants giving them 30 days to report. No report was received and a complaint was filed in the

IAA357

Circuit Court of Washington County seeking to permanently enjoin and restrain the defendant from polluting Council Creek. Then they filed a counter motion for an order which would require the Authority to review plans for their proposed disposal system. The next step by the Authority's legal advisor was to write a letter to the attorney representing the Arrow Meat Company stating that plans which could be approved had never been submitted but if they wanted to construct on preliminary plans to let the Authority know as the staff was always ready to review plans. Another letter was sent last week stating that if the company was serious about the motion it would be set down for early in January as the Authority was trying to get this matter to a final hearing.

CHIPMAN CHEMICAL COMPANY

Mr. T.B. Henshaw and R.F. Gitschlag were present to represent Chipman Chemical Company.

Reports prepared by the staff on air and water pollution were reviewed. These related to existing plant facilities and to proposed installation of a new process for production of 2-4-DB. Following a detailed review by the Authority's staff of the company's proposal relating to the existing plant a letter had been sent advising the company that its proposal was approved with some five conditions. The staff reported that said conditions were being met, that any source of pollution is being attended to immediately, that since operations had been resumed no complaints had been received, that on two or three occasions trace odors were found and reported to Mr. Gitschlag but it was found they had already been attended to. Plans and process description of the new 2-4-DB process had been submitted to the Authority staff in November. It is a secret process and is the only one in the United States. The staff had since reviewed the proposed system

IAA357

to control odors from the new process and recommended that it be approved with several conditions (8) which have to do with the technical detail and operational surveillance after the plant goes into operation. It was suggested that the Authority consider these conditions as a part of its conditional approval of the proposal. The conditions have been part of their conditional approval of the proposal. The conditions were discussed with Mr. Gitschlag and he stated he saw no difficulty in abiding by them.

Mr. Weathersbee said that at the last meeting of the Sanitary Authority he had given a brief description of the water pollution problem at Chipman. It was suggested at that time that further studies be made. A definite program of study and correction of the company's liquid waste problem was one of the conditions for approving the addition of 2-4-DB production.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that conditional approval of the plans submitted by Chipman Chemical Co. for production of 2-4-DB be granted provided the company meets the recommendations contained in the staff memorandum of December 19, 1963, namely:

- (1) The steam evaporating capacity at the condensation kettles V-6a and V-6b and at the Stripper Hold Tank, V-10, should not be permitted to exceed the vapor condensing capacities of Condensers E-1a, E-1b, and E-3.
- (2) The designed production rates of the 2-4-DCP Condensation Kettles (2-4-D production plant) should not be exceeded through the need for dichlorophenol at the proposed 2-4-DB plant.
- (3) The outlet gas stream from the Odor Control Scrubber shall be monitored for DCP with sampling collection and subsequent analyses following each day,

swing, and graveyard shift. These sample results shall be sent to the Authority each week.

(4) Daily downwind area air monitor measurements for DCP and other mal-odorous constituents shall be collected, analyzed and sent to the Authority on a weekly basis once the technical details of this procedure have been worked out and agreed upon by the company's and the Authority's staffs.

(5) Any discrepancy in the operation and/or maintenance of equipment that could permit the release of mal-odors into the atmosphere shall be corrected immediately by the company, including the shut-down of the faulty equipment or the production process, if necessary.

If a significant quantity of mal-odorous constituents is discharged into the atmosphere, the company will report the incident to the Sanitary Authority staff and take immediate corrective actions.

(6) Information concerning any process change that could effect the release of mal-odorous constituents into the atmosphere will be submitted to the Authority for review and approval before the change is made.

(7) The release of contaminated water from the plant to Lake Doane should not significantly aggravate the existing liquid waste problem. The company should continue to conform with their program outlined in their letter to the Authority dated December 12, 1963.

(8) Data describing the quality of waste water streams shall be submitted to the Authority weekly. The company shall advise the Authority of their progress in providing adequate waste water treatment in bi-monthly reports. and that the public hearing previously authorized be continued for one year duration.

CITY OF PORTLAND

On December 10, a comprehensive report prepared by Mr. Hatchard and staff entitled "Air Pollution in the Portland Metropolitan Area" was released at a meeting of the Portland City Council at which Chairman Wendel and Dr. Wilcox were present to aid in the presentation. Mr. Hatchard stated that the significant development that has taken place is the desire on the part of the city to support a community air pollution prevention effort by adopting a comprehensive ordinance. Drafting of such an ordinance is proceeding with participation by AOI, the Mayor's office, City Health Bureau, and the city attorney assigned to do it. The group expects to have a final draft before the Council some time in January 1964. The Authority's staff has been requested by the Portland City Planning Commission to furnish whatever data are available which will give the full picture regarding air pollution's limiting land use development. The staff is not prepared to answer in a detailed way now but is preparing a supplementary report.

Dr. Wilcox stated that this was an excellent report and the staff should be commended.

ST. JOHNS MOTOR EXPRESS

Mr. Denman reported this case had been set for trial on the 20th of October, 1963 but that the president of St. Johns Motor Express had fallen from a scaffolding and was unable to appear. It is now set for the 30th of December. Mr. Denman stated he had not been able to get in touch with the defendant's attorney to find out the present status.

IAA357

DULIEN STEEL

Mr. Denman reported that a petition for injunction has been filed in this case. The injunction is to enforce the Authority's order to refrain from burning.

PORTLAND CITY DUMP

Mr. Hatchard reported that Mr. Elmer Hawk filed action in circuit court in Multnomah County and that preliminary injunction proceedings on October 30, 1963, were heard by Judge Bryson who ruled it was not an emergency entitling injunction. The injunction was therefore not granted pending trial. Judge Bryson stated in his decision to the court that this condition has existed for some time but that this is not to say the Sanitary Authority could not by proper procedure prohibit the burning at the city dump.

Mr. Neidermeier, attorney for Mr. Hawk, was present. He requested that the Sanitary Authority take action in this matter. He stated it was difficult to get others to stop burning when the cities have not been required to cease.

Mr. Hatchard pointed out that at the Medford Sanitary Authority meeting the Board had authorized that a subcommittee be formed and that it and the staff meet with the Portland city officials to try to work out a solution. He said this seems to be an approach that may be possible, that this matter will not necessarily work itself out when the city gets an effective ordinance, and that it is going to take some additional enforcement. It was agreed that the subcommittee should meet with the city officials as soon as possible.

MULTNOMAH COUNTY FEDERAL GRANT APPLICATION

Mr. Spies stated he had been notified recently by the federal government that from the 1964 fiscal year appropriations under PL 84-660 an

IAA357

additional \$128,000 had been made available to Oregon applicants. The allotment was made on the basis of a \$100 million appropriation instead of \$90 million. As a consequence, some \$30,000 is now available to allocate to other projects after all previously approved requests have been met. The latter include Brownsville, Lebanon, Huntington and Talent, and increases for West Linn and Yamhill. Multnomah County has recently submitted a request for a \$4,700 grant to construct an interceptor to serve Whitford-McKay Sanitary District. The priority point totals for this project are high and it is ready to go. The staff recommended that a priority certificate be granted to Multnomah County for this project. Authority to grant a priority certificate to Aloha Sanitary District for residual funds, after all other authorized projects have received grants, was also recommended.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that a priority certificate be issued to Multnomah County; and after all presently authorized projects have been started, a priority certificate be issued to Aloha.

#### FEDERAL LEGISLATION

Mr. Hatchard stated that copies of PL 88-206, the new Federal Clean Air Law signed by President Johnson on December 17, 1963, would be submitted to the board members by the secretary at a later date.

#### MISCELLANEOUS

Mr. Spies announced that at this meeting Mr. B.A. McPhillips had completed 20 years of outstanding service to the state of Oregon as a member of the Sanitary Authority.

Mr. Spies thanked the board members for their fine support of the banquet for Mr. Everts. It was MOVED, seconded, and carried that the following resolution be adopted:

## RESOLUTION

WHEREAS, Curtiss M. Everts, M.S., served his fellow Oregonians as sanitary engineer of the Oregon State Sanitary Authority since its organization in 1939, and as State Sanitary Engineer and Secretary of the Authority since 1941; and

WHEREAS, this service earned him such respect among his friends and colleagues they honored him with numerous awards and positions of trust and responsibility, including his recent appointment as Director of the federal government's new Pacific Northwest Water Laboratory; and

WHEREAS, by his expert judgment and foresight he has developed for Oregon one of the most comprehensive programs of air and water quality control in the nation; and

WHEREAS, the United States Public Health Service and other federal and state authorities seek his counsel and hold his judgment in the highest esteem; therefore be it

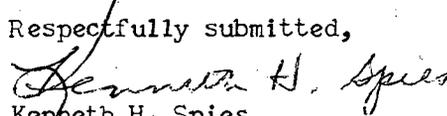

RESOLVED, that we, the members of the Oregon State Sanitary Authority, express our sincere appreciation to Curtiss M. Everts for 24 years of meritorious service and extend our congratulations to him on his new position; and be it further

RESOLVED, that this resolution be recorded in the minutes of the Oregon State Sanitary Authority and copies be sent to Mr. Everts, the Governor of Oregon, the United States Public Health Service, and the Oregon State Board of Health.

The date for the next meeting was set for Thursday, January 30, 1964.

The meeting adjourned at 1:15 p.m.

Respectfully submitted,

  
Kenneth H. Spies  
Secretary

## MINUTES OF THE NINETY-NINTH MEETING

of the

Oregon State Sanitary Authority

January 30, 1964

The ninety-ninth meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman at 10:00 a.m., January 30, 1964, in Room 36 of the State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Herman P. Meierjurgan and Chris Wheeler, Members; Kenneth H. Spies, Secretary; John Denman, Legal Advisor; Ely J. Weathersbee, Deputy State Sanitary Engineer, Richard E. Hatchard and Harold E. Milliken, Assistant Chief Engineers, T.M. Gerow and H.M. Patterson, District Engineers; Howard Smith, Assistant Chief Air Quality Control; Fred Bolton and Fred Katzel, Assistant District Engineers; Joseph A. Jensen, Associate Engineer; Robert F. Wood, Assistant Engineer; Edgar R. Lynd, Water Quality Technician; Robert Percy, Chief Chemist Air Quality Control, and Edison Quan, Aquatic Biologist.

MINUTES:

It was MOVED by Mr. Meierjurgan, seconded by Mr. Wheeler, and carried that the minutes of the 98th meeting held on December 19, 1963, be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the actions taken on the following 19 project plans and engineering reports for water pollution control for the month of December, 1963, and 11 project plans and engineering reports for air quality control for the months of November and December, 1963, be approved.

IAA357

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12-2-63	Springfield	Revision of S. 51st Place sewer	Prov. approval
12-3-63	Linn County	Gus Myss Apts. STP	Prov. approval
12-3-63	Medford	Stewart & Chestnut Aves. sewer	Prov. approval
12-4-63	Sandy	Sewage treatment plant additions	Prov. approval
12-5-63	West Linn	Jolie Point Estates Subd. sewers	Prov. approval
12-5-63	South Salem	Sunnyridge Heights #2 sewers	Prov. approval
12-5-63	Somerset West	Sewage treatment facilities	Prov. approval
12-9-63	Gold Beach	Sewers, APW-Ore-41G	Prov. approval
12-10-63	Independence	Rhoda Lane sewer laterals	Prov. approval
12-13-63	Bethel Danebo	Prel. report on sewerage	Prov. approval
12-13-63	Oregon City	Addendum No. 5	Approved
12-16-63	Sweet Home	No. 12th Avenue sewer lateral	Prov. approval
12-16-63	Gresham	N.E. Pacific Street sewer lateral	Prov. approval
12-16-63	Woodburn	Change Order No. 1	Approved
12-20-63	Portland	SW Ridge Dr. & SW 30th Ave. sewers	Prov. approval
12-23-63	Dufur	Addendum #1	Approved
12-27-63	Dufur	Addendum #2	Approved
12-31-63	Sherwood	Sewage treatment plant	Prov. approval
12-31-63	Baker	Sewers & lagoon, APW-124 & 70G	Prov. approval

Air Quality Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
Nov. 12	Coos County	Incinerator - Eastside Jr. High School	Requested additional plans
Nov. 13	Portland	Chipman Chemical odor controls for new process, 2, 4-DB	Studied plans and report. Requested add. information
Nov. 13	Eugene	Incinerator - Irvington Elementary School	Add. plans and specifications
Nov. 14	Oswego	Incinerator - Waluga Jr. High School	Add. plans and specifications
Nov. 14	Springfield	Incinerator - Yollanda Jr. High School	Requested add. plans
Nov. 26	Eugene	Incinerator - Bailey Hill Elementary	Req. additional plans
Nov. 27	Lane County	Wigwam waste burner, Douglas Fir Lumber Co.	Add. information requested
Dec. 9	Lane County	Wigwam Waste Burner - Douglas Fir Lumber Co.	No formal appr.
Dec. 9	Marion County	Incinerator - St. Paul Elementary School	Information requested
Dec. 9	Multnomah Co.	Pathological destructor (Humane Society)	Additional infor. requested
Dec. 31	Newberg	Incinerator - High School	Additional infor. requested

SERVICE AWARDS:

The secretary reported to the members that representatives of the U.S. Public Health Service had recently presented to Mr. Robert Percy and staff a special service award in recognition of the fine work done in connection with the operation and maintenance of the Portland air station of the National Radiation Surveillance Network program. Mr. Wendel congratulated Mr. Percy and staff and expressed the gratitude of the Board for the fine work performed by them.

IAA357

MISCELLANEOUS:

Mr. McPhillips brought to the attention of the Board and staff the problem of intermittent pollution caused by various types of operations on the watersheds of streams throughout the State. He referred particularly to turbidity caused by uncontrolled logging operations and to oxygen depletion caused by the cleaning or dumping of log ponds into adjacent streams. He pointed out that complaints are received after the damage has been done and that as a consequence the staff is frequently unable to make an investigation soon enough to obtain proper evidence. The staff was instructed, however, to follow up on all such complaints and do everything possible to punish the violators.

Mr. Wendel read a letter from Mr. Curtiss M. Everts expressing his appreciation for the banquet and gifts given him and Mrs. Everts on December 10, 1963.

The chairman also announced that plans were being made for a joint meeting of the Authority and State Board of Health to be held on the campus of Oregon State University at Corvallis on February 28. One of the main purposes of the joint meeting will be to present public service awards to four members of the University faculty for their many years of outstanding contributions to environmental health.

BIGGER-N-BETTER POULTRY:

In response to an official notice of public hearing issued on January 2, 1964, Mr. Gunther F. Krause, attorney and Mr. Clifford Holmes, leasee and operator were present to represent Bigger-N-Better Poultry. A court reporter was present to take testimony in this matter and his transcript will be made a part of the Authority's permanent files in this case.

IAA357

Mr. Krause reported that some 30 to 35 people are presently employed at this plant located at 6300 S.E. McNary Road in Clackamas County. He admitted that this location is not suitable for continued operation of this particular type of industry and stated that it was just a matter of time until the location would have to be changed. He reported that the entrails from the poultry processing operations are not presently being dumped into the adjacent Kellogg Creek, that a fine screen has been installed for the purpose of removing large solids from the waste, that the screened waters are now being disposed of on land and that as a result Mr. Holmes now feels that the new improvements are adequate to abate and prevent pollution for the time being. Mr. Krause requested that the hearing be postponed or continued on the grounds that no pollution is presently being caused, although admittedly the present site is not suitable for permanent operation. Postponement or continuance of the hearing was requested also for the purpose of allowing Mr. Holmes time in which to find a more suitable location.

Mr. Krause reported that the lease under which Mr. Holmes is presently operating runs only until May 1965. Mr. William Martin, owner of the land on which the plant is located, testified that no new lease has yet been signed.

Mr. Ed Quan, biologist, reported on his observations made on the occasion of a recent inspection of the waste disposal practices and the receiving stream. He confirmed the testimony that the wastes were presently being sprayed on to land. He said there were no noticeable effects on the receiving stream at this time. Mr. Weathersbee reported that the operations at this plant produce from 40,000 to 65,000 gallons of waste per day, and that during the summertime the plant operates on an average of four days per week. It was his opinion that there is not sufficient property available at the present site to dispose of

this quantity of waste continuously on land.

Mr. R.I. Hungerford, Mrs. Betty L. Robertson and Mr. Edwin C. Enegren, owners of adjacent properties, were also present and expressed objections regarding past operations of this company. They complained about odor nuisance and water pollution. They indicated, however, that they would not object to the company's operating for another year if it would agree to move to a different location at the end of that time.

Mr. John Borden, Clackamas County Sanitarian, testified that he had inspected the property recently and had noticed objectionable odors from the present waste disposal facilities.

Following further discussion of the matter, it was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the company be required to submit to the Sanitary Authority within 60 days for review and approval detailed engineering plans and a construction schedule for installation of facilities for effectively treating and disposing of the waste from the Bigger-N-Better Poultry Plant and further that the company submit an expression of willingness to proceed with such project.

It was also MOVED by Mr. Wheeler, seconded by Mr. McPhillips, and carried that the hearing in this matter be continued for at least 60 days.

CITY OF CORVALLIS:

The secretary reported that at the present time the city of Corvallis provides only primary treatment for its sewage and industrial wastes which are discharged into the main Willamette River. This degree of treatment was approved by the Sanitary Authority at the time the present plant was built in 1954. He pointed out, however, that monitoring surveys, which have been conducted annually since then by the Authority staff, have shown that

primary treatment at Corvallis is not sufficient to prevent detrimental pollution of the downstream waters of the Willamette River. He reminded the members that in 1958, following a review of the results of a comprehensive study which had been made the year before, the cities of Eugene, Salem and Newberg, all of which have large industrial waste loadings, were instructed to proceed immediately with plans for the provision of secondary treatment.

He pointed out further that in September 1960 a public hearing was held by the Authority and orders were entered directing all communities from Salem downstream to provide secondary treatment in order to abate pollution in the lower Willamette River. Studies conducted by the Authority staff during the summer of 1963 showed that secondary treatment is now required at Corvallis. By letter dated December 5, 1963, the city was requested by the Authority to take the necessary steps to provide this additional degree of treatment.

In response to that request, the Corvallis City Council had since adopted the following program:

- (1) Completion of sampling and preliminary engineering studies necessary for preparation of final plans and specifications by October 1, 1964.
- (2) Completion of preliminary engineering report and cost estimates by consulting engineers CH<sub>2</sub>M, by December 1, 1964.
- (3) Council authorization for preparation of final plans and specifications by January 1, 1965.
- (4) Submission of application for federal grant under Federal Water Pollution Control Act by March 15, 1965.

- (5) Completion of final engineering plans and specifications and cost estimates by May 1, 1965.
- (6) Election for authorization of necessary general obligation bonds for financing construction by July 1, 1965.
- (7) Award construction contracts by September 1, 1965.
- (8) Completion of project by July 1, 1966.

The secretary recommended the approval of this schedule with the exception that the election for authorization of bonds be held not later than June 1, 1965.

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the above construction schedule submitted by the city of Corvallis for installing secondary sewage treatment facilities be accepted, with the exception that the proposed bond issue election be held by not later than June 1, 1965.

PERFORMANCE BOND FOR THUNDERBIRD MOBILE CLUB:

In response to a request which had been submitted by the owners of the Thunderbird Mobile Club Trailer Park located near Wilsonville in Clackamas County that the present performance bond of \$17,200 be reduced and in view of the fact that the operation of this trailer park is subject to licensure and control by the Clackamas County Health Department, it was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the performance bond for the Thunderbird Mobile Club be reduced to \$1,000.

CHENEY FOREST PRODUCTS, CENTRAL POINT:

At the August 15, 1963, meeting, authorization for the public hearing in this matter was continued depending upon the company's submission of a proposal to provide adequate control for the air pollution caused by its waste wood burner at Central Point.

In a letter dated September 17, 1963, the company outlined the following five specific things that it was going to do at the mill to reduce fallout:

- (1) Contract to have 20 to 30 units of sawdust and/or shavings hauled from the plant each day. The practicality of this would depend on a continued market for such by-products or on the obtaining of an economical disposal area.
- (2) Install a water spray inside the burner cone for knocking down any partly burned particles, thereby preventing their leaving the burner.
- (3) Exercise close control over the draft in order to keep combustion at a most efficient level.
- (4) Thoroughly clean the burner and grates each week to prevent clogging of the underdraft system.
- (5) Educate and train plant personnel to give close supervision to the burner and take proper steps for its control.

Mr. Gerow reported that in early January he had conferred with Mr. Cheney and discussed the matter in detail with him, and had received the following information:

The company reportedly had employed CH<sub>2</sub>M to study the problem but as of that date had not received a report from them. The company is allegedly working with other mills in the Medford area in an attempt to work out a satisfactory solution to the burner problem. A chipper had been ordered and was scheduled to go into operation by April 1964.

Mr. Gerow recommended that close surveillance of this operation be continued, that the company be instructed to operate its present facilities at maximum efficiency and be required to seek other methods of wood waste disposal until a solution to the burner problem can be found.

IAA357

There was then some discussion by the members as to whether or not it would be proper to proceed against this company, in view of the policy which had been adopted at the last meeting of the Authority regarding wigwam burners. It was finally concluded that because of the large number of complaints being received concerning this operation, the company should be required to abate the nuisance. Mr. Hatchard recommended that the previously authorized public hearing be continued, and that the Authority notify the company that it expects further step-wise reductions.

Mr. Meierjurgan then brought up the matter of intermittent versus 24-hour operation of the burner. Mr. Gerow reported that he had discussed the advisability of 24-hour operation with Mr. Cheney, but that one of the drawbacks was the limited area available for storage.

Following further discussion of the matter, it was MOVED by Mr. Wheeler, seconded by Mr. McPhillips, and carried that a letter be sent to the company requesting that a detailed progress report be furnished the Authority setting out (1) the amount of sawdust that is being produced and the percent going to the burner, (2) size of the chipper and information regarding how material now going to the burner which cannot be chipped will be disposed of, and (3) plans for burning on a 24-hour basis.

WEYERHAEUSER PULP MILL EXPANSION, SPRINGFIELD:

The secretary reported that during the last month communications had been received from several residents of the Springfield-McKenzie River area expressing concern about the possible increase in water and air pollution as a result of the expansion of the pulp mill at Springfield which is being planned by the Weyerhaeuser Company. Petitions signed by some 75 residents of the area had been submitted to the Authority requesting that an investigation be conducted and that a public hearing be held prior to the approval by the Authority of

IAA357

the company's proposed plans for treatment and disposal of liquid and air effluent discharges from the enlarged pulp mill. Present capacity of the mill is 400 tons of unbleached kraft pulp per day. The proposal of the company is to add an additional 750 tons per day capacity. The secretary pointed out that in recent years the Weyerhaeuser Company has done a very fine job in abating and controlling both water and air pollution at its Springfield operations. For the past three summers, the company has been disposing of the strong condensates by using them for irrigating company-owned land. As a result the downstream waters of the McKenzie River during the past three summers have been maintained in very good condition. Last summer there was some slime produced in the McKenzie River early in the spring before the irrigation system was put into operation, and in the late fall after the irrigation had been stopped and before the rainy season began. The remainder of last summer, however, the water conditions were good.

During the past three years very few complaints have been received by the Authority about either water or air pollution in the vicinity of the Springfield pulp mill. It was thought that the concern of the people at the present time was due to their fear that air and water pollution would be caused by the expanded pulp production. The secretary pointed out that thus far no information had been received from the company regarding its plans for controlling liquid and atmospheric discharges from the enlarged operations, but that a conference with company officials had been scheduled for February 6 at which time preliminary plans would be discussed.

In view of the petitions which had been received from the residents of the Springfield-McKenzie River area, it was concluded that a public hearing should be held by the Authority at either Springfield or Eugene before any approval was granted to the Weyerhaeuser Company.

The meeting was then recessed for noon luncheon and was reconvened at 2:15 p.m.

PROPOSED REGULATIONS OF WIGWAM WASTE WOOD BURNERS:

Mr. Hatchard presented a report entitled "Air Pollution from Wigwam Burners Serving Lumber and Wood Products Industry" dated January 30, 1964, and containing a suggested 4-step program by the Authority for controlling pollution from wigwam waste burners. This report has been made a part of the Authority's permanent files in this matter.

Following the December 1963 meeting of the Authority, the Associated Oregon Industries arranged meetings in Eugene, Roseburg, and Medford for the purpose of discussing this problem with representatives of the lumber industry. Approximately 75 persons attended those meetings; and as a result, the following representatives were present at this meeting to confer with the Authority:

Mr. E.E. Cone, Mayor of Eugene and owner of the Cone Lumber Company of Goshen; Mr. Sam E. Hughes of the Guistina Bros. Lumber and Plywood Company, Eugene; Mr. Tom Reynolds, Jr. of Spalding and Son, Inc., Grants Pass; Mr. Paul R. Doe of Olsen-Lawyer Lumber Company, Inc., Medford; Mr. S.V. McQueen of Kogap Manufacturing Company; Mr. Vernon S. White, Western Timber Industry; Mr. Merlin Blais, West Coast Lumbermen's Association; Mr. Ray Luthy, Publishers Paper Company, Oregon City; Mr. Tom C. Donaca and Mr. R.E. Olinger of the Associated Oregon Industries.

Mr. Cone was spokesman for the group. He reported that he lives about two miles from the city of Eugene near several sawmills which until recently had very poor waste wood burners. When the wind was in the right direction, there was an extensive fallout of toasted sawdust from the air at his residence. He stated that under the supervision and control of Mr. V.J. Adkison, air quality control officer for the cities of Eugene and Springfield, the sawmill operators had greatly improved the operation of their burners and that as a consequence much of this air pollution had been abated.

IAA357

Mr. Cone stated further that in sawmill operation it is not unusual to waste one-half of the log as bark, sawdust and planer shavings. He pointed out that in recent years industry has done much to utilize these wastes. Scrap lumber is being converted into chips for pulp production. Other waste wood is being used as hog fuel for generating steam, hardboard and particle board production uses other wastes, and considerable quantities of wood shavings are used for agricultural purposes. He expressed the opinion that the present over-cutting of private lands would eventually help to reduce the problem. He thought that in time the problem would correct itself to a considerable degree. According to Mr. Cone, keeping existing burners in better repair is one thing that the industry definitely should do. He claimed that the industry recognizes the desirability and necessity of reducing air pollution, and promised that it would do everything possible to operate existing waste wood burners properly.

Efficient, high temperature burners were mentioned as a possible solution, but Mr. Cone felt that because of their high cost many small companies would be forced out of business if they were required to install such equipment. Mr. Cone indicated that the sawmill operators would be willing to help draft reasonable rules and regulations and would help educate the mill owners. Mention was made of the study which is being conducted by representatives of the industry in the Medford area, but no promise was made regarding the financing of research by the industry as a whole.

In answer to a question from the chairman about cooperative burning, Mr. Cone replied that he did not think it would be practical because of high transportation costs. He was not able to answer the chairman's question regarding the exact cost of high temperature burners. Mr. Cone pointed out that one of the difficulties involved in the burning of waste wood is the variable moisture content of the different species.

Mr. Hatchard, in speaking for the staff, stated that since 1952 the Authority has been working on various phases of the waste wood disposal problem with the lumber industry; however, the lumber industry had not yet taken up the challenge to find a satisfactory solution to this problem. He expressed the opinion that proper operation and maintenance of wigwam burners would greatly alleviate the problem, but that more research is needed to find a complete solution.

Mr. Wendel expressed disappointment concerning the statements made by industry representatives.

Mr. Meierjurgan stated that he felt the industry is capable of and will move to solve the problem.

Mr. McPhillips pointed out that this is not a crash program, but the problem is here and definitely must be solved. He said it was the intention of the Authority to insist on a satisfactory solution.

Mr. Wheeler pointed out that what the Authority is interested in is results.

#### PLACER MINING IN ROGUE RIVER BASIN:

The secretary reported that during recent months several complaints about excessive turbidity in the Rogue River system had been received by the Authority from sports fishermen and others, including Mr. B.R. Rutledge, owner of the Illahe Lodge, and Mr. E.J. Schneider, member of the Rogue River Coordination Board. Because this is a matter which appeared to be a responsibility of the Rogue River Coordination Board, Mr. W.W. Balderree, chairman, had been invited to attend this meeting. He reported that no complaints had been received directly by his Board, but that he had accompanied Mr. Gerow on a recent inspection of the basin to determine which placer mining operations were currently being conducted. Mr. Gerow had previously reported his findings which indicated that excessive turbidity in the waters of the Rogue River downstream from Grants Pass was being caused by placer mining operations.

IAA357

Mr. Balderree said that he had no solution to the problem. He said one thing that might be done would be to discontinue placer mining operations about Friday noon of each week so that the water would be clear enough for fishing over the weekend. The miners could then resume operations at a time such that the flow of tailings would not reach the main stream until Monday. He said the shortcoming of such a program is that this would reduce only the turbidity caused by mining operations and would have no effect upon the turbidity from other sources.

There was a general discussion about the provisions of the state law pertaining to the Rogue River Coordination Board. ORS 517.540, among other things, stipulates that the Coordination Board shall have complete jurisdiction over placer mining operations in the waters of the Rogue River system, and that said Board shall work out a system of rotating, alternating or coordinating the operations of the placer mining activities to the end that suitable conditions will be maintained in such waters for sport fishing.

Mr. Balderree pointed out that the 1963 legislature had appropriated only \$750 to finance the operations of the Coordination Board during the present biennium, and that this amount had been further reduced as a result of the defeat of the tax referendum by the voters on October 15, 1963.

Dr. Walter A. Goss, a Portland physician, was present and stated that he personally felt the Rogue River is one of the greatest fishing streams in the United States, and that preserving it as such could not be stressed enough.

After further discussion of the provisions of the Rogue River Coordination Board law, it was concluded that full responsibility for controlling pollution in the Rogue River basin caused by placer mining operation must of necessity be the full responsibility of said Coordination Board.

Mr. Balderree stated that the Board would do everything possible to alleviate the situation.

The chairman expressed to Mr. Balderree the appreciation of the Sanitary Authority for his being present at the meeting.

SEWAGE DISPOSAL FOR HOUSEBOATS:

The chairman read a letter that he had sent to Mr. Weathersbee regarding the matter of sewage disposal for houseboats. Mr. Weathersbee then reviewed briefly the report which had been prepared recently by the Authority staff covering the investigation made of the houseboats in the Portland harbor area. He stated that an early meeting probably would be held with all of the agencies which are concerned with this matter.

Mr. R.W. Mersereau of the Oregon Yacht Club, who was present, stated that there are some 30 houseboats in the Oaks Park Marina. He said that the club was aware of the problem and was trying to solve it without going into bankruptcy. He asked that when meetings are held that representatives of the various clubs be notified so that they could attend.

After further discussion of the matter, it was MOVED by Mr. Wheeler, seconded by Mr. McPhillips, and carried that the staff be instructed to meet with the various agencies listed in the report, and that an attempt be made to establish a coordinated program for solution of this problem.

FEDERAL LEGISLATION:

It was MOVED by Mr. Meierjurgan, seconded by Mr. Wheeler, and carried that the mail vote in October 1963, opposing federal legislation which would establish a separate water pollution control administration and would delegate to the Secretary of the Department of Health, Education and Welfare unilateral authority for establishment of stream standards, be confirmed.

IAA357

Mr. Hatchard discussed briefly the section of the new federal Clean Air Act, Public Law 88-206, which pertains to program and project type grants to communities, states, interstate agencies and other public bodies for new or expanded air pollution control activities. He also mentioned the new comprehensive air pollution control ordinance which had been prepared for adoption by the Portland City Council and referred to the efforts of the Multnomah County Board of Commissioners toward development of an area-wide approach to air pollution control.

AIR QUALITY CONTROL METHODS FOR COLLECTION AND ANALYSIS OF SAMPLES:

Mr. Hatchard pointed out that in the development of the new Portland air pollution control ordinance, the Associated Oregon Industries had recommended that the methods for collection and analysis of air samples should be clearly defined and presented in detail. Mr. Hatchard pointed out that this usually is done by reference to existing standard methods or is explained in very general terms. The city of Portland had indicated that it will be perfectly agreeable to using the same methods as those used by the Sanitary Authority. In order that the analytical methods used by the Authority would be a matter of record, Mr. Hatchard submitted a compilation of them for the information of the members. Such compilation will be available for use by the city of Portland and others.

MARION COUNTY REFUSE DISPOSAL PROGRAM:

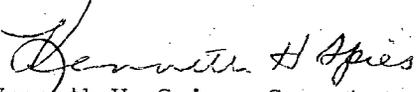

Mr. Smith reported that a letter signed by Dr. Willard Stone had been received from the Marion County Health Department requesting that a variance be granted authorizing the burning of waste lumber from house demolition in the Salem metropolitan area, such burning to be done at the county-owned and operated land fill site known as Macleay Dump. Mr. Smith pointed out that in August of 1963 the Sanitary Authority had denied the request of the Marion

County Court for power to grant similar variances. He pointed out further that prior to the development of the present sanitary land fill operations, the staff of the Authority had been very hesitant to recommend the granting of any variance powers to the county. However, now that the county had developed the sanitary land fill operation at the Macleay site, and in view of the favorable effect that it would have on the overall disposal of waste in Marion County, the staff now recommends that the Authority grant a variance to the Marion County Health Department authorizing the burning of lumber, brush, and tree trimmings, with the understanding that the burning be accomplished only at the Macleay site, and for a period not to exceed one year.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the request of the Marion County Health Department be granted, with the provisions outlined by Mr. Smith.

There being no further business the meeting adjourned at 4:30 p.m.

Respectfully submitted,

  
Kenneth H. Spies, Secretary  
State Sanitary Authority

## MINUTES OF SPECIAL JOINT MEETING

of the

Oregon State Board of Health and State Sanitary Authority

February 28, 1964

A special joint meeting of the Oregon State Board of Health and State Sanitary Authority was called to order by Doctor Forrest Rieke, President of the Board, at 2:00 p.m. in Room 105 of the Memorial Union Building on the campus of Oregon State University at Corvallis, Oregon. The members present were: Doctors Forrest E. Rieke, Richard H. Wilcox, Herbert W. Goodman, John G.P. Cleland, Jack W. Grondahl, Gerhard B. Haugen, Carl L. Holm and A.V. Jackson, and Messrs A.G. McLain, Harold F. Wendel, John Amacher, Edward C. Harms, Jr., B.A. McPhillips and Chris Wheeler.

Other persons present included Mr. Curtiss M. Everts, Director of the Pacific Northwest Water Laboratory, USPHS, Corvallis; Doctor Peter H. Rozendal, Benton County Health Officer; Mr. John Porter, Corvallis City Manager; Mr. Emile Larkin, Benton County Judge; Mr. Fred J. Burgess, Mr. Martin Northcraft, Doctor Paul Elliker and Doctor Chih Wang, all Oregon State University faculty members; and Mrs. Helen Lewis and Messrs Marion B. Lamb, Max Braden, Sherman A. Washburn and Kenneth H. Spies, State Board of Health employees.

Following an introduction of all those present at the meeting there was a brief discussion of the relative responsibilities of the two boards in the matter of water pollution control.

Doctor Rieke then called on Mr. Burgess to introduce the members of the Oregon State University faculty who had been requested to review the activities of their respective departments in the fields of environmental health and water resources which are of special interest to the Board of Health and Sanitary Authority.

386-B

- 2 -

Doctor Paul Elliker, Chairman of the Department of Microbiology, reviewed the program of that department; Doctor Chih Wang, Director of the Radiation Center, discussed the University's program in radiological health and research; Mr. Martin Northcraft reported on the short schools and in-service training programs which are conducted annually at the University under the joint sponsorship of Oregon State University and the Board of Health for sanitarians, sewage plant operators and water works superintendent, and Mr. Burgess reported on the research being conducted in the field of water resources, on the activities of the Water Resources Institute of the University and on the sanitary engineering graduate training program at Oregon State University.

Mr. Harold F. Wendel then presented to Mr. Everts a copy of the resolution which had been adopted by the members of the State Sanitary Authority at their meeting on December 19, 1963, expressing to him their sincere appreciation for his 24 years of meritorious service to the state of Oregon and congratulating him on his new position with the U.S. Public Health Service.

The meeting was then adjourned by Doctor Rieke and at 6:30 p.m. was reconvened in the banquet room of the Corvallis Country Club where Doctor Clair V. Langton, Mr. Ralph O. Coleman, Mr. Roland E. Dimick and Mr. Fred Merryfield, all members of the faculty of Oregon State University were entertained as dinner guests of the two boards.

Later that evening at the half-time intermission of the Oregon-Oregon State basket ball game in Gill Coliseum special public service awards were presented by Doctor Rieke and Mr. Wendel to:

Doctor Clair V. Langton for 36 years of outstanding service to the people of Oregon as Professor of Health and Hygiene, and Director, Division of Physical Education at Oregon State University and particularly for his contributions to the development and direction of training for teachers in the field of health and hygiene.

Mr. Ralph O. Coleman for 45 years of outstanding service to the people of Oregon as Professor of Physical Education, Oregon State University and particularly for his leadership in the development of a nationally recognized intramural sports program based on a concept of physical fitness and well-being for all students.

Mr. Roland E. Dimick for 35 years of outstanding service to the people of Oregon as Professor of Fisheries, Oregon State University and for contributions to the program for abatement of water pollution in the Willamette River Basin. His leadership in preserving a healthful environment assures a major recreational resource for posterity.

Mr. Fred Merryfield for 37 years of outstanding service to the people of Oregon as Professor of Sanitary Engineering at Oregon State University and for contributions to the program for abatement of water pollution in the Willamette River Basin. His foresight and leadership assures the preservation of a major recreational resource for posterity.

Respectfully submitted,

*Kenneth H. Spies*  
Kenneth H. Spies, Secretary  
State Sanitary Authority

## MINUTES OF THE ONE-HUNDREDTH MEETING

of the

Oregon State Sanitary Authority

March 19, 1964

The one-hundredth meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 2:00 p.m., March 19, 1964, in Room 36 of the State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Herman P. Meierjurgan, John Amacher, Chris Wheeler and Edward C. Harms, Jr., Members; Kenneth H. Spies, Secretary; John Denman, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; R.E. Hatchard and H.E. Milliken, Assistant Chief Engineers; Harold Sawyer and Robert F. Wood, Assistant Sanitary Engineers; Fred Bolton, Associate District Sanitary Engineer; Fred Katzel, Assistant District Sanitary Engineer; Ed Lynd, Water Quality Technician; Ed Quan and Glen Carter, Aquatic Biologists and Howard Smith, Assistant Chief, Air Quality Control. Dr. Richard H. Wilcox was unable to attend because he had to be in Salem to preside at a conference on Highway Safety called by the Governor.

MINUTES:

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the reading of the minutes of the 99th meeting be dispensed with and that approval be postponed until the next meeting.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the action taken on the following 39 project plans for water pollution control and 7 project plans for air quality control for the months of January and February 1964, be approved:

IAA357

During the month of January 1964 the following 18 sets of project plans and engineering reports were processed by the staff.

<u>DATE</u>	<u>LOCATION</u>	<u>PROJECT</u>	<u>ACTION</u>
1-3-64	Lake Oswego	Bryant & Jean Rd. sewer	Prov. approval
1-3-64	Springfield	Sewer lateral S-28	Prov. approval
1-3-64	Portland	Tryon Cr. STP equip substitutions	Approved
1-6-64	Sunset Valley SD	Addendum #1	Approved
1-6-64	Oregon City	Addendum #6	Approved
1-6-64	Sunset Valley SD	Addendum #2	Approved
1-14-64	Coos Bay	Sewer extensions	Prov. approval
1-14-64	Portland	SW 52nd & SW Lowell St. sewers	Prov. approval
1-14-64	Sunset Valley SD	Castlewood sewage pumping sta.	Prov. approval
1-15-64	Grants Pass	South side sewer system	Prov. approval
1-15-64	Washington County	Arrow Meat Co. IW treat. works	Prov. approval
1-15-64	Baker	Addendum #1	Approved
1-16-64	Medford	Murphy Road sewer	Prov. approval
1-16-64	Gresham	Dellarose Subd. sewers	Prov. approval
1-17-64	Tigard	Interceptor sewer project #141	Prov. approval
1-17-64	Lake Oswego	Relocation of sewer on "B" Ave.	Prov. approval
1-17-64	Corvallis	Pump stations #1 & #2	Prov. approval
1-20-64	Portland	Maplewood sewer system #2	Prov. approval

During the month of February 1964 the following 21 sets of project plans and engineering reports were processed by the staff.

<u>DATE</u>	<u>LOCATION</u>	<u>PROJECT</u>	<u>ACTION</u>
2-5-64	Pinebrook S.D.	Treatment plant	Not approved
2-5-64	Oceanlake	Sewer extension	Prov. approval
2-5-64	Gresham	Perdita Subd. sewer extension	Prov. approval
2-5-64	Hood River	Cherry Court Subd. sewer	Prov. approval
2-5-64	The Dalles	Sewer extension	Prov. approval
2-13-64	Medford	Rogue Terrace Unit #2 sewer extension	Prov. approval
2-13-64	Gresham	Hogan Road sewer extension	Prov. approval
2-13-64	South Suburban S.D.	Sewer laterals A-14-1 and D-17-53	Prov. approval
2-13-64	Portland	S.W. 45th Avenue sewer	Prov. approval
2-13-64	North Bend	Sewer extension	Prov. approval
2-13-64	Elgin	Boise Cascade glue waste disposal	Approved
2-14-64	Elgin	Sewerage system engrg. report	Approved
2-19-64	Linn County	Pugh Motel treatment plant	Prov. approval
2-19-64	Sherwood	Addenda #1, 2 and 3	Approved
2-19-64	Reedsport	Diehl & Serfling Addition sewers	Prov. approval
2-20-64	Corvallis	Sanitary trunk sewer #12	Prov. approval
2-20-64	East Salem	Institution sewer system engineering report	Approved
2-21-64	Gresham	N.W. Chastain Court sewer	Prov. approval
2-24-64	Corvallis	I.S. #10 and pump station #1 & #2 change orders	Approved
2-27-64	Eugene	Willakenzie sewers	Prov. approval
2-27-64	Springfield	Project S-23 on South 38th Street	Prov. approval

IAA357

The following plans or reports were received and processed by the Air Quality Control staff during January 1964.

<u>DATE</u>	<u>LOCATION</u>	<u>PROJECT</u>	<u>ACTION</u>
Jan. 9	Portland	Chipman Chemical Co. - Changes in 2,4-DB process	Approved
Jan. 17	Toledo	Georgia-Pacific - secondary scrubber proposal.	Preliminary review

The following plans or reports were received and processed by the Air Quality Control staff during February 1964.

<u>DATE</u>	<u>LOCATION</u>	<u>PROJECT</u>	<u>ACTION</u>
Feb. 7	St. Helens	St. Helens J.H.S. - Incinerator	Revised plans requested
Feb. 10	Eugene	Crest Drive Elem. School - Incinerator	Conditional approval
Feb. 14	Marion County	Overhead Door Co. - Wigwam waste burner	Recommendations submitted
Feb. 21	Portland	Tax Statute, State of Ohio	Submitted comments
Feb. 27	Klamath County	Henley School - Incinerator	Additional information requested

PUBLIC SERVICE AWARDS TO MR. WENDEL AND MR. MC PHILLIPS

At this point in the meeting Governor Mark O. Hatfield entered the room and asked permission to take a few minutes of the members' time. He commented briefly on the progress made by the Authority during the past 25 years since its creation in 1939 and commended the members for their untiring efforts in abating the pollution of the public waters of the state of Oregon. He then presented special public service awards to Mr. Wendel in recognition of his 25 years of outstanding service to the State as chairman and member of the Sanitary Authority, and to Mr. McPhillips for his 20 years of outstanding service to the people of Oregon as member of the Sanitary Authority.

WILLAMETTE SAILING CLUB

IAA357

Mr. Milliken reported that recently the Willamette Sailing Club had applied to the city of Portland for a building permit for a houseboat to be used as a club house and to be moored in the Willamette River at the Totem Pole Marina, 4444 S.W. Macadam Ave., Portland. The Portland Building Bureau had referred the club to the Sanitary Authority for approval because the houseboat was to contain toilet facilities and a galley, the wastes from which were proposed to be discharged into the Willamette. Inasmuch as the staff of the Authority had recently submitted a report on this subject, and it was considered advisable that a start should be made soon on adequate treatment of such wastes, the Authority staff did not consider it advisable to approve the construction of the Willamette Sailing Club's houseboat without provision for adequate sewage treatment.

Officers of the club had indicated that it would be a severe financial burden to install at this time a pump and pressure line to the Portland city sewer system or to provide for sewage disposal on shore, and therefore had requested permission to appear before the Sanitary Authority.

Mr. G.S. Patrick, Attorney, Mr. Roy E. Tarbet and Dr. Richard H. Borman were present to represent the club. They reported that it would cost an estimated \$5,000 to connect their houseboat to the city sewer system which is some eight or nine hundred feet from the river bank, that some 60 to 65 families are members of the club, that the members have boats costing from \$500 to \$2,000 apiece, that the cost of building the houseboat, not counting voluntary labor, will be about \$4,000, and that the maximum use of toilet facilities aboard the houseboat would be for occasional meetings involving an estimated 25 to 35 persons.

After a discussion of the relative merits or feasibility of employing incinerator-type toilets, a septic tank with effluent chlorination and other types of sewage treatment, it was MOVED by Mr. Harms, seconded by

Mr. McPhillips, and carried that the Sanitary Authority would not object to the club's proceeding with construction of its proposed houseboat as long as no toilet facilities were included in the structure, and providing further that in the future no such facilities shall be installed unless adequate sewage treatment meeting the approval of the Authority has been provided.

POLICY REGARDING DEGREE OF SEWAGE TREATMENT IN WILLAMETTE RIVER BASIN

The secretary stated that when the state-wide water pollution control program of the Sanitary Authority was organized in 1939, it was concluded that for the cities and communities on the main stem of the Willamette River, with the exception of the city of Portland, only primary treatment plus effluent chlorination would be required in order to restore and maintain an acceptable degree of purity in those public waters. By primary treatment was meant the removal of not less than 35% of the average 5-day BOD and at least 55% of the suspended solids. This same degree of treatment was considered acceptable for cities and communities located on the Coast and Middle Forks of the Willamette.

The acceptability of this degree of treatment was based on studies and surveys made in 1929, 1930 and 1936 by the Engineering Experiment Station of Oregon State University, in 1933 by a special board of consulting engineers for the State of Oregon Reconstruction Advisory Board, and in the late 1930's by the U.S. Corps of Engineers. It was later confirmed in the 1940's by additional studies made by the Engineering Experiment Station of Oregon State University and by the U.S. Public Health Service.

Because of the quantity and strength of its wastes, the city of Portland was required to provide secondary treatment (85% removal of 5-day BOD) for its effluent if it were to be discharged into the Willamette River or primary treatment for effluent discharged to the main Columbia River.

Prior to 1949 none of the cities or communities on the main Willamette or coast or Middle Forks had any sewage treatment facilities. All sewage and wastes were therefore being discharged raw into the river.

Pursuant to instructions from the Authority, the cities proceeded to install the necessary treatment works. In 1949 the first municipal sewage plants on the main Willamette were completed at Junction City and Newberg. By 1957, when the Harrisburg plant was built, all cities on the Willamette had completed the construction of at least primary treatment works and effluent chlorination, and the city of Portland had intercepted and was providing primary treatment for the major portion of its sewage flows with the treated effluent being discharged to the Columbia River.

Of the 25 plants that were built during this period, only three were required to provide more than primary treatment. They were Lowell (because it discharges into one of the U.S. Army Engineers reservoirs), Springfield (because it is immediately upstream from an area that was to be developed for recreational use) and Albany (because it had a large meat packing waste load).

Beginning in 1950 the staff of the Authority started conducting routine monitoring surveys every summer and fall for the purpose of determining the effectiveness of the sewage and waste treatment works being installed along the Willamette River. A summary of the data obtained by these surveys since 1953 has been included in each annual report of the Authority.

In 1957 a comprehensive study or survey of all existing sources of pollution in the Willamette Basin was made by the Authority staff. That survey covered not only the main river but also all the tributaries. One of the major findings of the 1957 study was that, because of the tremendous increase in population and expansion of industry that had taken place in the basin since 1939, primary treatment and effluent chlorination was not

going to be sufficient to restore and maintain the required degree of purity in the Willamette River system.

In view of the findings of the 1957 study, the cities of Eugene, Salem and Newberg (primarily because of their high industrial waste loadings) were by action of the Authority members at their 73rd meeting on January 24, 1958, instructed to provide as soon as possible secondary sewage treatment in order to abate their share of the pollution in the Willamette River. At the same time the city of Portland was instructed to accelerate its construction program for abatement of its pollution in the tidal reach of the river. The pulp mills at Springfield, Lebanon, Salem, Newberg, West Linn and Oregon City were likewise requested to further reduce their pollution loads.

Pursuant to the instructions from the Authority, the city of Eugene proceeded immediately to provide enlarged and improved sewage and waste treatment works. Its project was completed in 1961 and included secondary treatment for a design population equivalent of 75,000 persons.

At the 81st meeting of the Authority on September 22, 1960, a public hearing was held in the matter of sewage and waste disposal by cities and communities in the lower Willamette River (from Salem downstream). As a result of that hearing a findings of fact was made and an order was entered requiring the cities of Canby, Milwaukie, Newberg, Oregon City, Lake Oswego and West Linn (2 plants) and the communities of Marylhurst and Willamette Manor to complete the construction of secondary sewage treatment works on or before July 1, 1962, and the city of Salem and the community of Manbrin Gardens to complete the construction of similar facilities on or before December 15, 1963.

With the completion in the fall of 1964 or the spring of 1965 of the new Salem sewage treatment plant and the Tryon Creek plant, the latter by the city of Portland, all communities on the lower Willamette River will

be served by approved secondary treatment works. Only two small communities, Banks and Hubbard, located on tributary streams in the lower basin have only primary treatment and no plans for improvements.

Special studies conducted by the Authority staff in 1963 showed that secondary treatment is urgently needed at Corvallis to abate pollution in the immediate downstream portion of the Willamette. In response to a written request from the Authority, the Corvallis City Council has since adopted a fiscal, planning and construction schedule calling for completion of secondary treatment by July 1966. This program was approved by the Authority members at their 99th meeting on January 30, 1964.

Even with the above policy and the significant progress that has been made, we have not been able to meet minimum water quality standards in the lower river. Recent detailed analysis of our stream data has shown that upriver pollution loads have a greater effect on downriver conditions than was previously recognized. It is now abundantly clear that the highest possible water quality conditions must be maintained in the upstream reaches if minimum standards are ever to be achieved in the lower river.

Because of the continuing increase in population in the upper portion as well as the lower portion of the basin, and more particularly because of the increasing recreational use which is being made of these public waters, the secretary recommended that a policy of requiring as a minimum secondary treatment, or equivalent, for all effluents discharged into any public waters within the Willamette River Basin be adopted by the Sanitary Authority. He recommended further that all cities, communities, corporations or individuals now discharging untreated or primary treated sewage effluents into these waters be required to install approved secondary treatment works (at least 85% BOD removal plus effluent chlorination) by December 1, 1966. Depending upon the size and nature of the receiving stream, an even higher degree of treatment may be required in some cases.

IAA357

In the discussion which followed, it was pointed out that in the above recommendations the term "sewage effluents" does not include industrial wastes such as those from pulp and paper mills.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the Sanitary Authority adopt the policy of requiring as a minimum secondary treatment or equivalent for all effluents discharged into any public waters within the Willamette River Basin and of requiring further that all cities, communities, corporations or individuals now discharging untreated or primary treated sewage effluents into these waters install by December 1, 1966, approved secondary treatment works equivalent to at least 85% BOD removal plus effluent chlorination. Depending upon the size and nature of the receiving stream, an even higher degree of treatment may be required in some cases.

#### WEYERHAEUSER COMPANY PULP MILL EXPANSION

The secretary called to the attention of the members his letter of February 14, 1964, addressed to the Weyerhaeuser Company and to the reply of Mr. J.O. Julson, production manager, Weyerhaeuser Company dated February 19, 1964. These two letters pertain to the conference which had been held by the staff with company officials on February 6.

The secretary reported that except for the information received at the February 6 conference, no engineering plans or written proposal for water and air pollution control had yet been received from the company in connection with the proposed mill expansion at Springfield. No action was required in this matter at this time, but it was agreed that following the receipt of final plans from the company a meeting should be held in the Eugene-Springfield area.

METROPOLITAN AREA AIR QUALITY CONTROL PROGRAMING

IAA357

Mr. Hatchard stated that at the last two meetings he has reported to the members on activities that relate to the development of air pollution control and prevention in the Portland area. This effort is proceeding very actively. On February 27 the Portland City Commissioners passed a comprehensive ordinance which is being followed up with budgeting and program plans. At the same time the Multnomah County Board of Commissioners is spearheading an area-wide approach to the metropolitan air quality control problems. Meetings were held in mid-January and on February 19.

Mr. Hatchard had been requested by Commissioner M.J. Gleason of Multnomah County, to prepare an initial program summary outlining what the needs are in terms of program responsibility and kind of staff so that the appointed representatives of each county would have something definite to consider at the next meeting on April 10. Mr. Willis West, Deputy District Attorney of Multnomah County, was assigned the task of researching legal requirements for an inter-county program. He will be presenting a report at the April 10 meeting. It was pointed out that one of the important stimulations for multi-county approach to the problem of air pollution in the metro area is undoubtedly the program grant features contained in the Federal Clean Air Act, Public Law 88-206.

Mr. Donald Keagy, Regional Director of Air Pollution Services for the San Francisco office of the U.S. Public Health Service, was then invited by the chairman to give a brief summary of the federal program in terms of the local program. He reported that the grants provisions of the Clean Air Act are at a point where the rules and regulations are being drafted for implementation of the grants. It is expected that application forms will be received soon which state and local air pollution control agencies could use in applying. This is a matching funds type of assistance. For municipality there would be as much as \$2.00 federal money for every \$1.00 local

money for initial strengthening or improvement of air pollution activities. This matching money must be new money from the state or local agencies. This is to increase efforts to conserve natural air resources. In the case of a regional program where more than one municipality is involved, they could get as much as \$3.00 federal money for every \$1.00 local money. The project grants are differentiated from formula grants.

Pending before Congress is a request for a supplemental \$2,000,000 for the present fiscal year. As soon as application forms are out, there are a number of communities that are ready to go. During the next fiscal year the amount of money available will be 20% of total federal appropriation for air quality control. The amount authorized is \$25,000,000 for next year; so if it is all appropriated, \$5,000,000 could be applied to local or state project grants.

#### DEADLINE FOR SUBMISSION OF FEDERAL GRANT APPLICATIONS

Pursuant to the recommendation of the secretary, it was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that June 15, 1964, be established as the deadline for the submission of applications for federal grants under Public Law 660 from the 1965 fiscal year appropriation for assistance in financing construction of public sewage treatment works projects in the state of Oregon.

#### EDWARDS BROS.

Mr. Denman stated that the order entered in the matter of air pollution by the Edwards Bros. Construction Company required that said company convert its burner to conform with regulations and provisions contained in the bulletin "Wood Waste Disposal Utilization", that it submit to the Authority by February 20 a report of the changes and modifications completed, and that it submit by April 1, 1964, an engineering report containing additional plans for disposal of wood waste such that all operations would be in compliance with statutes and regulations pertaining thereto.

IAA357

Mr. Hatchard in summarizing the company's recent progress stated that a letter had been received on March 11 from Mr. M.B. Edwards, but only after a reminder from the Authority's legal counsel that the letter was due. The letter stated that they had read the order, had contacted Oregon State University regarding the provisions contained in the aforementioned bulletin and they were in the process of rebuilding their wastewood burner. The letter stated further that they were investigating other means of improving the efficiency of the burner. Mr. Hatchard reported that he was scheduled to meet with Mr. Edwards on Tuesday, March 31, at which time he would discuss in detail the needed improvements at this mill. He was requested by the members to pursue this matter diligently.

DULIEN STEEL, INC.

Mr. Denman reported that pursuant to the request of the Authority members the necessary papers seeking enforcement of the order previously entered against Dulien Steel, Inc. to cease and desist open burning had been filed in the Multnomah County Circuit Court on approximately the 17th of February. He reported further that the attorney for the company had called him on Tuesday, March 17, and said that by the following Monday, March 23, 1964, the company would know definitely what it intended to do. Mr. Denman was requested to do everything possible to bring this case to a speedy and satisfactory conclusion.

ST. JOHNS MOTOR EXPRESS

Mr. Denman reported that the St. Johns Motor Express had appealed the Authority's order to the circuit court and that the judge had requested additional information from the Authority's counsel regarding certain questions which had been raised by the plaintiff. Mr. Denman stated that he was presently in the process of composing a memorandum and of doing legal research which should be completed shortly.

Following the receipt of this information the judge could be expected to render a decision in this matter. The judge had also requested that both parties look into the possibility of installing adequate incineration facilities. Consequently, Mr. Hatchard had scheduled a meeting with an engineer retained by the company to discuss this possibility. Further action in this matter is dependent upon the outcome of the meeting with the engineer on March 25, 1964.

#### HARVEY ALUMINUM

Mr. Denman reported that the Harvey Aluminum Company had filed a motion for the reopening of its case which was heard late last year by the U.S. Federal District Court. Their purpose in filing such a motion was to be able to submit additional testimony. Arguments on the motion were reportedly set for the early part of April and should indicate whether or not the court will reopen and accept the testimony.

In support of the motion the company had recently obtained affidavits by several extremely reputable people experienced in the design of aluminum production plants and air pollution control equipment. The affidavits support the company's contention that the installation of electro-static precipitators would be impractical.

In answer to the question of why the company did not present all of the evidence at the original trial and if this was just another delaying action, Mr. Denman replied that the explanation given in the motion was that the company had been misled as to what it was expected to show. Also, some of the tests which they now wish to report on had not been completed by the time the trial ended. The members requested that they be kept informed of the developments in this case.

EASTSIDE AIR POLLUTION

IAA357

Mr. Hatchard stated that a report had been received from district engineer T.M. Gerow, covering the progress which is being made by the Georgia-Pacific mill at Eastside. Mr. Gerow had conferred with the mill officials the latter part of January. At that time plans were under way to abate and control the air pollution affecting the residents of Eastside. The plans cover both cinder and wood fibre deposition, as well as odors from the high temperature treatment of dipped plywood panels in linseed oil. Mr. Hatchard reported further that the staff had contacted Mr. William Moshofsky regarding the current status of the company's plans. He had advised that \$55,000 have been budgeted for this purpose. Dr. C. Edward Taylor from the Georgia-Pacific pulp mill at Toledo was serving as consultant on this problem. He reportedly is preparing plans for the installation of water scrubbing equipment which is to be installed as soon as the details are finished. The company also had reported that an American Sheet Metal Works mechanical engineer had been retained to prepare additional plans for controlling cinder dust. A large number of complaints had recently been received from the residents of Eastside regarding the continuing pollution of the atmosphere by discharges from the Georgia-Pacific mill. Follow-up investigations are to be made by the Authority staff.

ARROW MEAT COMPANY

A memorandum report covering the period from January 1963 to March 18, 1964, which has been made a part of the permanent files in this matter, was summarized by Mr. Weathersbee as follows: At its meeting on January 4, 1963, the Sanitary Authority authorized injunctive proceedings to abate pollution by Arrow Meat. Mr. Cecil Quesseth, legal advisor, informed the company that these proceedings would be instituted if final plans were not submitted within 10 days and construction started 30 days thereafter. In September, eight months later, final plans still had not been received.

On October 2, 1963, a complaint and summons were served on Arrow Meat. The company filed a counter motion on November 7 seeking a court order to require the Sanitary Authority to review the preliminary plans which had previously been submitted. Final plans were again requested on November 22. On January 9, 1964, another copy of the same preliminary plan without details or specifications was submitted by the company's engineer, Mr. Carl E. Green. On January 15, 1964, a letter was sent to Mr. Green approving the plans, with the condition that details to be submitted later would meet with the approval of the Sanitary Authority, and requesting submission of a construction schedule by February 1. Mr. Quesseth, on March 9, again wrote to Mr. George Mead, company attorney, requesting that a progress report be submitted by the time of this meeting. Mr. Mead called on March 18, and stated that plans had been let out for bids. Mr. Leland Jacobsmuhlen, owner, was called and he stated that plans had been let out for bids and that construction would begin as soon as weather permitted. He indicated that Mr. Green was to report at the Sanitary Authority meeting, March 19. Mr. Green was called and he confirmed that bids had been asked for but stated that he had not been authorized to attend the meeting or commit Arrow Meat to starting construction this spring.

Mr. Weathersbee stated that he and Mr. Quesseth agreed that we should wait another week, and if a definite commitment to construct had not been received, then resume legal proceedings. Injunction proceedings are on file.

It was MOVED by Mr. Wheeler, seconded by Mr. B.A. McPhillips, and carried that if progress is not forthcoming within one week (March 26) injunction proceedings be resumed.

#### BIGGER-N-BETTER POULTRY

A progress report, which has been made a part of the permanent files in this matter, was read by Mr. Weathersbee. The hearing scheduled for the previous meeting of the Authority on January 30, 1964, had been continued

for a period of 60 days. Mr. Weathersbee reported that Mr. Gunther Krause, attorney, had called on March 5 to state that his client was in the process of obtaining  $8\frac{1}{2}$  acres of additional land for disposal of the plant wastes, and that a written proposal and time schedule would be submitted within the 60 day period; however, to date no proposal had been received.

On March 11, E.L. Quan, staff biologist, made a survey of Bigger-N-Better waste disposal operations. He found that the plant is operating only two one-half day periods per week at the present time, and that the wastes were being applied to approximately 1.5 acres without apparent pollution or nuisance conditions being caused. No action was, therefore, considered necessary.

MARION COUNTY SANITARY LANDFILL DEMONSTRATION PROJECT

Mr. Smith reported that up until 1959 much of the solid wastes from the homes and cities of our state was being disposed of by open burning, adding substantially to air pollution. He also pointed out the fact that the quantity of such wastes has risen from  $1\frac{1}{2}$  lbs. per person per day to 4 lbs. per person per day. Cities have recognized that solid waste disposal is becoming a high priority problem in the community. In order to eliminate the air pollution aspect, the State Sanitary Authority, the Oregon State Board of Health and the county health departments some time ago started a program of converting open burning dumps to the sanitary landfill type of waste disposal. At the present time there are 1,200,000 persons in Oregon being served either by the landfill or sanitary landfill method.

In the Willamette Valley and along the coast problems have been encountered in the operation of sanitary landfills because of heavy rainfall, high ground water and unfavorable soils. The need for a good demonstration project to work on these problems has long been recognized. There are three types of landfills used -- one a ravine reclamation, one a cut and cover, and one an area landfill to reclaim marginal land involving various types of soils.

IAA357

Through the cooperation of the State Board of Health, the Marion County Health Department and the Marion County Commissioners, a demonstration project will be held at Salem on April 14, 1964, from 8:30 a.m. to 4:30 p.m. at which time equipment companies will demonstrate proper disposal methods to be accomplished with various types of equipment. The companies will set up their equipment at different sites -- one a ravine type at Macleay Road dump and one an area type developed on Minto Island. They will also have wood chipping equipment located on one of the sites.

The purpose of the demonstration project is to encourage counties to provide themselves with suitable equipment, to show proper locations for landfill operation, and to show how to avoid or solve operating difficulties. All county courts and commissioners have been invited by the Marion County Court and the Marion County Health Officer has invited health officers in the Willamette Valley to attend this demonstration. The Authority members are also invited to attend this all day session the 14th day of April.

FEDERAL WATER POLLUTION CONTROL ENFORCEMENT PROGRAM

There was a brief discussion of the opinion rendered recently by the general counsel for the Department of Health, Education and Welfare which stated that under the provisions of Section 8 of Public Law 660 of the 84th Congress, the Secretary of Health, Education and Welfare can call a conference whenever he has reason to believe that water pollution, subject to abatement under the Act, is occurring and that neither the information upon which the Secretary's action was based nor the mental processes by which he reached his decision to hold a conference is subject to examination or review.

There being no further business the meeting adjourned at 4:30 p.m.

Respectfully submitted,

*Kenneth H. Spies*  
Kenneth H. Spies  
Secretary

MINUTES OF THE 101st MEETING  
of the  
Oregon State Sanitary Authority  
June 18, 1964

The 101st meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:00 a.m., June 18, 1964, in Harris Hall, Eugene, Oregon. The members and staff present were: Harold F. Wendel, Chairman, B.A. McPhillips, John Amacher, Chris Wheeler, Edward C. Harms, Jr., Dr. Richard H. Wilcox, Members; Kenneth H. Spies, Secretary; John Denman, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; H.W. Merryman and Joseph A. Jensen, District Sanitary Engineers; Harold L. Sawyer, Assistant Sanitary Engineer; Glen D. Carter, Aquatic Biologist, and Howard G. Smith Assistant Chief, Air Quality Control. Mr. Herman P. Meierjurgan was unable to attend because of a prior commitment.

MINUTES:

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the minutes of the January 30 and March 19, 1964, meetings be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the action taken on the following 68 project plans for water pollution control and 14 project plans for air quality control for the months of March, April and May, 1964, be approved:

IAA357

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
3-5-64	Lebanon	Sanitary sewer system additions	Prov. approval

REPORT OF THE SECRETARY:

The secretary expressed appreciation to the officials of Lane County for permitting the Authority to hold its meeting in the very fine facility, Harris Hall.

Recent changes in personnel were then reported as follows: The latter part of April Mr. Richard E. Hatchard, who since 1951 was Chief of Air Quality Control, resigned effective the first of May to become Director of the new Air Quality

IAA357

Control Program for the city of Portland. Mr. Hatchard was replaced by Mr. H.M. Patterson, who for the past several years has been District Engineer located in the Pendleton District Office. Mr. T.M. Gerow, who has been employed in the District Office in Medford since 1946, submitted his resignation the end of May. He left Oregon to become sanitary engineer for the Contra Costa County Health Department in the state of California. Mr. Leo L. Baton of the Water Supply staff has been promoted to handle the vacancy created by Mr. Gerow's resignation. Other changes included: Mr. Joseph A. Jensen, who was formerly Associate Sanitary Engineer in Water Pollution Control, was promoted to the position of District Engineer in the Portland office. Mr. R.E. Brand was transferred to fill Leo L. Baton's former position. At the present time the staff is attempting to operate with vacancies for six engineers and two chemists. Of these eight vacancies only four are covered by the present budget. The other four are unbudgeted as these had to be sacrificed due to a budget cut by the 1963 Legislature. Four other new positions were authorized by the 1963 Legislature but they too had to be sacrificed because of the action of voters on October 15, 1963. At the present time, therefore, the staff is actually short 12 positions making it extremely difficult, if not impossible, to carry out all statutory responsibilities of the water and air pollution control programs.

The secretary reported further that the staff has recently been working on the preparation of a budget for the 1965-1967 biennium and is going to ask that all eight positions which were sacrificed be restored and that there be added seven new positions. The latter will include a laboratory director to coordinate all laboratory operations of both the Sanitary Authority and the State Board of Health in the field of environmental health, a draftsman to prepare maps and reports, a training officer, one secretary, and two sanitarians and one engineer in air quality control.

IAA357

It was reported that the staff has recently completed three major engineering reports. The first one pertains to the Willamette River. The second one is a report covering the water quality studies conducted in the Klamath Basin during the past several years. The third pertains to studies conducted jointly with the State of Idaho and the Public Health Service pertaining to conditions in the Snake River boundary of Oregon and Idaho.

Since the last Authority meeting letters have been sent to all cities and communities in the Willamette Basin who will be required to add secondary treatment units to their present primary sewage plants.

In order to improve the operation of municipal and other domestic sewerage treatment works, the staff has sent letters to some 53 cities throughout the state calling to their attention the need to submit monthly operation reports and conduct certain laboratory analyses. The majority of these communities and cities have responded and expressed willingness to cooperate fully in this important program.

In connection with the preparation of the Snake River Report and pursuant to the findings presented in that report, letters were sent to the cities of Nyssa, Vale, and Ontario in Malheur County, to the Amalgamated Sugar Company and Idaho Canning Company of Nyssa, to the Ore-Ida Canning Company of Ontario and to seven meat and 14 potato and onion processing plants calling their attention to the need for continued operation of sewage and waste treatment works and the need for improved treatment facilities for industrial wastes in order to abate and control pollution in the Snake River.

STATUS REPORTS:

Edwards Bros. - Mr. H.M. Patterson stated that following a hearing held on October 7, 1963, in the Linn County Court House, the Sanitary Authority had adopted on December 19, 1963, an order which required Edwards Bros. Lumber Company to repair and bring its wigwam burner in compliance with the provisions

of OSU Bulletin 39. Plans and an additional engineering report were also to be submitted to the Authority for review. On March 31, Dr. Boubel, acting as a consultant for the company submitted a three-step program. The first step included repair and conversion of the wigwam waste wood burner in compliance with the OSU Bulletin. This was completed May 13. Step two called for actual testing of the burner and submission of recommendations and results. The report covering this was received on June 9. The third step included the installation of the thermocouple pyrometer and compliance with further recommendations on actual operation of the burner and wood waste facility.

Mr. Patterson stated that the report as submitted by Dr. Boubel was acceptable to the staff and based upon the results listed in the report, it appeared that the burner should be able to operate in compliance with the Authority's regulations. He said the staff had requested Mr. Edwards to notify the Authority when he has carried out all recommendations of the report so that field tests can be conducted to determine if the burner is meeting regulations.

Dulien Steel - Mr. John Denman reported on the progress of negotiation for a consent decree. Mr. Dulien was to meet with the attorneys on June 17 regarding whether he would sign the stipulation in order that a consent decree can be entered in the suit for an injunction which the Sanitary Authority had filed. Mr. Denman had been unable to contact the attorney for Dulien Steel and, consequently, did not know the results. In the event that the stipulation and the consent decree are not acceptable, the Dulien case will be sent to trial.

St. Johns Motor Express - Mr. Denman reported that the St. Johns case had been set for trial on June 23 in Circuit Court.

Harvey Aluminum - Mr. Denman reported that Harvey Aluminum had appealed from the decision of Judge Kilkenny in U.S. District Court in which Harvey was ordered to install electrostatic precipitators within a year from the date of entry of decree. The case is on an appeal and will go through the usual applicable procedures.

Arrow Meat Company - Mr. Weathersbee reported that the Arrow Meat Company case is under litigation. He had received correspondence from Mr. Queseth on June 11, 1964, stating that the company's attorney had submitted an answer to the complaint filed on behalf of the Authority. The company had denied every allegation except that they were doing business at the location specified. Therefore, in view of this answer, Mr. Queseth had filed application that a trial date be set.

Bigger-N-Better Poultry - Mr. Weathersbee stated that at the Authority meeting on January 30, 1964, a hearing was scheduled. At that time Mr. Holmes, operator, and his attorney, Mr. Gunther Krause, appeared and asked for an extension of time. The Authority granted an extension for a period of 60 days. Shortly thereafter they did present an approvable plan for waste disposal and put it into operation within the deadline.

The disposal system essentially consists of an approved screening operation with disposal of wastes on 18 acres of land leased for this purpose. The system was inspected on May 25 and has been tentatively approved by the staff for operation for the remainder of the period of lease by Bigger-N-Better Poultry. No action by the Authority was needed except to continue the hearing indefinitely.

Eastside Air Pollution - Mr. H.M. Patterson reported that since the last Authority meeting on March 19, two additional complaints from residents of Eastside pertaining to air pollution problems there had been received. The industries involved are Georgia Pacific Plywood and the sawmills of Coos Head at the Bunker Hill plant formerly owned and operated by Georgia Pacific and at the McKenna plant. The Georgia Pacific problem involves discharge of sander dust from the plywood plant and fibers from the hardboard plant plus odors from the hardboard plant. On May 20, R.F. Wood surveyed the Eastside problems. His findings were: The Georgia Pacific boiler stacks did not contribute materially to the problem as the boilers have multi-clone collectors. The boilers operate

IAA357

within the smoke discharge regulations. The sander dust problem has not been solved yet. Hardboard fibers from the hardboard plant are to be removed from the waste burner by June 1 and since it is a substantial part of the problem, it should result in a major reduction in the fallout in Eastside. Following removal of the fibers, Georgia Pacific will have no waste being discharged to the wigwam waste burner. Odors are reportedly solvable by water scrubbing.

Mr. Moshofsky reported in his letter of June 10 that they had plans for an additional experimental device which is to be installed within two months. If the scrubber works satisfactorily, then they will install a scrubbing device in all main vents of the plant. The Coos Head Timber Company took over the sawmill and waste burner from Georgia-Pacific some time ago. The Authority staff had no previous contact with them so Mr. Wood contacted them and surveyed the burner. A letter has been sent to them based upon this survey but no reply has been received from them yet.

Mr. Wood also surveyed the McKenna plant and a letter of recommendations was sent to the Coos Head Timber Company regarding it. No action by the Authority members was considered necessary at this time.

#### WILLAMETTE RIVER REPORT:

To open the discussion of the staff's report on Water Quality and Waste Treatment Needs for the Willamette River, dated May 1964, the Chairman read the summary and conclusions. He emphasized particularly the conclusions contained in items 11 and 12 which are as follows:

- "11. In order to restore and maintain an acceptable degree of purity in the public waters of the Willamette River system, and in view of the continuing increase in population and expansion and development of industry in the basin, and also because of the increasing recreational and other beneficial uses which are being made of these public waters, it has been determined that:

- IAA357
- a. All industrial wastes from each pulp and paper mill prior to being discharged into said waters must at all times and seasons of the year be given primary sedimentation, or equivalent treatment, for removal of settleable solids, such solids to be disposed of in such a manner that they will not gain access to any public waters of the state.
  - b. Each sulphite pulp and paper mill, in addition to settleable solids removal, must provide, at least during the period of critical river flow (June to October, inclusive) of each year, such additional treatment or disposal as is necessary to effect an over-all reduction of not less than 85% in the BOD loading of the effluents from the entire mill.
  - c. All other sewage and waste effluents prior to being discharged into said waters must be given, as a minimum, secondary treatment, or equivalent, such treatment to effect not less than 85% BOD removal and, for sewage effluents, to include chlorination.
  - d. An even higher degree of treatment of sewage and industrial wastes may be required in some cases depending upon the size and nature of the waste load and of the receiving stream. This would particularly apply to tributary streams in the Willamette Basin.
  - e. Significant increases in waste loadings or adverse changes in river conditions, compared to 1963 conditions, would require more than 85% reduction in all waste loads in order to meet established water quality standards.
12. It is considered reasonable to require that all cities, communities and industries install these needed sewage and waste treatment facilities by not later than December 1, 1966."

Harold Sawyer and E.J. Weathersbee were both commended by the secretary for their fine work in the preparation of the report.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the Authority adopt the staff report, that the staff be instructed to meet with industry concerning the findings and conclusions set forth in the report, and that it be the intention of the Sanitary Authority to enter an order in the future in general accord with the staff's findings and conclusions.

APPLICATION FOR PROGRAM GRANT UNDER FEDERAL CLEAN AIR ACT:

The secretary stated that at previous meetings of the Authority Mr. Hatchard had informed the members that last December Congress passed the new Federal Clean Air Act. One provision of that new act authorizes Congress to make annual appropriations for program grants to states, cities,

and other local communities for improvement, expansion or development of Air Quality Control Programs. Word has not yet been received that Congress has yet made any appropriations for the 1965 fiscal year but it is anticipated it will be approved in the relatively near future. In anticipation of such money becoming available, the Authority's staff has given consideration to the advisability of submitting an application for the purpose of extending or expanding the present Air Quality Control program. One of the specific requirements under this new act for eligibility for funds is that the local contribution be new money. In other words it must be above and beyond the expenditures made the previous year for air quality control. The Authority is going to be hard pressed to find new state monies in order to match federal funds particularly in view of the budget restrictions made during the past year. Under this new law the federal government will provide \$2 for every \$1 of local money. This provides an excellent opportunity for state and local communities to get new programs started or to expand existing programs. It will be the policy of the Public Health Service, the federal agency responsible for administration of this act, to reserve a certain amount for each state. They reportedly will set aside \$10,000 for each state. If the Authority can find matching money, at least that amount of federal money will be available to it. There will be additional amounts set aside for some states as all states will not participate. Very few states have state laws pertaining to air quality control and very few have programs at the present time. From this standpoint Oregon stands to receive a good share of assistance under this program. One of the critical needs in Oregon's program at the present time is to obtain more information regarding gaseous contaminants in the atmosphere. Such information for the Portland metropolitan area is especially needed.

For the past two or three years the Public Health Service has had a Continuous Air Monitoring Program station in San Francisco. Equipment for that station is being moved in the near future. The Authority's staff made an

IAA357

effort to get them to move the station to Portland, but were unable to compete with Denver, Colorado, where it will be for the next two years. It will cost about \$80,000 for such a station. This would include equipment necessary for sampling, analysis and recording information, and staff for operation and maintenance. The secretary stated that it might be possible to develop a minimum facility of this type for about \$60,000. If the Authority can find \$20,000 of state money above and beyond the present budget level, with federal assistance it would be able to get started on this extremely important program. The city of Portland has recently inaugurated an Air Quality Control Program and it too is interested in this particular project. They will do everything possible to assist. It is also likely that some assistance might be forthcoming from the adjoining counties that at the present time are considering the establishment of a multi-county program in the metropolitan area. The secretary then asked if the members would be in favor of the staff's working up an application for such a project, an application for federal aid under the new federal Clean Air Act. It might be necessary to go to the Emergency Board to ask for the release of some of the funds that were previously sacrificed. In the '63-'65 appropriation there was an item of \$12,000 for capital outlay which was sacrificed.

It was pointed out that the Portland metropolitan area would not be the only location where this equipment would be used as the equipment would be portable and so could be moved to Eugene, Medford, and other areas of the state. Dr. Wilcox stated that he felt the growing air contamination in the state is of sufficient importance to warrant making an application especially if we could get a station in the next year. He stated he would think the Authority ought to authorize the staff to prepare an application on the basis of going to the Emergency Board to restore the \$12,000. In order to prepare any type of application, that restoration would have to be sought.

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips and carried that the staff prepare an application to be submitted for a program grant under the Federal Clean Air Act in line with the explanation given here and at the same time the staff proceed with the necessary steps to make application for restoration of \$12,000 capital outlay items removed from the budget.

FEDERAL GRANT PROGRAM FOR SEWAGE TREATMENT WORKS:

The secretary read a staff memorandum dated June 17, 1964, regarding the 1965 FY Federal grant applications. This memorandum has been made a part of the Authority's permanent files. It contains a summary and analysis of eligibility and priority standings of the 28 applications which had been received prior to the June 15, 1964, deadline.

The following applications and the amounts requested were reported to have high enough priority points to warrant authorization of priority certificates. (The priority point totals for each project are shown in parentheses.) Dayton (55), \$24,000; Boardman (52) \$30,000; Elgin (52) \$52,510; Salem (50) \$213,700; Forest Grove (49) \$195,600; Portland S.E. (48) \$19,070; Portland S.W. (48) \$37,870; Seaside (48) \$31,800; Metzger (48) \$236,100; Halfway (48) \$10,560; Lake Oswego (47) \$19,840; and Eugene #159 (47) \$154,440. It was pointed out that these 12 grant requests total \$1,025,490 whereas only \$1,007,200 is expected to be available. There will probably not be enough federal money available therefore to cover completely the Eugene request. It was pointed out further that Dayton and Halfway still must vote bonds in order to become eligible and the Metzger Sanitary District must contract with two adjoining districts.

It was MOVED by Mr. Harms, seconded by Mr. Amacher, and carried that the federal grants for fiscal year 1965 be awarded to the communities listed down through the Eugene Project #159, subject to the provisions that the authorizations for the communities of Dayton, Metzger and Halfway be withdrawn

if their eligibility is not satisfied within a reasonable time, and that the grant offer to Eugene be for the balance in the funds remaining after the other grant offers have been made.

Mr. Hugh McKinley, Eugene City Manager, then raised a question since Eugene is listed last in the priority ratings. He wanted to know if it would be possible to consider some realignment of the four Eugene projects for which grants had been requested. Their time schedule for getting sewage in the area of Bethel-Danebo depends somewhat upon these grants. Mr. Don Allen, Director of Public Works for the city of Eugene, stated they would like to change the order of the projects.

The secretary paid special tribute to the officials and residents of the city of Eugene for their cooperation during the past in providing funds for financing the necessary sewage collection and treatment works for this area. He pointed out that during the last two and one-half years the Eugene voters have approved the issuance of \$17,000,000 in general obligation bonds for this purpose. This is the largest amount issued by any municipality in Oregon including the city of Portland.

After considerable discussion of this matter Mr. Harms stated he would amend his previous motion to authorize the staff's meeting with the city of Eugene to determine whether or not these other projects would be eligible for a grant.

The secretary stated that the only suggestion he could make is that the city of Eugene combine all four projects in one application and request a maximum grant of \$600,000. The total of the grants requested for the four separate projects is \$753,310. They would then be able to start construction on any part they might wish. Next year they would be eligible to receive the remainder of the \$600,000 not received this year. The city of Eugene wanted a chance to analyze this further.

IAA357

CONFIRMATION OF MAIL VOTE RE: CANNON BEACH FEDERAL GRANT:

It was MOVED by Mr. Harms, seconded by Dr. Wilcox, and carried that the Authority ratify and confirm the mail vote which unanimously authorized a \$3,000 federal grant for the Cannon Beach project.

WEYERHAEUSER COMPANY PROPOSAL FOR WATER AND AIR POLLUTION CONTROL AT SPRINGFIELD PULP MILL:

Mr. John McEwen, branch manager of the Pulp Division, Weyerhaeuser Company at Springfield, presented a brief discussion of the company's plans for water and air protection for the new expansion planned for the Springfield pulp mill. He pointed out that these plans had been reviewed with the Authority's staff. The present mill has capacity to produce 400 tons of pulp per day. The proposed mill will increase the capacity 750 tons per day so the total will be 1150 air dry tons/day. They do not propose to use substantially more water than they are using at the present time. They are presently using water for condensing in the power house in the saw mill. This water is now being returned to the river through the effluent sewer line. Instead of sending it through the effluent line without further use they are going to use it for pulp mill process water in the new expansion. The total water use will, therefore, remain at approximately 20,000 gallons per minute. He stated that one of the primary parameters of water pollution is the oxygen demand of the effluent, that their present mill has an average oxygen demand of about 8,400 pounds per day, that a person would naturally expect that tripling the size of the mill would triple the oxygen demand, but the fact is that by some new processes which they are designing into the new mill they estimate that the expanded mill under normal circumstances will have only about 11,045 lbs. of BOD per day which is a very small increase.

He stated further that the major problem of water pollution comes during the summertime when the temperatures are high and the water flows are low, that fortunately they have been able to devise a system of land irrigation

IAA357

which admittedly is not effective in the wintertime because the water would just flow off into the river during the wet season but during the summertime it can satisfy a large portion of this oxygen demand by spraying the high oxygen demand wastes on land for irrigation processes. The oxygen demand is thus taken up on land and it does not flow into the stream and add oxygen demand there. With the present rate of pulp production (400 tons/day) the oxygen demand of 8,400 lbs./day is normally reduced to about 4,800 during the critical summer months. In the expanded mill the spraying system will be enlarged and will be able to reduce the oxygen demand even more than at present so that the total oxygen demand of the expanded mill during the critical summer months will be even less than for the present mill. They predict it will be 3,845 lbs. per day. This completed Mr. McEwen's brief summary of the water pollution control system.

Mr. Wheeler then commented that the present rate of spraying strong evaporator condensate on the adjacent field was indicated on the plan at 500 gallons per minute on approximately 50 acres and resulting in a reduction of 3,600 lbs. of BOD/day and leaving at present about 4,800 lbs./day being discharged to the stream. He asked what wastes make up those two items; namely, (1) going to the field and (2) going to the stream for both the present and the expanded mill. Mr. Oliver Morgan of the Weyerhaeuser Co. replied that the wastes discharged to the field are evaporator condensates which are very high in BOD and relatively low in volume and the wastes discharged to the stream are paper mill wastes. In the expanded mill the evaporator condensates will be used for spraying on the fields to reduce the loading and the remainder will be wastes from paper mill which will go to the river. Mr. Wheeler then asked if there would be an expanded amount of wash water and paper mill wastes, and if that water would be concentrated or would be recirculated and re-used in the plant. Mr. Morgan's reply was that they would do more recirculation so

there would be probably less volume in respect to the production than the present plant has.

Mr. Weathersbee stated that the Sanitary Authority staff has not met with the mill officials since the proposal was analyzed in detail and that it was planned to meet with the technical staff of the mill again and have them answer certain questions. He said most of the problems are engineering ones and will have to be resolved between the company's engineers and the Authority's staff.

Mr. Harms then stated that from his analysis of the matter it appeared that irrigation of wastes on land may have to start earlier in spring and extend later in the fall to avoid slime growth in the river. He asked if the mill is willing to do this. Mr. McEwen replied that they will do it if necessary. He pointed out that during wet weather it is less effective because more goes into the river but it still should have some net gain. Mr. Harms stated that it is unlikely to happen when wet. He said he thought there would have to be a discussion of the monitoring of this and that Weyerhaeuser might have to be requested to do some self-monitoring since the Authority's staff is so limited. He said another thing would be a statement with regard to the necessity for further treatment of wastes in that any approval from the Authority is tentative approval only and this means that changing conditions, changing population, changing waste loads and changing water conditions may require further treatment of wastes if proposed methods are not successful. The company should accept this and understand that further treatment may be required at some future date.

Mr. McEwen next discussed the provisions which will be made for control of air pollution at the expanded mill. They will include the following:

- (1) The non-condensable gases from the new and old digesters will be piped to the present vaporsphere where they are stored until they can be burned in the lime kiln. They are very odorous before oxidation. The present

IAA357

system is to collect these gases in the vaporsphere and to burn them in the lime kiln. The new system should be less of a problem because instead of having batch digesters it will have one continuous digester. The gases discharged from it will, therefore, be continuous instead of intermittent.

(2) The strong condensates that will still enter the stream have some odor and they will, therefore, be chlorinated to reduce this odor to a minimum. Chlorination oxidizes these odors and reduces the odor material which goes into the stream.

(3) The new recovery furnace has a design which the manufacturers claim is going to be a substantial improvement over the design of the present furnaces. In addition to having a furnace that is designed to oxidize more of the gases in higher parts of the furnace, it will allow them to operate the present furnaces at lower loadings which should make them more effective or efficient in burning all the odorous gases. They have on the present furnaces and propose to install on the new one oxygen recorders so that they can better control combustion to give minimum odor. They also have new electrostatic precipitators made by Cotrell. They are of an improved design and will control particulate matter (flyash) discharges from the recovery furnace.

(4) At the present time one of the main air pollution control devices is the oxidation of the black liquor before it is evaporated and burned. An efficient black liquor oxidation system will be installed in the mill expansion.

(5) One of the other sources of odor is the lime kiln. The company is presently installing a new and superior scrubber for both particulate matter and odors in the lime kiln in the old mill and also has planned one for the new mill. Various other devices will be installed and used in order to protect the air around the mill.

Mr. McEwen pointed out that the liquor that is burned in the furnace is 50% water and 50% solids. At that ratio it burns well and effectively and so most of the white plume coming out of the pulp mill stack is distilled

evaporated water. Some goes out from the paper mill and some (the bulk) goes out from the recovery furnace of the pulp mill. Fifty percent of the black liquor has to go off as steam.

Mr. McPhillips asked if the steam has an odor. Mr. McEwen replied that steam is pure water vapor and has no odor but there may be other compounds created at the same time that have an odor. In answer to Mr. McPhillips' question if there is a substantial number of odor producing gases carried with steam Mr. McEwen replied that they attempt to reduce them as low as they can but there are always some sulphur compounds present. They reduce those going out the stack primarily by oxidation of black liquor and by recording the oxygen to control combustion so as to oxidize them.

The chairman told Mr. McEwen that the Authority has in the past received complaints about the pollution of the waters of the McKenzie from people who live in the vicinity of the river. He asked him if he actually thought that any such causes will be less after they treble this production. Mr. McEwen replied that it is felt the oxygen demand during the time that they irrigate in the summer will be less than at present. The figures show that the oxygen demand during other parts of the year will not be less. It will be less per ton of production but not total. He said it is thought that some of these complaints are based on something other than problems directly traceable to oxygen demand to the river from the pulp mill. The chairman stated that the Authority is concerned with the effect on the river from all types of pollution. The secretary stated that some of the complaints were of odors from the water itself and some from slime production. Odor from the water is related to the sulfur-bearing constituents of some of the wastes. In the expanded mill the strong wastes will be recycled in the process and this will be done year round. This should reduce the amount of odor coming from the river during the winter. In 1963, the secretary said, there was some slime production in the spring before irrigation practices started and in the fall after they had ceased.

It is anticipated that with expanded mill operation there will be an increased tendency for slime production when river flow drops.

There being no further questions from the Authority members this concluded the presentation by the Weyerhaeuser representatives.

The following persons were also present and were heard regarding this matter:

- (1) Mrs. Winninette A. Noyes read a prepared statement from the Lane County Democrats. A copy of said statement has been made a part of the Authority's files in this matter.
- (2) Mr. C. Robert Smith, Manager of the Springfield Chamber of Commerce, read a letter signed by the Chamber President, Mr. Walter A. Commons, and addressed to the Chairman of the Authority. Said letter has been made a part of the Authority's permanent files. The Chamber endorses expansion of the Weyerhaeuser mill.
- (3) Mr. Charles W. Swango, land owner and farmer in the Muddy Creek Irrigation District, complained of Weyerhaeuser Company's dumping wastes into the McKenzie River. He is against expansion of the mill.
- (4) Mr. William Puustinen, Columbia River Fishermen's Protective Union, Legislative and Conservation Chairman, read a prepared statement for the record. His organization is concerned about the proposed expansion and would like the Sanitary Authority and Fish and Game Commission to consider this carefully. A copy of the statement has been made part of the Authority's permanent files.
- (5) Mr. Leon Henderson, a high school student, stated that he has observed that the river close to the plant smells during the winter as well as summer time.

IAA357

- (6) Mr. Truman Chase, Chairman of the Harlow Baptist Farm Committee, said the farm is a little ways below the Weyerhaeuser plant and comprises 200 acres of land used for growing cherries and filberts and includes a recreation area. Meetings are held from all parts of the state. They will be pleased if efforts are continued to keep air and water pollution down.
- (7) Mr. Hubert Willoughby, Representative of Muddy Creek Irrigation District, lives below the Weyerhaeuser operations. He thinks the company could go a little further in its research. He would hope the company would make some effort to have some other way of taking care of the wastes.
- (8) Mr. Loran Smith, President of Lane Chapter, Oregon Fish and Game Council, complimented Weyerhaeuser on their efforts and expressed belief they were going to work out a satisfactory solution.
- (9) Mr. Neil Brown, Attorney, said there is no question of the good faith of Weyerhaeuser but a group whom he represents does question the attempts being made to protect the river's natural resources and to stop the damages which are happening. He said, "Weyerhaeuser is located on a pure water stream. I have been told their problems would be complicated if they had to use impure water, even water from their own outfall. This company, I am told, takes as much water as the entire population of the city of Eugene. The people whom I represent would like to have an opportunity to have the entire plans explained or examined by a consulting expert of their own choosing which they would pay for in order that if there is a difference of technical opinion they could have an opportunity to present meaningful technical testimony to this government agency. Our request is that these plans be made available for their examination and an opportunity to present testimony." Mr. Wendel stated the Commission would welcome the critical look from these people. The information the Sanitary

Authority has will be available at all times. The secretary stated that the Authority's records are public property so it would be assumed that they would be free to examine the proposal submitted.

- (10) Mr. M.L. Allender, local homeowner, builder and developer, speaking for himself, stated that in his position he met a lot of people moving to this area from out of state. A lot of them being retired service personnel will not come into a community that has obnoxious odors. He wondered if expansion would not create stronger odors than they have had in the past.
- (11) Mr. Byron Taylor, Deputy Director of the Eugene Water and Electric Board, stated that the Eugene Water and Electric Board furnishes the municipal water supply for Eugene and vicinity. They are very concerned about the McKenzie River. Their raw water intake is located below the Weyerhaeuser pulp mill but the effluent sewer from the mill is carried below the raw water intake. He said that so far it has created no problems for them and they do not anticipate any future problems. He stated that Weyerhaeuser has been very cooperative. He thinks the expansion of the pulp mill is a good thing for the community and he sees no problems arising from it.
- (12) Mrs. John Jaqua, a resident of the area, stated that Mr. Merryman had asked her to take notes on the odors in the area and she had a very informal, unsigned schedule of the odors noticed on McKenzie Drive. The notes covered the period of February 14 to May 30. She claimed the problem was bad and getting worse. She believes any increase in mill operation will be an increased nuisance and claims it is preventing them from developing their land for subdivisions.

There being no further testimony the discussion regarding this matter was terminated.

A total of 62 persons had signed the attendance register for the meeting.

The date for the next meeting was set for Thursday, September 10, 1964. The meeting adjourned at 12:30 p.m.

Respectfully submitted,

*Kenneth H. Spies*  
Kenneth H. Spies  
Secretary and Chief Engineer

IAA357

MINUTES OF THE 102nd MEETING  
of the  
Oregon State Sanitary Authority  
September 10, 1964

The 102nd meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:00 a.m., September 10, 1964, in Room 36, State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman, B.A. McPhillips, Chris Wheeler, Dr. Richard H. Wilcox and Herman P. Meierjurgan, Members; Kenneth H. Spies, Secretary; John Denman, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; H.W. Merryman, Leo L. Baton and Joseph A. Jensen, District Sanitary Engineers; Fred Katzel, Associate Sanitary Engineer; Harold L. Sawyer, Assistant Sanitary Engineer; Edgar R. Lynd, Water Pollution Technician; Glen D. Carter and Edison L. Quan, Aquatic Biologists; Howard G. Smith, Assistant Chief, Air Quality Control; Ronald R. Ott, Chemical Engineer and Robert F. Wood, Associate Sanitary Engineer. Mr. Edward C. Harms, Jr. and Mr. John Amacher, Members, were unable to attend because of other commitments.

MINUTES:

It was MOVED by Mr. Wheeler, seconded by Mr. McPhillips, and carried that the minutes of the June 18, 1964, meeting be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the action taken on the following 83 project plans for water pollution control and 7 project plans for air quality control for the months of June, July and August, 1964, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
6-1-64	Hillsboro	Sewer extensions	Prov. approval
6-1-64	Albany	Sewer extensions	Prov. approval
6-1-64	Winston	Brantley Drive sewer extension	Prov. approval
6-1-64	Portland	SW Marigold St. sewer extension	Approved

Aug. 24	Marion County	Oregon State School for the Deaf Incin.	Cond. approval

EMPIRE LITE ROCK, INC.:

Mr. Denman reported that the Empire Lite-Rock Company had been cited to appear at a hearing at this time, but subsequent to the notification to appear the company had entered a stipulation which is acceptable to the staff of the Sanitary Authority and which states that the company will refrain from the use of water in its crushing operations or in any other manner or type of operation in which unclarified wash or other water may be discharged or allowed to seep into the waters of this State and particularly Castor Creek and the Nehalem River. The company further agreed by stipulation to operate and maintain its industrial operations, plant site, quarry and yard in such a manner that mud, raw earth or other polluting substances will not be discharged, carried or allowed to seep into the aforesaid waters. It was further agreed that all pollution in any manner of the waters of this State caused by the operations of the Empire Lite-Rock, Inc. at its plant site which is located near Sunset Highway, approximately three miles east of the Timber-Vernonia-Sunset Highway Junction in Washington County, Oregon, will be permanently abated by March 1, 1965.

Mr. Denman stated that should the company not follow through with the aforesaid stipulation, it would not be necessary to have another Sanitary Authority meeting, but that the Authority could go ahead and request the courts to enforce the order.

Mr. Carter briefly reported on conditions described in the engineering report, dated July 22, 1964, which has been made a part of the permanent files in this matter.

After some discussion, it was MOVED by Mr. Wheeler, seconded by Mr. McPhillips, and carried that the Authority accept the stipulation offered and enter the order as provided therein, ceasing all pollution by March 1, 1965.

IAA357

In further discussion, Mr. McPhillips asked Mr. Denman what recourse we would have should the Empire-Lite Rock Company not take the steps agreed to in the stipulation. Mr. Denman replied that a suit would have to be filed based on the order which is the statutory manner of proceeding.

CHIPMAN CHEMICAL COMPANY:

A progress report, which has been made a part of the permanent files in this matter, was read by Mr. Ott, as well as a letter from Senator Ted Hallock to the city of Portland registering a strong complaint against the Chipman Chemical Company.

Mr. McPhillips stated that according to Senator Hallock's letter the odor is almost continuous and that this does not tie in with the findings of the staff. According to the staff it has been more or less intermittent.

Mr. Ott replied that according to the investigations of the staff, someone living in the immediate area would be in a better position to notice the odor than our staff, and that perhaps a person would have to live in the vicinity of the complainant to be able to document exactly what it is that is occurring at that particular time.

Mr. McPhillips also stated that Senator Hallock, in his letter, refers to this type of air pollution as being dangerous and asked if Mr. Ott thought it might be.

Mr. Ott replied that the only information the staff has at the present time is that which was obtained from the Public Health Service back in 1959. Medical research at that time had not been conclusive.

Mr. Gitschlag, Plant Manager for Chipman Chemical Company, reported that the 2,4-D had gone through very extensive testing and that it had even been fed to cows in heavy dosages. He went on to state that the company had a number of men working in the area all the time and that there had been no evidence of injuries to workers in this plant.

Mr. McPhillips asked Mr. Gitschlag if he thought the company was making some progress and did he think the company would be able to overcome this problem.

Mr. Gitschlag replied that they are making more complete engineering studies, that it is a tough problem and that the company thinks they can lick the problem, but it would depend upon the general public's demands as to whether or not they are successful.

Mr. Ott stated that our staff had patrolled the area jointly with the city of Portland staff and that perhaps Mr. Hatchard would like to make a statement on this.

Mr. Hatchard read a letter from the city of Portland signed by Mr. Francis Ivancie and directed to Mr. Wendel outlining their views on this problem. This letter reads as follows:

"The City of Portland has continued to receive complaints regarding chlorophenolic odors originating from the Chipman Chemical Company plant at 6200 N.W. St. Helens Road. In a letter dated August 12, 1964, a serious complaint was received from Senator Ted Hallock regarding the problem.

"I requested Dr. Thomas L. Meador to review the present status of the efforts to control the chlorophenolic odors. It is evident that the management of the Chipman Chemical Company has made a determined effort to reduce the discharge of odors. However, it is clear that during the production process substances are released that cause odor complaints, too frequently to be acceptable by the citizens of Portland. I am advised that the management of Chipman is proposing additional controls which can reasonably be expected to reduce the quantity of odorous materials released into the atmosphere.

"May I summarize the City of Portland's views on the Chipman problem for consideration during the regular meeting of the Authority members to be held on September 10, 1964. On the basis that there are further courses of action that can be taken that give reasonable assurance for effective control of the chlorophenolic odor, the City of Portland believes that an additional period of time should be granted to accomplish these ends. However, if it becomes evident that progress towards effective control is not continuing, then it is recommended that the Authority schedule a public hearing in accordance with Oregon statutes. It is apparent that the citizens of Portland have no intention of allowing the chlorophenolic odors to become a permanent characteristic of the community atmosphere.

IAA357

"When the additional controls and other operational programs are completed, it is suggested that the odor conditions be evaluated and a report be prepared to establish whether the operation is in compliance with Oregon statutes and the Portland Air Quality Control Code. During this period, the Air Quality Control staff of the Portland Health Bureau will work cooperatively with the Authority staff.

I hope that this course of action will result in satisfactory compliance to the end that the chlorophenolic odor problem is solved."

The Chairman then asked Mr. Hatchard if he concurred that additional time should be given to Chipman Chemical Company to correct this problem, to which Mr. Hatchard replied that in his opinion additional time should be given.

Dr. Wilcox then asked if there was any way to distinguish Chipman odors from others that might result from spraying with 2,4-D compounds.

Mr. Ruggles, Chief Chemist for Chipman, stated that this was impossible.

The Secretary then asked Mr. Ruggles if when Chipman gets their new equipment in operation, did he believe they would be able to get samples from the environment which they will be able to test.

Mr. Ruggles answered in the affirmative and said they already have the instrument, and as soon as they get their Atomic Energy license, they can test. He went on to state that he was quite certain they could measure quantities lower than can be detected by smell.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that based on the recommendations of the Authority's staff, which is concurred in by the staff of the city of Portland Air Pollution Authority, the authorization for the public hearing as previously authorized on August 15, 1963, be continued for another year.

MANBRIN GARDENS:

The Secretary gave a brief summary of the past history of Manbrin Gardens stating that it is a residential development located north of the city of Salem which since 1947 has had a sewage collection system and a primary treatment plant, the latter discharging into the Willamette River a short distance downstream from the present city of Salem sewage treatment plant.

In 1960 a public hearing was held by the Authority and an order was entered directing that all cities and communities from Salem downstream on the Willamette install secondary treatment. The deadline which was established for Manbrin Gardens was the same as established for the city of Salem, for the reason that owners of this residential subdivision indicated it was their desire to connect to the new Salem project, rather than provide additional secondary treatment for themselves. The Salem project has been proceeding right along and is now expected to be completed in October of this year. It is designed with sufficient capacity to include Manbrin Gardens.

The Secretary said that a letter had been written recently to the owners of Manbrin Gardens reminding them of the order and their requirement to provide secondary treatment by the time the Salem project is completed. A letter was received in reply from the owners asking that they be given an additional period of time in which to work out arrangements so that they can connect to the Salem system.

A communication received from the city of Salem and from the county of Marion supporting the request that the owners of Manbrin Gardens be granted an additional period of time was read by the Secretary.

IAA357

The Secretary pointed out that the city of Salem is reluctant at this time to grant a permit to Manbrin Gardens to make a connection to its interceptor because by so doing the city is afraid they would then jeopardize the possibility of the entire Keizer area forming either a county sewer district or annexing to the city. The vote of the people of Manbrin Gardens is needed to help bring this about. Therefore, Manbrin Gardens would like for the Sanitary Authority to give them an additional period of time in which they would hope the voters in the Keizer area could be convinced to either form a county sewer district or annex to Salem. The Secretary stated that the Keizer area has had two elections recently for annexation to Salem and both have been defeated, and that the next time they will probably propose the formation of a county service district. If a county service district is formed then the city would be willing to contract with the county of Marion to provide sewer service for the entire area.

Mr. E.S. Ritter was present to represent the owners of the Manbrin Gardens sewerage system and answered questions of the Authority members and staff regarding the present status of the operations and maintenance of the treatment plant.

It was MOVED by Mr. McPhillips, seconded by Mr. Wheeler, and carried that the deadline for Manbrin Gardens be extended from October 1964 to June 1, 1965, to either connect to the city of Salem or provide its own secondary treatment.

CITY OF MONROE:

An engineering report, which has been made a part of the permanent files in this matter, was summarized by Mr. Harold W. Merryman, Eugene District Engineer, as follows: The city of Monroe is causing pollution of the Long Tom River in Benton County by the discharge of raw sewage. The city's sewerage facilities consist of a combined sewer system principally built in 1916 with

a 24-inch outfall to the Long Tom River. The sewer system did not initially serve all occupancy structures in the city and numerous homes and establishments have subsequently connected their building sewers directly, or septic tank effluent lines, to this collection system.

There have been numerous complaints from 1959 to the present from downstream residents and fishermen of objectionable pollution resulting from the discharge of untreated sewage from the city's outfall sewer.

On March 26, 1942, the city of Monroe was first requested by letter from the Sanitary Authority to develop a plan for treatment of its sewage and wastes and to begin to accumulate funds to be used for construction of adequate sewage treatment facilities. The only tangible action taken by the city to date has been to vote a 10-year sewerage fund levy in November 1962, which will bring in approximately \$1400 per year.

Inasmuch as the city of Monroe has for many years caused serious pollution of the Long Tom River by discharge of untreated sewage, and since the city has been made amply aware of this problem, and on numerous occasions has been requested to develop and adopt a definite plan of correction, and since the city has failed to make satisfactory progress in this matter, it was therefore recommended by the staff that authorization be given to cite the city of Monroe to appear before the Sanitary Authority at its next meeting to show cause, if any exists, why the city should not be ordered to abate its pollution of the Long Tom River by a specified date.

The Secretary reported that he had received a telephone call from Mayor Lucas shortly before this meeting began advising that the City Council had gone on record at its meeting on September 8, 1964, to hire an engineer to make a sewerage study.

After some discussion, it was MOVED by Mr. Meierjurgan, seconded by Mr. McPhillips, and carried that unless engineers are retained by the city of Monroe within 60 days from the date of this meeting (by November 10, 1964)

IAA357

for the purpose of preparing cost estimates and plans and specifications for the construction of required sewage treatment works, the city of Monroe shall be cited to appear before this Authority to show cause, if any exists, why said city should not be ordered to abate the pollution now being caused by the discharge of its sewage and wastes into the Long Tom River. It was further MOVED by Mr. Wheeler, seconded by Dr. Wilcox, and carried that the final plans and specifications for the required project shall be completed and submitted to this Authority for review and approval by not later than April 1, 1965.

FEDERAL GRANTS:

The Secretary summarized a memorandum report, dated September 10, 1964, which has been made a part of the permanent files in this matter. The Secretary stated in part that at the Authority meeting on June 18, 1964, a priority certificate was provisionally approved for the city of Eugene's project No. WPC-ORE-159 which included stage one of proposed additions to the city's present secondary sewage treatment works. It was expected that there would not be sufficient federal funds available to cover entirely the full 30% of the eligible portion of this project and so the grant offer was not to be made until all the other projects with higher priority point totals had received their grant offers.

In addition to project No. WPC-ORE-159, the city of Eugene had also submitted grant requests for three other projects. One of these was for a raw sewage pump station and another for a pressure main, both to serve the recently annexed Bethel-Danebo area. At the June 18 meeting, the Eugene city officials stated that their construction schedule called for the start of these latter two projects before the sewage plant improvement project and therefore they inquired if the priority certificate could be issued for at

least one of them rather than the one originally selected. They were informed that this could not be done because these latter projects had a lower priority point total, but that consideration might be given to consolidating all four projects into one.

For the purpose of resolving this problem the staff of the Authority was authorized to meet with the Eugene city officials. Accordingly, a conference was held on June 30 at which time it was decided that the city would submit a revised application for one federal grant to help finance construction of the Bethel-Danebo pressure main and of both stages one and two of the proposed additions or improvements to the Eugene sewage treatment plant. In addition, the city would proceed to construct the Bethel-Danebo pump station without federal assistance.

The revised application for a \$600,000 grant was subsequently received from the city on August 18, 1964.

Since the June meeting, two of the other communities, namely Gervais and Joseph, have become eligible due to the fact that they have in the meantime voted bonds. The Secretary reported further that these two communities each have priorities which are one point higher than the one project of Eugene; therefore, if the Authority members were going to permit Eugene to submit a revised application, priority certificates should first be granted to the cities of Gervais and Joseph.

It was MOVED by Mr. Wheeler, seconded by Dr. Wilcox, and carried that priority certificates for Gervais and Joseph in the amounts of \$15,300 and \$25,140, respectively be approved, and that the remainder of the allotment for fiscal year 1965 then be offered to the city of Eugene for its revised program.

IAA357

WEYERHAEUSER COMPANY:

Mr. E.J. Weathersbee gave the staff report dated September 10, 1964, which in part states that the Weyerhaeuser Company is expanding its mill at Springfield from 400 ADT/day to 1150 ADT/day of unbleached kraft paper and container board. The company has proposed that there will be no increase in water withdrawal from the McKenzie River, no substantial increase in water pollution and essentially the same and perhaps somewhat better efficiency in the control of air pollutants; however, the company makes no claims that it will maintain the total quantities of air pollutants discharged at or near present levels.

Mr. Meierjorgen stated that he was sure the Fish Commission recognizes the fact that the Willamette River is critical insofar as BOD loads are concerned and that their staff does not look with any high degree of enthusiasm in adding to them.

Mr. McPhillips stated that he personally felt that the conditions of odor and slime growths in the McKenzie River in the past have been a nuisance to fishermen and objectionable to fish life, and he is very much opposed to permitting any recurrence. He further reported that he did not intend to sit idle and see any further air or water pollution caused by this increase in production, and that in his opinion the Authority should make its position known to Weyerhaeuser-- that we are not going to let them raise this pollution threshold in either air or water. Mr. McPhillips further stated that he was making this recommendation as an individual, not as a part of the motion.

Dr. Wilcox suggested to the Chairman that Mr. McPhillips' important suggestion be concurred with by the members, and that Weyerhaeuser Company be notified that it is the consensus of the Authority that this feeling prevails. Such concurrence was given.

It was MOVED by Mr. Meierjorgen, seconded by Mr. Wheeler, and carried that in accordance with the staff's recommendation, the Weyerhaeuser Company proposals for air and water pollution control at its Springfield mill be only tentatively

IAA357

approved, subject to the continuing condition that if the proposed methods are not entirely successful, such further control, treatment, or disposal of air and water polluting wastes will be provided as required to prevent or eliminate validly objectionable air or water pollution, and subject to the following further conditions: (1) That complete irrigation disposal and river observation data shall be submitted in addition to liquid waste data presently submitted; (2) that stack emission data for old and new recovery furnaces and lime kilns shall be submitted for conditions before and after expansion; and (3) that Weyerhaeuser Company agree to meet with members of the Sanitary Authority staff at start-up of the new facilities, and quarterly thereafter, to evaluate conditions and decide on a course of action to be followed until the next regular scheduled meeting, said meetings to continue as long as any pollution problem remains and reasonable progress is being made.

ACTIVITIES OF PULP MILLS FOR CONTROL OF POLLUTION IN WILLAMETTE RIVER:

Mr. Weathersbee in summarizing the staff report dated September 10, 1964, reported that at the meeting on June 18, 1964, the Authority adopted the staff's Willamette River Report of May 1964, and indicated its intention to formally enter an order based on the conclusions and recommendations of that report after the staff had discussed the report with representatives of the pulp and paper industry.

On July 10, 1964, members of the technical staff of the Authority met with representatives of all pulp and paper mills located within the Willamette River basin. At that meeting, the current summer program of regulating waste discharges to the river was discussed along with the proposed treatment requirements of the Willamette River Report; namely, 85% reduction in BOD, and suspended solids removal equivalent to that which would be obtained by primary sedimentation, both to be accomplished by December 1966. Industry has to date voiced no strong objections to these treatment objectives.

During July, scheduled meetings were held with representatives of each of the four sulphite mills located on the main-stem of the Willamette River. At each of these meetings problems peculiar to the particular mill were discussed and the request made that a comprehensive engineering study be undertaken which would have as its objective to determine and propose means of meeting the treatment objectives of the Willamette River Report. In each case mill management agreed to undertake such a study immediately, and to submit a report and a definite proposal for reducing waste loads at its mill by the end of the current year.

Dissolved oxygen levels in the lower river so far this year have been higher than ever before since measurements have been taken. The average minimum dissolved oxygen level in the Portland Harbor for the month of August was an all-time high of 4.1 ppm. These comparatively high DO values are due in part to higher than normal river flows and generally cooler weather; however, an analysis of river data definitely shows that better regulation of waste discharges by the mills has been a significant contributing factor. Mr. Wendel reported that each of the four sulphite mills on the Willamette River have acceptable study programs in progress and recommended that no further action be taken regarding this matter until after the first of next year when reports from the mills are due. It was pointed out, however, that Spaulding Pulp and Paper Company was less capable of reducing its waste discharges than any of the other mills, and for this reason it might be advisable to require them to proceed immediately to provide more lagoon storage capacity.

Mr. Meierjurgan said that we now have in sight the construction of the fish ladders over the Willamette Falls, and once they are installed, we hope to avail ourselves of the Willamette system for a much more intensive fish rehabilitation program than was ever before undertaken. It is very important that with better passage over the falls, the Willamette system is going to once again be available to not only the salmon that are there now, but also available to species that ordinarily run and migrate upstream during fairly

low flows. The downstream migration is going to run head on into this pollution, so our agency is concerned with abating it.

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox, and carried that the recommendations of the staff be adopted as follows: That any further Sanitary Authority action with respect to the Willamette River pulp mills be postponed until after the first of next year when promised reports and proposals should have been submitted, with the exception that Spaulding Pulp and Paper Company be instructed as early as possible so as to provide them with maximum time for planning, that additional lagoon capacity must be provided by mid-summer of 1965 instead of by December 1966.

GEORGIA-PACIFIC, TOLEDO-NEWPORT

A report which has been made a part of the permanent files in this matter was read by the Secretary. In summarizing the report he stated that the Authority staff made some observations at Newport during the month of August. On the 1st and 5th of August the conditions were quite satisfactory, but on the 18th there was quite a bit of foam and some odor which were definitely a public nuisance. At a meeting on the 19th in the Newport City Hall attended by officials from the city of Newport, Chamber of Commerce, Georgia-Pacific, motel owners and residents of the area, some slides were shown of the conditions on the beach in October 1963 and April 1964. There was foam build up of about 3 or 4 feet. In the middle of July of this year, another excessive foam condition was created. The company has not denied its responsibility and is making a conscientious effort to control the nuisance conditions.

On August 26, Mr. Wendel and the Secretary had conferred with Mr. James Buckley and Mr. Flowerree of Georgia-Pacific, wherein Mr. Flowerree proposed and agreed to immediately start work on installing a system of automatic monitoring or detection and diversion and storage of any flows which might

IAA357

contain an abnormally high concentration of solids. In addition, the company was asked to immediately start an engineering study and the preparation of plans for extension of the outfall sewer.

In a letter dated September 3, 1964, from Mr. Flowerree to the Authority, it was stated that the company is in a position to go ahead with the extension of the outfall sewer, if after a reasonable period of time it is shown that the system of automatic detection, diversion and storage is not adequate to prevent pollution.

The Secretary then went on to say that in his opinion no motion was required at this time as it would be the recommendation of the staff that the Authority go along with the company's proposal to provide these improvements in their process control, with the understanding that the company will proceed promptly with engineering studies and preparation of plans for extending the outfall, so in case the other improvements are not adequate, they will be in a position to make the necessary extension as soon as weather conditions will permit.

Dr. C. Edward Taylor was present at the meeting and stated that he did not have anything further to add to the information presented by the Secretary. Dr. Taylor did assure the Authority that he was confident this system of detection and diversion would work, and that he anticipates no further nuisance conditions after it has been placed in operation. In response to a question from Mr. Wendel, Dr. Taylor also indicated that his company would proceed with preparation of plans to extend the outfall.

Mr. Wendel also asked that the Mayor and Governor Hatfield be advised of the current status of this problem.

#### STATUS REPORTS:

##### Edwards Bros. - Albany:

Mr. Robert Wood reported that as stated at the last Sanitary Authority meeting an engineering report prepared by Dr. Boubel, including recommendations for work to be done on and around the burner to reduce air pollution from this

IAA357

source had been received by the Authority staff on June 7, 1964. In the meantime the leaks in the shell of the burner have been repaired and dampers have been installed in the tangential drafts. The thermocouple and recording pyrometer have not been installed to date as recommended but reportedly they have been ordered. Installation is expected to be made in early October. Modifications recommended for the barker conveyor and chip loading facility have not been made.

No complaints regarding air pollution from the burners have been received by the Authority staff this year. Limited fallout sample results indicate that a reduction in fallout may have been effected.

After the thermocouple and recording pyrometer have been installed, the staff will conduct short term fallout sampling to determine if fallout from the burner is within acceptable limits.

No action was deemed necessary.

Dulien Steel:

Mr. Denman reported that on June 29, 1964, the Circuit Court of Multnomah County entered a decree permanently restraining and enjoining the Dulien Steel Products, Inc. from conducting open burning at their location in North Portland.

Harvey Aluminum Company:

Mr. Denman stated that Harvey Aluminum had appealed to the Ninth Circuit Court and apparently some time ago the defendant filed a motion asking that the court vacate the requirement of installing electrostatic precipitators, at least during the time this is on appeal, because of the fact that if by chance the decree was reversed or modified, then Harvey would have expended unnecessarily an alleged amount of 15 million dollars. As of this date, Mr. Denman did not believe this matter had been decided.

Arrow Meat Company:

Mr. Weathersbee reported that the case of Arrow Meat Company has been set for trial in the Circuit Court of Washington County on October 22 at 9:45 a.m. Recent investigations of this problem show that the company is presently irrigating the wastes on land and keeping them out of the creek fairly well. Mr. Weathersbee further stated that the Authority is seeking a permanent injunction to keep the company from putting these materials back into the creek. He also stated that some of the staff members were meeting with Mr. Cecil Quesseth, Legal Advisor, on Friday, September 18, to plan our case.

Eastside Air Pollution:

Mr. Patterson reported that this problem involves the Georgia-Pacific Corporation and Coos Head Timber Company. Georgia-Pacific Corporation has reported that since the last Authority meeting they have installed a hard-board fiber system consisting of cyclone, surge bin, and Rader pneumatic transport system. This system removes the fibers from the waste burner and transfers them to the fuel house for combustion in the boilers. Modifications were reported as necessary but no real difficulties were anticipated. A contract has been awarded to American Sheet Metal Company for an odor control system for odors originating from dipping hardboard panels in linseed oil. Additional work will be necessary for complete control of the sander dust problem. A 50% reduction in emission, however, was reported by installation of baffles in the system.

No action by the Authority was believed necessary at this time based upon the staff evaluation of the progress which is being made by Georgia-Pacific.

The wigwam waste burner is operated by the Coos Head Timber Company. At the last Authority meeting no response had been reserved relative to the staff's survey and letters. Mr. F. Willis Smith, President, has since advised the

Authority that the Bunker Hill wigwam waste burners were being repaired by Industrial Services, Inc. of North Bend.

The repairs consisted of: (1) Replacing warped steel beams. (2) Replacing warped side panels. (3) Installation of 20 adjustable overfire air scoops and (4) Removal of excess ash. (5) Providing adjustment of underfire air.

Similar treatment was proposed for the McKenna wigwam waste burner which is located some distance away.

The staff has not yet evaluated by field survey the improvements indicated. Until such an evaluation no action is believed necessary.

Cheney Studs - Central Point:

Mr. Leo Baton, District Engineer from Medford, Oregon, reported that Mr. Francis Cheney, in his letter of April 17, had delayed answering previous requests for information because of a fire at their California plant, and that was also the reason for the delay of the installation of a chipper.

On August 14, 1964, Mr. Cheney advised Mr. Baton that: (1) Chipper and barker plans and specifications were in the hands of equipment bidders and bids will be received shortly, (2) all burning of slabs and edgings are to be eliminated except during breakdowns and car shortages, (3) the company is confident much of the bark and shavings can be sold for fuel and flake-board, (4) he had joined other mills in the valley to sponsor the Medford study by Oregon State University Experiment Station and Forest Products Laboratory and (5) his mill and waste burner is one of the plants being studied and evaluated.

Mr. Baton reported that while the fallout problem may be only slightly relieved by steps already taken, the progress report indicates the proposals will alleviate the load on the waste burner. Mr. Baton reported further that it may be six months before the barker and chipper will be in operation and within one year the majority of the company problems should be resolved.

IAA357

Based upon the company's proposals and the participation in the Medford waste burner study, it was recommended that further action be withheld until the Medford study results are evaluated.

Mr. Emily Division, Boise-Cascade Corp. - LaGrande:

Mr. Harold M. Patterson reported that the air pollution problem at the Mt. Emily Division of Boise-Cascade Corporation is one of longstanding. The air pollution caused by this company is cinder emission from the boiler stack. They have no wigwam waste wood burners at this plant. During the August 15, 1963, meeting of the Sanitary Authority, action by the members provided that a public hearing be scheduled if the company did not submit plans and specifications for cinder control devices within thirty days. The company was subsequently notified of the Authority's action in a letter dated August 21, 1963. The company did not reply to this letter during 1963. Other State Board of Health litigation and pending public hearings prevented follow-up of this matter.

In a letter dated January 8, 1964, the company was reminded of its obligation to provide the Authority with plans for control equipment. Replies from their legal counsel, Mr. Charles F. McDevitt, did not indicate Mt. Emily's plans regarding control facilities.

A staff letter dated July 10, 1964, informed the company that particle fallout values in the vicinity of the mill still exceeded values set in the Oregon Administrative Rules. Results of a plant survey completed on July 23 revealed that the company had taken all of the steps they had agreed to take in regard to installation of in-process control equipment for the regulation and operation of their boiler units. Cinder control devices, however, had not been installed.

IAA357

In a staff letter dated August 5, 1964, the company was notified of the continued violation of statute and administrative rules, and was requested to advise the Authority by August 24 regarding plans to install cinder collection equipment. A reply from the company's legal counsel dated August 19 requested additional information regarding sample procedures and regulations. This information was forwarded to Mr. McDevitt in a staff letter dated August 31, 1964. In summary, no substantial progress has been made.

Based upon the record, the Authority's staff recommended that the public hearing, as authorized, be scheduled in La Grande if the company does not submit plans or demonstrate intent to submit plans for air pollution control equipment to the Authority for review by October 15, 1964.

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the staff be authorized to proceed with the hearing.

St. Johns Motor Express:

Mr. John Denman reported that on July 6, 1964, the Multnomah County Circuit Court entered a decree which first of all held that the Sanitary Authority's regulation of open burning was a valid exercise and was not arbitrary or capricious, and also held that the findings of fact of the Sanitary Authority were supported by the evidence and lastly confirmed the order entered by the Sanitary Authority. Mr. Denman stated that he talked with Mr. Homer Allen, Attorney for St. Johns Motor Express, relative to whether they are still burning at this site. The court at the time of the decree gave the company time to burn off accumulated materials at such time as the water level was down to the point where it could be done properly. Mr. Denman had been informed by Mr. Allen that the company was not open burning and as far as Mr. Allen knew the company had burned off their accumulated materials at this time.

Mr. Smith stated, however, that someone from the city saw the above company burning around September 1 or 2.

Mr. Hatchard reported that this is one of those problems which moves around, and now it is completely within the city. Mr. Hatchard stated that he checked about 5:30 p.m. on September 9 and most of the smoke was coming out through the large front opening of the burner, with quite a bit of flyash being emitted. The materials being burned were a mixture of combustible materials and were the type that would cause smoke. It was felt by Mr. Hatchard that the burning which was observed on September 2 was in violation of the court order.

Mr. Smith stated that to better clarify the matter, the staff feels that if St. Johns Motor Express continues to open burn it is up to the Authority to move to the courts to have it stopped. However, if a burning device is used, then it is up to the city of Portland to take care of this problem.

LEGISLATIVE NEEDS:

The Chairman reminded the members of the Authority that the Legislature will convene in January 1965, and the Authority should be thinking about what additional tools might be needed to make its work more effective.

(a) The Secretary reported that at the last session of the Legislature there was a Metropolitan Study Commission created which was authorized to study the problems of planning and zoning, sewage disposal, water supply, parks and recreation, public transportation and fire protection for the metropolitan area of Portland. The members of this Commission have since been appointed by the state senators and representatives of this area and the Commission has been divided into sub-committees. Each sub-committee has one of these areas to study. Air quality control is not one of the charges given to this Commission. If the Commission should come up with suggested legislation or a suggested type of organization for metropolitan areas to handle these

various problems, such suggestions may or may not give any light as to how to best proceed with solving the problem of air quality control in the Portland metropolitan area.

The Secretary pointed out that now there is an operating program by the city of Portland and that an effort is being made to organize a program by the county of Multnomah. Commissioner Gleason is attempting to get an area-wide program under way. The district attorney's office has drafted a form of agreement to get six counties together in one master organization for air quality control. This has been submitted to the other five counties but at last report, none of the other five counties had answered.

Mr. Hatchard suggested that the Sanitary Authority has the opportunity to exercise a leadership role and move ahead by introducing a plan involving two or three counties at this stage. Multnomah County has adequate funds to be a full participant, and so does Washington County, but the Sanitary Authority is needed to provide the driving force.

Mr. Hatchard further suggested that a conference could be called where representatives of cities and counties that are interested could sit down and work out a program. From the standpoint of air pollution only, details of what kind of legislation is needed in Oregon could be worked out. Legal counsels should be present at such a conference.

The Chairman then asked the Secretary to arrange a meeting of city and county officials to discuss mutual problems.

(b) There was then a discussion of legislation to provide for a tax credit for capital expenditure for water treatment facilities. The Chairman stated as an example that if a mill spent \$1,000,000 on water treatment facilities, this would increase the value of its plant \$1,000,000 which in turn would increase its taxes. Such a situation does not offer much incentive to industry to install expensive waste control devices.

IAA357

The Secretary reported that several bills have been introduced in the United States Congress which would exempt waste control and treatment facilities from taxation, but thus far none has passed. He expressed the belief this is something that industry itself should initiate, and at that time the Authority might give consideration to supporting such legislation. The members concurred with this position.

(c) The Secretary stated that four years ago the Sanitary Authority introduced a bill which would allow sale of revenue bonds for construction of sewerage facilities without a vote of the people. The bill got nowhere. It was decided that no further attempt should be made at this time to get such authorization.

(d) Elimination of the exemption of land clearing from open burning regulations:

Mr. Wheeler stated that he thought it would be most advantageous to the Sanitary Authority to obtain an exact definition in the law of what constitutes land clearing. It was his suggestion that the Sanitary Authority leave it up to the Legislature to define the above.

(e) Automobile exhaust control: Mr. Wendel asked whether the Sanitary Authority should request the Legislature to pass a law similar to California's. After some discussion, the Chairman suggested that this item be placed on the list for further consideration.

Oregon Portland Cement:

Mr. Wendel asked if the staff was in contact with this company regarding its air pollution problem. Mr. Patterson said the company will in the near future be submitting a report to the Authority of improvements recently made and proposed.

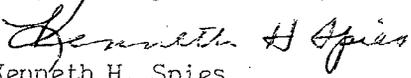

Rogue River:

The Chairman asked Mr. Denman if the Authority could take jurisdiction over pollution problems in the Rogue River in view of the existence of the Rogue River Coordination Board. Mr. Denman expressed the opinion that the Authority could proceed as if there were no Rogue River Coordination Board if we receive any more complaints of pollution by mining or gravel operations.

The date for the next meeting was set for December 3 in Portland.

The meeting adjourned at 3:30 p.m.

Respectfully submitted,

  
Kenneth H. Spies  
Secretary

IAA357

MINUTES OF THE 103rd MEETING  
of the  
Oregon State Sanitary Authority  
December 3, 1964

The 103rd meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:00 a.m., December 3, 1964, in Room 36, State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Chris Wheeler, Dr. Richard H. Wilcox, Herman P. Meierjurgan, E.C. Harms, Jr., and John P. Amacher, Members; Kenneth H. Spies, Secretary; John Denman and Don Morrison, Legal Advisors; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; H.W. Merryman, Joseph A. Jensen and Fred Bolton, District Sanitary Engineers; Bryan Johnson, Associate Engineer; Harold L. Sawyer and Patrick D. Curran, Assistant Sanitary Engineers; Glen D. Carter, Aquatic Biologist; Howard G. Smith, Assistant Chief, Air Quality Control; Ronald R. Ott, Chemical Engineer and Robert F. Wood, Associate Sanitary Engineer.

MINUTES:

It was MOVED by Mr. Wheeler, seconded by Dr. Wilcox, and carried that the minutes of the September 10, 1964, meeting be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the action taken on the following 52 project plans for water pollution control and 10 project plans for air quality control for the months of September, October and November 1964, be approved:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
9- 3-64	Corvallis	Trunk sewer #11 and lateral	Prov. approval
9- 3-64	Silverton	Barger Street extension	Prov. approval
9- 3-64	West Slope	Pacific Green interceptor	Prov. approval
9- 3-64	Eugene	SunRay Ridge 1st addn. lat.	Prov. approval

IAA357

SCHNITZER STEEL PRODUCTS CO.

Shortly before the meeting started the owner of the Schnitzer Steel Products Company called the Secretary and withdrew the request for permission to open burn within the city of Portland. This matter was therefore removed from the agenda.

WOOD WASTE DISPOSAL BY WIGWAM BURNERS

The Chairman called upon Mr. Harold Patterson to review the action taken regarding wigwam waste wood burners and to introduce Doctor Richard W. Boubel, Associate Professor of Mechanical Engineering, Oregon State University. Mr. Patterson read a memorandum dated December 3, 1964, regarding this subject, said memorandum having been made a part of the Authority's permanent files. He then called on Doctor Boubel.

Doctor Boubel stated that the report on the current Medford study is still in the preparation stage and that he hoped the report would be completed by the first of January.

He said that in 1958 it was thought utilization would probably take care of a large quantity of waste; however, it has been found today that species are being harvested and brought into the mills that were not even considered in 1958. It has been found that almost as much is going to the burners as there was in 1958. While utilization has increased, there has been a large increase in the amount brought out of the woods. Dr. Boubel went on to say that it was hoped the situation of residue going to the burners will clear itself with increased utilization, kraft mills, etc., but there is also the possibility that it may get worse. As labor costs increase, equipment costs increase, some of the utilization procedures no longer appear economical; and strictly on an economical basis it may be cheaper to burn the material than to utilize it.

IAA357

Doctor Boubel stated further that the situation has been hindered somewhat due to the fact that there are just a few people who have knowledge about the construction of burners, and a lot of burners made today are being done on a piece meal basis by people who have no background in combustion work whatsoever. There are a few companies working on burners who have a good background in combustion theory and seem to be doing a good job. Some of these look like real developments in the field and offer good possibilities. Bulletin #39 put out by Oregon State University Experimental Station is still valid for waste burners. Because of the large amount of Hemlock and White Fir that is being milled today, an exhaust gas minimum temperature of 600°F for smoke elimination should be recommended; whereas in 1958 Douglas Fir and the white species were by far the majority being milled.

Operation and maintenance of the burners in most mills is very poor. The average burner costs a mill approximately \$10,000 per year. As far as the material or contaminants being emitted by the burners, Doctor Boubel stated something is known about a few of them, and some recommendations toward smoke elimination will be made regarding these. However, there are several that nothing is known about. One of these is the size distribution of the total particulate coming out of the top of the burner. Also, nothing is known about the gaseous emissions from these burners. Doctor Boubel explained that it can be roughly estimated that there are about 20% of particulate matter coming from the top of the burner for every ton of material fired to the burner. The Public Health Service estimates about 40% of gaseous contaminants emitted for every ton of wood fired.

Doctor Boubel explained that there has been no study made on a full scale burner with auxiliary fuel firing. There is some talk about using gas as an

auxiliary fuel for starting up in periods of smoky operation, but the staff from Oregon State University can give no recommendations on this nor can they tell what would happen if a fuel house were used to uniformly feed a waste burner.

He stated that the U.S. Public Health Service had recently turned down a request for a research grant that Oregon State University had submitted to find the answers to the above problems, so the University is revising the research proposal and submitting it again.

In connection with the Medford Study, Doctor Boubel said, the University could put several recommendations in writing and if they were all instituted in Medford, the emissions could be cut to about one-third of what they are today. However, no guarantee could be made to the people of Medford that their burners would meet existing rules of the Sanitary Authority. If there were one burner in a large area for dilution of the waste, it could probably be operated satisfactorily and meet the Authority regulations, but if nineteen burners were operated in a small airshed, they probably would not meet the Sanitary Authority regulations. All samples taken by the University crew in Medford showed that at no time were suspended particulate or fallout regulations exceeded; however, all the sampling stations are a considerable distance from any one individual source. The Sanitary Authority crews have taken samples closer to emission sources and have found them to exceed the allowable standards.

The Chairman then asked if it would be feasible for several mills to get together and take the waste to a central place for disposal where it could be done properly.

Doctor Boubel replied that this is being considered and will be discussed in the report. They will also examine the cost of multi-chamber incineration where one large incinerator would take care of all the wastes. Another item

is the cost of electrical power generation. Eventually the staff from the University will be able to say how much it will cost to get rid of a unit of waste this way.

Mr. McPhillips asked whether there was a direct proportion between the cost of the burner and the size of the mill.

Doctor Boubel replied that the majority of burners in mills today are of a certain size range regardless of the output of the mill. In two instances in the Medford area the mills are using two burners. A large burner is used for a fuel storage house to feed the small burner continuously.

The Chairman asked if any effort was being made by any mill or group of mills to produce a fireplace fuel something on the order of Prestologs that would not be too expensive and possibly develop a national market.

Doctor Boubel did not know of any. He went on to say that Prestologs are just about as economical as one can get and that the major cost of Prestologs is in handling and shipping, not in the manufacturing of them.

Mr. Meierjurgan asked if it would help any to reduce the waste to chips or hog fuel.

Doctor Boubel stated it would help in some respects to have a uniform fuel and also to have facilities nearby that can use it. The problem is finding the facilities that can handle it.

Doctor Boubel stated that the tepee burners are coming into wide use in the central part of the United States for garbage burning. The burners are being erected in the state of Michigan at the rate of about ten a month and the Michigan authority can do nothing about it. The Michigan Legislature passed a rule prohibiting open burning, and tepee burners are being put up at various municipalities for doing burning that was formerly done in open dumps. The Taft Sanitary Engineering Center is extremely concerned about

IAA357

this problem. Most garbage and refuse operations utilize two burners; one is loaded to capacity before it is ignited, with no auxiliary fuel. It then burns for a certain period and as it burns down it is cleaned out and the refuse hauled away, while the second burner is being loaded. The two burners are operated on a cyclic basis.

Mr. McPhillips asked whether Doctor Boubel would care to express an opinion, and would it reduce the present pollution for the Sanitary Authority to establish regulations for wigwam burners in this area and apply them just as we do to any other development, like disposal of waste from pulp mills or municipalities, and enforce those regulations on these people.

Doctor Boubel felt that a burner could be designed with a grate system but the question is whether or not it would meet Sanitary Authority regulations as they now exist. The present Sanitary Authority regulations state that the smoke shall not be equal to or greater than a Ringlemann #2, except for a start-up period not to exceed three minutes in any one hour or of equal opacity. Dr. Boubel went on to say that no one to his knowledge had ever established equal opacity of smoke from a wigwam burner and Ringlemann #2 because there are no people trained to do this. A burner could be designed that would have the best grate system, the best feed system and everything else, but still the smoke opacity might not be maintained at less than Ringlemann #2.

Mr. McPhillips asked if a definite improvement could be effected.

Doctor Boubel said the situation could be improved tremendously. However, the lumber industry is extremely hesitant to go ahead and make these improvements which might cost them \$5,000 per burner without the assurance they can meet the Sanitary Authority regulations. The start-up periods right now run from one and one-half to three or four hours. With proper operation and handling

it is felt that most existing burners could probably be started up in less than one hour, but the regulation is written for three minutes. The mill owner can't be told that if these changes were made they would meet present regulations.

Mr. Wheeler asked if it would be feasible to hog all the wastes to one or two central stations, and run it on a 24-hour basis. Could a burner then be designed that would meet all the standards.

Doctor Boubel replied that the problem then is when does it become economical to quit using the present burners and go to a multiple chamber incineration outfit. It would be necessary to take into account the required transportation and firing facilities, a fireman would probably be needed full time, certain automatic controls would be needed, and all of a sudden it begins to look like an incinerator. Why not then go a little farther and make it an incinerator. Some mills have actually eliminated their burners now except for using them for fuel storage houses. One mill in particular has done away with a \$3,000 per month oil bill. With the installation of a small dutch oven they are now using all their wood waste to generate the steam for their kiln.

The Chairman then asked Doctor Boubel if it would be advisable for the Sanitary Authority to adopt the proposed regulations at this time.

Doctor Boubel replied that his only concern with adoption of the proposed regulations is, would they result in burners which would meet the Authority's regulations. The regulations are progressive and there is a need for them, but they should be explained to the lumber industry.

Mr. Harms said that it should be clarified that these proposed regulations do not do away entirely with wigwam waste wood burners, but that they provide

IAA357

for installation only if approved by the Sanitary Authority. He said one thing that the Sanitary Authority should do before formal adoption of any regulations is to hold a public hearing to which industry is invited to appear and give its views.

The Chairman then called on Mr. S.V. McQueen, Chairman of the Associated Oregon Industries Forest Industries Air Quality Committee and also President and General Manager of Kogap Manufacturing Company, Medford, to discuss the proposed regulations.

Mr. McQueen said that as Chairman of the Associated Oregon Industries Air Quality Committee he had a statement that he would like to read. It was as follows:

"As the result of the State Sanitary Authority meeting January 30, 1964, in a memorandum from Mr. Richard Hatchard to the Authority the following four points were made by Mr. Hatchard:

1. Encourage cooperative activities by representatives of the lumber industry and other interested groups in the preparation of additional rules and regulations that will bring about control of waste wood burners within a reasonable time period.
2. Complete the preparation of the proposed regulations that will (a) deny approval for new burner installations after January 1, 1965, unless adequate facilities are provided to control smoke and particulate matter and (b) require plans be submitted for a time compliance schedule for control of existing wood burners located in or near urban communities.
3. Encourage cooperative activities by industrial representatives with the OSU Engineering Experiment Station and the Forest Products Laboratory to develop, modify, and improve the utilization of wood residue and to provide adequate disposal methods for the remaining wastes, particularly to serve the mills located in cities and the urban fringe.
4. In the cases where complaints are received and surveys show excessive smoke and particulate discharge from burners, the staff will continue its effort to bring about control of the discharge following the procedures outlined in the statute and existing regulations.

Within the framework of this recommendation, the Forest Industry through AOI Air Improvement Committee contracted with the Oregon State University Engineering Experiment Station to conduct a Wood Waste Disposal study. This study which cost in excess of \$10,000.00 was entirely financed by the forest industries of Oregon. The purpose was to obtain authoritative and expert information regarding

wood waste disposal methods which would reduce air pollution emanating from wigwam burners used in the forest industries. This study is now being concluded by the Oregon State University Engineering Department and will be available in a short time.

It was our understanding that at the conclusion of this study and using basic technical data obtained therefrom, a cooperative approach to the drafting of wigwam burner operations would be made by representatives of both the State Sanitary Authority and the forest industries. We would hope that such an approach is still the intention of the State Sanitary Authority and that immediately upon conclusion of the study by Oregon State University this cooperative effort will commence and a satisfactory drafting of regulations will be made.

The proposed regulations being considered here today which have just been made available to our industry committee within the last two days contain many provisions that are impossible to analyze without considerable study and should be carefully considered in the light of the Oregon State University report.

Our industry stands solidly behind the basic idea of air quality improvement and has based its approach thereto regarding wigwam burner operations on the State Sanitary Authority's suggested cooperative approach and we hope the policy will be continued."

Mr. McQueen stated that it was his belief that the present problem has not been due to the increased amount of material burned, but rather to the fact that the material is of a different form. He said that when his firm went into the manufacture of wood chips and bark products, all the bark had to be taken off the logs first and then reduced to pulp chips. The material going into the burner now is practically 100% ground bark or small bark chunks and sawdust. The problem is in the change in type of fuel and not the amount of fuel. This changes the combustion problem.

The Chairman then asked the Authority members what they thought should be done about the proposed regulations.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that at the earliest possible date after completion of the Medford report a hearing be called, that authority be given to the Chairman and the Secretary to call said hearing after the Oregon State University report is completed and that industry be given ample time to study the proposed regulations.

IAA357

STATUS REPORTSCity of Portland

A summary report prepared and distributed to the members was read by the Secretary. This report, dated December 3, 1964, has been made a part of the Authority's permanent files in this matter.

Mr. Wendel stated that from the figures obtained from Mr. Bowes, City Commissioner, he concluded that in the three years since the Authority withdrew its suit against the city of Portland, sewer service charges in the amount of \$6,400,000 have been collected and during these same three years the capital expenditures consisting of land, rights-of-way, equipment and construction amounted to only \$2,382,000 with some \$2,100,000 being spent for operation and maintenance. Mr. Wendel then asked Mr. Denman and Mr. Harms if this was in accordance with the purpose for which the sewer service charge was levied; that is, to use a portion of the fund collected for operation and maintenance of the entire sewerage system for Portland. Both Mr. Denman and Mr. Harms expressed the opinion that it was a perfectly legal expenditure. The Secretary stated that when the city submitted its program to the Authority it was indicated there would be about one and one-half million dollars per year available for capital construction and the rest would have to go for operation and maintenance of the system. The fact that the cost of the project has gone up materially has slowed construction progress. In 1958 the improvement program was estimated at five million dollars, later it was raised to seven million dollars and now is estimated at between eleven million and nineteen million dollars. It was noted that many organizations have found that it is cheaper to borrow the money and pay interest on it and get the project done at once, thereby saving the constantly increasing construction costs. Bond payments can be made from the sewer users fund.

IAA357

An engineer's report being prepared by Stevens and Thompson, Inc., is scheduled to be completed and presented to the Portland City Council on December 9, 1964. This report will probably propose alternate solutions to the present problem. The city has to determine which of these alternates will be used, how much money will be involved and the time element for completion of each alternate. The city now has \$3,800,000 cash on hand but cannot spend it until it is determined which alternate is to be selected. Some alternates being considered are (1) whether or not they should build another plant on the west side of the river, (2) whether they should carry everything over to the east side to the present plant, and (3) whether or not they should abandon the Ankeny pump station which is a major station on the west side. These things will have to be considered in the master plan.

It was agreed that no action in this matter should be taken by the Authority until after the city has received this report from its engineers and has had time to study the alternates and recommendations outlined. Action was therefore deferred until the next Sanitary Authority meeting.

#### Riverdale-Dunthorpe Sewage Disposal

A memorandum report prepared by the staff and distributed to the members was read by the Secretary. This report, dated December 3, 1964, has been made a part of the permanent files in this matter.

From this report it was noted that on March 31, 1964, the residents of the area approved the formation of the Dunthorpe-Riverdale County Service District. Preliminary engineering studies estimated that the required facilities would cost some \$878,000 to construct and of this amount approximately \$217,475 would be for connection to the city of Portland's Willamette

interceptor sewer and Tryon Creek treatment plant. As soon as an agreement has been signed between the city and county regarding the charges which will be levied by the former for providing sewage treatment for the district, the county will apply to the Housing and Home Finance Agency for a planning loan. Financing the required trunk and lateral sewers will require a bond issue which will be referred to the voters of the district as soon as the necessary arrangements can be made and the statutes will permit. In the meantime the city is making progress in the construction of the Willamette interceptor and Tryon Creek treatment plant but it will probably be another year before the city's facilities are ready to serve the Dunthorpe-Riverdale district.

It is going to be an extremely expensive project for the residents in view of the nature of the terrain and the amount of rock to be encountered and the way the development is laid out.

The staff was instructed to keep the pressure on regarding this project.

#### City of Monroe

In a report regarding this matter Mr. Weathersbee stated that following the Sanitary Authority meeting on September 10 the city of Monroe was instructed to retain an engineer within 60 days, and to have plans and specifications completed by April 1, 1965. Mayor Lucas in a letter dated November 27, 1964, reported that the city had selected an engineering firm but had not entered into a formal contract. It was expected that this would be done at the next city council meeting on December 7 and also at that time an application would be signed for planning funds from the Housing and Home Finance Agency. Because it appeared that the city of Monroe is making an effort to comply with the instructions of the Authority, no action was considered necessary.

11

IAA357

Arrow Meat Company

Mr. Weathersbee reported that this case had previously been scheduled for trial in the circuit court of Washington County for October 22; later it was rescheduled for November 24, and then on the evening of November 23 Mr. Quesseth, legal advisor for the Authority, received a call from the clerk of the court stating the trial had been postponed again but would be rescheduled as soon as possible.

Mr. Weathersbee stated further that to his knowledge no date had been set yet. Mr. Quesseth had said he would get in touch with the court if nothing were heard within a week. The company is making some halfhearted efforts to abate pollution caused by the discharge of wastes from its operations.

Georgia Pacific

Since the Sanitary Authority meeting on September 10, Georgia Pacific has made considerable progress in the planning and installation of facilities for providing effective control of water and air pollution along the Newport ocean front. A memorandum report dated December 3, 1964, listing items of progress was read by the Secretary and has been made a part of the permanent files in this matter. This memorandum stated that according to the company's reports the foam conditions on the Newport Beach were well controlled during September except when the defoamer addition was inadequate or conditions at the outfall were adverse. During the last week of September there was some foam build up when effluent losses were high and rough surf conditions persisted. The high effluent losses resulted when the continuous digester was shut down for major piping revisions. At the September meeting Dr. C. Edward Taylor stated it would probably take two or three months to complete the installation of the proposed diversion and storage system and that it

should be possible to determine the effectiveness of said system by not later than the end of March or April, 1965. It appears that the company is making satisfactory progress. There have been no complaints about serious odors recently.

Mt. Emily Lumber Company, La Grande

Mr. Patterson reported that the Mt. Emily Division of the Boise-Cascade Corporation, La Grande, was placed on the agenda because at the last meeting the Authority staff was directed to proceed with a hearing. Considerable difficulty on this matter was encountered due to the correspondence or lack of correspondence. However, a letter was received from Charles F. McDevitt, General Counsel for Boise-Cascade, stating that drawings and specifications for the control installation would be received by the Authority by December 10. Therefore, it is felt that sufficient progress is being made at this time.

Edwards Bros. Construction Company

Mr. Wood reported that since the last Authority meeting Mr. Edwards has been contacted regarding the progress being made on his waste burner. He reported that the thermocouple and pyrometer have been ordered and all parts have been received except one, and that installation is expected to be completed around the first of the year. Mr. Edwards stated that the company is planning to install another chipper to eliminate some waste that is going to the burner and also sell some of the bark. Monthly fallout samples collected in the area indicate that there has been a significant reduction in fallout since the problem first came to the attention of the Sanitary Authority. The staff is planning to conduct a sampling program in the area as soon as the installation has been completed. No particular action is requested at this time.

Chipman Chemical Company

Mr. Ott reported that since the September 10, 1964, meeting of the Sanitary Authority, the staff has reviewed and approved plans and specifications for an odor control scrubber for the MCPA dryer and accepted a proposal for DCP tank car odor control ducting. In a letter dated October 23, 1964, the company notified the Authority's Secretary that they are considering the addition of facilities to produce a new hormone weed killer called CMPP. This new plant will be incorporated as a side production unit to existing plant processes. The company has notified us that air and water pollution aspects are being studied very thoroughly.

The company has continued their submission of weekly stack emission data reports, which include data from one 24-hour 2,4-D plant composite air space sampler. The new gas chromatograph has not been used to date because of problems resulting from contamination of the collection device for the chromatograph. According to company representatives, a "clean" or white room will be necessary before this chromatograph can be operational.

The company has been treating the 2,4-D stack emission using a chemical masking agent since September 1964; however, the lagoon (Doane Lake area) has not been treated with a masking agent since October 19, 1964. The company is currently considering a lagoon treatment program.

The Authority's staff has recently sent fifteen questionnaires to the Public Health Service, local air pollution control agencies, and one company, in an attempt to ascertain the extent of pollution problems and control associated with the production of 2,4-D in other areas of the United States. There are no recommendations at this time.

IAA357

Mr. Patterson said that in prior conferences with Chipman Chemical Company it was understood they would be able to treat the lagoon on a continued basis. This they have not been able to do because their method of treatment does not work under all conditions. The company is studying a method of treating the lagoon.

Mr. Gitschlag reported that they have found treatment of the lagoon with a masking agent is not effective during rainy seasons. The company is now looking at a method of putting the masking agent directly into the air over the lagoon.

The Chairman then asked how long the lagoon would give off the odor when the plant is not operating.

Mr. Gitschlag replied that he did not know exactly, but undoubtedly weeks or months.

#### 1965-1967 Budget Request

A memorandum regarding the budget request submitted to the administration for presentation to the next session of the Legislature for financing operations of the Sanitary Authority for the 1965-67 biennium was read by the Secretary. This report stated that under the present budget the Division of Sanitation and Engineering is authorized to employ a maximum of  $61\frac{3}{4}$  persons; the fraction is due to the fact that during the summer students are employed as trainees. A budget to finance a total of 80 employees was requested for the next biennium but the Governor has recommended approval of only  $66\frac{3}{4}$  positions. Of the present positions  $25\frac{1}{4}$  are in the air and water pollution control programs of the Sanitary Authority. For the next biennium  $8\frac{2}{3}$  additional positions beyond what are now employed were requested for these two programs. Of these

IAA357

the Governor has recommended approval of only five. Four of the positions recommended by the Governor are to be used in a program expansion project which is proposed to be financed at least in part by a grant under the new Federal Clean Air Act. While there will be four new positions in Air Quality, there will actually be one less in water pollution control than there was previously. The laboratory director and draftsman positions, although not recommended by the Governor, are considered to be extremely important. The Secretary pointed out that although it was not recommended by the Governor, the laboratory director position is urgently needed to coordinate all of the laboratory operations in the water pollution control, environmental radiation surveillance, environmental sanitation and air quality control programs of the Division of Sanitation and Engineering.

Mr. Meierjurgan asked if the water pollution control staff provided much informational material to the Water Resources Board. The Secretary replied that in the past the staff had supplied as much information as possible but not as much as needed. He stated further that if the Water Resources Board's request for a supplemental appropriation for the 1965-67 biennium should be approved by the Legislature for financing a detailed study of Oregon's present and future water needs, the additional positions requested for water pollution control would be a necessity and the position of laboratory director was especially important.

It was MOVED by Mr. Harms, seconded by Mr. Amacher, and carried that the Chairman and Vice-Chairman arrange an appointment with the Governor to urge that the position of laboratory director which was deleted be restored.

LEGISLATIVE NEEDSControl of Automobile Exhausts

The Chairman stated that the question was whether or not the Sanitary Authority should get something started in this coming session of the Legislature for the control of automobile exhausts.

Don Morrison, Assistant to Mr. John Denman, distributed to the members of the Authority excerpts from the California law pertaining to this. He stated that California started with requirements for a crankcase emission control device in their initial program. It was attached to the registration and made a condition to pre-registration of the vehicle. The second phase brought about enforcement of the program on the highway, requiring the vehicle to be equipped with this device. In 1966 California will have four approved devices. Their program allows the counties home rule. If the counties decide that this program is not needed for their area they are allowed to eliminate it with the exception of new autos. He said that to implement such a program in Oregon it would be necessary to amend quite a bit of the vehicle code.

Mr. Amacher asked if anyone had ever brought up such a proposal to the Legislative Interim Committee on Highways.

Mr. Morrison replied that it had not and that this is as far as it has gotten.

Mr. Richard Hatchard, who was present at the meeting, then offered some comments and stated that first the problem had to be defined and this has not been done anywhere in the state of Oregon. Control of motor vehicle exhaust is an extremely complicated field. The Sanitary Authority is faced with budgetary cuts and until the state does provide adequate resources, laboratory facilities and staffing so that the necessary determination can be made, any effort that the Authority tried to make would be faced with the policy positions by the

automobile association that no state, no region, or no community should consider vehicle exhaust controls until the problem has been defined.

The Chairman stated that it was his feeling that the Authority would not get the money for this purpose.

Mr. Harms said this is why he thought it should be taken through the Highway Interim Committee, because this committee is usually financed by highway funds; and it would seem they are the agency who would be in a position to make comprehensive studies in view of the Sanitary Authority's budgetary problems.

The Secretary stated that he thought the first responsibility of the Authority is to make a determination of conditions as they now exist and determine the extent of the hazard if there is one. In order to get additional positions in Air Quality Control approved for the next biennium, it was suggested that the Sanitary Authority would use them to support an application to the Public Health Service under the Federal Clean Air Act for federal financial assistance. One of the projects would be to establish a continuous air monitoring program in Portland and get the equipment, so that the components of the atmosphere within the metropolitan area could be determined. The Secretary went on to say that if the Authority went to the Legislature now and asked for a control program, they would want to know what the present situation is as far as Oregon is concerned. Under the Federal Clean Air Act it provides for the establishment of a joint Federal Government-industry committee. It has the task of accelerating progress toward control of air pollution from motor vehicles.

Mr. Verne J. Adkison, Air Pollution Control Officer, Lane County, who was also present, said that he has been following this problem very closely and that the majority of all cars shipped into Oregon, 1963, 64 and 65 models, are equipped with crankcase blow-by devices. Mr. Adkison mentioned that although Eugene and Springfield are small metropolitan areas, there is some control

IAA357

enforcement being done. The deputy sheriff, state police and city police have actually cited and given warnings to people who are putting additives into their cars and causing smoke condition problems. The Motor Vehicle Law says that a car shall be equipped with a muffler so as to not emit unnecessary noise or smoke. Under this simple Act people have been stopped and given warnings. Mr. Adkison went on to say that rather than go clear into the whole automobile exhaust program, a minor housekeeping program should be done in order to be able to maintain what we have now in the way of devices that are coming. We are just attempting to maintain those devices that we have and maintain a public education toward visual emissions so they won't create a nuisance. Mr. Adkison recommended that the advice of Mr. Harms and Mr. Hatchard be taken in referring it to the Motor Vehicle Division, because they would be the ones who would be authorized with it as they are in California. Mr. Adkison stated that he would like to see something in the way of a housekeeping rule so that we could keep what we have, although it is a minor form, until the problem is really defined.

It was MOVED by Mr. Harms, seconded by Dr. Wilcox and carried that (1) the 1965 Legislature consider legislation requiring devices for pollution control of auto emissions on all new vehicles sold in the state and (2) that there be referred to the Legislature's Highway Interim Committee the problem of auto emission control with appropriation of sufficient funds to adequately study the problem, the studies to be carried out by any state agency or agencies or by private organizations that the Highway Interim Committee might retain.

Elimination of Land Clearing Exemption from ORS 449.775

The Chairman asked the members of the Authority if anyone would like to make a motion on land clearing by cities and states.

Mr. Harms stated that it was his opinion there should be some control by the Sanitary Authority over agricultural burning. A program should be adopted

which would set forth times when there would be burning.

Mr. Hatchard stated that the city of Portland felt something should be done with the present exemptions of land clearing, and that it is the city's opinion that the exemption of land clearing due to building demolition ought to be removed from Oregon Statute 449.775 due to the fact that this is working to the detriment of the city as well as some of their refuse disposal problems.

It was MOVED by Mr. Wheeler, seconded by Dr. Wilcox and carried that the Sanitary Authority request the introduction of a bill into the Oregon Legislature which would delete land clearing operations or land grading from the exemptions in ORS 449.775.

Mr. Wheeler went on to say that if passed by the Legislature the Authority could then take action against any building demolition, highway clearing through the city, urban renewal, etc.

Mr. Harms was opposed to the motion because he favored including the agricultural exemptions in the proposed bill.

#### Tax Credit for Air and Water Pollution Control Equipment Installed by Industry

The Chairman explained that if an industry spends a lot of money for pollution control equipment and this increases the investment in the plant, then the company is assessed an ad valorem tax on the increased value of its property.

After some discussion by the members of the Authority, it was agreed that if a bill were introduced into the Legislature to give tax relief to industry, the Authority would present its views that it was not opposed to the bill but would not initiate such a bill.

#### Sewage Disposal for Houseboats

Mr. Denman, legal counsel, explained this was a matter of requiring the owners of all houseboats to connect their sewage devices, facilities, etc. to

IAA357

some type of collector system for treatment and disposal. There is a provision in the plumbing code which requires that all water and sewage from plumbing fixtures be discharged into a sewer system, septic tank or sewage cesspool. This section refers to plumbing in buildings and structures but does not state whether said building could be a floating device. The plumbing code would probably have to be changed to make sure it does apply to this type of situation.

If the Sanitary Authority or general water pollution control statutes were used for prosecution purposes then certain qualifications would be involved; for example it would be necessary to consider the size of the stream, effect on water quality, the values damaged, etc. If it were strictly under the plumbing code it would be by criminal prosecution, whereas under the water pollution control statutes it would be by injunctive proceedings.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler, and carried that the legal counsel be instructed to draft such changes as are necessary to clarify the law and to cover sewage disposal from houseboats.

#### Sewage Disposal from Ocean Going Vessels

Mr. Denman pointed out that from a legal standpoint regulating sewage disposal for ocean going vessels could be quite complicated, that at a meeting held on the subject at which the Port Commission was present, the opinion was expressed that the state should not get involved in this type of legislation. He stated further that the Port of Portland apparently does have some authority for regulating this matter but is reluctant to do it because it has to remain competitive. He said this problem should probably be handled on a federal level since it involves modifying ships which come from all over the world.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the Oregon State Sanitary Authority adopt a resolution urging that the Federal Government give consideration to the problem of sewage disposal for ocean going vessels.

Metropolitan Air Pollution Control

Mr. John Denman stated that this is a proposal to amend the Metropolitan Study Commission and Service Act 199.110 by the addition of the words "air pollution", and under the definition "Metropolitan Services" a new subparagraph "g" be added as "air pollution."

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that these changes be recommended.

Mr. Hatchard asked to make a few comments regarding the metropolitan air pollution control and stated that the Authority was doing nothing in terms of encouraging the formation of a regional control district for the next three years as the Metropolitan Study Commission won't report till the 1967 Legislature. Mr. Hatchard explained that there were three jurisdictions within the Portland area who have the local funds to make the study now, but needed some leadership from the Sanitary Authority. He stated that the League of Oregon Cities at their meeting in Eugene in November passed a resolution that Chapter 449.830 be revised so that it would establish the procedure for an organization of city-county, intra-county or multi-county air pollution control program. Mr. Hatchard urged that the Authority members reconsider their action to see what could be done in the 1965 Legislature.

Mr. Harms then asked that the resolution from the League of Oregon Cities be read. Mr. Hatchard then read the resolution which had been proposed to the League by the city of Portland. The resolution actually adopted by the League was more general and was as follows:

WHEREAS it is a policy of the State of Oregon to maintain purity of the air to prevent injury to persons and property while preserving economic and industrial growth, and

WHEREAS existing statutes authorize cities and counties to enter into agreements for establishing and financing air pollution programs, but do not

IAA357

clearly define the procedures for organizing, operating, and financing area or regional air pollution control programs,

NOW THEREFORE BE IT RESOLVED that the League of Oregon Cities recommend legislation to establish procedures for organizing, governing, operating, enforcing, and financing city-county, intra-county, or multi-county air pollution control programs.

It was MOVED by Mr. Harms, seconded by Mr. Amacher and carried that the members of the Sanitary Authority support in principle such a change in law as contained in the resolution from the League of Oregon Cities.

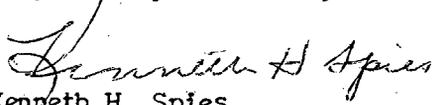

Rogue River

Mr. McPhillips stated he would like to see any case of pollution in the Rogue River by mining reported and brought up for abatement. The river too often is full of mud from these operations and since the Rogue River Coordination Board, which supposedly has jurisdiction, is not doing anything about it, the Sanitary Authority should go ahead with abatement proceedings. The other members concurred with Mr. McPhillips.

The date of the next meeting was set for February 18, 1965.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the meeting be adjourned at 4:10 p.m.

Respectfully submitted,

  
Kenneth H. Spies  
Secretary

MINUTES OF THE 104th MEETING  
of the  
Oregon State Sanitary Authority  
February 18, 1965

1A2357

The 104th meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 11:00 a.m., February 18, 1965, in Room 36, State Office Building, Portland, Oregon. The members and staff present were: Harold F. Wendel, Chairman; B.A. McPhillips, Chris Wheeler, Doctor Richard H. Wilcox, Herman P. Meierjurgan, and E.C. Harms, Jr., Members; Kenneth H. Spies, Secretary; Don Morrison, Legal Advisor; E.J. Weathersbee, Deputy State Sanitary Engineer; H.M. Patterson and H.E. Milliken, Assistant Chief Engineers; H.W. Merryman, Joseph A. Jensen, Fred Bolton, and Leo Baton, District Sanitary Engineers; Bryan Johnson and R.F. Wood, Associate Engineers; Harold Sawyer and Patrick Curran, Assistant Sanitary Engineers; Ed Lynd, Water Pollution Control Technician, Glen Carter and Ed Quan, Aquatic Biologists; and Howard G. Smith, Assistant Chief, Air Quality Control. Mr. John Amacher, Member, was unable to attend because of his absence from the state.

MINUTES:

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the minutes of the December 3, 1964, meeting be approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Dr. Wilcox, and carried, that the action taken on the following 31 project plans and engineering reports for water pollution control and 4 project plans for air quality control for the months of December 1964, and January 1965, be approved:

Water Pollution Control Plans

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12- 1-64	Manzanita	Engineering Report	Prov. approval
12- 1-64	N. Umpqua S.D.	Preliminary Study	Prov. approval
12- 1-64	Springfield	Trunk Sewer S-48	Prov. approval
12- 2-64	Lane Co.	Sewage treatment plant Camp Lane	Prov. approval
12-14-64	Springfield	Sewer relocation	Prov. approval
12-23-64	Fairview	Sewer extension	Prov. approval
12-23-64	Beaverton	Sewer- Wilson Park #4	Prov. approval
12-23-64	Gander Ridge S.D.	Revision Sheets 1, 3 & 4	Prov. approval
12-23-64	Oak Lodge S.D.	Lateral F-3-A	Prov. approval
12-23-64	Sweet Home	Sewer - M Street	Prov. approval
12-28-64	Eugene	Sewer- Garfield between 9th & 10th	Prov. approval
12-28-64	West Slope S.D.	Lateral B-9-3	Prov. approval
12-28-64	Portland	Industrial waste line and storm sewer - Columbia Steel Casting Co.	Prov. approval
12-28-64	Uplands S.D.	Sewer extension	Prov. approval
1- 7-65	Douglas County	Waste Collection & Treatment Bremner Hills Trailer Park	Prov. approval
1-11-65	Uplands San. Dist.	Mitchell Park sewer ext.	Prov. approval
1-15-65	Siletz Keys (Taft)	Sewerage system and treatment	Prov. approval
1-18-65	Seaside	Additions to pump station	Prov. approval
1-18-65	Jacksonville	Sewers - Lolita Acres	Prov. approval
1-18-65	Albany	Sewer extension-Rev. plans	Prov. approval
1-19-65	Junction City	Pump station and sewer	Prov. approval
1-20-65	South Salem	Force main - rev.	Prov. approval
1-28-65	Tangent	Treatment plant Elem. School	Prov. approval
1-28-65	Uplands San. Dist.	Mitchell Park sewer ext.	Prov. approval
1-28-65	Springfield	Sanitary sewer S-35	Prov. approval

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1-28-65	Medford	San. sewer on Biddle Road	Prov. approval
1-28-65	Linn County	Sewage treatment - Diamond Hill Subdivision	Prel. approval
1-29-65	Monmouth	Sacre's Acres sewer	Prov. approval
1-29-65	Whitford-McKay	S.W. 88th Avenue Lateral	Prov. approval
1-29-65	Lakeview Sub.S.D.	Preliminary Report	Approved
1-29-65	Lake Oswego	San. Sewers LID #88	Prov. approval

#### Air Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
12-1-64	Marion County	J.F. Kennedy School Incinerator	Not approved pending further action
1- 6-65	Portland	Chipman Chemical Company	Reviewed air monitoring data
1-12-65	Multnomah County	Stephenson Elementary School Incinerator	Cond. approval
1-21-65	Wasco County	Wahntonki High Sch. Incinerator	Requested additional infor.

#### FAIRWAY ESTATES

Mr. Harold E. Milliken reported that in September 1964, a proposal had been submitted to the Authority's staff by Clark and Groff, engineers for Mr. M.O. Bessonette, for the construction of a sewage treatment plant for retirement homes or 30 duplexes adjacent to the Rogue Valley Golf Course near Medford. In a conference with Mr. Bessonette it had been learned that the policy of the city of Medford prevented him from contracting with the city for disposal of sewage from his development. At the suggestion of the Authority's staff a sanitary district was formed with the thought that it would be easier to contract with the city of Medford for the purpose of disposal of the sewage.

Mr. Leo Baton, district engineer, had made inquiries locally and had visited the site. It became evident that this district, Fairway Estates Sanitary District, would have to build its own sewage treatment facilities.

An oxidation pond of sufficient size to provide for summer holding and sufficient treatment had therefore been proposed and approval had been given to proceed with final plans since it appeared that such a system could be built which would conform with the policies of the Authority.

Subsequently, a letter was received from the city of Medford requesting that this preliminary approval be rescinded because the city objected to the location of the oxidation pond. Consequently, it was decided to bring this matter to the attention of the Board.

Mr. Robert Duff, city manager, was present to represent the city of Medford. Mr. and Mrs. M.O. Bessonette, Mr. G.W. Kellington, Secretary and Attorney for the sanitary district, and Mr. Gilbert Groff of Clark and Groff Engineers, were present to represent the Fairway Estates Sanitary District.

Mr. Robert Duff, City Manager, stated that on January 8, 1965, the Medford City Council addressed a resolution to the State Board of Health protesting the location of a raw sewage lagoon on the Bessonette property immediately adjacent to the city of Medford, the objection being that if this request is granted others will also be received. He said the city does not want to be ringed with raw sewage lagoons.

Mr. Duff reported further that Jackson County had recently completed a \$50,000 plan for a sewerage system for the whole Bear Creek Valley which would include Medford, Ashland, Phoenix, Talent and all the area to the Rogue River. This, of course, would be a very comprehensive system and would take care of the sanitary problems in the Bear Creek Valley. However, the time required for implementation of this plan is not known.

IAA357

Mr. Duff then stated that Mr. Bessonette had contacted the Council relative to the formation of a sanitary district to serve this particular area but the city's experience with sanitary districts had been very sorry and as a consequence the Council long ago had determined not to have anything further to do with such districts. He said that the property which Mr. Bessonette or the district proposes to develop can be made contiguous to the city by including some of the golf holding company properties and then could be annexed and entitled to the rights of other citizens such as connection to the sanitary sewer system. The residences on either side of the proposed lagoon comprise one of the finest residential areas in the city. Some of the homes cost in excess of \$100,000, and there is objection to building a condominium type project. A map was displayed and the different properties outlined.

Mr. Duff reiterated that the reason the city does not wish to enter into a contract for connecting the sewage from the proposed development into the city system is that past experience with sanitary districts has not been good. The city would prefer annexation but would not approve a condominium type project. They would have to build single family residences.

Mr. Bessonette then testified that several years ago he had acquired property in the vicinity of the golf course, that he had put the Medford irrigation canal under ground at considerable expense with an eye to eventually developing the property, that not too long ago he gave approximately 10 acres of fairway to the golf course for an additional 9 holes and in return the golf company is required to keep it green and presentable. This provides a park like atmosphere. The property was given with that in mind. He now desires to develop this property as retirement homes or condominium. A trunk sewer of the city of Medford follows the exterior boundaries of this tract.

If a lagoon is installed now, at a later date when a trunk sewer extension is available to this property it can be connected without difficulty. It is anticipated that the water supply can be provided from the 4-inch city main now in use. The main objection to annexation is that the city will not approve the contemplated type of development.

Mr. Gil Groff, Clark and Groff Engineers, appeared and presented the engineering aspects of the proposed lagoon. He stated that from the standpoint of operation this facility should be feasible.

Mr. Harms stated it was his opinion that the Sanitary Authority did not have any choice but to approve the plan. He pointed out that the President's Commission on Intergovernmental Relations has just put out a report on special purpose districts which lists the state of Oregon as 30th in size from a standpoint of population but 4th in the number of sanitary districts and 9th in special purpose districts.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that the approval of the staff for construction of a sewage stabilization pond for the Fairway Estates be affirmed but with reluctance and with the hope that the area can still be served by a connection to the Medford city sewer system.

#### GRAND RONDE

An engineering report in the matter of sewage disposal for the city of Grand Ronde in the public waters of the state of Oregon was summarized by Mr. Jensen. This report has been made a part of the permanent files in this matter.

It was MOVED by Mr. Harms, seconded by Mr. Meierjurgan, and carried that the recommendations of the staff be adopted and a public hearing be scheduled before a hearings officer as soon as practicable.

MILL CITY

An engineering report in the matter of sewage disposal for the city of Mill City in the public waters of the state of Oregon was summarized by Mr. Jensen. This report has been made a part of the permanent files in this matter.

A letter from Mr. Omark, Recorder for Mill City, dated February 11, 1965, was read.

It was MOVED by Mr. Harms, seconded by Mr. Wheeler and carried that unless an acceptable program for abating pollution of the North Santiam River by raw sewage discharges within the city of Mill City is submitted within 60 days, the city will be cited to appear before the Sanitary Authority to show cause why an order for abating this raw sewage discharge should not be issued.

STATUS REPORTS

Arrow Meat Company

Mr. Weathersbee stated that a "firm trial date" of March 2, 1965, at 9:45 a.m. has been set by the Circuit Court of Washington County regarding the case of Arrow Meat Company discharging its wastes into Council Creek.

Willamette Basin Pulp & Paper Mills

Mr. Weathersbee read a report, which has been made a part of the permanent files, regarding the status of the pulp and paper mills in the Willamette Basin. He said that due to the strike last fall by pulp and paper workers and the two crippling floods in December and January, the mills have not been able to complete their reports within the agreed time (January 1, 1965) covering comprehensive studies of their waste disposal problems and proposals for 85% reduction of their waste loads including settleable solids removal. Mr. Weathersbee went on to say that the Authority staff has an understanding with each of the mills as to when they are to have their reports done.

11A857

City of Monroe

Mr. Weathersbee reported that a letter had been received from the city of Monroe submitting a revised schedule for their sewerage system improvements. This schedule will meet the construction deadline of December 1966.

It was MOVED by Mr. Wheeler, seconded by Mr. Meierjurgan, and carried that the new schedule be accepted with the understanding that advertising and awarding of contracts by May 1966 means that the actual contract for construction be awarded.

Mt. Emily Lumber Company

Mr. Patterson reported that plans and specifications for control of emissions from the boilers and stacks at the plant were given conditional approval on February 9, 1965. The company proposal included control on one boiler and stack and control on six of a battery of ten boilers on the other stack. No action is required at this time.

Chipman Chemical Company

Mr. Patterson reported that the staff of the Air Quality Control Section had mailed questionnaires to 15 regulatory agencies, the Public Health Service, and industrial plants throughout the United States regarding control of odors arising from 2,4-D process. Unfortunately, no new information was gained. This report has been made a part of the permanent files in this case. No action was necessary at this time.

Western Council of Lumber and Sawmill Workers

Mr. Weathersbee mentioned the fact that a resolution had been received from the Western Council of Lumber and Sawmill Workers regarding stricter enforcement of existing laws governing pollution. It was decided that no particular action need be taken except to note that the resolution had been received and to acknowledge receipt of same. This resolution has been made a part of the Authority's permanent files.

Georgia-Pacific Corporation

The Secretary reported that in a letter received from Dr. C. Edward Taylor, Technical Director for the Georgia Pacific Corporation, it was stated the installation of the recirculation pump for the lagoon is progressing. It was planned to have the project completed by the last week in January but the heavy rainfall had prevented it. The company is making similar progress with the installation within the yard for the provision of a sump pump, and is presently considering possible extension of the outfall. The other facilities were to have been in operation early enough so a determination could be made by March or April of this year as to the need for extending the outfall.

The meeting was then adjourned for lunch at 12:25 p.m. and was reconvened at 2:00 p.m.

MEDFORD AIR QUALITY STUDY REPORT

Mr. Harold Patterson reviewed briefly the discussion which took place at the last Sanitary Authority meeting regarding the Medford study on wood waste disposal by wigwam burners conducted by Oregon State University. He stated that the staff had conferred on February 15 with the Associated Oregon Industries representatives and the Lumberman's Air Quality Committee composed of Bob Olinger, Ed Cone, S.V. McQueen, Sam Hughes and Tom Reynolds. Mr. Verner Adkison and Doctor Boubel were also present at that conference.

After some discussion it was agreed that the staff of the Air Quality Control Section should cooperate on the drafting of regulations to reduce emissions from wigwam waste burners. The regulations should include the areas of adjustable forced draft underfire air, overfire air with a variable control and introduced tangentially, a temperature measuring device near the burner's dome, a written log for recording burner exit temperature, draft settings, and operation to determine optimum patterns of operation for varied conditions of

IAA357

fuel and atmosphere, periodical cleaning of grates and general housekeeping, and proper maintenance of burner shell and related equipment. The staff also suggested including that approval of new tepee burners shall be by submission of plans and specifications to the Sanitary Authority. It was pointed out that if industry undertook all of these improvements, some mills might still be in violation of the Sanitary Authority regulations. Industry wants some assurance by variance whereby they could be allowed to go ahead and make the above listed improvements to effect a reduction of 30 to 50% in air contaminants and not be in violation of regulations of the Sanitary Authority.

Mr. Patterson went on to say that since the granting of a variance is a matter of policy and must be approved by the Sanitary Authority, this matter was being brought to the attention of the Authority for discussion before proceeding with further drafts of regulations. He stated that the staff is concerned that if the variance clause includes total variance from minimum smoke, particle fallout and suspended matter standards, there would be no control. He thought the Authority should have some clause to provide for the maximum efficient operation of the waste burner even with these variances to regulations being granted.

Dr. Boubel was then called upon to say a few words. He stated that the values shown in the report show the lumber industry to be primarily at fault, at least in the Medford area, as far as the amount of particle fallout and particulates suspended in the air. Dr. Boubel said he believed that an improvement in the quality of the air can be obtained in the areas where there are major concentrations of tepee burners, but that the lumber industry cannot be expected to put out the necessary expense to gain improvement unless they can be assured that they would not be brought into court for violation of state regulations. The suspended particulate and particle fallout standards which are currently in effect cannot be met by the lumber industry in an area such

as Medford or Eugene-Springfield, even though these improvements in the burners would be made. Dr. Boubel stated that he felt the improvement in the reduction of fallout would be a worthwhile thing to go after, and would be something which could be obtained rapidly, probably within a year or so. The lumber industry would have to be given some sort of a variance to act as an incentive toward implementing the program.

After some discussion, it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the staff be authorized to proceed with drafting regulations to include a variance to the existing regulations relative to smoke, particle fallout and suspended particulate which would be reviewed on an annual basis until such variance was not necessary.

CITY OF PORTLAND

The following, representing the city of Portland, were present: Commissioner William A. Bowes, Deputy City Attorney Marian C. Rushing, City Engineer L.H. Rosenthal, Assistant City Engineers Ray N. Cruden, Joe P. Niehuser and C.A. Dow, and Administrative Assistant Carl Wendt.

Commissioner Bowes presented copies of the signed contract between the Dunthorpe-Riverdale area of the county and the city of Portland.

The Dunthorpe-Riverdale residents still have to vote bonds and proceed with construction of local sewers. It is not anticipated that the treatment plant will be ready until the latter part of March or April of 1965. The Willamette interceptor that will serve the Dunthorpe-Riverdale County Sewer District will not be completed until 1966.

Commissioner Bowes then stated he wanted to discuss the Stevens and Thompson report on the Linnton-Guilds Lake-Portland interceptor sewer problem. He presented to the Board a four-page document setting forth the intentions of the city council relative to carrying out the recommendations of the engineers' report.

IAA357

Mr. Loren Thompson of Stevens and Thompson Engineers was asked to outline briefly the three alternate proposals contained in the report. Under Plan A, interceptor sewers would be built in the Linnton and the Guilds Lake areas for bringing the sewage to a point on the west-side of the Willamette adjacent to the SP&S railroad bridge where a thirty million gallon per day activated sludge plant would be built to treat the wastes from not only the Linnton and Guilds Lake areas, but also the Ankeny Street pumping station. It is felt that the industrial waste from the Linnton and Guilds Lake area would be difficult to treat and would need the buffering action that would be provided if the average flow from the Ankeny Street station of 20 million gallons per day of domestic sewage were added. The proposed plant would be designed to effect a 90% reduction in the oxygen demand before final disposal to the Willamette River. Plan A would cost some fourteen million dollars.

Plan B is essentially the same in that the Linnton-Guilds Lake trunks and interceptors would be built but instead of the treatment plant at the SP&S bridge, there would be a pumping station which would pump sewage through a tunnel to the existing Columbia Boulevard sewage treatment plant now providing primary treatment. It is anticipated that this plant would be expanded to provide capacity for an average daily flow of 100 mg and a new outfall to the Columbia River parallel to the present outfall would be installed. Under Plan B the Ankeny Station would continue as at present to discharge to the eastside interceptor system. This would require enlargement of the Columbia Boulevard interceptor. Plan B would cost an estimated \$11,462,000.

Plan C is similar to Plan B except the Ankeny pump station would discharge to the new pumping station near the SP&S railroad bridge and would therefore be separated from the East central system leaving the East central system to pick up the existing sewage on that side of the river. The existing plant outfall would still have to be enlarged for adequate capacity, as also would the treatment plant. The Columbia Boulevard interceptor would not have to

be enlarged. This project would cost about the same as Plan A. One advantage of Plans B or C over Plan A is that important industrial property would not have to be used for a sewage treatment plant. The site that is contemplated for Plan A is just north of the Pennsalt Manufacturing plant. Another disadvantage of Plan A is that even if 90% reduction were achieved, 10% of the organic loading would still be going to the Willamette River.

The program outlined by the City Council would be a combination of Plans B and C and would include construction in five phases. Phase 1 would include an 80 million gallon tunnel so if necessary to go to Plan C the tunnel would have capacity for it. As part of Phase 1 a syphon discharge line would be placed under the river which would take 30 million gallons at the present time and a pumping station would be built which eventually could handle the sewage from the Ankeny station, but initially the pumps under Phase 1 would have capacity only for the Linnton-Guilds Lake areas. Phase 2 would include the Guilds Lake trunk and interceptor sewers and the Linnton interceptor. Phase 3 would be the enlargement of the Columbia Boulevard sewage treatment plant. Phase 4 would be the enlargement of the existing outfall sewer to the Columbia River. If it is later determined that the Ankeny Street pumping station should be removed from the East side, Phase 5 would be constructed so that the discharge would go to the SP&S railroad bridge pumping station.

Total cost of the project is estimated at about \$14,000,000. The city now has a 3.7 million dollar fund built up from sewer service charges. It is proposed to finance the project on a pay-as-you-go basis. There will be about \$1,300,000 per year available for construction from the present sewer service charge.

The Secretary pointed out the necessity of conducting concurrently the studies needed to determine how best to eliminate the by-passing of raw sewage from the southeast portion of the present interceptor system because these by-passes constitute a major source of pollution in the lower Willamette.

IAA357

It is expected the program can be completed in 5 or 6 years. The city will be applying for federal funds and would hope to get all the help possible.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the Sanitary Authority go on record as generally approving the plan of action outlined by the city of Portland with the additional request that the city proceed with all possible speed in implementing this plan since it doesn't appear that any substantial benefit would be obtained by having all funds available before proceeding.

#### CENTENNIAL MILLS

The Secretary reported that Centennial Mills, Inc., which are located on N.W. Front Street, want to put in a new process which will result in an industrial waste load in the Portland Harbor. The company proposes to tie into the city sewer system but at the present time the city is not in a position to serve them. Based on preliminary calculations, the waste from this new operation would have a population equivalent of about 7,000. The company would like to know whether the Sanitary Authority would permit them to go ahead and start production now or as soon as they can get the plant built, even though the city sewer would not be available, or make them wait until the city sewer is available.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that approval to start production cannot be granted by the Sanitary Authority until the city sewer is available.

#### DUNTHORPE-RIVERDALE

The signed contract having been submitted earlier by Commissioner Bowes for treatment of the sewage from this district by the city of Portland, the Chairman instructed the Authority's staff to keep the pressure on the county to make sure the necessary trunk and lateral sewers will be completed as soon as possible.

LEGISLATION

## (1) SB 212 - Certification of sewage treatment plant operators.

The Secretary stated that this particular bill had not been submitted to either the Sanitary Authority or the Board of Health for full-fledged support. Similar bills had been introduced in the two previous legislative sessions and defeated.

The staff of both the Sanitary Authority and the Board of Health are in favor of mandatory certification because it is felt that it would be a means of elevating the proficiency of the operators so they would do a better and more efficient job of operating these very important facilities. At the present time and for the past several years Oregon has had a voluntary certification program.

Under this proposed legislation a certified operator would be required for any sewage treatment plant that served 1,000 people or more or a population equivalent of 1,000 people or more. At the present time there is a total of 136 systems in operation in Oregon meeting that requirement. There are 127 certified operators under the voluntary program who are actually operating these 136 systems; however, that doesn't mean that 127 of the 136 systems have certified operators. In fact, Portland has 24 operators who are certified. Actually only 66 of the 136 systems have certified operators. Under the proposal anyone certified under the voluntary program would automatically be certified under a grandfather clause in the compulsory plan.

## (2) HB 1312 - Abolishing the Rogue River Coordination Board.

This is identical to SB 222 introduced in the 1963 Legislature. The Secretary reported that HB 2031 appropriating \$750 for financing the Coordination Board's activities for the next biennium had already been approved by the 1965 Legislature.

IAA357

Mr. Wendel stated that according to the Attorney General's office the Sanitary Authority could act as if the Rogue River Coordination Board did not exist.

(3) SB 194 - Columbia Interstate Compact.

This proposed Columbia Interstate Compact was approved by the five upper states in the basin two years ago. The only two states that did not approve it were Oregon and Washington.

If this bill were approved it would authorize the compact commission to proceed with enforcement actions and interstate pollution problems if the individual states failed to abate the problem.

(4) SB90 - Metro Study Commission.

Mr. Howard Smith stated that the local government committee of the House of Representatives met at 1:00 p.m. on this date and considered SB 90 which would authorize the Metropolitan Study Commission to develop a proposal for metropolitan air quality control program. He reported that after some discussion by the Committee the bill received a unanimous "do pass." This bill had previously passed the Senate on February 9 by a vote of 20 to 5.

(5) HB 1272 - Motor Vehicle Exhaust Control.

Mr. Patterson stated that the difference between this bill and the California law is that this bill applies state-wide and does not differentiate between new and used cars, and also provides for no inspection or enforcement. In other words, it calls for spending about one hundred million dollars for control devices without any enforcement clause.

Dr. Wilcox said that he had just returned from Washington, D.C. where they had explored this type of legislation and the matter of inspection had been discussed too. The trend of the thinking there was to support the proposed Federal act introduced by Senator Muskie. Under this proposal the Federal Government would establish national standards and the states would be requested to assist with enforcement.

Mr. Harms stated that he thought the Authority was already on record as favoring referral of this problem to a Highway Interim Committee.

The Secretary replied that this was part of the motion at the last meeting and also to ask the Legislature to approve an appropriation in sufficient amount to adequately study the problem of pollution control from auto emissions.

It was MOVED by Mr. Harms, seconded by Dr. Wilcox, and carried that the members of the Authority express their reservations about HB 1272 to the committee considering it and to the Legislature, in view of the pending Federal legislation and the problems with inspections and enforcement.

(6) SB 242 - Regional Air Pollution Control.

The Secretary stated that this bill had been introduced at the request of the city of Portland and provides for the creation of an air quality control region. The bill provides for cities and counties to enter into contracts or agreements to establish regional air quality control programs, with a Board of Directors responsible for administering the program.

IZAAC WALTON LEAGUE RESOLUTION

Mr. Patterson read Resolution No. 5 approved by the Izaak Walton League regarding adoption of an air quality control ordinance in the Portland area. The Secretary commented that the city of Portland has received a lot of publicity for having adopted this comprehensive air quality control ordinance, and the Associated Oregon Industries was honored by an award by the Pacific Northwest Pollution Control Association for the part that it played in the development and adoption of this ordinance.

The date for the next meeting was set for May 6, 1965.

The meeting adjourned at 4:30 p.m.

Respectfully submitted,

*Kenneth H. Spies*

**FRONT**

RE: Molalla Sewage Disposal- continued

It was then MOVED by Mr. Hallock, seconded by Mr. Veatch, and carried that the matter be continued for 60 days with the provision that the city submit a report of satisfactory progress to the Authority within that time.

LOCATION OF OUTFALL SEWER FOR CITY OF SPRINGFIELD:

In connection with a request from the city of Springfield for final approval of its outfall sewer the following persons were present: Mr. William S. Fort, Springfield City Attorney; Mr. Frank R. Brown and Mr. John W. Boeshons of the Springfield Utility Board; Mr. John W. Cunningham, Consulting Engineer for Springfield; and Mr. Robert A. Finlayson, Eugene City Manager.

Mr. Spies explained that the proposed location for the outfall sewer from the new Springfield sewage treatment plant to the Willamette River had been objected to by the city of Eugene, the Eugene Millrace Improvement Association and the University of Oregon Student Body. The complainants were concerned that it would constitute a hazard to the quality of the water in the Eugene Millrace. The city of Eugene had also indicated that it had plans to construct a public park in the immediate vicinity of the outfall.

The results of a sanitary survey which had been conducted recently by the Authority staff of the bacterial quality of the Willamette River and millrace waters were discussed by Mr. Spies. It was the opinion of the engineering staff, in view of the high degree of treatment which will be provided by the Springfield sewage treatment plant, that the proposed location for the outfall sewer will not constitute a hazard to the millrace. It was shown that the effluent from the present outfall sewer which is farther upstream does not mix readily with the waters in the main river channel and therefore does not seriously affect the millrace.

It was pointed out that the city of Springfield had already been notified by the Authority that if the proposed park is ever developed by the city of Eugene the Springfield outfall sewer will have to be moved downstream.

ABG763

Mr. Cunningham expressed the opinion that in view of the nature of the site he seriously doubted that it would ever be developed as a public park. He said it is subject to frequent flooding by the waters of the Willamette River.

Mr. Finlayson presented a map of the area showing the property owned by the city of Eugene. Mr. Fort presented a copy of a resolution which had been adopted by the Springfield Utility Board, said copy having been made a part of the Sanitary Authority files in this case.

Two alternate locations for the outfall sewer were also discussed, the first one being on city of Eugene property and terminating downstream from the diversion dam for the mill race, and the second one being upstream from the Eugene property.

It was then MOVED by Mr. Veatch, seconded by Mr. Hallock, and carried that any one of the three proposed locations for the outfall sewer be approved, conditional upon its effect on the downstream water uses.

#### WASTE DISPOSAL FOR INDUSTRIES ALONG COLUMBIA SLOUGH

The Authority was advised that letters had been sent by the secretary to fifteen industries located along Columbia Slough requesting that they be represented at this meeting so that further consideration could be given to the matter of abating the pollution caused in the waters of Columbia Slough by their liquid wastes. In response to these requests the following persons were present; Mr. J. W. Bigelow of 407 N. Columbia Blvd., representing B and B Ranch; Mr. C. Pace representing Bissenger and Co.; Mr. N. C. Wood representing Portland Rendering; Mr. E. Bonner and Mr. C. B. Fitzpatrick representing Armour and Co., Mr. R. D. Lomax and Mr. Henry Ding representing Brander Meat Co., Mr. Gordon L. Burt, Engineer-Manager, Bureau of Sewage and Refuse Disposal, City of Portland; and Mr. George Mead, attorney for ten meat processing plants.

Mr. Spies reviewed the case pointing out that the industries in question had been advised by letter in November 1946, November 1950 and October 1951 of their responsibilities to abate said pollution in Columbia Slough. It was pointed out further that the city of Portland had abated its share of the pollution in

in November 1951. Mr. Spies reminded the Authority that it had considered this matter on December 7, 1951, March 21, 1952, June 27, 1952 and October 17, 1952. At each hearing the matter had been continued because the industries claimed that they planned to connect to the city of Portland interceptor sewer system as soon as the city adopted the necessary ordinances making such connections possible. On September 24, 1953, the Portland City Council finally adopted a sewer-user service charge ordinance (No. 99205) setting up a schedule of charges for industries located outside of the city limits. The city is therefore now in a position to contract with the Columbia Slough industries.

Mr. George Mead then stated that the industries which he represented were going ahead with plans for connecting to the Portland sewerage system and that some of them including Kenton Packing Company and Pacific Meat Company had already ordered or installed the necessary pre-treatment works.

Mr. Gordon Burt advised the Authority that the Portland sewage treatment project did not have adequate facilities for the disposal of wastes from the rendering plants and that consequently such plants would have to dispose of their wastes by other means.

Mr. Fitzpatrick reported that Armour & Company had already ordered equipment in preparation for connection to the city system.

It was then MOVED by Mr. Hallock, seconded by Mr. Veatch, and carried that the matter be continued for another 60 days conditioned upon satisfactory progress being made in the meantime by the industries concerned and progress reports being submitted to the Authority on or before the end of the 60-day period by each industry, and conditioned further that, if any such industry fails to submit a satisfactory progress report within the time designated, it be cited to appear at the next meeting of the Authority to show cause if any exists why legal action should not be taken against it.

AR 763

NORTH ROSEBURG SANITARY DISTRICT

Mr. Queseth reported that a stipulation had been signed by the attorneys for North Roseburg Sanitary District, Roseburg Homes, Inc., Cloverdale Water Co., and the State Sanitary Authority in the case of the State of Oregon vs. Roseburg Homes et al. Under the terms of the stipulation the Sanitary District agreed to connect the Cloverdale sewer system to its own system thereby ending the insanitary conditions caused by the discharge of inadequately treated sewage from the subdivision.

The next meeting of the Authority was scheduled for January 29, 1954.

There being no further business the meeting adjourned at 5:30 P.M.

Respectfully submitted

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

MINUTES OF THE FIFTY-EIGHTH MEETING OF THE  
OREGON STATE SANITARY AUTHORITY

January 29, 1954

The fifty-eighth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:15 P.M., Friday, January 29, 1954, in Room 579, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., C. E. Stricklin, John C. Veatch, and B.A. McPhillips, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer, and Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers.

RESOLUTION:

The members observed the passing of their dear friend and colleague, Mr. Blaine Hallock, by submitting the following resolution:

Whereas: The Almighty in His wisdom has removed from our midst Blaine Hallock, a member of the State Sanitary Authority since December 19, 1938, and

Whereas, the progress made by the State Sanitary Authority in the abatement of pollution of public waters was greatly benefited by his interest, knowledge and wisdom in the development of policies and procedures, and

Whereas, his friendly manner, gentle humor and unswerving sence of responsibility endeared him to all with whom he came in contact, and earned him the respect and esteem of his fellow citizens, now therefore be it

Resolved: That we, the members of the State Sanitary Authority, express our deep sorrow and sense of personal loss in the passing of Blaine Hallock, friend, comrade and loyal citizen, and be it further

Resolved: That a copy of this resolution be sent to his beloved wife, Mrs. Blaine Hallock, to the Governor of Oregon, and a copy be spread on the minutes of the Authority.

Signed \_\_\_\_\_  
Chairman

\_\_\_\_\_  
Executive Secretary

ABG763

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the above resolution be adopted.

MINUTES:

The minutes of the fifty-seventh meeting which had been prepared by the secretary and distributed to the members in advance of the meeting were approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. Stricklin, seconded by Dr. Erickson, and carried, that the action as taken by the engineering staff on the following project plans and reports received and reviewed since the last meeting be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
10-1	Glendale	Sewage treatment plant	Not approved
10-6	Oswego	Sewer extensions	Approved
10-9	Laurelwood	Laurelwood Academy STP (revised)	Prov. approval
10-9	The Dalles	Sewer extensions	Approved
10-9	Woodburn	Sewer extensions	Approved
10-15	Union County	Willow Grade school sewage disposal	Approved
10-16	Coquille	Community Nursing Home	Not approved
10-23	Lane County	Thurston Jr. High school sewerage	Approved
10-26	Coquille	Community Nursing Home (revised)	Approved
10-26	Winston	Revised plans for STP	Prov. approval
10-28	Curry County	Ophir school sewerage	Approved
10-29	Lane County	Lorane Grade school sewerage	Approved
11-3	Hood River	21st Street sewer	Cond. approval
11-16	Marion County	Mt. Angel Abby sewerage	Prov. approval
11-23	Klamath Falls	Preliminary report	Approved
11-27	Glendale	Revised basis of design	Approved
12-1	Washington County	Buxton school plans	Approved

Date	Location	Project	Action
12-4	Salem	Silverton Road sewer	Not approved
12-17	Taft	Preliminary engineering report	Approved
12-18	Blue Lake Park	Sewer extension	Prov. approval
12-21	North Roseburg S.D.	Diversion Manhole	Approved
12-21	Salem	Silverton Road sewer	Approved
12-22	Malheur County	Willow Creek school sewerage	Prov. approval
12-29	Washington County	General Motors school disposal	Not approved
12-31	Douglas County	Days Creek school septic tank	Approved

MT. HOOD SKIWAY (Mt. Hood Aerial Transportation Company)

The Mt. Hood Skiway was represented by Mr. Carl H. Lundell, secretary, and by Mr. Lloyd Clark, engineer.

Mr. Spies presented the following information regarding the Mt. Hood Skiway sewage disposal problem. At the last meeting of the Authority a formal hearing had been held and based on the evidence submitted findings of fact had been made and a final order entered against the Mt. Hood Skiway. Under said order the company was required to submit to the Authority within 60 days plans, specifications and program for satisfactorily eliminating the stream pollution caused by the discharge of its inadequately treated sewage. In response to that order the company retained the services of Clark and Groff Engineers. Based on the recommendations of these engineers the company had recently made certain improvements to its existing sewage disposal facilities such that since the first of January 1954 the effluent from said facilities had been effectively chlorinated. At the request of Clark and Groff Engineers two investigations by Authority staff members had been made of the operation of the facilities during the month of January. The first inspection made on January 6 disclosed that the sewage effluent which was being discharged into the stream had a chlorine residual of 0.3 ppm.

ABG763

Bacteriological analysis of samples collected from the receiving stream gave the following results (expressed as most probable number of coliform organisms per 100 milliliter of sample): Up stream from sewer--620, 100' below sewer--620, bridge at Ski Bowl downstream from sewer--2400.

The second inspection was on Sunday January 10 when the facilities were being used at peak capacity. Sewage effluent on this date had a chlorine residual of 0.5 ppm. The MPN tests on this date were 60 for the station above the sewer, 60 for the first station 100' downstream from the sewer and 46 at the Ski Bowl bridge. The findings of these two inspections indicated therefore that at the present time no serious nuisance condition or bacterial pollution was being caused by said sewage effluent. Mr. Spies pointed out, however, that at the time of these inspections the water temperature was very low, being only 2°C., and that as a consequence bacterial growth in the stream was naturally limited. The results obtained at this time of the year therefore may or may not be indicative of the results that would be obtained during the summer when the water temperature is considerably higher. Mr. Spies then stated that on January 28 a copy of the report prepared by Clark and Groff had been received from Mr. C. H. Lundell, secretary of the Mt. Hood Skiway. In this report the engineers described briefly the existing facilities, presented the results of studies which had been made to determine the daily flow of sewage, and also outlined the additions which would be necessary for providing secondary sewage treatment. They estimated that it would cost between \$4000 and \$5000 to install secondary treatment. Because the improved operation of the existing facilities appeared to be satisfactory at the present time and also because of the urgent need for one sewer system to serve the entire Government Camp community, it was recommended by Clark & Groff that the skiway be permitted to operate the existing facilities for the time being without the addition of secondary treatment.

It was then pointed out by Mr. Spies that the efficacy of the existing facilities depended almost entirely on the proper operation and maintenance of the chlorinator. He stated that it would be necessary for the Authority staff to check the operation of this system at fairly regular and frequent intervals. Following a brief discussion of the above facts the Authority members concluded that the Mt. Hood Skiway had made satisfactory progress and that no further action was necessary in the matter at this time.

BATTLE AXE SEWERAGE

Mrs. H. F. Villiger, her attorney, Mr. Clarence A. Potts, and Mrs. R. M. Hughes were present regarding this matter. At the previous Authority meeting on October 23, 1953, a formal hearing had been held but no definite decision had been reached pending the submission of additional facts in the case. The necessary additional information was subsequently presented by the Authority staff in a report dated November 18, 1953, said report having been made a part of the Authority's permanent files in this case.

Mr. Spies then reported that on January 10, 1954, another investigation of the so-called Battle Axe sewerage system had been made by a representative of the Authority. The system was found to be still in use but no improvements had been made. The sand filter was not functioning. Sewage and surface water were both flowing directly across the top of the filter from whence they discharged into the receiving stream. Samples collected from the stream showed the coliform content (MPN) to be as follows: Upstream from the system - less than 4.5; at the filter - 24,000; 200 feet below the system - 2,400.

Mr. Clarence A. Potts stated that they realized that the system was inadequate but that the present owners or users were not in a position to employ engineers or to build a modern sewage treatment plant. They were in hopes that the Government Camp Sanitary District could find the necessary

ABG763

financial assistance so they could build a system for the entire community.

Upon questioning he admitted that his client had not attempted to contact congressional representatives in this regard but that they would try to if the Sanitary District board was not going to do it.

Mrs. R. M. Hughes then reported that she was quite certain that someone (name not given) was planning to go to Washington D.C. for that purpose. She also thought that an effort would be made to get a special appropriation from the next state legislature.

Mr. Spies pointed out that since the last Authority meeting the Mountain View Inn's sewerage system had failed again and that sewage was now flowing on top of the ground adjacent to the main highway.

In response to a question by the chairman, Mr. Cuyler reported that there are some 10 or 12 business establishments in the community which need sewerage facilities badly. There are also some private residences in the same condition.

Lloyd Clark reported that sometime ago he had conferred with representatives of the U. S. Forest Service in Washington D.C. and had been given the impression that it would be possible to obtain financial assistance through that agency.

After further discussion it was MOVED by Mr. Stricklin, seconded by Dr. Erickson, and carried that all property and home owners in the Government Camp area who are discharging inadequately treated sewage effluents into the public waters of the state be cited to appear at the next meeting to show cause, if any exists, why an order should not be entered against them to abate the pollution.

CITY OF MOLALLA

The city of Molalla was represented by Mayor Fred Averill, R. F. Morrow, Paul Jan and Oswald Marson, Councilmen, and J. J. Waller, City Water Supt.

A memorandum prepared by the Authority staff and dated January 29, 1954, was read by the secretary, said memorandum having been made a part of the permanent files of the Authority in this case. A letter dated January 27, 1954, from the city attorney, Clifford S. Beckett, was also read by the secretary.

Mayor Averill stated that he and the other council members were not pleased over the outcome of the recent bond election as they had hoped that the voters would approve the \$300,000 bond issue. He said the council wanted to cooperate with the Authority.

A copy of a full-page advertisement published in the Molalla Pioneer newspaper on January 21, 1954, and paid for by a group of citizens who opposed the bond election was shown to the Authority members. It was reported by the city officials that handbills containing similar information had also been distributed to each household by the opposition before the election.

When asked if any public meetings had been held to inform the citizens of the facts regarding the sewage disposal problem, Mayor Averill admitted that none had been held. He said he had tried without success to get the Chamber of Commerce to sponsor such a meeting. The council had however published some information in the local newspaper.

After reviewing all the facts in the matter it was concluded by the Authority that the best way to help the council get the support of the voters would be to refer the matter to the Attorney General for action. It was therefore MOVED by Dr. Erickson, seconded by Mr. McPhillips and carried that the matter be referred to the Attorney General with the request that appropriate action be taken to bring about compliance by the city of Molalla

AB9763

with the order issued by the Authority.

Mr. Quesseth was asked to notify the secretary when an appointment could be made to discuss the matter with the Attorney General.

#### M & S CANNING COMPANY

A memorandum dated January 28, 1954, prepared by J. R. Boydston, Sanitary Authority engineer, was read by the secretary, said memorandum having been made a part of the permanent files of the Authority in this case.

Mr. Quesseth stated that he had reviewed this matter with the Authority staff and that inasmuch as the pollution caused by this company's operations was intermittent rather than continuous he was of the opinion that, if legal action should be found to be necessary in order to stop said pollution, it would be better to proceed under the general statutes pertaining to pollution control rather than under the Sanitary Authority statute. The former laws include a definite penalty clause whereas the latter would require injunction proceedings.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson and carried that the M and S Canning Company be informed that if another complaint is received and it is found that pollution is being caused by the wastes from said company the matter will be referred to the District Attorney for appropriate action under the general statutes of the state pertaining to pollution control.

#### COLUMBIA SLOUGH INDUSTRIES

At the last meeting of the Authority on October 23, 1953, the matter of pollution by industries located along Columbia Slough was continued for another 60 days with the provision that in the meantime each company submit a satisfactory progress report to the Authority. This matter had previously been reviewed by the Authority at regular meetings on December 7,

1951; March 21, 1952; June 27, 1952; and October 17, 1952.

The 15 industries involved in this matter were notified by letter in November 1946, November 1950 and October 1951 of their responsibilities to abate their pollution.

It was reported by Mr. Spies that within the 60-day period following the last meeting of the Authority only 5 of the companies had submitted progress reports. Consequently, on January 5, 1954, a registered letter had been sent by the secretary to the other 10 companies.

George Mead, attorney, who represents 10 of the companies submitted a letter on January 8, 1954, giving only general information regarding the plans of the industries. No specific information for the individual plants was given by Mr. Mead.

Mr. Spies then reported that according to the latest information which had been obtained by the Authority staff six of the companies have ordered or installed pretreatment facilities, only six of them have thus far consulted with the city of Portland regarding connection to the city's sewerage system and only six companies have had preliminary engineering studies made.

He stated that although some of the companies are making fairly satisfactory progress it was his opinion that in order to get all of them to proceed with the installation of required waste disposal facilities a public hearing should be held, a findings of fact made, and a final order entered requiring abatement within a specified period of time.

It was MOVED by Mr. McPhillips, seconded by Mr. Stricklin, and carried that citations be issued to each of the 15 companies involved directing them to appear at the next meeting to show cause, if any exists, why an order should not be entered against them requiring abatement of the pollution of the public waters of Columbia Slough caused by the discharge therein of their industrial wastes.

ABG763

COMMISSION OF PUBLIC DOCKS

The request of the Commission of Public Docks for permission to discharge raw sewage into the Willamette River from a new warehouse under construction at the foot of N. W. 20th and 21st Avenues, Portland, Oregon, was referred to the Authority members for consideration. A map of the Portland interceptor sewer system was presented. It showed that although the main West Central interceptor is now under construction, the city has no immediate plans for construction of the proposed lateral sewer in N. W. Front Avenue adjacent to the new warehouse.

After discussion of the matter it was concluded that even temporary permission could not be granted for the discharge of raw sewage into the Willamette River from said property. It was MOVED by Mr. Stricklin, seconded by Dr. Erickson, and carried that the Authority could not permit the discharge of raw sewage into the river and that the Commission of Public Docks in Portland be notified that the sewage from the new warehouse must be disposed of either by connection to the Portland interceptor sewer system, by sub-surface means on the Commission's own property, or by adequate and approved treatment prior to discharge into the river.

LETTER FROM STATE HIGHWAY COMMISSION

The secretary read a letter from the State Highway Commission dated November 20, 1953, and signed by Mr. R. H. Baldock, State Highway Engineer. It was in reply to a letter written to them asking that they include special clauses in their highway construction projects for the purpose of controlling air and water pollution. The letter from Mr. Baldock stated that such clauses were already included in their contracts and that the Highway Commission would cooperate with both the Air Pollution Authority and the Sanitary Authority in these matters.

CITY OF SHERIDAN

Mr. Spies reported that on January 22, 1954, the voters of Sheridan had approved 235 to 219 a \$350,000 bond issue for construction of a municipal sewerage system but that certain persons who had opposed the bond issue had threatened to prevent the city council from proceeding with the project. After a brief discussion it was concluded that Mr. Spies should attend the next meeting of the Sheridan city council in an attempt to overcome such opposition.

CITY OF MT. ANGEL

It was pointed out that a public hearing in the matter of sewage and waste disposal for the city of Mt. Angel had been held by the Authority in July 1952, that a findings of fact had been made, and that the city had been ordered to abate the pollution in the Pudding River by not later than July 1, 1953. It was pointed out further that thus far preliminary but not final engineering plans had been prepared, that the cost of construction had been estimated at \$100,000 for city sewage only and \$130,000 for both city sewage and creamery wastes, and that the city council had not as yet completed the necessary fiscal program. The fiscal program had been delayed because the city had been unable to reach an agreement with the officials of the creamery regarding the latter's share of the cost.

Mr. Boydston stated that he was planning to attend the next city council meeting on February 1 to discuss this matter with them.

It was MOVED by Mr. Stricklin, seconded by Mr. Veatch, and carried that appropriate action be undertaken for the purpose of enforcing the final order issued by the Authority to the city of Mt. Angel in 1952 for the abatement of pollution.

ABG763

CITY OF TOLEDO

The court case filed by the Authority in February 1953 against the city of Toledo for pollution of the waters of Yaquina River and Bay is still pending. Mr. Spies reported that he had called Mayor Bogert on January 25, 1954, and had learned that the city council had recently authorized the employment of new engineers for the redesign of the required sewage disposal facilities inasmuch as the engineer employed previously had been discharged by the city. Until new plans have been prepared, the city is unable to sell its bonds to the state of Oregon. Mr. A. H. Rice of Cornell, Howland, Hayes & Merryfield, Engineers, who was present at the meeting, stated that his firm expects to sign a contract with the city within the next few days and that work would start immediately on the new plans.

No action by the Authority in the matter was considered necessary at this time.

CITY OF CARLTON

It was pointed out that thus far no public hearing has been held or final order issued in the matter of sewage disposal by the city of Carlton. In May 1952, however, permission had been granted the city by the Authority for connection of a new grade school to the existing city sewer system because the city had promised to complete the construction of its sewage treatment plant in 1953. In June 1953 the city had attempted to sell its bond issue of \$110,000 but received no bids for the same. No further progress had been reported since that time although the Authority had suggested that the city apply to the State Bond Commission for sale of the bonds to the state of Oregon.

Mr. Spies stated that he had called the city recorder on January 28 and had learned that the city council was to consider a new fiscal program at its

next council meeting on February 1. He stated further that Mr. C. E. Cuyler planned to attend that meeting.

It was then MOVED by Mr. McPhillips, seconded by Dr. Erickson and carried that a letter be written to the city of Carlton in time for the next council meeting reminding the city of its promise to construct sewage treatment works and informing the council that unless immediate action is taken by the city in this regard it will be necessary to cite the council members to appear before the Authority and show cause, if any exists, why they should not abate their sewage pollution in the public waters of the Yamhill River.

CITY OF NEWPORT

A public hearing was held by the Authority on July 18, 1952, regarding the matter of sewage disposal by the city of Newport. A findings of fact was made and a final order issued against the city requiring abatement by July 1, 1953. This order was later amended on May 15, 1953, setting a new deadline of June 1954 for completion of the project. Under the amended order the city was to vote bonds in July 1953 and thereby complete its fiscal program.

Mr. Spies reported that thus far the city had not voted any bonds and that no reply had been received to a letter dated December 21, 1953, requesting a report from the city in this matter.

It was MOVED by Mr. Veatch, seconded by Mr. Stricklin and carried that Newport be notified that unless they show immediate progress in getting the bond issue out and start construction the order already issued will be enforced. Mr. Quesseth suggested further if time does expire we will not look favorably on an extension of time. The motion was amended.

CITY OF OSWEGO

Mr. Spies reported that the city of Oswego was several months behind in its schedule for construction of sewage treatment works. In response to a public hearing held by the Authority in April 1949, the city had promised to complete its sewage treatment plant by July 1, 1951. Since then engineering plans have been prepared, mechanical equipment has been purchased, a sinking fund of some \$26,000 has been accumulated, and a \$160,000 bond issue has been voted by the people. The latter bond issue, however, has recently been declared illegal.

The city council has as yet worked out no solution to its fiscal problem and therefore can not start construction of the treatment plant. It was MOVED by Mr. Stricklin, seconded by Mr. McPhillips, and carried that Oswego be notified that unless immediate progress is made in constructing the required sewage disposal facilities the Authority will have no alternative but to take appropriate steps to enforce the laws pertaining to pollution control.

STATUS OF OTHER MUNICIPAL PROJECTS

Progress reports from other cities were presented as follows:

- (1) Gladstone The city council is to open bids on February 2, 1954, for construction of a pump station and sewer line connecting with the Oregon City sewerage system.
- (2) Gresham Bids are to be opened February 24, 1954, for construction of an outfall line to transport the sewage and wastes from the city of Gresham to the main Columbia River. Bids for construction of the treatment plant will be opened at a later date. The project is estimated to cost about \$650,000.

- ABG763
- (3) Springfield No agreement has yet been reached between the cities of Springfield and Eugene regarding location of the outfall sewer. The latter city has filed court action seeking a declaratory judgement regarding the authority of the former to condemn property owned by the city of Eugene.
  - (4) Vale Engineering plans have been prepared for the installation of a sewage lagoon as the means of disposal for the city of Vale.
  - (5) Rockaway A \$268,000 bond issue was approved by the voters on January 20, 1954. Engineering plans for a sewer system and treatment plant are now being prepared. Bids for sale of the bonds are to be opened on April 1, 1954.

#### MISCELLANEOUS

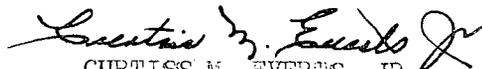

Mr. Quesseth was requested by the members to study the existing pollution control laws to determine what could be done to enforce compliance with orders issued by the Authority and to determine what amendments if any should be made to strengthen existing statutes.

No action was taken in the matter of appointing another attorney to take the place of Mr. Quesseth who has recently accepted the position of legal advisor for another state department.

The date for the next meeting was set for April 21, 1954.

There being no further business the meeting adjourned at 4:40 P.M.

Respectfully submitted

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

## MINUTES OF THE FIFTY-NINTH MEETING OF THE

## OREGON STATE SANITARY AUTHORITY

April 21, 1954

The fifty-ninth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:05 P.M., Wednesday April 21, 1954, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., C. E. Stricklin, John C. Veatch, and B. A. McPhillips, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer, Harold M. Patterson, District Engineer, and Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers. Also present was Mr. E. F. Eldridge, Director and Chief Engineer, Pollution Control Commission, Olympia, Washington.

MINUTES:

The minutes of the fifty-eighth meeting which had been prepared by the secretary and distributed to the members in advance of the meeting were approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. Stricklin, seconded by Dr. Erickson, and carried that the action as taken by the engineering staff on the following project plans and reports received and reviewed since the last meeting be approved.

Date	Location	Project	Action
1-7	Nehalem	Preliminary Engineering report	Comments submitted
1-11	Malheur County	Vale Union High Sewerage	Not approved
1-13	Baker County	Durkee School sewerage	Not approved

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1-18	Cottage Grove	Parochial school sewerage	More detail requested
1-20	Gresham	Outfall sewer	Approved
1-25	Lane County	Willamette Grade school sewerage	Approved
1-27	Wheeler	Preliminary report	Approved
1-27	Vale	Preliminary report lagoon system	Action deferred
2-1	Cottage Grove	Parochial school sewerage	Approved
2-3	Days Creek	School sewerage (revised)	Approved
2-5	Seaside	Additions to plant	Changes suggested
2-8	Multnomah County	Jewish Home sewerage	Not approved
2-11	Yamhill County	Amity school sewerage	No action
2-15	Bunker Hill S.D.	Preliminary report	Approved except for const. schedule
2-15	Oswego	Sewage treatment plant	Changes suggested
2-18	Clackamas County	Lake Grove Elementary school	Recommendations submitted
2-26	Enterprise	Preliminary report	Approved
3-2	Hillsboro	Armory sewerage	Not approved
3-2	Salem	Serra Catholic High school	Action deferred
3-8	Burns	Burns Cantonment sewerage	Action deferred
3-9	Clatskanie	Sewer extension	Not approved
3-10	Oswego	By-pass sewer	Approved
3-10	Oswego	Sewage treatment plant	Prov. approval
3-11	Reedsport	Douglas Housing project	Approved
3-12	Carlton	Sewage treatment plant (revised)	Approved
3-16	Dallas	Sewer extension	Prov. approval
3-16	Marion County	Hazel Green school sewerage	Further information requested

ABG763

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
3-19	Baker County	Durkee School sewage disposal	Approved
3-19	Clatskanie	Sewer extentions	Prov. approval
3-19	Forest Grove	Sewer extensions	Approved
3-24	Burns	Burns Cantonment sewerage	Recommendations submitted
3-25	Marylhurst	Preliminary report	Approved
3-31	Beaverton	Sewer extensions	Approved

LAMB-WESTON INC. Citation Hearing

In response to a citation which had previously been issued to the company, Mr. F. Gilbert Lamb, President, was present to represent Lamb-Weston, Inc. in the matter of industrial waste disposal by said company in the public waters of the state of Oregon. A memorandum dated April 21, 1954, and prepared by the engineering staff of the Authority pertaining to this matter had previously been submitted to Mr. Lamb and therefore was not read at the hearing but was made a part of the Authority's permanent files in this case.

Mr. Lamb stated that his company wished to cooperate fully with the Sanitary Authority in the matter of stream pollution control. When asked why his company had delayed so long in carrying out the instructions of the Authority's engineers regarding installation of adequate waste disposal facilities Mr. Lamb gave the following report:

His company had purchased the Weston food processing plant in the summer of 1950 and immediately thereafter retained the services of John W. Cunningham and Associates, Consulting Engineers, for advice in solving the waste disposal problem. After making a study of the situation the engineers had recommended that land disposal be employed. Serious efforts were then made by the company to acquire sufficient land near the plant for that purpose. Unfortunately the only land that was available at that time was a 400-acre farm located some 8 miles northwest of the plant. Because the cost of installing an 8-mile

ABG763

pipe line from the plant to this land was too great, the company had to use the lagoon system built by the previous owners for the disposal of its wastes in 1951. Finally in 1952 the company was successful in obtaining 200 acres of land located a short distance southwest of the cannery. This land plus the lagoon system was used in 1953 for disposal of the wastes. At the present time the waste disposal facilities include two 20-mesh screens for pretreatment of the wastes. A third screen is also available for emergency or standby use. After being screened the wastes are pumped to the 200-acre farm where they are used for irrigation. The original lagoons are to be used for impounding any overflow waters from the screening plant and for the impounding of certain wastes which will not be used for irrigating purposes.

In response to an inquiry as to whether or not he thought said facilities would henceforth be adequate to prevent pollution in Pine Creek, Mr. H. M. Patterson, district engineer, stated that it would depend upon the water tightness of the lagoons, the proper operation and maintenance of the screening facilities and pump station, and careful supervision of the irrigating system so that there would be no seepage of wastes into the creek. Mr. Patterson stated that in his opinion it would probably be necessary to do additional work on the third lagoon before it could be made sufficiently watertight.

Mr. Lamb promised that they would do everything possible to prevent further seepage of wastes from the lagoon and would so operate and maintain the irrigating system that no further pollution would be caused.

After further discussion it was MOVED by Mr. Veatch, seconded by Mr. Stricklin, and carried, that this matter be continued until the next Sanitary Authority meeting.

COLUMBIA SLOUGH INDUSTRIES Citation Hearing

In the matter of pollution of the public waters of Columbia Slough in the County of Multnomah, Oregon, and in response to citations which had been issued the following persons were present: Frank E. Smith representing Associated Meat Company; R. D. Lomax representing Brander Meat Company; J. W. Bigelow representing B and B Ranch; Clem Ponta representing Clem Ponta Hog Ranch; Walter Gallus representing Kenton Packing Company and Portland Provision Company; Howard Nelson representing Pacific Meat Company; C. R. Pace and Emil A. Cahen representing Western States Rendering Company; Jack Cervetto representing J. and C. Cervetto Co.; George Mead, Attorney, representing the above nine companies and Stearns and Welch Meat Co.; C. B. Fitzpatrick representing Armour and Company; N. P. Wood representing Portland Rendering Company; and William Smead representing Silver Falls Packing Company. Although citations had been sent by registered mail to Pete Wess Hog Ranch and to Tony Cervetto Hog Ranch neither of these two companies was represented at the meeting.

At the request of the chairman Mr. Spies gave a brief description of Columbia Slough, outlined the history of pollution of said waters, described the present sources of pollution, and discussed the numerous attempts made by the Sanitary Authority to obtain voluntary cooperation for abatement of this pollution. A memorandum dated April 21, 1954, containing the statements presented by Mr. Spies has been made a part of the Authority's permanent records in this matter.

Mr. George Mead, Attorney, then stated that in 1951 he had been retained by the ten companies as mentioned above. He stated that all of these firms had agreed that the best solution to their waste disposal problems would be by connection to the Portland interceptor sewer system and sewage

ABG763

disposal works but that they had been delayed in reaching agreements with the city until September 1953 when the Portland City Council adopted a special ordinance for that purpose. He stated further that negotiations were currently being conducted with the city attorney regarding the type of contract to be entered into by the city and the individual companies and that the first draft of such a contract had been mailed to him by the city attorney on April 6, 1954.

Mr. Mead stated that his clients were also proceeding with the installation of the pretreatment works which would be required in order to discharge the wastes into the Portland sewerage system.

In response to a question from the Authority, Mr. Mead then stated that because of the time required to complete the contract, to prepare engineering plans, and to install the necessary pipelines and other appurtenances it was his opinion that the companies represented by him would not be able to abate their pollution before the end of the calendar year 1954.

The representatives of the individual companies were then heard as follows:

Mr. C. B. Fitzpatric stated that Armour and Co. was in the process of installing fine screens for pretreatment of their wastes, that preliminary plans for a pipeline to the Portland city sewer system had been completed some time ago, and that a proposed contract had already been submitted to the City Attorney by the company officials.

Mr. Frank Smith stated that the Associated Meat Company within the past few days had installed a rotary screen for pretreatment of their wastes and that Mr. Carl Green, Consulting Engineer, had just been retained to prepare plans for the rest of the facilities required for connection to the Portland sewer system.

Mr. R. D. Lomax stated that fine screens had already been purchased by Brander Meat Company, that a detailed engineering study had been completed and that final plans were currently being prepared by Clark & Groff, Engineers, for connection to the Portland sewerage system.

Mr. J. W. Bigelow stated that Mr. Carl Green, Consulting Engineer, had just been retained by B and B Ranch to prepare plans for their waste disposal system.

Mr. Clem Ponta reported that fine screens had been ordered for pretreatment of the wastes from the Clem Ponta Hog Ranch and that it was intended to connect to the Portland sewerage system.

Mr. Walter Gallus stated that fine screens had already been installed and were being used for pretreatment of the wastes from both the Kenton Packing Company and the Portland Provision Company.

Mr. Howard Nelson stated that Pacific Meat Company had already purchased a fine screen and a flotation unit for pretreatment of their meat processing wastes. He expressed the opinion that the cost of disposing of the wastes through the Portland system would be excessive.

Mr. Wm. Smead reported that the Silver Falls Packing Company were planning to employ Cornell, Howland, Hayes and Merryfield, Engineers, to prepare plans for their required waste disposal system. He stated that the Silver Falls Packing Company had been in business only a few months and that consequently they had not been able to make much progress toward solving their pollution problem. It was pointed out by Mr. Spies that the plant owned by this company was formerly owned and operated by the Gem Meat Company who had been advised several years ago of the need for pollution abatement.

Mr. N. P. Wood reported that the Portland Rendering Company had already started to construct a lagoon for impounding their concentrated wastes on

land rather than discharging them into the slough or city sewer system. He expressed the opinion that they should be permitted to discharge the condensate waters directly to the slough.

Mr. Jack Cervetto stated that Mr. Carl E. Green, Consulting Engineer, had been retained by the J and C Cervetto Company to prepare plans for their required waste disposal facilities.

Mr. C. R. Pace reported that Western States Rendering Company (Bissinger and Co.) had recently employed Cornell, Howland, Hayes and Merryfield, Engineers, to prepare plans for their waste disposal project.

Mr. Spies then reported that at the present time both the Pete Wess Hog Ranch and the Tony Cervetto Hog Ranch were disposing of their wastes on land rather than discharging them into the slough and that consequently these two companies were currently not causing any pollution of the slough waters. He reported further that during a recent survey of the Stearns and Welch Meat Company plant it had been learned that the company officials were planning to install complete treatment facilities rather than connect to the Portland sewer system and that the latter company had already purchased a fine screen for pretreatment purposes.

After further discussion of the matter it was MOVED by Dr. Erickson, seconded by Mr. Stricklin and carried that the memorandum dated April 21, 1954, as prepared by the Authority staff be adopted as findings of fact in the matter of pollution of the public waters of Columbia Slough, County of Multnomah, State of Oregon.

It was then MOVED by Mr. Stricklin, seconded by Mr. McPhillips, and carried that a final order be issued to each and every person, firm, or

ABG763

corporation owning, operating or maintaining a slaughterhouse, meat packing plant, hog feeding farm, rendering plant or other meat processing industry from which wastes are discharged or permitted to drain into the public waters of Columbia Slough to cease and desist polluting said public waters by not later than January 1, 1955; that in the meantime satisfactory progress reports be submitted quarterly to the Authority by each said company for review by the Authority; and that if based on said quarterly reports any industry is found not to be making satisfactory progress immediate action be taken against it to secure compliance with said order.

#### GOVERNMENT CAMP

The citation hearings previously scheduled for this meeting were postponed because excessive snow cover had made it impossible for the Authority's engineering staff to complete the necessary sanitary surveys of the area.

It was reported that since the last meeting the Sanitary District Board had communicated with each of the U. S. Senators and Representatives from Oregon regarding possible federal financial assistance. The Authority also had contacted Senator Guy Cordon. Unfortunately all replies had indicated that there was little or no possibility of obtaining such assistance. The opinion was expressed by the Authority members that assistance from the state of Oregon was likewise improbable.

The chairman then suggested that an educational "Save Government Camp" campaign be conducted in an effort to obtain assistance from local community clubs and other organizations. Dr. Erickson stated that he would discuss such a program with the Health Education Section staff of the Board of Health. The secretary was requested to determine, if possible, the cost and feasibility of installing, operating and maintaining individual sewage treatment works as a means of solving the problem.

It was decided to proceed with the holding of citation hearings for individual violators as previously authorized.

MOLALLA

Mr. Quesseth reported that the complaint against the city of Molalla had been filed in the circuit court of Clackamas County. He had conferred recently with the city attorney, Mr. Beckett, who stated that a city council meeting had been scheduled to discuss possible future action. The hope was expressed that the city would hold another bond election at the earliest possible date.

MT. ANGEL

Mr. Quesseth reported that the complaint against the city of Mt. Angel had been filed in the circuit court of Marion County. Because the city had scheduled a bond election for May 21 and was proceeding with preparation of final engineering plans, the request of the Mt. Angel city attorney that action be withheld temporarily had been granted.

SHERIDAN

It was reported that on April 16 the city of Sheridan had received only one bid for the sale of its sewer bonds and that it had been rejected because the interest rate was 3.586%. The city since then had contacted the State Bond Commission in an attempt to sell its bonds to the State of Oregon. Bids for construction of the sewer system and treatment works were reportedly to be opened on April 30. The members of the Authority felt that the city was progressing as fast as possible and therefore no action was taken in this matter.

TOLEDO

It was reported that final engineering plans for the city's sewage treatment works were nearing completion and that it was anticipated that construction would be undertaken on the project this summer. Bonds to finance

ABG763

the construction probably would be sold to the State Bond Commission. No action was therefore taken by the Authority.

#### CARLTON

It was reported that construction of the Carlton sewage treatment plant was underway although bonds had not as yet been sold.

#### NEWPORT

The status of the sewerage program of the city of Newport as outlined in the letter dated April 14, 1954, from Mr. Carl E. Green, Consulting Engineer, was reviewed. Because the program depended upon the outcome of an annexation election scheduled for May 21, 1954, this matter was continued until the next meeting of the Authority.

#### OSWEGO

Because the city of Oswego was proceeding satisfactorily with plans for construction of its sewage treatment plant this summer, no further action on the part of the Authority was considered necessary at this time.

#### POLLUTION OF LOWER WILLAMETTE

A brief report was presented by Mr. Spies regarding existing private outfall sewers which are known to be causing pollution in the waters of the lower Willamette River. After some discussion of the matter it was MOVED by Mr. Stricklin, seconded by Dr. Erickson, and carried, that the Authority staff be directed to make such surveys as are necessary to locate all private and other sewers in the Willamette River so that steps can be taken to abate the pollution caused by them.

#### RIVER BEND SAND & GRAVEL CO.

Mr. Cuyler presented a report of his investigations of alleged pollution of a drainage ditch which is tributary to Pringle Creek. The investigation was in response to complaints received from downstream property owners who claimed that the waters had been made unfit for livestock water purposes.

He described the gravel mining and washing operations as conducted by the River Bend Sand and Gravel Company of Salem, Oregon.

After considerable discussion of the matter it was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that this matter be referred to the District Attorney of Marion County for action and that if satisfactory abatement could not be obtained by such action that the company be cited to appear at the next meeting of the Authority to show cause, if any exists, why it should not abate said pollution.

INTERSTATE POLLUTION PROBLEMS (COLUMBIA BASIN)

Mr. E. F. Eldridge, Director & Chief Engineer, Pollution Control Commission, Olympia, Washington, extended to the Authority the greetings of the Washington Pollution Control Commission. He suggested that the two agencies get together in the near future for a joint meeting.

In response to letters which had been received by both states from the Public Health Service regarding interstate pollution of the Columbia River, Mr. Eldridge discussed the progress which had been made to-date by the Washington cities and industries in abating their share of such pollution.

The secretary of the Authority then outlined the progress made on the Oregon side of the river.

It was decided that replies should be sent to the Public Health Service by each agency advising the Service of the progress being made, commending the support given the state programs by the staff of the Columbia River Basin Office, and asking for continued assistance from said Basin Office.

The date for the next meeting of the Authority was set for July 23, 1954. There being no further business the meeting adjourned at 5:10 P.M.

Respectfully submitted

*Curtiss M. Everts, Jr.*  
CURTISS M. EVERTS, JR.  
Secretary & Chief Engineer

ABG763

MINUTES OF THE SIXTIETH MEETING OF THE  
OREGON STATE SANITARY AUTHORITY

July 23, 1954

The sixtieth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:05 P.M., July 23, 1954, in room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; John C. Veatch, Charles E. Stricklin and B. A. McPhillips, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Queseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer, and Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers.

MINUTES: The minutes of the fifty-ninth meeting having been prepared by the secretary and distributed to the members in advance of the meeting, it was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried, that the reading of the minutes be dispensed with and that they be approved as prepared by the secretary.

PROJECT PLANS: It was MOVED by Mr. Stricklin, seconded by Mr. Veatch, and carried that the action as taken by the engineering staff on the following project plans and reports received and reviewed since the last meeting be approved:

Date	Location	Project	Action
4-1-54	Lane County	Elmira High School sewerage	None required
4-1-54	Hood River	Sewer extensions	Approved
4-6-54	Tillamook County	Beaver School sewerage	Approved
4-8-54	The Dalles	Sewer extensions	Prov. approval
4-12-54	Brander Meat Co.	Prel. Report on waste disposal	Approved
4-12-54	Lane County	Colin Kelly School sewerage	approved
4-14-54	Springfield	Proposed sewer extensions	Comments submitted

Date	Location	Project	Action
4-19-54	Riddle	Sewer extensions	Approved
4-19-54	Port Orford	School sewerage	Approved
4-20-54	Douglas County	Tri-City school sewerage	Approved
4-21-54	Table Rock S.D.	Sewer system (Prel. plans only)	Comments submitted
4-22-54	Clackamas County	Lake Grove School sewerage	Construction permitted
4-22-54	West Linn	Interceptor sewer	Approved
4-23-54	Clackamas County	Colton school sewerage	Construction permitted
4-23-54	Roseburg	Report on sewerage for metropolitan area	Deferred
4-23-54	Drain	Preliminary report	Deferred
4-26-54	Oregon Caves	Sewage disposal	Approved
4-27-54	Sweet Home	Sewer extensions	Prov. approval
4-27-54	Woodburn	Sewer extensions	Prov. approval
5-6-54	Coquille	Sewers	Approved
5-6-54	Lane County	Elmira Union High Sewerage	Approved
5-6-54	Myrtle Creek	Sewers	Approved
5-6-54	Pendleton	Sewers	Prov. approval
5-7-54	Clackamas County	Lake Grove School sewerage	Approved
5-7-54	Clackamas County	Mt. Pleasant School sewerage	Approved
5-7-54	Eugene	Sewers	Not approved
5-8-54	Multnomah County	Cherry Park school sewerage	Approved
5-10-54	Marylhurst	Sewage Treatment Plant	Prov. approval
5-11-54	Bandon	Sewer extensions	Prov. approval
5-12-54	Drain	Preliminary report	Approved in part
5-12-54	Roseburg	Report for Metropolitan Area	Approved
5-14-54	Newport	Preliminary sewer plans	Prel. approval

ABG763

Date	Location	Project	Action
5-17-54	Clackamas County	Southwood Park sewerage	Not approved
5-17-54	Springfield	Pump Station and outfall	Approved
5-18-54	Lane County	Washington school sewerage	Approved
5-18-54	Lane County	Willagillespie school sewerage	Approved
5-18-54	Lane County	Willakenzie school sewerage	Approved
5-24-54	General	Septic Tank forms	Approved
5-24-54	Rockaway	Sanitary sewer system	Not approved
5-24-54	Rockaway	Sewage treatment plant	Not approved
5-25-54	Sweet Home	Sewer extensions	Prov. approval
6-1-54	Enterprise	Sewage treatment plant	Changes suggested
6-3-54	Salem	Bellevue pump station	Approved
6-8-54	Enterprise	Sewage plant (revised plans)	Prov. approval
6-10-54	Cornelius	Preliminary report	Approved
6-11-54	Wash. County	Cooper Mt. school sewerage	Deferred
6-11-54	Wallowa County	State Park sewerage	Approved
6-11-54	Eugene	Sewer extensions	Approved
6-14-54	Clackamas County	Smuckers waste disposal	Approved
6-15-54	Jackson County	Oak Grove school sewerage	Approved
6-18-54	Hebo	School sewerage	Prov. approval
6-18-54	Malheur County	Ironside school sewerage	Prov. approval
6-28-54	Lane County	Pleasant Hill school sewerage	Approved
6-28-54	Rockaway	Sanitary sewer system	Prov. approval
6-28-54	Rockaway	Sewage treatment plant	Prov. approval
6-28-54	Toledo	Sewage treatment plant	Deferred
6-28-54	Yamhill County	Trappist Foundation sewerage	Cond. approval

GRESHAM

Mrs. W. J. Luyben, Secretary-Treasurer of the Marine Drive Improvement Association, was present in regard to the matter of sewage and waste disposal into the Columbia River from the city of Gresham.

The original preliminary engineering report as submitted by the city's consulting engineers had provided for an outfall sewer and sewage treatment plant with ultimate discharge into the main Columbia River north of Fairview. The proposed project has since been changed to the extent that the outfall sewer will not discharge into the main channel but into the portion of the Columbia River located south of McGuire and Government Islands.

Some of the property owners along Marine Drive below the proposed outfall had objected to this change in the plans because they were afraid the river would become polluted and unfit for recreational use. A copy of a letter registering such an objection and addressed to the Gresham City Council by E. A. Fewless, Attorney for the Marine Drive Improvement Association, had been received by the Sanitary Authority. Mrs. Luyben had also previously called the Authority and requested an opportunity to be present at this meeting.

The secretary of the Authority pointed out that plans for the proposed outfall sewer had been received and approved but that to-date no plans for the sewage treatment works had been submitted by the city's engineers although it was expected that they would be received within the next few days.

In view of the objections by said property owners it was decided that a special meeting of the Authority should be called to hear their complaints before taking final action on the plans for the proposed treatment plant, the date of the meeting to be set as soon as possible after receipt of the plans.

ABG763

1955 - 1957 BIENNIAL BUDGET

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried, that the following proposed budget for the 1955 - 1957 biennium be tentatively approved:

## PERSONAL SERVICES

## SALARIES AND WAGES:

(1) Clerk-Stenographer II	\$ 5,912	
(1) Public Health Engineer I	9,366	
(3) Public Health Engineer II	36,216	
(1) Public Health Engineer III	15,120	
(1) Chemist I (1/2 time)	3,851	
Extra Help	1,200	
Per diem	<u>96</u>	\$ 71,761

## OTHER PERSONAL SERVICES:

Civil Service Assessments	195	
Workman's Compensation Insurance	89	
Retirement Contributions	1,755	
Social Security Taxes	915	
Administration Assessments	<u>34</u>	2,988

## MATERIALS AND SERVICES:

Office Supplies	1,600	
Automotive Supplies	900	
Professional Services	4,000	
Rentals	3,834	
Communications	1,800	
Transportation of Persons	6,767	
Transportation of Things	600	
Meals and Lodging	4,000	
Insurance & Fidelity Bonds	80	
Other Supplies	<u>1,500</u>	25,081

## CAPITAL OUTLAY:

Office Equipment	100	
Other	<u>900</u>	<u>1,000</u>

TOTAL

\$100,830

COLUMBIA SLOUGH INDUSTRIES

Mr. Boydston outlined the status of the waste disposal projects for the 15 industries covered by the formal order of April 23, 1954. Progress reports received from them indicated that the majority were planning to connect to the Portland sewerage system. Armour and Company was reported to have prepared its contract which was expected to be signed in the near future and which would set the pattern for contracts between the city and the other companies.

All progress reports were considered adequate except the one from Stearns and Welch Meat Company. This latter plant is not accessible to the city sewer and therefore will have to be served by its own waste treatment and disposal works.

It was MOVED by Mr. McPhillips, seconded by Mr. Stricklin, and carried that a letter be sent to Stearns and Welch Meat Company notifying them that their progress to-date is not considered satisfactory.

GOVERNMENT CAMP

The secretary reported that the previously authorized citation hearings scheduled for this meeting for property owners of the Government Camp Sanitary District had been deferred because of a proposed meeting of said property owners and other interested parties with Governor Patterson to discuss possible means for financing the required community-wide sewerage system. Representatives of the Portland Chamber of Commerce had agreed to assume the responsibility for arranging such a meeting. The Governor had previously indicated his interest in the problem and had suggested such a meeting for the purpose of considering legislation which would make it possible for the state of Oregon to purchase bonds from the Sanitary District.

A map of the area was then presented by Mr. Cuyler outlining the findings of recent sanitary surveys.

ABG763

It was decided by the Authority to defer the matter again at least until after the proposed meeting with Governor Patterson.

LAMB-WESTON INC.

This matter having been continued from the previous meeting a report of the results of an inspection made on July 9 of the plant's operations by a representative of the Authority was presented by Mr. Spies. Because the company had thus far this season conducted its operations without causing any detrimental pollution in Pine Creek no action was considered necessary by the Authority at this time.

MOLALLA, MT. ANGEL and TOLEDO

Reports on the present status of these three municipal sewage disposal projects were presented by the secretary. Each city was found to be making satisfactory progress. The complaints filed by the Sanitary Authority in the respective Circuit Courts against these cities have in each case been held in abeyance pending completion of the project.

No further action was therefore considered necessary by the Authority at this time.

RIVER BEND SAND AND GRAVEL COMPANY

Mr. Gwyler reported on the present status of this company's operations as disclosed by several recent inspections. The company had constructed facilities for impounding their wash waters and as a consequence had greatly reduced the pollution in the receiving stream. The matter had been discussed with the Marion County District Attorney who was somewhat doubtful that such a matter comes within the jurisdiction of Section 449.105 Oregon Revised Statutes although he agreed to give his assistance if needed.

After much discussion it was finally concluded that no further action by the Authority regarding this matter was necessary at this time.

CITY OF EMPIRE

A report on the sewer program of the city of Empire submitted by Mr. R. L. Thomas, City Attorney, under the date of June 1, 1954, was submitted to the Authority for consideration. The report stated that because of financial limitations it was now impossible for the city to continue with its construction schedule which had previously been submitted to and approved by the Sanitary Authority on May 15, 1953, and which called for construction of sewage treatment works by 1957.

After considerable discussion of the matter it was MOVED by Mr. McPhillips, seconded by Mr. Stricklin, and carried, that the city of Empire be instructed to adopt a new fiscal and construction program for submission to the Authority before its next quarterly meeting in October, such program to provide for construction of the sewage treatment facilities as the next phase.

CITIES ON LOWER COLUMBIA RIVER

Information regarding the cities of Arlington, The Dalles, Hood River, St. Helens, Rainier and Clatskanie, all of which discharge raw sewage into the lower Columbia River, was presented by Mr. Spies.

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried, that a letter be written to each city requesting a report on the present status of its plans for construction of required sewage treatment works.

SWIFT and COMPANY

Mr. Spies reported that last fall a study had been made of the waste discharge from this plant and that it was determined such wastes were equivalent in oxygen demand to the sewage from a population of 85,000. This company is located in North Portland on Oregon Slough, a part of the main Columbia River. The results of the study had been submitted to the Company and it was pointed out to them that they would have to provide the equivalent of primary treatment to reduce their settleable solids to meet

ABG763

our minimum requirements. No reply or comments have been received from the company. When they were contacted by telephone it was found that they had given no consideration to the matter of submitting plans.

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried, that Swift and Company be cited to appear at our next regular meeting to show cause, if any exists, why abatement proceedings should not be issued against them.

#### CITY OF DRAIN

A memorandum giving the present status of the city of Drain and which had been previously prepared by the Authority staff was discussed by Mr. Spies. Since March 1942, the city has been sent 10 letters outlining the need for sewers. The present population is 1,150 with less than half that number being served by sewers. An engineering report by Cornell, Howland, Hayes and Marryfield was completed in April 1954. A letter dated May 12, 1954, was sent to the city by the Authority asking for a report on its progress. No reply had yet been received.

It was MOVED by Mr. Stricklin, seconded by Mr. Veatch, and carried, that the city of Drain be cited in at the next regular meeting of the Sanitary Authority to show cause, if any exists, why abatement proceedings should not be issued against them.

#### CITY OF HARRISBURG

A memorandum prepared prior to the meeting and giving the present status of the city of Harrisburg was discussed by Mr. Spies. It is the only city on the main Willamette River which still discharges raw sewage into the river and yet has made no definite plans for sewage treatment. The 1950 population was 862. They have a sinking fund of \$10,075 and a 4-mill tax levy which will bring in \$1,800 a year. No engineering firm has been employed.

The city has been advised by letter 11 times since 1941 of the need for sewage treatment.

It was MOVED by Mr. Stricklin, seconded by Mr. McPhillips, and carried, that the city of Harrisburg be cited in at the next regular meeting of the Sanitary Authority to show cause, if any exists, why abatement proceedings should not be issued against them.

#### PRIVATELY OWNED PUBLIC SEWERAGE SYSTEMS

Mr. Spies discussed the difficulties which have been experienced with privately owned public sewerage systems. The Authority does not have sufficient staff or the legal responsibility for inspecting the construction of such facilities. As a consequence several systems have not been constructed according to the approved plans or their construction has otherwise been defective. Where the contractor is also the owner he is not always inclined to follow the instructions of the consulting engineer. Because of these facts some of the systems are so defective that proper operation and maintenance of them is extremely difficult if not impossible. For example, some of the sewers have so much infiltration that they can not carry the peak loads during the rainy season. In some cases no one accepts the responsibility for maintaining the sewer systems. Mr. Spies asked if it would not be advisable to have the Public Utilities Act amended to include sanitary sewerage systems.

Mr. Quesseth said that the Sanitary Authority had the responsibility to review and approve the plans for such projects but beyond that had little or no authority to insure that the construction followed the plans.

It was then decided that Mr. Quesseth and the staff should determine what changes in the law might be advisable to correct this situation.

#### REGULATIONS GOVERNING OPERATION OF SEWAGE PLANTS

In order to promote more efficient operation and maintenance of all sewage and waste treatment or disposal systems it was suggested by Mr. Spies

ABG763

that a regulation be adopted by the Authority requiring the submission of monthly operation reports, said reports to consist only of certain basic data. It was pointed out that the sulphite pulp mills have been submitting monthly reports for the past five years.

After some discussion of this matter it was concluded that such a regulation was not advisable at this time but that if the staff wished to submit a definite proposal it could be given further consideration at a future meeting.

POLICY REGARDING CHLORINATION OF EFFLUENTS DISCHARGED INTO MAIN WILLAMETTE RIVER

It was pointed out that chlorination of sewage plant effluents discharged into the main Willamette River was needed primarily during the recreation season. The question was therefore raised as to the advisability of establishing a definite policy requiring chlorination only during the months of May through October.

It was decided to defer action in this matter.

POWDER RIVER DREDGING COMPANY

Colored slides showing the turbidity caused in the waters of Powder River by the operations of the Powder River Dredging Company near Sumpter, Oregon, were shown. It was stated that last year a biological study had been made of this problem which indicated that said turbidity was definitely injurious to fish and other aquatic life of the stream and therefore was in violation of state law. The company had been advised of its responsibilities in this regard but to-date had not taken any steps to abate the pollution.

It was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried, that if satisfactory progress is not made in 30 days toward correction of this matter the company be cited to appear at the next regular meeting of the Authority to show cause, if any exists, why abatement proceedings should not be entered against them.

M & M WOODWORKING COMPANY

A written complaint alleging that this company had constructed a log pond which had polluted a private ground water supply was referred to the District Engineer at Eugene.

FIELD TRIP

The secretary suggested that if the members of the Authority had the time he would like to arrange a one-day inspection trip for them so that they could visit some of the sewage and waste disposal projects which have been completed and placed in operation. It was agreed that such a trip should be arranged for some time in September or October.

RESOLUTION

A resolution adopted by the Multnomah Anglers and Hunters Club that legislation be enacted to give the State Board of Health specific authority to adopt rules and regulations for prevention of pollution in certain cases was read by the secretary. No action was considered necessary by the Authority.

The date of the next meeting was tentatively set for October 29.

There being no further business the meeting adjourned at 4:15 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

ABG763

SPECIAL MEETING OF THE  
OREGON STATE SANITARY AUTHORITY

September 1, 1954

A special meeting of the State Sanitary Authority to hear complaints regarding the location of the outfall sewer for the sewage treatment plant for the city of Gresham was called to order at 10:05 A.M. by the Chairman on September 1, 1954, in room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; John C. Veatch, Charles E. Stricklin and B. A. McPhillips, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer and Clarence E. Cuyler, Associate Sanitary Engineer.

The secretary reported that at the last regular meeting of the Sanitary Authority held on July 23, the matter of sewage disposal for the city of Gresham was discussed and that complaints relative to the location of the outfall sewer for the Gresham sewage treatment plant were brought to the attention of the Authority. He also reported that as of July 23, no plans for sewage treatment had been submitted by the city of Gresham for review and approval. He further reminded the Authority that they had deferred action on the complaints until final plans and specifications had been received and reviewed with the understanding that if the staff did recommend approval of the plans a special meeting would be called to hear protests from citizens in the area along Marine Drive.

The secretary then reported that on August 2, 1954, final plans for the proposed sewage treatment plant were submitted by Stevens and Thompson Engineers to the Authority for review and approval and that they had been advised that no action could be taken on said plans until the Authority could hear complaints at the special meeting which was called for September 1, 1954.

At the request of the chairman the secretary then read a memorandum prepared by the staff which presented the history of the Gresham sewerage project and gave the facts, conclusions and recommendation of the engineering staff regarding the proposed sewage and waste disposal system for the city of Gresham.

The Marine Drive Improvement Association was represented by Mrs. Wm. Luyben, Secretary-Treasurer, and Mr. Wayne E. Nagle, President, both of whom protested the discharge of the treatment plant effluent into the Columbia River at McGuire Island. Mrs. Luyben stated that she wanted to go on record as protesting the location of an outfall sewer from the Gresham sewage treatment plant 100 feet beyond the shore at mean low water stage and south of McGuire Island at a point approximately 1,000 yards downstream from the jetty which forms the mouth of said channel. She had no objection to the discharge of a sewage treatment plant effluent into the main channel of the Columbia River.

Mr. Marvin W. Runyan of Stevens and Thompson, Consulting Engineers, gave a report of the findings of a survey made before plans and specifications were prepared. He stated that the channel is about 800 feet wide at the point where the outfall is to be constructed, and that soundings were taken in 1953 and the flows calculated. He stated that on September 15, 1953, a boat was rented with a 2-1/2 hp motor but the current was too swift and the boat could not make it upstream; that on September 25 a larger motor was obtained for the boat in order to make soundings and the following data were obtained:

ABG763

<u>Distance from shore</u>	<u>Depth of water</u>
82 feet	5.7
108 feet	6.5
165 feet	10.7
200 feet	12.7
260 feet	13.2
310 feet	11.8
430 feet	9.5

He stated further that assuming the channel had an average depth of only 5', with a width of 800' and a velocity of 1 foot per second the flow would be 4,000 cfs. He also pointed out that when McNary Dam is completed it would, along with Bonneville and The Dalles Dams control the flow of the waters in this channel.

Mrs. W. J. Roark, a resident along Marine Drive, stated that there were sand bars in this slough which were constantly shifting and that, therefore, the depth of the channel could not be accurately determined.

Mr. Runyan continued his report by stating that the treatment plant proposed would remove all grit and sand and practically all of the suspended solids, that the effluent would be chlorinated, and that the small amount of material that would be carried in the effluent would be of little consequence.

Mr. McPhillips inquired as to the extent the river would be discolored when the plant was operating properly. A reply by Mr. Everts brought out the fact that there would be practically no discoloration.

Mr. Nagle presented a map showing soundings in the channel which had been prepared for a Mr. Kilander, by the U. S. Army Engineers. He reported that there are about a dozen homes along Marine Drive now and it is expected

that about 12 or 15 more are to be built, that there is a sand bar in this channel now on which many children play, and that the main objection of the people is that this will become contaminated and unfit for recreational purposes.

Mr. Leroy Kilander of the Oregon Marine Dredging Company stated that he had spent 3 days making a survey and he knew of about 4 different places where it was possible to walk within 100 feet of the piling, that there is a sand bar close to shore, and that there is a tidal effect in this area.

Mr. Wendel then stated that if it were not contrary to the law and standards he questioned whether or not the Authority had the right to deny the legitimate use of the river. Mr. Quesseth when asked his opinion said Mr. Wendel was correct and that it was the duty of the Sanitary Authority to abate pollution and if it were not contrary to our standards we did not have the authority to deny permission. It was also remarked by Mr. Wendel that no factual evidence had been presented to discredit the reports of the consulting engineers and the Authority's staff.

It was pointed out by Mr. McPhillips that if in the future the outfall was found to be causing pollution then the city of Gresham, upon direction from the Authority, would be required to make the necessary changes to abate pollution.

Mr. Nagle stated that when the citizens of Gresham voted for a sewage treatment plant it was to be constructed according to the plans on file but was changed after the bond issue had passed. Mr. Nagle said he did not think the people of Gresham would have voted for it if they had known what it would do to them.

It was MOVED by Mr. Stricklin and seconded by Mr. McPhillips that said plans for the proposed Gresham municipal sewage treatment plant be granted the customary conditional approval of the State Sanitary Authority with the

ABG763

provision that, if at any time in the future detrimental pollution should be caused by the effluent, the city of Gresham upon instruction from the Sanitary Authority will provide such additional facilities as may be found necessary.

When asked if there was any discussion on the motion Mrs. Luyben again brought up the matter of sand bars in the channel.

Mayor Hughes and City Councilman Donald McBain represented the city of Gresham. Mayor Hughes said he did not care to make any statements other than to say that the engineers employed by the city were capable and were doing a competent job and that when the citizens voted on this matter it was not to build a certain line but to authorize a \$750,000 bond issue for a new system of sewage and waste disposal.

After more discussion on the amount of flow, depth of the channel, and the number of sand bars in this channel, Mr. Wendel stated he did not think that any professional proof had been offered to support the statements and therefore he felt the evidence produced by the engineers of Stevens & Thompson should be considered in preference to theirs. Mr. Nagle then asked for an extension of time in which to obtain such professional evidence. The request was not granted.

Mr. Stricklin called for a rereading of the motion after which Mr. Wendel asked for a vote. The MOTION was carried unanimously.

After the motion was carried Mr. Brown requested the floor to present his argument. Mr. Wendel asked if his statements were relevant to the matter and was answered that they were. In his statements Mr. Brown mentioned that prior to the election a preliminary report had been prepared by the engineers of Stevens & Thompson showing the outfall located on Campbell Road with discharge into the main channel of the Columbia River. He said that there

ABG763

would be no question of contamination or property damage from that location; that the \$750,000 bond issue voted and passed at the last election was based on these plans, and that after this approval by the people the engineers decided to change the location of the outfall. He claimed that when the proposed plant is in operation there will be approximately 3 tons of solids dumped into the Columbia near McGuire Island everyday; that the people along the river do not believe there is enough flow during the low water periods to prevent pollution and that therefore the application to place the outfall at this point should be denied.

Mr. Veatch then stated that the plans and specifications had been reviewed by the engineers of the Sanitary Authority staff and in their opinion the disposal of sewage from this outfall would cause no property damage or pollution of the waters; that it was not the duty of the Authority to tell the city what and where to build but only to review and approve or disapprove the plans and, therefore, the Authority had no alternative but to grant the approval.

The meeting adjourned at 11:20 A.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.  
Secretary & Chief Engineer

MINUTES OF THE SIXTY-FIRST MEETING OF THE  
OREGON STATE SANITARY AUTHORITY

November 5, 1954

The sixty-first meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 11:05 A.M., November 5, 1954, in Room 720 State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; John C. Veatch, and Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer; T. M. Gerow, District Engineer, and Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers.

Because a quorum was not present no formal action could be taken on the matters discussed at this meeting.

MINUTES: The minutes of the sixtieth meeting, as well as the minutes of the September 1 special meeting, having been prepared by the secretary and distributed to the members in advance of the meeting, it was MOVED by Mr. Veatch and seconded by Mr. Whipple that the reading of said minutes be dispensed with and that they be approved as prepared by the secretary.

PROJECT PLANS: It was agreed that approval of the action taken by the engineering staff on the following project plans and reports received and reviewed during the third quarter should be deferred until the next meeting.

Date	Location	Project	Action
7-2-54	Riddle	Sewer extensions	Prov. approval
7-2-54	Toledo	Sewage treatment plant	Prov. approval
7-6-54	Milwaukie	Sewer extensions	Approved
7-6-54	Sweet Home	Sewer extensions	Prov. approval
7-6-54	Yamhill County	Ewing Young School sewerage	Deferred
7-6-54	Washington Co.	Hazeldale School sewerage	Deferred

Date	Location	Project	Action
7-6-54	Washington Co.	Hillsboro Armory sewerage	Cond. approval
7-6-54	Dallas	North Dallas trunk sewer	Cond. approval
7-6-54	Willamina	Business district sewerage system (Revised plans)	Cond. approval
7-6-54	Portland	Prel. report for Silver Falls Meat Company	Approved
7-6-54	Portland	Prel. report for Western States Rendering Company	Approved
7-7-54	Canyon City	Grade school sewerage	Suggestions given
7-9-54	Gresham	Trunk sewer extension	Approved
7-12-54	Union County	North Powder High School	Not approved
7-14-54	Southwood Park	Sanitary sewer system	Not approved
7-14-54	Southwood Park	Sewage treatment plant	Not approved
7-16-54	Benton County	North Albany Grade School	Approved
7-21-54	Washington Co.	Hazeldale School sewerage	Approved
7-26-54	Enterprise	Sewer extensions	Not approved
7-27-54	Mt. Angel	Sewage treatment plant	Cond. approval
7-30-54	Corvallis	Sewer extensions	Approved
8-6-54	Enterprise	Sewer extensions (Revised plans)	Prov. approval
8-9-54	McMinnville	Sewer extensions	Approved
8-11-54	Gresham	Sewage treatment plant	Deferred
8-11-54	The Dalles	Sewer extensions	Approved
8-12-54	Chiloquin	Sewage treatment plant	Not approved
8-12-54	Eugene	Sewers - South Hilyard	Approved
8-16-54	Clackamas Co.	Canby school sewerage	Approved
8-16-54	Junction City	Sewer extensions	Approved
8-16-54	Oakridge	Sewer extensions	Prov. approval
8-17-54	Klamath County	Homedale school sewerage	Approved
8-23-54	Chiloquin	Sewage plant (revised plans)	Prov. approval

ABG763

Date	Location	Project	Action
8-23-54	Coos County	Dora school sewerage	Approved
8-24-54	Klamath County	Pelican school sewerage	Not approved
8-26-54	Umatilla County	McLaughlin High school sewerage	Approved
8-31-54	Marion County	North Marion High sewerage	Approved
8-31-54	Multnomah County	Parkrose school sewerage	Approved
9-2-54	Gresham	Sewage treatment plant	Prov. approval
9-3-54	Southwood Park	Sewage treatment plant	Not approved
9-13-54	North Roseburg	Sewer extensions	Approved
9-13-54	Corvallis	Sewer extension	Approved
9-13-54	Cottage Grove	Oak Park sewers	Deferred
9-17-54	Wheeler	Hospital sewerage	Cond. approval
9-20-54	Klamath Falls	Sewer extension	Approved
9-20-54	Cottage Grove	Sewer extensions	Approved
9-21-54	Vale	Sewage disposal facilities	Not approved
9-24-54	Southwood Park	Sewage treatment plant	Prov. approval
9-27-54	Multnomah County	Wm. Clark School sewerage	Approved
9-28-54	Yamhill County	White Hospital sewerage	Approved

CITATION HEARING - City of Drain

In response to a formal citation which had been issued to the city of Drain for failure to install sewage treatment facilities, Honorable E. G. Whipple, Mayor; Mr. V. R. Thomas, City Recorder; Mr. E. W. Holmes, City Councilman, and Mr. James Howland, Consulting Engineer, were present to represent the city. A memorandum dated November 5, 1954, and prepared by the Authority's engineering staff was read by the secretary. This memorandum, a copy of which has been made a part of the Authority's file in this matter, outlined the facts pertinent to the present status of the sewage disposal program of the city of Drain.

Mayor Whipple speaking for the city reported that the city's present

ABG763

charter does not provide for collecting money to pay for sewage treatment works and therefore is in need of revision or amendment. He stated further however that the council hopes to proceed with the required project on a "pay as you go" basis; that such a proposal was discussed with the citizens of the community at a recent meeting, and that some \$30,000 to \$35,000 a year could be raised to finance the project without resorting to a special bond election. He explained that this amount of money could be obtained from the following sources: (1) a special 22 mill property tax which brings in about \$15,000 per year, (2) an annual surplus of \$15,000 from the city light department and (3) an annual surplus of \$3,000 from the city water department.

Mr. Howland, Consulting Engineer, then discussed how the city's sewerage project might possibly be constructed in stages. The primary part of the treatment plant would be the first contract and would cost an estimated \$40,000. The second step would be interceptor sewers. The cost of the entire project was estimated by the consulting engineers at \$237,700.

It was pointed out by the Authority staff that with an assessed valuation of \$746,000 and an outstanding bonded indebtedness of only about \$22,000, the city should have no difficulty in selling sufficient bonds to finance the entire project under one contract. The city's representatives, however, expressed doubt that the voters would approve the bonds.

Mayor Whipple requested that a representative of the Authority attend the next meeting of the city council on Tuesday, November 9, to advise them further as to how they should proceed. He was assured that one of the staff members would comply with his request.

It was then decided to continue the matter until the next meeting of the Authority and to instruct the city to submit in the meantime a definite fiscal and construction program and schedule.

CITATION HEARING - City of Harrisburg

A formal citation having been issued to the city of Harrisburg for failure to abate pollution in the Willamette River, Honorable R. G. Quinn, Mayor; O. M. Gillett, City Recorder; J. H. Sommerville and H. L. Skirvin, Councilmen, and James Howland, Consulting Engineer, were present to represent the city. A memorandum dated November 5, 1954, and outlining the facts pertinent to this matter was read by the secretary. This memorandum prepared by the Authority staff has been made a part of the official files of the Authority.

Mayor Quinn then stated that the city is definitely planning to go ahead with the project and that public meetings are to be held for the purpose of promoting a special bond issue to finance the cost of construction. He stated that present plans called for holding the bond election in May 1955. He reported further that the city has no outstanding bonded indebtedness at the present time and that the preliminary engineering studies and report of a proposed municipal sewage disposal project have been completed by the city's consulting engineers. Total cost of the project is estimated at \$112,000. Only 60% of the city is now served with sewers.

Members of the Authority then inquired why the bond election could not be held at an earlier date. They also asked if the engineers could not be instructed at once to proceed with the preparation of final plans and specifications in view of the fact that the city already has a sinking fund of some \$10,000 on hand. Mr. Howland explained that the earlier the bids for construction could be called the better the chances would be for obtaining a reasonable price. He stated that because of that fact January or February would be a better time than would May or June.

Mr. Wendel then reminded the city's representatives that the Sanitary Authority had first instructed them more than 12 years ago to proceed with

their program of sewage disposal and therefore it was felt that the city had been given plenty of opportunity to comply with state law in this matter. He stated further that in view of this fact he thought the city should hold the bond election without further delay and also should immediately authorize the preparation of final plans and specifications.

The city's representatives then stated that a public hearing would be held within the near future and that they would do everything possible to hold an election at an earlier date.

The matter was continued until the next meeting with the request that the city keep the Authority advised of any progress made in the meantime.

CITY OF THE DALLES

Mayor M. O. Davidson and City Manager Lee Swanson, having requested an opportunity to discuss the sewage disposal program of the city of The Dalles with the members of the Authority, were present to represent their municipality. Mr. Swanson discussed the status of their sewage treatment program as follows: The city has had a 28% increase in population since 1950, mainly because of the construction of The Dalles dam by the Corps of Engineers. The present population is 9,864 according to a census by the Secretary of State. The city's present tax rate is 79.3 mills. The city is built on 4 different levels with much of the newer construction being on the upper level. This has increased the load on certain portions of the existing sewerage system. In 1937 when Bonneville Dam was constructed the federal government installed a levee along the water front of the city and also built a sewage lift station which pumps all of the city's sewage into the main Columbia River. Consequently there is only one outfall sewer from the city which means that no expensive interceptor sewer will be required.

Many of the old sewers of the city are of the combined type and therefore

ABG763

it has been necessary for the city during the past several years to spend considerable sums of money to separate the storm water from the sanitary sewers. Because of the overloaded condition of some of the sewers it has not been uncommon during periods of heavy surface runoff for sewage to back up into basements and plumbing of private homes and business establishments. The city has tried to solve this problem before undertaking the construction of a sewage treatment plant.

In November 1948 a 3-mill tax levy for 10 years was approved by the city's voters for sewerage improvements. By July 1, 1954, the sinking fund accumulated by this tax amounted to more than \$90,000 and by July 1955 it was estimated that the city would have \$115,000 on hand.

In 1950 a preliminary study and report of the city's sewage disposal needs made by Cornell, Howland, Hayes & Merryfield, Consulting Engineers, placed the estimated cost of such a project at \$153,200.

However, because the program for separation of storm water and sanitary sewage is still not complete the city of The Dalles requested that construction of the disposal works be deferred until 1958.

The matter had to be continued until the next meeting because of the lack of a quorum.

#### CITY OF EMPIRE

At the previous meeting of the Authority the city of Empire had been instructed to develop and adopt a new fiscal and construction schedule. A written request had been received in the meantime from Mr. Robert L. Thomas, City Attorney, asking that additional time be granted the city for this purpose.

The request was granted and the time was extended until the February 1955 meeting of the Authority.

#### CITY OF HOOD RIVER

A memorandum prepared by the Authority staff and dated November 5, 1954,

was read by the secretary. It was pointed out that the city was having a new preliminary engineering study made for the purpose of revising the report which had been completed in 1945.

It was decided to continue the matter until the next meeting and to request that the city develop a definite fiscal program and construction schedule for submission to the Authority at the February 1955 meeting.

CITY OF ST. HELENS

In a summary of a previously prepared memorandum read by the secretary, it was indicated that this city has not given too much thought to providing for sewage treatment in that area. The board recommended that the city be instructed by the secretary to submit a fiscal and construction schedule before the next meeting.

CITY OF ARLINGTON

A letter dated August 6, 1954, from the city recorder, and read by the secretary informed the Authority that on June 1st, 1954, the city adopted an ordinance for a sewer service charge, which will bring in approximately \$300 a month. Also preliminary plans have been made by Wall & Tenneson to remodel the old filtration plant. The city of Arlington feels it would not be advisable to do anything until the matter of the John Day Dam is settled as at least a part of the city could become abandoned if the dam is built. No action was taken in this matter.

CITY OF RAINIER

The secretary read a memorandum previously prepared by the Authority staff outlining the status of the city's sewage treatment program from a report submitted by Mr. G. E. Russell, City Recorder. The only progress made so far was the adoption in August 1951 of a 50¢ sewer user charge. The required project is to have sewer extensions, interceptor sewer, pumping facilities, and primary

ABG763

treatment plant. No engineering study has been made so no accurate cost estimate is available. Raw sewage from the city now discharges into the Columbia River. It was decided to instruct the city of Rainier to submit a definite fiscal and construction program by the next meeting.

CITY OF CLATSKANIE

Mayor J. D. Puzey in a letter to the Authority advised that the city council had decided to levy a 50¢ sewer user charge. He estimated that this would bring in about \$3,000 annually. This past summer the city installed sewer extensions costing \$21,792. At the present time raw sewage discharges into Clatskanie River. The required project will include an interceptor sewer, pumping station and treatment plant. No preliminary engineering study has been made. The Authority recommended that the council be instructed to submit a definite fiscal and construction schedule for this project before the next meeting.

SWIFT AND COMPANY

At the last meeting of the Authority the staff was instructed to issue a citation to Swift and Company because no action toward abating the pollution in Columbia Slough caused by their operations had been taken. Since the last meeting the company has submitted plans for disposal of wastes and requested that we defer issuing the citation. In view of the fact that they are going ahead and are proceeding in good faith and making definite progress the citation was deferred by the Authority members.

COLUMBIA SLOUGH

Mr. Boydston reported that all 15 meat packing plants were making progress toward the January 1, 1955, deadline. Most of these plants plan to connect to the Portland interceptor sewer system. The voters approved a measure allowing the city of Portland to sign contracts for 5 year periods at the last election

and this should help speed up the progress for completion of these plants. It was recommended that the matter be continued until the next meeting.

WASHINGTON COUNTY

Mr. T. W. Christensen and Glen Snyder, sanitarians, represented Dr. Tarlowski, health officer for Washington County, who had written the Authority requesting help in cleaning up the pollution of Fanno Creek resulting from improper sewage disposal in the Tigard area. Residents in this area are contemplating forming a Sanitary District or incorporation. The staff of the Authority was instructed by the chairman to make at the earliest opportunity an investigation of this area and to submit a report of the findings to the Sanitary Authority.

JOINT MEETING WITH WASHINGTON POLLUTION CONTROL COMMISSION

Mr. Eldridge, director of the Washington Pollution Control Commission had previously invited the Authority members to participate in a joint meeting with the Washington Commission. It was concluded that the earliest date both boards could get together would be next spring. A tentative date in March or April was set for this meeting.

OTHER MUNICIPALITIES

A memorandum regarding the present status of the municipalities of Canby, Cornelius, Enterprise, Toledo, Government Camp, Tualatin Hills Sanitary District, Jacksonville, Vale, Gresham, and Coquille was discussed by Mr. Spies.

The date for the next meeting was set for February 18, 1955, at 2:00 P.M.

There being no further business the meeting adjourned at 12:55 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

ABG763

## MINUTES OF THE SIXTY-SECOND MEETING

OF THE

## OREGON STATE SANITARY AUTHORITY

February 25, 1955

The sixty-second meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:07 P.M., February 25, 1955, in Room 36 State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman, Harold M. Erickson, M.D., Jim S. Whipple, B. A. McPhillips, and Lewis A. Stanley, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer; and Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers.

RESOLUTION:

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley and carried, that the members observe the passing of their dear friend and colleague, Mr. Charles E. Stricklin, by adoption of the following resolution:

Whereas: The Almighty in His wisdom has removed from our midst Charles E. Stricklin, a member of the State Sanitary Authority since December 1938, and

Whereas: The progress made by the Sanitary Authority of the State of Oregon in the abatement of pollution of public waters was greatly benefited by his interest, knowledge, and wisdom in the development of policies and procedures, and

Whereas: His friendly manner, gentle humor, and unswerving sense of responsibility endeared him to all with whom he came in contact and earned him the respect and esteem of his fellow citizens; now therefore be it

Resolved: That we, the members of the Sanitary Authority of the State of Oregon express our deep sorrow and sense of personal loss in the passing of Charles E. Stricklin, friend, comrade and loyal citizen, and be it further

Resolved: That a copy of this resolution be sent to his beloved wife, Mrs. Charles E. Stricklin, to the Governor of Oregon, and a copy be spread on the minutes of the Authority.

MINUTES:

The minutes of the Sixtieth and Sixty-First meetings having been distributed to the members in advance of the meeting were approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that actions taken by the engineering staff on project plans for July through September as submitted at the previous meeting and the following 54 project plans, October through January, be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
10-1-54	Klamath Falls	Sewer extensions	Approved
10-1-54	Medford	Sewer extensions	Not approved
10-7-54	Vale	Pump station	Cond. approval
10-7-54	Portland	Swift & Co. industrial waste disposal	Not approved
10-8-54	Wasco County	Chenowith School sewerage	Approved
10-8-54	Clackamas County	Redland School sewerage	Approved
10-8-54	Clackamas County	Canby School sewerage	Approved
10-11-54	Benton County	Mt. View School sewerage	Approved
10-11-54	Eugene	Riverview pump station	Approved
10-11-54	Eugene	Riverview trunk sewers	Approved
10-12-54	Cottage Grove	Pump station	Deferred
10-13-54	Hood River County	Odell School sewerage	Prov. approval
10-13-54	Grant County	Canyon City School sewerage	Not approved
10-14-54	Oakridge	Sewer extensions	Prov. approval
10-14-54	Portland	Brander Meat Co. waste disposal	Deferred
10-15-54	Portland	Armour & Co. waste disposal	Deferred
10-15-54	Cottage Grove	Pump station	Revisions suggested

ABG763

Date	Location	Project	Action
10-15-54	West Slope San. Dist.	Preliminary report	Approved
10-19-54	Silverton	Relief sewer report	Approved
10-19-54	Molalla	Sewer system	Approved
10-20-54	Molalla	Sewage treatment plant	Not approved
10-20-54	Lane County	Honeyman State Park	Approved
10-25-54	Vale	Sewer extension	Prov. approval
10-28-54	Pendleton	Sewer extensions	Prov. approval
10-28-54	Drain	Sewer extension	Deferred
10-29-54	Baker County	Hereford School sewerage	Approved
11-9-54	Harrisburg	Preliminary Report	Approved
11-17-54	Mapleton	Septic tank for Housing project	Prov. approval
11-24-54	Coos County	Motel sewage disposal	Not approved
11-24-54	Columbia County	Rainier school sewerage	Prov. approval
11-29-54	Molalla	Sewage treatment plant(rev.plans)	Cond. approve <sup>1</sup>
11-29-54	Toledo	School sewerage	Not approved
12-7-54	Salem	Auburn Grade School sewerage	Prov. approval
12-10-54	Klamath Falls	Sewer extensions	Approved
12-10-54	John Day	Sewer extension	Prov. approval
12-13-54	Jefferson County	Motel sewerage	Prov. approval
12-21-54	Portland	Strell Company Housing	Prov. approval
12-21-54	Eugene	Riverview by-pass	Approved
12-23-54	Bunker Hill San. Dist.	Sewer system	Approved
12-23-54	Bunker Hill San. Dist.	Sewage treatment plant	Not approved
12-27-54	Lane County	Elizabeth Page Grade School sewerage	Deferred
12-30-54	Lebanon	Sewer extensions	Approved
1-10-55	Lane County	McKenzie Grade School	Approved

Date	Location	Project	Action
1-10-55	Hermiston	Sewer extensions	Not approved
1-12-55	Winston	Preliminary eng'g report	Approved
1-13-55	Hermiston	Sewer extensions	Changes suggested
1-14-55	Corvallis	Sewer extensions	Approved
1-18-55	Jackson County	Ruch School	Prov. approval
1-24-55	Heppner	Grade School	Approved
1-27-55	Hermiston	Sewer extensions	Approved
1-27-55	West Linn	Sewage treatment plant	Cond. approval
1-28-55	Washington County	Apartment house sewerage	Comments submitted
1-28-55	Washington County	Cedar Mill School	Not approved
1-31-55	The Dalles Dam	Residence bldg. sewer	Changes suggested
1-31-55	Troutdale	Report for Bissinger waste disposal	Approved

CITY OF BANDON:

Since representatives of the city had previously asked if they could attend the meeting to discuss their proposed sewerage program with the Authority members, Mr. J. H. Fasnacht, Manager of Utilities, and Mr. R. B. Backlund, Mayor, were present to represent the city.

Mr. Spies presented the following outline of the present status of Bandon's sewerage program.

"In 1950 a preliminary report was submitted to the Authority by the engineering firm of Cornell, Howland, Hayes and Merryfield listing the following needs: Sewage pump station \$31,500, treatment plant and outfall \$41,400, sewer extensions \$152,800, making a total project cost of approximately \$225,700. A more recent estimate places the cost of the sewage pump station, treatment plant and outfall at \$80,000 which represents some increase over the figures given in the 1950 report.

ABG763

At the present time the city has 4 outfall sewers which discharge raw sewage into the Coquille River. The city was first notified in 1942 of the need for installing adequate sewage collection and treatment works. In 1954 the city installed sewer extensions costing some \$25,000. In approving plans for this sewer extension project the Authority informed the city of Bandon that before any additional extensions could be made it would be necessary for the city to provide adequate sewage treatment and in that connection it was recommended that the city adopt a suitable fiscal program."

The proposed program as outlined at the meeting by the city's representatives called for deferring construction of the treatment works for 5 years during which time a sinking fund would be accumulated by means of a \$1 per connection per month sewer user charge. It was estimated that at the end of the 5 year period the sinking fund would amount to approximately \$30,000. According to the proposal the remaining \$50,000 would be raised by a general obligation bond issue. It was reported to the Authority that such a program had been thoroughly considered and approved by the Bandon city council and that it also met with the approval of the residents of the city.

After reviewing these and other facts in this matter it was concluded by the members of the Authority that the proposed fiscal and construction program could be accepted only with the following provisions:

1. The proposed sewer service charge shall be levied as soon as the necessary ordinance can be adopted by the city council.
2. Reports shall be submitted to the Authority by the city every 3 months outlining the status of said program including the balance accumulated by the sinking fund.

3. Since the Authority does not have the right to permit the city to continue to cause pollution in the public waters of the state of Oregon it reserves the right to require certain changes in said program if and when conditions so warrant.

CITY OF EMPIRE:

Mayor Kenneth E. Adams, City Councilman Odin A. Anderson, City Attorney R. L. Thomas, and City Engineer Roy H. Erichsen were present to represent the city of Empire.

After having constructed in 1953 a sewer extension project costing approximately \$123,000 the Empire city council found that it could not carry out the schedule for the construction of the remainder of its sewerage project which had been submitted to and approved by the Authority in May 1953. As a consequence the city had been advised by the Authority to submit a revised fiscal program and construction schedule.

Mr. Thomas pointed out that the voters of the city early in 1953 had approved a \$325,000 bond issue but that when they advertised for the sale of a portion of these bonds to finance the above mentioned sewer extension project no bids were received. Because the city had already started construction of the project they were forced to sell some \$120,000 in bonds to the State Bond Commission. In order to finance this bond issue all possible sources of revenue of the city had been pledged and therefore it was impossible for the city at the present time to sell any additional bonds. It was reported that if the present revenues continue the city will be able to retire this original bond issue in 1958. Under the revised program as proposed by the representatives of the city all further construction of sewers would be deferred until 1960 and installation of the treatment plant would not be undertaken until 1965. Under the program previously approved by the Authority construction of the sewage treatment plant was to be in 1957.

ABG763

66

The urgent need for the early construction of sewer extensions was discussed. It was pointed out that the insanitary conditions now caused by the lack of adequate sewers constitute a serious hazard to the safety of the city's water supply which is obtained from nearby lakes. There was also discussion of the need for sewage treatment in order to preserve the cleanliness of the waters in Coos Bay.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips and carried that the proposed program of the city of Empire be dis-approved. It was suggested to the city's representatives, however, that further attempts be made to work out a program under which construction of both sewers and sewage treatment works could be accomplished at a much earlier date.

The secretary was instructed to write a letter to the city offering the assistance of the engineering staff in working out a solution to this problem.

CITY OF HOOD RIVER

Mr. Hal Puddy, City Engineer, and Mr. Ken Jernstedt, Council President, represented the city of Hood River and presented the program which had been developed as a result of a discussion at the last meeting of the Authority.

A memorandum dated February 21, 1955, outlining the present status of the city's program and a letter from Mr. Puddy dated February 4, 1955, were read by Mr. Spies and both of these documents were made a part of the Authority's files in this matter.

After a thorough discussion of the matter it was MOVED by Mr. McPhillips, seconded by Dr. Erickson and carried, that the city of Hood River be required to construct during 1955 adequate facilities for the abatement of (1) the pollution caused in the public waters of Indian Creek by the discharge therein of overflows from the city's two septic tank systems, (2) the pollution caused in the public waters of Hood River by the discharge therein of industrial wastes from the Hood River distillery, and (3) the pollution

caused by the wastes from the Hood River Apple Growers Association plant.

Action regarding the city's proposal for abatement of pollution caused in the public waters of the Columbia River by the discharge of untreated municipal sewage was deferred until the next meeting of the Authority.

CITY OF THE DALLES

The matter of sewage disposal for the city of The Dalles having been continued from the previous meeting, Mayor M. A. Davidson and City Manager William E. Hansen were present to represent the city.

A memorandum dated February 21, 1955, prepared by the staff of the Authority and outlining the present status of the city's program was read by Mr. Spies, and the document was made a part of the Authority's file.

It was reported by the city's representatives that since 1941 more than \$273,000 have been expended for the construction of sanitary sewers and some \$148,000 for construction of storm sewers. As reported at the previous meeting the city was requesting permission to defer construction of its sewage treatment works until 1958. After discussion of the matter it was concluded by the Authority members that no action on this request could be taken until construction schedules for the other municipalities located on the main Columbia River had been given consideration.

Action was therefore deferred until the next meeting.

CITY OF ST. HELENS

The matter of sewage disposal for the city of St. Helens having been continued from the previous meeting, Mayor Irving T. Rau, Recorder Richard E. Singleton, City Engineer Clarence R. Wagner, and Councilmen Forrest Winkfield and Roy Harrington were present to represent the city.

A brief outline of the present status of the city's program was presented by Mr. Spies.

Mayor Rau stated that the new council which had taken office in January had not had sufficient time to develop a definite program as requested by the

ABG763

letter from the Sanitary Authority dated November 22, 1954. He stated, however, that it was their intention to comply fully with the state law in this matter. He reported that in 1951 a preliminary engineering study made by Cornell, Howland, Hayes and Merryfield revealed that the cost of constructing the required interceptor sewers and sewage treatment works would be approximately \$275,000. The engineers had also estimated that sewer extensions costing in excess of \$340,000 were also needed. The city now has on hand a sinking fund of more than \$120,000 which was accumulated by means of a special 5-mill tax levy during the period 1942-1952.

After considerable discussion it was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that a time limit of 90 days be set for the city of St. Helens to submit a fiscal program and construction schedule for the elimination of their pollution.

CITY OF RAINIER:

The present status of Rainier's sewage disposal program was outlined by Mr. Spies. It was reported that in a letter dated February 10, 1955, the Authority had been notified that the engineering firm of Cornell, Howland, Hayes and Merryfield had been retained by the city to make a preliminary study and cost estimate of the required sewerage project. Inasmuch as it appeared that the city was proceeding in good faith it was MOVED by Dr. Erickson, seconded by Mr. Stanley, and carried, that the matter be continued until the next meeting of the Authority.

CITY OF CLATSKANIE:

It was reported that since the last meeting of the Authority two letters had been written to the city of Clatskanie and that no replies to said letters had been received by the Authority. Inasmuch as the city has apparently taken no further action in the matter of planning for the early construction of required interceptor sewers and sewage treatment works it

was MOVED by Dr. Erickson, seconded by Mr. Whipple, and carried, that the city of Clatskanie be cited to appear before the State Sanitary Authority at its next meeting to show cause if any exists why the city should not be required to abate pollution caused by the discharge of its untreated sewage.

CITY OF DRAIN:

The citation hearing in the matter of sewage disposal for the city of Drain was continued from the previous meeting.

A letter dated January 10, 1955, addressed to the Authority from Mr. V. R. Thomas, City Recorder, was reviewed. In this letter the city outlined a proposed program for proceeding with construction of its required sewerage project on a "pay-as-you-go" basis. The proposed program includes the following:

1. A minimum of \$30,000 obtained from various sources will be spent each year on the construction of the project.
2. The first portion of the project will include the pump station, primary sewage treatment plant, and a portion of Main "A" and Main "C" the total estimated cost of which is \$102,000.
3. This first project will take approximately 3 years to complete with work to be started this coming summer.

It was reported that the city has already purchased the site for the treatment plant at a cost of \$5,000.

After giving thorough consideration to all the facts in this matter it was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the proposed "pay-as-you-go" program be approved with the provision that the city submit quarterly reports to the Authority outlining the status of finances and construction.

CITY OF HARRISBURG:

The citation hearing in the matter of sewage disposal for the city of

ABG763

Harrisburg was continued from the previous meeting.

Mr. Spies reported that since that time the city council had held two public meetings and recently had scheduled a \$150,000 bond election for March 7, 1955. It was understood that if the voters approve the proposed bond issue the consulting engineers will proceed at once to prepare final plans and specifications so that construction can be undertaken in the near future.

Because it appeared that the city is proceeding in good faith to carry out the instructions of the Authority no action was taken in this matter.

#### COLUMBIA SLOUGH INDUSTRIES

A summary report dated February 24, 1955, was submitted to the Authority members by James R. Boydston, Associate Sanitary Engineer. This report was made a part of the Authority's permanent files in this matter.

It was pointed out by Mr. Boydston that approximately one-half of the Columbia Slough Industries are negotiating with the city of Portland for connections to the municipal sewer system. The other plants have not made too much progress towards construction of required waste disposal facilities. They have been using the excuse that they are waiting to see what their neighbors are going to do.

After reviewing said report it was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that unless definite and satisfactory progress is made within 30 days appropriate steps would be taken to enforce the orders previously entered against Silver Falls Meat Co., Pacific Meat Co., B & B Ranch, Associated Meat Packers and Pete Wess Hog Ranch.

#### SUBURBAN FRINGE AREA COMMITTEE

A brief report was given by Dr. Erickson regarding a special committee which was recently created as a result of a public meeting which has been

held on February 7, 1955, regarding the problem of providing safe and adequate sewage disposal for the so-called unincorporated urban areas of the state. Some 75 or more persons including representatives of the county courts of Clackamas, Multnomah and Washington Counties, County Planning Commissions, city of Portland, county health departments, and other agencies concerned with or interested in this problem attended said meeting. The special committee which has been organized includes the State Health Officer, State Sanitary Engineer and representatives from these three counties plus two members at large. The committee has already started making a thorough study of the problem in an attempt to work out the most satisfactory solution. Dr. Erickson reported further that considerable interest in this problem has been shown by several of the state legislators and that legislation is being considered by the 48th Legislative Assembly.

CEDAR MILL PARK:

Mr. Clarence E. Cuyler, Associate Sanitary Engineer, gave a preliminary report on the stream pollution and insanitary conditions being caused by the sewerage system serving the Cedar Mill Park subdivision located in Washington County. It was reported that recent studies had shown that this system was grossly overloaded especially during periods of heavy rainfall and that it was being very poorly operated and maintained by the owner. Pictures showing the present condition of the treatment plant were reviewed. Mr. Cuyler stated that this matter was being presented at this meeting for the purpose of requesting authorization to issue a citation to the owner in case he should fail to comply voluntarily with any instructions which might be issued to him by the Authority staff. It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that unless pollution caused by the Marlene Village (Cedar Mill Park) sewage treatment plant is abated within 90 days the owner be cited to appear before the Sanitary Authority and show

ABG763

cause why action should not be instituted to obtain compliance with state statutes.

STATUS OF LEGISLATION:

A brief report outlining the status of various bills introduced by the 48th Legislative Assembly pertaining to sewage disposal, sanitary districts, and water pollution was reviewed by the members. No action in this matter was considered necessary.

The date for the next meeting was set for May 25, at 2:00 P.M.

There being no further business the meeting adjourned at 5:15 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

MINUTES OF THE SIXTY-THIRD MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

May 20, 1955

The sixty-third meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., May 20, 1955, in Room 579 State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Jim S. Whipple, B. A. McPhillips, John C. Veatch, and Lewis A. Stanley. Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer; and Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers.

MINUTES:

The minutes of the Sixty-Second meeting having been distributed to the members in advance of the meeting were approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried that actions taken by the engineering staff on the following 77 project plans during February, March and April, 1955, be approved:

Date	Location	Project	Action
2-2-55	Tualatin Hills S.D.	Sewer extensions	Prov. approval
2-2-55	Bunker Hill S.D.	Sewage Plant	Prov. approval
2-2-55	The Dalles	Seuffort Motel sewerage	Prov. approval
2-11-55	Aloha-Huber	School sewerage	Not approved
2-15-55	Multnomah County	Owens Ill. Glass Co. sewerage	Not approved
2-15-55	Manbrin Gardens	Sewer extensions	Cond. approval
2-15-55	Maupin	School sewerage	Deferred
2-16-55	Pilot Rock	Preliminary report	Deferred
2-17-55	Harney County	Crane School sewerage	Not approved
2-21-55	St. Helens	High School sewerage	Not approved
2-23-55	Marion County	Candalaria school sewerage	Not approved
2-24-55	Pilot Rock	Preliminary report	Approved
2-25-55	Washington County	Cedar Mill School	Deferred
2-28-55	Baker County	Hereford School sewerage	Not approved
2-28-55	Orient	School sewerage additions	Cond. approval
2-28-55	Lane County	Lynx Hollow school	Comments submitted
2-28-55	Polk County	Henry Hill school	Approved
2-28-55	Polk County	Central High school	Approved
3-2-55	Tigard	Red Rock School	Approved
3-2-55	Adrian	Union High School Additions	Prov. approval
3-4-55	The Dalles	Fairview sewer extensions	Approved
3-4-55	Springfield	Sewer extensions	Deferred
3-4-55	Dufur	School sewerage	Not approved
3-4-55	Linn County	Holly School sewerage	Deferred

ABG763

Date	Location	Project	Action
3-8-55	St. Helens	Sewer extensions	Prov. approval
3-15-55	Springfield	Sewer extension	Prov. approval
3-15-55	Multnomah County	Bull Run School	Deferred
3-17-55	Sutherlin	Sewer system	Deferred
3-17-55	The Dalles	Sewer extensions	Approved
3-18-55	The Dalles	Sewer extensions	Approved
3-18-55	Gladstone	School sewerage	Approved
3-18-55	Multnomah County	David Douglas school	Approved
3-18-55	Forest Grove	Sewage disposal additions	Approved
3-18-55	The Dalles	Seuffert Motel	Prel. approval
3-21-55	Vernonia	Sewer extensions and plant improvements	Deferred
3-21-55	Tualatin Hills S.D.	Sewer extensions	Approved
3-21-55	Jennings Lodge	Prel. engineering report	Accepted
3-21-55	Brookford Subd.	Prel. plans sewage plant	Prel. approval
3-22-55	Springfield	Vancouver Plywood mill sewerage	Approved
3-22-55	Hines	Sewage Lagoon	Comments submitted
3-22-55	Washington County	West Haven School	Deferred
3-23-55	Dallas	Sewer extensions	Approved
3-24-55	Sutherlin	Sewer system	Approved
3-29-55	Salem	Salem Heights School	Prov. approval
3-20-55	Washington County	McKay School	Deferred
4-4-55	Washington County	West Haven school	Deferred
4-4-55	Polk County	Western Mennonite school	Approved
4-5-55	Hines	Prel. engineering report	Approved
4-5-55	Prairie City	Grade School addition	Recommendations submitted
4-6-55	Washington County	McKay school	Approved
4-8-55	Baker County	Hereford Grade school	Prov. approval

Date	Location	Project	Action
4-8-55	Coquille	Sewer extensions	Approved
4-8-55	Washington County	West Haven school	Not approved
4-11-55	Barlow	School sewage disposal	Not approved
4-11-55	Clackamas County	Jennings Lodge sewerage	Approved
4-12-55	Brookford	Sewage treatment plant	Not approved
4-18-55	Linn County	Foster Grade school	Approved
4-18-55	Washington County	Bonny Slope school	Prov. approval
4-19-55	Brookford	Sewage plant (revised plans)	Prov. approval
4-20-55	Hermiston	Sewer extensions	Approved
4-20-55	Linn County	Sunrise school	Approved
4-20-55	Linn County	Waverly school	Approved
4-21-55	Hermiston	Sewer extensions	Approved
4-21-55	Lake Grove	Prel. engineering report	Approved
4-21-55	Portland	Kenton Packing Co. waste disposal	Not approved
4-22-55	Clackamas County	Happy Valley school	Prov. approval
4-22-55	Seaside	Sewer extensions	Prov. approval
4-25-55	Deschutes County	Bend High school	Approved
4-25-55	Lane County	Howard Grade school	Approved
4-25-55	Lane County	River Road School	Approved
4-25-55	Lane County	Washington Grade school	Approved
4-28-55	Linn County	Waterloo Grade School	Approved
4-28-55	Linn County	Seven Oaks Grade school	Not approved
4-28-55	Linn County	Albany UHS Grandstand	Not approved
4-29-55	Clackamas County	Concord Grade school	Approved
4-29-55	Polk County	Ballston school	Prov. approval
4-29-55	Roseburg	Sewer extension	Approved

ABG763

CITY OF CLATSKANIE Citation Hearing

A formal citation having been issued to the city of Clatskanie for failure to plan for the construction of sewage interception and treatment facilities, Mayor J. D. Puzey and Consulting Engineer S. A. Ross were present to represent the city.

The motion adopted at the previous Authority meeting authorizing the issuance of said citation was reviewed by the chairman. A memorandum dated May 20, 1955, and prepared by the Authority staff in the matter of sewage disposal by the city of Clatskanie was read by the secretary. This memorandum is a part of the official files of the Authority.

Mayor Puzey then reported that the city had recently retained the services of N. W. Haner and Associates, Consulting Engineers, to make a preliminary engineering study and report of a proposed sewage disposal system for Clatskanie. He submitted a copy of the resolution adopted by the city council in this regard. He reported further that since January 1, 1955, the city has been collecting a sewer user charge equal to 50% of the water bill for the purpose of creating a sinking fund to help finance the required project, said charge bringing in an estimated \$3,000 per year.

Mr. S. A. Ross, member of the firm of N. W. Haner and Associates, then outlined what the preliminary engineering study and report would include. He promised that the report would be completed within 90 days and stated that it would include a detailed estimate of the construction costs and a proposed fiscal program.

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips and carried that the matter be continued for 90 days with the understanding that the preliminary engineering study and report of the required sewage disposal project will be completed within that time. As soon as the engineering report is finished the city is to develop a suitable fiscal program and construction schedule for submission to and approval by the Sanitary Authority.

GOVERNMENT CAMP SANITARY DISTRICT

Mr. A. L. Greenwalt, Mr. and Mrs. R. M. Hughes and Mr. Carl Reynolds were present to represent the Government Camp Sanitary District pursuant to a request from the Authority.

It was pointed out that HB 216 which had been passed by the 1955 Oregon State Legislature authorizes the State Bond Commission to purchase within specified debt limitations the bonds from this and similar sanitary districts but that only \$60,000 had been appropriated for carrying out the provisions of said bill. Mr. Greenwalt reported that as soon as the bill had been signed by the Governor and the district had been certified by the Sanitary Authority as being in need of a community sewerage project, the district's officials would confer with the State Bond Commission, would proceed with the required bond election, and would complete the engineering plans so that, if at all possible, construction of the system could be started this summer.

Members of the Authority expressed their confidence that the bill would be signed by the Governor.

CITY OF EMPIRE

Because the construction schedule previously submitted by the city of Empire had been disapproved by the Authority at the February 25, 1955, meeting, Mr. Robert L. Thomas, Attorney, and Mr. R. H. Erichsen, Consulting Engineer, were again present to represent the city.

Mr. Thomas reported on the present status of the city's fiscal and construction program. He stated that of the \$120,000 bond issue sold in 1953 to the state of Oregon only \$57,000 remained unpaid and he estimated that it would be completely retired by 1958. He presented a revised construction schedule calling for installation of all remaining sewers and the treatment plant by not later than 1960 or earlier if possible. He stated that the proposed fiscal program had been reviewed by bond buyers who had indicated that it was feasible.

ABG763

Other information submitted by Mr. Thomas and Mr. Erichsen included the following: the estimated cost of the entire project still to be undertaken is \$450,000 of which \$300,000 is for sewers and \$150,000 for the treatment plant; by 1960 the city could have a reserve of \$60,000 from the present sources of income (sewer service charges and connection fees); two separate bond issues of \$90,000 and \$300,000 respectively would complete the proposed fiscal program and would require \$23,000 per year for bond servicing and plant operation; if forced to sell more bonds before the state bonds are retired, the annual cost for the first few years would be from \$35,000 to \$40,000; the city council has authorized Mr. Erichsen to proceed with the preparation of final plans, specifications and detailed cost estimates for the entire project.

Because it was indicated that the city might possibly be able to finance the project by 1958 and more particularly in view of the urgent need for sanitary sewers in certain sections of the city, it was MOVED by Mr. Veatch seconded by Mr. McPhillips and carried that the city of Empire be required to construct the remaining sewers and its sewage treatment works by not later than 1958 with the provision that the city submit to the Authority quarterly reports of the status of its fiscal and construction programs and that if in the meantime satisfactory progress is made by the city consideration could later be given for an extension of time.

#### CITY OF ST. HELENS

At the February 25, 1955, meeting of the Authority the city of St. Helens was given 90 days in which to submit a fiscal program and construction schedule for installation of its required sewage disposal project. Accordingly on March 24, 1955, the city submitted a proposed schedule as follows: —

- (1) Completion of plans and specifications by November 1, 1955;
- (2) Hold bond election by January 1, 1956,
- (3) Advertise bonds for sale by March 1, 1956,
- (4) Advertise bids for construction by April 1, 1956, and
- (5) Start actual construction in April or May of 1956.

A copy of this proposal had subsequently been sent by mail to each Authority member and was tentatively approved. In confirmation of this action it was MOVED by Mr. Veatch, seconded by Mr. Stanley and carried that the proposed program submitted by the city of St. Helens be approved.

CITY OF HOOD RIVER

Mr. Hal Puddy, city engineer, was present to represent the city of Hood River, Mr. Clyde R. Shiner the Hood River Apple Growers Association, and Mr. G. D. Heisley, Jr., the Hood River Distillery, Inc. At the last Authority meeting a motion had been adopted requiring that pollution caused by the wastes from these two industries be abated in 1955 but action relative to construction of the main sewage treatment plant by the city of Hood River had been deferred pending receipt of proposals from the other Columbia River cities.

Mr. Puddy stated that the city was proceeding with plans for abatement of the pollution in Indian Creek this year, that the council had recently increased the sewer user charge from 50¢ to \$1.00, and that the city would still like to have until the end of 1959 to complete its disposal project.

Mr. Shiner stated that the AGA would attempt to improve the efficiency of the fine screens which are used for pretreatment of their wastes. He requested that they be permitted to defer construction of their required interceptor and main outfall industrial waste sewer until the city built its system so that both projects could be handled together. It was pointed out that such an arrangement would be more economical for the industry.

Mr. Heisley then discussed the problem confronting the Hood River Distillery, Inc. He asked that they be given more time to install the necessary facilities for disposal of their wastes through part of the existing city system because otherwise it would be extremely difficult, if not impossible, for his company to finance the project.

ABG763

In view of the progress being made by other communities it was MOVED by Mr. McPhillips, seconded by Mr. Veatch and carried that the city of Hood River be required to complete construction of its stream pollution abatement project by not later than the end of 1957 and also that the deadline for abatement of pollution caused by the wastes from the Hood River Apple Growers Association plant and the Hood River Distillery be extended to the end of 1957.

No change was made in the 1955 deadline for abatement of pollution in Indian Creek. The staff of the Authority was instructed to check periodically with the city to insure that satisfactory progress is being made.

#### CITY OF RAINIER

Further consideration was given to the matter of sewage disposal by the city of Rainier. Since the last Authority meeting a preliminary engineering study and report had been completed by the city's consulting engineers and on May 10, 1955, had been submitted to the Authority for review and approval. According to the report the required sewage disposal project will cost an estimated \$92,000 to construct

A letter dated May 16, 1955, from Mayor Glen W. Williams was reviewed. It stated that as soon as the report was approved the city council would immediately work out a fiscal program including an increase in the sewer user charge from 50¢ to \$1.00.

It was then MOVED by Mr. McPhillips, seconded by Mr. Veatch and carried that the engineering report submitted by the city be approved and that the city be required to submit within 30 days a satisfactory fiscal program and construction schedule for the installation of the necessary interceptor sewers, sewage lift station, and treatment works.

CITY OF THE DALLES

Further consideration was also given to the matter of sewage disposal by the city of The Dalles, final action having been deferred at the previous meeting. Although they had been notified, no representative of the city was present at the meeting.

It was MOVED by Mr. McPhillips, seconded by Mr. Veatch and carried that the city of The Dalles be required to complete construction of its sewage treatment works by not later than the end of 1957.

CEDAR MILL PARK

The secretary pointed out that a comprehensive report had been prepared by the staff covering a detailed investigation of the Cedar Mill Park sewer system and sewage treatment works and outlining the deficiencies of said facilities. Copies of the report had been sent to the owner on April 27, 1955. Word had recently been received from the owner's attorney that the report was being studied before any action would be taken to correct the insanitary conditions now existing. The secretary reported further that on the occasion of an inspection of the system on May 18, 1955, it was found that no improvements had yet been made and that in fact the plant was in even worse condition than it had been previously.

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley and carried that the owner of the Cedar Mill Park sewerage works be cited to appear at a special meeting of the Sanitary Authority on June 24, to show cause, if any exists, why pollution caused by said sewerage works should not be abated.

COLUMBIA SLOUGH INDUSTRIES

A memorandum dated May 20, 1955, and prepared by the Authority staff outlining the present status of the plans of the various waste disposal projects for the industries located along Columbia Slough was reviewed by the secretary. At the last meeting of the Authority it had been

ABG763

concluded that unless definite and satisfactory progress were made within 30 days by Silver Falls Meat Co., Pacific Meat Co., B and B Ranch, Associated Meat Packers, and Pete Wess Hog Ranch legal action would be taken against them. It was reported that since that time most of the industries along the slough had made some progress but technically all of them were in violation of the formal order adopted on May 24, 1954, which required abatement of their pollution by not later than January 1, 1955.

After discussing what steps might be taken by the Authority in order to get immediate action from the industries, it was MOVED by Mr. McPhillips, seconded by Mr. Veatch and carried that Silver Falls Meat Company, Western States Rendering Co., Pacific Meat Co., Clem Ponta Hog Ranch, B and B Hog Ranch, J and C Cervetto Hog Ranch, and Associated Meat Packers be cited to appear at a special meeting on June 24 to show cause, if any exists, why the order previously entered against said companies should not be immediately enforced.

#### REPORT ON NEW LEGISLATION

A memorandum prepared by the staff was distributed to the members outlining the new legislation relating to sanitation which had been passed by the 1955 Oregon Legislature. Some bills had not yet been signed by the Governor and so had not been given chapter numbers.

Mr. Quesseth stated that HB 49 relating to the procedures for administrative agencies was of concern to the Sanitary Authority. This law will require that each such state agency adopt formal rules describing the administrative procedures which it follows. Mr. Quesseth was instructed to put in writing the procedures used by the Authority.

#### TOLEDO, MOLALLA AND MT. ANGEL

In a discussion of these three cities it was reported that each of them has sewage treatment facilities under construction.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips and carried that Mr. Quesseth dismiss the cases against Toledo, Molalla and Mt. Angel.

There being no further business the meeting adjourned at 4:00 P.M.

Respectfully submitted

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

MINUTES OF THE SPECIAL MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY  
June 24, 1955

The special meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., June 24, 1955, in Room 36 State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M. D., Jim S. Whipple and B. A. McPhillips, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer; and Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers.

MINUTES:

The minutes of the Sixty-Third meeting having been distributed to the members in advance of the meeting were approved as prepared.

MARLENE VILLAGE SANITATION COMPANY CITATION HEARING

In response to citations which were sent by certified mail on June 10, 1955, the following persons were present to represent the Marlene Village Sanitation Company: Mr. R. R. Bullivant, attorney; Mr. Harry Mittleman, president; Mr. Stanton Abrams, property manager; and Mr. Delbert Hicks, sewage plant operator.

ABG763

A memorandum dated June 24, 1955, as prepared by the staff of the Authority in the matter of disposal of effluent from the sewerage system and sewage treatment works of the Marlene Village Sanitation Company in Washington County, Oregon, was presented to the Authority members and has since been made a part of the Authority's file in this case.

Mr. Bullivant speaking for the sanitation company stated that he had filed a motion for postponement of the hearing but had been informed by Mr. Quesseth in a letter dated June 17, 1955, that such a matter would have to come before the Authority members for their consideration. The reasons given by him for requesting postponement were as follows:

(1) He claimed that no official complaints or orders of this proceeding had been received by him until about 9 days prior to this meeting. (Early in May 1955 Mr. Mittleman's counsel had received copies of a report dated April 1955 and prepared by the Sanitary Authority staff of recent investigations of the sewerage system in question but it was claimed by Mr. Bullivant that Mr. Mittleman was out of the city at that time and therefore conferences could not be arranged to discuss said report.)

(2) Arrangements were reported to have been made by Mr. Mittleman or the sanitation company for an engineering study of the sewerage system. It was stated that such a study would take two to three months to complete and that when finished it would show what changes in operations and what major capital improvements, if any, would be required to provide at all times adequate sewage treatment. The company requested that the hearing not be held until this engineering study and report were completed.

Mr. Bullivant pointed out that in the April report made by the Sanitary Authority staff it was stated that the plant was not only being improperly operated and maintained but also was of inadequate capacity to handle the

peak flow of sewage. He stated that if it were merely a matter of improper maintenance the deficiencies could be readily corrected but if major capital improvements were required it would be necessary for the company to make its own detailed investigation.

Mr. Bullivant pointed out that the matter was further complicated by the fact that on June 27 a special election would be held in the area served by said sewerage system for formation of a sanitary district. The boundaries of the proposed sanitary district were said to be identical with those of the area now served by the Marlene Village Sanitation Company.

He stated that if the proposed sanitary district were organized and if major capital improvements are necessary, a point not conceded by the company, then there would be the problem of making satisfactory arrangements with the sanitary district for taking over the existing facilities, and that the results of the forthcoming election and the attitude of the supervisors of the proposed sanitary district would have to be considered before any final decision could be reached as to whether or not capital improvements should be made at the existing plant. In the opinion of the company the present threat to public health and serious nuisance conditions being caused are largely a matter of maintenance and not a matter of major capital improvements. It was claimed that the conditions which were criticized were for the most part only temporary in nature and were not typical of year around conditions. He said that if it were determined that full time maintenance of the plant is needed the company will make every effort to provide it.

Mr. Bullivant then discussed some of the specific criticisms which had been made by the Authority staff. In support of his statements he presented photographs which had been taken recently showing some of the same locations covered by the pictures in the April report of the

ABG763

Authority. It was stated that on several occasions unauthorized persons had opened up manholes and had jammed debris into the sewer system thereby causing stoppages. It was pointed out that such conditions

were not due to faulty operation and maintenance and could not be prevented by the company. It was claimed that since 1950 only 6 new customers had been added to the sewer system and therefore the company could not see how the system could now be serving more than its design capacity. Mr. Bullivant pointed out that the community is more or less dependent on the company's sewerage system for the handling of sewage and therefore if major improvements are necessary the company should have an opportunity to have a thorough engineering study made and if a sanitary district is organized it should be consulted regarding any changes that might have to be made in the system.

When asked as to what damages might be caused from a postponement of the hearing, the secretary stated that if the plant in the meantime were properly operated and maintained it should be possible to control within reasonable limits pollution of the receiving stream during the summer but that when the rainy season starts again next winter the plant will again be overloaded and serious pollution will be caused. Mr. Bullivant stated again that an engineer had been retained by the company to make a detailed study of the system and he assured the Authority that henceforth the Marlene Village Sanitation Company would do everything possible to operate the plant at peak efficiency and would follow suggestions regarding proper maintenance.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that the matter of disposal of effluent from the sewerage system and sewage treatment works of the Marlene Village Sanitation Company be continued for 60 days provided that the plant in the meantime will be properly operated and maintained, an engineering study will be completed, and a report of the latter will be submitted at the next meeting of the Authority.

COLUMBIA SLOUGH INDUSTRIES CITATION HEARINGS

Having failed to comply with the Sanitary Authority order of May 24, 1954, or to make satisfactory progress toward abatement of pollution caused in the public waters of Columbia Slough by the discharge therein of their industrial wastes the following seven companies had been cited to appear and show cause, if any existed, why said order should not be enforced.

Associated Meat Packers This company was represented by Mr. George W. Mead, attorney, who stated that the company's plant had recently been shut down but that if and when it was decided to reopen the plant the company would go ahead with its plans for connection to the city sewer. It was, therefore, decided by the Authority to defer action in this case.

B and B Hog Ranch Mr. J. W. Bigelow, owner, and Mr. Larry Supove, consulting engineer, were present to represent this company. Mr. Bigelow stated that he had instructed his engineer to prepare the necessary plans and specifications for connection to the Portland sewer system. Mr. Supove was unable to state how soon the plans could be finished but estimated that the construction could be completed within 2 months after the application had been approved by the city of Portland.

After a brief discussion of some of the difficulties involved in getting approval from the city it was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that the B and B Ranch have its plans prepared and submitted to and approved by the city and Sanitary Authority by not later than August 26, 1955, the date of the next Sanitary Authority meeting.

Clem Ponta Hog Ranch Mr. George W. Mead, attorney, represented this firm. He reported that the use of the lagoons had been discontinued, that fine screens had already been installed, and that engineering plans prepared by Mr. Supove, engineer, and the application for permission to connect to the Portland sewer system were completed and ready to file with the city.

ABG763

It was therefore MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the matter of the Clem Ponta Hog Ranch be continued until the next meeting of the Sanitary Authority.

J and C Cervetto Hog Ranch Mr. Cervetto, representing this company, reported that fine screens had been installed, plans and specifications for connection to the Portland sewer system had been prepared by Mr. Supove, and the application for a permit had been filed with the city.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the matter of the J and C Cervetto Hog Ranch be continued until the next meeting of the Sanitary Authority.

Pacific Meat Company Mr. H. Nelson, representing the Pacific Meat Company stated that his firm is not planning to connect to the Portland sewer system and that it is putting in its own treatment plant which should be completed within 15 days after the high water in the Columbia River has receded. The proposed plant will consist of fine screens and flotation. When asked if plans had been approved by the Authority for such a disposal system he stated that plans had not been submitted but that he had conferred with the Authority staff and had been told that there was no guarantee that the proposed system would work. He said his company desired to go ahead with the installation and then have it checked to see if it would do the job. Mr. Nelson stated that this type of plant is used successfully by some meat companies in California and so he thought it should work here.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that the matter of the Pacific Meat Company be continued until the next meeting of the Sanitary Authority.

Silver Falls Meat Company Mr. Charles C. Bryant was present to represent this company. He stated that they had decided to abandon their original plans to use subsurface disposal and now are intending to go in

with Western States Rendering Company and install a connection to the Portland sewer system. In subsequent discussion it was brought out that the latter company might not be agreeable to such an arrangement. It was also stated that Silver Falls Meat Company had thus far made no progress in preparation of engineering plans or submission of an application to the city of Portland. Mr. Bryant was, therefore, instructed to contact the city immediately, to employ a consulting engineer to prepare plans, and to make application to the city for the necessary permit.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the Silver Falls Packing Company have plans prepared by a consulting engineer and have the necessary application submitted to and approved by the city of Portland before the next meeting of the Authority at which time the hearing in this matter would be continued.

Western States Rendering Company Mr. George Mead and Mr. C. R. Pace represented this company whose plant is located adjacent to that of the Silver Falls Meat Company. It was reported that quite some time ago the company had a preliminary engineering study and report made, that since then they had installed a fine screen and additional grease skimming facilities, that samples of the effluent had been tested by the city of Portland, and that within the past few days an application for a permit to connect to the city sewerage system had been filed with the Bureau of Sewage and Refuse Disposal. Mr. Pace stated that his company would probably be agreeable to letting Silver Falls Packing Company lay a sewer in the same trench with them but he doubted that they would agree to the use of a joint line.

Because Western States had already taken steps toward abatement of its pollution it was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the matter of the Western States Rendering Company be continued until the next meeting of the Sanitary Authority.

ABG763

CITY OF RAINIER

At the previous meeting of the Authority the city of Rainier had been instructed to submit within 30 days a satisfactory fiscal program and construction schedule for its required sewage disposal project. A letter dated June 20, 1955, had been received from Mayor Glen Williams and it reported that the city council had authorized a special bond election for financing construction of said project. In view of this information it was agreed by the Authority members that the matter should be continued until the next meeting.

The next meeting was tentatively scheduled for Friday, August 26. There being no further business the meeting adjourned at 3:55 P.M.

Respectfully submitted

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

## MINUTES OF THE SIXTY-FOURTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

September 2, 1955

The sixty-fourth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 p.m., September 2, 1955, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; B. A. McPhillips, John C. Veatch, Lewis A. Stanley, Harold M. Erickson, M.D., and Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer; and Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers.

MINUTES:

The minutes of the Special Meeting having been distributed to the members in advance of the meeting were approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried that actions taken by the engineering staff on the following 79 project plans during May, June and July, 1955, be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
5-5-55	Willamina	Grade School	Not approved
5-5-55	Washington County	West Haven School	Not approved
5-5-55	Springfield	Sewer extensions	Prov. approval
5-6-55	Brookings	Prel. engineering report	Approved
5-6-55	Delake	Prel. engineering report	Approved
5-9-55	Corvallis	Garfield Grade School	Approved
5-9-55	West Linn	School Sewerage	Approved
5-10-55	Stanfield	High School Addition	Approved
5-10-55	Grant County	Union High School Addition	Prov. approval
5-11-55	Multnomah County	Rockwood School	Approved
5-11-55	Multnomah County	St. Joseph's School	Approved
5-11-55	Multnomah County	St. Therese School	Approved
5-12-55	Yamhill County	Yamhill School	Prov. approval
5-16-55	Multnomah County	Troutdale School	Approved
5-18-55	Tillamook County	East Grade School Addition	Approved
5-19-55	Linn County	Knox Butte School	Approved
5-20-55	Corvallis	Chapman hardboard mill waste disposal	Changes recommended
5-20-55	Washington County	Garden Home School	Permission granted
5-23-55	Washington County	Sunset Valley School	Not approved
5-23-55	Lane County	Colin Kelly Jr. High School	Approved
5-23-55	The Dalles	Sewer extensions	Prov. approval

ABG763

Date	Location	Project	Action
5-25-55	Rainier	Prel. engineering report	Approved
5-26-55	Harney County	Crane Union High School	Not approved
5-31-55	Eugene	River Road School	Approved
6-1-55	Maupin	Prel. engineering report	Approved
6-3-55	Newport	Sewer extensions	Prov. approval
6-6-55	Linn County	Oakville School sewerage	Not approved
6-8-55	Multnomah County	Corbett School sewerage	Approved
6-8-55	Washington County	West Haven School sewerage	Approved
6-9-55	Hillsboro	Prel. report urban fringe sewers	Action deferred
6-9-55	North Roseburg	Digester heating	Approved
6-10-55	Lincoln County	Beverly Beach State Park	Changes recommended
6-10-55	Pendleton	Plant alterations	No action required
6-10-55	Josephine County	Selma School sewerage	Approved
6-10-55	Josephine County	Fruitdale School sewerage	Approved
6-16-55	Wheeler County	Spray School sewerage	Not approved
6-17-55	Albany	Sewer extensions	Approved
6-17-55	Clackamas County	Oak Grove School sewerage	Not approved
6-20-55	Clackamas County	Oak Grove School revised	Approved
6-20-55	Washington County	Aloha-Huber School	Approved
6-21-55	Multnomah County	Glenfair School sewerage	Approved
6-23-55	Multnomah County	Bonneville School sewerage	Approved
6-23-55	Multnomah County	Orient School sewerage	Prov. approval
6-24-55	Deschutes County	Allen School sewerage	Not approved
6-24-55	Benton County	Western Pulp Products revised	Approved
6-27-55	Deschutes County	Tumalo State Park	Prov. approval
6-27-55	Lane County	Roosevelt School sewerage	Approved
6-29-55	Malheur County	Brogan School sewerage	Approved
6-30-55	Biggs Junction	RR Housing sewerage	Prov. approval

Date	Location	Project	Action
7-1-55	Josephine County	Illinois Valley School	Approved
7-1-55	Lincoln County	Toledo Grade School	Approved
7-5-55	Clackamas County	Sandy Jr. High School	Approved
7-6-55	Tillamook County	Rockaway School	Approved
7-6-55	Marion County	Central Howell School	Approved
7-12-55	Sheridan	Sheridan Novitiate	Not approved
7-13-55	Sheridan Novitiate	Sewage plant	Comments submitted
7-13-55	Washington County	Hemstreet Subd. proposed sewage plant design	Preliminary approval
7-13-55	Washington County	Hemstreet Subd. sewers	Prov. approval
7-14-55	Salem	Roseland Annex sewers	Approved
7-14-55	Forest Grove	Outfall sewer	Approved
7-14-55	Gresham	Sewer extensions	Approved
7-14-55	Tualatin Hills S.D.	Sewer extensions	Approved
7-20-55	Lane County	River Road school	Approved
7-22-55	Marion County	Candalaria School (revised)	Approved
7-22-55	Beaverton	Sewers	Prov. approval
7-22-55	Beaverton	Looking Glass Hill sewers	Not approved
7-27-55	Clackamas County	Damascus School	Approved
7-27-55	Hines	Sewer system	Approved
7-27-55	Hines	Lagoon and Pump station	Prov. approval
7-27-55	Springfield	Sewer extensions	Prov. approval
7-28-55	Multnomah County	Powell Valley School	Prov. approval
7-28-55	Myrtle Creek	Sewer extensions	Approved
7-28-55	Sheridan	Novitiate (revised)	Not approved
7-29-55	Oakridge	Sewer extensions	Prov. approval
7-29-55	Portland	Western States Rendering	Recommendations made

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
7-29-55	Portland	J & C Cervetto Hog Ranch	Recommendations made
7-29-55	Portland	Clem Ponta Hog Ranch	Recommendations made
7-29-55	Deschutes County	Allen Grade School	Approved
7-29-55	Washington County	Hemstreet Heights temporary plant	Prov. approval

MARLENE VILLAGE SANITATION COMPANY

The citation hearing in the matter of disposal of effluent from the sewerage system and sewage treatment works of the Marlene Village Sanitation Company was continued from the special meeting of June 24, 1955. Mr. Harry Mittleman, President; Messrs. R. R. Bullivant and Samuel B. Weinstein, attorneys; and Mr. Stanton Abrams were present to represent the company.

Mr. Dallas Carter, 12985 S.W. Butner Road, Beaverton; Mr. Roy D. Cook, 3335 N. E. Clackamas, Portland; Mrs. Floyd D. Cook, 3121 S.W. Evergreen Lane, Portland; Mrs. Gilbert E. Schuh, 13630 S.W. Butner, Beaverton; Mrs. Victor J. Hoffland, 13655 S.W. Butner, Beaverton; Mr. Frank B. Jedermu, 2939 S. E. Francis, Portland; Mr. L. K. Brisban, Sr., 560 S.W. Murray Rd., Beaverton; and Mr. C. R. Windolph, Walker Road, Beaverton, were present to complain of insanitary conditions existing downstream from the Marlene Village Sanitation Company sewerage works.

A MOTION FOR CONTINUANCE of the hearing dated August 31, 1955, which had been received from Mr. Weinstein and Mr. Bullivant, was read by the secretary. The motion stated that due to the illness of its consulting engineer, Mr. R. L. Tidball, the company was not prepared to present its case to the Authority. A letter signed by Dr. L. P. Lind confirming the illness of Mr. Tidball was submitted by Mr. Bullivant for the files of the Authority.

A 5-page memorandum dated September 2, 1955, was then submitted by Mr. Spies. This memorandum was made a part of the Authority's files in this matter. It supplemented the facts presented by the Authority's staff at the June 24 meeting and among other things contained a report on the findings of a survey of the Marlene Village sewage treatment works made by representatives of the Authority on August 23, 1955.

The report and survey by Mr. Spies showed that, contrary to the claims made by Mr. Bullivant, the Marlene Village Sanitation Company was not operating its sewage disposal system in an efficient or satisfactory manner, that gross pollution still existed in the receiving stream, and that as a consequence the company had not complied with the instructions issued to it by the Authority on June 24, 1955. It showed further that the company had also failed to carry out written instructions submitted to it by letter dated July 21, 1955, from the Authority staff covering special items of sewage plant operation and maintenance.

Several of the riparian property owners and residents listed above then described the nuisance and insanitary conditions caused in the waters of Cedar Mill Creek by the effluent from said sewerage system. They demanded that in spite of the inability of the company's engineer to complete his study the Sanitary Authority take immediate action to secure abatement of such conditions.

Mr. Verne W. Newcomb, attorney for the Sunset Valley Sanitary District, was also present at the meeting. He reported that the district includes all of the area served by the sewerage system in question but that because it had been in existence such a very short time (it was approved by the voters on June 27, 1955) its officers had as yet not been able to take any definite action in the matter although they had been invited to confer

ABG763

with the attorneys of the Marlene Village Sanitation Company. He stated that the district was fully aware of the problem and knew that the system was inadequate but that because no funds were available it had not been able to have a preliminary engineering survey or evaluation study costing an estimated \$1500 made.

At the suggestion of Mr. Quesseth it was MOVED by Mr. Veatch, seconded by Dr. Erickson, and carried that a 5-minute recess be held in order to discuss procedures to be followed in the matter of continuation of the hearing as requested by the company.

Following resumption of the hearing there was further discussion regarding the lack of proper plant operation and maintenance. The company representatives requested that staff members of the Authority again go over the operation of the plant with them for the purpose of explaining what needed to be done. The company again promised to do everything possible to operate the plant and sewer system in a satisfactory manner.

It was then MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried, that the hearing in said matter be continued for another 60 days subject to the following conditions:

- (1) Within that time the required engineering study shall be completed either by the consulting engineer now retained or if he is unable to act in that capacity by another engineer employed for that purpose;
- (2) The existing sewage disposal plant shall in the meantime be operated and maintained in accordance with instructions set forth by the Sanitary Authority; and
- (3) Reports covering the operation and performance of the existing sewage disposal plant shall be submitted each week to the Sanitary Authority.

COLUMBIA SLOUGH INDUSTRIES

Citation hearings in the matter of waste disposal by the following seven companies were continued from the special meeting of June 24, 1955:

- (1) Associated Meat Company, 8349 N. Vancouver Ave., Portland;
- (2) B and B Hog Ranch, 407 North Columbia Blvd., Portland;
- (3) Clem Ponta Hog Ranch, 511 North Columbia Blvd., Portland;
- (4) J and C Cervetto Hog Ranch, 331 North Columbia Blvd., Portland;
- (5) Pacific Meat Company, N. Columbia Blvd. and Burrage, Portland;
- (6) Silver Falls Meat Company, P.O. Box 26, North Portland; and
- (7) Western States Rendering Co., P.O. Box 5654, Kenton Station, Portland, Oreg.

Mr. E. F. Stockwell, 5534 N.E. Ainsworth, Portland, was present to represent Associated Meat Packers. The other six companies although notified had no representatives present at the meeting. Mr. Stockwell reported that operations had been resumed by Associated Meat Packers about the first of August and that the company was again under the management of Mr. Frank L. Smith. He said he understood that plans for waste disposal facilities had been prepared by the company's consulting engineer but that they had not yet been approved by the city of Portland. Mr. Spies then reported to the Authority that the plans which had been submitted were not complete and that the company had thus far failed to supply the necessary additional information.

In addition to the above companies consideration was also given to the matter of waste disposal into the waters of Columbia Slough by the following six industrial firms; (1) Armour and Company, (2) Brander Meat Company, (3) Kenton Packing Company, (4) Portland Provision Company, (5) Stearns and Welch, and (6) Portland Rendering Company.

Mr. O. A. Welch, 4319 N.E. Columbia Blvd., was present to represent Stearns and Welch Meat Company. He stated that the necessary equipment had been received for pretreatment of the wastes and that the contractor was to start installing it by not later than September 6, 1955. The other

ABG763

companies, although notified of the meeting, were not represented.

A 3-page memorandum dated September 1, 1955, regarding this subject was then submitted by the Authority staff. This memorandum presented the status of the various projects as follows:

- (1) Plans and specifications for connection to the Portland sewer system had been submitted but not approved for the following: (a) Associated Meat Co., (b) B and B Hog Ranch, (c) Clem Ponta Hog Ranch, (d) J and C Cervetto Hog Ranch, (e) Western States Rendering Co., (f) Armour and Co., (g) Kenton Packing Co., and (h) Portland Provision Co.
- (2) Plans and specifications for waste disposal facilities had been completed and approved but construction had not yet been started for (a) Brander Meat Company and (b) Stearns & Welch Meat Co.
- (3) Engineers were currently engaged in preparing plans and specifications for the Silver Falls Meat Company.
- (4) Portland Rendering Company had already installed waste treatment works.
- (5) Pacific Meat Company had submitted no information as to its plans since the previous meeting and no progress had been reported.

After reviewing the above facts it was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried, that the following 10 companies be notified that unless construction of their required waste disposal projects is underway within 60 days from the date of said notification it is the intention of the Sanitary Authority to request the Attorney General of the state of Oregon to institute appropriate legal proceedings to enforce the final order entered against them under the date of May 24, 1954: (1) Armour and Co., (2) Associated Meat Co., (3) Brander Meat Co., (4) Silver Falls Meat Company, (5) Kenton Packing Co., (6) Portland Provision Co., (7) B and B Hog Ranch, (8) Clem Ponta Hog Ranch, (9) J and C Cervetto Hog Ranch, and (10) Western States Rendering Co.

It was then MOVED by Mr. McPhillips, seconded by Mr. Stanley and carried that the matter of waste disposal by the Pacific Meat Company be referred to the Attorney General with the request that he institute injunction proceedings.

CITY OF CLATSKANIE

At the last regular meeting of the Authority on May 20 when a citation hearing was held the city of Clatskanie had been given an additional 90 days in which to complete its preliminary engineering study and report with the understanding that immediately thereafter a suitable fiscal and construction program would be adopted by the city council.

The secretary advised the Authority members that the city's consulting engineers had completed their preliminary study and that their report had been received by the Authority staff on September 1, 1955, but had not yet been reviewed.

The matter was therefore continued until the next quarterly meeting.

BROADMOOR

The secretary reported that the W. C. Bauman Construction Company had recently installed certain extensions to the Broadmoor sewerage system located in Washington County, Oregon, and that said construction was without the approval of the Authority. Plans and specifications for the project had been prepared by Tom Smithson, Consulting Engineer, but had not been submitted to the Authority prior to construction. Following installation of the sewer extensions and at the request of the Authority staff the plans were received from Mr. Bauman. It was reported further that the owner of said sewerage system had previously been notified that no extensions could be approved because of the overloaded condition of the Broadmoor sewage treatment plant during periods of heavy rainfall in the winter.

It was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried that said Broadmoor sewer extension plans be disapproved and that the owner be

ABG763

notified that if any pollution is caused he will be held fully responsible and immediate correction to the sewerage system or treatment works will be required.

#### MUNICIPAL PROGRESS REPORTS

Quarterly progress reports received from the cities of Rainier, Empire, Drain and Bandon were reviewed and accepted by the Authority.

#### NEBERGALL AND STEEN BROTHERS MEAT COMPANIES

A report was presented by the staff showing that these two meat packing companies located near Albany, Oregon, have made no definite progress toward abating the stream pollution caused by the discharge of their industrial wastes. The Albany municipal sewage treatment works were originally designed to serve both companies but because the latter are located outside of the city limits they have thus far not worked out any agreement with the city council for connection to the Albany sewerage system.

It was MOVED by Mr. Stanley, seconded by Mr. Veatch, and carried, that the Nebergall Meat Packing Company and the Steen Brothers Meat Packing Company of Albany be notified that final plans for waste disposal facilities must be completed within 60 days or a citation will be issued to them to show cause, if any exists, why pollution caused by the discharge of their industrial wastes should not be abated.

#### ATTENDANCE AT MEETINGS

At the request of Governor Patterson a letter was read by the secretary reminding all appointed members that they must attend all regular, adjourned or special meetings, unless prevented from doing so by illness, or forfeit their office.

#### COLUMBIA RIVER COMPACT

At the request of the Oregon State Commission on Interstate Cooperation the section of the proposed Columbia River Compact pertaining to water pollution

was brought to the attention of the Authority members by the secretary. After considerable discussion it was MOVED by Mr. Stanley, seconded by Mr. Veatch, and carried, that the section of the proposed compact pertaining to water pollution be considered satisfactory.

YAMHILL RIVER TURBIDITY

Mr. Boydston reported that during the past two summers excessive turbidity had been caused in the waters of the Yamhill River by the operations of the McKibben Sand and Gravel Company of Sheridan, Oregon. Numerous complaints had been received regarding the matter. The company had been notified by letters dated August 20, 1954, and August 8, 1955, that such conditions were in violation of state law and that therefore its operations would have to be so conducted that excessive turbidity would not be caused. Finally on August 29, 1955, the company reported that it had removed its operations from the stream and that it was no longer causing any pollution.

It was MOVED by Dr. Erickson, seconded by Mr. Veatch and carried, that the McKibben Sand and Gravel Company be notified that henceforth its operations will have to be diked off from the river or be otherwise so conducted that turbidity in the river will be prevented, or a citation will be issued to the company to appear before the Sanitary Authority to show cause, if any exists, why pollution caused by its operations should not be abated.

SWIFT AND CO. & PORTLAND STOCK YARDS

Following a discussion of the present status of the programs of these two companies to install facilities for abating the pollution caused in the waters of the Columbia River by their discharge of untreated wastes, it was MOVED by Mr. Veatch, seconded by Mr. Stanley, and carried that final engineering plans be submitted within 60 days by Swift and Company and the Portland Stock Yards or a citation will be issued to each company failing so to do

ABG763

requiring that it appear before the Sanitary Authority to show cause, if any exists, why pollution caused by its wastes should not be abated.

CANNON BEACH

Mr. Cuyler reported on the status of the program of the community of Cannon Beach to construct its urgently needed sewer system and sewage treatment works. The residents of this unincorporated community have set up several committees to study the sewage disposal problem. Funds were collected and a consulting engineering firm was employed to make a preliminary study and cost estimate. According to the findings of the consulting engineers the only way in which the required project can be financed is by incorporating as a municipality. A committee has therefore been organized to promote incorporation and the Authority has been requested to have a representative present at a public hearing on September 7, 1955.

After considerable discussion it was concluded by the Authority that the community should take immediate action to abate the pollution and insanitary conditions caused by the lack of adequate sewage disposal facilities.

It was MOVED by Mr. Stanley, seconded by Mr. Veatch, and carried, that the following resolution be adopted:

- WHEREAS: Inadequately treated sewage and other wastes from the community of Cannon Beach are being discharged onto the surface of the ground and into small streams flowing across the beach, and
- WHEREAS: This unlawful discharge is causing pollution of the streams and a hazard to the health of the public, and
- WHEREAS: The only permanent correction for this problem is the installation of a community sewerage system, and
- WHEREAS: There is no existing corporate entity with statutory power to finance the construction of such a system, and
- WHEREAS: It does not appear that a sanitary district in the area would be able to provide the sewers and sewage treatment facilities required, now, therefore, be it

RESOLVED: That the Sanitary Authority of the State of Oregon hereby endorses and encourages incorporation of the area as a city, and be it further

RESOLVED: That unless immediate steps are taken to correct the serious stream pollution and health hazards which exist it is the intention of this Authority to take appropriate action to close those portions of the beach where such contamination exists.

GOVERNMENT CAMP

Mr. Cuyler next reported on the status of the Government Camp Sanitary District. Although the 1955 Legislature adopted a special act for the purpose of purchasing bonds from said district, the Government Camp Sanitary District since that time has made no definite progress. A question has been raised regarding the legality of the present board because in 1954 no election was held to replace the member whose term expired in January 1955. In the meantime the Clackamas County Court has appointed a new member. After some discussion of this point it was concluded that Mr. Quesseth should obtain an opinion from the Attorney General regarding the legality of the present board.

Following more discussion of the urgent need for a public sewerage system in the district the following resolution was presented by Mr. Wendel and was approved by the Authority members:

WHEREAS: Because of the lack of financing it has been impossible for the property owners of the community of Government Camp to install adequate sewage disposal facilities, thus constraining the Sanitary Authority for the past several years from taking action against said property owners; and

WHEREAS: By a special act of the 1955 Legislative Assembly of the State of Oregon funds were made available for the purchase of bonds to be issued by said community for financing the construction of a public sewerage system; and

WHEREAS: It has come to the attention of the Sanitary Authority that notwithstanding the fact that such funds have been made available, the Government Camp Sanitary District has as yet taken no steps to obtain them or to proceed with said sewerage project; now, therefore, be it

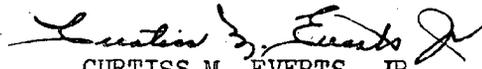

ABG763

RESOLVED: That, unless the said Government Camp Sanitary District without further delay takes the necessary steps to finance construction of its sewerage project, the Sanitary Authority of the State of Oregon will use every means at its command to obtain abatement of the pollution being caused by said community, and be it further

RESOLVED: That the Sanitary Authority will, if necessary, seek to enjoin businesses and residences alike from the use of their premises.

The next meeting of the Authority was tentatively scheduled for Friday, December 2, 1955. There being no further business the meeting adjourned.

Respectfully submitted

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

MINUTES OF THE SIXTY-FIFTH MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY  
December 2, 1955

The sixty-fifth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:10 p.m., December 2, 1955, in Room 720, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; B. A. McPhillips, John C. Veatch, Lewis A. Stanley, and Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Queseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer, Harold M. Patterson and Harold W. Merryman, District Engineers; Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers; and Donald J. Benson, Assistant Sanitary Engineer.

MINUTES:

The minutes of the sixty-fourth meeting having been distributed to the members in advance of the meeting were approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried, that actions taken by the engineering staff on the following 71 project plans during August, September and October be approved:

Date	Location	Project	Action
8-1-55	Milo	Sewage treatment plant	Prov. approval
8-1-55	Springfield	Prel. report on suburban sewage disposal	Approved
8-2-55	Celilo Falls	Sewage Disposal	Prov. approval
8-2-55	Burns	Prel. reports on sewerage system improvements	Approved
8-2-55	Prairie City	Preliminary report	Comments submitted
8-2-55	Portland	Northeast High School	Approved
8-3-55	Douglas County	Prel. report for Green San. Dist.	None required
8-3-55	Philomath	Sewer extensions	Approved
8-4-55	Sheridan	Novitiate sewage plant	Prov. approval
8-4-55	Harrisburg	High School sewerage	Approved
8-4-55	South Bear Creek Sanitary District	Sewer system	Not approved
8-5-55	Clackamas County	Holcomb School sewerage	Permission granted
8-9-55	Umatilla County	Central Grade School	Approved
8-9-55	Umatilla County	McLoughlin Union High School	Approved
8-9-55	Union County	Cove Grade School	Cond. approval
8-15-55	Sweet Home	High School sewerage	Approved
8-15-55	Metolius	Grade School sewerage	Approved
8-15-55	Woodburn	School sewerage	Approved
8-15-55	Government Camp	Boy Scout Lodge sewerage	Not approved
8-15-55	Multnomah County	Lynch School sewerage	Approved

ABG763

Date	Location	Project	Action
8-15-55	Roseburg	Hucrest Grade school sewerage	Not approved
8-17-55	Lane County	Willagillespie school sewerage	Approved
8-18-55	Chemawa	Sewage plant improvements	Not approved
8-19-55	Roseburg	Sewer extensions	Prov. approval
8-19-55	Drain	Pump station	Prov. approval
8-22-55	Lebanon	Sewer extensions	Not approved
8-22-55	Sweet Home	Sewer extensions	Prov. approval
8-22-55	Springfield	Sewer extensions	Approved
8-22-55	North Bend	High School sewerage	Approved
8-23-55	Lane County	Crow-Applegate High School	Approved
8-24-55	Forest Grove	Sewer extensions	Approved
8-25-55	South Bear Creek Sanitary District	Sewer system	Approved
8-26-55	Springfield	Elizabeth Page Grade School	Approved
8-26-55	Broadmoor	Sewer extensions	Deferred
8-26-55	Lake County	Fort Rock Elementary School	Approved
8-26-55	Central Point	Grade School sewerage	Approved
8-26-55	Gold Hill	Grade School sewerage	Approved
8-29-55	Wallowa County	Joseph Agricultural Bldg.	Cond. approval
8-30-55	Wheeler County	Spray Grade school	Not approved
8-31-55	Sutherlin	Sewage treatment plant	Deferred
9-1-55	Southwood Park	Revised plant location	Approved
9-1-55	Sutherlin	Pump station	Cond. approval
9-7-55	Sutherlin	Sewage treatment plant	Prov. approval
9-7-55	Troutdale	Bissinger Co. Industrial waste treatment plant	Prov. approval
9-8-55	Jackson County	Lone Pine School sewerage	Approved
9-12-55	Corvallis	Sewer extensions	Approved

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
9-12-55	Corvallis	Sewer extension No. 28	Not approved
9-13-55	The Dalles	Sewer extensions	Prov. approval
9-16-55	Douglas County	Hu-Crest School sewerage	Not approved
9-20-55	Hermiston	Sewer extensions	Approved
9-23-55	Klamath Falls	Sewer extensions	Not approved
9-23-55	Powers	High school sewerage	Approved
9-26-55	Toledo	Sewer extensions	Prov. approval
9-26-55	Oswego	Trunk sewer	Approved
9-26-55	Washington County	Bohman Tract sewerage	Not approved
9-27-55	Reedsport	Proposed pulp mill waste disposal	Deferred
9-28-55	Columbia San. Dist.	Sewage treatment plant	Cond. approval
10-4-55	Eagle Point	Grade school sewerage	Approved
10-5-55	Lane County	Bethel Junior High School	Comments submitted
10-5-55	Clatskanie	Preliminary Engineering Report	Comments submitted
10-6-55	Nehalem	School sewerage	Approved
10-10-55	Portland	Vermont Hills, Gabriel Park and Cambridge Village pump stations	Not approved
10-13-55	Sandy	High school sewerage	Approved
10-13-55	Multnomah County	Holbrook school sewerage	Approved
10-13-55	Scappoose	School sewerage	Approved
10-13-55	Multnomah County	Gilbert school sewerage	Approved
10-19-55	Klamath Falls	Sewer extensions	Prov. approval
10-20-55	Reedsport	Proposed pulp mill site & waste disposal	Comments submitted
10-21-55	Marion County	Lyons school sewerage	Approved
10-25-55	Portland	S. W. Logan St. pump station	Deferred
10-31-55	John Day	Grade school sewerage	Prov. approval

ARG763

MARLENE VILLAGE SANITATION COMPANY CITATION HEARING

The matter of sewage disposal by the Marlene Village Sanitation Company having been continued from the special meeting of June 24, 1955, and the regular meeting of September 2, 1955, came on for final hearing at this meeting. A complete record of the proceedings and the testimony given was made by a court reporter.

The persons present to represent the Marlene Village Sanitation Company included Mr. Harry Mittleman, President; Mr. R. R. Bullivant and Mr. S. B. Weinstein, Attorneys; Mr. R. L. Tidball, Consulting Engineer; Mr. David E. Painter, sewage plant operator; Mr. John J. Simon, Northwest Testing Laboratories; and Mr. Stanton Abrams. The Sunset Valley Sanitary District was represented by Mr. L. D. Barre, Chairman, Mr. F. S. Zeidlhack, Engineer; and Mr. V. W. Newcomb, Attorney.

Other persons present included Mr. and Mrs. G. E. Schuh, 13630 S. W. Butner Road; Mr. and Mrs. Floyd D. Cook, 13655 S. W. Butner Road, Beaverton; Inez A. Dimbler, 13606 N. W. Milburn, Portland; and Dr. Carl F. Tarlowski, T. W. Christiansen, and Glen W. Snyder of the Washington County Health Department.

At the request of Mr. Bullivant all witnesses were sworn in by Mr. Cecil H. Quesseth, Special Assistant Attorney General, with the exception of Mr. Mittleman who was sworn in by Mr. Veatch.

The first witness called by Mr. Bullivant was Mr. Tidball. In connection with the testimony of Mr. Tidball the following Respondent's exhibits were introduced:

No. 1 Copy of "Report on the Sewage System Owned and Operated by the Marlene Village Sanitation Company"; dated October 29, 1955, and written by Mr. Tidball.

- No. 2 A set of plans prepared by Mr. A. H. Mayne, Consulting Engineer, and consisting of sheets 1, 2, 3, 4, 5, and 7, showing the design of said sewage treatment plant.
- No. 3 A photostatic copy of a map showing the area served by said sewerage system.
- No. 4 A report entitled "Sewage System Evaluation for the Marlene Village Sanitation Company", dated October 1, 1955, and prepared by Mr. Tidball.
- No. 5 Copies of reports made by Northwest Testing Laboratories covering analyses of 26 samples of raw sewage and sewage plant effluent submitted by the Marlene Village Sanitation Company during the period September 29 to October 29, 1955, inclusive.
- No. 6 Copies of reports made by said laboratories of samples collected from said sewerage system during the period October 31 to November 23, 1955, inclusive.
- No. 7 Table of rainfall data giving the total monthly rainfall in the vicinity of Marlene Village for the Months of January, February, March, September, October and November for the years 1950 to 1955, inclusive.
- No. 8 Table of rainfall data showing the greatest rainfall in one day (24-hour period) for the same months.
- No. 9 The Sanitary Authority letter dated November 25, 1955, and addressed to Mr. R. R. Bullivant.

Mr. Tidball testified that he had been employed beginning the early part of July, 1955, by the Marlene Village Sanitation Company for the purpose of making a study of said sewerage system and that the reports listed above as Respondent's Exhibits 1 and 4 were based on the findings of the study which he had made. He testified further that in his opinion the present

ABG763

sewage disposal system, provided his prescribed maintenance and operation schedule is meticulously and conscientiously followed, will handle the normal domestic sewage flow; that in his opinion the excess flow during periods of heavy rainfall is caused by direct and unauthorized surface run-off and roof drainage connections with only a small proportion being ground water infiltration; that in order to handle the peak flow of sewage which occurs during heavy rainfall the existing plant would have to be enlarged 3 or 4 times its present size; that the cost of making such an enlargement would probably be 3 or 4 times the value of the present plant; that said excessive flows in the sewerage system with resultant overflow of raw sewage into the receiving stream or onto the ground surface can be expected to occur about 8 to 12 times each year or that as a consequence stream pollution and insanitary conditions can be expected for about 20 days each year; and that the existing sewage plant is capable of serving a population of 1700 persons and of handling a daily sewage flow of 145,000 gallons. The latter statement was submitted in response to a question from the Chairman. Also in response to questioning he stated that he did not think that the creation of stream pollution or insanitary conditions for a period of 20 days each year could be considered as acceptable.

The second witness called by Mr. Bullivant was Mr. Harry Mittleman and in connection with his testimony Respondent's Exhibits 10, 11 and 12 were introduced. Exhibit 10 is a table of the total number of connections to the Marlene Village sewerage system per street for the period 1951 to 1955, inclusive. Exhibit 11 is a copy of the recorded restrictions for the development and use of the property in Marlene Village Plat No. 2, Blocks 6 to 12, inclusive. Section C-13 of these restrictions prohibits the use

of cesspools and septic tanks. Exhibit 12 is a copy of a recorded declaration by the Marlene Village Sanitation Company regarding the charges to be made for providing sewer service and also regarding conditions for discontinuance of such service.

Following the testimony of Mr. Mittleman, Mr. Bullivant stated that it was the contention of the Marlene Village Sanitation Company that its present sewage disposal works are adequate to handle the normal sewage flow from the existing connections, that the excess flows which can not be handled satisfactorily by said sewers and sewage treatment works are caused by unauthorized roof, foundation and other drains which discharge into said facilities, that the Respondent being a private company does not have authority to make inspections on the property of others and therefore can not determine the existence, location or extent of such alleged illegal drain connections, and that the cost of enlarging the existing sewerage facilities to handle the peak flows satisfactorily would be excessive. He stated further that for the purpose of solving this problem the Marlene Village Sanitation Company would request that the staff of the State Sanitary Authority make such study as might be necessary to locate the unauthorized connections so that steps could be taken to have them removed. Testimony by Mr. Everts and Mr. Boydston had disclosed the fact that the Sanitary Authority staff did not make such a study in connection with the comprehensive investigation of the sewerage system which was conducted during January and February of 1955.

Following the conclusion of testimony by the Respondent, Mr. Quesseth introduced the following exhibits for the Authority:

- No. 1 Copy of "Report on an Investigation of the Cedar Mill Park Sewerage System" dated April 1955 and prepared by the Oregon State Sanitary Authority.

- No. 2 Memorandum pertaining to said matter prepared by the staff of the Authority and dated June 24, 1946.
- No. 3 Memorandum pertaining to said matter prepared by the staff of the Authority and dated September 2, 1955.
- No. 4 Memorandum pertaining to said matter prepared by the staff of the Authority and dated December 1, 1955.

The hearing in the matter of disposal of effluent from the sewerage system and sewage treatment works of the Marlene Village Sanitation Company was then declared closed and December 16, 1955, was set as the date for the review of the facts and for action by the Authority.

CITY OF BROOKINGS

Mr. Spies reported that in a letter dated November 28, 1955, from Cornell, Howland, Hayes and Merryfield, Consulting Engineers, a request in behalf of the city of Brookings was submitted to the Authority for permission to install a temporary outfall for the discharge of raw sewage into the Pacific Ocean from certain residential developments located in the southeast section of the city. The letter also outlined a proposed fiscal program and construction schedule for the installation of the other required trunk sewers, pumping stations and sewage treatment works, the preliminary design of which had been presented by the engineers in their report of April 1955. According to the proposed program the entire project would be completed by January 1, 1961.

Mr. Spies reported further that on November 30, 1955, a second request was received by telephone from the city's engineers for permission to discharge raw sewage into the Chetco River for a period of two or three months from the Woodland Park Addition because new homes have recently been completed in that area and it will take from two to three months to install

the trunk sewer and temporary outfall to the Pacific Ocean referred in the letter of November 28.

After a discussion of the facts involved in this matter it was concluded by the Authority members that the request for a temporary permit to discharge raw sewage into the Chetco River even for a period of only two or three months must be denied. It was concluded further that the other request for permission to install a new and temporary outfall sewer into the Pacific Ocean should be deferred until more information or definite plans had been submitted and until the Authority staff had an opportunity to study the problem more in detail.

CITY OF ROSEBURG

The secretary informed the Authority members that on Thursday, December 8, 1955, the city of Roseburg was holding a special election for the approval of a \$1,100,000 general obligation bond issue for the purpose of financing construction of urgently needed trunk and interceptor sewers and new sewage treatment works to serve the Roseburg metropolitan area. After discussing the facts involved in the matter it was MOVED by Mr. Whipple, seconded by Mr. McPhillips and carried that the following resolution be adopted and a copy be sent to the city council:

RESOLUTION

- WHEREAS: During the past few years there has been a great increase in population and a consequent development of extensive residential and commercial areas within and immediately adjacent to the city of Roseburg, Oregon; and
- WHEREAS: Because of the lack of adequate sewage disposal facilities in certain of said areas, serious nuisance conditions, public health hazards, and water pollution have been created; and
- WHEREAS: Because of the extremely unfavorable soil and drainage conditions which prevail in these areas, it is not possible to dispose of sewage and other water-carried wastes by means of individual subsurface systems; and

WHEREAS: The only satisfactory and practical way to correct said nuisance conditions, public health hazards, and water pollution is by the installation of public sewers and sewage disposal; and

WHEREAS: The city of Roseburg has had a comprehensive engineering study made and preliminary plans prepared for an approved system of sewage collection and disposal for these areas, including trunk and interceptor sewers, extensions to the existing municipal sewerage system, and a new sewage treatment plant; and

WHEREAS: It is considered necessary and essential for the general welfare of the community and for the protection of public health that the proposed sewerage project be constructed as soon as possible;

NOW, THEREFORE, be it

RESOLVED: That the Sanitary Authority of the State of Oregon hereby endorses and encourages approval by the voters of the bond issue being submitted to them by the Roseburg City Council at the special election on Thursday, December 8, 1955, said bond issue being for the purpose of financing the construction of said sewerage project.

#### COLUMBIA SLOUGH INDUSTRIES

Mr. Quesseth gave a report on the status of the complaint which had been filed by the Authority against the Pacific Meat Company.

Mr. Boydston submitted a memorandum dated December 1, 1955, covering the present status of the waste disposal projects for ten other Columbia Slough industries. It was reported that one of them, the B and B Hog Ranch, had gone out of business on September 16 and has no plans to resume operation. After reviewing the information contained in said memorandum it was concluded that, although the following 8 companies had not complied fully with the instructions given them at the September 2, 1955, meeting, the progress which they had made was sufficient to permit continuance of the matter until the next meeting on December 16, 1955: (1) Armour and Company, (2) Brander Meat Company, (3) Clem Ponta Hog Ranch, (4) J & C Cervetto Company, (5) Kenton Packing Company, (6) Portland Provision Company, (7) Silver Falls Meat Company and (8) Western States Rendering Company.

Because the Associated Meat Company had made no progress since the last meeting of the Authority, it was MOVED by Mr. McPhillips, seconded by Mr. Stanley and carried that the Attorney General be requested to institute proceedings against said company for failure to abate pollution caused in the public waters of Columbia Slough.

PERSONNEL

Mr. Don Benson, Assistant Sanitary Engineer, who had resumed his duties on the staff of the Authority in September following two years of military service, was introduced to the Authority members. Mr. Benson had previously been employed for about two months during the summer of 1953 before being called to military duty.

All other items on the agenda were deferred until the next meeting which was set for December 16, 1955.

The meeting adjourned at 5:35 p.m.

Respectfully submitted

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

MINUTES OF THE SPECIAL MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

December 16, 1955

The special meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:10 p.m., December 16, 1955, in Room 579, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; B. A. McPhillips, Lewis A. Stanley, Harold Mr. Erickson, M.D., and

Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer; Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers; and Donald J. Benson, Assistant Sanitary Engineer.

MINUTES:

The reading of the minutes of the December 2, 1955, meeting was dispensed with and they were accepted as prepared by the secretary.

MARLENE VILLAGE SANITATION COMPANY:

Following the public hearing held by the Authority on December 2, 1955, in the matter of sewage disposal by the Marlene Village Sanitation Company, a PETITION FOR INVESTIGATION, dated December 5, 1955, had been submitted by said Company to the Authority petitioning the Authority to investigate certain alleged unauthorized connections to the sewerage system of said company. The petition was based on the ground that the Company asserts that any stream pollution which may exist is caused by said alleged unauthorized connections.

It having previously been held in an opinion of the Attorney General (Opinion of the Attorney General, 1948-50, Page 344) that the power of the Sanitary Authority as stipulated in ORS 449.030 to conduct studies, investigations, and research is a directory rather than a mandatory provision, it was MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried - that said petition be denied.

Having given full consideration and study to the statements and evidence submitted by all interested parties at the public hearing on December 2, 1955, and having studied and considered the reports and investigations made by its engineers in the matter, it was MOVED by Mr. Whipple, seconded by Mr. McPhillips and carried - that the Findings of Fact in said matter be adopted. A true copy of said Findings of Fact is attached to and made a part of these minutes.

It was then MOVED by Mr. McPhillips and seconded by Mr. Stanley that the following Order be entered:

1. That the Marlene Village Sanitation Company, its officials, agents, and employees shall cease and desist polluting the public waters of Cedar Mill Creek, a tributary of Beaverton Creek, and of other public waters in the Tualatin River Basin of the State of Oregon by proceeding immediately to
  - (a) Provide adequate capacity at the McLain Village lift station for handling the maximum flow of wastes collected by all sewers tributary to said station; remove completely the existing overflow line from said station to prevent the discharge of raw sewage into the storm sewer which empties into the drainage way along Pioneer Road; and increase the capacity of the gravity sewer line receiving the discharge from said station to prevent the surcharging of said sewer line and the overflow of raw sewage through house plumbing systems connected to it; and
  - (b) Provide adequate facilities for the treatment and disposal of all waste waters collected by the Marlene Village sewerage system.
2. That plans and specifications for all such improvements shall be prepared by a registered engineer and shall be submitted to this Authority for review and approval by not later than March 30, 1956.
3. That construction of said improvements shall be completed by not later than December 31, 1956.
4. That until the improved facilities are in operation the existing sewerage works shall be operated and maintained at the greatest possible efficiency and under the supervision of a full-time operator.

5. That monthly reports of progress being made in the planning and construction of said improvements shall be submitted to this Authority by the Marlene Village Sanitation Company on or before February 1, 1956, and on or before the first of each month thereafter.
6. That in the event said progress reports are not submitted by the time prescribed in paragraph 5 hereof, or indicate that the progress being made is not sufficient to permit meeting the deadlines prescribed in paragraphs 2 and 3 hereof, the matter shall immediately be referred to the Attorney General of the State of Oregon for appropriate action.
7. That at no time shall additional connections to said sewerage system be made without the approval of this Authority.
8. That the Secretary of the Authority be and hereby is directed to serve a certified true copy of this order, together with the findings of fact pertaining to such matter upon the Marlene Village Sanitation Company.

Mr. R. R. Bullivant, Attorney, who was present to represent the Marlene Village Sanitation Company then moved that the effective date of the order be postponed until he and his client had had an opportunity to study the Findings of Fact and Order and to enter any exceptions considered necessary. The motion of Mr. Bullivant was denied.

The motion to adopt said Order was carried.

COLUMBIA SLOUGH INDUSTRIES:

Mr. Boydston submitted the following report on the status of the waste disposal projects for the various Columbia Slough industries:

- (a) B and B Hog Ranch had gone out of business.

- (b) Court action had been instituted against Pacific Meat Company and Associated Meat Company because of their failure to proceed with their required waste disposal projects.
- (c) Of the remaining eight plants that are planning to connect to the Portland interceptor sewer system, only one firm (Armour & Co.) had signed a contract with the city of Portland. Four other firms (Clem Ponta Hog Ranch, J & C Cervetto Co., Kenton Packing Co., and Portland Provision Co.) had completed their engineering plans and had had them approved by both the city and the Sanitary Authority. Final plans for the other firms were nearing completion and contracts had been forwarded to five of the companies by the city.

Mr. Pace was present at the meeting to represent Western States Rendering. None of the other companies was represented.

It was MOVED by Mr. McPhillips, seconded by Mr. Whipple, and carried - that the Chairman of the Authority be authorized to ask the Attorney General to institute legal proceedings against any one of the companies should they fail to have engineering plans approved, a contract signed with the city, and construction started or under contract by February 1, 1956.

MISCELLANEOUS INDUSTRIES:

Mr. Boydston presented reports on the status of the waste disposal projects for Swift & Company, D. E. Nebergall Meat Company, Steen Brothers Meat Company, and Portland Union Stock Yards. Final engineering plans for the former company had been prepared and required only minor changes or additions before they could be approved by the Authority. Consulting engineers had been retained by the other three firms and preparation of plans was underway.

Because it appeared that reasonable and satisfactory progress was being made by each company, no further action in this matter was taken by the Authority at this meeting.

KLAMATH BASIN COMPACT:

In response to a request which had been received from the Klamath River Commissions of the States of Oregon and California for comments on the document entitled "Draft of the 'Klamath River Basin' Compact Between the States of Oregon and California" and dated October 19, 1955, consideration was given to Article VIII of said document pertaining to the subject of pollution control.

After considerable discussion it was MOVED by Dr. Erickson, seconded by Mr. McPhillips, and carried - that the Sanitary Authority recommend that paragraph B-1 of Article VIII, authorizing said proposed commission to make studies, prepare reports, etc., be deleted from the Compact and that a statement be added to said Article to the effect that "nothing in this Compact shall be construed to prevent action in federal court by one state against the other in order to abate or control pollution originating in the latter state."

Mr. Stanley agreed to bring this motion to the attention of the Klamath River Commissions of the two states.

UMPQUA RIVER BASIN:

A letter dated October 18, 1955, which had been received from Mr. John P. Amacher, Chairman of the Douglas County Park Board, was read by the secretary. The letter was also signed by the three members of the Douglas County Court. It requested that the Sanitary Authority do everything within its power to prevent pollution of the public waters of the Umpqua River Basin by industrial wastes and that the natural purity of said waters be preserved to the greatest possible extent for protection of fishing and other recreational uses.

Dr. Erickson stated that he had received a request from Mr. Hickerson, Secretary of the Roseburg Chamber of Commerce, for information regarding the

amount of spent sulphite liquor that could be discharged into the Umpqua River without causing pollution.

Mr. Stanley stated that valuable information regarding tidal effects in the lower Umpqua River could probably be obtained from the Corps of Engineers.

It was agreed by the members that any pulp mills located on the Umpqua River should be required to provide adequate waste treatment or disposal facilities so as to prevent any detrimental effects on the existing fishery and recreational uses of said waters.

YAQUINA BAY:

It was reported that no definite information had as yet been received from the Georgia-Pacific Plywood Company regarding the plans of said company for construction of a pulp mill at Toledo, Oregon. The secretary stated that the company had been advised of the requirements for stream pollution control and that representatives of the company had indicated that they would get the approval of the State Sanitary Authority before proceeding with the project which recently had been given considerable publicity in the local newspapers.

GOVERNMENT CAMP:

Mr. Cuyler reported that at a special election on December 5, 1955, the residents of Government Camp Sanitary District by a vote of 31 to 0, out of a possible 35 votes, approved a \$60,000 bond issue for financing construction of a sewerage project. He reported further, however, that a new situation has developed because plans are being prepared by the U. S. Bureau of Public Roads to relocate the highway in the vicinity of Government Camp. The residents are, therefore, concerned about the effect upon the future economic conditions of the present developments.

After a discussion of this matter it was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried - that the following resolution be adopted:

- WHEREAS:** The Bureau of Public Roads of the United States Department of Interior has prepared plans for a new highway which will be located in the vicinity of and yet by-pass Government Camp, Oregon; and
- WHEREAS:** It is expected that certain properties along this new highway may be improved for commercial or domestic purposes; and
- WHEREAS:** The State Sanitary Authority and the State Board of Health have found the Government Camp Area to be an area in which adequate disposal of sewage and septic tank effluent presents a critical problem of public health and water pollution control; and
- WHEREAS:** There is no known individual sewage disposal system which is feasible and economical which could be constructed in this area; and
- WHEREAS:** It is understood that the State Highway Department and the United States Forest Service will have control of access facilities and property along this new highway; now, therefore, be it
- RESOLVED:** That the State Sanitary Authority requests the State Highway Department and the United States Forest Service to permit no building along this highway, insofar as their prescribed powers and regulations will allow, unless such proposed buildings or facilities are served by an approved community sewage collection system and treatment plant; and be it further
- RESOLVED:** That the construction of any new individual sewage disposal facilities to serve existing or future buildings anywhere in the vicinity of Government Camp be prohibited unless approved by the State Board of Health and State Sanitary Authority insofar as their powers and the rules and regulations will permit; and be it further
- RESOLVED:** That copies of this resolution be forwarded to all interested agencies, and a copy be spread on the minutes of the December 16th meeting of the Authority.

MAUPIN

The secretary reported that the city of Maupin had encountered difficulty in financing its sewage disposal project. A letter had been received from Governor Patterson who expressed concern about the situation and who had

requested that the Sanitary Authority give any assistance possible in working out a solution to this problem. The city had not voted any bonds as yet but reportedly had been advised by bonding authorities that it would not be possible to sell enough bonds to finance the proposed project.

HOOD RIVER

The secretary read a letter from Mr. Hal Puddy, Hood River City Engineer, explaining why the city had failed to abate the pollution of Indian Creek during 1955 although ordered to do so by the Sanitary Authority on February 25, 1955.

The secretary was instructed to send a letter to the city advising the council that the reasons given for the delay were not considered justifiable and that the city would be expected to proceed immediately with the required sewage disposal project and to complete the same before the end of 1956.

CLATSKANIE

The secretary reported that at the May 1955 meeting of the Authority a citation hearing had been held in the matter of sewage disposal by the city of Clatskanie and that the city had been given 90 days to complete its preliminary engineering report with the understanding that immediately thereafter a suitable fiscal and construction program would be adopted by said city. He reported further that at the Authority meeting on September 2, 1955, the matter had been continued until the following meeting because the city's preliminary engineering report had just been completed and the Authority staff had not had time to review it; that on October 5, 1955, the preliminary report had been reviewed and disapproved by the Authority staff; that on December 6, revisions were received; and that on December 7, the revised preliminary engineering report had been approved.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried - that the city be given another 30 days in which to develop a fiscal program and construction schedule meeting the approval of the Sanitary Authority and that if

AB9703

such progress is not made by the city, the matter will be referred to the Attorney General.

PROGRESS REPORTS

Quarterly progress reports received from the cities of Drain, Bandon, and Empire were read and accepted.

Dr. Erickson reported that the city of Prairie City had recently approved a \$150,000 bond issue to finance construction of an urgently needed sewer system and sewage treatment plant. Mr. Cuyler then informed the members that on December 9 the voters of Cannon Beach had approved the formation of a municipal corporation for the primary purpose of installing a public sewerage system. It was suggested by Mr. Stanley that the secretary be instructed to send communications to both of these communities commending them for their action.

COMMUNICATIONS:

For the information of the members, the secretary read a letter dated December 8 which had been received from State Senator Warren A. McMinimee of Tillamook, Chairman of the Roads and Highways Interim Committee, complaining about the requirements of the Sanitary Authority for controlling stream pollution caused by sand and gravel mining. He requested a complete report on the matter, intimating that said requirements would interfere with the highway construction program.

A letter from the city of Roseburg thanking the Authority for assistance given in connection with a recent bond election was also read by the secretary.

The next meeting of the Sanitary Authority was set for Friday, March 16, 1956.

There being no further business the meeting adjourned at 3:45 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

## MINUTES OF THE SIXTY-SIXTH MEETING

OF THE

## OREGON STATE SANITARY AUTHORITY

April 6, 1956

The sixty-sixth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:10 p.m., April 6, 1956, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; B. A. McPhillips, Harold M. Erickson, M.D., John C. Veatch, Lewis A. Stanley, and Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Deputy State Sanitary Engineer; Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers; and Donald J. Benson, Assistant Sanitary Engineer.

MINUTES:

The minutes of the December 16, 1955, special meeting of the Sanitary Authority having been distributed to the members in advance of the meeting were approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that actions taken by the engineering staff on the following 77 project plans during November, December, 1955, and January, February, 1956, be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
11-1-55	The Dalles	The Dalles Dam sewerage	None required
11-1-55	Sheridan	Sheridan Novitiate	Prov. approval
11-4-55	Mosier	Prel. Engineering report	Not approved
11-7-55	Central Point	Grade School sewerage	Approved

Date	Location	Project	Action
11-7-55	Klamath Falls	Roosevelt School sewerage	Approved
11-7-55	Riddle	Elementary School sewerage	Approved
11-7-55	Gold Hill	Primary School sewerage	Approved
11-7-55	Myrtle Creek	High School Addition	Approved
11-7-55	Douglas County	Tri-City School Addition	Approved
11-10-55	Port Orford	Private sewage disposal	Approved
11-10-55	Portland	Kenton Packing Co. waste disposal	Approved
11-10-55	Portland	Western States waste disposal	Changes required
11-10-55	Portland	Silver Falls Packing Co.	Changes required
11-15-55	Albany	Sewer extensions	Prov. approval
11-17-55	Col. San. Dist.	Sewage treatment plant (rev.)	Approved
11-17-55	Tillamook	Prel. report on sewerage ext.	Comments submitted
11-18-55	Condon	Air Force Base sewerage	Deferred
11-22-55	South Bear Creek Sanitary Dist.	Revised sewer design	Approved
11-22-55	Portland	Airport sewer extensions	Comments sub- mitted
11-22-55	Portland	Clem Ponta Hog Ranch disposal	Approved
11-22-55	Portland	J & C Cervetto waste disposal	Approved
11-22-55	Lane County	Lynx Hollow Grade School	Approved
11-23-55	Arlington	Preliminary engineering report	Comments submitted
11-25-55	Lane County	McKenzie High School	Approved
11-25-55	Marlene Village	Engineering report	Comments submitted
11-28-55	The Dalles	Sewer extensions	Prov. approval
11-28-55	Marylhurst	Sewers	Approved
12-6-55	Portland	Armour & Co. waste disposal	Deferred
12-6-55	Portland	Western States waste disposal	Deferred
12-6-55	Portland	Silver Falls waste disposal	Deferred
12-7-55	Clatskanie	Revised Prel. engineering report	Approved
12-9-55	Estacada	Sewer extensions	Not approved

Date	Location	Project	Action
12-12-55	Portland	Swift & Company	Deferred
12-13-55	Multnomah County	David Douglas school	Prov. approval
12-13-55	Multnomah County	Powellhurst school	Prov. approval
12-14-55	Wasco County	Moro school	Approved
12-15-55	Marion County	Keizer school	Approved
12-23-55	Wasco County	Seuffert Motel	Prov. approval
12-28-55	Empire	Sewer extensions	Prov. approval
12-28-55	Empire	Sewage lift station	Not approved
12-30-55	Baker County	Oxbow Dam housing	Deferred
12-30-55	Baker County	Brownlee Dam housing	Deferred
1-4-56	Nyssa	Grade School sewerage	Approved
1-5-56	Nyssa	High School sewerage	Approved
1-9-56	Tigard	Fowler Jr. High School	Temp. approval
1-10-56	Estacada	Sewer extension	Prov. approval
1-10-56	Portland	Swift & Co. industrial wastes and sewage disposal (revised)	Conditional approval
1-10-56	Empire	Sewage lift station	Not approved
1-13-56	Roseburg	Sewer extensions	Approved
1-13-56	Brookings	Private residence	Approved
1-16-56	Klamath County	Stock Sales Arena sewerage	Approved
1-20-56	Empire	Sewage lift station	Approved
1-23-56	Herniston	Sewer extensions	Not approved
1-23-56	Springfield	Sewer extensions	Prov. approval
1-25-56	Condon	Air Force Base	None required
1-26-56	Baker County	Brownlee Dam Trailer Court	Deferred
1-27-56	Arlington	Sewer extensions	Not approved
1-30-56	Portland	Brander Meat Company	Approved
1-31-56	St. Helens	Preliminary Report	Approved

ADPT63

Date	Location	Project	Action
1-31-56	Forest Grove	High School sewerage	Approved
2-2-56	Portland	Silver Falls waste disposal (2nd revision)	Approved
2-7-56	North Roseburg S.D.	Sewer replacements	Prov. approval
2-10-56	Harrisburg	Sewage treatment plant & sewers	Not approved.
2-15-56	Columbia S.D.	Sewer system	Cond. approval
2-15-56	Multnomah County	Renolds High School	Prov. approval
2-16-56	Hines	Grade school	Prov. approval
2-16-56	Baker County	Permanent housing sewerage, Brownlee and Oxbow Dams	Not approved
2-17-56	Harrisburg	Sewage treatment plant and sewers (revised plans)	Prov. approval
2-23-56	Portland	Armour & Co. waste disposal (revised plans)	Approved
2-24-56	Coquille	Sewer extensions	Cond. approval
2-27-56	Lane County	Cal Young Jr. High School	None required
2-27-56	Washington County	Fir Grove Elementary School	Prov. approval
2-27-56	Clackamas County	Lake Oswego Jr. High School	None required
2-28-56	Baker County	Brownlee Dam housing	Not approved
2-28-56	Klamath Falls	Sewer extensions	Conditional approval
2-29-56	Gervais	Preliminary report	None required
2-29-56	Hood River	Preliminary report	None required

#### CITY OF MAUPIN

The problems confronting the city of Maupin in connection with the financing of urgently needed sewerage improvements were outlined by Mr. Spies as follows:

The city of Maupin is located on the Deschutes River about 38 miles above the confluence with the Columbia. There is very little population or development located along the downstream waters. In 1950 the city had a population of 312 but a more recent enumeration places the present population at 410.

The existing municipal sewer system serves only a portion of the city. The present disposal facilities consist only of two overloaded cesspools or seepage pits from which sewage effluent overflows onto the surface of the ground and eventually drains into the Deschutes River. In order to abate the insanitary conditions which now exist, extensions to the present sewer system and new sewage treatment works are urgently needed. There is also a demand for more housing in the area but new homes can not be built until adequate sewerage facilities are available.

In May 1955 a preliminary study and report by the city's consulting engineers disclosed that the required sewerage project would cost an estimated \$82,413 of which \$33,875 would be for sewage treatment and \$48,538 for main and lateral sewers. The 1955 assessed valuation of the city was slightly more than \$225,000. Because of this comparatively low valuation the city officials had been informed by bonding authorities that it would not be possible to sell sufficient bonds to finance the proposed project. At the request of former Governor Patterson the staff of the Authority had made an investigation to determine what might be done to reduce the construction costs.

A special state law (ORS 449.545) specifies that the quality of the Deschutes River waters shall be preserved for all domestic and municipal purposes. It has been determined, however, that at the present time no such uses are being made of the river waters below Maupin. According to the State Engineer the only water rights issued for such uses belong to the Oregon Trunk Railway and a letter received from the Chief Engineer of the S.P. and S. Railroad states that said company has no intentions of ever using the river for domestic purposes. The Wasco County Health Department likewise has advised the Authority that to the best of its knowledge no one is using the river for such purposes.

ABCTCS

According to the city's engineers the cost of the sewerage project could be reduced by about \$12,000 if secondary treatment units did not have to be installed. This would make the total cost approximately \$70,000 which should be possible for the city to finance.

After considerable discussion it was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that conditional approval be given the city of Maupin for the construction of a sewage disposal plant consisting of only primary treatment plus chlorination but with the right being reserved by the Authority to demand the construction of secondary treatment facilities at any time conditions in the river should so warrant, and with the further provisions that the city develop a fiscal program for eventual construction of secondary treatment facilities and that the site purchased for the plant be adequate for that purpose.

#### PROPOSED REGULATION ON SEWAGE PLANT OPERATION AND MAINTENANCE

In order to provide for more effective control over the operation and maintenance of sewage and waste disposal systems from which effluents are discharged into the public waters of the state, the staff of the Authority prepared a proposed regulation for consideration by the members. The proposed regulation had previously been reviewed and redrafted by Mr. Queseth and copies had been mailed to the board members.

Among other things the proposed regulation would require (1) that all sewage and waste treatment plants be operated at their highest practical efficiency, (2) that certain tests be made and records be kept by the operators of such plants, (3) that monthly reports be submitted to the Authority, (4) that all sewage effluents during specified periods of the year be effectively disinfected, and (5) that by-passing of sewage or waste treatment works be limited.

It was pointed out that at the present time there are more than 130 public or semi-public sewage plants in operation in the state, that with the limited personnel available it is impossible for the staff of the Authority to inspect these plants as frequently as should be done, and that as a consequence the submission of monthly reports would be of real assistance in promoting better operation and maintenance.

There was then considerable discussion about the fact that the present Sanitary Authority law contains no penalty clause and that as a consequence there would be no penalty, other than action for abatement, for violation of the proposed regulation. There was also considerable discussion about the need for requiring that monthly operation reports be submitted to the Authority, some members being of the opinion that such should not be required. It was finally suggested that instead of requiring reports from all plants serving 500 or more persons that it be limited to those plants in which the operation is questioned or which the Chief Engineer of the Authority finds advisable to direct that reports be submitted. It was recommended further that in paragraph 2, line 3, of the proposed regulation the word "assure" be stricken and "prove" be inserted and that line 5 and all of line 6 to and including the word "notified" be stricken and "when directed to do so" be inserted.

The proposed regulation will be submitted to the League of Oregon Cities and other interested parties for comments before being given final consideration by the Authority members at the next meeting.

UMPQUA BASIN CONSERVATION COUNCIL Proposal for Control of Watersheds

A proposal for control of watersheds which had been submitted to the Sanitary Authority for comment by the Umpqua Basin Conservation Council was reviewed by the members. This report proposed to put the authority for preventing stream siltation caused by logging and related operations under

ADG703

the jurisdiction of the State Forestry Department instead of the Sanitary Authority. The proposal included that the State Forestry Department has sufficient personnel to inspect every logging operation to enforce the provisions of the Oregon Forest Conservation Act. The Forestry Department also issues permits for all logging operations and, therefore, should be in a better position to know of impending violations, and of any operation being conducted on a mountainside which would cause pollution by siltation. It was pointed out that one reason it is difficult for the Sanitary Authority to control pollution of this type is because the operation is underway or completed before the Authority is notified. Furthermore the staff of the Authority is too limited to permit investigation of all such operations.

It was recommended that the secretary reply to the Conservation Council stating the members of the Authority Board had discussed this proposal at their regular meeting on April 6 and it was their opinion the State Forestry Department should be contacted and the proposal discussed with them.

#### BROADMOOR CITATION HEARING

In response to a citation issued March 1, 1956, Norman Wiener, Attorney for Broadmoor Improvement Corporation, W. C. Bauman, Edward Drake, representing W. C. Bauman, and Carl E. Green, consulting engineer, were present at this hearing.

An engineering report covering a period of some 9 years in the history of this case had been prepared by the Authority staff and submitted to the members in advance of the meeting.

A letter dated April 3 had been received on the same date from Mr. Norman J. Wiener, Attorney for the Broadmoor Improvement Corporation, requesting postponement of the citation hearing. Mr. Wiener had been informed by the secretary that the staff had no authority to postpone the hearing and that consequently it would be necessary for the Broadmoor Improvement Corporation

and Mr. W. C. Bauman to be represented at the Authority meeting at which time the request could be acted upon by the Authority members.

In support of such a request Mr. Wiener submitted the following information: The Broadmoor Improvement Corporation which owns the existing sewerage system in Broadmoor was incorporated in 1947 as a non-profit corporation so that its members could use the sewers and sewage treatment plant. It has three incorporators of which W. C. Bauman is one; has never obtained written subscriptions from its members; has issued no membership certificates; its members have never elected a board of directors; and no organizational meeting of its members has ever been held. Each property owner in the subdivision is, according to the articles of incorporation, a member of said corporation.

In 1950 Victory Homes, Inc., (another corporation of which W. C. Bauman is President and registered agent) transferred the deed for the sewage treatment plant to Broadmoor Improvement Corporation. The residents of Broadmoor are served by the Broadmoor sewerage works for which service a \$2 per month fee is paid. The treatment plant was reported to have cost a total of between \$40,000 and \$45,000 to build. In 1950 when the property transfer was made some \$27,000 of this cost had been paid.

Mr. Carl E. Green, Consulting Engineer, had been retained prior to March 1 of this year to survey the sewer system and treatment plant and to recommend any improvements or additions found to be necessary. Mr. Green's study had not yet been completed and therefore it was requested that the hearing be postponed until his report had been prepared.

In 1953 another engineering study of the sewage plant was reportedly made by John W. Cunningham and Associates and on the basis of Mr. Cunningham's report improvements costing some \$1800 were made to the plant. It was brought out that this particular report had never been submitted to or filed with the Authority.

ABGT63

Mr. Wiener stated that the corporation proposed to call a meeting of all the share-holders as soon as Mr. Green's report is received. This meeting would be for the purpose of advising the users of the sewerage system of the action taken by the Authority and of the cost of making the needed improvements as might be outlined by Mr. Green. He said any such improvements would have to be financed by assessments against all property owners being served.

It was pointed out that additional homes are still under construction by Mr. W. C. Bauman in Broadmoor Subdivision No. 4 and that the developer plans to connect such homes to the sewer system in question.

There was then an extended discussion regarding the legal aspects as to who is actually the owner of the Broadmoor sewerage works and who is responsible for its operation, maintenance and improvement. There was also a discussion regarding additional connections to the system.

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried that the hearing in this matter be postponed for 60 days with the provision that in the meantime no connections shall be made to the Broadmoor sewerage system from the remaining undeveloped lots in Broadmoor-4 subdivision and with the further provision that if any such additional sewer connection is made the matter will immediately be referred to the Attorney General for action.

#### COLUMBIA SLOUGH INDUSTRIES

Mr. C. R. Pace was present to represent Western States Rendering Co.

Mr. Boydston gave the following report on the status of the various Columbia Slough industries' projects:

Four companies (Armour, Brander Meat, Kenton and Portland Provision) have construction underway for connection to the Portland interceptor sewer system. Western States and Silver Falls have applied to the Union Pacific

Railroad for right-of-way for sewer installation and as soon as it is received will apply to the city of Portland for construction permit and will employ a contractor. Clem Ponta and J. & C. Cervetto have signed contracts with the city of Portland and have plans out to contractors for bids. Stearns and Welch Co. has construction of its waste disposal project underway. The court case against Associated Meat is still pending but according to a recent news release the plant has been purchased by the Del Monte Meat Co.

ABG703

Mr. Quesseth reported on the status of the court case filed against Pacific Meat Company. On March 16 he appeared before the Multnomah County Circuit Court and asked that the trial proceed as previously scheduled on March 26. Later that same day he and representatives of the Sanitary Authority made an inspection of the meat plant and conferred with Mr. Howard Nelson, owner. Pre-treatment facilities consisting of fine screening and flotation had just been installed and were being used to treat the wastes prior to discharge into the slough. Although it appeared that such facilities would probably alleviate the pollution problem it was the opinion of Mr. Spies and Mr. Boydston that additional treatment would undoubtedly be required. The effluent was still blood red and was causing objectionable discoloration of the receiving waters. Because the Authority staff had not had an opportunity to check the efficiency of said waste treatment facilities it was concluded that it would be advisable to continue the court hearing. Accordingly a stipulation was entered continuing the case until August 31, 1956.

CEDAR MILL PARK

Mr. Quesseth reported on the status of the court case in the matter of sewage disposal by the Marlene Village Sanitation Company. The latter company had appealed the order which had been entered against it by the Sanitary Authority and had asked that the court hearing be deferred until

June. Mr. Queseth stated that he had appeared before the Washington County Court Circuit/at a preliminary hearing to determine a trial date and that at said hearing it was decided to schedule the trial for the latter part of May or the first part of June.

It was pointed out that another engineer had been retained by Mr. Mittleman to make an evaluation study of the Marlene Village sewerage system and treatment plant but that the case would not be further delayed because of it.

#### KLAMATH BASIN COMPACT

At the previous meeting of the Authority a motion was adopted recommending a change in the section on pollution control of the proposed Klamath Basin Compact. Mr. Stanley had presented this recommendation to the Klamath River Commission of the two states of California and Oregon. Mr. Stanley reported that the California Water Pollution Control Board was not in complete agreement with the proposed compact. The secretary suggested that some member or representative of the Authority should be authorized to go to California to discuss this matter with the State Water Pollution Control Board officials in an attempt to work out an agreement between the two states.

It was MOVED by Mr. Whipple, seconded by Mr. McPhillips, and carried that the matter of selecting a member of the Authority and a member of the staff to meet with the California officials be left to the discretion of the Chairman and that they be authorized to serve in that capacity if it becomes necessary.

#### YAQUINA BAY

The secretary reported that representatives of the Authority, Fish Commission, Game Commission and Oregon Development Commission had conferred with officials and consultants of the Georgia Pacific Plywood Company regarding the proposed kraft mill which said company is planning to build

at Toledo. Two preliminary conferences had been held to-date concerning the matter of water supply and waste disposal for such a mill.

No definite decision had been reached or plans prepared thus far for either water supply or waste disposal. Preliminary proposals, however, call for development of a 25 mgd water supply from the Siletz River and Olallie Creek (such development involves several problems that must be worked out to the satisfaction of the State Fish and Game Commissions) and to pipe the strong wastes from the mill to the lower end of Yaquina Bay for disposal by dilution, and to treat the weak wastes in a large lagoon or oxidation pond with discharge into the river at Toledo.

The company has employed a local biologist to determine whether or not the proposed method of waste disposal would be adequate to protect fish and other aquatic life in the receiving waters. The concern is for both the shellfish growing areas in the upper bay and the valuable sports and commercial fishery in the lower bay. Until the mill itself has been designed it will not be possible to determine with any degree of accuracy its probable pollution load. Consultants are to be retained shortly by the company for that purpose.

It was also pointed out that considerable field data had been gathered recently by the staff of the State Fish Commission which will be analyzed by Dr. Wayne Burt, Oceanographer, located at Oregon State College, in an attempt to determine the tidal influences in the bay and whether or not such influences will provide sufficient dilution for waste discharges.

Because of the significance of this project to the fisheries and other interests at Yaquina Bay it was concluded that before final decision was made on any proposed method of waste disposal a public-hearing should be held by the Authority.

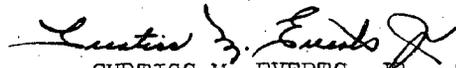

ABG763

GOVERNMENT CAMP

It was reported by Mr. Cuyler that this matter was going along as fast as possible. The \$60,000 bond issue which had been approved by the voters of the district had been advertised for sale but, as expected, no bids were received. All information regarding the bond proceedings has been submitted to Mr. John Shuler, Bonding Attorney, for his review and approval. Mr. Paulus will be contacted and a request made for purchase of the bonds by the State Bond Commission. As soon as funds are available the engineering firm of Clark and Groff will be retained to prepare final plans and specifications. The district board hopes to start construction on the sewer system and treatment plant this summer.

There being no further business the meeting adjourned at 4:20 P.M.  
The next meeting is scheduled for Friday, June 8, 1956.

Respectfully submitted,

CURTISS M. EVERTS, JR., Secretary  
and Chief Engineer

MINUTES OF THE SIXTY-SEVENTH MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY

June 8, 1956

The sixty-seventh meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2 p.m., June 8, 1956, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; B. A. McPhillips, John C. Veatch, Lewis A. Stanley, and Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Deputy State Sanitary Engineer; Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers; and Donald J. Benson, Assistant Sanitary Engineer.

MINUTES:

The minutes of the April 6, 1956, meeting of the Sanitary Authority having been distributed to the members in advance of the meeting were approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried, that actions taken by the engineering staff on the following 97 project plans during March, April and May, 1956, be approved:

Date	Location	Project	Action
3-5-56	Myrtle Point	Sewer extensions	Not approved
3-6-56	Portland	Western States Rendering waste disposal	Approved
3-6-56	McMinnville	Jr. High School sewerage	Approved
3-6-56	Hood River	High School sewerage	Approved
3-6-56	Cedar Hills	Area "G" sewers & pump station	Deferred
3-7-56	Tigard	Sanitary district prelim. report	Not approved
3-8-56	Empire	Sewer extensions Phase III	Approved

ABG763

Date	Location	Project	Action
3-8-56	Empire	Lift station	Not approved
3-12-56	Myrtle Point	High School sewerage	Approved
3-12-56	Gold Beach	School sewerage	Approved
3-14-56	Clackamas County	Dale Ickes Jr. High School	Not approved
3-14-56	Clackamas County	Ardenwald Grade School	Prel. approval
3-14-56	Multnomah County	Menlo Park School	Not approved
3-14-56	Cherry Park	Grade School	Prel. approval
3-14-56	Josephine County	Highland Ave. Grade School	Deferred
3-16-56	Corvallis	Garfield Grade School	Approved
3-16-56	Lebanon	High School	Comments submitted
3-19-56	Jackson County	Griffin Creek School	Approved
3-19-56	Klamath Falls	Sewer extension	Approved
3-21-56	Fairview	Preliminary report (revised)	Approved
3-21-56	Myrtle Point	Lift station & sewer extensions	Not approved
3-21-56	Prairie City	Sewer system	Deferred
3-22-56	Dufur	Preliminary report	Approved
3-22-56	Washington County	Raleighwood Subdivision sewers	Deferred
3-23-56	Myrtle Point	Lift station & sewers (revised)	Prov. approval
3-26-56	Baker County	Gas line station #13 sewerage	Approved
3-27-56	Jacksonville	Preliminary report	Comments submitted
3-28-56	Dallas	Birchwood Avenue sewers	Approved
3-29-56	Philomath	High School sewerage	Approved
3-29-56	Eugene	Westmoreland school	Approved
3-30-56	Eugene	Bailey Hill School sewerage	Not approved
4-3-56	Oak Lodge	Feasibility report	Approved
4-3-56	Siletz	School sewerage	Prov. approval
4-4-56	Waldport	School sewerage	Approved

Date	Location	Project	Action
4-4-56	Glendale	Sewer extensions	Deferred
4-5-56	Portland	Swan Island lift station	Approved
4-5-56	Portland	Aux. power for S.W. Logan St. lift station	Approved
4-5-56	Klamath Falls	Union High School	Approved
4-6-56	Glendale	Sewage Treatment Plant	Not approved
4-6-56	Multnomah County	McKay School sewerage	Prov. approval
4-6-56	Chiloquin	Sewer extensions	Not approved
4-9-56	Pendleton	Sherwood Heights School	Approved
4-9-56	Jacksonville	Preliminary report	Approved
4-9-56	Gervais	Supplemental report	Approved
4-10-56	Sunset Heights	Sewage plant (Prel. plans)	Not Approved
4-10-56	Silverton	Jr. High School	Approved
4-11-56	Cedar Hills	Preliminary Report	Approved
4-12-56	Myrtle Point	Grade School	Approved
4-12-56	Washington County	Joseph Gail School	Prov. approval
4-12-56	Multnomah County	Cherry Park Grade School	Approved
4-12-56	Cocs County	District 8C Grade School	Approved
4-12-56	Multnomah County	Menlo Park Grade School	Approved
4-13-56	Prairie City	Sewage Treatment Plant	Not approved
4-13-56	Albany	Oregon Metallurgical Corp. waste disposal	Approved
4-16-56	Klamath Falls	T. Ferguson School	Approved
4-19-56	Lane County	Harrison Grade School	Approved
4-19-56	Corvallis	Junior High School	Approved
4-23-56	Marion County	Morningside School	Approved
4-24-56	The Dalles	East 12th St., sewer ext.	Approved
4-25-56	Brookings	Sewer extensions	Approved

APG763

Date	Location	Project	Action
4-25-56	Multnomah County	Humphrey Park sewers	Approved
4-26-56	Washington County	Sunset Heights sewer	Deferred
4-30-56	Washington County	Jesuit High School	Deferred
5-1-56	Canyonville	School sewerage	Approved
5-1-56	Astoria	High school sewerage	Approved
5-1-56	Klamath Falls	Klamath High sewerage	Approved

5-29-56	Glendale	Treatment plant (revised plans)	Comments submitted
5-31-56	Winston	Sewer system	Prov. approval

GEORGIA PACIFIC PULP MILL WASTE DISPOSAL:

Because fisheries, recreational and other interests had expressed concern about the possibility of pollution being caused in the waters of the Yaquina Bay and River by the discharge therein of wastes from a new 250-ton kraft pulp mill which is to be built at Toledo, Oregon, by the Georgia-Pacific Paper Corporation, said company had been requested by the Authority to present at this meeting its proposal or plan for disposing of such pulp mill wastes so that it could be reviewed by both the Authority and the above-mentioned interests.

The following representatives of Georgia-Pacific Corporation were therefore present and were heard: W. J. Shelton, Resident Manager of the Toledo mill; D. F. Williamson of Sandwell & Co., Seattle, Washington, designers of the proposed mill; Cornell, Howland, Hayes and Merryfield, Consulting Engineers; and Roger D. Tollefson, consulting biologist.

AR6763

The proposed plan for waste disposal as presented by them was briefly as follows: Three separate industrial sewer systems would be provided - one for the unpolluted cooling, lubrication and service waters from the paper mill, one for the strong condensates from the pulp mill, and one for the weak wastes from the pulp and paper mill. The effluent from the former, estimated at 3,000 gallons per minute, would be discharged directly into the Yaquina River at Toledo. The strong condensates collected in the second system would be pumped through a pipeline approximately 6 miles long to McLean Point located on the lower portion of the bay about 1 mile upstream from Newport and 2 miles upstream from the end of the jetty at the mouth of the bay. The effluent from this system is estimated at 400 gallons per minute and its BOD loading at 5700 lbs. per day. The weak waste effluent from the third system, estimated at 1,150 GPM and 1,000 lbs. of 5-day BOD per day, would discharge into a 35-acre lagoon or oxidation pond from which it would overflow into Yaquina River at Toledo some 11 or 12 miles upstream from the Pacific Ocean. The proposed lagoon would have a retention of approximately 21 days.

Following the presentation of the above proposal by representatives of the Georgia-Pacific Paper Corporation all other persons present at the meeting were given an opportunity to ask questions or make comments. The following persons were heard: Bob O. Bower of the Pacific Coast Oyster Growers Association; Andrew Koerner, Oregon Oyster Growers; and Frank Gilkey, Mayor, city of Newport.

A complete transcript of the proposal presentation and subsequent discussion pertaining thereto is contained in the permanent files of the Authority regarding this matter and is made a part of these minutes.

It was concluded by the Authority that the company should submit in writing all of the pertinent details of the proposal and make sufficient

copies available for distribution to all interested parties for further review and consideration. It was agreed that each party receiving a copy of the proposal would be given 30 days in which to submit additional comments.

Final decision in the matter was deferred until the next meeting of the Authority.

BROADMOOR CITATION HEARING

At the April 6 meeting of the Authority a motion had been approved postponing for 60 days the citation hearing in the matter of sewage disposal for Broadmoor and Brentwood Park Subdivisions, said postponement being with the provision that in the meantime no additional connections would be made to the Broadmoor sewerage system from the remaining undeveloped lots in Broadmoor-4 subdivision and that if such additional sewer connections were made the matter would immediately be referred to the Attorney General for action.

Mr. Norman J. Wiener, Attorney, was therefore present to represent Mr. W. C. Bauman and the Broadmoor Improvement Company. Mr. Howard Rankin, Mr. Orvie Johnson and Mr. C. C. Corey, Attorney, were also present to represent the home owners served by the Broadmoor sewerage system.

Mr. Wiener reported that the following developments had taken place in the matter since the April 6 meeting: Mr. Carl E. Green, Consulting Engineer, had completed his study and report of the needed improvements to said sewerage system, the estimated cost of which was about \$18,000. On May 28, 1956, a public meeting had been held with the property owners involved. Notices of this meeting together with certificates of membership in the Broadmoor Improvement Company had previously been sent by Mr. Wiener to all property owners in Broadmoor and Brentwood Park served by said sewerage system. The purpose of the May 28 meeting was to organize the improvement company by selecting a board of directors and to have the

ABGTOS

property owners through the company assume responsibility for improving the sewerage system. At said meeting, however, the property owners deferred any decision to accept membership in the company and instead appointed a committee to investigate all the facts in the matter and to report back to them what they should do.

Mr. Wiener reported that Mr. Bauman did not intend to make any improvements to the plant or sewer system but that he was prepared to turn the sewerage works over to the home owners without cost.

Mr. Spies had attended a meeting of the above-mentioned citizen's committee on June 4. No representative of the Authority was present at the May 28 meeting, however.

Mr. Rankin, Mr. Johnson and Mr. Corey outlined the status of the committee's investigation and reported that they were doing everything possible to work out a solution to the problem but that more time was required.

After further discussion it was MOVED by Mr. Veatch, seconded by Mr. McPhillips and carried that the citation hearing in the matter of sewage disposal for the Broadmoor and Brentwood Park Subdivisions be postponed until the next regular meeting of the Authority with the provision that during the interim progress reports shall be submitted to the Authority by the parties cited to appear and by the interested property owners and with the further provision that no connections shall be made to the Broadmoor sewerage system until further order of this Authority from Lots 4 and 6, Block 13, Lots 5, 6, 8 and 9, Block 14, or Lots 7 and 8, Block 15 all located in Broadmoor-4 subdivision in Washington County, Oregon; and that if any such additional sewer connection is made without permission of this Authority the matter will immediately be referred to the Attorney General of the State of Oregon for action.

PROPOSED REGULATION ON SEWAGE PLANT OPERATION

The proposed regulation on sewage and industrial waste treatment plant operation as revised at the April 6 meeting was again reviewed by the members. Since the previous meeting of the Authority copies of the regulation had been sent to cities and other interested parties for comment. Mr. Boydston summarized the replies which had been received.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips and carried that the resolution as revised be adopted. A copy of the regulation as filed by the Secretary of State is attached to and made a part of these minutes.

PRELIMINARY BUDGET ESTIMATE FOR 1957-1959

Mr. Everts reported that the present staff had not been able to keep up with the greatly increased work load and that consequently if the state-wide water pollution control program were to continue to make satisfactory progress additional personnel would definitely be required. A preliminary budget estimate in the amount of \$143,990 for the 1957-1959 biennium was presented. It provided for one additional engineer, an aquatic biologist, an additional office secretary and a full-time chemist, increasing to 10 the total number of staff members. The present staff consists of only 5 engineers, 1 office secretary and a chemist half-time.

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley and carried that a committee of three members of the board be appointed to work on the budget. The members thus appointed were Mr. McPhillips, Mr. Wendel and Dr. Erickson.

KLAMATH BASIN COMPACT

Mr. Stanley reported that, pursuant to the decision of the Authority members at the December 16, 1955, meeting, he had recommended to the Klamath Basin Compact Committee that paragraph B-1 of Article VIII of the proposed

APG763

compact be deleted because it would permit duplication of effort and that the other revisions proposed by the Sanitary Authority to paragraph B-4 also be made. Because of objections by the California Water Pollution Control officials, however, said changes were not included in the most recent draft of the report dated May 8, 1956.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips and carried that a letter be sent to the Klamath River Basin Compact Commission stating the Oregon State Sanitary Authority's objections to the present wording of paragraph B-1 and requesting again that the proposed changes be made in the Compact.

#### MARLENE VILLAGE

Mr. Quesseth reported that a hearing on the appeal filed by the Marlene Village Sanitation Company to the order of the Sanitary Authority had been set by the Washington County Circuit Court for the last of May or the first of June. Prior to that time, however, Mr. Bullivant, attorney for said company, had requested a 30-day postponement because negotiations were underway to sell the sewerage system in question to the Sunset Valley Sanitary District. With the concurrence of Mr. Everts and Mr. Spies, Mr. Quesseth had approved the postponement as requested.

#### COLUMBIA SLOUGH INDUSTRIES

Mr. Boydston reported that most of the Columbia Slough industries had signed contracts for construction of connections to the Portland interceptor sewer system but that because of high water in the Columbia River the work had been delayed. He reported that the Associated Meat Company had been purchased by Del Monte but that the complaint against the former was still pending.

#### GOVERNMENT CAMP

Mr. Cuyler reported on the present status of the Government Camp

AB0763

sewerage project as follows: A bond issue in the amount of \$60,000 had been voted and advertised for sale but no bids were received. Mr. John Shuler, bonding attorney, had ruled that the State Bond Commission could not buy the full issue because it exceeded the limitation of 13% of the actual property value. A similar opinion had been received from a New York law firm by Mr. Fred Paulus, Secretary of the State Bond Commission. Mr. Paulus had since indicated, however, that the state might still be able to purchase the bonds provided a satisfactory opinion could be obtained from the Attorney General. Consulting engineers for the district have stated that the construction cost will now exceed the original estimate of \$60,000 so additional funds from some other source will be required in order to complete the financing of the project.

There being no further business the meeting adjourned at 4:20 p.m. The date for the next meeting of the Authority was set for Friday, September 7, 1956.

Respectfully submitted

  
CURLISS M. EVERTS, JR.,  
Secretary & Chief Engineer

MINUTES OF THE SIXTY-EIGHTH MEETING

OF THE

Oregon State Sanitary Authority

September 7, 1956

The sixty-eighth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:05 p.m., September 7, 1956, State Office Building, Portland, Oregon. Those present were Harold F. Wendel,

Chairman; B. A. McPhillips, Harold M. Erickson, M.D., John C. Veatch, Lewis A. Stanley, and Jim S. Whipple, Members; Kenneth H. Spies, Acting Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Clarence E. Cuyler, and Fred J. Burgess, Associate Sanitary Engineers; and Donald J. Benson, Assistant Sanitary Engineer.

MINUTES:

The minutes of the June 8, 1956, meeting of the Sanitary Authority having been distributed to the members in advance of the meeting were approved as prepared.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried, that actions taken by the engineering staff on the following 117 project plans during June, July and August, 1956, be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
6-1-56	Winston	Sewage treatment plant	Not approved
6-1-56	Wash. County	Hillsdale School	Approved
6-1-56	Mult. County	Columbia School	Approved
6-1-56	Jackson County	Howard School	Approved
6-1-56	Coos County	Charleston School	Approved
6-1-56	Corvallis	Sewer extensions	Approved
6-1-56	Pendleton	Sewer extension	Prov. approval
6-4-56	The Dalles	Preliminary report	Approved
6-5-56	Molalla	Grade School	Approved
6-5-56	Hemstreet Heights	Sewer extension	Not approved
6-6-56	Klamath County	Ponderosa Jr. High School	Approved
6-6-56	Burns	Sewer extensions	Not approved

8-28-56	Pendleton	Sewer extensions	Prov. approval
8-30-56	Raleighwood	Sewer system	Permission granted to start Construction

GEORGIA PACIFIC PAPER COMPANY

At the June 8 meeting of the Authority final decision in the matter of waste disposal for the new 250-ton kraft pulp and paper mill being constructed at Toledo, Oregon, by the Georgia Pacific Paper Company had been deferred pending further consideration and investigation. Following the June 8 meeting a complete transcript of the proposal and presentations made by Georgia Pacific had been distributed to all interested parties for comment. Written comments from the following persons were subsequently received and made a part of the Authority's files in this matter: Chester N. Wachsmuth of Oregon Oyster Co., July 13, 1956; D. C. McMillin, Biologist and Manager of Olympia Oyster Co., June 28, 1956; Bob O. Bower of Pacific Coast Oyster Growers Association, June 22, 1956; M. T. Hoy of State Fish Commission and P. W. Schneider of State Game Commission, July 16, 1956; and the city of Newport, August 23, 1956.

Because of objections which had been made by members of the Sanitary Authority staff and by the above-mentioned parties who had submitted comments on the original proposal by Georgia Pacific, the company in a letter dated September 4, 1956, had presented a revised proposal for consideration by the Authority.

The following persons were therefore present to represent Georgia Pacific Company at this meeting: H. S. Daniels, President; R. E. Flowerree, Jr., Vice President; W. J. Shelton, Resident Manager; D. F. Williamson, P. R. Sandwell and P. J. Vakomier of Sandwell & Company, Ltd.; J. C. Howland and A. H. Rice, Consulting Engineers, and Roger Tollefson, Consulting Biologist.

The discussion of this matter was opened by Mr. Shelton who read the September 4, 1956, letter outlining the principal features of the original proposed plan and presenting a modified plan for disposal of the pulp and paper mill wastes. The revised proposal was briefly as follows:

ABG763

- (a) In order to avoid the necessity of discharging any effluent into Yaquina River at Toledo at any time when such discharge would reduce the dissolved oxygen content of the river to below 5 ppm, the capacity of the effluent line to McLean Point would be increased enough to handle the total (combined weak and strong) effluent from the mill, and in addition another 15 acres of land would be held in reserve for use as additional oxidation pond, should that prove necessary. (At all other times the weak wastes would be discharged into an oxidation pond at Toledo and this into the river.)
- (b) To eliminate the possibility of a concentration of the discharge at McLean Point a special diffusion system would be installed.
- (c) A separate emergency storage basin would be provided at Toledo for temporary impoundment of the strong wastes in event of a breakdown of the McLean Point pipe line.

The acting secretary then presented the opinion of the Authority staff concerning said revised proposal. He pointed out that because of the many unknowns involved it was not possible to state definitely whether the proposed method of waste disposal would be or would not be adequate to prevent damage or injury to the beneficial uses now being made of the waters of Yaquina Bay. The unknowns which he mentioned included the following:

- (1) The actual pollution loading of the so-called weak wastes can not be estimated accurately because (a) the proposed acid neutralization and diffusion process has not been thoroughly tested, (b) the efficiency of the oxidation ponds is unknown, and (c) the presence of toxic constituents in such wastes is likewise unknown.
- (2) The dilution ratios for both the weak and strong wastes can not be estimated accurately because (a) there is not sufficient

hydrographic data available regarding Yaquina Bay, (b) the full effects of winds and tides are not known, (c) the quantity and strength of the wastes are not known accurately and (d) there is a possibility of precipitation of a portion of the strong wastes in the salt water.

- (3) There is not sufficient information available regarding the minimum concentrations of the different constituents of kraft mill wastes required to cause injury to the various forms of aquatic marine life such as shellfish, fish and fish food organisms.

Mr. Burgess discussed the results of recent investigations made by the Authority staff which showed that the dissolved oxygen concentrations in certain portions of the bay and under certain tidal conditions were already below 5 ppm. He stated that the oxygen depletion in the vicinity of Toledo was probably due to the large amount of log storage in the upper bay and to the presence of an accumulation of wood wastes. He stated further that the oxygen depletion near the lower end of the bay was undoubtedly due to natural conditions some of which originated in the ocean.

The acting secretary then stated that in view of these unknown factors and the conditions found by the recent surveys it was the considered opinion of the Authority staff that the revised proposal should not be accepted unless the following provisions were made:

- (1) At no time and under no conditions, shall any of the so-called strong wastes be discharged into the Yaquina River at Toledo.
- (2) There shall at no time be any discharge of the so-called weak wastes into the Yaquina River at Toledo except through an oxidation pond.
- (3) There shall be no discharge of any weak wastes or oxidation pond effluent into the Yaquina River at Toledo during the period of the year when the dissolved oxygen content of the receiving waters under any tidal

ABG763

conditions is at or below 5.0 parts per million or at any other time when such discharge would be injurious to fish, shellfish, and other aquatic life as determined by the studies referred to in (8) below.

- (4) Fully automatic flow measuring and recording equipment shall be installed on the oxidation pond influent, the oxidation pond effluent, and the strong waste line.
- (5) 24-hour composite samples shall be collected at least once each week from both the oxidation pond influent and the oxidation pond effluent when said lines are in operation and from the strong wastes line, and said composite samples shall be analyzed for 5-day B.O.D., suspended solids, sulfides, pH, and such other tests as may be requested by the State Sanitary Authority.
- (6) Tests to determine the dissolved oxygen content of the receiving waters in the vicinity of the mill at Toledo shall be made on at least two non-consecutive days each week and on both flood and ebb tides.
- (7) Monthly reports shall be submitted to the Sanitary Authority by Georgia-Pacific Paper Company giving the daily waste flows referred to in (4) above, the results of the chemical analyses referred to in (5) and (6) above, and the maximum, minimum, and average daily production in tons of pulp produced each month.
- (8) For the purpose of determining if the discharge of wastes from the Kraft mill at Toledo is causing or is likely to cause any injurious effects to fish, shellfish, or other aquatic life in Yaquina River and Bay, some agency such as the Fish and Game Management Department of Oregon State College under the direction of R. E. Dimick, Head, shall be retained beginning not later than January 1, 1957, to make such bio-assays, ecological and other studies as are necessary for such purpose and

shall continue to function in that capacity for such period of time as the State Sanitary Authority deems necessary.

- (9) An advisory Committee consisting of representatives of the State Game Commission, State Fish Commission, Georgia-Pacific Paper Company, National Council for Stream Improvement of Pulp and Paper Industry, and the State Sanitary Authority shall be appointed by the respective agencies to review the studies referred to in (8) above, and to advise and consult in the conducting of said studies.
- (10) If based on the findings of the above-mentioned studies it is concluded by the Authority that the discharge of wastes from the Georgia-Pacific Paper Company mill at Toledo is causing or is likely to cause any injurious effect upon fish, shellfish, or other aquatic life in the Yaquina Bay or River, said Company shall within a time to be specified by the State Sanitary Authority take such corrective measures as said Authority may recommend.

Mr. H. J. DeFrancq and Mr. Chet Wachsmuth of the Oregon Oyster Co., Mr. Bob Bower of the Pacific Coast Oyster Growers Association, and Mr. D. C. McMillin of the Olympia Oyster Company then commented on the revised proposal made by Georgia Pacific. They each expressed the opinion that the only sure way to protect the fisheries resources of Yaquina Bay against possible damage by pulp mill waste pollution would be to discharge all of the wastes into the Pacific Ocean.

Mr. John Hodges and Mr. L. D. Marriage of the State Fish Commission and Mr. John Rayner of the State Game Commission also expressed concern that the revised proposal even with the safeguards as outlined by the Authority staff might prove to be inadequate.

ABG763

The acting secretary then stated that it was true that the bio-assays and other studies which had been proposed as safeguards would not necessarily guarantee adequate warning to prevent serious damage to marine life and the fisheries resources of the bay.

Mr. Tollefson discussed the studies which had been made to estimate the probable dilutions of the toxic constituents of the various waste discharges.

Finally after considerable further discussion the officials of the Georgia Pacific Company submitted a second revised proposal under which they would agree to pipe all of the strong waste to the ocean and discharge only the weak wastes at Toledo. In order to give the Authority, its staff, and others concerned with this matter adequate time to examine this new proposal it was MOVED by Mr. McPhillips seconded by Dr. Erickson and carried that a decision in the matter of waste disposal for the Georgia-Pacific Paper Company be postponed until September 21, 1956, when a special meeting would be held for that purpose.

#### BROADMOOR CITATION HEARING

This matter having been continued from the previous meeting, Mr. Clifford Carlson, attorney, was present to represent Mr. W. C. Bauman and the Broadmoor Improvement Company. In a letter dated August 2, 1956, from Mr. Norman J. Wiener, attorney, the Authority had been requested to postpone any further hearing in this matter until the residents of the area had completed the organization of the Broadmoor Sanitary District. The acting secretary reported that at a public meeting on July 30, 1956, the property owners being served by the Broadmoor sewerage system had voted to proceed with the formation of such a district for the purpose of taking over the responsibility of improving, operating and maintaining said sewerage system. In view of this action on the part of the property owners he recommended that the hearing be continued.

It was MOVED by Dr. Erickson, seconded by Mr. Whipple, and carried that the citation hearing in the matter of sewage disposal for the Broadmoor Subdivision be continued for 90 days with the same provision as stipulated in the ORDER FOR CONTINUANCE dated June 8, 1956.

FEDERAL GRANT PROGRAM

The acting secretary reported that at the request of the U. S. Public Health Service, and beginning on September 1, 1956, Mr. C. M. Everts, Jr. had been granted a 90-day leave of absence to serve as special consultant to the Public Health Service in connection with the new federal grant program for construction of public sewage treatment works. This particular program was authorized by Public Law 660 which was adopted by the 84th Congress in July and which extended and improved the federal water pollution control act of 1948.

Under Section 5 of Public Law 660 Congress appropriated \$2,000,000 for grants to official state and inter-state water pollution control agencies for the purpose of improving and extending their respective pollution control programs. Of this appropriation \$21,785 has been allotted to the state of Oregon for the 1956-1957 fiscal year. The acting secretary reported that a supplemental budget in this amount had been submitted to and approved by the State Emergency Board and that with these additional funds it was planned to employ (1) an additional engineer, (2) an aquatic biologist, (3) an additional chemist, and (4) an additional stenographer. This would increase the personnel of the staff from 6 1/2 to a total of 10 1/2 members for the present fiscal year which ends June 30, 1957.

It was also reported that under Section 6 of Public Law 660 Congress had appropriated \$50,000,000 for assisting municipalities and other public bodies in financing construction of sewage treatment works; that the allotment

ADG763

for Oregon for the present fiscal year is \$647,125; and that in connection with this program the State Sanitary Authority will have the responsibility of (1) reviewing each application for a federal grant to assure that the proposed project conforms to the state plan and (2) assigning a priority to each proposed project based on financial and water pollution control needs.

It was decided that no action could be taken at this meeting regarding this program inasmuch as the application forms, detailed instructions, etc. had not yet been completed by the Public Health Service. The staff was instructed, however, to prepare and submit the required annual plan for the abatement and control of water pollution for the state of Oregon.

BUDGET FOR 1957-1959 BIENNIUM

Consideration was given to the proposed budget request for the 1957-1959 biennium. The estimate of \$143,990 which had been submitted by the secretary at the June 8, 1956, meeting had been revised in view of the federal grant authorized by Public Law 660. The new proposal called for a total budget of \$177,675 for the next biennium. Of this amount \$43,570 would be from federal funds and \$134,105 from state appropriation. This compares with \$21,785 from federal funds and \$102,715 from state funds for the present biennium. The summary of expenditures under the proposed budget would be:

Salaries and wages - - - - -	\$129,430
Other personal services- - - - -	5,682
Materials and services - - - - -	39,327
Capital outlay - - - - -	<u>3,236</u>
Total	\$177,675

The above budget would provide for a staff of 12 full-time employees.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that the budget as presented be approved.

KLAMATH RIVER BASIN COMPACT

Mr. Stanley reported that Mr. Wendel, Mr. Everts, Mr. Quesseth, Mr. Spies and he had met recently in Salem with representatives of the California and Oregon Klamath River Basin Compact Committees and with representatives of the California Water Pollution Control Board and that changes had been worked out in the wording of the section on water pollution control of the proposed interstate compact which met with the full approval of the parties from both states.

COLUMBIA SLOUGH INDUSTRIES

Mr. Benson reported on the status of the waste disposal projects for the several industries located along Columbia Slough. The following were reported under construction: (1) Armour & Company, (2) Brander Meat Company, (3) Kenton Packing Company, (4) Portland Provision Company, (5) Silver Falls Meat Company, (6) Stearns and Welch Meat Company, and (7) Western States Rendering.

MARLENE VILLAGE

Mr. Quesseth reported that this case had been continued indefinitely, because of the fact that the Sunset Valley Sanitary District had negotiated with Mr. Harry Mittleman and the Marlene Village Sanitation Company for the purchase of said sewerage system. A bond election will be required in order for the district to raise the funds necessary to make the purchase and to finance construction of the needed improvements. The district had agreed to assume by September 15, 1956, full responsibility for operation and maintenance of the system. The purchase price was reported to be \$35,000.

WILLAMETTE RIVER BASIN STUDIES

The staff reported that the monitoring studies conducted this past summer had disclosed that the minimum dissolved oxygen concentration in the lower Willamette River in Portland Harbor was approximately the same

AUG 7 63

as the two previous years, being 2.5 ppm compared with 2.2 ppm in 1955 and 2.7 ppm in 1954. The minimum stream flows as recorded at Salem for the same period were 6,450 cfs in 1956, 6,200 cfs in 1955 and 5,700 cfs in 1954.

After a brief discussion of the status of sewage and waste treatment in the Willamette Basin it was decided that the staff should prepare an up-to-date report on the efficacy of the pollution control measures taken by the various pulp and paper mills which discharge effluents into the Willamette River or its tributaries.

The next meeting which is to be a special meeting was set for 2:00 pm, Friday, September 21, 1956.

There being no further business the meeting adjourned at 4:35 p.m.

Respectfully submitted,

Kenneth H. Spies,  
Acting Secretary

MINUTES OF THE SIXTY-NINTH MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY

January 18, 1957

The sixty-ninth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:15 p.m., January 18, 1957, in Room 579, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; B. A. McPhillips, Harold M. Erickson, M.D., John C. Veatch, Lewis A. Stanley, and Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer;

Cecil H. Quesseth, Legal Advisor; Clarence E. Cuyler Associate Sanitary Engineer; Donald J. Benson, Assistant Sanitary Engineer; and Glen D. Carter Aquatic Biologist.

MINUTES:

The minutes of the September 7, 1956, meeting of the Sanitary Authority having been distributed to the members in advance of the meeting were approved as prepared.

PROJECT PLANS

It was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried, that actions taken by the engineering staff on the following 87 project plans during September, October, November and December, 1956, be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
9-4-56	Milwaukie	R.R. Avenue sewer extension	Approved
9-7-56	Bandon	Grade School sewerage	Prov. approval
9-10-56	Eugene	N. Eugene High School lift sta.	Prov. approval
9-10-56	Lane County	Elmira Grade school	Approved
9-10-56	Raleigh S.D.	Sewage treatment plant	Cond. approval
9-10-56	Coos County	Coos Head Naval Facility	Prelim. Approval
9-17-56	Medford	Southeast trunk sewer	Prov. approval
9-17-56	Brookings	Outfall sewer	Prov. approval
9-17-56	South Salem	Prelim. eng'g report	Approved
9-17-56	Beaverton	Sewer extensions	Not approved

12-31-56	Independence	Sewage plant addition	Deferred

Georgia-Pacific Paper Company

Following the September 7, 1956, meeting of the Authority the Georgia-Pacific Paper Company had submitted a further revised proposal for disposing of the liquid wastes from the pulp mill being constructed at Toledo, Oregon. This new proposal, which calls for discharging both weak and strong wastes into the Pacific Ocean at Newport instead of into the Yaquina River and Bay, was subsequently referred to each of the Authority members and by letter dated September 19, 1956, was given preliminary acceptance.

It was therefore MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that the action taken by the Authority staff by letter dated September 19, 1956, regarding said proposal of the Georgia-Pacific Paper Company be ratified.

Broadmoor Improvement Corporation

By petition dated October 5, 1956, the Broadmoor Improvement Corporation had requested permission to connect 4 more houses in the Broadmoor-4 Subdivision to the Broadmoor sewerage system. Said request met with no objections on the part of the other property owners served by this sewerage system and therefore after referring the matter by telephone to each of the Authority members an order was signed on November 13, 1956, by the chairman authorizing the connections as requested. This order amended the one previously entered in this matter on June 8, 1956.

It was therefore MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried, that the action taken on November 13, 1956, granting permission to connect 4 more homes to the Broadmoor sewerage system be ratified.

Federal Grant Program

The secretary reported that under the federal grant program for the construction of sewage treatment works as authorized by Public Law 660 of

ABC763

the 84th Congress a total of 21 applications had been received thus far from Oregon municipalities and sanitary districts; that said applications represented a total grant request of \$1,194,457.22 whereas Oregon's allotment for the present fiscal year is only \$647,125; and that under the provisions of the federal law the Sanitary Authority would be responsible for assigning priorities to the proposed projects based on both financial and water pollution control needs.

In connection with this matter the cities of Klamath Falls and The Dalles were represented at the meeting. Klamath Falls was represented by Mayor L. E. Slater, City Engineer E. A. Thomas and Consulting Engineer John W. Cunningham and The Dalles by Mayor John Crag, City Manager G. W. Miller and Consulting Engineer Marvin W. Runyan.

Mayor Slater reported that Klamath Falls had already voted and sold \$800,000 in bonds to finance urgently needed improvements and extensions to its existing sewerage works, that because of recent increases in construction costs and the higher degree of treatment needed to protect the Klamath basin waters it would be necessary for the city to receive federal aid in order to finance the entire project; and that if at all possible the city officials desired to build the new plant and appurtenances large enough to serve the south suburban fringe area which for many years has been confronted with a serious sanitation problem. It was reported further that the city of Klamath Falls plans to get its project under construction as soon as weather will permit and that final plans and specifications are now being prepared. No definite statement could be made, however, as to when the suburban area might get organized as a sanitary district so that it could construct its own sewers and enter into a contract with the city for sewage treatment.

Mayor John Crag of The Dalles reported that because of the increased demand on city services their property tax levy in 1956 was increased nearly 12 mills and because of additional school needs the 1956 tax levy was increased another 13 mills. (The total city tax levy was 78.02 mills in 1955 and 103.9 mills in 1956) He claimed that under these circumstances he was confident that unless a federal grant were received the people would not approve a bond issue at this time for sewage disposal.

Consideration was then given by the Authority members to criteria for determining priorities for the eligible projects for which applications had been received. After thorough consideration it was MOVED by Mr. McPhillips, seconded by Mr. Veatch and carried that the Sanitary Authority adopt the following point system for determining priorities as prepared by the engineering staff, that after the priority list is established in accordance with said point system the actual granting of the priority be contingent upon the applicant's readiness and ability to undertake construction, and that because of its urgent need for financial assistance the Government Camp Sanitary District be assigned a priority regardless of its ability otherwise to proceed.

Criteria for Determining Priority of Eligible Projects on Basis of Financial and Water Pollution Control Needs. (To be used in conjunction with application for federal construction grants authorized under Public Law 660, 84th Congress.)

In determining priority of eligible projects, the Oregon State Sanitary Authority will use the point system described below. No project will be considered eligible unless (a) it conforms with the State plan for control of water pollution, (b) its design conforms fully with the minimum requirements of the Authority and (c) the applicant is ready to start construction within the time required for encumbering the federal funds.

- 1. Points based on financial needs

(5) Abatement of local nuisance conditions - - - - -	4

It was MOVED By Dr. Erickson, seconded by Mr. Veatch and carried that because it is the obligation of the Authority as a commission to assign priorities to the individual projects as a basis for the allotment of federal funds a special meeting be held on Friday, February 1, 1957, for that purpose.

Columbia Slough Industries

It was reported by the staff that because the following six Columbia Slough industries had still not complied with the Authority's order dated May 24, 1954, a letter had been sent to them by certified mail on January 10, 1957, instructing them to complete the installation of their required

AB6768

waste disposal facilities by not later than January 15, 1957: Armour and Company, Silver Falls Meat Company, and Portland Provision Company. It was reported further that an inspection on January 18, 1957, disclosed that only the latter three companies had in the meantime complied with said order by connecting to the Portland interceptor sewer system.

The Associated Meat Company, J & C Cervetto Hog Ranch, Clem Ponta Hog Ranch and Stearns & Welch Meat Company were also reported as having failed to comply with the May 24, 1954, order. Mr. G. A. Stearns was present to represent the latter firm. He stated that all of the equipment for the waste treatment works had been purchased and delivered to the site, that part of the construction had been completed, but that because of the present weather conditions the installation could not possibly be finished before March 15. He was reminded by the Authority staff that either secondary treatment or land disposal would have to be provided in addition to the other treatment facilities referred to above.

Mr. Benson presented a report on the present status of the waste disposal project for each of the aforementioned industries. The chairman then stated that in his opinion the Authority had been derelict in its duties by failing to obtain an earlier abatement of the gross pollution caused by said industries.

It was MOVED by Mr. Whipple, seconded by Dr. Erickson and carried that all the Columbia Slough industries except Stearns & Welch Meat Company be notified that unless they abate their pollution by February 1, 1957, they will be faced with an injunction and that Stearns & Welch Company be notified to abate all of its pollution by March 15, 1957, or it will be faced with an injunction.

#### Proposed Legislation

A proposed bill amending the Sanitary Authority Law which had been drafted at the request of the chairman and staff by Mr. Quesseth and the

Legislative Counsel for submission to the Forty-Ninth Legislative Assembly was reviewed.

The present statute requires the submission to the Authority of plans and specifications for sewerage and waste disposal projects serving municipalities and industries but not privately-owned developments such as residential subdivisions. Likewise the present statute contains no penalty clause. The proposed amendment would require the submission of plans, in addition to municipal and industrial, of all other sewerage or waste disposal projects serving more than 25 families or 100 persons. It would also make it a misdemeanor to violate the aforementioned statute, any lawful rule and regulation of the Authority, and any order promulgated after due notice and hearing by the Authority.

To insure proper operation and maintenance of certain sewerage systems it would require the owner or owners to post a \$10,000 bond.

A copy of said proposed bill is attached to and made a part of these minutes.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that the proposed legislation as drafted by Mr. Quesseth and the Legislative Counsel be submitted to the Forty-Ninth Legislature for adoption.

#### Proposal of Umpqua Basin Conservation Council

Further consideration was given to the proposal of the Umpqua Basin Conservation Council for the adoption of legislation to control logging and related operations on watersheds which detrimentally affect the quality of surface waters. This proposal had previously been reviewed by the Authority at the meeting on April 6, 1956. It would give to the State Forestry Department the responsibility for supervising or regulating such operations.

AB6763

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley and carried that the following statement prepared by Mr. Whipple be adopted: "We have considered the legislation proposed by the Umpqua Basin Conservation Council relative to the protection of forested watersheds. Said proposal does not appear to affect in any way the responsibility of the Sanitary Authority with respect to the maintenance of water quality standards prescribed by existing law. The proposed legislation is a forestry matter that should more properly be discussed with the State Forestry Department, the U. S. Forest Service, the forestry professions and private forested land owners and operators, all of whom would be affected by the proposal."

Cedar Hills

The staff referred to the members the matter of the Cedar Hills Company's proceeding with the construction of certain sewer extensions for which plans and specifications had been disapproved by the Authority's staff. It was reported that plans for said project had been received on September 6, 1956; that on September 26, 1956, a letter was sent to the consulting engineers informing them that the design did not meet minimum accepted standards and therefore could not be approved, and that on November 20, 1956, an inspection disclosed that said sewer extensions had already been installed without approval of the Authority.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson and carried that the consulting engineers be warned that in the future if plans are not approved by the Authority before construction is undertaken the matter will be referred to the State Board of Engineering Examiners. It was further MOVED by Mr. Stanley, seconded by Mr. McPhillips and carried that a letter be sent to the Cedar Hills Company pointing out that said sewers do not comply with the state code, that their construction is in violation of

state law, and that said company is therefore responsible and can be required by the Authority to remove and rebuild said sewers.

1957-1959 Budget

A summary of the budget as recommended by the Governor for the water pollution control section of the State Board of Health for the next biennium was reviewed. The Governor's recommendation called for one less engineer than had been requested. The revised budget thus recommended included a total of \$175,350 of which \$129,591 would be from state appropriation and \$45,759 from federal funds. The total combined budget for the present biennium is \$127,293 with \$105,508 from state and \$21,785 from federal funds.

City of Hood River

A report from the Hood River city engineer stating that the project for abatement of pollution in Indian Creek was not constructed during 1956 was discussed. The city reported that bids had been opened in October but that no contract was awarded because the low bid was approximately 50% more than the engineer's estimate. The city had promised however to readvertise the project again this coming spring.

There being no further business the meeting adjourned at 4:30 p.m. with the date for the next meeting being February 1, 1957.

Respectfully submitted

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

MINUTES OF THE SPECIAL MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY  
February 1, 1957

The special meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:05 p.m., February 1, 1957, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, MdD., B.A. McPhillips, Lewis A. Stanley, and Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Cecil H. Quesseth, Legal Advisor; Clarence E. Cuyler, Associate Sanitary Engineer; Donald J. Benson, Assistant Sanitary Engineer; and Glen D. Carter, Aquatic Biologist.

MINUTES

The minutes of the January 18, 1957, meeting of the Sanitary Authority were approved as prepared.

Columbia Slough Industries

Mr. Benson, having made inspections of the following Columbia Slough Industries on the morning of February 1, gave the following report on his findings:

Armour and Company - Connected to city of Portland sewer February 1, but still have additional work to do. Wastes are no longer discharged to the slough. Brander Meat Company - Connected to city sewer. Associated Meat Company, J and C Cervetto and Clem Ponta Hog Ranch - Not connected and still discharging to slough. Silver Falls Meat Company - Not connected but pumping equipment has now been received and it is expected that project will be completed in one week. Kenton Packing Company, Western States

ABG763

Rendering Company and Portland Provision Company are all connected to the city sewer and discharging no wastes to the slough.

The staff was requested to check on the progress of Silver Falls Meat Company to make sure they connect to the sewer.

Mr. Larry Supove, Consulting Engineer, was present to represent Associated Meat Company, Clem Ponta and J. C. Cervetto. Plans for the latter two were completed by him quite some time ago but after bids were called for it was decided to install pumping facilities instead of using the gravity systems originally proposed. The cost of constructing the deep gravity sewers was considered to be too high. Revised plans for the pump systems have now been finished and construction can be started as soon as weather permits. Mr. Supove reported that he had but recently been retained by Del Monte, the new owners of the Associated Meat Company plant, to design the waste disposal facilities for them and that it would take him several weeks to complete the plans and specifications. He said he felt that June 1 would be the very earliest that the construction could be completed.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried, that J. & C. Cervetto and Clem Ponta be allowed until May 1 and Associated (Del Monte) be given until June 1 to make connection to the city of Portland sewer system with the condition that if at the next meeting of the Authority they have not made reasonable progress the Authority will bring immediate action to abate pollution.

#### Federal Grant Program

Memoranda containing pertinent information regarding the application, proposed sewage treatment works project, financial need, and water pollution control need for each of the 21 communities that had applied for a federal construction grant were reviewed thoroughly by the Authority members. After

considerable discussion it was decided to award the priorities on the basis of the point system which had been adopted at the previous meeting but with due consideration being given to the applicant's ability to start construction as soon as the federal offer is received.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the following 10 cities be given priorities in order as listed with the provision that the cities be notified the priorities will be reconsidered within 60 days and if the city being considered is not ready to go the priority will be given to the next eligible city (amount of grant request shown in Parentheses):

- |                               |                              |
|-------------------------------|------------------------------|
| Prairie City (\$25,957.80)    | Lebanon (\$15,322.28)        |
| Tigard (\$27,436.93)          | Roseburg (\$250,000.00)      |
| Government Camp (\$19,204.00) | Tillamook (\$60,144.30)      |
| Fairview (\$33,000.00)        | Albany (\$18,060.00)         |
| Clatskanie (\$51,400.00)      | Klamath Falls (\$146,000.00) |

It was also MOVED, seconded and carried that Weston, Pilot Rock and North Bend be alternates.

Proposed Amendments to Sanitary District Laws.

Mr. Everts read proposed amendments to the sanitary district law which had been drafted by Mr. Quesseth and the Legislative Counsel at the request of the Authority staff and which provide for notifying the Authority of any sanitary district which has been formed, delete the requirement that if a bond election is defeated no similar proposal can be voted upon again within one year, make it possible for an existing district or a portion of an existing district to become annexed to another district, and pertain to the dissolution of an existing district.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that the introduction of the Bill to the Legislature as prepared by

ABG763

Mr. Quesseth be approved by the Authority.

Future Program of the Authority

The Chairman brought to the attention of the other members certain statements in the Ninth Biennial Report pertaining particularly to the work remaining to be done and the need for a more adequate staff in order to continue to make satisfactory progress in the prevention and control of pollution.

After a discussion of this matter it was decided that every possible effort should be made to obtain an appropriation sufficient to employ as a minimum the full staff covered by the original request. In the Governor's recommendation to the Legislature one engineering position had been deleted.

It was agreed that the Chairman should appear before the Ways and Means Committee and insist that the deletion be replaced in the budget.

The next meeting of the Sanitary Authority was set for May 3, 1957.

There being no further business the meeting adjourned at 4:15 p.m.

Respectfully submitted,

CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer.

MINUTES OF THE SEVENTIETH MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY

May 3, 1957

The seventieth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:05 p.m., May 3, 1957, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., B. A. McPhillips, Lewis A. Stanley, and Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Cecil H. Quesseth, Legal Advisor; Clarence E. Cuyler and Paul H. Peters, Associate Sanitary Engineers; Donald J. Benson, Assistant Sanitary Engineer; and Glen D. Carter, Aquatic Biologist.

Minutes

The minutes of the February 1, 1957, special meeting of the Sanitary Authority having been distributed to the members in advance of the meeting were approved as prepared.

Project Plans

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that actions taken by the engineering staff on the following 63 project plans during the months of January, February and March, 1957, be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1-7-57	Green San. Dist.	Federal grant application	Approved
1-3-57	Milton-Freewater	New outfall sewer	Approved
1-4-57	Drain	Sewage plant and sewers	Deferred
1-7-57	Elgin	Federal grant application	Not approved
1-7-57	East Klamath Falls	Preliminary report	Approved
1-8-57	Independence	Plant additions	Not approved

ABG763

Date	Location	Project	Action
1-9-57	Roseburg	Federal grant application	Approved
1-9-57	Albany	" " "	Not approved
1-10-57	Lebanon	" " "	Approved
1-14-57	Tigard	" " " (revised)	Approved
1-14-57	Prairie City	" " " (revised)	Approved

3-22-57	Multnomah County	UPRR Rockwood Industrial Site	Prov. approval
3-25-57	Lebanon	Sewage plant additions	Deferred
3-25-57	Multnomah County	Gresham High School	Approved
3-27-57	Jefferson County	Culver Grade School	Permit granted
3-28-57	North Bend	Additions to lift station	Deferred
3-28-57	Weston	Federal grant applications	Not approved
3-29-57	Prairie City	Sewer extensions	Not Approved

ABG763

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
3-29-57	Multnomah County	Gilbert School	Approved
3-29-57	Lane County	Baird & Kindred Subdivision	Prov. approval
3-29-57	Chiloquin	Additions to sewage plant	Not approved
3-29-57	Hermiston	Sewage lift station	Not approved

#### Federal Grant Program

The staff presented a report covering the present status of the federal grant program for construction of sewage treatment works. The following ten applicants for which priorities had been assigned were reported to have received and accepted federal grant offers from the U. S. Public Health Service totaling \$501,005.88: Albany, Clatskanie, Fairview Sewer District (Multnomah County), Government Camp Sanitary District, Lebanon, North Bend, Prairie City, Roseburg, Tigard Sanitary District, and Tillamook. It was reported further that the application for the city of Klamath Falls was still pending and when approved would use up the balance of \$146,119.12 remaining in Oregon's allotment for the 1957 fiscal year. Unfortunately the funds were not adequate to include the city of Weston which had been assigned an alternate priority at the February meeting of the Authority and which had since made arrangements for financing its share of the construction cost.

Some questions on the status of the projects were asked by the Authority members, namely, if the amounts of grant offers were the same as requested and if eventually they would take up the same amount. It was stated that in some cases the amount offered was less. Tillamook was quoted as one city in which the grant had been cut.

#### (1) Klamath Falls

This city has made application for construction of an interceptor sewer, pumping station and treatment plant. No action has yet been taken on this

application by the Sanitary Authority staff, however, because the city recently changed the location of the site for the sewage treatment plant. The original proposal called for primary treatment plus oxidation ponds. It is now proposed to use conventional secondary treatment in place of the oxidation ponds. Mr. Thomas, city engineer, was present to discuss this matter.

ABG763

He stated that the \$800,000 bond issue approved by the city voters in May 1956, was based on installing only primary treatment which is what the city now has. Later they learned that additional treatment would be required by the Authority. In the original application submitted by the city for a federal grant the amount of grant requested was only \$146,000 as that amount plus the city's bond issue was considered adequate to finance the proposed project which had been revised to include sufficient capacity to serve the south suburban area as well as the city and to include oxidation ponds as the additional treatment, the latter having been suggested by the city's consulting engineer. Because only 25 acres of land are available for the oxidation ponds the city officials are concerned regarding the adequacy of such treatment and therefore would prefer to install conventional secondary treatment. This would increase the cost, however, and so Mr. Thomas asked the Authority if their application could be revised to include a request for the full \$250,000 allowed by Public Law 660 in case Congress should make a similar appropriation for the 1958 fiscal year.

After considerable discussion it was concluded by the Authority members that no commitment could be made at this time for grants to be made during the 1958 fiscal year and so it was suggested that the city go ahead with its original plans and submit another application for the additional funds if Congress makes a second appropriation.

(2) 1958 Allotment

The secretary reported that an appropriation bill passed recently by the House of Representatives contained another \$50,000,000 for federal construction grants but that it was not known when it would be acted on by the U. S. Senate.

The amount of the 1958 allotment to the state of Oregon would be \$651,575 if the money is appropriated. Because it is anticipated that grant requests will exceed the amount allotted priorities will again have to be given to applications received.

It was MOVED by Mr. Whipple, seconded by Dr. Erickson, and carried that the deadline for submission of applications for 1958 allotments be set for June 15.

St. Helens

A letter from St. Helens dated February 21, 1957, was read by the secretary stating that until a federal grant was allotted the city would do nothing further toward the construction of sewage disposal facilities. The secretary pointed out that no order was ever issued to the city of St. Helens but that the city had been notified 2 or 3 years ago to submit a fiscal and construction program to the Authority, that the mayor had appeared before the Authority to discuss the problem of sewage disposal, and that as a result the city had agreed to complete construction of its required facilities by the end of 1957. In the meantime an engineering report had been completed and bonds voted, but the sale of bonds has been held up in anticipation of a federal construction grant. It was pointed out further by the secretary that the same deadline for construction of sewerage facilities had been given to The Dalles, Rainier and Hood River and that they had all submitted applications for which no priorities were assigned at the February 1 meeting.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips and carried that the letter from St. Helens be answered by the Secretary stating that inasmuch as the Authority cannot guarantee there will be any more federal funds it has no power to defer the construction of the city's required sewerage facilities.

Broadmoor

Consideration was given to the letter dated April 22, 1957, from Mr. Norman J. Wiener, attorney for Mr. W. C. Bauman, in which it was stated that Mr. Bauman had made another connection to the Broadmoor sewerage system in violation of the order of the Sanitary Authority entered June 8, 1956, and amended November 13, 1956. It was claimed that inasmuch as negotiations were underway for the Broadmoor Sanitary District to take over said system Mr. Bauman was under the impression that he did not have to get permission to make the additional connection.

Mr. Richard Carlson, attorney, was present to represent Mr. Bauman in the absence of Mr. Wiener. He stated that said sewer connection had been made without consulting them.

Mr. Spies reported that the sanitary district had retained Carl E. Green, Consulting Engineer, to make a thorough investigation of the existing Broadmoor sewerage system. He stated further that he had been advised by the district's attorney that there were certain details which still had to be straightened out before the district could assume ownership.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that steps be taken to obtain an injunction to prevent the use of the sewer connection in question.

Columbia Sanitary District

Mr. Cuyler reported that in September 1955, the Columbia Sanitary District

ABG763

of Multnomah County was formed by 100% petition of the property owners who planned to develop the area for residential purposes, that on September 28, 1955, plans and specifications for a proposed sewage treatment plant to serve the area were approved by the Authority, that on February 16, 1956, plans for the first section of the sewage collection system were approved, and that in July 1956 inspections by representatives of the Authority disclosed that said sanitary facilities were completed and ready to be operated.

He reported further that in August 1956, plans for additional sewers were not approved by the Authority because they were incomplete and that the developer proceeded with their construction without the Authority's approval. Further inspections of the tract in October 1956, revealed that although 6 homes were connected to said sewerage system and were occupied the sewage treatment plant was not being operated and as a result raw sewage was being discharged into Fanno Creek. By letter dated October 26, 1956, the developer and sanitary district board were notified to start operation of said plant immediately. Other inspections in February 1957, disclosed that raw sewage was still being discharged into Fanno Creek and so the owners were again contacted, this time by telephone. On April 22, 1957, another letter was sent to the developer and sanitary district because the sewage plant had still not been placed in operation and in the meantime another house had been sold and occupied.

After a discussion of this matter it was MOVED by Mr. McPhillips, seconded by Dr. Erickson and carried that an injunction be obtained to prevent use of this sewer system until the necessary corrections had been made to prevent pollution in the receiving stream.

#### Columbia Slough Industries

Mr. Benson presented the following report on the status of the waste disposal practices of the Columbia Slough industries. The plants now being

ABG763

served by the Portland sewer system include Armour and Co., Brander Meat Co., Silver Falls Meat Co., Kenton Packing Co., Portland Provision and Western States Rendering Co. The projects for Clem Ponta Hog Ranch and J & C Cervetto Hog Ranch are complete except for some minor changes in the control manholes which are required by the city of Portland. The deadline for these latter two plants to complete their connection to the Portland system was May 1. Because of the recent death of Mr. Stearns the Stearns and Welch Meat Co. is now out of operation. The partnership or company will have to be reorganized before operation can be resumed. In the meantime no further progress has been made regarding the installation of the waste treatment facilities which were supposed to be completed by March 15, 1957. Prior to the death of Mr. Stearns engineers had been retained to complete the design of said facilities. Final plans for the Associated Meat Co. connection to the Portland system have been submitted by Mr. Supove, engineer, and are being reviewed by the Authority and city of Portland staffs. The deadline for this latter project is June 1.

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried that a registered letter be sent to the Stearns and Welch Meat Co. informing them that operations of said plant shall not be resumed until adequate waste disposal facilities have been installed and that if operations are resumed without such facilities steps will be taken to secure an injunction. It was further suggested that both the State Corporation Commissioner and the State Department of Agriculture be contacted and requested to notify the Authority of any steps taken to reorganize said company and to resume operations.

#### Clean Streams Program

The Clean Streams Program for the state of Oregon as suggested by Mr. A. P. Deering, Chairman of the Water Resources Council, Inc., of New York

City, and as outlined in the brochure previously submitted to the members was discussed. It was concluded that such a program might possibly be quite beneficial in helping to promote voluntary cooperation of cities and industries in the abatement and prevention of pollution, but before making any definite decision or recommendation regarding its use in Oregon it was decided to have the secretary investigate the matter further, work out the various details of setting up such a program, obtain the opinion of the cities and industries that would be affected and report back at the next meeting.

#### Legislation

The secretary reported that an appropriation of \$127,591 had been approved by the legislature for the 1957-1959 water pollution program of the State Board of Health. Except for \$2,000 deleted from capital outlay this is the same as recommended by the Governor. The attempt made to restore the one engineering position deleted by the Governor was unsuccessful.

SB 110 amending the Sanitary Authority Act was reported approved by the legislature and signed by the governor.

SB 200 authorizing the purchase of \$60,000 in bonds by the state of Oregon from the Government Camp Sanitary District was also reported approved.

No action has yet been taken on SB 109 which was introduced at the request of the Authority to amend the existing sanitary district law.

#### McKibben Sand and Gravel

On April 23, the McKibben Sand and Gravel operations on the Yamhill River was checked. The stream is still being muddied and a nuisance condition created. Mr. McPhillips stated he had had a complaint from another operator who at some expense had diverted his operations into an old quarry and is unhappy because McKibben is allowed to continue to operate apparently without any restrictions. The river was in a pretty bad condition.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried, that at the next meeting of the Authority a citation should be issued for this company to appear to show cause.

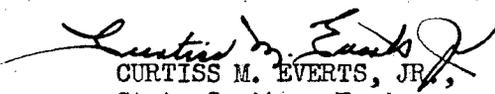

Georgia Pacific

In a letter dated April 30, 1957, from Mr. R. E. Flowerree, Jr., Vice President of the Georgia Pacific Corporation, the assistance of the Authority was requested in obtaining from the State Land Board an easement without cost for a pipeline across 250 feet of Depot Slough, such pipeline being a necessary part of the outfall sewer which is to be constructed for the new pulp mill at Toledo, Oregon. Correspondence between the company and the State Land Board which had been submitted by Mr. Flowerree was reviewed.

It was MOVED by Mr. Stanley, seconded by Dr. Erickson and carried that a letter be written to Georgia Pacific advising them that the secretary of the Authority would appear before the State Land Board in an attempt to work out a satisfactory agreement.

There being no further business the meeting adjourned at 3:50 p.m. No date was set for the next meeting.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
State Sanitary Engineer

ABG763

MINUTES OF THE SEVENTY-FIRST MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY

July 24, 1957

The seventy-first meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:05 p.m., July 24, 1957, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., B. A. McPhillips, Lewis A. Stanley, and Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Cecil H. Quesseth, Legal Advisor, Clarence E. Cuyler and Paul H. Peters, Associate Sanitary Engineers; Donald J. Benson, and Ronald I. Culver, Assistant Sanitary Engineers; and Glen D. Carter, Aquatic Biologist.

Minutes

The minutes of the May 3, 1957, meeting of the Sanitary Authority having been distributed to the members in advance of the meeting were approved as prepared.

Project Plans

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried, that actions taken by the engineering staff on the following 101 project plans during the months of April, May and June, 1957, be approved:

Date	Location	Project	Action
4-4-57	Linn County	Cascadia Grade School	Not approved
4-5-57	Roseburg	Sewage treatment plant	Not approved
4-8-57	Clatskanie	Sewer project	Approved
4-8-57	Pelton Dam	Picnic area sewerage	Approved
4-9-57	Weston	Sewage treatment plant	Not approved

Date	Location	Project	Action
4-9-57	Prairie City	Sewer extensions	Approved
4-9-57	Clatskanie	Sewage treatment plant	Not approved
4-9-57	Douglas County	Tiller-Drew school	Not approved
4-9-57	Portland	Precision Cast Parts sewers	Approved
4-11-57	General	Sitton septic tank	Approved
4-12-57	Roseburg	Interceptor sewer	Not approved
4-12-57	Albany	Revisions to interceptor	Not approved
4-15-57	Burns	High School sewers	Approved
4-17-57	Pendleton	Sewer extensions	Approved
4-18-57	Cedar Hills	Grade School sewers	Approved
4-18-57	Multnomah County	Parkrose Heights sewers	Prov. approval
4-19-57	Albany	Interceptor and plant revisions	Approved
4-19-57	Clatskanie	Sewage treatment plant	Approved
4-22-57	Multnomah County	Sultana Terrace sewers	Approved
4-22-57	Linn County	Sunrise Grade School	Approved
4-22-57	Eugene	Vocational School sewers	Approved
4-23-57	Toledo	Georgia-Pacific outfall line	Deferred
4-24-57	General	H. D. Fowler STP design	Deferred
4-25-57	Gold Beach	Pump stations	Not approved
4-25-57	Clackamas County	Tunnell Trailer Park	Comments submitted
4-26-57	Weston	Federal Grant application	Approved
4-26-57	Roseburg	Interceptor	Prov. approval
4-26-57	Roseburg	Sewage treatment plant	Prov. approval
4-29-57	Weston	Sewage treatment plant (rev.plans)	Not approved
4-29-57	Multnomah County	Assoc. Meat Co. waste disposal	Comments submitted
5-3-57	Albany	Sewerage works improvements	Prov. approval
5-6-57	Fairview	Trunk sewer	Deferred

ABG763

Date	Location	Project	Action
5-9-57	Lane County	Baird-Kindred subdivision	Not approved
5-9-57	Broadmoor	Preliminary Engineering report	Approved
5-10-57	Weston	Sewage treatment plant	Prov. approval
5-10-57	Creswell	Preliminary Engineering report	Approved
5-10-57	Tualatin Hills	Westerlock sewers	Approved
5-13-57	Weston	Sewer system (Prel. plans)	Prov. approval
5-13-57	Elgin	High School sewerage	Not approved
5-14-57	Fairview	Trunk sewers	Prov. approval
5-14-57	Benton County	Garfield Grade School	Approved
5-14-57	Multnomah County	Washington High School	Approved
5-14-57	Clackamas County	Bolton Grade School	Approved
5-14-57	Clackamas County	Sunset Grade School	Approved
5-14-57	Jefferson County	Warm Springs School	Approved
5-14-57	Clackamas County	Gladstone Grade School	Approved
5-16-57	Portland	Airport sewers	Not approved
5-20-57	Albany	Ropp Addn. & Cox Creek sewers	Prov. approval
5-20-57	Linn County	Grand Prairie School	Approved
5-21-57	Lane County	Mapleton Grade School	Approved
5-21-57	Lane County	Mapleton High School	Approved
5-21-57	Lane County	Baird-Kindred (rev. plans)	Approved
5-21-57	Pendleton	Youngs Addn. sewers	Prov. approval
5-21-57	Wilsonville	State Hosp. Federal Grant Appl.	Approved
5-22-57	Portland	Airport sewers	Prov. approval
5-23-57	Independence	Sewer extensions	Prov. approval
5-23-57	Milton-Freewater	Grade School sewerage	Approved
5-27-57	Elgin	High School sewerage	Prel. approval
5-27-57	Lane County	Bailey Hill Grade School	Prov. approval

Date	Location	Project	Action
5-27-57	Linn County	Knox Butte Grade School	Approved
5-27-57	Marion County	Victor Point Grade School	Not approved
5-27-57	Grants Pass	Junior High School	Approved
5-28-57	Pilot Rock	Federal Grant application	Approved
5-28-57	Klamath County	Laverne Grade School	Prov. approval
5-29-57	Lane County	Noti Grade School	Approved
5-29-57	Weston	Sewer system	Prov. approval
5-29-57	Tillamook	Plant and sewer system addn.	Prov. approval
6-3-57	Marion County	Victor Point Grade School	Not approved
6-4-57	Klamath Falls	Interceptor sewers	Prov. approval
6-6-57	Marion County	Salem Heights School	Approved
6-6-57	Green San. Dist.	Federal Grant application	Approved
6-7-57	Marion County	Liberty Grade School	Not approved
6-7-57	Clackamas County	Oak Grove Grade School	Approved
6-7-57	Salem	State Fair Grounds sewer	Prov. approval
6-10-57	Klamath Falls	Sewer extensions	Prov. approval
6-10-57	Douglas County	Glide High School	Approved
6-12-57	Klamath County	Military housing sewers	Not approved
6-14-57	Cannon Beach	Federal Grant application	Not approved
6-17-57	Coos County	Coos Head Military Inst.	Not approved
6-17-57	Linn County	Knox Butte School	Approved
6-18-57	Freewater	Grade School Addition	Approved
6-18-57	Lane County	Bailey Hill School	Approved
6-18-57	The Dalles	Federal Grant application (rev.)	Approved
6-18-57	Milton-Freewater	Federal Grant application (rev.)	Approved
6-18-57	Burns	Federal Grant application	Not approved
6-18-57	Rainier	Federal Grant application (rev.)	Approved

ABG763

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
6-18-57	Broadmoor	Federal Grant application	Not approved
6-18-57	Coquille	Sewer extensions	Prov. approval
6-18-57	Corvallis	Sewer extensions	Prov. approval
6-18-57	Madras	Grade School Addition	Approved
6-19-57	Multnomah County	Hemstreet-Piluso sewer	Prov. approval
6-19-57	Hillsboro	Federal Grant application	Not approved
6-20-57	Clackamas County	Cottrell Grade School	Approved
6-20-57	Clackamas County	Damascus Grade School	Not approved
6-21-57	Multnomah County	Lynchview Grade School	Approved
6-21-57	Hebo	Military Installation	Not approved
6-21-57	Beaverton	Federal Grant application	Approved
6-21-57	Cannon Beach	Federal Grant application (rev.)	Approved
6-21-57	Sunset Valley S.D.	Federal Grant application	Not approved
6-21-57	Hood River	Federal Grant application (rev.)	Approved
6-26-57	McMinnville	Sewer extensions	Prov. approval

#### Federal Construction Grant Program

It was reported that grants totaling \$645,072.81 had been offered by the Public Health Service to 11 Oregon communities, leaving a balance of \$2,052.19 in the 1957 allotment to Oregon and that from the federal appropriation recently approved by Congress for the 1958 fiscal year Oregon's share would be \$651,575. Memoranda having been sent to the members in advance of the meeting presenting pertinent data regarding each of the 18 applicants that had applied for grants from the 1958 allotment, consideration was given to the matter of assigning priorities to the eligible projects. The applicants and the grants requested by each were as follows:

City of Beaverton	\$29,550.00	City of Hood River	\$58,000.00
Broadmoor San. Dist.	10,950.00	City of Klamath Falls	103,880.88
City of Burns	26,850.00	City of Milton-Freewater	50,610.93
City of Cannon Beach	44,700.00	City of Pilot Rock	51,657.00
State of Oregon	53,226.60	City of Rainier	32,968.80
City of Drain	21,830.70	City of St. Helens	120,000.00
City of Elgin	44,947.30	Sunset Valley San. Dist.	65,760.00
Green San. Dist.	36,000.00	City of The Dalles	85,500.00
City of Hillsboro	134,550.00	City of Weston	27,141.00

The total of the above requests is \$998,123.21

After reviewing the water pollution control and financial needs of each project the following actions were taken:

It was MOVED by Mr. Stanley, seconded by Dr. Erickson, and carried that the city of Weston be issued a certificate of priority.

It was MOVED by Mr. Stanley, seconded by Dr. Erickson, and carried that Sunset Valley Sanitary District be given a certificate of priority, provided that construction plans were completed and bonds sold by December 1, 1957.

It was MOVED by Mr. Stanley, seconded by Dr. Erickson, and carried that the city of Burns be issued a certificate of priority.

The city of Elgin was dropped from the list as no word had been received regarding its intentions to proceed with construction during the 1958 fiscal year.

It was MOVED by Mr. Whipple, seconded by Mr. McPhillips, and carried that the city of Cannon Beach be issued a certificate of priority provided that construction plans were completed and bonds sold by December 1, 1957.

It was MOVED by Dr. Erickson, seconded by Mr. Stanley, and carried that the city of Beaverton be approved for a certificate of priority provided the

ABG763

city submit by not later than January 1, 1958, a proposed project meeting the approval of the Authority and Public Health Service.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that Broadmoor be approved for a certificate of priority. The motion was later amended by Dr. Erickson, seconded by Mr. Stanley, and carried that the district have until January 1, 1958, to complete its fiscal program.

It was MOVED by Mr. Whipple, seconded by Mr. Stanley, and carried that Green Sanitary District be approved to receive a certificate of priority provided that bonds were sold by December 1, 1957.

It was MOVED by Mr. Stanley, seconded by Mr. Whipple, and carried that the city of Drain be approved to receive a certificate of priority.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that the city of Hillsboro be approved for a certificate of priority with a deadline of December 1, 1957, set for election and sale of bonds.

It was MOVED by Mr. Stanley, seconded by Dr. Erickson, and carried that the city of Milton-Freewater be approved for a certificate of priority with a deadline of November 1, 1957, for sale of bonds.

It was MOVED by Mr. Stanley, seconded by Dr. Erickson, and carried that the city of Pilot Rock be approved for a certificate of priority with a deadline of January 1, 1958, for election and sale of bonds.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that the city of Rainier be approved for a certificate of priority with a deadline of December 1, 1957, for completion of plans and sale of bonds.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that the city of St. Helens be approved for a certificate of priority with a deadline of December 1, 1957, for the sale of bonds.

It was MOVED by Dr. Erickson, seconded by Mr. McPhillips, and carried

that the application of the city of Klamath Falls be approved for the balance of its revised request, if sufficient funds are available.

Requests from North Bend and Clatskanie for increased grants were not approved. Construction is already underway and both cities have sufficient funds available to finance their projects.

#### Hood River

A memorandum prepared by the Sanitary Authority staff was presented for the record. Also a letter from Hood River dated July 23 was read by Mr. Everts. The need for construction of the Indian Creek trunk sewer was reviewed. The city had been instructed by the Authority 2 1/2 years ago to install such facilities for the purpose of abating sewage pollution in Indian Creek.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that the city of Hood River be cited to appear at the next meeting of the Authority if steps have not been taken to award a contract for construction of the Indian Creek sewers by that time.

#### McKibben Sand and Gravel

At the previous meeting of the Authority the staff was authorized to issue a citation to this company if it failed to abate pollution caused in the South Yamhill River by its sand and gravel mining operations.

Since the last meeting the staff had been successful in obtaining the voluntary cooperation of the company. The sand and gravel mining operations had been diked off from the main stream and excessive turbidity was no longer being caused.

No further action on the part of the Authority members was therefore required in this matter.

ABG763

Corvallis Plywood

This industry is located at the Corvallis Airport and its wastes discharge into a small ditch or drainage way which flows through adjacent farm property. Over a year ago the company had been instructed by the staff of the Authority to provide adequate waste disposal facilities so as to prevent injury to the downstream property owner. Several months ago preliminary plans were submitted to the Authority covering the proposed construction of a connection to the Airport sewerage system which is owned and operated by the city of Corvallis. A recent inspection had disclosed that the connection had not yet been made by the company.

In response to a letter which had been sent to the company notifying them that adequate waste disposal facilities must be provided immediately a telephone call was received by the Authority staff on July 24 notifying us that the company was proceeding at once to install the required sewer connection.

No further action in this matter was therefore taken by the Authority members.

Willamette River Survey

The Authority staff reported that during this summer a comprehensive survey of the entire Willamette River Basin is being conducted in order to determine (1) the efficiency of existing sewage and waste treatment works, (2) the amount of pollution being discharged into the river from the various municipal and industrial outfall sewers and (3) the effects of such discharges on the river system.

The survey will include the collection of weekly samples from a total of 50 stations, 26 of which are on the main river and 24 are on tributary streams. The survey will be conducted over a six weeks period. Composite

samples will also be collected by city personnel from some 16 municipal sewage treatment plants located on the main river. These samples will be transported to the Sanitary Authority laboratory for analyses. Seven pulp and paper mills in the basin will collect samples from their outfall sewers and will make similar analyses in their own laboratories.

#### Columbia Slough Industries

It was reported by Mr. Benson that all of the companies except Del Monte Meat Company (Associated Meat Company) that had previously planned to connect to the Portland interceptor sewer system have their projects completed and in operation. The Stearns & Welch Meat Company is still out of operation. As soon as time will permit studies will be made by the Authority staff to determine whether or not disposal facilities installed by the Portland Rendering Company and the Pacific Meat Company are adequate to prevent pollution in Columbia Slough.

#### Columbia Sanitary District

Mr. Quesseth reported that at the present time it appeared that the complaint filed in Multnomah County Circuit Court against the Columbia Sanitary District could probably be dropped in the near future as steps had been taken to comply with the instructions of the Authority for abatement of pollution caused in a tributary of Fanno Creek by the discharge of raw sewage.

#### Broadmoor Improvement Corporation

Mr. Quesseth reported that the Broadmoor Improvement Corporation had voted to dissolve and to turn its assets over to the Broadmoor Sanitary District. It was his recommendation that as soon as ownership of the Broadmoor sewerage system had been transferred to the district the complaint filed in Washington County Circuit Court against the Broadmoor Improvement

ABG763

Corporation be dismissed.

Miscellaneous

Mr. Quesseth also reported that the Attorney General is preparing a set of rules to be used as a guide by administrative agencies in adopting rules and regulations. He stated that the 1957 legislature had adopted an Administrative Practices Act. He will submit more information regarding this matter at the next meeting of the Authority.

Personnel

Mr. Ronald I. Culver who graduated recently in civil engineering from Oregon State College and who joined the Authority staff in June was introduced to the board members.

The next meeting of the Authority was scheduled for October 18.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

MINUTES OF THE SEVENTY-SECOND MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

October 18, 1957

The seventy-second meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 p.m., October 18, 1957, in Room 732, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M. D., B. A. McPhillips, and Jim S. Whipple, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Cecil H. Quesseth, Legal Advisor; Clarence E. Cuyler, Associate Sanitary Engineer; Ronald I. Culver, Assistant Sanitary Engineer; and Glen D. Carter,

Aquatic Biologist.

Mr. John C. Veatch having resigned as a member of the Oregon State Fish Commission the following resolution was adopted by the Sanitary Authority:

Whereas, John C. Veatch, through his wise counsel and keen judgment, has contributed greatly to the development of policies, procedures and standards adopted by the Oregon State Sanitary Authority since its organization in January, 1939; and

Whereas by his ability, his integrity and his faithful interest in water pollution control, he has gained the admiration and respect of all who know him; and

Whereas, after more than eighteen and a half years of service, he has retired as a Member of the Sanitary Authority; now therefore be it

Resolved, that the Oregon State Sanitary Authority at its regular meeting the 18th day of October, 1957, express its sincere and grateful appreciation to John C. Veatch for his devoted effort in the interest of water pollution control, and its warmest wish for his future health and happiness; and

Be it Further Resolved, that this resolution be spread on the minutes of the October 18, 1957, meeting of the Oregon State Sanitary Authority, and that a signed copy thereof be forwarded to John C. Veatch.

Minutes

The minutes of the July 24, 1957, meeting of the Sanitary Authority having been distributed to the members in advance of the meeting were approved as prepared.

Project Plans

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that actions taken by the engineering staff on the following 90 project plans during the months of July, August, and September 1957, be approved:

Date	Location	Project	Action
7-2-57	Sunset Heights	Sewer extension	Deferred
7-2-57	Multnomah County	North Rockwood School	Approved

ABG763

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
7-2-57	Yamhill County	Yamhill Grade School	Not approved
7-3-57	Coos Bay	Sewage plant addition	Not approved
7-5-57	Sunset Heights	Sewer extension	Not approved
7-5-57	Bend	School addition	Approved
7-8-57	Marion County	Bonesteel Subd. sewers	Prov. approval
7-9-57	Pendleton	Youngs Addition sewers	Prov. approval
7-9-57	Phoenix County	Grade school addition	Approved
7-9-57	Eugene	School admin. building	Approved
7-9-57	Clackamas County	Damascus Union School	Not approved
7-11-57	Sunset Heights	Sewer extensions	Prov. approval
7-16-57	Yamhill County	Yamhill Grade School	Cond. approval
7-16-57	Marion County	Liberty Grade School	Not approved
7-16-57	McMinnville	North Evans sewers	Prov. approval
7-16-57	Portland	Associated Meat Co.	Approved
7-18-57	Siletz	School addition	Prov. approval
7-19-57	Evans Valley	Union High School	Approved
7-23-57	Milwaukie	Union High School	Cond. approval
7-23-57	Coos Bay	High School	Deferred
7-23-57	Pleasant Hill	School sewerage	None required
7-23-57	Corvallis	Witham Hill sewers	Prov. approval
7-25-57	Linn County	Lebanon Union High School	Approved
7-29-57	Coos Bay	High School	Not approved
7-29-57	Washington County	Cedar Mill School	Approved
7-29-57	Hermiston	High School addition	Approved
7-30-57	Corvallis	Corvallis Plywood sewer	Prov. approval
7-20-57	Coos Bay	Sewage plant addition	Cond. approval
8-1-57	Estacada	Sewer extensions	Prov. approval

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
8-1-57	Florence	Preliminary Report	Comments submitted
8-2-57	Washington County	Uplands sewer extensions	Prov. approval
8-2-57	Klamath Falls	Sewer extensions	Prov. approval
8-2-57	Roseburg	Diamond Lake Blvd. sewers	Prov. approval
8-2-57	Douglas County	Sutherlin High School Addn.	No action necessary
8-2-57	Marion County	Waconda School	No action necessary
8-5-57	Drain	Sewage treatment plant	Prov. approval
8-5-57	Multnomah County	Royal Highlands sewers	Prov. approval
8-5-57	Clackamas County	High School addition	Cond. approval
8-5-57	Yoncalla	Grade School addition	No action necessary
8-6-57	Linn County	Cascadia Grade School Addn.	Approved
8-7-57	Oswego	Trunk sewer	Prov. approval
8-7-57	Hermiston	Sewer extensions	Not approved
8-8-57	Linn County	Liberty Grade addition	Approved
8-9-57	Linn County	Cascadia Grade	Approved
8-9-57	Lane County	Roosevelt Jr. High School	Approved
8-9-57	Douglas County	Elkton Elementary	No action necessary
8-9-57	Government Camp	Sewage treatment plant and sewers	Action deferred
8-9-57	Sunset Heights	Sewer extensions	Not approved
8-13-57	Government Camp	Sewage treatment plant	Not approved
8-14-57	Beaverton	Tektronix sewers	Not approved
8-16-57	Multnomas County	Reynolds High School addn.	Approved
8-19-57	Benton County	N. Albany School addition	No action taken
8-19-57	Jackson County	McLaughlin Jr. High addition	Prov. approval
8-20-57	Lane County	Elmira High School	Approved
8-20-57	Portland	Albina Yards	Prov. approval

ABG763

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
8-21-57	Corvallis	Sewers	Cond. approval
8-22-57	Drain	Federal grant	Approved
8-23-57	Corvallis	Forest Research Center	Approved
8-23-57	Hermiston	Sewer extensions	Not approved
8-23-57	Lebanon	Sewer extensions	Prov. approval
8-23-57	Silverton	Relief sewer	Not approved
8-26-57	Chiloquin	Johns-Manville	Not approved
8-27-57	Benton County	N. Albany Grade addition	No action necessary
8-28-57	Grant County	Monument Gym	No action necessary
8-29-57	Union County	Cove School	Prov. approval
8-29-57	Union County	Union Elementary addition	Plans requested
8-30-57	Toledo	Georgia-Pacific Paper Co.	Comments submitted
9-5-57	Salem	Sewer extensions	Prov. approval
9-6-57	Government Camp	Sewage treatment plant (rev.)	Approved
9-9-57	Sunset Valley S. D.	Federal Grant priority	Approved
9-16-57	Arlington	Sewer extensions	Prov. approval
9-16-57	Baker County	Central School #5	No action necessary
9-16-57	Newberg	Sewer extensions	Prov. approval
9-16-57	Union County	Cove School Addition	Prov. approval
9-16-57	Union County	Union Elementary School	Comments submitted
9-16-57	Washington County	Brookwood School	Cond. approval
9-17-57	Marion County	Brush College sewerage system	Comments submitted
9-17-57	Toledo	Georgia-Pacific Pulp Mill	Comments submitted
9-20-57	Washington Co.	Country Club Homes sewers	Comments submitted
9-23-57	Josephine County	Grants Pass Jr. High	Approved
9-23-57	Klamath County	Johns-Manville insulating board plant	Not approved

Date	Location	Project	Action
9-24-57	Albany	Wah Chang metal waste treatment and disposal	Prov. approval
9-24-57	Douglas County	Douglas High School	Approved
9-30-57	Cottage Grove	Sewer extensions	Prov. approval
9-30-57	Deschutes County	Sisters Grade School	Approved
9-30-57	Lincoln County	Cannon School Addition	Not approved
9-30-57	Lincoln County	Newport High School	Approved
9-30-57	Lincoln County	Sam Case Elementary	Approved
9-30-57	Linn County	Santiam Union High School	Prov. approval
9-30-57	Marion County	Brush College Primary	Approved

Surety Bonds

Chapter 192, Oregon Laws 1957, requires that every person proposing to construct a domestic sewerage system which serves more than 25 families or 100 persons shall file with the Sanitary Authority a surety bond, of a sum required by the Authority but not to exceed \$25,000. A memorandum discussing this matter, which had been previously prepared by the staff and distributed to the Authority members, was read by Mr. Spies. In discussion it was pointed out that the surety bond required by the law would be in effect until any such sewage works constructed under this arrangement was taken over by a duly organized public entity. Under this requirement the owner or developer of the facilities would be responsible to the Authority and would be required to obtain the necessary bond rather than the engineer or contractor.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the following bond schedule based upon the proposed size of the project be adopted by the Authority:

Minimum bond-----	\$5,000
First 30 lots or an equivalent of 120 persons at \$300/lot	9,000
Next 50 lots or an equivalent of 200 persons at \$200/lot	10,000
Next 60 lots or an equivalent of 240 persons at \$100/lot	6,000
For any project serving more than 140 lots or 560 persons	25,000

ABG763

(Persons will be used instead of lots in cases of apartment houses, hotels, trailer courts, etc., at the rate of 4 persons being the equivalent of one lot in each of the above categories.)

#### City of Vernonia

In a letter dated September 17, 1957, the Vernonia City Council requested the Authority's permission to defer construction of its required sewage treatment works until July 1960. In discussion it was stated that the present sewerage system serves approximately 1100 persons, that the sewage disposal system consists only of a large septic tank and chlorination facilities whereas secondary or complete treatment is required as the effluent from this system is discharged to the Nehalem River, and that in 1955 the city was granted permission by the Authority to install a \$62,039 sewerage project which was needed to abate existing inadequate septic tanks, said permission being with the provision that an adequate sewage disposal plant would be constructed in 1958. Although there had not been a recent study made by the Authority staff of the pollution caused by this city in the Nehalem River but because the present facilities are known not to be adequate and also because the city of Vernonia did not present a complete financial proposal it was concluded that Mr. Everts and/or other staff members should confer with the Vernonia city officials in order to obtain more detailed information to present at the next meeting of the Authority. It was further suggested that the city might desire to have a representative appear at the next meeting.

#### City of Ontario

Mr. Spies stated that this city had not made satisfactory progress in the abatement of the pollution of the Snake River as they had agreed to do in 1958. At that time the city had adopted a continuing 10 mill tax levy for the construction of needed storm sewers which was to be completed in

1955. This project was required in order to eliminate large quantities of storm water which were being discharged into the sanitary sewer system. With the elimination of this storm water it would be possible for the city of Ontario to construct a more adequate and economical plant. The city of Ontario has a sewer system which serves an estimated 4,000 persons and discharges raw sewage into the Snake River. Although a news item appeared in the October 18, 1957, issue of the Daily Journal of Commerce which quoted the Mayor of the city as saying the City Council was planning to hire an engineer to make an estimate of the costs for a sewage treatment plant no progress reports had been submitted by the city to the Authority.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the city of Ontario be cited to appear at the next regular meeting of the Authority to show cause, if any exists, why pollution in the Snake River caused by the discharge of raw sewage therein should not be abated.

Pollution of Indian Creek by Sewage from the City of Hood River

A memorandum dated October 18, 1957, prepared by the staff was read by Mr. Spies. On July 26, 1957, following the Sanitary Authority meeting of July 24, 1957, a letter was sent to the city of Hood River notifying them that unless steps were taken at once to abate the pollution of Indian Creek they would be cited to appear at the October 18, 1957, Sanitary Authority meeting to show cause. On October 3, 1957, following another letter, the city stated no bids had been received on August 26 and that a new call for bids had been scheduled for October 18, 1957. Plans for this Indian Creek sewer had been approved by the Authority on August 8, 1956.

It was MOVED by Mr. Whipple, seconded by Mr. McPhillips, and carried, that if the city of Hood River does not proceed as directed it should be left to the discretion of the Chairman as to whether or not they should be cited to appear at the next meeting of the Authority.

ABG763

Report on Status of Federal Construction Grant Program

A brief report on the status of the various federal construction grant projects was submitted by the staff.

Government Camp: On October 4, 1957, bids were opened for construction of the Government Camp sewers and sewage treatment plant. The total bid price for this project was approximately \$120,000 for a community of 100 people. This was considerably more than the engineers' estimate. The Government Camp Sanitary District has received an offer of a federal grant of \$19,204 from the U. S. Public Health Service for sewage disposal construction. Because of the bids received on October 4, if the full amount of federal grant were allowed the district would be eligible for approximately \$25,000. A \$60,000 bond issue has been voted by the district and the State Bond Commission is authorized to buy another \$10,000 but there is still a need for an additional \$25,000 over and above the available monies. The size or extent of the proposed system can not be reduced as it would not then serve all of the property needing such facilities and the people would object to paying for a system they could not use.

The new highway which now bypasses Government Camp proper has caused a definite decline in the business conditions in the district. Two establishments which were major violators have in recent years, since the first Sanitary Authority action was taken, burned down and also the skiway, another violator, is in the middle of a transition to a chair lift type establishment. Mr. Paulus of the State Bond Commission has expressed a willingness to request the emergency legislative session to set aside additional monies to buy bonds from this district.

It was MOVED by Dr. Erickson, seconded by Mr. McPhillips, and carried, that a sum be allotted from Oregon's unexpended balance in addition to that already granted for the Government Camp project in order to make the

largest federal grant possible to this project.

Also the secretary was instructed to do everything possible to obtain additional financing as necessary so that construction of this project can be started next year.

Green Sanitary District: At the last meeting of the Authority the Green Sanitary District was given a deadline of December 1, 1957, for sale of bonds. In the meantime bids had been called for on a \$355,000 bond issue but no bids were received. The district has since applied to the Housing and Home Finance Agency for a federal loan to finance their proposed construction project and it was suggested that their deadline for the sale of bonds to qualify for a federal grant be deferred until January 1, 1958.

It was MOVED by Mr. Whipple, seconded by Dr. Erickson, and carried, That the Green Sanitary District have its deadline for sale of bonds extended until January 1, 1958.

Report on Clackamas River Pollution

Mr. Glen Carter, Aquatic Biologist, gave the following report on the pollution of the Clackamas River by the gravel washing operations of the Estacada Sand and Gravel Company. This company has been operating at this site since 1949; recently however, production had been stepped up and their method of operation changed so that during the past summer a considerable amount of waste was being discharged to the river and complaints had been received. The company had been contacted regarding this matter and advised that these wastes could not be discharged to the river unless adequately treated. However, no remedial action was taken by the company. Therefore, Mr. Bradshaw, Clackamas County District Attorney, had been contacted concerning the filing of a complaint. Shortly thereafter the company did abate the pollution and so the complaint was not issued. More recent inspections had indicated that some further pollution had been

ABG763

caused.

Mr. Quesseth was asked as to whether a criminal or civil action should be taken in order to obtain an immediate injunction against this company. He stated that an injunction could be obtained only in case of civil action.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that a criminal complaint be filed, if necessary, against the Estacada Sand and Gravel Company to abate pollution of the Clackamas River.

Columbia Sanitary District

The current status of the complaint pending in circuit court against Columbia Sanitary District had been outlined in a memorandum which has been made a part of the files of this Authority.

Mr. Quesseth stated a complaint had been filed, a summons served and a preliminary injunction prepared but no further action had been taken. Because the Multnomah County Commissioners had reportedly indicated that they might take the district over as a county sewer district a letter had been sent to them by the Authority inquiring as to their intentions in this regard. Thus far, however, no reply had been received from them. The Multnomah County Health Department, however, had in the meantime asked the Authority to take steps to abate the pollution.

After discussing the matter it was recommended the staff address another inquiry to Multnomah County to get a report of their intentions regarding this problem, the letter to be addressed to Mr. Jack Bain with a copy to the Board of County Commissioners. It was pointed out that pollution conditions still exist because of the discharge of untreated wastes from this district. In order to put the plant in operation the district would have to have someone check the plant once a day to see that

all units were operating properly. The staff was instructed to make another complete investigation.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that Mr. Queseth be instructed to continue with the complaint that has already been filed and follow it through to conclusion with the aid and assistance of the staff.

#### Columbia Interstate Compact

Mr. Stanley was ill and not able to stay for the meeting but stated that there was nothing to report on the Columbia Interstate Compact. The various compact commissions have met but have not been able to agree on the kind of a compact that should be developed, as a result of this the subcommittee on pollution control has not been able to come to any conclusion. It was suggested that the same provisions as in the Klamath River Compact be used.

#### Regulations

A memorandum dated October 18, 1957, and prepared by the staff relating to certain Sanitary Suthority regulations was read by Mr. Spies. The repeal of the regulations adopted June 14, 1946 and May 15, 1953, was recommended because they had been superseded either by other regulations or by state law.

It was MOVED by Mr. McPhillips, seconded by Mr. Whipple, and carried, that a resolution be prepared and submitted to the Secretary of State repealing the regulations adopted by the Authority on June 14, 1946, and May 15, 1953.

#### Trickling Filter Research:

A communication from Dr. M. Popovich, Assistant Dean of Engineering, Oregon State College, was read by the secretary requesting that the Sanitary Authority provide financial assistance to enable the college to continue a

ABG763

research study of deep trickling filters which had been started several months ago. To date much valuable data have been obtained from this study with a minimum of financing. It was stated that if the Authority would provide \$1050 the project could be continued for a 36 week period with 10 hours a week being set aside for operation of the filter and 5 hours a week for testing and sampling.

The secretary pointed out that money could be provided for this project from federal funds that have been allotted to the Sanitary Authority under the federal grants program and which very likely will not otherwise be used. He stated that in previous years the Authority has helped to finance research projects involving the use of storage basins for fiberboard wastes and for biological studies on pulp and paper mill wastes.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the Sanitary Authority give to the Oregon State College Engineering Experiment Station \$1,050 for the continuation of this trickling filter research, such money to be allotted from federal funds granted the Sanitary Authority through the U. S. Public Health Service for water pollution control purposes.

Mr. Quesseth suggested that at the next meeting of the Authority the Board consider the adoption of rules of procedure as prepared by the Attorney General and as required by the administrative practices act Chapter 717, Oregon Laws 1957.

Mr. Wendel asked that at the next meeting of the Authority a discussion be held on the Willamette River study, provided the report has been completed, and that whatever action deemed necessary be taken at that time.

The secretary announced that Dr. Erickson has recently been appointed by President Eisenhower as a member of the National Water Pollution Control Advisory Board which is meeting in Oklahoma City on October 30 and 31.

The next meeting of the Authority was set for January 24, 1958.

The meeting adjourned at 4:05 p. m.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

MINUTES OF THE SEVENTY THIRD MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

January 24, 1958

The seventy-third meeting of the Oregon State Sanitary was called to order by the Chairman at 2:00 p.m., January 24, 1958, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M. D., B. A. McPhillips, Harold T. Johnson and Edward C. Harms, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Cecil H. Quesseth, Legal Advisor; T. M. Gerow, Harold M. Patterson and Harold W. Merryman, District Sanitary Engineers; Clarence E. Cuyler, Associate Sanitary Engineer; Ronald I. Culver and Earl N. Kari, Assistant Sanitary Engineers; and Glen D. Carter, Aquatic Biologist.

Mr. Harold T. Johnson replaced Mr. John C. Veatch who resigned as Chairman of the Fish Commission. Mr. Edward C. Harms was appointed by Governor Holmes to replace Mr. Jim S. Whipple whose term as a member of the Sanitary Authority expired December 19, 1957.

MINUTES

It was MOVED by Mr. Stanley, seconded by Dr. Erickson, and carried

ABG763

that the minutes of the seventy-second meeting be approved with the following addition: "A motion was made, seconded and carried, that the rules of procedure referred to by Mr. Quesseth be adopted at the next meeting of the Authority."

PROJECT PLANS

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley and carried that actions taken by the engineering staff on the following 55 project plans during the months of October, November and December 1957 be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
10-1-57	Oregon City	Clackamas County Jail sewerage	Prov. approval
10-4-57	Lane County	McKenzie High School	Approved
10-4-57	Sunset Valley Sanitary Dist.	Sewage plant	Deferred
10-4-57	Albany	Sewer extensions	Approved
10-8-57	Whitford-McKay Sanitary District	Sewer extensions	Prov. approval
10-9-57	Portland	Air Base sewers	Comments submitted
10-10-57	Newberg	Hess Creek sewers	Prov. approval
10-16-57	Coos Bay	Marshfield High School	Approved
10-16-57	Klamath Falls	Joseph Conger School	Approved
10-16-57	Lebanon	Sewer extensions	Prov. approval
10-16-57	Clackamas Co.	Sunnyside Subdivision sewerage	Not approved
10-18-57	Mult. County	Bridlemile School sewer	Prov. approval
10-21-57	Clackamas Co.	Safeway Distribution Center sewer	Comments submitted
10-21-57	Baker County	Richland Grade School	Not approved
10-22-57	Fairview	Sewerage system	Prov. approval
10-22-57	Lebanon	Sewer extensions	Approved
10-23-57	Washington Co.	Durham Grade School	Approved

Date	Location	Project	Action
10-24-57	Linn County	Lacomb Grade School	None Required
10-25-57	Baker County	Halfway Grade School	Prov. approval
10-29-57	Clackamas Co.	Happy Valley School	Approved
10-30-57	Grant County	Monument Grade School	Deferred
10-31-57	Prineville	Preliminary report	Deferred
10-31-57	General	Southern Pacific Car septic tank	Deferred
11-4-57	Pendleton	Sewer extensions	Prov. approval
11-6-57	Lincoln Co.	Delake School Addition	Deferred
11-6-57	Lincoln County	Oceanlake School	Deferred
11-12-57	Linn County	McDowell Grade School	Approved
11-12-57	Baker County	Richland Grade School	Prov. approval
11-13-57	Seaside	High School	Prov. approval
11-14-57	Milwaukie	Prel. report for School Dist. 1	Approved
11-14-57	Sunset Valley	Sewage treatment works	Prov. approval
11-18-57	Beaverton	Hyde Park School pump station	Approved
11-18-57	Lincoln County	Oceanlake School	Approved
11-18-57	Lincoln County	Delake Grade School Addition	Approved
11-18-57	Yamhill County	Yamhill Grade School	Approved
11-19-57	Burns	Raw sewage lagoon	Prov. approval
11-19-57	Lane County	Cal Young H. S. Addition	Approved
11-20-57	Columbia County	St. Helens High School	Cond. approval
11-22-57	Chiloquin	Sewer plans	Not approved
11-22-57	Pendleton	High School	Prov. approval
11-25-57	Medford	Sewer report	Approved
11-25-57	Klamath County	Johns Manville waste disposal	Prov. approval
11-26-57	Klamath Falls	Primary sewage plant	Not approved

ABG763

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
11-26-57	Mult. County	Port of Portland sewers	Approved
11-29-57	Tigard San. Dist.	Sewer extensions	Approved
11-29-57	Lane County	Eugene Voc. School Addn.	Approved
11-29-57	Linn County	McFarland Grade School	Approved
12-2-57	Klamath Falls	Primary sewage treatment	Prov. approval
12-2-57	Prineville	Sewer extensions	Prov. approval
12-3-57	Dayton	High school sewerage	Not approved
12-11-57	Lakeview	Prel. engineering report	Approved
12-16-57	Roseburg	Interceptor sewer	Deferred
12-16-57	Beaverton	High School sewerage	Approved
12-16-57	Multnomah County	Russelville School	Approved
12-23-57	Dallas	Engineering Report	Approved

CITY OF ONTARIO, Public Hearing

A public hearing in the matter of sewage disposal by the city of Ontario in the public waters of the state of Oregon was held on this date by the Authority.

In response to a citation sent by certified mail on January 3, 1958, to the Honorable Mayor and City Council, Mr. Earl Bopp, Mayor was present to represent the city. The hearing proceedings were recorded by Mr. Neil C. Doane, court reporter, and Mr. Cecil H. Quesseth, special assistant attorney general, administered the oath for all witnesses. The following is a summary of the proceedings:

A memorandum dated January 24, 1958, prepared by the Authority staff and relating to said matter was read by the secretary and made a part of the Authority's files in this case. Mayor Bopp in his testimony stated that the facts presented in the above memorandum were to the best of his knowledge correct except that he did not remember some of the letters from the Authority ever having been received by the city.

ABG763

He reported on the steps which had been taken by the city since 1949 when a preliminary engineering study and report of the city's sewerage needs were made by consulting engineers, Cornell, Howland, Hayes & Merryfield. He claimed that the bond issue which had been proposed by the city council for financing the construction of sewage treatment works had been opposed by the Chamber of Commerce and Planning Commission, that the Planning Commission had recommended that the sewage treatment project be deferred until the storm sewer project had been completed, and that the Chamber of Commerce and Planning Commission had also been opposed to levying a sewer user charge. He stated that the bonded indebtedness of the city of Ontario during his administration has been reduced from \$500,000 to approximately \$200,000 at the present time.

He reported that on January 20, 1958, Cornell, Howland, Hayes and Merryfield were retained at a cost of \$650 to prepare another preliminary report of the city's sewage disposal needs. Under the terms of the contract the engineers would not submit their report until after July 1, 1958. According to Mayor Bopp the council had recently discussed the advisability of a charter amendment calling for a special tax levy but had concluded that a general obligation bond issue should be authorized for financing the required sewage treatment works project. He stated further that at the present time the city of Ontario has certain street improvement projects underway which will not be completed until next year. It was his opinion that no bond election could be held before then.

After a discussion concerning a time schedule for construction of the required project it was MOVED by Dr. Erickson, seconded by Mr. Johnson, and carried that the Authority enter an order requiring abatement by not later than July 1, 1959, of the pollution caused by the city of Ontario

in the public waters of the Snake River and that the city's preliminary engineering study and plan be submitted to the Authority by not later than July 1, 1958.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the memorandum prepared by the engineering staff be adopted as the findings of fact in these proceedings and that the secretary of this Authority serve a certified true copy of said findings of fact and order upon the city of Ontario.

#### CITY OF VERNONIA

Mayor D. E. Bayley and City Recorder Sam L. Hearing, were present to represent the city of Vernonia.

A memorandum prepared by the secretary pertaining to the city's request for an extension of time for submission of plans and construction of sewage treatment works improvements was read and made a permanent part of the Authority's files in this matter.

Because of the uncertainties in the economic future of this city it was MOVED by Mr. McPhillips, seconded by Dr. Erickson and carried that the city of Vernonia be given a two year extension of time for construction of its required sewage treatment works project provided (a) the city furnish assurance that construction will be undertaken early in 1960; (b) that final plans and specifications for any sewer extensions and the treatment works be submitted to and approved by the Sanitary Authority before December 1959; and (c) that the city keep the Sanitary Authority advised of any changes in status that may occur through written reports submitted to the Authority in July and December of each year.

#### CANNON BEACH

Mr. Sidney Lasswell, Consulting Engineer; Mr. M. E. Reynolds, City Attorney; Mr. Don Erickson, Mayor, and Mr. Robert R. Rittenbach, City

Councilman, were present to represent the city of Cannon Beach in connection with a request for an extension of time in which to sell bonds for financing construction of a city sewer system and sewage treatment works. The city had previously been given a deadline of December 1, 1957, in order to qualify for a federal construction grant.

Representatives of the city reported that on December 23, 1957, only one bid was received for the purchase of their \$200,000 bond issue. This bid which was for 5.132% interest was rejected because it was too high. They reported further that since then the city has made application to the State Bond Commission for purchase of said bonds but that more time is needed to complete the negotiations. It was reported that the city had not investigated the possibility of selling bonds to the Housing and Home Finance Agency of the federal government.

It was MOVED by Mr. Johnson, seconded by Mr. McPhillips, and carried that an extension of time from December 1, 1957, to March 1, 1958, be granted the city of Cannon Beach with the provision that in the meantime the city of Cannon Beach keep the Sanitary Authority informed of progress being made.

OREGON LUMBER COMPANY

A resolution adopted by the Oregon Division of the Izaak Walton League asking that the Sanitary Authority enter upon a more rigid enforcement policy in connection with alleged pollution of the waters of Hood River by the operations of the Oregon Lumber Company, at Dee, Oregon, was read by the secretary.

Mr. L. J. Roedel, Vice President; Mr. W. J. Runckel, and Mr. R. E. Kriesien, were present to represent the Oregon Lumber Company. No one was present to represent the Izaak Walton League.

ABG763

Mr. Spies outlined briefly the contents of the Authority's files in this matter. He pointed out that the saw mill of the Oregon Lumber Company at Dee has been in operation for many years, that the hardboard plant was completed and placed in operation in 1951 and that in August, 1953 following a public hearing in the matter an order was entered by the Authority directing the Oregon Lumber Company to abate within 60 days all pollution caused by domestic sewage and industrial wastes from said saw mill and hardboard plant operations. He reported further that in December 1953 the company put into operation two lagoons or settling ponds for the purpose of treating the hardboard mill wastes. It was pointed out that since that time several complaints had been received regarding pollution being caused by said company, that numerous investigations had been made by the Authority staff and that the company had attempted to comply with state law but because of the fact that it has a dam constructed across the main stream it had been unable to prevent pollution on several occasions.

Mr. Roedel stated that his company has operated a saw mill at Dee since 1906, that the present saw mill has been in operation since 1913 and that the present dam impounds water for log storage, for water supply and for power development. He stated further that at frequent intervals it is necessary to flush out the reservoir behind the dam because of the excessive amount of sand and gravel which is carried into it from the upper watershed by the swift current of the river. When this material is flushed downstream it creates excessive turbidity which is believed to be detrimental to fish life and definitely is injurious to fishing and other recreation. Mr. Roedel stated that they had recently decided to discontinue the operation of the hydro-electric power plant and that consideration was being given to an

ABG763

alternate method of handling the logs so that it would no longer be necessary to use the river for log storage. It was his opinion that if they could keep the logs out of the river it would not be necessary for them to flush out the reservoir behind the dam except during periods of extremely high flow when it would not seriously affect the quality of the downstream waters. Mr. Al Lichens of the State Game Commission reported on the complaints which that agency had regarding the operations of the Oregon Lumber Company.

After considerable discussion Mr. Roedel was instructed by the Sanitary Authority members to submit a report at the next meeting of the Authority outlining the plans of the Oregon Lumber Company to abate and control said pollution. Mr. Roedel agreed to submit such a report.

#### WILLAMETTE RIVER SURVEY

A narrative and statistical report covering the findings of the survey which was conducted by the Authority's staff during the summer and fall of 1957 of the main Willamette River and its tributaries was given thorough consideration by the members of the Authority.

Based on the findings of this survey and of previous studies of the Willamette River conducted by the Sanitary Authority and others since 1950 it was MOVED by Dr. Erickson, seconded by Mr. McPhillips and carried that the following conclusions be adopted and that the staff be instructed to proceed as indicated.

1. Since 1939, when the state-wide water pollution control program of the Sanitary Authority was first started, reasonably good progress has been made in the abatement and control of sewage and waste pollution in the Willamette River Basin, however, much still remains to be accomplished. Most of the progress made thus far has actually been accomplished during the past ten years.

There were no municipal sewage treatment plants on the main river until 1949 when the plants at Newberg and Junction City were completed. With the completion in February 1957 of the Harrisburg plant all cities on the main river now have such facilities. Whereas in 1939 there were only 22 sewage treatment plants in operation in the basin serving only 18,700 persons, by the end of 1957 there were 80 such treatment works serving more than 543,700 persons.

Since 1952 the five sulphite pulp mills in the basin have operated special waste treatment or disposal facilities for the purpose of reducing their pollution loads during the periods of critical stream flow and the other industries have either discharged their wastes into municipal sewer systems or have installed their own waste disposal facilities.

2. Although sanitary surveys of the Willamette River have been conducted annually since 1950 by the Sanitary Authority, limitations in staff did not permit the making of a comprehensive survey until 1957. Even the 1957 study was not as complete as it should have been and therefore further studies will be required during 1958 to locate and evaluate other existing sources of pollution.
3. The pollution observed in certain sections of the Willamette River system during the summer and fall of 1957 was detrimental or injurious to aquatic life and to the recreational enjoyment of the people and therefore was in violation of the public policy of the state of Oregon as set forth in Section 449.005 of the Oregon Revised Statutes.
4. The discharges of the sewage and industrial waste effluents which were responsible for such pollution were in violation of Section 449.010 of the Oregon Revised Statutes.
5. The polluted conditions observed were in violation of the standards of stream purity as adopted by the State Sanitary Authority under provisions of Section 449.030 of the Oregon Revised Statutes. The standards thus violated included those pertaining to the following:
  - (a) Minimum dissolved oxygen content of the five (5) parts per million.
  - (b) No development of fungi or other growths having a deleterious effect on stream bottoms, fish or related forms of aquatic life, or recreation.
  - (c) No formation of appreciable bottom deposits which are deleterious to fish or related forms of aquatic life or injurious to recreation.
  - (d) No bacterial pollution which is deleterious to the use of waters for domestic purposes, livestock watering, irrigation or recreation, or is otherwise injurious to public health.
6. Primary treatment and chlorination of the effluents from the municipal sewerage systems except Eugene and Salem which discharge

into the main Willamette River appear to be adequate to prevent cross bacterial pollution, but are not adequate to maintain the bacteriological quality of the river water in accordance with acceptable standards for recreational use. It is believed that in order to meet such standards secondary treatment plus chlorination of all sewage effluents would be required.

7. If the calculations of the self-purification capacity of the lower Willamette River as made in 1950 by C. J. Velz for the National Council for Stream Improvement are still valid under present conditions, it would be necessary for the following cities and sulphite pulp mills to reduce their average 1957 pollution loads by the following percentages in order to maintain a dissolved oxygen content of 5.0 ppm in the tidal reach of the river when the water temperature is 23° C. and with the listed river flows as measured at the Salem gauge:

	Stream Flow at Salem (cfs)					
	3,500	4,000	5,000	6,000	7,000	8,000
Oregon Pulp & Paper	75	73	68	63	55	45
City of Salem	88	87	85	82	79	74
Spaulding Pulp & Paper	86	85	83	79	75	70
City of Newberg	91	90	89	87	84	80
Publishers Pulp & Paper	78	77	74	69	63	54
City of Oregon City	74	73	68	62	55	45
Crown Zellerbach Corp.	79	78	74	70	64	55
City of West Linn	41	38	35*	35*	35*	35*
City of Milwaukie	63	61	54	46	36	20
City of Oswego	74	73	68	62	55	45
City of Portland	100	100	100	100	100	100

\*The minimum permitted by regulations of the Sanitary Authority.

8. Since 1950 the sewered population in the Willamette Basin has increased 20 percent (from 487,000 in 1950 to 586,000 in 1957) and the average industrial waste load, prior to treatment, has increased 18 percent (from 3,420,000 population equivalent in 1950 to 4,040,000 population equivalent in 1957). The maximum industrial waste load prior to treatment in 1957 was 41 percent more than the corresponding estimated 1950 load.

Because of this increase in the amount of both municipal sewage and industrial wastes which are produced in the Basin, the terms of the order entered on May 12, 1950, by the Sanitary Authority pertaining to the discharge of spent sulphite liquor from the five sulphite pulp mills in the basin are not adequate to maintain the quality of the water in the critical tidal reach of the main river or in the South Santiam River below Lebanon in conformance with the minimum standards of this Authority or the requirements of state law. Said order requires that no concentrated sulphite waste liquor shall be discharged into the Willamette River during the months of July, August, September and October, or at any other time when the flow in the river as measured at Salem is less than 7,000 cubic feet per second. It requires further that no pulp mill wastes shall be

discharged into the South Santiam River during the same months or at any other time when the flow in that stream below Lebanon is less than 500 cubic feet per second.

9. In order to prevent gross bacterial pollution and excessive slime growths in the Willamette River the city of Eugene must provide more effective treatment of its combined sewage and industrial waste loading during the period of May 1 to November 1 of each year.
10. In order to prevent gross bacterial pollution and oxygen depletion of the downstream waters of the Willamette River the city of Salem must provide treatment of its combined flow of domestic sewage and industrial wastes so as to effect an average BOD reduction of at least 85 percent during the period of May 1 to November 1 of each year.
11. The city of Salem must complete without further delay the construction of the remaining interceptor facilities needed to prevent the discharge of any raw sewage and wastes into the river.
12. The city of Portland must intercept all sewage and industrial wastes produced within its corporate limits and transport the same either to the existing treatment plant which discharges into the Columbia River or to other treatment works meeting the approval of the State Sanitary Authority.
13. To reduce the load in the Portland interceptor sewer system and thereby reduce the amount of sewage being by-passed into the river during periods of storm water runoff, the city of Portland must make immediate plans to divert all sewage flow on the Fanno Creek drainage basin from the present west side interceptor and discharge it into a separate master trunk sewer system and sewage treatment works.
14. The city of Oswego must complete without further delay the construction of the inverted siphon needed to transport all domestic sewage from the existing sewer system to the city's sewage treatment plant and thereby prevent the discharge of raw sewage into the Willamette River during the period of critical stream flow.
15. The community of Dunthorpe must cease and desist discharging raw sewage from its community sewer system into the Willamette River. Each resident of the community should be notified that treatment of sewage from Dunthorpe must be accomplished within a period of one year.
16. The city of Newberg must provide additional treatment for its combined flow of domestic sewage and industrial wastes in order to prevent oxygen depletion in the downstream waters of the Willamette River. Such treatment should be adequate to effect an average BOD reduction of at least 85 percent.

17. Because the degree of waste treatment that is required to prevent pollution in the tidal reach of the river is dependent upon the amount of stream flow, the authorities responsible for release of the stored waters from the up river reservoirs should be requested to maintain the highest possible flows in the river during the summer and fall months. A definite agreement in this matter is necessary before it can be determined how much reduction must be made in the present pollution loads by the pulp mills.
18. Because the Pacific Power and Light Company diverts waters from the South Santiam River into the Albany power canal a short distance upstream from the city of Lebanon, the flow in this river below the outfall sewer of the Crown Zellerbach Corporation pulp mill is so low during the late summer and early fall months that it provides an insignificant amount of dilution for the effluents from the pulp and paper mill and from the Lebanon municipal sewage treatment plant. Because of this limited stream flow, the river was grossly polluted during 1957 despite the fact that the pulp mill reduced its pollution load by from 70 to over 91 percent. Storage reservoirs on the upper river have been proposed by the U. S. Corps of Engineers and if constructed they would make it possible to maintain during all seasons of the year sufficient flow in the river below Lebanon so that the present sewage and waste treatment or disposal facilities would be adequate to prevent pollution. Until such storage reservoirs are built every possible effort must be made by the Crown Zellerbach Corporation to prevent gross pollution of the South Santiam River during the period of critical stream flow by either effecting a further reduction in its pollution load, getting the Pacific Power and Light Company to decrease the amount of diversion through the Albany power canal, or by other means.
19. The Weyerhaeuser Timber Company at Springfield must abate the pollution which causes the excessive slime growth in the waters of the McKenzie River downstream from the discharge of effluent from its kraft mill.
20. Although the wastes from the Western Kraft Corporation pulp mill at Albany affect the quality of the Willamette River water for only a very limited distance below its outfall sewer, the corporation must continue to effect further reductions in the present pollution load in order to abate and control the slime growths caused by the discharge of said wastes.
21. If during the period of critical stream flow the waste treatment or disposal facilities for any one of the sulphite pulp mills becomes inoperable the mill must cease operating or otherwise prevent discharge of its untreated wastes into the river until said waste treatment or disposal facilities are back in operation. Immediate notice of the failure of such waste treatment or disposal facilities shall be transmitted to the Sanitary Authority.
22. During the period of critical stream flow from May 1 to November 1 of each year all municipal and domestic sewage treatment works

ABG763

which discharge effluents into the river shall be operated at maximum efficiency. There shall be no by-passing of any unit of such plants during this period. In case of emergency the Sanitary Authority shall be notified immediately and such notice shall be confirmed forthwith in writing.

23. Because the discharge of wood fibers and other suspended solids from the pulp mills was found to be detrimental to downstream recreational uses (sport fishing and the deposition of such materials in the tidal reach was so great that during the period of critical stream flow large rafts of such solids were observed floating on the water surface, steps must be taken by said mills to reduce their fiber losses sufficiently to prevent such pollution.
24. During the period June 1 to November 1 of each year all major sources of pollution in the Willamette Basin shall be required to measure once a week their pollution loads, in terms of BOD, discharged to the river system and to report the same each week to the Sanitary Authority. During this same period the river at Salem and below should be monitored weekly by the Sanitary Authority and during the period of most critical flow the tidal reach should be monitored daily.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the secretary be instructed to notify each of the above cities and industries of the requirements set forth in said conclusions.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that arrangements be made by the staff for the calling of a public hearing for the purpose of revising the order of this Authority pertaining to the abatement and control of pollution in the Willamette River caused by the wastes from pulp and paper mills.

#### FEDERAL CONSTRUCTION GRANTS

After reviewing a report on the status of the federal construction grant program and in anticipation of another appropriation by Congress for the 1959 fiscal year it was MOVED by Mr. Stanley, seconded by Dr. Erickson and carried that the cut off date for submission of applications for federal grants be set for June 1, 1958.

Green Sanitary District

Because the Green Sanitary District had thus far received no commitment from the Housing and Home Finance Agency as to whether or not said agency would purchase its sewer bonds the district had submitted a request for another extension in time. A copy of a letter from the Housing and Home Finance Agency stating that the district's application had been received and was being processed was brought to the attention of the Authority members.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that an extension of time be granted the Green Sanitary District for the sale of its sewer bonds until such time as a decision is reached in this matter by the Housing and Home Finance Agency.

Beaverton and Broadmoor

Inasmuch as both of these communities are desirous of participating in the construction of the proposed first stage of the Tri-County master trunk sewer system for the upper Fanno Creek drainage basin it was concluded by the Authority members that a similar extension of time should be granted to Beaverton and Broadmoor for the sale of their respective bond issues.

Government Camp Sanitary District

A report was presented by Mr. Cuyler covering the status of the Government Camp Sanitary District project. Although the state legislature has authorized the purchase of bonds in an amount of \$95,000 from said district, before such a purchase can actually be made another bond election will be required. The voters in a previous election authorized the issuance of only \$60,000 in bonds.

RULES OF PROCEDURE

A copy of the rules of procedure as prepared by Mr. Quesseth and distributed to the members prior to the meeting was reviewed.

ABG763

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried that said rules of procedure be adopted with the following changes or corrections and that a true copy of the same be filed with the Secretary of State as required by law: In Section 7 of rule 3 the word "hearing officer" shall be replaced by the word "agency". Line D of Section 1 under rule 9 shall be changed to read "to issue citation notices and supenas."

POLLUTION OF THE LOWER COLUMBIA RIVER

Because of complaints which had been received recently from commercial fishermen concerning the slime growths which have existed in the lower Columbia River during the past winter it was concluded that a joint meeting with the Washington State Pollution Control Commission should be held as soon as possible for the purpose of discussing this problem. The secretary was therefore authorized to work out arrangements for such a meeting with Mr. Alfred T. Neale, Acting Director of the Washington Pollution Control Commission.

ADMINISTRATION

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that Mr. Wendel be re-elected as chairman of the Sanitary Authority.

The next meeting of the Authority was set for 10:00 a.m., Friday, May 23, 1958.

The meeting adjourned at 5:40 p.m.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

## SPECIAL MEETING

## OREGON STATE SANITARY AUTHORITY

March 10, 1958

A special meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 p.m. March 10, 1958, in room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., B. A. McPhillips, Lewis A. Stanley, Harold T. Johnson, and Edward C. Harms, Jr., Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Cecil H. Quesseth, Legal Advisor; Clarence E. Cuyler, Associate Sanitary Engineer; Ronald I. Culver and Earl N. Kari, Assistant Sanitary Engineers; Glen D. Carter, Aquatic Biologist; and Harold W. Merryman, District Sanitary Engineer.

This special meeting was called as a public hearing in the matter of waste disposal by the Georgia-Pacific Paper Company in the public waters of the state of Oregon at Toledo. In response to a formal notice sent by certified mail on February 17, 1958, the following persons were present to represent the Georgia-Pacific Company: H. S. Daniels, President; Robert E. Flowerree, Jr., Vice President; W. J. Shelton, Vice President and Resident Manager; Roy W. Wiberg, Technical Superintendent; and Roger Tollefson, Consulting Biologist.

The proceedings were recorded by Arvid E. Anderson, Court Reporter.

A memorandum pertaining to this matter and prepared by the staff under the date of March 10, 1958, was read by the secretary and made a part of the Authority's files in this case. Mr. Quesseth stated the record should indicate that the 1957 rules of this committee require that the witnesses take an oath, and that he, as attorney for the Authority, be designated to administer such oath. He was so designated.

ABG763

Mr. Robert E. Flowerree introduced Mr. W. J. Shelton, resident manager of the Toledo mill. After taking the oath and stating his capacity at the mill Mr. Shelton stated that although he had not had an opportunity before the meeting to review the memorandum read by the secretary he would attempt to discuss each item contained in it. The following is a brief summary of his statements.

With reference to item 1 of the afore-mentioned memorandum he stated that, as shown by actual tests, the BOD loadings of the mill wastes had been somewhat higher than their engineers' original estimates. He claimed this was due primarily to the difficulties which had been experienced in the starting up of the new mill. He stated further that the difficulties which had been encountered were fairly normal for that type of operation because of the complexities and size of a kraft pulp mill.

With reference to item 2 he stated that the company was following the proposal for the disposal of their liquid wastes made to the Sanitary Authority in a letter by Mr. Flowerree dated September 7, 1956.

He conceded that items 3, 4, 5, 6 and 7 true statements of fact and required no special comment. (Item 4 pointed out that no plans for the sanitary sewer system or emergency storage lagoon were ever submitted to the Authority.) The discharge of wastes into the Yaquina River reported in item 8 was admitted. He stated that the drains referred to in item 10 had since been plugged.

He stated that he had met with the Newport Tourist Association and had discussed with them the reasons for the pollution along the Newport beach, referred to in item 11. He stated further that the company had promised to report to the Association by April 1 on its plans for abating this pollution. The reason for the foam on the beach was claimed to be the very low efficiency of chemical recovery which had been

experienced during the start up of the mill. He claimed that the operations had recently been much more efficient and that as a result the chemical losses had been reduced from 260 to only 80 pounds per ton of pulp produced.

The culvert referred to in items 12 and 13 was said to have since been closed off so that the lagoon could not everflow into the ditch which drains into the Yaquina River. Mr. Shelton mentioned the various difficulties which had been experienced in the operation of the pumps and certain other mechanical units of the pulp mill which allegedly had been responsible for the overflow of wastes into the lagoon, onto the ground surface and thence into the Yaquina River.

He indicated that the high BOD values listed in item 14 and the conditions mentioned in item 15 were due to the inefficient operation during the start-up period, that the company would have to improve the efficiency in order to stay in business, and that with more efficient operation the pollution in the future should be fairly well controlled.

With reference to item 16 he claimed that the emergency lagoon had become ineffective because it had filled up with rain water during the recent periods of heavy rainfall.

He made no special comments regarding items 17, 18, 19 and 20.

In connection with item 21 he stated that the company's major problem was how to repair the dike around the lagoon with the lagoon filled with water. He expressed concern that the dike would break at any time and let the lagoon contents go directly into the river. A portable pump had been installed to pump the lagoon contents into the sump of the main lift station so they could be repumped to the ocean but the capacity of the main lift station was not adequate to handle this additional load unless the mill were shut down. He, therefore, requested permission to drain the lagoon contents under controlled conditions into the river so that the dike could be repaired. He claimed that the lagoon contained

ABG763

about 35,000,000 gallons of water of which only 35,000 gallons or 0.1% was black liquor or its equivalent. To support the company's contention that the controlled discharge of such wastes into the river would cause no damage he asked that Mr. Tollefson be permitted to testify.

Mr. Roger Tollefson, Consulting Biologist, after being sworn in by Mr. Quesseth stated that it had been calculated that the existing lagoon had an effective volume of 108 acre feet and that with the estimated concentration of only 0.1% black liquor the discharge of the contents under controlled conditions over a 10-day period into the river would increase the BOD of the river water in the order of 0.15 ppm. He claimed the river had a flow of about 600 cfs at the present time, that the pH of the lagoon contents was 7.2 or about the same as the river itself so there would be no effect on the alkalinity, that the sulphides and mercaptans after storage are no problem, and that, therefore, no detrimental effects on the aquatic life would be produced by draining the lagoon into the river.

In the discussion that followed and in response to questions raised by the Authority members it was admitted by Mr. Shelton that no provision had been made in the design or construction of the emergency lagoon for exclusion of surface drainage. This was one of the main reasons for the lagoon's becoming filled with water and, as a consequence, useless under present conditions for the storage of mill effluent. It was brought out that the flow of wastes being pumped to the ocean was more than had been estimated by the mill designers and that as a consequence the pump station did not have sufficient capacity to handle both the daily flow of mill effluent and the contents of the lagoon. When the mill was shut down over the weekend they were able to lower the level in the lagoon by about 3 or 4 inches by the use of portable pumps. In response to a question

by Dr. Erickson, Mr. Shelton stated that in order to empty the lagoon by pumping they would probably have to shut the mill down for 8 or 10 days.

There was considerable discussion about the condition of the dike around the lagoon and about repairing the dike without draining the lagoon.

Mr. Chester Wachsmuth, General Manager of the Oregon Oyster Company was then sworn in by Mr. Quesseth. He testified that his company owned and operated some 40 acres of oyster grounds in Yaquina Bay downstream from the Georgia Pacific Company pulp mill. He expressed disappointment over the Georgia Pacific Company's failure to keep the strong wastes out of the river during the start up of the mill although he did not believe that the discharge of wastes had as yet caused any noticeable damage. He pointed out, however, that within the near future the Oregon Oyster Company would be planting in the bay about 1,000 bushels of seed oysters which they had obtained from Kobe, Japan. Because of this he would object to any further discharge of wastes into the river including the controlled discharge of the lagoon contents. He asked that Mr. Bob Bower, representative of the Pacific Coast Oyster Growers Association, Olympia, Washington, be permitted to testify.

Mr. Bob Bower after being sworn in likewise expressed both concern and disappointment regarding the pollution problem which had been created by the failure of the pulp mill to keep its wastes out of the river. He stated that the marine resources of the river and bay should not have to take any calculated risks.

Mr. Dean Marriage, representative of the Oregon State Fish Commission, was sworn in as the next witness. He corroborated the statements presented in the memorandum of the Authority staff regarding their observations of waste discharges at the pulp mill. He said he would oppose the draining of the lagoon contents into the river for several reasons. He claimed

ABG763

such discharge would invalidate certain research work being conducted at the Oregon State College marine laboratory located <sup>on</sup> Yaquina Bay, would jeopardize the seed oysters which would soon be planted by the Oregon Oyster Company, would endanger horse clam larvae which are in the bay at the present time, and might also endanger live crabs being held in the bay by the Point Adams Packing Company at Newport. He admitted, however, that at the several ecological sampling stations, which the Fish Commission has been surveying since before the start of the pulp mill, no damaging effects had been detected to-date. In response to a question from Mr. Stanley, he stated that he could not state that no damage would be caused by the controlled discharge over even a 10-day period of the lagoon contents into the Yaquina River and Bay.

Mr. Ralph V. Criteser of the Criteser Moorage, Toledo, after being sworn in by Mr. Quesseth, expressed concern that even if the dike were repaired the lagoon contents would eventually leak into the river and cause pollution.

Mr. Joe Davidson, Newport City Councilman, after being sworn in testified that the discharge of the pulp mill wastes into the Pacific Ocean had created a serious odor nuisance along the ocean beach at Newport. He also complained about the nuisance condition caused by the foam which was caused by the pulp mill wastes.

At this point Mr. Quesseth stated that the notice of the hearing which had been sent out by the Authority referred only to the matter of waste discharged into the Yaquina and did not include the Pacific Ocean. It was agreed, however, by the representatives of the Georgia Pacific Paper Company that this hearing could include the subject of discharging wastes into the ocean.

Mr. L. G. Gardner, representative of the Newport Tourist Association, was sworn in as the next witness. He also complained about the nuisance

conditions along the Newport Beach and presented photographs to show the extent of the foam. He claimed that if the nuisance conditions were not abated they would ruin the tourist business along the Newport ocean front. He asked that the Authority do everything possible to obtain immediate abatement of these conditions.

Mr. Ernest Sallee, employee of the Oregon Oyster Company with residence at Oysterville on Yaquina Bay was sworn in by Mr. Quesseth. He referred to the possible damage to the seed oysters which were to be planted shortly in the bay and claimed that the wastes which had previously been discharged into the river had been observed in the eddies over the oyster beds. He claimed further that the oysters had already been damaged.

Mr. C. G. Campbell, representative of the Oregon State Game Commission, was the next person to testify. After being sworn in he concurred in the statements made in the Sanitary Authority memorandum and in the testimony presented by Mr. Marriage. Upon being questioned about the proposed draining of the lagoon contents into the Yaquina River he said he would not recommend it even under controlled conditions.

Professor R. E. Dimick, Fish and Game Management Department, Oregon State College, after being sworn in by Mr. Quesseth reported briefly on the studies being made at the marine laboratory on Yaquina Bay. He submitted a written statement which was made a part of the Authority's files in this matter.

At the conclusion of Professor Dimick's testimony, Dr. Isaiah Gellman, representative of the National Council of Stream Improvement of the Pulp and Paper Industry, asked Professor Dimick if the statement made in the Sanitary Authority's memorandum about the research studies being invalidated by the recent discharge of wastes was correct. He replied that the word

ABG763

invalidate was not correct as they had been unable to detect any damage thus far.

Mr. H. S. Daniels after being sworn in made a statement regarding the company's policy. He pointed out that the trouble to-date had been due to the inefficient chemical recovery and to the mechanical difficulties which had been experienced in the start up of the mill but that in order to stay in business this inefficiency and these other difficulties would have to be corrected or the company would soon be financially unable to continue operations. He said it was their policy to make this a model pulp mill operation from all standpoints, including pollution control.

Mr. Flowerree after being sworn in mentioned the possibility of land slides which could put the pipe line to the ocean out of operation for several days and stated that was the main reason--  
--for having the emergency storage lagoon in the first place. He reiterated the company's request for permission to drain the lagoon so that the dike could be repaired.

Mr. Wilbur P. Breese, representative of the Oregon State College marine laboratory, after being sworn in, was the next person to testify. He discussed the types of studies being conducted and pointed out that some of them are of long duration. He implied that the waste discharges which had already taken place might possibly invalidate some of these latter studies.

The chairman asked if anyone else wished to be heard in this matter. Mr. Milton Preiss said he was there to represent the Newport Chamber of Commerce but had no statement to make. No one else asked to be heard.

There being no further testimony the public hearing was adjourned.

The Authority members then continued their consideration of this matter in an executive session.

After considerable discussion it was MOVED by Mr. Stanley, seconded by Mr. McPhillips, and carried, that with one revision the findings of the staff as set forth in the memorandum dated March 10, 1958, in this matter be adopted as the findings of fact by this Authority, that paragraph No. 17 of said memorandum be revised by substituting the word "possible" in place of the word "the" before the word "invalidation", and that the recommendations of the staff set forth in paragraph 22 be amended as follows and be incorporated in an order, a certified true copy of which together with the findings of fact pertaining to this matter shall be served by the secretary upon the Georgia-Pacific Paper Company:

In order to insure that the natural purity of said waters will be preserved and also that no nuisance will be created along the Newport beach the Georgia-Pacific Paper Company

- (a) Must immediately cease and desist discharging any weak or strong wastes from said pulp and paper mill into the Yaquina River.
- (b) Until such time as an adequate emergency storage lagoon can be provided, must cease discharging any kraft mill wastes into the presently used diked area.
- (c) Must immediately construct an acceptable lagoon for the emergency storage of all weak and strong wastes. Such a lagoon shall have watertight dikes, shall be so designed and constructed that its contents can be drained back into the pumping station for final discharge to the ocean, shall exclude all unnecessary surface drainage, and shall have no drain to the Yaquina River.
- (d) Must measure and record daily the total quantity of raw water used by the pulp and paper mill, the quantity of wastes discharged to the ocean, and the quantity of wastes discharged to the lagoon; must determine at least once each week the 5-day BOD, sulphide

ABG763

and suspended solids content of the flow of weak and strong wastes to the ocean and of the flow of cooling, lubrication and service waters to Yaquina River; and must report the same, including the tonnage of paper produced daily, to the State Sanitary Authority at least once each month.

- (e) Must immediately provide such waste treatment or take such other steps as may be necessary to prevent any nuisance condition along the Newport beach.

The meeting adjourned at 5:40 p.m.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

SPECIAL MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY  
April 29, 1958

A special meeting of the Oregon State Sanitary Authority was called to order by Acting Chairman, Mr. B. A. McPhillips, at 2:00 p.m., April 29, 1958, in Room 36, State Office Building, Portland, Oregon. Members present were B. A. McPhillips, Harold M. Erickson, M.D., Harold T. Johnson, and Lewis A. Stanley. Also present were Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Deputy State Sanitary Engineer; Clarence E. Cuyler Associate Sanitary Engineer, and Glen D. Carter, Aquatic Biologist.

In the absence of Mr. Harold F. Wendel, Chairman, Mr. B. A. McPhillips was nominated and elected to serve as temporary chairman. The proceedings were recorded by Mr. Arvid E. Anderson, Court Reporter.

Mr. McPhillips announced that this meeting had been called for the purpose of hearing a petition by Georgia Pacific Paper Company requesting that portions of the order of the Sanitary Authority of March 12, 1958, be amended or repealed, which order pertains to the disposal of wastes by the Georgia Pacific Paper Company of Toledo, Oregon.

A notice of hearing having been sent on April 16, 1958, by the secretary of the Authority to all interested parties the following persons were present to represent Georgia-Pacific Paper Company: H. S. Daniels, President; W. J. Shelton, Vice President and Resident Manager; Robert E. Flowerree, Jr., Vice President; Roy W. Wiberg, Technical Superintendent; Roger Tollefson, Consulting Biologist; and Fred A. Yerke, Jr., Attorney.

The secretary summarized as follows the proceedings which had taken place in this matter since the March 10, 1958 hearing:

By certified mail on March 14, 1958 true copies of the Findings of Fact and Order, both dated March 12, 1958, were sent to the Georgia-Pacific Paper Company by the secretary of this Authority.

The order reads as follows:

"IT IS HEREBY ORDERED:

1. That the Georgia-Pacific Paper Company, its officials, agents, and employees, shall:
  - (a) Immediately cease and desist discharging into Yaquina River any weak or strong wastes from its pulp and paper mill located at Toledo, Oregon.
  - (b) Until such time as an adequate emergency storage lagoon can be provided, cease and desist discharging any Kraft mill wastes into the presently used diked area.

ABG763

(c) Take immediate steps to construct for emergency storage of all weak and strong wastes a lagoon with watertight dikes, with no drain to Yaquina River, excluding from such lagoon all unnecessary surface drainage and being so designed and constructed that its contents can be drained back into the pumping station for final discharge to the ocean.

(d) Measure and record daily the total quantity of raw water used by the pulp and paper mill, the quantity of wastes discharged to the ocean, and the quantity of wastes discharged to the lagoon; determine at least once each week the 5-day BOD, sulphide and suspended solids content of the flow of weak and strong wastes to the ocean and of the flow of cooling lubrication and service waters to Yaquina River; and report the same, including the tonnage of paper produced daily, to the State Sanitary Authority at least once a month.

(e) Immediately provide such waste treatment and take such other steps as may be necessary to prevent any nuisance conditions on the beach.

2. The secretary of this Authority be and hereby is directed to serve a certified true copy of this Order together with the findings of fact pertaining to said matter upon the Georgia-Pacific Paper Company. On March 19, 1958, a reply to said order was received from Mr. H. S. Daniels, President of Georgia-Pacific Paper Company, requesting that the order be amended to permit the company to have a drain in the emergency storage lagoon. Mr. Daniels was later advised that it would be necessary to hold another public hearing before the order could be amended.

On April 4, 1958, a petition was received from Mr. Robert E. Flowerree, Jr., Vice President of Georgia-Pacific, requesting a rehearing for the purpose of amending the order of March 12. The petition requested that said order be amended to permit the petitioner to drain from the aforesaid lagoon through petitioner's existing drain into the Yaquina River:

- (1) The waters accumulating therein from rain, drainage and other natural sources; and
- (2) The waters accumulated therein containing effluents from petitioner's plant when
  - (a) The ratio of such effluents to such waters does not exceed 1 to 2,000, and
  - (b) The biochemical oxygen demand does not exceed 40 parts per million.

On April 16, 1958, pursuant to the afore-mentioned petition, a notice of a new hearing to be held on Tuesday, April 29, 1958, was sent by certified mail to the Georgia Pacific Paper Company by the Sanitary Authority.

On April 18, 1958, an amended petition was received by the secretary from Mr. Robert E. Flowerree, Jr., Vice President of Georgia Pacific.

The acting chairman then asked if it was the desire of the company to consider the amended petition at this hearing. The answer was in the affirmative. The Authority members then approved the holding of the hearing on the basis of the amended petition, a copy of which was made a part of the Authority's files in this matter.

The acting chairman next stated that this hearing would not constitute a review of the entire proceedings relating to the waste disposal by Georgia Pacific which resulted in the order of March 12, 1958, but would be limited to those portions of the order which prohibited the

ABG763

petitioner from discharging its waste products from the lagoon adjacent to its plant into the Yaquina River. He stated further that the hearing would be governed by the Rules of Procedure adopted by the Authority pursuant to the Administrative Practices Act of 1957. Mr. Cecil H. Quesseth, was designated to administer the oath to all witnesses.

Mr. Fred A. Yerke, Jr., presented the opening statement for the petitioner. He stated that the petitioner would insist that the testimony be limited to the witnesses of the two parties and to others who might intervene. He introduced Exhibit 1 which was a map of the Toledo area showing the plant site and vicinity.

Mr. W. J. Shelton was the first witness called by Mr. Yerke. He described the emergency storage lagoon and discussed the problems caused by heavy rainfall and excessive surface drainage. He testified that the drain from the lagoon to the Yaquina River had been installed in February 1958. Later he corrected his testimony by stating that the installation had been made in January. He stated further that said drain line had not been opened since the March 10 hearing. He testified that following the previous hearing the pulp mill had been shut down for 9 days, allegedly for the purpose of pumping out the lagoon. He claimed that the mill shut down cost the company \$8,000 per day or a total of \$72,000. The Faye Plank Construction Company had reportedly repaired the dike. He testified that all surface drainage, except some from property owned by the city of Toledo, had been shut off from the lagoon and that all culverts and man-made openings had been closed. In response to questions from Authority members he stated that the maximum depth of the lagoon was 9 feet, that no land slides had occurred thus far along the pipeline to the ocean and that the pipeline had capacity to carry more flow than could be handled by the present pumping equipment.

ABG763

Mr. Flowerree, the next witness called by Mr. Yerke, testified that he has been familiar with the Toledo area since 1940 and has personal knowledge of serious land slides in the vicinity of the company's pipeline. He stated that the present lagoon site, which was used previously for settling the tailings from the dredging operations when the pulp mill site was being filled, was formerly used as pasture land for a dairy. He stated that the company would contact the city of Toledo and attempt to prevent the surface drainage from the city's property from getting into the lagoon.

Mr. Roger Tollefson was then called by Mr. Yerke as witness for the petitioner. He spent considerable time telling about his training and experience in the field of aquatic biology; particularly with reference to oysters and other marine organisms. He testified that he had been employed by the petitioner beginning in 1955 to make a review of the literature regarding pollution problems associated with kraft mill effluent, to conduct a study of the flushing characteristics of Yaquina Bay and to make sanitary and biological surveys of the river and bay. He described the procedures used and discussed at length the findings of these studies and surveys.

Considerable time was then spend by Mr. Yerke in presenting testimony by Mr. Tollefson in an attempt to prove by means of a hypothetical question that the draining of the lagoon contents under controlled conditions into the Yaquina River would not be detrimental to the aquatic environment. The hypothetical question assumed that such discharge would not create conditions in violation of the Sanitary Authority standards pertaining to dissolved oxygen and pH but no reference was made to other possible effects.

Mr. Everts was then requested by Mr. Yerke to take the stand. After

being sworn in he was asked to outline the requirements of the Sanitary Authority for the disposal of wastes from other pulp mills throughout the state and to indicate whether or not the requirements established for Georgia Pacific at Toledo were more rigid than those for other companies. An objection by Mr. Stanley to this line of questioning was sustained by the chairman on the grounds that it was irrelevant, immaterial and had no bearing on the matter and therefore was not admissible. An automatic exception was given. No further questions were asked of Mr. Everts.

Representatives of the Oregon Oyster Company, State Fish Commission, State Game Commission and Oregon State College were also present at this hearing and desired to be heard but under the rules of procedure adopted at the beginning of the hearing could not testify except as witnesses for either the petitioner or the Sanitary Authority. Because there had already been nearly 3 hours of testimony and discussion it was decided to continue the hearing until May 12, 1958, so as to give these other parties an opportunity to intervene if they so desire. The hearing was therefore adjourned at 5:00 p.m.

The following actions were then taken by the Authority members regarding other matters.

It was MOVED, seconded and carried that of the funds available to the Sanitary Authority during the 1958 fiscal year an amount not to exceed \$5,785 be used for financial support of a research study of waste water oxidation lagoons (sewage stabilization ponds) to be conducted by the Engineering Experiment Station of Oregon State College at the Corvallis municipal sewage treatment plant.

It was MOVED, seconded and carried that of the funds available to the Sanitary Authority \$2,950 be used for the production of an educational film, in color and sound, covering Oregon's water pollution control program

as per the proposal submitted by Mr. Sherman Washburn and Mr. R. E. Snethen of KOIN-TV Broadcasting Company of Portland.

It was also agreed to hold a joint meeting with the members of the Washington Pollution Control Commission on Friday, May 23, 1958, for the purpose of discussing water pollution problems of mutual interest and concern to the two states of Washington and Oregon, such a meeting to be held at Camas, Washington.

There being no further business the meeting adjourned at 5:20 p.m.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

Continuation of April 29, 1958  
Public Hearing for Georgia Pacific Paper Company

by

OREGON STATE SANITARY AUTHORITY

May 12, 1958

The hearing in the matter of the petition by the Georgia Pacific Paper Company, having been continued from April 29, 1958, was called to order at 1:45 p.m. on May 12, 1958, in Room 579, State Office Building, Portland, Oregon. Those present were B. A. McPhillips, Acting Chairman; Harold M. Erickson, M.D., Lewis A. Stanley, Harold T. Johnson and Edward C. Harms, Jr., Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Cecil H. Quesseth, Legal Advisor; Clarence E. Cuyler, Associate Sanitary Engineer; Ronald I. Culver and Earl N. Kari, Assistant Sanitary Engineers; and Glen D. Carter Aquatic Biologist.

Mr. Cecil H. Quesseth, attorney for the Sanitary Authority, was

ABG763

authorized to administer the oath to each of the witnesses called for testimony.

Mr. McPhillips stated the hearing of April 29 had been continued in order that interested parties might have a chance to intervene. Since April 29 two petitions had been received for intervention, one from the Oregon Oyster Company and one from the Oregon State Game Commission and State Fish Commission. Both petitions were read by the secretary. Mr. Fred A. Yerke, Jr., attorney for Georgia Pacific, was asked if notices had been received by them of these petitions. He stated they had. When asked if they had any objection to such intervention he said they had none.

Mr. Harry DeFrancq, attorney, was present to represent the Oregon Oyster Company and Mr. Roy C. Atchison, Assistant Attorney General, was present to represent the State Fish and Game Commissions.

It was MOVED by Mr. Johnson, seconded by Mr. Stanley and carried that the petitions for intervention by the Oregon Oyster Company and the State Fish and Game Commissions be allowed.

Mr. Yerke then stated that the petitioner desired to present a limited amount of additional testimony to supplement that which had been presented on April 29, 1958. Mr. W. J. Shelton was therefore asked to take the stand again. Having been sworn in at the previous meeting he testified that since then the city of Toledo had removed its culvert which previously had drained into the lagoon so that now all surface drainage had been diverted. Permission had also been received from the railroad company to keep drainage from their property out of the lagoon. He stated there had been no drainage from the lagoon into the Yaquina River since the March meeting.

Mr. Spies after being sworn in was asked to tell of his telephone conference with Mr. Daniels on March 25 regarding the draining of

rainwater and surface run-off from the lagoon into the Yaquina Bay. He stated that Mr. Daniels had been advised that if only rainwater and surface drainage were involved it would not be considered as a violation of the Authority's March 12, 1958, order to drain such waters into the river but that the Authority's staff would reserve the right to check the lagoon contents to make sure no industrial wastes were present.

Mr. Yerke then stated that the petitioner had no further witnesses.

Dr. Harry C. McMillin, aquatic biologist with the Washington State Department of Fisheries, after being sworn in by Mr. Quesseth was questioned by Mr. De Francq in behalf of the Oregon Oyster Company. He testified that in 1939 he had made a biological survey of the waters of Yaquina Bay for the U. S. Bureau of Fisheries (U. S. Fish and Wildlife Service) and for the Oregon Oyster Co. He said he was familiar also with the wastes from both sulphite and sulphate pulp mills and had conducted research with both. He said the resins and lignin compounds are the principal toxic constituents of such wastes, that kraft mill wastes could cause tastes in oysters as well as be toxic, and that the wastes will form a precipitate in salt water.

Mr. De Francq then submitted Bulletin No. 43 of the U. S. Department of Interior, published in 1947, and entitled, "Ecological and Physiological Studies of the Effects of Sulphate Pulp Mill Wastes on Oysters in the York River, Virginia" as petitioner's (Oregon Oyster Co.) Exhibit A. An objection by Mr. Yerke to the introduction of this exhibit was overruled by the chairman.

Mr. Yerke's objection to the introduction by Mr. De Francq of Bulletin No 49 of the Washington State Department of Fisheries was sustained by the chairman.

Dr. McMillin testified further that BOD is of little significance in oyster propagation. He claimed that oysters can survive under

ABG763

practically zero dissolved oxygen. He stated further, however, that 1 ppm of kraft mill waste effluent (10 percent solids) would be lethal to shellfish. It was his opinion also that 1 bucket of the lagoon contents if drained into the Yaquina River would invalidate the research studies at the marine laboratory on Yaquina Bay.

After the testimony of Dr. McMillin was finished a short recess was taken. When the hearing was reconvened, Mr. L. Dean Marriage, representative of the Oregon State Fish Commission, took the stand. Having been sworn in at the previous hearing he was questioned by Mr. Roy Atchison, attorney for the Fish Commission, regarding his personal knowledge of the marine resources of Yaquina Bay. He presented a chart by means of a lantern slide which showed the periods when various forms of marine organisms are present in the bay. It was pointed out that during all seasons of the year there are some species of adult and larval forms of marine life present in the bay.

He described the flushing studies which he had assisted Dr. Wayne Burt of Oregon State College in making of Yaquina Bay in 1955 and 1956.

He stated that in connection with the present problem of whether or not the paper company could be permitted to drain any contents of the emergency storage lagoon into the river several important factors should be considered. He stressed in particular the possible disruption of any portion of the food chain and mentioned as an example the algal bloom in 1953 and 1954 which covered some 200 acres in the lower bay and which was so heavy that it caused an estimated 60% mortality of Pacific oysters. He pointed out also that there is no quick or simple chemical or other test that can be used to determine if and when the waste concentration becomes high enough to be toxic to any part of the food chain.

At the conclusion of Mr. Marriage's testimony a second recess was called. During the recess an informal discussion was held by the members of the Authority and representatives of the Georgia Pacific Paper Company. A proposal was made that a smaller lagoon be constructed within the existing 35-acre lagoon and that the smaller one be so constructed that it would drain only into the pumping station and not into the river. The smaller lagoon would, however, have an overflow into the present lagoon which in turn would have a drain to the river.

Because the afore-mentioned proposal appeared to be a possible solution to the problem the attorneys for all parties concerned, including the intervenors, were instructed to confer immediately for the purpose of drafting a suitable amendment to paragraph I-(c) of the March 12, 1958, order in this matter. Accordingly such a conference was held and the following amendment was drafted.

"(c) Take immediate steps to construct for emergency storage of all weak and strong wastes a lagoon with water tight dikes within the present lagoon, with no drain to the Yaquina River, excluding from said new lagoon all unnecessary surface drainage and being so designed and constructed that its contents can be drained back into the pumping station for final discharge to the ocean. Upon construction of said emergency lagoon the Georgia-Pacific Paper Company may drain from time to time from the large lagoon, excepting said emergency lagoon, waters accumulating therein from rain, surface drainage and other natural sources into the Yaquina River."

After further discussion of the above proposed revision a stipulation was entered into that the March 12, 1958, order should be so amended. It was then MOVED by Mr. Stanley, seconded by Mr. Johnson and carried that the order in this matter dated March 12, 1958, be so amended in accordance

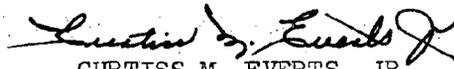

ABG763

with the above stipulation and that the secretary of the Authority serve a certified true copy of the amended order upon the Georgia-Pacific Paper Company, the Oregon State Game Commission, the Oregon State Fish Commission, and the Oregon Oyster Company and their respective attorneys.

The Georgia Pacific Company representatives were reminded that plans and specifications for the proposed emergency storage lagoon must be submitted for review and approval before construction of the same is undertaken.

The hearing was adjourned at 4:50 p.m.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary and Chief Engineer

Minutes of August 8, 1958, meeting inserted on following unnumbered pages.

MINUTES OF THE SEVENTY-FIFTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

October 17, 1958

The seventy-fifth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:20 a.m., October 17, 1958, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., Lewis A. Stanley, and Harold T. Johnson, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Cecil H. Quesseth, Legal Advisor; Clarence E. Cuyler and Donald J. Benson, Associate Sanitary Engineers; Earl N. Kari and Ronald I. Culver, Assistant Sanitary Engineers; and Glen D. Carter, Aquatic Biologist.

Previously omitted, entered on April 21, 1959

MINUTES OF THE SEVENTY-FOURTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

August 8, 1958

The seventy-fourth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 p.m., August 8, 1958, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; B. A. McPhillips, Lewis A. Stanley and Edward C. Harms, Jr., Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Cecil H. Queseth Legal Advisor; Clarence E. Cuyler and Donald J. Benson, Associate Sanitary Engineers; Ronald I. Culver, Assistant Sanitary Engineer; and Glen D. Carter, Aquatic Biologist.

Minutes

The minutes of the January 24, 1958, 73rd Meeting; March 10, April 29, and May 12, 1958, Special Meetings having been distributed to the members in advance of the meeting were approved as prepared.

Project Plans

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried that actions taken by the engineering staff on the following 225 project plans during the months of January through July, 1958, be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1-2-58	Pendleton	Sewer extension	Prov. approval
1-7-58	Multnomah County	Gresham High-School	Prov. approval
1-10-58	Powers	Preliminary report	Approved
1-10-58	Oswego	Jr. High School	Not approved
1-10-58	Pendleton	Sewer extension	Approved

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
1-13-58	The Dalles	Sewer extension	Prov. approval
1-13-58	Eagle Point	School sewerage	Approved
1-15-58	Linn County	Central Linn High School	Approved
1-16-58	Washington County	McKay Grade School	Prov. approval
1-16-58	Chiloquin	Sewer extension	Prov. approval
1-20-58	Tigard	Union High School	Prov. approval
1-20-58	Baker	Sewer extension	Prov. approval
1-22-58	St. Helens	Storm drainage	Approved
1-23-58	Multnomah County	Jason Lee School	Approved
1-23-58	Portland	Woodrow Wilson High School	Approved
1-24-58	Multnomah County	Lynchview Grade School	Prov. approval
1-28-58	Douglas County	Douglas High School	None required
1-29-58	Cannon Beach	Sewer system	Not approved
1-30-58	Clackamas County	Safeway Warehouse sewers	Prov. approval
1-31-58	Tri-County	First stage report	Deferred
2-3-58	Brookford	Sewers for District No. 2	Prov. approval
2-5-58	Forest Grove	Masonic Home sewers	Prov. approval
2-6-58	Clackamas County	Safeway Stores Inc. sewers	Prov. approval
2-7-58	Multnomah County	Lynchview School sewers	Prov. approval
2-13-58	Washington County	Sunset Valley School Addition	Approved
2-13-58	Clackamas County	Dale Ickes Jr. High School	Approved
2-13-58	Washington County	Barnes School addition	Approved
2-13-58	Washington County	West Tualatin View School	Approved
2-13-58	La Grande	Preliminary Report	Approved
2-14-58	Multnomah County	Ara Vista Subdivision sewers	Prov. approval
2-20-58	Albany	Grit removal facilities	Deferred
2-21-58	Eastside	Preliminary report	Approved

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
2-21-58	Milwaukie	Sewer extensions	Prov. approval
2-21-58	Klamath Falls	Sewer extnesions	Prov. approval
2-24-58	Coos County	Weyerhaeuser Allegany Housing	Prov. approval
2-24-58	Polk County	Monmouth Grade School	Approval
2-24-58	Polk County	Independence School	Approval
2-25-58	Rainier	Sewage treatment plant	Deferred
2-27-58	Roseburg	Hucrest Sewer extension	Not approved
2-28-58	Roseburg	Sundale Village sewers	Not approved
2-28-58	Roseburg	Millers Addition sewers	Deferred
2-28-58	Benton County	Corvallis Jr. High School	Approved
2-28-58	Coos County	Sunny Hill School	Approved
3-3-58	Roseburg	Hucrest sewers	Not approved
3-4-58	Roseburg	Millers Addn. & Sundale sewers	Not approved
3-5-58	Rainier	Sewage plant and interceptor	Deferred
3-6-58	Clackamas County	Hector Campbell School	Approved
3-6-58	Clackamas County	Ardenwald Grade School	Approved
3-6-58	Portland	Washington High School	Approved
3-7-58	Marion County	Lake Labish School	Approved
3-7-58	Klamath County	Henley School	Approved
3-11-58	Benton County	Highland View Junior High	Approved
3-11-58	Malheur County	Owyhee Lake Resort sewerage	Prov. approval
3-11-58	Rainier	Sewage plant and interceptor	Not approved
3-12-58	Benton County	Philomath High School	Approved
3-13-58	Deschutes County	Tumalo Grade School	Approved
3-12-58	Salem	Prel. report re trunk sewer	None required
3-17-58	Klamath Falls	South Suburban San. Dist. sewer	Approved
3-17-58	Roseburg	Millers Addition sewers	Prov. approval

Date	Location	Project	Action
3-17-58	Roseburg	Hucrest sewer	Prov. approval
3-17-58	Roseburg	Sundale	Prov. approval
3-17-58	Bonneville Dam	Septic tank system	Prov. approval
3-18-58	Multnomah County	Riverdale School	Not approved
3-18-58	Lafayette	Preliminary report	Approved
3-20-58	Washington County	West Sylvan School	Prov. approval
3-21-58	Medford	Berrydale preliminary report	Approved
3-21-58	St. Helens	Trunk and interceptor sewers	Deferred
3-24-58	Port Orford	Preliminary report	Approved
3-24-58	Josephine County	North Junior High	Approved
3-25-58	St. Helens	Sewage treatment plant	Deferred
3-25-58	Chiloquin	Sewer extensions	Prov. approval
3-28-58	Clackamas	Grade School	Approved
3-28-58	Clackamas County	Boring Grade School	Not approved
3-31-58	Yamhill County	Cook Grade School	Approved
3-31-58	Portland	Grant High School	Approved
3-31-58	Clackamas	Gladstone Grade School	Approved
3-31-58	Portland	Rose City Park School	Approved
3-31-58	Rainier	Sewage treatment plant	Approved
4-1-58	Cannon Beach	Sewers (revised plans)	Prov. approval
4-1-58	Hermiston	Sewer extensions	Prov. approval
4-1-58	Pendleton	Sewer extensions	Approved
4-1-58	Klamath County	Henley High School	Approved
4-2-58	Cannon Beach	Oxidation ponds	Not approved
4-2-58	Polk County	Dallas Grade Addition	Approved
4-2-58	Polk County	Dallas High Addition	Approved
4-3-58	Multnomah County	New David Douglas High	No action

Date	Location	Project	Action
4-4-58	Cornelius	Sewers	No action
4-4-58	Dallas	Sewers and pump station	Not approved
4-4-58	Multnomah County	Mount Tabor Elementary	Approved
4-4-58	Multnomah County	Joseph L. Meek School	Approved
4-4-58	Polk County	Whitworth Grade School	Approved

7-31-58	Ontario	Preliminary engineering report	Approved

Public Health Service Conference, Lower Columbia River, Designation of Conferee for Oregon

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that Mr. Everts be appointed to serve as the Sanitary Authority's conferee with the recommendation that the Chairman also attend. Said conference has been scheduled for September 10 and 11, 1958, in the Interior Building, Portland, Oregon.

Portland Sewerage Project Proposal

The Chairman read a letter which he had sent to the Portland City Council on August 1, 1958, objecting to the inclusion of the \$5,000,000 sewage disposal bond issue in the so-called \$39,500,000 "package plan" which is to be submitted to the Portland voters at the general election in November. A reply dated August 7, 1958, from Mayor Schrunk was also read. It stated that Mr. Wendel's letter had been reviewed and placed on file by the Council.

It was MOVED by Mr. McPhillips, seconded by Mr. Harms and carried that another letter be sent to the city (1) recommending again that the measure on pollution abatement be submitted separately to the voters with a full explanation that its passage is required in order to comply with state statutes, and (2) notifying the City Council that if funds for the sewerage project are included in the package proposal and such proposal is rejected by the voters the Sanitary Authority will have no alternative but to hold the Council responsible for the abatement of pollution caused in the Willamette River by the discharge therein of sewage and wastes from the city of Portland.

### Federal Construction Grants

Applications having been received prior to June 1, 1958, from 20 communities for federal construction grants from the 1959 appropriation consideration was given to the matter of assigning priorities. The applicants and the grants requested by them include: Ashland \$105,000, Brookings \$46,530, Cornelius \$52,776, Dufur \$30,435, Eugene \$153,000, Hood River \$58,000, La Grande \$103,200, Lakeview \$49,380, Medford \$20,400, Milton-Freewater \$43,689.63, Fanno Creek Sewer District (Mult. Co.) \$189,000, Tryon Creek Sewer District (Mult. Co.) \$185,000, Oak Lodge Sanitary District \$80,400, Ontario \$72,000, Prineville \$44,745, Salem \$50,928.77, South Suburban San. Dist. \$94,977.17, State of Oregon (Dammasch Hospital) \$53,226.60, The Dalles \$94,500, and West Slope \$249,192 for a total of \$1,776,380.17. The allotment to the state of Oregon from the 1959 federal appropriation is \$657,300. Several of the applicants were represented at the meeting.

The City of Salem was represented by Mayor Robert White, City Manager Kent Mathewson, City Engineer J. H. Davis and Councilman Clayton W. Jones, L. M. Grier, E. C. Charlton and Russell Bonesteele. Mayor White reported that the city had budgeted \$50,000 to help finance the proposed trunk sewer project for the southwest portion of the city which needed sewer extensions so badly. He stated that the project could not be financed at the present time unless a federal grant were received. City Manager Mathewson reported that the city was attempting to meet all of the requirements set forth by the Authority relative to sewage treatment but that no funds were available to finance preliminary engineering studies. He stated further that the city had applied to the Housing and Home Finance Agency for an advance planning loan for that purpose.

The Chairman thanked the city's representatives for the information which they had given but pointed out to them that unfortunately their

proposed project did not have sufficient points to receive a priority at the present time.

The City of Eugene was represented by Mr. Daniel Potter, Assistant City Manager, who reported that preliminary engineering studies were underway, that as soon as the present pilot plant studies were completed the final plans and specifications for secondary treatment units would be prepared, and that if a federal grant were received the city could finance the project immediately. Mr. Harms expressed the Authority's appreciation of the progress being made by the city of Eugene but pointed out that the project did not have sufficient points to receive a priority at this time.

Other representatives who were heard included City Engineer Robert Crichton for the City of Hood River, City Recorder H. L. Derrich for the City of Ontario, Sanitary District Board Chairman Fred Lewis for the South Suburban Sanitary District, Sanitary District Board Chairman Joe Davies for the Oak Lodge Sanitary District, City Superintendent Jack Kalinoski for the City of Prineville, City Superintendent E. C. Beigel for the City of Ashland, Howard Hugett and H. L. Thompson for the Tri-County Sanitation Committee (Fanno Creek and Tryon Creek Sewer Districts) and Col. Wm. C. Ryan for the State of Oregon (Dammach Hospital).

There being no other persons present who wished to be heard in this matter consideration was then given to the information submitted by the Authority's staff concerning each application. Under the priority point system previously adopted by the Authority five projects each had a maximum number of 27 points. They were Cornelius, South Suburban, Dufur, West Slope and Fanno Creek. Because the city of Dufur had made no progress toward financing its share of the construction cost and therefore was unable to undertake immediate construction its application was given no further consideration. The Tryon Creek and the Oak Lodge projects, each with 26 points, were the next highest applications. The total amount of the grants requested for these six

projects, excluding Dufur, was \$851,365.17 or considerably more than the amount available.

In the discussion of these projects it was brought out that the Fanno Creek and the West Slope projects were dependent upon each other because the former included the treatment plant and the latter the interceptor and outfall sewers. These two projects will also serve the Broadmoor Sanitary District, part of the city of Beaverton, and other adjacent areas. It was also brought out that the Oak Lodge project could not be built without the Tryon Creek project because the latter included the treatment plant and the former the interceptor or outfall sewer.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that priorities be authorized for the Cornelius, Fanno Creek Sewer District, South Suburban Sanitary District and West Slope Sanitary District projects with November 1, 1958, as the deadline for getting said projects underway.

After further discussion as to whether or not the Tryon Creek project could be financed by Tri-County without the assistance of a federal grant it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that a priority be authorized for the Oak Lodge project provided that by November 1, 1958, satisfactory assurance could be given that both the Oak Lodge and the Tryon Creek projects could be financed and construction started this fiscal year.

It was then MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that any funds remaining from the above allocations be carried over until the next meeting of the Authority.

#### City of Beaverton

Mayor A. H. Rossi and Consulting Engineer D. A. Huston were present to represent the city of Beaverton. The city had recently submitted a request for permission to make certain improvements to its sewer system and sewage treatment work which during certain periods of the year are grossly overloaded,

especially from a hydraulic standpoint. The city had previously applied for a federal grant to assist in financing a similar project. Although a priority had been tentatively allocated to the city, the initially proposed project was not approved by the Authority because it did not include any correction of the overloaded sewer system and also because it did not tie in with the master trunk sewer system which had subsequently been adopted by the Tri-County Sanitation Committee.

The city's representatives claimed that they could not wait any longer for the Tri-County project because the city was confronted with an immediate problem of providing adequate sludge disposal as well as sewage treatment. They requested permission therefore to go ahead with their proposed project even if they could not receive a federal grant.

After considerable discussion it was MOVED by Mr. McPhillips, seconded by Mr. Harms and carried that the city be permitted to go ahead with its proposed project but without a federal grant and with the understanding that the proposed changes and improvements to the sewage collection system and pump stations will also be made and further that upon instruction from the Authority the city shall make any additional improvements which might in the future become necessary to prevent stream pollution or the creation of a public health hazard.

#### Sunset Heights Sanitary District

Because a petition had already been submitted for annexation of the Ernst tract to the Sunset Heights Sanitary District and a contract had been entered into between the district and the owners of property within the Ernst tract relative to operation and maintenance of the proposed sewer extensions, it was MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried that a \$3,000 surety bond be accepted as substitute for the \$9,000 bond normally required for a 30-lot subdivision.

### Raleighwood Sanitary District

In connection with the proposed construction of sewer extensions to the privately-owned Raleighwood sewer system, Mr. Gene Talbot, President of West Hills Homes, Inc., tract developer, requested permission to substitute a \$10,000 savings account deposit receipt in place of a \$20,000 surety bond which would normally be required for a tract of 90 lots. In addition he has placed \$40,000 in escrow with Benjamin Franklin Savings and Loan to finance the cost of constructing a sewer connection to the Tri-County master trunk sewer system if and when the latter becomes available. Until connection can be made to the Tri-County system temporary sewage stabilization ponds are being used for treatment and disposal of the sewage from the Raleighwood district.

It was MOVED by Mr. McPhillips, seconded by Mr. Harms, and carried that the \$10,000 savings account deposit receipt be accepted pursuant to the terms of a sewer maintenance agreement meeting the approval of the Authority's legal advisor.

### Basic Data Survey in Bend Area

Mr. Stanley reported that consideration is being given by the Brooks-Scanlon Lumber Co. et al to the construction of a pulp mill in the Bend-Redmond area of the Deschutes River basin and that it has been proposed to discharge the wastes onto the surface of the ground and to let them seep away through crevices in the subterranean lava formations. Because there is a remote possibility that such a method of waste disposal might result in pollution of either ground or surface waters downstream from the proposed mill site, a basic data survey to determine the present quality of both ground and surface waters in that area is to be conducted by the Authority

staff. Mr. Stanley stated that the Brooks-Scanlon Co. has offered to help finance such a survey.

There being no further business the meeting adjourned at 4:00 p.m.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

Minutes

It was MOVED by Mr. Stanley, seconded by Dr. Erickson, and carried that the minutes of the seventy-fourth meeting be approved as prepared.

Project Plans

It was MOVED by Mr. Stanley, seconded by Mr. Johnson, and carried, that actions taken by the engineering staff on the following 84 project plans during the months of August and September, 1958, be approved.

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
8-1-58	Lane County	Twin Oaks Grade School	Deferred
8-1-58	Eugene	Federal grant application	Approved
8-4-58	Grant County	Mt. Vernon School	Prov. approval
8-4-58	Coos County	Charleston Grade School	Approved
8-4-58	Jackson County	Griffin Creek School	Approved
8-4-58	Brookings	Sewer extensions (Dist. #8)	Prov. approval
8-5-58	Columbia San. Dist.	Sewer extensions	Prov. approval
8-5-58	South Suburban S.D.	Sewerage system	Prov. approval
8-5-58	Raleighwood	Sewer extensions	Deferred
8-5-58	Umatilla County	Weston Union High School	Approved
8-5-58	Washington County	Joseph Gale School	Approved
8-5-58	Clackamas County	Milwaukie Grade School	Approved
8-5-58	Yamhill County	Central School	Approved
8-5-58	Douglas County	Roseburg High School	Approved
8-5-58	Multnomah County	Sauvies Island Grade School	Approved
8-5-58	Multnomah County	Benson High School	Approved
8-5-58	Multnomah County	Clinton Kelly Grade School	Approved

City of Portland - Citation Hearing

In response to citations sent by certified mail on September 25, 1958, the following persons were present to represent the city of Portland: Terry D. Schrunk, Mayor; William A. Bowes, Ormand R. Bean, and Nathan A. Boody, Commissioners; Alexander Brown, City Attorney and Gordon L. Burt, City Engineer. Commissioner Stanley Earl had been previously excused because of an out-of-state engagement.

The proceedings of the hearing were recorded by Arvid E. Anderson, Court Reporter.

An Engineering Report in the matter of sewage disposal by the city of Portland, as prepared by the staff of the Authority and bearing the date of October 15, 1958, was read by the secretary. It was later introduced as State's Exhibit No. 1 by Mr. Quesseth with no objections from the city

attorney, Mr. Brown.

All testimony at the hearing was given under oaths administered by Mr. Quesseth.

The first witness presented by Mr. Brown was Mayor Schrunk. He outlined the progress which has been made in the development of the city and discussed the "package plan" which would be voted on by the city at the general election on November 4 for financing certain proposed capital improvements including a \$5,000,000 sewage disposal project and a 10-year \$5,000,000 sewer repair program.

A copy of a printed letter, dated October 10, 1958, and bearing the signature of Mayor Schrunk, which had been given wide distribution for the purpose of explaining the city's "package plan" was then introduced by Mr. Brown as City's Exhibit "A".

Mayor Schrunk stated that if the voters should reject the "package plan" at the November election and the city had to hold a special election it would cost an additional \$150,000 which he was opposed to spending. He stated further that if only the present sewer user charges were used to finance the required additional sewage disposal works it would take from 20 to 25 years to raise sufficient funds for said project.

The second witness presented by Mr. Brown was Commissioner Bean. He discussed the city's financial status. City's Exhibit "B" was introduced to present information regarding the 1958-1959 property tax levy. A statement of revenues and expenditures for sewage disposal for the period 1940 to September 30, 1958, was introduced as City's Exhibit "C". According to this statement the total revenue for the period was \$22,516,330.85 of which \$14,260,077.00 was from the sale of general obligation bonds, \$8,103,185.14 was from sewer user charges, \$102,637.09 was from interest on securities and \$50,431.62 was from miscellaneous sources. The expenditures during the same

ABG763

period were \$18,177,520.00 for construction and engineering and \$4,034,343.58 for operation and maintenance, leaving a balance of \$304,467.27. The annual income from the sewer user charges was \$821,369.01 during the 1958 fiscal year. Of the amount raised annually by this means \$300,000 is used to service the \$2,500,000 bond issue sold in 1953, some \$250,000 is used for operation and maintenance, and the balance is available for financing new construction.

Commissioner Bowes was the next witness introduced by Mr. Brown for the city. He recited briefly the history of the development of the present sewage collection and interceptor system and sewage treatment works as constructed by the city since he became Commissioner of Public Works in 1938. He mentioned the Wolman study and report of 1939, the \$12,000,000 bond election of 1944, the sale of \$2,500,000 of additional bonds in 1953, and the construction of the interceptor system and disposal works from 1947 to the present.

City's Exhibit "D" was introduced by Mr. Brown and discussed by Commissioner Bowes. It is an itemized list of the estimated costs of the several projects still remaining to be constructed in order to prevent the discharge of raw sewage and untreated industrial wastes into the Willamette River from properties within the city. The total cost as estimated by the city engineering department is \$5,000,000.

In response to a question by Dr. Erickson Commissioner Bowes stated that the above estimate did not include any additions to the present sewage treatment plant which discharges to the Columbia River.

Copies of the August 23, 1958, and the October 11, 1958, issues of The Oregon Voter pertaining to the 10-year capital improvement program were introduced as City's Exhibits "E" and "F", respectively.

Mr. Gordon L. Burt, City Engineer, was then called by Mr. Brown as the last witness for the city. He stated that preliminary plans for the projects listed in City's Exhibit "D" were in the process of being prepared by his department, that the cost of installing chlorination equipment for disinfection of the effluent from the present city sewage treatment plant was estimated at about \$75,000, and that the annual cost of operating such equipment was estimated at from \$109,500 to \$255,000.

There being no further testimony the hearing was concluded at 12:00 noon.

The meeting was reconvened at 1:00 p.m. and after considerable discussion of the matter by the Authority members, it was MOVED by Mr. Stanley, seconded by Mr. Johnson and carried that the report dated October 15, 1958, prepared by the Authority staff be adopted as the findings of fact in this matter. It was then MOVED by Mr. Johnson, seconded by Mr. Stanley and carried that based on said findings of fact and evidence presented herein it is ordered by this Authority as follows:

1. That the city of Portland is hereby directed to abate the pollution of the Willamette River in Multnomah County, Oregon, and is hereby prohibited from discharging any and all sewage and industrial wastes, other than certain storm water overflow, into the Willamette River without prior adequate treatment in order that the public waters of the Willamette River will meet the minimum standards for water purity established by this Authority.
2. That the city of Portland is hereby directed to abate the pollution of the public waters of the Columbia River in Multnomah County, Oregon, caused by the discharge therein of its inadequately treated sewage.
3. That the city of Portland is hereby directed to submit to this Authority on or before January 15, 1959, a fiscal and construction program and

ABG763

schedule setting forth its plan for the abatement of pollution in the Willamette River.

4. That the city of Portland is hereby directed to submit to this Authority on or before January 15, 1959, a fiscal and construction program and schedule setting forth its plan for the abatement of pollution in the Columbia River.
5. That the secretary of this Authority be and hereby is directed to serve a certified true copy of this order together with the findings of fact pertaining to said matter upon the city of Portland.

#### City of Rainier

Because the bids received for construction of the Rainier sewage treatment works projects had exceeded by some \$22,000 the costs estimated by the City's consulting engineer, the City Council had submitted a request for an increase in the Federal grant which had previously been received from the Public Health Service.

After reviewing the facts in this matter as set forth in a memorandum dated October 14, 1958, and submitted by Mr. Cuyler, it was MOVED by Mr. Stanley, seconded by Mr. Johnson, and carried that the recommendations of the staff for an increase in the Federal grant to the full 30 per cent of the total eligible cost of the sewage treatment works project for the city of Rainier be approved.

#### City of Seaside

A memorandum dated October 16, 1958, and presenting facts in the matter of sewage disposal by the city of Seaside was discussed by Mr. Cuyler. After reviewing said facts it was MOVED by Mr. Stanley, seconded by Mr. Johnson, and carried that the city of Seaside be cited to appear at the next meeting of the Authority to show cause, if any exists, why immediate steps should

not be taken by the city to abate the pollution caused in the public waters of the Necanicum River by the discharge therein of inadequately treated sewage from said city.

City of Estacada

A memorandum dated October 14, 1958, in the matter of sewage disposal by the city of Estacada was discussed by Mr. Cuyler. After reviewing the facts as submitted therein, it was MOVED by Mr. Johnson, seconded by Mr. Stanley, and carried that the city of Estacada be cited to appear at the next meeting of the Authority to show cause, if any exists, why immediate steps should not be taken by the city to abate pollution caused in the public waters of the Clackamas River by the discharge therein of inadequately treated sewage from said city.

Alpenrose Dairy

The matter of pollution of Fanno Creek, a tributary of the Tualatin River, caused by sewage and wastes from the Alpenrose Dairy located at 6149 S. W. Shattuck Road, Portland, Oregon, was discussed by Mr. Benson. Facts regarding this matter outlined in a memorandum dated October 16, 1958. After reviewing said facts it was MOVED by Mr. Stanley, seconded by Mr. Johnson, and carried that the officials of the Alpenrose Dairy be cited to appear at the next meeting of the Authority to show cause, if any exists, why they should not take immediate steps to abate the pollution caused in the public waters of Fanno Creek by the discharge therein of inadequately treated sewage and wastes from said dairy.

Arrow Meat Company

A memorandum dated October 16, 1958, outlining the facts in the matter of waste disposal by the Arrow Meat Company located near Cornelius, Oregon,

ABG763

was discussed by Mr. Benson. After reviewing said facts, it was MOVED by Mr. Stanley, seconded by Mr. Johnson, and carried that the officials of the Arrow Meat Company be cited to appear at the next meeting of the Authority to show cause if any exists why they should not take immediate steps to abate the pollution caused in the public waters of Council Creek, a tributary of the Tualatin River, by the discharge therein of inadequately treated wastes from the Arrow Meat Company plant.

Lundy Brothers Construction Co.

The matter of pollution caused in Drift Creek, a tributary of the Alsea River, by the sand and gravel mining operations of the Lundy Brothers Construction Company of Waldport, Oregon, was discussed by Mr. Carter. A memorandum dated October 16, 1958, outlining the facts in this matter was also presented by Mr. Carter. After reviewing said facts it was MOVED by Mr. Stanley, seconded by Mr. Johnson and carried that the Lundy Brothers Construction Company be cited to appear at the next meeting of the Authority to show cause, if any exists, why the operations of said company should not be so controlled that they will not cause pollution in the public waters of the state of Oregon.

Copies of the afore-mentioned memoranda pertaining to the city of Portland, the city of Rainier, the city of Seaside, the city of Estacada, the Alpenrose Dairy, the Arrow Meat Company and the Lundy Brothers Construction Company have been made a part of the Authority's files in these matters.

Industrial Waste Pollution in Vicinity of St. Helens

In response to a request received from the Oregon State Game Commission in a letter dated October 10, 1958, the staff was instructed by the Authority members to conduct a special comprehensive survey of pollution

allegedly caused by industrial wastes in the public waters of Scappoose Slough and Multnomah Channel in the vicinity of St. Helens and to submit as soon as possible a report of the findings.

Joint Meeting with Washington Pollution Control Commission

The secretary was instructed to send a letter to the Washington Pollution Control Commission suggesting that another joint meeting of the two agencies be held as soon as possible for the purpose of giving further consideration to the matter of pollution control in the lower Columbia River.

Budget for the 1959-1961 Biennium

A revised and increased budget request and activities program for the 1959-1961 biennium were reviewed and approved with instructions that they be forwarded to the State Board of Health for adoption.

There being no further business the meeting adjourned.

Respectfully submitted,

CURTISS M. EVERTS  
Secretary and Chief Engineer

MINUTES OF THE SEVENTY-SIXTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

February 6, 1959

The seventy-sixth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:10 a.m., February 6, 1959, in Room 36, State Office Building, Portland, Oregon. The members and staff present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D.; Lewis A. Stanley,

B. A. McPhillips and Edward C. Harms, Members; Curtiss M. Everts, Secretary, and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Deputy State Sanitary Engineer; Clarence E. Cuyler, and Donald J. Benson, Associate Sanitary Engineers; Earl N. Kari and Ronald I. Culver, Assistant Sanitary Engineers; Glen D. Carter, Aquatic Biologist; and H. W. Merryman, District Engineer.

#### Minutes

It was MOVED by Dr. Erickson, seconded by Mr. McPhillips, and carried that the minutes of the seventy-fifth meeting be approved as prepared.

#### Project Plans

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that the following actions taken by the engineering staff on the 82 project plans and reports reviewed during the months of October, November and December, 1958, and January, 1959, be approved.

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
10-1-58	Sherwood	Prel. engineering report	Comments submitted
10-1-58	Josephine County	Illinois Valley School	Approved
10-1-58	Empire	Sewer extensions	Prov. approval
10-3-58	Canby	Sewer extensions	Prov. approval
10-7-58	Multnomah County	Royal Highlands sewer	Prov. approval
10-7-58	Stayton	Prel. engineering report	Approved
10-7-58	Corvallis	United Saw Service industrial waste disposal	Prov. approval
10-8-58	Harney County	Andrews School	Prov. approval
10-9-58	Salem	East Gate Park sewers	Prov. approval
10-9-58	Whitford-McKay	Glenmoor Subd. sewers	Prov. approval
10-13-58	Milwaukie	Ardenwald sewers	Prov. approval

Date	Location	Project	Action
10-13-58	Beaverton	Bel-Aire sewage plant	Prov. approval
10-13-58	Lincoln County	Waldport Union High School	Approved
10-14-58	Hillsboro	Sewage treatment plant	Prov. approval
10-20-58	Sunset Valley	Revised plans for sewage plant	Approved
10-21-58	Hillsboro	Revised plans for sewage plant	Approved
10-21-58	Hood River	Sewage treatment plant	Prov. approval
10-29-58	Lane County	Creswell Union High School	Prov. approval
10-29-58	Lane County	Twin Oaks School	Prov. approval
11-3-58	Clackamas County	Cedar Oak Park School	Approved
11-3-58	Multnomah County	School District #7	Approved
11-3-58	Multnomah County	Gresham Union High School	Approved
11-5-58	Salem	Sewer extensions	Prov. approval
11-5-58	The Dalles	Ostrander sewer extension	Prov. approval
11-6-58	Chiloquin	Sewer ext. (revised plans)	Prov. approval
11-6-58	Clackamas County	Rose Villa sewerage report	Deferred
11-6-58	Multnomah County	Southeast Portland High School	Approved
11-6-58	Tillamook County	Beaver Grade School	Approved
11-12-58	Medford	Sewer extensions	Prov. approval
11-17-58	Baker County	North Baker Grade School	Approved
11-17-58	Deschutes County	Jess Hill Grade School	Approved

City of Portland

Commissioner William A. Bowes, City Engineer Gordon L. Burt, Consultants A. M. Rawm and Ben S. Morrow, Consulting Engineer John W. Cunningham, and City Attorney Marian Rushing were present to represent the city of Portland. The secretary read the report which had been received from the city on January 15, 1959, in response to an order entered by the Sanitary Authority under the date of October 20, 1958.

ADG763

The Chairman informed the city's representatives that said report was not acceptable to the Sanitary Authority because it deferred until May of 1960 the holding of the necessary bond election, and because it gave no definite schedule for completion of the required plans and specifications for starting construction and for completion of the interceptor sewers and treatment works needed to abate the pollution in both the Willamette and Columbia Rivers.

Commissioner Bowes stated that the Council was opposed to spending \$120,000 to \$130,000 for a special election. He expressed the opinion that an aggressive educational campaign would be required in order to obtain voter approval and that such a campaign would require considerable time. He reported that the \$800,000 or more that the city now has on hand would be used to finance the preparation of the plans and the construction of some of the interceptors. Mr. Burt reported that the plans were about 25 per cent complete at the present time and that they would be 100 per cent complete by May, 1960. In response to a question from the Authority, he stated that they could be finished much sooner if more engineering help were made available and the project was put on a "rush" basis. Mr. Burt estimated that with the funds already available it would be possible to eliminate from 10 to 20 per cent of the present pollution load being discharged into the Willamette River. Both he and Commissioner Bowes stated that the city planned to construct the Garthwick sewer project this year as the first unit of the Willamette project.

After considerable discussion regarding the advisability and feasibility of the city's holding a bond election during 1959 and of speeding up the preparation of the engineering plans, Mr. Harms stated that it was his opinion that the city's proposal was not satisfactory; but at the same time it was not unreasonable.

It was then MOVED by Mr. Stanley, seconded by Mr. McPhillips and carried with one dissenting vote by Mr. Harms that the city of Portland be instructed to step up its program and, if possible, hold an election in the summer of 1959, and that in the meantime the Authority institute Court action to require that the city of Portland abate its pollution in the Willamette and Columbia Rivers, and that to insure that the city is proceeding with the engineering work definite reports of progress be submitted by the city during this period to the Sanitary Authority staff.

At the request of Mr. Burt, Mr. A. M. Rawn presented a discussion on the possibility of controlling the bacterial pollution in the Columbia River by diffusion of the sewage plant effluent rather than by chlorination. (Note: The October 20, 1958, order entered by the Authority in this matter makes no mention of chlorination.)

City of Seaside - Citation Hearing

In response to a citation sent by certified mail on January 15, 1959, City Attorney Avery A. Combs and City Engineer Frank S. Morse were present to represent the city of Seaside.

The proceedings of the hearing were recorded by Arvid E. Anderson, Court Reporter.

An engineering report in the matter of sewage disposal by the city of Seaside, dated January 15, 1959, and prepared by the staff of the Authority and copies of the same having been sent to the city and Authority members prior to the hearing, was not read at the hearing but was made a part of the Authority's files in this matter.

It having been stipulated to by both parties no witnesses were sworn in. The city's representatives stated that they had no objections to the Authority's entering an order as proposed in the aforementioned engineering report but that they merely wished to be informed of the requirements which the city would have to meet.

ABG763

They were advised that the staff of the Authority would be pleased to work with their consulting engineer relative to the technical details concerning the design of the required sewage collection and treatment works.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the city of Seaside be ordered to abate the pollution caused in the public waters of the Necanicum River by the discharge therein of untreated and inadequately treated sewage and wastes and that the city of Seaside be further ordered to have a preliminary engineering study and cost estimate made of the facilities needed and to submit to the Authority on or before September 1, 1959, a report of the engineer's findings and recommendations together with an acceptable fiscal and construction program and schedule setting forth the city's plans for abatement of said pollution.

City of Estacada - Citation Hearing

In response to a citation sent by certified mail on January 15, 1959, the following were present to represent the city of Estacada: John C. Caldwell, Attorney; Carl E. Green, Consulting Engineer; Robert Weinrich, Mayor; R. R. Cooke, Recorder; and Delbert Nordquist, Councilman.

The proceedings of the hearing were recorded by Arvid E. Anderson, Court Reporter, and all testimony was given under oaths administered by Mr. Queseth.

An engineering report in the matter of sewage disposal by the city of Estacada, dated January 15, 1959, and prepared by the staff of the Authority and copies of the same having been sent to the city and Authority members prior to the hearing, was not read at the hearing but was made a part of the Authority's files in this matter.

ABG763

The first witness called by Mr. Caldwell was Mr. Green. He testified that he had been retained by the city to make a preliminary engineering study and cost estimate of the facilities needed to provide adequate sewage disposal and that his detailed report would be submitted to the Authority within one week. He estimated that an approved lagoon system of sewage disposal would cost \$134,000 to build compared with a cost of \$212,000 for a new conventional sewage treatment plant. He estimated further that urgently needed storm sewers would initially cost an additional \$27,000 to build. He reported that the 1958 assessed valuation of the city was \$495,480. (The county assessment ratio in Clackamas County for 1958 was only 27 per cent and therefore the actual value was approximately \$1,840,000.) Mr. Green stated that a bond of an amount sufficient to finance the required project, if retired in 23 years at 4 per cent interest, would require \$9,000 per year for payment of principal and interest, and that a tax levy of 18 mills and a sewer user charge of \$3 per connection per month would raise sufficient funds for this purpose plus operating costs.

Mr. Cooke, the second witness called by Mr. Caldwell, testified that the city at the present time has a population of about 950 plus an additional daytime population of 750 students. He testified further that the city has the following outstanding bonded indebtedness:

\$5,000 in North Fork water revenue bonds which are due in November, 1959;

\$7,000 in general obligation water bonds of which \$3,000 are due in 1959 and \$4,000 in 1960;

\$52,000 in additional water bonds of which \$6,000 are due each year.

He reported that the city has a sewer fund of \$6,600 accumulated by means of a \$1 per month sewer user charge and of this amount \$2,850 was available

as of December 31, 1958, for engineering purposes. He reported further that one annexation election and two school bond elections had been defeated recently by the Estacada voters.

Mayor Weinrich testified that in his opinion no bond election should be held by the city until 1960 because the voters would not approve one before then.

Mr. Nordquist, Councilman in charge of sewage plant operation, testified that until last week he had not even seen the operating instructions for the treatment plant because they had been misplaced.

In response to a question Mr. Green testified that the present sewage treatment plant serving the city of Estacada is overloaded.

Mr. Caldwell admitted that said existing plant is completely overloaded and inadequate and that on occasion the receiving stream, the Clackamas River, is polluted. He argued, however, that the city should be granted additional time in which to install adequate sewage disposal facilities because the city does not have sufficient funds at the present time to finance such a project. He said he objected to certain statements in the aforementioned engineering report prepared by the Authority's staff in this matter, claiming that they were based on hearsay evidence.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips and carried that the city of Estacada be ordered to install by not later than January 1, 1960, adequate sewage treatment or disposal facilities for the abatement of pollution in the public waters of the Clackamas River, that in the meantime the city submit to the Authority at least once every three months a report of the progress being made, and that henceforth the city's sewage disposal facilities be effectively maintained and operated at all times.

The meeting was recessed at 12:10 p.m. and was reconvened at 2:10 p.m.  
Arrow Meat Company - Citation Hearing

In response to a citation sent by certified mail on January 15, 1959, the following were present to represent the Arrow Meat Company: George W. Mead, Attorney; Leland Jacobsmuhlen, owner; and Carl E. Green, Consulting Engineer.

The proceedings of the hearing were recorded by Arvid E. Anderson, Court Reporter. It having been stipulated to by both parties the witnesses were not sworn in.

An engineering report in the matter of waste disposal by the Arrow Meat Company, dated January 15, 1959, and prepared by the staff of the Authority and copies of the same having been sent to the company and the Authority members prior to the hearing, was not read at the hearing but was made an official part of the Authority's files in this matter.

Mr. Mead reviewed briefly the attempts made by the company during the past several years to provide adequate waste disposal and to prevent pollution of the public waters of Council Creek. He stated that the company was now planning to install a fine screen for more effective pretreatment, that Mr. Green was studying the problem for the purpose of determining what additional treatment, if any, would be required in order to use land irrigation as a means of disposing of the wastes, and that it would take about 90 days for Mr. Green to complete his studies.

Mr. Mead, therefore, requested that the company be given 90 days in which to work out a solution to the problem of waste disposal. He stated the company had spent some \$35,000 for waste disposal thus far.

In response to a question from the Authority Mr. Green stated that if a lagoon were to be used for additional treatment it would take from

ABG763

30 to 45 days to complete the installation, whereas if a trickling filter or some similar type of treatment unit were used it would take at least 90 days to complete the project.

Mr. Mead would not admit that any stream pollution had ever been caused by the operation of said company or that any additional treatment facilities would be required. He had no explanation for the failure of the company to operate the existing facilities on certain occasions during the past, and he could not guarantee that the company would do any better in the future.

Mrs. John Burns, Mrs. C. H. Wilson, and Mr. J. G. Kraft, who reside near the Arrow Meat Company plant were present at the meeting and were heard. They claimed that the operations of said company had caused stream pollution in Council Creek and constituted a public nuisance.

Mr. Mead stated that if an order were entered against the company they would be forced to file an appeal.

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley and carried that the Arrow Meat Company be ordered to cease and desist polluting the public waters of Council Creek and that plans for adequate waste treatment or disposal facilities be submitted within 90 days from the date of this hearing.

#### Lundy Brothers - Citation Hearing

In response to a citation sent by certified mail on January 15, 1959, the following persons were present to represent the Lundy Brothers, Inc.: W. T. Hollen, Attorney; Everett Lundy, Fred Lundy, and Bob Robinson.

The proceedings of the hearing were recorded by Arvid E. Anderson, Court Reporter.

An engineering report in the matter of gravel mining in the public waters of Drift Creek by said company, dated January 15, 1959, and prepared by the staff of the Authority and copies of the same having been sent prior to the hearing to the company, Authority members, State Game Commission and State Fish Commission, was not read at the hearing but was made a part of the Authority's files in this matter.

Mr. Hollen described briefly the operations which have been conducted in Drift Creek by the company since their start in 1957. He claimed that these operations which extended about one mile above tidewater had not caused any pollution, although he did admit that there was some turbidity for 1800 yards or so downstream. He stated that the downstream waters are not used for domestic purposes and that although they are used very extensively for sport fishing there had never been any complaints registered by sport fishermen. He said the company had complied with the recommendations of the State Fish Commission that no gravel mining be performed above Township 13.

Mr. L. Dean Marriage, Water Resource Analyst for the State Fish Commission, stated that his agency was greatly concerned about the harmful effect on the spawning beds in Drift Creek by the removal of gravel, but he realized that such removal was not a responsibility of the Sanitary Authority, unless it created pollution of the downstream waters. He also expressed concern about the possible damage to the fishery due to siltation caused by the gravel mining and washing operations but he admitted that no evidence of such damage had been obtained.

After further discussion of the matter, it was concluded that there had not been sufficient evidence presented to prove that the operations of the Lundy Brothers, Inc., were in violation of state law; and, therefore,

ABG763

it was MOVED by Mr. Stanley, seconded by Mr. Harms and carried that the case be dismissed.

Alpenrose Dairy - Citation Hearing

In response to a citation sent by certified mail on January 15, 1959, Mr. Leslie G. Miller, Maintenance Superintendent, and Mr. J. P. Leahey were present to represent the Alpenrose Dairy.

The proceedings of the hearing were recorded by Arvid E. Anderson, Court Reporter. By stipulation it was agreed that the witnesses need not be sworn in.

An engineering report in the matter of sewage and waste disposal by the Alpenrose Dairy, dated January 16, 1959, and prepared by the staff of the Authority and copies of the same having been sent prior to the hearing to the Dairy and the Authority members, was not read at the meeting but was made a part of the Authority's files in this matter.

Mr. Miller testified that the company intended to comply with the order of the Authority as proposed in the aforementioned engineering report.

It was MOVED by Mr. McPhillips, seconded by Mr. Harms and carried that the Alpenrose Dairy be ordered to provide adequate sewage and waste disposal facilities for the abatement of pollution in the public waters of Fanno Creek and its tributaries, that said pollution be abated by not later than July 1, 1959, and that a progress report be submitted to the Authority by the company within 90 days from the date of this hearing.

It was MOVED by Mr. McPhillips, seconded by Mr. Stanley and carried that the respective aforementioned engineering reports prepared by the staff of the Authority on the matters of sewage and/or waste disposal by the city of Seaside, the city of Estacada, the Arrow Meat Company and the Alpenrose Dairy be adopted as findings of fact in said cases.

City of Florence

Mr. Nile B. Paull, City Administrator, was present to request that the city of Florence be given a 5-year extension of time in which to construct a municipal sewage treatment plant.

On September 5, 1958, the Authority had granted the city permission to install a new 18-inch main sewer with the provisions that a bond issue sufficient in amount to finance the entire project including sewage treatment would be voted in 1958 and construction of the necessary interceptor sewer and sewage treatment works would be started by September, 1959, regardless of whether or not a federal grant was obtained.

Mr. Paull stated that the City Council had concluded that they could not meet the above provisions and, therefore, considered it necessary to request an additional 5-year extension of time in which to build the sewage treatment plant.

Because the city has no sewage treatment facilities at the present time and discharges raw sewage directly into the tidal waters of the Siuslaw River, it was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the city of Florence be granted an additional one-year extension of time or until September, 1960, to start construction of its required sewage treatment works.

Federal Grant Program

It was MOVED by Mr. Stanley, seconded by Mr. Harms and carried that June 15, 1959, be set as the deadline for submission of applications for federal construction grants for sewage treatment works for the 1960 fiscal year.

Multnomah County Commissioner M. James Gleason and Multnomah County Roadmaster Paul C. Northrop were present to represent the Tri-County

ABG763

Sanitation Committee. Mr. Arthur C. Bull, Attorney for the West Slope Sanitary District; Mr. Darrel L. Johnson, Attorney for the Broadmoor Sanitary District; Mrs. Barbara Wilcox, Washington County Commissioner; and Mr. Marvin Runyan, Consulting Engineer; and Mr. Joe Davies, Chairman of the Oak Lodge Sanitary District were also present in connection with the tentative allocation of federal grants to Multnomah County (for the Fanno Creek plant), the West Slope Sanitary District and the Oak Lodge Sanitary District.

Commissioner Gleason discussed the present status of the Tri-County master trunk sewer project and program. He reported that although progress had been made in the matter no contracts had yet been signed by Tri-County with the West Slope Sanitary District and other entities involved in the proposed Fanno Creek and Tryon Creek projects. With regard to the financing of said projects he reported that Multnomah County for the past three years had budgeted between \$200,000 and \$250,000 per year, that the total funds thus far included some \$60,000 to \$70,000 from Washington and Clackamas Counties and over \$600,000 from Multnomah County. He expected that the 1960 budgets of the three counties would include \$50,000 for Clackamas, \$30,000 for Washington and \$250,000 for Multnomah. He stated further that a bill was being prepared for presentation to the Legislature now in session to increase the authority of the Tri-County Committee.

Under the terms of the priorities for federal construction grants which were tentatively assigned by the Sanitary Authority to Multnomah County, the West Slope Sanitary District and the Oak Lodge Sanitary District, the necessary contracts between the various parties involved relative to joint use of the proposed projects were to be completed by not later than November 1, 1958.

After considerable discussion of this matter, it was concluded by the Authority members that an additional 30 to 60 days would be granted and that if at the end of that time said contractual agreements had not yet been signed by all parties concerned consideration would then be given to assigning the priorities for federal grants to other eligible applicants, some of which already have their projects under construction.

In their original application the Oak Lodge Sanitary District had requested a grant of \$80,400 which amount was tentatively approved by the Authority on August 8, 1958. In a revised application submitted on February 3, 1959, a grant of \$250,000 was requested. As of the date of this hearing the maximum amount of federal funds that could be made available to the Oak Lodge District was only \$124,356.17.

Following a discussion of the Oak Lodge project by Mr. Davies and Mr. Spies it was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the revised applications submitted by the Oak Lodge Sanitary District for an increased federal grant to help finance a proposed sewage treatment works project consisting of a secondary treatment plant separate from the Tryon Creek plant of the Tri-County system be approved, that all present uncommitted funds be allocated to this project and that if and when additional funds become available this application be considered along with all others to the extent of the full amount requested and eligible.

There being no further business the meeting adjourned at 4:50 p.m. The date for the next meeting was subject to the call of the Chairman.

Respectfully submitted,

CURTISS M. EVERTS  
Secretary and Chief Engineer

ABG763

SPECIAL MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY

April 17, 1959

Following a conference with official representatives of Multnomah County, the Tri-County Sanitation Committee, and the West Slope and Broadmoor Sanitary Districts of Washington County, a special meeting of the Oregon State Sanitary Authority was held on April 17, 1959, in Room 36, State Office Building, Portland, Oregon. At the conclusion of said conference, which was under the chairmanship of Mr. B. A. McPhillips, it was MOVED by Mr. Johnson, seconded by Mr. Stanley and carried that the members of the Sanitary Authority convene in a special meeting.

Because of the absence of Mr. Harold F. Wendel, Chairman, it was MOVED by Dr. Erickson, seconded by Mr. Stanley and carried that Mr. McPhillips be elected as Acting Chairman. The special meeting of the Authority was therefore called to order by Mr. McPhillips at 3:15 p.m. on April 17, 1959. Other members present were Dr. Harold M. Erickson, Harold T. Johnson and Lewis A. Stanley. Also present were Curtiss M. Everts, Secretary & Chief Engineer, Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Deputy State Sanitary Engineer; Clarence E. Cuyler and Donald J. Benson, Associate Sanitary Engineer; and Earl N. Kari, Assistant Sanitary Engineer.

At the afore-mentioned conference Mr. M. J. Gleason, Multnomah County Commissioner and Chairman of the Tri-County Sanitation Committee; Mr. A. C. Allen, Chairman of the West Slope Sanitary District; Mr. Jerome F. Morse, Jr., member of the West Slope Sanitary District board; Mr. A. C. Bull, attorney for West Slope; and Mr. Tom McNiesh, Chairman of the Broadmoor Sanitary

District each discussed the problems involved in working out mutually satisfactory agreements between the various parties involved in the matter of joint construction, operation and maintenance of the proposed Fanno Creek sewerage project.

Other representatives present at both the conference and meeting were: Judge J. A. Jaross of Washington County; Clayton Nyberg and Mrs. Barbara A. Wilcox, Washington County Commissioners; Paul C. Northrop Multnomah County Roadmaster; Howard W. Hughet, Assistant County Roadmaster; Herbert Schink, Secretary of West Slope Sanitary District; Darrell Johnson, attorney for the Broadmoor Sanitary District; Earl Hibbard, West Slope Sanitary District board member; Stetsen B. Harman, Broadmoor Sanitary District board member, and H. Loren Thompson, James R. Boydston and Robert M. Bonney, Consulting Engineers.

Because Multnomah County and the West Slope Sanitary District had failed to meet the deadlines and requirements previously established by the State Sanitary Authority at regular meetings on August 8, 1958, and February 6, 1959, it was MOVED by Dr. Erickson, seconded by Mr. Stanley and carried that an extension of time until May 1, 1959, be granted to Multnomah County and the West Slope Sanitary District to qualify for their federal construction grants, that in order to so qualify the following steps must be taken by that date: (1) the necessary contracts between Multnomah County (or Tri-County) and the West Slope and Broadmoor Sanitary Districts of Washington County for the joint construction, operation and maintenance of the proposed Fanno Creek sewage treatment works projects must be signed and a copy of the same furnished this Authority and (2) a legal description of the county sewer district which has been created pursuant to the requirements of Chapter 451 ORS together with an opinion from the district attorney stating that Multnomah County

ABG763

has full legal authority to proceed with said project shall be furnished this Authority, and further that if by May 1, 1959, Multnomah County and West Slope have failed to so qualify the federal funds tentatively allotted to them shall be immediately allocated to the next eligible projects as follows: Oak Lodge Sanitary District \$250,000; Brookings \$46,530; Prineville \$44,745; Ontario \$72,000; The Dalles \$94,500 and Hood River \$58,000.

The secretary was instructed to notify both applicants by letter of the action taken so that no misunderstanding would occur.

There being no further business the meeting adjourned at 3:25 p.m.

Respectfully submitted,

*Curtiss M. Everts*

CURTISS M. EVERTS  
Secretary & Chief Engineer

MINUTES OF THE SEVENTY-SEVENTH MEETING

of the

OREGON STATE SANITARY AUTHORITY

July 8, 1959

The seventy-seventh meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 p.m., July 8, 1959, in Room 36, State Office Building, Portland, Oregon. The members and staff present were Harold F. Wendel, Chairman; Harold M. Erickson, M. D., Edward C. Harms, Jr., Harold T. Johnson, and B. A. McPhillips, Members; Curtiss M. Everts, Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Deputy State Sanitary Engineer; R. E. Hatchard, Assistant Chief Engineer; Clarence E. Cuyler, Donald J. Benson, and James L. Agee,

Associate Sanitary Engineers; Glen D. Carter, Aquatic Biologist; H. W. Merryman, T. M. Gerow and H. M. Patterson, District Engineers; and Robert B. Percy, Chemist.

Minutes

It was MOVED by Mr. Johnson, seconded by Dr. Erickson, and carried that the minutes of the Seventy-sixth meeting, as corrected, the minutes of the April 17 Special Meeting and the minutes of the March 4, 1959, Air Pollution Authority meeting be approved.

Appointment of Hearings Officer

The chairman stated that since the work of the Sanitary Authority now included air pollution control and in view of the difficulty of holding frequent meetings, it might be desirable to consider the appointment of a hearings officer. Such an officer could hold hearings in cities other than Portland which would permit persons in these other communities to attend and be heard.

It was MOVED by Mr. Johnson, seconded by Mr. Harms, and carried that the Authority authorize the appointment of a hearings officer and that the Secretary be directed to investigate the matter and bring in his recommendations at the next meeting of the Authority.

Project Plans

It was MOVED by Mr. Harms, seconded by Mr. Johnson and carried that actions taken by the engineering staff on the following 134 project plans during the months of February through June, 1959, be approved:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
2-5-59	The Dalles	13th St. sewer extension	Not approved
2-5-59	The Dalles	Ericksen's 3rd addn. sewers	Prov. approval
2-5-59	South Bear Creek	Sewer extension	Prov. approval
2-5-59	Marion County	Turner School Addition	Approved
2-10-59	Coos County	Englewood School Sewage Treatment Plant	Not approved

ABG763

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
2-11-59	Multnomah County	Oregon Centennial Exposition sewage treatment plant	Prov. approval
2-16-59	The Dalles	13th St. sewer extension (revised plans)	Prov. approval
2-17-59	Milwaukie	Omark Industries sewer	Prov. approval
2-17-59	Oswego	Pumping equipment	Approved
2-18-59	Boardman	Prel. report and plans for sewer system and lagoon	Approved
2-24-59	Pendleton	Young's Addn. sewer extension	Prov. approval
2-24-59	Central Point	Sewer extensions	Deferred
2-24-59	Clackamas County	Beavercreek School sewerage	Approved
2-26-59	Albany	Albany Airport sewers	Prov. approval
2-26-59	Chiloquin	Sewer extension & lift station	Prov. approval
3-4-59	Douglas County	Winston Grade School	Approved
3-4-59	Coos County	North Bend Jr. High School	Approved
3-4-59	Umatilla County	Helix Grade School	Approved
3-4-59	Lake County	Fremont School (Lakeview)	Approved
3-5-59	Coos County	Eastside Grade School	Not approved
3-5-59	Bates	Prel. Engineering Report	Prov. approval
3-5-59	Umatilla County	Pleasant View Grade School	Approved
3-6-59	Clackamas County	RoseVilla Homes sewage plant	Deferred
3-16-59	Medford	Eastover Terrace and Hillcrest Road sewers	Prov. approval

#### Applications for Federal Construction Grants

The Chairman announced that while no appropriations had been made by Congress for construction grants for the 1960 fiscal year, the Authority would proceed to establish priorities at the meeting. It was also pointed out that applications had been received for grants which totaled approximately

three times the amount expected to be allotted to Oregon.

Mr. McPhillips asked what amount was available for grants in 1959-60. The Secretary replied that approximately \$676,000 would be available for the next fiscal year. Mr. Wendel stated that since the Tri-County projects would determine to a large extent what funds would be available for the remaining projects the status of Multnomah County's applications for the Denny Road treatment plant and the Fanno Creek interceptor should be discussed first with West Slope Sanitary District's request for funds for an interceptor sewer. Mr. Gleason, Chairman of the Tri-County Sanitation Committee, appeared to represent Multnomah County with Commissioners Jack Bain and Al Brown. He presented a resolution adopted by the Multnomah County Board of Commissioners relating to the necessity of the project and stated that the Sanitary Authority now had the legal opinions that were requested as well as the resolution of necessity and convenience. At the request of the Chairman the Secretary read the resolution.

Commissioner Gleason reported that the Denny Road treatment plant will have capacity to serve the Broadmoor and West Slope Sanitary Districts, that tentative contracts have been offered to these districts which they are now studying, that Multnomah County was ready to immediately let contracts for not only the treatment plant but also the Fanno Creek interceptor, and that construction could be started as soon as Federal funds became available.

The question was asked as to how long before a contract between Multnomah County and the West Slope Sanitary District would be signed. Commissioner Gleason reported that the county's engineers arrived at present contract rates the first of the week and that the attorneys for the West Slope and Broadmoor are to discuss the terms with their respective boards.

ABG763

Mr. Bull, attorney for the West Slope Sanitary District, stated that he had met with Mr. Gleason, that he had a copy of the contract and the proposed rates. The chief objections at the present time were (1) amortization of West Slope Sanitary District's share of total cost of plant including the federal grant and (2) the limitation on total flow to 1,500,000 gallons daily. With proposed annexations to the district the capacity allowed would be used and additional capacity would increase the cost by 100%. He reported that West Slope Sanitary District is extremely anxious to get started if those two items can be resolved.

Mr. Harms expressed the opinion that under the priority point schedule the proposed Tri-County projects were near the top, and since these are large projects, it would necessitate awarding most of the money to them and that they should be carried out as a joint project.

It was MOVED by Mr. Harms, seconded by Mr. Johnson that a tentative allocation of \$250,000 be awarded the Fanno Creek project with the condition that an acceptable contract would be signed with the West Slope Sanitary District.

Mr. Darrell L. Johnson, Attorney for Broadmoor Sanitary District, stated that at a conference with Commissioner Gleason the rate study and contract were given them; that he had discussed the matter with the chairman of his Board and Mr. Bull; and that the Broadmoor Sanitary District's objections are based on the capacity of the plant and the amortization costs including the federal grant. If the federal grant is eliminated from the costs he anticipated no big problems in reaching a contract agreement.

Mr. B. A. McPhillips asked when federal grant funds would be available. The secretary replied that we should know by the end of July 1959. Mr. McPhillips indicated that inasmuch as the Authority had held up the 1959 grants in the hope they would solve their contractual problems it was his opinion that a deadline should be set now for disposition of these funds.

Commissioner Gleason stated that county funds were available for the Fanno Creek interceptor and treatment plant and that Multnomah County was ready and able to initiate construction immediately regardless of whether West Slope was included or not because the project would serve several thousand people. He expressed the hope that the Authority would consider the Fanno Creek interceptor and treatment plant eligible as a single system.

MOTION by Mr. Harms :- Mr. Harms offered to amend the motion to add that contracts be arrived at between Multnomah County and the West Slope Sanitary District by not later than the next Sanitary Authority meeting with the understanding that all allocations are tentative. Mr. Johnson accepted the amendment to the motion, the Chairman called for the question, and the motion was adopted. It was then MOVED by Mr. Harms, seconded by Mr. Johnson and carried that the West Slope Sanitary District be issued a priority certificate for \$249,242 provided contracts have been completed with Multnomah County and the Broadmoor Sanitary District by the next Sanitary Authority meeting.

The Chairman then called on the secretary and Mr. Spies who summarized the status of the projects for which grants had been requested by the other applicants, as follows:

Dufur

Needs a sewer system and treatment works but has made no progress in the preparation of final plans or the development of a fiscal program.

Stayton

Needs a sewer system and treatment works. Preliminary engineering report received but city has not submitted construction plans and a bond election held in April failed.

Tryon Creek

Construction plans received, and no bond issue necessary. Ability to proceed with construction in 1959-1960 is doubtful because of lack of funds.

ABG763

Elgin

Application for funds and a preliminary engineering report have been submitted but no further action has been taken on a fiscal or construction program.

Lafayette

Application for funds and a preliminary engineering report received but no further action has been taken on a fiscal and construction schedule.

Canyonville

Application for funds and preliminary engineering report received. A bond election held in May was approved. Plans and specifications must be submitted but project is ready to go.

Green Sanitary District

District has voted bonds but has been unable to sell them on open market. District could not meet Housing and Home Finance Agency's requirements for purchase of bonds. Legislation adopted in 1959 would enable state of Oregon to buy bonds from district. Petitions in opposition to state purchase of bonds now being circulated in the district. District also proposes construction of sewage stabilization ponds rather than make connection to Roseburg system, which is contrary to application and basis on which original bond issue was adopted. Fiscal affairs appear to be too complicated at the moment to allocate any federal funds for this project.

Estacada

At the last meeting of the Authority a public hearing was held and the city ordered to proceed with the construction of sewage treatment works. An application for federal funds and a preliminary engineering report have been submitted. A bond election will be necessary to finance the project. The city intends to hold an election at an early date.

Lakeview

This project is ready to go. Final plans have been received for oxidation ponds which will replace overloaded sewage treatment plant. Bonds have been voted and the site for lagoon purchased or optioned. Bonds have not been sold yet but the city has no outstanding indebtedness on sewers. The city will open bids on July 14.

LaGrande

An application for federal funds was submitted in May 1958. No preliminary engineering report has yet been submitted. A bond election is proposed during October.

Vernonia

Application for federal funds was received last month. The city has some funds on hand and it may not be necessary to vote bonds. Several months ago the Authority permitted the city to extend sewers with the understanding that the city would install sewage treatment works. Additional treatment is required to abate pollution. The project is partially ready to go ahead.

Ashland

Submitted application for federal funds in May of last year which was approved and forwarded to the Public Health Service. Sufficient local funds are on hand. Project required to abate pollution caused in public waters of Bear Creek. Final construction plans and specifications have not been submitted.

Florence

Submitted application for federal funds last month. Preliminary engineering report was submitted in 1957. No definite fiscal or construction program.

ABG763

Eugene

Application for federal funds filed in August of last year. Final plans and specifications have been prepared and submitted. The city is ready to go on a project to provide secondary treatment which is required to abate pollution of the Willamette River.

Garibaldi

Application was received last month for federal funds for the construction of sewage pumping facilities. No bond issue would be required.

Salem

Application for federal funds received in 1958 for the construction of an interceptor sewer. This project does not contemplate additional treatment for the interceptor system. The city is now making studies for future additions to the treatment plant to comply with the Sanitary Authority instructions.

State of Oregon

Project under construction. Priority points low.

Nyssa

Application incomplete. Insufficient information furnished.

Mr. Kent Mathewson, City Manager of Salem, appeared and spoke for Mayor Russell F. Bonesteele and the City Council. He was accompanied by Mr. B. T. Van Wormer, Assistant City Engineer, and Mr. Howard D. Brandvold, Director of Finance. Mr. Mathewson reported that Salem's position was no different from other communities, that the city had \$100,000 in the bank, that if they could be granted an additional \$50,000 they could proceed with construction immediately. He commented on the problem created by septic tank discharge into Croisan Creek and stated that competent medical authorities have pointed out that this sewage not only is creating pollution problems but is a health menace. If this grant were approved, the city would immediately require that these houses be connected to sewers

which would take it to the sewage treatment plant and give it full primary treatment. He would urge that the application be approved and again stated that the city was prepared to proceed on 48 hours notice should the allocation of federal funds be made.

Dr. Erickson raised the question as to whether primary treatment of sewage as provided by Salem would be sufficient to handle the additional load from the Fairmont and Candalaria areas.

Mr. Mathewson stated that he was under the impression that the city was meeting the requirements for primary treatment, that they are using in excess of 700 pounds of chlorine per day and have been able to maintain a slight residual in the plant effluent.

It was pointed out, however, that the organic load on the plant increases as the canning season develops and this load does influence pollution conditions in the river.

It was MOVED by Mr. Harms, seconded by Dr. Erickson and carried that the Authority grant Salem the full five points permitted for primary treatment bringing the city's total priority points to 18.

After further discussion of the various proposed projects, the following actions were taken by the Authority members:-

Canyonville

It was MOVED by Mr. Harms, seconded by Dr. Erickson, and carried, that a tentative priority for \$43,410, subject to availability of federal funds, be awarded to Canyonville.

Estacada

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that a tentative priority for \$33,398, conditioned on a successful bond election by September 30 and subject to availability of federal funds, be awarded to the city of Estacada.

ABG763

Lakeview

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that a tentative priority for \$52,041, subject to availability of federal funds, be awarded to Lakeview.

Vernonia

It was MOVED by Mr. Harms, seconded by Dr. Erickson, and carried, that a tentative priority for \$19,152, provided financial ability is shown by September 30 and subject to availability of federal funds, be awarded the city of Vernonia

Ashland

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried, that the city of Ashland be named first alternate to receive federal funds should other projects fail to qualify.

Salem

It was MOVED by Mr. McPhillips, seconded by Mr. Johnson, and carried that the city of Salem be named second alternate to receive federal funds should other projects fail to qualify.

Pilot Rock

A memorandum prepared by the staff relating to the pollution of Birch Creek by wastes from the Pilot Rock Lumber Company and from the United States Gypsum Company board manufacturing plant at Pilot Rock, Oregon, and distributed to the members prior to the meeting was reviewed. It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that the chairman be authorized to cite the Pilot Rock Lumber Company and the U. S. Gypsum Company at Pilot Rock to appear at the next meeting of the Authority and show cause why an order should not be entered requiring abatement of the nuisance created by the pollution of Birch Creek.

Bear Creek

Mr. T. M. Gerow, District Sanitary Engineer, presented a summary of the memorandum relating to the pollution of Bear Creek, a tributary of the Rogue River. He reported that this particular stream system has not received much attention in recent years and that the most recent interest has been brought about by the Izaak Walton League and a group of citizens to prevent existing and further pollution with the hope they can improve this water resource, particularly if additional water can be placed in the stream so it can be used for recreation and fish production. He pointed out that the problem is not a new one but an existing one of gravel washing and mining in the stream, and wastes discharged from meat packing and processing plants. He recommended that known violators be instructed to abate and if satisfactory progress is not made that offenders be cited to appear and show cause why they should not be ordered to abate the pollution of Bear Creek. Mr. Gerow recommended that notices be sent to the following:- Eastside Custom Slaughterhouse, M. C. Lininger and Sons, Jackson County, Arvel L. Nash, Tru-Mix Concrete Company, Medford Concrete Construction Company, Bateman and Sons, and Medford Meat Company. He also suggested that the pear growers should be asked to keep toxic substances out of the stream.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson and carried that the secretary be instructed to notify the following to take immediate steps to abate pollution and if satisfactory progress is not made they be cited to appear at the next meeting of the Authority:- Eastside Custom Slaughterhouse, M. C. Lininger and Sons, Jackson County, Arvel L. Nash, Tru-Mix Concrete Company, Medford Concrete Construction Company, Bateman and Sons, and Medford Meat Company.

ABG763

Conference on Lower Columbia River

The secretary referred to the preliminary draft of a proposed action program for the abatement of pollution in the Lower Columbia River which will be considered at a conference with the U. S. Public Health Service, Washington Pollution Control Commission and Oregon State Sanitary Authority sometime in September. He stated that Mr. Stanley had tentatively concurred in the program but had raised the question as to the necessity for two bacterial standards, one for boating and the other for water skiing and swimming. It was pointed out that these are standards for an interstate stream suggested by the Public Health Service and would require further discussion at the conference in September. Dr. Erickson stated that he had served on the Federal Water Pollution Control Advisory Board. There are so many different uses of watersheds and streams in the United States that this is one of the many reasons uniform standards have not been established. At the conclusion of further discussion it was agreed that the program should again be reviewed after the conference in September.

The Chairman then asked for a report on the status of Seaside, Arrow Meat Company and Alpenrose Dairy. It was reported that Seaside has retained engineers to conduct necessary studies and to make a preliminary report and recommendations. It was concluded that the city is progressing satisfactorily.

Mr. Benson reported that Arrow Meat Company was making some progress but that no plans or specifications for improvements have been submitted.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson and carried that the matter be referred to the attorney general for appropriate action.

Mr. Benson also reported that Alpenrose Dairy has submitted plans which have been approved and that construction has started. They have not ceased pollution but are proceeding with haste and the project should

be completed in about thirty (30) days or more. At the present time they are putting the waste on the ground and are trying to keep as much as possible out of the stream.

The Chairman then asked about the status of court proceedings against the city of Portland and suggested that every possible means should be used to bring this matter to trial.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson and carried that Mr. Queseth be requested to do everything possible to expedite the court's action in the Sanitary Authority's case against the city of Portland.

Portland - Chipman Chemical Company

Mr. Hatchard reported that since late 1956 the Chipman Chemical Company has been producing 2-4-D, an herbicide, and during the production, chlorophenol type organic compounds are released to the atmosphere from several steps in the process. These substances produce strong penetrating odors at very low concentrations. Some control facilities were included in the original plan, however, many complaints of obnoxious odors were received. Major additions were made to the air pollution control facilities in the fall of 1957, but changes in the production methods prevented the full operation of the new control facilities.

During 1959 several hundred complaints were received by the City of Portland and the Authority from residents in metropolitan Portland. The frequent presence of the obnoxious odors were the main basis for complaint, but some were concerned regarding health effects. Intensive investigations were made and the company management was notified again that emissions from the plant were still in violation of Section 449.730, ORS.

The Company has advised the staff that plans for additional control are being designed and will be submitted to the Authority for review, and that the installation of the facilities will be completed during the plant shutdown between July 15 and September 15, 1959.

ABG763

It was recommended that:-

1. The Chipman Chemical Company be notified that plans and/or reports describing the additional air pollution control facilities, to be in compliance with State Statutes, be submitted to the Authority for review by August 15, 1959.

2. That if the plans and/or reports are not submitted by this date, or do not appear to adequately control the atmospheric discharges, the Company be cited to appear at the next Authority meeting.

Mr. C. E. Carlsen representing Chipman Chemical Company stated that they have definite plans for equipment to control the odor problem and these could be submitted by August 1, 1959.

It was MOVED by Dr. Erickson, seconded by Mr. Johnson, and carried that the recommendations of the staff be accepted with the exception that the date for compliance be changed from August 15 to August 1, 1959.

Albany - Western Kraft Corporation

Mr. Hatchard reported that since December 1955 the Authority's staff has been investigating complaints regarding emissions into the atmosphere from the Western Kraft Pulp Mill north of Albany. The original plant design included some control equipment and several control additions have subsequently been made.

The Western Kraft technical staff has measured the major discharges from the pulp mill and has prepared summary reports. The Authority staff has prepared two previous summary reports and a report of 1959 investigations will be completed soon. The Authority staff field investigations during 1959 show that the presence of obnoxious odors is still creating a public nuisance on property downwind from the mill in violation of Section 449.730 ORS.

Mr. Hatchard recommended that:

1. Western Kraft Corporation be notified that a definite program describing the installation of additional control facilities, to comply with state statutes be submitted to the Authority by September 15, 1959.

2. The control facilities include treatment of non-condensable substances contained in the digester blow and relief gases, the recovery furnaces and other sources creating public nuisance.

3. That if adequate plans and specifications are not submitted by September 15, 1959, the Western Kraft Corporation be cited to appear at the next Authority meeting.

Mr. Waldemar Seton, Technical Director, Western Kraft Corporation, appeared and stated that they completed tests on atmospheric emissions during the past year and had submitted their reports to the Air Pollution Authority and that they are now evaluating the available methods of control. He explained that the three main approaches to controlling the non-condensibles from the digester blow and relief gases are: (1) oxidation towers, (2) Collectors to store gas volume and conversion to non-odorous compounds by controlled combustion, and (3) a combination stripping column and black liquor stabilization facilities.

Mr. Seton reported that some oxidation towers have been installed which pass the non-condensibles in one step but unfortunately the companies with these installations have not made the data available regarding the control efficiency. He explained that Western Kraft was undertaking studies of the black liquor to determine whether an oxidation tower would be an advantageous step. He pointed out that the main problem is the \$100,000 cost and the unknown degree of odor reduction that would result. He states that because several control methods need evaluation, perhaps more time will be needed than Mr. Hatchard had suggested in his report. The Chairman asked Mr. Seton how much time would he suggest as a minimum. Mr. Seton replied that his company could present a time estimate at the next Sanitary Authority meeting.

ABG763

Dr. Erickson stated that as he drove through Albany at about 6 PM on Sunday, July 5, 1959, he had never experienced a more obnoxious odor than was being emitted by the plant and he thought the Authority should do everything possible to require correction of this source of air pollution, particularly since the plant has doubled its capacity in spite of the existing pollution problem.

Mr. Harms was of the opinion that there is a decided difference between the Weyerhaeuser plant at Springfield and the Western Kraft plant at Albany. Mr. Seton stated that while the pulping processes are the same, the Weyerhaeuser mill which uses an oxidation tower has electrostatic precipitators for control rather than the Venturi scrubbers used by Western Kraft.

Mr. McPhillips asked Mr. Seton if it would be impossible to provide the Authority with a definite plan for elimination of this nuisance by the 15th of September, 1959. Mr. Seton replied that his company wanted to install the most effective controls to do the most good and September 15 would be a little early because of the analytical work required before plans were submitted. Mr. McPhillips stated that the investigation had been going on since 1955 and he thought a definite program should be presented no later than September 15, 1959.

It was MOVED by Dr. Erickson, seconded by Mr. McPhillips, and carried that (1) Western Kraft Corporation be notified that a definite program for installation of control facilities must be submitted to the Authority by September 15, 1959; (2) that the control facilities include treatment of the non-condensable substances contained in the digester blow and relief gases, the recovery furnaces and other sources creating public nuisance; and (3) that if adequate plans and specifications are not submitted by September 15, 1959, the Western Kraft Corporation be cited to appear at the next Authority meeting.

Southern Pacific Railroad

A report was presented by Mr. James L. Agee relative to complaints caused by open burning refuse dumps operated by the Southern Pacific Railroad, near Eugene in Lane County. He reported dense smoke and flyash from open burning was observed in June and September, 1958, and that the Southern Pacific Railroad Company was notified regarding the violation and that recommendations had been submitted to the Company. Mr. Agee stated that the company replied that they were designing an incinerator to handle this waste. He reported that additional complaints had been received recently and that the staff recommends that the Southern Pacific Railroad Company be notified that open burning be discontinued by September 1, 1959; otherwise, the Authority would have no alternative but to cite the Southern Pacific Railroad Company to appear at the next meeting of the Authority.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the Southern Pacific Railroad Company be so notified.

The next meeting was called for September 9, 1959.

There being no further business the meeting adjourned at 4:45 PM.

Respectfully submitted,

  
CURTISS M. EVERTS  
Secretary & Chief Engineer

## Minutes of the Seventy-Eighth Meeting

of the

Oregon State Sanitary Authority

November 24, 1959

The seventy-eighth meeting of the Oregon State Sanitary Authority was called to order by B. A. McPhillips, acting chairman, at 2:00 p.m. November 24, 1959, in Room 36, State Office Building, Portland, Oregon. The members and staff present were B. A. McPhillips, Harold M. Erickson, M.D., Lewis A. Stanley and Herman P. Meierjorgen, Members; Curtiss M. Everts, Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Deputy State Sanitary Engineer; Clarence E. Cuyler and Donald J. Benson, Associate Sanitary Engineers; Ronald R. Ott and Ronald I. Culver, Assistant Sanitary Engineers; H. M. Patterson, H. W. Merryman and T. M. Gerow, District Engineers; Glen D. Carter, Aquatic Biologist; and Robert B. Percy, Ed Taylor, George L. Toombs and Robert C. Barnes, Chemists.

It was MOVED by Mr. Stanley, seconded by Dr. Erickson, and carried that Mr. B. A. McPhillips be elected acting chairman in the absence of Mr. Harold F. Wendel.

Minutes

It was MOVED by Mr. Stanley, seconded by Mr. Meierjorgen, and carried, that the minutes of the Seventy-Seventh meeting be approved as prepared by the secretary.

Project Plans

It was MOVED by Dr. Erickson, seconded by Mr. Stanley, and carried that actions taken by the engineering staff on the following 177 project plans during the months of July, August, September and October, 1959, be approved.

Date	Location	Project	Action
7-2-59	Douglas County	Reedsport Union High School	Approved
7-3-59	Columbia San. Dist.	Sewer extensions	Prov. approval
7-3-59	Oceanlake	Sewer extension	Prov. approval
7-6-59	Oswego	Erickson Street sewer	Prov. approval
7-8-59	Beaverton	Sewer extension for 67 homes	Prov. approval
7-8-59	Hillsboro	Sewer extensions	Prov. approval
7-9-59	Multnomah County	Rockwood Grade School	Approved
7-9-59	Washington County	Hillsboro Union High School	Approved
7-9-59	Klamath County	Merrill Grade School	Approved
7-9-59	Multnomah County	Columbia Grade School	Approved
7-9-59	Lane County	Ellis Parker School	Approved
7-9-59	Linn County	Cascadia Grade School	Prov. approval
7-10-59	Beaverton	Sewer Ext. Bel-Aire #3 Addn.	Prov. approval
7-10-59	Linn County	New Albany Grade School	Approved
7-10-59	Washington County	Reedville Grade School	Approved
7-10-59	Washington County	Hal Smith Subdivision sewage disposal proposal	Prel. approval
7-13-59	Klamath County	Johns-Manville industrial waste pretreatment	Permission granted to install on trial basis
7-13-59	Scio	City septic tank system	Not approved
7-13-59	Linn County	McFarland School sewerage	Comments submitted
7-14-59	Sunset Valley	Sewer extensions	Prov. approval
7-15-59	Ontario	Sewage stabilization ponds	Prov. approval
7-15-59	Knoxtown San. Dist.	Sewer extensions	Not approved
7-16-59	Lane County	Camp Creek Grade School	Approved
7-16-59	Lane County	Upper Elmira Grade School	Approved
7-17-59	Uplands	Sewage treatment works	Deferred
7-17-59	Furlong Park	Sewage treatment works	Deferred

ABG763

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
7-17-59	Lane County	Creswell Union High School	Approved

#### Adoption of Revised Rules of Procedure

Copies of revised rules of procedure having been prepared by Mr. Quesseth and sent to the members of the Authority in advance of this meeting and the pertinent revisions having been discussed by Mr. Quesseth at this meeting, it was MOVED by Mr. Stanley, seconded by Dr. Erickson and carried that the following resolution be adopted:

WHEREAS: By virtue of chapter 357, Oregon Laws 1959, the duties and functions of the Air Pollution Authority were transferred to the State Sanitary Authority; and

WHEREAS; under the said Act the State Sanitary Authority was vested with power to appoint a hearings officer and the duties and powers of such hearings officer were prescribed therein; and

ABG763

WHEREAS, heretofore rules of procedure were separately adopted by the Air Pollution Authority and by the State Sanitary Authority, and it is deemed necessary to combine and modify the said rules so as to prescribe a single and unified method of procedure for hearings before this Authority; Now, therefore,

BE AND IT HEREBY IS RESOLVED by the State Sanitary Authority as follows:

(1) That those certain "Rules for Procedure in Hearings", adopted by the Air Pollution Authority on August 27, 1958, and filed with the Secretary of State on September 12, 1958, be and they hereby are repealed.

(2) That those certain "Rules of Procedure Before the Oregon State Sanitary Authority", adopted by the said Authority on January 24, 1958, and filed with the Secretary of State on February 3, 1958, be and the same hereby are repealed; and the rules of procedure referred to in paragraph (3) hereof are hereby adopted in lieu thereof.

(3) That the amended rules of procedure before the Oregon State Sanitary Authority presented to it, and considered by the Sanitary Authority on November 24, 1959, be and they hereby are adopted as the rules of procedure to govern hearings before this Authority.

(4) The secretary of this Authority is directed to give notice of the adoption of this Resolution, and of the adoption of the amended rules of procedure, by sending duplicate originals thereof to the Secretary of State, of the State of Oregon, in compliance with provisions of ORS chapter 183.

Upon motion duly made, seconded and passed, the foregoing Resolution was duly adopted in Portland, Oregon, this 24th day of November, 1959.

City of Salem

Mr. Kent Mathewson, Salem City Manager, appeared briefly before the Authority for the purpose of presenting a copy of the final report, dated 1958-1959, of the Citizens' Conference for Governmental Cooperation in the Mid-Willamette Valley of Oregon. He also reiterated the fact that the city of Salem is most anxious to obtain a federal grant to assist in financing construction of an urgently needed trunk sewer and pump station to serve a portion of the city which presently is not sewered. In addition he reported that plans were being prepared for construction within the near future of certain improvements to the city's sewage treatment plant, primarily for the purpose of abating an odor nuisance but also for the purpose of increasing the efficiency of certain of the treatment units.

U. S. Gypsum Company

Mr. S. E. Martin, Works Manager, and Mr. Holly Cornell, Consulting Engineer, were present to represent the U. S. Gypsum Company and to request that the company's proposal for abatement and control of pollution in Birch Creek be accepted and that the citation proceedings in this matter be dismissed by the Authority.

Mr. Spies reported that at the request of the attorney representing the U. S. Gypsum Company the citation hearing authorized at the previous meeting of the Authority and scheduled for September 9, 1959, had been postponed, first until November 18, 1959, and later for an indefinite period. In the meantime the company had retained Cornell, Howland, Hayes and Merryfield, Consulting Engineers, to work out a solution to the company's waste disposal problem at its Pilot Rock hardboard mill on Birch Creek in Umatilla County. On November 5, 1959, a preliminary proposal of the company had been reviewed by the staff of the Authority and on November 18, 1959, a written report and revised proposal for solving said waste disposal problem had been submitted by the company officials.

Mr. Spies reported further that the company's proposal was acceptable to the Authority's staff provided the following three additions be made:

1. The discharge rate shall be controlled such that the ratio of waste to stream flow shall at no time be more than 1:60.
2. The Sanitary Authority shall be notified in advance of any discharge of wastes to Birch Creek.
3. Permission to discharge wastes to Birch Creek shall be granted only for the winter season of 1959-1960.

Mr. S. E. Martin stated that he considered the above additions reasonable and he agreed to them with the understanding that the Sanitary Authority would give consideration to permitting emergency discharges under the controlled conditions into Birch Creek in future years if the experience this

ABG763

coming winter shows that such discharge can be so controlled that it will cause no detrimental effects on the downstream waters.

Having thus been assured that such additions would be agreed to by the company it was MOVED by Mr. Stanley, seconded by Dr. Erickson and carried that the citation hearing in the matter of waste disposal by the U. S. Gypsum Company at Pilot Rock, Oregon, be dismissed provided said company:

1. Will promptly make every reasonable effort to acquire approximately 110 acres of additional land for waste disposal purposes, by purchase or by lease.
2. Will so operate the waste treatment farm that the flow into George Canyon will be limited to 200,000 gpd or less.
3. Will permanently plug the outlet from the lower log pond into Birch Creek and
4. Will improve the operation of its waste treatment farm as set forth on page 14 of the engineering report dated November 1959 and prepared by Cornell, Howland, Hayes & Merryfield.

And further that permission be granted to the U. S. Gypsum Company to discharge impounded wastes into Birch Creek during the winter season of 1959-1960 but only under the following procedure or controls:

- A. The U. S. Gypsum Company will perform weekly determinations of dissolved oxygen at Stations 4, 8, and 10, as shown on Figure 2 (of said engineering report).
- B. The U. S. Gypsum Company will make regular BOD determinations of the BOD in its storage ponds.
- C. The U. S. Gypsum Company will install flow control devices with an accompanying measuring device for use in discharging waste from the main storage pond into Birch Creek.
- D. The U. S. Gypsum Company will establish a stream flow gauge for Birch Creek near the plant.

- E. The U. S. Gypsum Company will not discharge waste directly from the plant or from the lower log pond into Birch Creek.
- F. The U. S. Gypsum Company will discharge waste water into Birch Creek only from its main storage pond only when the flow in Birch Creek exceeds 60 cfs, and only under controlled conditions on the basis of the above tests. The quantity discharged will be determined from the above test data as that quantity for which the oxygen demand will not exceed the oxygen available in the stream in excess of 6 ppm.
- G. The discharge rate shall be so controlled such that the ratio of waste to stream flow shall at no time be more than 1:60.
- H. The Sanitary Authority shall be notified in advance of any discharge of wastes to Birch Creek.

City of Portland

No one was present to represent the city of Portland. Mr. Spies reviewed briefly the developments which have occurred in this case since the citation hearing on October 17, 1958. He reported on the steps being taken by the city of Portland for the purpose of abating pollution in the Willamette and Columbia Rivers as outlined at a conference with the Authority staff members on October 8, 1959, by representatives of the city and as listed in a letter dated November 13, 1959, by City Engineer L. H. Rosenthal.

Mr. Quesseth reported that in March 1959 a complaint had been filed in the name of the Authority against the city of Portland, that on May 4, 1959, the court had overruled a motion by the city to strike the complaint, that subsequent thereto the city had filed a demurrer, and that on September 30, 1959, the court had ordered the case continued until November 30, 1959, with the understanding that in the meantime the two parties would attempt to work out a satisfactory solution to the matter. He reported further that at a conference on October 8, 1959, the attorneys for the city of Portland had requested that in view of the fact that certain steps were being taken by the city to abate its pollution the Authority dismiss its court action.

ABG763

After considerable discussion of the matter it was MOVED by Mr. Stanley, seconded by Dr. Erickson and carried that the Legal Advisor for the Authority be authorized to consent and recommend to the Court a further continuance for a period of 60 days, provided the city of Portland will stipulate that it will submit within that time a plan and time schedule for construction of the needed facilities.

Commission of Public Docks and Union Oil Company

Consideration was given to requests received from the Commission of Public Docks and the Union Oil Company for permission to discharge raw sewage into the Willamette River from single toilet installations located at the end of two separate docks in the Portland Harbor.

It was MOVED by Dr. Erickson, seconded by Mr. Stanley and carried that both parties be informed that such permission can not be granted but that the staff of the Authority be directed to assist them in working out some alternate method of disposal.

Western Kraft Corporation

Chairman McPhillips called upon Mr. Robert Beatty, Asst. to the President Western Kraft Corporation, to report on the progress that his company had made in the control of air pollution from their plant near Albany. Mr. Beatty stated that the report furnished to the members of the Sanitary Authority under the date of September 4, 1959, was self explanatory and represented the thinking of Western Kraft Corporation on the subject at the present time. Mr. Beatty offered to answer any questions that Authority members might have on the contents of the report.

The Chairman then called on H. W. Merryman to furnish the staff report. Mr. Merryman referred to interim reports in the Sanitary Authority files that indicated that both conferences with residents adjacent to the plant and field surveys continue to show that nuisance conditions exist over an extended period of time, particularly under unfavorable weather conditions.

He stated that there are other kraft pulp mills that have air pollution control facilities which have reduced the odor nuisance conditions in the area of the plant and that at the present time there are processes and equipment available to improve the odor control. Mr. Merryman then proceeded to read a portion of the report from Western Kraft Corporation in which it was stated, "our objectives at Albany are identical with both the Authority's interest and the public interest - to minimize or, if practically possible, to eliminate any odor which may now or in the future cause or create a public nuisance." Mr. Merryman stated that he believed this section of the Western Kraft report minimized the problem.

Mr. Stanley asked if the Authority had issued any order or request that air pollution from this mill be properly controlled.

The Secretary stated that this matter had been considered at the last meeting of the Authority; that R. E. Hatchard reported that since December 1955 the Authority's staff has been investigating complaints regarding emissions into the atmosphere from the Western Kraft pulp mill north of Albany; that the original plant design included some control equipment and several pieces of control have subsequently been installed and that the Sanitary Authority took the following actions at its July 8, 1959, meeting.

1. That Western Kraft Corporation be notified that a definite program for installation of control facilities must be submitted to the Authority by September 15, 1959:
2. That the control facilities include treatment of the non-condensable substance contained in the digester blow and relief gases, the recovery furnaces and other sources creating public nuisance; and
3. That if adequate plans and specifications are not submitted by September 15, 1959, the Western Kraft Corporation be cited to appear at the next Authority meeting.

The Chairman asked Mr. Beatty to explain what has been done at the Western Kraft mill to date.

AR6763

Mr. Beatty stated his company submitted a thorough report on September 4, 1959, containing detailed studies made by his staff. The report pointed out that at a cost of \$450,000 the company could put in other known devices that would reduce intermittent odor but this would not take care of the odor problem completely which at times still could be considered a public nuisance. He stated that the Western Kraft pulp mill has a number of controls but does not have oxidation towers for condensers and that there are 4 major items other pulp mills have that Western Kraft does not yet have. They have concluded that even if the company did spend the \$450,000 to have the most complete odor control pulp mill in the industry they are not convinced this would solve the problem in their particular location. He believed a large part of the problem was due to their geographical location, and admitted that there is an odor from the mill which could be classified as a public nuisance but reiterated that with the expenditure of the sum of money indicated in the report they still would have an odor problem that could be classified as a public nuisance. He pointed out that the reduction of kraft pulp and paper odor is qualitative as well as quantitative; that it is not technically feasible to remove the odor compounds completely.

Mr. Beatty commented that the September 4th report reviewed some current, very important research activities underway at Washington State College and the University of Washington related to kraft pulp mill problems. He stated it was most difficult to talk in generalities and reviewed parts of the written report. His company believes that they should be permitted to wait until these current research activities are completed before additional control equipment is required by the Authority. Mr. Beatty again emphasized the company does not want to spend \$450,000 with no assurance those installations will solve the air pollution problem. He stated they have made some quantitative reductions at the plant but explained that at the moment his company does not feel that the other devices would make enough contribution to reducing

the problem of taking them "out of the nuisance situation". Mr. Beatty proceeded to quote from the report that, "we believe it is worth noting in the Authority's four year summary of area odor surveys around our plant, as completed in July of this year that, of 1,231 observations, only 143 were classed as "strong" and only 21; 1-1/2% were listed as "overpowering"; that the majority of observations disclosed no odor whatever, or a bare minimum threshold level of odor detected." He admitted the plant smells and they want to eliminate the odor if there were a practical way to do it; that the company is asking for a little more time and patience on the part of the Authority.

Mr. McPhillips asked Mr. Beatty if there were any similarity between the Western Kraft plant and the Weyerhaeuser plant at Springfield.

Mr. Beatty stated that theirs is the same process used; that they do not have all of the equipment Weyerhaeuser has; that Weyerhaeuser has a high stack of about 325 feet. He added that a stack as high as that helps very much. He again asked the members to refer to the report since all this has been summarized for them.

Mr. Stanley stated he has read the September 4th, report and his reaction was that the problem was just outlined.

Mr. Beatty informed the Authority that the company's position at the present is not to do anything more at this time; that they have listed the things that can be done at a cost of \$450,000 but they don't believe this will solve the problem.

Mr. Quesseth noted in the report that Western Kraft mentioned the cost of a high stack in item #11. He wished to ask Mr. Beatty if it would do any good to install that equipment which is described under item #4 at the cost of \$25,000.

Mr. Beatty replied that if this equipment was installed the results would probably be questionable. He admitted that the company knows where

ABG763

the odors are coming from and that this installation for \$25,000 would cure only one trouble area.

Mr. Quesseth asked if Western Kraft would have to put in all four installations to have results.

Mr. Beatty said that if they put in all 4 installations the problem would not be solved.

Dr. Erickson stated he had read this report and that he felt it is apparent that the company is reluctant to do anything; because the company is of the opinion this installation would not solve the problem. Dr. Erickson read from the Interim Report on Western Kraft dated July 20, on page 3.

\*\*\*\*"Since our 1957 interim report Western Kraft Corporation has presented a report of stack sampling procedures, methods, results and discussions. The report provided daily values of mal-odorous chemical constituents being discharged from the two recovery furnaces, the digester blow gas stack, evaporators, smelt tank and lime kiln. Consolidated values for the sampled constituents are as follows:

1. Hydrogen sulfide -- 2367 lb. per day.
2. Methyl mercaptan -- 369 lb. per day.
3. Other sulfides -- 356 lb. per day.

A total of 3,092 pounds per day of mal-odorous constituents are produced by the mill on a 200 ton per day basis." \* \* \* \* \*

Dr. Erickson asked if this condition has been reduced to where it is negligible. He told Mr. Beatty that he has had many, many complaints, as State Health Officer, about the kraft mill in Albany; more than any other installation in the State. Dr. Erickson stated he did not believe that the Authority has ever been unreasonable but he recalled that similar statements had been made by pulp and paper mills when matters of water pollution were being considered.

Mr. Beatty indicated that there was probably a feeling on the part of the Authority that this is just another sample of "delaying techniques."

He added he would like to assure the Authority that the company is not intentionally trying to delay on the clean up problem; that if his company had everything Weyerhaeuser has at Springfield and the other mills have, that because of Western Kraft's location along the highway and the various prevailing winds that suddenly blow up they still could do little about odor problems; that he realized there are more people who get an odor from their mill than in any other part of the state.

The Chairman then called on H. W. Merryman who reported that conditions at Toledo, Oregon are entirely different; that in the vicinity of Toledo at one time only did he observe what could be called an obnoxious odor which was a No. 3 odor intensity.

Mr. Merryman referred to the minutes of the last Sanitary Authority meeting at which time Mr. Harms indicated that there was a difference in odor conditions and equipment at the Springfield and Albany mills. Mr. Merryman also commented on the staff report dated July 20, 1959, and read the odor intensities for 1956, 57, 58 and stated due to prevailing weather at time of surveys in 1958 not enough data was obtained to prepare a summary. He stated that the reports indicated that the control installations had not reduced the intensity of the odor in the vicinity of the mill.

Mr. Beatty stated that Mr. Merryman's report and the statistics supported his point; that in December 1957 Western Kraft completed a control installation at a cost of \$80,000. That before and after stack sampling showed a reduction of 60% quantitatively but odors still occur. He stated the area odor surveys are a very subjective type of test; that some of the work which is being done by Dr. Adams at Washington State University shows promise of developing more objective methods.

Mr. Beatty stated that about 2 years ago Western Kraft asked the Authority's staff to cooperate in supplying actual complaints. He again

ABG763

asked the staff if they had received any more complaints. The staff reported that there were apparently none except verbal ones. Mr. Beatty felt certain that the staff could get a lot of people to register formal complaints since odors still persist in the area at times. He added they have been trying to do something about it in perhaps better methods of "housekeeping".

Mr. Stanley asked Mr. Beatty was it a fair statement that his company is behind the industry in this matter.

Mr. Beatty replied they do not have the installations some kraft mills have. He felt his company was neither behind nor ahead of other companies; that they are in the middle.

Chairman McPhillips stated that he felt it was about time to explain the position of the Authority to Mr. Beatty. He pointed out many years ago the Authority went through similar problems on water pollution control with the pulp mills; that the Authority tried to cooperate with them for years and no progress was made. The Chairman then read the motion which the Sanitary Authority adopted during the July 8, 1959 meeting. He stated the Authority will not tell the Western Kraft Corporation that they must spend the \$450,000; however, the Sanitary Authority's function was to tell them they must stop polluting the air. The Chairman warned Mr. Beatty that his firm must be aware that sometime the Authority will order them to stop polluting the air or close down the plant; that the Authority recognizes their problem and that the company must recognize it. He stated that the Authority will work with Western Kraft and give them a reasonable time to abate the air pollution from their plant but that this can not be postponed.

The Chairman stated that he passed this information on to him so the company may know its position.

Mr. Quesseth asked the Chairman what would be a reasonable time to complete the research, 60 days, 6 months or what length of time.

Mr. Beatty said that Dr. Adams who is conducting the research expected to have his work done by June 1960; that until that time the company can do nothing.

Dr. Erickson wanted to know how soon after June 1960 could Western Kraft present some plans and specifications to control their problem.

Mr. Beatty replied that it depended upon the type of the installation decided upon and that he could not commit himself at the present time. He added after they know the best steps to take they could progress quite rapidly and by the end of 1960 have equipment that was actually functioning, if it proved desirable to do so.

Mr. Stanley wanted to know if the staff concurred in the statements made by Mr. Beatty and if there will be a better chance for a solution of this problem six months from now than there is now.

Mr. Merryman stated he felt research was a continuing operation and that there was no assurance that solutions would be provided that would guarantee the installation of effective control equipment.

Mr. Stanley asked if there could be something installed at this time that would help the problem.

MOTION Re: Western Kraft Corporation

It was MOVED by Mr. Stanley and seconded by Dr. Erickson that Western Kraft Corporation be cited to appear before the Authority and show cause why an order should not be entered requiring the Western Kraft Corporation to abate the nuisance caused by pollution in the vicinity of their plant at Albany, Oregon.

Mr. Beatty stated his company was not asking for a "carte blanche" to avoid air pollution abatement and that his company would be very happy to appear at a public hearing and that their engineers would explain the whole situation and that Mr. Beatty was not arguing against the motion.

ABG763

Mr. Stanley explained that this would be a public hearing which would give the company an opportunity to present all arguments and engineering data; that the citation would give the Authority a chance to offer any assistance or contradiction.

Mr. Merryman wished to know if such a meeting could be held in the Albany area.

Mr. Stanley stated he saw no reason why not.

The Chairman said this could be determined and asked for a date.

AMENDED MOTION Re: Western Kraft Corporation

Mr. Stanley stated he wished to amend the MOTION to order that the time and place of the hearing be arranged by the staff; that it be some time during the month of February 1960, and that consideration be given to holding the hearing in the Albany area. Dr. Erickson who seconded the motion agreed to the amendments and the motion was carried.

Rogue River Paving Company

The Chairman called upon T. M. Gerow to review this case.

Mr. Gerow stated that the Authority had in their folders a resume of all the correspondence and reports on the subject of air pollution by the Rogue River Paving Company. The original complaint was received on July 13, 1959, from Mrs. Howard Arant with 17 co-signers. Mr. Gerow reported a letter dated September 21, was sent to Mr. Heisel, Attorney for Rogue River Paving Company regarding the continuing public nuisance downwind from the paving plant. Mr. Gerow stated that on October 12, 1959, a letter was received from a complainant stating that the plant was still in operation. Mr. Gerow talked with one of the owners of the plant, a Mr. Kimball who was not understanding, quite put out and even used somewhat abusive language. The important point Mr. Gerow brought out was that the plant this company acquired was one with no control facilities whatsoever and it created tremendous amounts of dust into the atmosphere.

The Chairman asked if this plant was operating on a permanent basis.

Mr. Gerow stated that it is but plans are being made to move it on to another permanent location since the land on which they are now located is not owned by their company. Mr. Gerow pointed out the report of the sampling in the Medford area indicating the high percentage of times that temperature inversions are present in the atmosphere. He stated that this paving plant was the only one at the present time that has no control devices whatsoever. He added that he requested the District Attorney to take action and if possible institute proceedings. The District Attorney had informed Mr. Gerow that he would have to await the administrative action on the part of the Sanitary Authority. Mr. Gerow said it was his suggestion to cite this company before the Authority to show cause why an order should not be entered requiring them to provide control devices when operating in Oregon.

The Chairman stated that now the Authority has heard T. M. Gerow's testimony and his recommendation is before the Board.

Dr. Erickson asked if this would be an appropriate case in which to set up a hearing with a hearings officer rather than to wait.

Mr. Quesseth said he thought this would be a good time except that no hearings officer has been appointed.

Mr. Gerow added that this asphalt paving plant will be in operation during the whole winter.

Mr. Stanley asked if it would be necessary to have a hearing in order to initiate action. He asked Mr. Quesseth if a suit in court could be initiated and would this take care of the matter.

Mr. Quesseth stated that the District Attorney is satisfied in his mind that he could not act without an order from the Authority and since violation of an order of the Sanitary Authority is a crime he could enjoin it criminally.

The Chairman stated a hearing must be held before anything could be accomplished.

ABG763

Mr. Spies advised the Authority that after sending a letter to the company he had a long distance telephone call from Mr. M. M. Heisel, Attorney for the company, stating he did not want to come to Portland for the Sanitary Authority meeting unless it would be necessary. Mr. Spies told him it was not a formal hearing and therefore the trip was not necessary. Mr. Heisel reported to Mr. Spies that the plant was not operating now and therefore not causing a problem, and that before operating again they would provide the necessary control facilities.

Mr. Stanley asked could this be resolved by getting in touch with Mr. Heisel and having him put this statement in writing.

MOTION Re: Rogue River Paving Company

It was MOVED by Dr. Erickson and seconded by Mr. Stanley and carried that should this operation occur again with the type of air pollution that has been encountered that we follow recommendations of the staff and cite them to appear at a hearing to be conducted by a hearings officer to show cause why an order should not be adopted requiring the Rogue River Paving Company to abate the pollution of the air and that a copy of this action be transmitted to the Attorney for the company.

Chipman Chemical Company

The Chairman requested Mr. Ronald Ott to give a progress report on the Chipman Chemical Company.

Mr. Ott stated that at the Sanitary Authority meeting on July 8, 1959, the Authority's members resolved:

That the Chipman Chemical Company be notified that plans and/or reports describing the additional air pollution control facilities to be in compliance with state statutes, be submitted to the Authority for review by August 1, 1959. He reported that the plans and specifications were received by the Authority prior to August 1, 1959. The Authority's staff completed the review of control plans and specifications on August 5th,

and provisional approval was granted by the Authority on August 12, 1959, with five stipulations. He explained the company had shut down their 2,4-D production operations on July 15, 1959. He stated that plant surveys were made by staff members on November 5th, and November 9, 1959, which indicated that the previously approved plans and specifications describing control facilities together with four of the five stipulations would be met. During conference with their staff engineer on November 9, it was stated that blow-pit facilities for emergency "dumping" of odorous chemicals would be completed by the end of November. Mr. Ott stated that actual start-up trials began as of November 9, 1959, and follow-up plant and area odor surveys would be made by Authority staff when production was typical.

Recommendations:

Mr. Ott presented recommendations for consideration as follows:

1. Regarding the provisional approval of control plans dated August 12, 1959 - that if the performance of the caustic scrubber unit fails to eliminate all excessive odors that a secondary treatment unit will be provided.
2. If future area odor nuisance conditions are created, the company should be requested to shut down 2,4-D production operations until appropriate controls are completed.
3. If the voluntary procedure fails to bring compliance with State Statutes, a public hearing should be scheduled as soon as possible.

The Chairman called upon Carl Carlson, Plant Manager of Chipman Chemical to present his report.

Mr. Carlson stated it was his feeling that Mr. Ott covered this case report very well. He stated his company has installed the system outlined on the plans submitted and that they have been tested and as near as can be determined the controls are doing the job they were designed to do.

ABG763

He felt it was performing above their expectations. He stated they have now provided negative draft on all odor producing points within the plant. He admitted they still have somewhat of an odor in the area but felt it is primarily a residual saturation. This does not seem to be offensive outside of the plant but they are taking steps to clean this up. Mr. Carlson said he had no comments to make on the recommendations of the staff and they are going ahead with plans. Generally speaking, he explained, his company has made major steps and now are taking minor steps.

MOTION Re: Chipman Chemical Company

It was MOVED by Mr. Stanley and seconded by Dr. Erickson and carried that the report of the staff be accepted.

Pacific Carbide and Alloys Company

The Chairman requested Mr. Robert Percy to report on Pacific Carbide and Alloys Company.

Mr. Percy stated that the Pacific Carbide and Alloy Company, one of the Northwest's producers of calcium carbide and acetylene, was first cited as a dust problem over four years ago. He reported that their main emissions originated from the calcium carbide electric furnace stack and the limestone kilns. He stated that control facilities on their furnace stack were installed early in 1956, but did not prove adequate. The last report on Pacific Carbide and Alloy was presented during the March 4, 1959, Authority meeting. He stated that furnace discharge measurements by the company (January 1959) indicated an 88% dust removal efficiency at approximately 50% furnace capacity. The plans and specifications had been reviewed and given conditional approval. He stated that surveys completed during August 1959, showed that air samples collected at stations approximately 1/3 mile southeast from the plant are still in violation of ORS 449.010 and regulations 2.2, 2.3, and 2.4, Chapter V. He reported that in October 1959 a scrubber was installed to control No. 2 kiln and according to discharge

measurement data (May 1958), kilns Nos. 2 and 3 contributed the majority of total dust, with kiln No. 3 emitting the majority of calcium-oxide dust. Mr. Percy stated that the company was constructing a vinyl acetate monomer manufacturing plant which would be the first of its kind on the west coast. He explained that vinyl acetate monomer is a chemical intermediate used in the production of plastics, paints, and other products. He stated that plans and specifications were requested by the Authority staff on October 22, 1959, and November 10, 1959, and that these plans have been reviewed. He pointed out that during starting up and shutting down operations several hundred cubic feet of essentially acetylene gas will be emitted at a height of 75 feet from the ground level. Public Health Service has been contacted for evaluation of any known nuisance conditions from acetylene gas or other air contaminants at four similar plants in the United States.

Recommendations:

1. Sampling data from scrubber unit for control of kiln No. 2 to be completed and submitted to the Authority by January 1, 1960.
2. That the controls for kilns Nos. 1 and 3 be completed and tested and that if further sampling established violation after kiln scrubber units were in operation a public hearing should be held to consider additional or more adequate controls.
3. That the Authority establish whether any conditional approval should be given for a proposed new plant, where the company, is already in violation of the Authority's regulations by their existing calcium carbide production plant.

The Chairman called upon T. J. Waters, Mgr. Pacific Carbide for any comments to this report given by Mr. Percy.

Mr. Waters stated he was quite surprised since he thought the company would be able to present its report first and comments of the Air Pollution Control staff would follow. He stated that staff's report did not sound

ABG763

exactly like the report he had heard; that is why he felt his report should be brought in prospective first. He stated that several years ago the company had substantial dust emission and at first they had no controls, and that the company spent about \$50,000 for control equipment. He stated that at the present time his company is not in violation. Mr. Waters stated that his company had tremendously reduced this so-called problem and that he didn't think they had any complaints during the last year or so.

The Chairman called upon Mr. Ott to make any additional statements regarding this case.

Mr. Ott stated the Authority had received a complaint from the Morrison Oil Company which is located directly adjacent to Pacific Carbide. He added that the air sampling showed a violation of the state statute; that a survey was completed in August both on suspended particulate and particle fallout values.

The Chairman wanted to know whether the main point of issue to eliminate this pollution is to put a scrubber on all three kilns.

Mr. Percy stated the company has an existing scrubber connected to kiln No. 2 but could not say whether the scrubber is efficient enough to handle it.

Mr. Waters stated they are going to make tests first on kiln No. 1 and that this test will be done by the company which would take a month or two.

At this point the Chairman read the staff recommendations and stated that he felt it was not unreasonable to ask Pacific Carbide that the tests be completed and submitted to the Authority by January 1, 1960.

Mr. Waters said he felt that was a reasonable date.

Mr. Percy stated that he was not sure that the scrubber could handle all kilns; that there should be some control on numbers 3 and 1 also.

Mr. Waters felt there was no problem except the wording involved here; that they would check the efficiency of the scrubber in operation by the end

of this year and then using these results they would install similar equipment with whatever modifications are necessary on the other kilns within the next 3 to 4 months.

Mr. Ott stated he believed the main thing here is the date when the additional controls and stack sampling would be completed.

The Chairman added that he gathered the data that the Authority would get by the end of the year will determine how much more equipment would be necessary to control this problem; and that it would be installed within the next 90 days, that being by the first of April. The Chairman concluded that all had heard the testimony of both operator and the staff.

MOTION Re: Pacific Carbide and Alloy Company

It was MOVED by Mr. Stanley and seconded by Dr. Erickson that the report of the staff be accepted and that the staff be requested to furnish a follow up report at the next meeting.

Medford Area - Air Pollution Survey Report

The Chairman called on T. M. Gerow to report on the Medford area air pollution problem.

Mr. Gerow stated he would try to acquaint the Authority with what is being done in the Medford area on the air pollution survey for the city of Medford. He stated that there have been cooperative studies with a number of cities in the state on air pollution plus the city of Medford and Roseburg. He added that Medford had provided a man on a part-time basis to service fallout sampling stations; that they have maintained high volume sampling stations for about 4 months. He informed the Authority that they have an AISI smoke tape sampler which they have been running continuously. He reported that the county court and Medford City Council is interested in the matter and particularly interested in what they can do and what they can expect from the state regarding a coordinated control program. Mr. Gerow added that in fringe areas they have problems regarding toxic sprays used

ABG763

on fruits, but that no toxicity to humans has been demonstrated and that the medical society's cooperation in a study of the matter had been requested. He stated that there are many orchard heating smudge pots in the Bear Creek area which are the open pan type and that the operators just let them burn openly in the fields. Mr. Gerow stated the odor is pungent as some of the operators are using discarded tires and that this creates heavy billows of smoke. He added that the final Medford report should be completed by the first of the year.

Mr. Stanley wanted to know if Mr. Gerow was asking the Authority for any action at this time.

Mr. Gerow stated no he was not but was in the hopes that the Pear Growers Association would have a program worked out to submit to all interested agencies in the near future.

A brief report on the progress being made by industries and others in the Bear Creek basin toward abatement of stream pollution was received. It was pointed out that public hearings will probably have to be held in some of the cases.

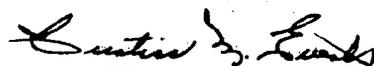

#### General

On behalf of the other members and the staff of the Authority, Mr. McPhillips expressed to Dr. Erickson their sincerest regrets that he had found it necessary to resign from his position as State Health Officer and extended to him best wishes for success in his new job with the California State Department of Health.

It was MOVED by Mr. Stanley, seconded by Mr. Meierjurgan and carried that Mr. Wendel's name on behalf of the Authority be included on the list of sponsors for a testimonial dinner for Dr. Erickson to be held on Wednesday, December 30, 1959.

There being no further business the meeting adjourned at 5:00 p.m.

Respectfully submitted,

CURTISS M. EVERTS  
Secretary & Chief Engineer

## MINUTES OF THE SEVENTY-NINTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

April 7, 1960

The seventy-ninth meeting of the Oregon State Sanitary Authority was called to order by Harold Wendel, Chairman, at 2 p.m. April 7, 1960, in Room 36, State Office Building, Portland, Oregon. The members and staff present were B. A. McPhillips, Lewis A. Stanley, Herman P. Meierjurgan, John P. Amacher, E. C. Harms, Members; Curtiss M. Everts, Secretary and Chief Engineer, Richard H. Wilcox, M. D. State Health Officer, Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Deputy State Sanitary Engineer; and Donald J. Benson, Associate Sanitary Engineer; R. E. Hatchard, Chief, Air Pollution Control, R. R. Ott, Assistant Engineer, Air Pollution Control, Robert B. Percy, Chief Chemist and Edward Taylor, Chemist, Air Pollution Control.

It was MOVED by Mr. Meierjurgan, seconded by Mr. Stanley and carried that the minutes of the seventy-eighth meeting be approved as prepared by the secretary.

Confirmation of mail vote on cancellation of hearing.

The Chairman stated that at the last meeting of the Authority a public hearing had been scheduled to consider the matter of air pollution caused by the Western Kraft Corporation mill near Albany. In view of the fact that the Western Kraft Corporation had agreed to install control equipment and had submitted to the staff a project proposal and time schedule, this hearing had been cancelled with the consent of the members of the Authority and confirmed by a mail vote.

PROJECT PLANS: Nov-Dec. 1959 Jan.-Feb.-March-1960

The Secretary stated that 115 project plans had been reviewed by the staff from November 1959 through March 1960 and he recommended that the Authority approve the actions taken by the engineering staff on these plans,

AR6763

specifications and reports.

It was MOVED by Mr. McPhillips and seconded by Mr. Harms and carried that the action taken by the staff on the following 115 projects be approved by the Authority:

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
11-3-59	Vernonia	Preliminary plans for lagoon	Prov. approval
11-4-59	Eugene	Sewer extensions	Prov. approval
11-4-59	Albany	Freeway Addition sewers	Prov. approval
11-4-59	Gold Beach	Sewer extensions	Prov. approval
11-5-59	Raleighwood	Temp. lagoon for 41 unit apt.	Prov. approval
11-6-59	Washington Co.	School District No. 57 J	Approved
11-9-59	Multnomah Co.	Corbett School Addition	Approved
11-10-59	Washington Co.	Ridgewood Grade School Addn.	Approved
11-10-59	Clackamas Co.	Dale Ickes Jr. High School Addn.	Approved
11-10-59	Toledo	Georgia Pacific Paper Co. outfall	Approved
11-10-59	North Bend	Preliminary plan for lagoon site, Menasha pulp mill	Prel. approval
11-10-59	Clackamas Co.	Lot Whitcomb School Addn.	Approved
11-13-59	Multnomah Co.	Parkrose Sr. High School Addn.	Comments submitted
11-16-59	Marion County	Gervais High School Addn.	Not approved
11-16-59	Furlong S. D.	Sewer extensions	Prov. approval
11-19-59	Gresham	Sewer extensions	Prov. approval
11-23-59	Eugene	3 sewer extensions	Prov. approval
11-23-59	Washington Co.	McKay Park Subd. sewers & lagoon	Not approved
11-23-59	The Dalles	Sewer extension	Prov. approval
11-24-59	Multnomah Co.	Fairview Ave. sewer extension	Prov. approval
11-24-59	Tigard	Hunziker Ave. sewer	Prov. approval
11-25-59	Prineville	Sewer extension	Prov. approval
11-25-59	Tillamook Co.	Hebo Grade School Addn.	Approved
11-27-59	Washington Co.	Beaver Acres Grade School Addn.	Approved

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
11-27-59	Springfield	Rosboro sewer extension	Pro. approval
11-30-59	Merrill	Sewer extension	Not approved
12-3-59	Washington Co.	Gales Creek School	Approved
12-9-59	Clackamas Co.	Rose Villa sewerage	Prov. approval
12-10-59	Wallowa Co.	Wallowa State Park sewerage	Comments submitted
12-10-59	Marion Co.	Mt. Angel College sewerage	Comments submitted
12-11-59	Milwaukie	Ardenwald sewer extensions	Prov. approval
12-11-59	Jackson Co.	Ashland Jr. High School	Not approved
12-14-59	Lane Co.	Spencer Butte Jr. High School	Approved
12-15-59	Washington Co.	Tigard Jr. High School	Prel. approval
12-17-59	Lake Co.	Plush School Addition	Comments submitted
12-22-59	Douglas Co.	Proposed pulp mill waste disposal	Comments submitted
12-22-59	Douglas Co.	Umpqua Lighthouse State Park	Deferred
12-30-59	Lane Co.	East Springfield High School	Prov. approval
12-31-59	Florence	Public Housing sewers	Deferred
1-5-60	Florence	Public Housing sewers	Comments submitted
1-7-60	Washington Co.	Tigard Jr. High School	Approved
1-7-60	Union Co.	Riveria Grade School, LaGrande	Approved
1-8-60	Florence	Sewer extension	Prov. approval
1-8-60	Portland	Private sewers for NPTC	Approved
1-14-60	Florence	Public Housing sewers	Approved
1-21-60	Portland	West Central Additions	Approved
1-22-60	Benton Co.	Cloverland Grade School	Approved
1-26-60	N. Roseburg S.D.	Garden Valley sewer	Prov. approval
1-28-60	Multnomah Co.	Skylark Subd. sewers & lagoon	Not approved
1-28-60	Multnomah Co.	Westmont Subd. sewers	Prov. approval
2-2-60	Prineville	South Second St. sewer	Prov. approval
2-2-60	Medford	Grandview Unit No.1 sewers	Prov. approval

ABC763

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
2-3-60	McKay Park	Sewers and lagoon	Deferred
2-4-60	Multnomah Co.	Springdale School	Approved
2-8-60	Eugene	West Eugene sanitary trunk	Approved
2-8-60	Winston	Sherry Street sewer	Prov. approval
2-8-60	Oswego	Wren Street sewer	Deferred
2-9-60	Eugene	Fillmore sewage lift station	Approved
2-9-60	Gold Beach	Sewer extension	Prov. approval
2-16-60	Florence	Sewer extension	Deferred
2-16-60	Merrill	Sewer extension	Approved
2-18-60	Clackamas Co.	Del Johnson Trailer Park	Comments submitted
2-19-60	Linn Co.	Grand Prairie School	Prov. approval
2-19-60	Coos Co.	Englewood School sewerage	Not approved but permission granted to proceed with construction
2-19-60	McKay Park	Sewers and lagoon	Prov. approval
2-25-60	Camp Adair	BOMARC sewage plant	Approved
2-26-60	Uplands	Sewers in Leahy Subd.	Part of system approved; other part not approved
2-29-60	Wasco Co.	Dry Hollow School	Approved
3-1-60	Newberg	New Grade School	Comments submitted
3-2-60	Medford	Mont Crest Villa sewers	Prov. approval
3-2-60	Lane Co.	Thurston Grade School Addn.	Approved
3-2-60	Tualatin Hills S.D.	Proposed plant expansion	Comments submitted
3-3-60	Clackamas Co.	Point Adams sewerage	Approved
3-3-60	Benton Co.	West Hills Terrace Subd. sewerage	Not approved
3-3-60	Malheur Co.	Farewell Bend State Park	Approved
3-3-60	Salem	Sewage pump station	Approved
3-7-60	Brookings	Sewer District # 10	Prov. approval
3-7-60	Toledo	Hospital sewer prel. report	Approved

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
3-7-60	Oregon City	Hartke Estate sewers prel. report	Approved
3-7-60	Furlong S. D.	Sewer extension and lift station	Prov. approval
3-9-60	Oswego	LID No. 50 sewer	Prov. approval
3-9-60	Washington Co.	Tualatin Grade School	Approved
3-9-60	La Grande	Eastern Oregon College sewer	Approved
3-10-60	Clackamas Co.	New Clackamas Co. Grade School	Approved
3-11-60	Malheur Co.	Dist. No. 81 Grade School	Approved
3-11-60	Malheur Co.	Aiken Grade School, Ontario	Approved
3-11-60	Washington Co.	New McKay Grade School	Not approved
3-11-60	Malheur Co.	Roberts Grade School	Approved
3-15-60	Furlong S.D.	Sewer extensions	Prov. approval
3-15-60	Fanno Creek	Interceptor sewer	Approved
3-15-60	Uplands S.D.	Sewers for Leahy Heights	Prov. approval

Wah Chang Corporation - Albany

The Chairman called on Ronald Ott to report on staff activities concerning the Wah Chang Corporation's extraction plant located north of Albany.

Mr. Ott stated that the control of air pollution from the Wah Chang Corporation was last considered at the regular meeting of the Oregon State Air Pollution Authority meeting on August 27, 1958. At that time he reported that the Authority had recommended the following:

1. That Wah Chang Corporation be instructed to install monitoring equipment on stacks where chemical reactive contaminants are being released which cause known injury.
2. That the corporation be instructed to proceed with plans for the installation of equipment or devices which would reduce the discharge to a maximum 1 ppb fluorides in the vicinity of the plant.

Mr. Ott pointed out that no monitoring equipment has been installed at the Wah Chang Corporation either at the zirconium-hafnium or columbium-tantalum production plants. He also stated that stack sampling data and the

monitoring of sources of release of contaminants to the atmosphere had been requested in previous letters, however a stack sampling summary report was received on April 6, 1960.

He reported that additional control installations have been installed at the columbium-tantalum (fluoride emissions) plant since the previous recommendations were made; area fluoride sampling by the Authority's staff included in the December 1959 report have shown that fluoride concentrations in excess of 1 ppb continues to exist in the vicinity of the plant.

Mr. Ott stated that the Authority's staff report provided recommendations for additional controls with stipulated dates for the submission of reports. He pointed out that previous stack sampling reports were requested by February 1, 1960, followed by a progress report including plans and specifications for additional control system and analyses for the columbium-tantalum plant by March 1, 1960.

Mr. Ott presented staff recommendations for consideration as follows:

1. That the Wah Chang Corporation comply with the following requirements with submission of all reports and data by May 9, 1960.
  - a. Provide negative pressure duct system over all potential fluoride sources of emission:
  - b. Provide central fluoride control system from duct system. All control equipment should be designed for maximum anticipated fluoride concentrations.
  - c. Install continuous fluoride monitoring at central fluoride control effluent to include alarm system. Fluoride sampling and analyses at least every 12 hours to be continued until fluoride tolerance limits are established by the company and reviewed by the Authority's staff, as the basis for adjusting the alarm system. Perform fluoride stack sampling from calcining process immediately upon their resumption of operation. Sampling reports shall be forwarded to the

ABG763

Authority for evaluation. All sampling methods and procedures shall be sent to the Sanitary Authority together with the sampling data.

d. Plans and specifications for these additional control systems shall be forwarded to the Authority before any installations are made.

2. That if the above requirements are not met by May 9, 1960, a citation be issued for a public hearing to be held at a time and place to be set by the Authority.

The Chairman invited Mr. Carl Carlson, representative, Wah Chang, to report on their progress.

Mr. Carlson stated that the recommendations included in Mr. Ott's report will be complied with by May 9, 1960.

Mr. Quesseth stated that if the requirements above mentioned were not met by May 9, that a citation be issued for a public hearing to be held at the time and place selected by the staff.

It was MOVED by Mr. Amacher and seconded by Mr. Meierjorgen and carried that Wah Chang Corporation be notified that the recommendations of the staff must be met by May 9, otherwise a citation would be issued for a public hearing to be held at the time and place selected by the Authority.

#### Miller Products Company

The Chairman called on Robert Percy to report on staff activities regarding Miller Products Company.

Mr. Percy explained that the Miller Products Company located at the foot of S. W. Caruthers Street, Portland, manufactured a dormant lime sulfur spray and that fumes from the operation were primarily composed of hydrogen sulfide gas. He explained that this gas is characterized by a rotten-egg odor which is detectable by the human nose in concentrations as low as 0.1 ppm. He stated that an existing water scrubber washes relief gases from the settling chamber but does not satisfactorily control hydrogen sulfide

ABG763

gas discharge since hydrogen sulfide concentrations in area air samples collected range from 0 ppm to 18 ppm. He stated that samples collected one foot from scrubber exhaust stack and the settling tank cover exceeded 50 ppm H<sub>2</sub>S. He reported that the present relief gas scrubber was installed in 1956 and that in a letter dated October 31, 1955 the Authority had requested that plans and specifications for the proposed scrubber be submitted to the staff for review. Mr. Percy stated that the plans were never submitted to the Authority's staff for review before the installation was made. He reported that the Miller Products Company plans to move the existing manufacturing plant, within the next year to N. E. 78th and Killingsworth, approximately 1/2 mile north of the city limits of Portland on Prescott Street. He explained that this location is in a mixed commercial land use area and 1/4 of a mile from residences and public schools and that residential areas downwind from the plant will certainly be subjected to the hydrogen sulfide odor unless a highly efficient hydrogen sulfide control system is provided. Mr. Percy presented the following staff recommendations for consideration.

1. That the Miller Products Company be required to submit plans and specifications by June 1, 1960 to the Authority's staff for the installation of adequate control facilities and that the control facilities on the lime sulfur spray manufacturing units eliminate any possible source of gas which could cause health hazards or obnoxious odors; and

2. That since the company will be producing the lime sulfur spray at the existing location for the next year it is recommended that the controls be installed as soon as possible at the present site.

The Chairman asked if a representative of the company wished to be heard.

Mr. Frank Stewart, Vice President, Miller Products stated that the season for lime sulfur production would end this week and that there will be no more processing for this year. He stated the company will meet the specifications as submitted in the recommendations.

The Chairman asked if this would include both the old and new locations.

Mr. Stewart stated it would be either "the old or the new". He added that in their plans for completion of the system they would add an additional scrubber but this was disrupted for this season; that the emission of the steam which carried the vapors were reduced from a 15 minute cycle to a 3 minute cycle.

Mr. Stanley asked Mr. Stewart if he was in agreement with the recommendations made by the Authority's staff.

Mr. Stewart stated he was in agreement with what they must do but he did not know the definition of health hazard; that he would like a qualification of that point.

Mr. Stanley asked if his company was willing to do what the staff has indicated was necessary.

Mr. Stewart stated his company would do anything that is reasonable; that his company desires to cooperate with the staff to the best of its ability. He stated that the existing control facilities had been installed in cooperation with the staff.

The Chairman asked Mr. Hatchard if there were additional staff comments.

Mr. Hatchard stated that an important point had been raised involving the existing control system to reduce the hydrogen sulfide releases from Miller Products Company. Mr. Hatchard stated that the relationship between the Authority staff and Miller Products has been cordial and the company has been cooperative. However, he pointed out that the release of hydrogen sulfide into the atmosphere can create a very toxic situation. Mr. Hatchard stated that the Authority's regulations require that all plans for installation of controls be submitted for review by the Authority when the Authority's investigations are in response to complaints. He reported that no plans were prepared and submitted to the City Health Bureau or the Authority by Miller Products, and that in this case the source control requirements, because of

the low concentration that caused obnoxious odors would be less than 0.1 ppm which necessitate a high efficiency removal unit.

The Chairman asked if there were any further comments or questions.

It was MOVED by Mr. McPhillips and seconded by Mr. Amacher and carried that the recommendations of the Authority's staff be accepted.

Auto Wrecking Salvage Operations

The Chairman called on Mr. E. Taylor for the staff report regarding auto wreckers open burning operations.

Mr. Taylor stated that complaints originating from the burning of stripped automobile bodies was increasing. He explained that the usual practice is to pour 1 to 2 gallons of gasoline over the stripped vehicle and burn the remaining paint, oily residues, upholstery, rubber floor mats, wire insulation and sometimes tires. He stated that large quantities of dense black smoke, soot, flyash and odors frequently drift into nearby residential and commercial properties.

Mr. Taylor reported that field investigations of complaints regarding the following salvage operations in Multnomah County have been made at:

Bens Auto Wreckers	10131 N. E. Holman	20 vehicles per week
Acme Auto Wreckers	4511 N. E. 148th Ave.	36 vehicles per week
Hopkins Wrecking Yard	6227 S. E. 103 Place	13 vehicles per week

and stated that in each case public nuisance conditions were present on nearby residential properties when the stripped auto bodies are being burned and that recommendations had been made previously in an attempt to minimize the amount of rubber products, tires, wire insulation, etc., being burned; however this approach has not produced any significant reduction in the public nuisance.

He stated that a survey of the auto wrecking and salvage yards in Multnomah County was made in March 1960 and showed that about 150 vehicle bodies are burned each week in Multnomah County at 26 locations. He pointed out that the Authority's regulations regarding the open burning of refuse, limit the location to at least 6 miles from the boundaries of the cities of Portland, Salem and Eugene. He stated that in other parts of the country air pollution

ABG763

from burning vehicles bodies or other metal salvage operations have been controlled by:

1. Installing appropriate incineration facilities with provision for controlling smoke and flyash emissions or;
2. Requiring the open burning of stripped vehicles to be moved to remote locations.

Mr. Taylor presented the following staff recommendations for consideration;

1. That the owners and /or operators of vehicle wrecking yards be notified that the open burning of stripped auto bodies within 6 miles of city boundaries of Portland, Salem or Eugene is in violation of Chapter V, Section 4.1 Authority regulations.

2. That the owners and/or operators of vehicle wrecking yards be notified that the open burning of stripped auto bodies within 3 miles of Albany, Astoria, Baker, Bend, Corvallis, Grants Pass, Klamath Falls, Medford, Pendleton, Roseburg, Springfield and The Dalles are in violation of the existing open burning regulations.

3. That the owner and operator of the Bens Auto Wreckers, Acme Auto Wreckers, and Hopkins Wrecking Yard be notified that open burning of stripped auto bodies at their present locations cease by May 15, 1960, or appropriate action will be taken under the provisions of 449.010 CRS.

The Secretary read a petition dated April 4, 1960, signed by 7 complainants regarding Bens Auto Wrecking Company located at N. E. 102 and Holman in Multnomah County.

The Chairman asked if any representatives or complainants were present.

Mrs. M. C. Hostetter of 10224 N. E. Liberty Street, Portland, Oregon, stated that the situation was very bad due to burning at Bens Auto Wrecking and that now they even burn on Sundays; that she didn't believe they needed to burn all day; that at 10 p.m. burning was still going on and that the smoke and odors enter the homes on the warm days and evenings when windows are open.

It is felt, she stated, by all property owners that they deserve clean air and relief from open burning.

The Chairman asked if this violation was the same as any general dump burning.

Mr. Stanley asked why the Authority was allowing 30 days for the ceasing of this burning instead of immediate action since the open burning operations are a violation of existing statute and regulations.

The Chairman stated he favored rapid action.

The Chairman asked about other situations in Oregon which are not included in the locations specified in recommendations Nos. 1 and 2.

Mr. Hatchard stated that Section 4 b, Chapter V of regulations on refuse burning included provision for other locations in the state where refuse disposal practices caused a nuisance; that the reason these particular distances were stated was that when the general regulations were adopted these distances included all the cities where complaints involving refuse disposal existed.

The Chairman stated that any written complaints from communities of less than 10,000 population will be considered individually by the Authority.

Mr. Stanley suggested that the open burning of stripped vehicle bodies be ceased within 10 days instead of 30.

Mr. Hatchard stated the owners of the 3 establishments where written complaints were received had been notified of the violation over one year ago and that the Northwest Auto Wreckers Association were notified a year ago verbally and within the last month by letter regarding the need to change disposal method. Mr. Hatchard stated he understood that this Association represented most of the auto vehicle wrecking operators and that no reply had been received from them.

The Chairman called on Mr. Thomas, Manager S. E. Portland Chamber of Commerce to comment.

Mr. Thomas stated that he was interested in the Hopkins Wrecking Yard

ABG763

problem and that land area there was changed to M3 zone which is light manufacturing. He added that his group also believed that the smoke and odor emitted from these particular wrecking yards should be stopped. He stated firmly it is not his wish to put a man out of business and that the May 15, date would give enough time for them to find a central spot to do their burning. He reiterated that no one wants to put the wrecking companies out of business but that the Chamber was interested in the future of that area and many complaints have been received. He stated it was a deplorable situation but even at that he thought the Authority should not cut the time down before the May 15, deadline.

The Chairman stated he wished to remind all that the date of cessation for open burning actually started in January 1960.

Mr. Stanley said that no one wanted to create a hardship on the auto wreckers but it still was a violation; and that he believed that there was no reason why the offenders should be given so long; and that it was time to quit violating the law.

Mr. Thomas stated he did not know about the official enforcement and that he disliked just cutting the operators off but if May 15, is the end of the open burning that would satisfy his organization.

The Chairman asked Mr. Thomas if his organization was interested in only the Hopkins Wrecking Yard, 103rd Place.

Mr. Thomas replied yes.

The Chairman stated that whatever the Authority decided to do necessarily included the whole state of Oregon.

Mr. Harms stated he had no argument with the members of the Authority that the auto wreckers have had ample time to stop burning and make other arrangement; but, that sometimes the State has to be more than reasonable in enforcing these regulations, and he stated that he was in favor of the adoption

of the staff recommendations with the May 15 deadline. He stated that all parties involved have had adequate notice.

It was MOVED by Mr. Harms and seconded by Mr. Stanley and carried that the staff recommendations be adopted.

The Chairman asked what would happen in case the recommendations are not complied with.

Mr. Harms stated that then the Authority was authorized to take action under the Statute.

The Chairman asked if a complaint must be filed.

Mr. Harms stated it would; that this was included in item No. 3 of the staff recommendations.

Mr. Quesseth asked if the words "that appropriate action be taken under the regulations" intended that the party or parties would be cited to appear before the Sanitary Authority at a time and place to be selected by the staff.

The Chairman asked why action should not be instituted against the offender immediately instead of further delayed by a hearing.

Mr. Quesseth replied that would require criminal proceedings in the court and that one recourse would be for a staff member to file a criminal complaint with the local district attorney. He explained that the other action would be the administrative remedy through a hearing before the Authority or a hearings officer and adoption of an order.

Mr. McPhillips stated that with the time element involved, in a violation, and a subsequent hearing that he believed it was plausible and possible for the staff to be instructed to take immediate action. He explained that if the Authority had to wait for a hearing that things would move so slowly that the wreckers would continue the violating.

Mr. Quesseth suggested the auto body burners might be cited to appear in criminal court and pay a fine and then perhaps go right on burning and think this sum was worth the expense to permit them to continue. Mr. Quesseth pointed out that if the Authority held a hearing and adopted an order against a wrecking

ABG763

company then the Authority could secure an injunction restricting repeated offenses.

Mr. Harms stated it might be well to enjoin them.

The Chairman asked the Authority's attorney if an injunction could be acquired on the violation without a hearing.

Mr. Quesseth replied that he believed it would be difficult since there were no specific criminal statutes relating to air pollution. He stated the Authority would be authorized to bring immediate action to enjoin the violation of a Water Pollution Control statute. However, he explained on air pollution when there is an administrative hearing and an order is entered then the order is the action that is enforceable by an injunction.

The Chairman asked if this wouldn't be a clear violation of law regardless.

Mr. Quesseth explained that the law on air pollution has in it a declaration of public policy on air pollution but the state does not have an actual criminal statute on air pollution as in water pollution statutes. The air pollution law places upon the Authority the responsibility to enforce the policy of the state of Oregon by citation, public hearing and adoption of an order then the orders are enforceable by injunction.

The Chairman stated the Authority did take action against the owner of an open burning dump in the northeast section of the city without a public hearing by filing complaints against the operators--so why couldn't this be done?

Mr. Quesseth replied it could be done here too and reiterated that this was a criminal offense.

Mr. Stanley asked the Chairman if the Authority follows the latter action would it be initiated immediately; or would the Authority give a grace period of 10 to 30 day to stop all operations.

Mr. Stanley stated that the best decision was the motion that was already passed that the Authority adopt the recommendations of the staff.

Mr. Stanley asked Mr. Harms if he wished to withdraw the motion he made.

Mr. Harms replied that he was not sure. He stated he felt direct action against the offenders for abatement of the nuisance would be the best procedure; that he believed this could be done under the recommendations included in the staff report. He stated he was a little concerned by the correctness of this move but was unable to rectify it. He added that he thought the Sanitary Authority could proceed to obtain an injunction under the abatement statute without a public hearing at all. He added though that he now was inclined to let the motion stand.

Mr. Stanley asked if the auto wreckers would still be given 30 days to cease burning.

Mr. Harms stated May 15, deadline was a fair one.

The Chairman wondered how the people felt about going through 5 more weeks of this nuisance.

Dr. Wilcox asked about the reasons for the recommended May 15 deadline.

Mr. Hatchard stated that the complainants seemed to accept the May 15 deadline as reasonable. He explained that some time would be required to convert the open burning to accepted methods.

Mr. Quesseth asked if the staff had filed criminal complaints against the violators of the air pollution statute and had received the cooperation of the district attorney's office.

Mr. Hatchard stated that there had been two cases involving refuse dumps in Multnomah County; that the residents near the nuisance signed the complaint and the staff did the field work. He added that the staff received excellent cooperation from the district attorney's office in Multnomah County and that these 2 cases successfully terminated in court.

Mr. Stanley asked Mr. Hatchard how much time was required to bring about compliance.

Mr. Hatchard replied that about 9 months after the complaint was filed

ABG763

since there were a number of legal aspects and demurrers to be decided.

Mr. McPhillips asked that in the case of these operators should the Authority staff or one of the property owners sign a complaint, then would it take 9 months to consummate the operations.

Mr. Hatchard said he did not think that the action would require 9 months now because the basic law aspect has already been decided in court.

The Chairman stated the motion was declared and passed.

Mt. Emily Lumber Company - La Grande

The Chairman asked Mr. Hatchard to report on Mt. Emily Lumber Company.

Mr. Hatchard reported that in August 1959 complaints were received regarding the deposition of cinders and flyash on properties near Mt. Emily Lumber Company's steam generating plant and that investigations started in August 1959 showed heavy deposition of cinders both on the outside and inside of structures approximately 350 feet S. W. of the mill's steam generating plant. He stated that no cinder collection facilities are provided for the ten dutch-oven type steam boiler units. He reported that on September 11, 1959 recommendations were presented to the management of the Mt. Emily Lumber Co. and that the company management replied that an engineering study was being made of proposed facilities to control the excessive smoke and cinder and flyash emissions.

He explained that a particle fallout station was established in September 1959 and the samples, collected monthly, have shown a fallout rate from 26 to 1687 tons per square mile per month and that subsequent field surveys disclosed that smoke and flyash emissions were continuing. He stated that the company management has reported mill re-organization plans were being considered which made it impossible to predict the steam generating rate needed for future mill production and that the management has indicated that appropriate changes would be made in the mill facilities to correct the excessive smoke and flyash emissions as soon as possible.

RECOMMENDATIONS

Mr. Hatchard presented the following staff recommendations for consideration.

1. Notification to the management of Mt. Emily Lumber Company that plans and specifications for the installation of appropriate smoke and cinder and flyash control facilities must be submitted to the Authority by June 1, 1960; and
2. If satisfactory progress is not made that a public hearing will be scheduled near La Grande.

Mr. John R. Hay, Attorney representing Mt. Emily Lumber Company, stated that he would like to confirm the report given by Mr. Hatchard. He added that there was no quarrel that the company was in violation of the standards and regulations regarding flyash, smoke and cinders and that the problem was an operational one. He explained that 7 mills in the area of Mt. Emily had shut down due to the lack of timber supply and this year the Umatilla Forest offered only 103 million board feet for sale which was not enough timber to allow the existing mills to continue.

Mr. Hay stated that the company has made a survey as to what would be involved to correct the smoke and flyash situation and the cost of correcting this condition would be from \$130,000 to about \$340,000 including the mill steam boiler plant changes and that this cost was so high the management could not justify it. Mr. Hay told the Authority that the June 1, date was too soon a time for the company to prepare plans; however, the Mt. Emily Company management would do the best it can to get a plan ready. Mr. Hay suggested the possibility of continuing the matter on the agenda for the next meeting. He concluded by stating the Authority has his assurance from the management that they were not merely delaying correction of the problem but were actively considering it at headquarters offices in Boise, Idaho.

The Chairman called for questions from Authority members.

Dr. Wilcox asked if the company was cutting the timber they had contracted for.

ABG763

Mr. Hay said they do but recently the furniture manufacturing operations were curtailed which reduced their pay roll by about 80 people.

The Chairman asked if there were many complaints due to the smoke and flyash discharges from the mill operation in La Grande.

Mr. Hatchard replied that the original complaint was from a single property owner; but that since then the city had received about 20 complaints.

The Chairman asked how much time should be given.

Mr. Hay stated that he talked to the mill manager and presented him with that question and it appeared that a decision could be made some time this fall, when it is determined how much timber will be available on government lands for the ensuing year. He explained that this decision would somewhat depend on how many lumber companies would remain in the business since 7 had gone out of business within the past 14 months. He told the Authority that Mt. Emily has a good competitive business and he concluded that it was unfortunate that the decision could not be made now regarding the corrections that should be institute

The Chairman asked what percentage of the lumber mill was operating now.

Mr. Hay replied that the sawmill was operating at full capacity and that this would be continued.

The Chairman asked Mr. Hatchard's comment.

Mr. Hatchard replied that there are a number of people concerned with this nuisance and that the field investigations had been underway since August 1959 and that in this case it seemed a re-organization of the mill was the main problem. He explained that this had occurred throughout the state with other large lumber mills such as the Coos Bay Lumber Division of Georgia Pacific Corporation. He stated that Coos Bay Division changed ownership while substantial complaint problems were pending and that the new company assumed the operations and could not predict what the rate of sawmill cut would be a year hence; however, in this case 3 major installations were made in a

step-wise sequence. He reported that the mill first replaced several old dutch oven units with a modern boiler equipped with smoke and cinder collectors and next installed cinder collectors on the remaining boiler units and the 3rd step was the installation of a second new boiler with appropriate cinder controls.

The Chairman stated he felt that some uncertainties would always exist in lumber companies.

Mr. Meierjurgan asked Mr. Hay what the average daily capacity of Mt. Emily was.

Mr. Hay replied that he did not know.

Mr. Hatchard stated that the company started operation in 1924 and that their normal operation was two 8 hour shifts per day for 5 day a week and that about 200,000 board feet were cut each shift.

It was MOVED by Mr. Stanley, seconded by Mr. McPhillips and carried that the Authority accept the staff recommendations, with a modification that the company should be notified unless satisfactory progress is made the company would be cited before the Authority at a time and place to be arranged by the Secretary.

The Chairman asked Mr. Hatchard if he wished to change the recommendations in any way.

Mr. Hatchard replied that the recommendations were satisfactory and that he thought the Mt. Emily Company management was interested in providing needed controls.

#### Reynolds Metal Company

The Chairman asked the Secretary to read a letter-petition received by the Authority regarding alleged injury to agricultural activities near Reynolds Metals Company's aluminum reduction mill in Troutdale.

The Secretary read a letter-petition dated 3-18-60 from Herbert Anderson, representing Mr. and Mrs. Julius Lampert and Mr. and Mrs. I. B. Wand.

The Chairman asked if a representative wanted to be heard.

Mr. Herbert Anderson stated that the emission of fluorine and fluorides

ABG763

from Reynolds Metals was continuing and that it was more serious than stated in the petition; that the situation has existed since the aluminum plant was constructed in 1943. Mr. Anderson explained that after 1947 Reynolds operated the plant and at times used a water spray from the top of its plant which reduced the fluorine somewhat; that there was a considerable reduction initiated during 1947 and 1948; that in 1950 Reynolds Metals installed a scrubber system. He added that this was not completely efficient since about 700 pounds of fluorine and fluoride compounds was escaping into the atmosphere daily. He explained that these fluorine and fluoride compounds cause injury to agricultural crops and that the gladioli plants particularly were injured. He added it is impossible to market the blooms of gladioli; and that since the war years the residents have been unable to grow gladioli. He stated in 1946 when the plant was not operating the gladioli crop was beautiful but since then they have been burned from fluorine. He said one family had recovered \$35,000 damages.

Mr. Anderson informed the Authority that in the Troutdale and Sauvie Island areas considerable damage had been done to the cattle; that cattle owned by Mr. Lambert had been damaged also. He stated that he and the residents feel that Reynolds Metals Company could install more efficient collection systems; and that there are certain types of electrostatic precipitators which are 100% efficient in removing the fluorine from the manufacturing process. He stated this condition has continued for a long period of time and the pollution of the air in the Troutdale area will continue unless something is done about it.

He stated that Reynolds Metals Company has much information from their air and foliage sampling surveys and that this information could be obtained from them; that his principal request is to get the data from Reynolds on their sampling which was started about 13 years ago. He stated he was now

requesting the Authority to get the sampling records and examine the results of these tests as well as those made by Dr. O. C. Compton who is qualified to test foliage for the amount of fluorine. He stated that there was a fluorine value in excess of 100 ppm found on the Lambert property and this, he concluded, was believed to be a high concentration that was causing damage to the crops.

Mr. Harms stated that if the Authority decided to take action it would be on the basis of whether contamination exists now. If this course was pursued then why should the Authority get the past records? He asked further if this matter is now being litigated.

Mr. Anderson stated that this matter has been continuously litigated since 1947 and it will be indefinitely.

Mr. Quesseth asked Mr. Anderson if he was referring to these complainants cases in court.

Mr. Anderson replied yes and that they have been in court since 1947.

Mr. Quesseth stated he was familiar with the Martin case and one other and he asked again if the complainants Mr. Anderson was representing had their cases in court.

Mr. Anderson stated yes and that they have been paid by Reynolds Metal Company for damages up through 1957; that another law suit was pending from 1957 through the present time. When this is completed, he added, another case will be started unless something is done to eliminate these harmful fumes.

It was MOVED by Mr. Stanley and seconded by Mr. McPhillips and carried that the Authority's staff proceed with investigations of emissions from Reynolds Metals Co., plant in Troutdale.

#### Mt. Pitt Lumber Company

The Chairman asked Mr. Hatchard to report on the Mt. Pitt Lumber Company cinder and flyash problem in Central Point.

Mr. Hatchard reported that in November 1958 a complaint was received that

ABG763

the cinder and flyash deposition allegedly from the Mt. Pitt Lumber Company's waste wood burner was causing public nuisance on nearby properties and that a field investigation was made in December 1958 and recommendations were provided to the company management. He stated that in September 1959 a petition requesting a public hearing concerning the continued deposition of cinder and flyash from the waste wood burner was received and another field investigation was made in September 1959 and a particle fallout station was established. He said that additional recommendations were provided to the management of the Mt. Pitt Lumber Company regarding operational changes in the waste wood burner and that the company management replied that several of the recommended changes had been made and work was continuing on the remainder. He reported that samples collected from the particle fallout station showed a deposition rate between September 1959 and March 8, 1960, of 35 to 66 tons per square mile per month and explained that the Authority's regulations provided that a deposition rate over 20 tons per square mile per month create public nuisance on residential and commercial properties. He advised that in April 1955 the city of Central Point requested assistance with review of a proposed waste burner to be constructed by the Mt. Pitt Lumber Company which was then starting a lumber re-manufacturing plant; that State Board of Health District Engineer completed a field survey of the proposed location and the schematic plan of the proposed burner was reviewed. He explained that the Mt. Pitt Lumber Company and the City was notified that a typical waste wood burner could not be expected to operate at a location within 50 feet of residences without producing public nuisance.

#### RECOMMENDATIONS

Mr. Hatchard presented the following recommendations for consideration:

1. That inasmuch as the particle fallout rate after improvements have been completed at the Mt. Pitt Lumber Company's waste burner have continued to be excessive--that the management of the company be notified that the existing waste wood burner must cease operation before May 15, 1960, or;

2. That more complete incineration facilities be installed and operated to dispose of the wood waste without exceeding the particle fallout deposition rate.

The Secretary informed the Authority that in their notebooks there was a copy of a letter addressed to the Authority from Mr. Clinkinbeard, Attorney, representing the Rogue River Valley Creamery Company requesting Authority action to control the cinder and flyash deposition from Mt. Pitt Lumber Company.

The Secretary stated that a letter was also received on 4-7-60 from E. H. Collins, President, Mt. Pitt, announcing that a representative unfortunately could not attend the Authority meeting and requesting a copy of the minutes.

The Chairman asked for the Authority members' decision.

It was MOVED by Mr. Stanley and seconded by Mr. Amacher and carried that the Authority accept the report and recommendations made by the staff.

#### Pilot Rock Lumber Company

No one was present to represent the company. A proposed agreement drafted by the company's attorney and submitted prior to the meeting was referred to the Authority members for consideration.

Mr. Benson discussed the background of this case and explained the purpose of the agreement as follows: On July 31, 1959, the company had been issued a citation to appear before the Authority and show cause, if any exists, why an order should not be entered requiring the abatement and control of pollution caused in the public waters of Birch Creek by the discharge of inadequately treated wastes from said company's plant located at Pilot Rock, Oregon. Preferring not to appear before the Authority at a public hearing in this matter the company proposed to enter into an agreement under which it would take the steps necessary to abate and control said pollution provided the Authority would dismiss the citation hearing.

Mr. Benson advised the Authority members that the steps which the company agreed to take are considered adequate by the staff of the Authority for this purpose. He stated further that the company officials understand fully that the agreement in no

ABG763

way gives them any license to pollute Birch Creek but merely defines the methods of operation of the waste disposal facilities.

It was MOVED by Mr. Stanley, seconded by Mr. Amacher, and carried that the terms of the agreement as submitted are generally acceptable to the Authority.

After further discussion it was concluded by the members that it was neither necessary nor proper that the Authority be a party to the agreement. It was rather the opinion of the members that instead of a formal agreement between the company and the Authority the company should simply submit a unilateral statement reciting the steps that it will take to abate and control pollution.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the Pilot Rock Lumber Company be requested to send the Sanitary Authority a letter listing the proposed actions as outlined in the formal agreement previously submitted and stating that it will do those things and that upon the receipt of such a letter the Sanitary Authority will dismiss the citation hearing pending in this matter against said company.

#### City of Florence

Those present to represent the city of Florence were Darrell Swatzell, City Administrator; R. H. Erichsen, engineer; Sidney J. Nicholson, attorney; Stuart Johnson and R. T. Gibbons.

A memorandum regarding this matter dated March 31, 1960, prepared by the staff and distributed to the members in advance of the meeting was reviewed by Mr. Spies. In reviewing the memorandum, the original having been made a part of the Authority's permanent files in this case, it was brought out that the city of Florence which has an estimated population of 1,775 discharges all of its municipal sewage without treatment into the Siuslaw River; that in January 1948 a three year temporary permit to discharge raw sewage into said river had been granted by this Authority; that in 1951 the city had been reminded of its responsibility to provide sewage treatment; that in May 1957 a preliminary engineering study

estimated the cost of the required interceptor system and sewage treatment plant at approximately \$180,000 and sewer extensions at \$127,000; that in August 1958 the city had requested of the Authority permission to construct a new 18-inch main sewer but to defer temporarily the construction of the interceptor and treatment plant with the agreement that the city would vote sufficient bonds during the latter part of 1958 to finance construction of the entire project; that during 1958 the proposed bond issue was not submitted to the voters and construction of the project was not started; that on February 6, 1959, the city officials had requested a 5 year extension of time in which to start construction of its sewage treatment works; that in response to said request the Authority had granted only a one year extension or until September 1960; that later the city had filed with the Authority an application for a federal construction grant for which no priority certificate was granted, and that finally on September 30, 1959, a \$375,000 bond issue had been submitted to and approved by the voters of the city of Florence only to be later declared illegal.

Mr. Spies pointed out further that before it was learned that the bonds were not legal plans had been submitted by the city for certain sewer extensions and because the Authority staff was under the impression that the bonds were saleable the proposed extensions were approved. Subsequent to such action it was learned that the bond issue had to be revoted. Unfortunately at a second election on January 27, 1960, the bonds were defeated by a vote of 202 to 122. In the meantime construction of the afore-mentioned sewer extensions had been started and practically completed. The city then submitted plans for other extensions and connections which in view of the action by the city voters the Authority staff had to disapprove. Mr. Stuart Nicholson, attorney speaking in behalf of the city, stated that they had no complaint with the actions

taken by the staff of the Authority. He emphasized the fact that prior to the bond issue being declared illegal in December 1959 the city council had been proceeding in good faith to develop a program for the early construction of the required interceptors and sewage treatment works. He said the city council did not know exactly why the people had rejected the bond issue unless it was because they had associated it with a proposed urban renewal project. He stated further that the city council has recently been working with a group of the citizens in an attempt to come up with a plan which would meet with their approval. As soon as an agreement could be reached the city intends to submit another bond issue to the voters for approval. Mr. Nicholson said they hope to accomplish this by May 20.

In view of the efforts being made by the council he asked that the city be permitted at least to make certain connections to the existing sewers even though permission could not be granted for further extensions. It was reported that at the present time there is one commercial laundry and three or four private homes which they desire to serve with sewer connections.

After considerable discussion it was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried, that the action of the staff of the Authority be upheld and that the city of Florence be denied permission to make any more connections or extensions to its existing sewerage system until adequate assurance can be given that the city will install the required interceptor sewers and sewage treatment works.

It was pointed out by Mr. Harms that favorable action by the voters would constitute the sufficient assurance and that consequently permission to make additional connections and extensions could be granted if and when the necessary bonds were voted.

#### City of Coos Bay

No one was present to represent the city. A memorandum regarding

this matter dated March 31, 1960, prepared by the staff and distributed to the members in advance of the meeting was reviewed by Mr. Spies. A copy of said memorandum has been made a part of the Authority's permanent files in this case.

Mr. Spies reported that although the city of Coos Bay has spent more than \$1,000,000 for interceptor sewers and sewage treatment works it still has one small outfall in the south part of the city which is not connected to the interceptor system and which discharges raw sewage into Coalbank Slough. Recently the city submitted plans for a proposed extension to this latter outfall. The present sewers serve 20 homes and the proposed extension would serve an additional 12 homes. The city of Coos Bay has requested permission to install the proposed extension without connecting it to the main interceptor sewer and sewage treatment works. In letters received from the city manager the argument was presented that until such time as community sewers and adequate sewage treatment can be provided for the 400 or more homes now existing in the adjacent Englewood area and from which inadequately treated sewage now finds its way into Coalbank Slough the city should not be required to spend additional money for the construction of a pump station which would serve only 32 homes within its corporate limits. After a thorough review of this problem it was concluded by the members that they had no authority to grant the city of Coos Bay permission to increase the pollution in the public waters of Coalbank Slough.

It was, therefore, MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried that the city of Coos Bay be denied permission to install the proposed sewer extensions until such sewers can be connected to the main interceptor system.

Following further discussion regarding the matter of sewers in the unincorporated community of Englewood it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that the staff be instructed to investigate the problem further for the purpose of seeing what assistance could be given

ABG763

in obtaining public sewers in the Englewood area.

Maintenance of Minimum Stream Flows in Willamette Basin

The secretary reported that the State Water Resources Board on this same date is holding a hearing at Eugene for the purpose of obtaining data and information pertinent to the development of a control program for the waters in the Upper Willamette River Basin.

After a discussion of the need for maximum control of the flow in the Willamette River during the summer and fall months it was MOVED by Mr. Stanley, seconded by Dr. Wilcox, and carried that the following resolution be adopted and be submitted to the State Waters Resources Board for consideration:

The Sanitary Authority recognizes that adequate flows of water in the lower Willamette River at all times are essential for the preservation of aquatic life and to its use for water supply, recreation and other beneficial purposes.

While substantial progress has been made in pollution control in the Willamette Basin, population increases and industrial development have occurred at such a rapid rate that primary water quality objectives in the lower river cannot be attained during periods of low flow which occur in the summer and fall months.

The Sanitary Authority, therefore, recommends to the State Water Resources Board that provision be made in the development of its program for the upper Willamette Basin for sufficient releases of water from impoundments to maintain the highest flows possible in the Willamette River so that the waters of this stream may be suitable for all beneficial uses at all times.

Federal Construction Grant Program

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that the deadline for submission of applications for federal grant funds from the 1961 fiscal year appropriation be June 15, 1960.

Proposed Legislation

Mr. Quesseth was instructed to prepare suitable amendments to the existing statutes which would more adequately define the powers of the Authority to make rules and regulations for the abatement and control of water and air pollution; would authorize the issuance of general obligation and/or revenue bonds by cities without a vote of the people for financing construction of sewage treatment works needed to abate water pollution, would

authorize the levying of connection charges by cities and sanitary districts as one means of financing sewerage works, and would authorize counties to engage in air pollution control activities.

The date for the next meeting was set for July 14, 1960. There being no further business the meeting adjourned at 5 p.m.

Respectfully submitted,

CURTISS M. EVERTS  
Secretary and Chief Engineer

MINUTES OF THE EIGHTIETH MEETING

of the

OREGON STATE SANITARY AUTHORITY

July 14, 1960

The eightieth meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 2:10 p.m., July 14, 1960, in Room 36, State Office Building, Portland, Oregon. The members and staff present were B. A. McPhillips, Richard H. Wilcox, M. D., Edward C. Harms, Herman P. Meierjurgan, Lewis A. Stanley, and John P. Amacher, Members; Cecil H. Quesseth, Legal Advisor, Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Donald J. Benson and Ronald I. Culver, Associate Sanitary Engineers; Ronald R. Ott, Joseph A. Jensen, Robert Wood and Keith R. Sherer, Assistant Sanitary Engineers; Harold M. Patterson and Harold W. Merryman, District Engineers; Glen D. Carter, Aquatic Biologist; Howard Smith, Supervisory Sanitarian-Air Pollution Control; and Robert Percy and George L. Toombs, Chemists.

MINUTES

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjurgan, and carried that the minutes of the Seventy-Ninth Meeting of the Sanitary

ABG763

Authority be approved as prepared by the secretary.

PROJECT PLANS.

The Secretary stated that 125 project plans for water pollution control and 10 project plans for air pollution control had been received and reviewed by the staff during the months of April, May and June, 1960. He recommended that the actions taken by the staff in air and water pollution control facilities during the period be approved by the Authority.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried, that the action taken by the staff on the following projects be approved by the Authority:

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
4-1-60	Marion County	Mark Twain School Addn.	Approved
4-5-60	Springfield	Sewer extensions	Prov. approval

HARVEY ALUMINUM COMPANY -THE DALLES

The Chairman called on Mr. Ronald Ott to report on the status of air-sanitation related to the Harvey Aluminum Company's plant located at The Dalles.

Mr. Ott stated that in late April, 1960, the Authority staff learned of plans of the Harvey Aluminum Company to expand aluminum production 25% from 240 to 300 cells. He reported that a plant survey was made in May and the company was requested to submit the plans and specifications for the new fume control installations and also stack sampling data on the existing fume

ABG763

control. He stated that area sampling had been resumed by the staff in April 1960.

His report showed that production at the Harvey Aluminum Corporation plant started in August 1958 and that the plans for the original fume control system had been reviewed and granted conditional approval in a letter dated April 16, 1958, with the following conditions:

- (1) Comply with discharge standards in Chapter V of the Air Pollution Authority's regulations.
- (2) Make representative stack sampling tests and analyses periodically and submit the data to the Authority.
- (3) Control any discharge into the atmosphere which is creating public nuisance conditions contrary to Section 449.730, Oregon Revised Statutes.

Mr. Ott commented as follows relative to compliance with these conditions:

- (1) Excessive <sup>area</sup> fluoride concentrations are designated as three p.p.b. or higher for The Dalles area; that lack of complete sampling data thus far for 1960 has limited any conclusions concerning compliance with Chapter V of the regulations, and further that eight samples of three p.p.b. or higher for April - May, 1960, do indicate that excessive fluoride emissions may occur intermittently at the plant.
- (2) Stack sampling reports have not been received by the staff to the extent necessary to establish whether Harvey Aluminum Company's present control system is either adequate or functioning properly. The Authority had, to this date, received only one stack sampling report (June 16, 1959); it is understood that three other sampling runs were made in 1958, but there is no record of these reports being received by the Authority.
- (3) One recent written and other verbal complaints have alleged horticultural damage or possible health effects. The horticultural aspect of possible crop damage has been investigated by Washington State

University and Oregon State College before and after the start of the plant. A report by Dr. O. C. Compton, horticulturist from Oregon State College, is to<sup>be</sup> given at this meeting. Evaluation of the public health aspect is pending.

Mr. Ott's recommendations were as follows:

- (1) That the Harvey Aluminum Company proceed with stack sampling at the earliest possible date and furnish the Authority monthly reports of its findings.
- (2) The company conduct in-plant area fluoride monitoring and furnish the Authority with monthly reports of its findings.
- (3) That approval for further plant expansion be deferred until it is established that fluoride emission controls for existing production facilities are adequate.
- (4) The alleged horticultural problem should be determined on the basis of the report and evaluation by Dr. O. C. Compton from Oregon State College.

Dr. O. C. Compton, Associate Horticulturist, Agricultural Experiment Station, was then called upon to summarize the results of studies conducted by Oregon State College in the area. He stated that investigations in The Dalles area were started in 1953, were stopped temporarily, resumed again in 1957, and have continued to this date. Dr. Compton stated that they had selected definite sampling sites and that samples have been collected subsequently from these sites. In the course of a season they have collected approximately 200 horticultural plant samples - one-half being obtained in late spring and one-half in late summer. At this point Dr. Compton read a statement entitled "Fluorine in Crops of The Dalles Area Before and After Operation of a local Aluminum Factory" by O. C. Compton, L. F. Remmert and W. M. Mellenthin of Oregon State College and dated July 12, 1960.

ABG763

The fluorine contents of seven crops grown in The Dalles fruit area have been studied since 1953. Determinations of leaf fluorine have been made four times previous to and three times since July 26, 1958, the date when the Harvey Aluminum Factory started operations.

Leaf samples taken before July 26, 1958, averaged less than 12 parts per million (ppm) fluorine at each collection. Similar samples collected October 7, 1958, seventy-three days after start of operation of the factory, ranged from 16 to 197 ppm, averaging 68 ppm fluorine. In 1959 the June 17, samples ranged from 6 to 107 ppm, averaging 27 ppm fluorine while those collected August 18 ranged from 19 to 189 ppm, averaging 73 ppm fluorine.

The fluorine content of samples taken October 7, 1958, decreased progressively from 140 ppm at one mile from the factory to 54 ppm, 4-5 miles away. Results obtained in 1959 were similar.

Fluorine burn on leaves was not found in 1953, 1957, and 1958 but was severe in 1959 on certain apricot and prune trees growing within two miles of the factory. There was a wide variation in the degree of burn from tree to tree within an orchard.

Premature ripening and softening at the suture of Red Haven, J.H. Hale and Elberta peach fruits occurred in certain orchards in 1959. This condition had not been observed previously in this area. Several investigators have produced soft suture experimentally by fumigating or spraying peach trees with fluorides.

A detailed report of our investigations in The Dalles area is being prepared for release in late summer.

Slides were shown depicting the various damage done to the fruit crop in and around The Dalles area. Dr. Compton stated that a complete report would be available later in the summer.

The Chairman then asked if anyone present represented Harvey Aluminum Company. Mr. M.H. Elliott, Attorney, responded and stated that Harvey Aluminum Company has been very cognizant of potential pollution problems in the area, that when they decided to establish the plant in Oregon, extensive investigations were made and that Harvey Aluminum designed and constructed the most modern and most efficient pollution control facilities of any plant in this country. He reported that detailed plans of the control facilities were submitted to and reviewed by the Authority's staff, and that such modifications requested by the Authority were made. Mr. Elliott also stated the company has cooperated within the limits of human ability and human error with the Authority and has continued to operate the plant with maximum efficiency. He stated that the

company had investigated every complaint, had done everything possible to create good community relations and to help the people solve their agricultural problems, and that in some instances the plant had provided spray to control plant damage of biological origin. He indicated that they have had no complaint on crop foliage damage from across the river in Washington.

Mr. C. A. Rochon was also present to represent the Harvey Aluminum Company.

The Chairman then called upon anyone else from The Dalles area who wished to present further information on the problem.

Mr. W. H. Myers from The Dalles Fruit and Produce stated that Dr. Compton's report was through 1959 only, that he noticed minor damage last year and he didn't know what it was for sure, that the damage this year was many times greater than last year; that he could show Mr. Elliott where some orchards had been almost completely burned up this year, that if damage increased next year in comparison, orchards would be seriously damaged, and if it continued, could not remain in business.

Mr. Walter E. Ericksen stated that he has lived near The Dalles for 40 years. About June 13, 1960, he observed smoke coming from the aluminum plant and that on June 17 he checked his cherry crop and observed damage. At this point Mr. Erickson displayed leaves to show damage which had allegedly been caused by air pollution from the aluminum plant.

Mr. Walter Luckovsky from The Dalles area stated that he suffered about 90% damage to crops this year. He also stated that Harvey Aluminum Company gave him some spray and suggested that he use it, but also informed him that he was using it at his own risk. Mr. Luckovsky made a request that air samples be taken in the area.

Mr. John R. Thienes, Wasco County Agricultural Extension Agent, reported on sprays used in the area.

Mr. L.M. Hern, The Dalles, reported that his apricot orchard had suffered

ABG763

damage to about two-thirds of the crop and also displayed samples to illustrate the problems present in his orchard. He asked that this situation be controlled so he would not lose his orchard.

Mr. Arthur Howell from The Dalles area stated that his cherries have been seriously affected as well as potatoes, corn and dahlias.

Mr. Stanley asked if the fume control facilities that have been installed were the best available and what else could be done to clear up the situation. He also inquired if it would be feasible to continue plant operations, but install additional equipment to remove fluorides.

Mr. Elliott replied that he could not answer this question since it involved technical matters.

The Chairman then recommended that the words "to the extent determined by the Authority staff" be inserted in recommendations one and two. Mr. Wendel also pointed out that the recommendations made by the staff, if carried out, will do no good as far as this year's crops are concerned.

Mr. Quesseth stated that the purpose of the Sanitary Authority meeting today was to obtain information relative to complaints which had been received by the Authority and to make recommendations to the company, that the Authority was trying to determine whether existing facilities are adequate, that it was concerned primarily with plans submitted, and that recommendations to the company had been made to the effect that the plans could not be approved until certain things were done, including the submission of the reports which have been previously referred to, so that the Authority could determine now how to make appropriate recommendations to the company for future developments.

Mr. Elliott stated that plans had been submitted, suggestions made and sent back for revision and corrections, and that they would be resubmitted.

Mr. McPhillips stated there was one point which should be made to Mr. Elliott regarding approval of plans submitted to the Authority and that is that if control facilities proposed do not do the job, this does not mean

the company could continue to violate laws, and that it would not save the company from civil action or being liable for damages.

Mr. Wendel then stated that the increased capacity of the plant could not be permitted to go into operation until plans for control facilities have been approved.

Mr. Elliott replied that he understood this, and asked for all possible scientific assistance in solving the problem.

Mr. Everts also emphasized that additional production of aluminum could not take place until it was definitely shown that existing control facilities are removing fluorides to the extent necessary to prevent damage to human, plant or animal life and to property.

It was MOVED by Mr. Harms, seconded by Mr. McPhillips and carried that the Authority's recommendations be adopted as follows, that:

1. The company proceed with stack sampling to the extent determined by the Authority staff at the earliest possible date and furnish the Authority monthly reports of its findings.
2. The company conduct in-plant area fluoride monitoring to the extent determined by the Authority staff, and furnish the Authority with monthly reports of its findings.
3. That approval for further plant expansion be deferred until it is established that fluoride emission controls for existing production facilities are adequate.

#### REGULATIONS ON OPEN BURNING

Mr. A. H. Harding, Manager, Portland Chapter Associated General Contractors, stated that he was serving as temporary chairman of a group of businessmen representing some 30 types of businesses; that they had been advised by the city of Portland that the Authority had set July 15 as a deadline for cessation of the open burning of refuse; that this deadline would cause a definite hardship

ABG763

on certain industrial groups, and asked for extension of time to work out problems concerning disposal of waste from demolition of buildings, expressway construction, oil, wrecked car bodies, etc.

Mr. Wendel answered that the Authority had not set a deadline of July 15, 1960, that the regulations had been in effect since January 1, 1960, and that if the city of Portland felt that no air pollution or nuisances were created from open burning operations that the city has the means within Section 4.4 of the Regulations to grant variance and issue a permit for such burning. He also pointed out that the group was appearing before the wrong board and suggested that they take their problem to the city council of Portland.

Mrs. George Sale, representing the Campfire Girls reported that they had been notified by the city that they could no longer have open fires at their day camps. She was assured by Mr. Wendel that the Authority's regulations did not cover such matters.

Carlie Gilstrap stated that her neighborhood was still subjected to nuisances from open burning, and demanded that something be done about it.

GEORGIA-PACIFIC PULP MILL - Newport and Toledo

Alberta Heffron, attorney from Eugene, appeared before the Authority and explained she represented Mr. and Mrs. A.F. Tischer, the owners of the White Cap Motel and other property owners in connection with the problem of disposal of liquid waste from Georgia-Pacific Corporation pulp mill into the ocean off the beach at Newport. She stated that Newport has about 5,000 people, that the city depends mainly on tourist trade, that its beaches are well known for recreation value and that there are many motels, cafes and others who cater to tourist industry. Mrs. Heffron presented a petition bearing 453 signatures as well as aerial photographs of a pipe line which had been constructed from the Georgia Pacific Paper Mill at Toledo which discharges into the Pacific Ocean. She reported that within the past 60 days an additional pipe line had been constructed and that additional effluent is being discharged into the ocean.

She further stated that this matter had been called to the attention of the Authority from time to time, that she had a file of correspondence from the Junior Chamber of Commerce, Izaak Walton League, and others who are all concerned because the effluent has been causing nauseating odors in the Newport area which have seriously affected the tourist business of the community.

Chairman Wendel asked if this problem had previously been brought to the attention of the Authority. Mr. Benson reported that on July 1, 1960, he and Mr. Percy had made an inspection of the beach area at which time they had found a definite odor and approximately an acre of foam. Chairman Wendel asked if means had been suggested to correct violation. Mr. Benson replied that the staff was working with the mill officials to try and find out what they could do to correct the problem. Mr. Wendel stated that Georgia Pacific had always been cooperative in the past but that our staff should see that the company is not permitted to expand production until they can dispose of wastes created by their present operations.

Mr. Quesseth stated that the ordinary procedure would be to cite the company in for public hearing; that this is within the Authority's power to do. Mr. Everts then pointed out that the Sanitary Authority had entered an order against Georgia Pacific in 1959 which among other things required that pollution of the beach area be abated.

Mr. Stanley stated that he had recently been at Agate Beach which is a short distance north of Newport, that at that time no one was in swimming, and that the smell was so bad he had to leave. Mr. Stanley believed that Authority should not stop at anything to correct this situation.

Mr. Meierjurgan asked if the Authority had a continuing relationship with Georgia Pacific or when was the last time there had been any contact with them. Mr. Benson replied, July 1.

Dr. Wilcox asked if it were possible for a mill of this type not to use a water borne discharge to which Mr. Benson replied they do have waste water

ABG763

which must be disposed of in some fashion, and that it was on this basis that an additional pipe line was constructed last year. Mr. Spies said that without any question of doubt the staff had spent more time on this particular problem than all the other pulp mills in the state of Oregon combined, and that Georgia Pacific at this time was producing more pulp but had not yet completed construction of improved lagoon facilities for handling the additional waste.

Mr. Wendel suggested that the attorney general be instructed to file an injunction against the company unless the Authority were assured of immediate abatement of the nuisance to the people of Lincoln County. Mr. Wendel further stated that Georgia Pacific should reduce production to a point where they could satisfactorily dispose of their liquid wastes. The Authority should get in touch with them immediately and inform them that an injunction would be filed against them unless they cut down their production to the amount they can dispose of.

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher and carried that the attorney general be instructed to notify Georgia Pacific Company that he has instructions from the Authority to institute injunction proceedings against the company unless assurance is received the nuisance created by the discharge of liquid wastes into the ocean at Newport is abated immediately.

#### LOWER COLUMBIA RIVER

Mr. Leonard B. Dworsky, Officer in Charge, Pacific Northwest Basins, U.S. Public Health Service, appeared before the Authority and made the following statement relative to abatement of pollution in the lower Columbia River:

Mr. Wendel, Members of the Authority: I requested the opportunity to present to you today my office's views with respect to the problem of pollution of the interstate waters of the Columbia River, and particularly with respect to that part of the problem caused by the City of Portland.

The members of the Sanitary Authority will recall that Surgeon General Leroy Burney of the U.S. Public Health Service received the recommendations of a Conference held here in Portland last September 3, 1959, on a specific action program to keep clean the waters of the Columbia River.

The membership of the Conference making the recommendations included

a representative of the State of Oregon, the State of Washington and the U.S. Public Health Service for the Federal Government.

Acting under the Authority of Section 8 of the Federal Water Pollution Control Act of 1956, the Surgeon General concluded that the City of Portland, along with other communities and industries, shall take effective action to provide effective treatment of waste discharges contributing to pollution of the lower Columbia River. Such treatment was to include not less than primary treatment and effective disinfection.

Financing, planning and construction of these waste treatment projects were scheduled for performance by Portland as follows: (1) by July 1, 1960, have completed and in operation effective disinfection of the treated wastes discharged to the Columbia River; (2) for additional major construction projects involving sewage treatment works and intercepting sewers, financing to be arranged not later than June 1, 1960; (3) final plans and specifications for these works to be prepared by not later than June 1, 1960; (4) construction contracts to be awarded not later than August 1, 1960; and (5) completed projects to be in operation not later than July 1, 1961.

These actions, Mr. Chairman, were aimed solely to conserve the waters of the lower Columbia River for public water supply, commercial uses, including commercial fishing and recreational uses, including sport fishing. The states of Washington and Oregon, together with the Federal Government, consider the waters in this part of the Columbia River a hazard to public health, especially in view of the wide recreational use of the river for boating, bathing and water skiing.

To date, the City of Portland has not met these time schedules. Because of the delays thus far, there is little expectation that the City will be able to meet the balance of the time schedule.

The members of this Authority know that the Congress debated the proper role of the Federal Government in the matter of water pollution control for many years. In passing the Federal Water Pollution Control Act in 1948, and revising it in 1956, the Congress wisely recognized that solutions to water pollution problems are best worked out locally and within each of the several states. It also recognized, however, that the problem of water pollution was creating vast damage to the Nation's water resources. While recognizing the desirability of achieving solutions to the maximum extent possible in local areas, it also recognized that satisfactory solutions to the pollution problem must be found.

Accordingly, the Congress set out to attack the pollution problem on several fronts:

Recognizing that new industrial development and population growth demanded new knowledge to keep sewage and waste treatment in step with this growth, it established a research program. Universities in Washington and Oregon are helping to carry out needed research through grants provided by the Public Health Service;

Recognizing that the problem had important financial overtones, the Congress provided for modest cost sharing with respect to the construction of municipal sewage treatment works. The Tri-County program in the Portland Metropolitan area is a recipient, among many other communities in Oregon, of this financial aid.

Recognizing that specialized technical assistance together with public education was important, the Congress made provision for these also; and in keeping with its general philosophy of hopefully looking to the states to carry out the major responsibility for pollution control programs, it provided financial aid to the States to help them establish and maintain strong and effective state investigation, survey and enforcement activities;

ABG763

Finally, the Congress recognized that the Federal Government might have to take direct action on pollution problems affecting interstate waters.

In keeping with Congressional policy, the Public Health Service has looked to the State of Oregon, and has encouraged it in its attempt to solve the pollution problem created by the City of Portland in the lower Columbia River. We have observed carefully the actions taken by the State Sanitary Authority and have maintained close working relationships with the Authority's technical staff. We believe that the Oregon Sanitary Authority has acted as effectively and as forcefully as it can under the State laws of Oregon to carry out its responsibilities. We are aware of the problems that have arisen as a result of the court action initiated by the Authority against the City of Portland. We are especially concerned over the fact that, confronted by this public health problem on its very doorstep, the citizens have repeatedly rejected at the polls proposals to finance adequate sewage treatment facilities and further, that the City itself is contesting the right of the State to rid the State's outstanding water resources of polluttional substances which will ultimately foul and destroy these life-giving water resources.

The Oregon Sanitary Authority, the Federal Government, and the Washington Pollution Control Commission representing the State of Washington are working side by side in full agreement to control pollution and keep the waters of the Columbia River clean. The Federal Government supports the action taken by the State of Oregon with respect to the City of Portland. If in the coming months the State of Oregon is not able, effectively, to bring about a solution to the lower Columbia River pollution problem in accordance with the action program recommended by the conference held September 3, 1959; if effective action is not taken by the City of Portland during the next several months to meet the final completion dates for projects; and if needed financing arrangements are not made, consistent with project completion dates, the Public Health Service will recommend to the Secretary of the Department of Health, Education & Welfare that a public hearing be held before a Board to be appointed by the Secretary of the Department of Health, Education and Welfare. As this Authority knows, if action recommended by such a Board is not taken within the time specified by that Board, the Secretary may request the United States Attorney General to bring a suit against the City of Portland on behalf of the United States to secure abatement of the pollution.

Mr. Wendel and Members of the Authority, we sincerely hope that Federal enforcement action against the City of Portland will not be necessary. If it becomes necessary, it will, in my estimation, be a blight against the City of Portland and the State of Oregon. But all of us know that water pollution is a local, regional and national menace and can no longer be tolerated.

#### PRIORITIES FOR FEDERAL CONSTRUCTION GRANTS

Mr. C. Eugene Fields, Sanitarian, Coos County Health Dept., Coos Bay, who was present to represent the city of Powers in connection with its application for a federal grant, presented information regarding the city's financial situation and its need for sewage treatment.

The members of the Authority having reviewed the data furnished by the staff on applications for federal grants for the construction of sewage

treatment works, it was MOVED by Mr. Harms, seconded by Mr. Stanley and carried, the certificates of priority be issued to the cities of Cresswell, Eagle Point, Powers, Florence, Woodburn, Newberg, Seaside, Salem, Eugene and Nyssa and to Oak Lodge Sanitary District No. 2 with the provision that projects where financing has not been completed must have bond issues approved no later than the general election in November, and further, that alternates be determined on the basis of priority points.

SECONDARY TREATMENT ON THE WILLAMETTE RIVER

The Chairman then called on Mr. Spies to report on the status of domestic sewage treatment on the main stem of the Willamette River. Mr. Spies stated that with the completion in 1957 of the Harrisburg sewage works project all cities on the main Willamette River now have the equivalent of primary treatment. A comprehensive sanitary survey conducted in 1957 and the monitoring surveys made annually since then have disclosed, however, that in spite of the sewage and waste treatment facilities which have been installed since the program of the Sanitary Authority was started in 1939 the river is still polluted to such an extent that it is not safe for certain recreational uses and occasionally in certain sections it is unsuitable for propagation or maintenance of fish life.

As a result of the 1957 studies, the Authority early in 1958 instructed the cities of Eugene, Newberg and Salem to add as soon as possible secondary treatment units to their existing primary plants. These cities were singled out in 1958 because they each handle large quantities of fruit and vegetable processing wastes which overload and greatly reduce the efficiency of their primary plants. Each of these three cities has since proceeded to prepare plans and specifications and to develop a fiscal program for construction of the needed additional treatment works. The city of Eugene is ready to start construction of its project during 1960 and Newberg should be able to start during the summer of 1961.

ABG763

A comprehensive engineering study has recently been made for the city of Salem of the present and future sewerage needs of not only the city but also the suburban fringe areas of Marion and Polk Counties. As a result of this study it has been proposed that the city's present primary treatment plant which has been in operation only since 1952 be abandoned because it is already completely surrounded by high value residential property and because it is otherwise not properly located for serving certain contiguous areas. A new plant site located approximately 4 miles farther downstream has been proposed by the city's consulting engineers. The costs of building the additional outfall sewer and new secondary treatment plant have been estimated at \$4,929,400. Due to the magnitude of the project the time schedule suggested by the city's engineers calls for start of construction of the plant in 1963 and completion of the project in 1965. It is the opinion of the Authority staff, however, that it could be accomplished much earlier than that because it should be possible to start construction early in 1962 with completion being not later than the latter part of 1963.

The only cities on the main Willamette River which have a secondary treatment at the present time are Albany and Springfield. These two cities included secondary treatment as a part of their original construction which was completed in 1954 and 1955, respectively.

The Oak Lodge Sanitary District No. 1 of Clackamas County now has under construction the first secondary sewage treatment plant to be built on the lower Willamette. This district had initially planned to install only a primary plant but because of the findings of the 1957 survey was required by the Authority staff to provide secondary treatment. The same requirement has been established for all other new projects being considered on the lower river including the Tryon Creek project which has been proposed by both Multnomah County and the city of Portland.

Because of the increasing use which is being made by the public of the lower river (from Salem to the Columbia) for recreational purposes such as boating and water skiing it is considered advisable that a deadline be established for provision of secondary treatment for all sewage effluents now being discharged into said waters.

The communities on the lower Willamette, in addition to those previously mentioned, which have only primary treatment at the present time include the following:

<u>Community</u>	<u>Present Population Served</u>	<u>Date Installed</u>
Canby	1,800	1956
Manbrin Gardens	1,000	1947
Marylhurst	600	1954
Milwaukie	7,000	1951
Oregon City	10,000	1953
Oswego	5,000	1955
West Linn #1	3,000	1952
West Linn #2	1,000	1956
Willamette View Manor	450	1955

It was MOVED by Mr. Meierjorgen, seconded by Mr. Amacher and carried, that the communities of Canby, Manbrin Gardens, Marylhurts, Milwaukie, Newberg, Oregon City, Oswego, Salem, West Linn and Willamette View Manor, be notified that it is the intention of the Sanitary Authority to establish July 1, 1961, for the completion of final plans and specifications, July 1, 1961, for the completion of arrangements for an adequate fiscal program, and July 1, 1962, for the completion of construction and the start of operation of secondary treatment works for all sewage effluents being discharged into the Willamette River from Salem to the Columbia River, and that public hearings be scheduled at the next meeting of the Sanitary Authority for that purpose.

ABG763

Mt. EMILY LUMBER COMPANY - La GRANDE

The secretary brought to the attention of the Authority and read a letter from Mr. M. Gale Beals, General Manager, Mt. Emily Division, Boise Cascade Corporation, in which the Authority was requested to extend for a minimum of 90 days, until October 14, 1960, the time by which the company was to submit plans and specifications for the installation of appropriate air pollution control facilities for their lumber mill in La Grande. The secretary also reported on his office conference with Mr. Beals on July 8, and stated that the staff now had under review the reports made for the Mt. Emily Division Boise Cascade Corporation by Mr. W.O. Stevens, Consulting Engineer, Seattle, and by McManama & Company, Inc., Mechanical Contractors, Seattle.

Based on the secretary's recommendation, it was MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried that the company be granted an extension of 90 days to complete their plans, with the understanding that progress reports would be submitted at 30 day intervals.

SPRINGFIELD MUNICIPAL REFUSE DISPOSAL AREA

The Secretary then read a letter addressed to the State Sanitary Authority by Mr. Frank R. Smiley, City Manager, Springfield, dated June 29, 1960, in which Mr. Smiley requested that the Authority grant a variance in its regulations governing open burning at the Bloomberg dump until the city council could enter into an agreement with a local contractor to operate the disposal site as a sanitary land fill.

Mr. Edward C. Harms, Jr., thereupon disqualified himself for consideration of this matter and offered to answer any questions the Authority members might have with regard to operation of the Bloomberg refuse disposal area. Mr. Harms, in answer to questioning, stated that the city owned the site and that with the withdrawal of the county from the refuse disposal business, Springfield and its disposal area appeared to offer the only immediate solution for

refuse disposal in that area. He indicated that an extension of 60 days appeared to be sufficient to complete local arrangements for operation of a sanitary land fill.

It was MOVED by Mr. Amacher, seconded by Mr. McPhillips, and carried that a variance from the Authority's regulations for a period of 60 days be granted to the city of Springfield to enable them to enter into an agreement with a local contractor to operate the refuse disposal site as a sanitary land fill.

#### STATEMENT NORTH SANTIAM RIVER

The secretary reported that on Thursday, June 9, the State Water Resources Board continued its hearing on the application of Consumer's Power, Inc., for a preliminary permit to develop power facilities on the North Santiam River. He reported that if the permit were granted, it would provide for diversion of the waters from the stream and return of the water to the river at a distance of approximately 10 miles below the point of removal. He stated that in view of the fact that notice of the meeting had not been received in time to bring the matter before the Authority at its April meeting, a staff statement had been made and that copies of the staff statement had been supplied to the members of the Sanitary Authority subsequent to its presentation. He asked for approval of the statement on the part of the Sanitary Authority with the exception that in paragraph 5, line 6, page 2, the word "until" be changed to "unless". It was Mr. Stanley's opinion that the Authority should not engage in matters of this sort and that they should be left to the State Water Resources Board, the State Hydroelectric Commission and the State Engineer. Mr. Meierjürgen and Mr. Harms disagreed and indicated that inasmuch as the Authority is vitally concerned in the quality of the public waters of the state, our position in such matters should be made known to the State Water Resources Board.

It was MOVED by Mr. Amacher, seconded by Mr. Meierjürgen, and carried that the statement of the staff made to the State Water Resources Board in person on June 9, and by letter on June 10, be approved with the exception recommended by the secretary.

COOPERATIVE AGREEMENT WITH THE GEOLOGICAL SURVEY, U.S. DEPARTMENT OF INTERIOR

Mr. Spies then brought to the attention of the members a proposed agreement between the Sanitary Authority and the United States Geological Survey relative to analysis of samples of water from surface and underground sources. He reported that our present laboratory facilities were insufficient to make the necessary analyses, that funds in the amount of \$5,000 were available to defray the Sanitary Authority's part of the expenses of the analyses, and that \$2,500 in services for collection of the samples was available.

After reviewing the proposed agreement, it was MOVED by Mr. Harms, seconded by Mr. McPhillips, and carried that the Sanitary Authority enter into the following cooperative agreement with the Geological Survey Department of the Interior.

THIS AGREEMENT is entered into as of the first day of July, 1960, by the GEOLOGICAL SURVEY, UNITED STATES DEPARTMENT OF THE INTERIOR, party of the first part, and the Oregon State Sanitary Authority, party of the second part.

1. The parties hereto agree that subject to the availability of appropriations and in accordance with their respective authorities there shall be maintained in cooperation an investigation of the water resources of the State of Oregon.

2. The following amounts shall be contributed to cover all of the cost of the necessary field and office work directly related to this investigation but excluding any general administrative or accounting work in the office of either party and excluding the cost of publication by either party of the results of the investigation:

(a) \$7,500 by the party of the first part during the period 7-1-60 to 6-30-61 of which amount a portion may be held in reserve, for later release if funds permit, in order that the available Federal funds may be distributed proportionately among the cooperating States and municipalities.

(b) \$7,500 by the party of the second part during the period 7-1-60 to 6-30-61.

(c) Additional amounts by each party during the above period or succeeding periods as may be determined by mutual agreement and set forth in an exchange of letters between the parties.

3. Expenses incurred in the performance of this investigation may be paid by either party in conformity with the laws and regulations respectively governing each party, provided that so far as may be mutually agreeable all expenses shall be paid in the first instance by the party of the first part with appropriate reimbursement thereafter by the party of the second part. Each party shall furnish to the other party such statements or reports of expenditures as may be needed to satisfy fiscal requirements.

4. The field and office work pertaining to this investigation shall be under the direction of an authorized representative of the party of the first part.

5. The areas to be investigated and the scope of the investigation shall be determined by mutual agreement between the parties hereto or their authorized representatives. The methods of investigation shall be those usually followed by the party of the first part subject to modification by mutual agreement.

6. During the progress of the work all operations of either party pertaining to this investigation shall be open to the inspection of the other party, and if the work is not being carried on in a mutually satisfactory manner, either party may terminate this agreement upon 60 days written notice to the other party.

7. The records and reports resulting from this investigation shall be released for public inspection as promptly as possible. Both parties shall have the privilege of publishing the reports, provided that the reports published by either party shall contain a statement of the cooperative relations between the parties.

RESOLUTION KLAMATH COUNTY POMONA GRANGE No. 34

The secretary then called attention to the following resolution from the Klamath County Pomona Grange No. 34 which had been forwarded to Mr. Stanley who referred it to the Sanitary Authority.

Whereas, with the expanding population and increased use of modern utilities there is an ever-mounting demand for water for domestic and industrial purposes; and

Whereas, it is a well known fact that the wanton pollution of our water supplies tends to make many of them unfit for human use;

Be it Resolved by Fort Klamath Grange, number 775 Fort Klamath, Oregon, that we urge the enactment of and/or enforcement of suitable legislation making it unlawful for any person, municipality, or corporation, to dump, or cause to be dumped, any untreated sewage or industrial waste, into any stream, river, or other body of water, within the state of Oregon.

ABG763

Adopted by Fort Klamath Grange this 3rd day of May, 1960,  
Fort Klamath Grange #775.

Approved and adopted by Klamath County Pomona Grange No. 34,  
at its last regular session May 14th, 1960.

The secretary reported that the resolution had been acknowledged and  
that it would be referred to the Authority at their next meeting. At the  
suggestion of Mr. Harms, the secretary was instructed to place the resolution

on file.  
**RESOLUTION-RETIREMENT OF MRS. GRACE LUNDQUIST**

Upon being advised of the retirement of Mrs. Grace Lundquist on July 15,  
1960, it was MOVED by Mr. McPhillips, seconded by Mr. Stanley, and carried

that the Authority adopt the following resolution in appreciation of Mrs.  
Lundquist's services.

WHEREAS Mrs. Grace Lundquist has served the Sanitary Authority of the state  
of Oregon from November 1943 to July 1960 with industry, ability, and  
competence; and

WHEREAS Mrs. Grace Lundquist has been honorably retired from state service

WHEREAS the energy and devotion of duty exemplified by Mrs. Grace Lundquist  
has been of great value to the Sanitary Authority and its staff in the  
fulfillment of the state's water pollution control program, now therefore

BE IT RESOLVED that the Sanitary Authority express its grateful recognition  
of this long and useful service, and

IT FURTHER RESOLVED that the Sanitary Authority extend to Mrs. Grace Lundquist  
its good wishes for a life of happiness and contentment.

The secretary was directed to provide Mrs. Lundquist with a copy of the  
resolution signed by each member of the Authority.

There being no further business, the date for the next meeting was set  
at 10:00 A.M. September 22 and the meeting was adjourned at 6:00 P.M.

Respectfully submitted,

*Curtiss M. Everts*  
CURTISS M. EVERTS

Secretary & Chief Engineer

Minutes of the Eighty-First Meeting

of the

Oregon State Sanitary Authority

September 22, 1960

The eighty-first meeting of the Oregon State Sanitary Authority was called to order by Harold F. Wendel, Chairman, at 10:15 a.m., September 22, 1960, in the auditorium of the State Game Commission, 1634 S. W. Alder, Portland, Oregon. The members and staff present during the morning session were B. A. McPhillips, Richard H. Wilcox, M. D., Herman P. Meierjürgen, Lewis A. Stanley, and John P. Amacher, Members; Cecil H. Quesseth, Legal Advisor; Curtiss M. Everts, Secretary and Chief Engineer; Kenneth H. Spies, Deputy State Sanitary Engineer; Donald J. Benson and Ronald I. Culver, Associate Sanitary Engineers; Joseph A. Jensen, Robert Wood and Keith R. Sherer, Assistant Sanitary Engineers; Glen D. Carter, Aquatic Biologist; and Howard Smith, Supervisory Sanitarian, Air Pollution Control. During the afternoon session E. C. Harms, member; R. E. Hatchard, Assistant Chief Engineer, and Ronald R. Ott, Assistant Sanitary Engineer, were also present.

MINUTES:

It was MOVED by Mr. McPhillips, seconded by Mr. Meierjürgen, and carried, that the minutes of the Eightieth Meeting of the Sanitary Authority be approved as prepared by the secretary.

PROJECT PLANS:

It was MOVED by Mr. McPhillips, seconded by Mr. Amacher, and carried, that the action taken by the staff on the 80 projects for water pollution control and 9 projects for air pollution control be approved by the Authority, as follows:

ABG763

Water Pollution Control

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action</u>
7-1-60	Jackson County	Hedrick Jr. High School Addn.	Approved
7-1-60	Woodburn	Sewer system improvements	Prov. approval
7-1-60	Multnomah County	Lynch Plaza Grade School	Approved
7-5-60	Multnomah County	Lynch Parka Grade School Addn.	Approved
7-6-60	Gold Beach	Sewer extensions	Prov. approval
7-8-60	Milwaukie	Ardenwald sewers - area C	Prov. approval
7-8-60	Oswego	Hallinan Heights sewers	Prov. approval
7-8-60	Curry County	Ophir Grade School Addn.	Approved
7-8-60	Multnomah and Washington Counties	Fanno Creek interceptor (2 sections)	Approved
7-8-60	Jackson County	Oak Grove School Addition	Prov. approval
7-12-60	Hillsboro	Sewer extensions	Prov. approval
7-12-60	Linn County	Tennessee School Addition	Approved

VISITORS:

Mr. Wendel introduced Mr. Vedmanickam Anandadoss and Mr. K. Narayanan Nair, engineers from India. He stated they had come to spend two weeks in Oregon to observe the sanitary engineering programs of the Authority and State Board of Health.

PUBLIC HEARING - Matter of Sewage and Waste Disposal in the Lower Willamette River

Notices having been sent on August 30, 1960, by certified mail to the officials of the cities of Canby, Milwaukie, Newberg, Oregon City, Oswego, Salem, and West Linn and of the communities of Manbrin Gardens, The Society of the Sisters of the Holy Names (Marylhurst) and Willamette View Manor,

ABG763

a public hearing was held on this date in the matter of sewage and waste disposal by municipalities and other communities in the public waters of the Lower Willamette River.

In response to said notices the following persons were present and were heard: Mayor Russell F. Bonesteele, City Manager Kent Mathewson, Marion County Commissioner Henry Ahrens, Polk County Commissioner W. Frank Crawford and Consulting Engineer Sidney S. Lasswell, as representatives of the city of Salem; E. S. Ritter as representative of Manbrin Gardens; Consulting Engineer Carl E. Green, as representative of the city of Newberg; City Superintendent Lee Cox, as representative of the city of Canby; Attorney Paul Biggs, as representative of the city of West Linn and of Willamette View Manor; City Attorney Alden Miller, City Manager C. R. Strohmeyer, and Consulting Engineer Marvin W. Runyan, as representatives of the city of Oregon City; Consulting Engineer W. J. Dorner, as representative of the Society of the Sisters of the Holy Names; Mayor Lee Stidd, Jr., Councilman R. F. Debellis, City Engineer Ray N. Cruden, City Administrator G. D. Gleason and Consulting Engineer W. J. Dorner, as representatives of the city of Oswego; and Earl S. Burdick and Consulting Engineer Marvin W. Runyan, as representatives of the city of Milwaukie.

The following report prepared by the staff of the Authority was read by Mr. Spies.

"Until 1949, when sewage treatment plants were built by Newberg and Junction City, the sewage and wastes from all cities and industries located along the main Willamette were discharged without any treatment directly into the river. Because of this practice the waters of the Willamette by the late nineteen twenties had become so polluted that they were a hazard to human health, injurious to fish life and unfit for most beneficial uses.

In 1938 the State Sanitary Authority was created by a vote of the people and was given the mandate to develop and conduct a state-wide program under which all such pollution would be abated.

Based on studies made by the Engineering Experiment Station of Oregon State College, by a special board of Consulting Engineers, by representatives of the U. S. Corps of Engineers and U. S. Public Health

Service, and by the staff of the Authority it was concluded that primary treatment and effluent chlorination would be sufficient to abate and control the sewage pollution caused by the cities along the main Willamette River. Consequently, under the program of the Authority which has been conducted since 1939 all such cities and communities have been required to provide primary treatment as a minimum.

With the completion in 1957 of the sewage works project for the city of Harrisburg all municipalities on the main Willamette River now have the equivalent of primary treatment including effluent chlorination.

The 18 municipal and other community sewage treatment plants now in operation on the main Willamette River include the following:

Location	Year Built	Estimated Present Population Served	River Mileage
Springfield	1955	14,000	W 185
Eugene	1954	45,000	W 178.3
Junction City	1949	1,500	W 166
Harrisburg	1957	800	W 162
Corvallis	1954	20,000	W 131
Albany	1954	12,000	W 119
Independence	1951	6,000	W 96
Salem	1952	52,000	W 83
Manbrin Gardens	1947	650	W 82
Newberg	1949	3,800	W 50.1
Canby	1956	1,800	W 34
West Linn	1956	1,500	W 27.7
Oregon City	1953	11,000	W 25.3
West Linn	1952	2,400	W 24.3
Marylhurst	1954	600	W 22.5
Oswego	1955	4,500	W 21
Willamette View Manor	1955	450	W 20.2
Milwaukie	1951	7,500	W 18.5

Of these 18 public and semi-public plants which discharge into the main Willamette River only the Springfield and Albany plants provide secondary treatment. The other 16 provide only primary treatment and chlorination.

Since 1950 routine monitoring surveys of the Willamette River have been conducted every summer and fall by the Sanitary Authority staff for the purpose of determining the progress being made in the abatement of pollution as a result of the installation of municipal sewage and industrial waste treatment works. These annual monitoring surveys together with a comprehensive sanitary survey conducted in 1957 have disclosed that because of the tremendous increase in sewered population and expansion of industry that have taken place in the basin since 1945 the Willamette River is still polluted to such an extent that it is not safe for recreational uses and occasionally in certain sections it is unsuitable for propagation or maintenance of fish life.

As a result of the 1957 studies, the Authority early in 1958 instructed the cities of Eugene, Newberg and Salem to add as soon as possible secondary treatment units to their existing primary plants. These cities were singled

out in 1958 because they each handle large quantities of fruit and vegetable processing wastes which overload and greatly reduce the efficiency of their primary plants. Each of these three cities has since proceeded to prepare plans and specifications and to develop a fiscal program for the early construction of the needed additional treatment works. The city of Eugene, for example, has final engineering plans already completed and approved, the necessary financing all arranged, and has advertised for construction bids. This project is, therefore, expected to be completed and ready for operation before the end of 1961.

The Oak Lodge Sanitary District No. 1 of Clackamas County now has under construction the first secondary sewage treatment plant to be built on the lower Willamette. This district had initially planned to install only a primary plant but because of the findings of the 1957 survey was required by the Authority staff to provide secondary treatment. This plant will have capacity to serve 12,000 persons, will cost approximately \$400,000 to build and is expected to be completed by the end of 1960.

During the past five or six years, or since the majority of the existing sewage treatment works were first placed in operation, there has been an ever increasing use made by the general public of the waters of the lower Willamette River from Salem downstream to the Portland harbor for recreational purposes. This section of the river during the summer and fall is now used very extensively for pleasure boating and for water skiing. In spite of the high bacterial concentration it is even used for swimming by a large number of people.

Under the water pollution control law adopted by the people of Oregon in 1938 it is the public policy of the state to preserve the natural purity of our rivers for not only the protection and conservation of public health but also for the recreational enjoyment of the people. It is therefore considered advisable that a deadline be established for the provision of secondary treatment for all sewage effluents now being discharged into the public waters of the lower Willamette River.

Pursuant to the motion adopted at the July 14, 1960, meeting of the Authority official notices of today's public hearing in this matter were sent on August 30, 1960, to the officials of the cities of Canby, Milwaukie, Newberg, Oregon City, Oswego, Salem, and West Linn and of Manbrin Gardens, Marylhurst, and Willamette View Manor. Each of these 10 communities now has primary sewage treatment works in operation.

The notice stated that it was the intention of the Sanitary Authority to establish the following dates for compliance with an order requiring secondary treatment.

- Completion of final plans and specifications on or before July 1, 1961.
- Completion of fiscal program on or before July 1, 1961.
- Completion of construction on or before July 1, 1962.

The city of Salem has already had a comprehensive engineering study made of its present and future sewerage needs including those of the suburban fringe areas located in both Marion and Polk Counties. As a result of this study it has been proposed by the city's consultants that the present primary treatment plant which has been in operation only since 1952 be abandoned because it is already hydraulically overloaded, is

completely surrounded by high value residential property and is otherwise not properly located for serving certain contiguous areas. A new plant site located approximately four miles downstream from the present plant has been proposed by the city's consulting engineers. The cost of building the additional outfall sewer and a new secondary treatment plant has been estimated to be approximately \$5,000,000. Pilot plant studies conducted in 1959 are being continued during the 1960 fruit and vegetable processing season for the purpose of obtaining data and information needed for the proper design of the treatment plant.

Preliminary engineering studies have already been made by consulting engineers for required additions and improvements to the Newberg and Milwaukie sewage treatment plants and both cities have voted bonds and in addition have made application to the Authority for federal grants to assist them in financing construction. The city of Newberg on July 14, 1960, was assigned a certificate of priority for a federal grant of \$77,050, with the provision that construction would be started during the present fiscal year. The costs of the Milwaukie and Newberg sewage treatment works projects have been estimated at \$147,700 and \$273,400, respectively.

A preliminary engineering study has also been made of the interceptor and sewage plant needs for the city of Oswego and the costs estimated at \$892,000 for sewers and \$303,000 for sewage plant additions. No bond issue has yet been voted for this project, however."

All statements submitted by municipal and community officials were made under oath administered by Mr. Quesseth.

City of Salem:

Mayor Russell F. Bonesteele introduced Mr. Kent Mathewson, city manager, who presented the following statement in behalf of the city of Salem:

"In response to your letter of August 30, 1960, the City of Salem is hereby submitting information relative to a proposed construction schedule for secondary sewage treatment facilities. We are joined in this response by the County governments of Marion and Polk and who are officially represented here today.

As you know, in March of this year a report entitled "Preliminary Engineering Study of Sewage Collection and Treatment Facilities for the City of Salem, Oregon, and Adjacent Areas", was presented to the City of Salem and the other affected governments by the Consulting Engineering Firm of Cornell, Howland, Hayes & Merryfield. This report recommended use of the present City sewer system to serve as a "core" for eventual sewer service to a total area of 65 square miles in Polk and Marion Counties as contrasted with the 11 square miles presently served by and encompassing the City of Salem. Six different sewage treatment plans were also compared on the basis of total annual cost and also their ability to serve the entire regional area.

In accordance with the recommendations of this report, the City of Salem has required all major industries now served to install waste flow measurement and sampling equipment and has been conducting a continuing program of

ABG763

design criteria development through pilot plant operations and extensive laboratory testing. Discussions are also being held with members of industry for the ultimate development of a fair and equitable industrial waste charge.

Orderly and systematic development of sewer service in the entire 65 square mile area appears to be to the best interests of the total community. We understand your Authority also favors such a program. Based on this, officials of Marion and Polk Counties, and the City of Salem, as well as the state institutions and the public school interests, have been meeting to determine the steps necessary to put such an over-all sewer program into effect. To develop an administrative and contractual plan among the three principal and two secondary governmental interests, a series of conferences and subsequent agreements must be developed by the Inter-governmental Cooperation Council covering these unknowns. Until these administrative and contractual plans are completed and approved, there does not appear to be a firm basis for such a program to be satisfactorily developed. It is estimated that these negotiations, studies and agreements will require approximately six months work. A final go ahead on the over-all 65 square mile program could not be expected then before May 1, 1961.

Until the City of Salem has been given assurances that an over-all regional sewerage program will be followed as outlined in the aforementioned study, it appears unwise to proceed on their own with such a program. If the City is required to maintain the construction schedule as outlined in your citation of August 30, 1960, then the City would be forced to seriously consider a lesser treatment plan which does not include service to the entire area. Since this approach has serious disadvantages to the entire community, it is jointly suggested by the several affected governments that a construction schedule be attempted that will allow for an area wide sewer program. You can be assured that the sewer problems confronting the over-all community are of such magnitude that we are equally as anxious for progress as is the Authority. We do not believe however, that we can embark on a five million dollar project without adequate preparation."

"Using a borrowed phrase, it is our desire to proceed "with all deliberate speed" and to that end we suggest the following schedule, which as time passes, may be able to be shortened or possibly lengthened."

Design criteria development and intergovernmental planning complete by (6 months)	May 1, 1961
Treatment plan selection confirmed and plant site purchased by (2 1/2 months)	July 15, 1961
Plans, Specifications, and Cost Estimated by (7 1/2 mo)	March 1, 1962
Bond Election Completed by (2 1/2 months)	May 15, 1962
Construction bids taken, bonds sold, bid awarded (3 months)	August 15, 1962
Completion of construction (16 months)	December 15, 1963

Following the presentation of the statement Mr. Mathewson was asked by Mr. McPhillips to define the boundaries of the 65 square mile area being considered in the metropolitan sewerage plan. Mr. Sidney S. Lasswell was then introduced by Mr. Mathewson and he described the area under consideration. In response to a question by Mr. Stanley, Mr. Mathewson stated that the governments involved in the proposed project include the city of Salem, the two counties of Marion and Polk, the Salem school district and the state of Oregon, the latter on behalf of the state institutions. Mr. Mathewson explained that if only the city of Salem is to be served by the proposed project the cost of constructing the required sewage and waste treatment works will be approximately \$3,000,000 whereas if the entire metropolitan area is to be included the sewage treatment plant project will cost an estimated \$5,000,000. An additional \$5,000,000 will be required to finance construction of sanitary sewers in the presently unsewered suburban fringe areas.

Mr. Mathewson also introduced Mr. Frank Crawford, Polk County Commissioner, and Mr. Henry Ahrens, Marion County Commissioner. Mr. Ahrens stated that the county governments are in full agreement with the proposed program but that he personally believes that the schedule suggested by the city may be too optimistic.

Manbrin Gardens:

Mr. E. S. Ritter, one of the owners of the public sewerage system serving the Manbrin Gardens Subdivision of Marion County, stated that it is their intention to connect said sewer system to the new outfall sewer which is to be constructed by the city of Salem under the proposed metropolitan project. He pointed out that it would be unreasonable for them to build a secondary treatment plant of their own inasmuch as the Manbrin Gardens Subdivision is within the 65 square mile area which can

ABG763

be served by the city of Salem. Upon connection to the Salem system the present Manbrin Gardens facilities which consist of an Imhoff tank would be abandoned.

City of Newberg:

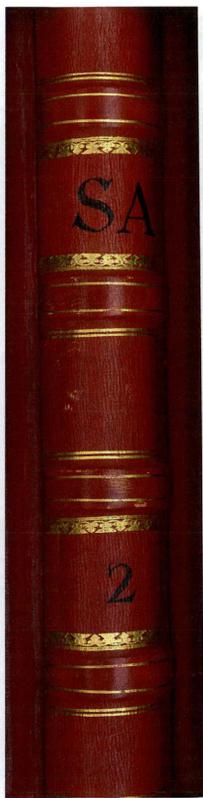

Mr. Carl E. Green, consulting engineer, representing the city of Newberg stated that said city has already voted and sold the bonds necessary for financing construction of secondary sewage treatment works, that it already has under construction a new outfall sewer and other major improvements or extensions to its existing sewage collection system, that early in 1961 bids are to be opened for the construction of additional interceptor, trunk and lateral sewers, lift station and additions to the existing primary treatment plant, and consequently the city anticipates no difficulty in complying with the schedule proposed by the Sanitary Authority.

City of Canby:

Mr. Lee Cox, Superintendent of Public Works, stated that the city of Canby has only a primary plant at the present time, that the council in recent months had been concerned about the efficiency of operation of the plant, and that as a result certain preliminary studies had already been made. He reported further that at a recent meeting of the city council the problem had been discussed and preparations had been made for the conducting of further tests. In conclusion he stated that the city officials were of the opinion that they can complete any necessary additions to the existing plant and have them operating within the next year and a half.

City of West Linn:

Mr. Andy Harila, city recorder, introduced Mr. Paul Biggs, attorney and spokesman for the city of West Linn. Mr. Biggs reported that at the present time the city has two primary sewage treatment plants and that consideration has already been given by the city officials to the necessity of providing additional treatment. He stated that before secondary treatment can be

**FRONT**

(TWENTY-THIRD MEETING - continued)

TENTATIVE BUDGET FOR 1945 - 1947 BIENNIUM: A tentative budget for the next biennium as submitted by the secretary included two engineering positions in addition to the State Sanitary Engineer. The total budget was \$28,590. It was not considered adequate by the members and instructions were given to have a new budget prepared and to submit it to the members for their approval.

PUBLIC RELATIONS COUNSEL: It was moved by Mr. Stricklin, seconded by Mr. McPhillips, and carried, that the balance of \$458.50 on Mr. Charles P. Ohling's account be paid.

WATER POLLUTION BILL, HR-4741: Copies of Bill HR-4741 introduced in the 78th Congress, second session, for the purpose of creating within the U. S. Public Health Service a stream-pollution abatement section were presented to the members. Briefly, this bill would allocate annually to the Public Health Service \$50,000 to finance stream pollution studies and control works; would provide \$1,500,000 annually for allotment to state agencies for conducting stream pollution studies and control programs; and would provide \$50,000,000 annually for grants and loans to municipalities, industries, and others who are required to construct water pollution abatement works. It was the concensus of opinion of the members that the abatement of water pollution in the United States could be handled more satisfactorily by the individual states and that provisions of this bill were inconsistent with national economy, and furthermore, that they represented an encroachment upon states rights. Mr. Veatch was instructed by the Chairman to prepare a resolution to that effect for presentation to the proper congressional authorities.

The meeting adjourned at 12:00 N. to allow the members to attend a luncheon meeting at the Multnomah Hotel with the directors of the League

ABG759

of Oregon Cities at which time the discussion regarding the proposed water pollution studies was to be continued. The date for the next meeting was set for September 15, 1944, at 10:00 a.m.

Respectfully submitted,

*Kenneth H. Spies*

Kenneth H. Spies  
Acting Director and Secretary

MINUTES OF THE TWENTY-FOURTH MEETING

of the

STATE SANITARY AUTHORITY

December 8, 1944

The regular meeting of the Oregon State Sanitary Authority was called to order December 8, 1944, at 10:00 a.m. in the Library Room of the State Board of Health, 816 Oregon Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Frederick D. Stricker, B. A. McPhillips, and Charles E. Stricklin, Members; and Kenneth H. Spies, Secretary.

MINUTES: Copies of the minutes of the meeting held June 17, 1944, had been submitted to the members in advance. A brief summary of the minutes was presented by the secretary and they were approved as prepared.

ACTIVITIES AND PROGRESS REPORT: The secretary presented a brief discussion of the following subjects as part of the activities and progress report for the period covering the months of July to December, 1944: (a) stream pollution studies, (b) domestic sewerage, and (c) industrial wastes.

It was reported that from August to December, 1944, sanitary surveys and laboratory analyses had been conducted of municipal sewages, certain trade wastes, and the Willamette River and its tributaries by the Engineering Experiment Station, Oregon State College, under the supervision of the Sanitary Authority. The studies were financed jointly by the College, Game Commission, Hydroelectric Commission, and the State Board of Health. The following twenty-one cities participated in the studies: Albany, Corvallis, Eugene, Gladstone, Harrisburg, Hood River, Independence, Lebanon, Mt. Angel, McMinnville, Newberg, Oregon City, Oswego,

ABG759

Pendleton, Salem, Sheridan, Springfield, St. Helens, The Dalles, West Linn, and West Salem. Both quantitative and qualitative data were obtained for municipal sewages and trade wastes. The complete engineering report of these studies is to be presented to the Authority and the cities and industries as soon as possible during the first half of 1945. In addition to supplying certain necessary data and information for use by the Authority and the respective consulting engineers, these studies in the opinion of the Authority have had a great educational value as far as the city officials and general public are concerned.

The secretary reported that since the last meeting surveys had been made of the following sewage disposal systems: (1) La Grande (city), (2) Baker (city), (3) Hermiston (city), (4) Silverton (city), (5) Roseburg (city), (6) Wood Village, (7) Multnomah County Farm, (8) Pilot Rock (Lumber Company), (9) Stanfield (War Prisoner Camp), (10) Veneta (F.P.H.A. Project), (11) Sweet Home (F.H.A. and F.P.H.A. Projects), and (12) Hermiston (F.P.H.A. Project).

The secretary reported further on the progress being made by the following cities for postwar construction of stream pollution abatement projects: Newberg, Pendleton, Hood River, Tillamook, Sweet Home, Mt. Angel, Oregon City, The Dalles, Medford, and Milton.

Reports covering investigations of trade waste disposal problems at the following industries were given: (1) Rogers Vegetable Cannery, Athena, (2) Preston Shaffer Milling Company, Athena, (3) Rogers Vegetable Cannery, Milton, (4) Moffett Vegetable Cooler Plant, Weston, (5) Utah Vegetable Cannery, Freewater, (6) F. G. Lamb Fruit and Vegetable Cannery, Freewater, (7) Washington Dehydrator Company, Freewater, (8) Smith Vegetable Cannery, Pendleton, (9) Valley Sausage Packing Plant, La Grande, (10) Lincoln Dairy Co-op., Waldport, and (11) Nebergall Meat Packing Plant, Eugene.

There was also presented a summary report of the present status of trade waste pollution in Oregon as caused by the eight leading industries; namely, pulp and paper mills, flax retting plants, woolen mills, flour mills, milk processing plants, meat packing plants, fruit and vegetable canneries, and sand and gravel companies. It was disclosed that of the 101 individual plants which had been checked only eight have completely satisfactory disposal facilities. Sixty-eight have inadequate disposal facilities (twenty-six of these, however, are connected to municipal sewerage systems and the responsibility for final disposal of the trade wastes will in most cases rest with the respective cities), and the other twenty five have disposal systems which are questionable and, therefore, they will at some future time be required to make improvements.

PROJECT PLANS: The actions taken by the secretary regarding the following project plans were approved by the members:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
8/17/44	Lebanon	Sewage Pumping Plant	Approved
10/4/44	Sandy Ridge	School Sewerage	Approved
10/4/44	Crowfoot School	School Sewerage	Approved
10/4/44	Crawfordsville	School Sewerage	Approved
10/13/44	Vanport	Class C. Permit (Columbia Slough)	Not approved
11/14/44	North Bend Housing #35304	Sewer Extension	Approved
11/27/44	Astoria Housing #35302N	Sewer Extension	Approved
11/27/44	Klamath Falls " #35303N	Sewer Extension	Approved

CORVALLIS SEWERAGE: A motion was made, seconded and adopted that the secretary contact the Corvallis city officials to ascertain what progress has been made in carrying out the recommendations of the Authority for postwar stream pollution abatement.

ABG759

WATER POLLUTION BILL HR-4741: The secretary was instructed to contact Mr. Veatch regarding the matter of presenting a resolution to the congressional authorities.

INTERIM COMMITTEE REPORT: Dr. Stricker reported that at the final conference of the Interim Committee with Governor Snell and the State Board of Health the Interim Committee had agreed to withdraw their recommendation that the Sanitary Authority be abolished, such recommendation having previously been a part of their report on the re-organization of the State Board of Health.

1945-1947 BIENNIAL BUDGET: The secretary reported that a hearing had been held with the State Budget Director and that a budget of \$22,095 was to be recommended by the Governor to the Forty-Third Legislature for approval. The request for \$33,840 had been decreased on the basis that the entire engineering staff would not be available until the latter half of the biennium. Summaries of the budget requests and recommendations are attached to these minutes. The secretary was instructed to notify the members of the date of the budget hearing with the Sub-committee of the Joint Ways & Means Committee and to keep them otherwise advised.

PUBLICITY: After some discussion it was decided that the secretary should prepare a summary report of the progress being made by Oregon cities and industries relative to postwar pollution abatement projects and to present the same to Mr. Wendel as a basis for a feature story in the Sunday Edition of one of the Portland daily newspapers.

MISCELLANEOUS: INDUSTRIAL WASTES: - It was moved, seconded and passed that the secretary advise the city of Hillsboro that adequate disposal facilities shall be provided before the next spring canning season to eliminate pollution of the Tualatin River now being caused by wastes from the B. E. Maling Company Cannery at Hillsboro, Oregon.

It was moved, seconded, and passed that the secretary advise the officials of the Washington County Flax Grower's Association that adequate and satisfactory lagooning facilities shall be provided at the Cornelius Flax Plant to prevent pollution of the Tualatin River by flax retting wastes.

There being no further business, the meeting adjourned at 11:45 a.m. The date for the next meeting was set for March 9, 1945.

Respectfully submitted,

*Kenneth H. Spies*  
Kenneth H. Spies  
Secretary

MINUTES OF THE TWENTY-FIFTH MEETING

of the

STATE SANITARY AUTHORITY

March 9, 1945

ABG759

The regular meeting of the Oregon State Sanitary Authority was called to order March 9, 1945, at 10:00 a.m. in the Library Room of the State Board of Health, 816 Oregon Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Frederick D. Stricker, Messrs. John C. Veatch, B. A. McPhillips, Blaine Hallock, and Charles Stricklin, Members; Kenneth H. Spies, Secretary; and Dr. Harold M. Erickson, Assistant State Health Officer. (Dr. Erickson becomes a member of the Authority on March 21, at which time he becomes State Health Officer, following the resignation of Dr. Stricker.)

There were also present Messrs. F. N. Youngman, Vice President, and W. R. Barber, Director of Research of the Crown-Zellerbach Corporation; and Mr. R. E. Koon of Stevens & Koon, Consulting Engineers, and Mr. Carl E. Green of John W. Cunningham & Associates, Consulting Engineers.

MINUTES: Copies of the minutes of the Twenty-fourth Meeting held December 8, 1944, had been submitted to the members in advance. They were approved as prepared.

ACTIVITIES REPORT: The secretary reported briefly on Senate Bill #89 which had been introduced at the 43rd Session of the State Legislature, and stated he believed that the sections of the bill pertaining to the State Sanitary Authority would be eliminated therefrom. Later in the meeting Dr. Stricker presented engrossed copies of the bill which showed these sections to be stricken out. Mr. Hallock reported that he had written to Senator Rand regarding this portion of the bill and that he had been

advised by him that it was not intended to abolish the State Sanitary Authority.

The secretary next reported on the Biennial Budget to the effect that a hearing had been held with the Sub-committee and that he had been assured that the \$22,095 recommended by the Governor, plus the \$5,800 supplemental request would be approved by the Joint Ways & Means Committee. The fine support given the Authority by Mr. George Aiken, State Budget Director, at the hearing before the Sub-committee was acknowledged.

Approval of the feature article which appeared in the Sunday Oregonian January 21, 1945, was expressed by the members. The motion was made, seconded, and passed that the secretary send a resolution to Mr. Virgil Smith, Staff Writer for the Oregonian, expressing appreciation for the fine manner in which he presented this article.

The secretary reported briefly on progress being made by various municipalities of the state regarding postwar plans for construction of sewage disposal facilities.

**PULP AND PAPER MILL WASTES:** Mr. F. N. Youngman and Mr. W. R. Barber presented briefly the plans of the Crown-Zellerbach Corporation for improvement of their pulp and paper mill at West Linn, Oregon. They reported that it was planned to substitute the basic soda process of chemical wood pulp manufacture in place of the acid sulphite process which is now being used. With the soda process it will be possible to evaporate and incinerate the waste cooking liquors for the purpose of recovering valuable chemicals and of utilizing some of the heat energy contained in the lignins and wood sugars. This will make it unnecessary to discharge into the Willamette River a large portion of the waste resulting from the production of chemical wood pulp. The Crown-Zellerbach Corporation estimates that the new process will accomplish at least a 70 per cent reduction in the

amount of pollution material discharged into the stream, in spite of the fact that it is planned to increase the capacity of the plant by 150 tons of chemical wood pulp produced per day. Whereas, the average B.O.D. loading of the present process is estimated at 84,400# per day, the loading for the new process will be only 25,455# per day. The soda process is decidedly more suitable for the production of wood pulp from Douglas Fir and, although the resulting product does not have as much strength as sulphite wood pulp, it is preferred for magazine purposes. The Company has completed its detailed plans and specifications and also has placed orders for at least a portion of the equipment which will be required. The total project will require an expenditure of nearly \$10,000,000 for buildings, equipment, and machinery. Contracts made with the publishers of "Life," "Time," and "The Saturday Evening Post" call for the delivery of magazine paper within eighteen months after priorities on construction materials have been relaxed. The officials of the Crown-Zellerbach Corporation requested the approval of the Sanitary Authority of this proposed improvement project as a method of stream pollution abatement for this particular mill.

Following a brief discussion by the members of the Authority, it was moved, seconded, and passed that two consulting sanitary engineers be retained to study the proposed process and to submit a report to the Sanitary Authority containing their findings regarding the adequacy of such a process for accomplishing the required degree of pollution abatement and that upon receipt of such report a special meeting of the Authority be called for the purpose of taking appropriate action regarding this matter. It was requested that no publicity be given this subject until the Crown-Zellerbach Corporation had definitely decided to proceed with its plans.

PORTLAND SEWERAGE PROJECT: Mr. R. E. Koon and Mr. Carl E. Green

ABG759

of the Board of Consulting Engineers, retained by the city of Portland to design a system of interceptor sewers and a sewage disposal plant for the city, presented a report on the progress made thus far in the design work.

They reported that the plan which is being followed will utilize a high level system of interceptors rather than a low level system as previously proposed. This change in plan will facilitate construction by the avoiding of numerous quicksand areas. It will also reduce from fourteen to two the number of main pumping stations required and although some thirteen or fourteen smaller pumping stations will be needed to serve certain of the waterfront areas, a considerable saving in the cost of this portion of the project will be made. Only one Willamette River crossing, near Ankeny Street, will be necessary. It is probably that a separate treatment plant for the Linnton area, which has a population of about 3,000 persons, will be installed. The balance of the sewered portion of the city will be served by one large plant located near the north city limits in the triangle formed by the S. P. & S. and the O. W. R. and N. R. R. tracks.

Sewage will be transported to the treatment plant through the gravity interceptor sewers which will range in size from 30 inches to  $8\frac{1}{2}$  feet in diameter. Three miles or more of the interceptors will be in tunnel. From the treatment plant the effluent will flow by gravity to the Columbia River.

The project is being designed for an ultimate population of 600,000 persons, and a total combined sewage and storm water flow of 155,000,000 gallons per day. The sanitary sewage flow at the present time is approximately 40,000,000 gallons per day.

The design is sufficiently far advanced that contracts for \$2,000,000 worth of work could be let in a short time if conditions so

required. Several months more will be needed to complete the entire design, however. It is the opinion of the designing engineers that the \$12,000,000 bond issue will be adequate to finance the whole project.

PROJECT PLANS: It was moved, seconded, and carried that the action taken by the secretary relative to the following list of project plans be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
10/11/44	Oregon City	Sewerage system for Doernbecker Furniture Mfg. Company	Approved
1/6/45	Nyssa	Sewage plant additions	Approved
1/12/45	Seaside	Hospital sewerage	Not approved
2/26/45	Springfield	Sewer extension	Not approved

The secretary reported briefly on postwar plans of the industries for waste disposal and except for a few cases the progress being made is not too satisfactory. It was stated that the special studies made last year by the Engineering Experiment Station at Oregon State College were not started soon enough to include many of the industries. An attempt will be made to obtain data regarding them this coming summer provided the studies are renewed. The secretary was instructed to continue the report on industrial wastes at the next meeting.

The meeting adjourned at 12:30 p.m.

In anticipation of the calling of a special meeting, no date for the next regular meeting was set.

Respectfully submitted,

*Kenneth H. Spies*

Kenneth H. Spies  
Secretary

ABG759

## MINUTES OF THE TWENTY-SIXTH MEETING

of the

## STATE SANITARY AUTHORITY

June 22, 1945

The regular meeting of the Oregon State Sanitary Authority was called to order June 22, 1945, at 10:00 a.m. in Room 322, 816 Oregon Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson, Messrs. John C. Veatch, Charles Stricklin, and B. A. McPhillips, Members; Kenneth H. Spies, Secretary; and Mr. F. N. Youngman, Vice President of the Crown-Zellerbach Corporation.

PULP AND PAPER INDUSTRY: At the last meeting of the Authority the Crown-Zellerbach Corporation discussed their plans for revising the pulping process at West Linn, Oregon, which would alleviate pollution of the Willamette River. Provisional approval of such plans was subsequently granted to them by the Authority. Mr. Youngman reported at this meeting that in the meantime they have found it necessary to again revise their plans to the extent of postponing the change from the sulphite to the soda process for an additional two years. The reason for the postponement is the proposed reconstruction by the U. S. Army Engineers of the Oregon City locks which will require two years to complete. The pulp and paper mill is located on an island adjacent to the locks, and reconstruction of the latter will make it financially impossible to proceed with the plant revisions as originally scheduled. In the meantime they will use sulphite pulp to produce magazine paper as per their new contracts. (It was reported that the supply of hemlock and spruce which is used for the sulphite pulp will be exhausted within perhaps twenty-five years. One reason for the plan to change to the soda process is to be able to use the sustained yield of Douglas Fir).

Mr. Youngman advised the members of the Authority that if the city of Portland should abate its share of the pollution in the Willamette River and the river pollution upstream from West Linn is, likewise, alleviated before the Crown Zellerbach Corporation is able to proceed with the changes as originally planned, they will agree to shut down the sulphite pulp process at West Linn and to operate their paper mill with pulp shipped in from other sources. In view of this agreement, the report of Mr. Youngman was favorably accepted by the Authority.

MINUTES: Copies of the minutes of the Twenty-fifth Meeting held March 9, 1945, having been submitted to the members in advance, were approved as prepared without a reading.

ACTIVITIES REPORT: Copies of the activities and progress report for the period March, April, and May, 1945, were presented to the members by the secretary. The report included the list of field inspections made of sewage and waste disposal projects, the progress of postwar planning, project plans reviewed and approved, the public relation activities of the secretary and the proposed budget for 1945-1946.

PROJECT PLANS: It was moved, seconded and approved that the action taken by the secretary relative to the following list of project plans be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
3/24/45	Medford	Preliminary engineering report	Approved
4/9/45	Eugene	Sewer extensions	Prov. app.
4/9/45	Eugene	F.P.H.A. sewer extensions(35311)	Approved
4/23/45	Klamath Falls	F.P.H.A. Sewers (35310)	Approved
4/23/45	Klamath Falls	F.P.H.A. Sewers (35313-N)	Approved
4/23/45	Astoria	F.P.H.A. Sewers (35312-N)	Approved
5/1/45	Lebanon	Sewer extensions	Prov. app.
5/1/45	Eugene	Sewer extensions	Approved
5/17/45	The Dalles	Sewer extensions	Prov. app.

ABG759

**INDUSTRIAL WASTES:** The report of the city of Hillsboro regarding the progress made in providing necessary waste disposal facilities was presented and accepted. The city had previously been instructed by the Authority to provide adequate disposal facilities prior to the 1945 canning season.

The secretary reported that the Vanaken Sand & Gravel Company had complied with previous instructions to abate pollution of Gales Creek.

The Gales Creek Sand & Gravel Company was given until July 1 to comply with instructions for abatement of pollution in Gales Creek.

The secretary was instructed to attempt to obtain voluntary cooperation for stream pollution abatement in all cases and when voluntary cooperation could not be obtained to accumulate sufficient facts for the issuance of orders. In the case of the Alpenrose Dairy on Fanno Creek and the Fairlawn Hospital on Johnson Creek (both in Multnomah County) it was suggested that pollution surveys be conducted by the college personnel as part of the special studies being planned for this summer.

The secretary reported further that special emphasis was to be given all types of industrial wastes in the pollution studies now being planned as the data collected last year on municipal sewage are fairly complete.

**BUDGETS:** The following budgets were presented and approved for the 1945-1946 fiscal year:

(a) From general appropriation:

Salaries & Wages

State Sanitary Engineer	\$115/mo.*	\$1380
Associate Sanitary Engineer	300/mo.	3600
Senior Clerk Stenographer	112.50/mo.*	1350
Members		180
		<u>\$6,510</u>

\*Supplemented by State Board of Health

General, Operating and Maintenance

Total \$3,625

Capital Outlay

Total \$ 750

Grand Total \$10,885

(b) From special appropriation:

Salaries

1 Field Engineer	6 mo. @ \$350	.. . . .	\$ 2100
2 " Assistants	8 mo. @ \$150	.. . . .	1200
1 Lab. Technician	4 mo. @ \$250	.. . . .	1000
1 Stenographer	4 mo. @ \$150	.. . . .	600
			<u>\$4,900</u>

General, Operating and Maintenance

Laboratory Supplies	.. . . .	\$ 100
Travel, 10,000 miles @ 5¢	.. . . .	500
Meals & Lodging	.. . . .	300
Grand Total	.. . . .	<u>\$5,800</u>

It was moved, seconded, and carried that all disbursements from the special appropriation be handled in the customary manner through the fiscal office of the Sanitary Authority and under the control of the State Budget Director.

PORTLAND SEWERAGE PROJECT: The meeting then adjourned to room 1008 Spalding Building for a report by the Portland Board of Consulting Engineers on the progress made in the design of an interceptor system and sewage disposal works. The report was presented by R. E. Koon, John W. Cunningham, Ben S. Morrow, and Carl E. Green. Following the presentation by the Board of Engineers it was recommended: (1) that provisional approval be given the city to dispose of digested sludge by discharging it with the plant effluent into the Columbia River, (2) that the outfall sewer be terminated at the North Portland Harbor (Oregon Slough) rather than at the main channel on the north side of Hayden Island, and (3) that more consideration be given to the necessity

ABG759

for providing a separate treatment plant for the Linnton area.

For the first two items provisional approval was recommended with the understanding that if at any time conditions so demanded, other means for sludge disposal would be provided by the city and/or the outfall sewer would be extended to the main river channel. It was stated that funds would be retained for those purposes. The engineers had suggested that raw sewage from the Linnton area, because of its small amount, be permitted to discharge untreated into the Willamette River.

There being no further business the meeting adjourned at 1:00 P.M.

Respectfully submitted,

*Kenneth H. Spies*

Kenneth H. Spies  
Secretary

## MINUTES OF THE TWENTY-SEVENTH MEETING

of the

STATE SANITARY AUTHORITY

November 30, 1945

ABG759

The regular meeting of the Oregon State Sanitary Authority, previously scheduled for October 5, was called to order November 30, 1945, at 10:00 A.M. in Room 322, Oregon Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson, Messrs. John C. Veatch, Charles E. Stricklin, B. A. McPhillips, and Blaine Hallock, Members; Kenneth H. Spies, Secretary; and Messrs. Ben S. Morrow, John W. Cunningham and J. C. Stevens of the City of Portland Board of Consulting Engineers on Sewer Design.

MINUTES: The minutes of the Twenty-Sixth Meeting held on June 22, 1945, were read and accepted.

FEDERAL LEGISLATION ON STREAM POLLUTION CONTROL: Copies of the Barkley-Spence Bill (S-1462 - - HR-4070) which has been introduced into the present session of Congress were furnished to the members for consideration prior to the meeting. Predecessors of this bill were passed by both House and Senate in 1936, being killed later by seantorial courtesy. In 1938 a similar bill was vetoed by the President and in 1940 the Senate refused to concur in a House amendment.

Briefly, the present bill provides for the establishment of a Federal coordinating agency for stream pollution control work; it provides for loans and grants to municipalities and loans to industry; it authorizes interstate compacts; and it provides financial assistance to state pollution control agencies.

After considerable discussion regarding the various features

of the bill, it was moved by Mr. Hallock, seconded by Mr. Stricklin, and approved that no action be taken by the Sanitary Authority and that the matter be tabled.

PORTLAND SEWERAGE PROJECT: Messrs. Morrow, Cunningham, and Stevens reported as follows to the Authority on the present status of the Portland sewer and sewage disposal projects:

- (a) The engineering designs on the sewers are progressing satisfactorily.
- (b) The Columbia Slough interceptor design is practically completed and ready for contract. This will undoubtedly be the first portion of the project to be built.
- (c) Contracts will be let by the city council as soon as labor conditions are favorable. Labor costs are high and materials are scarce at the present time, but construction will be started whenever employment for returned veterans is needed.
- (d) The plans for a separate treatment plant to serve the Linnton area have been completed.
- (e) The main treatment plant will be built in time to handle the sewage from the first interceptor sewer that is constructed. No intercepted sewage will be discharged untreated into Columbia Slough.
- (f) The outfall from the disposal plant will discharge into the main channel of the Columbia River rather than into the Oregon Slough (North Portland Harbor).
- (g) Disposal of digested sludge will probably be by discharge with the plant effluent into the Columbia River.
- (h) Contracts are being let for test borings to determine construction conditions in the areas of the proposed interceptor sewers.

- (i) Construction of storm overflow diversions at certain of the present outfall sewers is now under way.

ACTIVITIES AND PROGRESS REPORT: The activities of the secretary for the period July to November, 1945, were reported briefly. (Refer to copy of Activities Report for June, July, August, and September, 1945).

PROJECT PLANS: It was moved, seconded and carried that the action taken by the secretary relative to the following list of project plans be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
6/19/45	Sweet Home	Sewerage	Prov. app.
7/5/45	Milton-Freewater	Labor Camp sewerage	Not approved
7/5/45	Milton-Freewater	Industrial sewerage	Not approved
7/7/45	Eugene	Colin Kelly School "	Not approved
7/22/45	Cottage Grove	FPHA #35320 sewers	Approved
7/22/45	La Grande	FPHA #35315 "	Approved
7/25/45	Klamath Falls	Sewer extensions	Approved
7/27/45	Eugene	Sewer extensions	Approved
8/10/45	Hermiston	Preliminary report	Prov. app.
8/10/45	Klamath Falls	Preliminary report	No action taken
8/30/45	Eugene	Sewer extension	Approved
8/30/45	Springfield	Sewer extension	Prov. app.
9/1/45	Klamath Falls	Design data	Approved
9/11/45	Newberg	Preliminary report	Approved
9/24/45	Springfield	Sewer appurtenance	Approved
10/6/45	Hood River	Preliminary report	Approved
10/8/45	Albany	Sewer extensions	Prov. app.
10/13/45	Springfield	Sewer extensions	Not approved
10/17/45	Klamath Falls	FPHA Sewerage	Prov. app.
10/22/45	Springfield	Sewer extensions	Approved
11/1/45	Mount Angel	Sewer extensions	Approved
11/3/45	Pendleton	Preliminary report	Approved
11/6/45	Beaverton	Preliminary report	Approved
11/19/45	Springfield	Borden Co. sewerage	Approved

DOMESTIC SEWAGE:

- (a) Naval Hospital, Astoria: The secretary reported that the \$55,000 disposal plant (primary treatment plus chlorination) built by the Navy at the Astoria Naval Hospital has never been operated because the public works officer was afraid it would not be able to handle the grease from the kitchens

ABG759

and laundry. The hospital has now been declared surplus.

- (b) Klamath Falls: Bids called for in connection with the construction of a sewage disposal plant at Klamath Falls were rejected because they were too high. The lowest bid was \$81,600, or \$20 per capita for a design loading of 4,080 persons.
- (c) Central Point: Sewage from the city of Central Point is discharged untreated into Bear Creek. In response to complaints an investigation was made by the secretary and on July 7, 1945, a letter was sent to the city council advising them that proper disposal facilities must be provided in order to abate the pollution of Bear Creek. The city had previously been so advised under the dates of March 23, 1942, and April 14, 1945. No reply has been received to our request of September 25 for a report on the progress made by the city to provide the necessary facilities. It was moved by Mr. Hallock, seconded by Mr. Veatch, and approved that the secretary be instructed to send a communication to the city of Central Point allowing them thirty days in which to show that definite progress is being made and that, if at the end of thirty days no steps have been taken by the city looking toward early construction of a sewage disposal plant, the city council be cited to appear before the Authority and show cause why such progress should not be made.
- (d) General: It was reported that on September 23 letters were sent to forty-four cities asking for reports on the progress made thus far in planning for the postwar construction of

sewage treatment works. As replies had been received from only seventeen of the forty four, the secretary was instructed to send a follow-up letter to the remaining twenty-seven cities.

INDUSTRIAL WASTES:

- (a) Miscellaneous: The secretary reported that complaints had been received regarding the following waste disposal problems: (1) fruit and vegetable wastes, United Growers, Inc., Salem; (2) fruit and vegetable wastes, Bird's Eye-Snyder Division, Woodburn, Oregon; (3) logging operation wastes in Siuslaw and Umpqua Rivers; (4) Sumpter Dredging Company operations in Powder River. Inspections of these are being made as rapidly as possible by the secretary.

- (b) Willamette Valley Wood Chemical Company, Springfield, Oregon:

The Defense Plant Corporation started construction at Springfield, Oregon, of a plant to manufacture ethyl alcohol from waste wood. The company officials originally proposed to dispose of the liquid wastes from this process by returning them untreated into the mill race, tributary to the Willamette River. Research studies conducted at Oregon State College of samples of waste obtained from the pilot plant at Madison, Wisconsin, indicate that the wastes from the Springfield plant will have a population equivalent of 400,000. The secretary has advised the company officials of this fact and also has notified them of their responsibilities under the stream purification laws; however, the company officials have shown no particular concern over this problem.

It was moved by Mr. Veatch, seconded by Mr. Hallock,

ABG759

and approved that the industry be instructed to submit to the State Sanitary Authority detailed plans for the treatment and disposal of all trade wastes from the Springfield Plant; that the approval of the State Sanitary Authority be obtained before proceeding further with the construction of the plant; and that construction of the waste disposal facilities be in accordance with the approved plans.

- (c) General: The secretary was instructed to contact all industries as soon as possible and to notify them that they would now be expected to provide at the earliest possible date the waste disposal facilities necessary for abatement of stream pollution.

There being no further business, the meeting adjourned at 12:30 P.M. No date was set for the next meeting.

Respectfully submitted,

*Kenneth H. Spies*

Kenneth H. Spies  
Secretary

## MINUTES OF THE TWENTY-EIGHTH MEETING

of the

## STATE SANITARY AUTHORITY

April 19, 1946

The regular meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:00 A.M., April 19, 1946, in Room 315, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson, Messrs. John C. Veatch, Charles E. Stricklin, and Blaine Hallock. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer, and Kenneth H. Spies, Associate Sanitary Engineer.

MINUTES: Copies of minutes having been supplied to the members in advance, the chairman with the consent of the board, dispensed with the reading of the minutes of the meeting of November 30, 1945, and the minutes were approved as prepared by the secretary.

PORTLAND SEWERAGE PROJECT: - The secretary reviewed briefly the progress of the Portland Sewerage Project. It was reported that plans and specifications for the Columbia Slough intercepting sewer had been completed and were to be submitted to the city council for action within a week. The council was expected to advertise for bids if the plans presented were satisfactory.

The board members then discussed the advisability of granting permission for the discharge of digested sludge into the Columbia River along with the sewage treatment works effluent. It was pointed out that the sludge could be held and disposed of as fertilizer or dried and incinerated, but that either of the two procedures would add an additional cost to the construction of the treatment plant. The discussion brought out the fact that the quantity of sludge to be discharged into the stream

ABG759

in relation to the stream flow was small and should not prove detrimental. The minutes of the June 22nd Meeting indicated that provisional approval only had been granted the city of Portland for the discharge of digested sludge into the Columbia River with the understanding that if at any time conditions demanded, other means for sludge disposal would be provided by the city.

The Chairman stated that in the future when the Sanitary Authority is called upon to approve sewage treatment plant plans that such approval should always be provisional and subject to change depending on the results obtained after the treatment plant is in operation. It was also the opinion of the Authority that plans for large sewage treatment works projects should be submitted to the Sanitary Authority for formal approval before any action is taken by their engineers.

WILLAMETTE WOOD CHEMICAL COMPANY: Mr. Clark Van Fleet, Production Manager, Willamette Wood Chemical Company, and Dr. Locke, Forest Products Laboratory, Corvallis, appeared before the State Sanitary Authority to present data concerning the operations of the wood alcohol plant at Springfield, Oregon. The plant is to be put on a production basis about July 1, 1946. They state that approximately 500,000 gallons of waste would be produced each day, and that no practical method for disposal or treatment had yet been devised. A lagoon of 3.25 million gallons is to be provided for storage of the waste prior to its discharge into the Willamette River. Some reduction in oxygen demand, although not appreciable, is expected during the six day retention period. The Oregon State Experiment Station and Oregon State College are conducting research on the production of yeast from still bottom wastes from the process. Mr. Van Fleet was advised that some method must be developed for reducing the BOD of the wastes from this plant. The Sanitary Authority

is to keep in touch with research developments on treatment of the waste and instructed its engineers to spend some time assisting the plant authorities in working out a solution to their problem.

MUNICIPAL SEWAGE TREATMENT PROGRAM: A review of the progress made by municipalities in planning for the construction and finance of sewage treatment works had been presented to the members of the State Sanitary Authority in advance in a report entitled "Summary of Present Status of Municipal Sewage Treatment." The report indicated that some municipalities had done nothing toward complying with the Sanitary Authority's requests; others had done very little. The secretary was authorized to write lagging communities and threaten them with a citation if satisfactory progress was not made.

The secretary was also instructed to write to the city of Central Point and request a report on the progress made in the adoption of an adequate fiscal plan to provide for the construction of sewage treatment works.

The matter of approving a proposal submitted by the consulting engineers for Oregon City providing for the discharge of digested sludge into the Willamette River during periods of high stream-flow was discussed. Motion by Mr. Veatch and seconded by Mr. Hallock that the discharge of digested sludge into the Willamette River was contrary to the policy of the State Sanitary Authority and that the request be not approved. Carried. The members stated, however, that the matter would be reconsidered if authorities at Oregon City or their consulting engineers wished a hearing at the next meeting.

GRESHAM BERRY GROWERS CO-OP: The secretary reported the receipt of complaints relative to the destruction of fish life in Johnson Creek last October. A field investigation indicated that waste from corn processing operations at the Gresham Berry Growers Co-op. Cannery at Gresham was

ABG759

responsible. The acting secretary, Kenneth H. Spies, had notified the industry of their responsibility for the abatement of this condition but no action had yet been taken by the Co-op. Motion by Mr. McPhillips, seconded by Mr. Hallock that the secretary instruct the Gresham Berry Growers Cooperative that they must abate the nuisance created by their pollution of Johnson Creek, or appropriate action would be taken. Carried.

INDUSTRIAL WASTE DISPOSAL: Following a discussion of a program and policies for industrial waste disposal, a Motion was made by Mr. Veatch and seconded by Mr. Hallock that the secretary notify all industrial plants responsible for pollution of streams that they must take immediate steps to correct this pollution problem and report their progress to the State Sanitary Authority, and where no progress is made by an industry, then appropriate action will be taken. Carried.

POLLUTION OF COASTAL WATERS: The Authority's attention was directed to the increase in the pollution of coastal waters, due chiefly to rapid real estate development on the Oregon coast. It was pointed out that the ground area available and soil conditions are not suitable for the use of cesspools or septic tanks and that as a result effluents are discharged into watercourses which eventually reach the beach. If the pollution increases, the beaches may no longer be safe for recreational purposes. Motion: It was moved by Mr. Stricklin and seconded by Mr. Hallock that the State Sanitary Authority extend an invitation to representatives for local service clubs, community organizations, and leading citizens from communities along the Oregon coast to attend the next meeting of the Sanitary Authority for the purpose of discussing adequate sewerage facilities for Oregon Coast communities. Carried.

STATE INSTITUTIONS: The secretary was instructed to communicate with the State Board of Control, and secure their cooperation in providing adequate sewage treatment facilities for all state institutions.

INDUSTRIAL WASTE SURVEY REPORT: Motion made by Mr. Stricklin, seconded by Mr. McPhillips that it be left to the discretion of the chairman and the engineers as to whether the Authority would participate in joint publication of the report on the Industrial Waste Survey conducted by the Oregon State College Engineering Experiment Station at an expenditure not to exceed \$400. Carried.

SANITARY AUTHORITY LABORATORY: Motion by Mr. Hallock, seconded by Mr. Veatch that the installation of necessary facilities for a Sanitary Authority Laboratory in the Behnke-Walker Building be authorized. Carried.

PROJECT PLANS: Motion by Mr. Stricklin, seconded by Mr. Hallock that the action of the secretary on sewerage project plans submitted be approved. Carried.

COOPERATION WITH GAME, FISH, & HIGHWAY COMMISSIONS: Motion by Mr. Stricklin and seconded by Mr. Hallock that the secretary be instructed to write the Chairman of the State Fish Commission, State Game Commission, and the State Highway Commission and request that when pollution complaints are received by their agencies, the State Sanitary Authority be notified; and that if investigations are to be conducted, a representative of the State Sanitary Authority be present to make recommendations on municipal and industrial waste disposal. Carried.

PERSONNEL: The secretary reported that the staff authorized by present appropriations would be filled when Mr. Rice returns from military service about July 1, 1946.

BUDGETS: The secretary was instructed to prepare budgets for 1947-49, for consideration by the State Sanitary Authority at their next meeting.

PUBLICITY: The secretary was instructed to furnish to both Portland papers suitable news releases on action taken by the Sanitary Authority at this meeting.

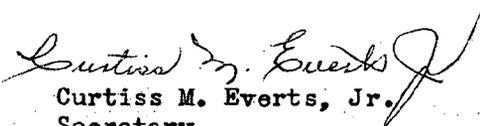

ABG759

AMOZONE PROCESS OF SEWAGE TREATMENT: The Sanitary Authority directed its engineers to keep in touch with the development and operation of the sewage treatment plant to be constructed at West Kelso by Amozone of Oregon, and to secure data on which to base action on any plans for this treatment process which may be proposed for installation in Oregon.

NEXT MEETING: The date of the next meeting was set for 10:00 A.M., June 14, 1946, in the offices of the State Board of Health, Portland, Oregon.

There being no further business, the meeting was adjourned at 1:20 P.M.

Respectfully submitted,

  
Curtiss M. Everts, Jr.  
Secretary

## MINUTES OF THE TWENTY-NINTH MEETING

of the

STATE SANITARY AUTHORITY

June 14, 1946

The regular meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:00 A.M., June 14, 1946, in the offices of the State Health Officer, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson; Messrs. John C. Veatch, Blaine Hallock, and Chas. E. Stricklin. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; and Kenneth H. Spies, Associate Sanitary Engineer.

MINUTES: The members of the Authority dispensed with the reading of the minutes of the preceding meeting of April 19, 1946, and the minutes were approved as prepared by the secretary.

OREGON CITY SEWAGE TREATMENT PROJECT: On the basis of a written request by Mr. John C. Gearhart of Stevens & Koon, Consulting Engineers, Portland, Oregon, the matter of sewage treatment facilities proposed for Oregon City was re-opened for discussion. Consulting engineers for Oregon City requested approval of the plan for by-passing domestic sewage into the Willamette River for approximately three or four days per year and also requested permission to discharge digested sewage sludge, that could not otherwise be disposed of, into the Willamette River during the wet season when the efficiency of sludge drying beds would be reduced. Mr. Hallock raised the question as to whether such an approval would be consistent with state statutes under which the Sanitary Authority was created, and under which it operates. It was also Mr. Hallock's opinion that approval in this case might be contrary to past policy and that it might establish a precedent. Mr. Veatch suggested that the Authority go

ABG759

on record as opposed to such a plan and that all persons concerned be advised that sewage sludge could not be discharged into streams. The probable effect that approval of plans prepared for Oregon City would have on plans of other cities in the Willamette Basin was also discussed. The general opinion of all members present was that only preliminary or tentative approvals of plans for sewage treatment works should be granted at the time the plans are reviewed and that final approval should not be granted until the treatment plant had been installed and its operating efficiency demonstrated. After further discussion on the subject, the chairman requested Mr. Hallock and Mr. Veatch to prepare a paragraph to be included in all letters related to the subject of approval of municipal or industrial waste treatment or disposal facilities. The material contained in this paragraph would grant tentative, conditional approval to sewage or industrial waste treatment facilities, but would indicate that such approval was not binding and that the Sanitary Authority would have the authority to request additional treatment or disposal facilities when the necessity for such was indicated.

The discussion again returned to the proposal submitted by consulting engineers for Oregon City and the following resolution proposed by Mr. Hallock was unanimously adopted: "That the Oregon State Sanitary Authority adopt the policy and precedent that the discharge of digested municipal sludge in the Willamette River is not to be permitted, but where circumstances require temporary conditional permits for this method of sludge disposal, permission may be issued on that basis. Such sludge is not to be discharged into the River under the authority granted by such a permit unless the State Sanitary Authority be notified each time in advance and grants approval for the discharge of sludge into the stream under the permit issued."

Mr. J. L. Franzen, city manager for Oregon City, and John C. Gearhart, representing Stevens & Koon, consulting engineers of Portland, then appeared before the Authority and presented additional data supporting their request for permission to by-pass the sewage treatment plant during periods of high water level in the Willamette River and for use of the River as a means of discharging digested sludge during the wet season of the year. The State Sanitary Authority's position in this matter was explained both to Mr. Franzen and Mr. Gearhart and it was pointed out to them that a temporary conditional approval of the plan would be granted with the understanding that additional sludge disposal facilities might be required at a later date.

PROJECT PLANS: MOTION by Mr. Hallock; seconded by Mr. Veatch, and carried - that the action of the Secretary and State Sanitary Engineer on sewerage project plans submitted be approved.

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
4/3/46	Coos Bay	Sewer extensions	Not approved
4/4/46	Portland	Preliminary eng'g report re: interceptors and disposal plant	No action taken (referred to members for approval)
4/5/46	Josiah Hall Tract	Sewage disposal	Not approved
4/10/46	Lake Tahkenitch	Sewerage system (Crown-Zellerbach Corp.)	Preliminary approval
4/11/46	Coos Bay	Sewer extensions	Approved
4/11/46	Phoenix	Preliminary report on sewers and disposal	Approved
4/11/46	Detroit	Design data for sewage disposal (U.S.E.D. construction village at Detroit dam site)	Prov. app.
4/11/46	Pendleton	Sewer extensions	Approved
4/26/46	St. Helens	Sewage disposal (Western Insulating Co.)	Approved

ABG759

## Project Plans - continued:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
4/30/46	North Bend	Sewer extensions	Approved
4/30/46	Weston	Cannery waste disposal	Disapproved
5/2/46	Cedar Hills (Washington County)	Sewer construction	Tentative app.
5/29/46	Sandy	Sewers and sewage disposal	Not approved
5/29/46	Manbrin Gardens(Salem)	Sewers and sewage disposal	Preliminary App.
5/29/46	The Dalles	Sewer extensions	Approved
6/4/46	Josephine County	Sewage disposal (Logge Motor Court)	Approved
6/6/46	Dallas	Sewer diversions	Approved

PERSONNEL: MOTION by Mr. Stricklin, seconded by Mr. Veatch, and carried - that the salary of Mr. Kenneth H. Spies, Associate Sanitary Engineer, be increased from \$350 per month to \$375 per month, effective July 1, 1946.

Inasmuch as Mr. Archie H. Rice, Associate Sanitary Engineer, will not be eligible for discharge from the army until August 1, 1946, the secretary was authorized to employ an additional engineer as soon as one could be obtained.

BUDGET: Copies of a proposed budget for 1947-1949 biennium were submitted to the members of the Authority in advance of the meeting for their review; MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that the budget proposed for this period be approved.

U. S. PUBLIC HEALTH SERVICE WATER POLLUTION SURVEY: A letter from Mr. F. E. De Martini, Sanitary Engineer, USPHS, Water Sanitation Investigation Laboratory, Cincinnati, Ohio, was read to the members of the Authority. This letter indicated that appropriations for the proposed water pollution surveys to be conducted by the Public Health Service in

several regions of the United States would probably not be made by the present Congress inasmuch as similar appropriations were set up under H.R. 6024 which is now under consideration by Congress. Mr. De Martini pointed out in his letter, however, that the Willamette Basin had received favorable consideration by the staff at Cincinnati, and should appropriations become available, the Willamette Basin would be recommended for a high priority for such a survey.

The secretary was authorized to keep in touch with this matter and if appropriations became available, to prepare for the chairman's signature a letter to the Surgeon General in which a survey of the Willamette Basin in cooperation with the State Sanitary Authority would be requested. This letter, however, was to include several conditions under which the cooperative survey would be undertaken.

SEWAGE DISPOSAL REGULATIONS: The rules and regulations relating to individual sewage disposal facilities had been reviewed by the members of the Authority in advance of this meeting and it was moved by Mr. Hallock; seconded by Mr. Veatch, and carried - that the regulations relating to the individual sewage disposal facilities be adopted, as per the attached.

NEXT MEETING: The date of the next meeting was set for September 13, 1946, in the offices of the State Board of Health, Portland, Oregon.

There being no further business the members of the Sanitary Authority then moved to the basement auditorium of the Behnke-Walker Building to review the film, "Clean Waters." At the completion of the film the meeting was adjourned at 12:00 noon.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.  
Secretary

ARG 759

## MINUTES OF THE THIRTIETH MEETING

of the

STATE SANITARY AUTHORITY

September 13, 1946

The regular meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:30 A.M., September 13, 1946, in the offices of the State Board of Health, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Messrs. John C. Veatch, B. A. McPhillips, and Chas. E. Stricklin. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineer; Mr. George C. Brewster, Attorney, Redmond, Oregon; and Mr. John W. Cunningham, Consulting Engineer, Portland, Oregon.

DESCHUTES RIVER INVESTIGATIONS: Consideration was given to the conclusions and recommendation contained in the report submitted by the Sanitary Authority's engineers on investigations of alleged pollution of the Deschutes River. The Chairman invited Mr. George C. Brewster, Redmond, Oregon, and Mr. John W. Cunningham to take part in the discussions and to submit any additional data they might have on the subject.

Mr. Brewster stated that he represented the city of Redmond, The Central Oregon Irrigation District, The Crook County Improvement District No. 1, and the Deschutes Reclamation & Irrigation District No. 1, and that in 1943 the city of Bend and the Bend School District proposed to develop a swimming area in the Deschutes River above the diversion points for the Redmond and Irrigation District water supplies. The city of Redmond, together with the Irrigation and Improvement Districts, requested that the city of Bend and the Bend School District abandon plans to establish a swimming area in the river, and further to make arrangements to

35-A

OREGON STATE SANITARY AUTHORITY

REGULATIONS GOVERNING SEWAGE AND WASTE DISPOSAL

Regulation 1. Sanitary Sewage Disposal Facilities Required. All human excreta, sewage, and other household wastes shall be disposed of in properly designed, constructed, and maintained community sewerage systems, individual septic tank systems, cesspools, privies, or by other means approved by the State Board of Health.

No human excreta, kitchen wastes, laundry water, sink water, or toilet wastes shall be allowed to discharge or flow upon the surface of the ground or into any ditch, gutter, street, roadway, or public place, nor shall such wastes discharge onto any private property so as to create a nuisance condition or health hazard.

Regulation 2. Pollution of Water Prohibited. No sewage, household wastes, or industrial or trade wastes shall be discharged into or disposed of in such a manner that access will be gained to any public waters of the state of Oregon unless such waste materials are first treated in a manner approved by the State Sanitary Authority, a division of the State Board of Health.

1. No abandoned or deep well shall be used for the disposal of sewage or as a receptacle for household wastes. No privy vault, cesspool, or septic tank disposal system, unless it be water-tight, shall be located in any water-bearing stratum which is, or may be, used as a source of domestic water supply, or shall be so otherwise located that pollution from the same can enter any domestic water supply.

Regulation 3. Submission of Plans and Specifications Required. Plans and specifications covering the construction of new systems of sewers, sewage or waste disposal, or of modified or extended existing systems from which effluent is to be discharged into any surface or ground water or which is to be used by any number of persons exceeding ten families or fifty persons, shall be submitted to and approved by the State Sanitary Authority before construction thereof may begin. The plans and specifications shall be submitted a sufficient length of time in advance of construction in order that the Authority may direct any changes deemed necessary. Preliminary plans and reports may be submitted in advance of final plans. Approval may be subject to modifications by the Authority upon due notice. Construction shall be according to the approved plans only.

Regulation 4. Disposal of Privy, Cesspool, and Septic Tank Contents. No part of the contents of any privy, cesspool, or septic tank shall be discharged upon the surface of the ground unless subjected to additional treatment in a manner approved by the health officer. Final disposal shall be by incineration, burial, or other means approved by the health officer. No person shall engage in the transportation and disposal of the contents of privies, cesspools, or septic tanks without first obtaining a written permit from the health officer in the county in which the privies, cesspools, or septic tanks are located

and from the health officer in the county in which final disposal of the material will take place. The permit shall designate where and in what manner the disposition of the material shall be carried out. The contents of privies, cesspools, and septic tanks shall be transported in a manner that will not create a nuisance or public health hazard.

Regulation 5. Individual Water-Carried Sewage Disposal Systems. All individual water-carried sewage disposal systems shall comply with the following requirements:

- 1. Design Capacity. The sewers and sewage treatment facilities shall have adequate capacity to properly dispose of the maximum daily sewage flow. If actual flow measurements are not available, the quantity of sewage shall be estimated according to the following table:

TABLE OF DAILY SEWAGE FLOWS

<u>Type of Establishment</u>	<u>Gallons per person per day</u>
Dwellings	50
Schools	15
Trailer Camps	20
Modern motor courts and tourist cottages	40
Industrial and commercial buildings	25
Hospitals and other institutions	100

The population of dwellings, motor courts, and tourist cottages shall be estimated at two persons per sleeping room and of trailer camps at 2-1/2 persons per trailer space.

- 2. House Sewer. The sewer line from the interior plumbing system to the cesspool, septic tank, or community sewer system shall comply with the following requirements:

- a. Location. No sewer shall be within 10 feet of any well, spring, or other source of domestic water supply. All sewers, drains, or parts thereof, which are located between 10 and 50 feet from a well, spring or other source of domestic water supply, shall be constructed of cast-iron soil pipe or cast-iron water pipe, and shall have water-tight lead joints.

Sewers and water lines shall not be laid in the same trench. Parallel water and sewer lines shall be at least 10 feet apart horizontally. Wherever it is necessary for house sewer and water service lines to cross each other, the crossing shall be at approximately a 90° angle and the sewer shall either be located at least 3 feet below the water line or shall be constructed of cast iron soil or water pipe with water-tight lead joints for a distance of 10 feet on both sides of the water line.

- b. Material. Only bell and spigot cast-iron, vitrified clay, or concrete sewer pipe, cement asbestos pipe, bituminized-fiber pipe, or pipe of other material approved by the State Plumbing Inspector shall be used. Extra-heavy cast-iron pipe shall be used for sewers located in roads or driveways with less than three feet of cover.
- c. Sewer Joints. All sewer joints shall be as watertight as possible and shall be protected against the entrance of tree roots wherever necessary. Jute, oakum, or other approved packing shall be used with either lead,

cement mortar, or approved bituminous joint material in all bell and spigot pipe joints.

- d. Minimum Diameter. No pipe less than four inches in diameter shall be used.
- e. Sewer Grade. All sewers shall be laid to an even grade and true alignment. The minimum grades for house sewers shall be 1/4 inch per foot for 4-inch pipe, 1/8 inch per foot for 6-inch pipe, 0.4 foot per 100 feet for 8-inch pipe, and 0.28 foot per 100 feet for 10-inch pipe.
- f. Cleanouts. Manholes or cleanouts shall be installed at every change in alignment in excess of 45° and at every change in grade in excess of 22-1/2°.

3. Septic Tanks. All septic tanks shall comply with the following requirements,

- a. Location. They shall be located at least 50 feet from any well, spring, or other source of domestic water supply, 25 feet from any stream, river, or lake, and 10 feet from any building or property line.
- b. Capacity. Every septic tank shall have a liquid capacity of at least the average volume of sewage flowing into it during a period of 24 hours, but in no case less than 500 gallons. In multi-compartment tanks, the inlet compartment shall have a capacity of not less than 2/3 the total capacity nor less than 500 gallons. Minimum capacities for septic tanks are given in the following table:

MINIMUM CAPACITIES FOR SEPTIC TANKS

Maximum number of persons served						Effective Liquid Capacity of Tank in gallons
Dwellings	Schools	Trailer Camps	Motor Courts	Commercial Buildings	Hospitals, etc.	
6	30	25	12	20		500
8	50	35	18	30		750
12	65	50	25	40		1000
14	80	60	30	50		1200
16	100	75	40	60		1500
24	140	100	50	80	20	2000
	170	130	65	100	25	2500
	200	150	75	120	30	3000
	230	170	85	140	35	3500
	270	200	100	160	40	4000
	300	230	115	180	45	4500
	350	250	125	200	50	5000

- c. Construction. Septic tanks shall be constructed of (1) reinforced concrete, or of (2) not less than 10 gauge iron coated inside and out with asphalt, or of (3) other sound and durable material approved by the State Board of Health.
  - a. The inside length of the single-compartment tank or the inlet compartment of a multi-compartment tank shall be not less than 5 feet. The total inside depth shall be not less than 5 feet and the liquid depth shall be not less than 4 feet.
  - b. The inlet and outlet pipes shall be located at opposite end of the tank and shall be at least 4 inches in diameter. They shall be of cast iron, vitrified

clay, or concrete bell and spigot tee or quarter bend fittings. The inlet shall be at an elevation one to three inches higher than the outlet.

c. Convenient access to the tank for inspection and sludge removal shall be provided by means of a manhole or removable cover. Where the top of the tank is more than 3 feet below the ground surface, a manhole shall be built up within 12 inches of the ground surface.

4. Subsurface Disposal Fields. Subsurface disposal fields shall not be used in heavy clay soil or in areas in which the ground water during any season of the year is within 24 inches of the ground surface.

a. Location. They shall be located at least 100 feet from any well, spring, or other source of domestic water supply, 25 feet from any stream, river, or lake, and 10 feet from a building or property line. Wherever it is necessary for any tile line in a subsurface disposal field to be located within ten feet of a water service line, it shall be constructed with water-tight joints.

b. Distribution Box. A distribution box shall be provided for each disposal field having more than one tile line or more than 100 feet of tile. Each lateral tile line shall be connected separately to the distribution box.

c. Minimum Seepage Area. The amount of bottom trench area required for each disposal field shall be determined by the character of the soil in accordance with the following table:

MINIMUM SEEPAGE AREAS FOR DISPOSAL FIELDS

Character of Soil	Effective Absorption Area (area of bottom of disposal trench) in sq. ft. per 100 gallons of daily sewage flow.
Clean coarse sand or gravel	50*
Clean fine sand	80*
Light loam	100*
Clay with considerable sand or gravel	150*
Clay with small amount of sand or gravel	240*
Heavy clay	Unsuitable

\*Note:- A minimum of 150 square feet of effective absorption area (100 lineal feet of 18-inch trench) shall be provided for each individual swelling unit.

d. Construction. The construction of subsurface disposal fields shall comply with the following requirements:

a. Maximum length of any lateral tile line shall be 100 feet.

b. Minimum width of bottom of trench shall be 18 inches.

c. Maximum depth of seepage trench shall be 36 inches.

d. Maximum grade of tile line shall be 6 inches per 100 feet.

- e. Minimum distance between lateral lines shall be 6 feet.
  - f. Minimum depth of filter material beneath tile shall be 6 inches.
  - g. Minimum total depth of filter material in trench shall be 12 inches.
  - h. Filter material shall be clean crushed stone, gravel, slag, or cinders ranging from 1/2 to 2-1/2 inches in size. The filter material shall be covered with building paper, straw, or similar material before trench is backfilled with earth.
  - i. Tile shall have a minimum diameter of 4 inches and shall be laid with 1/4 inch open joints or be otherwise perforated to permit seepage into the filter material. Open joints shall be protected on top by strips of asphalt-treated building or tar paper.
  - j. Grade boards shall be used beneath all short length drain tile.
  - k. Brick or concrete drop boxes or ells with cemented joints shall be used where necessary to maintain proper grade and cover.
5. Seepage Pits and Cesspools. Seepage pits and cesspools shall be used only in areas approved by the local health department. They shall not be used in limestone areas or in areas where shallow wells are used as a source of domestic water supply.
- a. Location. They shall be located at least 150 feet from a well, spring, or other source of domestic water supply, 25 feet from any stream, river, or lake, and 10 feet from a building or property line.
  - b. Construction. The minimum inside diameter shall be 4 feet and the minimum depth below the inlet shall be 15 feet. The effective absorption area shall penetrate at least 5 feet of clean coarse gravel or equally porous material. The lining shall be of stone, clay brick, building tile, or other material approved by the State Board of Health.

Regulation 6. Non Water-Carried Sewage Disposal Facilities.

1. Earth Pit Privies. The construction and maintenance of earth pit privies shall comply with the following requirements.
- a. Location. They shall be located at least 50 feet from a well, spring, or other source of domestic water supply, 25 feet from any stream, river, or lake, and 10 feet from any property line.
  - b. Construction. The pit shall have a minimum capacity of 50 cubic feet, shall be at least 5 feet deep, and shall be lined with lumber to prevent caving. The pit shall be covered by a building of substantial construction located on either a concrete or a creosote-treated wood sill or foundation. An earth embankment shall be placed around the sill to make it as fly-tight

and rodent-proof as possible from the outside. The floor and riser shall be built fly-tight or wood or concrete. The seat opening shall be covered with a lid, hinged and so constructed that when closed, it will exclude flies from the pit. Vents connected to the pit shall be covered with 16-mesh copper wire screen. The building shall have a tight-fitting door and substantial roof.

- c. Maintenance. The seat covers shall be kept closed during the fly season when the privy is not in use. The contents of a privy shall not be permitted to overflow onto the surface of the ground or be exposed to flies and rodents. When the pit becomes filled to within 18 inches of the ground surface, either the contents shall be removed and disposed of by burial or a new pit shall be excavated and the old one shall be backfilled with at least two feet of earth.
2. Privies with Water-Tight Receptacles. On the watersheds of public water supplies concrete vault privies, pail privies, or chemical toilets shall be used in the place of earth pit privies for the disposal of human excreta. The vaults and receptacles shall be constructed of reinforced concrete or metal and shall be water tight. They shall be maintained in a sanitary condition and the contents shall be disposed of by burial beneath at least one foot of earth in a location where the ground water will not be polluted.

APPROVED AND ADOPTED BY THE STATE BOARD OF HEALTH

APRIL 27, 1946

FILED WITH THE SECRETARY OF STATE MAY 22, 1946.

(duplicates  
regular page 36)

MINUTES OF THE THIRTIETH MEETING

of the

STATE SANITARY AUTHORITY

September 13, 1946

The regular meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:30 A.M., September 13, 1946, in the offices of the State Board of Health, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Messrs. John C. Veatch, B. A. McPhillips, and Chas. E. Stricklin. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineer; Mr. George C. Brewster, Attorney, Redmond, Oregon; and Mr. John W. Cunningham, Consulting Engineer, Portland, Oregon.

DESCHUTES RIVER INVESTIGATIONS: Consideration was given to the conclusions and recommendation contained in the report submitted by the Sanitary Authority's engineers on investigations of alleged pollution of the Deschutes River. The Chairman invited Mr. George C. Brewster, Redmond, Oregon, and Mr. John W. Cunningham to take part in the discussions and to submit any additional data they might have on the subject.

Mr. Brewster stated that he represented the city of Redmond, The Central Oregon Irrigation District, The Crook County Improvement District No. 1, and the Deschutes Reclamation and Irrigation District No. 1, and that in 1943 the city of Bend and the Bend School District proposed to develop a swimming area in the Deschutes River above the diversion points for the Redmond and Irrigation District water supplies. The city of Redmond, together with the Irrigation and Improvement Districts, requested that the city of Bend and the Bend School District abandon plans to establish a swimming area in the river, and further to make arrangements to

prevent street washings and storm water from the business district of Bend from entering the stream. An unfavorable response from Bend prompted Mr. Brewster's clients to file suit in the state circuit court against the city of Bend and the Bend School District No. 1.

The petition of the plaintiffs was withdrawn but with the provisos that swimming in the river would not be sponsored by the defendants and that the case would be referred to the Sanitary Authority for final decision, both parties agreeing to abide by the ruling of the Authority. In compliance with the provisos, swimming in the stream was abandoned.

In the meantime, Dr. Rogers, Deschutes County Health Officer, made an investigation of the complaint, but found no serious hazards. Mr. Brewster's clients were dissatisfied with Dr. Roger's findings and requested a Sanitary Authority investigation. The Bend City Council and the Redmond City Council held a joint meeting, however; and, according to Mr. Brewster, the city of Bend agreed to drill wells and discharge street washings into subterranean caverns and further to eliminate pollution of the stream by domestic sewage from individual residences or business establishments along the river in the city.

Mr. Brewster agreed that the facts in the report were true, but that streets in Bend might be flushed more often than reported, and he also questioned the statement that storm water was not a source of pollution.

In answer to Mr. Wendel's question as to whether the city of Bend had installed the wells to provide for disposal of street washings, Mr. Brewster replied that they had not.

Mr. John W. Cunningham, Consulting Engineer, Portland, who was representing the city of Bend, advised the Authority that the city of Bend had a cooperative attitude toward the problem, had stopped swimming

ABG759

in the river, and it was their desire to protect the water supply of its neighbors. Mr. Cunningham pointed out that swimmers and livestock have access to and use the diversion canals outside the city of Bend, and that watercourses are the usual method for the disposal of storm water. He used as an example the Rogue River into which Medford, Ashland, Talent, and Gold Hill discharge storm water, but domestic sewage receives complete treatment before it reaches the stream. The Rogue River is used as a source of water supply by Grants Pass and Gold Hill, Oregon.

Mr. Brewster admitted that control over swimmers and livestock was difficult to obtain and stated that every effort was being made to eliminate swimming in irrigation canals and to prevent livestock from gaining access to them. He further stated that his clients were not too concerned about storm water but were concerned about street washings, and that the irrigation districts were the chief complainants.

Mr. Wendel asked if screening of the street washings was a practical solution to the problem.

Mr. Cunningham admitted that there was a collection of debris in the present storm sewer outfall grates, but this material would not constitute as serious pollution condition as some of the dissolved material in the washings. If screens were installed, dissolved material would not be removed and during periods of heavy rain storms overflows might occur which would permit material to reach the river.

Mr. Brewster mentioned that while the city of Bend had agreed to dispose of street washings in underground caverns, conclusions No. 2 in the report which stated that "the discharge of street and storm water drainage from the city of Bend into the Deschutes River does not constitute an unreasonable use of public waters \* \* \* \* \*" might cause the city of Bend to delay or abandon their plans for disposal of street washings.

Mr. Cunningham offered the information that the city of Bend did plan to proceed with construction of wells for the disposal of street washings as soon as well drillers are available.

A discussion as to the remaining items of the report followed in which it was agreed that the city of Bend should require the Oregon Trail Furniture Shops, Inc., to dispose of their domestic sewage by means of a connection to an adjacent city sewer. Mr. Brewster questioned the recommendation in which the city of Redmond was advised to provide additional water treatment facilities. No serious objection arose to this recommendation, however, when it was learned that even with the removal of street washings from the Deschutes River, the quality of the Redmond water supply would not be materially improved.

Mr. Stricklin added that when places for additional storage in existing reservoirs in the Deschutes Basin are complete, the only flow in the stream during the winter season will be an absolute minimum for domestic use. In view of these circumstances, the discharge of street washings might conceivably result in pollution of the river above the irrigation and domestic water supply intakes.

It was agreed by the members present that the secretary be instructed to prepare for transmission to the city of Bend a letter in which the conclusions and recommendations of the Sanitary Authority would be presented and in which appropriate recommendations for the disposal of street washings would be contained.

INDUSTRIAL WASTE DISPOSAL: Mr. Spies, Associate Sanitary Engineer, reported on his investigation of alleged pollution of the Siuslaw River by the Siuslaw Forest Products Company of Mapleton, Oregon. Inasmuch as logs, butt cuts, slashings, etc., were the chief cause of complaint, and since the use of the stream for the disposal of these materials

ABG759

was considered as a problem for stream navigation authorities, the members did not consider that the matter was one over which they had jurisdiction.

Mr. Spies also reported on his investigation of waste disposal facilities for the Willamette Wood Chemical Company, Springfield, Oregon. The plant management was reported to be awaiting the results of experimental work at Oregon State College before adopting any plans for waste disposal. Letters on the subject of waste disposal having been previously forwarded to the Willamette Wood Chemical Company, no further action was deemed necessary at this time.

Upon receipt of a report that no progress had been made by the Gresham Berry Growers Cooperative in the matter of providing for treatment of corn processing wastes prior to discharge to Johnson Creek, the secretary was authorized to issue a citation for the Manager of the Gresham Berry Growers to appear before the Sanitary Authority at their next meeting unless satisfactory evidence was presented immediately that definite progress has been made in the abatement of the nuisance caused by their pollution of Johnson Creek by wastes from corn processing operations at the cannery.

MUNICIPAL SEWAGE DISPOSAL: The secretary presented to the members a proposed letter of approval to be used for municipal sewage treatment plant and industrial waste disposal plant plans. After a brief review by those present, it was agreed that copies should be forwarded to all members for review and comment before it was officially adopted for use.

In view of complaints relative to the lack of sewage disposal facilities for the city of Salem, Oregon, which had come to the attention of members of the Authority, the secretary was instructed to write the mayor and city council and ascertain what progress was being made with respect to the construction of a sewage treatment plant.

After a discussion of the aspects of sewage disposal facilities for suburban housing projects, it was agreed by all members present that when the installation of septic tanks and seepage trenches or cesspools for residential sewage disposal facilities might result in the pollution of waters of the state, such facilities would not be approved and a community sewer system and treatment plant must be installed.

REPORTS: At the request of the secretary, comments and criticisms on the Summary of Activities and Quarterly Reports were invited. After some discussion it was agreed that reports rendered in the future should include a summary of activities for the period up to and including the last day of the month preceding a regular scheduled meeting.

PROJECT PLANS: Following a review of project plans, a MOTION by Mr. McPhillips, seconded by Mr. Stricklin, and carried - that the action of the State Sanitary Engineer on the following sewerage project plans submitted be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
6/10/46	Lebanon	Battery Separator Plant Sewerage	Not approved
6/14/46	Chiloquin	Sewage Treatment Plant	Not approved
6/15/46	Lebanon	Battery Separator Plant Sewerage	Approved
6/20/46	Stanfield	Sewerage, Preliminary Engineering Report	Approved
6/20/46	Forest Grove	Sewerage, Preliminary Engineering Report	Approved
6/27/46	Sandy	Sewer Plans	Approved
6/27/46	Sandy	Sewage Disposal Plant	Not approved
6/28/46	Chiloquin	Sewage Disposal Plant	Not approved
6/28/46	Washington County (Raleigh School)	Sewerage System	Approved
6/29/46	Junction City	Preliminary Sewer Plan	No action

ABG759

## Plans - continued :

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
7/1/46	Nehalem	Sewer System	Not approved
7/1/46	Wheeler	Sewer System	Not approved
7/1/46	Cedar Mills	Disposal Plant	Not approved
7/1/46	Tillamook	Outfall & Interceptor Sewer	No action
7/1/46	Lebanon	Sewer Extensions	No action
7/2/46	Ontario	Sewer Extensions	Approved
7/5/46	Cedar Mills	Disposal Plant	Approved
7/10/46	Chiloquin	Sewage Treatment Plant	Conditional app.
7/11/46	Sandy	Disposal Plant	Approved
7/11/46	Medford (Bear Creek Orchards)	Sewerage	Approved
7/11/46	Cedar Hills	Preliminary Plans	Approved
7/12/46	Eugene	Interceptor Sewer	Approved
7/13/46	Near Beaverton	Broadmoor Sewers & Plant	Not approved
7/15/46	Redmond	Housing Disposal Plant	Approved
7/17/46	John Day	Sewerage Report	Approved
7/18/46	Cedar Hills	Disposal Plant	Approved
7/23/46	Milwaukie	Sewer Extensions	Approved
7/31/46	Beaverton (Kaiser Housing Project)	Sewer System	No action
8/6/46	Myrtle Creek (Housing Sewer System Project, Fir Mfg. Co.)		Cond. app.
8/9/46	Ontario	Terrace Heights Sewers	Approved
8/13/46	Milton (Housing Project)	Sewerage	Tentative app.
8/13/46	Portland Meadows Race Track	Sewerage	Approved
8/13/46	Merrill	Sewer Extensions	Not approved
8/15/46	Washington County (Broadmoor)	Sewers & Sewage Treatment Plant	Approved

Plans - continued:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
8/15/46	Beaverton (E. P. Cole Tract)	Individual Sewage Systems for 20 houses	Approved
8/15/46	Medford	Interceptor Sewer	Approved
8/15/46	Milton	Industrial Waste Sewer	Approved
8/17/46	Lebanon	Sewer Extensions	Not approved
8/17/46	Albany	Sewer Extensions	Not approved
8/17/46	Foster	Lumber Mill Sewerage	Not approved
8/19/46	Eugene (Glenwood Area)	Sewerage	Prov. app.
8/22/46	Albany	Sewer Extensions	Approved
8/30/46	Corvallis	Lateral Sewer No. 28th St.	Approved

BUDGET: MOTION by Mr. Stricklin, seconded by Mr. McPhillips, carried - that the Chairman and the Secretary be authorized to revise budget estimates in order to adjust them to current expense allowances and proposed civil service salary ranges.

PERSONNEL: MOTION by Mr. McPhillips, seconded by Mr. Veatch, carried - that the Sanitary Authority authorize Mr. Spies to attend the annual meeting of the American Public Health Association in Cleveland, Ohio, November 11 to 15, at Sanitary Authority expense.

NEXT MEETING: The date of the next meeting was set for December 13, at 10:00 A.M. in Portland, Oregon.

There being no further business the meeting was adjourned at 1:00 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.  
Secretary

ABG759

## MINUTES OF THE THIRTY-FIRST MEETING

of the

STATE SANITARY AUTHORITY

December 13, 1946

The regular meeting of the Oregon State Sanitary Authority was called to order by the chairman at 10:00 A.M., December 13, 1946, in the offices of the State Board of Health, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson and Messrs. John C. Veatch and Chas. E. Stricklin, Members. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineer; and T. M. Gerow, Assistant Sanitary Engineer.

MINUTES: - Since the minutes of the June 14 and September 13 meetings had been supplied to the members in advance, the minutes of these meetings were approved as prepared by the secretary without formal reading.

MUNICIPAL SEWAGE TREATMENT:

Salem - The secretary reported that in accordance with the instructions of the Sanitary Authority at its September 13 meeting, a letter had been forwarded to the Mayor and City Council of Salem, Oregon, in which that city was requested to proceed with the construction of an intercepting sewer to abate the immediate nuisance caused by the discharge of untreated sewage into the Willamette River near Salem. It was further reported by the secretary that the city of Salem had employed additional engineering assistance to prepare data for the design of the interceptor sewer and that the city proposed to have plans ready for submission to the Sanitary Authority by March 1947. Inasmuch as the city will undergo a change in local government on January 1, 1947, it was recommended that no formal action be taken at this meeting until the new council and city manager had taken office and had been advised of the necessity for the interceptor sewer construction.

Baker - A letter from Mayor M. McKim of Baker, Oregon, was read in which the Mayor advised the Authority that repairs to the city sewage treatment plant were under way and that improvements would be made in accordance with the recommendations of the Sanitary Authority engineers. Complaints from the local health department and from riparian owners along the receiving stream resulted in an investigation of the maintenance and operation of the sewage treatment plant and the submission of a complete report to the city on the subject.

Prineville - Letters from Mrs. May F. Barney, Mayor, Prineville, and from Mr. R. H. Corey, Consulting Engineer, relative to sewer extensions in the city of Prineville were brought to the attention of the members of the Authority. In an explanation of the cause of the letters, the secretary stated that the city proposed to use six-inch sewer pipe on some extensions to the sanitary sewers, and that in view of the Authority's general policy of requiring eight-inch pipe as a minimum size, the Authority's engineers in the review of plans had not approved the use of the six-inch extensions. It was pointed out that when the system was originally constructed in 1940, the Authority had approved the use of six-inch laterals, and that the city might have some justification for the belief that the use of six-inch laterals would be satisfactory to the Authority at this time.

Mr. Stricklin stated that more definite information should be obtained as to whether the use of the six-inch pipe already installed had been satisfactory before permission to use this size in new extensions should be granted. It was pointed out by Mr. Stricklin that real-estate development in the area surrounding Prineville was progressing rapidly and that ultimately sewage from these areas must be discharged into the Prineville sewer system.

It was Mr. Veatch's opinion that no plans should be approved by the Authority which were not in accordance with sound engineering principles.

Mr. Wendel suggested that if the six-inch pipe were to be permitted in this

ABG759

instance, a letter should be forwarded to the city of Prineville in which the city was advised that the Sanitary Authority definitely recommends and approves the use of eight-inch pipe as the minimum size for sewer construction, but if the city of Prineville chooses to install six-inch pipe, the proper operation of the sewer system would be their own responsibility.

MOTION by Mr. Stricklin, seconded by Mr. Veatch, and carried:- that, inasmuch as six-inch sewer pipe had been used in a portion of the original Prineville sewer system with the approval of the Sanitary Authority, (1) permission be granted for the installation of six-inch pipe for lateral sewers in the proposed extensions to the city of Prineville's sewer system provided, however, that said six-inch pipe be installed only where future extensions will not be required or on dead end lines; (2) the city of Prineville be notified that the Sanitary Authority definitely recommends and approves the installation of eight-inch pipe as the minimum size of pipe for sewers, and if the city of Prineville uses six-inch pipe, they must accept full responsibility for proper operation and maintenance of the sewer system, and if any maintenance problems arise which are due to the use of six-inch pipe, the city must relay the lines with pipes of larger diameter; and (3) the city be further advised that all future plans should be drawn for the use of eight-inch pipe as the minimum size of pipe to be used in the sewer system.

FUTURE PROGRAM: A program to encourage cities to undertake studies of sewage flow and characteristics was outlined to the members of the Authority and the draft of proposed letters to municipalities was submitted for review and approval. MOTION by Mr. Veatch, seconded by Mr. Stricklin, and carried:- that the Authority endorse the program and that the letters prepared by the secretary be forwarded to all communities in which sewage treatment plants are to be constructed.

SEWER AND SEWAGE TREATMENT DESIGN STANDARDS: - It was then proposed by the secretary that the Authority consider the preparation and adoption of minimum standards for the design of sewers and sewage treatment plants, such standards to serve as a guide and be the Authority's minimum requirements for the design of sewers, sewage treatment works, and appurtenant structures. MOTION by Mr. Veatch, seconded by Mr. Stricklin, and carried:- that the Sanitary Authority's engineering staff be directed to prepare minimum standards for sewer and sewage treatment plant design and that these standards be presented for consideration at the next regular meeting. Mr. Stricklin suggested that the standards also be submitted to prominent consultants for their recommendations and advice before the next meeting.

INDUSTRIAL WASTE DISPOSAL:

Gresham Berry Growers Cooperative - The secretary reported that no method had yet been worked out by this Cooperative to dispose of the wastes from corn processing at their plant, although the Cooperative had assured the Sanitary Authority that they would do everything possible to solve the problem. It was Mr. Veatch's belief that strenuous/<sup>efforts</sup> should be made to prevent industries from polluting Johnson Creek, and it was his thought that the Authority should press action against all offenders until solutions are reached whereby wastes are properly treated before being discharged into streams. The secretary was instructed to review the file on this case, confer with Mr. Wendel, and prepare a strong letter to Gresham Berry Growers Cooperative advising them that the solution of their problem was their responsibility, and that it was imperative the wastes be not discharged into Johnson Creek until after they had been properly treated.

POLICIES: The secretary reported that industrial waste investigations had been started on the Columbia Slough, and that the Authority's engineers were about ready to begin work on Willamette Valley industries. The secretary requested suggestions as to method of working with industries pertaining to pollution of

ABG759

streams. It was Mr. Veatch's belief that leeway should be allowed old industries where honest effort to solve water pollution problems is being made, but such industries should be notified that they are expected to solve the problem of waste treatment as soon as they possibly can. It was the opinion of those present that all new industries should be advised that no waste detrimental to the waters of the state shall be permitted to discharge into such waters. Mr. Wendel stated that he also thought old established industries that were making no effort to solve their waste problem should be notified to take prompt action in the matter of waste disposal problems. The secretary was of the opinion that where no progress is being made at all by industries, they should be cited to appear before the Authority.

The secretary stated that industries using lagoons as a means for storage of wastes during the dry season should be required to secure a permit from the Sanitary Authority granting permission to discharge such wastes into a stream and outlining the conditions under which a stream could be used for disposal of wastes. The secretary was instructed to draw up minimum requirements for the discharge of lagoon-stored wastes into the streams and present them for consideration at the next meeting.

INTERSTATE WATER POLLUTION AGREEMENTS: A communication was presented from the Washington Pollution Control Commission in which it was suggested that the states of Washington and Oregon through their respective water pollution control agencies meet and arrive at some satisfactory standard of purity for the Columbia River. The engineering staff was authorized to meet with technical personnel from the Washington Pollution Control Commission and draw up standards for presentation to the Oregon Sanitary Authority at their next meeting. The secretary was also directed to communicate with the states of Idaho and California on the matter of standards of purity for interstate streams.

FEDERAL LEGISLATION: The question was raised as to whether the Authority should take active interest in federal legislation pertaining to stream pollution. A preliminary draft of a bill presented by the Conference of State Sanitary Engineers to the Association of State and Territorial Health Officers, November 22, 1946, for filing with the 80th Congress, was presented to the Authority with the statement that copies of this draft would be sent to each member of the Authority before the next meeting. It was the belief of those present that the Authority should give serious thought to all such bills so that appropriate action could be taken by the Authority relative to lending support to water pollution control legislation believed to be in the best interest of the state.

BUDGET 1947-1949: The request for appropriations for the 1947-1949 biennium as revised by the Budget Director was reviewed and was considered satisfactory by members of the Authority.

PROJECT PLANS: MOTION by Mr. Stricklin, seconded by Mr. Veatch, and carried:- that the action of the State Sanitary Engineer on the following project plans be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
Sept. 6	Eugene (Colin Kelly Jr. High School)	Sewerage	Approved
Sept. 6	Eugene	Sewer Extensions	Approved
Sept. 6	Merrill	Sewer Extensions	No action
Sept. 6	Merrill	Disposal Plant Additions	Approved
Sept. 7	Gladstone	Engineering Report on Sewage Disposal	No action
Sept. 16	Dorena	Sewerage for Dam Site	Not approved
Sept. 16	Milton	Sewer System	Approved
Sept. 19	Albany	Sewer Extensions	Approved
Sept. 19	Myrtle Creek (83-unit Housing Project)	Revised Sewer System	Returned for correction

Oct.

ABG759

PROJECT PLANS - continued

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
Sept. 23	Milton	Sewage Disposal Plant	Approved
Oct. 2	Myrtle Creek (Fir Mfg. Co.)	Sewer System	Approved
Oct. 2	Dorena (Dam Site)	Sewerage	Prov. approval
Oct. 7	Sweet Home	Sewers & Sewage Disp.	Approved
Oct. 14	Ontario	Sewer Extensions	Approved
Oct. 17	Mapleton (FPHA Project)	Sewage Plant Additions	Not approved

Nov. 22	Prineville	Sewer Extensions	Prov. Approval
Nov. 20	Albany	Sewer Extensions	Approved
Nov. 30	Multnomah County (Vanguard Cannery)	Sewage & Industrial Waste	Approved

NEXT MEETING: Date for the next meeting was set for March 21, 1947 at 10:00 AM, in the offices of the State Board of Health, Portland, Oregon.

There being no further business, the meeting adjourned at 12:15 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.,  
Secretary

## MINUTES OF THE THIRTY-SECOND MEETING

of the

## STATE SANITARY AUTHORITY

April 11, 1947

The regular meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:00 A.M., April 11, 1947, in the offices of the State Board of Health, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson and Messrs. John C. Veatch, Blaine Hallock, Chas. E. Stricklin, and B. A. McPhillips, Members; Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineer; and T. M. Gerow, Assistant Sanitary Engineer.

MINUTES:- The minutes of the preceding meeting, December 13, 1946, having been submitted to the members of the Authority by the Secretary in advance and there being no additions or corrections to same, were unanimously approved, without reading, as prepared by the secretary.

PROJECT PLANS:- Following a review of sewerage project plans submitted to the State Sanitary Authority for examination and approval, it was MOVED by Mr. Stricklin, seconded by Mr. McPhillips, and carried - that the action of the Sanitary Authority engineers on the following project plans be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
Dec. 19, 1946	Prineville	Sewer Extensions	Prov. Approval
" 30 "	Cedar Hills	Sewers	Approved
" 30 "	Cedar Hills	Area "B" Sewage Lift Station	Approved
Jan. 8, 1947	Prineville	Sewage Pumping Station	Conditional Approval
" 27 "	Pendleton	Sewer Extensions	Not approved
" 27 "	Pendleton	Eastern Oregon State Hospital (Cost Estimate Report)	No action
" 27 "	Garibaldi	Sewer System Report	Prov. approval

ABG759

## Project Plans - continued

Date	Location	Type of Project	Action Taken
Jan. 27, '47	Roseburg	Sewerage System for Cloverdale Addition	Not approved
Feb. 4 "	Roseburg	" " " " "	Prov. Approval
" 7 "	Detroit Dam Site	Sewerage System	Not approved
" 8 "	Dallas	Sewage Plant(Prel. Report)	No action required
" 14 "	Eugene	Interceptor, Franklin St.	Approved
" 14 "	Eugene	Sewer Extensions	Prov. approval
" 14 "	Roseburg	Sewerage System, Cloverdale Addition	Approved
" 14 "	Hermiston (Turtle Town)	Sewer System	Prov. approval
" 14 "	Pendleton	Sewer Extensions	" "
" 20 "	Riddle	Sewage Plant	Not approved
" 28 "	Merrill	Sewage Plant Addition	Prov. approval
" 28 "	Pendleton	Sewage Plant (Prel. Report)	No action
" 28 "	Pinehurst	Sewer System	Approved
Mar. 12 "	Springfield	Sewer Extensions	Approved
" 12 "	Detroit Dam Site	Sewerage System	Approved
" 20 "	Meridian Dam Site	Sewerage System(Prel. Report)	Approved
" 20 "	Eugene	Amozone Interceptor, Proj.#2	Approved
" 19 "	Fairview Home, Salem	Sewer Extensions	Not approved
" 29 "	La Grande	Sewer Extensions	Approved

MUNICIPAL SEWAGE TREATMENT:-

Portland - The secretary reported briefly on the status of the Portland sewerage project as follows: (1) plans for the intercepting sewers and sewage lift stations are essentially complete; (2) plans for the sewage treatment plant are almost complete; (3) it was expected that the city would call for bids on the Columbia Slough

interceptor during the first quarter of 1947, but that due to difficulties in obtaining stenographic help to type specifications, a call for bids would probably be deferred until sometime during the second quarter of 1947.

Mr. Wendel directed attention to the Monday evening broadcasts over Portland radio station KWJJ in which the Federated Men's Clubs of the city were advocating the installation of activated sludge treatment plants and the sale of fertilizer prepared from activated sludge produced by such treatment plants. Many mis-statements concerning the value of interceptor sewers and the inadequacy of the proposed primary treatment facilities for the city of Portland were made by those taking part in the broadcasts.

The Chairman advised those present that he had discussed the matter with Portland city officials and that they were not alarmed over the effects the broadcasts might have on their program for the construction of intercepting sewers and primary sewage treatment plant. In the discussion that followed, it was the consensus of those present that no action should be taken by the Authority to refute the misstatements made on the broadcasts.

Lebanon - The secretary brought to the attention of the Sanitary Authority a request by the city of Lebanon for permission to discharge storm water into a canal which is the source of the Albany municipal water supply. It was reported that the Authority's engineers had advised the city officials of Lebanon that the discharge of storm water drainage into the Albany water supply could not be approved by the Authority and that the city should arrange to construct their storm water drains in such a manner that they would discharge into either Marks Slough or the South Santiam River. Those present approved of the action of the Authority's engineers with respect to disposal of storm water for the city of Lebanon; and instructed their engineering staff to render any further assistance to the city of Lebanon that might be required to obtain a solution to the problem.

ADG759

Beaverton - The matter of the use of storm water drains for the disposal of domestic sewage, and for the disposal of effluents from septic tanks in the city of Beaverton was discussed. It was reported that these storm drains terminate in Beaverton Creek which is a tributary of the Tualatin River and the discharge of untreated domestic sewage and septic tank effluents into the stream through the storm drains constitutes a water pollution problem. The secretary was instructed to forward a letter to the city council at Beaverton, and to any other city in the state of Oregon where similar conditions exist, which would clearly outline the Sanitary Authority's policy relative to the use of storm water drains for the disposal of untreated domestic sewage and septic tank effluents. In the communication it was requested that the secretary notify the cities involved that they should immediately proceed with the construction of sanitary sewer systems and adequate sewage treatment facilities.

Broadmoor Housing Project - Kenneth H. Spies, Associate Sanitary Engineer, reported to the Authority that the sewage treatment plant at Broadmoor Housing project was not being constructed in accordance with the plans which were submitted to and approved by the Sanitary Authority. Mr. Spies stated that the contractor had not constructed the plant according to the plans through his failure to put into the concrete walls the amount of reinforcing steel indicated on the plans. The contractor's failure to provide the required amount of reinforcing steel might weaken the structures and cause a failure at some future time.

Mr. Wendel expressed the opinion that if any modifications to the plans were made during the construction of sewage treatment works and such modifications would affect the operation of the plant that those responsible for its construction should be cited to appear before the Sanitary Authority. In the opinion of Mr. Stricklin and others, the plans submitted to the Sanitary Authority are approved not only on the basis of sufficient capacity and proper operation, but also on the basis of

sound structural design, and if such plans are modified subsequent to approval of the Authority, <sup>the Authority</sup> could enjoin construction. It was MOVED by Mr. Stricklin, seconded by Mr. Hallock, and carried - that the Authority notify the owner and contractor of the Broadmoor Housing project that the plans had been modified without the knowledge or approval of the Authority and that if such modification affected the operation of the plant, the Authority would withdraw its approval; both the owner and the contractor to be further advised that no other modifications to the original plans shall be made without first securing the prior approval from the Authority and that if such modifications are made without the approval of the Authority, appropriate action would be taken to secure compliance with state statutes.

STANDARDS FOR SEWERS AND SEWAGE TREATMENT:-

The secretary reported that the standards for sewer and sewage treatment plant design which the Authority engineers were instructed to prepare for submission at the present meeting were in the process of preparation but due to other unexpected activities, the standards had not yet been completed. It is hoped that a preliminary draft of the standards will be available for distribution before the next meeting. It was also reported that this preliminary draft would be submitted to prominent consulting engineers in the city for their comments and suggestions prior to formal submission to the Sanitary Authority for adoption.

SUBURBAN SEWAGE DISPOSAL:-

Coastal Area - It was reported by the secretary that some progress was being made in the matter of sewers and sewage disposal in the coastal areas. The cities of Wheeler and Nehalem have sewer systems under construction and will provide sewage treatment facilities in the immediate future.

It was also reported that the cities of Garibaldi and Rockaway have employed consultants to furnish cost estimates on sewer and sewage treatment plant construction.

The area in which the most serious public health and pollution problems exist at the present time is in the Oceanlake district, Lincoln County; where inadequate

ABG759

private sewage disposal facilities are not only responsible for the pollution of small fresh water streams but may also affect the safety of the beach area. It was MOVED by Mr. Hallock: seconded by Mr. Veatch; and carried - that the Authority engineers confer with the city officials at Oceanlake in an effort to obtain their cooperation in the construction of sewers and sewage treatment facilities at an early date.

Willamette Valley - The matter of sewage disposal in suburban areas of the Willamette Valley was discussed and it was reported that the most serious area was located in Southwest Multnomah County with minor problem areas in Washington County. The Southwest Multnomah County district has planned a sanitary district election on April 22 and it was believed that a sufficient number of those residing in the district were in favor of its establishment to assure a favorable vote in the election.

INDUSTRIAL WASTES:-

Cannery:-

Gresham Berry Growers Cooperative, Gresham, Oregon - The secretary advised those present that the letter which they had directed him at their December 13 meeting to forward to the Gresham Berry Growers Cooperative had been prepared for the chairman's signature but due to the progress made by the city of Gresham and the Berry Growers Cooperative, the letter had not been mailed. Members of the Authority were advised by their engineering staff that arrangements had been made for the Berry Growers to dispose of their waste from corn processing operations through treatment with domestic sewage and that estimates of the cost of providing this treatment were now in the process of preparation by the city's consulting engineers.

Bird's-eye Snider Division, General Foods, Inc., Woodburn, Oregon - Upon receipt of information that the Bird's-Eye Snider Division, General Foods, Inc., Woodburn, Oregon, had conducted studies of the quantity and quality of wastes produced by the

cannery in Woodburn in accordance with the Sanitary Authority's previous suggestions, those present agreed that this cannery, because of its pollution of the Pudding River, should be requested to carry on pilot plant studies either alone or in conjunction with other agencies to determine the treatment process which would be most practical and economical for the disposal of their wastes.

Pulp and Paper:-

Mr. Hallock requested information as to the progress made by the pulp and paper mills and was advised that little work had been done by the Hawley Pulp and Paper Company at Oregon City; the Spalding Pulp and Paper Company at Newberg; or the Oregon Pulp and Paper Company at Salem. The secretary was directed to forward letters to all these paper mills requesting a report on what progress had been made toward solving their waste disposal problems.

STANDARDS OF STREAM PURITY:-

Columbia River - The secretary reported briefly on conferences held with representatives of the Washington State Pollution Control Commission and the Washington State Department of Health relative to standards of purity for the Columbia River. It was pointed out that some minor differences of opinions existed between the State of Washington and the State of Oregon regarding the minimum standards which should be established. The Authority then instructed the engineering staff to confer further with members of the technical staff from the Washington agencies in an effort to reach an amicable agreement. If the differences could not be worked out through joint conferences of the technical staff then the Authority would request a joint meeting with the Washington State Pollution Control Commission in an effort to arrive at some satisfactory agreement.

Snake River - It was reported by the secretary that an informal agreement had been reached with the Idaho State Department of Health on standards for municipal sewage treatment for cities located along the Oregon side of the Snake River. In conference with the technical staff of the Idaho Board of Health and with municipal officials of cities in Idaho located along the Snake River, it was determined that

ABG759

primary treatment of domestic sewage and chlorination of the sewage effluent would meet current requirements for domestic sewage disposal on that part of the Snake River which forms an interstate boundary.

FEDERAL LEGISLATION:-

The provisions of various water pollution control bills which had been introduced in Congress were discussed and inasmuch as the Authority was opposed to those provisions of the bills which made grants and loans available to municipalities and others for the construction of treatment or disposal works, those present agreed that the Authority should take no formal action either in supporting or opposing any of the current legislation in Congress.

Senate Bill 244 which makes it possible for industries to deduct from their income tax the cost of construction or the cost of the operation of industrial waste treatment facilities was discussed in view of the fact that such legislation might establish a precedent for the enactment of similar legislation affecting other tax legislation. After some discussion, it was MOVED by Mr. Veatch, seconded by Mr. Stricklin, and carried - that the Authority go on record as favoring the type of legislation proposed by SB. 244.

PUBLIC RELATIONS:-

The secretary requested members of the Authority to furnish their comments and suggestions on the subject of public relations. After a brief discussion, the secretary was instructed to keep the activities of the Sanitary Authority before the public by every available means.

INDUSTRIAL WASTE REPORT:-

The secretary advised members of the Authority that a preliminary draft of the Engineering Experiment Station Bulletin No. 22 had been submitted to the Authority for review and that it contained useful information on the quality and quantity of industrial waste as well as additional data on municipal sewage flows and characteristics which had not been published in the previous reports.

DISPOSAL OF SAWDUST:-

The matter of the discharge of sawdust into public waterways was discussed and

it was pointed out that existing legislation prohibits the disposal of sawdust by discharge into public waterways only when such practices can be proven to be detrimental to fish life. The secretary suggested that the Authority cooperate with the Fish & Game Commissions to submit an amendment to existing statutes at the 1949 Legislature, which would eliminate that phrase of Section 116-1101 which requires proof that the discharge of sawdust into a stream is detrimental to fish life. It was the concensus of those present that such legislation should be sponsored by the sportsmen.

PURCHASES:-

The secretary requested authority for the engineering staff to attend the meeting of the Pacific Northwest Section of the American Water Works Association and the Pacific Northwest Sewage Works Association at Victoria, B. C., May 13 to 17, 1947. It was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the travel so requested be authorized.

The secretary also requested authority to purchase an opaque projector for use at sewage works operators' conferences and for other purposes. It was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried - that the secretary be authorized to purchase such opaque projector.

SALARY STATUS:-

Mr. Wendel raised a question as to the salary status of the engineering staff. Dr. Erickson discussed the matter with Mr. Wendel and outlined the program of the State Civil Service Commission on job classifications and salary ranges.

The date for the next meeting was set for July 11, 1947. There being no further business, the meeting adjourned at 12:45 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*

Secretary

ABG759

## MINUTES OF THE THIRTY-THIRD MEETING

of the

## STATE SANITARY AUTHORITY

July 11, 1947

The thirty-third regular meeting of the Oregon Sanitary Authority was called to order by the Chairman at 10:10 A.M., on July 11, 1947, in the offices of the State Board of Health, Behnke-Walker Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Messrs. B. A. McPhillips, Blaine Hallock, Charles E. Stricklin, and John C. Veatch, Members. Also present were Curtiss M. Everts, Jr., Secretary; and Kenneth H. Spies, Associate Sanitary Engineer.

MINUTES:- The minutes of the April 11th meeting having been supplied to the members in advance, were approved as prepared by the secretary, without reading.

PROJECT PLANS:- It was MOVED by Mr. Hallock, seconded by Mr. Veatch, and carried that the Sanitary Authority take the following action on sewerage project plans, submitted for review during the periods, April, May and June, 1947:

Date	Location	Type of Project	Action Taken
April 2	Crowfoot School Addition	Preliminary Plans Sewerage	Preliminary App.
2	Sweet Home High School	" " "	" "
2	Myrtle Creek High School	" " "	" "
2	Philomath Grade School	" " "	" "
2	Springfield Grade School	" " "	" "
2	Roseburg, Riverside School	" " "	" "
2	Whittaker School Addition (Multnomah County)	" " "	" "
7	Broadmoor Subdivision (Washington County)	Revised sewage lift station	Approved
7	Phoenix	Sanitary Sewer System	Prov. approval
8	Myrtle Creek	Housing Project Sewerage	Not approved
8	S.W.Vermont Heights (Multnomah County)	Sewer System	Not approved

Date	Location	Type of Project	Action Taken
April 8	Riddle	Sewage Treatment Plant	Not approved
9	Merrill	Alternate Sewage Treatment	Approved
21	Stayton	School Sewerage	Approved
25	Pinehurst (Washington County)	Temp. sewage plant for Housing Project	Prov. approval
10	The Dalles	Sewer extensions	Prov. approval
30	Grants Pass	Sewer extensions	Prov. approval
May 3	Oregon City	Sewage Treatment Plant	Approved
3	Milton	Industrial waste sewer	Approved
5	Riddle	Revised sewage treatment plant	Approved
8	Albany	Sewer extensions	Prov. approval
19	Multnomah County	Revised sewer system	Prov. approval
19	Portland	Sewer system	Prov. approval
21	Myrtle Creek	Revised Housing Project Sewerage	Approved
21	Riddle	Temporary Sewage Plant	Approved
23	Pendleton	Sewer extensions	Approved
26	Pendleton	Sewer extensions	Not approved
June 6	Rockaway	Preliminary Plans Sewer System	No action
11	McNary Dam Site	Sewers & Sewage System (Treatment plant)	Not approved
24	Nehalem	Sewer extensions	Not approved
25	Medford	Sewage Plant extension	Action deferred
26	Portland	East Section, Columbia Slough Interceptor	Approved
27	Phoenix	Preliminary plans - sewage treatment plant	No action

SECRETARY'S REPORT:

CANNERY WASTE DISPOSAL:- The proposed plans of the Northwest Cannery Association for a program of investigation to determine some practical means for the utilization,

treatment, or disposal of cannery wastes was outlined by the secretary.

After a discussion on Sanitary Authority participation in the project, it was the unanimous opinion of those present that Sanitary Authority funds could not be used to assist industry in obtaining a solution to their waste disposal problems. The secretary was instructed, however, to offer the assistance of the professional staff for planning and general supervision of such investigations.

RADIO BROADCASTS AND TALKS BY MR. WELCH:- The misinformation quoted in radio broadcasts and public talks by Mr. Welch, relative to the Portland sewerage project was brought to the attention of the Authority. Confirming a previous decision on the matter, it was decided that the Sanitary Authority would not enter into any discussion on the subject with Mr. Welch, but that correct information on file in the Sanitary Authority office would be made available to interested persons upon request.

CLEAN WATERS, INC.:- The chairman then outlined the background of a proposed organization which planned to form a corporation known as Clean Waters, Inc. Since the data presented was for information purposes only, no action on the part of the Sanitary Authority was taken. The secretary then reported that the proposed organization had been approved by the

PULP AND PAPER WASTES:- The secretary then reported that representatives of the Weyerhaeuser Timber Company had arranged to meet with the professional staff of the Sanitary Authority, the Fish Commission, and the Game Commission at which time they would outline preliminary plans for disposal of wastes from the proposed pulp mill to be constructed adjacent to the McKenzie River, near Springfield, Oregon. Mr. Veatch stated that new industries should understand that no new sources of pollution would be permitted. Existing industries have been allowed additional time to solve their problems, but new industries must be prepared to treat or dispose of their wastes in a proper manner.

PERSONNEL:- Upon recommendation from the secretary, it was MOVED by Mr. Hallock, seconded by Mr. Veatch, and carried, that salaries of Sanitary Authority personnel be increased as follows: Kenneth H. Spies - \$375.00 to \$384.00 per month, effective July 1, 1947; T. M. Gerow - \$250.00 to \$264.00 per month, effective July 1, 1947; and Grace D. Lundquist - \$165.00 to \$173.00 per month, effective September 1, 1947.

The secretary then announced that a staff member, Mr. Spies, had been honored by his election as Vice-Chairman of the Pacific Northwest Sewage Works Association. Mr. Spies was commended by the Chairman on his achievement.

FEDERAL LEGISLATION:- The substitute for Senate Bill 418 in the United States Congress was briefly explained by the secretary.

STATE INSTITUTIONS:- The secretary reported that plans were now under way to construct a sewer from Fairview Homes to Salem and that the state was beginning to negotiate with the city of Salem on treatment of sewage from the penitentiary and the State Hospital.

PORTLAND SEWERAGE PROJECT:- The status of the Portland project was then discussed, and those present were advised that contracts had been signed for the construction of the Columbia Slough interceptor at a cost of approximately \$450,000. It was Mr. Wendel's belief that appropriate publicity should be given to the start of the project. Suggestions were made that Mr. Averill of the Izaak Walton League and Mr. Smith of the Wildlife Federation be present along with Mr. Wendel. The secretary was requested to discuss the matter with Portland city officials and to suggest that suitable publicity be given the project.

WILLAMETTE VALLEY CITIES:- The chairman then requested the secretary to report on the status of sewerage works planning in Willamette valley cities. The Authority was advised that satisfactory progress had been made in almost every city; Albany being the one exception. It was explained, however, that Albany had just completed an ambitious sewer system extension project and that they are now seriously considering the problem of sewage treatment.

WILLAMETTE VALLEY WOOD CHEMICAL COMPANY, SPRINGFIELD, OREGON:- Mr. Spies was then requested to report on his field investigation of operations and of waste disposal facilities installed at the Willamette Wood Chemical Company in Springfield, Oregon. Mr. Spies stated that the plant was operating at 1/5 of capacity and that the cost of producing alcohol was approximately three times the sales price. A rock-filled lagoon had been provided as a treatment unit and the wastes were sprayed on the rock to reduce the temperature. The filter effluent is connected to the outfall sewer, which dis-

ABG759

charges into the Willamette River. Mr. Spies stated that he had advised the plant manager that the treatment was unsatisfactory. Upon completion of the report, the Sanitary Authority requested the staff to collect and analyze samples of the plant effluent and if pollution was present to issue a citation.

PULP & PAPER INDUSTRIES:- The secretary stated that letters had been sent to Hawley Pulp & Paper Company, Oregon City; Spalding Pulp & Paper Company, Newberg; and the Oregon Pulp & Paper Company, Salem, Oregon, requesting a report on the progress made in solving waste disposal problems. Since time has not permitted the receipt of replies it was MOVED by Mr. Hallock, seconded by Mr. McPhillips and carried, that if the replies did not report satisfactory progress that an appropriate citation be issued.

COLUMBIA RIVER STANDARDS:- The matter of standards of purity for the Lower Columbia River was then discussed. The secretary advised those present that the proposed standards, which had been forwarded to each member by letter in advance of the meeting, met the general approval of the Washington State Pollution Control Commission, but that the Washington State Department of Health did not agree that chlorination was unnecessary.

The question arose as to whether the statutes implied that the Columbia River should be made safe for swimming purposes and the secretary was requested to refer the proposed standards to the attorney general for an opinion as to whether the proposed standards conformed to the statutes which established the responsibilities of the Authority.

STANDARDS FOR SEWERS, SEWAGE TREATMENT AND INDUSTRIAL WASTE DISPOSAL:- Copies of proposed policies governing the preparation and submission of plans and specifications for sanitary sewer systems, sewage treatment plans, and industrial waste disposal works were then distributed, and those present were advised that additional copies of the proposed standard had been prepared and were being sent to consulting engineers, college authorities and others for review and comment. It was further stated that when all the comments and criticisms had been received, appropriate revisions to standards would be made and the final draft submitted to the Authority

for adoption.

NEXT MEETING:- The date of the next meeting was left to the discretion of the chairman and the secretary, with the understanding that a joint meeting with members of the Washington State Pollution Control Commission would be arranged if possible and that each Sanitary Authority member would be canvassed in advance relative to the suitability of the meeting date.

There being no further business, the meeting adjourned at 12:25 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.,  
Secretary

ABG759

## MINUTES OF THE THIRTY-FOURTH MEETING

of the

STATE SANITARY AUTHORITY

November 24, 1947

The thirty-fourth regular meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., November 24, 1947, in the offices of the State Board of Health, Behnke-Walker Building, 1022 S. W. 11th Avenue, Portland, Oregon. Those present were Harold F. Wendel, chairman; Messrs. B. A. McPhillips, Blaine Hallock, Chas. E. Stricklin, and John C. Veatch, members. Also present were Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineer; and T. M. Gerow, Jr., Assistant Sanitary Engineer.

MINUTES:- The minutes of the preceding meeting, July 11, 1947, having been submitted to the members of the Authority by the secretary in advance and there being no additions or corrections to same, were unanimously approved, without reading, as prepared by the secretary.

PROJECT PLANS:- Following a review of sewerage project plans submitted to the State Sanitary Authority for examination and approval, it was MOVED by Mr. Hallock, seconded by Mr. Veatch, and carried - that the action of the Sanitary Authority engineers on the following project plans be approved:

Date	Location	Type of Project	Action Taken
July 8	Garibaldi	Sewerage System	Not approved
8	Coos Bay	Sewerage for Weyerhaeuser Timber Company	Prov. approval
8	Phoenix	Sewage Treatment	Recommendations submitted
10	Springfield	Sewer Extensions	Approved
10	Orient	Public School sewerage (revised plans)	Approved
10	Independence	Sewer extensions	Not approved

	Date	Location	Type of Project	Action Taken
July	10	Corvallis	Sewer extensions	Approved
	17	Medford	Sewage plant enlargement	Approved
	17	Garibaldi	Sewerage system (revised plans)	Approved
	21	Forest Grove	Interceptor sewer	Approved
Aug.	11	Lebanon	Sewer extensions	Not approved
	11	Malin	Sewer extensions	Not approved
	12	Milwaukie	Sewer extensions	Not approved
	14	Springfield	Sewer extensions	Not approved
	26	Lebanon	Sewer extensions	Not approved
Sept.	3	Hermiston	Preliminary report for new sewage plant	Approved
	4	Harrisburg	Sewer extensions	Prov. approval
	4	Corvallis	Sewer extensions	Approved
	15	Springfield	Sewers, Weyerhaeuser Mill	Approved
	15	Corvallis	Sewer extensions	Approved
	16	Salem	Sewers, Mapleton Addition	Not approved
	19	Albany	Sewer extensions	Prov. approval
	20	Klamath Falls	Sewer extensions	Not approved
	24	Eugene	Sewer extensions	Approved
	25	Ontario	Sewer extensions	Prov. approval
Oct.	8	Eugene	Sewage plant design data	Approved
	8	John Day	Sewer system plans	Prov. approval
	15	Malheur County	Sewerage system - School	Prov. approval
	8	John Day	Sewage plant design data	Changes proposed
	15	Springfield	Sewer extensions	Prov. approval
	15	Malin	Sewer extensions	Approved
	17	Myrtle Creek	Sewerage system-School	Recommendations submitted

ABG759

Date	Location	Type of Project	Action Taken
Oct. 17	Philomath	Sewerage system-school	Recommendations submitted
31	Rockaway	Preliminary sewerage report	Approved
31	Washington County	Sewerage system-Barnes School	Prov. approval
31	Pendleton	Final engineering report	Approved

MUNICIPAL SEWAGE TREATMENT: The members of the Sanitary Authority reviewed the progress that had been made by municipalities in planning for the construction and financing of sewage treatment facilities; and the secretary recommended that formal orders be served on all cities discharging untreated or inadequately treated wastes into the waters of the state.

In the discussion that followed, Mr. Veatch stated that the cost of sewerage projects was a primary consideration of many cities, but that we should notify those cities who have done nothing that they have not made satisfactory progress and that legal proceedings will be instituted unless they act immediately.

Mr. Hallock then raised the question as to whether the Sanitary Authority was authorized by statute to issue an order without first making an investigation and holding a public hearing. As a result of this question, the secretary was instructed to refer the matter to the Attorney General for an opinion on the following questions: (1) May the Sanitary Authority issue an abatement order without first according the recipient of such an order a hearing; (2) May the Sanitary Authority issue an abatement order following a hearing, based upon notice to the offender and a citation to appear before the Authority for a showing of cause; and (3) May such nuisance be abated only by court order.

The discussion of the progress made by municipalities in planning for the construction and financing of sewage treatment works was continued; and it was the belief of those present that action should be taken to obtain results in those cities in which very little progress had been made. It was MOVED by

Mr. Hallock, seconded by Mr. Veatch, and carried, that the cities of Albany, Cottage Grove, Huntington, Monmouth, North Bend, Sheridan, and Toledo be notified that the progress they have made toward the ultimate construction of sewage treatment plants has not been satisfactory to the Sanitary Authority and that each city must begin the preparation of definite plans for construction of a sewage treatment plant and must adopt a definite fiscal program within ninety days, or the Sanitary Authority will take appropriate legal action.

Wood Village Sewage Treatment Plant:- Mr. Spies reported on the lack of proper maintenance and operation of the sewage treatment plant at Wood Village, Oregon; and stated that the owner, Mr. W. C. Bauman, had been notified verbally and in writing on several occasions that the plant was not being properly operated, thereby creating a nuisance and a water pollution condition in the receiving stream. The secretary was directed to notify Mr. Bauman that unless the plant was properly operated in the future, the Sanitary Authority would institute legal proceedings to obtain conformance with state statutes.

Portland Sewerage Project:- The chairman requested the secretary to read a letter from Commissioner William A. Bowes in which the schedule of construction for the Portland sewerage project was partially outlined. When the reading of the letter had been completed, the chairman then pointed out that of the estimated \$14,500,000 required to complete the project, contracts for only about \$500,000 had been actually let. The chairman stated further that there was doubt in the minds of many that the city of Portland was proceeding in good faith to complete their project and to abate pollution of the Willamette River. The Secretary was instructed to forward a letter to the city of Portland in which attention is directed to the feeling on the part of many people of the city of Portland and the members of the Sanitary Authority that the city is not proceeding with its construction program in good faith. The letter was to state further that a special meeting of the Sanitary Authority has been called in Portland on January 10, at 10:00 A.M. at which time the representatives of the city of Portland are requested to be present to furnish

ABG759

the Sanitary Authority complete information on the status of their sewerage project.

The secretary was then instructed to request the cities of Central Point, Corvallis, Eugene, Forest Grove, Gladstone, Independence, Lebanon, McMinnville, Milwaukie, Myrtle Creek, Newberg, Oregon City, Oswego, Pendleton, Salem, Springfield, Tillamook, West Linn, and West Salem to furnish to the Sanitary Authority by January 10, 1948 an up-to-date report on the progress that they have made relative to the installation of sewage treatment works. In addition, the secretary was also instructed to notify the cities of Beaverton, Garibaldi, Oceanlake, Rockaway, and Sandy that the discharge of sewage from septic tanks and other private sewage disposal systems into small waterways has created a public health hazard, and nuisance condition and that these cities should make immediate plans for the construction of adequate community sewerage systems.

State Aid for Municipal Treatment Plant Construction:- The subject of state financial aid to municipalities for the construction of sewage treatment plants was discussed briefly, and it was decided by all present that such matters were not within the province of the Sanitary Authority, and could be decided only by the state legislature.

#### INDUSTRIAL WASTE DISPOSAL

Johnson Creek Pollution (Gresham Berry Growers Cooperative):- Mr. Hallock opened the discussion on the Report on Stream Pollution Investigations of Johnson Creek in Multnomah County and stated that the Sanitary Authority had been extremely lenient with the Gresham Berry Growers Cooperative and that it was his belief that legal proceedings should be instituted.

Those present were then advised by the secretary that representatives of the Gresham Berry Growers Cooperative had requested members of the Sanitary Authority Staff to meet with representatives of the Gresham City Council and the Berry Growers Cooperative on December 8, 1947 to discuss the problem, in an attempt to reach a satisfactory solution before the 1948 corn processing season. It was also pointed out by Mr. Spies that officials of the Gresham Berry Growers Cooperative had indicated

that unless they could solve the problem, they would cease corn processing operations.

In view of these facts, the members present instructed the secretary to send a copy of the Report on Stream Pollution Investigations of Johnson Creek to the Gresham Berry Growers Cooperative accompanied by a letter stating that unless recommended procedures to be developed at the December 8 meeting were carried out, that appropriate legal action would be taken.

Hess Creek Pollution (Hudson Duncan Company, Dundee):- The report of the field staff having been supplied to each member of the Sanitary Authority in advance, the matter of the pollution of Hess Creek by the Hudson-Duncan Company fruit packing plant at Dundee was then discussed. In view of the failure of the Hudson-Duncan Company to fully cooperate with the Sanitary Authority in the abatement of the nuisance created by the pollution of Hess Creek, it was believed by those present that immediate legal action should be taken. It was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried that the matter of the pollution of Hess Creek by the Hudson-Duncan Company, Dundee, Oregon, be referred to the Attorney General with the request that proceedings be instituted under Sections 116-1123 and 116-1126 O.C.L.A.

Pulp and Paper Mill Wastes:- The chairman then requested the secretary to read the replies to the Sanitary Authority's request for a progress report from sulphite pulp mills in the Willamette Valley. Letters from the Spaulding Pulp and Paper Company, Newberg, and the Hawley Pulp and Paper Company, Oregon City, were read and the secretary reported on a telephone conversation with Mr. Frank Youngman, Vice President, Crown Zellerbach Corporation, in which the plans for disposal of wastes from the Crown Willamette Paper Company pulp mill at West Linn were discussed.

It was the belief of those present that the pulp and paper industry in the Willamette River valley should furnish the Authority with more definite plans for pollution abatement and accordingly it was MOVED by Mr. Hallock, seconded

ABG759

by Mr. Veatch, and carried that the Crown Zellerbach Corporation, the Hawley Pulp and Paper Company, the Spaulding Pulp and Paper Company, and the Oregon Pulp and Paper Company be presented with a citation wherein they would be commanded to appear before the State Sanitary Authority at 10:00 A.M., on January 10, 1948, and show cause, if any exists, why said companies should not now take the steps available leading to compliance with the laws of Oregon, relating to abatement of stream pollution, and why appropriate proceedings should not be instituted against said companies should they fail so to do.

STANDARDS OF PURITY FOR THE WATERS OF THE STATE:

Consideration was then given to proposed standards of purity for the waters of the state. It was MOVED by Mr. Stricklin, seconded by Mr. Veatch, and carried that the following standards of purity for the waters of the state of Oregon be adopted:

REGULATION I

STANDARDS OF PURITY FOR WATERS OF THE STATE OF OREGON

AND

GENERAL REQUIREMENTS FOR THE DISPOSAL THEREIN OF SEWAGE AND INDUSTRIAL WASTES:

Pursuant to the duties imposed upon and the powers vested in the State Sanitary Authority, in Section 116-1122, Oregon Compiled Laws Annotated, 1940, the following standards of purity for waters of the state of Oregon and general requirements for the disposal therein of sewage or industrial wastes are hereby established:

- A. No sewage or industrial waste shall be discharged into any waters of the state of Oregon which in itself or in conjunction with other wastes will cause:
1. The dissolved oxygen content of the waters to be less than five (5) parts per million.
  2. The hydrogen-ion concentration (pH) of the waters to be outside of the range of 6.5 to 8.5.
  3. The liberation of dissolved gases, such as carbon-dioxide, hydrogen sulfide or any other gases, in sufficient quantities to be deleterious to fish or related forms of aquatic life, navigation or other reasonable uses made of such waters.

4. The development of fungi or other growths having a deleterious effect on stream bottoms, fish or related forms of aquatic life, or which are injurious to health, recreation or industry.
5. The creation of toxic conditions that are deleterious to fish or related forms of aquatic life or affect the potability of drinking water.
6. The formation of appreciable bottom or sludge deposits or the formation of any organic or inorganic deposits deleterious to fish or related forms of aquatic life or injurious to public health, recreation or industry.
7. Objectionable discoloration, turbidity, scum, oily sleek or floating solids, or coat the aquatic life with oil films.
8. Bacterial pollution or other conditions deleterious to waters used for domestic purposes, livestock watering, irrigation, bathing, or shellfish propagation, or be otherwise injurious to public health.

B. The degree of sewage or waste treatment required to restore and maintain the above standards of purity shall be determined in each instance by the State Sanitary Authority and shall be based upon the following:

1. The uses which are or may likely be made of the receiving stream.
2. The size and nature of flow of the receiving stream.
3. The quantity and quality of the sewage or wastes to be treated; and
4. The presence or absence of other sources of pollution on the same watershed.

At its discretion, the State Sanitary Authority may require chlorination or equally efficient disinfection of sewage and waste treatment plant effluents wherever and whenever the discharge of unchlorinated effluents shall or may affect the quality of water used for public or domestic water supplies, irrigation, shellfish, growing areas, or swimming and recreational areas.

C. For the purpose of facilitating the determination of the degree of treatment required for municipal and sanitary sewage, the waters of the state of Oregon shall be classified in three divisions as follows:

Class "A"

Bodies of water which are used or which may be used for public water supplies, swimming and recreation, for irrigation, for the propagation of game and commercial fish, or for the propagation of shellfish and which because of insufficient flow cannot receive, without detriment, wastes other than those that have been given a high degree of treatment.

ABG759

Class "B"

Bodies of water which are used or which may be used for public water supplies, swimming and recreation, for irrigation, for the propagation of game and commercial fish, or for the propagation of shellfish, and which, in the opinion of the State Sanitary Authority, provide sufficient dilution to obviate the necessity for the degree of treatment required under Class "A" waters.

Class "C"

Bodies of water into which the temporary discharge of untreated sewage or wastes may be permitted, if, in the opinion of the State Sanitary Authority, such discharge may not be detrimental to any reasonable use of said waters.

- D. Unless a higher degree of treatment is found to be necessary by the State Sanitary Authority to meet the requirements of Section A of this regulation, municipal or sanitary sewage discharged into the above described classes of waters of the state of Oregon shall, in each instance, receive the following degree of treatment as a minimum:
1. Municipal or sanitary sewage discharged into Class "A" waters shall be so treated that the effluent from the treatment plant:
    - (a) Shall be free of noticeable floating solids, oil, grease, sleet, and practically free of suspended solids.
    - (b) Shall indicate an average five-day bio-chemical oxygen demand reduction of not less than 85 per cent and at no time shall the residual effluent B.O.D. be in excess of 50 parts per million.
  2. Municipal or sanitary sewage discharged into Class "B" waters shall be so treated that the effluent from the treatment plant:
    - (a) Shall be free of noticeable floating solids, oil, grease, and sleet.
    - (b) Shall indicate an average suspended solids reduction of at least 55 per cent.
    - (c) Shall indicate an average five-day bio-chemical oxygen demand reduction of not less than 35 per cent, and at no time shall the residual effluent B.O.D. be in excess of 125 parts per million.
  3. Municipal or sanitary sewage may be discharged without treatment into Class "C" waters; provided, that a temporary permit for such discharge has first been obtained from the State Sanitary Authority, that no such permit shall be valid for a period of time longer than three years, and further that such permits may be revoked for cause at any time after the date of issuance thereof.

E. Certain words or terms used in this regulation shall be defined as follows:

Sewage . . . . .The water-carried human, household and similar wastes from residences, business and commercial establishments, institutions and other public and private buildings, together with such ground water infiltration as may be present.

Industrial Wastes . . . . .The water-carried wastes resulting from any process employed in industry, manufacturing, trade or business, or from the development of any natural resources.

Waters of the state . . . . .The lakes, rivers, ponds, streams, inland waters, underground waters, salt waters, and all other surface waters and water-courses within the jurisdiction of the state of Oregon.

Fish and Related Forms . . . . .Include all fishes, crustacea, mollusks, plankton, higher aquatic plants, and waterfowl.

Having dispensed with all of the business before it, the meeting of the Sanitary Authority was recessed at 5:00 P.M. to permit members to re-convene at the University Club in Portland, Oregon, for a joint meeting with the members and staff of the Washington State Pollution Control Commission.

JOINT DINNER MEETING WITH THE WASHINGTON STATE POLLUTION CONTROL COMMISSION:

The dinner meeting of the State Sanitary Authority and the Washington State Pollution Control Commission was called to order at 6:00 P.M. by Mr. Wendel, Chairman of the Sanitary Authority, who welcomed the Washington officials to Oregon.

Those present, representing the Washington State Pollution Control Commission were:

Emil C. Jensen, Chief, Division of Public Health Engineering, Washington State Board of Health, Seattle, Wash.

Jack Taylor, Director, Washington State Pollution Control Commission, Olympia, Wash.

Ted Little, Assistant Attorney General, Olympia, Wash.

Art Gartan, Director, Dept. of Conservation & Development, Olympia, Wash.

Wallace Bergerson, Chief Engineer, Washington State Pollution Control Commission, Olympia, Wash.

Dan Clark, Director, Dept. of Game, Seattle, Washington

ABG759

Dr. Nathan Fasten, Chief Biologist, Washington State Pollution Control Commission, Olympia, Wash.

Dr. Arthur L. Ringle, State Health Officer, Washington, State Board of Health, Seattle, Washington

Albert Young, Assistant Biologist, Washington State Pollution Control Commission, Olympia, Wash.

Joe Craig, Biologist, Dept. of Fisheries, Seattle, Washington

Robert E. Leaver, Public Health Engineer, Washington State Department of Health, Seattle, Wash.

Sam Bernsted, Investigator, Washington State Pollution Control Commission, Olympia, Wash.

Those present representing the Sanitary Authority of the State of Oregon were:

Harold Wendel, Chairman, Oregon State Sanitary Authority, Portland, Oregon

Blaine Hallock, Member, Oregon State Sanitary Authority, Baker, Oregon

Dr. Harold M. Erickson, State Health Officer, Oregon State Board of Health, Portland, Oregon

Chas. E. Stricklin, State Engineer, Salem, Oregon

John C. Veatch, Member, Oregon State Sanitary Authority, Portland, Oregon

B. A. McPhillips, Member, Oregon State Sanitary Authority, McMinnville, Oregon

Curtiss M. Everts, Jr., State Sanitary Engineer & Secretary, Oregon State Sanitary Authority, Portland, Oregon

Kenneth H. Spies, Associate Sanitary Engineer, Oregon State Sanitary Authority, Portland, Oregon

T. M. Gerow, Jr., Assistant Sanitary Engineer, Oregon State Sanitary Authority, Portland, Oregon

At the conclusion of the dinner, Mr. Gartan of the Washington State Pollution Control Commission, was accorded the chair and presided over the discussions which followed relative to the proposed standards for the Columbia River.

In order to bring the subject before the group for discussion, it was MOVED by Mr. Hallock, and seconded by Dr. Ringle that the proposed standards be adopted. Mr. Taylor stated that it was his understanding that the meeting was for the purpose of discussing both the problems of pollution control on the Columbia River and the proposed standards, and that he did not believe it wise to adopt the standards

st this meeting until they had been given further consideration. Mr. Taylor further suggested that Mr. Hallock's MOTION be tabled. With the agreement of Dr. Ringle who seconded the motion, Mr. Hallock then withdrew his MOTION for adoption of the standards.

The co-chairman, Mr. Gartan, then announced that an open and frank discussion was in order and those present then expressed their opinions on the various problems.

Mr. Clark believed that the standards should also apply to the various tributaries of the Columbia River; but both Mr. Wendel and Mr. Hallock disagreed. In addition, Mr. Wendel stated that the Oregon Sanitary Authority was bound by law to deliver Oregon streams to the Columbia River in clean condition and, therefore, these standards should apply to the Columbia River alone.

Dr. Fasten recommended that the standards be referred to the two Commissions for further study.

Mr. Wendel then outlined the activities of the Sanitary Authority in connection with the Portland sewerage project, and mentioned that had it not been for the Sanitary Authority's interest in the matter, the Portland sewerage project would not have progressed as far as it had.

Mr. Bergerson then discussed the Vancouver sewerage project, and stated that glass covered sludge beds would be constructed and that chlorination of the plant effluent would be provided. In his opinion, these two treatment and disposal methods were the only controversial points in the standards.

Mr. Veatch then stated that the purpose of the meeting was to establish standards for cities and industries discharging wastes into the Columbia River, and that if the group could arrive at mutual standards they could then go to industries and municipalities and tell them what was to be done. Mr. Veatch further advised the group that while Oregon had standards for its own streams, we would have a problem on the Columbia River unless standards of purity for that stream are established.

Mr. Leaver discussed the problem of pollution control on the Columbia River

ABG759

with respect to the disposal of sludge, and chlorination of sewage effluents. He also mentioned the problem of pollution control that would be evident if radio active wastes were discharged into the stream.

Mr. Jensen outlined the position of the Washington State Board of Health relative to the Columbia River. He mentioned that they were concerned with three pollution factors on the Columbia as follows: (1) nuisances created by scum, grease, and sleek; (2) the dissolved oxygen to support fish life; and (3) the bacterial load related to the protection of public health. It was Mr. Jensen's opinion that the physical and nuisance factors could be kept under control, but that control of the bacterial pollution would be most difficult. Mr. Jensen further stated that the bacterial load that a water treatment plant can handle, without failing, has been determined from the Ohio River studies, and that with continued discharge of Portland sewage into the Columbia River, a problem could develop.

Mr. Everts then stated the Sanitary Authority's policy on plans for treatment of the Portland sewage. He advised the group that no formal plan had yet been presented to the Authority for approval, and further, the city of Portland was aware of the Sanitary Authority's policy which would require the construction of additional treatment facilities should the proposed units fail to prevent pollution.

Mr. McPhillips then asked the question as to how pure the Columbia River would be when standards were established.

Dr. Erickson stated that we should have standards of purity for the Columbia River, but that we should also have some objectives in the establishment of such standards.

At the request of Mr. Gartan, Mr. Bergerson read the California State Board of Health resolution of 1946 in which the policies of California relative to preservation of the waters of that state were outlined.

Mr. Clark then discussed the problem of water supply in California, where growth in certain areas has been inhibited due to lack of adequate water supplies.

Mr. Spies in discussing proposed standards stated that we could not expect to

adopt policies at this time which would be applicable for all time to come; that we must adopt a reasonable program; and that there was no difference of opinion among the technical staffs of the two Agencies as to the proposed standards; but that differences had arisen relative to enforcement. Mr. Spies believed that the standards proposed were reasonable because provision had been made for additional treatment requirements later, if necessary.

In the opinion of Mr. Craig, the standards were adequate to maintain the Columbia River in condition to support fish life, but that the construction of dams would result in the loss of spring runs.

Dr. Ringle believed that the technical committees should reach some agreement on the proposed standards. He also stated that he was in agreement with Mr. Spies and Dr. Erickson with respect to the scope of the standards, and that the proposed standards should be subject to change. Dr. Ringle cautioned the group that they should make certain that the Columbia River did not become as heavily polluted as eastern waters; and that any standards adopted must protect the river but not be impractical.

Mr. Gartan then suggested that in order to retain the spirit of cooperation it might be in order to hold several joint meetings of the two commissions to discuss mutual problems. He further suggested that the technical staffs should meet regularly and that a committee of members of both Commissions should meet with the technical staffs to review decisions.

Mr. Taylor then suggested a joint review of plans for Oregon and Washington sewage treatment plants to be constructed for cities located on the Columbia River, inasmuch as such coordinated efforts would tend to develop a sound program.

Mr. Wendel then advised the group that the Sanitary Authority was bound by law to restore the waters of the State to their natural purity and that the Sanitary Authority did not give final approval on plans. He further stated that Washington should have no fear of programs carried out by the Sanitary Authority since all of its programs are contingent, temporary, and subject to change.

Mr. Gartan then suggested that the groups meet again to discuss the standards,

ABG759

and with the consent of those present January 26, 1948 was set as a tentative date.

There being no further business the joint meeting of the Oregon State Sanitary Authority and the Washington State Pollution Control Commission was adjourned at 10:00 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*

Curtiss M. Everts, Jr.  
Chief Sanitary Engineer and Secretary  
OREGON STATE SANITARY AUTHORITY

MINUTES OF THE THIRTY-FIFTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

January 23, 1948

The thirty-fifth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., January 23, 1948, in the offices of the State Board of Health, Behnke-Walker Building , 1022 S. W. 11th Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Messrs. John C Veatch, B. A. McPhillips, Blaine Hallock, and Dr. Harold M. Erickson, members; Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineer; and T. M. Gerow, Assistant Sanitary Engineer.

MINUTES:- The minutes of the preceding meeting, November 24, 1947 , having been submitted to the members of the Authority by the secretary in advance, and there being no additions or corrections to same, they were unanimously approved as prepared by the secretary, without reading.

PROJECT PLANS:- Following a review of sewerage project plans submitted to the State Sanitary Authority for examination and approval, it was MOVED by Mr. Hallock; seconded by Mr. McPhillips; and carried that the action of the Sanitary Authority Engineers on the following project plans be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
<u>1947</u>			
Nov. 6,	Phoenix	Sewage Disposal Plant	Cond. Approval
14	West Salem	Sewer extension	More data required
14	Mt. Angel	Sewer Extension	Not approved
14	Condon	Preliminary report	Prel. approval
14	Florence	Sewer System	Action deferred pending grant of Class C Permit

ABG759

Date	Location	Type of Project	Action taken
Nov. 14	Meridian Dam Site	Sewage disposal plant	Not approved
14	McMinnville	Sewer extensions	Prel. Approval
19	Eastside	Subdivision sewers	Not approved
Dec. 1	Freewater	Sewer system	Approved
1	Huntington	Design data	Approved
12	West Linn	Preliminary report	No action
18	Oregon City	Sewage Disposal (Mt. Pleasant School)	Cond. Approval
23	Pendleton	Industrial waste pre- treatment	approved
24	Sandy	activated sludge (Prel. Plans)	Approved
26	Oakland	Preliminary report, sewers and sewage treatment	Approved
<u>1948</u>			
Jan. 6	Meridian Dam Site	Sewage treatment ( Rev. plans.)	Approved
7	Sandy	Sewage treatment plant (alternative design)	Approved
9	Baker	Sewer extension (Prel.Plans)	"

PORTLAND SEWERAGE PROJECT:- Commissioner William A. Bowes and Assistant City Engineer L. G. Apperson appeared before the Sanitary Authority to present facts on the status of the Portland sewerage project. Commissioner Bowes furnished the members of the Authority a report prepared by the Portland Board of Engineers on the project. The report read as follows:

"For the information of the City Council and the State Sanitary Authority, in connection with the meeting on January 10, we wish to submit a report on the status of Plans and Specifications for the Portland Intercepting Sewer Project. For Convenience in reference and in letting contracts, the work has been divided into 15 units, with sub-units, in conformity to the attached sheets.

The City has contracted for the construction of Unit I, the Columbia Slough Section, in the amount of \$459,218.64 and it is well along toward completion.

The city has awarded contracts for Items 1 and 2 of Unit IV, the major equipment, sluice gates and valves for the sewage treatment plant. Delivery of this equipment will extend up to approximately one year.

Complete plans and specifications have been turned over to the city for the following work, which will aggregate in cost approximately \$4,000,000.

- Unit II - - Columbia Boulevard Section
- III - St. Johns Section
- IV - Treatment Plant, (3) Pumps and Compressors  
" " (4) Cast Iron Pipe
- VI - Main Peninsula Tunnel
- XIV - Pumping Stations:
  - Mallory NE1 at Mallory Ave. and Columbia Blvd.,
  - Montana NE2 near Montana Ave. and Columbia Blvd,
  - Johnswood NW1 at Johnswood Drive near N. Oswego Ave.,
  - St. Johns SJ1 at N. Alta Ave. and Bradford St.
  - Albina EC1 at N. Russell and Interstate Ave.,
  - Alder SE3 at S. E. Alder St. and Water Ave.
  - Harney SE2 at S. E. Harney St. and 21st Ave.
  - Umatilla SE1 at Umatilla St. and S. E. Grand Ave.
  - California SW1 at S. W. California near Macadam Ave.
  - Thomas SW2 at SW Thomas near Macadam Ave.

Plans are complete and specifications in course of preparation for Unit VII from the Peninsula Tunnel to Sullivan's Gulch, costing about \$730,000. This is now ready.

With respect to the balance of the project, it will make the situation clearer to discuss the work still remaining to be done inasmuch as this is relatively small in amount and has been held up for special reasons. With the single exception of the sewer location across Sullivan's Gulch, Sheet SE15, all strictly sewer plans are complete. Where rights of way have not already been secured through purchase or easement, this work should be pushed forward to completion.

Many alternative studies have been made on the Underwater Sections of the Outfall (Unit V-2), but the final designs have not been completed. The outlet and transition structure designs are, however, complete.

ABG759

The Ankeny Street pumping station (Unit XIV-1) is complete with the exception of some electric wiring plans; specifications are in draft form.

The Sullivan's Gulch pumping station (Unit XIV-5 is the only major construction unit for which plans have not yet been prepared. We anticipate completion by June 30.

For the treatment plant, all structural and functional designs are complete, and we are at the present time rechecking and coordinating drawings and finishing up details such as light and power wiring, plumbing and heating. The Specifications for all plant equipment have been completed, except for pumps which are in draft form, but the detailed specifications for the structures and installation of this equipment have not been started.

Summarizing the situation, we would say that the engineering work related to the design of the project is about 95% complete. There is a substantial backlog of units complete and ready for advertising and award in the event that the City Council decides it to be expedient to push the project. It can all, or substantially all, be placed under contract during the current construction season if desirable.

Respectfully submitted

ENGINEERS Portland Sewerage Project  
By J. C. Stevens"

Copy of enclosure with above letter;

"Columbia Slough Section of Interceptor and Sanitary Sewer - N.E.42nd Ave., to N. Delaware Ave. - Nearly completed . . . . \$512,000  
Original bids for this section were rejected being 40% over engineer's estimate. Upon re-advertising the above bid was received.

Columbia Slough Section of Interceptor - N. Delaware to Plant Site.  
Bids open Feb. 5 - will take about 6 months to complete.

St. Johns Interceptor - Plant Site to N. Bradford St.,  
Bids open about Feb. 15. Will take about 6 months to complete . \$1,000,000

Treatment Plant

Screens, Racks, Scrapers . . . . . \$100,00  
About 1 1/2 yr. delivery.

Sluice gates and valves. Contract let . . . . . \$ 60,000  
About 8 months deliver.

Treatment Plant - con.

Cast iron pipe and fittings.  
Bids received about Mar. 1 - No estimate.

Total . . . . . \$1,672,000

Bids were received on two pumping stations on June 5, 1947, and were rejected on account of being about 44% over engineers' estimate.  
Amount of bid . . . . . \$60,000."

At the conclusion of Commissioner Bowes' statements, Chairman Wendel asked what progress could be expected on the project in the near future, and Mr. Veatch asked whether or not it would be possible to acquire the needed equipment at the present time or in the near future. Commissioner Bowes replied that the engineers employed by the city of Portland had not been inactive; and that when the city advertised for bids on certain types of equipment such as pumps, wiring and various types, etc., and they learned that it would be increasingly difficult to obtain, it was considered good judgment to advertise for joint bids on these materials so that all types of materials would be on hand when construction of the treatment works was undertaken. The Commissioner mentioned that many of the bids received were based on delivery of the materials 240 to 300 days from the date of the contract, and present indications were that deliveries in the future will be subject to even longer delays. He cited as an example that the city called for bids on \$100,000 worth of sewage treatment plant equipment, and manufacturers requested a period of 1-1/4 years for delivery. In addition a contract was signed for sluice gates and valves on an 8 mont delivery time. He further stated that the city purchasing agent has been directed to purchase all the piping needed for the sewage treatment plant, and bids on this material should be in by March 1st. Commissioner Bowes stated that the city was doing everything possible to push the project but that bids received on two pumping stations June 25, 1947, were 44% over the engineers' estimate of costs. Mr. Veatch then asked how much of the material was standard, and Commissioner Bowes replied that it was all standard or equal.

ABG759

In response to Mr. Hallock's question concerning the probable cost of the entire plant, Commissioner Bowes stated that the Board of Engineers estimated that the total cost of the Portland sewerage project under current labor and material costs would be \$14,388,000. The funds on hand from bonds and user charges available on December 1, 1947, to finance the project amounted to \$12,627,800.

In the brief discussion that followed it was brought out (1) that the sewer users' charge in Portland was still only one-third of the authorized amount but that the recommendation had been made that it be increased to the full amount when construction began; (2) that approximately \$1,000,000 in work would be let in February for the construction of intercepting sewers; (3) that the city would furnish progress reports from time to time on the status of its sewerage project; and (4) that the Sanitary Authority would furnish the city with reports on the progress that up-river communities were making on sewerage works construction.

Commissioner Bowes and Mr. Apperson left the meeting at 2:30 P.M.

PULP AND PAPER MILL WASTE: - In response to a citation issued on November 24, 1947, the following persons appeared before the Sanitary Authority to show cause why the nuisance created by the discharge of industrial wastes from the manufacture of pulp and paper into the waters of the state should not be abated:

R. Reid	Spaulding Pulp and Paper Company	Newberg, Ore.
O. N. Allison	" " " " "	" "
Carl E. Braun	Hawley Pulp and Paper Company	Oregon City, Ore.
Earl S. Nelson	" " " " "	" " "
F. N. Youngman	Crown Zellerbach Corporation	Portland, Ore.
N. Teren	Oregon Pulp and Paper Company	Salem, Ore.
Jack Smith	Hawley Pulp and Paper Company	Oregon City, Ore.

Spectators and observers present were as follows:

R. A. Blanchard	Western Construction News	
D. F. Stevens	Pollution Control Commission, State of Washington	
Aldred Neale	Portland Chamber of Commerce	
R. W. Hensel	Inertol Co., Inc.	San Francisco, Calif.
C. W. Brown		Springfield, Ore.
W. J. Cloyes		

The hearing proceeded as follows:

Mr. Wendel: The main force of the Sanitary Authority has been directed against municipalities; and many municipalities are moving rapidly towards consummation of abatement of pollution in the waters of the state of Oregon, and the public demand is being felt on the industrial side of the problem. The public would like to know from the pulp and paper industry what their plans are and what their intentions are in this regard. We have been told by Crown-Zellerbach that they are prepared to change at almost any time now to a process which will end their pollution problems and we feel they are going to solve their part of the problem. We would be interested in hearing from the Spaulding Pulp and Paper Co.

The following report was then read by Mr. Allison;-

"Comes now Spaulding Pulp and Paper Co. and by way of answer to the citation heretofore served upon it in the above entitled matter, respectfully shows and represents as follows:-By citation dated November 24, 1947, under the signature of the Sanitary Authority of the State of Oregon by H.F.Wendel, Chairman, the Spaulding Pulp and Paper Company is cited to show cause, if any exists, "why said Spaulding Pulp and Paper Company should not now take the steps available leading to compliance with the law of Oregon, relating to abatement of stream pollution, and why appropriate proceedings should not be instituted against said Spaulding Pulp and Paper Company should it fail so to do."

The Spaulding Company desires to report at this time that it has installed a method of filtering all of the white water produces at the mill by circulating the same through the mill and then back through the blow pits, and, in addition, has installed all stainless steel blow pit bottoms with fine perforations, to the point that the suspended matter, including pulp fiber, in our main sewer, has been reduced to what we believe to be the practical minimum.

The question of disposal of waste sulphite liquor, insofar as the same may

ABG759

contribute to stream pollution, is of such magnitude that the management of the Spaulding Pulp and Paper Company has joined with other mills in the industry and has contributed prorata with other mills in the industry to the creation and perpetuation of the National Council for Stream Improvement, organized in 1943.

Under date of December 23, 1947, in a letter addressed to the Members of the National Council for Stream Improvement, under the Signature of Mr. Russell L. Winget, Executive Secretary, a full report is made to the members of the National Council for Stream Improvement relative to the scope and activity of the National Council for Stream Improvement and summarization of the investigations conducted by the Council and a detailing of some of the more promising possibilities relative to waste sulphite liquor treatment.

The said report of the Council is attached hereto, marked "Exhibit A" and by such reference incorporated in and made a part of this Answer and Appearance as fully and to the same extent as if actually set out in full herein.

From the report, the problem of the disposal of waste sulphite liquor has been approached from the following angles:

- 1.) Trickling Filter
- 2.) Foam Phase Oxidation Treatment
- 3.) Heat Hydrolysis
- 4.) Stream Aeration
- 5.) Fodder Yeast Production
- 6.) Evaporation
- 7.) Lagooning
- 8.) The Howard Process

In reference to the above we quote from "Exhibit A" attached, as follows:

"It will be noted that to a large degree the Council's efforts to develop an economic and practical solution to the waste sulfite liquor disposal problem have been negative. Research is continuing, however, and eventually a solution will be reached."

Until such time, therefore, as an economic and practical solution has been found for the disposal of waste sulphite liquor, the Spaulding Pulp & Paper Company respectfully requests that no order be entered herein finding that said company has failed to take steps available leading to compliance with the

laws of the State of Oregon relating to the abatement of stream pollution.

Dated at Newberg, Oregon, this 23rd day of January, 1948.

SPAULDING PULP & PAPER COMPANY

By O.M. Allison, Secretary

STATE OF OREGON )  
County of Multnomah ) ss.

I, O.M. Allison, being first fully sworn on oath, depose and say:

That I am the dully elected and acting Secretary of the Spaulding Pulp & Paper Company., an Oregon corporation with its principal place of business located at Newberg, Oregon: that I have read the foregoing Appearance and Answer, am familiar with the contents thereof, and that the same is true as I verily believe.

O.M. Allison

Subscribed and sworn to before me this 23rd day of January, 1948.

W. B. Shiveley

Notary Public for Oregon

My commission expires, Nov. 6, 1951

"Exhibit A"

Letter from National Council for Stream Improvement  
New York, N. Y., December 23, 1947

"TO MEMBERS:

SULFITE WASTE LIQUOR TREATMENT

Since its organization in 1943, the National Council has received numerous requests from regulatory and other agencies interested in waste treatment, for information regarding the availability of treatment processes adaptable to the treatment of waste sulfite liquor. Since this has been for years one of the most troublesome disposal problems facing the pulp and paper industry, the Council has devoted a major part of its research funds to the solution of the problem. Because of the desire of various regulatory agencies and the industry to find an immediately available and economic solution to the problem, the Council's research approach to this problem has been from the abatement rather than the utilization angle.

The disposal of waste sulfite liquor is troublesome because of certain undesirable characteristics of the liquor such as large volume and high oxygen demand which render treatment extremely difficult. The first approach to this problem was the preparation of a bibliography of several thousand references to sulfite liquor in the published literature, including reference works and periodicals. In preparing this bibliography all foreign as well as domestic sources were consulted. Following this, each reference was critically examined and the most promising were subjected to thorough laboratory and pilot plant investigation.

Following is a brief summarization of the work that this and affiliated organizations have carried on in investigation of some of the more promising possibilities relative to waste sulfite liquor treatment.

ABG759

### Trickling Filter

Because of the ability of the trickling filter to handle domestic sewage and some industrial wastes, the pulp and paper industry has conducted intensive research on this treatment method at the University of Washington and the Institute of Paper Chemistry as well as at several pulp mills. Pilot plant development was carried to a sufficiently large unit so that accurate information concerning construction, operation and costs was obtained. It was found that the liquor could be reduced in B.O.D. about 60 per cent at loading of four pounds of B.O.D. per cubic yard of filter media daily on a specially constructed filter employing corrosion proof materials, large size stone, forced ventilation and several other innovations. It was determined that a plant capable of treating the waste from a 200-ton mill would be comparable in size to the mill itself. It has been concluded that this device does not offer a practicable solution to the problem, at least until investigations currently under way develop means of achieving higher oxidation rates and thus reduce the size of the plant required.

### Foam Phase Oxidation Treatment

A new treatment process for sulfite liquor was evolved by the Council's project at Rutgers University. The natural foaming tendency of the liquor was employed to accelerate biological oxidation and B.O.D. reductions as high as 70 per cent were obtained in the laboratory. This process was not carried into the development stage because of obviously high fixed costs such as foaming structures capable of retaining ten times the daily liquor volume for 12 to 24 hours, a blower plant or injector pumping system capable of dispersing 500,000 cfm of air, as well as the cost of supplying the air and operating defoaming equipment. If this system were developed to a workable degree, it could not be built and operated at costs substantially lower than a trickling filter installation and probably, under actual working conditions, it is doubtful that it would offer any more practical treatment method than the trickling filter.

### Heat Hydrolysis

Preliminary experiments have indicated the possibility of effecting relatively high B.O.D. reductions by retaining sulfite waste liquor at high temperatures and under high pressure. This effect is believed due to hydrolysis of wood sugars and possibly other constituents. The Council is now arranging for the establishment of a project at Syracuse University for the purpose of investigating this fully.

### Stream Aeration.

An ameliorating method for improving conditions in a stream polluted by sulfite liquor was investigated by the Council on the Flambeau River in Wisconsin. This method consisted of adding dissolved oxygen to the stream at the point where oxygen depletion is greatest, by means of compressed air diffusion. This serves to accelerate self-purification of the stream and shorten the distance of passage required for oxidation of the waste. Actually, in this instance an upper uninhabited stretch of the river was employed for waste treatment for the purpose of insuring improved conditions in the lower inhabited area. Considerable information was obtained relative to the technique involved and it is felt that under certain conditions this process shows some promises.

With the anticipated future availability of low cost oxygen, the applicability of this process might be vastly increased and the council is now investigating possible means of applying it.

#### Fodder Yeast Production

Considerable attention has been given to the production of fodder yeast from sulfite liquor as a means of reducing the oxygen demand and providing a return to cover to some degree the cost of the operation. This appeared an attractive possibility since it might afford a means of handling the large quantities of liquor produced. The process had been operated in Sweden and Germany, and since protein feeds command a relatively high price in the Northwest United States, the possibilities of this proposal seemed attractive.

In view of these facts, the Council's research project at Oregon State College was assigned the task of evaluating the possible use of this process. Their findings indicated that fodder yeast could be produced in the Northwest and effect a B.O.D. reduction of about 40 per cent in the liquor. However, the production cost was found to be such that operations could not be carried on under normal market conditions since competitive feed materials could supplant it. The accuracy of this statement is evidenced by the fact that two of the three Swedish plants producing yeast have closed down in recent months since their product could not compete with other protein feeds. If this is the case in Europe, it would most certainly hold true in this country.

Further investigations being carried on by the Oregon State College along this line are directed toward the production of protein feed from filamentous molds since there are some indications that lower production costs could be achieved which would enable plants to operate continuously.

#### Evaporation

The evaporation of waste sulfite liquors without the recovery of some by-product is uneconomic due to the high fuel requirement. Also, such evaporation leaves a very large residue which in some degree is comparable in pollution rating to the original liquors.

With the purpose of liquor disposal in mind the production of marketable commodities based on the physical characteristics of evaporated liquor such as adhesiveness has been investigated to an extremely high degree. As a result of this number of small markets have been established for evaporated liquor. The uses include linoleum cement, core binder, ceramic hardener and as a constituent of insecticides and fungicides. The markets represented by these uses are rarely able to absorb more than 5 per cent of the liquor produced in this country. Since the evaporation is costly due to the low initial concentration of solids in the liquor and scaling difficulties encountered, operation of such a process is limited to mills close to the users. At present about five mills are capable of supplying the entire demand and entry of more of this material into the market would destroy it altogether.

ABG759

### Lagooning

Lagoons have been employed both with and without success for the storage of sulfite waste liquor during periods of low water for discharge at flood flows. Sealing against seepage had determined the success or failure of these since the liquor exerts a shrinking action on my soils. Most of the common sealing methods have proven inadequate where the soil itself becomes previous to the liquor. Employment of this expedient necessitates the existence of a large area of land adjacent to the mill which is isolated from populated districts.

### The Howard Process

This process consists of a multiple lime coagulation system whereby some chemical is recovered, liquor precipitated, and other residues separated. When first devised it was believed to be capable of high B.O.D. removals but with the evolution of better testing methods it was found that reduction was about half of that supposed since the wood sugars are not precipitated. One mill in this country operates a full scale installation, the economy of which is based on the sale of several highly specialized by-products of very limited volume but relatively high value produced from the precipitated liquor such as vanillin. This one mill has been unable to find large enough markets to dispose of the quantity of liquor precipitate produced despite exhaustive efforts to do so and a considerable portion must be disposed of by incineration.

It will be noted that to a large degree the Council's efforts to develop an economic and practical solution to the waste sulfite liquor disposal problem have been negative. Research is continuing, however, and eventually a solution will be reached. The Council's current research budget provides funds not only to carry on current waste sulfite liquor activities but in addition a large sum has been earmarked or reserved for any additional work on this problem that appears promising. The Council will, in cooperation with any qualified state or other regulator agency, or at the suggestion of such agency, enter into any additional waste sulfite liquor projects that offer any possibility of arriving at a reasonably practical solution to the problem.

Very truly yours,  
Russell L. Winger, Executive Secretary"

- Mr. Hallock: You have a capacity of some 80 tons?
- Mr. Allison: Over 100 tons.
- Mr. Hallock: What has been done as to white water?
- Mr. Allison: I will let Mr. Reed, the chemist for Spaulding, answer questions.
- Mr. Reed: All water is re-circulated; all that comes in goes out through blow pits.
- Mr. Hallock: That is - a continuous re-circulation? Has the company made any study of the process where a magnesium base is employed.
- Mr. Reed: We have been watching the development of the magnesium process

to find out how it is going to wind up. It is our understanding it will be in operation this spring.

Mr. Hallock: Are the Weyerhaeuser people experimenting with a pilot plant?

Mr. Reed: The results there show promise. Do not know yet if it is going to be practical.

Mr. Hallock: Is it your thought that nothing can be done until some better process is developed?

Mr. Reed: There may be a possibility of storing and discharging wastes into flooded waters. Further than that, I do not know.

Mr. Hallock: Is it possible to lagoon the waste?

Mr. Reed: No place to lagoon such wastes without artificial ponds.

Mr. Hallock: Mr. Spies, do you know about the Shelton Mill?

Mr. Spies replied regarding this mill.

Mr. Mallock: Do you know anything about probable cost of ammonia plan in place of present method of cooking?

Mr. Teren: We process 135 tons per day at Salem. Seems to be running in the neighborhood of \$2,000,000 to install such a plant.

Mr. Reed: Concerning the matter of lagooning wastes, there is the problem of seepage.

Mr. Hallock: Do you think ground might act as a filter?

Mr. Reed: It would not help any.

Mr. Wendel then called on the Oregon Pulp and Paper Company represented by Mr. Teren. Mr. Teren stated that they had prepared no statement, but referred to a letter from his Company addressed to the Authority, dated December 17, 1947, which was in our files. He stated, however, that the capacity at this mill was 135 tons per day.

ABG759

The Crown-Zellerbach Corporation: represented by Mr. F. N. Youngman, Vice President of the Company, who furnished a statement which was read by Mr. Everts, as follows:

" 19 January 1948

In the following statement we have attempted to lay before the Authority our plans in connection with industrial waste disposal, the steps we have already taken in an endeavor to eliminate it as best we can, and also the steps we are considering taking in an endeavor to further correct the situation:

LEBANON - At our Lebanon Mill the problem of waste going into the Santiam River divides itself into two categories: (1) Fibre in the paper machine sewers, and (2) Waste sulphite liquor.

(1) Fibre in the Paper Machine Sewers - With regard to the fibre in the paper mill sewers, we have most of the equipment on hand, and are in the final stages of completing engineering studies on the installation of Savealls, which are intended to remove practically all of the fibre from the paper machine sewers. These Savealls are of a somewhat different type than the Sveen Pedersen Savealls at West Linn, but the removal of solids is approximately the same as the Sveen Pedersen. Unless some final equipment shortages hold us up, this project should be completed during 1948.

(2) Waste Sulphite Liquor

With regard to the waste sulphite liquor problem, we have several different plans under consideration, but in the meantime, have taken definite steps to put one of these plans into effect. The plan which we know will be practical is to run the Sulphite Pulp Mill at sufficient capacity during nine months of the year to store out enough sulphite pulp to run the paper mill during approximately three months lower water season. We would then shut the Sulphite Pulp Mill down during the low water season and draw on the stored pulp. This plan has the disadvantage of creating nine months seasonal employment for about

thirty employees, and will mean that this many of our people will have to find other work during the summer months. It is also rather costly. On the other hand, it is the type of an operation we can start as soon as certain equipment changes are completed.

Under this plan we would discontinue disposing the waste sulphite liquor in the Santiam during periods when the dissolved oxygen content reached a point where it was no longer feasible to continue operation. The Sulphite Mill would remain down until the flow of the river had increased to a point where the dissolved oxygen content again made it possible to dispose of the waste liquor. Definite steps looking toward this type of operation have been taken as follows:

Orders have been placed for a new boiler to increase the steam capacity, and work is under way to equip a third digester, together with other changes in auxiliary equipment, which will increase the pulp capacity sufficiently that the mill can produce enough pulp in nine months to operate the paper machines for twelve months. The boiler and digester installations are scheduled to be completed sometime during 1948. Certain other auxiliary equipment will be required; however, it is of a nature that could be installed without a great deal of delay.

While the above method of eliminating the waste sulphite liquor from the Santiam River is a definite and practical solution to the problem, it has, as stated above, certain disadvantages, and in the meantime, we are continuing studies that may later result in alternate solutions, as follows:

- (A) We are actively experimenting to see if we can continue to operate the sulphite mill twelve months per year by impounding the waste liquor during the low water season, and releasing the impounded liquor during the highwater season.
- (B) We are investigating the economic feasibility of changing the cooking liquor base, looking toward burning the waste liquor.

ABG759

WEST LINN - The problem at this mill also divides itself into the question of disposal of fibre in the paper mill sewers, and waste liquor from the sulphite mill.

(1) Fibre Disposal in Paper Mill Sewers - With regard to the fibre loss from the paper machines, definite action was started over two years ago when the first Sveen Pedersen Saveall was installed experimentally on our No. 1 Paper Machine. This unit proved to be very successful in removing solids from the paper machine white water, and since that time, two additional Savealls have been completed, two others are under construction, and we have a definite program of practically eliminating paper mill fibre loss from the Willamette River. In the case of this type of operation, the recovered fibre is used back in the system, and any excess water is clean enough to be reused in the process.

(2) Waste Liquor from Sulphite Pulp Mill - We are considering at least three different alternate plans, one of which is the conversion of the sulphite mill to magnesium base cooking liquor, similar to the project now under construction by Weyerhaeuser at Longview. We wish to delay final decision until the Weyerhaeuser mill has come into production. This will give us an opportunity to observe the practicability of this commercially untried process, not only from an operating standpoint, but also as to its possible application to the pulp and paper qualities required at our West Linn mill. We expect to reach a decision on this matter sometime during 1948. For your information attached are copies of a report by the National Council for Stream Improvement, of which we are members, which will give you an idea of the research work being done in various institutions throughout the country in an endeavor to solve this difficult problem in connection with waste sulphite liquor.

Yours very truly,

CROWN ZELLERBACH CORPORATION  
By F. N. Youngman, Vice President "

Mr. Hallock: You had a plan to change to sulfate process?

Mr. Youngman: That is one of the three alternate plans.

Mr. Hallock: How would this affect process at West Linn?

Mr. Youngman: It would produce a B. O. D. satisfactory to the Authority.

Mr. Hallock: Let us assume that Weyerhaeuser is successful from the standpoint of pollution abatement, would you be willing to change to that method.

Mr. Youngman: Off hand, would say it would be one of the last things we would want to do. Would be entirely different operation. The Weyerhaeuser Mill is operated purely for the manufacture of sulfite pulp for sale. I am not so sure until they have the Weyerhaeuser method in operation but that the method would produce pulp which might not be applicable to paper mill. We cannot tell until we see what happens.

Mr. Veatch: What is the reason for the two processes--that is, the sulfite and sulfate processes? Is it the quality of paper, or is it simply a different method?

Mr. Youngman: It produces a different quality of paper. The Kraft process produces dark wrapping paper.

Mr. Wendel: Have you contemplated abandoning the soda process? At one time you were prepared to switch to soda.

Mr. Youngman: The reason for postponing it is the cost, which would be in the neighborhood of \$15,000,000 for soda process.

Mr. Smith, representing Hawley Pulp and Paper Company, had no prepared statement covering the operations toward stream pollution abatement of his company, but made the following remarks:

"I feel, and wish to frankly admit I think this pollution problem a very important and serious problem. I am optimistic that the matter can ultimately be solved. I base that belief mainly upon the large expenditure the industry

as a whole is making and the contribution they are making and the contribution they are making for research work done in schools and companies. I am sure that Hawley wants to be cooperative in this matter. Getting down to our own particular case, I believe you have two sources of pollution--one is fiber loss in the river; and the other sulfite liquor. I will not go into too much detail, but as far as fiber is concerned, I believe we have done a very good job over a period of years. When we started operations in December of 1932, there were only two save-alls in the plant. We have since that time equipped three other machines with them, and I think, at least I am hopeful, that your engineers will say that pollution from fiber loss is minimized, and I believe this phase of pollution is in very good shape. On the other hand, and when it comes to liquor loss, I cannot report any appreciable progress. The one thing I believe we have done to help that is that some years ago we changed our sulfite cooking procedure into what is called "Chemi Pulp procedure". I am not saying that has anywhere near solved the problem. In fact, I believe it is debatable how much good it has done. That is the only thing we have done, and to repeat again, I believe the fiber loss is in good shape. I believe the sulfite liquor problem which affects the oxygen just as much as other processes has been very limited, but I am hopeful that will be solved, if not by us, by the industry. Naturally, we are watching the magnesium process with a great deal of interest. Such a large expenditure would not be possible for our Company, and we will have to let the other fellow do it. In this particular, we are fortunate in one sense, since the big saving itself comes from B.T.U. 's, and we consume fuel oil entirely and as a result we would be in a favorable position to adopt it. Mr. Youngman says that at the Lebanon plant it may be necessary to cut operation to 9 months. Each mill differs, naturally. It so happens that Hawley, instead of being strictly a sulfite mill, is a newsprint mill. Our capacity averages slightly better than 100 tons daily and our ground wood capacity almost twice that much. Our wood pulp production on anational basis

is in the neighborhood of 65,000 tons a year, and I am hoping that we can increase that to an excess of 70,000 tons this year because we are going to go a little than sulfite. Production last year was the record, so far 92,700 tons. It would be most impractical for us to go to nine months operation with probably building a whole new sulfite mill. At Lebanon such a method would mean un-employment for only thirty men; while at Hawley's it would be considerably more, and would result at least in laying off 150 men, which, of course, offers more of an employment problem than it does at Lebanon."

Mr. Hallock: I presume you are watching the magnesium process. Do you think if it proves successful you would be interested in employing it.

Mr. Smith: Yes, if it is economical and feasible. I honestly believe if it is economical and feasible, competition would force us to adopt the method. We are using fuel oil, and I believe we are spending a half million dollars for it this year. The saving I believe Weyerhaeuser hopes for in the use of the magnesium process is that of the B.T. U. 's.

Mr. Wendel: As I said before Mr. Youngman and Mr. Smith came in, the Commission has been marking time for nine years. The public now requires action. It was only fair that the communities should act first. I believe when Portland completes its sewerage project (which will cost about \$14,500,000), another ten or fifteen million dollars will be spent by communities on the river. If you care to stay you may hear reports on municipal participation in stream pollution abatement. When the cities have completed these building projects and the river is still polluted, the public feeling is very much in favor of having industry clean up their share of the pollution.

Mr. Youngman: To date there is no known way of cleaning up sulfite liquor wastes.

ARG759

- Mr. Wendel: We realize that, but the public does not. Every time I walk down the street, I hear talk as to what are the paper mills going to do about the pollution of the river they are causing. After municipalities have spent money to the tune of \$30,000,000 to abate pollution in the river, and the river is still polluted by industry, they begin to wonder why.
- Mr. Hallock: We have a pollution from the mills along the Willamette equivalent to 1,000,000 persons, and this is a bit discouraging to those who have done their part to abate such pollution.
- Mr. Youngman: There is nothing in the river produced by paper and pulp mills that is destructive to human life.
- Mr. Smith: I would like to suggest that your engineers try to straighten people out in this respect. I believe that a lot of people erroneously think that the major part of the pollution of the river comes from the paper mills. I believe your own figures show that many people have a wrong belief in this respect.
- Mr. Wendel: The Authority does not put out any misinformation. We have never been accused of doing so. If the problem cannot be solved, then industry should endeavor to have the law changed.
- Mr. Smith: I was just hoping that the public could get, by some means, factual accurate information.
- Mr. Veatch: I do not know what the future of the paper industry is going to be. I do know, however, that according to the law we could not give permission for a new paper mill to open up without employing some process that would keep all the pollution out of the river. If someone comes in and puts in a paper mill where the location is such that would be required to use some process that would cause no pollution to the water, their natural reaction would be that all other mills meet the same condition.

It is a serious problem, but I think that the movement for cleaning up the river is going to gain momentum instead of quieting down, and I further believe it is up to the industry to bear that in mind. It is not only in the state of Oregon, but the same movement is spreading in eastern states, and the only hope is that someone finds the proper method for elimination of the pollution caused by this industry. The fisherman on the Columbia River are preparing to bring action against the plant at Camas for causing such pollution. That is just one indication of what you are going to be up against. I do believe that most of the plants are facing a very serious situation-- a bigger problem perhaps than that of any other industry.

ABG759

Mr. Smith: I do not intend to minimize in any way the pollution either by the paper mills or by domestic sewage, and I do appreciate the seriousness of the pollution. As I understand the law, if you gentlemen enjoin us from violating the law and even if we had ample excuse, we do not know how to comply with the law. I believe we have done a good job on the waste fiber, but we do not know how to stop pollution caused by sulfite liquor wastes. Perhaps Weyerhaeuser will have the solution in the process they are perfecting.

Mr. Hallock: If Weyerhaeuser should prove the magnesium method to be the answer, would you consider employing it.

Mr. Smith: We would give serious thought to it.

Mr. Veatch: The Authority recognizes the problem that industry has and what they are trying to do, and we do not believe any industry would say we had been hard-boiled about it. We are, however, faced with a very difficult situation here as far as the paper industry is concerned. We have insisted that some of the industries that could immediately eliminate pollution take care of their wastes immediately, but in all seriousness I do not believe the paper

industry can postpone the issue too long.

Mr. Smith: I honestly and sincerely believe that the paper industry, both nationally and in Oregon does not intend to try to avoid and evade or procrastinate in the matter. The industry is active nationally, and I believe all of the paper mills are participating in the national movement on stream cleanliness, and I believe they top all industry in endeavoring to solve this problem by contributing money to various state colleges and other interests.

Mr. Wendel: Any other discussion or question?

Mr. Kimmell: The present status of the program looking toward pollution abatement seems to be that the paper industry has nothing to contribute to solve the problem.

GRESHAM BERRY GROWERS ASSOCIATION: - Following a brief report on the matter of pollution of Johnson Creek made by Mr. Everts, Mr. Roy Burton, representing the Gresham Berry Growers Association, appeared before the Sanitary Authority to discuss their waste disposal problem. Mr. Burton stated that no progress had been made since. Mr. Burton did not bring a copy of the report to the meeting, but felt if they wanted to process corn, it would be the real problem. Up to now all corn processed by the plant was frozen. It had been estimated that about 150 gallons of water per minute would be isolated and be directed through the city sewer system. 150 gallons per minute was not considered too much for the middle of the stream until about the 20th of October when the creek would be very low. The cannery started out last fall with everything set up, when things went to pieces. Sewer lines plugged up, and while they were being opened, more water was directed into the creek. Unfortunately, no one really found out whether 150 gallons per minute or more than that were being discharged into the creek. He

estimated that 150 gallons per minute would be minimum, but did not know how much was run through the disposal plant, probably three times that much. At the conclusion of Mr. Spies' report on what had been recommended for handling this situation at the Gresham Berry Growers Plant, the following remarks were made concerning the matter:

Mr. Wendel: What are your plans for the coming season?

Mr. Burton: I don't know.

Mr. McPhillips: Are corn wastes still going into the sewer system?

Mr. Wendel: How soon will plans be completed?

Mr. Burton: If we cannot operate of 150 gpm, we will be out of business. We do not know how to run the plant with less water then 150 gpm.

Mr. McPhillips: Is it possible to store some of the waste and release it evenly?

Mr. Burton: We have given this consideration, but we don't like to do this very well. We gave the city of Gresham close to \$9,000.00 to help improve their plant and now find out we spent money for nothing. We do hate to give up the corn business.

Mr. Hallock: How much money would be necessary to provide proper method of disposing of corn wastes?

Mr. Spies: Not less than \$60,000 and perhaps more.

Mr. Hallock: Could you lagoon these wastes?

Mr. Burton: We would not consider lagooning, for we do not know of any available place for this lagooning.

Mr. Wendel: It is not within the province of the Authority to give a solution to a problem.

Mr. Hallock: Have you had the benefit of any independent engineering.

Mr. Burton: We did once or twice have an engineering staff. Their recommendation was to lagoon the wastes, which was not satisfactory.

Mr. Wendel: Have you had any civil suits yet?

Mr. Burton: No, not yet.

ABG759

Mr. Burton: We would like to know what can be done regarding the 150 gpm.

Mr. Veatch: Regardless of what this Commission does, if you start to operate without proper disposal of wastes, you will find civil suits against you. That is what you are facing right now. If we sit back and do nothing, you will still have that to face.

Mr. Burton: I know a lot of complaints were received and conditions were bad.

Mr. Beatch: If one of the communities were to enjoin you against stream pollution, you would have absolutely no defense.

Mr. Burton: We can confine operations to 150 gpm, but even that amount of waste cannot be handled. If there was any chance to make a pit and run waste off evenly, we might entertain the idea.

Mr. Hallock: What sort of load could the Gresham plant carry in addition to the domestic sewage.

Mr. Spies: The plant is now running pretty close to capacity.

Mr. Wendel then read action of the Authority at last meeting and asked the question as to whether there was any reason why this action should be changed. It was decided that the action of the Authority taken at its last meeting would not be altered.

Mr. Burton left at 4:10 P.M.

MUNICIPAL PROJECTS: - The secretary then reported on the status of municipal sewerage projects, and it was agreed that it be recommended to the city of McMinnville that they proceed more rapidly towards planning for necessary sewage disposal facilities, and that they give consideration to increasing their sewer users charge in order to provide a larger sinking fund.

In the case of Albany, Mr. Veatch MOVED that Albany be notified that action of their city is not satisfactory and the Authority must have satisfactory reply within 90 days time or else the city will be cited to appear before the Authority at its next regular meeting.

Seconded by Mr. McPhillips and carried.

Following the submission of a request from the city of Huntington, it was agreed by the Authority to give Huntington more time to comply.

Inasmuch as no report was received from the cities of Gladstone, Myrtle Creek, West Salem, and Milwaukie in response to our request for reports, it was MOVED by Mr. McPhillips that an additional 30 days be given; then if no reply was received, the cities will be cited to appear before the Authority. Seconded by Mr. Veatch, and carried.

③ // Policies regarding submission of plans and specifications for sanitary sewer systems, sewer systems, sewage treatment plants, and industrial waste treatment works having been presented to the Authority for consideration in advance of this meeting, it was MOVED by Mr. Hallock that policies as prepared be adopted. Carried. It was MOVED By Mr. McPhillips that policies be printed, provided the cost of printing was not excessive, and was approved by Mr. Wendel and Dr. Erickson. Seconded by Mr. Veatch and carried. //

A discussion of help needed to cover additional work in the Division was led by Mr. Everts, who reported that one additional engineer will be required to perform other work while plans for sewage works for 85 cities in addition to plans for industrial plants will be passing through this office. The office will have to be in position to do a lot more field investigation work in order to have sufficient data to support findings. The amount involved was approximately \$10,000 for two years.

It was MOVED by Mr. Veatch that the budget be made up to include an additional engineer; seconded by Mr. Hallock, and after a bried discussion by Dr. Erickson relative to support of Sanitary Authority in presenting same to budget director, motion carried.

The secretary, Mr. Everts, then brought to the attention of the meeting the U. S. Public Health Service training school to be held in March at Cincinnati. It was MOVED by Mr. Hallock that the matter be left to the discretion of Mr. Everts

ABG759

as to the value of our engineer attending the meeting; seconded by Mr. McPhillips, and carried.

Mr. Wendel, Chairman, opened a discussion relative to the pulp and paper pollution problem in an effort to arrive at some action on the part of the Authority as to what should be done about advising companies of the action of the Authority regarding thereports that had been received from representatives of the pulp and paper mills. Mr. Hallock believed that the magnesium process will be in operation this year and further believe that the Authority will be justified in waiting a little longer to see how the Weyerhaeuser project works. Mr. Spies thought that the magnesium method was the most feasible one yet developed; and Mr. Wendel proposed that until the next meeting our engineers keep in very close touch with the paper industry.

Mr. Everts was of the opinion that no evidence was submitted by any of the pulp and paper companies which would indicate they were conscientiously trying to solve the problem of stream pollution. It was believed that the technical staff of the Authority should be authorized to draw up a statement for each mill individually requesting certain information to be rendered periodically. Such information would be considered confidential by the Authority. The secretary was authorized if necessary to notify each of the pulp and paper companies that had appeared before the Authority that action of the Authority on the reports made by them is being considered by the Authority and will be continued at the next meeting. In addition, Mr. Wendel was authorized to review any requests for data on pulp wastes which might be requested.

Mr. Everts then outlined the plan of In-service training for sanitarians and recommended that the Sanitary Authority assist with the financing of such a course, inasmuch as the sanitarians are many times called upon to do work for the Authority in their respective counties. It was MOVED by Mr. McPhillips that \$200.00 be allowed for this purpose; seconded by Mr. Veatch, and carried.

There being no further business, the Chairman was authorized to set the date for the next meeting.

Meeting adjourned at 5:15 PM.

Respectfully submitted,

*Curtiss M. Everts, Jr.*

Curtiss M. Everts, Jr.,  
Secretary and Chief Engineer  
OREGON STATE SANITARY AUTHORITY

ABG759

## MINUTES OF THE THIRTY-SIXTH MEETING

OF THE

## OREGON STATE SANITARY AUTHORITY

August 20, 1948

The thirty-sixth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:30 A. M., August 20, 1948, in the offices of the State Board of Health, Behnke-Walker Building, 1022 S. W. 11th Ave., Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M. D., B. A. McPhillips, and Chas. E. Stricklin, Members; Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineers. Visitors present included Mr. Verne Reiersen, Health Education Consultant of the State Board of Health; Dr. David B. Charlton and Mr. Stuart Hill, representing the Izaak Walton League.

MINUTES: The minutes of the preceding meeting held January 23, 1948, having been submitted by the secretary to the members of the Authority in advance, were approved as prepared, without reading.

PROJECT PLANS: Following a review of sewerage project plans submitted to the members of the Authority for examination and approval, it was MOVED by Mr. McPhillips, seconded by Mr. Stricklin, and carried - that the action of the Authority engineers on the following project plans be approved:

Date	Location	Type of Project	Action taken
Jan. 6	Meridian	Sewage plant(Aero-filter	Approved
7	Sandy	Sewage plant (activated sludge)	"
9	Baker	Sewer extensions	"
26	Hood River	Sewer extensions (Prel.plans)	Recommendations submitted
27	Newberg	Sewer extensions	Approved

19	Salem	State sewer	Prov. approval
19	Tillamook Co. (Tillamook Co. Creamery Association)	Industrial waste treatment plant	Not approved

## MUNICIPAL SEWERAGE PROJECTS:

Portland Sewerage project: At the request of the Chairman, the secretary furnished a brief report on the status of the Portland sewerage project in which it was pointed out that the St. Johns interceptor, the Columbia Slough interceptor, and the main sewer to the sewage treatment plant were under construction, and that the grading at the sewage treatment plant site had been completed. It was further reported that plans for the project are complete except for the Columbia and Oregon Slough crossings; that the treatment plant plans are complete, the specifications for the treatment plant plan are almost complete and that the city will advertise for bids for construction of the sewage treatment plant in the near future. The cost of improvements completed or under construction was estimated at approximately \$1,600,000. It was reported by the secretary that Portland was progressing in a manner that could be considered satisfactory at the present time.

Pendleton: The secretary then brought to the attention of the Authority a request by consulting engineers for the city of Pendleton in which approval of the use of temporary domestic sewage facilities at a site near the confluence of the Umatilla River and McKay Creek was desired by that city during the summer of 1949. The secretary explained that the city of Pendleton had accumulated approximately \$200,000 in a sinking fund and is collecting approximately \$50,000 per year from a sewer-user service charge, and that in addition the state of Oregon has appropriated \$61,540 which will be used to pay the state's share of the cost of constructing the Pendleton sewage treatment plant.

It was pointed out that consulting engineers for the city of Pendleton had requested approval of the use of a temporary primary treatment plant during the canning season of 1949 to permit the use of the city's existing sewage treatment facilities for treatment of the cannery wastes; and further that the city of Pendleton desired to commence construction on the outfall sewer from the city to the new plant site near McKay Creek during the coming year so that construction

ABG759

of the new sewage treatment plant could be started by 1950. MOVED by Mr. Stricklin, seconded by Mr. McPhillips, and carried - that the request of the city of Pendleton as outlined by the secretary for the construction and use of temporary sewage treatment facilities during the 1949 canning season be approved.

West Salem: The attention of the Authority was then directed to the request from consulting engineers for the city of West Salem for information as to the degree of treatment required for sewage from the city of West Salem prior to its discharge into the Willamette River. It was pointed out that Salem and West Salem have considered the possibility of the construction of a joint sewage treatment plant and that these two municipalities and the Oregon Pulp & Paper Company of Salem are now discharging untreated wastes into the Willamette River in practically the same area. It was further pointed out that when the cities of Salem and West Salem construct sewage treatment plants, conditions in the stream would be such that wastes from the Oregon Pulp and Paper Company might not reduce the quality of the water in the Willamette River below the standards established by the Sanitary Authority. It was the belief of the secretary that inasmuch as both the cities of West Salem and Salem as well as the Oregon Pulp & Paper Company were responsible for pollution of the Willamette River in the vicinity of Salem that all three violators should be required to abate their share of this pollution. Mr. Wendel expressed the opinion that a committee should be appointed to give further study to the matter before any action was taken by the Authority; and as a result an informal committee consisting of Dr. Erickson, Messrs. Veatch, Wendel and Everts was designated to discuss the matter before the next meeting of the Authority and in the meantime it was decided that no further action against Salem and West Salem should be taken until a decision was reached regarding the problem

of the Oregon Pulp & Paper Company mill waste.

Gladstone, Myrtle Creek, Albany, McMinnville: The chairman requested a report on the progress made by the cities of Gladstone, Myrtle Creek, Albany, and McMinnville. The secretary reported that each city was now making satisfactory progress, and that there was no further necessity for action on the part of the Authority at the present time.

Gresham Berry Growers Association: At the request of the Chairman, the secretary reported further that the Gresham Berry Growers Association has not planned to process corn this season and that the city of Gresham has employed a firm of engineers to study the possibility of enlarging the city sewage treatment plant to sufficient capacity to properly treat the wastes from the Berry Growers Association cannery in Gresham.

Miscellaneous Municipality Sewage Projects: The secretary brought to the attention of the Authority the draft of the Biennial Report for 1946-1948 which contained information concerning the status of all municipal sewage disposal projects in Oregon.

PULP AND PAPER INDUSTRY: A verbal report on a recent conference with Mr. Russell Winget, Executive Secretary of the National Council for Stream Improvement of the Pulp and Paper Industry was then presented by the secretary. Mr. Winget indicated that the pulp and paper industry in Oregon would like to establish a committee to develop, together with the State Sanitary Authority, a plan to solve the pulp and paper waste disposal problem in this state. It was originally proposed to discuss the matter of the formation of such a committee at the Regional Conference of the pulp and paper group in Portland during the early part of June; but plans for the conference was dropped when floods prevented many of the members from attending. The secretary advised the Authority that the next meeting is scheduled for sometime around the 15th of September, and that the industry would probably desire to establish such a committee at that time. It was Mr. Wendel's opinion that the attitude

ABG759

of the Authority should be a willingness to work with such a committee; but that the actual administration functions of water pollution control should be maintained within the Sanitary Authority. Mr. Wendel then referred to the minutes of the last meeting of the Authority regarding the matter of pollution caused by discharge of wastes from the pulp and paper mills into the waters of the state and believe that the method outlined at that time regarding the handling of this matter was the most satisfactory.

Following some discussion on this subject, it was agreed by those present that the secretary should request the pulp and paper mills in Oregon to supply the Authority with data as to the quantity and strength of the wastes which they are discharging into the waters of the state, and also request them to keep the Authority advised periodically as to what progress they have made with regard to solving their pollution problem.

**MISCELLANEOUS INDUSTRIES:** The matter of pollution of the waters of the state by the Frontier Leather Company at Sherwood, the L. A. Beaudoin Meat Packing Plant at The Dalles, and the Gales Creek and Vanaken Sand and Gravel Companies located on Gales Creek west of Forest Grove, was discussed. The secretary then requested the opinion of the Authority members as to whether legal proceedings should be instituted against these establishments if any further pollution of the streams were caused.

**MOVED:** by Mr. Stricklin, seconded by Mr. McPhillips, and carried - that the Chairman be authorized to determine when such legal proceedings should be instituted and to direct the technical staff to take such action as may be required to prevent recurrent pollution of the streams by the Frontier Leather Company of Sherwood, L. A. Beaudoin Meat Packing Company of The Dalles, and the Gales Creek and Vanaken Sand and Gravel Companies of Forest Grove.

POLLUTION OF FRESH WATER STREAMS ON THE OREGON COAST: The matter of pollution of the fresh water streams on the Oregon Coast was discussed; and it was the belief of those present that the State Board of Health should take immediate action to post streams in the coastal area that are heavily polluted and unsafe for recreational purposes. It was further believed that such warning signs would have an educational value by bringing to the attention of the public the necessity for adequate sewage disposal facilities which would prevent such pollution. After some discussion on the subject, it was MOVED by Mr. McPhillips, seconded by Mr. Stricklin, and carried - that the State Sanitary Authority recommend to the State Board of Health that warning signs be posted on sewage polluted streams in the Oregon Coast area.

BUDGET 1949 - 1951: At the suggestion of the secretary, Mr. V.H. Osborn, Business Manager of the Oregon State Board of Health, was requested to join the meeting to assist in the discussions of the 1949-1951 budget.

The first item discussed was that of the amount requested for salaries and wages, in amount of \$39,328. It was pointed out that salaries were not comparable with those of private industry and in order to retain an efficient staff it would be necessary to obtain increased funds for salaries and wages. In addition, the added activities and increase in work made it essential that additional personnel be provided. MOVED by Mr. Stricklin, seconded by Mr. McPhillips, and carried - that the budget for salaries and wages be approved as prepared.

Next item of the budget concerned that of general, operating, and maintenance expense, in amount of \$22,767, to cover expenses incurred by the Sanitary Authority for the next biennium. Dr. Erickson pointed out that the increase in personnel would naturally increase the travelling expenses, and that the cost of operating the office has increased since the last biennium. MOVED by Mr. McPhillips, seconded by Mr. Stricklin, and carried - that the

ABG759

budget for general, operating and maintenance expense be approved as prepared.

The secretary then discussed the budget relating to funds requested for capital outlay, in amount of \$2,950; and indicated the necessity for having a new incubator for the laboratory, and an automobile available for use by the Sanitary Authority personnel. MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried - that the budget request for capital outlay be approved as prepared.

BUDGET 1947 - 1949; Following the discussion of the 1949-1951 budget, the matter of the expenditure of the remainder of the 1947- 1949 budget was discussed. It was recommended by the secretary that inasmuch as one of the stenographers in the Engineering Section of the State Board of Health does considerable clerical work for the Sanitary Authority the salary of this employee be carried by the State Sanitary Authority for the portion of the remainder of the present biennium. It was Mr. Stricklin's recommendation that this matter be left to the decision of the administrative personnel, and his recommendation was concurred in by those present.

VOUCHERS: The matter of signing vouchers for salaries, wages and operating expenses was briefly discussed. In the past, the Chairman of the Authority had always signed vouchers for such expenses, but to expedite and facilitate payment of claims and to relieve the Chairman of this responsibility, it was believed by those present that if a monthly financial statement was rendered to each member of the Authority the secretary of the Authority or the business manager of the State Board of Health could be authorized to sign such vouchers. MOVED by Mr. McPhillips, seconded by Mr. Stricklin, and carried - that the secretary of the Authority be authorized to sign all vouchers for salaries and other expenses incurred by the Sanitary Authority of the state of Oregon. In the absence of the secretary of the Authority, the business manager of the State Board of Health be authorized to sign all vouchers for salaries and other expenses incurred by the State Sanitary Authority.

ABG759

FEDERAL LEGISLATION: The matter of public law 845 water pollution law adopted by the 80th Congress was discussed and it was the opinion of those present that funds received from the federal government to carry on water pollution control activities in Oregon should be payable to the Oregon State Sanitary Authority, Division of the Oregon State Board of Health; and that the business management section of the State Board of Health would account for the funds in the same manner as it accounts for other federal funds in the same manner as it accounts for other federal funds for public health purposes.

BIENNIAL REPORT: The secretary referred to the preliminary draft of the biennial report for June 30, 1946, to July 1, 1948, which was supplied to those members present; and Dr. Erickson advised the Authority that the State Board of Health proposed to compile two biennial reports;- one which contained technical and statistical data, the other report to cover general activities of the Board of Health which would contain photographs and which would be for general public distribution. Dr. Erickson invited the Sanitary Authority to include their activities in the report which the Board of Health will prepare for public review. Mr. Wendel believed that a simplified report of the general activities of the Sanitary Authority for the use of the general public would be beneficial and should be included in the State Board of Health report. The secretary was instructed to cooperate with the Board of Health in the preparation of such a report.

The printing of "Policies Governing the Preparation and Submission of Plans and Specifications for Sanitary Sewer Systems, Sewage Treatment Plants, and Industrial Waste Disposal Works" was discussed. It was reported that the cost of having the State Printing Office do this work was \$160 per 300 copies. The cost of mimeographing was discussed. Mr. McPhillips suggested that the matter be left to Mr. Everts for decision.

The chairman at this point asked Dr. Charlton if he had any comments to

make. Dr. Charlton said it was the first time he had ever attended a meeting of the Sanitary Authority and that he had thoroughly enjoyed it. He then stated that he and Mr. Hill were representing the Izaak Walton League in their interests in stream cleanliness, and that the League was not satisfied with the progress that the pulp and paper mills were making in abating pollution caused by that industry. He said that the industry had stated in 1937 that if they knew of any way to abate pollution caused by their wastes, they would be willing to try it. Dr. Charlton referred to the fact that alcohol can be made from pulp mill wastes and also that it is a well-known fact that the Weyerhaeuser Timber Company has installed facilities to eliminate the discharge of such wastes into the streams. He believed that each paper and pulp mill should be required to show definitely whether or not they are making any plans to abate their pollution. At this point Mr. Wendel called Dr. Charlton's attention to that portion of the minutes of the January 23 meeting of the Authority where it was decided to ask for specific information and data from each individual mill concerning their pollution abatement program.

Dr. Carlton further stated that he did not believe that the pulp and paper industries were doing as much research work on the subject of abating stream pollution as they were leading the public to believe. He stated that he had reports on the studies and activities of various research laboratories in the country and that the pulp and paper industry did not show on their list of activities any reference to investigations for water pollution control. The Chairman then asked Dr. Charlton if he would furnish the Authority with certain data on this subject, and Dr. Charlton replied he would be very pleased to do so, as well as raise further questions concerning the water pollution control program in Oregon.

There being no further business, the date of the next Sanitary Authority meeting was set for 10:30 A.M. December 3, 1948; and the meeting was adjourned at 12:55 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.,  
Secretary of Chief Engineer,  
OREGON STATE SANITARY AUTHORITY

ABG759

## MINUTES OF THE THIRTY-SEVENTH MEETING

## OF THE

## OREGON STATE SANITARY AUTHORITY

December 2, 1948

The Thirth-Seventh meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:40 A. M., December 2, 1948, in the offices of the State Board of Health, Behnke-Walker Building, 1022 S. W. 11th Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M. D., B. A. McPhillips, Chas. E. Stricklin, Blaine Hallock, John C. Veatch, Members; Curtiss M. Everts, Jr., Secretary and State Sanitary Engineer; Kenneth H. Spies, Associate Sanitary Engineer; Clarence E. Cuyler, Assistant Sanitary Engineer; Robert R. Harris, Sanitary Engineer with the U. S. Public Health Service; and Mr. Cecil H. Quesseth, Assistant Attorney General.

MINUTES: The chairman called for corrections or additions to the minutes of the preceding meeting held August 20, 1948. The secretary reported that the amount appropriated by the Oregon Legislature for the state's share in the cost of construction of Pendleton's sewage treatment plant should have been \$61,500 instead of \$45,000. With this correction, the minutes were approved as prepared, without reading.

PROJECT PLANS: Following a review of sewerage project plans submitted to the members of the Authority for examination and approval, it was MOVED by Mr. Hallock, Seconded by Dr. Erickson, and carried - that the action of the Authority engineers on the following project plans be approved:

Date	Location	Type of Project	Action Taken
Aug. 24	Springfield	Sewer extensions	Approved
25	Monmouth	Sewage treatment plant	Not approved
27	Lebanon	Strom sewers	Approved
28	Springfield	(Weyerhaeuser Co.) Sewage plant(rev. plans)	Approved

	Date	Location	Type of Project	Action taken
Sept.	2	Tillamook County Coop. Creamery Association	Milk waste treatment plant (revised plans)	Approved
	3	Heppner	Hospital sewerage	Not approved
	3	Burns	Hospital Sewerage	Approved
	8	Springfield (Weyerhaeuser Co.)	Sewage Plant(revisions)	Approved
	8	Multnomah Co.,Forest Acres Subdivision	Sewers and sewage treatment Plant	Not approved
	10	Springfield	Sewer extensions	Approved
	14	Washington Co., Groner School, Dist.No.39	Sewerage - school	Approved
	14	Washington Co.,West Union School,Dist.#1	School sewerage	Approved
	20	Gales Creek	School sewerage	Approved
	21	Tigard	Grade school sewerage	Prov.approval
	21	Malheur Co.School Dist. #23	School sewerage	Prov. approval
	24	Tillamook Co.Coop. Creamery Association	Pumping station	Approved
	24	Medford	Bear Creek interceptor	Prov.approval
	24	Medford	Southwest interceptor	" "
	24	Medford	Camp White outfall sewer	" "
Oct.	1	Sheridan	School Sewerage	" "
	4	Klamath Falls	Sewer extension	Approved
	4	Washington Co. Manning School	School sewerage	Approved
	4	Pendleton	Sewer siphons	Approved
	4	Multnomah Co. Glendoveer Golf Club	Sewerage Sewerage	Approved
	8	Eugene	Sewer extensions	Approved
	15	Sheridan	School sewerage (Ret. plans)	Approved
	25	Pendleton	Interceptor & Outfall sewer	Approved
Nov.	1	Oak Grove, Grade School	School sewerage	Approved

ABG759

Date	Location	Type of Project	Action taken
Nov. 1	Dayton	Sewers & sewage treatment(Preliminary report)	Prov. Approval
1	Beaverton	Design date for sewage treatment plant	Approved
8	Ordnance	Sewage Disposal	Cond.Approval
8	John Day	Sewage Plant(Rev.Plans)	Action deferred pending receipt of additional plans.
15	Oakland	School sewerage	Approved
17	Roseburg	Veterabs Administration Facility sewage plant	Approved
23	Vermont Hills	Sewage Plant(prel. plans)	Not approved
26	Fairview	Sewers & Sewage treatment Pl.	Approved
24	Pendleton	Sewer extensions	Approved
26	Myrtle Point	Sewage treatment plant (Preliminary report)	Approved

The Chairman then advised those present that it would be necessary for him to leave the meeting for a short time; and Dr. Erickson was designated as temporary chairman until Mr. Wendel's return.

WOOD VILLAGE SEWAGE DISPOSAL PLANT: Mr. Edward Drake was present to represent W. C. Bauman in reply to citation issued by the Authority regarding improper operation of the sewage plant at Wood Village.

The hearing was opened by the secretary of the Authority who presented pertinent facts relating to the case, and read the citation issued to W. C. Bauman of the Wood Village Service Company. Copies of the case history and citation are attached and made a part of these official minutes. A letter received from Klik & Klik, attorneys at McMinnville, relative to the Wood Village sewage disposal practices was also introduced but was not considered pertinent to the subject at hand and was, therefore, not included in the proceedings. The testimony presented and the statements made were as follows:

Dr. Erickson: Mr. Drake, you understand the purpose of the hearing?

Mr. Drake: Yes, but I am somewhat unofficial. I have no official connection with the Wood Village Service Company. Mr. Bauman is the president of Wood Village Service Company. I am only connected indirectly with the set up. I live in Wood Village and have assumed the responsibility of representing Mr. Bauman at this meeting. However, this letter which is mentioned here as being from an attorney apparently representing some dairy is somewhat new and I do not want to jeopardize any of Mr. Bauman's interests. Is it of serious enough nature that it might require an attorney?

Mr. Hallock: The letter is in the nature of a complaint only.

Dr. Erickson: Mr. Drake, are you here unofficially?

Mr. Drake: Mr. Bauman just underwent a serious operation in New York. If he were able to give such statement I am sure he would give it.

Mr. Everts: Dr. Drake telephoned our office the other day to advise us that Mr. Bauman had undergone this operation and requested the hearing be postponed. I told Mr. Drake at the time that I had no authority to postpone the hearing, and suggested that Mr. Drake come to the meeting and if he wanted to make a plea for postponement at that time it could then be made before the Authority.

Dr. Erickson: What is the pleasure of the Authority? Should the hearing be postponed?

Mr. Hallock: If Mr. Drake is in position to make any statement regarding the physical complaint scheduled for hearing, we would like to know what we can expect of Mr. Bauman with respect to the plant.

Mr. Drake: First of all, I must admit of procrastination. In connection with the chlorination we feel we have maintained that pretty well. We have had some difficulty but from time to time it has been taken care of. We ran out of chlorine once or twice, and had trouble with the line once or twice. We cleared that up and I believe we have good operation at this time.

ABG759

The condition of the arms on the trickling filter was involved in the complaint and we believe that has been taken care of. At the time they were installed it was impossible to secure mercury because that required some special priority preference which we did not have. In any event it was agreed to make the installation without a mercury seal. Later we agreed to put the seal in; there was some delay but it has now been installed in the trickling filter. The sewer line coming into the plant was leaking, permitting some of the water to drip down under the main pipe line back of our own building. That has been entirely stopped, and repairs on that have been completed except for a little finishing of some cement work. The leaks have been stopped and the situation cleared up. Cleaning up of most of the plant has been carried on. We have been somewhat handicapped, having to change operators. We had a good operator a little over a year ago who was part engineer, and he took pretty good care of the plant. We lost him and changed to an operator who lives nearby but he just did not seem to have the time to spend at the plant. More recently we have changed to another operator who lives in Wood Village. We are going to watch this operator closely and are going to get someone who will look after the plant and keep it operating on an efficient basis, as we realize it has to be done.

Mr. Hallock: Have you seen the schedule that pertains to the situation?

Mr. Drake: No, I have seen letters from Mr. Eyerts.

Mr. Hallock: On page 4 there is outlined a list of requirements which remain to be carried out. Are you in a position to run through these briefly?

Mr. Drake: Yes.

Dr. Erickson: We will start with Item I - "Repair all leaks in influent sewer so it will be watertight?"

Mr. Cuyler: That was checked yesterday and found to be practically completed.

It will be finished in a few days.

Dr. Erickson: Item 2 - "Install flow measuring device to measure flow entering the plant".

Mr. Drake: I do not know what that is.

Mr. Cuyler: This was never installed due to the fact that Mr. Bauman was doing his own contract work. It should be installed.

Mr. Drake: I am not familiar with that but presume it could be put in without much difficulty.

Dr. Erickson: Item 3 - "Dispose of screenings removed from bar screen at frequent intervals and in a sanitary manner".

Mr. Drake: This is a matter of operation and I believe it is being taken care of.

Mr. Cuyler: They have been dumping screenings over the side of the screen for there is no place to dispose of them.

Mr. Drake: We have a receptacle, and the material is buried periodically.

Mr. Cuyler: The screenings should be buried every day.

Mr. Drake: That will be done.

Dr. Erickson: Item 4 - "Skin off floating solids from water surface of primary tank more frequently and draw primary sludge at least twice each day".

Mr. Drake: That is being done. The man who is maintaining the plant is operating it morning and evening.

Mr. Cuyler: This does not appear to have been done in the past.

Mr. Drake: The operators are instructed and trained on the basis that they must maintain proper operation of the primary tank and remove sludge twice daily. I assure you this will be done.

Dr. Erickson: Item 5 - "Install thermometers on digester hot water heating lines so that water temperature can be determined and recorded. Maintain digester temperature between 85° to 95° F."

Mr. Drake: This has not been done. We have a little different system. I believe most sewage plants are operated without utilization of the gas from the digester.

ABG759

Ours does take care of that. I do not know if that is a major matter. Could the gas heater be cut off and allow gas to escape? I understand that similar plants are operated without use of gas.

Mr. Cuyler: The capacity of the digestion tank is such that the contents must be heated. Otherwise, the digester would not be large enough.

Dr. Erickson: Item 6 - "Eliminate in an approved manner the cross-connection between the domestic water supply and the sludge digester heating system."

Mr. Drake: If I understand it, that has been done. There has been a back-water valve installed.

Mr. Everts: This type is not acceptable. It is a check valve and the installation is contrary to the plumbing code.

Mr. Drake: It was installed by a registered plumber and we thought it would be alright.

Dr. Erickson: Item 7 - "Clean off the sludge beds and place them in proper operating condition so that digested sludge can be withdrawn from the digester at regular intervals or whenever necessary".

Mr. Drake: The beds were cleaned but there is grass on the surface of the bed. Whether that is supposed to be correct, I do not know. Is that necessary?

Mr. Cuyler: Those beds are supposed to be sand beds. The way the beds are now, grass and weeds have grown over them so that sludge is drawn off onto the grass itself. The grass holds the moisture and does not permit the sludge to dry off properly.

Mr. Drake: The beds have been cleaned off.

Mr. Cuyler: The beds have not been cleaned off thoroughly enough.

Mr. Drake: If all grass is removed, will the grass not grow back on the beds again?

Mr. Cuyler: Not, if the beds are properly maintained.

Mr. Drake: You want us to clean the grass off then?

Mr. Cuyler: Yes, the grass is to be removed.

Mr. Drake: I will have the man take care of this.

Dr. Erickson: Item 8 - "Maintain gas collection and burning equipment, including the waste gas burner, in proper operating condition."

Mr. Drake: It is in operating condition and has been overhauled.

Mr. Cuyler: Gas has been burned, but not in the proper manner to maintain adequate temperatures. The burner is corroded and not doing the job it should.

Mr. Drake: In the summer time, the same burner operates very efficiently. As we get into the winter, we do not have the effectiveness nor the amount of gas. Can you tell me how we can maintain efficiency during the cold weather for that burner?

Mr. Cuyler: You could make a connection on the burner for city gas.

Mr. Drake: As far as I know we do not have this. We have not city gas at all. All heat comes entirely from the digester.

Mr. Spies: We spent one whole day several months ago with the plant operator trying to get the gas line in operation. The operator did not know anything about how to operate it. We found it was completely plugged with sludge and scum which had apparently gotten into it when the digester was not operating properly. The scum in the digester had risen up to the top of the tank and had overflowed into the gas line. We got most of the line cleaned out the day we were at the plant. The operator was going to complete the job and did get it fairly well cleaned out and the burner placed in operation. Since that time, it has been observed that there is still a plug in the line because the gas escapes through the water seal at the top of the digester, and all the gas is not being used. During the winter time you will have a lowering in the temperature of the digester contents because of the outside air temperature. This will naturally decrease the rate of digestion but with the load which they have at this plant it would seem that they would have enough solids to produce sufficient gas. The waste gas burner is not working. The operator will have to go over the gas burning system from

ABG759

beginning to end. Gas is being wasted through the water seal on top of the digester at the gas dome.

Mr. Drake: We will have someone go over that again. It was gone over about three or four months ago, and the whole burner was overhauled; but as soon as cold weather sets in, there is not enough gas.

Dr. Erickson: Item 9 - "Repair chlorine discharge line and maintain proper chlorine dosages."

Mr. Hallock: I understand Mr. Drake to say it was being properly chlorinated now.

Mr. Drake: I believe it is. We would be glad to have the state check the chlorine.

Mr. Spies: The chlorinator is located in the control house where the chlorine solution is made and discharged through a rubber hose in the final clarifier. For several months this discharge line was broken, with the result that chlorine was going into the ground.

Mr. Hallock: Has this been corrected?

Mr. Drake: It has been corrected, but we would like to have the state check that, too. There is chlorine at the point where it is supposed to be.

Dr. Erickson: Items 10 and 11, respectively, - "Maintain automatic dosing siphon, rotary distributor and nozzles in good condition so that sewage will not be by-passed to the outfall sewer from the siphon chamber", and "Install mercury seal in distributor and make all other necessary repairs so that the distributor will rotate freely at all times."

Mr. Drake: I believe this has been taken care of.

Mr. Cuyler: The primary effluent still overflows into the by-pass. The dosing chamber is not working as it should. There might be a plug in the line from the dosing chamber to the rotary distributor. The operator has mentioned that he has had to clean it out several times. Solids are still coming through and the effluent was still going out the by-pass. The distributor was moving from the first time when I inspected the plant yesterday. They had installed the

mercury seal, but the distributor was still not moving too freely. I did not inspect it too closely.

Mr. Drake: Then the dosing siphon seems to be the difficulty. We will take care of that.

Dr. Erickson: Item 12 - "Keep the trickling filter rock free of grass and weeds."

Mr. Cuyler: The filter has had grass growing up in the rock, and it should be removed.

Mr. Drake: This has been taken care of.

Dr. Erickson: Item 13 - "Make effluent weir of final tank perfectly level throughout its entire length."

Mr. Drake: I do not know just what this is.

Mr. Spies: There is a circular effluent trough on the outside of the tank. When it was built the weir was not installed level. Actually the flow does not take place all around the tank periphery. In order to get maximum efficiency it must flow evenly from the entire circumference of the tank.

Mr. Drake: I do not know anything about this, but will see it is taken care of.

Dr. Erickson: Item 14 - "Pump humus daily from final tank and discharge it into primary tank influent line and not directly to the digester."

Mr. Drake: I do not think that has been done. Believe it is done once or twice a week.

Mr. Spies: If this humus is not removed regularly, it will cause septic conditions. Sludge will rise to the top. Daily operation and maintenance is necessary for this unit.

Dr. Erickson: With your new operator, can you take care of that daily?

Mr. Drake: I do not recall that the final tank has been pumped more than once or twice a week.

Mr. Spies: Instructions have been given on this item in previous correspondence to the owner.

Mr. Drake: I will instruct the operator regarding this.

Dr. Erickson: Item 15 - "Keep the entire plant grounds free of weeds and maintain all structures and mechanical equipment in good condition.

Mr. Drake: This will take time, and we probably will not be able to do this until spring.

Dr. Erickson: Any further questions?

Mr. Hallock: I make the following motion - Because of Mr. Drake's statements here and because of Mr. Bauman's illness I move that these people be given a grace period of thirty (30) days in which to accomplish these results, to be followed by further inspection on the part of the Authority and if it develops that we have not had satisfactory compliance, the hearing and citation be continued at a date to be agreed upon.

Motion seconded by Mr. McPhillips, and carried.

At this point Mr. Drake left the meeting.

FRONTIER LEATHER COMPANY, SHERWOOD, OREGON: The Authority then considered the matter of discharge of tannery wastes into Cedar Creek by the Frontier Leather Company. The following persons were in attendance: Emma L. Cox, Dr. V.L. Ruiter, L. M. Thurlow, Orville M. Samulson, Larry Smith-Manager, Leo J. Henley-Attorney, representing the Frontier Leather Company; Ronald L. Riley- Attorney, C. H. Sanders-Mayor, A. Zimmerman-Water Supt. and councilman W.M. Adair, W. S. Bowen, H. J. Dahlke, representing the City of Sherwood; Dorsie G. Olds, representing the farmers along Cedar Creek; Philip E. Hodel, representing the Tualatin Protective Association; and Fred A. Anderson, attorney, representing the Rock Creek and adjacent property owners.

Mr. Everts briefly reviewed the case history of this industrial waste problem, and read the citation issued to the City of Sherwood and the Frontier Leather Company. Copies of the case history and citations are attached herewith and made a part of these official minutes.

Dr. Erickson: You have heard the facts as presented by Mr. Everts concerning this matter. What is your reply?

Mr. Henley: Only this - since the Frontier Leather Company was first organized, they have done exactly what they were told to do.

Mr. Hallock: Has the Company responded to all of the Commission's requirements?

Mr. Spies: No, they have not. After the company stopped running its wastes into Rock Creek, a letter was sent by the Authority to the city of Sherwood, with a copy to the industry in connection with their proposal for handling the tannery waste by discharging it into the city sewer and thence into Cedar Creek. In the letter it was pointed out that before this method of disposal could be used, the connecting sewer, the pre-treatment works at the tannery, and the final treatment works at the city plant would all have to be designed by a registered engineer. The matter of pre-treatment at the tannery had been discussed with Mr. Larry Smith and it was suggested that a fine screen and sedimentation would probably be the most logical method. They have installed facilities of that nature. The screening facilities are fairly satisfactory, but are not fine enough to remove all of the suspended matter. The sedimentation facilities which were installed are simply a plain tank divided into three compartments. It will be difficult to properly operate this tank because of the lack of sludge and scum removal equipment. No plans for these facilities were ever submitted to the Authority for review as is required by law and we had no knowledge that they had already been installed until after the operation at the tannery had been resumed.

Dr. Erickson: Is the inefficiency of the pre-treatment plant manifesting itself?

Mr. Spies: The tests made by the Authority in October indicated that the effluent from the pre-treatment works was about what one might expect for that degree of treatment. However, the plant had not been in operation very long. At the time our tests were made, the pre-treatment works were operating with the expected degree of efficiency, but without the mechanical equipment for removal of the

ABG759

solids, it will require much effort or manual labor to keep it operating with the same degree of efficiency over a prolonged period of time. Furthermore, in order to prevent pollution of Cedar Creek, additional treatment for these wastes was to be provided by the city of Sherwood, but no engineering or fiscal plans have been prepared as yet for such treatment works.

Mr. Hallock: The industry now turns its effluent waste over to the city and it is a combination problem?

Mr. Veatch: It might appear to be a combination problem, but the question is really between the city and the industry as to who is to take care of it.

Dr. Erickson: Is the obligation now that of the city, or has the Leather Company still the obligation for proper disposal of its wastes?

Mr. Henley: We have hired Charlton Laboratories to give the specific report on the effluent from the plant. We believe we have done everything we can do as far as the industry is concerned.

Mr. Riley: I understand from the Mayor that the matter was discussed orally, and oral consent was given the industry to connect this sewer onto the then existing sewer which was supplying sewage disposal for the cannery. We did receive notice from your Authority on June 24, 1948, by letter that it would be necessary for us to do certain things; and that it would be necessary to have a competent engineer retained for the purpose; and also we must arrange immediate financing for the work. We must not only have plans approved, but we must go forward with immediate construction of the sewage disposal plant. Here is the situation in Sherwood. There are about 500 people living in Sherwood. The valuation of the property in Sherwood is, roughly, in the neighborhood of \$300,000. Under our situation, for sanitary purposes we cannot issue a bond indebtedness of more than 20% of the assessed valuation. We are confronted with a proposition of having an impossible situation as far as bonded indebtedness and immediate construction is concerned because I understand there are some \$30,000 outstanding water bonds, which were voted some time ago for a water system. We have gone ahead, I understand, and we

have made an assessment on all users of the sewers equal to 30% of their water bill cost, to create a sinking fund to pay for these things. We have some \$1,500 in our possession. That is sufficient to give us a start. I don't see how we can possibly go ahead in the immediate future with any immediate construction. We have had engineers come out and look the situation over and make recommendations as to what should be done.

As I understand it, getting back to the Leather Company, in installing the system they did, they cooperated with us and we are trying to cooperate with them as much as possible; and this system they have put in is running as efficiently as that system can do ordinarily. That's the position of the city of Sherwood. As far as compliance with these orders is concerned, it is impossible; and it cannot possibly be done even had we attempted to comply with them.

Mr. Hallock: If the industry did not dispose of its waste into the city sewers, would the present city system be adequate to handle its own domestic sewage?

Mr. Henley: The tannery is an independent line and not mixed with the regular city sewage of Sherwood.

Mr. Hallock: It looks like the city and industry could get together and try to work out something and make some sort of tentative arrangements to handle this problem.

Mr. Veatch: Provisions should be made for the disposal of industrial wastes before a plant is constructed and operated. The Sherwood tannery was constructed in 1947 without adequate plans for waste disposal. The attitude of the Sanitary Authority in the past has been that for established industrial plants that were using sewers for waste disposal when the stream purification law was first adopted, a reasonable time would be given them to take care of their industrial wastes; but for new plants built since then, it would be necessary to comply with existing state statutes.

ABG759

The same condition applied to the Alcohol plant at Springfield. They are not operating yet because they have never worked out the proper system of disposing of their industrial wastes.

Mr. Hodel: I represent a group of about 350 river property owners, most of them in the lower reaches who would be directly affected by pollution above. The statement I would like to make is that we are greatly concerned in maintaining a clean stream. The stream is used recreationally, and is used by some to make a living. In expressing the will of these property owners, we request that every effort be made not only to keep the stream in as clean a condition as possible but to eliminate waste from entering the stream.

Mr. Riley: How far is the property from the disposal of this plant at Sherwood?

Mr. Hodel: I do not know the length of the Cedar Creed and Chicken Creek stream before it reaches the Tualatin River, but our membership extends from the dam up to and beyond the confluence of Chicken Creek and the Tualatin River.

Mr. Riley: Do the people above that point complain of pollution?

Mr. Hodel: Pollution has been discussed.

Mr. Riley: Your complaint is generally about any pollution put into the river from any community?

Mr. Hodel: In particular from the city of Sherwood, but we do want a clean condition in the stream.

Dr. Erickson: You are here today because the state law does prohibit pollution of the waters of the state. Getting back to the basic question, Mr. Everts can you tell us as to whether the city of Sherwood, if the pollution of the Leather Company were removed, has a plant that would adequately take care of the sewage disposal problem?

Mr. Everts: It has not.

Mr. Hallock: What are the citizens of Sherwood doing about it?

ABG759

Mr. Sanders: We have made a survey of the line. I asked the engineer to make two surveys - a deep line and a shallow line. Their survey only included the deep line. In a city the size of Sherwood, it seems to me it should be necessary for engineers to understand we cannot do things in the way the city of Portland can do them; and the costs would have been \$14,000 to \$18,000 just to run a line of about one-half mile. That was something we could not do. So, we constructed a sewer line and arrived at the same point as would have been laid. The line was not constructed by the city entirely. Frontier Leather Company constructed part of it and the cannery constructed part of the line.

Mr. Hallock: What I am thinking about is - that engineers were employed by the city to work up the program to adequately handle the city's sewage for the industry. Is it possible for the city itself, with no great financial burden, to provide adequate facilities? If the industry stands on its own feet, is it not quite possible that the city could finance its own sewage disposal plant?

Mr. Sanders: It would be difficult for us now to construct any kind of a sewage treatment plant. We have had meetings in which we agree tentatively that when we could afford to construct a sewage disposal plant, that the city and the industries would carry equal parts of the burden. The Leather Company agreed they would share an equal burden. We imposed a 30% sewer tax on our water users, and we have budgeted \$1,000. We cannot do much on that and get an engineering plan unless we have money on hand. The problem of the small city is always lack of funds. We used some of the money for the extra line.

Mr. Hallock: When was the 30% assessment effective?

Mayor Sanders: A year or ten months ago.

Mr. Hallock: The city has enough load to handle its own problem. The question gets right back to the point of the industry handling its own problem.

Dr. Erickson: As I understand it, no engineering plan to join these wastes was ever submitted to the Sanitary Authority.

Mr. Sanders: We talked with Mr. Spies. He knew they were doing it.

Mr. Spies: We knew what had been proposed, but we did not know that they were going ahead with construction without benefit of any engineering plans.

Mr. Everts: It seems to me that the city should have some sort of plan for the collection and treatment of this sewage. The matter of whether or not they are going to include industrial wastes is something for the council to decide. However, they cannot get that plan until they have had a survey of their problem made and recommendation by engineers for a suitable method of handling their sewage problems. So far, the only thing they have retained an engineer for is to design a connecting sewer between the tannery and the city. The fact that the city is collecting sewer rental charges and levying a sewer-user charge to build up sinking funds, I believe is commendable. On the other hand, it is believed that they should know the estimated cost of constructing the needed facilities. They should bend every effort to act and get a practical plan for disposal of sewage and industrial waste disposals. In the meantime, I do not believe we can go along with continued disposal of the tannery wastes into the creek, as long as we are operating under the present statutes.

Mr. Veatch: Any industrial plant prior to the time that it starts to discharge wastes into the streams must have some system which has been approved by the Sanitary Authority for disposal of the wastes. The burden is placed on the Authority to enforce this statute. How are we going to say that this plant or any other plant can go ahead and discharge industrial wastes into the streams, causing pollution of these waters, simply because they have made arrangements with the city to dispose of their wastes into the city sewers. We cannot legally give them permission.

Dr. Erickson: Mr. Henley, you understand the position of this Commission

regarding this matter?

Mr. Henley: We have spent a lot of money on this, but if the Authority says to shut down the plant we will have to do it.

Mr. Veatch: We have allowed a little more leeway for an industry that was established before this state law was passed, but the paper and pulp mills have now been notified they must solve their industrial waste problem. They have been required to report regularly to the Authority regarding this matter and some of them have already made good progress towards solving their particular problem. We have the situation here in which this plant was constructed after the stream purification act became effective and, therefore, the industry must comply with the law. Regarding the alcohol plant at Springfield, it was never allowed to open because it had no solution to the industrial waste problem created by that plant.

Dr. Erickson: I would like you, Mr. Henley, to clarify your statement to the effect that the Leather Company has complied exactly with the recommendations of the Authority.

Mr. Henley: Maybe, not exactly, but when Mr. Spies was out there we talked the matter over.

Mr. Hallock: No formal request was ever made?

Mr. Spies: The industry has tried to cooperate and they naturally looked to us for recommendations. We made recommendations as far as their pre-treatment was concerned. Our requirements in a letter which was sent to the city and the industry pointed out that certain things would have to be done according to law. That letter was dated June 24, 1948.

Mr. McPhillips: Where the fault lies is in not securing approval before starting to operate.

Mr. Spies: Actually, this matter should have been clarified before the plant was ever located at Sherwood. Sherwood is not a suitable location for an industry of this type because there is no stream nearby large enough to handle

ABG759

the wastes. As soon as we learned of this plant being located at Sherwood, we made an inspection of the plant site. At that time we were advised that the city was assuming the responsibility for the waste disposal. Following that inspection a letter was sent on August 21, 1947, to the city of Sherwood pointing out the problem they would be up against, and advising them of the statutory requirements, but they did not see fit to heed our letter and we had to write again before we could get any reply. In their reply they stated that land had been purchased and lagoons were being installed. As stated before, it is a poor location for an industry of this type due to the fact they do not have adequate waters for dilution and if they had taken this into consideration, they would probably not have located there at all. If it were located on a stream such as the Willamette River the degree of pre-treatment, which has been provided by the industry, would be adequate.

Mayor Sanders: In the beginning none of us realized the seriousness of the situation and naturally we are all people working at jobs and know nothing about all these problems until they really concern us. I believe if we had realized all this and had acquainted Kiwanis Club with these facts, things would have been different. They went out after this industry and we didn't think the disposal of the wastes would be so serious. We do realize it now and we are trying to get out of it. The city is trying to work with the industry, but we did not realize what we were getting into.

Mr. Henley: If for a moment the tannery knew they were going to be faced with this problem, we would not have gone ahead and spent the money we have in making a temporary line.

Dr. Erickson: The Authority had no opportunity to approve of any plans.

Mayor Sanders: We were told by Mr. Spies last winter it would be OK to allow the waste to enter the city sewer lines.

Mr. Spies: They were told it would be OK providing certain requirements were complied with which, of course, haven't been. In our original report we suggested they try to use lagoons if sufficient land were available. There is plenty of area below the plant but apparently it cannot be obtained. They did install some small lagoons finally on land near the tannery. They were, however, very small and were not large enough to prevent the pollution of Rock Creek. After being convinced that Rock Creek could not handle the wastes, the city proposed to the industry that they pump their wastes over into the city sewer system. We told them if they were going to do that someone would have to provide additional treatment because Cedar Creek has about the same flow as Rock Creek.

Mr. Hallock: Is adequate land available to lagoon these wastes?

Mr. Spies: There is a lot of ground available on the Rock Creek watershed that could be used for lagooning purposes, providing it could be purchased from the present owners.

Mr. Anderson: There was no attempt on the part of the tannery or city whatever to consider the property owners on Rock Creek. They dumped raw sewage into the Creek without any treatment. The cattlemen and dairies were unable to water stock in the stream. All in all, it appears that the tannery was riding roughshod over the interests and rights of these people and from that standpoint, this area now being considered for lagoons and owned by a client of mine is not for sale. They do not want sewage or any part of it in Rock Creek.

Mr. Sanders: Bringing the matter of Rock Creek into the question is beside the point. There is still land available in the vicinity where the discharge is being made.

Mr. Quesseth: You say the property owners do not desire the refuse to go into Rock Creek, and they also refuse to sell the land for lagooning purposes. Is it not possible by a purchase of this land to eliminate refuse from entering the Creek? Could several acres be used? If they do purchase additional land,

ABG759

would that eliminate refuse in the Creek?

Mr. Spies: It would no eliminate it entirely. They would have to have lagoons large enough so that the waste could all be stored during the growing season, but it would have to be released later when the stream flow was great enough to handle it. There would be some overflow, but regulated at a period when it would be the least detrimental to the farmers.

Mr. Quesseth: Would it be to the interests of the riparian owners along Rock Creek to allow purchase of this ground?

Mr. Olds: I am only concerned in this matter inasmuch as I am a small property owner on Cedar Creek. I own five acres right at the point where Cedar and Chicken Creeks come together. During the winter months my property is flooded, and this summer about the time this refuse had been put into Cedar Creek, we noticed the creek had developed after this last rain a terrible stench. I have cows and they will not drink in this creek. I began to investigate and found out why I was unable to water my stock in Chicken Creek and went around among my neighbors and circulated a petition and gave it to Mr. Fosner of the Sportsmen Club. At the present time there is possibly 2-1/2 feet of water that fills up depressions. If it becomes contaminated with chemicals, it will be hard on the dairymen. That is why I am here today, to have this much to say.

Mr. Smith: Your cattle would not drink water contaminated from city sewage disposal from Sherwood?

Mr. Olds: The cattle did not refuse to drink until after the tannery wastes were dumped into the creek.

Mr. Yeatch: There is nothing the Authority can do except to order the industry to cease discharging effluent into the city sewage system. It is up to the industry to find some other means of disposal.

Mr. McPhillips: We can do nothing else according to the state statutes, where pollution has arisen since the enactment of the Stream Purification Act.

Mr. Henley: We are having our own engineers check on this pollution but have no report yet and not able to get one for two weeks. After all, the question of the correctness of these figures does arise, and I do not think they are typical of the pollution this report indicates.

Mr. Hallock: The state statutes provide we make such investigation; then we cite the offender and have a hearing, and then based on all the findings in the case, which is the reason we are assembled here today, we are required to take some form of definite action to abate the pollution caused.

Mr. Henley: Your letter of June 24th indicates there would be a report available which would be delivered to the city. That report has never come into possession of the city.

Mr. Spies: The report in question was mailed to both the city and the industry on June 29, 1948. The report was dated June, 1948. With regard to the results of our October 1948 studies, Mr. Thurlow was in our office one day and I advise him to check with us within a week as the laboratory tests would be completed by then.

Mr. Thurlow: I did not understand it that way.

Mr. Veatch: I move that the tannery at Sherwood submit within sixty (60) days to the Sanitary Authority for approval its plans for the disposal of industrial wastes from the plant; seconded by Mr. Hallock, and carried.

Dr. Erickson: I hope all of you understand the position of the Authority in this matter.

Mr. Thurlow: What is most important - to stop polluting the Creek, or put a number of persons out of work?

At this point those present for the hearing left the meeting; and Mr. Wendel returned and assumed the chairmanship.

MEDFORD TRUNK SEWER - The secretary outline the request of the City of Medford to space manholes not more than 700 feet apart in connection with the trunk sewer line from Medford to the Camp White sewage plant.

ABG759

MOTION by Mr. Hallock that waiver be made to permit manholes to be spaced not to exceed 700 feet on this particular trunk line. Seconded by Dr. Erickson and carried.

MONEYS AVAILABLE FOR STREAM POLLUTION: Mr. Veatch brought up the question of money being spent for stream pollution investigations by the various and sundry commissions, and said that it was a waste of funds for different organizations to cover the same territory. It was his belief that the Commissions concerned should work together. Mr. Everts stated that the Authority engineers had worked in close cooperation with the Fish Commission and Game Commission in planning pollution investigation undertaken by the Fish & Wildlife Service at Corvallis.

MUNICIPAL SEWAGE PROJECTS:

Portland - Mr. Wendel stated that he did not think that Portland was moving very fast in the matter of constructing its sewerage project, which was supposed to have been completed in about 1-1/2 years from 1947. Mr. Everts believed that the slow pace of the city was due to the fact that engineers have been slow in getting the plant designed. Mr. Wendel indicated that he would like a definite time schedule from the city of Portland showing the anticipated dates for completion of the project. MOTION by Mr. Hallock that chairman's suggestion be acted upon and the secretary be requested to call upon the city of Portland for definite time schedule for completion of each unit; Dr. Erickson seconded the motion, and it was carried.

Sheridan - A letter from the Mayor of Sheridan was read in which it was stated that the Sanitary Board would have to take drastic action before Sheridan will do anything about a sewage plant for that municipality. Mr. Everts recommended that after about the 15th of January when new mayors and new members of the city councils in the state go into office that the Sanitary Authority immediately notify them of their responsibility for abatement of water pollution, and ask for a report as to the status of sewerage projects in each city.

Mr. Wendel believed that was an excellent plan, and the secretary was authorized to obtain such a report from each city.

STATE INSTITUTIONS: The secretary reported that sewage from Fairview Home and Hillcrest will be taken care of in Salem's sewer system, and that the Board of Control now proposes to ask the Legislature to appropriate enough money to extend sewers to the TB Hospital.

Securities Investment Company, Oswego - The Secretary reported that no plans had been received for a sewage pumping station at Conifer Terrace in Oswego. The station had been installed but was not working satisfactorily and sewage overflows from the station and into Lake Oswego, in violation of specific state statutes protecting Lake Oswego. He further stated that the Authority has tried to cooperate in this matter but could not obtain the necessary corrections. The secretary was instructed to issue a direct order to get this matter cleaned up.

Paper and Pulp Industry. - The secretary reported briefly on the request of the Authority that the paper and pulp mills submit to the Authority a statement, monthly, regarding the quantity and strengths of their wastes. He stated it was apparent that these industries had no idea as to the extent of the wastes which were being discharged into the waters of the state. They all indicated a willingness to cooperate, however, and the reports will be sent in regularly as requested.

The secretary also reported on the visit to Weyerhaeuser Timber Company's pulp mill at Longview, Washington, to learn about the new process they are installing at that plant to reclaim chemicals and to abate stream pollution.

Mr. Harris, U.S. Public Health Service Sanitary Engineer, stated that he believed the northwest is doing more on disposal of pulp mill waste than is being done in other parts of the country.

ABG759

Pollution of coast streams - The matter of the State Board of Health posting these streams as being unfit for recreational purposes was discussed, and Dr. Erickson stated that this matter was presented at the regular meeting of the State Board of Health. Dr. Erickson reported that it was the belief of the State Board of Health that a survey should be made of all the streams in Oregon and that they be so posted, rather than concentrated only on the coastal streams. Also, it was requested that a map be presented to the State Board of Health showing location of these streams; and that a practical method of posting be presented.

Mr. Harris was introduced at this time, and he briefly commented on the activities of his staff. He stated that they are a service organization, and that the first step in getting started will be to develop a comprehensive program for the area. He also stated that all pollution control agencies will have to gather basic data and then determine a long-time program; and that they will be working very closely with the Authority. Relative to the paper and pulp industry, he believed that the primary responsibility for research rests with the industry, but that the Public Health Service will be in a position to assist them in their research work.

PUBLIC RELATIONS: Mr. Wendle opened a discussion on public relations. It was his belief that keeping the matter of sanitary sewage disposal and stream pollution abatement before the public was of the greatest importance in securing compliance with the state statutes relative to these matters. Dr. Erickson suggested that the personnel of the Health Education Section of the State Board of Health assist the Sanitary Authority with such a program, on a part time basis. MOTION by Mr. Veatch that \$500.00 be set aside for the purpose of the public relations program and that the chairman be authorized to determine how the money should be spent to the best interests of the program; seconded by Mr. Stricklin, and carried.

The secretary was instructed to contact Mr. David Piper of the Health Education Section regarding this matter.

There being no further business, the date for the next meeting was set for Friday, February 11, at 10:30 A.M.

Meeting adjourned at 1:40 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.,  
Secretary and Chief Engineer  
OREGON STATE SANITARY AUTHORITY

ABG759

BEFORE THE SANITARY AUTHORITY  
OF THE  
STATE OF OREGON

In the Matter of Sewage Disposal  
by the Wood Village housing development  
in the Public Waters of the State of Oregon.)

CITATION

To W. C. Bauman, builder and owner of the sewage disposal works serving said housing development

IN THE NAME OF THE STATE OF OREGON, upon relation of the Sanitary Authority of the State of Oregon, you are commanded to appear before the Sanitary Authority of the State of Oregon, at Room 1, Behnke-Walker Building, 1022 S. W. Eleventh Avenue, in the city of Portland, county of Multnomah, State of Oregon, on Thursday, December 2, 1948, at the hour of 10:30 O'clock A.M., and then and there show cause, if any exists, why you should not operate the Wood Village sewage disposal works in an efficient and proper manner, and if you should fail so to do why appropriate proceedings should not be instituted against you for the purpose of abating a public health hazard and nuisance condition created and existing by virtue of the lack of proper operation of said disposal works and the disposal of inadequately treated sewage into the public waters of the State of Oregon.

By order of the Sanitary Authority of the State of Oregon made and entered on the 17th day of November, 1948.

SANITARY AUTHORITY OF THE STATE OF OREGON

signed

BY H. F. Wendel  
Chairman

PERTINENT FACTS REGARDING  
WOOD VILLAGE SEWAGE TREATMENT PLANT

1. General Information

The Wood Village sewage disposal plant is located one mile east of the town of Fairview, Multnomah County, Oregon. It is owned and operated by W.C. Bauman, Contractor. The plant was designed by Cunningham and Associates, Consulting Engineers, for a population of 1,500 persons and was built by the owner with the major units being completed and placed in operation in December 1943.

The plant, at the present time, is loaded to capacity in as much as it receives the sewage from the 183 private homes in Wood Village proper and from the 264 family units in Fairview Homes, the latter being a federally owned and operated housing project.

The plant consists of the following units:

- (1) Coarse bar rack or screen.
- (2) Primary settling tank with mechanical sludge removal equipment.
- (3) Dosing chamber and automatic dosing siphon.
- (4) Standard-rate trickling filter with rotary distributor.
- (5) Plain hopper-bottom final settling tank.
- (6) Separate sludge digester with heating equipment.
- (7) Chlorinator.
- (8) Sludge drying beds.
- (9) Control house for sludge pump, gas burning equipment, chlorinator, etc.
- (10) Waste gas burner.

The plant effluent is discharged through an outfall sewer into a small unnamed stream which provides very little dilution during much of the year.

ABG759

Wood Village 11/27/48

With proper operation and maintenance the plant should effect an 85% removal of the 5-day B.O.D. and should produce an effluent containing not more than 50 p.p.m. of residual B.O.D. In fact, this degree of efficiency is required in order to comply with the minimum standards of the State Sanitary Authority.

2. Defects in Original Construction

When the plant was first built certain details were not constructed in accordance with the approved plans and have never been changed since then. Because the contractor was also the owner, the Consulting Engineer was unable to do anything about this non-compliance with the plans.

The most important defects in construction included:

- (1) The inlet sewer to the plant was not built water tight and as a result raw sewage leaks onto the surface of the ground.
- (2) The diversion manhole at the inlet to the plant was not built according to plan and as a result no flow measuring device was installed.
- (3) A direct cross connection between the domestic water supply and the hot water heating system in the sludge digester was made in the piping at the Control House, thereby creating a hazard to the safety of the water supply.
- (4) The effluent weir for the final clarifier was not installed level throughout the entire periphery of the tank.
- (5) Insufficient or improper supports were provided for certain sections of the various piping throughout the plant.
- (6) Refer to copy of a letter from the Consulting Engineer to the owner dated August 16, 1943, for other minor defects in construction.

Wood Village 11/27/48

3. Defects in Operation and Maintenance

The plant was actually placed in operation before the construction was fully completed. Since that time it has never been properly operated or maintained. Numerous inspections of the plant have been made by the Authority personnel and several letters have been written to the owner outlining the needed changes and improvements. Verbal instructions and advice have been given to both the owner and operating personnel at the time of the inspections.

According to our file records, inspections have been made on the following dates:

- |                        |                         |                         |
|------------------------|-------------------------|-------------------------|
| (1) September 10, 1943 | (9) August 16, 1946     | (17) January 27, 1948   |
| (2) September 27, 1943 | (10) September 9, 1946  | (18) July 12, 1948      |
| (3) November 6, 1943   | (11) October 16, 1946   | (19) August 18, 1948    |
| (4) December 2, 1943   | (12) September 17, 1947 | (20) August 26, 1948    |
| (5) March 2, 1944      | (13) September 29, 1947 | (21) September 3, 1948  |
| (6) October 10, 1944   | (14) October 23, 1947   | (22) September 22, 1948 |
| (7) February 27, 1945  | (15) January 15, 1948   | (23) November 3, 1948   |
| (8) February 4, 1946   | (16) January 18, 1948   | (24) November 15, 1948  |

Letters and reports advising the owner of needed changes and improvements have been sent by the Authority under the following dates:

- (1) September 14, 1943
- (2) September 29, 1943
- (3) November 6, 1943
- (4) August 17, 1946
- (5) October 29, 1947
- (6) December 4, 1947
- (7) January 27, 1948
- (8) July 27, 1948

In spite of these activities on the part of the Authority personnel, the owner has made little or no attempt to improve the operation and maintenance of the plant.

ABG759

Wood Village 11/27/48

4. Results of Laboratory Tests Made of Plant Efficiency

Date Samples were collected	5-day B.O.D. (P.P.M.)		Over-all Plant Efficiency
	Raw Sewage	Plant Effluent	
January 15, 1948	250	64	75%
August 26, 1948	505	124	75%
September 3, 1948	420	150	65%
September 22, 1948	*	155	---

\* No samples of raw sewage collected on this date.

5. List of Requirements Which Remain to be Carried Out.

- (1) Repair all leaks in influent sewer so it will be water tight.
- (2) Install flow-measuring device to measure flow entering plant.
- (3) Dispose of screenings removed from bar screen at frequent intervals and in a sanitary manner.
- (4) Skim off floating solids from water surface of primary tank more frequently and draw primary sludge at least twice each day.
- (5) Install thermometers on digester hot water heating lines so that water temperature can be determined and recorded. Maintain digester temperature between 85° and 95° F.
- (6) Eliminate in an approved manner the cross-connection between the domestic water supply and the sludge digester heating system.
- (7) Clean off the sludge beds and place them in proper operating condition so that digested sludge can be withdrawn from the digester at regular intervals or whenever necessary.
- (8) Maintain gas collection and burning equipment, including the waste gas burner, in proper operating condition.
- (9) Repair chlorine discharge line and maintain proper chlorine dosages.

Wood Village 11/27/48

- (10) Maintain automatic dosing siphon, rotary distributor and nozzles in good condition so that sewage will not be by-passed to the outfall sewer from the siphon chamber.
- (11) Install mercury seal in distributor and make all other necessary repairs so that the distributor will rotate freely at all times.
- (12) Keep the trickling filter rock free of grass and weeds.
- (13) Make effluent weir of final tank perfectly level throughout its entire length.
- (14) Pump humus daily from final tank and discharge it into primary tank influent line and not directly to the digester.
- (15) Keep the entire plant grounds free of weeds and maintain all structures and mechanical equipment in good condition.

BEFORE THE SANITARY AUTHORITY  
OF THE  
STATE OF OREGON

In the Matter of Sewage and Waste Disposal }  
by the city of Sherwood and the Frontier }  
Leather Company in the Public Waters of }  
the State of Oregon. }

CITATION

To the City of Sherwood, a municipal corporation;  
C.H. Sanders, Mayor of said city; Herbert Dahlke, Victor Muralt,  
Walter S. Bowen, and W. M. Adair, Councilmen of said city; and, to  
the Frontier Leather Company, Larry Smith, President and Manager of  
said Company

IN THE NAME OF THE STATE OF OREGON, upon relation of the  
Sanitary Authority of the State of Oregon, you and each of you are  
commanded to appear before the Sanitary Authority of the State of  
Oregon, at Room 1, Behmke-Walker Building, 1022 S. W. Eleventh Avenue,  
in the city of Portland, county of Multnomah, State of Oregon, on  
Thursday, December 2, 1948, at the hour of 11:00 o'clock A.M., and  
then and there show cause, if any exists, why appropriate proceedings  
should not be instituted against you for the purpose of abating a  
public health hazard and nuisance condition created and existing by  
virtue of the disposal of inadequately treated sewage and wastes by  
said city and company in the public waters of the State of Oregon.

By order of the Sanitary Authority of the State of Oregon  
made and entered on the 17th day of November, 1948.

SANITARY AUTHORITY OF THE STATE OF OREGON

signed

BY H. F. Wendel  
Chairman

PERTINENT FACTS REGARDING  
TANNERY WASTE DISPOSAL PROBLEM AT SHERWOOD, OREGON

General Information

The Frontier Leather Company tannery, which is a new industrial establishment at Sherwood, Oregon, was built during the summer and fall of 1947, with operation of the plant starting in November of that year. It is located just inside the northeast corporate limits of the city and on the watershed of Rock Creek which is a small tributary of the Tualatin River.

The chrome tanning method is employed at this plant for the processing of some 2,000 pounds of deer skins per day. This results in the daily production of approximately 20,000 gallons of liquid tanning wastes which have an average 5-day B.O.D. content of 1,400 parts per million. In other words, the liquid wastes from this tannery are equivalent in strength to the sewage from a population of 1,360 persons, whereas, the present population of the entire city of Sherwood is probably not more than 650 persons.

When this plant was under construction, the first inspection of it by a representative of the Sanitary Authority was made on August 14, 1947. At that time it was learned that the city of Sherwood had agreed to provide proper waste disposal facilities for this new industry. In a detailed report dated August 21, 1947, the city and industry were advised by the Authority that adequate treatment would have to be provided for such wastes before they could be discharged into a public waterway. In spite of this fact, the only facilities which were provided for the disposal of the wastes consisted of a short outfall sewer which discharged into a ditch leading to Rock Creek.

On October 31, 1947, the city was again advised by letter that treatment facilities for the tannery wastes were required by state law. Finally, on November 21, 1947, a letter from C.H. Sanders, Mayor, stated that land had been purchased and that adequate storage lagoons would be installed so that the waters of Rock Creek would not be polluted.

ABG759

### Pollution of Rock Creek

In March 1948 complaints were received from farmers living along Rock Creek in which it was alleged that the stream was grossly polluted by the tannery wastes. The waters of Rock Creek were used by these farmers for livestock watering and irrigation purposes. The complaints also alleged extremely obnoxious odors along the ditch and the creek. An inspection on March 15, 1948, disclosed that not even the lagoons had yet been installed and that as a consequence the raw wastes were being discharged directly into the creek.

On March 26, 1948, a special meeting was held with the city council and the riparian property owners. As a result of that meeting the city council promised that in the future all the wastes would be kept out of Rock Creek. Shortly, thereafter, however, a series of three shallow lagoons was constructed on private property adjacent to the tannery and the overflow from these lagoons continued to flow into Rock Creek.

Finally on May 17, 1948, two formal petitions bearing 80 signatures were presented to the Sanitary Authority requesting prompt remedial action for this stream pollution. In response to these petitions, a comprehensive survey was started on May 24, 1948. The results or findings of this survey are contained in the "Report on Sanitary Survey of Industrial Waste Disposal, Frontier Leather Company, Sherwood Oregon" dated June, 1948.

Shortly after the first of June, 1948, the tannery suspended its operations so as to keep all wastes out of Rock Creek.

### Disposal of Wastes into Cedar Creek

The city council then proposed that the industry pump its wastes into the city sewer system which discharges into Cedar Creek, another small tributary of the Tualatin River. In the above mentioned report and also in a letter dated June 24, the city council was advised by the Authority that if the industry were permitted to discharge its wastes into the municipal sewerage system and thence into Cedar Creek, adequate facilities for the treatment of both domestic

Tannery Waste Disposal Problem  
at Sherwood, Oregon - 11/29/48

sewage and trade wastes would have to be provided. They were advised further that before any connections were made between the industry and the city sewer system the following steps would have to be taken:

- (1) A competent registered professional engineer must be retained to design the pretreatment works required at the tannery and the necessary sewers and treatment facilities for the city and to estimate the cost of construction of such facilities.
- (2) Complete arrangements must be made for financing the entire project either by approval of a general obligation bond issue and/or by other means.
- (3) A contract for the construction of the approved collection and treatment facilities must be let and actual construction underway.

The City then retained Stevens and Koon, Consulting Engineers, to design only a sewer line from the tannery to the city system. No plans were prepared by the engineers for either the pretreatment works at the tannery or the final treatment works at the city.

The industry officials in the meantime investigated the possibility of employing subsurface disposal by means of dug wells. This method, however, could not be approved of by either the Sanitary Authority or the State Board of Health because of the possibility of polluting nearby underground domestic water supplies and so it was abandoned.

On October 15, 1948, a complaint was received by the Sanitary Authority from the Tualatin Valley Sportsman Club of Sherwood in which it was alleged that the tannery wastes were being discharged through the City sewer into Cedar Creek.

An inspection on October 18, 1948, disclosed that lift pumps and an industrial waste sewer line had been installed and that the tannery wastes were being discharged through a city sewer into Cedar Creek which also receives the effluent from the city septic tanks and the wastes from the Portland Canning Company. It was also found that a revolving screen and a three-compartment settling tank had been

installed at the tannery to provide pre-treatment of the wastes before being pumped into the outfall sewer. No engineering plans nor specifications had been prepared for these facilities. Furthermore the sewer line which was installed from the tannery to the city was not constructed according to the plans which had been prepared.

#### Pollution of Cedar Creek

On October 19, 1948 and October 21, 1948, samples were collected from Cedar Creek and from the tannery effluent line. These samples were analyzed with the following results:

Sampling Point	Dissolved Oxygen (p.p.m.)		5-day B.O.D. (p.p.m.)	
	10-19-48	10-21-48	10-19-48	10-21-48
		A.M. P.M.		A.M. P.M.
Cedar Creek 100' above sewer	9.8	8.3 9.1	2.6	1.2 4.1
Cedar Creek 50' below sewer (Bridge below elevator)	4.8	4.8 4.3	33	51 84
Cedar Creek $\frac{1}{4}$ mile below sewer (Bridge below school)	2.5	3.7 4.0	18	40 35
Cedar Creek $\frac{3}{4}$ mile below sewer (Hwy. 99W bridge)	1.2	0 0	21	50 33
Cedar Creek $1\frac{1}{4}$ miles below sewer--		3.2 1.6	--	7 15
Tannery pretreatment plant effluent	0	0	880 *	377*

\* composite samples. On October 21 the tannery effluent was being diluted with ground water pumped from a shallow well near the tannery.

The above data show that Cedar Creek below the point of discharge for the tannery wastes was grossly polluted. At the Hwy. 99 W bridge, for example, there was little or no dissolved oxygen present and B.O.D. of the stream at that point was still 21 to 50 p.p.m. These results may be compared with analyses made of the same stream on May 25, 1948 when only sewage effluent was being discharged into it. On that date the stream at the bridge below the elevator had 9.2 p.p.m. of dissolved oxygen and a B.O.D. of 6.0 p.p.m. and at the bridge below the school 8.9 p.p.m. of dissolved oxygen and a B.O.D. of 5.5 p.p.m.

Tannery Waste Disposal Problem  
at Sherwood, Oregon - 11/29/48

On November 12, 1948, another inspection was made of Cedar Creek and the following conditions were noted:

1. At the bridge 50' below the tannery outfall the stream had a dark green color with white froth and scum on the surface. Gas bubbles were also evident. An odor was readily perceptible.
2. At the bridge  $\frac{1}{4}$  mile below the tannery outfall the stream had a dark bile green color and the surface of the water was literally covered with small gas bubbles. Odors were definitely noticeable at this point.

Above information compiled by Sanitary Authority, November 29, 1948.

## MINUTES OF THE THIRTY-EIGHTH MEETING

of the

## OREGON STATE SANITARY AUTHORITY

February 25, 1949

The Thirty-eighth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:40 A.M., February 25, 1949, in the offices of the State Board of Health, Behnke-Walker Building, 1022 S.W. 11th Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., B.A. McPhillips, Chas. E. Stricklin, Blaine Hallock, and John C. Veatch, Members; Curtiss M. Everts, Jr., Secretary and Chief Sanitary Engineer; Kenneth H. Spies, Senior Sanitary Engineer; and Clarence E. Cuyler, Assistant Sanitary Engineer. Also present were Robert R. Harris, Sanitary Engineer with the U.S. Public Health Service; and the following persons:

Wm. A. Bowes	representing	The city of Portland
Herman Kehrli	"	The League of Oregon Cities
R.L. McGrath	"	Div. of Water Pollution Control, U.S.P.H.S.
A.F. Bartsch	"	" " " "
C.H. Sanders, Mayor	"	City of Sherwood
John N. Lansing	"	Columbia Empire Industries, Inc.
L.M. Thurlow	"	Frontier Leather Company
Orville Samuelson	"	Frontier Leather Company
P.W. Cookingham, Attorney	"	Frontier Leather Company
Larry Smith, President	"	Frontier Leather Company
R.W. Hensel	"	Portland Chamber of Commerce
Mrs. Morrison	"	The Oregonian

MINUTES: - The minutes of the Thirty-seventh meeting having been submitted to the members in advance, it was MOVED by Mr. Veatch, seconded by Mr. Hallock, and carried, that the minutes be approved as prepared by the secretary, without reading.

PROJECT PLANS: - Following a review of sewerage project plans submitted to the members of the Authority for examination and approval, it was MOVED by Mr. Hallock, seconded by Dr. Erickson, and carried - that the action taken by the Chief Engineer on the following project plans be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
12-3-48	Reedsport	Hospital sewerage	Cond. Approval
12-3-48	Monmouth	Sewage treatment plant (revised plans)	Not approved
12-20-48	Oak Grove	School sewerage (revised plans)	Approved
12-20-48	Gold Beach	Trunk sewer	Prov. approval
12-21-48	John Day	Outfall trunk sewer	Not approved
12-21-48	Newport	Preliminary Eng'g. report	Approved
12-24-48	Medford	Camp White Trunk sewer (revised plans)	Approved
12-27-48	Monmouth	Sewage treatment plant (final plans)	Preliminary and Prov. Approval
1-6-49	John Day	Final revisions to sewage plant	Approved
1-18-49	Siletz	C.D. Johnson Lbr. Co. camp sewerage	Approved
1-20-49	Eugene	Sewerage system for W.J. Coust Addition	Not approved
1-25-49	Vermont Hills	Permanent sewage treatment plant	Not approved
1-25-49	Detroit Dam	Septic tank system for control house	Approved
1-26-49	Drain	Preliminary Eng'g. report	Approved
2-2-49	Lebanon	Sewer extension	Approved
2-3-49	Springfield	Industrial waste recovery system-Weyerhaeuser Pulp Mill	Approved
2-3-49	Baker	Sewer extensions	Approved
2-3-49	Eugene	Sewage Plant design data W.J. Coust Addition	Not approved
2-8-49	Eugene	Sewer extension	Approved
2-9-49	Oswego	New pumping station for Conifer Terrace	Prov. approval

ABG759

## Project Plans - con.

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
2-9-49	Coos Bay	Sewer extension	Approval withheld pending further progress RE: Disposal
2-9-49	Heppner	Hospital sewerage	Not approved
2-10-49	Eugene	Bethel School sewerage	Not approved
2-11-49	The Dalles	Sewer extensions	Approved
2-18-49	Woodburn	Interceptors and sewer Ext.	Approval withheld pending corrections
2-18-49	Albany	Sewer extension	Approved
2-21-49	Carlton	Preliminary Eng'g. report	Approved
2-24-49	Central point	Sewage treatment plant	Not approved
2-24-49	Coquille	High School sewerage	Prov. approval
2-24-49	Eugene	Howard Lane School	Prov. approval

PORTLAND SEWERAGE PROJECT:-With the approval of those present, the Chairman amended the order of business and called on Mr. William A. Bowes, Commissioner of Public Works, Portland, Oregon, for a report on the status of the Portland sewerage project.

The Commissioner stated that three units of the project - the Columbia Slough interceptor, the St. Johns interceptor, and the Columbia Blvd. interceptor - were now complete; that ninety (90%) percent of the equipment for the sewage treatment plant had been purchased; and that the city expected to advertise for bids for 16,400 feet of sewer tunnel, the Peninsula interceptor, on March 15, and for the treatment plant and outfall sewer on April 1.

Commissioner Bowes advised the Authority that: - (1) the estimated cost of the entire project was now \$15,890,000; (2) that the full sewer-user's charge would become effective on April 10, 1949; and that the city expected to complete the project within two and one-half to three years. He then furnished the

Authority with a copy of a report dated January 26, 1949, on the status of the Portland project, such report having previously been submitted to the Portland city council.

After a brief discussion, the members of the Authority advised Commissioner Bowes that they were satisfied with the progress being made on the Portland sewerage project at the present time.

FRONTIER LEATHER COMPANY & THE CITY OF SHERWOOD: - The Chairman then called on Mr. Kenneth H. Spies to report on the status of the Frontier Leather Company case at Sherwood, Oregon. Mr. Spies reported that the city of Sherwood had entered into a contract with an engineering firm to make a preliminary study of the sewage and waste disposal problem for Sherwood in an attempt to work out a solution which would take care of the city of Sherwood, the Frontier Leather Company, and the Portland Canning Company; and that the engineers had already started work on that study. It was also reported that as the result of a conference with the engineers, they had stated that the report would be completed by March 15, and that if their recommendations met with approval of the Sanitary Authority and the estimate of cost indicated the project was within the realm of possibility, the city would proceed immediately with final plans and specifications which could be completed by June 1, 1949, after which date it would require time to enter into a contract to undertake general construction. No estimate had yet been obtained, however, as to when the construction would actually be started, but it was thought improbable that the disposal plant could be completed before the low water period this summer. Mr. Warren Clark of Salem is the consulting engineer who has been retained by the city of Sherwood for this work.

Mr. Veatch then raised the question as to what the tannery was going to do in the meantime, inasmuch as Mr. Spies' report did not mention anything that might be done on a temporary basis.

Mr. P.W. Cookingham, attorney for the Frontier Leather Company, then reported that since the last meeting with the Authority on this subject, there had been some

ABG759

very expensive temporary installations made by the tannery in the way of settling basins and screening machinery so that the actual effluent from the tannery itself had been very much diluted; that much of the undesirable matter had been eliminated from the overflow at the tannery; and that recent tests at the outfall of the tannery had shown decided improvement. It was later pointed out by Mr. Spies, however, that these temporary preliminary treatment facilities had been installed before the Sanitary Authority had made its investigation last October, and that no changes or improvements had been made by the tannery since the last Sanitary Authority meeting. This fact was substantiated by Mr. Larry Smith, Frontier Leather Company official.

Mr. Cockingham reported further that tests made in the river itself since the last meeting showed conditions which according to the testing laboratory indicated very nominal pollution as far as the tannery was concerned and, therefore, it seemed to the Company that pending the time when more permanent arrangements could be made that the situation had improved enough over what it was when originally presented to the Authority so there could be no serious objections to continuing as they now were. He also stated that they had spent over \$10,000 and that conditions had been improved as much as could be done without the further cooperation of the city of Sherwood. He suggested that under those conditions, the Sanitary Authority might consider the continuance of the present situation until permanent plans could be financed and completed.

Mr. McPhillips then asked that in case the operation of the tannery were continued, if the operation could be adjusted to reduce pollution in July, August, and September, the months of low stream flow. Mr. Smith stated the tannery would have to close during the summer months.

Mr. Spies reported that the tannery had submitted to the Authority copies of the analyses made by the Pittsburgh Testing Laboratory on Samples collected from the river. He said that due to high water which existed at the time the samples were collected no claim had been made by the Authority that conditions

in the stream at that period of the year were objectionable, but that gross pollution occurs during the period of low flow in Cedar Creek. Mr. Spies then reported that there have been no changes made in the treatment of these wastes since the Sanitary Authority had made its last tests.

ABG759

Mayor Sanders of Sherwood advised that to offset the low water condition, the tannery had drilled two wells and intends to pump this clear water into Cedar Creek. Mayor Sanders also reported that they had no definite plan of financing a sewage treatment project, but that he believed that in conjunction with the cannery and the tannery such a project could be financed. He stated that the city of Sherwood now has a sewer-user charge equal to 30% of the water bills, and he believed that public opinion was back of the city now to complete the project. The city will have to have a revenue bond issue when the exact cost is known which will be around \$75,000, more or less. Mayor Sanders also said that the only bonded indebtedness now of the city of Sherwood is \$28,000 in water bonds.

Mr. Herman Kehrli of the League of Oregon Cities reported on two definite procedures under the law by which the city can finance their sanitary facilities. He believed that the problem of statutory debt limitation has not been the stumbling block because cities can follow a procedure which does not put any legal limitation on the indebtedness. Mr. Kehrli also reported that Oregon State Legislature is now working on a plan under which state money could be loaned to the smaller communities at a low rate of interest through the purchase of city bonds even though the private bonding market would not buy the bonds; and he believed that there would be something definite along this line before too long a time.

Mr. Sanders next asked whether pollution would continue if the tannery were closed. Mr. Spies stated that the nuisance caused by the tannery would be abated, but that pollution by domestic sewage would continue.

Mr. Veatch then raised the question as to just what authority the Authority had under the statutes, inasmuch as he did not believe the Sanitary Authority

could give permission to any person to pollute a stream on and after the effective date of this act.

A discussion then followed on the amount of pollution actually being caused by the tannery and whether the plant could be operated until the municipal treatment plant had been placed in operation.

Mr. Wendel then asked what assurance the city could give that conditions would be controlled during the season; but none could be given. Mr. Everts next stated that the city should furnish assurance that a nuisance would not be created, otherwise, an abatement order should be issued. Mr. Veatch called attention to the fact that this was a new plant; that it had been constructed after the passage of the Sanitary Authority act; that plans for waste treatment had not been submitted for review and approval; and that the Authority had no other alternative but to require compliance with the law. Mr. Hallock was of the opinion that unless operation of the tannery could be arranged to slow up production during the period of low flow in the creek, there would be no other alternative but to close the plant during that period.

Mr. Smith, President of the Frontier Leather Company, thought that work could be arranged to slow up production during the period of low flow in the creek. Mr. Spies and Mr. Everts reminded him that no nuisance conditions could be permitted whatsoever, and if such did result, the Authority would have no other alternative but to issue an abatement order. Mr. Wendel was in favor of the plant continuing operation during the period of planning for treatment of wastes, provided no nuisances be created, and Mr. Spies also felt that action should be deferred to see if they would be able to install the necessary treatment works. Mr. Hallock was willing, in view of the above, to postpone action at the present time regarding this matter. Mr. McPhillips believed that since the parties involved were apparently acting in good faith, action should be deferred at the present time. Mr. Veatch and Mr. Everts again reminded the tannery officials, however, that the Authority was in such a position that if

any individual should take action against the company there would be no alternative but to close the plant.

It was, therefore, decided that the Authority would take no action against the city of Sherwood or the tannery at the present time, pending progress toward the installation of adequate treatment works to effectively handle the wastes causing the pollution in question. Mr. Cookingham stated that his clients understood that the Authority was not making a binding commitment.

At this point the representatives from the tannery and city of Sherwood left the meeting.

CONIFER TERRACE, OSWEGO:- The secretary reported that Budget Homes, Inc., had employed engineers to redesign the sewage pumping station at Conifer Terrace, and that the company was apparently complying with the order of the Sanitary Authority. The secretary was instructed to keep in touch with the project and if the required corrections were not made, to refer the matter to the Attorney General for action.

WOOD VILLAGE:- Mr. Everts stated it was his belief that the officials of Wood Village were trying to comply with the order of the Authority, but that weather conditions had prevented completion of the work. The secretary was instructed to write the officials of the Wood Village project that while the Authority recognized that weather conditions had held up required improvements at their plant, the Sanitary Authority now expects them to proceed with the work, which must be completed within thirty (30) days; and if the project is not placed in proper operating condition within the thirty (30) days, the Authority will have no alternative but to refer the matter to the Attorney General.

MUNICIPAL PROJECTS:-

Albany - The secretary reported that the city of Albany had requested approval for the installation of another sewer in the southwest part of the city which would temporarily discharge untreated sewage into the Calapooya River. He believed the city was prepared to make progress toward the solution of the sewage disposal problem, but to date no sewer rental charge had been approved, and there was no

ABG759

definite decision on financing the program for the necessary facilities. Mr. Wendel was of the opinion that inasmuch as Albany had not really done anything definite regarding the financing of their sewage disposal problem, some action should be required of them at once. After some discussion, the secretary was instructed to cite the city of Albany to appear at the next meeting of the Authority.

Oswego - Inasmuch as the city of Oswego had reported no progress in the preparation of engineering or fiscal plans, the secretary was instructed to also cite the city of Oswego to appear at the next meeting of the Authority.

Sheridan - Inasmuch as the city of Sheridan had reported no progress in the preparation of engineering or fiscal plans, the secretary was instructed to cite the city of Sheridan to appear at the next meeting of the Authority.

Corvallis - The plan to increase the sewer user charge submitted by the city of Corvallis was then reviewed by the Authority. This plan provided for an increase in the sewer-user charge to 50% of the water bill which within a five year period or less would accumulate enough money to pay cash for the sewage treatment plant, the latter to be constructed in 1954. There then followed a discussion on the matter of whether Corvallis should be allowed to defer for this length of time construction of the sewage treatment plant, or whether they should be required to proceed at once. It was believed by some of the members that Corvallis should be cited to appear before the Authority.

With reference to the plan submitted by Corvallis to extend sewer lines in certain sections of the city and to defer the planning for the construction of sewage treatment plant, the secretary was directed to advise Corvallis that this plan does not meet with the approval of the Authority, and that it would be necessary for them to proceed with the construction of the sewage treatment plant at an earlier date.

It was Mr. Everts' opinion that a dead-line should be set for each city in the various basins of the state for compliance with requirements of the Authority.

for the abatement of stream pollution. The opinion was also expressed that each individual case should be considered separately on the basis of magnitude, financing, etc., and advice be given that the Authority is preparing to issue an order that required facilities be completed within a specified time. Mr. Veatch was of the same opinion, and the secretary was instructed to notify all cities not making satisfactory progress that the Authority is considering issuing an order setting a definite time for completion of sewage disposal plants.

The Chairman then asked Mr. Herman Kehrli for an expression of an opinion on the subject of municipal sewage disposal. Mr. Kehrli believed that many cities are planning to have sewage treatment plants completed by the time Portland has their sewerage project completed. He also advised the Authority that a bill was contemplated which would appropriate \$10,000,000 for sewage plant construction in small cities at an interest rate of 2%. He believed that Governor McKay would support this bill and that it was the only way that the situation can be handled in the financially hardpressed municipalities. Mr. Kehrli further reported that in the budget submitted by the President for Public Law 845 there was no appropriation for loans on the construction of sewage disposal plants, but only for the engineering on such work.

The meeting was recessed at 12:15 for lunch.

The Authority reconvened at 1:25 P.M. with the following persons present:

INDUSTRIAL WASTES: Mr. Wendel opened the meeting by stating that the Authority would consider the matter of industrial wastes first, and requested the secretary to report on the pulp and paper industry. The secretary reported that the monthly reports, requested previously by the Authority, from the individual mills concerning the quality and quantity of their wastes, were being received by the Authority.

Mr. Wendel outlined the progress being made by the pulp and paper mills, and invited comments from those present regarding this matter. Mr. Everts presented information on the Weyerhaeuser Timber Company's recovery plant at Longview, Washington, and advised those present that within the next three months they will be able to determine the cost of that operation and that data will be available to other mills interested in the process. Prior to this date, changes in equipment were necessary and it could not be determined definitely just what could be accomplished by this method. It was pointed out that in a previous meeting with representatives of sulfite mills in Oregon it was indicated that some mills were interested in the new process and would await the outcome of its trial operation, and that if the process were successful, it would be up to the individual mills to determine just what can be done by them to substitute that process for the one now being used. Mr. Hallock stated that the mills in Oregon had been given some grace period in order to determine just what the process being used at the Weyerhaeuser Mill would bring forth.

Mr. A.F. Bartsch of the Division of Water Pollution Control, U.S. Public Health Service, made the following statement: "I am not well-versed in the mechanics of disposal of sulfite pulp wastes. My knowledge of sulfite pulp waste liquor disposal

is not much, but I have picked up a few bits of knowledge as they apply in Wisconsin. A long time ago, attempts were made in Wisconsin to dispose of waste sulfite liquor by dilution in such a manner that it would alleviate the contamination. This was to be done by building lagoons to hold liquor for a period of time so the liquor could be discharged into the stream at various times depending upon the stream flow. The results of this method were not good. The liquor leached out of the lagoon area and caused contamination of water supplies.

Another thing that was tried was to use waste sulfite liquor as a road binder by sprinkling it on roads in an attempt to bind the materials together. Although there were some difficulties in the work, that process is still being used in certain parts of the state. When this process was first started, the Stream Sanitation Committee of Wisconsin was considerably worried about what might happen during a rain in which some of the organic material from the road-binding material would drain into roadside ditches and hence back to some of the smaller streams. Investigations along that line indicate that the leaching was insignificant and had no detrimental effect on streams.

At Appleton, Wisconsin, funds were used for performing research work. An experimental trickling filter was used which produced good reductions in B.O.D., but because of the nature of sulfite liquor, I believe their conclusions indicate the cost of constructing a filter of the size required to handle the wastes would be too expensive, so that method was abandoned.

Attempts were also made to alleviate the pollutional results by pumping air into the water under pressure. The points for this procedure were placed along the stream. The chemical evidences of improvement, however, were very slight.

The most promising step taken so far is the installation during the past year of a plant where sulfite liquor is used as a medium for growing yeast, located at Rhinelander, Wisconsin. The last information received was that during December they had shipped out the first carload of yeast. The cost of the plant

ABG759

was very high, and yet was large enough to handle only half the waste from a 100-ton mill. At the present time, a plant is being constructed for full scale operation".

Mr. Wendel asked the question at this point if any further steps should be taken against the pulp industry at this time. No comments were made.

Mr. Rushlight then made the following comments: "I am interested in water and sewage treatment. We have been experimenting for some time and have spent \$45,000 to date on the ozone process. This process was never fully developed for sewage treatment and further research is necessary in order to perfect the process. We have installed in Portland a small pilot plant at the residence of Mr. Earl Wilkinson, President of the First National Bank, who lives at West Slope. This plant has been working for sometime, and periodic samples are being run. This type of process offers a great deal of promise. Another pilot plant is located in Olympia, Washington. I thought that the Sanitary Authority might in some way be able to get Oregon State College to help carry on some research on this method." Mr. Rushlight offered cooperation in research work, expressed his belief that the appropriation for the Authority should be increased in carrying out their work, and invited members of the Authority to visit the pilot plant in West Slope.

Dr. Erickson then asked the question as to whether anyone present knew of any state that has successfully solved the pulp and paper pollution problem.

Mr. G.R. Cranor, representative of the Oregon Pulp & Paper Company at Salem, Oregon, made the remark that no one has yet perfected a method to handle pollution from this source, and said research was being carried on all over the country, but no one has yet found a method of eliminating it, at least chemically. It was his opinion that the magnesium base seems to be the one to give the best results, and that the solution to this problem is a question of knowing what to do.

Mr. Wendel asked Mr. Cranor if it was their plan to follow the Weyerhaeuser method if it proved successful. Mr. Cranor stated that the process has been discussed but he did not know definitely if the management of Oregon Pulp and Paper Company planned to use it. They are, however, watching closely what happens at Longview.

Mr. Wendel stated that Crown Zellerbach Corporation was the only mill that gave any definite information of what they proposed to do to abate the nuisance caused by their mills, and asked if there were anything that could be done at this time to force the other mills to some definite action. He stated further that other mills are merely furnishing reports as stated above, but no progress is being made to solve the problem.

Mr. Veatch believed that the matter should not be allowed to run on indefinitely without some progress being made, and if it comes down to the matter that there is no practical way to eliminate contamination from the streams and if it reaches a point where no method can be found to solve the pollution problem; then since the good of the State is paramount, other locations for the mills might have to be found.

MOTION by Mr. Hallock, seconded by Mr. McPhillips and carried - that the paper and pulp mills be notified to appear before the Authority at a time to be fixed by the Chairman, to submit progress reports together with plans for their proposed program of pollution abatement.

Mr. Chester K. Sterrett, Manager Industries Department, Portland Chamber of Commerce, presented the following paper at the meeting:- "The Industries Department of the Portland Chamber of Commerce has had occasion to contact the staff of the Oregon Sanitary Commission many times in recent years with respect to sewage disposal and water supply plans of new industries desiring to locate in this territory. In this work, the Sanitary Authority has been very helpful to us in supplying the necessary technical information required to enable these new plants to meet the requirements of the State Law.

The problem of dealing with waste disposal problems of industries in existence before this law went into effect in 1938, has also been of great concern to the Authority, but it is our opinion that this situation is being handled in an intelligent manner by the Authority. Certain of our industries,

such as the paper mills, are conducting their own research in disposal problems, and through this work and activities of the Institute of Paper Chemistry, are making progress on the matter of handling the waste materials put into the streams of the States.

Many of the cities of Oregon, - Portland for example, are installing sewage disposal plants, and this progress indicates that from the long-range standpoint, the objectives of the State Sanitary Act are gradually being accomplished. With certain types of industrial waste, there have been no adequate technical methods developed as yet that would enable the industry to treat these wastes economically, and it is hoped that the Sanitary Authority will continue its policy of being lenient with these industries until a good and practical method of treating these wastes, or abating pollution can be developed.

Also, certain industries may not be adequately financed to pay for a complete waste treatment plant without impairing their capital structure. In such cases, if a method could be worked out to have the state or some other agency construct the project, allowing the industry to amortize this cost with interest over a period of years, it might help speed up the elimination of stream pollution in the state.

The cooperative manner of approach by the Sanitary Authority and its technicians, is greatly appreciated by us at the Portland Chamber of Commerce, and it is our feeling that eventually the objectives of the Sanitary Laws will be worked out, and that pollution will be abated in our streams."

CANNERY WASTES:

Mr. S. E. Laselle of the Portland Canning Company, Inc., which has plants at Sherwood and Forest Grove, then appeared before the Authority. He was informed that the Sherwood situation had been discussed at the morning session and that it was understood that the Portland Canning Company was to participate with the city of Sherwood and the Frontier Leather Company in financing a treatment

plant for the disposal of wastes from their Sherwood plant. Mr. Lasselle presented the attitude of the Portland Canning Company towards the cost of such a project, and said they had put in screens and done all that could be done to alleviate the pollution caused by their company. Mr. Wendel advised Mr. Lasselle that the Authority could take no other stand but to expect the canning industry to help solve the problem of stream pollution which is caused by their industry.

Mr. Ed. F. Averill stated that he was present at the meeting to urge the Authority to put pressure on the pulp and paper industry to solve their waste pollution problems. He stated that for 24 years the pulp and paper industry had been stalling, and that they are still stalling, and that the time had come to advise them that they must present to the Authority information as to just what plans they have made, what they are doing about them and when they expect to put them into operation to relieve the situation.

Mr. Hallock stated that the Authority knew of no mills successfully abating the pollution problem.

Mr. Averill replied that it was not up to the Authority to solve the problem. Mr. Hallock pointed out that no one seems to know what to do about it and that the Authority would be glad to have a solution to the problem. Mr. Wendel then requested Mr. Averill that if he had a specific solution, to please give it to the Authority. Mr. Averill stated that it was the duty of the Authority, now that the problem had been solved in Wisconsin, to see that they are not polluting the streams of Oregon.

Mr. Wendel advised Mr. Averill that this Commission did not think the time was right for closing the mills, and called on Mr. Bartsch for a further report on the Wisconsin program.

Mr. Bartsch made the following statement: "I have seen rivers in Wisconsin grossly polluted. On September 19 of last year I was present at a pollution hearing to get the story of the pulp manufacturers along the lower Fox River

ABG759

in Wisconsin. This river runs into Green Bay. At the hearing it was brought out that of the 15 mills in the state of Wisconsin there are only two of them using the same method for treating sulfite waste liquor. That was significant because it indicated that conditions were not satisfactory for all to operate in the same manner. In spite of all the activities they have not solved the problem of pollution. The Wisconsin River has an area or length in which the dissolved oxygen is zero as a result of waste pollution. The lower Fox River for a distance of about 18 miles had a dissolved oxygen content of zero for most of the summer. It all indicates to me that the waste sulfite liquor problem has not yet been solved." In addition, Mr. Bartsch pointed out that the Wildlife group at the Wisconsin hearing had made reference to the excellent progress being made in the Pacific Northwest on sulfite liquor disposal.

Mr. Veatch then stated that all industries that are putting pollution into the streams will eventually have to stop the practice; those industries that were operating before the Sanitary Authority law was established should be required to show why the pollution problem cannot be solved; and that they must get busy and solve the problem themselves, or get out of business. He also stated that it is simply a business proposition on the part of the industry, or of anyone polluting the public waterways of the state, but he did not believe it best to insist that the pollution be stopped immediately. The Authority has since 1942 been writing municipalities and industries urging them to give this matter thorough consideration, and most of the municipalities are making progress. Mr. Veatch mentioned that a great many of the industries also are making progress in working out the problem; and that he really saw no other course that the Authority can take except by constantly writing all of them regarding this matter and if they are not doing anything to solve the problem, then clamp down on them.

Dr. David B. Charlton offered the following comments: "I have been in close touch with the pollution question for the last 20 years. There are two important facts I would like to mention pertaining to this matter: (1) the responsibility

for cleaning up the streams is that of industry and municipalities; and (2) the industry or municipality can usually do it."

Mr. Wendel then asked Dr. Charlton as to what specific advice he might have. Dr. Charlton replied that he would have told industry to show real tangible evidence on their part in abating the pollution. If they cannot solve the problem, they must then close down. He believed the reports that have been requested of the pulp and paper mills should be real progress reports and that the Authority would be more effective and get greater cooperation.

Mr. Hallock told Dr. Charlton that the Commission had been in existence only ten years, and asked if he considered \$30,000,000 spent in abating pollution as being negligible progress. Dr. Charlton replied that the amount mentioned by Mr. Hallock was the total cost of abating domestic sewage pollution and did not include industrial wastes. Mr. Hallock then presented the accomplishments of the Authority over a ten year period.

Mr. Wendel asked Dr. Charlton for his recommendations, and Dr. Charlton presented the following:- (1) make industry show tangible evidence of progress; (2) close down Lebanon pulp mill if the Company cannot solve the problem; (3) notify violators to have plans ready within a year; and (4) revise reports to include information on pollution problems that are still unsolved as well as to show any progress made.

The meeting was recessed for fifteen minutes, after which discussions of municipal sewage disposal were resumed.

North Bend: A report received from North Bend was submitted by Mr. Everts. The report covered a proposed plan of finance and construction for the North Bend sewerage project which called for completion of the treatment plant by 1953. MOTION by Mr. McPhillips, seconded by Mr. Stricklin, and carried - that the plan submitted by North Bend be approved.

Coos Bay: MOTION by Mr. Hallock, seconded by Mr. Stricklin, and carried - that the Authority encourage the city of Coos Bay to adopt a plan similar to

ABG759

that of North Bend pertaining to their sewage disposal problem, and that until such a plan has been adopted the city not be permitted to install any more out-fall sewers into the Bay.

Southwest Portland: The Sanitary Authority decided to notify by newspaper the residents of Southwest Hills in Multnomah County that existing sewage disposal facilities are not satisfactory and that unless something is done regarding same, the Authority will have to take action to alleviate the situation.

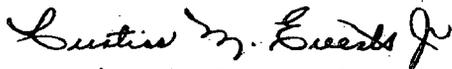

Miscellaneous Cities: Reports on the status of the progress being made by other cities in the state were reviewed and the secretary was instructed to transmit by letter appropriate instructions to each of the cities.

PRIORITIES FOR FEDERAL AID:- The secretary brought to the attention of the members the fact that the Sanitary Authority is to approve any application from municipalities to Congress for federal aid, and that the Authority must prepare a plan of priorities. MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried that Mr. Everts work with the League of Oregon Cities to establish a priority schedule for federal aid to municipalities.

PUBLIC RELATIONS:- It was recommended that public relations work be continued by Mr. David L. Piper of the Health Education Section of the State Board of Health, and his organization.

There being no further business, the date of the next meeting was set for April 9; and the meeting adjourned at 3:30 P.M.

Respectfully submitted:

Curtiss M. Everts, Jr.,  
Secretary and Chief Engineer  
OREGON STATE SANITARY AUTHORITY

## MINUTES OF THE THIRTY-NINTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

April 26, 1949

The Thirty-ninth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:35 P.M., April 26, 1949, in the offices of the State Board of Health, Behnke-Walker Building, 1022 S. W. 11th Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., B. A. McPhillips, Chas. E. Stricklin, Blaine Hallock, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; and Clarence E. Cuyler, Assistant Sanitary Engineer.

MINUTES: - The minutes of the Thirty-eighth meeting having been submitted to the members in advance, it was MOVED by Mr. Stricklin, seconded by Dr. Erickson, and carried, that the minutes be approved as prepared by the secretary, without reading.

PROJECT PLANS:- Following a review of sewerage project plans submitted to the members of the Authority for examination and approval, it was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the action taken by the engineering staff on the following project plans be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
3-2-49	Coquille	Coquille School Sewerage	Approved
3-2-49	Dillard	Dillard School Sewerage	Approved
3-2-49	Multnomah County	Collins View School Sewerage	Approved
3-4-49	North Bend	Interceptor sewers, etc.	Not approved
3-7-49	West Salem	Preliminary Engineering report	Approved
3-9-49	Waldport	Preliminary Engineering Report	Approved
3-10-49	Sherwood	Preliminary Engineering Report	Approved
3-14-49	Central Point	Sewage treatment plant	Not approved
3-21-49	Woodburn	Sewage treatment plant	Not approved

ABG759

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
3-22-49	Lane County	Bailey Hill School sewerage	Not approved
3-22-49	Woodburn	Sewage treatment plant (revised plans)	Approved
3-24-49	Hepner	Hospital sewerage	Not approved
3-24-49	Multnomah County	Gilbert School sewerage	Approved
3-24-49	Jackson County	Evans Valley School sewerage	Approved
3-24-49	Sheridan	Preliminary report	No action req'd.
3-28-49	North Bend	Interceptor sewers (revised plans)	Approved
3-28-49	North Bend	Sewage treatment plant	Not approved
3-29-49	Lincoln County	C. D. Johnson Lumber Company Camp sewerage	Approved
3-30-49	Hepner	Hospital sewerage	Not approved
3-30-49	Central Point	Sewage Treatment plant	Approved
3-30-49	Woodburn	Industrial Waste disposal Birds Eye-Snyder Cannery	Prov. approval
4-12-49	Roseburg	Cloverdale Addition-Temporary sewage plant	Prov. approval
4-12-49	Burns	Sewer extensions	Not approved
4-14-49	Molalla	High School sewerage	Approved
4-15-49	Empire	Sewer extensions	Approved
4-15-49	Springfield	Sewer extensions	Approved
4-19-49	North Bend	Sewage treatment plant (revised plans)	Approved
4-19-49	Clackamas County	Cottrell School sewerage	Approved
4-19-49	Salem	Capitola Grade School sewerage	Approved
4-19-49	Springfield	Sewer extensions	Approved
4-23-49	Mill City	Housing project sewerage	Approved

MUNICIPAL PROJECTS:-The cities of Sheridan, Toledo, Oswego, Albany, and Myrtle Creek had been requested to send representatives to the meeting and explain why more

progress had not been made in planning for the early installation of needed sewerage improvements. In addition, Corvallis and Springfield had requested permission to present their progress report in person at the meeting.

Sheridan- The Chairman called on the representatives of the city of Sheridan to identify themselves. Mr. W. H. Smith, Mayor; Francis Bradley and Robert D. Cole, Councilmen, announced that they represented the city of Sheridan at the hearing. Mr. Everts then reported that Sheridan is in need of a complete sewer system and sewage treatment plant in order to abate stream pollution; and he outlined the steps taken by the Authority since 1939 to obtain voluntary cooperation from the city of Sheridan in the matter of the construction of such facilities.

Mayor W. H. Smith stated that a preliminary survey had been made for the city of Sheridan last year by Mr. R. H. Corey, consulting engineer, and that in the city budget an amount of \$1,000 had been set aside to pay for this survey. There was still an unpaid balance of \$500 on the cost of the survey which the city had anticipated paying from a \$2.00 per month sewer assessment; however, when action of the council rescinded this sewer user charge, it left a debt of \$500.

Mayor Smith said that with regard to the matter of there being no progress reported at the meeting in February, 1949, subsequent action of the council had levied an assessment of 50¢ per month on each water user within the corporate limits of the city, which was collected for the first time on the water bills between the first and 10th of March 1949. He reported that this money is set aside in a sewer sinking fund and so labeled, and that the assessment will bring in about \$4,000 per year. The fringe area, adjacent to the city, was not included in the sewer assessment, nor were the commercial users, because of the inability of the council to arrive at an equitable charge. Only part of the fringe area is using water, and a resolution was passed by the council early in 1949 to protect first the residents within the city limits.

ABG759

Mayor Smith advised the Sanitary Authority that the bonded indebtedness of the city of Sheridan at the present time is \$45,000, and that there was no provision at the present time for setting aside money for sewer facilities other than the water-user charge of 50¢ per month. In the discussion that followed relative to the lack of progress made by the city within the last ten years, Mr. Wendel asked Mayor Smith as to just when he thought they would be able to install a sewage disposal system. Mayor Smith stated that, regardless of the attitude of himself or the council, there was a definite limitation as to the public's acceptance of the idea as a whole. Mr. Wendel then asked Mayor Smith if he believed it would be of assistance for the Authority to issue an order to the city at this time. Mr. Hallock stated that the city of Sheridan had a tax base that would justify their voting a special tax levy; which would be in addition to the opportunity to continue to collect the sewer user charges; therefore, they could vote a special tax levy and also vote a bond issue. Mr. Hallock also believed that the only way to bring this matter of the necessity of installing sanitary sewers home to the people would be to confront them with an abatement order.

Councilman Bradley from Sheridan thought that a bond issue or tax levy would not go over. He stated that he had talked with a newspaper man concerning a tax levy, and that it was his opinion that the citizens were not in favor of it. Mr. Hallock explained that there were three ways to finance this matter - by bond issue, special tax levy, and a continuance of the sewer -user charge. Mayor Smith wanted to know what would happen if the public were to vote on these different methods of financing the matter, and they turned it down. Mr. Hallock advised that then the only procedure would be to compel the city to abate the nuisance. Mr. Wendel advised that if it became necessary for the Authority to issue an order, it would be to the effect that the city of Sheridan cease discharging their sewage into the Yamhill River.

Councilman Cole said he realized fully that the Sanitary Authority had already given the city of Sheridan ten years to take some action in the matter, but that they were three new members of the council who had no knowledge of the program. He

also stated that if the Authority saw fit to enforce the law fully, there would be nothing that the city could do about it.

The new legislation that has been adopted by the state of Oregon relative to the financing of sewers and sewage treatment works in small financially distressed cities was then discussed.

ABG759

Mr. Wendel reminded the representatives of the city of Sheridan that if they had acted in good faith in establishing a sinking fund for the purpose of installing the much needed sewer system when the matter was first brought up, they would at this time have a sizeable amount on hand for this purpose. He further reminded the city that the law is on the statute books of the state and that it is the responsibility of the Authority to enforce the law. Mr. McPhillips was of the opinion that the city could obtain some aid from private homes and business establishments who did not now have satisfactory sewage disposal facilities.

Mr. Hallock inquired as to how much time it would take for the city to prepare and present to the Authority a concrete plan on this matter. The Mayor replied that it would not take very long, but he was quite sure that the community would vote down both a special tax levy and a bond issue.

MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried - that the city of Sheridan be granted a period of 30 days to prepare and submit a tentative concrete program to take care of the sewage disposal problem, including engineering and fiscal plans. Mayor Smith requested that they be furnished with detailed instructions as to just what this concrete plan should include. Mr. Hallock advised that it is to include both engineering plans and adequate financing plans. Following further discussion at a later point in the meeting the above motion was amended to grant the city 60 days in which to submit their program.

Mr. Wendel asked Mayor Smith if it would enable the city to bring the matter to a head faster if the Authority were to issue an order for abatement at this time. Mayor Smith was of the opinion that it would take time for the new council to get

started on the project. He preferred that no order be issued at this time. The representatives of Sheridan were then excused from the meeting.

Toledo: The city of Toledo was represented by Mayor M. G. Hammerness and C. D. McCluskey, City Attorney. The secretary of the Sanitary Authority briefly reviewed this case, outlining the steps taken by the Authority from 1942 to the present time to obtain voluntary compliance by the city of Toledo to have the needed sewage treatment facilities installed. Mr. Wendel then asked the city to state what they had done regarding the matter. Mayor Hammerness stated that no progress could be reported; that they had been working on it; had made surveys; had engaged an engineer; and after the first of the year were contemplating a further engineering study of the matter. He also said they were faced with the problem of obtaining authorization for a bond issue to install new water lines, which will cost about \$100,000 to \$150,000, and that when the water question is solved, it was hoped that they could accumulate funds to help defray part of the sewage disposal plant cost which is estimated at from \$250,000 to \$300,000. Mayor Hammerness reported that the city is now working on an educational program, and had a few questions they would like to ask; namely, (1) What is going to happen to the fringe areas? Toledo has several fringe areas that use septic tanks, and dump sewage into Yaquina Bay; (2) What happens if the city puts in a sewage disposal plant and the small towns up the river keep on dumping sewage into the river? (3) What happens to the city's sewage disposal system if and when sewage from the fringe areas enters the city plant, thereby costing additional money and requiring a special lifting station? (4) Inasmuch as the tide waters extend upstream as far as Toledo, what about the sewage from the city of Newport and the offal from the Newport fish plants? The Mayor stated that the city of Toledo agrees with the program of the Authority, but that the city already has bonded indebtedness of some \$30,000 and, therefore, financing sewage treatment is a serious problem to them.

Mr. Wendel replied to the questions to the effect that the state will insist that all towns will have to cease polluting the waters, and asked what kind of help

did the city wish from the Sanitary Authority. Mayor Hammerness said they would require help on the engineering and on the educational program, since they are now trying to carry on an educational program for sewage disposal.

Mr. Hallock stated that he believed the city has a substantial tax base and with a population of only 2,200 people it will have recourse to the recently enacted law for financing sewage disposal facilities, as well as to levy and collect sewer-user charges.

ABG759  
Mr. McCluskey stated they were now furnishing 600,000 gallons of water free to the local lumber mill which seriously impairs the finances of the city. This contract has eight years to run, but the city is now working out a new contract whereby the mill will pay something for the water used. He also stated that there are probably about four areas in the city that are not now served with sewers and that the city is having a survey made in order to supply these areas with sewers so that the whole matter of disposal of the sewage can be handled under one head.

Mr. Wendel explained that the stream purification program extended to the tide waters of the state and that the oyster industry in Yaquina Bay had been ruined by sewage pollution. Mayor Hammerness said that he had made the same statement over the radio at Newport and that the sanitarian of Tillamook-Lincoln County Health Unit had said such wastes did not kill the oyster.

Mr. Everts advised that due to the health hazards involved, oysters could not be harvested from waters into which raw sewage was being discharged. Mr. Hallock suggested that similar action to that taken on the Sheridan problem be taken in this case, also. After some discussion the city of Toledo requested that the time limit allowed be set at 60 days rather than 30, so that they might promote an educational program. Mr. Wendel asked the city officials if they believed they could bring in a plan in which they would have some confidence. The Mayor said he believed that a plan could be submitted together with plan of action to get things started. In view of the mayor's statement, it was MOVED by Mr. Hallock, seconded by Dr. Erickson, and carried - that the city of Toledo be granted sixty days in which to

submit to the Authority a complete program for the construction and financing of sewage treatment facilities.

Oswego: The city of Oswego was represented by Mayor Chas. Needham, Mr. Al Hughes, Mr. W. J. Dorner, City Engineer, and Mr. Grimm. Mr. Everts summarized the Authority's efforts in the case of this municipality to obtain voluntary compliance with state statutes relative to sewage disposal facilities. Mayor Needham said they were present today to seek information and they very strongly favored the sanitation program, and were ready to go ahead with it. He also stated that their present bonded indebtedness was \$30,000. Mr. Wendel asked the Mayor what sort of advice and information they wanted. The Mayor replied that they would have to obtain an engineer to get what was required regarding the type of disposal, and would be willing to cooperate in any way the Authority saw fit to direct. Mr. Everts advised that the city should obtain detailed engineering plans, and develop some definite plan so construction could be started as soon as possible. The Mayor said they were ready to proceed upon direction of the Authority. Mr. Hallock asked the Mayor if he could present a definite outline of their plan. Mr. Dorner said that as far as engineering was concerned, very few tests had been run on the sewage and that they had a peculiar situation due to the excessive infiltration from Lake Oswego. Mr. Hallock inquired as to whether the city contemplated a tax levy or bond issue. The Mayor said he favored a bond issue. Mr. Hallock asked the city officials if they believed that a letter from the Authority would help in this matter. Mr. Dorner thought it would take more than 30 days to get engineering plans; but believed that a good estimate could be made within 10% of the amount of the cost. The Mayor said they had been conducting an educational program for several years but had postponed action and now they realized they must do something. The Mayor was also in favor of increasing the sewage rental to conform with that charged by Hillsboro, and stated he could promise definite action within a very short time.

Mr. Wendel again asked the city officials if they believed that any action on the part of the Authority would be of help in getting things started, and they

replied they certainly thought it would not hurt any. MOTION by Mr. Stricklin, seconded by Mr. McPhillips, and carried - that the city of Oswego be granted 60 days in which to submit to the Authority a complete program both in regard to the construction and financing of sewage facilities.

Corvallis: The city of Corvallis was represented by City Manager, Mr. James C. Convill. The secretary of the Sanitary Authority summarized the case, and Mr. Wendel read from the minutes of the previous meeting the action taken by the Authority relative to the plan proposed by the City of Corvallis for sewerage works construction.

Mr. Convill stated that the council had taken the letters from the Authority seriously, because they immediately referred them to the city manager. In March the matter was discussed by the city council and plans for the work were reviewed. Mr. Convill stated that there is a large suburban fringe area that has to be considered; and that at the council meeting on April 25, a special election was authorized for May 24 at which time the city is voting on funds for additional water supply and interceptor sewer and the disposal plant. Mr. Convill pointed out that he realized that the particular part of the matter in which the Sanitary Authority was most interested is when will the city get started on the construction of the sewage treatment plant. He advised that at the present time the city of Corvallis has a sewer-user charge of 20% of the water bill which has been accumulating at the rate of \$2,000 per month, and that there is now about \$30,000 in the fund. The city realizes that the present plan is too slow; but they feel that they cannot divorce the water and sewer deal, and they are also cognizant of the fact that taxes are pressing the people. They have proposed to levy a two-mill special tax for five years, and increase the sewer rental charge for 9 months of the year to 50% of the water bill and for the summer months to 25% of the water bill. Mr. Convill estimated that the proposed sewer rental charges will bring in not less than \$54,000 a year. The council on April 25 authorized Mr. Convill to promise that they would do everything possible to speed up the program so as to be all through with it by 1954. On May 24 the city will vote on a two-mill tax and also on a \$400,000 bond issue.

Mr. Wendel requested that Mr. Convill furnish the Authority with a report in writing of the proceedings of the Council meeting April 25. Mr. Convill promised to do this. Mr. Wendel inquired if a communication from the Authority might be of help in carrying the election, and Mr. Convill thought it might help. The secretary was then instructed to prepare a letter relative to this matter and forward it to the city of Corvallis.

Albany: The city of Albany was represented by Attorney Edward E. Sox and Mr. J. D. Baughman, City Manager. Mr. Everts summarized the case history of this municipality relative to the steps taken by the Sanitary Authority since 1939 to obtain voluntary compliance with state statutes relative to sewage disposal facilities.

Mr. Sox reported that quite an extensive survey had been made and that based on the report completed in September 1948, a sewer-user charge had been drawn up. Engineers Cornell, Howland, Hayes and Merryfield had been engaged and had submitted the report to the city. He mentioned that the problem of levying a sewer charge was complicated due to the fact that the city does not own the water system; but stated, however, that arrangements were nearly complete for levying a 75¢ per month charge which would accumulate approximately \$33,000 a year. Mr. Sox also said the estimated cost of the project at the present time is \$380,000 for interceptor sewers; and \$247,000 for a treatment plant; making a total of \$627,000. The city has accumulated \$25,000 at the present time but have an engineering charge against this amount. The city has outstanding bonds in the amount of \$240,000, plus \$120,000 Bancroft bonds. The present assessed valuation of the city is \$7,700,000.

Mr. Wendel asked the city officials when they thought they would be able to complete the required sewerage system. Mr. Sox said that they plan on financing through bonds, and that the \$33,000 revenue was merely to build up a fund to operate the plant when completed. He thought they would have accumulated by the time they were in a position to build about \$65,000; and they hope they will be able to construct the interceptor first. At present the city has no program of bonding

and they have delayed any planning until they could get a report from their engineer as to what the interceptor will cost. They expect this report within twelve months.

Mr. Wendel again asked the officials if they had any complete plan to submit as to when the city council expected to build the project. Mr. Sox replied that they had not done this, and he could only quote from the 1948 engineering report. Mr. Wendel then stated that Albany be given a limited amount of time in which to make a complete plan and submit it to the Authority. Mr. Sox said the city would like to have a preliminary report of the engineer which would give some idea of just what they could do; but he believed it would take until Fall to complete the report. Mr. Hallock suggested that the Authority should have in writing from the city some plan of what they proposed to do; and Mr. McPhillips stated that the Authority should certainly require some assurance from the city council that they were going ahead with the program. Mr. Wendel asked Mr. Sox if a fiscal program could be furnished within thirty days. Mr. Sox requested that at least sixty days be given them. MOTION by Dr. Erickson, seconded by Mr. McPhillips, and carried - that the city of Albany be ordered to furnish to the Authority within sixty days a plan and time schedule of construction and financing for their sewerage project.

Mr. Sox requested permission of the Authority to construct a new sewer line in the southeast section of the city. Mr. Everts advised that there would be no objection to the installation of that particular sewer, provided the city conformed to the requirements of the Authority with regard to the development of the remainder of their sewerage works program.

Springfield: The city of Springfield was represented by Mr. Fred Cheatham, City Manager, who stated that the city started in 1941 with preliminary studies for a sewage disposal plant. In 1941 approval was given by the voters to a \$250,000 revenue bond issue. In 1944 the city levied an annual sewer-user charge of \$5.00 per connection. In 1945 the city started on a major sewer construction program

ABG759

and since then the length of sewers in use has increased probably about 175%. He was not certain that the city could sell the \$250,000 revenue bond issue. Mr. Hallock asked Mr. Cheatham if the city had undertaken to finance the \$250,000 bond issue, and if any funds had been accumulated from the sewer charges. Mr. Cheatham said they had \$48,200 cash on hand, and about \$11,200 outstanding unpaid rentals, making a total of \$59,400. He stated that the sewer-user rates were raised in January 1949 to \$1.00 per month.

Mr. Wendel requested that the city of Springfield submit to the Authority at the earliest possible time a letter stating the proposed time schedule, and plan for engineering and financing, for completion of the sewer project. The Authority would then decide whether or not their plan is satisfactory. Mr. Cheatham agreed to do this.

Myrtle Creek: Inasmuch as Myrtle Creek had not complied with the request of the Authority to appear at the meeting and present plans of the city for installation of proper sewerage facilities, MOTION by Mr. Hallock, seconded by Mr. Stricklin, and carried - that a citation be issued to the city of Myrtle Creek to appear before the Authority at the next meeting to show cause, if any exists, why action should not be taken against the city to abate the pollution created by the discharge of sewage from the city of Myrtle Creek into the South Umpqua River.

Sherwood: Mayor Sanders advised the Authority that the city of Sherwood planned to vote on a bond issue for sewerage works construction before May 24. He also reported that Mr. Lasalle of the Portland Canning Company was very cooperative and willing to aid in financing the sewerage system. The Canning Company would bear \$25,000 of the cost, and the tannery \$18,000, leaving a balance of \$32,000 of the cost of the plant to be borne by the city of Sherwood. He was of the opinion that the bond issue would carry with very little trouble. In view of the steps being taken by the city to install adequate disposal facilities, no further action was taken by the Authority at this time.

Pulp and Paper Industry:

At the request of the Authority the pulp and paper companies operating sulfite

mills on the Willamette River were also represented at the meeting. Due to a previously scheduled meeting, representative of the Spaulding Pulp and Paper Company had requested permission to postpone their appearance until a later date.

Oregon Pulp & Paper Company: This company was represented by Mr. Nils G. Teren and Mr. G. R. Cranor. Mr. Teren stated that the Oregon Pulp and Paper Company had made no plans relative to abatement of pollution of the Willamette River caused by operations at their mill. He said they really did not know what to do in this case.

Mr. Hallock reminded Mr. Teren that when the pulp mill representatives had been previously cited to appear before the Authority to discuss this matter there was some discussion as to what Weyerhaeuser Timber Company was doing at Longview, Washington. Various other methods were also discussed; such as aeration of the water in the receiving stream and the manufacture of yeast. Mr. Hallock stated that the Authority would like to know now whether the industry here has done anything other than contribute to the National Council for Stream Improvement. Mr. Teren said that his company was watching with a great deal of interest all these developments. In addition, a great amount of money has been given to the Mellon Institute. Mr. Hallock asked Mr. Teren if it were his belief that industry should just go ahead and discharge the wastes into the waters of the state, and added that in the last ten years the Authority had not heard of any constructive ideas for abatement of pollution caused by pulp mill wastes. Mr. Teren replied that the problem had been studied for the last fifty years without reaching any satisfactory solution. Mr. Hallock then pointed out that he personally could see nothing else to do except either repeal the statute or find some way to abate the pollution. Mr. Wendel stated that if Weyerhaeuser had found the solution to the problem with the magnesium process, it could be applied to other pulp mill plants, and asked Mr. Everts what the status of the Weyerhaeuser plant was at the present time. Mr. Everts stated that the magnesium base plant at Longview was undergoing a full-scale trial run and that Weyerhaeuser had promised that the Authority would be advised as soon as definite costs and operation data were determined. Mr. Wendel said that he was sure from commitments made by Crown-Zellerbach that they

ABG759

will go to either the magnesium or the soda process, or to some other process, inasmuch as originally Crown-Zellerbach had planned to use the soda process but when the Weyerhaeuser experiment started, they requested permission to await the outcome of that. Mr. Wendel then asked Mr. Teren if he were willing to make some commitment as to his Company's plans. Mr. Teren said that he was not able to make any statement since he had no knowledge of the costs involved. Mr. Everts asked if the Oregon Pulp and Paper Company had ever considered the possibility of concentrating the waste liquor and burning it. Mr. Teren said they had not, as it was their belief that no recovery of the chemicals could be made. Mr. Everts then pointed out that it was really not so much a question of recovery of chemicals or by-products, but a matter of the prevention of the pollution of the waters of the state, and that the pulp and paper mills must develop plans immediately for disposal of wastes until such time as recovery processes could be developed. Mr. Wendel was of the opinion that public sentiment would be aroused if pollution of the rivers continues, especially after so many communities have cooperated and so much money has been spent to abate pollution created by the discharge of domestic sewage into the rivers.

Publishers Paper Company: This company was represented by Mr. Carl E. Braun and Mr. Fred J. Welehen. Mr. Braun stated that since the last meeting with the Authority, his company had made studies of the B.O.D. of the mill wastes which had proven to be helpful to them in the matter; and that they had sent reports of the tests to the Authority each month. Mr. Braun said the Publishers Paper Company was endeavoring to do all they possibly could to prevent pollution of the waters; but they were confronted with the problem of trying to put in some sort of system that would be economical to their type of plant. He said that various systems were being used in Europe, none of which, after all the years of effort would completely eliminate pollution. He also stated that his company was trying to find something in the way of equipment to solve the problem that would not be too much of a financial burden to the company but at the present time they failed to see where they could improve the B.O.D. of wastes discharged into the river, based on a comparison with what

ABG759

the Authority expects to achieve in the way of city sewage treatment when all plants have been installed in various communities. With all the information they have been able to assemble, they do not know of any process that would satisfy the Authority on this point. Mr. Braun stated that they were watching very closely the system being installed at Longview, which is a very costly installation and would be much too costly for the Publishers Paper Company, due to the difference in size of the plants. Mr. Braun further said he believed burning of the waste liquors would come closer to an economical solution. To install such a process would mean that they would have to completely rebuild their sulfite mill system; and just how successful such a proposal would be would depend on whether or not it would meet with the requirements of the Authority. He said they could see the "writing on the wall", however, and at the present time they were putting in an 80,000 pound boiler and hoped to have it in operation the latter part of this year for burning oil and some other fuel. The location of the boiler was to be such that additional equipment could be installed for evaporation and burning if necessary. Mr. Braun said they had yet to find a way of lowering the B.O.D. of present wastes. Mr. Wendel then said that the answer at the present time apparently is "no progress".

Mr. Welehen asked if the standards for pollution abatement from paper mills were based entirely upon B.O.D. of the wastes. Mr. Everts replied that the standards were based on the condition of the Willamette River. Mr. Welehen said that progress had been made just in the few years he had been with the mill in the waste material being dumped into the river, but as to whether or not the B.O.D. had been lowered he did not know. Mr. Hallock brought up the subject of fibre waste going into the river. Mr. Welehen said that good progress had been made in reducing the fibre waste formerly dumped into the river. Mr. Everts explained that the volume of fibre waste which was formerly discharged into the river had been reduced, but the fact remained that the most serious pollution is caused by the waste sulfite liquor; and that the question now was whether it will be possible for the state to wait another

five years for someone to determine some method of recovering anything from these sulfite liquors, or whether something will have to be developed purely from a disposal standpoint. Mr. Everts pointed out that some means of disposal must be provided and industry will have to do something in the immediate future. Mr. Teren said that within the last few years the pulp and paper companies on the west coast have given something like \$700,000 to study these problems in an effort to find a solution.

Mr. Spies advised that even in spite of the improvements which have been made in the recovery of fibers and other solids from pulp mill wastes, the waste sulfite liquors discharged into the river by each one of the pulp and paper mill plants equal in strength the sewage from 400,000 to 500,000 people. This, Mr. Spies stated, would give some idea of the effect of pulp mill waste pollution in comparison with the municipal wastes; inasmuch as the pollution from each of the mills has the same effect on the river as a city of the size of Portland. Mr. Spies further advised that pollution has destroyed one run of fish because during the period of low flow there is no oxygen in the Portland Harbor, and studies made in 1944 and 1945 showed that the zone of gross pollution had been extended upstream as far as the Wilsonville Ferry.

Crown Zellerbach Corporation: This company was represented by Mr. Frank N. Youngman. Mr. Youngman said that while there has been a lot of investigation made by the University of Washington and Oregon State College, he was of the opinion that the industry had come to the conclusion that there was no quick answer. There may be a solution eventually and one that will show very substantial results, but the industry has pretty well come to the conclusion that the only quick method of disposal is probably by burning. Mr. Youngman stated there were two different methods, neither of which has been proven. One is the magnesium base at Weyerhaeuser which is today in the process of being proven, and the other is the ammonia base which is a far simpler installation and far less costly, yet obtaining the same results as far as pollution abatement is concerned. There are two mills in the country that are using this latter method - one is located at Shelton, Washington; and the

other is Eastern Manufacturing Company located in Massachusetts. The Crown Zellerbach Corporation has been investigating the ammonia base process and may use this process if operating difficulties can be overcome. Basically, it is rather simple, but may prove to be very expensive unless some recovering of chemicals can be effected. Mr. Youngman does not believe that the Weyerhaeuser process is the final answer yet; and reported that some two weeks ago the Weyerhaeuser technicians said they would be ready within the next two or three months to start full operation.

ABG759

Mr. Youngman stated that they were about ready to build a full-scale ammonia base pilot plant which will cost between \$300,000 to \$400,000 and will probably prove whether their present boilers can be used for the burning of the liquor. He also stated that he believed that the ammonia base would cost 25% of what the magnesium process would cost, but that they had been unable to get very much information from the other mills. Mr. Wendel advised that if industry is doing as they claim - i.e. putting money into a pool for research and investigation, but the various mills are withholding information from each other regarding the question of a solution to the problem, then they may be accused of just stalling as the public says they are doing. Mr. Youngman said he believed that they were nearing a solution to the problem.

Mr. Wendel reminded Mr. Youngman that the President of Crown Zellerbach had told him that when the city of Portland stopped polluting the river, the Crown Zellerbach plant at Oregon City would also stop its pollution; and asked Mr. Youngman if their commitment to stop the pollution of the Willamette at West Linn when the Portland sewage plant went into operation was rescinded. Mr. Youngman said he did not know if they will be ready to go into operation as soon as Portland will, but said they were working just as fast as possible and spending money to work out the situation.

Mr. Spies inquired if in thirty days the Crown Zellerbach Corporation would be in position to know whether they would be building a full scale pilot plant, and

then within another six months whether they would know if they would go ahead on the ammonia base. Mr. Youngman said he hoped so.

Mr. Youngman stated that he had spoken quite freely and requested that not too much publicity be given as to what they were doing along this line.

Budget:

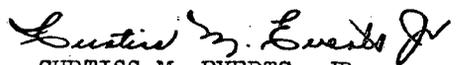

The secretary advised the Authority that under the Federal Water Pollution Control Act there had been allocated to the state for research, investigations, and surveys on industrial wastes some \$12,960 for the next fiscal year. The proposed budget for use of the funds was presented. MOTION by Mr. Hallock, seconded by Mr. Stricklin, and carried - that allocation of the federal funds as submitted be approved.

District Engineer:

Mr. Everts requested authority to locate a district sanitary engineer at Medford to handle the Sanitary Authority field work in that area. Following some discussion on the advisability of such a plan, the secretary was authorized to establish such an office.

There being no further business, the meeting adjourned at 6:15 P.M. The date of the next meeting was set as July 22, 1949.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary and Chief Engineer

## MINUTES OF THE FORTIETH MEETING

OF THE

## OREGON STATE SANITARY AUTHORITY

July 22, 1949

The Fortieth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:40 P.M., July 22, 1949, in the offices of the State Board of Health, Behnke-Walker Building, 1022 S. W. 11th Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., B. A. McPhillips, Chas. E. Stricklin, Blaine Hallock, and John C. Veatch, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; Clarence E. Cuyler, T. M. Gerow, Jr., and James R. Boydston, Assistant Sanitary Engineers. Mr. George Neuner, Attorney General, was also present.

MINUTES:- The minutes of the Thirty-ninth meeting having been submitted to the members in advance, it was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the minutes be approved as prepared by the secretary without reading.

PROJECT PLANS:- Following a review of sewerage project plans submitted to the members of the Authority for examination and approval, it was MOVED by Mr. Hallock, seconded by Dr. Erickson, and carried - that the action taken by the engineering staff on the following forty-three project plans be approved:

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
4-26-49	Salem	State sewer extension	Approved
5-2-49	Burns	Sewer extension (rev. plans)	Approved
5-5-49	Eugene	Sewer extensions	Approved
5-5-49	Lebanon	Sewer extensions	Approved
5-9-49	Beaverton	Sewer system	Approved
5-9-49	Beaverton	Sewage treatment plant	Approved
5-9-49	Oakland	Sewer system	Approved

ABG759

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
5-9-49	Oakland	Sewage treatment plant	Prov. Approval
5-18-49	Canby	Sewer system	Approved
5-18-49	Canby	Sewage treatment plant	Approved
5-18-49	Milwaukie	Sewage treatment plant	Approved
5-19-49	Pendleton	Sewer extensions	Approved
5-26-49	Sutherlin	Sewer system	Approved
5-26-49	Sutherlin	Sewage treatment plant	Approved
5-27-49	Beaverton	School sewerage	Approved
6-2-49	Multnomah County	S. W. Hills Sanitary District sewer system	Prov. Approval
6-2-49	Multnomah County	S.W.Hills Sanitary District sewage treatment plant	Prov. approval
6-3-49	Coos Bay	Sewage treatment plant	Approved
6-7-49	Portland	Peninsula Tunnel Interceptor	Approved
6-13-49	Eugene	Sewer extensions	Approved
6-13-49	Eugene	Sewage treatment plant	Approved
6-15-49	The Dalles	Sewer extensions	Approved
6-17-49	Scio	Sewerage system	Recommendations submitted
6-21-49	West Roseburg	Prel.report for proposed sanitary district	Approved
6-22-49	Josephine County	Jerome Prairie School sewerage	Approved
6-23-49	Ontario	Preliminary report	Approved
6-23-49	North Roseburg	Preliminary report	Approved
7-6-49	Creswell	Grade school sewerage	Approved
7-6-49	Eugene	Sewer extension	Approved
7-6-49	Fern Ridge Dam	Recreation Center sewerage	Not approved
7-6-49	Marian Forks	Fish Hatchery sewerage	Not approved
7-6-49	Detroit Dam	Resident Engineer-office sewerage	Not approved

<u>Date</u>	<u>Location</u>	<u>Type of Project</u>	<u>Action Taken</u>
7-6-49	McMinrville	Sewer extension	Approved
7-11-49	John Day	Sewer extension	Not approved
7-12-49	The Dalles	Sewer extension	Approved
7-13-49	Yamhill	Grade School sewerage	Approved
7-15-49	Gladstone	Preliminary Engineering Report	Approved
7-15-49	Coquille	Preliminary " "	Approved
7-15-49	Eugene	Dunn School sewerage	Not approved
7-15-49	Eugene	Bailey Hill School sewerage	Not approved
7-19-49	Willamina	Grade School sewerage	Approved
7-19-49	Dallas	Lyle Grade School sewerage	Not approved
7-20-49	Corvallis	Lincoln Grade School Sewerage	Not approved

PULP & PAPER INDUSTRY:- Representatives of the Spaulding Pulp & Paper Company appeared before the Sanitary Authority to discuss problems relating to the discharge of wastes from their mill at Newberg into the Willamette River. Mr. O. M. Allison, Secretary and Treasurer; Mr. J. C. Compton, President; and Mr. Ralph Reid, Chief Chemist, explained that they were present at the meeting inasmuch as they had been excused from attending the April meeting of the Authority at which time other pulp mill representatives had been present.

Mr. Compton said that they had not been able to find a solution to the waste disposal problem; that they had employed within the last three or four months two additional chemists, increasing their staff to four chemists; and that at the present time Mr. Clodfelter, Chief Chemist, was in the east visiting paper mills in Michigan and Wisconsin. Mr. Clodfelter also expected to call on mills at Madison. His particular mission was to study the matter of waste pollution. Mr. Compton said that their mill was analyzing samples of wastes at the present time, and that they were contributors to the National Council for Stream Improvement who are doing research on this problem. He reported that the National Council had spent \$53,000 last year and \$155,000 is to be spent this year, but as yet no economical solution to the problem

ABG759

had been found. His company is watching closely the Weyerhaeuser process at Longview, and believes it will prove successful.

Mr. Everts reported on the Weyerhaeuser project and stated that he believed they would find a solution to their operational problems and that representatives of Weyerhaeuser expected the process to be economical in operation.

Mr. Spies reported on the ammonia base process used by the Rayonier Pulp & Paper Company at Shelton, Washington, and stated that there is no recovery of chemicals with the ammonia base process. He also reported that it was not possible to obtain any figures on the cost of the process, but it was the general opinion that it would be considerably less expensive to convert to ammonia base process than to the magnesium base process. At Shelton the process has proven successful in solving their pollution problem.

Mr. Hallock asked if the pulp industry thought they would gain anything by showing to the court that the problem was insolvable. Mr. Compton was of the opinion that if the mills were forced to shut down, some might find a solution and continue to operate in an endeavor to keep business alive.

Mr. Wendel said that the Izaak Walton League was criticizing the Authority for not taking more action towards securing compliance with the law, inasmuch as it was their opinion that the problem could be solved either by the magnesium or ammonia base process; and also as soon as the Portland sewerage system was completed, the public would be very much concerned if private industry continued to pollute the waters of the state. Mr. Reid stated he thought the method used in Sweden, one in which the waste is concentrated and burned, was the best one yet tried; but there was no mill in this country where a process of this type was being used. Mr. Compton referred to this as the Rosenblatt process of evaporating and burning sulfite liquor and stated that Mr. Lundberg in Seattle was familiar with the process.

Mr. Hallock stated that he had just addressed the Izaak Walton League, and had committed himself personally that as long as the cost was not prohibitive to abate 50% of the waste he would be in favor of going ahead and issuing an abatement order

to the industry. Mr. Wendel stated that either an abatement order would have to be issued to stop pollution of the waters of the state, or industry would have to get the laws of the state changed. Mr. McPhillips asked Mr. Compton just how much they had investigated the Weyerhaeuser process and if it could be applied to the Newberg plant. Mr. Compton said he had contacted Weyerhaeuser Timber Company representatives within the last three or four months, but said he had not felt like bothering them too much on this matter while operation problems were still being worked out.

Mr. Wendel then asked Mr. Compton if his company could give the Authority some kind of a program they hoped to follow in solving this problem. Mr. Compton replied that they were planning to have a representative of their company visit Sweden to study the method used there.

Mr. Veatch advised the industry that time was fast approaching when the paper industry would have to face this problem and that if it is an insurmountable problem, the Authority could not go on indefinitely with the laws of the state the way they are. Mr. Compton said that the company had a limited amount of money that could be spent for abatement. The present owners have spent all the earnings to produce materials but if the market remains as it is and there is any money available it will be spent on this work. Mr. Veatch said that the Authority realizes that companies have big investments in mills, but the people of Oregon have bigger investments in the streams of Oregon, and action will have to be taken one way or the other in cleaning up the streams. Representatives from the Spaulding Pulp & Paper Company then left the meeting.

The secretary then advised the Authority members that reports of the strength and quantity of wastes were not being received from the Oregon Pulp & Paper Company. These reports were requested in October, 1948, from all the pulp and paper companies discharging wastes into the Willamette River. Such reports have been received regularly from the other mills since December, 1948. The first report received from the Oregon Pulp & Paper Company, however, was for the month of February, 1949;

ABG759

one for March was received but was not complete; none was received for April; and one for May was received after the mill had been reminded that they were to submit monthly reports. None have been received since that time. The secretary of the Authority was instructed to write a sharp letter to the Oregon Pulp & Paper Company requesting that they comply with the former request of the Authority, and that reports of their mill wastes be submitted promptly.

Further consideration was then given to the matter of pulp and paper mill pollution in the Willamette River. Mr. Neuner said that all records in this matter should be kept carefully; and he advised that it would be wise not to approve any plans for partial abatement of pollution, but suggested that time in which to effect the final pollution abatement in the stream be granted; and in the meantime require progress reports.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that representatives of the pulp and paper industries of the Willamette River Basin in the state of Oregon, be ordered to abate the nuisance that is produced by their stream pollution; and that such abatement be accomplished not later than December 31, 1951; and that the Authority, likewise, address a communication to each such industry reciting the fact of issuance of an abatement order and demanding reports of progress each 90 days. Such letters to be approved by the Attorney General, and prepared for signature of both Mr. Wendel and Mr. Everts.

MUNICIPAL PROJECTS:-

Sherwood - Mr. P. W. Cookingham, Attorney, representing both Sherwood and the Frontier Leather Company, and Major C. H. Sanders of Sherwood appeared before the Authority to discuss the abatement of pollution in Cedar Creek. Mr. Cookingham advised the Authority that the city had been working on the problem of financing the project, and realized that the city had not progressed as rapidly as they should have done, which was due partly to his absence from the city and also to his illness. He further stated that he had met with Mr. Schuler and the plan now is to hold a council meeting the week of July 25 and call the bond election as soon after

that as the charter will permit which will be twenty (20) days, and that the election, therefore, should be held during the first part of August. The amount of the bonds required for construction of the facilities is \$85,000.

Mayor Sanders reported that the people were favorable toward the bond issue and there is no doubt but that the election will be successful; in fact, he assured the Authority that the election would be successful; and reported that the disposal plant will be designed to take care of the tannery, cannery, and the municipality. Mr. Wendel then said that the Authority could assume that after the bond issue was passed, the city will proceed as fast as possible with the construction of the plant.

Samples of water from Cedar Creek, as evidence of gross pollution, were shown at this point. Mr. Sanders said that the cannery was starting now with the bean crop and that about 100,000 to 200,000 gallons of water a day (cooling water) would be discharged into Cedar Creek and he believed that this additional water would help the condition of the creek at the present time, but Mr. Spies advised him that the waters from the cannery would only add to the pollution. Mr. Sanders said that since the last meeting of the Authority the tannery is using a chemical which controls odor, probably 50% over what it was previously. Mr. Wendel asked whether the condition could be tolerated this season, and Mr. Spies replied that it would create a definite and serious nuisance condition.

Mr. Wendel asked the Authority just what action should be taken. Dr. Erickson asked if any kind of order from the Authority would be helpful in the coming bond election, in bringing to the attention of the residents of Sherwood that the condition existing was extremely bad and could not be further tolerated. Mayor Sanders said he would not be adverse to an order and would give it publicity in the community paper. Dr. Erickson was of the opinion that the people of Sherwood should be advised that the situation would be tolerated this year, but that by next year provision must be made to abate the pollution as it will not be allowed to continue. Mayor Sanders was in favor of such an order.

ABG759

MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried - that a resolution be adopted as follows: assuming (1) that the city of Sherwood is proceeding in good faith in an effort to abate pollution, and (2) that the bond election will pass, this is the last year in which wastes from the operations of the tannery and cannery and sewage from the city of Sherwood will be permitted to be discharged untreated into Cedar Creek; therefore, the conditions will be tolerated the balance of this season with the understanding that a bond issue will be authorized which will provide funds for financing an adequate disposal system and that pollution of Cedar Creek by the city of Sherwood must be abated by May 1, 1950; and further that the city of Sherwood be notified in writing of this action. The Sherwood representatives left the meeting after the adoption of this motion.

Myrtle Creek - Mr. James McGinty, City Attorney, Myrtle Creek, Oregon, appeared before the Authority in answer to a citation issued to the city of Myrtle Creek to appear and show cause why action should not be instituted against them to abate the pollution created by the discharge of sewage from the city of Myrtle Creek into the South Umpqua River. Mr. Everts briefly stated the case history of Myrtle Creek and the efforts of the Authority to secure voluntary compliance with state statutes regarding stream pollution abatement. Mr. McGinty advised the Authority that the Mayor, Mr. Kennedy, and the City Council could not get away to attend the meeting but that the city was very anxious to get adequate sewage disposal facilities installed. He advised that just about two years ago they city proposed and passed a \$68,000 bond issue to construct a water system and that their finances were still strained due to the fact they are paying off those bonds. Mr. McGinty further advised the Authority that the city recently employed an engineer, James C. Dougherty, who made a map of the city showing contours, sewer lines, water lines, treatment plant location, etc. Mr. McGinty then showed the map to the Authority. He stated that the city had put \$5,000 into a fund during the last fiscal year to obtain a plan to find out where to start. Mr. Dougherty had received most of the \$5,000 for the services he rendered and the big question before the city at present was whether the

voters would authorize another bond issue to furnish money to construct a sewage disposal plant. It was Mr. McGinty's belief that it will cost the city from \$100,000 to \$150,000 for such a plant. Mr. McGinty reported that the population within the city is about 1,000 and that the city has a fringe area which is thickly settled. The assessed valuation of the city is \$1,200,000; and the present bonded indebtedness of the city is \$75,000.

Mr. Wendel asked Mr. McGinty when the city would have complete engineering plans and an estimate of the cost. Mr. McGinty said that right now the city would like a list of engineers who are acquainted with this type of construction. Mr. Wendel asked how much time the city would require to submit a set of plans, and was advised that the city would like 12 months. Mr. McGinty stated that the city usually sets aside every year, roughly \$4,850 for a sewer fund and that the city formerly charged 25¢ per month sewer-user charge, but that this had been discontinued.

Mr. George Neuner said that the city did have a big problem and he suggested that a definite time should be fixed within which they would submit a financial report sufficient to accomplish the object, which may be by one or all of three methods - (1) sewer-user charge; (2) special tax levy; and (3) bond issue.

MOTION by Mr. Hallock, seconded by Mr. Stricklin, and carried - that within a period of 90 days from the date of the order, the city of Myrtle Creek shall submit to the Authority a plan showing the financial and engineering program which they will follow for the construction of needed sewerage facilities.

Portland - The sewerage project underway in Portland was briefly discussed, and the secretary presented the plans which had been submitted by the city of Portland for sewage treatment plant construction. It was the opinion of the Authority that the basic engineering plans were satisfactory. MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried, that approval of plans as submitted, subject to conditions outlined by the Authority on June 22, 1945, be granted. The secretary was also requested to ask the city of Portland for plans for the Linnton plant.

ABG759

Albany - The fiscal and construction program which had been presented to the Authority by the city of Albany were reviewed. Mr. Veatch stated that it was his belief that Albany was not making sufficient progress. Dr. Erickson believed that the city should be notified to complete their plant for proper disposal of sewage at the same time as Corvallis, and that they should submit a bond issue in 1951 rather than 1953 as planned. Mr. Neuner said that bonds could be authorized now and then issued whenever necessary. MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried - that Albany be notified that their proposed plans for financing are unsatisfactory to the Authority and that their program must be so arranged that construction will be completed not later than December 31, 1953.

Sheridan - The proposed fiscal plan of the city which was submitted in response to an order from the Authority was discussed. Mr. Everts reviewed the progress that this community had made, and said he believed the city would now be more cooperative regarding this matter. Their financial situation was discussed in detail and it was thought that the city would probably be eligible for financial assistance from the state. There was some discussion relative to issuing abatement orders. Mr. Neuner advised the Authority that he believed the court would uphold abatement orders; however, authority within reason must be exercised. MOTION by Mr. Hallock, seconded by Mr. Stricklin, and carried - that Sheridan be advised that their proposed fiscal plan is not satisfactory and they must submit one which will show completion of the project by December 31, 1953.

Toledo - Mr. Everts read letters from Toledo and from the consulting engineers who have been retained to advise the city on construction and fiscal plans. In view of the progress being made by the city it was decided to defer action against this municipality until the next meeting.

West Salem - Mr. Everts reviewed the situation of West Salem. In view of the possibility of this city being annexed to the city of Salem, the Authority decided to defer action in the matter pending the outcome of the consolidation election.

Cottage Grove - Mr. Everts presented data relative to Cottage Grove sewerage

program, and stated he was of the opinion that we should require more definite progress. MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that Cottage Grove be notified to submit to the Authority within sixty (60) days from the date of the notice an adequate engineering and financial plan for the construction of sewage treatment facilities.

Springfield - Mr. Everts reviewed the case history of Springfield relative to stream pollution abatement. A letter had been written to the city on May 3 asking for information regarding plans for sewage treatment, but no reply had been received. MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that Springfield be notified to submit to the Authority within sixty (60) days from the date of the notice plans of their engineering and financing program; otherwise, the city will be cited to appear before the Sanitary Authority.

Monmouth - The case history of this municipality was reviewed by the secretary who reported that some consideration had been given to Monmouth and Independence constructing a joint sewage treatment plant. Independence was in favor of such a plan, but Monmouth did not appear to be too interested concerning it. MOTION by Mr. Hallock, seconded by Mr. Stricklin, and carried - that Monmouth be notified they will have to submit engineering and financing plans to the Authority within 60 days from the date of the notice, and if same are not satisfactory, an abatement order will be issued.

Southwest Hills District - There was discussion of the insanitary conditions existing in the Southwest Hills area of Multnomah County where septic tanks are used; and where the soil is of such formation that it will not absorb the effluent properly. After this sanitary district was formed, a bond issue was submitted to the voters but it did not pass. It was pointed out that plans have been completed for a sewer system and treatment plant in this area. The Secretary of the Authority was requested to see that publicity be given to the conditions existing in this district.

#### WATER POLLUTION COMPLAINTS:

Neskowin - Mr. Wendel read a letter from the Governor regarding pollution of the water at Neskowin. Mr. Everts reported that on July 16 an examination had been made of the matter by one of the M<sub>o</sub>torcourt sanitarians, and that on July 20 Mr. Gerow

ABG759

was in Neskowin and investigated the matter further. He inspected the Neskowin Apartments and a number of other establishments. The Authority was advised that additional investigation would be made and that action would be taken to correct any further pollution of the stream. MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the investigation of the pollution in that area be completed as soon as possible and when the offenders are ascertained they be notified immediately to abate the pollution.

Date for the next meeting was set for November 4, 1949, at 2:30 P.M.

There being no further business, the meeting adjourned at 6:00 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
CURTISS M. EVERTS, JR.,  
Secretary and Chief Engineer

## MINUTES OF THE FORTY-FIRST MEETING

of the

## OREGON STATE SANITARY AUTHORITY

November 4, 1949

The Forty-first meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 3:00 P.M., November 4, 1949, in the offices of the State Board of Health, Behnke-Walker Building, 1022 S. W. 11th Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Blaine Hallock, John C. Veatch, and B. A. McPhillips, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; Clarence E. Cuyler, T. M. Gerow, Jr., and James R. Boydston, Assistant Sanitary Engineers. The Attorney General's office was represented by Cecil H. Quesseth. Also present were Messrs. D. H. Howells, A. F. Bartsch, F. E. DeMartini, R. J. Black, and Robert R. Harris, all of the U. S. Public Health Service; H. C. Clare of Idaho Department of Public Health; Mrs. Emma H. Frazelle of Multnomah; and Alfred H. Corbett, Attorney, Frank C. McCulloch, Attorney, and S. J. Robinson, General Manager, all of the Publishers Paper Company.

MINUTES: The minutes of the Fortieth meeting having been submitted to the members in advance, MOTION was made by Mr. Hallock, seconded by Mr. Veatch, and carried - that the minutes be approved as prepared by the secretary, without reading.

PROJECT PLANS: Following a review of sewerage project plans submitted to the members of the Authority for examination and approval, MOTION was made by Mr. Veatch, seconded by Mr. Hallock, and carried - that the action taken by the engineering staff on the following project plans be approved:

Date	Location	Type of Project	Action Taken
7-22	Portland	Greeley-Glisan Interceptor	Approved
7-22	Portland	Plant outfall sewer	Approved
7-22	Portland	Sewage Treatment plant	Prov. approval
7-22	Marion County	Dist. #5 School sewerage	Not approved

ABG759

Date	Location	Type of Project	Action Taken
7-22	John Day	Sewer extensions (rev.plans)	Approved
7-23	Corvallis	Sewer extension	Prov.appr.
7-25	Corvallis	Lincoln Grade School Sewerage	Prel.approval
7-27	Marion County	Dist. #5 School sewerage (Rev.plans)	Approved
7-27	Springfield	Sewer system	Approved
7-28	Lane County	Camp-Creek School sewerage	Not approved
8-1	Salem	Capitola School sewerage (Alt. design)	Approved
8-1	Salem	Four Corners School sewerage	Prov.approval
8-1	Corvallis	Sewer extensions	Approved
8-2	Pendleton	Sewer extensions	Not approved
8-3	Eugene	Sewer extensions	Approved
8-10	Josephine County	Merlin School sewerage	Approved
8-10	Corvallis	Sewers	Approved
8-11	Toledo	Prel.Engineering Report	Approved
8-12	Monroe	Grade School sewerage	Approved
8-12	Washington County	Farmington School Sewerage	Approved
8-15	Clackamas Heights	Trunk or outfall sewer	Approved
8-20	Clatsop County	Knappa-Svenson School sewerage	Prel.approval
8-22	North Bend	Sewer extensions	Prov. approval
8-23	Shedd	Grade school sewerage	Not approved
8-23	Scio	Sewerage system (revision)	Prov. approval
8-23	Dallas	Lyle School sewerage(rev.plans)	Prel. "
8-24	Cedar Mill Park	Marlene Village sewers	Approved
8-25	Coos Bay	Bennett Hog Farm Waste Disposal	Approved
8-25	Prineville	Sewage plant additions	Approved
8-29	Coquille	Sewer extensions	Not approved
9-2	Springfield	Sewer extensions	Prov. approval
9-6	Lane County	Dist. #66 School sewerage	Prov. approval

Date	Location	Type of Project	Action Taken
9-6	Lane County	Dist. #191 School sewerage	Prov. approval
9-12	Springfield	Sewer extensions	Approved
9-15	Myrtle Creek	School sewerage	Prov. approval
9-15	Gladstone	Sewer extensions	Prov. approval
9-21	Crabtree	School sewerage	Approved
9-21	Warrenton	High School sewerage	Prov. approval
9-21	Pendleton	Sewer extensions	Approved
9-21	Empire	Sewer extensions	Approved
9-21	The Dalles	Sewer extensions	Approved
10-3	Multnomah County	Parkrose School sewerage	Approved
10-4	Central Point	Pumping station	Not approved
10-4	Cottage Grove	Hospital sewers	Approved
10-24	Central Point	Pumping station (Rev. plans)	Cond. approval
10-25	Sheridan	School sewerage	Changes recomm'd.
10-25	Cedar Mill Park	Pumping station	Approval
10-25	Marion County	North Marion Union High School sewerage	Approved

MUNICIPAL SEWAGE DISPOSAL:

Southwest Hills Sanitary District - Chairman Wendel stated that the disposal of sewage in the Southwest Hills area of Multnomah County presented a real nuisance and a health problem; that at the last bond election only 1,300 voters turned out to vote on this issue which was turned down, and although there is still a district in formation, it does not seem practical to proceed against the district. It was his opinion that the only recourse the Sanitary Authority would have would be to proceed against individuals.

Mr. Quesseth of the Attorney General's office believed that the powers of the Authority would extend to the district provided it could be shown that the pollution occurred as a result of their action.

Mrs. Frazelle, representing the district in an unofficial capacity, said she really believed there were many persons in the district who are interested in having

ABG759

the place cleaned up but due to a strike which was in progress at the time of the election, they did not get out to vote on the question. Mr. Hallock asked Mrs. Frazelle if she thought that if the matter were submitted again to the people for approval, it could be sufficiently publicized so the people would get out and vote. Mrs. Frazelle made no comment other than to say that she would like to see the Authority take some action against the district since the place was extremely insanitary. Mr. Wendel was of the opinion that the insanitary conditions in the district had been given sufficient publicity and that there was no reason to believe that another vote if taken only 60 days later would turn out any differently. It was then pointed out by Mr. Quesseth that under the law another bond election could not be held in the same district for at least one year.

Mr. Wendel then asked Mr. Quesseth what the law was regarding the matter of selecting individuals in the district and proceeding against them as an example. Mr. Quesseth was of the opinion that it made no difference whether the nuisance was caused by one individual or contributed to by other people. Mr. Veatch was of the opinion that the district should be notified that unless they handle their sewage problem as a district, the Authority will proceed against the individual violators. Mr. Spies asked if it would be appropriate to proceed against school districts as they are among the chief offenders. Mr. Hallock said there was no reason why this could not be done, and suggested that there were probably many business establishments who were offenders also. Mrs. Frazelle did not seem to think that handling the matter on an individual basis would be very helpful.

No action was taken on this matter at this point in the meeting due to lack of a quorum.

#### PULP AND PAPER INDUSTRY:

Publishers' Paper Company - Frank C. McColloch, Attorney, and S. J. Robinson, General Manager, representing the Publishers' Paper Company presented their objections to the issuance of an order to the effect that pollution caused by discharge of wastes by their mill be abated by December 31, 1951.

Mr. McColloch reviewed the fact that the Publishers' Paper Company had recently purchased the mill from Hawley Pulp and Paper Company; that Mr. Robinson was the new

ABG759

general manager with the Company; and that he had not had sufficient time to consider all the details of their pollution problems, although he had come from an identical condition in Wisconsin. Mr. McColloch said that the big problem is the disposal of waste sulfite liquors; and as far as setting the dead line for abating this pollution by December 31, 1951, the date might just as well be set for day after tomorrow, because there is no practical known solution for the problem of sulfite waste disposal. He further stated that in Wisconsin last year nationally and internationally known firms were solicited to prepare plans and specifications for equipment which would solve this problem, and that they replied that they did not want to accept money for the work because they had no known practical solution. He pointed out that for sixty years the industry had been trying to solve the problem; that the Publishers' Paper Company is a member of the National Association for Stream Improvement; that results of research which this Association carries on are available to all mills; and that at the present time there is no known solution to the problem. Mr. McColloch believed the Company he represents is making a real effort to solve the problem, but at the present time it is insolvable. He stated that Mr. Robinson had received a report last week on the Weyerhaeuser process and that the company has already spent \$5,000,000 on the process but they were not ready yet to install such equipment in any of their other mills. At Shelton, Washington, Mr. McColloch stated that the use of the ammonia base process was a practicable solution for the Rayonier Company, although the cost of producing pulp under these conditions is \$3.00 per ton additional operating cost; that the Rayonier Company can stand the additional cost because of the high price they receive for pulp; that unless something happens in the interim concerning the problem, the situation will be just where it is today; and that if the program is carried out to abate pollution, the mills will just have to close down. He believed that the only solution to offer is that the mills are doing a substantial part in trying to solve the problem; and from a practical point of view it is inevitable, as the situation now stands, if the order is promulgated it will be impossible to do the job. He stated that they would welcome the Sanitary Authority itself entering into a research program, and would be willing to contribute their share of the cost.

Mr. Wendel explained that industry has spent ten years trying to find an economical solution; and that now it was the duty of the Sanitary Authority to carry out the directions of the people of the state. He thought that in the 2-1/2 years interim between the date of order and date for abatement of the pollution that perhaps industry would put forth greater effort to solve this problem, or perhaps endeavor to change the law of the state. Mr. McCulloch then read the section of the Sanitary Authority statutes defining the powers and duties of the Authority; and a discussion followed on enforcement of the law, the effect of sulfite waste on human life, and the duty of the Authority. Mr. Wendel was of the opinion that it was not the duty of the Authority to solve the financial problems of industry or to conduct their research for them.

Mr. McCulloch requested a consideration of postponement of the effective date of the proposed order. Mr. Veatch brought up the question as to whether delay by the Authority in proceeding with issuance of an order was justified just because one plant was not in position to install necessary equipment to abate the pollution. He said that industry was faced with the proposition that the waters of the state could not be used exclusively for one person or one corporation, and the problem now was whether or not the Authority would clamp down on the practice or whether industry would solve the problem.

Mr. Robinson said that he had contacted Weyerhaeuser Timber Company and had written Babcock & Wilcox, and that the latter firm will manufacture the equipment that Weyerhaeuser finds to be successful in this experiment and sell it to other mills. He stated further that at the present time Weyerhaeuser has not successfully proven that the method will solve the problem.

Mr. Robinson also stated that there is an experimental program going on in connection with evaporation and burning of the calcium base waste, and that this method has been fairly successful in Sweden because of high fuel costs in that country. Experiments along this same line are being conducted in Wisconsin at the present time but so far it has proven too costly. The answer to the matter still is that no mill has found a solution to the problem.

Mr. McColloch then stated that the Publishers' Paper Company does formally object to the issuance of such an order as contemplated by the Authority; and that if such an order were issued, the Company he represented would appeal it.

Mr. Hallock said he believed that the Authority should not proceed until the Attorney General had furnished the Authority with advice as to the procedure to be followed. Mr. Quesseth said that perhaps this order could be made and if during the interim it was seen that a process had been discovered but could not be put in operation by 1952, the Authority would have the power to modify the order, if desired. Mr. McColloch said that he was of the opinion that a public meeting would have to be held in order to rescind the order. He also said that he did not want litigation, but thought cooperative study was the answer.

Mr. McPhillips pointed out that a process which one mill might consider as a practical method might not be considered economical by others. He also stated that a number of cities have been forced to comply with the law and face the financial problem; and they are doing it despite the fact it might not be practical from their monetary standards and financial status but they are being forced to go ahead and comply with the law. Are we to understand that the Publishers' Paper Company is asking the Authority to desist from trying to enforce the pollution law, in spite of the fact that all municipalities representing the greater portion of the people of <sup>the state</sup> Oregon are being forced to comply, and that other industries also are being required to abate pollution.

Mr. McColloch replied that there is a solution to municipal sewage disposal; but that for pulp and paper mill wastes there is no solution.

Mr. Wendel requested an opinion as to whether the agency which issues an order has the power to amend it. Section 116-1127 O.C.L.A. was reviewed and it was the belief that it contained authority to amend an order formerly issued.

A discussion was then held as to what would be considered as a time limit for abating pulp and paper pollution. Mr. McColloch said he thought that five years would be more suitable, and was of the opinion that the Authority, industry, and the State

ABG759

College could go to the state legislature and get an appropriation made for the study of this problem. A discussion then followed as to whether the state should participate financially in such studies.

Mr. Robinson stated he really believed that his company had made progress in trying to clean up the pollution, and said that in the design of new boilers they had taken into consideration the possibility of their being used in the future for this purpose. Mr. McColloch repeated the fact that the Publishers' Paper Company was ready to spend its share of the cost for any study undertaken toward solving this problem. He also advised that the Board of Directors at its last meeting adopted a resolution instructing its management to cooperate with the Authority and that the Company is prepared to spend whatever money is reasonable to accomplish the result desired.

Mr. Robinson said that Wisconsin was now issuing orders to abate pollution, that industry was concerned with the same problem there; and he believed that when a solution of this problem is found, it will spread rapidly over the country.

Mr. Everts at this point stated that there is a known solution and that sulfite liquor can be concentrated and burned. It was Mr. McColloch's opinion, however, that this would interfere with an industrial process.

Mr. Spies said that in looking at the matter from a practical standpoint, if the pulp and paper industry is permitted to continue pollution of the waters of the state, the Authority then is not justified in ordering municipalities to abate their pollution.

Mr. Wendel asked the members of the Authority if they wished to act on this problem or to defer action. Mr. Spies said that there was one point which ought to be clarified in connection with the notice of the proposed order and that was the statement pertaining to abatement in full of the pollution. He then explained what is meant by pollution.

Mr. Veatch asked if objections justified an extension of the order as issued. Mr. Wendel did not believe that any action could be taken at the meeting.

Representatives of Publishers' Paper Company then left the meeting. Action in the matter was deferred until the next meeting.

The secretary was instructed to get an expression from the Attorney General's office on the matter of amending the order to the pulp and paper mills.

PUBLIC RELATIONS:

The matter of having the film made by W. J. Smith reprinted and converted to sound at a cost of \$900.00 was discussed. A committee consisting of Dr. Erickson, Mr. Wendel and Mr. Everts was appointed to go ahead with this matter. MOTION made by Mr. Hallock, seconded by Mr. McPhillips, and carried - that Mr. Everts go ahead with publication of the film.

Mr. Howard then discussed the Sanitary Authority water pollution report, and was authorized to proceed with its publication.

There being no further business the meeting adjourned at 5:15 P.M.

Next meeting was set for December 6.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
CURTISS M. EVERTS, JR.,  
Secretary and Chief Engineer

ABG759

## MINUTES OF THE FORTY-SECOND MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

December 6, 1949

The Forty-second meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:25 P.M., December 6, 1949, in the offices of the State Board of Health, Behnke-Walker Building, 1022 S.W. 11th Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Blaine Hallock, Chas. E. Stricklin, Dr. Harold M. Erickson, and B.A. McPhillips, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; and Clarence E. Cuyler and James R. Boydston, Assistant Sanitary Engineers. Also present were the following:

J.O. Convill, City Manager, Corvallis	
V.L. Goodnight, " Engineer, Corvallis	
R. A. Zimmerman	Corvallis
Paul Invino	Corvallis
S.W. McHugh	Corvallis
E.O. Muhs, M.D.	Corvallis
G.W. Holcomb	Corvallis
Dean Dorsey	Corvallis
R.H. Erichsen, City Engineer, Coos Bay	

MINUTES: The minutes of the Forty-first meeting of the Authority having been submitted to the members in advance; MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried - that the minutes be approved as prepared by the secretary, without reading.

## MUNICIPAL SEWAGE DISPOSAL:

Corvallis - J. O. Convill, City Manager of Corvallis, presented to the Authority problems of sewage disposal in suburban fringe areas surrounding Corvallis, and raised questions as to the desirability of the city of Corvallis, spending money for treatment of its sewage when sewage from surrounding areas also eventually reached into public waters; and as to the justification for the city furnishing water to the outside areas.

Chairman Wendel advised Mr. Convill that the jurisdiction of the Authority pertained and extended only to those responsible for polluting public waters of the state and that it was only a question of time until everyone violating water pollution statutes must comply with the law. The chairman also pointed out that the Authority had no jurisdiction over the matter of furnishing water to fringe areas. Mr. Convill then stated that it would not be difficult to prove that sewage from fringe areas was finding its way into the stream. The chairman advised the delegation from Corvallis that if pollution of public waters was caused by inadequate sewage disposal in fringe areas, the Authority would act to clean up such areas when major problems had been solved.

The question was then raised as to whether the Authority would assist the city in the abatement of pollution from fringe areas. The secretary stated that the Authority did not have the staff now nor did they expect to have it, that would be available for such work. He further stated the Authority was aware that pollution by individuals is going to have to be controlled, but at the moment the Authority had a greater task in taking care of industrial pollution and domestic sewage from the larger cities, and that to handle individual pollution problems would require more time than is available with the present staff. However, when the major pollutional problems are solved, the engineering staff of the Authority will be available for the more minor problems.

The representatives from Corvallis left the meeting at this point.

Coos Bay - R. H. Erichsen, City Engineer for Coos Bay, presented to the Authority the problem which confronts Coos Bay in the matter of furnishing additional sewers for the city, and requested permission for the city to install another outfall sewer discharging into Coos Bay. He advised the Authority that the city had increased the sewer-service rate to \$1.00 as of September 1, 1949; that the city had a budget this year of \$74,324.87 earmarked for intercepting sewers; and that he estimated that the fund from the service charge would bring in approximately

ABG759

\$25,000 a year. He also mentioned that a bond issue of \$45,000 to apply on enlargement of the water system for the city was to be voted on in December, and he was of the opinion that it was not a logical time now to call for a vote on sewer bonds.

Mr. Wendel advised Mr. Erichsen that it would be necessary for the city of Coos Bay to furnish the Authority with a definite fiscal program and time schedule for the completion of their needed sewerage facilities, and that he questioned the right of the Authority to grant permission for the installation of one more outfall discharging raw sewage into the waters of the state.

Mr. Stricklin and Mr. McPhillips were also of the opinion that the Authority could not legally grant such approval, and any such action would be dependent upon a bona fide attitude of the city towards completion of the sewerage project, as required by the Authority. Mr. Everts also said that any action taken would depend upon construction and fiscal programs, in order that the Authority would have some idea as to when actual completion of the project will take place.

Mr. Erichsen stated that he was not sure that a bond issue for sewage treatment would be acceptable to the people at this time. Mr. McPhillips then advised Mr. Erichsen that the success of bond issues depends a great deal on the city council and the people who are promoting the issue, and he requested that the Authority be informed as to what the attitude of the Coos Bay council will be in regard to the bond issue.

Mr. Erichsen was instructed to take these matters up with the council members of Coos Bay, and advise the Authority of their decisions or attitude in the matter. Mr. Erichsen then left the meeting.

Cities in the Willamette Basin - The Authority then considered the matter of the disposal of sewage from municipalities in the Willamette Basin and directed the secretary to notify the following cities that the Authority plans to have the Willamette River pollution abated by January 1, 1952, and that the Authority

intends to issue an order to that effect; and at a date to be determined later the cities could be heard and objections filed:

Milwaukie	McMinnville	Independence
Oswego	Mt. Angel	Mommouth
Gladstone	Dallas	Lebanon
West Linn	Woodburn	Albany
Oregon City	Salem	Springfield
Philomath	Cottage Grove	Eugene

Similar action was taken with respect to Waldport, Myrtle Point, Coquille, and Toledo.

Southwest Hills District - Mr. Everts advised that he believed no action should be taken regarding this district until it is seen what action will be taken to annex the district to Portland. Mr. Everts also stated he believed that the areas outside of the district should be warned through publicity that pollution must be abated.

#### INDUSTRIAL WASTES:

Pulp and Paper Industries - The problem regarding action in connection with the pollution by pulp and paper mill wastes was then discussed. Mr. Hallock was of the opinion that the Authority should send the pulp and paper companies a formal notice that a public hearing is to be held on the matter, such notice being sent at least thirty (30) days in advance of the public hearing. He also suggested that the formal notice should be accompanied by a letter to the effect that in response to our latest communication they had merely brought certain objections but had contributed no constructive information relative to solving the pollution problem. Mr. Hallock stated further that notices of the hearing should be sent to all those who could give us some valuable information, such as the Isaak Walton League, Game Commission, etc.

It was Mr. Hallock's opinion that the Authority should also have statements from Mr. Everts and Mr. Spies, and should have representatives of the Weyerhaeuser Company appear so that some real authentic data could be assembled as to the nature of the pollution and what its effect is on recreational activities and upon

ABG759

fish life, and what the best solution may be; and then on the basis of this information the Authority could work out findings of fact.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the Authority promulgate and forward to the various interested parties a notice directing attention to the fact that on February 15, 1950, at 9:30 A.M. this Authority will hear evidence with respect as to whether or not it shall issue an order to the effect that on or before December 31, 1951, the pulp and paper industry shall abate the pollution which it contributes to the waters of the Willamette River; and, it is further moved that in connection with the issuance of said order appropriate publicity be given and that various parties interested, not only the pulp and paper industry, but also sportsmen and others generally interested in the subject be notified to participate, and that the Authority on its own motion arrange to submit such proof as it may care to introduce.

Mr. Hallock then recommended that before sending the notices, Mr. Everts should work out the proper procedure with the Attorney General. He also stated that inasmuch as the members of the Authority would be sitting in at the meeting, it should be handled by a representative from the Attorney General's office.

Mr. Hallock then pointed out that when findings are made, proof must be furnished substantiating them; and he suggested that perhaps the Washington Pollution Control Commission should be asked to contribute some information on this subject.

Wood Alcohol Plant, Springfield - The secretary advised the Authority that the Wood Alcohol Plant at Springfield was opening and was directed to send by registered mail to this industry a copy of the laws pertaining to pollution, and a letter advising them of their responsibility under such laws.

Oregon Forest Fiber Products Company - Mr. Spies reported that the Oregon Forest Fiber Products Company had completed a large lagoon to store wastes, which made it possible to eliminate the pollution of Scoggins Creek; but that when a

representative of the Authority was in that area recently, it was found that they were by-passing the lagoon and discharging the wastes back into the creek. Tests showed that the load on the stream was very high and Mr. Spies was of the opinion that the industry should be advised that in the future no wastes shall be discharged into the creek without permission of the Authority. This action was approved by the Authority.

M & S Canning Company (Oregon Mushroom Company), Milwaukie - Mr. Everts read a petition from persons living in the vicinity of this industry relating to nuisance and pollution caused by industrial wastes from said company. Mr. Spies reported that the condition had been inspected and recommendations made to the industry to put in screens and a storage lagoon and to use the effluent for irrigation; but that such recommendations had not been fully carried out, and as a result the creek is definitely polluted. Mr. Spies further stated that due to lack of an adequate receiving stream, no industry should be located at this site. The secretary was instructed to notify the M & S Canning Company to appear at the next regular meeting of the Authority.

Industries along the Columbia Slough - The matter of the pollution of the Columbia Slough by wastes from industries in that area was discussed and the secretary directed to notify these industries that they will have to provide proper waste disposal or the Authority will be compelled to take action against all those responsible for pollution of the stream.

MEAT PACKING AND CANNERY REGULATIONS:

Mr. Spies presented copies of proposed regulations on meat packing plants and canneries. Mr. Wendel was of the opinion that in the promulgation of regulations, while it perhaps was not necessary from the standpoint of law, they should first be submitted to the interested parties for their comments. It was agreed by the Authority that the proposed regulations be submitted to the interested persons for comment before final action is taken.

There being no further business the meeting adjourned at 5:15 P.M.

Respectfully submitted  
*Curtiss M. Everts, Jr.*  
CURTISS M. EVERTS, JR.

## MINUTES OF THE FORTY-THIRD MEETING

of the

## OREGON STATE SANITARY AUTHORITY

May 9, 1950

The Forty-third meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:35 P.M., May 9, 1950, in the offices of the State Board of Health, Behnke-Walker Building, 1022 S.W. 11th Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson, John C. Veatch, B.A. McPhillips, and Chas. E. Stricklin, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; T.M. Gerow, Jr., and J.R. Boydston, Assistant Sanitary Engineers; and Mr. George Neuner, Attorney General.

MINUTES: The minutes of the Forty-second meeting of the Authority having been submitted to the members in advance: MOTION was made by Mr. McPhillips, seconded by Dr. Erickson, and carried - that the minutes as prepared by the secretary be approved, without reading.

PROJECT PLANS: MOTION by Mr. McPhillips, seconded by Mr. Veatch, and carried - that the action taken by the engineering staff on the following project plans, be approved:

Date	Location	Project	Action Taken
<u>1949:</u>			
Nov. 2	Washington County	Garden Home sewerage	Not approved
8	Washington County	Dilley Grade School sewerage	Not approved
8	North Bend	Revised plan for sewage treatment plant	Cond. approval
9	North Bend	Revised plans for pumping sta.	Not approved
9	Siletz	Preliminary engineering report	Approved
14	The Dalles	Sewer extension	Approved
14	Washington County	Garden Home School sewerage	Prel. approval

Date	Location	Project	Action Taken
Nov. 15	Linn County	Grand Prairie School sewerage	Not approved
16	Sheridan	Grade School sewerage	Approved
21	Washington County	Barnes Grade School sewerage	Not approved
28	Lebanon	Preliminary Eng'g. report	Approved
30	Hermiston	Preliminary Eng'g. report	Approved
28	Albany	Industrial waste report	Approved
Dec. 1	Oceanlake	Sanitary Sewer system	Not approved
2	Gales Creek	School sewerage additions	Approved
6	Eugene	Sewer extensions	Approved
6	Oceanlake	Sewage treatment plant	Not approved
13	Oceanlake	Sewer system (rev.plans)	Approved
13	Oceanlake	Sewage treatment plant (rev.plans)	Cond. approval
<u>1950:</u>			
Jan. 1	Sandy	Preliminary report, sewerage system	Approved
15	Medford	Sewer extensions	Approved
16	Roseburg	Hospital sewerage	No action
18	Douglas County	Melrose School sewerage	Approved
18	Washington County	Raleigh Park shopping center sewerage	Approved
24	Myrtle Creek	Preliminary report	Approved
25	Portland	Libby, McNeill & Libby Cannery Industrial waste screening	No action
25	Coquille	Sanitary sewer extensions	Not approved
26	Hermiston	Sunset Sanitary sewer extn's.	Prov. approval
Feb. 2	Scio	Union High School sewerage	Approved
16	Lane County	Washington Grade School sewerage	Approved
16	Coquille	Sewer extensions(rev.plans)	Approved
23	Vale	Grade School sewerage	Prov. approval

ABG759

Date	Location	Project	Action Taken
Feb. 24	Multnomah County	Markham School sewage plant	Approved
27	Roseburg	Sewer extensions	Not approved
28	Cedar Mill Park	Sewer extensions	No action taken
Mar. 3	Multnomah County	Markham School sewage tr. plant	Approved
3	Cedar Mill Park	Sewer extensions	Deferred
7	Clackamas County	Wilsonville School sewerage	Approved
7	St. Paul	High School sewerage	Not approved
8	Woodburn	School sewerage	Not approved
8	Rainier (Columbia Co.)	School sewerage	Not approved
9	Cedar Mill	School sewerage	Approved
9	Sherwood	Sewage treatment plant	Not approved
10	Witch Hazel	School sewerage	No action
13	Woodburn	School sewerage	Approved
16	Witch Hazel	School sewerage	Approved
17	Oswego	Preliminary Eng'g. report	Approved
20	Cedar Mill Park	Sewer extensions	Prov. approval
24	Benton County	Greenburg School sewerage	Approved
27	Scio	Sewerage extensions	Prov. approval
27	Toledo	C.D. Johnson Lbr. Co. sewerage	Prov. approval
27	Taft	School sewerage	Approved
28	Roseburg	Sewer extension (rev.plans)	Not approved
28	Roseburg	Sewage lift station (rev.plans)	Not approved
31	Manbrin Gardens	Sewer extensions	Prov. approval
31	Pendleton	sewer extensions	Approved
Apr. 5	Hermiston	Sewer extension	Prov. approval
5	Roseburg	Sewer extension	Not approved

Date	Location	Project	Action Taken
Apr. 5	Washington County	Dilley Grade School Sewerage	Approved
10	Monmouth	Trunk sewers	Approved
11	Forest Grove	Prel. engineering report	Approved
11	Manbrin Gardens	Sewer extensions	Prov. approval
13	Vermont Hills	Sanitary sewers	Approved (Prov.)
13	Roseburg	Sewers (Rev. plans)	Prov. approval
19	Corvallis	Sewer extensions	Approved
21	The Dalles	Sewer extensions	Approved
24	Newport	Hospital (sewerage)	None required
25	St. Rita Parish School	Sewerage	Approved
25	Eugene	Sewer extensions	Approved
27	Pendleton	Sewer extensions	Approved
27	Coquille	Sewer extensions	Approved

PULP AND PAPER WASTES:

The matter of pollution of the Willamette River by the pulp and paper industry was discussed. On February 15, 1950, a public hearing had been held by the Authority and the testimony of the individual companies as presented by their legal counsel and of others had been recorded. Based on this recorded testimony and on data and information supplied by the staff of the Authority, the office of the Attorney General had prepared a finding of fact. After thorough consideration of this matter, a MOTION was made by Mr. Stricklin, seconded by Mr. McPhillips, and carried - that the following Findings of Fact be approved and adopted.

## BEFORE THE OREGON STATE SANITARY AUTHORITY

IN THE MATTER OF THE POLLUTION OF )	
THE WILLAMETTE RIVER AND ITS )	
TRIBUTARIES BY PULP AND PAPER )	FINDINGS OF FACT
MANUFACTURING WASTES. )	

WHEREAS, the above entitled matter came on for final hearing on the 15th day of February, 1950, before the Oregon State Sanitary Authority, consisting of Harold F. Wendel, chairman, Harold M. Erickson, M.D., Blaine Hallock, B.A. McPhillips, Charles E. Stricklin, John C. Veatch, and Curtiss M. Everts, Jr., secretary and chief engineer, all members being present throughout said hearing; and

WHEREAS, due notice was given of the time and place of said hearing by publication thereof for the public generally and by personal service upon all pulp and paper mills operating upon or near the Willamette River and its tributaries; and

WHEREAS, the following appeared and were heard:  
 Crown Zellerbach Corporation, through its officers, representatives, and its attorneys, Clarence D. Phillips and John J. Coughlin;  
 Oregon Pulp and Paper Company and Publishers' Paper Company through their officers, representatives, and their attorney Frank C. McCollough;  
 and Spaulding Pulp and Paper Company, through its officers, representatives and its attorney O.M. Allison; and

WHEREAS, the said parties and all persons interested were given full opportunity to be heard and oral and written testimony and evidence pertaining thereto was received, considered and filed by this Authority; and

WHEREAS, title 116, chapter 11, O.C.L.A., declares it to be the public policy of this state to preserve the natural purity of the water of all rivers and streams in the interest of the public welfare, for the protection and conservation of the public health and the recreational enjoyment of the people, and for the protection and conservation of fish and wildlife, and to encourage the cooperation of industries, and enjoins the duty upon the Oregon State Sanitary Authority to enforce compliance with the laws of this state relating to the pollution of waters, and further provides that the discharge into waters of any wastes that are, or may become, detrimental or injurious to human or aquatic life, or the recreation and enjoyment of the people, by any person, firm or corporation, is against the declared public policy of the state of Oregon:

NOW, THEREFORE, the Authority having made exhaustive research and having given full consideration and study to the testimony and evidence submitted by all interested persons and parties to said hearing, and having studied and considered the reports and investigations made by its engineers pertaining to the pollution by industrial

waste of the waters of the Willamette River and its tributaries, and now being fully advised in the premises, makes the following findings of fact, to wit:

1. That sections of both the Willamette River below the city of Salem and the South Santiam River below the city of Lebanon are grossly polluted during period of low stream flows, and the wastes from sulphite pulp mills are the major cause of such pollution.
2. During the summer and early fall months, the period when minimum stream flow occurs, this pollution of the main Willamette and South Santiam Rivers causes a reduction of the dissolved oxygen in certain sections of these streams to a point below the amount required to sustain fish and other normal aquatic life, and at times the dissolved oxygen has been reduced to zero.
3. There are five pulp and paper mills located in the Willamette River basin that produce wood pulp by means of the acid bi-sulphite process, which mills are: Publishers' Pulp and Paper Company, located at Oregon City; the Crown Zellerbach Corporation, located at West Linn; the Spaulding Pulp and Paper Company, located at Newberg; and the Oregon Pulp and Paper Company, located at Salem, all on or near the Willamette River; and the Crown Zellerbach Corporation, located at Lebanon on the South Santiam River.
4. Liquid wastes from these five sulphite pulp and paper mills are disposed of by discharge into the Willamette River at Oregon City, West Linn, Newberg, and Salem; and by discharge into the South Santiam River at Lebanon.
5. The liquid wastes from other industrial plants which are disposed of by discharge into the Willamette River or its tributaries above Portland, exclusive of the wastes from the five sulphite pulp and paper mills, have from the standpoint of oxygen demand the same effect on the waters of this river system as the discharge of untreated domestic sewage from approximately 450,000 persons.
6. The discharge of untreated domestic sewage and sewage effluents into the Willamette River or its tributaries from cities and towns above Portland, from an engineering standpoint, has a population equivalent of approximately 203,750 persons.
7. Wastes from the five sulphite pulp and paper mills which are discharged into the waters of the Willamette River system have, from the standpoint of oxygen demand, the same effect on these waters as the discharge therein of untreated domestic sewage from approximately 2,851,000 persons.

ABG759

8. On the average, about ninety (90) to ninety-five (95) per cent of the total pollution load placed on receiving streams from sulphite pulp and paper mill wastes is caused by the wastes from the production of sulphite pulp.
9. Wastes from the pulp and paper mills at Oregon City, West Linn, Newberg, and Salem are responsible for approximately eighty-four (84) per cent of the total pollution load in the Willamette River, exclusive of that received from tributary streams and the city of Portland.
10. Wastes from the pulp and paper mill at Lebanon are responsible for approximately ninety-one (91) per cent of the pollution load on the South Santiam River.
11. The wastes from the pulp and paper mills which are discharged into the Willamette River system, excluding sewage or other wastes discharged by the city of Portland are sufficient in quantity and strength to deplete the dissolved oxygen in the waters of said river during periods of low stream flow prior to its confluence with the Columbia River.
12. Except for the recovery of fibre from the paper mill wastes by the use of modern "save-alls" and other equipment, and except for certain research studies of the problem, little or no actual progress has been made by the said pulp and paper companies toward reducing that pollution of the Willamette and South Santiam Rivers which is caused by wastes from pulp and paper mills located at Oregon City, West Linn, Newberg, Salem, and Lebanon.
13. Sulphite pulp mills in other areas have been able to meet their pollution problems by employing various treatment, disposal or waste utilization processes, which methods include: (a) lagooning or storing of wastes on land during periods of low stream flow; (b) multiple-effect evaporation of calcium bi-sulphite liquors; (c) fractional precipitation of sulphite waste liquor with lime and utilization of solids removed; (d) concentration and burning of sulphite waste liquor by using ammonia rather than calcium base; (e) concentration and burning of sulphite waste liquor with recovery of heat and chemicals by using magnesium rather than calcium base; (f) fermentation of sugars for production of ethyl alcohol; (g) production of fodder yeast through utilization of sugars in sulphite waste liquor; and (h) miscellaneous utilization of wastes or production of by-products.
14. The Sanitary Authority of the State of Oregon from the time it was organized in February, 1939, has continuously and consistently endeavored to obtain the voluntary cooperation of the pulp and paper industry, as well as of municipalities and other industries in the matter of abating the pollution of the Willamette River system.

15. The city of Portland, which is the largest single source of domestic sewage pollution on the Willamette River, has approximately fifty (50) per cent of its \$15,000,000 sewage disposal project either under contract or already completed. The Portland sewage treatment plant is now under construction and it is expected that it will be completed and in operation by the end of the year 1951.
16. The completion of the Portland sewerage project will not abate pollution in the Willamette River unless upstream sources of pollution are also abated.
17. Municipalities upstream from Portland will expend approximately \$6,797,000 for the construction of sewage treatment works to abate their share of the pollution in the Willamette River system. Nearly all of these municipalities will have made adequate provision to comply with state water pollution control laws by the end of the year 1951. The pollution caused by other industrial wastes, likewise, is to be abated at the same time.
18. The pollution of the Willamette and South Santiam Rivers by wastes from pulp and paper mills is injurious to aquatic life, interferes with the recreational enjoyment of the people, and is not a reasonable and natural use of these waters.
19. The pollution of the Willamette and South Santiam Rivers by wastes from pulp and paper mills is contrary to the public policy of the state of Oregon as expressed in section 116-1118 O.C.L.A., and is in direct violation of section 116-1118 O.C.L.A., and other statutes pertaining to stream cleanliness.
20. In order to abate the pollution caused by pulp and paper mill wastes in the South Santiam River below Lebanon, no wastes from the production of sulphite pulp at the Crown Zellerbach Corporation mill at Lebanon should be discharged into the South Santiam River during the period July 1 to October 31, inclusive, of each year; nor should such wastes be discharged into the South Santiam River at any other time when the flow of said river, immediately below the city of Lebanon as calculated from the readings of the official gauging stations at Waterloo and at the Albany power canal, is less than 500 cubic feet per second. The above degree of waste reduction must be considered as the minimum required for maintaining satisfactory stream conditions.
21. In order to abate the pollution caused by pulp and paper mill wastes in the main Willamette River below Salem it will be necessary as a minimum, during the period of July 1 to October 31, inclusive, of each year, or at any other time when the flow in the river as measured by the official gauging station at Salem is less than 7,000 cubic feet per second, for the Oregon Pulp and Paper Company at Salem; the Spaulding

ABG759

Pulp and Paper Company at Newberg; the Crown Zellerbach Corporation at West Linn; and the Publishers' Paper Company at Oregon City to refrain from discharging into the river any sulphite waste liquor, including the wastes from the first complete washing, or to effect by any method of treatment, disposal or waste utilization an equivalent reduction in the total pollution load of the wastes from the respective pulp and paper mills.

22. That the completion of the construction of 16 multi-purpose dams included in the program of the United States engineer for the development of the Willamette River basin will not necessarily cause a minimum stream flow of 6,500 cubic feet per second to be maintained in the Willamette River at Salem, in view of the great increasing numbers both of population and development which will occur in the future, and the possibility of the diversion of greater quantities of water from the Willamette River for irrigation, industrial and other purposes.
23. At the present time, the removal of concentrated sulphite waste liquors and the first wash waters from the Willamette River during the period of July 1 to October 31, inclusive, of each year, or at any other time when the flow of the Willamette River at Salem is less than 7,000 cubic feet per second, will satisfactorily abate the pollution caused by sulphite pulp mills, provided, there is no material increase in the sources of pollution on the Willamette River and its tributaries.
24. That the removal of all liquid wastes resulting from the production of sulphite wood pulp from the South Santiam River during the period of July 1 to October 31, inclusive, of each year, or at any other time when the flow of the South Santiam River immediately below Lebanon is less than 500 cubic feet per second, will satisfactorily abate the pollution caused by sulphite pulp mills, provided there is no material increase in the sources of pollution on said river.
25. That the removal of concentrated sulphite waste liquors during the period and at the times above stated will provide a solution to the immediate problem until such time as the effects of the construction of the multi-purpose dams can be accurately determined.
26. That the period from date of these findings to May 1, 1952, is a reasonable length of time for said pulp and paper mills to construct and complete methods by which they can abate the discharge of industrial wastes into the waters of Willamette River and its tributaries in accordance with the minimum requirements above stated. All plans and specifications for impounding, treatment or utilization of sulphite wastes shall be submitted to and approved by the Authority.
27. That these findings of fact shall be published and a

copy thereof served upon each pulp and paper mill operating on or near the Willamette River and its tributaries.

Dated this 12th day of May, 1950.

OREGON STATE SANITARY AUTHORITY

By \_\_\_\_\_  
Chairman

ATTEST:

\_\_\_\_\_  
Secretary

The official order as proposed by the Attorney General was then read and discussed. MOTION by Mr. Veatch, seconded by Mr. McPhillips, and carried that the following Order be issued.

BEFORE THE OREGON STATE SANITARY AUTHORITY

IN THE MATTER OF THE POLLUTION )  
OF THE WILLAMETTE RIVER AND ITS )  
TRIBUTARIES BY PULP AND PAPER )  
MANUFACTURING WASTES. )

O R D E R

This matter coming on regularly for final hearing on the 15th day of February 1950, before the Oregon State Sanitary Authority, consisting of Harold F. Wendel, chairman, Harold M. Erickson, M.D., Blaine Hallock, B.A. McPhillips, Charles E. Stricklin, John C. Veatch and Curtiss M. Everts, Jr., secretary and chief engineer, and the Authority having heard all persons and parties interested and having given full consideration to all testimony and evidence submitted at said hearing, and having studied and considered the reports and investigations of its engineers pertaining to pollution by industrial wastes of the waters of the Willamette River and its tributaries, and having heretofore made, and entered, its Findings of Fact pertaining thereto, and now being fully advised in the premises,

IT IS HEREBY ORDERED:

1. That each and every person, firm or corporation owning, operating or maintaining pulp and paper mills which discharge concentrated sulphite waste liquors into the waters of the Willamette River shall, not later than May 1, 1952, cease and desist discharging any such concentrated sulphite waste liquor into said river during the months of July, August, September, and October of each year, and at all

ABG759

other times whenever the flow of the Willamette River as measured by the official gauging station at the city of Salem, Oregon is less than 7,000 cubic feet per second;

2. That on and after May 1, 1952, each and every person, firm or corporation owning, operating or maintaining pulp and paper mills which discharge liquid wastes resulting from production of chemical wood pulp into the South Santiam River shall, during the months above specified, cease and desist discharging said industrial wastes into the waters of said stream, and at all other times when the flow of the South Santiam River immediately below the city of Lebanon, Oregon, as calculated from readings of the official gauging stations at Waterloo and at the Albany power canal, is less than 500 cubic feet per second;
3. That plans and specifications for the abatement of sulphite and other industrial wastes by pulp and paper mills operating upon the Willamette River or its tributaries shall be submitted to and approved by this Authority;
4. That the discharge of impounded industrial wastes during high stream flow at periods when the minimum flow of said streams is above the minimum specified herein, other than the months of July, August, September and October, shall be permissible, provided each pulp and paper mill submits to this Authority, and obtains the approval of, the manner and means of such discharge prior to its release in order that the flow thereof may be properly regulated.
5. That the secretary of this Authority be and hereby is directed to serve a certified true copy of this order upon each and every person, firm or corporation now discharging industrial wastes into the waters of the Willamette River or its tributaries, and to make proof of service thereof.

Dated this 12th day of May, 1950.

OREGON STATE SANITARY AUTHORITY

ATTEST:

Chairman

\_\_\_\_\_  
Secretary

MUNICIPAL SEWAGE DISPOSAL

On the advise of the Attorney General, action against those municipalities which are not making entirely satisfactory progress in developing plans and fiscal programs for early construction of sewage disposal works was deferred by the Authority, pending the receipt of further progress reports from such cities.

The cities included in this category were:

1. Philomath . . . . . preliminary engineering completed but no progress on fiscal program.
2. Mt. Angel . . . . . fiscal program not adequate to permit construction within reasonable time limit.
3. Woodburn . . . . . final engineering pland prepared but no fiscal program has been started.
4. Cottage Grove . . . . . financing is a serious problem; no program developed. Engineering progress unsatisfactory.
5. Lebanon . . . . . trying to finance project without a bond issue may take too long.
6. Albany . . . . . no definite plans for submission of bond issue to the voters.
7. Springfield . . . . . no progress made in engineering except for joint study which is now being conducted with Eugene for metropolitan sanitary district.
8. McMinnville . . . . . no definite fiscal program adopted but may be able to obtain sufficient funds from sale of timber on watershed.
9. Toledo . . . . . preliminary engineering study completed but no fiscal program developed.
10. Myrtle Creek . . . . . preliminary engineering study completed but no fiscal program developed.
11. Waldport . . . . . preliminary engineering study completed but no fiscal program developed.

It was pointed out by the Secretary that these cities were advised by letter on December 15, 1949, of the Sanitary Authority's intention to issue orders requiring completion of their sewage disposal projects by January 1, 1952.

ABG759

Satisfactory progress reports were then presented for some of the cities as follows:

1. Milwaukie . . . . . Contract already awarded for construction which will start in the near future.
2. Oswego . . . . . \$150,000 bond issue to be voted on May 19. Final plans now being prepared.
3. Oregon City . . . . . \$150,000 bond issue to be voted on May 19, which will complete their fiscal program. Plan to start construction in near future.
4. Sherwood . . . . . Interceptor sewer and treatment plant project now under construction.
5. Oceanlake . . . . . Contract awarded for construction of sewer system and treatment plant.
6. Monmouth-Independence . . . Proceeding with plans for joint sewage disposal plant.

The Dalles - A letter from the consulting engineers for the city was read in which permission was requested to discharge digested sludge into the Columbia River from the primary treatment plant which is being planned for the city. After considerable discussion it was decided to defer the matter until such time as further cost data on the alternative methods of sludge disposal could be furnished by the city.

Reedsport - A letter from Mr. Russell Hubbard, member of the City Planning Commission, was read in which permission was requested to discharge raw sewage directly into Schofield River from a proposed sewer system for the Wade's Flat Addition. The original plans called for connecting this sewer system to the existing city system which now discharges into the main Umpqua River. Mr. Hubbard, who was present at the meeting, stated that the saving in cost would be between \$38,000 and \$40,000 and that, if the request were not granted, it would not be possible to finance any of the project.

After reviewing all the facts in the case and especially in view of the public health aspects involved, MOTION by Dr. Erickson, seconded by Mr. McPhillips, and carried - that permission not be granted to discharge raw sewage into Schofield River but that a temporary permit could be granted, provided an adequate fiscal program would be adopted by the city which would permit con-

struction of the required river crossing, trunk sewer, and treatment works within a reasonable period of time; and provided further that temporary treatment of the sewage from Wades' Flat Addition was provided prior to discharge into Schofield River.

Coos Bay In response to request submitted by telegram from the City Manager of Coos Bay, MOTION by Mr. McPhillips, seconded by Dr. Erickson, and carried - that permission be granted for immediate construction of Ferndale trunk and outfall sewer as soon as voters approve bond issue for financing the required sewage treatment plant.

Southwest Hills Sanitary District - Mr. Everts reported that another section of the sanitary district had been annexed to the city of Portland in a special election in April, and that the district was now split into two separate areas. There still remains the problem of providing sanitary sewage disposal for these two separate areas which are not connected with each other. The responsibility of the state and local health departments in the matter was discussed. After considerable discussion, it was concluded that definite action should be taken by the Authority, if at all possible, to get the problem solved. Instructions were given to investigate the sewage disposal problem at the Multnomah Grade School and to determine the extent of stream pollution being caused. Based on the findings of this investigation, appropriate action would be taken to abate the pollution.

#### INDUSTRIAL WASTES

As instructed at a previous meeting, the Secretary had referred to the industries concerned copies of proposed regulations setting up minimum requirements for the disposal of certain industrial wastes. Based on the comments received from the industries, some changes in the proposed regulations had subsequently been made. The revised regulations were now submitted for final approval. MOTION by Dr. Erickson, seconded by Mr. Stricklin and carried - that the following regulations for cannery wastes be adopted. MOTION by Mr. Stricklin, seconded by Mr. McPhillips and carried that the following regulations for meat processing wastes be adopted.

ABG759

## OREGON STATE SANITARY AUTHORITY

## REGULATION

MINIMUM REQUIREMENTS FOR THE DISPOSAL OF FRUIT AND VEGETABLE PROCESSING WASTES

Pursuant to the duties imposed upon and the powers vested in the State Sanitary Authority, in Section 116-1112, Oregon Compiled Laws Annotated, 1940, the following minimum requirements for the disposal of fruit and vegetable processing wastes are hereby established:

- A. Unless other arrangements are made with the written consent of the State Sanitary Authority, all fruit and vegetable processing plants shall provide efficient facilities for the removal of skins, seeds, pomace, culls, discarded products and all other suspended and floating material from the wastes resulting from the washing, sorting, or other canning and freezing processes. Solids retained by a U.S. Standard 20-mesh screen shall be removed by screening or by other approved means from the liquid wastes, except cooling, condenser or other clean waters which may be by-passed around the facilities for the separation of solids or may be discharged through a separate outlet.
- B. All screenings and other solid materials removed from the liquid waste or product during the process operations shall be disposed of in such a manner that they will not enter any public waters of the state.

Adopted May 9, 1950

Filed Secretary of State June 13, 1950.

## OREGON STATE SANITARY AUTHORITY

## REGULATION

MINIMUM REQUIREMENTS FOR THE DISPOSAL OF CERTAIN MEAT PROCESSING AND ANIMAL WASTES

Pursuant to the duties imposed upon and the powers vested in the State Sanitary Authority, in Section 116-1122, Oregon Compiled Laws Annotated, 1940, the following minimum requirements for the disposal of certain meat processing and animal wastes are hereby established:

- A. Slaughterhouses and Meat Packing Plants
  1. All feeding yards and holding pens shall be so constructed that they can and will be dry cleaned before being washed down. The solid materials thus removed shall be disposed of on land or in any other manner approved by the State Sanitary Authority.

2. All blood from the killing floor shall be collected separately from the other wastes and be disposed of in such a manner that it will not enter any public waters of the state. The blood shall be thoroughly removed from the floor into a suitable collection tank for final disposal or utilization.
3. All paunch manure and hog stomach contents shall be collected separately and used as fertilizer, land-fill, or in any other manner approved by the Sanitary Authority. Such wastes shall not be discharged either directly or indirectly into any public waters of the state. At its discretion, the State Sanitary Authority may require the installation of fine screens for this purpose.
4. All fleshings, grease particles, hair, and other solid materials shall be collected by dry cleaning of floors and by screening of wastes and shall be disposed of in such a manner that they will not enter or drain into any public waters of the state.
5. Adequate grease recovery basins shall be installed on drain lines from by-product processing rooms. Such basins shall be skimmed and cleaned at least once each day that the plant is in operation.

B. Poultry Killing and Packing Plants

1. Facilities shall be provided for the collection of blood from the killing and bleeding room floor. The blood shall be disposed of in such a manner that it will not enter any public waters of the state.
2. All manure, feathers, entrails, and other materials removed from the carcass of the fowl shall be collected from the floor and equipment and shall be disposed of separately in a manner approved by the State Sanitary Authority.

C. Hog Feeding Farms

1. Unless other arrangements are made with the Sanitary Authority, all feeding yards and holding pens shall be so constructed that they can and will be dry cleaned before being washed down. All solid materials shall be removed and shall be disposed of on land or in any other manner approved by the Sanitary Authority, and shall not be permitted to enter or drain into any public waters of the state.

Adopted May 9, 1950

Filed Secretary of State June 13, 1950.

Libby, McNeill & Libby - In response to a request from the company, a temporary permit was granted to discharge pulverized wastes into the Willamette River with the understanding that if such discharge caused sludge banks or any

ABG759

other detrimental condition in the receiving stream the permit would be revoked and the wastes would have to be disposed of on land.

Portland Gas & Coke Company - A complaint received from the Harbor Patrol and previous correspondence with the Company was reviewed by the Authority. Pictures of the pollution caused by the discharge of wastes into the Willamette River were presented. MOTION by Mr. Stricklin, seconded by Mr. McPhillips, and carried - that the Authority request the company to submit to them a definite and satisfactory plan within 60 days for abating this pollution.

MISCELLANEOUS

Federal Water Pollution Control Advisory Board Meeting - Mr. Everts reported that the Federal Water Pollution Control Advisory Board was planning to hold a meeting in the Pacific Northwest during the week of July 10 and he suggested that the Sanitary Authority arrange a joint meeting with the Board if at all possible. Mr. Everts was instructed to make the necessary arrangements.

Proposed Legislation for State Department of Conservation - Copies of a proposed bill to create a department of conservation had been referred to the members for their consideration. Purpose of such a department would apparently be to coordinate the planning and activities of all existing agencies concerned with conservation of natural resources. The bill had been prepared by an interim committee for presentation to the 1951 state legislature. After much discussion on the subject, the matter was tabled.

Next Meeting - The date for the next meeting was held in abeyance pending a definite date for joint meeting with the Federal Water Pollution Control Advisory Board.

Meeting adjourned at 5:15 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*

CURTISS M. EVERTS, JR.

Secretary and Chief Engineer

MINUTES OF THE FORTY-FOURTH MEETING

of the

OREGON STATE SANITARY AUTHORITY

July 11, 1950

The Forty-fourth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P. M., July 11, 1950, at the Heathman Hotel, Portland, Oregon, following a luncheon meeting with the Water Pollution Control Advisory Board to the Surgeon General of the U. S. Public Health Service.

Those present were Harold F. Wendel, Chairman; John C. Veatch, B. A. McPhillips, Dr. Harold M. Erickson, Members; Curtiss M. Everts, Jr., Secretary; and Kenneth H. Spies, Assistant Chief Engineer.

MINUTES: The minutes of the Forty-third meeting having been submitted to the members in advance, it was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried that the minutes be approved as prepared by the secretary without reading.

PROJECT PLANS: The action of the Authority's engineering staff on the following project plans was by mutual agreement approved:

Date	Location	Project	Action Taken
May 2	Medford	Sewer extension	Approved
2	Douglas County	Tiller-Drew School sewerage	No action
2	Cave Junction	Preliminary engineering report	No action
4	Gold Beach	Sewer system	Approved
5	Pendleton	Sewer extension	Approved
8	Corvallis	Sewer extensions	Approved
9	Albany	Sewer extensions	Approved
10	Eugene	Sewer extensions	Not approved
11	Springfield	Sewer extensions	Approved
12	Eugene	Sewer extensions	Approved
15	Linn County	Crowfoot School sewerage	Approved
15	Columbia County	Delena School sewerage	Approved

ABG759

Date	Location	Project	Action Taken
May 15	Washington County	Aloha-Huber School sewerage	Approved
16	Yamhill County	Dayton Grade School "	Approved
17	Portland	Sewer Extensions	Approved
17	Washington County	Roy School sewerage	Approved
18	Lane County	Willamette H. S. "	Approved
26	McMinnville	Sewer extension	Approved
26	North Roseburg San. Dist.	Sewer plans	Approved
27	Eugene	Sewer extensions (rev.)	Prov. approval
June 1	Sweet Home	Sewer extension	Not approved
8	Dallas	Preliminary Eng'g. Report	Approved
9	Gladstone	Sewer extensions	Approved
8	North Roseburg San. Dist.	Sewage treatment plant	Approved
8	Multnomah County	Columbia School sewerage	Approved
10	Hermiston	Outfall sewer	Approved
10	Hermiston	Sewage Treatment Plant	Approved
19	Pendleton	Sewer extensions	Approved
20	Pendleton	Sewer extensions	Not approved
22	Condon	Sewage treatment plant	Approved
23	Sweet Home	Sewer extensions (rev.)	Not approved
26	Newport	Sewer extensions	Not approved
26	Wasco County	Tygh Valley School sewerage	Approved
28	Corvallis	Sewer extensions	Approved
28	Baker	Sewer extensions, Pumping Sta.	Prov. Approval
28	Stanfield	Preliminary Eng'g Report	Recommendations submitted

PULP AND PAPER MILL WASTES:

Mr. Everts and Mr. Spies reported briefly on the status of the Authority's order affecting sulphite pulp and paper mills in the Willamette Basin. It was pointed out that three of the mills had filed appeals but that no court proceedings were

anticipated at least for the time being. Progress reports from the Oregon Pulp and Paper Company and the Publishers Paper Company were also discussed.

MUNICIPAL SEWAGE DISPOSAL:

Coos Bay - sewer extensions: A request from the city of Coos Bay for the approval of extensions to the municipal sewer system in Coos Bay was brought to the attention of the Authority. It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried that there be no change in the policy with regard to the approval of additional sewer construction in Coos Bay, and that the request for the approval of the construction of additional sewers be denied.

Southwest Hills - sewage: Following a discussion on the disposal of sewage from the Multnomah Grade School, the secretary was instructed to notify Portland School District No. 1 that said district must submit to the Authority within sixty (60) days a satisfactory plan for sewage disposal or the Authority would have no other alternative but to take appropriate action against them.

GRAVEL MINING OPERATIONS:

It was reported by the secretary that the matter of pollution of Gales Creek by the operations of the Gales Creek Sand and Gravel Company had been referred to the Attorney General for action on June 6, 1950; that the Attorney General had given said company thirty (30) days in which to comply with the requirements of the Sanitary Authority and that inspections made by Sanitary Authority engineers on July 10 indicated only partial compliance. It was reported further that rock crushing operations by the County of Washington were causing similar polluted conditions in McKay Creek, another tributary of the Tualatin River.

The secretary was instructed by the members to request the Attorney General to proceed against both the private company and the County of Washington if said pollution were not abated immediately.

Waste Disposal, Portland Gas & Coke Company:

The secretary reported that the Portland Gas & Coke Company had complied with the directives of the Authority and had furnished a satisfactory plan for the disposal of

ABG759

wastes from their plant on the Willamette River in Portland. It was also reported that the Company would complete the work as soon as weather and river level conditions permitted.

LEGISLATION:

The secretary then brought to the attention of the Authority a proposed statute prepared by the Legislative Interim Committee on Natural Resources, and a proposed statute prepared by the Governor's Natural Resources Advisory Committee. No action was taken pending further study of the measures.

NEXT MEETING:

There being no further business, the meeting was adjourned at 3:30 P. M. The date for the next meeting was left to the discretion of the Chairman.

Respectfully submitted

  
CURTISS M. EVERTS, JR.

Secretary and Chief Engineer

## MINUTES OF THE FORTY-FIFTH MEETING

OF THE

## OREGON STATE SANITARY AUTHORITY

December 1, 1950

The Forty-fifth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 3:00 P. M., December 1, 1950, in the offices of the State Board of Health, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Blaine Hallock, John C. Veatch, B. A. McPhillips, and Charles E. Stricklin, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; T. M. Gerow, Jr., James R. Boydston, E. J. Weathersbee, and Fred J. Burgess, Assistant Sanitary Engineers.

MINUTES: The minutes of the Forty-fourth meeting of the Authority, having been prepared and submitted to the members of the Authority in advance of the meetin, MOTION was made by Mr. McPhillips, seconded by Mr. Hallock, and carried, that the minutes be approved as prepared by the secretary.

PROJECT PLANS: MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried, that the action taken by the engineering staff of the Authority on reports, plans, and specifications be approved as follows:

Date	Location	Project	Action Taken
7-1-50	Pendleton	Sewer extensions	Approved
7-18	Newport	Sewer extensions (Revised plans)	Approved
7-18	Baker	School sewerage	Approved
7-18	Broadmoor	Sewer extensions	Approved
7-19	Corvallis	Sewer extensions	Approved
7-19	Springfield	Sewer extensions	Not approved
7-24	Monmouth-Independence	Sewage treatment plant	Not approved
7-27	Gold Beach	Sewage treatment plant	Prov. approval
7-28	Myrtle Creek	School Addition-sewerage	Deferred
7-31	Corvallis	Sewer extensions	Prov. approval
7-31	Salem	Sewage treatment plant	Deferred

ABG759

Date	Location	Project	Action Taken
8-4	Myrtle Creek	School Additon-sewerage	Prov. approval
8-7	Vermont Hills	Additons to temporary plant	Prov. approval
8-14	Prineville	Riverside Additon-sewers	Approved
8-15	Elmira	School sewerage	Not approved
8-15	Salem	Sewage treatment plant	Not approved
8-15	Progress	Sawyer, Inc., Plant-sewerage	Not approved
8-16	Monmouth-Independence	Sewage treatment plant (Revised)	Prov. approval
8-25	Springfield	Sewer extensions	Prov. approval
8-28	Gold Beach	Sewage plant revisions	Approved
8-30	Salem	Sewage treatment plant	Prov. approval
9-7	Terrebonne	School sewerage	Approved
9-17	Raleigh Hills	School sewerage	Approved
9-12	Klamath Falls	Sewer extensions	Prov. approval
9-12	Waldport	Sewer system	Approved
9-13	Waldport	Sewage treatment plant	Approved
9-13	Washington County	Business District-sewerage	Prov. approval
9-14	Sheridan	Preliminary report	Approved
9-14	Hermiston	Sewer extensions	Not approved
9-15	Elmira	School sewerage (rev. plan)	Approved
9-18	Cottage Grove	Interceptor-trunk sewer	Approved
9-18	Portland	Grand Ave. Interceptor sewer	Approved
9-21	Springfield	Sewer extensions	Approved
9-26	Prineville	Riverside additon sewers (revised plan)	Approved
9-26	Umatilla	Sewer system	Prov. approval
9-27	Portland	S. W. Sunset Blvd. sewers	Approved
9-27	Brownsville	Preliminary report	Deferred
9-29	The Dalles	Preliminary report	Approved
10-4	Springfield	Sewer Extensions	Prov. approval

Date	Location	Project	Action Taken
10-4	Stanfield	Grade School-sewerage	Approved
10-4	Portland	Grand Ave. Interceptor	Approved
10-5	Dee	Oregon Lumber Co.-sewage and waste disposal	Deferred
10-10	Bandon	Preliminary report	Approved
10-11	Hinkle	Sewerage system (U.P.R.R.)	Prov. approval
10-17	Salem Creek sewer	North Trunk sewer	Approved
10-19	Multnomah County	Holbrook School-sewerage	Approved
10-23	Multnomah County	Lynch School-sewerage	Changes suggested
10-27	Multnomah County	Lynch School-sewerage (rev. Plan)	Approved
11-9	Hermiston	Sewage treatment plant	Prov. approval
11-9	Springfield	Sewer extensions (Velure)	Prov. approval
11-13	Dallas	Sewage treatment plant	Approved
11-13	Lane County	Walterville Grade School- sewerage	Deferred
11-13	Lane County	Westside Grade School- sewerage	Deferred
11-14	Springfield	Sewer extensions (M&N)	Permission granted
11-15	Coos County	Chezaville sewerage	Not approved
11-17	Springfield	Jr. High School sewerage	Prov. approval
11-17	Salem	Highland Grade School-sewerage	Prov. approval
11-21	Disston	Grade School-sewerage	Prov. approval
11-21	Coos County	Chezaville sewerage (revised)	Approved
11-22	Umatilla	Sewage treatment plant	Not approved
11-22	Springfield	Sewer extension (revised)	Not approved
11-24	Oswego	Lake Oswego High School sewerage	Approved
11-27	Springfield	Sewer extensions (revised)	Prov. approval

BUDGET 1951-1953 BIENNIUM: The secretary reviewed the budget request for the 1951-1953 biennium, copies of which had previously been sent to each member. MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that the budget be approved as

prepared. (State appropriation \$66,656 and Federal appropriation \$31,937, or total of \$98,593).

SOUTHWEST HILLS: The secretary reported that subsequent to the last meeting of the Sanitary Authority a major part of the S. W. Hills area, much of which had been included in the S. W. Hills Sanitary District has become annexed to the city of Portland. Since the Multnomah Grade School was located in the area annexed, and since the school was also in the Portland School District, closure of the school would not have accomplished the desired results and it was recommended that action in this case be deferred. The recommendation was approved.

The Maplewood Association for Progress, through a letter addressed to the Sanitary Authority, offered the cooperation and assistance of the Association in the planning and development of educational and other programs necessary to obtain the installation of adequate sewerage facilities in the Maplewood District. This particular district had rejected annexation to the city of Portland in the recent election. Chairman Wendel advised Mrs. J. Door Bennett and Mrs. Lucas Weiler who were present at the meeting and who represented the Maplewood Association for Progress that in the absence of any corporate body, the Authority's only alternative was to proceed against individuals in the area. The Chairman recommended that the Association seek competent legal advice as to the proper procedure to be followed in the creation of a sanitary district. Assistance of the Sanitary Authority's staff for consultation and advice to the Association's committee was offered.

M AND S CANNING COMPANY, MILWAUKIE: The following residents of the area adjacent to the M and S Canning Company plant near Milwaukie appeared before the Authority to complain of odor nuisances and water pollution caused by the M and S Cannery - Dr. Edwin Morene, 5808 S. E. Thiessen Road; Mrs. Paul Schafer, 5712 S. E. Thiessen Road; Mr. A. R. Huckins, 5410 S. E. Thiessen Road, and Mr. Albert C. Philbrick, 5424 S. E. Thiessen Road.

The complaintants reported, that in addition to disagreeable odor conditions, wastes from the cannery were discharged into Kellogg Creek, a tributary of Kellogg Lake, and thence into the Willamette River.

ABG759

Mr. Spies, Assistant Chief Engineer, reported briefly on this problem and stated that the Authority had attempted to work with the cannery in solving their problem, but the plant was not located in the proper place for an industry of that type for there is no large stream near enough into which the wastes could be discharged. He also stated that the amount and nature of the wastes produced by the processing are such that it is impossible to dispose of them in a sanitary manner, and that the Authority staff has been working with the cannery management three or four years to try to solve the problem. Mr. Spies recalled that the property owners presented a petition to the Authority in 1949 and at that time the industry was ordered to correct their waste disposal methods or appropriate action would be taken against them. The Authority staff had recommended that a dam be installed to retain the flow of wastes and that the wastes be pumped to higher ground for disposal by irrigation. Only a half-hearted attempt was made by the cannery to add enough chemicals to control the odor or to pump the wastes to higher ground. Mr. Spies reported that on a recent inspection of the plant it was found that the wastes do pollute the waters of the state, and that the residents of the area have a legitimate complaint.

Mr. Maltby of the M and S Cannery reported that they had spent considerable money and effort in an attempt to do something about their problem, and that they now have a lagoon and also a tank of 5,000 gallons capacity from which they pump the concentrated processing wastes, which are the cause of the bad odors.

Mr. Spies reported that on his last inspection trip there was a crack in the lagoon through which the wastes were seeping and that the tank was overflowing onto the ground surface.

Mr. Maltby reported they had written for information regarding a new chemical compound which had been recommended for controlling odors. He also suggested the possibility of hauling the wastes away from the lagoon. Mr. Spies advised him that such a system would have to be very carefully and properly operated if it were to solve the problem.

MOTION by Mr. Hallock, seconded by Mr. Stricklin, and carried - that the M and S Canning Company be cited to appear withing forty-five days from date of order to

show cause why the nuisance and pollution caused by improper disposal of wastes from the M and S Cannery should not be abated; and that appropriate notice of the hearing be sent to those who have appeared at this meeting.

OAK LODGE DISTRICT: Mr. Stuart Mockford, President of the Community Improvement League, representing the Oak Lodge District, was present to request the assistance of the Sanitary Authority in determining the proper method for sewage disposal in that area. He stated that septic tanks are used, but the ground is of such nature that the effluent from the tanks cannot be absorbed, and that the Oak Grove School had an open trench behind it in which sludge was floating. Mr. Mockford pointed out that the area is not incorporated, and, therefore, nothing much can be done about employing proper persons to make necessary surveys, etc. Mr. Mockford stated that there were two separate drainage systems in the area; that the area of one slope could possibly be taken into the city of Milwaukie in order to connect to the municipal sewer system; and that the other drainage area was too far away to consider this solution. Mr. Mockford was of the opinion that if they could obtain a definite plan from the Authority setting up geographical boundaries, it would help in getting the solution to the problem started. Mr. Spies advised that he had appeared before the Club on May 26 and discussed methods of solving their sewage disposal problem, and that when the remarks were completed a petition was circulated requesting the Sanitary Authority to make an engineering survey. The petition, however, was never received by the Sanitary Authority. It was estimated that the cost of financing preliminary engineering would be approximately \$250. Mr. Everts advised that arrangements would be made upon request to get together with the group represented by Mr. Mockford to discuss the matter.

AIR POLLUTION CONTROL LEGISLATION: The secretary reported that copies of the proposed air pollution control act had been circulated to members of the Authority for their information and comment and that the Portland Chamber of Commerce had also circulated copies to representative industries in the state. The secretary explained that the act had been drawn by the Subcommittee appointed by the Governor and that such subcommittee consisted of representatives of industry, municipalities, Oregon State College, State Dept. of Agriculture, State Board of Health, and the State Sanitary Authority.

It was also reported that the proposed legislation would be introduced in the 1951 Legislature and that any recommendations that the Authority wished to make concerning the act should be made prior to the time it was introduced.

In the discussion that followed it was the opinion of the State Sanitary Authority that an increase in membership from six to ten was too great. MOTION was made by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the Authority approve the basic philosophy contained in the act but recommend that if any increase in membership in the Sanitary Authority is contemplated to handle air pollution control that it be limited to the addition of the Director of the State Department of Agriculture.

PULP AND PAPER INDUSTRY: The secretary furnished a brief report on the status of water pollution control activities by pulp and paper mills. It was pointed out that the Crown Zellerbach Corporation's pilot plant at Lebanon now had all equipment in place except one evaporator which they expected to arrive in the immediate future so that the studies of concentration and burning of the waste could be undertaken. It was also reported that lagoons for storage of waste in low flow periods were proposed by Oregon Pulp and Paper and Spaulding Pulp and Paper companies and that studies were being made of such disposal methods by Publishers Paper Company at Oregon City.

MUNICIPAL SEWAGE DISPOSAL: Mr. Spies furnished a detailed report on the status of sewerage projects for fifty-five municipalities in the state. Upon completion of the report, the Authority directed the secretary to take the following action: -

1. Cities of Gladstone, Canyonville, Riddle, Coquille, Oakland, and Myrtle Point be cited to appear before the Sanitary Authority at the next meeting to show cause why proceedings should not be instituted against them to abate nuisance conditions caused by pollution of public waters.
2. Letters be addressed to the following cities requesting reports on what progress is being made to abate water pollution - McMinville, Oakridge, Sheridan, Rockaway, Mt. Angel, Roseburg, Sutherlin, and Newport.
3. Letters be sent to West Linn and Drain requesting the presence of the Mayor at the next meeting of the Sanitary Authority to report on the progress made by their respective cities in abating water pollution.

ABG759

4. Request the Attorney General to take appropriate action against the city of Toledo for their failure to comply with state statutes relating to water pollution control.

FOOD PROCESSING PLANTS: Portland: - The secretary directed the attention of the Authority to a letter from Mr. Paul Patterson, attorney representing the R. D. Bodle Company cannery located in Portland in which questions were raised regarding the minimum requirements for screens for the removal of solid materials from cannery wastes. It was the decision of the Authority that cities permitting the use of municipal sewerage systems for the disposal of cannery wastes would be responsible for establishing the standards by which industrial wastes are discharged into the sewerage systems.

INDUSTRIES LOCATED ON COLUMBIA SLOUGH: Mr. Boydston, Assistant Sanitary Engineer, reported that industries located along the Columbia Slough had been notified of their responsibility to cease pollution of those waters and that in general most of them were willing to comply with the requirements of the Authority.

PROPOSED PUBLIC MEETING - TUALATIN RIVER BASIN: The Authority discussed the proposal that a public meeting of municipal authorities, representatives of industries and other groups be held to discuss problems of water pollution control in the Tualatin River basin and to outline to them the policies of the Authority with respect to the maintenance of acceptable quality of water in the Tualatin River. It was the opinion of those present that such a meeting would prove most beneficial and it was agreed that those members of the Board who could, would attend.

INDUSTRIAL RESEARCH PROJECTS: The secretary outlined the need for investigation of the types of materials which could be used to line storage lagoons used by municipalities and industries for the disposal of wastes. He reported that a cooperative project was now under way at Oregon State College and that the Sanitary Authority's share of such project would be \$850.00 which could be expended from Federal funds. After some discussion as to the advisability and need for this work, MOTION by Mr. Veatch, seconded by Mr. Hallock, and carried - that the Authority authorize the expenditure of \$850.00 of Federal funds allocated to the Authority for the Authority's part of the cooperative project.

LEGISLATION TO CONTROL PRIVATELY-OWNED COMMUNITY SEWERAGE SYSTEMS: Upon report of the secretary that there appeared to be a need for some agency to control operation of privately owned sewage treatment works, the secretary was directed to communicate with the Public Utilities Commissioner and suggest that appropriate legislative action be made to existing Public Utilities statutes to include privately-owned sewerage systems.

ALCOHOL PLANT, SPRINGFIELD: The secretary reported on a conference with the new manager of the alcohol plant at Springfield, and pointed out that the plant expects to go into limited production about March 1951 and that the manager requested permission to discharge small quantities of waste into the Willamette River for a short period of time to give them an opportunity to study their problem and provide the necessary waste disposal facilities. Following a discussion on the subject it was decided that if a temporary permit were granted in this instance, that the conditions under which such a permit was issued should be very specific, and that it should be made very clear that the Sanitary Authority could revoke the permit at any time; and the secretary was instructed to consult with the Attorney General concerning the preparation of the permit before it was granted.

SALMON RIVER POLLUTION: The Sanitary Authority directed the secretary to cause an investigation to be made on the excessive turbidity of Bear Creek a tributary of the Salmon River and if violations of state statutes pertinent of water pollution were found, to take appropriate action.

MISCELLANEOUS:

In an executive session the secretary reported on his activities with the Columbia River Advisory Board and the Atomic Energy Commission at their Hanfor Works.

New staff members, E. J. Weathersbee, Assistant Sanitary Engineer, and Fred J. Burgess, Jr. Sanitary Engineer, were introduced to the members of the Sanitary Authority.

The date of the next meeting was scheduled for March 2, 1951.

There being no further business, the meeting adjourned at 5 P.M.

Respectfully submitted,

*Curtiss M. Everts Jr.*  
CURTISS M. EVERTS, JR.,  
Secretary and Chief Engineer

ARG759

MINUTES OF THE FORTY-SIXTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

March 2, 1951

The Forty-sixth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., March 2, 1951, in the offices of the State Board of Health, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Blaine Hall-ock, John C. Veatch, B. A. McPhillips, Dr. Harold M. Erickson, and Charles E. Stricklin, Members: Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; T. M. Gerow, Jr., James R. Boydston, E. J. Weathersbee, and Fred J. Burgess, Assistant Sanitary Engineers.

MINUTES: The minutes of the Forty-fifth meeting of the Authority, having been

prepared and submitted to the members of the Authority in advance of the meeting, MOTION

was made by Mr. Veatch, seconded by Mr. McPhillips, and carried - that the minutes be

approved as prepared by the secretary.

PROJECT PLANS: MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that

the action taken by the engineering staff of the Authority on reports, plans, and

specifications for sewerage and waste disposal projects be approved as follows:

Date	Location	Project	Action Taken
12/4/50	Hood River County	Hood River Valley High School - sewerage	Prov. approval
12/6	Malheur County	Pioneer School Dist. #80 - sewerage	Approved
12/6	Vaughn	Long Bell Lumber Co. Mill - sewerage	Prov. approval
12/6	Toledo	Preliminary plan of Toledo Public Housing - sewerage	Pre. approval
12/8	Umatilla	Primary sewage treatment plant	Prov. approval
12/11	Talent	Sewer extensions	Not approved
12/22	Jackson County	Rogue River Grade School - sewerage	Approved
1/16/51	Fossil	Preliminary report	Revisions suggested

Date	Location	Project	Action Taken
1/19	Stanfield	Preliminary report	Not approved
1/22	Eugene	Westmore land School - sewer extension	Prov. approval
1/29	Medford	Sewer extensions	Approved
1/30	Forest Grove	Progress report	Approved
2/8	Pendleton	Sherwood Heights - sewer extension	Approved
2/9	Grants pass	School Dist. #7 - sewerage	Action deferred
2/15	Canyon ville	School Dist. #8 - sewerage	Approved
2/20	Pendleton	Sewer extension	Approved
2/23	Stanfield	Sewer system	Not approved
2/23	The Dalles	Sewer extension	Approved
2/23	Tongue Point	Sewer extensions	Not approved
2/23	Portland	Emanuel Hospital	None required
2/26	Triangle Lake	School sewerage	Changes
2/27	Lebanon	Hardboard Mill - sewerage	Approved
2/28	Hermiston	Sewage Treatment plant	Approved
2/28	Oakridge	Jr. High School - sewerage	Approved

#### INDUSTRIAL WASTES:

M and S Canning Company, Milwaukie, (Citation Hearing): - In response to a notice of public hearing sent to complainants and company officials, the following persons appeared before the Sanitary Authority relative to alleged pollution caused by the discharge of wastes from the M and S Canning Company into the waters of a tributary of Kellogg Creek in Clackamas County, Oregon: Mrs. Glenn J. McQueen, Mrs. Stanley W. Peterson, Dr. Edwin Morene, Mr. Glenn O. Ratcliff, Mr. Fred A Gerber, Mr. R. E. Cox, and Mr. Fred J. Gates, residents of the area in question; Mr. D. D. Maltby, owner of the M and S Canning Company; John Yeokovich, Attorney for the M and S Canning Company; Stuart Mockford, President of the Community Improvement League; and William Murphy and John Borden, Sanitarians for Clackamas County Health Department.

ABG759

At the request of the Chairman, the secretary read the citation which had been served on the M and S Canning Company by the Sanitary Authority. The Chairman reminded those present that the Sanitary Authority had jurisdiction only over conditions causing water pollution, and asked that this fact be kept in mind in the discussions.

A brief of the testimony presented is as follows:

- Mr. Fred Gerber (riparian property owner): Claimed that drainage from cannery wastes and septic tank sewage disposal systems from the M and S Cannery grossly pollutes and contaminates the adjacent stream which flows through his property; and that such pollution causes objectionable fungus growths in the water and obnoxious odors; that attempts of the company to abate the pollution had thus far been unsuccessful because the septic tank from which the wastes were pumped was allowed to overflow onto the ground, around the lagoon and into the creek, and because the drainage from the fields onto which the wastes were pumped was not sufficiently purified before it reached the creek.
- Dr. Edwin Morene (riparian property owner): Claimed that odors resulting from the pollution were unbearable and further that such pollution had destroyed the use of the creek waters for a private swimming pool.
- Mr. G. O. Ratcliff (riparian property owner): Claimed that tests made of the water in the swimming pool on the Fred Gates property last summer showed such waters to be so polluted that they could not be used for bathing purposes.
- Mr. Frank Gates (riparian property owner): Objected to discharge of cannery wastes and sewage into the stream on his property. He expressed opinion that the waters of this stream would be suitable for swimming pool purposes if the alleged pollution were abated.
- Mrs. G. J. McQueen: (riparian property owner): Claimed that cannery wastes caused a brown sludge in the creek which flows across her property.
- Mr. J. R. Boydston (Sanitary Authority Engineer): Testified that on the occasion of his last inspection on February 16, 1951, it was found that wastes from the cannery operations were overflowing from the septic tank into which they were being discharged, that such wastes were flowing around the lagoon and thence directly into the waters

of the adjacent tributary of Kellogg Creek; that the bed of the stream below the cannery was coated with a heavy fungus growth; and that the odors from the septic tank and stream were extremely objectionable.

Mr. John Yeokovich (Attorney for M and S Canning Company): Testified that cannery wastes were being discharged into a large 5,000-gallon septic tank by means of a pipe and that from this septic tank the wastes were pumped onto adjacent land for disposal by irrigation; and the cooling water had been separated from the floor drainage and other polluted wastes so that the amount of polluted wastes that had to be pumped had been reduced from 10,000 gallons to 2,500 gallons per day; that no wastes were being pumped or discharged into the lagoon which had previously been used for their storage and that as a consequence the water in the lagoon did not now appear to be a nuisance. He admitted that in the past there had been industrial wastes overflowing from the cannery property into the adjacent creek but claimed that the company had done everything possible to carry out the recommendations and to comply with the requirements of the State Sanitary Authority. He admitted further that the conditions which existed on the occasion of the last inspection by Mr. Boydston were caused by the fact that the lift pumps were out of working order and the pipe line had broken.

Mr. D. D. Maltby (M and S Canning Company official): Explained his attempts to repair the pumps and pipe line break referred to by Mr. Yeokovich.

Based on the above testimony and the previous investigations by the staff of the Sanitary Authority, the following were established as facts in the case: -

1. Wastes and drainage from the M and S Cannery are causing, and have in the past, caused pollution in the waters of the tributary of Kellogg Creek which flows across the property of the complainants.
2. The company has in the past not complied fully with the recommendations and requirements of the Authority and as a consequence both stream pollution and a nuisance have been created.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the Sanitary Authority adopt an order directing the M and S Canning Company to abate said pollution of the tributary of Kellogg Creek within not less than 60 days from this date.

City of Riddle (Citation Hearing): The city of Riddle was represented by C. E. Dickie, Mayor; F. L. Kummer, City Recorder; and Mr. Arthur H. Mayne, Consulting Engineer, a citation having been issued to the city under date of February 9, 1951.

Mr. Wendel read the conclusions of the Authority's engineers regarding the matter of sewage disposal for the city of Riddle.

C. E. Dickie, Mayor, advised the Authority that he had taken over the office of mayor in May; that he had gone through the matter as thoroughly as possible; and that it was mainly a lack of funds that prevented the city from proceeding. He reported that the last estimate received showed it would take approximately \$18,000 or \$20,000 to complete the project and that the city has been considering a bond issue for this purpose.

Mr. Kummer advised the Authority that sewage disposal bonds in amount of \$15,000 were considered; that the assessed valuation of the city was \$367,780 as of June 30, 1950; that the city had approximately \$40,000 in outstanding bonds at the present time; and that the tax rate was 82.6 mills. He stated that the city wants to complete the plant but did not know how money could be raised. He also reported that the Harbor Plywood Company at Riddle had offered to pay for 50% of the cost of the sewage disposal plant.

Mr. Wendel asked if the city had considered a sewer-user charge, and Mr. Kummer said they were charging residents within the city limits \$2.00 per month for water now. Mr. Wendel inquired as to what the cost of completing the project would be, and was advised by Mr. Mayne that it would run about \$16,000. Mr. Mayne reported that equipment was all bought and paid for, and it would take about \$16,00 more to complete the project. Mr. Veatch suggested that they see Mr. Paulus in the State Treasurer's office in Salem who could probably help them work out their financial problem. MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that the city of Riddle be directed (1) to complete the construction of its sewage treatment plant and to have the same in operation by not later than December 1, 1951; (2) to complete within 90 days from this date all necessary arrangements for financing construction; and (3) to submit to the Authority monthly progress reports.

City of Oakland (Citation Hearing): The City of Oakland was represented by Mr. John Edwards and Mr. Carl M. Felknew, Attorney, a citation having been issued to the city under date of February 9, 1951.

Mr. Felknew stated that the firm of Cornell, Howland, Hayes and Merryfield, Consulting Engineers, had made a survey and designed a plant for the city of Oakland which would cost at the present time \$150,000 to \$175,000; and that about a year ago, the city council in order to get an idea of costs called a special meeting within the city of Oakland notifying all the people to attend. The Sanitary Authority was represented at that meeting. There was considerable discussion of the matter; the plan for the whole system was presented; and a straw vote was taken to determine what the feeling of the people was regarding this problem. The vote was said to be unfavorable.

Mr. Felknew reported that in the 1949-50 tax year the city had an assessed valuation of \$452,000 and a tax levy of 102.1 mills; that in 1950-51 the assessed valuation had increased to \$506,651 and the tax levy had decreased to 76.4 mills; that some \$330,000 in bonds had been voted for schools; and that the city had only \$10,000 in outstanding bonds at the present time.

Mr. Wendel called attention to the fact that the law regarding stream purification had been in effect for more than ten years, and that communities could have done a lot of work in that length of time. A discussion followed on the question of what would happen if municipalities refused to comply with state statutes. Mr. Hallock advised that in view of the fact that the city of Oakland has not seen fit to show any spirit of cooperation or good faith in the matter, he would MOVE that the city of Oakland be directed to complete the financial plans in not less than 90 days; submit 30 day progress reports; and complete the project by not later than December 1951. Motion seconded by Mr. Stricklin, and carried.

City of Drain (informal hearing): W. E. McIntosh, Mayor, appeared in behalf of the city of Drain and advised the Authority that about a year and a half ago, due to several letters from the Authority, the city had an engineering survey made of the area and presented preliminary plans to the Authority for approval. He reported that the council at that time was in accord with the program, and would take care of the situation

ABG759

if it could be done; but finances are such that nothing can be accomplished unless the people vote the money. Mayor McIntosh reported further that the present assessed valuation of the city is about \$602,000; that the total tax levy is 79.5 mills of which 29.2 is for the city; and that the city has some \$33,000 in outstanding bonds.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried, that the city of Drain be directed to complete financial plans in not less than 90 days; submit 30 day progress reports to the Authority; and complete the project by not later than December 1951.

Westmoreland Addition, Eugene: Messrs. J. E. Brindle, W. H. Metcalf, and Gordon R. Peters appeared before the Authority to present data on the sewers in the Westmoreland Addition to the city of Eugene.

Mr. Veatch opened this discussion by saying that he had read the report of the Westmoreland situation and believed that the city of Eugene had ample authority to correct everything brought out in the report.

Mr. Brindle said that they had been given all sorts of promises by the city council, but nothing had yet been done to correct the situation existing in Westmoreland Addition. He reported that sewage overflows and backs up into the school and onto the grounds. Pictures were shown of the conditions which prevailed during periods of heavy rains. Mr. Wendel read the letter from the School Board regarding the situation and Mr. Everts read a letter from the city of Eugene. Mr. Brindle stated that the letter from the city did not cover or handle the situation, and felt that the city was very negligent in the matter.

Mr. Spies stated that it was a definite fact that the sewer system was not properly installed, and that the sewer will not carry the flow during periods of heavy runoff and high ground water table. Mr. Spies also stated that originally a set of plans had been submitted, together with a map of the project, and bids were called for but prices were out of line and the project was deferred. Later the plans were changed but were never submitted to the Authority for review and approval; and as yet the Authority still has no plans on the pumping station which was installed. Mr. Spies also stated that Amazon Creek is definitely polluted and that after the first check in January 1950, the Authority wrote a letter to the city pointing out that the city

would have to take immediate steps to correct the condition. Mr. Spies described the sewer system and also showed a map of the location affected.

Dr. Erickson stated that it was a real and definite public health hazard, and one of the worst conditions he had ever heard of, and that something should be done about it. Dr. Erickson said he would like to see an order issued and that he would bring the matter up before the State Board of Health at their next meeting. Dr. Erickson also recommended that the city be advised that in the event of any communicable disease outbreak, due to such conditions, the city would be held strictly responsible. MOTION by Mr. Veatch, and seconded by Mr. Hallock, that the city of Eugene be notified that the sewer system as installed in this district has never been approved by the Sanitary Authority; that the city be directed to submit to the Authority within 30 days time any plans they have or what they propose to do to correct the situation that exists in this location; and that if plans submitted are not adequate further plans will have to be submitted. If plans so submitted are not found to be suitable, an order will be immediately directed to abate the nuisance. Motion carried.

The secretary was directed to prepare a letter and submit it to Mr. Veatch for comment, prior to forwarding it to the City of Eugene.

City of Coquille (Citation Hearing Deferred): Although a formal citation had been issued to the city of Coquille under the date of February 9, 1951, the city was permitted at its request to submit only a written report rather than send representatives to the meeting.

The secretary read a letter dated February 23, 1951, which had been submitted by Donald H. Farr, Mayor. This letter outlined a proposed construction schedule for a sewage treatment plant for the city. After thorough discussion, MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried, that the city be notified as follows: Because the proposed schedules do not call for completion of the Coquille sewage treatment plant until the fall of 1953, they do not meet with the approval of the State Sanitary Authority. It will, therefore, be necessary for the city to revise their schedules so that the required sewage treatment works will be completed and in

operation by not later than the end of 1952. If the city fails to so revise the schedules, then the city shall be required to appear before the Authority at the next meeting in accordance with the citation dated February 9, 1951.

City of Myrtle Point (Citation Hearing Deferred): As in the case of Coquille, the formal citation hearing for Myrtle Point had been deferred on the same basis.

The secretary read letters dated February 27, 1951, which had been submitted by J. M. Myers, Mayor, and Jack H. Dunn, City Attorney. Following a discussion of the matter, MOTION was made by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the city be notified as follows: The city of Myrtle Point shall adopt a fiscal and construction schedule such that the required sewage treatment plant will be completed and in operation by not later than the end of 1952. If the city fails to adopt such a schedule, then the city shall be directed to appear before the Authority at the next meeting in accordance with the citation dated February 9, 1951.

City of Gladstone (Citation hearing deferred): The citation hearing previously scheduled for the city of Gladstone was deferred in view of the fact that a \$115,000 bond election was being held on 3-6-51 to complete the fiscal program. The secretary was instructed to keep a check on the city to make sure that the sewage disposal project proceeded as planned.

City of Canyonville (Citation hearing deferred): At the recommendation of the County Health Department, the citation hearing for this city was also deferred. The secretary was instructed to write to the city of Canyonville urging them to prepare engineering plans for their sewerage project.

City of McMinnville: The secretary read a letter from Mayor Barendrick of McMinnville in which it was stated that the city proposed to hold a bond election and construct a treatment plant in 1952. Mr. McPhillips believes that a bond issue would pass this year. The secretary was instructed to write the city of McMinnville directing that they submit plans and specifications for their project at once, and that the bond election be held this year instead of next year.

Cities of Myrtle Creek, Oakridge, Rockaway, and Sutherlin: No action was taken for the present relative to the cities of Myrtle Creek, Oakridge, Rockaway, and Sutherlin.

West Linn: The secretary made a report that West Linn was making satisfactory progress and that construction would probably be undertaken this year. He pointed out that houseboats, and homes located along the river should be notified that they will have to provide for disposal of sewage other than discharge into the river.

EVANS PRODUCTS, Coos Bay:

The secretary reported that the chief engineer of the Evans Products Company had advised the engineering staff of the Authority of the proposal of his company to install a manufacturing plant which would produce liquid wastes; that the matter had been discussed very frankly; and that the Company was aware of their responsibility to abate pollution in Coos Bay.

The Evans Products Company requested permission to discharge some of their wastes into Coos Bay until they can learn enough about the wastes to treat or dispose of them adequately. It having already been brought to the attention of the Evans Products Company that they could dispose of the wastes in the Bay as long as they complied with the Sanitary Authority standards regarding water quality, it was the consensus of the members that a temporary permit be granted to discharge wastes below low tide into Coos Bay.

MISCELLANEOUS:

Following a discussion on what action could be taken if a city failed to carry out an order of the Authority, the secretary was directed to get an opinion from the Attorney General on this subject.

Mr. Wendel stated he would like to see some strong articles on the attitude of the Authority toward water pollution control.

Mr. Gerow brought up the problem of improper construction of sewers and what, if anything, could the Authority do about failure of contractors to install sewers as approved by the Authority. Mr. Wendel was of the opinion that the duty of the Authority should go farther than approval of plans where it is felt that local inspection was not adequate and that it would appear this is a problem for the individual municipalities to solve. It was also stated by Mr. Wendel that perhaps a communication from the Authority to the League of Oregon Cities would help in this matter. Mr. Spies advised

ABG759

that the League of Oregon Cities was well aware of this problem. Discussion followed relative to setting up a special committee to study the problem. It was pointed out that a special report had been prepared which included recommended procedure for the cities to follow for construction of sewers, etc., and that the problem still exists. Mr. Wendel was of the opinion that a warning issued by the Authority to cities to supervise construction of such facilities more closely than they have been doing would prove helpful.

LEGISLATION:

SB 9, Air Pollution Control Bill: - The secretary reported briefly on the status of air pollution control legislation, and also on legislation pertaining to the Governor's Natural Resources Advisory Committee and the Natural Resources Board. Information was also presented on the status of S. 349, and act relating to defense housing which was introduced in Congress.

BUDGET:

It was reported that in a hearing held before Mr. Dorman, State Budget Director, the budget was approved as prepared.

There being no further business, the date for the next meeting was set for June 1, and the meeting was adjourned at 5:20 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary and Chief Engineer

MINUTES OF THE FORTY-SEVENTH MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY

June 1, 1951

The Forty-seventh meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., June 1, 1951, in the offices of the State Board of Health, Portland, Oregon. Those present were Harold F. Wandel, Chairman; Blaine Hallock, B. A. McPhillips, Dr. Harold M. Erickson, and Charles E. Stricklin, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer, T. M. Gerow, Jr., James R. Boydston, E. J. Weathersbee, Fred J. Burgess, and Harold W. Merryman, Assistant Sanitary Engineers.

MINUTES: The minutes of the Forty-sixth meeting of the Authority, having been prepared and submitted to the members of the Authority in advance of the meeting; MOTION by Dr. Erickson seconded by Mr. Hallock, and carried - that the minutes be approved as prepared by the secretary.

PROJECT PLANS: MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried - that the action taken by the engineering staff of the Authority on reports, plans, and specifications for sewerage and waste disposal projects be approved as follows:

Date	Location	Project	Action Taken
3-1	Lane County	Clear Lake Grade School - sewerage	Changes requested
3-2	Stanfield	Sewage treatment plant	Not approved
3-5	The Dalles	Sewer Extensions	Prov. approval
3-5	Beaverton	Home for the Aged -sewerage	Prov. approval
3-5	Tongue Point	Sewer extensions (Rev. plans)	Prov. approval
3-8	Tualatin Heights	Sewers	Prov. approval
3-15	Stanfield	Sewer system (rev.plans)	Prov. approval
3-16	Crook County	Lone Pine School-sewerage	Changes requested
3-19	Coos County	Summer School -sewerage	Prov. approval
3-20	Crook County	Lone Pine School-sewerage (rev.plans)	Approved
3-22	Gladstone	River Road interceptor	Approved
3-26	Oswego	Plant equipment	Approved
3-30	Lane County	Clear Lake Grade School-sewerage (rev.plans)	Approved
4-5	Sandy	Sewage disposal plant	Not approved
4-9	Rockaway	Sanitary sewer system	Not approved
4-11	Eugene	Westmoreland sewer project	Prel.approval

Date	Location	Project	Action Taken
4-11	West Linn	Sulphite liquor disposal	Deferred
4-17	Rockaway	Sewage treatment plant	Not approved
4-18	Marion County	Brooks School -sewerage	Prov. approval
4-18	Lane County	Triangle Lake School-sewerage	Approved
4-19	Coos County	Green Acres School-sewerage	Approved
4-19	Lowell	Sewers and lift station	Not approved
4-19	Klamath Falls	Altamont Subdivision - sewerage	Prov. approval
4-20	Coos Bay	Mingus Park Heights - sewers	Approved
4-20	Coos Bay	Bayview Ferndale sewers	Approved
4-20	Coos Bay	Interceptor sewer contract No.1	Approved
4-20	Fossil	Equipment specifications	Not approved
4-23	The Dalles	Sewer extensions	Approved
4-24	Oswego	High School - sewerage	Approved
4-25	West Linn	Interceptor sewer and lift station	Approved
4-25	Joseph	Preliminary engineering report	Comments submitted
4-30	Myrtle Creek	Sanitary sewer system	Prov. approval
4-30	Eugene	Sewer extensions	Approved
5-2	McMinnville	Sewage treatment plant	Action deferred
5-3	Washington County	Durham Grade School-sewerage	Prov. approval
5-8	Multnomah County	Skyline Grade School-sewerage	Changes requested
5-8	Pendleton	Sherwood Heights outfall	Final approval
5-8	Umatilla	School sewer	Approved
5-8	Umatilla	Sewer extensions	Approved
5-8	Fossil	Equipment specifications (revised)	Approved
5-8	Stanfield	Treatment plant (rev.plans)	Not approved
5-9	Philomath	Sanitary sewers, treatment plant and lift station	Approved
5-11	Eugene	72" outfall sewer	Approved

Date	Dodson Location	Project	Action Taken
5-11	Dodson	Grade school-sewerage	Changes requested
5-18	Salem	Kelley Farquharn Cannery screens	Prov. approval
5-22	Hermiston	Sewer extensions	Approved
5-22	Fossil	Sanitary sewer system	Prov. approval
5-22	Tualatin Slopes	Temporary treatment plant	Action deferred
5-25	Philomath	Addendum to treatment plant plans	Approved
5-25	Douglas County	Ten-Mile Grade School-sewerage	Deferred
5-29	Vale	Treatment plant	Not approved

RESEARCH REPORT: Mr. Warren Stayton, Oregon State College, reported on studies and experiments he had made on asphaltic membrane linings for lagoons in which sulphite liquors are to be retained. He believed that the method of lining such lagoons was practical, but more details must be worked out and more field tests performed. The possibility of odors must also be taken into consideration.

Mr. Stayton reported that asphalt was chosen because of its low cost; and ease and speed of application to the lagoons.

Mr. Stayton advised the Sanitary Authority that the appropriation fund for such experimental work which had been provided by the Authority was exhausted; and he believed that another application of asphalt should be applied to the experimental lagoon and carefully watched during the summer season.

Mr. Stayton then turned over to the Chairman a copy of a report on the investigation which he had undertaken at the College during the past year.

MUNICIPAL SEWAGE DISPOSAL:

Myrtle Point: The city of Myrtle Point represented by Jack Dunn, City Attorney; J. M. Myers, Mayor; and W. L. Bell, Councilman, then appeared before the Authority.

The Chairman opened the discussion by reading the action taken by the Authority at its last meeting relative to sewage disposal facilities for the city of Myrtle Point.

Mr. Dunn advised the Authority that the city was now awaiting approval of a site which has been selected so that arrangements could be made for its purchase. Some delay had been experienced, however, due to the indecision in the city council as to the engineering firm to employ. Preliminary survey and estimate of cost was made by Cornell, Howland, Hayes and Merryfield in 1948, and showed the estimated cost of sewage disposal plant to be \$94,000; however, it is anticipated that the cost would be greater at the present time. Mr. Myers reported that 25% of the water revenue goes into the sinking fund, and a total of \$40,000 has been accumulated at the present time.

Mr. Myers also advised the Authority that he thought the engineering firm

ARG 759

would be selected within two weeks. Mr. Dunn stated that the city had taken the attitude that there was no particular rush to build a treatment plant, but the city now realizes that the Authority does mean business.

MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried - that the city of Myrtle Point be ordered to submit to the Authority within two weeks a definite program outlining the various steps and time schedules to be followed in the financing and construction of the required sewage treatment works, with the first step being to select without further delay consulting engineers for the preparation of final plans and specifications.

Pendleton: The city of Pendleton, represented by Raymond P. Botch, City Manager; and Ralph E. Roderick, Consulting Engineer, appeared before the Authority to request permission for extension of time until January 1, 1960, for the completion of their sewage treatment plant. The city proposed to construct various units of the plant from time to time as funds became available from users charges.

The secretary reviewed correspondence with the city of Pendleton concerning the schedule of the city on installing necessary sewage treatment plant.

Mr. Botch advised the Authority that it had been the policy of Pendleton to proceed on a pay-as-you-go basis on the sewage treatment plant construction program; that the city now has approximately \$50,000 in the fund; and during the next five or six years will have added enough to complete the project on a cash basis; but the city will be unable to complete the project by January 1, 1953, unless bonds are issued. He reported that revenue from sewer users charges amount to \$55,000 per year; and that the city receives 10% of the treatment plant operating cost from the State Hospital as their contribution for the operation of the sewage disposal plant. The city has already received approximately \$40,000 from the state toward construction costs of the plant, and will receive an additional \$20,000 when the city plant is completed. Mr. Botch stated the city will be debt-free in 1959, and hope they could continue on a non-bonding basis of operation. Mr. Botch also thought it was not the time to go into debt. In answer to a question by Mr. Wendel, Mr. Botch reported that the outstanding bonded indebtedness of the city totals \$52,000.

The Chairman then asked the representatives of Pendleton what the effect would be on other municipalities if Pendleton were permitted this extension of time so they could proceed on a pay-as-you-go basis, especially since smaller communities were proceeding with the installation of the necessary facilities and authorizing bond issues to do so. Mr. Wendel was of the opinion that granting this deferrment request would seriously affect the wholestate program, and that it would not cost any more for the city to do it now.

Mr. Hallock was of the opinion that such deferrment would prove extremely detrimental to the program of the Authority for stream cleanliness, and believed that the Authority should adhere to the existing order. Mr. McPhillips believed it would be complete reversal of the policy of the Authority, and would certainly be a step backward in the program; and that the Authority would have to abandon its entire program for water pollution control if this request is granted to Pendleton.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the Authority adhere to the existing order issued previously to the city of Pendleton, directing that the plant be in operation by January 1, 1953.

McMinnville: The secretary explained the request of the city of McMinnville and read the letter from the city resulting from a statement by Mr. Wilson, Director of Mobilization, dated May 9, 1951, relative to deferrment of construction of water and sewage works. Secretary also reported on the letter dated May 24, 1951 which he had written to McMinnville regarding this matter.

Mr. McPhillips said that he had contacted several of the city officials; that they have delayed the project longer than necessary; and believed they should be instructed to hold a bond election this year.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the secretary inform the city of McMinnville that the Authority approves the communication of Mr. Everts, dated May 24, 1951.

Riddle: Mr. Wendel reviewed the motion that had been adopted by the Authority at their last meeting regarding installation of proper sewage treatment facilities for the city of Riddle. Mr. Spies reported that nothing so far had been heard from the city. MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried that the city of Riddle be informed that they must immediately comply with the entire spirit of our former communication, dated March 9, 1951; and if they did not do so promptly, their case will be referred to the Attorney General for injunction proceedings.

Oakland: The Chairman reviewed the motion that had been adopted by the Authority at their last meeting regarding installation of proper sewage treatment facilities for the city of Oakland. Mr. Spies advised that nothing had been received from the city of Oakland. MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the city of Oakland be informed that they must immediately comply with entire spirit of our former communication, dated March 9, 1951, and if they did not do so promptly, their case will be referred to the Attorney General for injunction proceedings.

Toledo: The matter of Toledo installing proper sewage treatment facilities having been referred to the Attorney General, the Chairman read a letter from The Attorney General dated May 2, which stated that the attorney general would follow the progress made by this city in the construction of sewage treatment facilities. Mr. Spies reported that during recent weeks surveys of Yaquina Bay water had been made which proved that pollution in the Bay can be traced definitely to Toledo.

Springfield: It was pointed out that Springfield had not taken any positive action for a good many years on the matter of providing adequate sewage disposal for the city, and that about two years ago the cities of Eugene and Springfield considered the possibility of a joint sewerage system, and a very comprehensive study was made and it was shown by engineers to be practicable for the two cities to provide a joint treatment plant. The city of Springfield, however, had not reached any final decision.

Mr. Spies explained that under a charter amendment the Utility Board of the City of Springfield was presumed to have the responsibility for the construction of a sewage treatment plant. MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that Springfield be cited to appear at the next meeting of the Authority and show cause why they are not making any advancement in providing adequate sewage disposal facilities.

Heppner: Mr. Spies reported that Heppner has no sewer system at the present time, and the individual sewer systems which are in use now do not function properly. He advised the Authority that a few years ago when the new hospital was constructed, considerable difficulty was experienced in working out a system of sewage disposal for the hospital. Mr. Merryman, District Sanitary Engineer, made a survey recently and found sewage disposal in the city very poor.

It was reported that the city of Heppner has shown some interest in the problem and has attempted to start on a program of construction and financing; and that they are now asking a bond attorney to give them some assistance in view of the coming bond issue there.

ABG759

Mr. Everts read a letter from the Mayor of Heppner, dated May 28, 1951, and also reported on his conference with the mayor by telephone on May 29, 1951.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried, that - the city of Heppner be directed to give the Authority a comprehensive working schedule of their program, including engineering, financing, and completion of the project; also that arrangements be made for bond issue sometime in 1951.

Tualatin Slopes: The matter of Tualatin Slopes, a new subdivision southwest of Portland and adjacent to another subdivision known as Tualatin Heights and already built in which septic tank systems were used, and which do not work satisfactorily, was then discussed.

The developer of Tualatin Slopes had been advised by the Authority that septic tank systems in this area could no longer be permitted, and that it would be necessary to install a sewer system. The promoters of the subdivision, however, did not have enough money to build the entire sewerage system now; therefore, temporary facilities for the first few houses will be constructed and permanent facilities for the area will be built later.

A sanitary district has been established in the area, and some misunderstandings have arisen over the construction of sewers and a temporary treatment plant.

The secretary was instructed to arrange a meeting of the Tualatin Slopes and Tualatin Heights developers, with Mr. Wendel, Mr. Everts, and Mr. Spies in an effort to determine how the problem in these two subdivisions may be solved.

Fruitdale Sewers, Josephine County: Mr. Gerow explained the circumstances surrounding the installation of the Fruitdale sewer which discharges sewage into the Rogue River at Grants Pass. The sewer serving the area had been deeded to the county, and the county had accepted it on the ground that they could charge the property owners for necessary treatment facilities when needed. The county is now using the sewers as storm water drainage in the winter.

The Chairman directed the engineers of the Authority to ascertain the degree of pollution in the river caused by the discharge of sewage into the stream. MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that if it develops there is sufficient pollution created in the receiving waters to justify citation that the county be ordered to appear at the next meeting of the Authority to show cause why it should not be abated.

#### INDUSTRIAL WASTES:

M and S Canning Company, Milwaukie: Mr. Boydston reported that he had visited this plant on May 31 and talked with Mr. Maltby at which time there were no odors; no overflow of effluent from the tank into the stream, and no fungus growth in the stream. All waste waters were being used for irrigation, and the system of disposal appears to be satisfactory and there was no drainage into the stream at all.

Crown Zellerbach Corporation: F. N. Youngman, Vice President of Crown Zellerbach Corporation, and Mr. J. H. Moar, Engineer, Crown Zellerbach Corporation, were present at the meeting to report on their engineering studies being made on lagoons to store waste liquors during the low water periods, and to request approval of the Authority on the report and plans covering such lagoons for their West Linn mill.

Mr. Youngman advised the Authority that his company planned to begin construction this summer of an 88,000,000 gallon capacity lagoon for its West Linn plant at a cost of approximately \$165,000; and will have the lagoon in operation for dry weather next summer.

Mr. Youngman advised, also, that his company plans to spend another \$125,000 to separate the domestic sewage and industrial wastes at the West Linn mill, and install lines to connect with the proposed sewerage system now under consideration by the city of West Linn.

After some discussion of the plan, and just what approval the Authority could grant to the plan before it really was in operation, it was decided that the plan as proposed by the company would seem to be adequate to abate the pollution caused by the operation of the mill at West Linn.

Mr. Youngman also advised the Authority that his company was now experimenting with a pilot plant to evaporate and burn wastes at its Lebanon Plant, and while the method looks feasible, the only recovery is the heat, and the process would be very expensive for a small mill. It was reported that a new system was being used in California of evaporation and burning of waste liquor at about 1/3 the cost of the plant at Lebanon.

Kraft Mills, Willamette Basin: The secretary advised the Authority that within the last two weeks, two different corporations had been in the office to discuss with him proposed locations for Kraft mills in the Willamette and Umpqua River Basins, and also along the coast. It was the opinion of the Authority that industry should not be discouraged but should be acquainted with stream standards as required by state statutes.

TUALATIN BASIN MEETING: Mr. McPhillips reported that a meeting had been held at Forest Grove with representatives of the Tualatin Basin at which municipal authorities, sand and gravel operators, county authorities, recreation park owners, and the Sanitary Authority were represented. There was a round table discussion of the problems of pollution in the Tualatin River and of the varied interests who were represented; and all persons were encouraged to speak freely regarding their interests, and no one seemed to hold anything back. The sand and gravel owners defined their position; and there was a good discussion from the Game Commission about the effects of the pollution caused by sand and gravel operations.

Mr. McPhillips believed that more such meetings should be held throughout the various districts, as it was his opinion that a lot of good could be accomplished by that method.

BUDGET 1951-1953: Mr. Everts explained the budget for the next biennium which had been approved.

MISCELLANEOUS There was some discussion of the letter which had been received from the Attorney General relative to what action could be taken by the Authority in the case of municipalities refusing to comply with orders to abate pollution caused by the discharge of domestic wastes in the waters of the state. Mr. Hallock advised that if a municipality refused to comply with state statutes and orders issued by the Authority to abate their pollution, the courts could order the pollution abated and if the municipality failed to obey the courts' order, they could be fined for contempt, each day being a separate offense. He cited the case of Baker as being an example of this action.

Date of next meeting was set for September 7, at 2:00 P.M.

There being no further business the meeting adjourned at 4:45 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.  
Secretary and Chief Engineer

ABG759

## MINUTES OF THE FORTY-EIGHTH MEETING

of the

## OREGON STATE SANITARY AUTHORITY

September 7, 1951

The forty-eighth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:35 P.M., Friday, September 7, 1951, in the offices of the State Board of Health, 1022 S. W. 11th Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson and Charles E. Stricklin, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; T. M. Gerow, Jr., Harold W. Merryman, and Fred J. Burgess, Assistant Sanitary Engineers.

MINUTES: The minutes of the forty-seventh meeting of the Authority, having been prepared and submitted to the members of the Authority in advance of the meeting, MOTION was made by Mr. Stricklin, seconded by Dr. Erickson, and carried - that the minutes be approved as prepared by the secretary.

PROJECT PLANS: MOTION was made by Mr. Stricklin, seconded by Dr. Erickson, and carried - that the action taken by the engineering staff of the Authority on reports, plans and specifications for sewerage and waste disposal projects be approved as follows:

Date	Location	Project	Action Taken
6-5	Sandy	Revised preliminary plan	No action
6-6	Lewis & Clark College	Sewage Disposal works	Not approved
6-7	Dodson	Grade School, Bonneville Dis. #46, Sewerage (rev. plans)	Approved
6-8	Newberg	Sewer extensions	Prov. approval
6-8	Springfield	sewer extensions	Approved
6-11	Chiloquin	Sewage Treatment Plant, (rev. preliminary plans)	Not approved
6-19	Douglas County	Ten-Mile Grade School, sewerage	Approved
6-19	Multnomah County	Russellville " " " Dist. #40	Approved
6-21	Lane County	Central School, Dist. #44 "	Approved

## Project Plans - continued

Date	Location	Project	Action Taken
6-22	Multnomah County	Servite Monastery, sewerage	Approved
6-25	Corvallis	Sewer extensions (Granted permission to install)	Not approved
6-27	McMinnville	Pumping station	Deferred
6-27	McMinnville	Force main & interceptor	Deferred
6-28	Marion County	Lake Labish School, Dist. #120 sewerage	Approved
6-29	Douglas County	Lookingglass School, Dist. 130 sewerage	Referred to T.M.G. for site inspection; otherwise, it is O.K.
7-2	Milton-Freewater	Industrial sewer	Not approved
7-5	Forest Grove	Primary treatment plant	Cond. approval
7-6	Lowell	Sewers & lift station	Approved
7-6	Corvallis	Interceptor sewer	Approved
7-6	Rockaway	Sewerage plans, revised	Not approved
7-6	Arago	Arago Co-op. Cheese Ass'n. Industrial Waste Disposal Plans	Tentative approval.
7-9	Fossil	Sewage Treatment Plant	Not approved
7-9	Portland	Interceptor sewer and treatment plant, Sellwood Unit	Approved
7-9	Portland	Lateral sewers for East Glisan, Greely Unit	Approved
7-9	Portland	Sewage Pumping stations - Albina ECl, and Alder SE3	Approved
7-10	Klamath Falls	Sewer extensions	Not approved
7-11	Lewis & Clark College	Sewage treatment plant	Prov. approval
7-11	Oakridge	Sewage treatment plant	Approved
7-12	Hermiston	Sewer extensions	Approved
7-12	Oswego	Sewer extensions	Approved
7-16	Tualatin Slopes	Outfall sewer	Approved
7-16	Myrtle Creek	Sewage Treatment plant	Approved
7-16	Hermiston	Orchard Homes, sewerage	Approved

ABG759

Project Plans, continued

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action Taken</u>
7-17	Sandy	Sewer System	Approved
7-19	Roseburg	Rosewood Homes Project, sewerage	Approved
7-20	Klamath Falls	Sewer extensions (rev. plans)	Prov. approval
7-23	Gresham	Sewer extensions	Approved
7-23	Gresham	Sewage siphon, S.E. Roberts Ave.	Not approved
7-26	Pendleton	Sewer extensions	Prov. approval
7-27	Eugene	Sewer extensions, Amazon 30th and 33rd	Approved
7-27	Eugene	Sewer extensions	Approved
8-3	Lebanon	Hospital sewer	Approved
8-7	Albany	Interceptor	Approved
8-7	Albany	Sewage treatment plant	Approved
8-7	Fossil	Sewage treatment plant	Approved
8-8	Klamath County	Shasta School, sewerage plans	Approved
8-9	Douglas County	Glide School, sewerage plans	Not approved
8-9	Douglas County	Lookingglass School " "	Not approved
8-10	Corvallis	Sewer extensions	Approved
8-13	Douglas County	Glide School, sewerage plans (revised)	Approved
8-14	Rockaway	Sewage treatment plant	Cpnd. approval
8-15	North Bend	Sewer extensions	Approved
8-17	Hermiston	Sewer extensions	Approved
8-20	Prineville	Sewage treatment plant additions (revised plans)	Approved
8-21	Oakridge	Sewer system	Approved
8-28	Springfield	Sewer extensions	Approved
8-29	Newberg	Spaulding Pulp & Paper Company (Sulphite waste liquor lagoon)	Deferred

WILLAMETTE RIVER RESEARCH REPORT: Dr. A. F. Bartsch, Chief Biologist, Division

of Water Pollution Control, U. S. Public Health Service, outlined the nature and ex-

ABG759

tent of the biological investigations of the Willamette River which are being financed and conducted jointly by the State Sanitary Authority, Oregon State College, and the Public Health Service. Dr. Bartsch stated that the purpose of the studies was to determine biological indices of pollution and to measure the progress of the biological recovery of the river as the abatement program progresses. He advised the Authority that funds from the Public Health Service might not be available for the studies during the 1952-53 fiscal year, but that to be of real value the program should be continued over a period of several years. The Chairman asked Dr. Bartsch what the survey had indicated thus far. Dr. Bartsch replied that the results of investigations to date indicated that in some places improvements in the river system have already become evident.

Mr. Wilson, Biologist for the River Basin Office, Public Health Service, Portland, reported that in conjunction with the work carried on by Oregon State College, the River Basin Office was collecting samples in the Willamette River Portland Harbor and in the Lower Columbia River.

#### MUNICIPAL SEWAGE DISPOSAL

Springfield: Mr. Felix Zeidlhack, Consulting Engineer, representing the city of Springfield, reported that the city Utilities Board had authorized his firm to prepare plans for a sewage treatment plant.

The secretary read a letter dated August 30, 1951 addressed to the State Sanitary Authority by Frank R. Brown, Secretary of the Springfield Utilities Board, in which the Utilities Board assured the Sanitary Authority that they were ready to proceed with the Springfield sewage treatment plant project without further delay.

In the discussion that followed, the question was raised as to the fiscal plan which would be adopted by the city, and the secretary was directed to request that the Utilities Board furnish the Sanitary Authority with an outline of their fiscal program for construction of the sewage treatment plant.

Myrtle Point: The secretary reported that engineering plans from the city of Myrtle Point had not yet been received, and that the Authority had been advised by the consulting engineers for the city that the original preliminary engineering report on Myrtle Point would have to be revised due to the installation of a cheese plant

in that city.

It was recommended that action in the case of Myrtle Point be deferred to allow the consulting engineers more time to complete their investigations relative to the effects of wastes from the cheese manufacturing plant on the sewage treatment plant.

McMinnville: The secretary reported that final construction plans for the sewerage facilities for the city of McMinnville had been received and approved by the Authority engineers.

Although no progress had been reported by the city in connection with the submission of a bond election to the voters, the Authority decided that no further action was indicated at this time.

Riddle: Kenneth H. Spies, Assistant Chief Engineer, reported to the Authority that the city of Riddle had authorized a bond issue in the amount of \$19,000 and that the city had advertised for bids to be opened on September 17 for the sale of said bonds. No information was available, however, regarding the city's plans for resuming construction of the plant.

The secretary was directed to keep in touch with the progress made by the city of Riddle and if they did not proceed with construction to notify them to comply with the requirements of the Authority.

Oakland: Following a discussion relative to the action which could be taken by the Authority in the case of the city of Oakland, it was MOVED by Mr. Stricklin, seconded by Dr. Erickson, and carried - that the matter be referred to the Attorney General with a request for his advice as to what further steps the Sanitary Authority should take in this matter.

Toledo: The secretary reported to the Authority that the Attorney General had notified the city of Toledo by letter dated September 6, 1951, that, unless the Authority directed otherwise, he would institute within ten days from September 6 legal proceedings against the city for failure to provide sewage treatment facilities to abate the pollution of Yaquina Bay.

Heppner: The secretary reported to the Authority that since the June 2nd meeting, the city of Heppner had levied a 10-mill property tax and sewer-user service charge

to accumulate funds with which to construct a sewer system and a sewage treatment plant. A letter from the Mayor of Heppner, J.O. Turner, was brought to the attention of the Authority in which the Mayor pointed out that the city water supply needed repairs, extensions, and an additional well; and requested that the Authority allow the city more time in which to install a sewer system and treatment plant.

After a discussion of the matter and, inasmuch as a bond issue will be necessary in order to finance the needed sewerage construction, it was MOVED by Dr. Erickson, seconded by Mr. Stricklin, and carried - that the city be instructed to proceed immediately with engineering plans for a sewer system and treatment plant and to arrange for a bond election as previously stipulated.

St. Helens: A letter from Cornell, Howland, Hayes & Merryfield, consulting engineers for the city of St. Helens, was brought to the attention of the Authority by the secretary, in which letter information was requested as to whether or not the Sanitary Authority would permit the city of St. Helens to discharge digested sludge into the Columbia River.

After some discussion by the members present, the secretary was directed to request the consulting engineering firm for the city to furnish the Authority with information on the cost of employing methods of sludge disposal other than by discharge of the sludge into the Columbia River.

INDUSTRIAL WASTE DISPOSAL:

Dollar & Patterson Lumber Company, Glendale: T. M. Gerow, Jr., District Sanitary Engineer, reported to the Authority that the Dollar & Patterson Lumber Company of Glendale had located a log pond in the stream bed of Mill Creek, a tributary of the Umpqua River; and that they had within the last three months, and at our request, constructed a flume to divert the creek waters around the log pond. However, a waste burner had been located too near the bank of the stream and every time the log pond overflowed, some of the waste materials were carried into the waters of the creek.

After a review of the problem, the secretary was instructed to forward a communication to the Dollar & Patterson Company outlining to them in detail the requirements that would have to be met in order to maintain the purity of the adjacent stream.

ABG759

Studies of Rogue River: Following a discussion on preliminary bacteriological studies of the Rogue River in the vicinity of the Grants Pass and Fruitdale outfall sewers, the sanitary Authority authorized the staff to undertake a comprehensive water pollution investigation of the Rogue River, and to request the loan of the mobile laboratory from the State Board of Health to aid in such work.

It was reported by Mr. Spies that the city of Grants Pass had already authorized its consulting engineers to begin the preparation of plans and specifications for enlargement of the Grants Pass sewage treatment plant.

North Santiam River: The secretary reported briefly on the studies of turbidity in the North Santiam River caused by the construction of Detroit Dam. The contractor has recently taken steps to reduce the turbidity to a point where it no longer damages the Salem water supply. It was also reported that the Fish Commission had placed in the hands of the Attorney General the matter of fish destruction which occurred in the North Santiam River during the month of August as a result of the discharge of ammonia from the aggregate cooling plant at Detroit Dam.

Tualatin River (City of Hillsboro): Mr. Spies reported that oxygen concentration in certain sections of the Tualatin River below the city of Hillsboro's outfall sewer were reaching a critical level. After some discussion on the matter, in which it was pointed out that the city of Hillsboro had always cooperated with the Authority in past years, the secretary was directed to request the city of Hillsboro to provide additional disposal facilities for domestic and industrial wastes before the 1952 low water season.

FULP AND PAPER MILL WASTES:

Spaulding Pulp & Paper Company, Newberg: A letter from O. M. Allison, Secretary of the Spaulding Pulp & Paper Company, together with plans and specifications for the sulfite waste liquor storage lagoon at Newberg was brought to the attention of the Authority. After a review of the plans and some discussion as to what action should be taken by the Authority, the engineering staff was directed to take appropriate action on the plans with the understanding that such action would be reviewed by the Authority at a later date.

Publishers' Paper Company, Oregon City: It was reported that the Publishers' Paper Company is apparently planning to dispose of its waste sulphite liquor by using it as a road binder. It was the opinion of the members and staff of the Authority that such a plan was very questionable as it was doubted that it would be successful.

It was decided, therefore, that the engineering staff should confer with the manager of Publishers' Paper Company and remind him that the Authority expects compliance with its order for abatement of pollution from their mill.

DISTRICT OFFICE: The secretary requested authority to locate one of the Sanitary Authority Engineers at Eugene in order to handle domestic and industrial waste problems which occur in the Upper Willamette Valley, and adjacent to coastal areas. MOTION by Mr. Stricklin, seconded by Dr. Erickson, and carried that authorization be granted to locate a district engineer at Eugene, Oregon.

NEXT MEETING: There being no further business, the date for the next meeting was tentatively set for 2:00 P.M., December 7, 1951.

Meeting adjourned at 4:30 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary

ABG759

MINUTES OF THE FORTY-NINTH MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY

December 7, 1951

The forty-ninth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:30 P.M., Friday, December 7, 1951, in Room 936, State Office Building, 1400 S. W. Fifth Avenue, Portland, Oregon. Present were Harold F. Wendel, Chairman; Charles E. Stricklin, John C. Veatch, and B. A. McPhillips, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; James R. Boydston, Clarence E. Cuyler, and Fred J. Burgess, Assistant Sanitary Engineers.

MINUTES: The minutes of the forty-eighth meeting of the Authority having been prepared and submitted to the members of the Authority in advance of the meeting, it was recommended that the minutes be approved as prepared by the secretary.

PROJECT PLANS: MOTION was made by Mr. McPhillips, seconded by Mr. Stricklin, and carried - that the action taken by the engineering staff of the Authority on reports, plans, and specifications for sewerage and waste disposal projects be approved as follows:

Date	Location	Project	Action Taken
9-4	Fossil	Sewer Extension	Approved
9-5	Roseburg	Roseburg Lumber Co. sewage disposal	Cond. Approval
9-10	Stanfield	Treatment Plant Equipment specifications	Not Approved
9-10	Lane County	Pleasant Hill High School sewerage	Prov. Approval
9-11	Westfir	Lumber Co. Sewage Disposal	Not Approved
9-17	West Linn	Sewage Treatment Plant	Prov. Approval
9-28	Cottage Grove	Sewer Extensions	Approved
10-1	Cottage Grove	Sewer Extensions	Approved
10-2	Portland	Equipment for Pump Stations SE1, SE2, WC1, SW1, SW2	Approved

Date	Location	Project	Action Taken
10-2	Portland	Willamette River Unit	Approved
10-3	Clackamas County	North Logan Sch. Sewerage	Approved
10-4	Molalla	Sewer Extensions	Deferred
10-10	Stanfield (revised)	Sewage Treatment Plant	Not Approved
10-19	Vale	Sewage Treatment Plant	Not Approved
10-25	Condon	Sewer Extensions	Cond. Approval
10-29	Newberg	Spaulding Pulp & Paper sulfite waste lagoon	Prov. Approval
10-30	Portland	Ankeny Pump Station	Approved
11-5	Stanfield (revised)	Sewage Treatment Plant	Cond. Approval
11-7	Hermiston	Sewer Extensions	Approved
11-7	Springfield	Sewer Extensions	Approved
11-13	Pendleton	Sherwood Heights sewer extensions	Not Approved
11-15	The Dalles	Sewer Extensions	Approved
11-20	Roseburg	Review of Data on Rosewood Homes	Not Approved
11-26	Government Camp	Hwy. Dept. Maintenance buildings sewerage	Not Approved
11-29	Riddle	PHA Housing Project sewerage	Not Approved
11-30	Toledo	PHA Housing Project Fircrest Homes - sewerage	Approved
11-30	Eugene	Sewer Extensions	Approved

MUNICIPAL SEWAGE DISPOSAL:

Toledo. Mayor C. H. Bogert, Mrs. C. H. Bogert, Councilwoman, and W. W. Jones, City Engineer of Toledo, all representing the City of Toledo, appeared before the Authority to present information relative to the status of the Toledo sewerage project. Mayor Bogert advised the Authority that, upon assuming the office of mayor in January of 1951, he thought it proper to re-examine the sewerage plans and some of the proposals which had been made in order to see if the cost could not be reduced and also to try to locate a new site for the disposal plant, since access to the original plant site

was limited. The mayor further reported that the City now has another site which they are considering and, in fact, have made an agreement to purchase it.

Mayor Bogert told the Authority that Toledo was endeavoring to effect annexations of two outlying districts; that when this matter is worked out the City will endeavor to sell the necessary bonds; that since the first of this year the City has been collecting a sewer-user charge of \$1.00 per month; and that Mr. W. W. Jones, City Engineer, has been directed to prepare plans for the sewage disposal project.

Mr. Jones stated that the primary treatment plant, the intercepting sewers, and the pumping stations were estimated to cost about \$100,000 and that the total city population after annexation was estimated at 3,000 persons.

Mr. Wendel asked whether the City was planning to submit a bond issue to the voters. Mayor Bogert said that they would just as soon as the proposed annexations were effected.

Mr. Wendel asked whether the City could give the Authority a schedule as to when the election on annexation would be held. The answer was that it would be about January or February.

Mr. Spies asked the mayor why the planning for the sewage treatment plant depended upon the proposed annexation, in view of the fact that the City of Toledo needed the plant anyway. The question was not answered by the mayor. Mr. Spies then pointed out that some time ago (August, 1949) an engineering report had been made by competent engineers, who estimated the cost of construction at \$130,000, and that only a few months later the City Council proposed to submit a \$300,000 bond issue to the voters. Mr. Spies asked the mayor to explain this increase. Mr. Jones said that he had advised the City that, in spite of the increase in costs since 1949, he was positive the cost would not exceed \$200,000. Mayor Bogert said he did not know just what the \$300,000 amount covered and was trying to find out. It was Mr. Spies opinion that the City Council had proposed a \$300,000 bond issue with the hope that it would be rejected by the voters.

Regarding the annexation problem at Toledo, Mr. Veatch advised the City representatives that communities building up outside the city limits should be made to

understand that they were going to need some kind of sewer system and that if they did not come into the city they would have to provide such facilities through sanitary districts or by other means. Mayor Bogert said they were working along that basis.

Mayor Bogert then told the Authority that he believed they would be ready to hold a bond election in February. Mr. Everts inquired as to when the City expected to have the final fiscal and construction plans completed. Mr. Jones said that he thought the engineering plans would be finished about the 15th of January. The mayor reported that at present the City had outstanding bonds amounting to \$110,000, which are principally water bonds.

After this discussion, Mr. Wendel then reminded the Board that the matter had been referred to the Attorney General a year ago and asked what action the Board now wished to take.

MOTION By Mr. McPhillips, seconded by Mr. Veatch, and carried that the City of Toledo be directed (a) to complete its fiscal program including submission of bond issue to voters, (b) to prepare detailed engineering plans and specifications, and (c) to adopt a satisfactory construction schedule for the installation of the necessary interceptor sewer, sewage lift station, and treatment works by March 1, 1952.

In addition, the City was instructed to forward to the Authority monthly progress reports.

Government Camp Area: (Mt. Hood Aerial Transportation Company)-

The following persons were present relative to sewage disposal problems in the Government Camp area: Mr. A. L. Greenwalt, representing the Mt. Hood Skiway; Mrs. H. F. Villager, property owner; J. P. Langdon, U. S. Forest Service; Mr. Lloyd R. Olson, U. S. Forest Service; Dr. J. O. George, Mr. Warren Huff, Troutdale; and John Borden, Senior Sanitarian of the Clackamas County Health Department.

Mr. Cuyler reviewed the matter of improper sewage disposal in the Government Camp area. He explained that since 1937 the State Board of Health and the Clackamas County Health Department have been greatly concerned about the public health hazards

ABG759

created by insanitary sewage disposal especially during the summer recreation season, and that numerous attempts have been made by these agencies to promote the installation of approved community sewerage facilities in the area, but so far the efforts have all been in vain.

Mr. Cuyler pointed out that because of the extremely unfavorable soil and drainage conditions and, in many cases, the limited space available it has been impossible to provide sanitary disposal of sewage and wastes by individual sub-surface systems and that privately-owned treatment plants with effluents discharged into surfact water have also proved to be unsatisfactory.

Mr. Cuyler stated that the only solution to the sewage disposal problem in this area was the installation of a community sewerage system. Because the area was not incorporated it has been impossible to get a program underway for actual construction of such facilities.

Mr. Greenwalt of the Mt. Hood Aerial Transportation Company then stated that the people of Government Camp would be cooperative if they were told what to do. He also reported that his company had already spent \$10,000 on sewage disposal and would do more if the Sanitary Authority would advise them on what to do. Mr. Greenwalt was then informed by the Chairman that the Authority could not design the treatment facilities for him and that the state law required that plans and specifications for all such sewage disposal works be prepared by a registered engineer and that the plans and specifications be submitted to the Authority for review and approval before construction is undertaken.

Mr. Cuyler then explained that there were two distinct problems in the Government Camp area - the one at Government Camp proper and the one at the Tramway site, the latter being the one referred to by Mr. Greenwalt. Mr. Cuyler pointed out the deficiencies of the disposal system serving the Tramway in that it had never been approved by the Sanitary Authority and that it was responsible for serious pollution of the waters of the Camp Creek watershed.

Mr. Spies informed Authority members that experience had indicated that privately owned sewerage systems could not be relied upon to maintain sanitary

conditions and to prevent stream pollution in the Government Camp area. He pointed out that two such systems had been installed to serve the Tramway and the Battle Axe Inn but they had never operated satisfactorily. As a consequence the receiving streams had become seriously contaminated. He emphasized the fact that a community-wide, or public, sewerage system was the only satisfactory solution to the problem in this area.

Testimony by Warren Huff, Dr. George, and Mrs. Villager, property owners, and by J. P. Langdon of the Forest Service brought out the fact that residents of the area had in the past showed no willingness to cooperate with one another and it was most doubtful that the situation would improve in the future.

In the discussion which followed it was reported that the area did not have 25 resident property owners and therefore could not petition for the formation of a sanitary district. Under existing state laws such a petition must be signed by 25 residents who are freeholders of the area. Mr. Borden, Clackamas County Sanitarian, advised the Authority that as of November 1951 there were only 11 resident property owners.

Mr. Greenwalt complained to the Authority that the engineers of the Authority had not given him the assistance to which he was entitled as a taxpayer of the state of Oregon. It was explained to him again that it was not the duty of the professional staff of the Authority to prepare plans for individuals or companies, and that it was necessary to obtain such services from private consulting engineers.

After further discussion of the problem, MOTION was made by Mr. Veatch, seconded by Mr. Stricklin, and carried - that all private residents and business establishments in the Government Camp area be notified that they must solve their own sewage disposal problems and that they must submit by not later than March 1, 1952, adequate plans for the sanitary disposal of all domestic sewage and other liquid wastes.

Riddle. Mr. Everts reported that the City of Riddle had failed to carry out the orders of the Sanitary Authority dated March 9, 1951, to complete the construction of the treatment plant by December 1, 1951, and that actually construction

ABG759

had not even been started because the fiscal program had not been completed.

Following a discussion of the matter, MOTION was made by Mr. McPhillips seconded by Mr. Stricklin, and carried - that no new or additional connection to the existing sewage collection system at Riddle, Oregon, be permitted until approved treatment facilities have been constructed and placed in operation.

Carlton. Mr. Spies reviewed the present status of the sewage disposal program of the City of Carlton, Oregon. He reported that in February 1949 the City's consulting engineers had completed a study on the needed improvements and had outlined a reasonable fiscal plan and time schedule for construction. The Council, however, had failed to carry out the recommendations submitted by their engineers and thus far no commitments had been made to the Authority as to when the project would actually be undertaken.

After discussing the matter of connecting a proposed new grade school to the existing city sewer system, MOTION was made, seconded, and carried - that no new or additional connections be permitted to the present city sewer system of Carlton, Oregon, until an adequate and satisfactory fiscal program has been completed and an approved time schedule has been adopted by the City for construction of the required interceptor sewer, sewage lift station, and sewage treatment plant.

Heppner. Mr. Everts reviewed the situation at Heppner regarding the sewage disposal for a proposed public grade school. It was MOVED, Seconded, and carried - that no approval be granted on even a temporary basis for the installation of any individual subsurface sewage disposal system within the city of Heppner, Oregon, until a satisfactory fiscal program and construction schedule have been completed by the city for the required municipal sewerage system.

#### Present Status of Other Municipal Sewage Disposal Projects

An outline report had been prepared by Mr. Spies and was submitted to the members covering the present status of the municipal sewage works construction program.

- a. The cost of all major sewerage projects placed under construction during the past five years has totaled \$24,500,000.

- b. 47 new treatment works placed under construction during that period have the capacity to serve an ultimate population of 721,150 persons.
- c. 97 communities still need new or improved sewage disposal works, with total estimated cost of \$21,010,000.

INDUSTRIAL WASTE DISPOSAL

Columbia Slough Industries. Mr. Boydston reported that on October 15, 1951, registered letters had been sent to the 16 major industries which discharge untreated wastes into the public waters of Columbia Slough. These industries were instructed to submit plans by December 1, 1951, for the waste disposal or treatment facilities required to abate their share of the pollution. In the replies which were received it was stated that the industries had contacted the City of Portland regarding possible connections to the municipal interceptor sewer and treatment plant project which is now in operation.

In view of the fact that the City of Portland had as yet apparently reached no decision in the matter MOTION was made by Mr. Veatch, seconded and carried - that the industries along the Columbia Slough be given until March 1, 1952, to inform the Authority what plan they will use to abate said pollution, and that they be advised that unless some definite plan is received by that time appropriate proceedings will be instituted to secure compliance with state laws pertaining to stream cleanliness.

Pulp and Paper Mills. The matter of providing facilities for abatement of pollution by pulp and paper mills in the Willamette Basin was briefly reviewed by Mr. Everts as follows:

Publishers' Paper Company, Oregon City - This Company has thus far made no plans to provide any storage facilities but has attempted to dispose of the waste for use as a road binder.

It was recommended by the Authority that the attention of Publishers' Paper Company be called to the deadline for abatement of pollution in the Willamette River by their mill.

Crown-Zellerbach Corporation, West Linn - The storage basin with a capacity of 88 million gallons is almost completed. It will be ready for use about the first

ABG759

of May, 1952.

Spaulding Pulp and Paper Company, Newberg - A storage basin with a capacity of 40 million gallons has been completed.

Oregon Pulp and Paper Company, Salem. - The Company completed a lagoon last year, and all concentrated wastes were stored during the summer of 1951.

Crown-Zellerbach Corporation, Lebanon. \* Mr. Everts read a letter from the Crown Zellerbach Corporation in which the Authority was advised that orders for evaporating and burning equipment for handling sulphite waste liquor had been placed, and assistance of the Authority in obtaining materials was requested.

SPECIAL REPORTS BY THE U. S. PUBLIC HEALTH SERVICE:

Mr. Everts provided the members of the Authority with copies of two reports; (a) Pacific Northwest Drainage Basins (1950), and (b) Willamette River Basin (1950).

MISCELLANEOUS:

Mr. Wendel and Mr. Stricklin complimented the engineering staff of the Authority on the work which they had done and which they are doing.

The secretary was instructed to keep members of the Authority advised of the situation at Toledo, Government Camp, Carlton, and Heppner.

DATE OF NEXT MEETING: The date for the next meeting was set for March 21, 1952.

There being no further business, the meeting adjourned at 4:45 P.M.

Respectfully submitted,

Curtiss M. Everts, Jr.  
Secretary and Chief Engineer

MINUTES OF THE FIFTIETH MEETING  
OF THE  
OREGON STATE SANITARY AUTHORITY

March 21, 1952

The fiftieth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., Friday, March 21, 1952, in Room 936, State Office Building, 1400 S. W. Fifth Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Charles E. Stricklin, John C. Veatch, Elaine Hallock, and B. A. McPhillips, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; James R. Boydston, Clarence E. Cuyler, and Fred J. Burgess, Assistant Sanitary Engineers; T. M. Gerow, Jr., and Harold W. Merryman, District Sanitary Engineers.

MINUTES: The minutes of the forty-ninth meeting of the Authority having been prepared and submitted to the members in advance, it was MOVED by Mr. Veatch, seconded by Mr. Stricklin, and carried, that the minutes as prepared by the secretary be approved.

PROJECT PLANS: The following actions taken by the technical staff on project plans and reports received and reviewed since the last meeting were approved:

Date	Location	Project	Action Taken
12-3	Hermiston	Sewer Extensions	Approved
12-3	Pendleton	Sherwood Heights Sewer ext.	Approved
12-5	Toledo	Fircrest Homes, STP (Rev. Plan)	Approved (Prov.)
12-10	Riddle	Public Housing sewers	Not approved
12-16	Hermiston	Sewer extension	Approved
12-18	Sandy	Sewage Treatment Plant (Rev. Plans)	Not approved
12-20	Portland	SE1 and SE2 Pump station	Approved

ABG759

Date	Location	Project	Action Taken
12-20	Portland	Sullivan Gulch Pump station	Approved
12-27	Grant County	Court House sewerage	Prov. approval
12-28	Deschutes County	Alfalfa School sewers	Approved
1-4	Oswego	Sewer extensions	Approved
1-8	Portland (Mocks Bottom)	Sewerage, Freightner Factory Bldg.	Prov. approval
1-11	The Dalles	F.St. & Dry Hollow-sewers	Prov. approval
1-14	Swan Island, Portland	Port of Portland	Deferred
1-15	Albany	Hill St.-sewers	Not approved
1-15	Wallowa Lake	Overnight camping area	Not approved
1-16	Eugene	Sewer extensions	Approved
1-16	Pendleton	Sherwood Heights, Sewer Ext.	Not approved
1-18	Toledo	Treatment plant	Not approved
1-24	Sheridan	Sewers	Prov. approval
1-24	Multnomah County	Skyline School, sewerage	Approved
1-28	Albany	Sewer extensions	Approved
1-29	Stanfield	Treatment plant relocation	Action deferred
1-30	Pendleton	Sherwood Heights, sewer rev.	Approved
1-30	Roseburg	Sewer extensions	Not approved
1-31	Pendleton	Sewer extensions	Approved
1-31	Westfir	Sewerage project	No action
2-5	Riddle	Public Housing Sewerage	Prov. approval
2-5	Stanfield	Revised plant site	Prov. approval
2-7	Tillamook County	Short Sand Beach, State Park sewerage system	Action deferred
2-8	Eugene	Willis Addition-sewers	Approved
2-14	Hermiston	Sewer extensions	Approved
2-14	Toledo	Treatment Plant (rev. plans)	Not approved

Date	Location	Project	Action Taken
2-15	Forest Grove	20th Pl.E. of Hawthorne,sewers	Approved
2-15	Lane County	Willamette H. School-sewerage	Approved
2-15	Marion County	Jefferson H.School-sewerage	Approved
2-19	Sheridan	Sewage Treatment Plant	Con.approval
2-20	Astoria	Tongue Point Naval Station sewer extensions	Approved
2-20	Pendleton	Treatment Plant Additions	Approved
2-25	Heppner	Preliminary Report	Approved
2-27	Imbler	High School-sewerage	Not approved
2-28	Toledo	Treatment Works(rev.plans)	Prov.approval
2-29	Hermiston	Oman Addition-sewer extensions	Approved
3-03	Forest Grove	Sanitary Sewer Lateral on D St. and 21st Place	Approved
3-4	Gold Hill	Sewage Plant Additions	Provisional Approval
3-4	Lane County	Septic Tank Construction	Not approved
3-6	Sandy	Sewage Treatment Plant (revised plans)	Prov.approval
3-6	Enterprise	Preliminary report	Action deferred
3-7	The Dalles	Sewer extensions	Approved
3-10	Hermiston	Sewer extensions	Approved
3-11	Multnomah County	West Powelhurst School sewerage	Approved
3-11	Springfield	M & N Sts.,sewers	Approved
3-11	Springfield	East of 21st St.,sewers	Not approved
3-14	Hermiston	Oman Addition-sewer extensions (revised plans)	Approved
3-18	North Bend	Sewer Extensions	Approved
3-19	North Bend	Sewer Extensions	Approved

INDUSTRIAL WASTES:

Crown Zellerbach Corporation, West Linn Mill: The Chairman read a letter from Crown Zellerbach Corporation, dated March 6, 1952, in which the

ABG759

progress made at the West Linn Plant was reported and a request was made for a postponement of the effective date of the Order previously issued by the Authority from May 1, 1952, to July 1, 1952. MOTION by Mr. McPhillips, seconded by Mr. Veatch, and carried, that the Authority accede to the request of the Crown-Zellerbach Corporation for a postponement of the effective date of the Order to July 1, 1952.

Crown Zellerbach Corporation, Lebanon Mill: The Chairman read a letter from Crown Zellerbach Corporation, dated March 6, 1952, in which the progress made at this plant and plans for complying with the Order of the Authority to abate pollution were reviewed, and which contained a request that the effective date of the Order be postponed from May 1, 1952, to such time as permanent installation was possible, which they hoped would be in late March of 1953.

After considerable discussion of the matter it was concluded by the members that the Crown Zellerbach Corporation was progressing toward the abatement of pollution from this plant and was acting in good faith to comply with the Order. MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the Crown Zellerbach Corporation be informed as follows: Because in the opinion of the Sanitary Authority the Crown Zellerbach Corporation was acting in good faith and had made satisfactory progress, the Authority would not stand upon its Order of May 12, 1952, requiring that facilities for the abatement of pollution caused by said mill be completed by May 1, 1952; provided the Crown Zellerbach Corporation would keep the Authority fully informed of the progress being made by submission of reports every thirty days, and with the understanding that the Authority reserves the right to enforce the deadline date of May 1, 1952, if the Corporation fails to continue to make satisfactory progress in its program for pollution abatement.

Publishers' Paper Company, Oregon City: Mr. S. J. Robinson, Vice President; Mr. Carl E. Braun, Mill Manager; and Mr. Frank C. McColloch, Attorney, were present to represent the Company.

Mr. McColloch requested that the effective date of the Order of the Authority for abatement of pollution caused by Publishers' Paper Mill be extended two years

from the date May 1, 1952. Mr. McColloch explained that the Company had a three-fold program which included lagooning, use of waste sulphite liquor as a road binder, and investigation of the possibility of evaporation and burning.

Mr. Hallock expressed the opinion that permission should be given the company to do some experimenting but with the understanding that they would proceed without delay to effect the abatement of their share of the pollution. It was the conclusion of the members that the request for a 2-year extension could not be granted.

MOTION by Mr. Hallock, seconded by Mr. Stricklin, and carried - that the Authority defer enforcement of the deadline date of May 1, 1952, as stipulated in the Order of May 12, 1950; provided the Publishers' Paper Company proceeds forthwith and in good faith to develop plans and install facilities which will accomplish in full the required degree of abatement of pollution caused by the operation of said mill; that Publishers' Paper Company keeps the Authority informed every thirty days of progress being made in this matter; and providing further that the Authority reserves the right to reconsider the matter within ninety days in the light of the progress which is made in the meantime by said Company.

Columbia Slough Industries: Mr. George W. Mead, Attorney, appeared before the Authority to represent the following ten meat packing industries which discharge wastes into and thereby pollutes the waters of Columbia Slough: (1) Associated Meat Packers, Inc., (2) Stearns and Welch Meat Company, (3) Brander Meat Company, (4) J and C Cervetto Company, (5) B and B Ranch, (6) Clem Ponta Hog Feeding Farm, (7) Pacific Meat Company, (8) Portland Provision Company, (9) Bissinger and Company, and (10) Kenton Packing Company.

The other companies involved in this pollution problem who were not represented at the meeting include (1) Armour and Company, (2) Gem Meat Company, (3) Tony Cervetto Hog Feeding Farm, (4) Pete Wess Hog Feeding Farm, and (5) Portland Rendering Company.

Mr. Mead stated that advice had been requested from the Authority engineers and also from the city of Portland regarding connection of these industries to the Portland city sewerage system. He also said that some difficulty had been encountered in this matter of connection because it was going to be necessary to

ABG759

install pumping plants in some instances. Mr. Mead stated further that the city of Portland was not yet able to give the industries in question an answer as to whether or not they had legal authority to enter into a contract for such a connection and, if so, upon what basis the contract could be made with respect to the kind of wastes to be discharged into the system.

The matter is now before the city authorities for decision. As soon as an answer is obtained, the meat industries will proceed with plans to provide facilities as required. In view of this report, Mr. Mead asked that the matter be deferred until they could get an answer from the city.

Mr. Veatch was of the opinion that it would be necessary for the Columbia Slough area to form a sanitary district because then there would be no question of their being able to enter into a contract with the city. Mr. Mead thought it might be more logical to wait until they hear from the city before attempting to organize a sanitary district. Mr. Spies expressed serious doubt that a sanitary district could be organized under the existing statutes, which require a petition signed by twenty-five (25) residents and property owners of the area.

The dead line date for abatement of this pollution was March 1, 1952. Mr. Mead requested an extension of 90 days by which time they would be in a better position to present more definite facts. He also said that if the city refused to permit the connection to the Portland sewerage system, the meat industries will proceed at once to try to establish a sanitary district.

Mr. Walter J. Cosgrave, representing the Associated Meat Packers, also made the same request.

MOTION by Mr. Veatch, seconded by Mr. Hallock, and carried - that an extension of 90 days be granted during which time the matter of connecting to the Portland sewerage system shall be checked into thoroughly by the industries and the Authority kept advised of progress being made; and that if agreement cannot be made with the city for such a connection the industries shall provide other facilities of their own.

Hardwood Mill - Dee, Oregon: Mr. W. J. Runckel of the Oregon Lumber Company was present to represent the company in the matter of pollution of Hood River by wastes from the hardboard mill at Dee, Oregon.

Mr. Burgess, Assistant Sanitary Engineer of the Authority, reported on tests that had been run on samples of wastes and river water. These tests showed that excessive amounts of wood fiber were being discharged into the river.

Mr. Runckel advised that changes in the plant had since been made to control or prevent such discharge. It was decided by the Authority that no action was necessary unless further complaints were received in the future. Mr. Runckel was advised that the waters of Hood River must not be polluted by the wastes from the hardboard mill.

MUNICIPAL WASTE DISPOSAL:

Cloverdale Park Sewerage (Roseburg Homes, Inc., vs. North Roseburg Sanitary District): Mr. Wm. B. Murray, attorney representing Mr. H. R. Ketell, (Roseburg Homes, Inc.) and Edward M. Murphy, attorney, Clarence V. Landis, and John A. Anderson, representing the North Roseburg Sanitary District, were present regarding the sewage disposal problem at Cloverdale Park, a subdivision of the North Roseburg Sanitary District. Because of excessive ground water infiltration the Sanitary District had found it necessary to disconnect the Cloverdale Park Sewers from its system. This meant that the inadequate temporary disposal plant had to be put back into operation by the Roseburg Homes Corporation. This had resulted in pollution of the adjacent drainageway.

Mr. Murray claimed that Mr. Ketell could not be held responsible for this problem because there was considerable doubt as to whether he was still president of the Roseburg Homes, Inc. The contractor who built the homes and sewer system in Cloverdale Park, W. C. Smith, Inc., had apparently filed suit against the Roseburg Homes or against Ketell, and the suit had not yet been settled.

Ketell had, however, employed A. H. Mayne, Consulting Engineer, to inspect the Cloverdale sewers and to determine where they were defective and the causes for

ABG759

the excessive infiltration. It was also admitted that a relief sewer had recently been installed by Ketell or the Roseburg Homes, Inc., to prevent overloading of a sewer lateral within the subdivision.

Mr. Murray claimed further that the defects in the sewer system were the fault of the contractor. MOTION by Mr. Veatch, seconded by Mr. McPhillips, and carried - that communication be directed to the Corporation (not to any individual member) to correct the condition existing in the area within 60 days; and if the condition is not corrected within that time the matter will be referred to the Attorney General for action.

Lebanon: Dr. Peter F. Tweed, Mayor of Lebanon, and Mr. Ralph E. Roderick, consulting engineer, appeared before the Authority to request an appeal from a recent Authority ruling pertaining to the degree of treatment required for the city of Lebanon. The mayor advised that they had hired the firm of Cornell, Howland, Hayes & Merryfield in 1951 to prepare plans, and they are now working on these plans which will provide for primary treatment only. The Mayor also recalled the fact that the construction of Green Peter dam would probably be completed in the near future, and this would provide sufficient flow to take care of the sewage disposal problem. He said that, in the light of this contemplated construction, he did not believe a bond issue sufficient to provide complete treatment of the sewage would be considered favorably by the people.

Mr. Roderick advised that if complete treatment were going to be necessary, it would be cheaper to provide for it now rather than later. He estimated that primary treatment would cost \$230,000 and complete treatment about \$315,000. He stated further that the city now has \$160,000 on hand and will need a bond issue in any event.

Further discussion brought out the fact that there was no assurance at the present time just when the storage reservoirs would be built by the U.S.E.D. on the South Santiam River and that in the meantime complete treatment was absolutely necessary for the city of Lebanon.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that it is the conclusion of this Authority that complete treatment is necessary at this time and that, therefore, the city shall submit to this Authority at its next meeting final plans and specifications coupled with a program for financing complete treatment works.

Reedsport: Mr. B. A. Serfling, City Manager of Reedsport, appeared before the Authority to request an extension of existing sewers to serve an area in the center of town, which the city is contemplating opening up for residential development.

Mr. Spies called attention to a former request for extension of sewers in Reedsport, which after careful consideration had been refused. Mr. Serfling advised the Authority that the city was now in favor of starting some sort of sewer charge for the purpose of creating a sinking fund leading toward the construction of a sewage disposal plant. Mr. Serfling said the matter had been discussed at various Chamber of Commerce meetings. Present population of the city was reported as being about 3,000. The area in question will contain 150 homes. He stated further that the city was bonded at the present time for an extension to the water system and replacement of main pipe line to the extent of \$250,000, which was voted about a year ago. He requested advice as to what the actual needs were for sewage disposal at Reedsport.

Mr. Serfling was then advised by the Authority that only primary treatment would be needed for sewage which is being discharged into the Umpqua River and that sewage now being discharged into the Schofield River should be intercepted and disposed of in the same plant. Mr. Everts said that the city of Reedsport should realize that they will have to have a treatment plant, and that any sewer plans made now would have to lead toward an ultimate treatment plant. Mr. Serfling replied that he had understood that a treatment plant was not required at the present but would be at sometime, and that so far the Sanitary Authority had set no deadline for the construction of it.

ABG759

Mr. Wendel then advised Mr. Serfling that the Council should make a complete study of the whole matter including the cost of sewage treatment and submit a plan for the entire system and proposals for financing the same in order that the Authority could be better able to judge the request made by the city for extension of sewers.

MOTION by Mr. Hallock, seconded by Mr. McPhillips and carried - that the city of Reedsport be denied the permission of proceeding with their proposed sewer extension program and in the meantime be required to submit to the Authority before its next meeting preliminary plans for a complete sewerage system plus an adequate financial program for the same.

Government Camp: The following persons were present in regard to the matter of providing adequate sewage disposal for the Government Camp area;- Mr. Everett L. Darr, Mr. Herb Underdahl, Mr. James A. Mount, Mr. V. W. Farnsworth, Mrs. C. E. Loveland, Mrs. R.O. Calkin, and Mr. Warren C. Huff.

Mr. Cuyler reported on the meeting he had attended at the Mountain View inn at Government Camp on April 21, 1952. There was some discussion as to the need and cost and how the matter of providing proper adequate sewage disposal facilities could best be handled. (The assessed valuation of the area was estimated at only \$25,000.) It was brought out in this discussion that, perhaps, due to the fact that so many non-residents flocked to the area on week-ends and holidays, some assistance might be obtained from the State Highway Commission, which operates State Parks, and from the U. S. Forest Service. It was decided, however, that the first step was to find out what the required sewerage system would cost.

MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that members of the community be advised to submit to the Authority within 90 days a preliminary survey and estimate of the cost for installing an adequate sewerage system; and that if they fail to do so the Authority will then issue abatement orders.

Coquille: C. Eugene Fields, Sanitarian for Coos County Health Department, appeared before the Authority to report that the city had advertised for bids which

will be opened on April 1, 1952, for the sale of timber in the municipal watershed. The funds from this sale are earmarked for sewage treatment only. He said that he believed the city was now acting in good faith even though they have not answered correspondence as requested by the Authority. No definite schedule had been set for construction of the project pending the sale of timber.

The secretary was directed to send a letter to the city of Coquille asking for a report on what they are doing toward financing and construction of the necessary sewerage system, which report must be received before the next meeting of the Authority.

Molalla: MOTION by Mr. Veatch, seconded by Mr. Stricklin and carried - that the Sanitary Authority refer this matter to the Attorney General and ask him to take whatever action he sees fit.

Tillamook Air Base: MOTION by Mr. Veatch, seconded by Mr. Stricklin and carried - that the Tillamook County Court be instructed to abate the pollution caused by the discharge of raw sewage from the Tillamook Air Base.

MARK TRAIL Pamphlet in Schools: MOTION by Mr. Stricklin, seconded by Mr. Veatch, and carried - that Mr. Everts be directed to purchase a supply of the Mark Trail pamphlets sufficient to meet the demand (for such a purpose).

The date of the next meeting was scheduled for June 27, 1952.

There being no further business, the meeting adjourned at 4:45 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.,  
Secretary and Chief Engineer

## MINUTES OF THE FIFTY-FIRST MEETING

OF THE

## OREGON STATE SANITARY AUTHORITY

June 27, 1952

The Fifty-first meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:10 P.M., Friday, June 27, 1952, in Room 720, State Office Building, 1400 S. W. Fifth Avenue, Portland, Oregon. Those present were Harold F. Wendel, Chairman; B. A. McPhillips, Elaine Hallock, Chas. E. Stricklin, and Dr. Harold M. Erickson, Members; Cecil B. Quesseth, Assistant Attorney General; Curtiss M. Everts, Jr., Secretary & Chief Sanitary Engineer; Kenneth H. Spies, Assistant Chief Engineer; and James R. Boydston, Fred J. Burgess, T.M. Gerow, Jr., and C.E. Oyler, Assistant Sanitary Engineers.

MINUTES: The minutes of the fiftieth meeting of the Authority having been prepared and submitted to the members in advance, it was MOVED by Mr. McPhillips, seconded by Mr. Hallock, and carried - that the minutes as prepared by the secretary be approved.

PROJECT PLANS: MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried - that the action taken by the technical staff on the following project plans and reports received and reviewed since the last meeting be approved:

Date	Location	Project	Action Taken
3-14	Stanfield	Lift Station	Not approved
3-20	Klamath Falls	School sewerage	Prov. approval
3-20	Drain	High School, sewerage	Not approved
3-24	Springfield	Sewers M & N; 12 & 13 (revised)	Approved
3-25	Enterprise	Prel. report	Approved
3-28	Beaverton	Lift station	Not approved
3-31	Stayton	Santiam Memorial Hospital, sewerage	Not approval
3-31	Silver Creek Falls	State Park Camping Area	Prov. approval
4-2	Emigrant Springs	State Park-sewerage	Prov. approval

Date	Location	Project	Action Taken
4-2	Klamath Falls	Comminutor installation	Approved
4-3	McMinnville	Sewer extension	Not approved
4-4	Tillamook County	Short Sand Beach State Park, sewage disposal facilities	Not Approved
4-4	Detroit Dam	Temporary sewage disposal	Prov. approval
4-7	Lane County	Clear Lake School-sewerage	Approved
4-7	Springfield	Sewer line-east of 21st	Not approved
4-9	Canyonville	Prel. Engineering Report	Approved
4-11	Tillamook County	Cape Lookout State Park-sewage disposal facilities	Prel. approval
4-16	Imbler	Revised plans-High School sewerage	Prov. approval
4-16	Multnomah	Parkrose Grade School-sewerage	Prov. approval
4-18	Washington County	Reedville School-sewerage	Prov. approval
4-21	North Bend	Sewer extensions	Prov. approval
4-25	North Bend	Sewer extensions	Prov. approval
4-25	Stayton	Sanitam Memorial Hospital revised plans	Prov. approval
4-29	Douglas County	Curtin School-sewerage	Not approved
4-29	Sandy	Plant revisions	Not approved
4-29	Reedsport	Public Housing-sewerage	Not approved
4-29	Springfield	Sewer extensions	Prov. approval
4-9	Portland	Pumping Plant, S.W. Sunset & Dosch	Approved
5-2	Toledo	Public Housing-sewerage (revised plans)	Approved
5-5	Sweet Home	Sewer extension	Approved
5-5	Hermiston	Sewer extensions	Approved
5-6	Cottage Grove	Sewage Treatment Plant	Prov. approval
5-9	Coos County	Alleghany School-sewerage	Not approved

ABG759

Date	Location	Project	Action Taken
5-9	Oswego	Sewer extensions	Approved
5-9	North Roseburg San. Dist.	Sewer extensions for annexations #1 & 2	Approved
5-12	Springfield	Sewer extension	Approved
5-13	Irrigon	School sewerage	Prov. approval
5-14	Corvallis	Interceptor & Outfall	Approved
5-14	Lincoln County	Spencer Creek State Park	Prel. approval
5-14	Lebanon	Sewer extension	Not approved
5-14	Coos County	Alleghany School-sewerage	Prov. approval
5-15	Myrtle Point	Sewer extension	Approved
5-15	Cape Lookout State Park	Sewerage Facilities	Approved
5-19	Oakland	Public Housing-sewerage	Prel. approval
5-20	Glendale	Prel. engineering report	Approved
6-9	Coos County	Radar Station-sewerage	Recom. changes
6-3	Forest Grove	Sewer laterals	Approved
6-9	Tillamook County	Garibaldi-Wheeler High School-sewerage	Not approved
6-11	Tualatin Hills S. Dis.	Sewage Disposal (Prel. plans)	Not approved
6-13	Eugene	Sewer lateral	Approved
6-13	Prairie City	Grade School-sewerage	Approved
6-13	Clackamas County	Clark School-sewerage	Recommendations
6-16	Douglas County	Tri-City School-sewerage	Not approved
6-20	Sandy	Sewer extension	Approved
6-20	Albany	Price School-sewerage	Action deferred
6-23	Lane County	Cal Young, Jr., High School Sewerage	Approved
6-23	Tillamook County	Garibaldi-Wheeler High School Sewerage-Rev. Plans	Not approved
6-24	Douglas County	Tri-City School-sewerage (rev. plans)	Approved

Cloverdale Park Sewerage Disposal Citation Hearing:

Citations dated June 6, 1952, had been sent by registered mail commanding that the Cloverdale Water Company, Roseburg Homes, Inc., Mr. H. R. Ketell, and the North Roseburg Sanitary District appear and show cause, if any exists, why the owner or owners of the Cloverdale Park sewerage system should not be required to abate the stream pollution and public nuisance caused by the operation of said facilities.

Mr. Wm. B. Murray, Attorney, 525 Failing Building, Portland, Oregon, represented the Cloverdale Water Company and Mr. H. R. Ketell; Mr. Raymond P. Underwood, Attorney, 1001 Board of Trade Building, Portland, Oregon represented the Roseburg Homes, Inc.; and Mr. E. M. Murphy, Attorney, P.O.Box 959, Roseburg, Oregon, represented the North Roseburg Sanitary District.

The citations as issued by the Sanitary Authority were read by Mr. Everts. A detailed report prepared by the engineering staff of the Authority was read by Mr. Spies. This report presented a complete record of the case and an outline of the findings of a recent sanitary survey as well as conclusions and recommendations. The report, dated June 27, 1952, and entitled "Complaint" is on file in the office of the Sanitary Authority.

Mr. Wendel then asked the parties present if they agreed with the statements as read by Mr. Spies.

Mr. E. M. Murphy, representing the North Roseburg Sanitary District, stated that he agreed fully with them.

Mr. Wm. B. Murray, representing the Cloverdale Water Company and Mr. H. R. Ketell, stated that he was not in a position to answer as to whether or not he agreed with the statements as read by Mr. Spies inasmuch as he was not acquainted with all the facts and had not had an opportunity to study them. He claimed that the Cloverdale Water Company, whom he represented, was the owner of Cloverdale sewerage system but that since July 24, 1951, when the Sanitary Authority ordered the system connected to the North Roseburg Sanitary District System, the management, control, and operation of the Cloverdale sewer system

ABG759

had been the responsibility of the Sanitary District.

Mr. Murray claimed further that the Cloverdale Park subdivision had been annexed to the North Roseburg Sanitary District. The files of the Authority, however, show that the subdivision was a part of the original sanitary district when the latter was first organized. Mr. Murray presented answers in writing to the citation issued to his two clients, Mr. H. R. Ketell and the Cloverdale Water Company. Such documents have since been made a part of the Sanitary Authority in this case.

Mr. Raymond P. Underwood, representing Roseburg Homes, Inc., claimed that his client had not been properly informed of the hearing. Mr. Murray stated that the citation to said corporation had been received by the office of Mr. H. R. Ketell but that although Mr. Ketell was a director of the corporation there was some doubt as to whether or not he could represent the corporation. He stated further that the matter of straightening out the question of who the officers of the corporation are is now before the State Supreme Court.

Mr. Underwood, upon being questioned, stated that the headquarters of the Roseburg Homes, Inc., were in Roseburg, Oregon. Mr. Spies pointed out that the registered copies of the citation which had been sent to the Roseburg office of the corporation had been returned to us by the post office department as being unclaimed. Mr. Underwood stated further that he was not acquainted with the facts in this matter and that, therefore, he was not prepared to say if he agreed with the statements read previously by Mr. Spies.

At this point Mr. Hallock remarked that it was his recollection and understanding that this matter has been of serious and considerable annoyance not only to all the people involved but to the Authority as well; that the engineering staff of the Authority has expended considerable time and effort in ascertaining what it definitely assumes to be findings of fact in the case, has made complete investigations and has given to the members of the Authority the benefit of its findings, on which findings the Authority has cited these various parties to appear and show cause why the nuisance and

pollution should not be abated; and, that it is now evident, as it has been before, that the difficulty apparently results from a misunderstanding regarding who the officers of these various concerns may be and just where the responsibility lies. He stated further, "It appears we have put up with this type of defense long enough, and I, therefore, MOVE that this Authority adopt an order directed against all of the parties to whom the citations were addressed requiring that the pollution be abated within ten days from the date of such an order; otherwise, the matter will be directed to the attention of the Attorney General with the request that he institute appropriate action." The motion was seconded by Mr. McPhillips, and carried.

MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried - that the statements of record as contained in the report read by Mr. Spies be deemed the FINDINGS OF FACT of the State Sanitary Authority regarding the matter and that they constitute the basis of said order.

Columbia Slough Industries:

Mr. Irving Rand, Attorney, Public Service Building, Portland, appeared in the absence of Mr. George W. Mead, as representative for the Columbia Slough industries. Mr. Rand referred to the letter of June 6, 1952, which had been sent to the Authority by Mr. Mead requesting another 90-day extension of time on behalf of the Columbia Slough Industries to allow them further opportunity to obtain permission from the city of Portland for connecting to the Portland sewerage system in order to abate pollution existing by reason of these industries. Mr. Rand reported that Commissioner William A. Bowes of the city of Portland who received the request for connection to the Portland sewerage system has not yet make a report to the City Council, and therefore the Columbia Slough industries were still not sure what method they would have to use to abate their share of the pollution. Mr. Wendel reported that he had been informed that it would probably be five or six months before this decision by the city would be made. MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried -

ABG759

that the request of Mr. Mead through Mr. Rand for 90 days extension of time in which to accomplish this connection be granted; provided that, if within that period it becomes apparent that such connection is not to be permitted, the clients represented by Mr. Rand and Mr. Mead shall submit to the Authority an alternate plan of a reasonable method for abating said pollution.

City of Molalla Sewage Disposal Citation Hearing:

A citation dated June 13, 1952, had been sent by registered mail commanding the Mayor and City Council to appear and show cause, if any exists, why appropriate proceedings should not be instituted against the city of Molalla for the purpose of abating the nuisance created by the disposal of the sewage of said city in the public waters of the State of Oregon.

The following persons representing the City of Molalla were present at the meeting; Fred Averill, Mayor, Glenn M. Onion, Oswald Marson, R. F. Morrow, P. K. Stafford, P. Jan, T. F. Johnson, J. J. Waller, and James O. Goodwin, attorney for the city.

The citation as issued by the Sanitary Authority was read by Mr. Everts.

Mr. James O. Goodwin, attorney, stated that he and representatives of the city had read the report as prepared by the engineers of the Sanitary Authority. Mr. J. R. Boydston described briefly the history of the case and the findings of a recent sanitary survey and read in detail the conclusions and recommendations set forth in the report. This report, dated June 27, 1952, and entitled "Complaint" is on file in the office of the Sanitary Authority.

Mr. Goodwin said he believed there had been some misunderstanding between the city of Molalla and the Sanitary Authority with regard to some maintenance work done there sometime ago. He claimed that the project involved only an old pipe that was taken up and a new one installed in its place. He stated further that the city of Molalla had hired Clark and Groff, Consulting Engineers, to do some planning and to make a report to the city on a long range program.

Mr. Waller, city water superintendent, reported on the condition of Creamery Creek. He said that during the summer the water in Creamery Creek consists only of septic tank effluent from the city of Molalla and the sewage from a 40-unit housing project. He stated that there are nine irrigation projects using this water below the city of Molalla and that they take virtually all the flow during the summer.

Mr. Boydston reported that a sanitary survey made during June showed that the waters of Creamery Creek inside the city limits of Molalla were polluted to such an extent that they had all the characteristics of untreated sewage. He also stated that Creamery Creek flows into Gribble Creek which is a tributary of the Molalla River. The Molalla River is used extensively for swimming and boating during the summer months. Mr. Boydston introduced pictures made during the sanitary survey which showed the sewers discharging into Creamery Creek in the City of Molalla.

Correspondence between the City of Molalla and the Sanitary Authority was read by Mr. Wendel.

Mr. Waller said the city officials realized the seriousness of the situation, but that a report of the engineers indicated the cost of an adequate sewage collection system would be about \$154,000 and if a treatment plant were included the total cost would be about \$219,000. He said the city could not afford this amount of indebtedness. He reported that in Molalla there are 629 water connections. The 1951 assessed valuation of the city is \$1,140,000 and outstanding bonded indebtedness is only about \$45,000. Mr. Lloyd Clark of the firm of Clark & Groff, Engineers, submitted a cost estimate for the construction of certain sanitary sewers in Molalla.

Mr. Boydston reported that the city had recently installed a sewer lateral after receiving notification by the Sanitary Authority that approval of the plans was being withheld pending receipt of information from the city indicating progress toward construction of a sewage treatment plant.

Mr. Goodwin asked approval of a plan whereby the city would construct trunk and lateral sewers and delay construction of a sewage treatment plant until later. He reported that the city had recently adopted a sewer-user charge of 50¢ per month on

ABG759

each water connection. The city representatives said the city was now bonded to the full extent of charter limitations. Mr. Spies pointed out, however, that it was possible to amend the charter to obtain ample bonding capacity for sewerage construction, and that this has been done in many other Oregon communities.

MOTION by Mr. Hallock, seconded by Mr. McPhillips and carried that a final order be adopted by the Sanitary Authority directing the city of Molalla to abate the pollution caused by the discharge of untreated sewage within fifteen (15) months from the date of said order and that the city submit to the Authority without unreasonable delay a progress report on the financing and construction of the required sewerage facilities; and further that the Authority adopt as its FINDINGS OF FACT the report prepared by the engineering staff of the Sanitary Authority and entitled "Complaint".

City of Reedsport Sewage Disposal:

The following officials from the City of Reedsport appeared before the Authority in connection with their request for permission to install two separate sewer extension projects and to discharge raw sewage temporarily into the Scholfield River: B. A. Serfling, City Manager; Tom Lillebo, Mayor; O. H. Hinsdale, Councilman; and F. S. Zeidlhack, Consulting Engineer.

Mr. Wendel read the motion which had been adopted at the March 21 meeting regarding this matter. Mr. Everts read two resolutions which had been adopted by the Reedsport City Council on June 9, 1952, and which declared it to be the intention of the city to proceed as rapidly as possible to install the sewage disposal facilities required to abate pollution in the Scholfield River. Although the resolutions set forth the intentions of the council, they did not include any commitments regarding definite time schedules or detailed methods of financing.

Mr. Serfling explained the problems confronting the City Council in this matter. He stated that there is a critical need for additional housing in the vicinity of Reedsport and that recently the area has, in fact, been declared a critical housing area by the Federal Government. He stated that based on the 1951 assessed valuation

of the city of \$2,114,977 the total-bonded indebtedness, including school bonds, is now approximately 20.1%; that because of this fact and also because the city had defaulted on a bond issue several years ago, the sale of a sewage disposal bond issue at the present time would be impossible. He also expressed a doubt that the voters themselves would approve a bond issue for this purpose.

Mr. Serfling reported further that the council was planning to adopt a sewer-user charge equivalent to 10% of the water bill and that such a charge would amount to about \$4,000 per year. He claimed that some consideration had been given to a minimum sewer-user charge of \$1.00 per connection per month which would amount to some \$8,000 per year but that such a proposal had met with too much opposition from the residents of the city.

Mr. Spies than presented a map of the city which outlined the proposed sewer extension projects and also the projects required to comply with the water pollution control program of the Authority. In addition the map showed the costs of the various projects as estimated by F. S. Ziedlhack, Consulting Engineer.

The two projects for which the city had requested permission to construct immediately were: (1) the Winchester Avenue sewer to serve the High School and adjoining property owners - estimated cost \$16,200; and (2) sewer extensions for the proposed housing development in the lower section of the city - estimated cost \$28,400. Both of these projects would discharge untreated sewage into Scholfield River. Their cost would be financed by direct property assessment. In order to connect these two proposed projects with an existing outfall sewer which discharges into the main Umpqua River and thereby to comply with the requirements of the Authority's pollution control program, the following three projects would be needed; (1) Scholfield River crossing (siphon) and Winchester Avenue trunk extension - estimated cost \$38,750; (2) sewage lift station and pressure sewer - estimated cost \$35,150; and (3) outfall sewer extensions - estimated cost \$3,680.

It was the opinion of the city officials that these three latter projects could

ABG759

not be financed at the present time. The urgent need for sewer service at the high school was pointed out by both Mr. Serfling and Mr. Spies.

Dr. Erickson stated that in view of the public health significance of the problem he did not see how the Authority could approve the request of the city for permission to discharge raw sewage into Scholfield River. It was the conclusion of Mr. Hallock that the city officials had not exhausted all possible methods for financing the required sewage disposal facilities.

Following more discussion regarding the high school sewage disposal problem MOTION by Mr. Hallock, seconded by Dr. Erickson, amended by Mr. McPhillips, and carried - that the application of the city of Reedsport to install the upper Winchester Avenue sewer to serve the high school and to discharge on a temporary basis raw sewage from the same into Scholfield River be granted with the following provisions: That no connections to said sewer other than the school be permitted except for immediately adjacent property owners who contribute toward its cost of construction; that the city council proceed without delay and in good faith to submit to the voters at the forthcoming general election in November 1952 a bond issue in amount sufficient to construct the Scholfield river crossing and connecting Winchester Avenue trunk, and finally that should the proposed bond issue fail to carry, the approval hereby granted shall be deemed automatically cancelled and withdrawn.

Further discussion then took place regarding the other request of the city of Reedsport for permission to extend sewers in the lower section of the city. MOTION by Dr. Erickson, seconded by Mr. McPhillips, and carried - that the request of the city of Reedsport to extend sewers to the proposed residential development in the lower portion of the city be rejected.

Spaulding Pulp and Paper Company:

Mr. O. M. Allison, Secretary of Spaulding Pulp & Paper Company, appeared before the Authority to support the request of that Company for an extension in time under the Sanitary Authority Order of May 12, 1950. He reported that the mill was not operating at the present time and by July 15, 1952, when operations

would be resumed that the impounding reservoir or storage lagoon would be completed so that the concentrated sulphite waste liquor would not be discharged into the Willamette River during the period of low stream flow.

Because it appeared that the Spaulding Pulp and Paper Company had proceeded in good faith to comply with the Order of May 12, 1950, MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the request of the Spaulding Pulp and Paper Company for an extension of time until July 15, 1952, from the original date of May 1, 1952, be approved.

Tualatin River - Public Hearing:

A notice that a public hearing was to be held on this date had been sent to all cities, industries, individuals and others interested in or concerned with the pollution and abatement thereof of the public waters of the Tualatin River system.

The following persons were present; John H. Frederick and A. S. Hamilton, representatives of the recreational interests; L. L. MacIntyre, County Engineer, and Harry M. Seabold, County Judge, representatives of Washington County; Mayor Wm. Heesacker, Gaston; City Manager J. W. Barney, Hillsboro; City Engineer A. M. Klein, Forest Grove; and C. Smith, Forest Grove; M. O. Gardner, Forest Grove; municipal representatives; M. Batalgia and Philip E. Hodel, representatives of riparian property owners and residents; O. W. Frost, representative of Forest Fiber Products Company; and R. C. Halloway and Loren K. Parcher, representatives of the State Game Commission.

The hearing was started by the reading of the notice, a copy of which is contained in the Sanitary Authority files. Mr. Fred Burgess, Assistant Sanitary Engineer, then presented a report which included a history and description of the pollution control program for the Tualatin River Basin. This report entitled "Memorandum" is also on file in the office of the Sanitary Authority.

A discussion was held regarding the proposed order to prohibit during the period of May 1 to October 1 of each year the discharge of any sewage or wastes, or the conducting of any operations which would in any manner impair the quality

ABG759

of the downstream waters for recreational and other beneficial uses. Mr. O.W.Frost stated that, unless he misunderstood the intent and meaning of such an order, he considered it too restrictive.

A letter from the State Game Commission dated June 20, 1952, was read by Mr. Everts. In this letter the Game Commission requested that all sand and gravel operations be excluded from the Tualatin River and its tributaries during the period April 15 to October 15 of each year in order to protect both sport fishing and fish propagation.

Mr. Frederick described the extent and effects of pollution upon the recreational developments on the Tualatin River. Mr. Hotell of the Tualatin River Protective Association discussed the pollution which has existed in the past and the effects of the same upon riparian property.

Following further discussion of the proposed order, MOTION by Mr. Hallock, seconded by Mr. McPhillips and carried - that the facts contained in the report as presented by Mr. Burgess be adopted as a FINDINGS OF FACT; and a final order is hereby adopted requiring that all sand and gravel operations shall be excluded from the Tualatin River and its tributaries during the period from April 15 to October 15 of each year; and further that all such operations be so conducted that they will not cause turbidity or other conditions in the downstream waters which would be detrimental to fish life or recreational uses.

Consideration was then given to the problem of waste disposal from the Forest Fiber Products hardboard mill located on Scoggins Creek, a tributary of the Tualatin River.

MOTION by Mr. Hallock, seconded by Mr. McPhillips and carried - that based on the FINDINGS OF FACT as previously adopted, it is hereby ordered that no person, firm, or corporation shall at any time through any process or operation cause pollution of the public waters of the Tualatin River and its tributaries in violation of the standards of purity for waters of the state of Oregon as adopted by the Sanitary Authority.

Government Camp Sewage Disposal:

The secretary read the following motion which had been adopted at the March 21, 1952, meeting: "That members of the community be advised to submit to the Authority within ninety days a preliminary survey and estimate of the cost for installing an adequate sewerage system, and that if they fail to do so, the Authority will then issue abatement orders".

Mr. Lloyd Clark of Clark & Groff, Consulting Engineers, appeared before the Authority and reported that his firm had been retained by the Government Camp Community Club for the purpose of making a preliminary study and estimate of cost of the most practical method of solving the sewage disposal problem confronting this community. Mr. Clark stated that the preliminary report had not yet been completed but that an estimate of the cost of constructing a public sewer system and treatment plant for the area had been made. He then presented to the Authority a copy of a map showing the proposed layout of the sewer system. His estimated cost was \$43,000 for the sewer system and \$19,500 for the treatment plant giving a total estimated cost of \$62,500 for the entire proposed project. Mr. Clark also pointed out that this preliminary information had not as yet been submitted to the officials of the Community Club and therefore he had no information as to what action that group would take in the matter. There was no official representative of the Government Camp Community Club present at the meeting.

Mr. Everett Darr, a member of the Club, was present but stated that he was appearing merely as an individual property owner of the community. Mr. Darr expressed the opinion that unless financial aid could be obtained from some outside source the property owners of Government Camp would not be able to finance such a large project. He also expressed the doubt that the majority of the property owners were sincere in their efforts to solve this problem of sanitation. He stated that in the past he had found it necessary to take legal action against certain individuals in order to have insanitary conditions abated and that he was willing to take such action again if it was necessary to do so. He claimed that

ABG759

pollution and nuisance caused by the over-flow of sewage was so obnoxious that at times it was necessary to use lime in order to control the odors in the vicinity of his residence. He emphasized the need for immediate action and pleaded that the Authority do everything possible to expedite the matter.

Mr. Wendel stated that inasmuch as the Community Club had retained the consulting engineers to make a preliminary study and report it appeared that they were making a serious effort to solve the problem.

Mr. Clark, in response to a question from the Authority members stated that his complete report would be ready for presentation to the Community Club within about thirty days and that in the meantime the Community Club could take no further action in the matter.

In view of this information the members of the Authority advised Mr. Clark that further consideration would be deferred for another thirty days pending the completion of a report by the consulting engineers and the subsequent action taken by the members of the Community Club.

Publishers Paper Company:

Mr. Everts presented progress reports from the company in the matter of waste disposal and compliance with the Order of May 12, 1950. The reports were considered to be an indication that the Company is proceeding in good faith and they were therefore approved.

Crown-Zellerbach Corporation:

Mr. Everts read the progress reports from this company regarding the waste disposal programs at Lebanon and West Linn. The reports were approved.

Municipal Sewage Disposal:

Following the consideration of a report by Mr. Everts it was moved, seconded, and carried - that the following cities be cited to appear at the next meeting of the Authority and show cause, if any exists, why a final order should not be entered against them requiring abatement of their sewage pollution:

- (a) Toledo                    (d) Coquille                    (g) Nehalem                    (j) Mount Angel  
 (b) Lebanon                    (e) Newport                    (h) Vale  
 (c) Myrtle Point                    (f) Wheeler                    (i) Nyssa

Budget for 1953-1955 Biennium:

Action on the proposed budget for the 1953-1955 biennium was deferred until the next meeting.

Date of next meeting:

The Chairman was authorized to call a special meeting for July 18, 1952.

There being no further business the meeting adjourned at 6:00 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
 CURTISS M. EVERTS, JR.,  
 Secretary & Chief Engineer

MINUTES OF THE FIFTY-SECOND MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

July 18, 1952

The fifty-second meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 10:05 A.M. Pacific Daylight Savings Time, July 18, 1952, in Room 720 of the State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson, B. A. McPhillips, Elaine Hallock, John C. Veatch, and Chas. E. Stricklin, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; Cecil H. Quesseth, Assistant Attorney General; Clarence E. Cuyler, T. M. Gerow, Jr., Fred J. Burgess, and James R. Boydston, Assistant Sanitary Engineers.

MINUTES: The minutes of the fifty-first meeting having been prepared by

ABG759

the secretary and distributed to the members prior to the meeting - MOTION by Mr. McPhillips, seconded by Dr. Erickson, and carried - that the minutes as prepared by the secretary be approved.

Complaints: B. A. Kliks (Stream near Multnomah Farm), Wood Village:-

Mr. B. A. Kliks appeared before the Authority and filed a complaint relative to the pollution in a small unnamed stream on his property. It was alleged that said pollution was caused by the discharge of inadequately treated sewage from the Wood Village sewerage system. Mr. Kliks stated that this stream eventually finds its way into the Columbia River. He explained the location of his property with respect to the creek and discussed the division of his land following government purchase in 1944. He also reported that an additional complaint would be forwarded to the Authority later by a dairyman in the area.

The engineering staff was directed to make the necessary investigations to determine the extent and source of pollution and to report back to the Authority at the next meeting when further consideration would be given the matter.

Public Hearings:-

City of Coquille Sewage Disposal Citation Hearing:-

The Chairman asked if there was anyone present who wished to appear in behalf of the city of Coquille. There was no one present to represent the city.

Mr. Everts reported briefly on his telephone conversation of July 16 with Mr. Tallant Greenough, City Attorney of Coquille. Consideration was then given to the report as prepared by the engineering staff pertaining to this case.

MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that the Authority adopt as FINDINGS OF FACT the report submitted to the Authority by its engineering staff in the matter of disposal of effluent from the sewerage system of the city of Coquille in the public waters of the State of Oregon.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that based on the Findings of Fact the Authority enter an order requiring the city of Coquille to install and place in operation by not later than July 1, 1953,

such sewage and waste treatment works as are necessary for the abatement of pollution caused in the public waters of the Coquille River by the discharge therein of untreated sewage from the city of Coquille.

City of Lebanon Sewage Disposal Citation Hearing:-

The Chairman asked if there was anyone present who wished to appear in behalf of the City of Lebanon. Mr. Ralph Roderick of the engineering firm of Cornell, Howland, Hayes & Merryfield was present and stated that he expected two members of the Lebanon City Council to be present, but they had failed to appear and he was not in a position to represent the city in the matter. Consideration was then given to the report as prepared by the engineering staff pertaining to the case.

MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that the Authority adopt as FINDINGS OF FACT the report submitted to the Authority by its engineering staff in the matter of disposal of effluent from the sewerage system of the city of Lebanon in the public waters of the state of Oregon.

MOTION by Mr. Veatch, seconded by Mr. Hallock, and carried - that based on the Findings of Fact the Authority enter an order requiring the city of Lebanon to install and place in operation by not later than July 1, 1953, such sewage and waste treatment works as are necessary for the abatement of pollution caused in the public waters of the South Santiam River by the discharge therein of untreated sewage from the city of Lebanon.

Prior to calling for a vote on these motions, the Chairman had asked if anyone present wished to be heard further.

City of Mount Angel Sewage Disposal Citation Hearing:

In the matter of the disposal of sewage from the City of Mount Angel in the public waters of the State of Oregon, the following appeared in behalf of the city:- Jacob Berchtold, Mayor; and J. M. Wagner, Louis A. LeDoux, Carl J. Mucken, and Albert Ebner, City Councilmen.

At the request of the Chairman, Mr. Everts read the citation served on the Mayor and City Council of the city of Mount Angel, and then read the report of

ABG759

the Authority's engineers and the chronological history of the case.

Mayor Jacob Berchtold, city of Mount Angel, stated that in 1939 the city had constructed a new outfall sewer to change the point of discharge from an unnamed creek to the Pudding River. The mayor also stated that he and members of the city council had recently inspected the outfall line and the river at the point of discharge and could detect no odors. Mayor Berchtold pointed out that the Pudding River is about 5 to 30 feet deep, that they have had no complaints from property owners and that he did not believe the river to be seriously polluted. The mayor reported that in 1948 the city had engaged the firm of Cunningham & Associates to design a sewage treatment plant, and that because the Mount Angel Cooperative Creamery uses city sewers for the disposal of its wastes, the State Board of Health was at that time requested to furnish the city with data on the strength and quantity of creamery wastes. He said a study had been made but the creamery officials questioned the fact that the results showed their wastes to be equivalent to a population of 3,000, especially since operations at the creamery had changed since 1948. Mayor Berchtold stated that until the State Board of Health could make another survey of the creamery wastes, no decision could be made as to apportionment of costs for sewage treatment plant construction between the city and the creamery.

The mayor believed that a new sewage treatment plant was needed but thought it would be difficult to finance at the present time.

Mr. Wendel stated that the Sanitary Authority had been attempting to bring about voluntary compliance since 1939 and that during the war period, the Authority made every possible effort to get cities and industries to prepare plans and establish sinking funds so that they could proceed with construction when the war was over. He pointed out that a period of thirteen years had elapsed since the law became effective, and that cities have had ample time to prepare for the construction of sewage treatment plants.

Mayor Berchtold stated that the city had a sinking fund of approximately

\$23,000. that the present population of the city was about 1,300, that the assessed valuation was \$691,000 and the bonded indebtedness was around \$50,000.

Mr. Hallock stated that he was of the opinion that it was apparent from the declarations made by the report of its staff that the Authority had been extremely patient with the city of Mt. Angel, and that through the assessment of certain tax levies, the accumulation of funds and monies available through the Federal Works Agency, the city should have been long ago able to proceed with the program in good faith.

Mr. Mucken stated that the city would not be able to proceed with plans until further studies of the creamery wastes had been made and that the city was waiting for the Authority's staff to perform these tests for them.

Mr. McPhillips then pointed out to Mr. Mucken that it was not within the province of the Sanitary Authority to determine what share of the cost of the treatment works should be borne by the city and by the industry, and that the city should request their consulting engineers to study the problem and make recommendations.

Mr. Hallock then stated that non-compliance by the city with the pollution control laws of the state was obvious, that the statutes were clear and that the Authority could not be confronted with a possible misunderstanding between the city and the creamery as to how expenses should be shared.

MOTION - It was moved by Mr. Hallock, seconded by Mr. McPhillips and carried - that the report as read by the secretary be adopted as FINDINGS OF FACT in the matter of the disposal of effluent from the sewerage system of the city of Mount Angel in the public waters of the state of Oregon.

MOTION - It was moved by Mr. Hallock, seconded by Mr. McPhillips, and carried - that based on the Findings of Fact, the hearing conducted at this time and the presentation made by the city of Mount Angel, that the Sanitary Authority enter an order at this time requiring the city of Mount Angel to install and place in operation by not later than July 1, 1953, such sewage and waste treatment works

ABG759

as are necessary to abate the pollution caused in the public waters of Pudding River by the discharge therein of inadequately treated sewage.

Prior to calling for a vote on the above motions, the chairman had asked those present if anyone wished to be heard further.

City of Myrtle Point Sewage Disposal Citation Hearing:-

The chairman asked if there was anyone present who wished to appear in behalf of the City of Myrtle Point. There was no one present to represent the city.

Mr. Everts read a letter dated July 16, 1952, and received from the Myrtle Point city attorney, and also a copy of letter from the engineering firm of Cornell, Howland, Hayes, & Merryfield. Both of these letters are on file with the sanitary Authority.

Consideration was then given to the report as prepared by the engineering staff on this case.

MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that the Authority adopt as FINDINGS OF FACT the report submitted to the Authority by its engineering staff in the matter of disposal of effluent from the sewerage system of the city of Myrtle Point in the public waters of the State of Oregon.

MOTION by Mr. Veatch, seconded by Mr. McPhillips, and carried - that based on the Findings of Fact the Authority enter an order requiring the city of Myrtle Point to install and place in operation by not later than July 1, 1953, such sewage and waste treatment works as are necessary for the abatement of pollution caused in the public waters of the Coquille River by the discharge therein of untreated sewage from the city of Myrtle Point.

City of Nehalem Sewage Disposal Citation Hearing:-

In the matter of sewage disposal from the city of Nehalem into the public waters of the state of Oregon, the following appeared in behalf of the city: Mayor Alvin P. Vedder and Oscar L. Haugen, Councilmen.

At the request of the Chairman, Mr. Everts read the citation served on the Mayor and City Council of the city of Nehalem and then read the report of the

Authority's engineering staff and the chronological history of the case.

Mayor Vedder stated that Nehalem was a very small city and that it appeared to him it was unreasonable to demand that the city build a sewage treatment plant. He stated that the sewage was actually discharged near the mouth of the Nehalem River and that it was his opinion that very little pollution was being caused. He also pointed out that it was his understanding that a sewage lift station would be required as well as a sewage treatment plant, and that he did not see how the city could finance such construction at this time.

Mr. Wendel then asked the members of the staff how much pollution was being created by the city of Nehalem. Mr. Spies stated that although Nehalem was a small community and the quantity of sewage was not great, the discharge of such sewage into the public waters of the state was nevertheless contrary to the public policy of the state, and that permission had originally been granted by the Sanitary Authority for the construction of sewers in the city of Nehalem on the basis of a promise by the city that they would submit a bond issue to the people at the general election in 1946 to provide funds for the construction of the plant. Mayor Vedder then stated that a bond issue in amount of \$18,000 had been voted in 1946 but the bonds had never been offered for sale. It was his opinion that the money available through the bonds would be insufficient to construct the needed sewerage facilities. Upon being questioned by Mr. Wendel, the Mayor stated he did not know what the bonded indebtedness of the city was. Mr. Vedder reported that the city now has a sewer-user charge of 65¢ per residence and \$1.00 per business establishment per month. The present population of the city is 278 and that as near as he could remember there were approximately seven business establishments connected to the city sewers at the present time.

It was Mr. Hallock's opinion that the Authority should defer action for the time being and until the other cities had been heard, but that the Authority should adopt the report of its engineering staff as FINDINGS OF FACT, and it was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the report of the

staff of the Authority as read by the secretary be adopted as FINDINGS OF FACT in the matter of disposal of effluent from the sewerage system of the city of Nehalem in the public waters of the state of Oregon; with the exceptions that the dates stated in line 5, paragraph 8 and line 3, paragraph 9 of the report be omitted, subjected to later determination. It was MOVED by Mr. Veatch, seconded by Mr. Hallock, and carried - that action in the case of Nehalem be postponed for the time being.

City of Newport Sewage Disposal Citation Hearing:

In the matter of the disposal of sewage from the city of Newport in the public waters of the state of Oregon, the following appeared in behalf of the city of Newport:- F. E. Gilkey, Mayor, and G. K. Litchfield, City Attorney.

At the request of the chairman, Mr. Everts read the citation served on the Mayor and City Council and then read the report of the Authority's engineering staff and the chronological history of the case.

Mayor Gilkey stated that when the estimated cost of approximately \$400,000 for the construction of sewerage works for the city of Newport was made known several years ago it did not appear that the citizens favored such a project. He stated that the city is now in the process of reducing the bonded indebtedness which had been incurred some twenty to thirty years ago. He advised that last month the city began the collection of a sewer-user charge which will produce a revenue of approximately \$1,500 per month. The mayor reported that as soon as the city was able to accumulate some funds from the sewer-user charges they plan to secure the services of a firm of consulting engineers to make the report on an estimate of cost and prepare engineering plans for the sewerage project. He indicated that a bond issue would be required to finance the project and that the public feeling in the city now is such that approval would be given for the bonds by the voters. The mayor further reported that there were some 600 families living in an area north of the city which is served by the Newport water supply system and that in making their plans for sewer and sewage treatment construction the city expected

to construct a system large enough to also serve this area. Mayor Gilkey said that the city is attempting to cooperate with the Authority and that they will move towards the solution of their problem as fast as possible.

Mr. Hallock was of the opinion that the city was finally realizing its responsibility but that in order to be assured that a bond issue adequate to accomplish the desired results would be proposed and supported by the city of Newport during the coming fall, it would be appropriate for the Authority to adopt an order fixing the time limit within which the treatment of sewage by the city of Newport should be accomplished. Mr. Hallock also stated that unless such an order were adopted the idea might still prevail that the city would not have to proceed in the matter of abating its pollution.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the report as read by the secretary be adopted as FINDINGS OF FACT in the matter of the disposal of effluent from the sewerage system of the city of Newport in the public waters of the state of Oregon. It was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried - that based on the Findings of Fact, the hearing conducted at this time, and the presentation made by the city of Newport, the Authority enter an order requiring the city of Newport to install and place in operation by not later than July 1, 1953, such sewage and waste treatment works as are necessary to abate the pollution caused in the public waters of Yaquina Bay and the recreational areas along the Pacific Ocean caused by the discharge therein of sewage from the city of Newport.

Prior to calling for a vote on these motions, the chairman had asked if anyone present wished to be heard further.

City of Nyssa Sewage Disposal Citation Hearing:-

In the matter of the disposal of sewage from the city of Nyssa in the public waters of the state of Oregon the following appeared in behalf of the city :

E. K. Burton, City Manager.

At the request of the Chairman, Mr. Everts read the citation served on the

AB0759

Mayor and City Council of the city of Nyssa and then read the report of the Authority's engineering staff and the chronological history of the case.

Mr. Burton stated that the city had been somewhat slow in placing their present sewage treatment plant in operating condition as there were several cities in the area who were not now treating their sewage and, therefore, the Nyssa City Council did not believe that much abatement of pollution could be accomplished by Nyssa's treating their sewage. Mr. Burton reported further that the repair parts necessary to place the Nyssa treatment plant in operation were on hand and that it had been planned to install these parts during the early part of the spring of 1952. He pointed out, however, that the city wished to make the installation with their own work crews, but that other work which was considered more urgent had caused a postponement of work on the sewage treatment plant. He stated that the work of repairing the sewage treatment plant could be accomplished this summer. He also pointed out that the city of Ontario was now depending upon wells as a source of domestic water supply but was uncertain as to whether the city continued to maintain its intake to the Snake River. Mr. Everts pointed out that as long as the intake was maintained, the Snake River would be considered as a source of water supply for Ontario and that, furthermore, the city of Weiser, Idaho, was using the Snake River as a source of water supply.

After a brief discussion of the matter it was MOVED by Mr. Hallock, seconded by Mr. Stricklin, and carried, that the Authority adopt as Findings of Fact the report of the staff of the Authority as read by the secretary in the matter of disposal of effluent from the sewer system of the city of Nyssa in the public waters of the state of Oregon.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the Authority enter an order requiring the city of Nyssa to install and place in operation by not later than December 31, 1952, such sewage and waste treatment works as are necessary to abate the pollution caused in the Snake River by the discharge therein of untreated sewage from the city of Nyssa.

Prior to calling for a vote on the above motions, the Chairman had asked if anyone present wished to be heard further.

City of Toledo Sewage Disposal Citation Hearing:

In the matter of the disposal of sewage from the city of Toledo in the public waters of the State of Oregon, the following appeared in behalf of the city: C. H. Bogert, Mayor; Mrs. Eleanor Bogert, Councilman; and W. W. Jones, City Manager.

At the request of the chairman, Mr. Everts read the citation served on the Mayor and City Council of the city of Toledo and then read the report of the Authority's staff in the matter. It was the decision of the Board Members to dispense with the reading of the assembled chronological history of the case.

Following the reading of the citation and report, Mayor Bogert stated that he believed the city had made progress toward the construction of sewage treatment works even though they were unable to sell the bonds when they were advertised for bids. The mayor reported that the purchase of the sewage treatment plant site had been completed on February 8; that a road had been constructed to the proposed plant site; that the city was now constructing 450 feet of sewer lines to the plant site; that an annexation election was held on May 16 and additional area was now added to the city; and that the Council would consider on July 22 an ordinance which will set a date for a new bond election. Mayor Bogert reported that the reason the city had been unable to sell the \$126,000 bonds previously voted was because of the low interest rate which had been established in the election. He further reported that an outstanding bonded indebtedness of the city was \$110,000; the city had surplus funds of \$11,000; the assessed valuation was approximately \$2,000,000; and there was a sewer-user charge of \$1.00 per month which furnishes a revenue of approximately \$900 per month to the city.

The Mayor stated that it was his serious intention to comply with the requirements of the Authority and he was confident that progress toward the construction of a sewage treatment plant would be made by the city.

ABG759

After some discussion regarding the status of the Toledo bond issue, MOTION was made by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the report as read by the secretary be adopted as FINDINGS OF FACT in the matter of the disposal of effluent from the sewerage system of the city of Toledo into the public waters of the state of Oregon.

MOTION by Mr. Veatch, seconded by Mr. McPhillips, and carried - that based on the Findings of Fact, the hearing conducted at this time, and the presentation made by the city of Toledo, the Sanitary Authority enter an order at this time requiring the city of Toledo to install and place in operation by not later than December 1, 1952, such sewage treatment works as are necessary to abate the pollution caused in the public waters of Yaquina River by the discharge therein of untreated sewage from the city of Toledo.

Mr. Veatch indicated to Mayor Bogert that the city of Toledo could apply to the Authority for additional time to comply with the Order in the event that reasonable progress was being made by the city.

Prior to calling for a vote on the above motions, the chairman had asked those present if anyone wished to be heard further.

City of Vale Sewage Disposal Citation Hearing:

The chairman asked if there was anyone present who wished to appear in behalf of the city of Vale. There was no one present to represent the city.

Mr. Everts reported briefly on his telephone conversation with Robert D. Lytle, City Attorney for Vale. Consideration was then given to the report as prepared by the engineering staff pertaining to this case.

MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that the Authority adopt as FINDINGS OF FACT the report submitted to the Authority by its engineering staff in the matter of disposal of effluent from the sewerage system of the city of Vale in the public waters of the state of Oregon.

MOTION by Mr. Veatch, seconded by Mr. McPhillips, and carried - that based on the Findings of Fact the Authority enter an order requiring the city of Vale to install and place in operation by not later than July 1, 1953, such

sewage and waste treatment works as are necessary for the abatement of pollution caused in the public waters of the Malheur River by the discharge therein of untreated sewage from the city of Vale.

City of Wheeler Sewage Disposal Citation Hearing:

The Chairman asked if there was anyone present who wished to appear in behalf of the city of Wheeler. No one was present to represent the city.

Mr. Everts reported briefly on an office conference with, and a letter from, Mr. W. A. McMinimee, Attorney for the city of Wheeler. Consideration was then given to the report as prepared by the engineering staff pertaining to the case.

MOTION by Mr. Hallock, seconded by Mr. Veatch, and carried - that the Authority adopt as FINDINGS OF FACT the report submitted to the Authority by its engineering staff in the matter of disposal of effluent from the sewerage system of the city of Wheeler in the public waters of the state of Oregon.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried - that based on the Findings of Fact the Authority enter an order requiring the city of Wheeler to install and place in operation by not later than July 1, 1955, such sewage and waste treatment works as are necessary for the abatement of the pollution caused in the public waters of Nehalem Bay by the discharge therein of untreated sewage by the city of Wheeler and that the city be instructed to submit to the Authority by not later than December 1, 1952, its proposed fiscal and construction program which will provide for the construction of the necessary treatment works.

After hearing all persons who were present in behalf of the cities who had been cited to appear at the meeting, the members of the Authority took a 45-minute recess.

City of Nehalem Sewage Disposal Citation Hearing (Continued):

Further consideration was then given to the pollution caused by the discharge of untreated sewage from the city of Nehalem.

In the matter of the disposal of effluent from the sewerage system of the city of Nehalem it was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried -

ABG759

that the Sanitary Authority enter an order requiring the city of Nehalem to install and place in operation by not later than July 1, 1955, such sewage and waste treatment works as are necessary for the abatement of pollution caused in the public waters of the Nehalem Bay by the discharge therein of untreated sewage from the city of Nehalem and that the city be instructed to submit to the Sanitary Authority by not later than December 1, 1952, its proposed fiscal and construction program which will result in the construction of the required sewage and waste treatment works.

Columbia River Gravel Processing Operations:

The secretary reported on proposed aggregate processing operations to be undertaken in connection with the construction of The Dalles dam and after reading an excerpt from a letter from the Washington State Pollution Control Commission to the Corps of Engineers on the subject, recommended that the Sanitary Authority advise the Corps of Engineers that suitable methods would have to be employed by contractors on the dam to prevent pollution of the Columbia River by wastes from the manufacture of concrete aggregate.

MOTION by Mr. Hallock, seconded by Dr. Erickson, and carried - that the secretary of the Authority be directed to call to the attention of Corps of Engineers their responsibility in this matter.

Gresham Berry Growers Association, Gresham and City of Gresham, Oregon:

The secretary reported that the city of Gresham and the Gresham Berry Growers Association were again causing pollution in Johnson Creek. He recalled that several years ago the Gresham Berry Growers Association had been notified that if they continued to pollute this stream proceedings would have to be instituted against them. As a result of that notice the Gresham Berry Growers did discontinue the processing of corn. However, they are still discharging other wastes into the Gresham sewer system and into Johnson Creek direct. Mr. Spies reported that the city had retained engineers to make a study of the most practical method of handling these wastes. It was recommended by the secretary that the city and Berry Growers

Association be cited to appear before the Authority at the next meeting to show cause why an order should not be entered against them to abate the pollution they were causing.

MOTION by Mr. Hallock, seconded by Mr. Stricklin, and carried - that the offenders at Gresham be requested to promptly abate the nuisance and be informed in the communication that unless the nuisance is promptly abated and they satisfy the Authority to that effect within not more than 30 days from the date of such letter, they will be cited to appear before the Authority to show cause why an order should not be entered against them.

Enterprise:

The secretary reported that the city of Enterprise had a sinking fund of \$30,000 and were planning on placing a sewer-user charge on the ballot in the fall election which would net \$13,000 per year. The city reported that this money would be used to extend the sewer system and possibly within the next three of four years they might build a sewage treatment plant. It was believed that while the city has had a preliminary report on sewers and sewage treatment they have taken no definite action towards developing a construction program. It was the recommendation of the secretary that the city be cited to appear and show cause why they should not abate the pollution caused by the inadequate disposal of sewage from the city.

MOTION by Mr. McPhillips, seconded by Mr. Hallock, and carried - that the city of Enterprise be cited to appear at the next regular meeting of the Authority to show cause why they should not be prohibited from polluting the waters of Wallowa River.

Ontario:

MOTION by Mr. Hallock, seconded by Mr. McPhillips and carried that the city of Ontario be cited to appear at the next regular meeting of the Authority to show cause why they should not be prohibited from polluting the waters of the Snake River.

ABG759

Oregon Lumber Company, Dee:

Mr. Burgess presented the results of his investigation of the pollution of Hood River caused by disposal therein of wastes from the Oregon Lumber Company. Mr. Burgess was of the opinion that some type of order should be issued to the effect that the wastes should be so handled at all times that they would not create any pollution of the public waters of the state of Oregon.

MOTION by Mr. McPhillips, seconded by Mr. Veatch, and carried - that the Oregon Lumber Company at Dee be cited to appear before the Authority at the next regular meeting to show cause why they should not abate the pollution caused in the public waters of the Hood River system by the operation of said mill.

Lamb-Weston Cannery, Weston:

Mr. Everts reported that wastes from processing of peas at this cannery are discharged to a large lagoon located near the plant. The lagoon was not well constructed and there are numerous complaints from the residents along the course of Pine Creek about odor nuisance and general conditions of the stream.

MOTION by Mr. Hallock, seconded by Mr. McPhillips, and carried, that this company be cited to appear before the Authority at the next meeting to show cause why they should not abate the pollution caused in the public waters of Pine Creek by the operation of said cannery.

Crown-Zellerbach Corporation:

Mr. Everts read a letter from the Crown-Zellerbach Corporation requesting a modification of the Order of the Authority to the effect that discharge of the wastes into the river be permitted at all times when the stream flow at Salem was in excess of 7,000 cubic feet per second. In the discussion that followed it was pointed out that the recreational use of the stream from July through October as well as fish propagation must be considered. The secretary was instructed to notify the Crown-Zellerbach Corporation that their request for modification of the Sanitary Authority Order dated May 12, 1950, could not be granted without a public hearing since only requests for extension of time could be granted under such an order.

Budget 1953-1955:

Mr. Everts discussed the activities of the Authority's staff and recommended that two additional engineers be included in the Authority's budget for 1953-55 in order to make up for the loss of two engineers who previously were financed by federal funds.

Mr. Veatch expressed the belief that the Authority should request an appropriation from the State Legislature sufficient to maintain the present staff and recommended that the Authority ask for sufficient funds to continue present activities, plus an amount necessary to meet increased costs. Mr. Hallock agreed with Mr. Veatch, and Mr. McPhillips stated that he did not see how the work can go on with any less help than at present.

MOTION by Mr. Veatch, seconded by Mr. McPhillips, and carried - that the budget as prepared in amount of \$102,356 be approved.

Date of Next Meeting:

The date for the next meeting was set for October 17.

There being no further business, the meeting adjourned at 3:15 P.M., DST.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
CURTISS M. EVERTS, JR.,  
Secretary & Chief Engineer

## MINUTES OF THE FIFTY-THIRD MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

October 17, 1952

The fifty-third meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., October 17, 1952, in Room 720, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Dr. Harold M. Erickson, B. A. McPhillips, and John C. Veatch, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; Clarence E.

ABG759

Cuyler and Fred J. Burgess, Assistant Sanitary Engineers; and T. M. Gerow and Harold M. Patterson, District Engineers.

MINUTES: The minutes of the fifty-second meeting having been prepared by the secretary and distributed to the members prior to the meeting, it was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried - that the minutes as prepared by the secretary be approved.

PROJECT PLANS: It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried - that the action taken by the technical staff on the following project plans and reports received and reviewed since the last meeting be approved:

Date	Location	Project	Action Taken
7-1-52	Multnomah County	Wilkes School sewerage	Approved
7-3-52	Sandy	Sewer Extension	Approved
7-3-52	Milton-Freewater	Sewer lateral	Prov. approval
7-3-52	Athena	Design data	Prov. approval
7-8-52	Eugene	Sewage treatment plant	Deferred
7-10-52	Lebanon	South Grade School sewerage	Approved
7-10-52-	Linn County	Crowfoot Grade School sewerage	Approved
7-11-52	Grants Pass	Sewage Plant additions	Approved
7-14-52	Springfield	Modena Trailer Park sewers	Not approved
7-17-52	Corvallis	Sewage treatment works	Deferred
7-17-52	Tillamook County	High School Dis. #2 sewerage	Approved
7-21-52	Hermiston	Sewer extension	Prov. approval
7-23-52	Springfield	Sewer extension	Prov. approval
7-23-52	Corvallis	Sewer laterals	Not approved
7-29-52	Reedsport	Winchester Avenue sewer	Prov. approval
8-4-52	Rockaway	Prel. report-sewerage	Approved
8-5-52	Empire	Prel. report-sewerage	Not approved
8-5-52	St. Helens	Prel. report-sewage disposal	Approved
8-5-52	Corvallis	Sewage treatment works	Cond. approval
8-6-52	Corvallis	Lateral sewers(revised plans)	Cond. approval

Date	Location	Project	Action Taken
8-7-52	Athena	Equipment specifications	Approved
8-8-52	Eagle Point	Grade School sewerage	Approved
8-11-52	Port of Portland	Septic Tanks	Prov. approval
8-11-52	Grants Pass	Sewage plant additions	Approved
8-11-52	Ione	School sewerage	Prov. approval
8-13-52	Oregon City	Sewage Plant (revised plans)	Approved
8-14-52	Cottage Grove	Sewer laterals	Deferred
8-18-52	Marcola	School sewerage	Prov. approval
8-20-52	Independence	Plant by-pass	Not approved
8-20-52	Cottage Grove	Sewer extensions	Not approved
8-21-52	Linn County	Crowfoot School sewerage (rev. plans)	Approved
8-21-52	Eugene	Sewage treatment plant	Prov. approval
8-21-52	Woodburn	State School for Boys sewage treatment plant	Approved
8-22-52	Springfield	Modena Trailer Park sewerage	Not approved
8-22-52	Willamette City	School sewerage	Prov. approval
8-25-52	Marion County	Camp Mangold sewerage	Approved
8-25-52	Linn County	Waterloo School sewerage	Prov. approval
8-26-52	Hillsboro	Sewage & Industrial Waste disposal	Not approved
9-2-52	Heppner	Sewage treatment plant	Not approved
9-3-52	Multnomah County	Jason Lee School sewerage	Prov. approval
9-4-52	Canyonville	Sewer extension	Prov. approval
9-5-52	The Dalles	Sewer extensions	Approved
9-8-52	Clackamas County	Clark School sewerage	Prov. approval
9-8-52	Heppner	Sanitary sewer system	Not approved
9-10-52	Tualatin Slopes	Prel. plans, sewage treatment plant	Not approved
9-10-52	Tualatin Hills	Prel. design data, sewage " "	Approved
9-15-52	Portland	Burlingame outfall	deferred

AB6759

<u>Date</u>	<u>Location</u>	<u>Project</u>	<u>Action Taken</u>
9-17-52	Heppner	Sewage treatment plant	Prov. approval
9-17-52	Sandy	Sewer extension	Approved
9-23-52	Athena	Sewer system	Not approved
9-23-52	Athena	Sewage treatment plant	Not approved
9-23-52	Hillsboro	Ind. waste pretreatment	Approved
9-29-52	Oakland	Public Housing sewerage	Approved
9-29-52	Oakland-Sutherlin	Prel. report	Approved
9-29-52	Myrtle Point	Design data	Approved
9-29-52	Roseburg	Sanitary sewer overflow	Approved
9-29-52	Langlois	School sewerage	Not approved

PUBLIC HEARING-POLLUTION OF JOHNSON CREEK:

The Sanitary Authority having announced that a public hearing would be held for the purpose of giving further consideration to the matter of pollution of the public waters of Johnson Creek and having stated in said announcement that it was the intent of the Sanitary Authority to make findings of fact and to enter an order requiring the abatement of said pollution of the waters of Johnson Creek, a tributary of the Willamette River, the following persons appeared: Dr. H.H. Hughes, Mayor; Roy Burton and Ray Darnielle, City Councilmen; George A. McAllister, City Attorney; and Elden W. Carter, City Engineer; all representing the city of Gresham: H. Loren Thompson and Marvin W. Runyan, of Stevens & Thompson, Engineers, consulting engineers for the city of Gresham; R. P. Juhnichen, Secretary, and Harold J. Bushne, Vern Wasson, Glen Schaeffer, R. E. Schedeen and John E. Campbell, Directors, all representing the Gresham Berry Growers; Roscoe L. Fanning and Larry A. Pendergrass, representing the Gresham Chamber of Commerce; and Vernon Cole, H. L. McMullen, Mrs. Paul N. Weaver, Mrs. Glenn A. Franks, C. W. Johnson and Fred Vinton.

The chairman announced that the hearing was in session and directed the secretary to read the memorandum prepared by the Sanitary Authority staff regarding the pollution in Johnson Creek caused by discharge therein of wastes from the city

of Gresham and the Gresham Berry Growers Association.

ABG759

Mr. George A. McAllister, City Attorney for Gresham, stated that the city was aware of the problem and that attempts were being made to reach a practical solution. He then introduced Mr. Loren Thompson of the firm of Stevens & Thompson Engineers, consulting engineers for the city. Mr. Thompson stated that studies had been made of disposal methods for both the cannery wastes and city sewage and that the recommendation would probably be made to convey the wastes to the Columbia River for disposal after primary treatment. He also stated that they have determined the cost of the project, the approximate time it will take to design the plant, and the approximate time that construction could be undertaken. Mr. Thompson advised the Authority that the overall project would cost about \$650,000 for construction alone and to this must be added \$75,000 for engineering and right-of-way. It was stated that the project would provide for a gravity trunk sewer from Gresham to the Columbia River which could also serve Fairview, Wood Village, Troutdale, and other adjacent areas. Preliminary studies of the possibility of providing complete treatment of sewage and industrial wastes and the use of Johnson Creek for final disposal of the effluent proved this method to be highly impractical. An investigation was also made of the possibility of using the Sandy River where the Sanitary Authority would require 65% treatment, but Mr. Thompson indicated that his firm was still of the opinion that a gravity sewer to the Columbia would be more practical. It was reported that the city plans to present a bond issue to the voters by not later than February, 1953, to finance the project. If the city votes favorably in January or February, it is the belief of Mr. Thompson that the treatment works could be placed in operation by the summer of 1954.

Mr. Wendel inquired as to what the citizens of Gresham thought about the bond issue. Mr. McAllister stated that it would be a problem to sell them on the idea but he thought that with proper publicity it could be done.

Mr. Wendel then asked what the program was for next summer, and Mr. Thompson advised that there was no program for 1953, except what is being done at the present time which was that the city domestic sewage was being treated by the present plant and

that the wastes from the cannery were being discharged directly into the creek.

Mr. McPhillips asked if the present plant was adequate to take care of the city's problem alone without the industrial wastes. Mr. Thompson replied that it was questionable whether it was adequate; and that within a short time, even to treat adequately only the city's sewage, it would have to be revamped and improved.

Mr. Thompson also stated that he had advised the city to consult a bonding firm and work out the details of financing the project before placing it before the citizens, so that both the city and the cannery will know what their respective share of the cost is to be.

Mr. Veatch asked whether the Berry Growers Association had any plans to handle their wastes, to which Mr. R. P. Juhnichen, Assistant Manager and Secretary of the Berry Growers Association, replied that the Association will do everything they can to clean up the situation but it was not going to be easy to solve it in one year or even two years, especially since the Association does not know what the cost will be. He said it would, however, probably be around \$15,000 a year, plus assessment on the property. He reported that there was no suitable tract near Gresham where disposal of the wastes by irrigation could be practiced and that rather than burden the people with high taxes, they will either have to move the plant or build an irrigation or lagoon system which could not be accomplished in one year.

Mr. McAllister, City Attorney, stated that there must be a definite understanding as to what the city's share of the cost would be; that the city expects to have a definite answer from the Association as to what they plan to do; and that such information should be obtained at least two months before the proposed bond election. He indicated that the city could tell the Association what the costs will be as soon as the engineering report was received from Mr. Thompson.

Mr. Veatch asked if a fairly accurate statement of what the total project will cost could be submitted to the Association and whether the cost would vary if the Berry Growers were not connected to the city sewer system. Mr. McAllister said that a statement could be submitted and that the cost would vary. Mr. Thompson

said that it would be much cheaper at this time to treat city sewage only, but if the program as contemplated for the handling of combined domestic sewage and industrial wastes from the Association were not followed, it would not be too long before the existing sewers would have to be improved and he did not believe that the city could do it alone.

Mr. Juhnichen stated that he was led to believe the city and the cannery would have four or five years in which to solve the problem and that the Association is not prepared to handle the problem within the next two or three months. When asked if the cannery would operate during 1953, Mr. Juhnichen advised that they hoped to do so.

Mr. Spies stated that the condition in the creek was worse this year than at any time during 1948-1951. Early in June when berries were being processed there was no dissolved oxygen in the creek waters below the cannery sewer. Mr. Spies stated that he had met with the Chamber of Commerce at Gresham several months ago and that they had wanted to know then how soon they were going to have to do something to abate the pollution; and they were advised then that although the pollution condition existed every year in the stream immediately below the cannery sewer, the Authority had not pushed the matter of abatement because complaints had not come from anyone below the city. However, this summer complaints were received from residents all along the creek because the conditions had been much worse than previously.

Mr. Veatch stated that in view of the fact that the city of Gresham could handle sewage from the city if the industrial wastes were not handled through the city sewer system, it looked to him as though it were up to the Association to make up their minds whether they wanted to join Gresham in the proposed program of handling combined sewage and industrial wastes, or whether they had some other plan for disposal of industrial wastes. Mr. Juhnichen advised the Authority that the Association wanted to work with the city of Gresham but that the problem was too big to handle within the next year, and that it would take time to educate

ABG759

the people and time to construct treatment works. Mr. John E. Campbell of the Association said that they were having tests made of their wastes to see just how big offenders they really were, and that the cannery was giving serious consideration to methods of solving their waste problem.

Mr. Wendel then stated that the Authority would expect definite plans and fiscal program for the project by the next meeting which will be probably within three months. It was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried - that the City of Gresham be directed to submit to the Sanitary Authority before its next meeting definite plans, a complete fiscal program, and a time schedule for the installation of the necessary facilities to adequately handle combined sewage and industrial wastes.

Mr. McPhillips pointed out to the city officials and the representatives of the Association that if pollution in the summer of 1953 caused complaints by property owners then the Berry Growers should realize that the Authority would have no other alternative but to order the nuisance abated.

CITATION HEARING - CITY OF ONTARIO

Mr. Horace A. Beal, City Councilman, Ontario, appeared before the Authority in answer to a citation ordering the city of Ontario to appear and show cause why an order should not be entered against the city requiring abatement of the pollution caused in the public waters of the Snake River by the discharge therein of sewage from the city of Ontario.

Mr. Beal stated that the information contained in the report read by Mr. Everts was correct. He reported that the city council had discussed a sewer rental charge which they intend to put into effect.

Mr. Veatch asked Mr. Beal if any plans had been made for the construction of a disposal plant, and was advised that studies have been made by Cornell, Howland, Hayes & Merryfield who estimated that a sewage treatment plant would cost \$150,000. Mr. Veatch then asked if any plans had been made for raising the money required to build a treatment plant. Mr. Beal stated that the money would have to be raised by general obligation and revenue bonds, that present city indebtedness is \$350,000, and present taxes were too high.

ABG759

Mr. Veatch advised Mr. Beal that the city should not wait until the last minute to work out a plan of financing their project; that most towns were having to face this same problem of financing; and that the Authority was required by statute to carry out the stream purification laws. Mr. Veatch pointed out further that Ontario like all other towns must have a definite program for complying with the law; that the Sanitary Authority has never been "tough" if they see that progress is being made; but that in this instance, the city knows what the cost of the treatment plant is and there have been no plans made by the city for raising funds to take care of this cost.

Mr. Wendel then asked Mr. Beal what program they had for the coming year regarding this problem. Mr. Beal advised the Authority that the city was planning for a sewage disposal plant which will cost about \$150,000 and that it was planned to start construction early in 1955, at which time they will have the cost of storm sewers all paid. He also reported that there are about 1,400 connections to the sanitary sewers and that under the proposed ordinance levying a sewer service charge approximately \$12,000 to \$14,000 a year revenue would be obtained.

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried - that the city of Ontario be directed to submit to the Sanitary Authority prior to its next meeting definite plans for financing the sewage treatment plant, including a definite date by which time construction will be undertaken.

CITATION HEARING - CITY OF ENTERPRISE

Mayor G. B. Homan, R. V. Chrisman, City Attorney, and George Thompson, Councilman, appeared before the Authority in answer to a citation ordering the city of Enterprise to appear and show cause why an order should not be entered against the city requiring the abatement of pollution caused in the public waters of the Wallowa River by the discharge therein of sewage from the city of Enterprise.

The chairman directed the secretary to read the memorandum of facts prepared by the Authority staff relative to the matter of sewage disposal by the city of Enterprise.

Mr. Chrisman stated that he had no quarrel with the report as read by Mr. Everts, and it was true that the city did receive notice in 1942 from the Authority that they should proceed to make plans for sewage treatment and to establish a sinking fund for that purpose. He reported that to date there is \$15,000 in the sinking fund; and that a registered engineer had been employed to advise the city what was needed, but unfortunately that engineer had passed away and nothing was done. The city later employed Mr. Frank R. Ofner, Consulting Engineer, to make a report and the city council thought they they were now making splendid progress on the program and, therefore, considered it unkind to be cited to appear at this time. Mr. Chrisman then reported on the financial condition of the city and also stated that the mayor and city council are just as anxious in their official capacities to carry out the program as the Authority is, but with its bond history and with people who had previously lost homes because of street paving and sewer bonds, the problem had to be presented with just a little different approach. Mr. Chrisman pointed out that a town meeting had been called and the townspeople were advised that a \$225,000 bond issue would be necessary to improve the sewers and construct a sewage treatment plant. It was decided at that meeting that the proper procedure would be to lay some 8,000 feet of transite pipe to reduce infiltration and then determine whether the construction of additional sewers was necessary before undertaking any work on the treatment plant.

Mayor G. B. Homan stated that the city had a tax levy of \$13,200 per year for three years to defray the cost of sewer construction and that a sewer service charge will accumulate about \$5,000 per year at the present rate. It was Mr. Homan's opinion that it will take until June 1954 to finish the sewer construction work and that the city would then be in a position to submit to the people the question of voting bonds for a treatment plant.

Mr. Wendel stated that he would like to eradicate any idea that the Authority has been severe with the city in this matter. He pointed out that after ten years of working with the city the only thing done is the collection of \$30,000 in a sinking fund to finance the project required; that only since the last meeting of

the Authority did the city set up a sewer-user charge to help defray the expenses of a sewage treatment plant; and that the city now reports that its present program will take until August 1954.

Mayor Homan stated that the city might have the problem well in hand by the end of 1953, and that the city does not think the Authority has been unreasonable; and probably the city has not been keeping the Authority advised of what the real state of affairs was.

Mr. Everts then asked if in the event the city was unable to control the ground water flow with the completion of the present work on the sewers would it be the plan of the city to proceed with sewage treatment plant construction.

Mayor Homan stated that the pipe line which the contractor has already laid to date, which is some 300 or 400 feet. has lowered the water considerably in the manholes, and that if the flow was sufficiently reduced by future sewer installations the city would proceed with the construction of treatment facilities.

Mr. Thompson then discussed the problem of sewage flows due to underground waters and requested the Authority to give the city time enough to check the excessive flow of water, which must be reduced before a treatment plant would function. He stated that the work will proceed as far as possible.

Mr. Wendel then asked the city to give to the Authority a written report covering the proposed program as it had been outlined at the meeting. The city agreed to furnish such a report.

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried - that this matter be continued and that the city of Enterprise be instructed to submit within the next thirty days to the Sanitary Authority a detailed progress report and plans for sewerage works construction and financing.

RIVERSIDE DRIVE ADDITION, MULTNOMAH COUNTY

Mr. Everts read a letter from Dr. F. Sydney Hansen, Multnomah County Health Officer, relative to the disposal of sewage from the Riverside Drive addition which is discharged into the Willamette River.

Mr. Everts was of the opinion that the people in this Addition should be

ABG759

244  
notified that the residents will have to provide for disposal and treatment of their sewage wastes.

The Authority instructed Mr. Everts to advise Dr. Hansen that the discharge of untreated sewage into the Willamette River cannot be approved by the Authority and that arrangements would have to be made for the proper disposal and treatment of sewage from this Addition.

Wood Village:

Mr. Cuyler reported that the sewage treatment plant serving the residents of the city of Wood Village is owned and operated by the Wood Village Service Company under the direction of Mr. W. C. Bauman.

Since this plant was first constructed and placed in operation in December 1943, the Authority has had considerable trouble obtaining proper operation and maintenance.

The Engineering staff of the Authority has made many efficiency surveys and inspections in an attempt to obtain certain needed corrections and adequate plant operation. Over ten letters and reports advising the owners of needed changes and improvements have been written by the Authority. In November 1948 the owner was cited to appear before the Authority to show cause why the Wood Village sewage disposal works should not be operated in an efficient and proper manner. Mr. Bauman was not present for this hearing; however, he had a Mr. Drake, Manager of the Victory Homes, Inc., present in his place. At that time it was promised by Mr. Drake that the plant would be placed in proper working order and operated accordingly.

Some improvement was noticed for a time after this hearing but the plant was soon allowed to slip back into a state of disrepair and inefficient operation. In the meantime changes were made in plant operators and this was used as an alibi for the lack of attention.

On August 15, 1952, Mr. B. A. Kliks presented to the Authority a complaint charging pollution of the small creek flowing through this property. He claimed it was rendered unfit for any purpose because because of the discharge of improperly

treated sewage effluent from the Wood Village sewage disposal system. Further complaints have also been received from other property owners along this creek.

Recent surveys made by the Authority staff shows the receiving stream to be grossly polluted and practically devoid of oxygen and that a health hazard and serious nuisance condition have been created in downstream waters.

A letter outlining needed improvements in plant operation and maintenance was sent to Mr. Bauman on August 18, 1952. A reply was received on August 28 advising that all recommendations as outlined in our letter would be followed.

Further surveys and inspections were made on September 4, 1952, and September 8, 1952, at which time the plant was not being properly maintained and operated and the receiving stream was still grossly polluted.

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried - that the owner of this plant be cited to appear before the Authority at its next meeting to show cause why proceedings should not be instituted against them for failure to carry out the instructions of the Authority with regard to proper maintenance and operation of the Wood Village sewage treatment plant.

GOVERNMENT CAMP:

Mr. Cuyler reported that the community of Government Camp was in the process of trying to organize a sanitary district to provide adequate sewage disposal for this area. No further action was taken by the Authority at this time.

PORTLAND:

The matter of interceptor sewer construction by the city of Portland was then discussed. Mr. Veatch stated that the Authority should insist that the city of Portland progress with their sewage disposal program until it is completed, and that the city would not be granted any "out" by saying they did not vote the bonds and that it will take another ten years to complete the program.

Mr. Spies asked whether the Authority should advise the city that they cannot continue to build sewers in outlying districts and discharge sewage into the Willamette River before the interceptor sewers are completed.

ABG759

Mr. Everts believed that the city should be requested to furnish information on the remainder of their construction schedule. It was the concensus of opinion that the Portland project should have been completed long ago.

NORTH ROSEBURG SANITARY DISTRICT:

Mr. Gerow reported that nothing had been accomplished toward correcting faulty sewers in the Cloverdale Addition of the North Roseburg Sanitary District.

The Authority instructed the secretary to request the Attorney General to institute action to have the problem corrected.

PROGRESS OF MUNICIPALITIES:

Mr. Everts read a report prepared by the Authority staff regarding the progress made by municipalities in Oregon in the construction of sewage treatment plants.

Mr. Veatch stated that suitable publicity should be given to those cities making progress.

INDUSTRIAL WASTES

LAMB-WESTON, INC., (Weston, Oregon):

The secretary read a letter addressed to the Authority by Mr. J. F. Kilkenny, Attorney, representing Lamb-Weston, Inc. The letter stated that the company had already begun to install facilities to correct pollution and requested a postponement of the hearing until the next meeting.

The secretary was instructed to advise Lamb-Weston, Inc., that the matter would be continued but they must continue to make progress or appear at the next meeting of the Authority.

OREGON LUMBER COMPANY, (Dee):

The secretary read a letter addressed to the Authority by the Oregon Lumber Company stating that the company had already begun to install facilities to correct pollution and requested postponement of the hearing until the next meeting.

The secretary was instructed to advise the Oregon Lumber Company that the matter would be continued but they must continue to make progress or appear at the next meeting of the Authority.

COLUMBIA SLOUGH INDUSTRIES:

The Secretary read a letter received from George W. Mead, Attorney for the Columbia Slough Industries, reporting on progress made toward waste disposal. It was the opinion of the Authority that the industries were making progress in disposing of their wastes and, therefore, no action was taken at this time by the Authority.

ARROW MEAT COMPANY, Washington County):

Mr. Spies reported that the Arrow Meat Company was located at Cornelius; that the plant had been expanded considerably recently; and that they have not provided adequate facilities for disposal of wastes which are being discharged into the waters of Council Creek. He also reported that the owner of the Arrow Meat Company is now facing a \$10,000 damage suit.

Mr. Spies recommended that the Authority cite the Arrow Meat Company to appear at the next meeting if suitable progress were not made in the meantime.

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried - that the owner of the Arrow Meat Company be notified that he must within sixty days present to the Authority a program for solving the matter of waste disposal from the operations of this plant; otherwise, failing to do so they will be cited to appear before the Authority at the next meeting.

COLUMBIA PICKLING & PACKING COMPANY:

Mr. Cuyler reported that the Columbia Pickling & Packing Company is located at 9333 N. E. 47th Avenue, Portland, Oregon. This industry has been in continuous operation at the same location for some thirty years and has been engaged in the processing of pickles and sauerkraut.

The first survey made by the engineering staff was in January 1947 at which time it was learned that the company hired approximately ten employees and that all wastes were discharged into a septic tank and the liquid effluent disposed of on land. There was no evidence of water pollution at that time.

During the years 1949, 1950, and 1951, complaints were received by the Multnomah County Health Department from residents in the area of this industry. These

ABG759

complaints were about odor nuisance and, therefore, were all handled by the County Health Department. This year, however, the Sanitary Authority received complaints regarding the effect of this industry's wastes which were discharged into adjacent drainage ditches maintained by the Multnomah County Drainage District No. I.

A field investigation was made during the month of September and it was determined that the Columbia Pickling & Packing Company was discharging wastes from its various processes directly to the adjacent ditches. Furthermore, septic tank effluent from domestic wastes was also discharged to the ditch. The company now employs about twenty-five persons and packs some 175,000 cases of pickles and sauerkraut per year. This practice has resulted in gross pollution of the ditches of the Multnomah County District No. 1 and has rendered them unfit for use. Solids contained in the wastes caused sludge banks to be formed and considerable odor of a foul rotten cabbage smell was given off the full length of the drainage ditch.

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried - that the owner of the Columbia Pickling & Packing Company be notified they must within sixty days present to the Authority a program for solving their waste disposal problem; otherwise, failing to do so they will be cited to appear before the Authority at the next meeting.

SPAULDING PULP & PAPER COMPANY:

Mr. Everts read a letter from Mr. O. M. Allison, Secretary for the Spaulding Pulp & Paper Company, relative to the problems which the company had encountered in connection with the lagoon that had been constructed for impounding sulfite waste liquor. The letter stated that leaks which had developed in the lagoon would be repaired as rapidly as possible.

It was the opinion of the Authority that the Spaulding pulp & Paper Company were proceeding in good faith.

PULP AND PAPER INDUSTRIES:

Mr. Spies reported on the progress being made in the abatement of pollution by the pulp and paper mills. It was Mr. Spies' recommendation that the companies who had not complied with the order of the Authority be advised that they will be expected to so comply by the summer of 1953.

Mr. Spies was instructed to obtain further reports on the status of the waste disposal projects before the next meeting.

MISCELLANEOUS:

Mr. Everts read a letter from the Attorney General in which it was recommended that Cecil H. Quesseth be retained by the Authority as legal consultant. In the discussion that followed it was pointed out that there was an item in the budget providing for legal and professional services, and Mr. Everts was instructed to contact Mr. Quesseth and see what could be worked out in this regard.

It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried, that if Mr. Quesseth was available he be employed by the Authority at a retaining fee of \$50.00 per month as legal consultant to the Authority.

BUDGET:

Mr. Everts explained the present method of handling Sanitary Authority accounts by the Business Office of the State Board of Health, and outlined the proposal for including the Sanitary Authority appropriation with other State Board of Health funds in order to facilitate fiscal management of the funds appropriated.

It was the decision of those present that the funds of the Sanitary Authority should be kept separate from those of the State Board of Health.

BIENNIAL REPORT, 1950-1952:

It was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried - that the secretary be authorized to arrange for printing of the Seventh Biennial Report of the Authority.

ABG759

DATE OF NEXT MEETING:

The date for the next meeting of the Authority was set for January 16, 1953.

ADJOURNMENT:

There being no further business the meeting adjourned at 4:35 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.  
Secretary & Chief Engineer

## MINUTES OF THE FIFTY-FOURTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

February 13, 1953

The fifty-fourth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., on Friday, February 13, 1953, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; John C. Veatch, B. A. McPhillips, and Dr. Harold M. Erickson, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; Cecil H. Quesseth, Legal Advisor; and C. E. Oyler, Fred J. Burgess, H. M. Patterson, H. W. Merryman, and T. M. Gerow, Sanitary Engineers.

MINUTES: The minutes of the fifty-third meeting having been prepared by the secretary and distributed to the members prior to the meeting, it was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried - that the minutes as prepared by the secretary be approved.

PROJECT PLANS: It was MOVED by Dr. Erickson, seconded by Mr. McPhillips, and carried - that the action taken by the engineering staff on the following project plans and reports received and reviewed since the last meeting be approved:

## Project Plans:

Date	Location	Project	Action Taken
<u>1952</u>			
10-2	Athena	Sewage Treatment Plant	Prov. approval
10-2	Athena	Sanitary sewer system	Prov. approval
10-7	Cornelius	Arrow Meat Co. waste treatment works (Prel. report)	Approved
10-8	Enterprise	Sewer replacement	Approved
10-10	Carlton	Madison Street sewer	Approved
10-10	Carlton	Linke Add'n. sewer extension	Approved
10-17	Tualatin	School sewerage	Approved
10-20	Drain	High School sewerage	Not approved
10-20	Cornelius	Arrow Meat Co., waste treatment	Not approved
10-27	Warrenton	Preliminary report	Approved
10-27	Carlton	Sewage lift station	Approved
10-27	The Dalles	Parque Vista sewers	Approved
11-6	The Dalles	Sewer extension	Approved
11-6	Springfield	Sewer extension	Approved
11-6	Cornelius	Arrow Meat Co., waste disposal	Not approved
11-7	Springfield	Sewer extensions	Approved
11-7	Toledo	Revisions in sewage plant design	Approved
11-17	Medford	Country Club Park sewers	Not approved
11-18	Benton County	Blodgett School sewerage	Prov. approval
11-19	Clackamas County	Oak Grove School sewerage	Prov. approval
11-19	Cornelius	Arrow Meat Co., waste treatment	Prov. approval
11-19	Douglas County	Green School sewerage	Approved
11-24	Springfield	Sewage Treatment plant	Deferred
12-4	Medford	Sewer extension	Not approved
12-8	Oswego	Sewer extensions	Approved
12-8	The Dalles	Sewer extensions	Approved
12-10	Washington County	Laurel School sewerage	Approved

ABG759

Date	Location	Project	Action Taken
12-15	Eugene	Sewer extensions	Not Approved
12-16	Sherman County	Moro School sewerage	Prov. approval
12-22	Portland	Columbia Pickle Co., waste disposal (prel. report)	Prelim. approval
12-16	Grant County	Pilot Rock School sewerage	Prov. approval
12-23	Sheridan	School sewerage	Approved
12-24	Albany	School sewer and pump station	Approved
12-31	The Dalles	Sewer extension	Prov. approval
<u>1953</u>			
1-12	Gresham	Gresham Berry Growers Waste disposal	Prov. approval
1-21	Sweet Home	Sewer extensions	Approved

DOMESTIC AND INDUSTRIAL WASTES:

City of Gresham and the Gresham Berry Growers Association: The matter of pollution of Johnson Creek by the City of Gresham and the Gresham Berry Growers Association having been held over from the previous meeting of the Authority, the following persons were present to represent the city and the industry;- Elden W. Carter, City Engineer; George McAllister, City Attorney; H. Loren Thompson, Consulting Engineer; H. H. Hughes, Mayor; and A. R. Darnielle, Councilman; all representing the city of Gresham; and John E. Campbell, Glen T. Schaeffer, R. P. Juhnichen, Roy Burton, and R. E. Roderick of the firm of Cornell, Howland, Hayes and Merryfield, Consulting Engineers; all representing the Gresham Berry Growers Association.

Mr. Spies opened this discussion by advising that a preliminary engineering report prepared by Stevens & Thompson, Engineers, had been approved by the Sanitary Authority staff since the last meeting; said report covering a proposed gravity sewer system to the Columbia River including primary treatment. Such system would serve both the city and the industry. He also advised that a report had been prepared by Cornell, Howland, Hayes, and Merryfield, Consulting Engineers;

for a system of disposal to serve only the Berry Growers Association, and that the Authority was now awaiting a decision as to which system would be selected.

Mr. Loren Thompson, representing Stevens & Thompson, advised the Authority that the city of Gresham had made definite progress in the matter; that at a recent meeting with the Berry Growers Association the latter had agreed to support the city's program whereby the city would take the combined industrial and domestic wastes from the city, give them primary treatment and discharge them to the Columbia River; that a contract between the city and industry was to be completed within the next thirty days; and that a bond election authorizing the city to issue a \$750,000 general obligation bond was to be held in the immediate future. He reported further that it is proposed to pay for the bonds over a period of thirty years by means of a millage levy and by sewer service charges; that the Berry Growers Association will pay a sewer service charge of \$6,000 per year for twenty years; that the sewer service charge for residences will be increased; and that the tax levy will be 5-1/2 mills. Mr. Thompson thought it might be possible to have the first contract underway by June, 1953. Mr. McPhillips asked Mr. Thompson what the sentiment of the people was toward the bond issue. Mr. Thompson stated that he thought the people would support the city's program. He said the project could be in operation by the summer of 1954.

Mr. John Campbell, President of the Berry Growers Association, stated that they would like to join with the city in the matter of disposal of wastes as they believed it would be much better, but if, however, that plan is not acceptable or the bond election fails they have the alternate plan for providing their own disposal system.

Mr. McPhillips raised the question as to what the industry would do this coming summer to abate pollution, and Mr. Campbell said that naturally it was up to the Authority as to how long or how much they can operate. He said they would try to hold the wastes down by putting in another screen. He wanted advice

ABG759

from the Authority as to whether they would give permission for the Berry Growers to join with the city for abatement of their pollution.

Mr. George McAllister, City Attorney for Gresham, reported that the Chamber of Commerce in Gresham deserved a great deal of credit for getting the present proposed plan started. He reported further that the assessed valuation of the city is now a little over \$4,000,000; that the 5-1/2 millage will provide \$22,500 per year; that the increase from 90¢ to \$1.50 in the sewer user charges will bring in about \$16,000; and that with the \$6,000 from the Berry Growers Association, the total annual income will be approximately \$44,000. He estimated that it will take \$40,000 annually to pay for the bond issue and the operating cost of the plant. Mr. McAllister was of the opinion that the bond issue could be paid off within 20 years, but if this should not be the case, the Berry Growers Association have agreed to pay \$1,000 per year until the bond issue is redeemed entirely. Mr. McAllister advised the Authority that the bond election will be held on or about March 10, 1953. If this is voted on successfully, construction will start around July 1, 1953.

Mr. Juhnichen, of the Berry Growers Association, said that in case the city fails to approve the bond issue, it will take some additional time for the Berry Growers Association to proceed with their own project. He then called on Mr. Roderick, of the firm of Cornell, Howland, Hayes, and Merryfield, to report further on that matter.

Mr. Roderick stated that in connection with the proposed system for the Berry Growers Association the outfall line would have to cross a swampy area close to the Columbia River, and that the Army Engineers are now making a study of that area and propose to build a dike across it in the future. For that reason Mr. Roderick thought any line carrying the wastes from the Berry Growers Association plant should be delayed until the dike were installed.

After further discussion regarding this latter item, the length of time required to prepare the plans and specifications, and a schedule for construction,

it was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried - that the evidence as presented at this and the preceding meeting be adopted as Findings of Fact in this matter and that an order be entered requiring the city of Gresham and the Gresham Berry Growers Association to have the necessary sewage and waste disposal plants completed and pollution of Johnson Creek abated by June 1, 1954.

Empire: Mr. R. H. Erichsen, City Engineer; and Mr. Robert L. Thomas, City Attorney, were present to discuss a proposed sewerage plan for the city of Empire.

Mr. Everts opened the discussion by reporting briefly on the sewage disposal problem confronting the city of Empire. At the present time only a small portion of the city is served by public sewers and those which are in existence discharge directly into Coos Bay without any treatment. Because of the large increase in population which has taken place during the past two or three years there is now an urgent need for more housing and for extension of sewerage service within the city.

Under the proposed program presented by Mr. Erichsen and Mr. Thomas the city would construct sewers costing \$77,200 in 1953; sewers costing \$53,400 in 1954; sewers costing \$29,200 in 1955; and sewage treatment works costing \$164,000 in 1956. They proposed to finance the construction by sewer service charges, direct property assessment, Bancroft bonds and general obligation bonds.

Because no definite plan had been adopted by the city for submitting a bond issue to the voters and for other details of the required fiscal program, it was concluded by the members of the Authority after considerable discussion that favorable action could not be taken on the proposed sewerage program at this time. It was, therefore, MOVED by Mr. Veatch, seconded by Dr. Erickson, and carried - that this matter be continued until the next meeting of the Authority.

Mr. Wendel suggested that at that time the city should be prepared to present

ABG759

a complete report in writing covering their proposed program and that in the meantime the details for the required bond issue should be worked out so that the Authority would be assured that the program would be carried out as proposed.

Molalla: Mr. Lloyd K. Clark, of the firm of Clark & Groff, Engineers, was present to represent the city of Molalla. He presented a preliminary engineering report covering proposed sewerage improvements for the city including estimates of cost. He also submitted a letter from the mayor of the city of Molalla in which it was stated that the city council had authorized a \$300,000 bond issue. Mr. Clark advised the Authority that he felt the city council was sincere in their desire to go ahead with the proposed bond issue although no definite date had yet been set for the election. He did not believe, however, that the work could be completed by the 1953 deadline set by the Order of the Sanitary Authority. After discussion of the matter by <sup>the</sup> members of the Authority, it was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried - that a letter be written to the city of Molalla requesting a definite time schedule for the project, including in particular the date for the bond election.

Lebanon: Mr. Everts reported on the matter of sewage disposal for the city of Lebanon pointing out that a hearing had been held on July 18, 1952; Findings of Fact had been made; and an Order entered against the city to abate pollution in the South Santiam River by July 1, 1953.

Final plans for a primary sewage treatment plant had been received from the city's consulting engineers on January 30, 1953, but no action had been taken on them because both primary and secondary treatment are required at Lebanon.

Mr. Ralph Roderick, of the firm of Cornell, Howland, Hayes, and Merryfield, consulting engineers, was present to represent the city of Lebanon. He reported that the city council was now concerned about whether or not they should go ahead and call for bids for the primary plant as scheduled on March 3, 1953, or if they should wait until it could all be under one contract. He advised the

the Authority that the city council has gone on record to agree to provide secondary treatment when the primary plant was built if tests show it is necessary.

Mr. Spies reported that the flow in South Santiam River is extremely low in the summer time; that with this small amount of dilution there is no argument about their needing secondary treatment; that the Authority has already ordered the city to go ahead with secondary treatment; and that consequently he felt the Authority should stand firm on the order and make the city comply with the same.

Mr. Roderick stated that he thought the city would get a very good bid on the primary section of the plant now, and that, therefore, from a financial standpoint it would be advisable for the city to start the primary plant and to proceed immediately with plans for secondary treatment.

Mr. Spies asked how long it would take to complete the plans and Mr. Roderick said it would only take about one month's work, but that his firm was so loaded up with other work until the first of June it might be sometime in July before the plans could be finished for secondary treatment. He stated that the primary treatment plans are now in the hands of the contractors for bid.

After further discussion on the matter, it was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried - that the Authority approve the city's proceeding with construction of the primary treatment plant, provided the Authority be notified by letter from the city council that secondary treatment plans will be furnished by not later than July 1, 1953; that an adequate additional fiscal program for financing construction of the secondary unit will be developed by not later than July 1, 1953; and that the construction of the entire plant will be completed by July 1, 1954.

Enterprise: The matter of adequate sewage disposal for the city of Enterprise was continued from the previous meeting of the Authority. Mr. Everts read a letter dated 2-10-53 which had been received from Mayor G. B. Homan relative to the situation at Enterprise. The 8,000 feet of sewer line which had been relaid

ABG759

had reduced the ground water infiltration more than had previously been expected.

Mr. Patterson, District Engineer, advised that he had talked with Mayor Homan recently and was told that the present tax levy of 93.7 mills is about as much as the community can stand at this time; that the present sewer user charge is bringing in much more money than was anticipated; that tests have been run on the main trunk line sewer which shows appreciable reduction in the amount of water passing through the sewers; that tests will be re-run this spring before the city accepts the contractor's job; and that the city is endeavoring to get the creamery plant to discharge its cooling water direct to the river. Mr. Patterson advised that it was the Mayor's belief that within another year they would be ready to construct the treatment plant.

Mr. Spies was of the opinion that an order should be issued to the effect that final engineering plans be submitted by January 1954; that a contract be awarded for the construction of the plant by March 1, 1954; and that completion of the project be not later than end of 1954. It was MOVED by Mr. Veatch, seconded by Mr. McPhillips, and carried - that the city of Enterprise be required to submit complete engineering plans by January 1, 1954, and a revised time schedule for construction be submitted before the next meeting of the Authority. If such schedule is not satisfactory, the Authority will take further action in the matter.

Ontario: The matter of sewage disposal for the city of Ontario was continued from the previous meeting. Mr. Everts read a letter from the Mayor of Ontario relative to the present status of their sewage disposal project. Mr. Everts expressed the opinion that the city was making progress in their program, but that they should be allowed until 1954 for submission of plans.

After further discussion it was decided to continue this matter; therefore, no action was taken.

Toledo: Mr. Spies presented a report on the present status of this city's sewage disposal project. The city had failed to comply with the Order of the Authority to abate pollution of Yaquina River by December 1, 1952. The bond issue has not been sold, and no construction has been started. On January 9, 1953, a registered letter had been sent to the city council of Toledo. To date no reply has been received. It was Mr. Spies' opinion, therefore, that the matter should be turned over to the Attorney General with the request that the Order previously issued to the city by the Authority be enforced.

Mr. Cecil H. Quesseth, Legal Advisor for the Authority, expressed some doubt regarding the advisability of court action, and pointed out it should be determined in advance whether or not it was necessary. If the Authority determined such action to be necessary, he said he would be glad to follow through. Mr. Spies thought that if the matter were turned over to the court, the city would then realize that the Authority meant business and would then proceed with their project. Mr. Veatch concurred in this opinion, and expressed the belief that the Authority should go ahead in the matter. Dr. Erickson stated that in talking with Health Officers of other states they had reported that when such action had been instituted in similar cases it had proven effective.

It was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried - that an injunction suit to abate pollution be instituted against the city of Toledo.

Reedsport: Mr. Spies reported on the request of the Douglas County Housing Authority for permission to build certain sewer extensions in the city of Reedsport. He reviewed the actions taken by the Authority regarding similar requests at the previous meeting and pointed out that the city had failed to fulfill certain provisions under which permission had been granted for a sewer line to serve the public high school. Although a letter had been received from the city manager of Reedsport that the bond issue was to be submitted on March 3, 1953, there was still no assurance that the bond election would carry and the bonds would be sold.

ABG759

Mr. Spies stated that once the city has approved and sold the bond issue there would be no reason for not permitting the Housing Authority to go ahead with their project, as the bond issue would be sufficient to complete the entire required sewerage project.

It was MOVED by Mr. McPhillips, seconded by Dr. Erickson, and carried - that permission be denied for any further construction in this area until the bond issue has been acted upon and bonds sold. Authority was granted to the staff to approve plans for construction of the proposed sewer extensions after the bond issue has been passed and sold.

North Roseburg Sanitary District: Mr. Spies reported that the North Roseburg Sanitary District, et al had failed to comply with the Order entered against them by the Authority on July 7, 1952. He also reported that in the case between Mr. Ketell and the Roseburg Homes, Inc., the State Supreme Court had ruled that Mr. Ketell was no longer secretary of that corporation and, therefore, he was ordered to turn over his books to someone else.

Mr. Quesseth advised that this matter is complicated in that the liability of the respective parties is not clear. There is still a legal question as to whether the North Roseburg Sanitary District is responsible for pollution in that area or whether Roseburg Homes, Inc., or the Cloverdale Water Company is liable. When the Sanitary District was formed it included the Cloverdale area, but the district had filed a dis-claimer to the effect that if they were not able to handle the sewage from same they could cut off the Cloverdale sewer system.

After further discussion relative to the advisability of entering an injunction against the several parties on account of not knowing who is responsible for the existing conditions, it was MOVED by Mr. McPhillips, seconded by Mr. Veatch, and carried - that H. R. Ketell, North Roseburg Sanitary District, Cloverdale Water Company, and North Roseburg Homes, Inc., be enjoined to abate the existing conditions caused by inadequate sewage disposal facilities in the Cloverdale Addition.

Government Camp: Mr. Cuyler reported on the status of this matter which was continued from previous meetings. Because it appeared that the people of that community were sincere in their desire to form a sanitary district but were being delayed by the Clackamas County Court, the secretary was instructed to write a letter to the County Court urging them to do everything possible to expedite the formation of a sanitary district in the Government Camp area.

Portland: Mr. Everts reported briefly on the progress being made by the city of Portland in connection with its interceptor sewers project as outlined in a letter dated November 13, 1952, from City Engineer L. G. Apperson. It was the opinion of the Authority that the city was making fairly satisfactory progress in this matter and, therefore, no action was considered necessary.

Broadmoor-Brentwood Park: It was reported by Mr. Spies that in this area the sewers had overflowed onto the ground during periods of heavy rain storms because certain of the sewers were very poorly installed. The staff has been working with the owner of the Broadmoor Park system to get additional pumping facilities installed as a temporary measure but eventually it may be necessary to relay some of the sewer system.

It was requested that authority be granted to cite the owners in at the next meeting of the Sanitary Authority if they fail to make the necessary corrections.

Other Cities: The secretary reported the progress being made by the following municipalities, and because of this progress no further action was taken by the Authority regarding said cities:

Gladstone is planning to sign a contract with Oregon City for treatment of its sewage at the disposal plant which is now being constructed by the latter city.

Oswego has purchased equipment for its treatment plant; plans for construction to be completed by February 1953; contracts to be awarded in March and construction completed early in 1954.

ABG759

Nyssa has placed its plant back in operation but still has some more work to do on it.

Nehalem and Wheeler have both recently retained N. W. Haner and Associates to make a preliminary engineering study and report of their respective sewage disposal needs.

Newport has retained Carl E. Green and Associates to make a preliminary study and cost estimate of needed sewerage improvements.

Mt. Angel is attempting to purchase a new plant site so that preparation of final plans can be undertaken by the engineers.

Industrial Waste Pollution:

Logging Operations, Conrad Hodge, Rose Lodge: Mr. Burgess made a report concerning the turbidity of Slick Rock Creek, Lincoln County, caused by the logging operations of Mr. Conrad Hodge, at Rose Lodge, Oregon. In response to complaints regarding such pollution, a recent inspection had been made of the Hodge Logging Company's operations. Mr. Burgess explained the manner in which these operations were conducted, and said he believed the Logging Company desired to correct the situation.

Mr. Conrad Hodge, owner of the logging operation, was present at the meeting. He advised the Authority that the stream across which he was transporting logs was turbid, partly due to his operations but also due to the extremely rainy season. He said that representatives of the State Game Commission, the State Police, and the Hatchery Commission at Taft had checked on his operations but that none of them had spoken to him. Mr. Hodge said that he would not be conducting further logging operations in this area until good weather and that he was very willing to do anything in his power to reduce the turbidity when he again started to work there.

The Authority instructed Mr. Burgess to prepare a statement for publicity possibly through the Columbia River Basin Loggers Association, Portland, outlining what the loggers can do to protect streams in areas in which they are logging.

Spaulding Pulp & Paper Company: Mr. H. Clodfelter of the Spaulding Pulp and Paper Company appeared before the Authority with a report which was read by Mr. Everts. Mr. Clodfelter advised that during this coming summer they are expecting to dispose of some of the sulfite waste liquor for crop irrigation in addition to using it for road binder and to impounding it in their storage reservoir. He also advised that they had reduced the amount of seepage from the lagoon from 75 gallons a minute to 6 gallons per minute; and that they believe because of the height of the lagoon from the river the ground waters will carry much of the liquor away from the neighboring wells. No action was considered necessary by the Board in this matter.

Northwest Packers and Growers: Mr. F. J. Furman appeared before the Authority to request permission to discharge wash water from operations at the Pictsweet Packing Company, Albany, into the Willamette River. He was advised to submit a written request with pertinent data to the engineering staff for their consideration. No further action was taken in the matter.

Publishers' Paper Company: Mr. Everts read a letter dated December 17, 1952, from the Publishers' Paper Company, requesting permission from the Authority to barge their spent sulphite liquor to the Columbia. The Company also plans to continue to use as much as possible of their waste liquor for road binder, both methods being considered as temporary until a more permanent method is found. Mr. Veatch was of the opinion that this company should be given a temporary permit to dispose of their waste liquor in this manner. The Authority concurred in this opinion and permission was granted.

Columbia Pickling & Packing Co.:- It was reported by Mr. Cuyler that this Company had retained an engineer to design suitable waste disposal facilities and that in his opinion the company was making reasonably satisfactory progress. No action was, therefore, taken by the members.

It was, likewise, reported that satisfactory progress was being made at the

ABG759

Oregon Lumber Company hardboard mill at Dee and by Lamb-Weston, Inc., at Weston, Oregon.

Arrow Meat Company, Cornelius:- Because this Company had already retained an engineer to prepare construction drawings; had placed an order for the necessary waste treatment equipment; and had promised to have the plans completed by March 1953; and the installation of the waste disposal system finished by July 1, 1953, no action by the Authority members was considered necessary at this time.

The next meeting of the Authority was set for May 15, 1953.

There being no further business, the meeting adjourned at 4:55 P. M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.  
Secretary & Chief Engineer

MINUTES OF THE FIFTY-FIFTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

May 15, 1953

The fifty-fifth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., Friday, May 15, 1953, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Blaine Hallock, B. A. McPhillips, and Dr. Harold M. Erickson, Members; Cecil H. Quesseth, Legal Advisor; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Kenneth H. Spies, Assistant Chief Engineer; and C. E. Cuyler, F. J. Burgess, and Harold W. Merryman, Assistant Sanitary Engineers.

MINUTES: The minutes of the fifty-fourth meeting having been prepared by the secretary and distributed to the members prior to the meeting, it was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the reading of the minutes be waived and that they be approved as prepared by the secretary.

PROJECT PLANS: It was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the action taken by the engineering staff on the following project plans and reports received and reviewed since the last meeting be approved:

Date	Location	Project	Action
2-10	Clackamas County	Harmony Jr. High School sewerage	Approved
2-10	Sisters	School sewerage	Approved
2-11	Linn County	Hamilton School sewerage	Prov. approval
2-11	Linn County	Lacomb School sewerage	Prov. approval
2-20	Douglas County	Brockway School sewerage	Not approved
2-20	The Dalles	Sewer extensions	Approved
2-25	Multnomah County	Antler Motel sewerage	Prov. approval
2-25	Athena	Sewage plant by-pass	Not approved
2-25	Molalla	Preliminary report	Approved
2-25	Lane County	Fairfield School sewerage	Deferred
2-27	Clackamas County	Welches Natatorium sewerage	Approved
3-2	Athena	Public Housing Authority sewers	Approved
3-3	Clatskanie	Willson Subdivision sewerage	Deferred
3-4	Lebanon	Primary treatment plant	Prov. approval
3-5	Beaverton	Sewer extension	Approved
3-5	Sheridan	Revised sewer plans	Approved
3-6	Cornelius	Arrow Meat Co. waste disposal	Comments submitted
3-9	Clatskanie	Willson Subdivision sewerage	Approved
3-10	Boardman	School sewerage	Approved
3-13	Stayton	Grade School sewerage	Approved
3-16	Washington County	Sunset Valley School sewerage	Approved
3-16	Marion County	Morningside School sewerage	Prov. approval
3-20	Dallas	Sewer extension	Approved
3-30	Douglas County	Deer Creek Grade School sewerage	Approved

ABG759

MUNICIPAL SEWAGE DISPOSAL:

Newport: Mr. D. M. DeFreese and Mr. H. G. Olson, Councilmen, and Mr. Carl E. Green, Consulting Engineer, were present to represent the city of Newport.

The secretary pointed out the fact that based on the public hearing held on July 18, 1952, the Sanitary Authority on August 11, 1952, had adopted a Findings of Fact and had entered a final order requiring that the city by July 1, 1953, abate the pollution caused by the discharge of its sewage into the Yaquina Bay and Pacific Ocean. He also read a letter from Mr. Green in which a proposed sewerage project for the city was outlined; and which included discharging the untreated sewage into the ocean.

When asked by the Chairman if the proposed project met with the approval of the technical staff, the secretary replied that there was considerable doubt as to whether pollution of the beach area would be effectively controlled by such a plan because of the possibility of the pollution being carried back to shore by tidal currents.

Mr. Green then explained the proposed project and the financial problem facing the city. He point out (1) that much of the city is now unsewered with the result that serious nuisance and health hazards have been created in such areas because of the lack of adequate sewage disposal, (2) that the most practical plan of sewage disposal for the entire city would be to discharge the treated sewage effluent into Yaquina Bay but that unfortunately the only possible treatment plant site in the bay front area is on property now owned by the U.S. Coast Guard and is, therefore, not obtainable, (3) that the City Council prefers to construct an outfall sewer out into the ocean and to dispose of the sewage by dilution in the ocean waters, (4) that in view of the present high tax rate of 101.1 mills the city council feels that the total project cost must be kept to

ABG759

a minimum and that if too large a bond issue is proposed it will be defeated by the voters.

Mr. DeFreese then reported that the city had only a small sinking fund accumulated thus far and that a \$1.00 sewer user charge had been adopted about one year ago. He stated further that approximately two-thirds of the city is now unsewered and in dire need of sanitary sewers, that the city is willing to try a sewer line out into the ocean, that the city is now negotiating for the purchase of a plant site along the ocean front, and that with an assessed valuation of some \$2,000,000 the present indebtedness of the city amounts to about \$400,000.

When asked by the chairman if the city had any definite construction schedule which included sewage treatment, it was replied that the city did not.

Mr. Green estimated that the proposed project would cost about \$260,000. When asked what the estimated cost was for treatment and discharge into Yaquina Bay he replied that no accurate estimate had been made because a plant site could not be found but that it probably would be in the neighborhood of \$450,000.

Mr. Hallock inquired if the proposed project would provide for collection and disposal of the sewage from the bay front area and was advised by Mr. DeFreese that it was not planned that it would, at least for the present. Mr. Hallock then suggested that the city's representatives retire from the meeting and attempt to work out a definite time schedule and more satisfactory type of program so that favorable action might be taken by the Authority. He stated further that so far the city had not given the Authority much in the way of a program which would afford a basis on which action could be taken.

Dr. Erickson was of the opinion that if the Authority brought some pressure on the city at time time, it might hasten the development of an adequate plan to handle their sewerage problem. He reported that the State Board of Health

was concerned about pollution on the beaches, inasmuch as it is becoming more and more serious, and the elimination of this pollution means a great deal to the people living in the city of Newport.

There was some discussion about the fact that the county had voted to move the court house from Toledo to Newport and that this would entail additional expense to the city taxpayers.

The representatives of the city at the suggestion of the chairman then left the meeting to work out a definite time schedule and more favorable program. After some time they returned and presented the following program and schedule:

- (1) Construction would be started this year on the following facilities:
  - (a) An outfall from Nye Beach to a point some 700 feet or more from the shore line:
  - (b) Necessary interceptor sewer, pumping station, and pressure sewer to divert the sanitary sewage from the Bay-front area into the ocean-front sewer system; and
  - (c) All needed trunk and lateral sanitary sewers to serve the areas within the city which are already developed but unsewered.
- (2) A suitable site for location of a treatment plant for the Nye Beach outfall would be purchased.
- (3) A bond issue in sufficient amount to finance the above projects would be authorized as follows:
  - (a) Read ordinance at June 1, 1953, Council Meeting
  - (b) Pass ordinance at June 15, 1953, Council Meeting
  - (c) Hold special election on July 10, 1953
  - (d) Open bids for sale of bonds in first week of August
  - (e) Open bids for construction of facilities during last week of August
  - (f) Complete construction by June 1954.

Mr. DeFreese advised the Authority that work could be started immediately without the bond sale, since the city has enough money to start work at once

ABG759

on the plan of running the sewer line out to the Pacific Ocean. They are also able financially to take up the option on the site for the treatment plant.

Mr. McPhillips then asked if this would eliminate the pollution of the beach along the ocean front.

Mr. Everts said he had discussed this with Mr. Green and Mr. Olson, and that he was somewhat apprehensive of using the ocean for disposal of sewage without any treatment. He said that Mr. Olson was more familiar with the currents of the ocean and the seasons when the currents are from the north to the south when one would expect the sewage to be swept out into the ocean. He expressed the opinion that if the city wants to go ahead on a program of this sort they would have to do it on their own responsibility, and the council should realize that if there were any pollution of the beach area, the Authority would require adequate treatment to abate such pollution.

Mr. Wendel then advised the city's representatives that if the city council approved this program at its June 1 meeting, the Authority would be inclined to accept it, but if the Council did not approve such a plan, then the Authority should be so advised. Furthermore, if the city council failed to approve the plan, the Authority would consult with the Attorney General to see what the next step would be in order to secure compliance with the pollution abatement statutes.

Mr. Spies stated that he did not believe approval should be given to any plan which would discharge raw sewage into the Ocean, and asked if it could be on a permissive basis.

Mr. Olson again stated that it was only during February and March when westerly winds were blowing that any debris was brought to the beach. During other months the movement of the water is always oceanward.

It was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried, that the above time schedule and program submitted by the city of Newport be approved if the various steps to be taken are met in time indicated, the approval being considered as conditional to the extent that the work to be accomplished under it in the manner outlined by the representatives of the city be treated

as a step in the full accomplishment of an over-all program which is to ultimately involve treatment of the sewage at a proposed treatment plant should it develop that pollution would result under the plan as proposed; and that if immediately following the proposed meeting to be held by the Council on June 1st the Authority is not advised that the action contemplated has been considered and approved by the city authorities then the Sanitary Authority without further delay shall submit the problem to the Attorney General for such solution as he may be able to offer to meet this pollution problem.

Empire: Mr. R. H. Erichsen, City Engineer, and Mr. Robert L. Thomas, City Attorney, were present to continue the discussion regarding a proposed plan for sewers and sewage treatment for the city of Empire, the matter having been held over from the previous meeting of the Authority.

Mr. Erichsen advised the Authority that since the last meeting the matter of planning a fiscal and construction schedule for the sewerage system for the city of Empire had again been presented to the city council and that a definite construction program had been worked out. Mr. Erichsen said that the council had approved the program, that it had been presented to the voters, and that on May 9, 1953, the people had voted general obligation bonds in the amount of \$325,000, and that the city is now prepared to carry out the program in accordance with the Authority's requirements, except that the city was requesting permission to complete the treatment plant in 1957 instead of 1956 in order to allow some flexibility in the financial program. Mr. Erichsen reported further that the total cost of construction would be about \$392,000. Mr. Thomas stated that all legal proceedings to date had been checked by the bonding attorneys. According to the program as submitted by the city's two representatives the bond issue and sewers would be financed by increasing the present 50¢ sewer-user charge to \$1.00 per month which would bring in about \$10,000 to \$12,000 per year, by levying a sewer connection charge of \$250 each for all new sewer connections, and by a general tax levy. The bonds would be sold in blocks as needed. Engineering plans for the first section of sewers were submitted by Mr. Erichsen for review and approval, by the Authority.

ABG759

It was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the program as submitted by the city of Empire be approved.

Portland: Mr. L. G. Apperson, City Engineer of Portland, appeared before the Authority to report on the progress being made relative to construction of the sewerage disposal system for Portland, and more particularly regarding the sewer extension for the S. W. Multnomah District.

Approval of the plans for the latter project had previously been deferred by the engineers of the Authority pending completion of the southwest interceptor sewer plans. The city, however, had just recently submitted the interceptor sewer plans and, therefore, the entire project could now be approved.

Mr. Apperson estimated that by this summer at least 75% of the city would be sewerred by the sewage treatment works. The city was commended by the Authority for its progress.

Vernonia: Mr. C. F. Bradley, City Attorney, Sam L. Hearing, City Recorder, and Mr. S. A. Ross, Consulting Engineer, appeared before the Authority regarding the matter of sewage disposal for the city of Vernonia.

The secretary read a letter dated May 8, 1953, addressed to the Authority from the city in which permission was requested for the construction of sewers in the Corey Hill area but with sewage treatment deferred until sometime in the future, say in ten years.

Mr. Bradley said that the Authority in June 1946 had advised the city it would have to proceed with plans for more complete treatment of the sewage which was being discharged into Nehalem River. At the present time Vernonia has a large septic tank which is located near the Nehalem River, the effluent from which drains into the river without further treatment.

Mr. Ross advised that the present septic tank is adequate to provide partial treatment and that the Corey Hill area could be connected to it. It was estimated by Mr. Ross that if the city could go ahead with immediate construction of the urgently needed sewer extensions, improvements to the sewage lift station,

and installation of chlorination facilities at the existing disposal plant, it would cost only about \$85,000. If the city were required to construct complete treatment works the total cost would be \$150,000 or more. The urgent need for sewer extensions in the Corey Hill area was described by Mr. Bradley.

Mr. Ross said that there are now 320 connections to the existing sewer system and that proposed extensions would increase this number to 540. He proposed to provide chlorination of the septic tank effluent if permission could be granted to use the existing facilities for the time being.

Mr. McPhillips asked the representatives if any progress had been made since 1946, and if there had been any attempt to levy a sewer-user charge to build up a sinking fund for the required sewerage system.

Mr. Bradley said that an attempt had been made to create a sinking fund but that the water main had been damaged and \$19,000 of the fund was used to repair the damage. He said he thought that within the next ten years the city would be in a position to build a sewage treatment plant. He also stated that the city has had no bond issue for a good many years, and for that reason it was anticipated it would take some time to bring a bonding house up-to-date with the transcript they would require. He anticipated that it would require not less than ninety days in order to get bonds sold and get money to go ahead with the Corey Hill project.

A preliminary engineering report was submitted by Mr. Ross for review and approval by the Authority.

It was MOVED by Mr. Hallock, seconded by Dr. Erickson, and carried - that if the staff approves the program submitted by the city of Vernonia, the Authority, likewise, extends its approval, but declines at this time to commit itself to any suggestion to await ten years for construction of a treatment plant.

North Roseburg Sanitary District: Mr. Cecil H. Quesseth, legal advisor for the Authority, reported that following the direction of the Authority at its last meeting on February 13, a complaint had been duly filed in the Circuit Court of Douglas County against Roseburg Homes, Inc., the Cloverdale Water Company,

ABG759

Mr. H. R. Ketell, and the North Roseburg Sanitary District, for failure to abate insanitary conditions caused by inadequate sewage disposal facilities in the Cloverdale Addition.

Mr. Quesseth reported that within the time allowed for answering, the North Rosebrug Sanitary District first filed a demurrer but later retracted it; and then filed an answer claiming they were not at fault in that they had filed a disclaimer of responsibility before they connected up the Cloverdale sewer system. They asked that they be absolved from any responsibility. A reply was filed by Mr. Quesseth to that answer, denying the request. Roseburg Homes, Inc., and Mr. H. R. Ketell had filed a motion to take the depositions of Chairman Harold F. Wendel and the Secretary, Curtiss M. Everts, Jr., but the motion was denied by the Court.

Mr. Quesseth then discussed the desirability of filing a motion for preliminary injunction so as to at least get the parties before the Court. He reported that the necessary motion had been prepared, and that Mr. Spies had been contacted regarding his affidavit as to the present existing pollution.

Mr. Spies then stated that he had gone to Roseburg several days ago and found that conditions were still bad and that no steps had been taken to correct them. Since then he had been contacted by Mr. W. C. Smith who is the new president of Roseburg Homes, Inc., and the Cloverdale Water Company, and who was the contractor that built the project originally. Mr. Smith had assured Mr. Spies that he would do everything possible to solve this problem. Mr. Smith had advised that there was about \$2,000 in an account with Cloverdale Water Company and that he could use that money to try to repair the Cloverdale sewer system. He also had stated that inasmuch as he was the contractor, he felt he was responsible for certain other items which he would take care of himself, such as, improving the manholes.

Mr. Spies said that while he did not know just what to suggest in the way of court action, Mr. Smith appeared to be fairly reliable and Mr. Murphy, Attorney for the North Roseburg Sanitary District, was agreeable to giving Mr. Smith a reasonable amount of time in which to repair said sewers. Mr. Spies stated further that he believed that Mr. Ketell was not out of the picture, and that, therefore, there was a

good chance of getting Mr. Smith and the North Roseburg Sanitary District together.

Mr. Quesseth then stated that no further action would be taken until he was advised to do so.

Toledo: Mr. Quesseth, legal advisor for the Authority, reported that following the direction of the Authority at its meeting on February 13, a complaint was duly filed on February 28, in the Circuit Court of Lincoln County against the city of Toledo for failure to abate the pollution caused in the Yaquina River by insanitary sewage disposal methods.

Shortly thereafter the Attorney General had received a letter from Mr. G. B. McCluskey, attorney for the city of Toledo, advising that he had received copy of the complaint and requesting a 30-day extension of time. The request was granted by the Attorney General.

Mr. Quesseth advised that he had heard nothing further in connection with this matter and about ten days ago he wrote to Mr. McCluskey stating the Authority was meeting shortly and he would like a report of the progress made by the city for the abatement of its pollution problem. To date no reply has been received from Mr. McCluskey.

Mr. Hallock was of the opinion that an application for default should be filed.

Mr. Quesseth advised that if satisfactory with the Authority he would follow the matter through, but would like to consult with the Attorney General first inasmuch as he was the one who was in favor of granting more time.

Rockaway: The secretary read a petition from residents of Twin Rocks protesting the proposed location for construction of a sewage treatment plant by the city of Rockaway.

After reviewing the facts in the case, it was the decision of the Authority that the matter of the location of the treatment plant was not within the jurisdiction of the Sanitary Authority.

Enterprise: At the February 13th meeting of the Authority, the matter of the progress being made by the city of Enterprise had been considered. It was

ABG759

decided at that time that the city should be notified that a revised time schedule for construction of the necessary sewage disposal plant should be submitted to the Authority before the next meeting of the Authority.

The secretary reported that in the meantime the city had undertaken the second sewer replacement job which was expected to satisfactorily eliminate the ground water infiltration. No revised time schedule had been submitted, however.

The secretary was instructed by the Authority to write the city of Enterprise again, requesting such action.

Vale: Final engineering plans for the construction of adequate sewage disposal facilities had been submitted to the Authority on May 14 by representatives of the city of Vale. However, no definite progress had been made in the matter of financing the project.

The Authority authorized the engineering staff to write the city requesting that the city submit within thirty (30) days a complete time schedule and fiscal program.

PULP & PAPER WASTES:

Crown Zellerbach Corporation - Lebanon: The secretary read a letter from Crown Zellerbach Corporation regarding the status of their project at Lebanon and extending an invitation to the Authority members to inspect the mill as soon as the new process is in full-scale operation.

MISCELLANEOUS:

Resolution re: application for review and approval of plans: A proposed regulation requiring submission to the Sanitary Authority of a formal application for review and approval of plans pertaining to sewage disposal projects was presented to the Authority for adoption. It was MOVED by Mr. Hallock, seconded by Mr. McPhillips, and carried - that the regulation as follows be adopted:

WHEREAS, Sec. 116-1122, O.C.L.A., empowers the State Sanitary Authority to formulate rules and regulations pertaining to the control and pollution of the waters of the state, and to prepare programs relating to the treatment and disposal of sewage and other wastes; and

WHEREAS, Sec. 116-1124, O.C.L.A., imposes upon the State Sanitary

Authority the duty to examine and approve plans and specifications for the construction of sewer systems, treatment, or reductions plants and modifications or additions thereto; and

WHEREAS, the Authority and its engineering staff have found that an orderly procedure governing the submission of plans for sewage and waste treatment is necessary for the proper administration of the laws pertaining thereto; NOW, THEREFORE:

BE AND IT HEREBY IS RESOLVED by the Sanitary Authority that the following regulations shall be adopted:

1. Any individual, partnership, corporation, municipality, or sanitary district, before constructing any new sewage or waste disposal works, or before modifying, enlarging, or adding to any existing sewage or waste disposal works, from which effluent is to be discharged into any public waters of the state of Oregon or which are to be used by more than five (5) families or fifty (50) persons, shall submit to the State Sanitary Authority for review and approval full plans and specifications for said project.
2. All plans and specifications thus submitted shall be accompanied by an application for such review and approval, said application to be made in writing on a form prepared for that purpose and furnished by the State Sanitary Authority, and contain the following:
  - a) Name and address of the owner of said disposal works.
  - b) A statement as to whether the owner is an individual, partnership, corporation, municipality, or sanitary district.
  - c) Brief description of the project covered by the plans, including location of the disposal works and name of receiving stream, if any.
  - d) A statement by the owner that he, (or it), in consideration of the allowance of such application, agrees to operate and maintain the disposal works in accordance with the requirements of the State Sanitary Authority.
  - e) A statement by the owners that he, (or it), will notify the State Sanitary Authority immediately in event of sale of other transfer of ownership of said disposal works.

ABG759

(f) Signature of the owner or duly authorized officer or officers. If the owner is more than one individual, all must sign; if a partnership, by one or more members of the firm; and if a corporation, private or municipal, by the president or vice-president and secretary, or the mayor or chairman of the board of directors, as the case may be. The official title of said officer or officers shall be stated.

The Secretary and Chief Engineer of the Authority shall prepare such forms in accordance with the foregoing regulation as may be necessary to carry out the purpose thereof.

The Secretary of the Authority is directed to file with the Secretary of State a duplicate original of this resolution, in accordance with Chapter 5, Title 89, O.C.L.A.

Appropriation for the 1953-1955 biennium: The secretary reported that the State Legislature had appropriated the amount of \$94,510 to the State Board of Health for use by the Authority for its water pollution control program during the period July 1, 1953 to June 30, 1955.

Status of other projects: A report covering the status of other sewage disposal projects was presented by the secretary for the information of the Sanitary Authority members.

Date for the next meeting: The date for the next meeting of the Authority was set for Friday, August 7, 1953.

There being no further business, the meeting adjourned at 4:20 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR.  
Secretary and Chief Engineer

MINUTES OF THE FIFTY-SIXTH MEETING OF THE  
OREGON STATE SANITARY AUTHORITY

August 7, 1953

The fifty-sixth meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:00 P.M., Friday, August 7, 1953, in Room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., Blaine Hallock and John C. Veatch, Members; Curtiss M. Everts, Jr., Secretary and Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer, and Fred J. Burgess, Assistant Sanitary Engineer.

MINUTES: The minutes of the fifty-fifth meeting having been prepared by the secretary and distributed to the members in advance of the meeting, it was MOVED by Mr. Veatch, seconded by Mr. Hallock, and carried, that the reading of the minutes be dispensed with and be approved as prepared by the secretary.

PROJECT PLANS: It was MOVED by Mr. Hallock, seconded by Mr. Veatch, and carried that the action as taken by the engineering staff on the following project plans and reports received and reviewed since the last meeting be approved:

Date	Location	Project	Action
5-1	Marion County	Morningside school sewerage	Approved
5-1	Multnomah County	Bonny Slope school sewerage	Approved
5-3	Marion County	Keizer school sewerage	Not approved
5-4	Jordan Valley	Jordan Valley school sewage disposal	Recommended approval
5-4	Oswego	Oswego sewage treatment	Not approved
5-7	Jordan Valley	School sewerage	Approved
5-8	Arlington	Sewer extensions	Approved

ABG759

Date	Location	Project	Action
5-8	Athena	Public housing sewers	Approved
5-8	Enterprise	Sewer replacement	Approved
5-8	Newport	Public housing sewerage	Prov. approval
5-8	Portland	West Central interceptor	Approved
5-13	Clackamas County	Clackamas school sewerage	Approved
5-15	Marion County	Keizer school sewerage	Prov. approval
5-18	Portland	S.W. Multnomah Blvd.	Approved
5-19	North Bend	Sewage treatment plant	Prov. approval
5-19	Portland	S.W. interceptor	Approved
5-20	Vale	Sewage treatment plant	Not approved
5-20	Washington County	Aloha-Huber school sewerage	Approved
5-21	Coquille	Sewage treatment plant	Prov. approval
5-21	Empire	Sewer system	Prov. approval
5-25	Marion County	Liberty school sewerage	Approved
5-25	Myrtle Point	Treatment plant	Prov. approval
5-25	Oakridge	Sewer extensions	Not approved
5-28	Carlton	Sewage treatment plant	Not approved
5-29	Corvallis	Sewer extensions	Approved
5-29	Oakridge	Sewers	Prov. approval
6-1	Wilbur	School sewerage	Not approved
6-4	Gladstone	Sewage collection system	Cond. approval
6-4	Roseburg	Sewer extensions	Approved
6-4	Yamhill County	Willamina school sewerage	Permission granted
6-5	Lebanon	Sewage treatment plant additions	Prov. approval
6-5	Oakland	Jr. High school sewerage	Approved
6-5	Redmond	John Tuck school sewerage	
6-5	The Dalles	Sewer extensions	Approved

Date	Location	Project	Action
6-11	Carlton	Sewage plant (revised)	Prov. approval
6-11	Oakland	Jr. High school sewerage	Approved
6-12	Portland	Swan Island extensions	Approved
6-16	Springfield	Sewer extensions	Approved
6-19	Warm Springs	Simnasho Indian school sewerage	Not approved
6-19	Wilbur	Elementary school sewerage	Approved
6-19	Reedsport	Sewer and pump station	Prov. approval
6-20	Baker	Sewer extensions	Approved
6-20	Harris Beach	State Park sewerage	Prov. approval
6-20	Portland	Pump stations SW 1, SW 2	Approved
6-22	Warm Springs	Day School sewerage-	Approved
6-23	Clackamas County	Barlow school sewerage	No action
6-23	Columbia County	Yankton school sewerage	Approved
6-23	Multnomah County	Union High #3 sewerage	No action
6-23	North Bend	Sewer extensions	Approved
6-24	Albany	Pump station and interceptor	Approved
6-24	Corvallis	Sewer extension	Approved
6-24	Milwaukie	Report on treatment for Ardenwald Sanitary District	Approved
6-24	Multnomah	Gilbert school sewerage	No action
6-24	Multnomah County	Union High #3 school sewerage	Approved
6-24	Nehalem	Sewer extensions and interim report	Approved
6-24	Reedsport	Sewerage project	Prov. approval
6-24	Tualatin Hills	Sanitary District sewers	Cond. approval
6-29	Multnomah County	Gilbert school sewerage	Prov. approval
6-29	Salem	State Institution sewer replacement	Prov. approval
7-3	Wasco County	Petersburg school sewerage	Approved
7-6	Vale	Sewage treatment plant	Approved

ABG759

Date	Location	Project	Action
7-8	Eugene	Sewer extensions	Prov. approval
7-17	Baker	Sewer extensions	Approved
7-17	Corvallis	Sewer extensions	Approved
7-17	North Plains	School sewerage	Prov. approval
7-17	Portland	Electro Metallurgical Company waste disposal	Cond. approval
7-20	Gold Beach	Sewer extensions	Prov. approval
7-20	Jackson County	School sewerage	Approved
7-20	Winston	Sewer system specifications	Deferred
7-22	Riddle	Hanna Nickel Smelting Company sewage disposal	Recommendations submitted
7-24	Clackamas County	Mulino School sewerage	Approved
7-24	Salem	West Salem interceptor sewer	Prov. approval
7-24	The Dalles	Sewer extensions	Prov. approval
7-24	Washington County	Raleigh school sewerage	Approved
7-28	Corvallis	Sewer extensions	Approved
7-28	Nehalem	Sewer extensions	Prov. approval
7-28	Salem	West Salem pumping station	None required
7-29	Arlington	Sewer extensions	Prov. approval
7-30	Clackamas County	Union Mills school sewerage	Approved
7-30	Yamhill County	Willamina school sewerage	Provisional permission
7-31	Wasco County	Pine Wood Trailer Park sewerage	Not approved

#### MUNICIPAL SEWAGE DISPOSAL

Government Camp: The voters of the Government Camp area having approved the formation of a sanitary district on May 22, 1953, but being unable to proceed further because of financial limitations, consideration was again given this matter by the Authority members. The Government Camp Sanitary District was represented by R. M. Hughes, Everett Darr and Ole Langrud, directors. The U. S.

Forest Service was represented by Ralph Wiese and James Ralph.

The secretary read a memorandum dated August 7, 1953, which outlined the status of the problem, said memorandum being a part of the Sanitary Authority files in this case.

Mr. Veatch stated that the Authority recognized that a difficult problem exists inasmuch as the resident population of the district constitutes only a very small percentage of the total population, the summer tourists and the wintertime skiers, who are actually responsible for the sewage disposal problem. He stated however that in spite of that fact it will be necessary either to solve the problem or close the places responsible for such insanitary conditions. Mr. Veatch then suggested that it might be possible to obtain some outside financial assistance from the State Highway Commission inasmuch as the state benefits from the large amount of tourist travel to and from the Government Camp area.

After further discussion it was MOVED by Mr. Hallock, seconded by Mr. Veatch, and carried, that the office of the Attorney General be requested to determine whether or not the State Highway Commission had authority to assist in financing the construction of a community sewerage system under such circumstances.

Mr. Wiese, Mt. Hood Forest Ranger, then asked how long it would be before definite action could be taken. He pointed out that the U. S. Forest Service had some time ago granted two special use permits in that area for the location on Forest Service property of private sewage disposal facilities, that such facilities had never been properly installed, operated or maintained, and that as a consequence serious contamination of the waters of Camp Creek and its tributaries was being created. He said the Forest Service felt it was time that such conditions be corrected but on the other hand they did not want to do anything that would hinder the progress of the sanitary district.

ABG759

Mr. Darr then expressed the opinion that before anything would ever be accomplished the Sanitary Authority would have to issue final abatement orders to the individual violators.

It was MOVED by Mr. Hallock, seconded by Dr. Erickson, and carried, that if within 45 days from date of this meeting the Authority is not successful in getting a favorable response from the Highway Commission or from any other outside source of finances for the proposed community sewerage system, then the engineering staff of the Authority will immediately make an inspection of the area, determine six or more of the biggest offenders, and cite them to appear before the Authority to show cause why such pollution should not be abated.

#### TOLEDO

There being no one present to represent the city of Toledo, the secretary read a memorandum prepared by the Authority's engineering staff regarding the matter of sewage disposal facilities for the city, and which also contained a request dated July 27, 1953, for permission to extend the present sewer system to the vicinity of the First Baptist Church and 11th Street.

Mr. Everts reported that the city has an application before the State Bond Commission for purchase of \$126,000 in bonds which were voted in April, 1953. In discussing the matter recently with the mayor, Mr. Everts said he was advised that the city had been negotiating with Mr. Paulus, Deputy State Treasurer, who had promised them he would get to the matter within the next ten days.

Mr. Quesseth said he had conferred with Mr. Paulus on two different occasions and was advised it would probably be around the first of August when this could be considered. It was his impression that Mr. Paulus would recommend the purchase to the State Bond Commission and that they would be accepted.

Mr. Quesseth advised that from the indications by Mr. Paulus he believed the Authority can be fairly well assured the city will be able to sell the bonds.

It was MOVED by Dr. Erickson, seconded by Mr. Hallock, and carried that approval of the extension to the Toledo sewer system as per request of July 27, 1953, be granted, provided the city disposes of its bonds and proceeds promptly with the installation of the sewage treatment plant.

VALE

The secretary read a memorandum dated August 7, 1953, as prepared by the Authority's engineering staff setting forth the progress being made by the city of Vale and containing the recommendation that the abatement deadline for completion of the sewerage facilities be extended to July 1, 1954. It was MOVED by Dr. Erickson, seconded by Mr. Veatch, and carried that request for extension of time for completion of sewerage facilities contained in the city's letter of June 16, 1953, be granted and that the time be extended to July 1, 1954.

NEWPORT

The secretary read a memorandum dated August 7, 1953, setting forth actions taken by the Sanitary Authority and steps taken by the city towards the installation of adequate sewage disposal facilities for the city of Newport.

It was MOVED by Mr. Veatch, seconded by Mr. Hallock, and carried that the matter relating to sewerage facilities for the city of Newport be continued.

REEDSPORT

The secretary read a memorandum dated August 7, 1953, setting forth actions taken by the Authority and steps taken by the city towards construction of adequate sewerage facilities for the city of Reedsport. It was the opinion of the Authority that the city was making satisfactory progress inasmuch as bonds had been sold, final plans had been accepted and construction contracts had

ABG759

been awarded, and therefore, no further action was required at this time.

#### LEBANON

The secretary read a memorandum, dated August 7, 1953, as prepared by the Authority's staff regarding the steps taken by the city of Lebanon towards the construction of adequate sewerage facilities, and it was the belief of the Authority that the city was progressing satisfactorily and that no further action was required at this time.

#### VERNONIA

The secretary read a memorandum dated August 7, 1953, covering the steps taken by the city of Vernonia regarding financing of sewerage facilities for the city, which also included a request from the city that, inasmuch as they did not feel they would be able to dispose of the bonds on the open market, certification by the Authority be made to the State Bond Commission for approval of the city's application for sale of the bonds. The Authority authorized the secretary to proceed with such certification.

#### NORTH ROSEBURG SANITARY DISTRICT

The secretary read a memorandum dated August 7, 1953, regarding the status of the Cloverdale sewer problem. It was reported that the engineers engaged by the North Roseburg Sanitary District had made an inspection of the repaired Cloverdale sewer system, that it was the belief of said engineers that the contractor had made a conscientious effort to correct the faulty construction where same could be located, and that the system as corrected now should operate satisfactorily with reasonable maintenance.

The Authority is now awaiting receipt of a definite agreement between Mr. Smith, manager of the Cloverdale properties, and the North Roseburg Sanitary District.

No further action by the Authority at this time was required.

SHERIDAN

The secretary read a resolution adopted by unanimous vote by the City Council of Sheridan at its meeting on August 3, 1953, whereby the charter of the city of Sheridan would be amended by adding 2 sections to provide (1) for the construction, maintenance and operation of a municipal sewerage system and (2) empowering the City Council to issue and sell general obligation bonds, not to exceed \$350,000, for the financing of sewerage facilities, said resolution amending the city charter to be voted on at a special election called for the 16th day of September, 1953. No action by the Authority was required at this time.

Southwest District, Portland

Mr. Wendel inquired about progress being made in sewerage the southwest section of the city of Portland. Mr. Everts advised that in a letter to Commissioner Bowes dated August 5, 1953, the position of the Authority had been stated to the effect that if community sewers are not installed in that area, the Authority will have no alternative but to take appropriate action to abate the existing pollution.

INDUSTRIAL WASTES

Oregon Lumber Company Citation Hearing In the matter of industrial waste and sewage disposal by the Oregon Lumber Company at Dee, Oregon, and in response to the citation issued to said company the following persons were present at the citation hearing: L. J. Roedel, Vice President, Oregon Lumber Company, Dee, Oregon; H. J. Rayner, G. E. Howell, Paul W. Ebert and L. M. Mathisen of the Oregon State Game Commission; Robert Nunamaker, Charles A. Best and Ervin Beard, representing the Farmers Irrigation Company, Hood River, Oregon; Max L. Moore, Hood River, Oregon, representing Hood River County Game Association; C. R. Mattson, Clackamas, Oregon, representing State Fish Commission; and P. J. Lens and J. O. Creson, Hood River, Oregon.

ABG759

Mr. Hallock requested that he be permitted to disqualify himself regarding this matter for the reason that for the past several years he has been retained by the company as attorney. His request was granted.

A memorandum dated August 7, 1953, and prepared by the Sanitary Authority staff was then read by the secretary. This memorandum which has been made a part of the Authority's permanent files of this case outlined the history of the problem and presented data regarding the pollution being caused in the waters of the Hood River system by the discharge of sewage and wastes from the Oregon Lumber Company's operations at Dee, Oregon.

Mr. H. J. Rayner presented a report from the Oregon State Game Commission dated August 6, 1953, and signed by P. W. Schneider, State Game Director. This report has likewise been made a part of the Authority's permanent files and describes the polluted conditions observed in the downstream waters during the period from August 1951 to July 1953 inclusive, by representatives of the State Game Commission.

Mr. L. J. Roedel, Vice President, Oregon Lumber Company, explained that the most recent cause for complaint was the plugging of the fish screen at the intake to the diversion canal of the Irrigation Company. He stated that he was unable to account for the tremendous amount of wood fiber which had collected on the screen unless someone at the mill had accidentally opened a valve and released fiber directly to the river. He stated that since that time locks have been placed on the valve so that in the future it will be impossible for the valves to be opened accidentally. He stated further that the equipment which had been installed recently for removal of fibers from the process waters had been selected upon the recommendation of the manufacturer and that it is now being returned to the supplier, inasmuch as experience had shown that such equipment could not produce the required results. Mr. Roedel stated further that the company was most disappointed that this equipment and also the

stationary screen which had been installed more recently had failed to abate the pollution caused by the loss of wood fibers from the hardboard mill.

Mr. Beard representing the Irrigation Company described the excessive accumulation of bark and other wood debris at the racks on the intake of their diversion canal and also stated that the farmers experienced considerable difficulty with the plugging of their sprinklers and spraying equipment.

Mr. Burgess of the Sanitary Authority staff then reported that on numerous occasions when investigations had been made of the company's operations the officials of the Oregon Lumber Company had always appeared to be most cooperative and willing to control such pollution, and that some improvements had been made to their operations but that too frequently when investigations of complaints about pollution were made the officials claimed that such pollution had been caused by some accidental opening of a valve or other unexpected circumstances. Mr. Burgess expressed the belief that facilities should be provided to abate and control the pollution on a permanent basis.

Mr. Everts then stated that since July 1949 the engineering staff of the Authority had made numerous investigations of this matter in response to complaints which had been received. He stated further that in his opinion the company had had sufficient time in which to provide adequate facilities for the prevention and control of stream pollution. Mr. Veatch expressed the opinion that ample evidence had been presented showing that the waters of the Hood River system had been detrimentally polluted by the operations of the Oregon Lumber Company and that although the company had undoubtedly been trying to solve the problem they could not be excused from causing further damage to downstream water users.

It was therefore MOVED by Mr. Veatch, seconded by Dr. Erickson and carried, that the Authority adopt as findings of fact the report submitted to the Authority by the engineering staff in the matter of industrial wastes and

ABG759

sewage disposal by the Oregon Lumber Company in the public waters of the state of Oregon from the operations of said company at Dee, Oregon, and that based on such findings of fact the Authority enter an order requiring said Oregon Lumber Company to cease and desist within 60 days from date of said hearing the pollution caused in the public waters of the Hood River system.

#### HIGHWAY AGGREGATE PRODUCTION

The secretary reported that for a number of years the state has been faced with a serious problem of stream pollution in the form of excessive turbidity caused by tailings from gravel mining and washing operations throughout the state. Some of these operations are conducted by county road departments and others by private contractors who are furnishing aggregates for state highway construction purposes.

Recently a tributary of the Rogue River as well as the main stream itself had been seriously polluted in this manner by the discharge of tailings from a gravel plant supplying aggregates for the State Highway Commission.

Mr. Everts requested permission to bring this matter to the attention of the State Highway Commission and to suggest to them that in the future provisions be included in their contracts calling for compliance on the part of the contractor with all state statutes and Sanitary Authority requirements for stream cleanliness and requiring that adequate steps be taken for controlling pollution.

It was MOVED by Mr. Hallock, seconded by Mr. Veatch, and carried that the secretary write to the State Highway Commission calling to their attention the water pollution problem caused by certain gravel mining and washing operations and suggesting that in the future when contracts are made for highway construction

provisions be made that the contractor comply with state statutes regarding water pollution control and that adequate measures be taken to prevent such pollution.

The next meeting of the Authority is scheduled to be held on Friday, October 23.

There being no further business, the meeting adjourned at 3:40 P.M.

Respectfully submitted

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.  
Secretary

MINUTES OF THE FIFTY-SEVENTH MEETING

OF THE

OREGON STATE SANITARY AUTHORITY

October 23, 1953

The fifty-seventh meeting of the Oregon State Sanitary Authority was called to order by the Chairman at 2:15 P. M., October 23, 1953, in room 36, State Office Building, Portland, Oregon. Those present were Harold F. Wendel, Chairman; Harold M. Erickson, M.D., Blaine Hallock, and John C. Veatch, Members; Curtiss M. Everts, Jr., Secretary & Chief Engineer; Cecil H. Quesseth, Legal Advisor; Kenneth H. Spies, Assistant Chief Engineer; and Clarence E. Cuyler and James R. Boydston, Associate Sanitary Engineers.

MINUTES: The minutes of the fifty-sixth meeting having been prepared by the secretary and distributed to the members in advance of the meeting, it was MOVED by Mr. Hallock, seconded by Mr. Veatch, and carried, that the reading of the minutes be dispensed with and they be approved as prepared by the secretary.

ABG759

PROJECT PLANS: It was MOVED by Mr. Hallock, seconded by Mr. Veatch, and carried that the action as taken by the engineering staff on the following project plans and reports received and reviewed since the last meeting be approved:

Date	Location	Project	Action
8-3	North Bend	761 AC&W site sewage plant	Not approved
8-4	Coquille	Sewer extensions	Approved
8-10	Glendale	Sewer extensions	Deferred
8-10	Glendale	Sewage treatment plant	Deferred
8-12	Foster	Grade school sewerage	Recommendations submitted
8-13	Oswego	Sewer extension	Approved
8-14	Dundee	School sewerage	Not approved
8-17	Springfield	Sewer extensions	Prov. approval
8-17	Coquille	Coquille Park Tract sewers	Prov. approval
8-18	Jefferson Co.	Palisades State Park	Approved
8-18	Yoncalla	School sewerage	Prov. approval
8-20	Beaverton	Sewer extensions	Approved
8-21	Corvallis	Lincoln Grade School	Prov. approval
8-24	Jackson County	Griffin Creek School	Not approved
8-25	Winston	Temporary sewage plant	Not approved
8-26	Marion County	Sunnyside School sewerage	Prov. approval
8-27	Beaverton	Broadway pumping station	Approved
8-27	Clackamas Co.	Union High School sewerage	Approved
8-27	Malheur Co.	Ridgeview School sewerage	Prov. approval
8-31	Lane County	Honeyman State Park sewerage	Approved
8-31	Portland	West Central lateral sewers	Deferred
9-1	The Dalles	Sewer extensions, Col Terrace Add'n.	Prov. approval
9-2	Multnomah Co.	Whitaker School sewerage	Approved
9-2	Yamhill Co.	Dundee School sewerage	Prov. approval
9-3	Multnomah Co.	Lynch School sewerage	Approved

Date	Location	Project	Action
9-8	The Dalles	Government Trailer Camp sewerage	Approved
9-14	McMinnville	Sewer extensions	Prov. approval
9-15	Griffin Creek	School sewerage	Prov. approval
9-17	Laurelwood	Laurelwood Academy STP	Not approved
9-17	Winston	Sewer system & temporary treatment plant for South Slope Subdivision	Prov. approval
9-18	Lane County	Elizabeth Page School sewerage	Prov. approval
9-18	Multnomah Co.	Orient School STP	Cond. approval
9-21	Lane County	Thurston Jr. High sewerage	Recommendations submitted
9-21	Portland	West Central lateral system	Prov. approval
9-25	Lane County	Honeyman State Park	none required
9-29	Tualatin Hills Sewage treat	Sewage Treatment plant	Prov. approval
9-30	Canyonville	Elementary School sewerage	Prov. approval
9-30	Wasco County	Wasco High School sewerage	Approved

MT. HOOD AERIAL TRANSPORTATION COMPANY CITATION

In the matter of sewage disposal by the Mt. Hood Aerial Transportation Company at Government Camp, Oregon, and in response to the citation issued to said company the following persons were present at the citation hearing: Wallace R. Telford, County Judge, County of Clackamas; Stan Skoko, Clackamas County Commissioner; George L. Rauch, Attorney for Mt. Hood Aerial Transportation Company; A. L. Greenwalt, C. Lundell and Dr. J. Otto George; representing the Mt. Hood Aerial Transportation Company; Everett Darr, resident of Government Camp; Mansfield Murphy and Robert H. Whitmore, Clackamas County Sanitarians; George J. Gutfleisch, Oregon Motor Court Association; Lloyd R. Olson, U. S. Forest Service; and V. A. McNeil, Portland Chamber of Commerce.

ABG759

At the request of the chairman the secretary read the citation issued to the company, the chronology of events leading up to the hearing and a memorandum prepared by the engineering staff, all three documents being a part of the Authority's files in this case.

Mr. Wallace R. Telford, Clackamas County Judge, then requested that a sufficient extension of time be granted so that an attempt might be made to obtain financial assistance from the 1955 Oregon State Legislature for the construction of a public sewerage system for the entire Government Camp area. He stated that representatives of the Clackamas County Court and the Government Camp Sanitary District had already discussed the matter with Governor Patterson, that an appeal for financial assistance had been made but without success to the State Highway Commission, and that other assistance had been requested by the Sanitary District from the Portland Chamber of Commerce and the Clackamas County Court.

Mr. Stan Skoko, Clackamas County Commissioner, also requested an extension of time for the same purpose and suggested that the time be extended to the end of the 1955 state legislature.

Mr. George L. Rauch stated that the many tourists and skiers who come to Government Camp to enjoy the recreational facilities of our national forests are primarily responsible for the sewage disposal problem at Government Camp and therefore the U. S. Forest Service ought to help provide funds for the construction of adequate sanitary facilities. He expressed the opinion that funds for such a purpose could be obtained from Congress and that by April 30, 1954, it should be possible to ascertain whether or not Federal money would be available. He said that he personally would do everything possible to promote it.

A blueprint supposedly showing the plan of the septic tank system as actually built for the Mt. Hood tramway was then shown to the Authority by the Company representatives. The plan had been prepared by Ormond R. Bean, Jr., Architect, and was dated July 27, 1950, indicating that it had not been prepared until after the construction of the system had been completed. It showed only a concrete septic

tank  
/ 28' long x 8' wide x 5-1/3' liquid depth (liquid capacity 8,950 gallons)  
and a chlorine contact chamber 4' long x 6' wide x 4-1/4' liquid depth.

Mr. Everett Darr stated that he was positive that the septic tank was not built as large as shown on the plans. He pointed out that the downstream waters below the tramway sewer are used for drinking purposes by fishermen, hunters, campers, and picnickers who do not realize that such waters are contaminated.

Dr. J. Otto George who said he was a director of the Mt. Hood Aerial Transportation Company stated that he had not realized that such a serious sewage disposal problem existed at the tramway. In response to a question by Mr. Hallock, he stated that the company had not been operating at a profit or at least had not paid any dividends.

Mr. Rauch then explained that serious mechanical difficulties had been experienced with the tramway because of the type of design which had been used. He stated that an expenditure of some \$50,000 to \$75,000 more would be required to change this design so that the operation of the tramway would be less expensive.

Mr. A. L. Greenwalt stated that the sewage disposal system at the tramway had been constructed under very adverse weather conditions, that they thought they were proceeding properly with it and that because of the limited time available and the bad weather it had not been possible to have the construction inspected. He admitted that the plans had not been submitted to or approved by the Authority before the system was installed but claimed that the recommendations of the county and state health departments had been followed.

Mr. Rauch then claimed that his clients had never been advised in detail by the Authority as to the deficiencies of the existing sewage disposal system. In response to his question as to how the present system might be improved so that it would comply with state requirements he was informed by Mr. Spies that secondary or complete treatment of the sewage plus effective chlorination of

ABG759

the effluent was necessary in order to prevent bacterial contamination of the receiving stream. Mr. Spies pointed out that the present facilities provided only primary or partial treatment and that chlorination of the effluent had been poorly maintained and most ineffective.

Mr. Spies emphasized the fact that the most logical solution to the sewage disposal problem facing the Mt. Hood tramway would be the installation of a public sewerage system for the entire Government Camp Sanitary District because individual systems had definitely proved to be unsatisfactory. He admitted, however, that at the present time there did not appear to be any way to finance such a project. He also pointed out that although it was entirely possible for the company to install its own sewage disposal works there would still be the difficult matter of insuring that such facilities would at all times be properly operated and maintained.

After further discussion of the deficiencies of the present sewage disposal facilities serving the Mt. Hood tramway it was MOVED by Mr. Hallock, seconded by Mr. Veatch and carried that the report prepared by the engineering staff of the Authority in the matter of sewage disposal by the Mt. Hood Aerial Transportation Company in the public waters of the state of Oregon be adopted as findings of fact and that based upon such findings of fact the Authority enter an order requiring said Mt. Hood Aerial Transportation Company to submit to the Authority within sixty (60) days from date of said hearing plans, specifications and program for satisfactorily eliminating the pollution caused by the discharge of its inadequately treated sewage into the public waters of Mosquito and Camp Creeks.

#### BATTLE AXE SEWER USERS CITATION HEARING

A citation having been issued to Mr. Raymond M. Hughes, Mr. A. L. Greenwalt and Mrs. H. F. Villiger in the matter of sewage disposal by the users of the so-called Battle Axe Inn sewerage system in the public waters of the state of Oregon the following persons were present: Mrs. H. F. Villiger, Mr. C. A. Potts, attorney for Mrs. Villiger, Mr. R. M. Hughes, Mrs. La Vern Hughes, Mr. A. L. Greenwalt, and Mr. Lloyd R. Olson.

The citation was read by the secretary.

Mr. C. A. Potts, attorney for Mrs. Villiger, stated that the Battle Axe Inn sewerage system had been installed in 1944 by Mrs. Villiger at a cost of about \$4,000 and that it followed the recommendations of the State Board of Health at that time, said system consisting of a trunk sewer parallel to the main highway, an automatic dosing siphon and chamber, and a small sand filter, the effluent from which discharges into a small creek above Collins Lake on the Camp Creek watershed.

(The files of the Authority show that said system was built originally to serve the Battle Axe Inn which later was destroyed by fire in 1951. It now serves a grocery store, gasoline station and two cabins. In addition, Mr. Hughes who purchased the site of the former Battle Axe Inn has plans for connecting to it a motel development which is now under construction. Individual septic tanks precede the disposal units described above.)

Mr. Potts claimed that his client had not previously been informed of the deficiencies of said sewerage system and of the pollution being caused by it. He referred to a letter dated July 30, 1953, from the Authority to the U. S. Forest Service as evidence that said sewerage system was satisfactory.

Mr. Spies pointed out that the letter in question did not approve the existing facilities but instead merely suggested to the Forest Service that, in view of the efforts of the Government Camp Sanitary District to install a community-wide sewerage system, the Forest Service permit be extended on a temporary and conditional basis. (The sewerage system in question is located on Forest Service property and is operated under a permit granted by the federal government.)

Mr. Hughes explained that his property was not yet connected to said sewerage system but that he had planned to have it serve his new motel.

Mr. Olson then explained the method followed by the Forest Service in

ABG759

issuing permits for the use of government-owned lands.

It was then MOVED by Mr. Veatch, seconded by Mr. Hallock, and carried that in view of the apparent confusion regarding this sewage disposal system the matter be continued for further consideration with no final action being taken at this meeting.

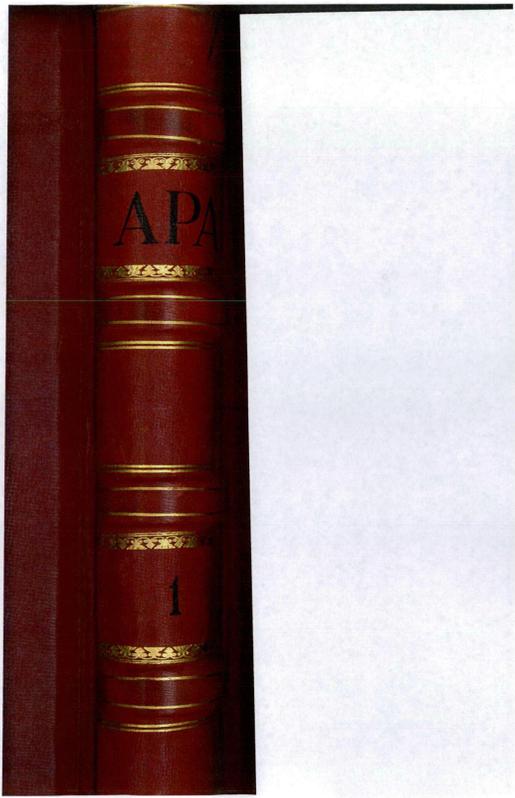

#### CITY OF MOLALLA SEWAGE DISPOSAL

Mr. Spies stated that in the matter of sewage disposal by the city of Molalla a public hearing had been held by the Authority on June 27, 1952, the findings of fact and final order had been issued on July 18, 1952, and abatement of pollution was required by October 18, 1953. He stated further that since then the city had encountered legal difficulties in connection with the approval and issuance of bonds, that as a consequence its sewerage program had been delayed, and that it had been unable to meet the deadline.

Mr. Clifford S. Beckett, attorney for the city of Molalla, and Mr. Warren W. Clark, Consulting Engineer, were present to represent the city in regard to a request for an extension of time.

Mr. Beckett explained the legal difficulties that had been encountered. He said the present city charter which had been adopted in 1944 had been declared invalid by the bonding attorneys, revisions made in 1926 to the original city charter were likewise defective, and that the original charter of 1913 was also inadequate. Because of these defects it had been considered advisable to draft and adopt an entirely new city charter. He said the initiative and referendum ordinances had been passed by the council on October 20, 1953, and on October 27, 1953, the new charter would receive final action by the council. He thought that an additional 60 days would be required for the holding of the bond election.

In response to a question by Mr. Spies, Mr. Clark, Consulting Engineer, stated that if the bond issue were approved as planned in 60 days the final engineering drawings for the sewerage project could be completed by next spring and construction could be finished by next fall.

AIR POLLUTION AUTHORITY  
MINUTES OF THE FIRST MEETING

August 24, 1951  
Salem, Oregon

ABI 228

The first meeting of the Air Pollution Authority of the state of Oregon was called to order by the Secretary at 1:45 P.M., on Friday, August 24, 1951, in the Board of Control room of the State Capitol Building at Salem, Oregon.

Members of the Air Pollution Authority present were Dr. Harold M. Erickson, Carl E. Green, Oren L. King, Harold F. Wendel; and Curtiss M. Everts, Jr., Secretary. Also present were Chester K. Sterrett, Industrial Manager, Portland Chamber of Commerce, and Mrs. Grace Lundquist, stenographic assistant.

ELECTION OF OFFICERS

With the consent of the members present, Mr. Everts assumed the office of chairman pro-tem and asked for nominations for Chairman.

Mr. King nominated Mr. Green for the office of Chairman. It was MOVED by Dr. Erickson, seconded by Mr. Wendel that the nominations for Chairman be closed and that a unanimous ballot be cast for Mr. Green as Chairman. MOTION carried.

The chairman pro-tem then turned the meeting over to the new chairman, Mr. Green.

The Chairman then asked for nominations for vice-chairman. Mr. Wendel nominated Mr. King for Vice-chairman. Dr. Erickson MOVED and Mr. Wendel seconded that the nominations for vice-chairman be closed and that a unanimous ballot be cast for Mr. King for Vice-chairman. MOTION carried.

POLICY AND PROGRAM

The secretary reported that he had already received complaints of atmospheric contamination and requests for investigations, and that some potential industries had also inquired as to their status in relation to the law. He requested the Authority to consider the adoption of an initial program as a basis for considering the proposed budget and for guidance in answering inquiries.

Dr. Erickson expressed an opinion that new industries should be prepared to comply with the act and inquired as to whether any standards for atmospheric cleanliness had been developed which could be used by the Authority.

Mr. Wendel suggested that the Authority should first secure the services of a qualified engineer to head the technical work, provide the necessary stenographic help, and in the meantime accept complaints and requests as they are submitted while the Authority formulates a more definite long range program.

After further discussion of the matter, it was MOVED by Mr. Wendel, seconded by Dr. Erickson, that the secretary with the advice and consent of the Chairman be authorized to employ a competent engineer to supervise the technical program, and, if necessary, a secretary. MOTION carried. It was Mr. Green's opinion that the Authority would experience difficulty in obtaining the properly qualified person for the salary indicated for the position.

In the discussion that followed, it was pointed out that it might be possible to recruit other members of the proposed staff before the supervisory engineer was selected. It was agreed, however, that action on this matter could be deferred until the next meeting of the Authority which would be held within the next two months.

At this point, the Honorable Douglas McKay, Governor, entered the meeting and discussed briefly his views on the approach to air pollution control activities in the state. The Governor complimented the Sanitary Authority on the progress made in water pollution control, and stated that the problem of air pollution control was quite similar. He also suggested that the present approach should be one of study and investigation and cooperation, rather than retaliatory.

After offering the full cooperation of his office in working out the air pollution control program, the Governor withdrew from the meeting.

Mr. King requested that the discussion on program and policy be continued and recommended that as soon as a staff was assembled studies be undertaken to determine the nature of air pollution problems, and establish standards. He also suggested that new industries be advised that standards were in the process of preparation and

that they should take every precaution to reduce to a minimum any atmospheric contamination that might be discharged.

Mr. Wendel suggested that until standards could be established, any new industry should be furnished with a copy of the law with the advice that the program was just getting underway and that until such time as standards were established, new industries should do everything possible to minimize air contamination.

The Chairman then recommended that some work of the Authority be undertaken by committees who could concentrate on certain activities. Among the committees he suggested were Public Relations.

Dr. Erickson believed that the Board should work as a unit until a special problem presented itself, and he suggested that the Authority avail itself of the services of the Health Education Section of the State Board of Health for its public relations work.

Mr. Wendel thought that the idea of subcommittees would be a good organizational plan when special problems became too complicated to be undertaken by the whole commission.

The Chairman then asked if the services of the Industrial Hygiene Section could be made available, and Dr. Erickson replied that arrangements had already been made to requisition the service of the Industrial Hygiene Laboratory.

It was MOVED by Dr. Erickson, seconded by Mr. King that the Air Pollution Authority undertake a program to establish reasonable standards for air pollution control and that industry should then be expected to comply with the standard adopted, MOTION carried.

The Chairman then notified the Authority that it was the intention of the city of Portland to request the Authority to undertake a study in the Portland area.

BUDGET 1951 - 1953

After a discussion of the proposed budget, it was MOVED by Mr. Wendel, seconded by Mr. King that a tentative budget of Salaries & Wages, G.O.M., and Capital Outlay be adopted for the period ending June 30, 1952. MOTION carried.

The secretary was directed to confer with Dr. Robin Moser, Industrial Hygiene

ABI 228

Section, State Board of Health, regarding the laboratory equipment which should be ordered in the near future.

#### FISCAL PROCEDURES

The secretary requested authorization from the Authority for the Business Manager of the Oregon State Board of Health sign vouchers drawn on the Air Pollution Authority budget, explaining that the Business Management Section was adequately equipped to handle such matters. MOVED by Dr. Erickson, seconded by Mr. Wendel, that the Business Manager of the State Board of Health be authorized to sign vouchers for expenses incurred in behalf of the Air Pollution Authority. MOTION carried.

#### OTHER BUSINESS

The Chairman then asked Mr. Chester K. Sterrett, Industrial Manager, Portland Chamber of Commerce, and a member of the Portland Air Pollution Committee if he would care to make any remarks to the Authority.

Mr. Sterrett stated that he believed the Air Pollution Authority was approaching the problem on a sound basis and that industry would cooperate on the program. Mr. Sterrett also stated that the Authority should give careful consideration to the selection of its field staff, and that under the present air pollution control act the state could undertake a program of study and investigation leading to the establishment of standards later.

The secretary then brought to the attention of the Authority, a request from the Portland City Council for a study and report on an alleged atmospheric contamination problem in the vicinity of the Smithwick Concrete Products Company plant on Columbia Blvd., Portland. The Authority directed the secretary to advise the Portland City Council that due to lack of a field staff the Authority could not undertake the investigation at the present time.

The secretary was authorized to order such office supplies as were necessary to carry on the business of the Authority.

The next meeting was scheduled for Friday, October 26, in Portland, Oregon.

There being no further business, the meeting adjourned at 3:15 P.M.

Respectively submitted,

*Curtiss M. Everts, Jr.*  
CURTISS M. EVERTS, JR.,  
Secretary

SECOND MEETING  
of the  
OREGON AIR POLLUTION AUTHORITY

October 26, 1951

ABI 228

The second meeting of the Oregon State Air Pollution Authority was called to order by the chairman at 2:00 P.M. Friday, October 26, 1951, in the offices of the Oregon State Board of Health at 1022 S. W. 11th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman; Merle S. West, Oren L. King, and Dr. Harold M. Erickson, Members; and Curtiss M. Everts, Jr., Secretary.

MINUTES: The secretary read the minutes of the first meeting of the Air Pollution Authority. MOTION by Dr. Erickson, seconded by Mr. King and carried, that the minutes be approved as read.

PERSONNEL: The secretary reported that as yet no person having the necessary required qualifications had been employed.

Secretary also reported on the visit of Mr. Henry Doyle, Senior Sanitary Engineer, U. S. Public Health Service at Salt Lake City, at which time Mr. Doyle indicated the Public Health Service had an engineer whom they might assign to the state for a period of two years. The secretary said he would talk further with Mr. Doyle and Dr. Seward E. Miller, Medical Director and Chief of Division of Occupational Health, PHS, in San Francisco during week of October 29. He also advised the members of the Board that the PHS wanted to know if the Authority would pay up to \$6,000. per year salary for such a person for the two year period.

After some discussion about the possibility of recruiting an engineer to head the Air Pollution Control program during the APHA annual meeting

in San Francisco, MOTION was made by Mr. King, seconded by Mr. West, and carried that the expenses of Mr. Everts' trip to San Francisco for the purpose of interviewing possible applicants be paid by the Authority.

Mr. Everts while in California was going to contact Mr. Robinson, who is a meteorologist, and who made application for the position.

Mr. Everts advised the members of the Authority he did not anticipate too much trouble in recruiting junior assistants for this work.

#### COMPLAINTS:

##### Macleay Garbage Disposal Organization (Marion County Garbage Dump):-

The secretary read a complaint dated August 3, 1951, made by the Macleay Garbage Disposal Organization against the Marion County Garbage Dump, which was signed by twenty-three persons, alleging that the maintenance of this dump created conditions of air pollution which were injurious to human, plant and animal life.

After some discussion of this complaint, it was the opinion of the members that these complainants should be advised that garbage disposal is primarily a health problem, and the matter should again be referred to the local health department; and that they be notified that the Air Pollution Authority was not set up to handle air pollution problems at this time.

M & S Cannery, Milwaukie: The secretary also brought to the Authority's attention a complaint alleging air pollution by the M&S Cannery at Milwaukie, Oregon. The attorney representing the plaintiffs had conferred with the secretary relative to a hearing before the Authority. Mr. Everts reported that he had explained to the attorney that such a hearing should be discouraged until the Authority was properly staffed and prepared to handle such matters.

##### Pennsylvania Salt & McCormich & Baxter Creosoting Company, Portland:

The Secretary reported that Mr. Wiggins of the Portland Bureau of Health had brought to the attention of the Authority the matter of complaints

against the Pennsylvania Salt and other companies alleging that noxious and toxic odors and vapors which were being discharged into the air were affecting the health of the residents of that district. The secretary advised the members of the Authority that the City Nuisance Division had been advised that the Authority planned to undertake survey in the area and would want to consult with them further regarding this matter.

Western Door & Plywood Company, Milwaukie: The secretary read a complaint against smoke from the Western Door & Plywood Company. He reported that attorney for these complainants was advised that the Authority was not ready to handle complaints at this time, but an investigation would be made as soon as staff was available.

MISCELLANEOUS:

Mr. King advised the members of the Authority that he had been authorized by the City Council of Eugene to go ahead and draw up a model ordinance for air pollution abatement. He now has a committee working on this matter.

Space in new office building: Secretary reported that he had contacted the Secretary of State and now has space reserved in the new State Office Building for the Air Pollution Authority on the 7th floor, and that arrangements have been made for laboratory work to be performed in the Industrial Hygiene Laboratory.

RE expense accounts for members of the APA: The secretary called attention to the fact that he has never received any claims for expense accounts for the August 24 meeting. The members were advised of procedure for placing such accounts.

Date of next meeting: Next meeting date was set for Friday, December 21, at 2:00 P.M., in the New State Office Building.

There being no further business, the meeting adjourned at 3:05 P.M.

ARI228

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr.  
Secretary

MINUTES OF THE THIRD MEETING  
of the  
OREGON STATE AIR POLLUTION AUTHORITY

December 21, 1951

The Third meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M., Friday, December 21, 1951, in Room 936, State Office Building, Portland, Oregon. Those present were Carl E. Green, Chairman; Dr. Harold M. Erickson, Merle S. West, Oren L. King, and Harold F. Wendel, Members; and Curtiss M. Everts, Jr., Secretary.

MINUTES: The minutes of the Second meeting of the Authority having been prepared and distributed to the members in advance, MOTION by Dr. Erickson, seconded by Mr. Wendel, and carried - that the minutes as prepared by the secretary be approved.

COMPLAINTS:

Reynolds Metals Company, Troutdale-Corbett Area: Mr. M.B. McKay, a resident in the Troutdale area, appeared before the Authority to present the problem of alleged damage caused by fluorine on plants and livestock in the Troutdale-Corbett area, and to request that a study of this condition be made as early as possible. He advised the Board that the residents in the area affected were also concerned over possible effects on human life as well as on plants and livestock. Mr. McKay assumed that the fluorine being discharged into the air originated from the Reynolds Metals Company, inasmuch as when

this plant was closed in 1946 and again in 1948, conditions of plant and animal life were noticeably improved. He also reported that studies on this subject have been made by the Experiment Station at Oregon State College, and the Department of Agriculture, and that the reports are now filed in the Portland Library. Mr. McKay suggested that perhaps since some studies have already been conducted by the Experiment Station, the studies of the Authority could be carried on jointly with the College.

After the presentation by Mr. McKay, the secretary of the Authority was instructed to obtain copies of the Oregon State College reports on the Troutdale-Corbett studies from the Portland Library. He was also instructed to confer with Dean Earl Price and Mr. Ralph Bessie on the work done by the Agricultural Experimental Station.

Mr. King suggested that the delegation from the Troutdale-Corbett area be assured that just as soon as a staff could be assembled for the work, an investigation of the matter would be made.

LANE COUNTY AIR POLLUTION COMMITTEE: Mr. King then introduced to the Board members Judge Day T. Bayly, County Judge of Lane County, and Mr. L.B. Bartlett, City Manager of Springfield. Judge Bayly said that the Weyerhaeuser Timber Company wanted to locate another pulp mill in Lane County to utilize the wood wastes and the county wanted more paper mills; but while everything should be done to encourage industry, at the same time the residents of the area should be assured that everything possible was being done to control air pollution problems caused by industry.

Judge Bayly advised the Authority that Lane County Court had appointed a committee consisting of the District Attorney, the County Health Officer, and Dr. Kunz, Head of the Chemistry Department, Oregon University, to study air and water pollution in the county and report the facts to the County Court together with recommendations. Judge Bayly said that they had been assured by the Weyerhaeuser Company that their company would do everything possible

AB1228

and would spare no expense in solving their pollution problems. The Judge also believed that constant checking of industry for sources of possible pollution should be maintained.

Mr. Green advised the representatives from Lane County that just as soon as the Air Pollution Authority was sufficiently staffed, investigations of conditions would be undertaken. He stated that the Authority was just getting under way and fully realized the complexity of the problems confronting it. He cited the fact that Dr. Erickson, Mr. Wendel, and Mr. Everts, members of the Air Pollution Authority, were also on the Board of the State Sanitary Authority, who had functioned so ably in that much has been accomplished in the matter of water pollution abatement in the state, and he believed that over a period of time, the Air Pollution Authority would function as efficiently as did the Sanitary Authority.

A discussion then followed, in which Mr. Everts suggested that in approaching the problem of air pollution on the Troutdale-Corbett area, all matters pertaining to same should be investigated very carefully, and more information obtained on the matter. Mr. Everts suggested that it might prove helpful to invite Dean Price or Mr. Bessie from Oregon State College to the next meeting in order to find out what type of work they are doing and what the need for additional studies may be.

The secretary was instructed to invite Dean Price and Mr. Bessie, and representatives of the Reynolds Metals Company to attend the next meeting of the Authority so that more information on fluorine in the Troutdale-Corbett area could be obtained.

#### PERSONNEL

Mr. Everts reported on his contacts at the A.P.H.A. meeting in San Francisco regarding the employment of personnel, and advised the members that he had met with no success in the matter. He then reviewed his efforts, since then, to employ proper personnel, only to find that the starting salary of \$513.00 per month was in the low price range for such qualified personnel. Mr. Everts

stated that it might be necessary to employ a graduate engineer just out of school and train him for the job, which would necessitate using one of our engineers presently employed in other work to handle the administrative duties. Mr. Wendel asked whether it would be possible for Mr. Spies to work with any young engineer graduates who might be employed.

Mr. Green suggested that the Authority should take immediate action to ask for more money for personnel, and asked who would be the proper persons to see regarding this matter, and was advised that they were Mr. Harry S. Dorman, Director of Finance; Mr. James M. Clinton, Director of the Civil Service Commission; and Governor McKay. MOTION was made by Mr. Wendel that the matter of reviewing the possibility of changing the rating and salary of personnel be studied by Mr. Green, Mr. Everts, and Dr. Erickson, and that they constitute a committee on this problem, and be authorized to proceed in the matter. Mr. Green suggested that perhaps the committee could arrange for a meeting with the three state officials at which time the matter could be presented. Dr. Erickson suggested that if the Board attended such a meeting in a body, it would perhaps carry more weight than if just a few persons represented the Board. He made the suggestion that the next meeting of the Authority be held in Salem and that arrangements be made to meet with the State officials on the same day. He also suggested that the committee develop a program and plan in advance and place it in the hands of other members before scheduling the meeting in Salem.

After some discussion on this matter, the MOTION was amended to read as follows: That a committee consisting of Dr. Erickson, Mr. Green and Mr. Everts be appointed to prepare a planned program for submission to the Governor, the Director of the Department of Finance, and the Director of Civil Service Commission having to do with changes in personnel classifications and salaries, and that arrangements be made for a meeting of the Air Pollution Authority with the three state officials, and that copies of the prepared program, or

ABI228

plan, previously developed by the committee be sent to the state officials at the time a meeting was requested. Motion seconded by Mr. King, and carried.

LABORATORY EQUIPMENT:

Mr. Everts reported on the status of laboratory equipment to carry on field investigations. He estimated that the cost of the equipment would be from \$8,000 to \$10,000, and requested advice as to whether the equipment should be purchased before personnel was available to use it. Dr. Erickson suggested that the purchasing of equipment should proceed, except trucks. MOTION by Mr. Wendel, seconded by Mr. West, and carried - that the matter of purchasing be left to the discretion of the chairman and secretary.

The question of the secretary investigating a little further the matter of equipment before placing an order was raised, but the matter was tabled until next meeting.

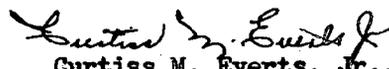

COMMUNICATIONS:

Mr. Everts then advised the Board of communications received concerning the M and S Cannery and the Western Door & Plywood Company, both of Milwaukie. The secretary was instructed to advise complainants that just as soon as a staff is obtained to carry on the work of the Authority, they will be asked to appear before the Authority, and will be advised of the date and place of meeting.

No date was set for the next meeting.

There being no further business, the meeting adjourned at 3:50 P.M.

Respectfully submitted,

  
Curtiss M. Everts, Jr., Secretary  
Air Pollution Authority

FOURTH MEETING  
OF THE  
OREGON AIR POLLUTION AUTHORITY

June 11, 1952

ABI228

The fourth meeting of the Oregon State Air Pollution Authority was called to order by the chairman at 2:10 P. M. Wednesday, June 11, 1952, in the offices of the Oregon State Board of Health at 1400 S. W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Dr. Harold M. Erickson, Mr. Harold Wendel, Members; and Curtiss M. Everts, Jr., Secretary.

MINUTES: The minutes of the Third meeting of the Authority having been prepared and distributed to the members in advance, MOTION by Dr. Erickson, seconded by Mr. Wendel and carried that the minutes as prepared by the Secretary be approved.

PERSONNEL: The Chairman stated that the search for a well-qualified engineer to direct the technical program was continued during the period between meetings, and that the decision had been made on Mr. Evert's recommendation to place in charge of the program Mr. R. E. Hatchard who has been employed for several years by the Public Health Engineering Section, State Board of Health, and who was Sanitary Engineer for the Oregon State Civil Defense agency. The chairman reported that all major universities in the country who had courses in public health, industrial hygiene and Air Pollution Control had been contacted and that the Civil Service Commission tried to recruit an engineer but with no success.

Mr. Hatchard was then introduced to the Board by the Chairman. The matter of program was discussed and the Chairman asked Mr. Hatchard to outline the program he planned to recommend and to discuss briefly the major items.

COMPLAINTS:

Milwaukie Residents Re: Western Door and Plywood Corporation: The Authority then considered the petition signed by seventy-one Milwaukie residents and property owners in which it was alleged that emissions from the Western Door and Plywood Corporation, located in Milwaukie, were creating a nuisance in the neighborhood. Mr. B. G. Skulason, Attorney, and resident of Milwaukie, appeared before the Authority in behalf of the signers of the petition to present the problem caused by this industry and called on some of the residents to state the situation.

Mrs. John E. McGee, 436-32nd St., Milwaukie, located approximately two blocks northeast of the Western Door and Plywood Company, presented a sample of the material which fell on her porch during just one night and stated that the material comes down on laundry, covered outside lawn furniture, and filled the air and caused throat irritation and coughing. She reported that at night when the windows are open the material enters rooms and causes coughing and makes room cleaning very difficult. She stated that this situation has existed in the area since the plant began operation approximately two to three years ago. Mrs. McGee also reported that in addition to the black smoke and debris an additional problem was created by a lower pipe of some sort that emitted material that smelled like creosote and that there was a downblow that should be contained in an underground concrete tank but the noise from steam which occurred at intervals of about fifteen minutes awakened them at night.

Mrs. Z. A. Olson of 916-29th St., located southwest of the plant complained that these conditions occurred at her home all summer. Mrs. Olson submitted a sample of the material collected from her steps and back porch and stated that wind carried the material to her property and the south wind carries it to Mrs. McGee's property. Mrs. Olson also stated that the plant operates twenty-four hours per day and an odor is wafted in on the breeze, and that when she complained to the local authorities they told her that

it was caused by trains which run near her home and they were of no help.

Mr. Owen Nichols of 2935 Harrison Street, Milwaukie, located about one block S. W. of the plant stated that his property receives the debris and odor when a northeast wind blows; that he just recently washed the house and now it seemed to have another covering of greasy, oily substance which also settles on one's clothes when outdoors. He reported that the material could not be brushed off, but leaves an oily streak and settles on cars at night and that if a dew has fallen or a light rain has descended, the material sticks all over the car.

Mr. Skulason then stated that he has complained to the industry but nothing was ever done.

Mr. Nichols further reported that a real estate agent has estimated a 3,000 to 3,500 dollar depreciation of his property and that a Mr. Clark, who planned to sell his home was offered \$9,000 loan but after the loan agency representative investigated the site he offered \$1,000 less on the loan.

Mrs. B. S. Eremeff, (Mr. Skulason's daughter) 721-34th St., Milwaukie, who lives two blocks from the plant stated that she had nothing further to add other than what was said by the other complainants but that all laundry is ruined, every plant and leaf is coated with an oily substance and that this condition has been going on for about two years.

Mr. Skulason stated that the Western Door and Plywood have taken the attitude of "public be damned".

Mrs. Howard Hamlin, 514-32nd St., Milwaukie, located three blocks from the plant, stated that she has lived there for eleven years; that there is a great deal of smoke that settles on the patio at her home; that the sawdust blower emits sawdust and she claimed that it is very detrimental to her children's health.

Mr. Green stated that he thought that the Authority had enough data to warrant an investigation.

ABI 228

At the request of Mrs. McGee, Mr. Skulason presented his experience with the problem and stated that he had observed accumulations of debris on the window sills and that his room is on the N. W. corner of the house so one window was exposed directly to smoke from the factory. He also reported that one night about one year ago he woke up and was certain he was about to expire for he could not get his breath and suffered orthopnea. The window on the north side of the house was open. He got up and found that the room was full of some sort of noxious vapor even though it was a balmy, bright moonlit night. He searched for the source of the odor and found that smoke from the plant was responsible.

MOTION: It was MOVED by Mr. Wendel, seconded by Dr. Erickson and carried that the personnel of the Authority investigate the complaint and report its findings to the Authority and if the conditions should be found as alleged an order to cease and desist be considered at the next meeting.

Columbia Boulevard, Portland Re: Burning Refuse Dump:

Mr. Wm. C. McCulloch and Mr. Meyers, attorneys, for National Biscuit Co., were present.

Mr. Meyers appeared before the Authority and presented a letter to the members relative to smoke and odors from a garbage dump north of the National Biscuit Company Plant on Columbia Boulevard. Mr. Meyers stated that it is located on the north bank of the Columbia Slough and has been operated for a number of years by Mr. Henry Seivert who has been in and out of trouble with County Authorities. He reported that in December 1951, the National Biscuit Company asked them to do something about the dump which is burned openly since the wind carries refuse across the road and it settles over their new plant and grounds. Mr. Meyers had investigated the situation and determined that the best procedure was to go before the Board of County Commissioners with the request that an abatement order be issued. He stated that a number of property owners signed a petition governing the operation of the dump and that

the petition is before the Board of County Commissioners to be heard. Mr. Meyers also reported that raw household garbage is not burned at the dump area. Since the petition has been filed, the operator of the dump is a little more careful than in the past, but the black smoke and debris effects the National Biscuit Company plant which operates around the clock and that homes and motels in that area and everyone within a mile are affected by the smoke and debris and would appreciate an investigation.

Mr. Green asked if it has been approached as a public nuisance. Mr. Meyers replied that it had been alleged in a petition that it was a public nuisance; that the District Attorney is handling it on that theory and turned it over to the County Health Department for consideration.

Mr. Wendel asked if Mr. Henry Seivert collects domestic refuse. Mr. McCulloch answered that his impression is that Mr. Sievert has a dump of substantial area, that he did not collect refuse but charged a fee to collectors for use of the dump as a disposal area and that the main complaint is the burning of refuse which produces smoke and fumes all the time.

Mr. Allen, Manager of National Biscuit Company, thanked the Members for their consideration of this situation and stated that it is a very serious problem for a considerable amount of material is deposited on cars that becomes plaster-like after a rain or dew. Mr. Allen stated that his company would cooperate with the Authority.

Dr. Charlton, member of the Recreation and Natural Resources Committee, Portland Chamber of Commerce, commented on the interest of this committee regarding the action taken by the Authority.

MOTION: It was MOVED by Mr. Wendel, seconded by Dr. Erickson and carried that the complaint be investigated and that if conditions are as alleged that the Authority proceed with appropriate action.

ABI228

Nu-Bora Soap Company, Portland, N. W. 12th and Hoyt:

Mr. Hatchard quoted briefly from a report from the Industrial Hygiene Department of the State Board of Health on their investigation of a complaint alleging atmospheric pollution by the Nu-Bora Soap Company.

Mr. B. F. Dalton, representing Oregon Transfer Company appeared before the Authority and stated that the transfer company has an office building and parking lot opposite Nu-Bora Soap Company; that a fine soap-like substance comes out of the top of the stack and settles on cars; etc., that it comes through the windows of the office building and causes considerable throat irritation and that one of the tenants is now home sick from the soap which has filtered into the office. Mr. Dalton thought that if the soap company had some sort of filter on the ventilator it would prevent the soap from escaping and getting into the office or on cars.

MOTION: It was MOVED by Mr. West and seconded by Dr. Erickson and carried that the complaint be investigated and that a report be furnished to the Authority.

S. E. 8th and Taylor, Portland, Paint Damage:

Mr. Everts reported a complaint in which it was alleged that paint on cars located in the vicinity of S. E. 8th and Taylor had been damaged by some atmospheric substance. He summarized the report of the Industrial Hygiene Section, State Board of Health.

Dr. Charlton stated that his laboratory has made some examinations of specimens collected from the automobiles. It was further reported that a number of cars had to be repainted and that the insurance company has been concerned about the problem.

MOTION: It was MOVED by Dr. Erickson, seconded by Mr. West and carried that the matter be investigated and a report furnished the Authority.

Reynolds Metals Company, Troutdale-Corbett Area: Mr. Harold Zey, Chemist.

Fred A. Yerke, Attorney representing Reynolds Metal Company appeared before the Authority, and stated that he would be glad to answer any questions.

After a brief discussion of the status of damage suits, Mr. Green requested Mr. Hatchard to review the data on fluorine assembled by the Oregon State College Agricultural Experiment Station and submit a report to the Authority at the next meeting.

Mr. Everts then discussed the 1952-53 budget with Members of the Authority. It was recommended to the Business Manager of the State Board of Health not to attempt to make any changes in the budget until the program is developed more in detail.

Date of next meeting: The Chairman was authorized to call a meeting during the month of August.

There being no further business the meeting adjourned at 4:15 P.M.

Respectfully submitted,

  
Curtiss M. Everts, Jr., Secretary  
Air Pollution Authority

FIFTH MEETING  
OF THE  
OREGON AIR POLLUTION AUTHORITY

September 11, 1952

The fifth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 3:10 P. M., Thursday, September 11, 1952, Room 720, State Office Building, 1400 S. W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Dr. Harold M. Erickson, Mr. Oren L. King, Members; and Curtiss M. Everts, Jr., Secretary. Also present were Mr. R. E. Hatchard, Chief, Air Pollution Control Section, and Mr. W. J. Whitsell, Associate Sanitary Engineer.

MOTION RE: MINUTES OF PREVIOUS MEETING:

The minutes of the fourth meeting of the Authority having been prepared and distributed to the members in advance, it was moved by Dr. Erickson, seconded by Mr. West and carried that the minutes as prepared by the Secretary be approved.

MOTION RE: ELECTION OF OFFICERS:

The chairman then notified the members that through an oversight the Authority had failed to elect officers at the beginning of the present calendar year. It was moved by Dr. Erickson, seconded by Mr. West and carried that the minutes of the third meeting be corrected to state that the Authority officers were elected as of January 1952.

OSWEGO RESIDENTS RE: CINDERS, FLY ASH AND CEMENT DUST:

Mr. Chester A. Ferguson, 350 State Street, Oswego, the owner of Chet Ferguson's Furniture and Gift Shop appeared before the Authority to submit a complaint relative to cinders, fly ash and cement dust in the city of Oswego. Mr. Ferguson stated

AB1228

that he had attended the meeting as a representative of Mr. Charles A. Needham, the Mayor of Oswego, who had requested him to present information on air pollution conditions in that city. Mr. Ferguson reported that the Oregon Portland Cement Company plant is located across the highway from his store; that the plant is operated twenty-four hours a day and that a considerable amount of cement dust was emitted from the plant. He also complained of cinders and soot from the Huddleston Lumber Company Mill and the Oswego Planing Mill. He stated further that the Oregon Portland Cement Company installed a filter system in 1944, to remove cement dust but since that time the plant capacity has tripled and that according to reports the filters were not always operated. Mr. Ferguson claimed that the cement dust damaged the finish on automobiles and that the cars of shoppers in the city were often covered with cinders and sawdust within thirty minutes after they had parked in the business district.

The chairman then asked whether or not the staff had made any investigations in the Oswego area and Mr. Hatchard reported that a preliminary survey had been made which showed that the area was covered with the material described by Mr. Ferguson but that laboratory reports on the analysis of material collected by "particle fall-out jars" had not yet been received.

Mr. Henry Davis who stated that he operates a pharmacy on State Street in Oswego confirmed Mr. Ferguson's description of conditions created by cement dust, fly ash and cinders in Oswego.

Mr. King then asked how long the Oregon Portland Cement Company plant had been operating in Oswego and Mr. Ferguson stated that he was not certain but that it had been there for many years.

Mr. O. C. Roehr stated to the Authority that he represented Mr. Frank McCaslin, President of the Oregon Portland Cement Company; that he was not familiar with

all of the details concerning the operation of the Oregon Portland Cement Company plant; that he was present to listen to the statements that were being made. Mr. Roehr mentioned, however, that the plant has been operating in Oswego for over thirty years and that it was his understanding that the City Council in Oswego invited the Oregon Portland Cement Company to locate in Oswego.

Mr. Ferguson then stated that the city of Oswego was not a first class residential area thirty years ago and that newcomers to the city remain only about thirty days and then move away due to the nuisance created by cement dust.

Mr. R. B. Hopkins, Manager of the Oswego Planing Mill, reported that last year his mill had constructed a new waste burner which had been approved by the Fire Underwriters and by the State Fire Marshal and requested a copy of any report that the Air Pollution Authority might make which would contain recommendations for the elimination of fly ash and cinders from their waste burner. Mr. Hopkins stated that Mr. Jack Huddleston of the Huddleston Lumber Company at Oswego had intended to be present but could not attend the meeting of the Authority and that he was also representing Mr. Huddleston.

Mr. King then asked if the Oregon Portland Cement Company was endeavoring to alleviate the dust problem and Mr. Roehr stated that in 1944 electrostatic precipitators were installed to collect the dust and that since he was not familiar with the operation of the plant and he did not feel able to answer Mr. Ferguson's statement that the filters were not operated at night.

The chairman then reported that the engineers on the Air Pollution Authority staff are studying the area and will furnish the Authority with a report and recommendations. The chairman also stated, for the benefit of those present, that the Authority planned to request the various lumber associations in the state to appoint a committee to work with the Authority and its engineers in a comprehensive study

of the problem of controlling emissions from lumber and wood products plants.

MOTION RE: OSWEGO CINDERS, FLY ASH AND CEMENT DUST:

After a further brief discussion of the matter, it was moved by Mr. King and seconded by Dr. Erickson and carried that the Authority's engineers continue their study in Oswego and report in detail to the Authority at the next meeting.

KLEMAN ORCHARDS RE: . KEISER SAND AND GRAVEL COMPANY, KEISER DISTRICT NORTH OF SALEM.

Mr. Max Kleman, owner of the orchard, appeared before the Authority to submit a complaint regarding damage to his crops caused by emissions from the asphalt plant operated by the Keiser Sand and Gravel Company. Mr. Kleman stated that the asphalt plant was located approximately 300 feet north of his orchard and that the plant began operating this spring. He claimed damage to his apple, pear and berry crop. Mr. Kleman reported that after first noting the damage that he had observed the direction of the wind and was surprised how frequently the northerly wind carried the plant emissions over into his orchard. Mr. Kleman asked that the photographs taken by Mr. Whitsell during the complaint study be shown to the Authority since he believed the pictures would describe conditions and show the effect on the crops more clearly.

Mr. Hatchard reported on the complaint investigation and showed the photographs of Mr. Kleman's orchard to the Authority. He further stated that a letter was sent to the Central Paving Company, owners of the Keiser Sand and Gravel Company, stating that the plant emissions violated the provisions of the Air Pollution Act and recommended corrective action. Mr. Hatchard then brought to the attention of the Authority a letter from Mr. F. E. Price, Dean of the School of Agriculture, Oregon State College, to which there was attached a report written by H. Hartman and Dr. Hanson of the Horticultural Department, O. S. C. and which described the damage to the crops and predicted the effect on the orchard if the emissions

ABI228

continue for an extended period of time.

Mr. Arthur Woods, partner in the Central Paving Company, was present at the meeting and asked if it was the purpose of this meeting to establish a claim for Mr. Kleman's alleged damages.

Mr. Green answered that the Authority is required to investigate complaints involving air pollution and that the statute specifically covers the discharge of air contaminants causing damage to plants or animals. He further stated that the function of the Authority is to require correction of excessive emissions but the Authority certainly was not concerned with establishing the basis for a claim of damage caused from a particular air pollution problem.

Mr. Woods then stated that he could not understand how the plant discharge could effect only Mr. Kleman's orchard since other orchards in the area are healthy. He stated that he believes Mr. Kleman's orchard has not actually been damaged by the plant emissions and that he would take exception to this statement regarding the prevailing northerly winds at this time of the year. He conceded that occasionally the wind came from the north but not every day. Mr. Woods stated that the complaint from Mr. Kleman is the only one received by the Keiser Sand and Gravel Company. He further stated that he is aware that they have a dust problem and that if it is determined the plant is in the wrong they will make an attempt to correct the situation. A service engineer from the company which manufactured the asphalt plant equipment was expected to visit the asphalt plant in the near future. If a practical control system could not be provided, Mr. Woods explained that as a last resort the plant could be moved to an isolated location. Mr. Woods stated that he did not wish to mislead the Authority members regarding the time required to correct the problem, however he expected by fall to have some plans formulated.

Mr. West requested that when the Keiser Sand and Gravel Company has approposed

plan available that the information and plans be submitted to the Authority for review.

MOTION RE: KEISER SAND AND GRAVEL COMPANY:

It was moved by Mr. King, seconded by Mr. West and carried that the field investigation be continued and that a report would be submitted at the next meeting regarding any corrective measures which the Keiser Sand and Gravel Company may have developed.

MILWAUKIE RESIDENTS RE: WESTERN DOOR AND PLYWOOD, MILWAUKIE:

Mr. Hatchard summarized the area study carried on since the last Authority meeting and explained in detail what the plant management had done to reduce the emissions. Mr. Hatchard stated that the plant management had succeeded in reducing heavy black smoke and other materials emitted from the plant.

Mrs. John E. McGee, 436 - 32nd St., Milwaukie, accompanied by four other ladies was present at the meeting. Mrs. McGee stated that she had not noted any appreciable improvement and that the same conditions which were described at the last Authority meeting still occurred but not quite as bad due to a change in the wind. Mrs. McGee continued that in the mornings at about 7 A.M. and in the evenings at about 6 P.M. the plant discharges a heavy black smoke that is deposited on the clothes and window sills.

Mrs. Probst, Milwaukie, Oregon, stated that just before the last rain there was considerable smoke which returned to the ground level and that even with the windows closed one could smell the fumes inside of the house. She stated that sawdust emission decreased. Mrs. Probst also maintained that the conditions at night are worse than during the day.

MOTION RE: WESTERN DOOR AND PLYWOOD, MILWAUKIE:

It was moved by Mr. King, seconded by Mr. West and carried that the engineering

ARI228

staff continue the study and submit a report at the next meeting.

NU-BORA SOAP COMPANY, N. W. 12th AND HOYT STREETS, PORTLAND, OREGON.

Mr. Hatchard summarized the field work activities to investigate this complaint and reported that the plant management had retained the services of the American Sheet Metal Company to develop collection apparatus, and that Mr. B.A. Crouch, Plant Supt., is working with the American Sheet Metal Company to develop a venturi-tube and steam curtain system to collect the soap dust. Mr. Hatchard further stated that the plant owner indicated a willingness to make necessary corrections as long as the cost is within reason and the space required for the equipment will fit in their present building.

COLUMBIA BOULEVARD, PORTLAND. RE: BURNING REFUSE DUMP.

Mr. Hatchard reported that the operator of the refuse dump on Columbia Blvd., is now taking reasonable precautions to prevent burning of materials that would create excessive smoke. It was pointed out, however, that an open burning refuse dump can not be operated in a community without creating nuisance conditions unless a properly designed incinerator is provided. The question was raised whether it was the intent of the Air Pollution Act to provide for abatement of this type of nuisance since existing nuisance statutes likely would cover this situation. It was decided to submit the question informally to the Attorney General's office for comment.

S. E. 8th AND TAYLOR, PORTLAND, OREGON. PAINT DAMAGE.

Mr. Hatchard advised that the damage to paint on automobiles has not been occurring as frequently as the complaint indicated. A preliminary survey of this area indicated that more than one plants' discharge could be responsible and that special sample equipment which is required for more detailed field study by the staff

has been ordered but has not yet been delivered.

QUARTERLY REPORTS.

Mr. Everts stated that the Air Pollution Control Section had not previously prepared a Quarterly Report due to the date that the section began operations. Much of the information and data which was reported today will be contained in the Quarterly Report. This report will be mailed to the Authority members and will reduce the amount of details to be discussed at the meetings.

FUTURE PROGRAM.

The need for industry-wide study of air pollution problems effecting many similar plants was discussed and the suggestion was made that the Authority invite industries to organize committees for the purpose of studying problems and cooperating with the Authority in developing information which would be of assistance to the industry in the correction and prevention of any air contamination problems.

MOTION RE: EFFORT TO SECURE INDUSTRY-WIDE COOPERATION:

It was moved by Mr. West and seconded by Mr. King and carried that the Secretary be authorized to contact the lumber, pulp, foundry and other industrial associations in an effort to secure industry-wide cooperation in the study of air pollution problems.

Mr. King stated that the city officials need recommended rules and regulations so that municipal ordinances may be considered and in the meantime, the investigation of complaints should be delayed until the recommended rules and regulations have been prepared. Mr. King further stated that considerable field work will be required to develop these recommendations for municipal control. Mr. Everts added that the magnitude of the state-wide problem has not yet been determined and also there is a need to continue study of equipment and laboratory procedures which

ARI 228

will be required to further the Air Pollution Control activities. It was the opinion of the Authority that if the basic data for air pollution control activities were to be collected the staff could not spend considerable time on the investigation of individual complaints.

Laboratory and field equipment that has been ordered or studied was also discussed and it was directed that additional equipment be ordered when it is determined that the items would be necessary.

Mr. Green suggested that the district engineers of the State Board of Health who are stationed in Pendleton, Eugene and Grants Pass be relied upon to make initial field investigations and report their findings to Mr. Hatchard and that if the particular complaints were very important that additional investigations could be undertaken.

MOTION RE: DISTRICT ENGINEER SERVICES FOR AIR POLLUTION CONTROL WORK.

It was moved by Mr. King and seconded by Mr. West and carried that arrangements be made for the district engineers' services for air pollution control activities and to budget one district engineer's salary and expenses for this work.

EDUCATIONAL PROGRAM:

Mr. Hatchard suggested that a pamphlet be prepared which would briefly explain the Air Pollution Act and control activities for public information.

Mr. Green suggested that information be prepared for a newspaper article and that the health Education Staff, State Board of Health, collaborate on this material.

Mr. King suggested that it would be a good plan for the future to have a member of the staff speak on air pollution control activities before service clubs, Chambers of Commerce and other interested groups before the end of the year.

DATE OF NEXT MEETING:

The chairman was authorized to call a meeting for December 3, 1952. There being

no further business the meeting adjourned at 5:30 P. M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr., Secretary  
Air Pollution Authority

SIXTH MEETING

OF THE

OREGON AIR POLLUTION AUTHORITY

December 3, 1952

The sixth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 3:10 P.M., Wednesday, December 3, 1952, in Room 936, State Office Building, 1400 S. W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman; Oren L. King, Harold F. Wendel, Merle S. West, Members; Curtiss M. Everts, Jr., Secretary; R. E. Hatchard, Chief of the Air Pollution Control Section; W. J. Whitsell, Associate Sanitary Engineer; and Frank Terraglio, Chemist.

MOTION RE: MINUTES OF PREVIOUS MEETING:

The minutes of the fifth meeting of the Authority having been prepared and distributed to the members in advance, it was moved by Mr. Wendel, seconded by Mr. West, and carried that the minutes as prepared by the Secretary be approved.

NATIONAL TOBACCO RESEARCH LEAGUE RE: SMOKING IN PUBLIC PLACES:

Mrs. John Stanley Dull, 1753 N. W. Aspen Ave., Portland, Oregon, representing the National Tobacco Research League, appeared before the Authority to request the Authority to assume jurisdiction over the problem of smoking in public places, particularly restaurants and public buildings. Mrs. Dull read parts of an article

ARI228

from the December 1952 Readers' Digest, to show the danger to public health from inhaling tobacco smoke. Mrs. Dull stated that the League desires legislation to prohibit smoking in public places. The League members believed that an appeal to the Air Pollution Authority was justified, and hoped that the Authority will determine what can be done about this problem. Mrs. Dull requested that a report be sent to the National League of Tobacco Research concerning the action taken. The Chairman stated that the same request was made to the Authority about a year ago and at that time it was assumed that the Authority did not have jurisdiction over air pollution within buildings. Mr. Wendel called attention to the section of the Air Pollution Control Act which in part reads, "to prevent the pollution of the air with impurities menacing the health and general welfare of the people of the State of Oregon", and that no mention was made whether this referred to the air inside buildings or outside.

MOTION RE: ADVICE OF ATTORNEY GENERAL CONCERNING CONTROL OF SMOKE INSIDE PUBLIC BUILDINGS.

It was moved by Mr. Wendel, seconded by Mr. King, and carried that the advice of the Attorney General be secured to determine whether the Air Pollution Control Act gives the Authority the responsibility for control of air pollution within buildings. Mrs. Dull was advised that the Authority would investigate this matter and report would be made to the National Tobacco Research League.

STATUS OF AIR POLLUTION SAMPLING STATIONS:

Mr. Hatchard, Chief of the Air Pollution Control Section, explained the overall plan for locating particle fallout stations in the State and stated that the purpose of the initial sample collection is to collect information showing the present air pollution conditions. At present only the material falling out of the air is being collected and that additional air samples will be collected at the same stations to determine the quantity and quality of the small sized particles that remain suspended in the air. Certain gaseous concentrations will be measured in

the future when the field equipment is on hand, he pointed out.

There are now 137 stations in 36 communities operating in the State of which 27 are located in the Portland area. Roofs of schools or other public building are being utilized as locations for sample stations. It was necessary to develop simple equipment and procedures to carry on the study throughout the State. Mr. Hatchard introduced Mr. Terraglio, Staff Chemist, who then explained to the Authority the equipment that is being used and the procedures that were developed for collecting the fallout samples.

INDUSTRIAL AIR POLLUTION ACTIVITIES:

Mr. Hatchard reported that 344 questionnaires had been mailed to lumber and wood working companies to secure information regarding waste wood disposal and that 115 replies had been received. State Board of Health district engineers assisted with this work by reviewing the county industry list and making additions or deletions. The Western Pine Association and the West Coast Lumbermens Association had been contacted regarding the formation of an industrial air pollution committee and it was learned that one committee appointed by the Associated Forest Industries could be arranged that would represent both the fir and pine industries. Mr. C.E. Ogle, Secretary for the Associated Forest Industries, promised to appoint such a committee.

OSWEGO RE: CINDERS AND CEMENT DUST:

Mr. Whitsell reported on the analyses of the particle fallout samples collected in the Oswego area as follows:

<u>Location of Sampling Point</u>	<u>Total Solids expressed in Tons per Square Mile per Month.</u>
Pinafore Restaurant 230 N. State St.,	56.3
Dahl House 41 S. State St.,	138
Grocery 365 S. State St.,	40
Residence 250 Furnace St.,	44.3
Bontys Plumbing 442 First St.,	47.7
Chevrolet Agency George Calder	54
Control Point	20.2

Accumulations of more than 25 tons per square mile per month indicates a dust problem in the area. It is possible to determine the general quality of the major constituents of fall out samples, and this will be done in the future.

Mr. Green asked if the Authority had sufficient information available regarding the dust condition to consider action for its abatement. Mr. Hatchard replied that it would be necessary to have laboratory analyses that would show the amount of dust from the major sources.

At this time the chairman asked Mr. H. R. Shipley, representative of the Oregon Portland Cement Company, if he desired to make any statements. Mr. Shipley replied that he was attending the meeting as an observer; however he did wish to point out that the cement plant is located within approximately 1/4 mile of three lumber and wood products plants and that it would be necessary to determine the quantity of material coming from these plants, road dust and other possible sources.

The Chairman pointed out to Mr. Shipley that the Authority and its staff were willing to work and cooperate with industries on air pollution problems; that the Authority was charged by law with certain duties and responsibilities, and that

the Authority desires to discharge such duties to the best of their ability and cooperation with all concerned; and requested that Mr. Shipley convey to his company the action taken by the Board and the attitude of the Authority in handling such problems.

The Authority members discussed procedure to follow in this type of problem in view of the fact that there was not sufficient data at this time and that the industries concerned have shown interest in working out a solution to the problem.

MOTION RE: INTERIM NOTIFICATION OF THE CONTRIBUTORS TO AIR POLLUTION.

It was moved by Mr. Wendel, seconded by Mr. King and carried that when complaints involving certain alleged offenders are supported by evidence that there is substantial air pollution, then the industries suspected of being contributors shall be notified of the conditions and be given the data that has been collected thus far so that the management will be advised.

NORTH SALEM RE: KEIZER SAND AND GRAVEL COMPANY:

Mr. Whitsell reported that the Keizer Sand and Gravel Company had moved the hot-mix asphalt plant on October 1, 1952, to Klamath Falls temporarily and would not be operating again in the Keizer community until about June 1st. The management had consulted with the manufacturers of the plant equipment in Los Angeles, and learned that the plans for a wet collection system are available. Before plant operation is resumed in the Keizer district, the collection system will be installed. Plans for the collection system will be submitted to the Authority prior to construction.

The Chairman stated that as long as the company was making progress with their

ABI228

plans to collect the dust, no further action was necessary at this time.

MILWAUKIE RE: WESTERN DOOR AND PLYWOOD COMPANY:

Mr. Whitsell reported that no additional study of the complaint concerning the Western Door and Plywood Company, Milwaukie, had been made since the last meeting due to the staff's work on air sampling stations throughout the State. Three sampling stations are now operating in Milwaukie, but it will be necessary to locate additional stations closer to the Western Door and Plywood Company. After discussing this complaint, the Secretary was instructed to write a letter to the Western Door and Plywood Company calling their attention to the conditions.

PORTLAND RE: NU-BORA SOAP COMPANY, N. W. 12th and Hoyt Streets:

Mr. Whitsell stated that a wet collection system had been planned at the Nu-Bora Soap Co., by Mr. Crouch, Superintendent, however, Mr. Crouch had recently left the company. Mr. Easson, owner of the Nu-Bora Soap Co., had advised that the soap dust problem no longer existed due to operational changes. Tenants in the Pihl Transfer Company Bldg., located immediately north of the soap plant, claim that conditions are just the same as previously.

After discussing the complaint the Authority instructed the staff to continue its investigations of the problem, and report at the next meeting.

PORTLAND RE: BURNING REFUSE DUMP N. E. COLUMBIA BLVD.:

The informal advice of the Attorney General had been requested to determine if the Authority was responsible for investigating and abating smoke and fly ash from the N. E. Columbia Blvd., dump and other similar complaints. The Secretary read the reply received from the Attorney General which stated that the Authority does have jurisdiction and that the Authority should adopt rules and regulations embodying or clarifying the procedures outlined where they appear

vague in the Act.

Mr. Everts pointed out that complainant should furnish proof that property was actually damaged before the Authority take any action.

The Authority directed the staff to continue the investigation of this complaint and report at the next meeting.

BIENNIAL BUDGET 1953-55:

Mr. Everts explained the proposed biennial budget 1953-55 as set up and pointed out that the amount is \$5,000 less than the budget allowed by the 1951 legislature for the 1951-53 biennium. The matter had been discussed with the State Budget Director, and none of the items were questioned. The Secretary recommended that the legislature be requested to consider legislation which would return to the general fund unobligated balance as of June 30, 1953, to simplify the accounting and budgeting procedure.

MOTION RE: BIENNIAL BUDGET 1953-55:

It was moved by Mr. Wendel, seconded by Mr. West, and carried that the budget as prepared be approved.

OUT-OF-STATE VISITS TO STUDY AIR POLLUTION CONTROL TECHNIQUES:

Mr. Everts explained the necessity for out-of-state visits by the engineers of the Air Pollution Control Section to confer with air pollution officials of other states and requested the approval of the Authority for such travel. He reported that he would like to have Mr. Hatchard visit Detroit-Windsor area sometime in the future; however the trip would not be scheduled until March or April 1953. After discussion, the Authority decided it would be wise to have Mr. Hatchard visit other agencies having to do with air pollution control in order to benefit by their experience.

ABI 228

MOTION RE: ELECTION OF OFFICERS:

It was moved by Mr. Wendel, seconded by Mr. West, and carried that the present officers be reelected for 1953; namely, Carl E. Green, Chairman, and Oren L. King, Vice Chairman.

PROGRAM FOR THE NEXT QUARTER:

Mr. Hatchard stated that the staff would be engaged in the following activities during the next quarter.

1. Preparation of preliminary report on the evaluation of the potential air pollution problem in Oregon.
2. Continue investigation of complaints which have been received.
3. Stimulate organization of air pollution industry committees.
4. Develop additional field techniques for measurement of air pollution values and continue study of equipment for laboratory and field use.
5. Prepare a report on the standards of atmospheric contaminants based on available reports.
6. Cooperative work with cities and counties wherever the establishment of air pollution control or zoning regulations are being considered.

Mr. King pointed out that there is a need for a study of the combustion of wood-waste as a fuel and suggested that this work might be done at Oregon State College.

Mr. Green stated that he would discuss this matter with George Gleeson, Dean of the School of Engineering, O. S. C. in the near future.

LABORATORY AND FIELD EQUIPMENT:

Mr. Hatchard advised the Authority that the material that had been ordered in August was now coming in slowly. The staff is continuing to study equipment on the market for this work and will order necessary units when it is determined

that the equipment can effectively be used.

DATE OF NEXT MEETING:

The tentative date for the next meeting was set for February 18, 1953.

ADJOURNMENT:

There being no further business, the meeting adjourned at 5:00 P. M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
Curtiss M. Everts, Jr., Secretary  
Air Pollution Authority

SPECIAL MEETING

OF THE

OREGON AIR POLLUTION AUTHORITY

January 7th, 1953

A special meeting of the Air Pollution Authority was called to order by the Chairman at 12:30 P. M., Wednesday, January 7, 1953 in Room 3, Aero Club Bldg., Portland, Oregon. Those present were Carl E. Green, Chairman, Dr. Harold M. Erickson, Oren L. King, Harold F. Wendel and Merle S. West, Members and Curtiss M. Everts, Jr., Secretary, also present were R. E. Hatchard, Wilbur J. Whitsell, and Frank Terraglio, Air Pollution Authority staff, and George W. Gleeson, Dean, School of Engineering, Oregon State College, and Cecil Quesseth, Assistant Attorney General, State Sanitary Authority.

MINUTES OF PREVIOUS MEETING:

The reading of minutes of the sixty meeting of the Authority was dispensed with since the minutes had been prepared and distributed to the members in advance.

ABI228

POLICY RE: CONTROL OF AIR POLLUTION WITHIN CITIES:

The Chairman opened a discussion on the future policy of the Authority with regard to participation in air pollution control activities in cities throughout the state.

It was Mr. West's opinion that the Authority should cooperate with cities on problems of air pollution control, and that the Authority should gather information on the subject and make it available to cities. In smaller cities that cannot carry on a program, the Authority could furnish some assistance when serious problems develop, but cities should be advised that the Authority will expect them to carry on their own air pollution control programs.

Mr. King stated that as a city manager he was particularly interested in the policy developed by the Authority and that he had discussed the relationship with Mr. Herman Kehrl, Executive Secretary, Mr. Mark Westling, Public Works Consultant and Mr. Raymond C. Coulter, Legal Consultant, all of the League of Oregon Cities. Mr. King reported that it was their belief that the Authority should preserve local autonomy in the field of air pollution control and that the laws under which the Authority functions would not prevent a city from adopting air pollution control ordinances to handle local problems. It was Mr. King's belief that the Air Pollution Authority should consult with and furnish technical advice for cities.

Mr. Wendel stated that he had raised the question of state-city relationship initially to make certain that in the conduct of the state program that duplication of effort would be avoided and that air purity could be effected with the least cost to the tax payer.

Mr. Green made reference to the letter, signed by Francis Hill, Bruce Morrison and Edward Huffs Schmidt representing a committee of the Columbia Empire Industries Inc., and addressed to the Portland Air Pollution Committee in which the establishment of an air pollution control program in Portland was opposed on the grounds that

the State Air Pollution Authority could and should handle such matters. It was Mr. Green's opinion that neither the staff or the operating funds of the Air Pollution Authority would ever be sufficient to control or supervise the thousands of individual sources of air contamination which exist or would potentially exist in a city as large as Portland. It was Mr. Green's belief that such sources of air pollution could best be controlled by an adequate municipal program.

Dr. Erickson thought that the prime responsibility for control of local air pollution problems should rest with the cities and that they could adopt ordinances with standards equal to or higher than those established by the Authority.

He also recommended that in drafting a reply to the letter from the Portland Air Pollution Committee that the historical background that led to the creation of the Authority should be outlined and it should also be mentioned that at no time during the preparation of the law was it contemplated that the Air Pollution Authority would be responsible for the abatement of air pollution originating in cities unless the city should fail to correct the problem. He also suggested that it be pointed out to the Portland committee that the Air Pollution Authority has the responsibility for the control or abatement of air pollution which originates outside of cities or in adjacent areas over which local authorities have no control.

Dean George Gleeson then asked if the Air Pollution Authority was empowered to delegate its authority to a city that adopted an appropriate ordinance.

Attorney Quesseth did not believe that the Authority could relieve itself or any responsibility but that in so far as he could determine there was nothing to prevent a city from adopting an ordinance for local control of air contamination and the Authority could probably exercise jurisdiction if local authorities failed to enforce such ordinances.

ABI 228

MOTION RE: CONTROL OF AIR POLLUTION WITHIN CITIES:

It was moved by Mr. Wendel and seconded by Mr. King and unanimously carried that the policy of the Air Pollution Authority with regard to the control of air pollution in cities would be as follows.

1. To preserve and encourage local autonomy on matters of air pollution control to the extent that cities would be expected to carry on local programs for air pollution control with such technical assistance and advice from the Air Pollution Authority as may be necessary.
2. Cooperate with cities in the furtherance of local air pollution control programs.
3. Collect and disseminate information to cities on the prevention and control of air pollution.

STUDY OF COMBUSTION PROBLEMS OF WOOD MATERIALS AND WASTE:

The Chairman then requested Dean George W. Gleeson to open the discussion on the subject of combustion of waste wood.

Dean Gleeson reported that the Oregon State College had undertaken a study of this problem several years ago and had arranged for use of a full scale burner at one of the local lumber mills. In addition studies had also been planned using a pilot unit at the college. He stated that when the professor in charge of the investigation left the college the studies were dropped.

When the matter was again brought to his attention in a letter from the Chairman of the Authority about a month ago, he was of the opinion that the investigation might be undertaken by the Forest Products Laboratory at the college. He learned later, however, that the Forest Products Laboratory had no authority to under-

take such studies.

It was the Dean's opinion that a solution to the problem might be obtained by either the improvement of combustion in existing facilities or the development of a new type of burner. Of the two he believed that the former offered the best possibility. He stated that in his experience that smoke and particulate matter could be eliminated from plants in which smoke stacks were used but that open burners were somewhat more of a problem.

Mr. Green asked if information was available which could be disseminated to industry; and the Dean reported that it was not.

Dean Gleeson suggested, however, an educational approach to the problem and that any further studies to be conducted by the college would require additional personnel and funds.

The concensus of opinion was that it should not be the policy of the Authority to solve such problems for industry, but to encourage industry to finance their own investigations and studies. Dean Gleeson supported this policy and suggested that the matter be brought to the attention of the industry committee now being formed by the Associated Forest Industries of Oregon located in Salem.

#### QUARTERLY ACTIVITY REPORT

Mr. Hatchard spoke briefly on the activities of the staff during the last quarter of 1952.

Mr. Whitself summarized the results of analyses of samples collected at particle fallout sampling stations located in Portland, Milwaukie, Oswego, Oregon City, Corvallis, Astoria, North Bend and Coos Bay.

AUTHORIZATION FOR EQUIPMENT PURCHASE:

The Secretary requested authorization for the purchase of needed field and laboratory equipment as follows:

Automatic Filter Paper Sampler

Directional Particle Fallout Unit

Wind Speed and Direction Recorders

Additional stands for 30 fallout stations.

MOTION RE: EQUIPMENT PURCHASE:

It was moved by Mr. King, seconded by Mr. Wendel and carried that authorization for purchase of the equipment be granted.

PROPOSED LEGISLATIVE ACT RE: TRANSFER OF UNOBLIGATED FUNDS:

The Secretary then read the proposed legislative act which would transfer unobligated funds from the 1951-1952 Air Pollution Authority account to the general fund after July 1, 1953. The principle of the bill was approved.

PORTLAND RE: BURNING REFUSE DUMP, N. E. COLUMBIA BOULEVARD:

The Authority then reviewed the report prepared by Mr. Whitsett on the burning of garbage and refuse at a site in the vicinity of N.E. Columbia Blvd., outside the city limits of Portland.

MOTION RE: SEIVERT REFUSE DUMP N. E. COLUMBIA BOULEVARD, PORTLAND:

After hearing a report of additional complaints which property owners had made to the staff, and learning that the problem could not be corrected unless the open burning of refuse is stopped; it was moved by Mr. West, seconded by Mr. King and carried that Mr. Seivert be cited to appear before the Authority and show cause

why action should not be instituted against him to abate the nuisance caused by the burning of refuse along N.E. Columbia Boulevard near the city of Portland.

INTERSTATE AIR POLLUTION PROBLEMS:

The matter of handling interstate air pollution problems was then discussed. It was pointed out that the State of Washington had no air pollution laws, but that it was expected that the legislature in that state would attempt to establish a program this year.

The Secretary was then directed to bring to the attention of the Governor of Oregon and the Columbia Basin Interagency Committee the potential interstate air pollution problem and recommended that the matter be brought to the attention of appropriate authorities in the State of Washington to encourage the adoption of legislation.

DATE OF NEXT MEETING:

The date for the next meeting was announced as February 18, 1953.

ADJOURNMENT:

There being no further business the meeting was adjourned at 2:30 P. M.

Respectfully submitted,

  
Curtiss M. Everts, Jr., Secretary  
Air Pollution Authority

SEVENTH MEETING  
OF THE  
OREGON AIR POLLUTION AUTHORITY

February 18, 1953

The seventh meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 3:00 P. M. Wednesday, February 18, 1953, in Room 720, State Office Building, 1400 S. W. 5th Ave., Portland, Oregon. Those present were Carl E. Green, Chairman; Harold F. Wendel, Merle S. West, Members; Curtiss M. Everts, Jr., Secretary; R. E. Hatchard, Chief of the Air Pollution Control Section; W. J. Whitself, Associate Sanitary Engineer; Frank Terraglio, Chemist, and T. M. Gerow, District Engineer, Oregon State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING:

The minutes of the sixth meeting of the Authority and those of the special meeting held on January 7th, 1953, having been prepared and distributed to the members in advance, it was moved by Mr. Wendel, seconded by Mr. West, and carried that the minutes as prepared by the Secretary be approved.

PORTLAND RE: BURNING REFUSE DUMP, H. M. SEIVERT PROPERTY, N. E. Columbia Blvd.

The Secretary read the original letter of complaint and the chronology of the investigation and study of the nuisance conditions created by a burning refuse dump, located in the vicinity of Portland between Union Avenue and Vancouver Avenue north of Columbia Slough and operated by H. M. Seivert.

The Chairman stated that the purpose of discussing the matter at this meeting was in an attempt to reach an amicable settlement. However, he stated that if the nuisance conditions were not eliminated it would be necessary in the future to hold a public hearing under the provisions of Chapter 425, Oregon Laws 1951 and the Authority would then enter a formal order. The Chairman asked Mr. Seivert

if there was information that he desired to present to the Authority.

AB1228

Mr. Seivert and his attorney, A. E. Prag, stated that refuse burning operation was a land filling operation; that Mr. Seivert has resided in the area for forty years in which time twenty-two tenants have established business on the reclaimed ground and that business establishments located adjacent to the dump had not suffered ill affects from the operation of the dump. It was also stated that no complainants had contacted Mr. Seivert directly regarding the conditions and Mr. Seivert denied that any air pollution other than ordinary smoke from burning wood, paper and trash was coming from the dump. He reported that there are many other industries in the area causing disagreeable odors. The prevailing wind in the area is either northwesterly or southeasterly according to Mr. Seivert and therefore the refuse dump could not cause odor and fly ash complaints at the National Biscuit Company plant which is located directly south of the dump.

Mr. Wendel stated that according to the Air Pollution Control Act excessive smoke is air pollution and that although there are other sources of air pollution in the area, they were irrelevant to the consideration of the emissions from Mr. Seivert's dump.

The Chairman asked if any complainants present desired to make any statements.

Attorney R. L. Myers stated that he represented twenty complainants who own businesses or reside within one mile of the refuse dump and are affected by the smoke, fly ash and odor. In his investigation of conditions he has observed smoke and fly ash being carried from the dump to his clients' property. He stated that samples of the material and photographs of the conditions would be made available to the Authority upon request.

Mr. E. C. Struznik, a complainant residing at 910 N. E. South Shore Road, pointed

out that the emissions from the Seivert dump have caused nuisance conditions for many years; that at times, the burning is done twenty-four hours a day and the smoke and fly ash made living conditions very annoying. He reported that there are now some 250 permanent residents living in this area and that the population is increasing. He stated that the smoke collects in the low land and under certain weather conditions the prevailing winds did not cause much mixing and while there have been previous attempts to reduce the nuisance no relief has been obtained.

The Chairman asked Mr. Hatchard to summarize the field work that the staff has carried on in this matter. Mr. Hatchard stated that the first inspection of the refuse dump was made in July 1952, and that six subsequent inspections have been completed. He reported that the complainants and Mr. Seivert were contacted and recommendations were made to eliminate the burning of certain types of materials in order to reduce the generation of dense smoke. Later visits to the dump site, however, had disclosed that excessive smoke and fly ash emissions were coming from the dump and that while some improvement was observed after Mr. Seivert had reduced the amount of the material being burned which generally caused dense smoke, the experience in other areas had shown that open burning near business and residential areas will continue to cause nuisance conditions until either the burning is stopped or a properly designed incinerator is provided.

The Chairman asked Mr. Seivert if he had ever considered installing equipment to burn the refuse. Mr. Seivert replied that the filling operation will be completed by November 1, 1953, and that he would be willing to sign a letter to that effect.

Mr. West stated that he had visited the refuse dump earlier in the afternoon and had noted waste oil on the land north of Schmeer Road. Mr. Seivert stated

that this material would be covered with dirt and would not be burned.

MOTION RE: H. M. SEIVERT BURNING REFUSE DUMP:

It was moved by Mr. Wendel, seconded by Mr. West and carried that Mr. Seivert be directed to abate the nuisance conditions created and existing by virtue of the emissions from open burning at the refuse dump within the next thirty days or to appear and answer formal charges as to why proceedings should not be instituted requiring him to abate the nuisance.

It was also agreed that if within the thirty day period Mr. Seivert could give some assurances or commitments to the Authority that will indicate that the nuisance is being abated, then the order to appear will not be issued, if the Authority believes Mr. Seivert is proceeding in good faith.

PORTLAND RE: NU-BORA SOAP COMPANY, N. W. 12th and Hoyt Streets:

The Secretary read the chronology of the complaint investigation and study of the nuisance conditions caused by the soap-dust emission from the Nu-Bora Soap Company located at 1240 N. W. Hoyt Street.

Mr. Don Lewis, representing Mr. Easson, owner of the soap company, stated that they thought the dust problem had been solved in early January by a change in the process. However, it has not been possible to control the moisture content of the soap to consistently prevent the discharge of soap dust. He acknowledged that the soap dust emission still existed and stated that they are planning now to build another dust collection house.

Mr. Wendel asked when they expected to complete the installation so that the nuisance would no longer be present.

Mr. Lewis said they hoped to have the unit working within thirty days, but that

AB1228

plans and specifications for constructing the dust house have not been prepared.

Mr. Wendel pointed out that if plans were not available the thirty day period seemed short and that probably sixty days would be required.

The Chairman asked if the Authority's staff had any comments. Mr. Hatchard stated that during one of the plant inspections a sample of the soap dust was collected.

The laboratory analyses of the sample showed that a large percentage of the soap particles were under one micron in size and that a gravity settling chamber could not be expected to remove this small sized material but that there were several wet-type collection processes that could be provided for this purpose.

The Chairman asked if any of the complainants present desired to make any statements. Mr. George Talbott, representing the Oregon Transfer Company located at 1238 N. W. Glisan one block south of the soap plant, said that the soap dust is a real annoyance to the tenants in their building, that dust affects the employees during the work day and that at times the dust deposits on their automobiles parked in the company's parking lot immediately south of the soap plant. He did not think there had been any improvement in the nuisance conditions.

Mr. Ward R. Schafer, Jr., representing Schafer-Wright Company located in the Pihl Transfer Company building at 1231 N. W. Hoyt, stated that the soap dust is a serious nuisance, that the employees in the building are affected by the dust and that during the summer the windows must be kept closed, in spite of the heat, to keep out some of the soap dust.

The Chairman advised Mr. Lewis to employ an engineer experienced in these

problems so that the soap dust collection system would operate properly.

Mr. Wendel requested the management to submit plans to the Authority before starting construction.

MOTION RE: NU-BORA SOAP COMPANY, PORTLAND:

It was moved by Mr. Wendel, seconded by Mr. West and carried that Nu-Bora Soap Company be directed to abate the soap-dust nuisance within sixty days or appear to answer formal charges as to why proceedings should not be instituted requiring them to abate the nuisance.

It was also agreed that if within the sixty day period Mr. Easson, owner of Nu-Bora Soap Company, can give some assurances or commitments to the Authority that will indicate that the nuisance is being abated, then the order to appear will not be issued.

PORTLAND RE: NORTHWEST NUT GROWERS:

Mr. James P. Nelson representing Northwest Nut Growers appeared before the Authority in regard to air pollution conditions affecting their new plant at 1601 N. Columbia Blvd. He stated that the Charlton Laboratory was retained to make a preliminary study of the conditions and that in their report, completed in January 1953, the recommendation was made that the situation should be investigated to determine the sources of the air pollution. He also stated that the company had brought the matter to the attention of the Multnomah County Board of County Commissioners in December 1952.

The Secretary stated that a request for a field study was received from Mr. Dan Dibble, Chief Deputy, Civil Dept., and that a field investigation is now scheduled for early March 1953.

ABI228

PROPOSED WEATHER CONTROL LEGISLATION:

The Secretary summarized the provisions of Senate Bill No. 103 and House Bill No. 266 which have been introduced into the Legislature to control the activities of weather modification operations. He reported that Senate Bill No. 103 would require the Air Pollution Authority to review the weather modification plans in a specific area and consider approval within a ten day period. The Authority believed that the ten day period would be too short if new materials were being used which would require the staff to gather information on the matter.

The Authority directed the Secretary to write to Senator Ben Day, the sponsor of Senate Bill No. 103 to suggest the substitution of "a reasonable length of time" for the ten day period.

ATTORNEY GENERAL'S ADVICE RE: TOBACCO SMOKING IN PUBLIC PLACES:

The Secretary read the Attorney General's letter relating to jurisdiction over tobacco smoking in public places. The Authority directed the Secretary to inform the National Tobacco Research League that the Authority does not have jurisdiction in this matter.

ACTIVITIES OF THE AP CONTROL SECTION:

Mr. Green reported that Messrs. Everts, Hatchard and he attended the February 18, 1953 meeting of the State Natural Resources Committee and discussed the initial air pollution control program. Governor Patterson and the committee members indicated that they were pleased to learn of the progress thus far.

Mr. Hatchard reported that (1) the preliminary report of the first particle fallout results were complete from 118 stations located in 38 communities, but that unusually heavy rainfall and winds caused considerable emergency

field work to maintain the stations. (2) Arrangements have been made with Dr. Yunker, Head of the O.S.C. Physics Department to have spectrographic analyses made of fallout samples from selected industrial areas, and it is hoped that semi-quantitative data regarding the presence of specific elements will be obtained in this matter. (3) The City of Eugene is now preparing a general type smoke control ordinance. The Air Pollution Authority staff has conferred with city officials regarding the proposed ordinance, and that the Springfield Planning Commission requested their City Manager to contact Eugene regarding coordination of the air pollution activities in both cities.

DATE OF NEXT MEETING:

The tentative date for the next meeting was set for May 20, 1953.

ADJOURNMENT:

There Being no further business, the meeting adjourned at 4:50 P. M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*

 Your obedient servant,  
 J. B. Thompson, Secretary of the State.

EIGHTH MEETING

OF THE

OREGON AIR POLLUTION AUTHORITY

May 20, 1953

The eighth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2: P.M., Wednesday May 20, 1953, in Room 36, State Office Building, 1400 S.W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Dr. Harold M. Erickson, Harold F. Wendel and Merle S. West, Members, and Curtiss M. Everts, Jr., Secretary, Cecil H. Quesseth, Legal Advisor, R. E. Hatchard, Chief of the Air Pollution Control Section; W. J. Whitsell, Associate Sanitary Engineer and Frank Terraglio, Chemist.

AB1228

MOTION RE: MINUTES OF PREVIOUS MEETING:

The minutes of the seventh meeting of the Authority held on February 18, 1953, having been prepared and distributed to the members in advance, it was MOVED by Dr. Erickson and seconded by Mr. West and carried that the minutes as prepared by the Secretary be approved.

TROUTDALE RE: CONSIDERATION OF COMPLAINTS:

Mr. M. B. McKay, an owner of agricultural land in Troutdale, appeared before the Authority and stated that the air pollution was adversely affecting certain types of crops. He asked if the Air Pollution Authority is now set up to study conditions in the state and adopt acceptable standards. Mr. McKay urged that the Authority proceed with field studies that would determine what the present air pollution conditions are in the Troutdale area and whether the air pollution is affecting agriculture or livestock.

Mr. Green stated that there are several damage suits now involved in litigation and asked Attorney Quesseth if it would be proper for the Authority to begin field

studies at this time.

Mr. Quesseth stated that we should not enter into suits now in court but there was no objection in conducting independent investigations in the area.

F. E. Price, Dean of the School of Agriculture, Oregon State College, informed the Authority that his department would be very happy to collaborate with the Air Pollution Authority and work in any manner to assist in the proposed study. He stated the problem would be to determine what additional data should be collected to answer the questions now presented. Furthermore, it would be necessary to consider what agency or personnel could be used.

Mr. Green asked if this would mean Mr. Price needed additional staff to cooperate in the study. Dean Price stated that first, he would have to know how much additional data would be required; however the leadership of a staff is now available.

Mr. Green asked if the Air Pollution Authority or Oregon State College Experiment Station should have additional funds to carry on the field investigation.

Dean Price thought that the college would need additional funds. The charges for chemical analyses have been definitely established and that they could outline a program and submit an estimated cost in the near future when the Authority has determined what additional information is desired.

The Secretary suggested that if the Board wished to proceed with the matter that it designate one of its staff or members to confer with Dean Price to determine if we are in a position to take on such a program.

MOTION RE: TROUTDALE AREA:

It was MOVED by Mr. West, seconded by Dr. Erickson and carried that we authorize the staff to proceed with the field study and cooperate with the college in this activity.

LUMBER AND WOOD PRODUCTS INDUSTRIAL AIR POLLUTION COMMITTEE:

Mr. Charles E. Ogle, Secretary-Manager, Associated Forest Industries of Oregon, Salem, Oregon, which represents the lumber and paper industries in the State of Oregon stated the organization had appointed an air pollution committee and was ready to work with the Authority to determine what can be done to alleviate air pollution conditions. Mr. Ogle introduced the following members of the Committee to the Authority and stated they were present to learn about existing problems and to become acquainted with the Authority's activities:

1. Mr. Irving T. Rau
2. Mr. Truman W. Collins
3. Mr. J. R. Frum

The Secretary read a letter from Associated Forest Industries of Oregon dated February 13, 1953, which listed the names of the members on their Air Pollution Committee.

NORTH BEND RE: CINDER AND FLYASH COMPLAINT PETITION:

The Secretary read the petition signed by approximately 1200 North Bend residents, and Resolution No. 578 adopted by the North Bend City Council and signed by Mayor I. N. Hartley.

Mrs. Ben Flaxel representing the North Bend petitioners regarding the flyash problem stated that she and Mrs. I. Pittam had circulated petitions among the residents who live in the affected area in North Bend. She stated that the North Bend City Council had promised, over a year ago, that something would be done but nothing has been accomplished to date. She said that no particular industry is at fault but the petitioners believe that all of the industries should endeavor to correct the problem.

She stated that the conditions are so acute in North Bend that it is injurious

ABI 228

to health and property values.

Mr. A. O. Karlen, Mgr., Weyerhaeuser Timber Company, North Bend, Oregon, stated that they are aware of the problem but believe they are not the sole offenders. The timber company has conducted two stack emission tests. The first measurement was made in December 1951, using Western Precipitation Company equipment. The engineer reported the plant was emitting about 50% of the cinders allowed by the American Society of Mechanical Engineers dust discharge code. In January 1952, the Richfield Oil Company ran a combustion efficiency test. Six weeks ago another stack emission test was run but was made by the Combustion Engineering Company; however results have not been received. This information will be made available to the Air Pollution Authority as soon as Weyerhaeuser receive it. Mr. Karlen stated that the Weyerhaeuser plant is about two years old and that they have no dutch oven, forced draft or mechanical stoker. The stack test was made to determine just how much cinder and flyash was being emitted and whether or not the company could justify spending about \$150,000 to collect the emissions. Mr. Karlen stated that Weyerhaeuser Timber Company is very anxious to comply with all rules and regulations adopted by the Authority.

Mr. C. R. Leever, Chief Engineer, Mt. States Power Company, Albany, Oregon, stated they felt they were fairly innocent regarding the excessive cinders and flyash in North Bend especially since each burner stack at their plant has a cyclone type cinder collector and these units have been operating for many years and apparently are doing a good job. He reported, however, that Mt. States Power Co., is willing to cooperate in any possible way with the Authority and do whatever the Authority thinks should be done to correct the conditions.

Mr. Wendel asked if Mr. Leever had conferred with the other three companies regarding a cooperative effort to have stack emission measurements made.

Mr. J. W. Asplund, Mgr., Mt. States Power Company, Coos Bay, Oregon, stated as yet nothing has been agreed upon but the proposal had been discussed.

Mr. Asplund stated that it would be desirable to get the same firm to make the measurements so that a standard procedure would be used.

Mr. Green asked whether the study was to determine conditions around the plants or to determine the stack discharges.

Mr. Asplund informed the Authority that the study would be in connection with combustion since it was the burning of wood residue that caused the cinders.

Mr. James Boynton, Fire Chief, North Bend, Oregon, represented Mayor Hartley who was unable to attend. Mr. Boynton stated that he has lived in North Bend thirty-one years and the cinder problem has come up three or four previous times. In the past years the Fire Department took care of this situation since it was then called a fire hazard. Some years ago, the Mt. States Power Company emitted cinders and flyash and the Fire Department brought the matter to their attention; cinder collectors were installed and the condition was alleviated. Other industries have now moved in. The cinder prevailing now is sort of a moon-shaped cinder that seems to have an oily surface.

Mr. John L. Hawkins, General Manager, Irwin-Lyons Lumber Company, North Bend, Oregon, stated his firm desired to do everything possible to improve the conditions. Their plant is the oldest there and perhaps are contributing a lot to the problem. They have a wood waste burner which is an additional problem for Irwin-Lyons. Arrangements are being made for measuring the emissions and as soon as the study is complete a copy will be sent to the Authority.

Mr. Hatchard summarized analyses of samples collected from the six particle fallout stations in North Bend as follows: Four series of fallout samples have been

ABI228

collected since November 1952 and the average fallout in North Bend was found to be 80 tons per square mile per month. However, in the vicinity of Sherman and Oregon Streets an average fall of 500 tons per square mile per month was found. The prevailing wind during the sampling period greatly affects the area fallout. During trips to North Bend, plant visits have been made to determine what operational changes could be made to reduce the emissions. In April 1953, a letter was sent to the four industries pointing out the cinder and flyash and recommending that stack emission measurements be made and requesting a copy of the report by August 1, 1953. Replies have been received from the industries concerned stating they are interested in having the stack sampling done.

The Secretary asked about how long would it be to accomplish this study, and Mr. Green wondered if the industry representatives cared to speak on the matter as of this date.

Mr. Leever added that each plant has its own problem to eliminate and it was very difficult since they all are operating in such close proximity, and all of the industries pick up their steam loads about 7:30 in the morning.

Mr. Wendel asked if the cinder problem was caused by burning the wood for fuel and as a waste material and had any study been made of the amount of fuel burned for both purposes.

Mr. Hatchard stated that hog fuel is burned at the four industries to operate steam boilers and Irwin-Lyons and Menasha Plywood plant operated wood waste burners. The cinder emissions originate from both burning operations. However, field measuring equipment to determine the quantity of cinders from each operation falling in the area has not been available. A directional particle fallout unit was ordered in January and delivery is expected next week. He stated

that the emissions from the steam plants can be controlled by a combination of operational procedures and suitable collection systems. However, the cinders from the waste burners present a problem that has never been studied to determine what improvements will provide better combustion and less cinder and flyash.

Mr. Wendel stated that he would like to know if the wood waste burning could be reduced by hauling to low ground and requested the staff to determine the quantity of wood waste burned for disposal purposes rather than for steam generation.

Mr. Mowry Smith of Menasha Plywood Corporation, North Bend, reported that they are planning to install a new stack during the last week in August. He wanted to know if that was an adequate improvement or if there was something else they could do and asked that Mr. Hatchard go over the proposed work with their engineer.

Mr. Green advised him to employ engineers competent to do the work and the Authority's staff would cooperate. Mr. Green stated that inasmuch as we have these petitions indicative of the problem we should indicate to North Bend residents what is going to be done to correct the conditions.

Mr. Wendel suggested that the operators of the various mills do what they can to correct the individual problems between now and the next Authority meeting and at that time present a report on what has been accomplished and what is proposed for the future.

MOTION RE: NORTH BEND CINDER AND FLYASH COMPLAINT PETITION:

It was MOVED by Mr. West, seconded by Mr. Wendel and carried that the industries concerned with this problem proceed with their investigational work and pursue improvements and report to the Authority regarding the progress and that the industries of the City of North Bend and other interested parties be notified of

ABI228

this action.

PORTLAND RE: SEIVERT REFUSE DUMP, N. E. COLUMBIA BOULEVARD:

A public hearing was conducted regarding the excessive smoke and flyash from the burning refuse dump located between Union and Vancouver Avenues, north of Columbia Slough.

Mr. R. L. Myers, attorney for the complainants, stated that the excessive smoke and flyash emissions have continued after April 1, 1953, which was the deadline that Mr. Seivert was given to reduce the emissions in accordance with the Authority's action at the February 18, 1953, meeting. Mr. Myers requested that the Authority adopt an order to abate this nuisance condition.

Mr. E.E. Nelson, Sanitation Department, National Biscuit Company, stated that the smoke and flyash causes excessive maintenance to keep the plant and grounds clean and submitted photographs, flyash samples and smoke and odor observations as exhibits.

W. J. Whitsell and R. E. Hatchard presented a summary of the field investigations of the dump operations and stated that excessive smoke and flyash emissions have continued.

Mr. Kenneth Gustin, owner of the Union Avenue Motel, stated that the smoke and flyash has been a nuisance in the area for many years and that previous petitions presented to the Multnomah County Board of County Commissioners have not removed the nuisance. He further requested that the Authority enter an order to abate the nuisance condition. Mr. H. M. Seivert stated that the refuse dump has been leased to Matheny and Bacon Inc., effective June 1, 1953, and will be used as a building materials storing yard.

MOTION RE: SEIVERT REFUSE DUMP:

It was MOVED by Mr. Wendel, seconded by Dr. Erickson and carried that findings of fact be made and that an order be adopted requiring H. M. Seivert to discontinue all burning at the refuse dump located between Vancouver and Union Avenues north of Columbia Slough until combustion facilities are provided to burn the material without producing nuisance conditions.

## BEFORE THE AIR POLLUTION AUTHORITY

OF THE

STATE OF OREGON

In the Matter of Air Pollution from )  
 H. M. Seivert's Burning Refuse Dump )  
 located between Vancouver and Union ) ORDER  
 Avenues in the State of Oregon. )

This matter coming on regularly for final hearing on the 20th, day of May 1953, before the Air Pollution Authority of the State of Oregon consisting of Carl E. Green, Chairman, Harold M. Erickson, M. D., Harold F. Wendel and Merle S. West and Curtiss M. Everts, Jr., Secretary and the Authority having heard all persons and parties interested and having given full consideration to oral and written evidence submitted at such hearing and having studied and considered the reports of its engineers pertaining to the smoke and flyash pollution of the air from the burning refuse dump owned by H. M. Seivert, and having heretofore on the 20th of May 1953, entered its findings of fact and now being fully advised in the premises,

IT IS HEREBY ORDERED:

1. That from and after June 10, 1953, H. M. Seivert shall discontinue all burning at the refuse dump located between Vancouver and Union Avenues, North of Columbia Slough until combustion facilities are provided to burn the refuse without producing nuisance conditions.

ABI228

2. That the Secretary of this Authority be and hereby is directed to serve a certified true copy of this order together with the findings of fact pertaining to said matter, upon H. M. Seivert and R. L. Myers, Attorney for the complainants.

DATED this 29th, day of May 1953.

OREGON AIR POLLUTION AUTHORITY

By \_\_\_\_\_  
Chairman

ATTEST:

\_\_\_\_\_  
Secretary

BEFORE THE AIR POLLUTION AUTHORITY  
OF THE  
STATE OF OREGON

In the Matter of Air Pollution from )  
H. M. Seivert's Burning Refuse Dump )  
located between Vancouver and Union ) FINDINGS OF FACT  
Avenues in the State of Oregon. )

WHEREAS, the above entitled matter came on for final hearing on the 20th, day of May 1953, before the Oregon Air Pollution Authority consisting of Carl E. Green, Chairman; Harold M. Erickson, M. D., Harold F. Wendel and Merle S. West and Curtiss M. Everts, Jr., Secretary, all members being present throughout said hearing; and,

WHEREAS, due notice was given of the time and place of said hearing by registered mail upon H. M. Seivert, 5 N. E. Columbia Boulevard, owner of the refuse dump, and,

WHEREAS, the following appeared and were heard, H. M. Seivert, owner of

the refuse dump, Robert L. Myers, Attorney for the complainants, Elmer E. Nelson, Chief, Sanitation Department, National Biscuit Company, Kenneth Gustin, owner, Union Avenue Motel, Wilbur J. Whitsell, Associate Engineer, Richard E. Hatchard, Chief, Air Pollution Control Section, and,

WHEREAS, the said parties and all persons interested were given full opportunity to be heard and oral and written statements and evidence pertaining thereto were received considered and filed by this Authority and,

WHEREAS, Chapter 425, Oregon Laws, 1951, declares it to be contrary to the public policy of this state to discharge into the air solids, liquids or gases so as to cause such injury to human, plant or animal life or to property as constitutes a public nuisance:

Now, THEREFORE, the Authority having given full consideration to the statements and evidence submitted by all interested parties at said hearing and having studied and considered the reports and investigations made by its engineers pertaining to the smoke and flyash pollution of the air from the burning refuse dump owned by H. M. Seivert and now being fully advised in the premises makes the following findings of fact to wit:

1. H. M. Seivert is the owner of the land located between Vancouver and Union Avenues north of Columbia Slough and is the owner of a refuse dump at this location.
2. Miscellaneous waste material is brought to the dump by trucks or trailer for which a fee is charged for the disposal service. Garbage is not accepted at the dump. The combustible material is burned more or less continuously along the edge of the dump.
3. A petition signed by twenty-four property owners was presented February, 1952 to the Multnomah Board of County Commissioners who ordered the Health Department to investigate the health menace. The County Health

ABI228

Department investigation concluded that the dump was not an actual or potential health problem.

4. A complaint petition from twenty property owners was presented to the Authority June 11, 1952, requesting removal of this source of air pollution. Subsequent field investigations by the Authority's staff disclosed that excessive smoke and flyash were originating from the burning dump and that the smoke and flyash discharge was in violation of the public policy of the State of Oregon as expressed in Chapter 425, Oregon Laws 1951.
5. At the informal authority hearing February 18, 1953, Mr. Seivert was directed to abate, within thirty days, the nuisance conditions caused by open-burning at the dump or to appear and answer formal charges.
6. On March 17, 1953, a letter was received from H. M. Seivert outlining his proposed plan of operations which consisted of accepting only trash and refusing materials which produce flyash or odors when burned.
7. Letter was received March 25, 1953, from Mr. Seivert stating that the dump was to be closed April 1, 1953, except for some lumber mill products to clean up left over brush on the dump.
8. Nine field investigations between April 2, and April 22, 1953 indicated that the dump was not closed. Trucks and trailers were observed discharging miscellaneous refuse. Large fires extending the full length of the dump causing heavy smoke and flyash discharges were noted. Complaints from adjacent property owners have continued.
9. Particle fallout stations were located at four points in the area. The fallout was found to be heavy.
10. In other areas where air pollution control laws are in effect the open burning refuse dump adjacent to other business and residential use

had to be curtailed. It has been necessary to either operate a dumping land fill dump or to burn refuse in an incinerator properly designed to produce complete combustion and minimize flyash.

11. That the discharge of heavy smoke and flyash into the air by H. M. Seivert, his agents and employees, as aforesaid, is contrary to the public policy of the State of Oregon, as declared and set forth in Chapter 425, Oregon Laws, 1951.

DATED this 29th, day of May 1953.

OREGON AIR POLLUTION AUTHORITY

By \_\_\_\_\_  
Chairman

SAUVIES ISLAND RE: FLUORIDE EMISSIONS:

Mr. R. W. Fraser, Sauvies Island, appeared before the Authority to present a complaint regarding fluoride emissions from the Alcoa plant. He stated that this was a problem that covered the whole city of Portland and created serious contamination inasmuch as cattle are dying from it, humans are affected and crops can not successfully be raised. Mr. Fraser told the Authority that Oregon State College has conducted experiments which show that the fluoride emission is still causing extreme damage. He realizes that the source is a plant on the Washington side of the river but asked if we have some power to require controls to stop this nuisance.

Mr. Quesseth suggested they seek voluntary cooperation from the company.

Mr. R. W. Fraser stated the company has already been in Federal Court and even though he secured a judgment against them fluoride contamination still exists. He tried to secure an injunction against the plant and it was said that due to the war and the need for aluminum all plants must be operated.

ABI228

Mr. Quesseth stated that as far as a Washington offender was concerned this Authority could do nothing directly. However, perhaps sampling could be made of the air on the Oregon side and we could then take the matter up with the officials in the State of Washington.

Mr. R. W. Fraser stated that he would very much like to see some sort of a resolution passed by the Authority to conduct an investigation in the city of Portland to see that people are not being harmed by the plant.

Dr. Erickson stated the State Board of Health had cooperated with the University of Oregon Dental School and had made a study of some sixty children living on Sauvies Island. This study found no evidence of fluoride toxicity, no changes in teeth or bones; however this was the only study regarding fluoride damage the Board of Health had carried on.

In reply Mr. R. W. Fraser stated that doctors had advised people to move out of the area and his own doctor had given him like advice.

Mr. William M. Fraser, Sr., reported that he owns 600 acres on Sauvies Island and already has lost about 250 head of cattle and he further stated that Dr. Foskett, Pathologist at Emanuel Hospital, advised him not to eat any of the contaminated cattle or any of the vegetation.

Mr. William Fraser stated all that was asked of Alcoa was to eliminate their fluoride discharge and while they spent one million and a quarter to put on controls, it was testified in court that they were letting escape 1150 pounds of fluoride a day. He also stated that Alcoa employs a veterinarian who claims they can not find any fluorosis in the cattle. The trouble, claimed Mr. William Fraser, is that very few people have enough money to fight Alcoa and he urged that the Authority take some action. Mr. Fraser informed the

Authority that there was considerable data available to study.

Mr. Green stated that if this data is now available and can be obtained by our staff he could see no reason why this Authority could not take up the matter with the aluminum company or the State of Washington and get some action.

It was MOVED by Mr. Wendel, seconded by Mr. West and carried that the Authority collect such data as it can and with the advice of the Attorney General's office take any and all action that may elicit the cooperation of the Aluminum Company of America and any and all official bodies in the State of Washington from whom we can secure assistance.

PORTLAND RE: REYNOLDS ALUMINUM PLANT, TROUTDALE, OREGON:

Mr. Robert S. Strebin, Troutdale, Oregon, appeared before the Authority and stated that he is a cattle raiser in this area and has suffered very heavy losses due to fluoride poisoning. He stated that a year ago or more facts were given to the Secretary regarding this nuisance. At that time Mr. Strebin stated that the Authority gave assurances that this nuisance would be one of the first studies undertaken but nothing has been done. Mr. Strebin stated that four of his horses had recently died and showed pictures of a bull which he reported would perhaps have been a prize winner at the fair but has been so badly affected that he will soon be destroyed. He further stated that he can not use the hay grown in that area for feeding purposes and the animals now are not fit for human consumption. He stated that the aluminum company at Troutdale does not deny emitting about 700 pounds of fluoride a day and he doubts that their controls are operating a good part of the time.

ABI 228

Dr. Erickson assured Mr. Strebin that we intend to take action to cooperate with the college to extend studies previously made so that the present conditions would be known.

Mr. Wendel stated that the Authority is concerned with this problem and he added that he thought that the complaint representations made today against this plant was by far the most serious complaint in the state and that we should begin study of this problem immediately.

Mr. Green recalled that in a previous meeting the Chief Chemist for the Reynolds Aluminum Company was present and he had stated that extensive improvements to the fluoride collection system had been provided in 1949 and 1950. The improvements may have improved conditions some but apparently have not alleviated them altogether.

Mr. Wendel reiterated the fact that this case should be investigated at once and that if the allegations are true then we should take appropriate action to gain compliance with state statutes.

MOTION RE: REYNOLDS ALUMINUM COMPANY, TROUTDALE, OREGON:

It was MOVED by Mr. Wendel, seconded by Dr. Erickson and carried that the Reynolds Aluminum Company be notified that complaints have been made charging the Company with serious contamination of the air, detrimental to human, animal and plant life; that the Air Pollution Authority intends to make an investigation of this situation and that if conditions are found as alleged the Authority will have no alternative under Chapter 425, Oregon Laws 1951, than to take such action as necessary to enforce the said statute.

MULTNOMAH COUNTY RE: ZONING PROVISIONS IN THE UNINCORPORATED AREAS:

Mr. Lloyd Anderson, Sr. Planner, Multnomah County Planning Commission, appeared before the Authority and stated that a Planning Commission had been approved in the last election to regulate land use in the unincorporated areas. Mr. Anderson advised that the zoning regulations are now being prepared to establish the districts and the Zoning Commission desires a policy-statement from the Authority regarding the administrative procedures to handle the air pollution problems in the districts. He requested advice whether or not the zoning regulations should state specific requirements regarding air pollution in the land use districts or whether these matters should be referred to the Authority for review.

The Secretary asked Mr. Anderson if the Planning Commission had ordinances ready to adopt. Mr. Anderson stated that he hoped before the next Authority meeting to have adopted zoning ordinances.

Mr. Green advised Mr. Anderson that the Authority had not yet adopted standards since it was in the process of gathering data and it may be some time before we do have sufficient data to warrant the adoption of standards.

Dr. Erickson stated that he believed that all the County Zoning Commission could do was refer industries with possible air pollution problems direct to the Air Pollution Authority and when we develop standards the requirements could then be written into the zoning ordinances. Dr. Erickson further suggested that perhaps the County could screen cases, delete certain types of industry and refer only the questionable cases to the Authority.

Mr. Green suggested that the new industries who possibly have an air pollution problem be required by the Multnomah County Planning Commission to submit

their data to the Air Pollution Authority for approval.

MOTION RE: MULTNOMAH COUNTY PLANNING COMMISSION PROVISIONS FOR AIR  
POLLUTION IN UNINCORPORATED AREAS:

It was MOVED by Dr. Erickson, seconded by Mr. West, and carried that the Secretary prepare an administrative policy statement for submission to the Multnomah Planning Commission that will bring to the attention of new industries planning to locate in Multnomah County that there is a State Air Pollution control law, that industries must meet the Authority's requirements, and that the Multnomah County Planning Commission should first examine the permit requests and refer only the cases with possible air pollution problems to the Authority for consideration and action.

Mr. Green directed that the Secretary submit the policy to the Authority members by mail for approval before the Authority meets again, if that is necessary; otherwise have it ready for consideration at our next meeting.

LABORATORY AND FIELD EQUIPMENT:

The Secretary requested authorization for buying needed laboratory and field equipment.

It was MOVED by Mr. West, seconded by Dr. Erickson and carried that necessary laboratory and field equipment be purchased before June 30, 1953.

Date for the next meeting was to be set upon call by the Chairman.

Respectfully submitted,

  
Curtiss M. Everts, Jr., Secretary  
Air Pollution Authority

SPECIAL MEETING

OF THE

OREGON AIR POLLUTION AUTHORITY

August 11, 1953

A special meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 8:30 A.M. Tuesday, August 11, 1953, in Room 36, State Office Building, 1400 S.W. 5th Ave., Portland, Oregon. Those present were Carl E. Green, Chairman, Dr. Harold M. Erickson, Harold F. Wendel, Members and Curtiss M. Everts, Jr., Secretary, Mr. Thomas C. Enright, Legal Advisor, R. E. Hatchard, Chief of the Air Pollution Control Section and W. J. Whitsell, Associate Sanitary Engineer.

GOLD HILL RE: COMPLAINT ON DUST AND OIL VAPOR DISCHARGE FROM HOT-MIX ASPHALT PLANT.

The Chairman stated that the main purpose of this special meeting was to consider further action on a complaint regarding dust and oil vapor discharge from a hot-mix paving plant located near Gold Hill, and requested the Secretary to read the chronology report of the Authority's staff and the August 1, 1953 letter from F. L. Somers and the Central Heating Company, owner of the paving plant.

Mr. Green stated that the letter did not indicate to him that the owners wished to cooperate in the reduction of the dust and oil vapor discharge and that Mr. Somers apparently believed that no unsatisfactory condition existed and therefore the next move was for the Authority to consider the matter.

Mr. Glen G. Byrnes, representing Central Heating Company, stated that he had previously noticed the dust from the plant but that it did not seem abnormal to him and added that there are five hot-mix plants in Portland operating with similar type paving plant equipment but that he was not aware of any complaints from these operations. In Gold Hill, Mr. Byrnes said that the owner of the Lazy Acres Motel is the only complainant and that the paving plant would be out of that locality in two weeks' time.

ABI 228

Mr. Green explained that the Authority had considered a complaint pertaining to a hot-mix plant north of Salem about a year ago, and advised Mr. Byrnes that the Authority's position is that a hot-mix paving plant or any other plant can be so constructed and operated that nuisance conditions can be prevented.

Mr. Byrnes said that his company had purchased the largest portable commercial dust collector on the market last year which cost approximately \$14,000.00 and that they believed the dust collection was being properly handled.

Mr. Green asked Mr. Byrnes if they ever contemplated using a water spray to control the dust. Mr. Byrnes replied that several changes had been tried at the Gold Hill plant to reduce the dust and that the draft had been reduced 50% but they didn't believe that a water spray was necessary since this was a very expensive operation for a small amount of paving and he suggested also that before taking action on this plant that all the paving plants in Oregon should be inspected instead of just concentrating on one. Mr. Byrnes stated that only ten days of plant operations would be needed to finish the job since there was only ten thousand tons more of paving needed.

Mr. Byrnes stated further that complainants of this kind have gone to court previously but it never has been proven that there has been any ill health caused by the paving plant discharges and that the dust emissions are a nuisance but that is all. The operation of a paving plant at any one location happens so infrequently he could not understand why the Lazy Acres Motel owner is so disturbed about it. He stated that this matter had been taken up with The American General Contractors Association which is very interested in the proceedings but there was insufficient notice of the meeting to have a representative present.

Mr. Hatcherd stated that Mr. T.M. Gerow, District Engineer, had made a preliminary area survey on July 23, 1953, and that the dust emissions from the

paving plant were heavy and had deposits on the property north of the Rogue River west of the Gold Hill city limits, and that Mr. Whitsell and Mr. Hatchard had also made an area survey July 30, and that heavy dust deposition was noted then on the residences and the Lazy Acres Motel which required excessive cleaning. Mr. Hatchard conferred with Mr. Somers, co-owner, of the hot-mix plant to learn what corrections had been tried. The changes made had reduced the dust discharge some but the nuisance conditions were still present, Mr. Hatchard reported, and that he had also discussed with Mr. Somers additional corrections that could be made and had recommended that Mr. Somers contact the Service Engineer of the Madson Equipment Company, who built the equipment, for detailed advice.

Mr. O.H. Bengston, representing E. R. Drake, et al, presented to the Authority five letters of complaint from property owners in the vicinity and stated that the complainants appreciated the Authority's efforts to reduce the dust and oil discharges since considerable damage has been done to business. Mr. Bengston stated that Mr. E.R. Drake, owner of the Lazy Acres Motel, had suffered financial loss and has been caused a great amount of additional cleaning work. Other property owners stated that they have suffered from nasal and throat irritations, that vegetation has been damaged in the gardens and their properties covered with oily dust.

Dr. Erickson asked how the location of the paving plants are determined and the Chairman replied that the State Highway Commission probably designates certain areas where rock is available and that the contractors then select a location in the area and enter their bid.

The Chairman asked Attorney Enright what action the Authority could take under the statute and Mr. Enright replied that the formal procedure outlined in the statute required a public hearing in order for the Authority to adopt an order

ABI228

and then if satisfactory corrections were not made to file a motion for a temporary injunction in the Circuit Court but this procedure required time. Attorney Enright explained that the statute also provided for summary abatement which did not require a public hearing.

Mr. Hatchard stated that it may actually be a much longer time than just ten successive days before the paving plant is finished since the paving might require almost a month to complete.

Dr. Erickson stated that the Authority should take immediate action even though there may not be sufficient time to make such action effective.

MOTION RE: GOLD HILL HOT-MIX ASPHALT PLANT

It was MOVED by Mr. Wendel and seconded by Dr. Erickson and carried that it is hereby resolved; in the matter of air pollution from the hot-mix paving plant located near Gold Hill:

1. That the discharge into the air of solids, liquids and gases from the operation of hot-mix asphalt plants, so as to cause such injury to human, plant or animal life or to property as constitutes a public nuisance should be immediately discontinued.
2. That the conditions associated with the operation of the hot-mix asphalt plant are such as to require immediate action to protect the public health and welfare and it is directed that action be taken for the immediate abatement of the nuisance.
3. That the Attorney General of the State of Oregon be instructed to take appropriate action in order to secure immediate abatement of the nuisance.
4. That the Secretary of this Authority be and is hereby directed to serve a certified true copy of this Resolution together with Findings of Fact

pertaining to said matter upon Central Heating Company, F. L. Somers, The Oregon Highway Commission, and Irving Allen, attorney for the complainants.

OREGON HIGHWAY COMMISSION:

The Chairman suggested that the matter of paving plant emissions should be taken up with the Highway Commission in order to develop a policy that would prevent air pollution problems from paving plant operations.

Dr. Erickson and Mr. Wendel agreed that the Secretary should write a letter to the Highway Commission.

TROUTDALE RE: PLANT VISIT INVITATION, August 14.

The Secretary advised the Authority that we have made some studies at the plant and have collected air samples from the area, and that an invitation from the Reynolds Metal Company had been received for the Authority and staff to tour the plant on August 14, in detail in order to observe the work on the agriculture test plots and to discuss the problem. The Secretary stated that the conference with the Oregon State College has not been held due to difficulty in arranging an agreeable date with Dean Price.

Mr. Wendel asked whether the complaints have continued and whether the area study was being expedited. Mr. Hatchard stated that no direct complaints have been received since May 20, 1953 Authority meeting and the staff was spending considerable time collecting data.

Dr. Erickson stated that it is very important to gather data but inasmuch as Oregon State College and others have spent years in gathering data and making experiments it seems more important to coordinate the work with them to find out what additional studies should be made.

ABI228

DATE OF NEXT MEETING:

The Secretary explained that the Governor will be making an appointment to fill the present vacancy and that the next meeting could be arranged afterwards.

ADJOURNMENT:

There being no further business, the meeting adjourned at 10:00 A. M.

Respectfully submitted,

CURTISS M. EVERTS, Jr., Secretary  
Oregon State Air Pollution Authority

## NINTH MEETING

OF THE

## OREGON AIR POLLUTION AUTHORITY

October 9, 1953

The ninth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:15 P. M., Friday, October 9, 1953, in Room 36, State Office Building, 1400 S. W. 5th Ave., Portland, Oregon. Those present were Carl E. Green, Chairman, Mr. R. P. Dixon, Dr. Harold M. Erickson, Harold F. Wendel and Merle S. West, members, and Curtiss M. Everts, Jr., Secretary, Thomas Enright, Legal Advisor, R. E. Hatchard, Chief of the Air Pollution Control Section, W. J. Whitsell, Associate Engineer and Frank Terraglio, Chemist.

MOTION RE: MINUTES OF PREVIOUS MEETING.

The minutes of the eighth meeting of the Authority held on May 20, 1953, and the minutes of the special meeting of the Authority held August 11, 1953 having been prepared and distributed to the members in advance, it was MOVED by Mr. Wendel and seconded by Mr. West and carried that the minutes of these meetings

be approved as prepared by the Secretary.

ELECTION OF OFFICERS.

The Chairman then announced that in view of the resignation of Mr. Oren L. King a vacancy existed in the office of vice-chairman of the Air Pollution Authority. It was MOVED by Mr. Wendel and seconded by Mr. West and carried that Mr. R.P. Dixon be elected Vice Chairman of the Air Pollution Authority.

CONFIRMATION OF APPOINTMENT OF LEGAL COUNSEL.

It was MOVED by Mr. West and seconded by Mr. Wendel and carried that the appointment of Mr. Thomas Enright as legal advisor for the Air Pollution Authority be confirmed and that the Secretary so advise the Attorney General.

GOLD HILL, RE: COMPLAINT OF DUST AND OIL VAPOR DISCHARGE FROM PAVING PLANT.

At the request of the Chairman Mr. Enright summarized the legal actions which were undertaken to stop excessive dust and oil vapor discharge from the paving plant located at Gold Hill which was operated as a joint venture of the Central Heating Company, Eugene, and the F. L. Somers Company, Klamath Falls. Mr. Enright stated that a preliminary injunction was served but was set aside when the Circuit Judge granted a Writ of Review. He also reported that due to a completion of its contract the operation of the paving plant was discontinued before the appointed hearing date.

Mr. Wendel asked if the Authority's action taken in the Gold Hill complaint would have any effect should the paving operation plant resume operation in another location.

Mr. Enright stated that the operation of this paving plant in another location would be a separate matter and must be treated as such.

NORTH BEND. RE: STATUS OF CINDER AND FLYASH PROBLEM.

Mayor I. N. Hartley, North Bend, advised that he was present at the Authority

ABI228

meeting to secure information regarding the Authority's progress on the cinder and flyash problem in North Bend. Mayor Hartley described the continuing nuisance conditions from the cinders and soot which has been present during the past 2-1/2 years and stated that property values have declined and that residents will be moving away from North Bend if conditions do not improve. Mayor Hartley asked if the Authority expected North Bend to handle the local situation or if the Authority planned to handle it alone. In either case, the City of North Bend would do everything to cooperate but the city could not solve the problem without assistance.

The Chairman informed Mayor Hartley that the State Air Pollution Authority has certain responsibilities which they propose to perform; but that the Authority believed that cities, particularly the larger ones having complex and numerous air pollution control problems also have some responsibility of their own and the cities could assist greatly by reviewing plans and issuing permits for the installation of proper combustion equipment and the necessary air pollution control facilities.

The Chairman explained that the Authority must gather basic information and facts and cooperate with cities. Mr. Hatchard was asked to review the status of the problem.

Mr. Hatchard advised the Authority that an interim report on North Bend's cinder and flyash problem had been prepared by the staff and he then summarized the activities on the North Bend cinder problem. Mr. Hatchard stated that the study in North Bend began in November 1952. In April 1953 a volunteer committee circulated petitions and secured 1125 signatures of citizens asking for immediate abatement. The Authority's staff contacted the industrial plants to secure information. In April the Authority requested each of the four industries to have a stack emission study made in order to find out how much material was

being discharged. Mr. Hatchard stated that the Authority had requested that the reports be submitted by August 1, 1953, but the only report received thus far was from the Weyerhaeuser Timber Company. The Mountain States Power Company report has not yet been received and the Authority has been advised that the Irwin-Lyons Lumber Company emission study was scheduled for the week of October 19, 1953. He reported that the Menasha Plywood Corporation had asked if it was necessary that a study be made of their particular plant since they had planned to modify boiler equipment and install appropriate cinder collection equipment. The company had also advised the Authority that estimates from contractors and engineering firms were received but as yet no decision has been made when the cinder collectors or other modifications will be provided.

Mr. Hatchard pointed out that the summary of each of the fallout stations in North Bend showed wide variations during various seasons of the year and displayed a Wind Rose chart prepared from the U. S. Weather Bureau records together with the correlation of the wind record and the particle fallout found in North Bend.

Mr. Green asked what had been accomplished from a tangible point of view to reduce air pollution in North Bend.

Mr. Hatchard replied that operational controls had been tried at plants to reduce smoke and cinder discharges but that the area studies had not shown any significant improvement from these efforts.

Chief Engineer C. R. Leever of Mt. States Power Company then submitted to the Authority the cinder emission report for their North Bend steam plant. Mr. Leever stated that his company did not believe that they were big offenders; that they are discharging a minor portion of the cinders in the area and believe that the test report will bear this point out. He stated if there is anything further his company can do to alleviate this situation they would be happy to consider it.

ABI228

The Chairman directed the Authority's staff to review the report and furnish the Authority with comments and recommendations at the next meeting.

Mr. Whitsell stated that Mrs. Robert Pittam had telephoned from North Bend to report that the cinder fall on the morning of October 9, was extremely heavy and that it appeared worse than any previous time.

Mayor Hartley said that the streets are literally covered with oily soot but that previous to about 2-1/2 years ago there were just cinders and sawdust, but now there also is a heavy black soot.

Mr. Green asked if this condition coincided with the beginning of operations of a new industry and Mayor Hartley replied that it did.

Mr. Wendel wanted to know if we had to wait for the Menasha Plywood report before we could go any further since he said it seemed to him that we could proceed on the information at hand.

Mr. Green asked if the technical staff had sufficient data to determine the source of the trouble.

Mr. Hatchard said that the staff would like to have an opportunity to study the cinder discharge reports of the Mt. States Power Company and Irwin-Lyons Lumber Company.

Mr. West asked if we had any complaints from Coos Bay, and Mr. Hatchard replied that no direct complaints had been received from Coos Bay residents.

Mr. Green asked if there were any further data that the staff needed to secure from the particular plants and Mr. Hatchard stated he did not believe plant information other than the cinder emission reports would be needed.

Mr. Everts stated there are four industrial plants in North Bend burning wood-waste and if all four are causing the trouble then the Authority's action should be directed to all four. However, if the staff's study shows there are one or two plants creating the problem then the Authority's action should be directed to the particular plants. Mr. Everts advised that the staff's studies should indicate the source of the excessive cinder discharge.

Mr. Green wanted to know how long would it take the staff to proceed after reports are obtained from the industrial plants concerned.

Mr. Hatchard replied that it would depend on how many other communities in the state demanded attention at the same time. However, he believed it would not take a great deal of time to study the reports and correlate the data with the area study.

Mr. Everts read to the members a letter from Menasha Plywood Corporation dated October 7, and signed by Mr. Mowry Smith. Mr. Green asked if any communication had been received from Weyerhaeuser Lumber Company and Mr. Hatchard replied that we had received additional data requested after reviewing the cinder discharge report but nothing else. Mr. Green asked what the conclusions were in the report and Mr. Hatchard said the conclusion stated in the report that as long as the steam plant operation was maintained under 60,000 pounds of steam per hour they met with the American Society of Mechanical Engineers dust loading code requirements.

Mr. Wendel then wanted to know how soon the staff could make recommendations to the Authority regarding the North Bend problem.

Mr. Hatchard advised that recommendations could be made shortly after the Irwin-Lyons cinder discharge report was received.

Mr. Wendel asked Mr. Enright what course of action should be pursued after the staff had the necessary data.

ABI228

Attorney Enright informed the Authority that as far as the procedure goes it would be proper to inform the management of each plant of the causes of complaint and notify them what corrections are expected. At the same time a hearing should be scheduled twenty days after the date of the notice thus giving the parties an opportunity to appear and present their case. Attorney Enright also stated that after presentation of evidence and statements the Authority could then adopt an order directing responsible parties to comply with the state law. Upon failure to do so, the Authority could then proceed to secure court action to enforce compliance.

MOTION RE: NORTH BEND

It was MOVED by Mr. Wendel and seconded by Mr. Dixon and carried that after the cinder emission reports are received and reviewed that the Secretary be directed to communicate with the management of plants that are discharging excessive material and request that they take necessary action to reduce emissions to tolerable levels and report their progress to the Authority at its next meeting.

SAUVIES ISLAND COMPLAINT RE: FLUORIDE EFFECTING CATTLE.

Mr. Earl Reeder of Rt. 1, Box 124, Portland, Oregon, appeared before the Authority to describe the condition of his dairy cattle he alleged are affected by fluorides from the Aluminum Corporation of America Plant at Vancouver, Washington. Mr. Reeder stated that the operation of a dairy on his land had been carried on since 1853; that they never had experienced any trouble until the aluminum plant began operations. He then started losing cattle. Their teeth were affected, the legs of the animals became swollen and finally developed into split hoofs. He called in veterinarians and they didn't know what the trouble was but one said it might be due to fluorine. Mr. Reeder stated that he conferred with representatives of the aluminum company and they said it was hoof rot although five other veterinarians said it was not hoof rot. In one winter, Mr. Reeder stated, four-

teen heifers died and that he finally made a half settlement with Alcoa.

Mr. Reeder reported that when Alcoa officials said that fluoride controls were operating at the Vancouver plant and there was no reason why a herd could not be raised he bought a herd of cattle but didn't have them on the farm over six months before they began to show signs of upset and now they are all "going to pieces." Mr. Reeder stated that he now is treating the cattle for split hoofs and claimed that his cows are getting fluorine out of the clover pasture which once was good for the cattle. He stated further that Alcoa claims there is no fluorine and that Washington State College and Oregon State College have been employed by Alcoa to make tests and that no fluorine has been found. Mr. Reeder said he has gone to the County, City and State but so far has received no help. Mr. Reeder stated that he took a cow to Oregon State College to be checked for fluoride poisoning and seven years later got a report that the cow had 1300 ppm of fluorine and he stated that the Bureau of Animal Industries is the only agency that has ever given any help. Mr. Reeder requested the Authority to do something about this matter.

Mr. Wendel told Mr. Reeder that he was of the opinion that the State of Washington has no statutes in that state on air pollution control and that the only recourse then would be civil action and then asked if there is anything the Oregon Air Pollution Authority could do in taking the matter up with the Authorities in the State of Washington.

Mr. Dixon asked Mr. Enright regarding the legal aspects of the case. Attorney Enright stated that he had not studied the law on such matters but thought such a case would have to go to the Federal Court because it involved a matter between states. Mr. Enright promised the Authority he would investigate the law and advise later.

Mr. William M. Fraser, Rt. 1, Box 118, Portland, Oregon, stated that he had lost

ABI228

additional cattle since he appeared before the Authority during the May 20, meeting, and that forty-six head of cattle have died since the first of the year. Mr. Dixon asked if Mr. Fraser had legal proceedings underway. Mr. Fraser stated he did.

The Chairman asked Mr. Reeder to submit to the Authority a letter briefly covering the situation described.

MOTION RE: SAUVIES ISLAND

It was MOVED by Mr. Wendel and seconded by Mr. Dixon that we submit our findings and write a strong letter to the Governor of the State of Washington protesting the fluoride discharge from the Aluminum Company of America. The Authority discussed the motion and considered other procedures.

Mr. Enright offered to investigate the legal aspects of the matter and submit recommendations to the Secretary who in turn would ask for an opinion of the State Attorney General regarding the proposed action.

Mr. Green asked Mr. Enright to proceed on this basis and report to the Secretary.

TROUTDALE RE: FLUORIDE EFFECTS.

The Secretary reported that the staff has collected a series of random samples in the Troutdale area; that in order to make use of this data it appeared necessary to correlate the findings with the studies that Oregon State College experiment station has been conducting since 1948. Mr. Everts explained that he and Mr. Whitsell had conferred with Dean Price and Dr. Compton to discuss the Troutdale fluoride problem and that as a result of this meeting it was decided that a future meeting should be arranged so that representatives of the Oregon State College experiment station, agricultural property owners in Troutdale and the Authority

staff could develop future plans for collecting data. Mr. Everts advised the Authority that this meeting had recently been held; that Dr. Compton and Mr. Henderson of the Oregon State College experiment station and Dr. N.B. MacKay from Troutdale and members of the Authority staff were present. At this meeting Dr. MacKay brought out the fact that the residents of Troutdale-Corbett eventually desire the Authority to adopt standards to limit the discharges from industrial plants and that continuous air sampling be carried on to collect necessary data. At this meeting it was decided that the Authority staff would select certain sampling stations in the Troutdale area; that in the near future would discuss these stations with Dr. Compton to determine which locations would produce a maximum amount of fluoride air concentration reports which Dr. Compton and his associates could correlate with their test plot experiments.

Mr. Green asked if dairy and livestock operations are carried on in the Troutdale area. Mr. Everts replied that there was a dairy west of the plant and that livestock are raised south and east of the aluminum plant. Mr. Everts advised that the studies of the fluoride effects on livestock or dairy cattle were being carried on by the Washington State College Institute of Technology. Mr. Green asked if there was a study underway to secure data from the Reynolds Aluminum Plant in Troutdale.

Mr. Everts advised that additional technical help was needed if this problem and other pressing matters were to be investigated. He added that the staff would get as much data as possible with available staff. The Secretary advised that the budget would permit the addition of one engineer.

MOTION RE: ADDITIONAL ENGINEER

It was MOVED by Mr. Wendel, seconded by Mr. Dixon and carried that the Air Pollution Authority employ an additional engineer.

ABI228

Mr. Robert Strebin, land owner, Troutdale, Oregon, appeared before the Authority and stated that his property is south of the Reynolds aluminum plant and that his crops and cattle are being damaged. Mr. Strebin further stated that his cattle and horses and thoroughbred stock are now useless due to the fluoride poison; that only last Sunday one of his prize colts had to be killed. Mr. Strebin advised that he has arranged to have parts of the kidney and liver tested. Mr. Strebin advised the Authority that Mr. Mead, who is an attorney for Mr. Paul Martin, a livestock operator in Troutdale, has a complete transcript available covering Mr. Martin's civil suit against Reynolds Metals Company. Mr. Strebin reiterated that in this transcript Reynolds Metal Company admits discharging 750 pounds of fluorine daily and that unless something is done about this condition Mr. Strebin feels that farmers will be put out of business.

Mr. Wendel asked if the Authority believed it was necessary to collect additional data in view of the fact that the aluminum company admits the discharge of this quantity of fluoride. Mr. Wendel suggested that possibly Mr. Enright could review the evidence that is now a matter of record to determine whether some action could be based on these facts.

The Chairman stated that such evidence should be submitted to the Authority for consideration.

Mr. Wendel asked Mr. Strebin if he had an attorney working on his case and if a suit had been filed. Mr. Strebin stated that his attorney has a suit prepared and expects to file an action within the next week.

MOTION RE: TROUTDALE FLUORIDE EFFECTS.

It was MOVED by Mr. Wendel and seconded by Mr. West and carried that we request our staff and attorney to determine what evidence is available, to what extent the Authority may act upon the evidence, and that the Authority schedule its

next meeting tentatively five weeks from today.

In the discussion of the motion Mr. Everts stated that the complainants should formally present their evidence against the industries involved at a future meeting of the Authority and that the Aluminum Company of America, Reynolds Metal Company, Oregon State College, Washington State College and any others concerned should have an opportunity to present information and data on the matter of fluoride in the Troutdale and Sauvie Island areas.

PORTLAND COMPLAINT RE: DUST AND OIL VAPOR FROM THREE HOT-MIX ASPHALT PAVING PLANTS.

The Secretary read a petition dated 8-5-53 signed by 75 complainants requesting the Authority to take abatement action against three hot-mix asphalt plants located near N. E. Columbia Boulevard and Cully Road.

Mr. Green asked if any investigation had been conducted to gain factual information.

Mr. Hatchard advised the Authority that the owners of the paving plants were notified immediately after the complaints were received and an area survey was made. Mr. Hatchard stated that nuisance conditions exist similar to other paving plants that the Authority had considered. The three paving plants involved are permanent units which have been operated for a considerable time.

Mr. L. M. Rhodes of 5737 N. E. 72nd St., appeared before the Authority and stated that up until two years ago there was no asphalt processed in the area; that gravel was being removed but it was not a nuisance then.

Mrs. J. F. Wilson of 5709 N. E. 72nd St., stated that the dust and smoke is terrible and can be seen on the residences and gardens in the area and one can't put out washing and expect it to stay clean.

ABI228

Mrs. L. M. Rhodes stated that her husband has been under the care of a doctor the past three months with a cardiac condition and while the operation of the asphalt plants did not bring this cardiac condition on, it now makes it almost impossible for her husband to breathe and that she wished to also bring out the health problem in this locality.

Mr. Green asked what was needed in the way of data to advise the plants to make corrections.

Mr. Hatchard said that air sampling is not needed since the area affects are so evident that the owners should be requested to install adequate dust and oil control equipment.

Mr. Wendel asked if it was not proper to notify the owners to cease their air pollution activities.

Attorney Enright advised that the letter requesting corrections be sent at least twenty days before the next meeting so that a hearing could be set if corrections were not being arranged and that the Authority could then designate part of the meeting as a hearing, prepare Findings of Fact, and adopt an Order.

MOTION RE: ASPHALT PLANTS.

It was MOVED by Dr. Erickson and seconded by Mr. Wendel and carried that we follow the advice of our attorney and if after due notice the owners of the paving plants do not comply that a public hearing be arranged at the next meeting.

TIGARD COMPLAINT RE: DUST AND OIL VAPOR FROM HOT-MIX PAVING PLANT.

The Secretary read a complaint petition dated September 10, containing 14 signatures requesting the Authority to abate the nuisance created by the

operation of a hot-mix asphalt plant in the vicinity of Tigard.

Mr. Hatchard advised the Authority that several field visits were made; that the plant owners were notified; that control equipment would be required and that the owners stated that they intended to install appropriate dust control facilities. Mr. Hatchard also reported that the plant had ceased operations at the Tigard location on October 6,

Mr. A. L. Jaquess of 6550 S. W. McEwan Road, Oswego, stated that in regard to the Pacific Asphalt Paving Company plant there were no operations going on today. However, he stated that he served as a Commissioner of the Forest Park Zoning District and it was their desire that any future plants located near their area be equipped with dust and asphalt control equipment.

Mr. Green directed the Secretary to advise the State Highway Commission of this problem and request their cooperation in road contracts and specifications in a manner which would prevent air pollution from such plants. Contacts with county and city officials were also recommended.

Mr. Dixon advised that all of the paving plant owners bid on Highway Commission contracts and that arrangements with the Highway Commission would include all of the major paving plants operating in Oregon.

PORTLAND RE: COMPLAINT STATUS: NU-BORA SOAP COMPANY, N.W. 12th and Hoyt Streets.

Mr. Hatchard requested the Authority's policy regarding former Portland complaints such as the Nu-Bora Soap Company on which the staff started working in May 1952. He reported that some corrections have been made by the installation of a make-shift cloth filter but nuisance conditions still exist from the soap dust.

It was agreed that future complaints about conditions created by this plant should be referred to the city until some cooperative plan could be worked out with the city.

ABI228

RAGWEED PROBLEM.

Dr. Erickson advised that Oregon had not been previously troubled with Ragweed but the last two or three years it has started growing in several locations in the state and that he wanted the Authority to be aware of the problem for if ragweed control is not started the Authority will receive complaints in future years. Dr. Erickson advised that ragweed is now infesting Clackamas, Douglas, Josephine, Lincoln and Marion counties but it is fairly easily controlled by 2-4D applications. Dr. Erickson advised that the Legislature passed a control act but didn't appropriate funds and that the Emergency Board had not granted funds for eradication. Dr. Erickson suggested that the Authority send a letter to the Emergency Board requesting that funds be granted. It was agreed that Dr. Erickson and the Secretary would prepare an appropriate letter to be forwarded to the Emergency Board.

DATE OF NEXT MEETING

The next Air Pollution Authority meeting was tentatively set for November 13, 1953.

ADJOURNMENT:

There being no further business, the meeting adjourned at 5:10 P. M.

Respectfully submitted,

CURTISS M. EVERTS, Jr., Secretary  
Oregon State Air Pollution Authority

TENTH MEETING  
OF THE  
OREGON AIR POLLUTION AUTHORITY

December 16, 1953

The tenth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M. Wednesday, December 16, 1953, in Room 36, State Office Building, 1400 S. W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Mr. R. P. Dixon, Vice Chairman, Dr. Harold M. Erickson, Merle S. West, Members, and Curtiss M. Everts, Jr., Secretary, Thomas Enright, Legal Advisor, R. E. Hatchard, Chief of the Air Pollution Control Section, W. J. Whitsell, Associate Engineer and Frank Terraglio, Chemist.

MOTION RE: MINUTES OF PREVIOUS MEETING

The Secretary read the minutes of the ninth meeting of the Authority which was held in Portland on October 9, 1953.

The Chairman then declared that if there were no corrections or additions the minutes would stand approved as read.

SAUVIE ISLAND AND TROUTDALE FLUORIDE COMPLAINTS

The Chairman then announced that at previous meetings of the Authority that complaints had been made alleging that fluoride damage had occurred to livestock on Sauvie Island. He stated that in order to obtain information on all aspects that all parties had been invited to the meeting. He then called on Mr. Hatchard to summarize the situation on Sauvie Island. Mr. Hatchard summarized the memorandum report dated December 4, 1953 in which it was stated that (1) In November 1947 the Oregon State Emergency Board appropriated \$40,000 for use by the Oregon State College to initiate investigations of the industrial fume damage reported to affect crops and livestock in Multnomah and Columbia counties. (2) This study was undertaken early in 1948 by the Oregon State College Agricultural Experiment

ABI228

Station Staff. (3) An additional \$60,000 to continue the study was appropriated by the 1949 Legislature. (4) This investigation undertook to determine the following facts:

a. The presence, concentration and distribution of fluorine complaints in the vicinity of the aluminum reduction plants.

b. The amounts of fluorine absorbed by certain agricultural crops at varying distances and directions from aluminum reduction plants.

c. The affects of fluorine upon agricultural crops grown in the field under controlled experimental conditions.

d. The occurrence and distribution of fluorosis in livestock.

(5) The conclusion reached from these investigations was: (a) that fluorosis existed in cattle in the area prior to the installation of the fluorine collection system by the Aluminum Company of America (Alcoa) at its Vancouver, Washington, works in 1949. The exact extent of the damage and the geographical boundaries, however, were not determined.

Mr. Hatchard reported further that: (1) In 1950 Alcoa made available \$49,000 to Oregon State College and \$22,000 to Washington State College for investigations on Sauvie Island to determine whether fluorides discharged from the Vancouver aluminum plant subsequent to December 1, 1949 were impairing the health of livestock in that area. (2) In these investigations Oregon State College studied the pasture, herbage, hay and the nutritional status of the livestock, and Washington State College investigated the physical conditions of the livestock in the veterinary medicine area. (3) Six progress reports have been prepared by Oregon State College and Washington State College staff. A final progress report should be completed and available to the Authority about January 1, 1954. Conclusions based on the entire study are now being prepared and will be available for consideration by the Authority in the near future.

In 1952 a preliminary investigation was made by the University of Oregon Dental School in cooperation with the State Board of Health to determine if fluorides on Sauvie Island had affected the teeth of the Sauvie Island children. It has been established that the first detectable effect of an excessive fluorine intake would be the mottling of the enamel of the teeth of the children living in the area. Visual examination of the teeth of Sauvie Island resident children revealed no mottling of the teeth.

ABI 228

Mr. Hatchard also reported that the staff had reviewed the Oregon State College Experiment Station reports on the fluorine investigations on Sauvie Island, technical reports from other sources pertaining to fluorosis in cattle and had conferred with the Oregon State College Experiment Station Staff regarding their present fluorine investigations. Three air sampling stations have been established by the Air Pollution Authority personnel on Sauvie Island properties of the Oregon Game Commission. The fluoride air concentration of random samples range between 0 to 2.0 parts per billion, an amount not considered detrimental to humans or animals.

The Secretary advised the Authority that a letter dated December 8, 1953 had been received from Mr. Earl Reeder regarding the effects on his cattle which he attributed to fluorosis.

Mr. C. S. Thayer, Mgr., Northwest Operations, Aluminum Company of America, Vancouver, Washington, advised the Authority that he believed the report just read covered the matter very adequately, and that he was certain the Authority would be interested in the conclusions reached by Oregon State College and Washington State College after the study of the dairy and livestock operations on Sauvie Island. Mr. Thayer stated that the conclusions would be available within a few weeks but that the report would not include either Mr. Fraser's or Mr. Reeder's property since they were not willing to grant representatives of

the two colleges permission for access to their properties in order to have studies made. He stated further that it was the practice of the State Colleges to make the progress reports at joint meetings of representatives of the farmers on the island and representatives of Alcoa and that six such reports have been made and that the whole study by the State colleges has been a cooperative effort on the part of the farmers and Alcoa to find the true answer to the fluoride situation on the island. Mr. Thayer said that his company has every confidence that these test results will produce findings that are accurate and true.

Mr. Thayer informed the Authority that prior to the work done by the State colleges The Aluminum Company of America had engaged Stanford Research Institute to make studies on the Fraser farm in connection with a damage suit which was heard in the U.S. District Court at Tacoma, Washington, in 1950. He reported that the Stanford Research staff spent about a year studying the situation and that a copy of the complete report would be available to the Authority if they wish it. Mr. Thayer recalled that this report showed evidence of some poor management but that no fluoride poisoning was found.

The Chairman then requested that a copy of the Stanford Research Institute studies on Sauvie Island be furnished to the Authority for review.

Mr. Robert M. Johnson, Rt. 4, Box 127, Portland, Oregon, appeared in behalf of his father and he stated they had been led to believe that after fluoride controls had been installed by the Aluminum Company at Vancouver, Washington, in 1949 there would not be any more fluorine gas emitted. He reported that it seemed that there had been less fluorine but that in the fall of 1953 the prevailing winds seemed to carry something to the Lilac and Snowball trees that burned the foliage. He also advised the Authority that they have 40 cows and claimed that four are suffering from abnormal hoof conditions which seem to be similar to

the symptoms of fluoride. Mr. Johnson stated that during the past year, 10 or 11 head of cows have become lame and that it definitely was not hoof rot. Mr. Johnson stated that fluorine is definitely present regardless of what any report of Oregon State College or Washington State College may show.

The Chairman requested Mr. Johnson to send a letter to the Authority describing the conditions and outlining his complaint. Mr. Johnson promised he would prepare the letter.

The Chairman then asked the members if further consideration of the matter should be deferred until the conclusions reached by Oregon State College and Washington State College were available. It was agreed by the members present that further consideration should be deferred until reports from Oregon State College and Washington State College were available for study.

#### TROUTDALE

The Chairman then called on the Secretary to summarize the data in connection with complaints from the Troutdale area.

The Secretary summarized a memorandum to the Air Pollution Authority members dated December 11, 1953, in which it was stated that the Oregon State College Agricultural Experiment Station studied the fluoride effects in the Troutdale area beginning in 1948 and continuing to the present. The conclusions drawn from those investigations were as follows:

1. Fluorosis was found in dairy cattle. However, the area involved was rather limited.
2. General fluorine contamination in certain areas adjacent to the aluminum reduction plant was found. The most severe injury occurred in plants southeast of the Troutdale aluminum plant.
3. Grasses from three pastures situated three miles west and southeast of the Troutdale plant contained excessive amounts of fluorine compared to grasses

ABI228

on land located a similar distance directly south of the plant.

He also reported that the Oregon State College Agricultural Experiment Station has continued the fluorine investigations through the 1953 growing season and that: (1) Investigations conducted from 1951 to 1953 show the leaf injury to gladioli considerably reduced over that prevailing from 1948 to 1950. (2) The grass samples from the pastures indicated that the concentration of fluoride is below the level which would affect livestock except in the pasture land located about one half mile west of the aluminum plant. (3) The Agricultural Experiment Station's staff considers fluoride concentration in excess of 30 parts per million in forage crops to be above the tolerance level for dairy livestock.

The Secretary stated that the Authority's staff had collected random twenty-four hour fluoride air samples from four stations in the Troutdale area as follows:

<u>LOCATION</u>	<u>FLUORIDE CONCENTRATION, AIR</u>
Roof of the U.S. Cirps of Engineers Testing Laboratory 1/4 mile S.E. of the aluminum plant.	Twelve samples collected from June 25, to July 24, 1953. Median fluoride concentration 3.9 parts per billion.
OSC test Plot No. 9 2-1/2 miles S.E. of the aluminum plant	Oct. 27, 1953 0.3 parts per billion Oct. 28, 1953 1.8 " " "
OSC test Plot No. 11 4 miles S.E. of aluminum plant	Oct. 26, 1953 1.3 parts per billion Oct. 27, 1953 1.8 " " " Oct. 28, 1953 1.9 " " "
OSC test Plot No. 17 4 miles south-SE of aluminum plant	Oct. 26, 1953 0.4 parts per billion Oct. 27, 1953 0.3 " " " Oct. 28, 1953 3.2 " " "

Mr. F. A. Yerke, Attorney representing Reynolds Metals Company, stated that the aluminum reduction plant has been operating approximately twelve years; that it was constructed originally by Alcoa in 1941 and 1942 and that the pot lines started operating in 1942 and continued until 1945. During this time no fume control was provided in the plant. In the summer of 1946, Mr. Yerke continued, the Reynolds Metals Company secured the plant from the Federal Government and

began operating in 1946. Before resuming the plant operation Mr. Yerke advised the Authority that the Reynolds Metals Company installed a dust collection system including water spray units on the roof of each of the pot line buildings in order to remove as much of the escaping fluorides as possible. This collection system was about 60 to 62% effective and in 1949 and 1950 further efforts were made to increase the efficiency of the fluoride removal system. Plant studies made since 1950 show fluoride reductions of 90 to 92%.

Mr. Yerke stated that at the October 9, 1953 meeting of the Authority Mr. R. S. Strebin advised the Authority that the fluoride discharge from the plant was about 750 pounds per day and while this figure agreed with the plant measurements Mr. Yerke brought out the fact that the size and type of plant operation should also be considered together with the fluoride concentrations found in the area. Mr. Yerke informed the Authority that the aluminum plant operates twenty-four hours a day and on this basis only about 30 pounds per hour of fluoride are being emitted.

Mr. Harold Zeh, Chief Chemist, Reynolds Metals Company, advised the Authority that the test runs of the atmospheric fluoride concentration made during the summer of 1953 showed two parts per billion at a distance of two and a half miles from the plant. Mr. Zeh referred to a report, "The Nature of Atmospheric Pollution in a Number of Industrial Areas" by Jacob Cholak, Kettering Laboratory, University of Cincinnati, Ohio, in which it is stated that the fluoride concentrations in the atmosphere of the following cities were found.

Baltimore Industrial area	1950	18 parts per billion.
Baltimore Residential area		8 parts per billion.
Cleveland Industrial area	1949-50	14 parts per billion.
Donora	1948-49	8 parts per billion.
Donora	1949	6 parts per billion.
Los Angeles	1948	8 parts per billion.

ABI228

Cincinnati	1946-51	5 parts per billion.
All areas		4.7 parts per billion.
Rural area		6 parts per billion.
Residential area		5 parts per billion.
Industrial and commercial areas		3 parts per billion.
Charleston	1950-51	

Mr. Yerke stated that the fluoride concentration information must be correlated with the fluoride levels that cause damage to agriculture and livestock. He stated that since 1946 the Reynolds Metals Company had operated a number of pasture grass sampling stations in Washington and Oregon from which monthly samples were collected and analyzed. About 8,000 samples have been collected each year and the total now represents 55,000 samples.

He stated that Dr. O. C. Compton, Oregon State College Plant Horticulturist, advised them that a fluoride concentration in the pasture grass less than 10 parts per million is normal. Mr. Yerke stated that the grass on Mr. Strebin's land located three miles south-southwest of the plant had not been sampled but that the Reynold's sampling station No. 2A was located one half mile from Mr. Strebin's property and that grass samples have been analyzed from this station for fluorides since 1949. He reported that pasture grass samples from Station 2A for the past year show the following fluoride concentrations.

Dec. 5, 1952	8.2 parts per million
Jan. 6, 1953	10 parts per million
Feb. 3, 1953	12 parts per million
Mar. 5, 1953	9.0 parts per million
Mar. 21, 1953	11 parts per million
May 1, 1953	8.4 parts per million
June 11, 1953	7.5 parts per million
June 25, 1953	10 parts per million
July 27, 1953	20 parts per million
Aug. 24, 1953	21 parts per million
Sep. 28, 1953	15 parts per million
Nov. 2, 1953	13 parts per million
Nov. 23, 1953	4.3 parts per million

Mr. Yerke stated that the Oregon State College Agricultural Experiment Station Staff had reported that in order to have any livestock damage from fluorine the fluorine content of pasture grass would have to be about 30 parts per million

ABI228

and that studies have been carried on in other parts of the country where dairy livestock were fed a high fluorine diet without loss in milk production. Mr. Yerke also stated that southeast of the plant the nearest livestock were located at a distance of two and a half miles and that urine samples from 30 to 40 animals in this area show fluoride concentrations averaging 3.5 parts per million, the highest with 5.1 parts per million. Mr. Yerke referred to a report, "A Critical Study of the Literature on Fluoride Toxicology with Respect to Cattle Damage" by H. J. Schmidt, D.V.M. and W. E. Rand, published in the American Journal of Veterinary Research, January 1952, in which it is stated that cattle grazing on uncontaminated pasture show a fluoride content of the urine of less than 5 parts per million and that if the cattle had fluorosis that quantity of fluorides found in the urine would be well in excess of 10 parts per million.

Mr. Yerke asserted that the Reynolds Metals Company believes that they have one of the best collection systems available to control the fluorine emissions; that the initial collection system cost over \$200,000, the improved installation \$2,150,000. Mr. Yerke stated that from 1946 to 1953 the company spent \$1,200,000 to operate the fume control system. Mr. Yerke concluded with the statement that based on their study of present conditions they do not believe there is basis for complaint; however the company believes the Authority should make further investigations.

Mr. C. A. Chapman, Rt. 2, Troutdale, Oregon, asked if Mr. Yerke's statements concerning the fluoride content found in the urine of cattle mentioned was from his herd. Mr. Zeh replied that the samples were not; however Mr. Chapman's herd had been sampled but he had not brought the report of these samples with him.

The Chairman asked Mr. Zeh if he would furnish this information to the Authority on Mr. Chapman's cattle. Mr. Zeh agreed to send this data to the Authority.

Mr. R. S. Strebin of Troutdale, Oregon, again appeared at the meeting and informed the Authority that the Reynolds Metals Company did not inspect the cattle or grasses on his property and the transcript of the trial of Paul Martin against the Reynolds Metals Company contained lots of evidence.

Mr. Strebin said he wished the Authority would get this transcript and study it.

The Chairman advised Mr. Strebin that the complainants who appeared at the last meeting were requested to furnish evidence and data for use of the Authority but that so far no data had been submitted. Mr. Strebin said he would request his attorney, Mr. Mead, to send the transcript of the Paul Martin trial to the Authority if it was available.

Mr. Thomas Enright, Legal Advisor, informed the Authority that it would be quite expensive for the Authority to secure a copy of the transcript and also that such transcripts are very limited in value since so much of the information applies to previous periods and that one has to consider the frame work in which the testimony was advanced. Mr. Enright stated he believed it was up to us to get our own information and not accept the testimony of other bodies and courts.

Mr. West suggested that the Authority continue the matter until all of the data is available to the Authority.

The Chairman and the members present agreed with this suggestion.

OSWEGO RE: CINDER AND CEMENT COMPLAINT AND FINDINGS.

Mr. Hatchard summarized the memorandum of December 15, 1953, pertaining to study of the Oswego complaint by the Authority's staff. He stated that: (1) In April 1952 the Oswego City Council had requested the Authority to make a study of the air pollution conditions in Oswego. The major complaint had been based upon the deposition of particulate material. (2) This study was not started, however, until July 1952 since no technical staff was available. (3) The results of a

preliminary investigation during the summer of 1952 showed that excessive particle fallout was occurring and that further study was needed. (4) Eight particle fallout stations were placed at representative locations in Oswego to determine the nature and quantity of the material settling out. These stations were operated for over a year and the following conclusions based on this study were made.

a. The fallout found in Oswego is excessive from the weight standpoint alone.

b. The laboratory analyses of the fallout samples showed that 70% of the material is of mineral nature which contains a high percentage of calcium oxide (lime) which shows that a substantial part of the fallout is cement dust that originates from the Oregon Portland Cement Company's plant in Oswego.

Mr. Eugene Crampton, Attorney for the City of Oswego, appeared stating that the City would appreciate an expression of the Authority's policy regarding the control of air pollution from sources within Oswego. Mr. Crampton said that the tentative policy of the council is one forced upon it by the continuing complaints from residents of the city. The Council feels that if the cement company has taken every measure reasonably expected and the fallout continues to exist in spite of every measure perhaps a re-examination of the Council's position may be desirable.

Mr. F. E. McCaslin, President, Oregon-Portland Cement Company, replied that the cement company has done everything possible to alleviate dust conditions. He stated that the plant has been operating in Oswego from 1916 to 1947 with a one kiln unit and that in 1947 a second kiln was installed. He reported that an electrostatic precipitator was installed in 1947 at a cost of \$200,000 and was about 90% efficient. He stated that other dust collectors have been installed in the crushing plant, grinding department and clinker storage building etc.,

ABI228

at a cost of \$75,000 and that these collectors eliminated a substantial portion of the dust which might otherwise be carried by the wind outside the plant area. Mr. McCaslin advised the Authority that the dust conditions are being studied by Western Precipitation Corporation of San Francisco but the reports of their study had not yet been received.

Mr. McCaslin requested the Authority to describe what was meant by "excessive" in the Authority's report on the Oswego dust survey dated December 15, 1953, in order for his company to meet all requirements. Referring to Table I of the report, the data shows a fallout of 39 tons of dust per square mile per month. Table II showed 8 tons per square mile per month of cement dust. Mr. McCaslin asked what action was proposed by the Authority for the other 31 tons which was falling in Oswego from other sources of pollution.

Mr. McCaslin stated that the Oregon Portland Cement Company wants to be a good neighbor and that their study of dust conditions would be continued.

Mr. Hatchard informed Mr. McCaslin that if a fallout is about 25 tons per square mile per month nuisance conditions begin to appear and that this figure applied to dusts in general. A fallout of considerably less than 25 tons per square mile per month of cement dust will cause nuisance conditions. Mr. Hatchard stated that the data shown in Table II of the report was a comparison of the calcium oxide (lime) found in the Oswego fallout samples compared with calcium oxide found in samples collected in other Oregon cities. The lime content of the samples was used as a tracer to indicate the dust origin since lime is a major material used in the manufacture of cement.

Mr. Hatchard pointed out that the data in Table II does not show the total portion of the fallout originating from the cement plant but instead reports

the quantity of calcium oxide.

The Chairman asked Mr. McCaslin if there was any other collection system that would remove additional amounts of dust. Mr. McCaslin replied that the Western Precipitation Company is studying the possibility of installing some equipment ahead of the electrostatic precipitator in order to improve the collection efficiencies.

Dr. Erickson suggested that the cement company get together with the City of Oswego and the Authority's staff to study the problem in order to determine practical corrections.

MOTION RE: OSWEGO RE: CINDER AND CEMENT COMPLAINT AND FINDINGS.

It was MOVED by Mr. Dixon and seconded by Dr. Erickson and carried that the Authority request the industry to obtain the additional information regarding the removal of dust from its plant discharges; to confer with the Authority's staff and to have a report before the Authority at its next meeting.

PORTLAND RE: NEED FOR MUNICIPAL ACTION ON AIR POLLUTION PROBLEMS.

Commissioner W. A. Bowes, City of Portland, appeared before the Authority and stated that the City is aware of the fact that the 1951 Legislature passed an Air Pollution Control Act and that at about the time the proposed Portland Air Pollution ordinance was being prepared for submission to the City Council in 1953 the city received a letter from the Authority advising Portland of its responsibility on air pollution matters. Commissioner Bowes said the most important matter to the city was to determine from the Authority just what policy would be followed regarding air pollution within cities and what standards would be adopted. He asked if the city would be expected to take care of its own problems.

ABI 228

The Chairman reminded Commissioner Bowes that the Authority had discussed this matter in considerable detail in 1953 and had adopted a policy that the larger cities of the state should be expected to carry on their own air pollution control programs with such assistance as the state Authority could provide. Mr. Green stated further that the Secretary expressed the position of the Authority in a letter dated September 24, 1953, addressed to the Mayor and City Council. Mr. Green explained that the Authority expected the City of Portland to carry on its proper share of the control work and that the Authority would cooperate with and assist the city in technical problems, gathering of basic data, etc.

Commissioner Bowes asked if the Authority was going to issue orders to cities similar to those issued by the Sanitary Authority in connection with sewage disposal.

The Chairman explained that in the matter of air pollution there are innumerable points of discharge within the cities from all kinds of combustion and industrial activities and that we have a multitude of sources to deal with and not just a single one. The problem is much more complex than that of water pollution control.

Commissioner Bowes stated that if it was going to be the policy of the Authority to look to the City of Portland to clean up its own air pollution then he believed there should be a well defined statement of policy showing the relationship of the city to the Authority.

Dr. Erickson added that the Authority had to adjust its activities to the budget available and that it became apparent early that the Authority's activities should be directed towards gathering data regarding existing conditions and

ABI228

establishing standards. He also stated that the Authority should assume jurisdiction in the areas outside of city boundaries where city government could not provide air pollution control. He pointed out that the Authority's program has been developed with the understanding that the city would control pollution within its boundaries and that the Authority would cooperate with cities, conduct surveys, establish standards and make every possible effort to reduce air pollution both inside and outside and the Authority also expects to cooperate with adjoining states and other agencies.

Mr. Bowes was advised that air pollution differed greatly from stream pollution because the cities in the state were one of the major sources of water pollution and that air pollution sources are largely from private operations and city officials should have an interest in their control.

Commissioner Bowes asked if the Authority would take action against the cities.

Dr. Erickson stated that if cities pollute the air the Authority certainly would have to consider taking action.

Commissioner Bowes stated that the State Air Pollution Authority was just passing this responsibility on to the city.

Dr. Erickson said in explanation to Commissioner Bowes that this Authority is a Division of the State Board of Health. The state law provides that County and City departments of health shall enforce health laws.

NORTH BEND RE: STATUS OF CINDER AND FLYASH PROBLEM.

The Secretary reported that a letter dated December 14, 1953 had been received from Mr. A. O. Karlen, Manager, Coos Bay Branch, Weyerhaeuser Timber Company, which advised the Authority that plans for the installation of a cinder collection

system had been prepared; bids for the equipment had been requested and they plan to proceed with the installation at the earliest practical date.

The Chairman advised the Weyerhaeuser representatives present that the Authority appreciated this progress and evidence of their voluntary cooperation to eliminate their portion of the air pollution in North Bend.

The Secretary also reported that a letter dated December 15, 1953 had been received from the Irwin-Lyons Company which advised the Authority that the company was securing proposals from the Western Precipitation Corporation and the Seattle Boiler Works to reduce the cinder emissions.

The Secretary then quoted from a letter dated December 14, 1953 received from the Menasha Corporation advising the Authority that the stack emission studies were now under way and would be completed during the week of December 14, 1953. The Secretary further stated that the Authority advised the Mountain States Power Company that the Authority was not ready to make any recommendations until further area studies were completed by the Authority's staff.

Mayor Hartley, North Bend, stated that he had no additional comments other than that he was certain the residents of North Bend would be extremely pleased to learn that the Weyerhaeuser Timber Company will be proceeding with the installation of cinder collection units.

STATE HIGHWAY COMMISSION RE: WATER AND AIR POLLUTION CONTROLS PROVIDED IN SPECIFICATIONS.

The Chairman advised Mr. W. C. Williams, Assistant State Highway Engineer that the Authority believed the dust control at asphalt paving plants could best be handled by the State Highway Commission by appropriate provisions in its specifications and contracts.

Mr. W. C. Williams stated that he was in accord with what had been proposed.

He stated that their present specifications and contracts required compliance with all laws. It was his opinion that many of the contractors were not aware of the air pollution law. Mr. Williams said the Highway Commission would cooperate but that it could not bar a paving contractor from bidding on a contract because his asphalt plant did not have certain specified dust collecting equipment appliances.

Mr. Dixon asked Mr. Williams if the State Highway Commission would close a plant until all dust control requirements were met if a situation similar to the Gold Hill problem of last summer should arise.

Mr. Williams stated if the Authority notified the Highway Commission that the law is being violated it would be the obligation of the Commission to stop the contractor until all requirements were complied with.

The Secretary stated that he thought if the Authority could maintain that type of relationship with the Highway Department that the Authority should assure the Highway Commission that any notice regarding a contractor violating the Air Pollution Control Act would be accompanied by supporting data.

The Secretary suggested that the Authority send to the Associated General Contractors or any other similar organization copies of the statute and other available information on procedures to follow in the removal of excessive dust discharges from the paving plants.

Mr. Williams said that such information would help considerably to bring attention to the dust problems.

Mr. Dixon asked how many contractors were qualified for bidding on Highway Commission paving projects. Mr. Williams replied that there were about twenty doing asphalt paving work but about a dozen do most of the work.

ABI228

Attorney Enright was instructed to contact Mr. C. W. Enfield, Chief Counsel for the Highway Commission, and discuss what information should accompany any future notice that a paving contractor was violating the Air Pollution Control Act in order for the Highway Commission to order a contractor to cease work until appropriate air pollution control equipment was provided and satisfactorily operated.

NYSSA RE: PRELIMINARY SURVEY OF FLYASH DEPOSITION

Mr. Hatchard summarized the memorandum report of December 15, 1953 regarding the flyash deposition in the City of Nyssa. Mr. Hatchard stated that the original complaint was received in March 1952 from Dr. C. M. Tyler, Chairman, Sanitation Committee, Nyssa Chamber of Commerce. (1) He reported that the preliminary investigation was made by District Engineer Patterson in the fall of 1952. (2) Two particle fallout stations have been operated in Nyssa for over one year. (3) The fallout shows no substantial difference during the seasons of the year. (4) The largest industry in Nyssa is the Amalgamated Sugar Company's sugar beet refinery which is operated from October to February each year. When this plant is operating about 340 tons of coal is burned each twenty-four hours. (5) The fallout is shown by twenty-four hour samples collected at five representative locations in Nyssa which show considerable flyash deposition in certain sections of Nyssa. (6) Visits have been made to the sugar refinery in order to determine what control measures have been provided and it was learned that from 1950 to 1951 \$100,000 had been expended in providing a cinder collection system for the two main boiler units. (7) The management of the sugar refinery believed that emissions from their plant have been greatly reduced and that the railroad activity is now probably a major source.

Mr. Hatchard stated that conferences with the City Manager of Nyssa disclosed that no complaints had been received by the city during the past two years and

the city believes that conditions were now greatly improved. Mr. Hatchard stated that Dr. Tyler has requested the Authority to take definite action to reduce the flyash deposition.

Mr. Hatchard requested the Authority to consider what activities the staff should take in the future since an intensive area survey would be required in Nyssa to apportion the sources of the remaining flyash.

The Chairman asked if it was possible for District Engineer Patterson to gather the data. Mr. Hatchard replied that it would be necessary for special equipment including the directional fallout unit and the wind direction recorder to be used and this would require the truck and one of the staff to work with the District Engineer in Nyssa.

The Chairman asked if there were any more improvements which could be provided at the sugar refinery to reduce the flyash problem.

Mr. Hatchard replied that the boiler serving the beet waste recovery operations was not provided with cinder collection equipment and it is probable that flyash from this source could be reduced.

The Secretary stated that obviously there may be sources of atmospheric pollution which could definitely be city-controlled such as the emissions from locomotives. Inasmuch as the Authority could not keep an engineer in Nyssa to check constantly this should be controlled by local authorities.

Mr. Green stated that since the railroad goes through the city of Nyssa and the plant is outside the city it would be feasible to at least discuss the matter with the Union Pacific representatives in Portland. Furthermore, he stated that we could not expect the City of Nyssa to do anything about the beet plant outside of the city limits. The Secretary was directed to write to the Union Pacific

ABI228

Railway Company regarding this problem.

The Chairman suggested that all possible information be secured from the District Engineer but that area studies now under way in other parts of the state should not be interrupted.

DATE OF THE NEXT MEETING.

To be scheduled when the Oregon State College and Washington State College conclusions are available on their Sanvie Island fluoride effects studies.

ADJOURNMENT

There being no further business, the meeting adjourned at 5:15 P. M.

Respectfully submitted,

CURTISS M. EVERTS, Jr., Secretary  
Oregon State Air Pollution Authority

ELEVENTH MEETING  
OF THE  
OREGON AIR POLLUTION AUTHORITY

July 14, 1954

ABI228

The eleventh meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M., Wednesday, July 14, 1954, in Room 36, State Office Building, 1400 S.W. 5th Ave., Portland, Oregon. Those present were Carl E. Green, Chairman, Mr. R. P. Dixon, Vice Chairman, Dr. Harold M. Erickson, Harold F. Wendel, Merle S. West, Members and Curtiss M. Everts, Jr., Secretary, Charles D. Burt, Legal Advisor, R. E. Hatchard, Chief of the Air Pollution Control Section, W. J. Whitsell, Associate Engineer and Frank P. Terraglio, Chemist.

MOTION RE: MINUTES OF PREVIOUS MEETING

The Secretary summarized the minutes of the tenth meeting of the Authority which was held in Portland on December 16, 1953.

The Chairman then declared that if there were no corrections or additions the minutes would stand approved as prepared by the Secretary.

PORTLAND RE: PETITION FROM KENTON DISTRICT

The Secretary read a letter from D.W. Carter, 8206 N. Fenwick Ave., Portland, Oregon, transmitting petitions signed by approximately 200 residents in the Kenton District alleging that cinders, ash and smoke from the M & M Woodworking Company, Nicolai Door Mfg., and Portland Shingle Company were causing nuisance conditions.

The Chairman advised that no field investigation had been made since the complaint had been received only a few days ago.

MOTION RE: PETITION FROM KENTON DISTRICT

It was MOVED by Mr. Wendel and seconded by Mr. West and carried that this complaint be referred to the staff for investigation and that a report be made to the Authority at the next meeting.

NORTH BEND RE: STATUS OF THE CINDER AND FLYASH CONTROL MEASURES

The Chairman requested the staff to report on the efforts of industries in North Bend to reduce the cinder and flyash deposition.

Mr. Whitsell stated that the area sampling has continued uninterrupted in the North Bend area. The directional particle fallout collector was removed from the Roosevelt School to the Sherman Apartments. He explained that we intend to continue the area sampling as a check upon the improvements effected and also to show whether or not additional control measures will be needed at the Mt. States Power Company's steam generation plant. Mr. Whitsell also reported that the Menasha Plywood Corporation had submitted its stack emission report in January and in March the Authority advised the company by letter that the report together with our area studies showed that the plant was adversely affecting the area north of Montana Ave., and that it was recommended that the company proceed with appropriate plans to reduce the stack emissions. The company has secured proposals from three engineering or contracting firms regarding the installation of cinder and flyash collecting equipment and the cost for this work was from approximately \$23,000 to \$27,000. Mr. Whitsell stated that a proposal was received from the F.E. Balden Company involving certain changes to the combustion chamber at an approximate cost of \$7,000. Mr. Whitsell explained further that there has been considerable correspondence between the plant, F. E. Balden Company and the Authority involving the guarantee for cinder reduction. Unfortunately it developed that the proposed boiler changes would not accomplish the degree of cinder reduction required in order to remove nuisance conditions in the area affected by the plant. Mr. Whitsell reported that the Menasha Plywood Corporation has been constructing a wood flour plant which utilizes the sander dust that previously was burned in the boiler and that it is hoped by the plant management that the removal of this fine material will improve the combustion conditions. In their letter of July 12, the company advised that the wood flour plant would be in operation by August 1, 1954. Mr. Whitsell advised

the Authority that the management of Irwin-Lyons Lumber Company had taken no specific action on plant cinder and smoke control since the Western Precipitation Corporation completed the study of the stack discharges and the Authority's staff has conferred with the management several times since the last Authority meeting but as yet no new activity has developed.

Mr. Whitsell stated that the installation of cinder collectors at the Weyerhaeuser Timber Company's mill in North Bend was expected to have begun by July 1, 1954; however, the lumber strike had caused postponement. Mr. A. O. Karlen advised the Authority in his letter of July 9, 1954 that all the equipment and materials for the cinder control system are at the plant site and that the installation will be completed about six weeks after the end of the lumber strike.

Mr. West asked about the status of Mt. States Power Company's cinder and flyash control situation.

Mr. Whitsell explained that Mt. States Power Company had previously installed cinder collectors and after the improvements are completed at the mills, it will then be determined whether the present collection system as the power plant is satisfactory.

Mr. Wendel asked if the Menasha Plywood Corporation was making adequate progress.

Mr. Hatchard explained that it was the hope of the management that substantial cinder reduction would occur by removing the sander dust from the combustion chamber and using it as a by-product. Mr. Hatchard advised the Authority that the change ought to considerably improve the smoke problem but it was doubtful if there would be a considerable reduction in the cinder fallout in the area affected by the plant and that it would be about the end of October before any changes in the fallout could be determined from our sample stations. Mr. Hatchard stated that the management was making some progress and that if the present change did not accomplish sufficient reduction then other measures would have to be considered.

ABI228

Mr. Wendel asked if the complaints were seasonal in North Bend.

Mr. Hatchard replied that during the fall and winter the prevailing wind is from the mills towards town and that is the time of year complaints are made.

Mr. West wished to know if Irwin-Lyons promised to do anything to overcome the fallout of cinders from their plant.

Mr. Hatchard informed the members that Irwin-Lyons Company had contacted the engineering department of Western Precipitation Corporation and the Seattle Boiler Works. The company has taken no action, however.

Mr. Dixon suggested that the Secretary write the Irwin-Lyons Company and advise them that the Authority is still awaiting a solution to this matter.

The Chairman urged that this matter not be delayed and agreed that the Secretary should advise the company that more satisfactory progress should be made.

REPORT ASSOCIATED FOREST INDUSTRIES OF OREGON AIR POLLUTION COMMITTEE

Mr. Charles M. Sanford, assistant to Mr. Charles E. Ogle, represented Associated Forest Industries of Oregon. He explained that the association is not an operating company but is made up of lumber, plywood and pulp companies throughout the State of Oregon and that they do not have the membership of all such mill owners but they do represent 30 to 40% of the operators. There are a number of committees within the association, one of which is the Air Pollution Committee. Mr. Sanford informed the Authority that representatives of the Committee recently met with the technical staff of the Authority to orient itself as to the procedure before the Authority and to give assistance where possible through its organization to its members. As a result of the meeting a few days ago it was decided that Mr. Ogle should learn from the manufacturers of wood burning equipment and others regarding the cinder and flyash reduction features and have this data available for the

benefit of the engineering staff of the Authority and the committee. Mr. Ogle has corresponded with the manufacturers of waste wood burners and has secured 4 or 5 replies.

Mr. Sanford stated that when all the correspondence on this subject is received he will submit it to the Authority's staff for their use. At that time the committee will be in a position to cooperate with the Authority.

The Chairman asked if this meeting was the first one and Mr. Sanford replied that it was the first meeting held with the Authority's staff but that the committee had held other meetings previously.

Mr. Sanford further explained to the Chairman that it is the intention of the committee to search out such situations as exist in the North Bend community and give assistance to the operators. He stated, that as he saw it, the Association would urge the operators to take action on their own volition.

The Chairman stated that it is the Authority's policy that industries who create an air pollution problem should find the solution for it.

Dr. Erickson suggested that a considerable saving in time and cost would be affected if the problem were solved by industry-wide measures rather than by individual mill operators.

Mr. Sanford stated he hoped to submit a progress report at the next meeting of the Authority.

Mr. C. Russel Rees, Rees Blower Pipe Manufacturing Company of San Francisco, California, stated that his company had 40 years experience with the design and construction of waste burners and that while the problem of cinder and flyash carry-over is not entirely solved, they do have the answers to many situations. Mr. Rees explained that very frequently the waste burner is overloaded since the expenditure of the mill owners is not a productive item, and there is a tendency to install units which

ABI228

are too small.

Mr. Larry Supove, member of the City of Portland Air Pollution Committee, and a registered mechanical engineer, stated that he felt this was a problem that an association of mill operators could take care of on the basis of what is known.

Mr. Hatchard said this problem has been before the Authority several times since many complaints are based on cinder emissions, etc., from waste burners and the staff has observed a number of experimental attempts to correct the smoke and cinder discharge. However, Mr. Hatchard pointed out that technical information regarding the operational nature of the many types of burners is not available upon which changes can be made to improve smoke and cinder discharges. He stated that the Authority's staff was not acquainted with the Rees Company's waste burners and would appreciate securing pertinent description.

Mr. West reminded the Authority that G. W. Gleeson, Dean of Engineering, Oregon State College had advised the Authority that the waste burners are a problem but that it was not insoluble.

OSWEGO RE: REPORT OF OREGON-PORTLAND CEMENT COMPANY

The Chairman stated that at the last meeting the Authority requested the Oregon-Portland Cement Company to make a progress report on their efforts to reduce the cement dust discharge.

Mr. Frederic Yerke, Attorney representing Oregon-Portland Cement Company reported on the activities of the company since the last meeting of the Authority and also reviewed some of the information transmitted to them by the Authority's staff and presented his interpretation of what the information meant.

The operation of the cement plant commenced about 38 years ago and one kiln was in operation from 1916 to 1947, Mr. Yerke explained. In 1947 the second kiln was placed in operation. However, he pointed out that prior to the installation of

the second kiln no dust control equipment had been installed. In 1947 the company consulted with the Western Precipitation Corporation regarding installation of dust control equipment for the kilns and the electrostatic precipitator unit was installed when the second kiln was placed in operation.

He advised that at the same time other means of eliminating the dust emissions were also considered; that there are presently installed six bag-collectors which prevent dust from various parts of the plant from escaping into the atmosphere. Mr. Yerke explained that the first unit was placed in operation in 1946 in the raw-grind department and that the gas volume for this unit was 10,000 cubic feet per minute. Two similar units were installed in 1947 to serve the crusher and cement-grind operations. In 1951 another bag collector was installed in the cement grind department with a gas volume capacity of 11,000 cubic feet per minute.

Since the last Authority meeting Mr. Yerke advised that the company has been installing two additional bag-collectors which have greater capacity than those previously installed. One of these collectors will serve the klinker storage department with a capacity of 12,500 cubic feet per minute and the other bag collector will serve the packing department with a capacity of 12,500 cubic feet per minute. The cost of each unit is about \$12,000. In addition to these fume collection devices he said that a multiclone unit is in operation on the effluent from the rotary kiln.

The raw lime is delivered in railroad cars, ground and then burned, Mr. Yerke explained, and that the company endeavors to wet the lime with water so the raw dust will not escape and be carried away by the winds and that the rock is also wetted down in the railroad cars and is dumped wet.

Mr. Yerke said he understood that the work of the Authority's staff commenced in the early part of 1953 and that the Oregon-Portland Cement Company had been furnished with records indicating particulate fallout found in the city of Oswego at eight stations. Fallout for the February 9, 1953 to March 26, 1953 period ranged from

AB1228

15 to 60 tons per square mile per month. For the period March 26, 1953 to June 1953 it was 17 to 48 tons per square mile per month, and for the period June 3, 1953 to October 19, 1953 it was 30 to 59 tons per square mile/month. Mr. Yerke stated that the lime concentrations found in the fallout samples was from 17 to 37% compared with lime contents of less than 5% in areas where there is no industrial lime discharge. He concluded that the Oregon-Portland Cement Plant is obviously one source of industrial effluents. However, there are effluents coming from sources other than the Oregon-Portland Cement Company. He stated that the Oregon-Portland Cement Company alone, in terms of calcium oxide, is not producing a nuisance condition and if the plant were to shut down there would still be a fallout most of the time in excess of 25 tons per square mile per month. Sometime ago the company had contacted the Western Precipitation Corporation of Los Angeles and they were to send a representative to run tests to determine if the dust control equipment was functioning properly, Mr. Yerke explained. Two days after the last Authority meeting Mr. McCaslin, President of Oregon-Portland Cement Company, wrote the company again requesting this study, however, it was two months later before the Western Precipitation Corporation could start the study. Mr. Yerke stated that on March 26, 1954, Mr. Leche wrote Western Precipitation Corporation and asked for their recommendations and proposals concerning installation and additional equipment and the Western Precipitation Corporation replied that the information could not be provided until May 1954. He replied that this report from Western Precipitation Corporation arrived on May 17, 1954, and included preliminary sketches and proposals, however, additional information is needed.

Mr. Yerke stated that Mr. Leche had a representative of the Koppers Company, Inc., visit the plant and reviewed the data available concerning the operation of the plant and control equipment. On May 27, 1954, Mr. Leche wrote the Koppers Company to learn when their proposals would be received. This information arrived on June 23, 1954 and indicated the need for a meeting with the Koppers representative from San Francisco. Mr. Leche has now been advised that a San Francisco representative will

not be able to come to Oswego until about August 1, 1954. Mr. Yerke stated that on August 1, 1954, they will confer with a representative of Koppers Company Inc., to consider the proposals together with the plant limitations such as physical lay-out, area available, cost of operating, etc. Mr. Yerke said it would help considerably if the members of the Authority would indicate what standards would be applied in Oswego.

The Chairman asked if a representative of the City of Oswego was present and would like to make any comments.

Mr. Lee Stidd, member City Council, Oswego, stated that he was present as an observer interested in Mr. Yerke's report and the dust report of the Authority's staff. He stated that it appeared that Mr. McCaslin has made a very sincere effort to alleviate conditions.

The Chairman called on Mr. Hatchard to make some comments regarding the interpretation of particle fallout limits, etc.

Mr. Hatchard said that the Authority's staff was pleased to learn that an additional collection system had been installed since the last meeting. He pointed out that unfortunately there is not enough experience of our own or in other areas of the country to consider a standard for area fallout of lime, but that the important fact is that nuisance conditions are present in Oswego; that it is causing a real disturbance to the residents and causes loss to business, particularly the automobile sales agencies. Many complaints originate with the owners of apartment houses who are unfortunately in the prevailing wind direction during certain seasons.

A series of samples were collected from the roof of the Elementary School at Church and State Streets in Oswego during the period April 29, to May 20, 1954. This station is located approximately 1200 feet southwest of the cement plant. A high volume sampler with an accordion pleated filter and the electrostatic precipitator sampler were used. Total particulate matter found at this station varied from 83 to 530

ABI228

micrograms per cubic meter and the amount of the particulate material that was lime (calcium oxide) varied from 11 to 28%. Portland type cement in this area contains about 62% lime (calcium oxide).

Mr. Wendel asked if we were receiving many complaints at the present time.

Mr. Hatchard stated that the City of Oswego received most of the complaints but that the Authority also was receiving a few complaints.

Mr. Lee stidd stated that the City of Oswego was receiving complaints spasmodically depending upon weather conditions and that these complaints have been received for several years. The problem has been before the City Council many times and the Council is interested in the status of the dust control measures and what is going to be done to remove the nuisance conditions.

The Chairman wanted to know if the area fallout of cement dust was caused by overloading the dust control system.

Attorney Yerke stated it was not and that the situation is no different now than when the second kiln and the electrostatic precipitator was installed.

The Chairman asked if further reduction of the cement dust discharge could be obtained.

Mr. Yerke replied that the question was how much improvement could be made in view of the cost and space limitations at the plant.

Mr. Wendel stated that he believed that the company is making a sincere effort to meet the problem and would do everything that could be done to improve the conditions.

MOTION RE: REPORT OF OREGON-PORTLAND CEMENT COMPANY

It was MOVED by Mr. Wendel and seconded ny Dr. Erickson and carried that the matter be continued and that the company submit a report at the next Authority meeting.

PORTLAND RE: MUNICIPAL AIR POLLUTION ORDINANCES

Mr. A. M. Westling, League of Oregon Cities, Eugene, Oregon, reviewed the relationships between the Air Pollution Authority and the League of Oregon Cities. He

AB1228

stated that in January C. M. Everts, Jr., and R. E. Hatchard attended a League's Director's meeting and discussed some of the air pollution problems and the Authority's policies regarding air pollution problems within cities. He realized that it was the hope of the Authority that the cities would assume more responsibility for carrying on air pollution control problems within their boundaries. In order to assist cities in getting ideas in mind as individual communities the League requested the Authority's staff to prepare a report describing the relationship of the Authority to cities and also to give them some idea what is involved in air pollution control and how it may be handled. The Authority's staff has prepared a preliminary draft of a report and Mr. Westling hoped the Authority would publish this information so it would be available to the cities. Mr. Westling asked if it would be possible for the League and the Authority to cooperate on the preparation of a model air pollution ordinance. He explained that he excluded the City of Portland since they could have sufficient personnel to carry on their own projects and was thinking what could be done to assist the smaller Oregon cities so they could care for air pollution problems within the municipal boundaries.

The Secretary stated that the relationship of the Authority to Oregon cities has been discussed to quite an extent and that it was his impression that it was the policy of the Air Pollution Authority that many problems involving air pollution on the local level should be handled by municipalities within their limitations of staff, technical advice and personnel. He stated that it was on that basis that we met with the Board of Directors of the League of Oregon Cities to determine their opinion regarding this approach. The Secretary stated his impression was that those League officers present believed that the local city officials would prefer to receive complaints on air pollution and make efforts to handle those within their boundaries. Then, if additional technical advice was needed perhaps the cities could depend on the Air Pollution Authority for such assistance. The Board of Directors indicated that they wished to discuss this proposed arrangement with the officials of other cities not represented at their meeting.

The Secretary asked Mr. Westling if there were discussions about air pollution control at the annual regional conferences with the League of Oregon Cities staff and city officials which were held this spring.

Mr. Westling stated there was not considerable discussion of the subject but felt that cities would be willing to assume more responsibility if there was available a procedure, which the city officials could adapt to the local situation. He advised that if this information was available the city concerned would have to develop a program that one of their regular employees could carry on the extra activities since the size of Oregon cities, except for Portland, would prevent employing a specialized air pollution control staff.

The Secretary explained that the Authority has been generally referring the complaints received involving air pollution within the city boundaries to the City Council concerned and then if assistance was requested the Authority tried to provide it.

DUST CONTROL: ASPHALT PAVING PLANTS

Mr. Hatchard stated that the Authority had received written complaints involving the dust and asphalt vapor discharges from approximately nine paving plants in the state. He explained that the location and status of the complaints are as follows:

<u>LOCATION</u>	<u>PAVING PLANTS</u>	<u>STATUS</u>
<u>Portland</u>		
Vicinity of N.E. Cully & Columbia Blvd.	Warren Northwest Parker Schram Porter Yett	Dust control system improved. " " " " No change but not established that plant causing nuisance condition.
<u>Salem</u>		
Keiser District	Central Paving Company	Plant moved. Damage to orchard settled out of court-\$7,500.
<u>Tigard</u>		
Forest Hills District	Pacific Asphalt Paving Plant	Plant moved.
<u>Eugene</u>		
	Central Heating Co.	Improved dust control system. Air samples show improvement not adequate.

Eugene

Glenwood Vicinity T.M. Wildish Paving Plant

Considering improvements to dust control system.

Gold HillCentral Heating Co.  
Eugene and  
F.L. Sommers, Klamath  
Falls.

Temporary improvements to control system, plant moved.

Mr. Hatchard further explained that informal complaints have been received regarding paving in Portland (SW) Canby and Cornelius. He stated that the staff had made studies to determine the range of nuisance conditions and recommended that more attention be given to the prevention of this problem rather than waiting until a condition was created byat must be corrected.

Mr. Porter W. Yett, representing Portland Chapter Associated General Contractors advised the members there are many reasons for the nuisance conditions such as wind direction and change of material standards. He pointed out that materials often specified by the Oregon State Highway Commission affected this problem, and that it would take some engineering study to determine control methods. In some locations the plants are permanent installations while others are only portable. The problem of dust control, he felt, was a simple matter if water was available, however, it is impossible to do anything with the dust without water. It was his feeling that the Highway Commission's plants were not as well protected as the private contractors.

Mr. Yett stated that he operates a permanent plant near N. E. Cully and Columbia Blvd., and that corrections can be made if needed. He explained that the plant had been operated there for 25 years, and that they own 20 acres and believe that very little dust gets off their own property. He remarked that other plants have moved into the area and at present only two companies are operating on the area, Parker-Schram and Porter-Yett since Warren Northwest had recently moved.

Mr. Yett stated that in their own plants they investigated various dust control systems and have consulted the manufacturers of paving plants which have been built

ABI228

with a dust control of some type for many years. He added that in the case of the Tigard plant the material which the contractor was forced to use in that area was considerably over-graded into a type of dust which was almost impossible to collect. Porter-Yett is still working on collectors and have contacted manufacturers in the Los Angeles area regarding this. Mr. Yett felt this equipment must be at least within 80 or 85% efficient, however, in the permanent plants he felt even higher dust collection efficiencies could be provided.

Mr. Carl Schram, member of Associated General Contractors, stated he felt Mr. Yett covered this subject well and added that it was their sincere desire to cooperate in every way possible to eliminate this nuisance.

The Chairman added that the problem was not really solved by moving a plant from a specific location to another site unless the new site was far enough from other land uses so that no new nuisance was created.

Mr. West commended Messrs. Yett and Schram for their fine spirit of cooperation.

Mr. Ray L. Beeler, safety man, Associated General Contractors, stated he attended as an observer but wanted the Authority to know that he had visited a number of construction plants through the state of Oregon and assured the Authority the contractors are working on the problems discussed today, especially the owners of permanent paving plants.

#### WASHINGTON STATE COLLEGE AND OREGON STATE COLLEGE REPORT OF FLUORINE.

Mr. Hatchard summarized the combined report published by Oregon State and Washington State Colleges after completion of their Sauvie Island fluoride project. The study period involved was from December 1951 to December 1953 and the basic purpose of the study was to determine if the aluminum reduction plant in Vancouver, Washington was impairing the health of livestock on Sauvie Island. Their study procedure was to determine by physical examination the condition of the cattle and to evaluate analyses of urine samples, teeth, bone and soft tissue. This phase of the study was handled by Washington

State College. The determination of fluorine content of pasture herbage, indicator plants and grain concentrate, etc., was conducted by Oregon State. Control areas for livestock and agricultural fluoride studies were operated in locations remote from sources of fluoride.

Since the last Authority meeting Mr. Hatchard reported that the staff has operated air sampling equipment on Sauvie Island and collected seventeen samples during the period of February 24, to May 17, and air concentrations ranged from a trace less than 0.10 part per billion to 1.6 part per billion with a median of 0.4 ppb.

Mr. Wendel asked if the staff had seen the evidence accumulated by Mr. Fraser. Mr. Hatchard stated that since the last meeting the Authority had not received additional reports from any Sauvie Island residents.

Mr. Robert Fraser, Sauvie Island, was present and informed the Authority the reason that there were no other people present was that at the last meeting they were not allowed to be heard.

The Chairman emphatically denied this statement and explained that everyone present had the opportunity to be heard at the time this matter was being discussed.

Mr. Fraser disagreed entirely with the report presented by Mr. Hatchard and stated that evidently Oregon State College and Washington State College came to Sauvie Island to tell people who lived there that their cattle were not dying from fluorine poisoning, and that at a public meeting in April 1954 at the Sauvie Island school it was asked how many people believed their cattle were dying of fluorine poisoning and all present responded to the affirmative.

Mr. Fraser stated that two dairies on Sauvie Island nearby had recently gone out of business and one that did stay in business receives a milk check for only \$25.00 from 35 cows. Mr. Fraser reported that he has moved all his breeding stock out of the area

ABI228

so that not so many are dying now and there is at the present 1,000 tons of hay going to waste. He stated further that since the meeting Washington State College has admitted fluorine in two different herds on the Island.

The Chairman asked if it were not possible that some of the fluoride may be coming from other sources.

Mr. Hatchard replied that well could be, that it has never at any time been reported at zero and that there was always a trace or tenths.

The Chairman asked if any representatives of the Aluminum Company of America wished to be heard.

Mr. C. S. Thayer, Mgr. Northwest Operation, Alcoa, stated that he had nothing further to add to their statements expressed at the Authority's meeting of December 16, 1953. He felt there was some fluoride concentration everywhere and believed that even the concentrations found on Sauvie Island could be found in Portland, Eugene or Salem and other cities.

Mr. Hatchard stated the staff collected samples in Portland area and found a fluoride concentration from 1/2 to 2 parts per billion. For comparison purposes the industrial hygiene standard for 8 hour exposure of workers is 3,000 ppb.

Mr. Wendel stated he had seen the cattle and knew they are in bad shape and asked if the Authority had ever requested a veterinarian's opinion concerning the condition of the cattle.

Mr. Green suggested that we might find out from representatives of the two colleges when they could meet with us in the near future and have those concerned present to ask questions.

Mr. Wendel heartily agreed.

Mr. Green wanted the Authority to have all the facts and not over-look any source of information.

Mr. West asked if there were more accurate, scientific information than that given by the agricultural college.

Mr. Fraser replied "yes, that things at Oregon State College are not the same there as it used to be". He stated that a veterinarian from Cornell University inspected Sauvie Island cattle and claimed that it was fluorine poisoning.

The Chairman asked if he could get a statement from the Cornell veterinarian.

Mr. Fraser stated he could.

The Chairman stated that until the Authority is shown otherwise the Authority will assume that the staff and those employed by Oregon State College and Washington State College are presenting factual information.

Mr. Fraser asked if his only recourse was to go through court.

The Chairman impressed upon him if he could have evidence to substantiate all that has been said it would not be necessary to go to court.

Mr. Wendel asked if Mr. Fraser could prove what he was saying before this Board.

Mr. Fraser said he had brought material to Mr. Hatchard's office and it always ended in an argument.

Mr. Hatchard explained that the Authority had received copies of three laboratory reports of fluoride concentrations for specimens from animals and that no interpretation of the reports by a veterinarian was provided indicating whether fluorosis was present. Copies of these reports were included with the staff reports which each Authority member had received.

The Chairman said we should look to veterinarians and experts in this field to give us advice and of necessity must take that evidence until it is proven faulty and that the Authority would like a letter from the Cornell veterinarian and also would like to know if he is qualified to make such statements.

Mr. Wendel suggested that the Sauvie Island residents be given the opportunity of presenting additional proof at a special meeting of the Authority if they believed the

ABI 228

findings of the colleges are wrong and recommended that the residents be represented by counsel. He also stated that in the absence of such a presentation of facts we will assume these findings by the colleges are correct.

Mr. Green stated the Authority would hold a special hearing and wanted to know how soon the Sauvie Island residents could be prepared.

Mr. Fraser replied that they could be ready in about a month.

The Chairman stated he would instruct the Secretary to communicate with Oregon State and Washington State College and agree upon a date for the special meeting in approximately one month and that the Secretary would then contact Mr. Fraser to secure a date convenient to all concerned.

Mr. Fraser asked the Chairman what the Authority would do about it after the special meeting was held.

The Chairman informed Mr. Fraser that the Authority has a legal advisor who would advise us what could be done.

Mr. Fraser wanted to know "what could be done before I go through all this".

The Chairman replied to Mr. Fraser that he was now jumping to conclusions and that first it would have to be shown at the special meeting that fluoride was damaging livestock and agriculture.

Mr. Wendel stated that it would depend upon whether the Authority found that there was a nuisance condition, and further that the Alcoa Company was the responsible agent for the condition. If these facts were determined then the matter of the interstate agreement would be the next step and he felt certain that such an agreement could be worked out to take steps to alleviate the nuisance if such a nuisance were found to exist.

TROUTDALE-CORBETT FLUORIDE SURVEY

ABI228

The Chairman requested the staff to report on the Troutdale-Corbett fluoride study. Mr. Whitsell reported on the fluoride air samples that have been collected in the area, and he informed members that the staff had operated stations at the McKay farm, Willoughby farm and Schutze residence. The fluoride air concentrations found at these stations from March 30, 1954 to April 18, 1954 ranged from a minimum of 0.4 part per billion which was common to several of the stations to a maximum of 2.1, at the Willoughby farm 2-1/4 miles west of the aluminum plant. At the present time, Mr. Whitsell stated, we have the automatic impinger operating at the Schutze residence, one mile S.E. from the plant. Nineteen samples have been collected in the current series; two samples are secured each day, one during the day and the other at night.

Dr. M. B. McKay of Troutdale, Oregon, asked if the wind direction during the sampling period affected the fluoride concentrations found.

Mr. Hatchard replied that special wind observations are made by the Troutdale Airport Weather station when the Authority's staff are collecting samples and that this data is tabulated with the fluoride concentrations found at the various stations.

The Chairman asked if there were representatives of the Reynolds Metals Company present who wished to be heard.

Mr. F. Yerke, attorney, stated that Mr. H. W. Zeh and he were representing the Reynolds Metals Company today. Mr. Yerke explained that they are continuing their test plot program with three test plots being operated this year. This work has been underway for the past 5 years and last year the Authority's staff observed the project. Mr. Yerke extended an invitation to visit their test plots again this year. He stated that the highest fluorine concentration found in gladioli foliage samples was 114 ppm on the Lampert property, but that this concentration seems high it does not affect the bulb size. Reynolds Metals Company had Dr. Lewis Massey and Dr. Zimmerman make inspections of the Lampert bulb plantings and both gentlemen believed that no damage

had been done as far as the bulbs were concerned.

Mr. Hatchard explained that some time ago the staff had met with Dr. Compton and Dr. McKay to plan the future area fluoride studies. He reported that the results of the Oregon State College Agricultural Experiment Station test plot data showed that fluoride concentration in the foliage had been high at stations E-SE of the aluminum plant. Mr. Hatchard stated that the staff will again meet with Dr. Compton and Dr. McKay to plan future studies.

The Chairman asked if any studies were made of the affect on cattle in that area.

Mr. Hatchard replied that several years ago the Oregon State College Agricultural Experiment Station studied the cattle in the area but we have not seen reports of recent investigations. However, he continued the Authority has received no written complaints from residents in Troutdale-Corbett regarding fluorosis in cattle.

MOTION RE: TROUTDALE-CORBETT FLUORIDE SURVEY

It was MOVED by Dr. Erickson and seconded by Mr. Wendel and carried that the staff continue investigations of this matter and present a report at the next Authority meeting.

LA GRANDE-AMERICAN PRODUCTS COMPANY

Mr. Hatchard stated that the American Products Company operates a rendering plant in the northwest area of LaGrande and that adjacent property owners had secured an injunction in the fall of 1952 which required the plant to close from June 1, to October each years. The Authority has not taken any action in the matter since no complaints had been received from property owners. The Authority had been requested this spring by the attorney for American Products Company to make a survey of present conditions for American Products Company. Following a survey a report was prepared and the attorney was advised that the Authority would be glad to present the report to the circuit court. In the meantime, however, the Air Pollution Authority had been drawn

ABI 228

into the action. Mr. Charles D. Burt stated that inasmuch as the Authority was not a party to the litigation he had appeared before Circuit Court Judge Hubbard in LaGrande to explain the Authority's position and at that time the court heard arguments on both sides, from Carl Keller, et al and Gibson Packing Company, owners of the American Products Company. The court continued the matter until July 1, 1954 to secure additional information. Since then an affidavit has been prepared and signed by Dist. Engineer Patterson explaining facts based upon the surveys and this was submitted to court. Mr. Burt stated that he has had no further word from the court as to the disposition of this case so he assumed that the original injunction is still in effect, however, he stated the Authority is no longer a part litigant in this matter.

The Chairman wanted to know if this case established any precedent.

Mr. Burt replied that he thought not since the Authority could not of its own volition have taken any action without holding a hearing first and it was assumed we could not be a party of the litigation without first holding a hearing.

BEAVERTON RE: ODOR PROBLEM

The Secretary read a letter dated July 13, 1954 to the Authority from H. H. Rossi, Mayor, City of Beaverton regarding the odors from the Pacific Adhesive Plywood Plant located in the main business district. In the letter Mayor Rossi requested an investigation of the odor and a report be submitted to the Council prior to their September 3, 1954 meeting.

The Chairman directed the staff to proceed with investigations and prepare a report prior to September 13, 1954.

BIENNIAL BUDGET -- 1955-57

The Chairman requested the Secretary to explain the 1955-57 biennial budget request. The Secretary explained that the Authority's previous biennial budgets compared with the proposed budget were as follows.

	<u>1951-53</u>	<u>1953-55</u>	<u>1955-57</u>
Salaries and Wages	\$ 46,740.00	\$ 61,190.00	\$ 80,694.00
General operating & Maintenance	8,516.71	20,518.66	26,356.00
Capital outlay	<u>9,299.00</u>	<u>1,249.00</u>	<u>4,000.00</u>
	\$ 64,555.71	\$ 82,957.66	\$ 111,050.00

Dr. Erickson stated that Governor Patterson had requested that each department limit their request for additional personnel to an absolute minimum. However, Dr. Erickson continued if there is an urgent need the Authority must make this need known. The Secretary explained that the additional engineer would be needed to assist with area surveys within city boundaries, particularly in the smaller cities and also the Authority expects to have more plans and specifications to review as the program develops. He pointed out that new industry is entering Oregon and the present staff will not be able to handle this additional work.

MOTION RE: BUDGET--1955-57

It was MOVED by Mr. Dixon and seconded by Dr. Erickson and carried that the Secretary prepare justifications of the biennial 1955-57 budget and submit the report to each member and that each member will submit his comments to the Secretary.

UNIVERSITY OF MICHIGAN SYMPOSIUM ON "AIR SAMPLING EQUIPMENT".

The Chairman requested Mr. Whitsell to report on the University of Michigan Air Sampling Symposium. Mr. Whitsell explained that approximately 500 public health personnel, engineers, manufacturers and educators in the industrial hygiene and air pollution fields attended the meetings. The Sessions were of a general nature but with interesting discussions concerning equipment development and use. Mr. Whitsell pointed out that it was interesting to note that others working in the air pollution control field have strikingly similar experiences to ours in Oregon. During the symposium, there was a large number of displays and it was possible to talk with equipment manufacturers' representatives and secure information on the new developments. Mr. Whitsell concluded that we are informed of latest developments and are at least keeping pace with others and are ahead of some in our thinking and planning.

MOTION RE: ELECTION OF OFFICERS

It was MOVED by Mr. Dixon and seconded by Dr. Erickson and carried that Mr. Green

be re-elected Chairman.

It was MOVED by Mr. West and seconded by Mr. Wendel and carried that Mr. Dixon be continued as vice chairman.

DATE OF NEXT MEETING:

The Secretary was instructed to arrange for a special meeting in approximately one month when the Oregon State College and Washington State College representatives can attend the meeting.

ADJOURNMENT

There being no further business, the meeting adjourned at 5:20 P.M.

Respectfully submitted,

CURTISS M. EVERTS, Jr., Secretary  
Oregon State Air Pollution Authority

SPECIAL MEETING OF THE  
OREGON AIR POLLUTION AUTHORITY

September 28, 1954

A special meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 10:00 A.M. Tuesday, September 28, 1954 in Room 36, State Office Building, 1400 S.W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Mr. R. P. Dixon, Vice Chairman, Dr. Harold M. Erickson, Merle S. West, Harold F. Wendel, Members and Curtiss M. Everts, Jr., Secretary, Charles D. Burt, Special Assistant Attorney General, R. E. Hatchard, Chief of the Air Pollution Control Section, State Board of Health, W. J. Whitsell, Associate Sanitary Engineer, State Board of Health and Frank P. Terraglio, Chemist, State Board of Health.

SAUVIE ISLAND RE: FLUORIDE MATTER

The Chairman announced the purpose of the special meeting was to permit residents of Sauvie Island, representatives of Oregon State College and Washington State College,

ARI 228

and others to present information on the occurrence of fluorides on Sauvie Island.

Mr. Robert W. Fraser, Sauvie Island resident, presented the Authority copies of the Findings of Fact made December 11, 1950 by the U. S. District Court in Tacoma, and a copy of the supplemental complaint filed September 27, 1954, in which it was alleged that fluorides from the Aluminum Company of America's reduction plant continued to be deposited on the Fraser property causing injury to the cattle.

Mr. Fraser also presented a copy of a letter dated August 6, 1954 from K. P. Keller, veterinarian, stating that fluorosis was present in their herd and a copy of a letter dated September 30, 1952 from Wm. Menaul, veterinarian, stating that several of the Fraser animals showed syndromes of fluorosis. Mr. Fraser also presented to the Authority copies of the pathological report dated May 1, 1952 signed by H. H. Foskett, M.D. regarding specimens from a horse on the Fraser ranch. He also submitted copies of three laboratory determinations of the fluorine content of specimens taken from animals at the Fraser farm, which were made by R. J. Morris, University of Nevada, and by the Northwest Laboratories. Mr. Fraser presented a letter of September 25, 1954 from Wm. Menaul, veterinarian, in which it was stated that after examining the pathology and fluoride determination reports it was his opinion the specimens showed an excessive amount of fluorine and much higher than considered normal.

Mr. Fraser also stated in the joint fluoride study conducted by Oregon State College and Washington State College on Sauvie Island the experiments were based on earlier studies on rock phosphate which contains calcium fluoride and since they used this as a basis for their study and conclusions, instead of sodium fluoride, that in his opinion this was not the proper procedure.

Mr. Fraser stated that death and loss in their cattle had been so great that a year ago they moved the cattle breeding stock off the ranch away from the fluorine area.

Mr. Fraser stated further that he had presented factual information regarding the

fluorine conditions and that if the Authority was not going to take any action to bring relief that their only alternative was then to take the matter to the courts.

Mr. Carl A. Baker, Sauvie Island resident, advised the Authority that K. P. Keller, veterinarian, had stated in a letter to him that both acute and chronic fluorosis had been present in his cattle for the past six or seven years. Mr. Baker advised the Authority that he is no longer operating his dairy ranch due to the inability to raise herd replacements and the declining milk production.

Mr. George Cashdollar, Sauvie Island resident, stated that some of his livestock had suffered from cracked hoofs and declining milk production. He read a letter from Dr. G. R. Spencer, Department of Veterinary Medicine, Washington State College, in which it was stated that the cracking of the hoofs was unusual and abnormal and that the cause was something external and suggested the possibility that fertilizers might cause the condition, and also that 12 teeth in five cattle showed slight changes probably due to fluorine but the slight degree of dental changes and absence of the effect on bones indicated normal fluoride intake for most of the animals' life.

Mr. Cashdollar stated that no commercial fertilizer was used on the pasture land.

Mr. W. R. Charleton, Oregon Washington Fertilizer Company, stated that the suggestion that fertilizer was causing the hoof cracking was very surprising since there had been no other occurrences throughout the country and that large quantities of fertilizer were used in other areas. He also stated that Mr. Cashdollar did not use any fertilizer on the pasture land this year.

Mr. Earl Reeder, Sauvie Island resident, stated he had no written reports to submit; that it had been his understanding the result of the Oregon State College and Washington State College investigation would determine what was wrong with the livestock. He stated that he still hadn't heard the cause or what could be done to correct the situation, and that his milk production was still low.

Mr. Archie Hall, Sauvie Island resident, stated that he was one of the members of the Farmer Fluorine Advisory Committee; that the Sauvie Island residents have lived

ABI 228

with this problem for many years and that it is admitted that approximately 1,100 pounds of fluorine escaped from Alcoa plant daily even with the controls operating; that it is the feeling of the Sauvie Island residents that the study by the colleges was not continued for a long enough period of time to show conclusively whether there may be long term effects which will show up later. He stated that he believed the majority of the Sauvie Island residents did not feel the problem had been solved yet; that they were still being damaged by this contaminant.

The Chairman asked if there were other Sauvie Island residents who wished to be heard and that if not the Authority would hear statements from the Oregon State and Washington State College representatives.

F. E. Price, Dean of the School of Agriculture, Oregon State College, stated that since the purpose of the meeting was to consider data taking exception to the conclusions contained in the Oregon State College and Washington State College report that he would not go into a lengthy explanation of the details of the study. He stated that the investigating staff was particularly well qualified to do an excellent technical job and that a very large number of samples were collected and that prior to starting the extensive sampling project proper procedures had been established so that the laboratory results were consistent and reliable.

Dean Price stated that he would like to answer some of the questions raised by the Sauvie Island residents; that in the case of the Reeder herd their investigations had shown the herd to be suffering from a severe case of hoof rot; and that this condition must be cleared up before any other treatment is considered. He explained that an offer was made to Mr. Reeder to have a veterinarian treat his herd and that it would be paid for as cost of the study project, however, to date Mr. Reeder has not selected a veterinarian.

Regarding the Cashdollar herd, Dean Price, advised that the hoof splitting was unusual; that it had not been observed in any of the other herds on Sauvie Island

and the cause for it was unknown.

Dean Price stated that the colleges did not carry on their studies on the Fraser property due to the bitter opposition the Frasers had taken previously regarding the entire project.

Dr. G. R. Spencer, Department of Veterinary Medicine, Washington State College, stated that the main conclusions were contained in the published report, however, he wished to clarify some of the points raised. Dr. Spencer explained that the study project had been continued until June 30, 1954 which made a total of 31 months of examination on Sauvie Island. He pointed out that the decision as to whether fluorosis was a problem in any area ought to be based upon an over-all investigation such as the colleges' study on Sauvie Island area and not just a few analyses of samples collected at random.

Regarding the Cashdollar herd, he stated that his suggestion that fertilizer may be the cause of the hoof cracking was made after considering all external sources of materials that might cause the condition. However, he pointed out that it was only a possibility and that he had requested a sample of the fertilizer for further studies but since none was received no studies could be made.

He explained that it is well recognized that the analyses of teeth, bones and urine provide the best and most reliable evidence as to whether fluorosis was occurring since the analyses of soft tissue such as kidney and liver are extremely erratic. He stated that in his opinion the fluorine contents of the laboratory reports which the Sauvie Island residents had presented to the Authority showed that there was no fluorosis in cattle on Sauvie Island.

Dr. C. C. Compton, Associate Horticulturist, Oregon State College, stated that he was engaged in the vegetation part of the study and that the question of the fluoride content of the soil had been raised. He stated that in general the fluoride content of soils in this area is quite low and that plants do not take up a significant amount of fluoride through their root system. He stated that the fluoride content

ARI228

from pasture land far removed from sources of fluoride show a concentration of less than 10 ppm.

The Chairman stated that if there were no more questions the Authority would like to call on the Alcoa representatives.

Mr. Hugh Biggs, Attorney for Alcoa, suggested that it might be helpful for the Authority if he were to place some of the events discussed at the meeting in chronological perspective. He explained that the Fraser case was tried in 1950 and that the aluminum company's control system was completed and in operation in December 1949; that Judge Levy of the U. S. District Court in Tacoma, Washington, issued Findings of Fact in December 1950 and that he did find in favor of the plaintiff for the period up to 1949. Mr. Biggs explained that the testimony for this case was highly technical and there was much conflicting opinion by the experts on the two sides and that it appeared to the Alcoa Company that what was needed for a real solution of the problem so far as the public was concerned was to secure an authoritative determination by a group of experts not associated with either party.

Mr. Biggs explained that Alcoa attempted to arrange for such a study to be conducted by Oregon State College and Washington State College under their own terms to guarantee their impartiality and objectivity and that Alcoa would finance the study. He stated that Alcoa discussed this proposal with the representatives of both Oregon State and Washington State and that Dean Price emphasized that such a study could be undertaken only if the cooperation of the Sauvie Island residents could be obtained.

Mr. Biggs explained that at a public meeting in May 1951 Dean Price discussed the proposed study project with the Sauvie Island residents and at first this cooperation was not secured but later the majority of the Sauvie Island residents petitioned Oregon State College to carry on the study on the Island.

Mr. Biggs pointed out that after the study was underway Mr. C.S. Thayer, Alcoa, had written a special letter to Mr. Fraser inviting his participation, however,

no reply was received to this letter.

During the period when this study was proceeding he stated that Alcoa had been permitted to make 2 or 3 herd examinations at the Fraser ranch; however, no analytical work had been done upon the pastures. Mr. Biggs advised that the reports by Alcoa's veterinarians could be made available to the Authority and that the conclusions by these veterinarians were that fluorosis was not present in the Fraser livestock.

MOTION RE: SAUVIE ISLAND FLUORIDE MATTER

It was MOVED by Mr. Wendel and seconded by Dr. Erickson and carried that the Board take that matter under advisement and announce its decision later.

BIENNIAL BUDGET ESTIMATE 1955-57

The Chairman explained that on August 11, 1954, Mr. Wendel and he had met with several members of the State Board of Health and discussed the proposed 1955-57 budget which totaled \$111,050 and included additions of a Public Health Engineer II and a Chemist I positions. After considering the matter it was decided that the request for the additional chemist would be deleted and instead the vacant public Health Engineer I position during the current biennial would be reclassified to Chemist I.

The Chairman stated this change reduced the budget request to \$102,273.

The Secretary suggested that a member of the Air Pollution Authority attend future meetings of the State Board of Health when the biennial budgets are being considered in order that the questions relating to the budget could be answered.

Dr. Erickson stated that the State Board of Health would certainly welcome this participation and that it would be mutually advantageous.

MOTION RE: BIENNIAL BUDGET 1955-57

It was MOVED by Mr. Wendel and seconded by Mr. West and carried that the budget estimate of \$102,273 be approved.

BIENNIAL REPORT July 1, 1952 to July 30, 1954

The Secretary explained that the preliminary draft of the biennial report had been sent to each member and the comments which had been received were incorporated with

AB1228

the report. He stated that several photographs showing the various air sampling equipment would be included in the printed report and that there was a need for the Authority to indicate how many copies should be ordered. The Secretary explained that approximately 450 would be needed for the initial mailing list.

MOTION RE: BIENNIAL REPORT 1955-57

It was MOVED by Mr. Wendel and seconded by Mr. West and carried that the biennial report be printed by the State Printer and that sufficient copies be ordered so that a supply is available for distribution during the next two years.

DATE OF NEXT MEETING

The Secretary was instructed to arrange for a regular business meeting during the first half of November, 1954.

ADJOURNMENT

There being no further business the meeting adjourned at 2:15 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, Jr., Secretary  
Oregon State Air Pollution Authority

TWELFTH MEETING  
OF THE  
OREGON AIR POLLUTION AUTHORITY

November 10, 1954

ABI228

The twelfth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M., Wednesday, November 10, 1954, in room 720, State Office Building, 1400 S. W. 5th Ave., Portland, Oregon. Those present were Carl E. Green, Chairman, Mr. R. P. Dixon, Vice Chairman, Harold F. Wendel, Merle S. West, Members and Curtiss M. Everts, Jr., Secretary, Charles D. Burt, Special Assistant Attorney General, R. E. Hatchard, Chief of the Air Pollution Control Section, State Board of Health, W. J. Whitsell, Associate Engineer, State Board of Health, Frank P. Terraglio and Eugene E. Lee, Chemists, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The Secretary summarized the minutes of the July 14, 1954 meeting and the special meeting held on September 28, 1954. The Chairman declared that if there were no corrections or additions the minutes would stand approved as prepared by the Secretary.

SAUVIE ISLAND RE: FLUORIDE MATTER

The Chairman stated that the Secretary had sent a transcript of the special meeting held on September 28, 1954, to each member of the Authority and that Attorney Burt had provided legal comment on the information presented at the special meeting.

The Chairman then asked if the members were now ready to consider action on the matter of alleged fluoride damage to crops and livestock on Sauvie Island.

Mr. Wendel stated that if the Attorney had any additional information on this matter that he should be heard.

The Chairman asked Attorney Burt to advise the members of the Authority regarding the action to be taken.

Mr. Burt explained that the Authority should take action as to whether or not there is

atmospheric fluoride pollution occurring on Sauvie Island.

The Chairman asked if the Authority was ready at this time to make such a definite finding from the presentation of the reports from Oregon State College and Washington State College and the statements and reports introduced at the special meeting of September 28th.

Mr. Burt stated that the Authority could determine whether it should find that there is pollution or find that there is not pollution or to continue the matter for further discussion. At this time, however, the Authority should accept or reject the findings contained in the combined colleges' report on fluorosis on Sauvie Island.

MOTION RE: SAUVIE ISLAND - REPORT ON FLUOROSIS - OREGON STATE COLLEGE, WASHINGTON STATE COLLEGE.

It was MOVED by Mr. Dixon and seconded by Mr. West and carried that the findings contained in the combined report of Oregon State and Washington State Colleges, "Summary Report of Fluorosis Investigations in the Sauvie Island Area in Oregon from December 1, 1951 to June 30, 1953" be accepted since there was not sufficient evidence presented at the special meeting to discredit the conclusions contained in the report.

Mr. Wendel stated that the Authority would investigate the matter in the future if evidence was presented to support a complaint that fluoride contamination was present.

OSWEGO RE: CEMENT DUST

The Chairman stated that at its last regular meeting the Authority requested the Oregon Portland Cement Company to submit a progress report on their studies and efforts to reduce cement dust emissions at their plant in Oswego and that in the meantime the Authority's staff had conducted additional studies in the Oswego vicinity. He then requested Mr. Hatchard to report on the results of this air sampling. Mr. Hatchard reported that continuous air samples had been collected during the periods August 18, through the 27th, and October 18, through the 29th, from the

roof of the Elementary School located at Church and State Streets in Oswego which is approximately 1500 feet S. W. of the cement plant. The purpose of this sampling was to compare the particulate matter in the air moving from the cement plant with the particulate matter present when the air movement is from the other directions. Mr. Hatchard stated that the staff had prepared a report describing the equipment used and the sampling data for each run.

He advised that the results of the samples collected during the period August 18 to 27 showed that the concentration of particulates when the wind was within the 90° arc from the plant to the sampling station was 3.5 times the concentration found when the wind originated within the other 270° arc. He stated that during the period from October 18, to 29th, the concentration of particulate matter when the wind was within the 50° arc from the plant to the sampling station was 1.8 times the concentration found when the wind was within the other 310° arc. Mr. Hatchard explained that during the second sampling run that the laboratory reports showed that from 25 to 40% of the particulate matter present in the samples was composed of calcium oxide. Assuming that Portland cement in this area is composed of approximately 62% calcium oxide (lime), he concluded that from 40 to 65% of the particulate matter collected was cement dust.

Mr. Hatchard explained that six particle fallout stations had been maintained in Oswego and that these stations are located from 600 to 3,000 feet from the cement plant. The laboratory analyses of the fallout found shows a fallout proportional to the distance of the station from the cement plant. The calcium oxide found ranged from 25 to 50% of the total sample, while the calcium oxide content in fallout samples from areas where there is no lime process industry ranges from 2 to 7%. Mr. Hatchard stated that the studies by the Authority's staff support the following conclusions:

1. The dust concentration in the Oswego air is 2 to 3 times higher downwind from the cement plant compared with the dust concentration on the upwind side.
2. The total particle fallout from the six stations has been from 2 to 3 times

ABI 228

heavier than would be expected in communities where no unusual source exists. The calcium oxide content of the samples shows that the major portion of the dust concentration originates from the operation of the Oswego Portland Cement Company's plant.

3. That the physical and chemical nature of the cement dust has caused severe corrosion conditions in Oswego in addition to the excessive cleaning required to remove the dust deposition.

Mr. Wendel asked Mr. Hatchard if he found the fallout less in wet weather than in dry.

Mr. Hatchard replied that this was true.

The Chairman asked if this data had been presented to the company.

Mr. Hatchard replied that it had not since the sampling had been completed only a few days ago and the report had just been assembled.

Mr. F. E. McCaslin, President, Oregon-Portland Cement Company stated that he would be pleased to have a copy of the staff's report.

The Chairman asked if a representative of the cement plant would report on their dust control activities since the last meeting.

Mr. Frederic Yerke, Attorney for Oregon-Portland Cement Company stated that since the July 14th meeting the installation of a new bag collector has been completed in the packing department. Mr. Yerke explained that the unit has a capacity of 12,500 cubic feet per minute and cost \$12,000. He stated that the other dust control equipment described at the last meeting has been operated without change. Following the July 14, meeting a representative of Koppers Company visited the plant during the latter part of August and a preliminary report was prepared, and that the company is still awaiting the revised report. He stated that a representative of the Buell Engineering Company, Inc., had also visited the plant and submitted a report regarding dust control improvements. The company now has reports from three dust control companies and this information has been turned over to the plant engineering department. Mr. Yerke explained that the reports are of a preliminary nature

and do not show equipment locations but the company hopes that it will be possible to reach some conclusion from the data available within a short time.

The Chairman asked Mr. Yerke when the new bag collector started operating.

Mr. Yerke replied that it was during the month of October 1954.

The Chairman asked Mr. Hatchard if the samples collected during that period showed a reduction in the dust concentration found.

Mr. Hatchard replied that if the new bag collector was in operation during late October the dust concentrations found didn't show a reduction. However, the weather conditions influence the dust concentrations present and that a reduction may have occurred that is not shown in the results from a few samples.

The Chairman asked Mr. Hatchard if it was a fair statement that additional dust control improvements were necessary.

Mr. Hatchard replied that the studies by the Authority's staff certainly showed the need for further dust control.

Mr. Yerke reminded the Authority that the company had not reviewed this data and requested that a copy be sent to Mr. McCaslin. He asked if the cement plant was eliminated as a nuisance source would it be possible to say whether or not there would still be a nuisance condition present in Oswego.

Mr. Hatchard replied that there would be nuisance conditions in the north end of the business section caused by cinders and flyash deposition from two wood waste burners.

The Chairman asked if a representative of the City of Oswego was present and wished to be heard.

Mr. Crampton, City Attorney, City of Oswego, stated that the city believed that the Oregon-Portland Cement Company was proceeding satisfactorily with its program to reduce cement dust emissions and re-assured the Authority that the City Council has a continued interest in this matter as a complainant.

Mr. Fred Hallwyler, representing the Lake Corporation of Oswego advised the Authority that his observations showed that the heaviest fall of dust seemed to be in the early

ABI228

hours and that the dust deposition was a serious problem to the property owners, damaging shrubbery, settling on cars and clothing, etc. Mr. Hallwyler stated that the people in Oswego felt the plant was taking corrective measures but they would like to be assured that the changes would meet requirements.

Mr. Leche said that the dust control system operates continuously during the 24 hour period and that usually the only observable discharge from the main stack was steam. The Chairman explained to Mr. Hallwyler that the weather conditions such as wind, temperature and moisture of air influences the capacity of the air to disperse the dust and that in the early morning there frequently is little wind and the vertical mixing of the air is lacking due to a temperature inversion. The Chairman advised Mr. Hallwyler that under these conditions more dust would be deposited on property downwind from the plant and that the property owners would notice increased dust early in the morning although the plant dust control systems have been operating. Mr. Hatchard stated that dust samples had been collected during the early morning hours and that the results indicated that the plant dust control system is operated at night in the same manner as during the day.

Mr. Hatchard informed the Authority that the staff had observed the dust discharge from the main stack during sampling activities and had noted that frequently the dust discharged is visible for several hundred feet downwind.

Mr. Hatchard pointed out that the steam would have disappeared within a relatively short distance and that the visible plume under these conditions was cement dust.

Mr. West asked if there was calcium oxide contained in cinders and flyash from wood waste combustion.

Mr. Hatchard explained that calcium oxide determinations had been made on fallout samples collected in areas where cinders and flyash are a problem and that the calcium oxide found was within the range of 2 to 7% compared with the 25 to 40% found in Oswego samples.

Mr. Wendel asked L. E. Crampton, City Attorney, to amplify his statement that the

Oswego City Council believed that the Oregon Portland Cement Company is proceeding satisfactorily towards the reduction in cement dust discharged.

Mr. Crampton explained that the Council believes that the company is making progress and further that the city has always had cooperation from the cement plant.

Mr. Wendel asked L. E. Crampton, City Attorney, to amplify his statement that the Oswego City Council believed that the Oregon-Portland Cement Company is proceeding satisfactorily towards the reduction in cement dust discharged.

Mr. Crampton explained that the Council believes that the company is making progress and further that the city has always had cooperation from the cement plant.

The Chairman asked if the staff had any recommendations regarding the Oswego matter.

Mr. Hatchard stated that there is definite need for additional cement dust control and that the plans and specifications for proposed dust control improvements should be submitted to the Authority for review before the changes or alterations are made in order that the comments or recommendations from the Authority would be known in advance of the actual installation.

Mr. Hatchard stated also that a report describing the dust discharged from the cement plant during representative periods of operation would be extremely helpful in connection with the evaluation of area sampling data.

The Chairman asked if the Oregon Portland Cement Company had been requested to provide such a report.

Mr. Hatchard replied that the request had recently been made.

Mr. McCaslin informed the Authority that arrangements are being made to provide this report.

The Chairman suggested that the Oregon-Portland Cement Company and the staff prepare a progress report for the next meeting.

Dorothy E. Bloomquist of 14217 S.E. Fair Oaks Lane, Portland 22, Oregon, was present and requested that a sample station be placed on the east side of the Willamette River in the vicinity of Oak Grove to determine the cement dust fallout since they have been noticing the cement dust deposition from the Oregon-Portland Cement plant

ARI228

and also cinders from sawmills located north of the cement plant. She stated a letter had been written to the Authority in August regarding this request but the station had not been started yet.

Mr. Hatchard assured her this fallout station would be located in that district as soon as feasible.

NORTH BEND: CINDER AND FLYASH CONTROL

The Chairman requested Mr. Whitsell to give a report on the efforts of the various industries in North Bend to abate the flyash and cinder deposition.

Mr. Whitsell advised the Authority that Weyerhaeuser Lumber Company had completed the installation of cinder collectors on their two boilers during the week of September 13, 1954. He explained that the collectors were made by Western Precipitation Company and blowers were manufactured by the Buffalo Blower Company. He reported that the North Bend residents in the south Sherman Street vicinity are very pleased with the cinder and flyash reduction this far. He explained that the staff has not collected a series of fallout samples since the collectors started functioning so the quantitative reduction can not be reported yet. However, the samples will be collected within the next two weeks.

Mr. Whitsell explained that Menasha Plywood Corporation has no plans to install collectors since it was their understanding that the Weyerhaeuser plant was such a major contributor that when their collectors started operating the nuisance conditions would be greatly alleviated which would help the whole area. Mr. Whitsell reported that Menasha had recently begun the operation of a wood flour mill which would remove the sander dust from the boiler and that they, however, believed this would reduce cinder emissions considerably. Mr. Whitsell pointed out that the staff disagreed with Menasha regarding the reduction in cinder fall in the area north of Montana Avenue, caused by the installation of cinder collectors at Weyerhaeusers' mill since our study shows that the cinder fall in this area is from the Menasha plant. Mr. Whitsell also explained that the staff believes that the removal of sander dust from the boiler will reduce the fallout only about 5 to 10%. He

reported that Menasha understood that a lumber mill in Tacoma, Washington had reduced a cinder complaint by modifying the boiler combustion conditions. However, the staff learned from the air pollution control engineer in Tacoma that the complaint had been from excessive smoke and that cinders were not a problem.

Mr. Whitsell explained that Irwin-Lyons is contemplating changes in their overall operation which will have an appreciable effect on the cinders and flyash produced and that this change will be affected by spring 1955.

The Chairman explained to the Authority that the staff study showed that the excessive cinder and flyash fallout in North Bend originated from three industries and that two of the firms had either reduced their discharge or had plans to care for their problem. However, the Menasha Plywood Corporation does not have adequate corrections underway. The Chairman asked Mr. Hatchard when the next series of samples would be collected in North Bend that would show the effect of the Menasha wood flour by-product operation.

Mr. Hatchard replied that the samples would be collected within the next two weeks and that the analyses would be completed a week later.

The Chairman suggested that if the data which the staff secures shows no substantial fallout reduction then the Authority should advise the Menasha Plywood Corporation to proceed with appropriate plans to reduce the fallout.

Mr. West stated that the Authority should delay action until the fallout data is available that shows the results of their wood flour by-product installation.

The Chairman instructed the Secretary to advise the company that appropriate control measures must be taken if the fallout data shows that the excessive fallout is still occurring.

ASSOCIATED FOREST INDUSTRIES OF OREGON AIR POLLUTION COMMITTEE

Mr. Charles M. Sanford, Assistant to Mr. Ogle, appeared before the Authority on behalf of Mr. Charles E. Ogle, Mgr. of Associated Forest Industries, who was unable to attend and stated that since the last Authority meeting their air pollution committee had met in Portland to discuss air pollution problems affecting the lumber industry. He

ABI228

explained that Mr. Hatchard attended this meeting and discussed with the committee the problems before the Oregon State Air Pollution Authority in respect to air pollution from sawmill stacks and burners.

Mr. Sanford reported that after this meeting the Association sent out a questionnaire on all phases of air pollution from burners and stacks to 156 mill owners on October 29, 1954, and on November 9, had received a total of 22 reports. He explained that eighteen of the reporting members had waste wood burners and all had stacks while four of the reporting members had no burners which meant their waste material was absorbed in the sale of chips and bark, etc. Mr. Sanford advised that of the eighteen mills reporting seven had complaints of ash fallout and cinders and that it was interesting to note that two or three of the seven were both the complainant and the offender in that the fallout was discoloring and damaging the lumber in their own yards. Mr. Sanford emphasized that one owner had spent \$30,000 to correct this condition for his own benefit. He reported that the twenty-two plants who have reported so far all have chippers, and that these chips are either sold to processing companies or used in their boilers.

Mr. Sanford advised the Authority that the kraft plant to be located at Albany would use chips from lumber mills in the vicinity, however, the cost of transportation limits the distance that the wood chips can be hauled to the plant.

Mr. Sanford explained that Mr. Ogle had contacted six manufacturers of burner equipment regarding the elimination of smoke and fallout from waste burners and that the manufacturers are not in agreement regarding the improvements needed. He explained that Mr. Ogle was attending a meeting of the Forest Products Laboratory in Corvallis, Oregon, today and that he was investigating the possibility of a research project at the laboratory to determine improvements for waste burners.

The Chairman asked if the Forest Products Laboratory had mechanical engineers on their staff or could such services be obtained from the Oregon State College Department of Mechanical Engineering.

Mr. Sanford replied that he didn't know but that Mr. Ogle would secure that information. Mr. Sanford stated that the Association's Air Pollution Committee would be meeting in December and that the Authority's staff would be invited to be present.

The Chairman thanked Mr. Sanford for a copy of the report and stated that the Authority hoped that the Association's committee would produce methods that will solve the smoke and fallout problems now present in many lumber mill areas.

PORTLAND RE: KENTON DISTRICT CINDERS AND FLYASH

The Chairman requested Mr. Whitsell to report on the Kenton District complaint investigation.

Mr. Whitsell reported that the staff began area investigations after the July 14th, meeting and had located fallout stations to determine the amount and character of the fallout in that area. He explained that the chief complaint concerns cinders and that the three alleged sources are the Portland Shingle Company, M and M Woodworking Company and Nicolai Manufacturing Company. Mr. Whitsell reported ~~XX~~ the three companies have been contacted and that the Nicolai Manufacturing Company recognized there was still some sander dust escaping from the tops of their cyclones, although the company has spent considerable money already in attempting to control the discharge. However, he explained that the company believed they were not responsible for the major part of the fallout existing in the Kenton district. Mr. Whitsell stated that the situation was similar at the M and M Woodworking Company and that the company indicated that they were willing to cooperate with the Authority but at the same time did not feel that they were discharging anything which could account for the complaints in the area.

Mr. Whitsell advised the Authority that he could not talk with the Manager of the Portland Shingle Company since he was in the east; however, he discussed the problem with the plant superintendent and learned that the company was aware of the problem with their waste burner and that the company had at an earlier date requested assistance from our staff.

ABI228

MULTNOMAH COUNTY RE: BURNING REFUSE DUMPS.

Dr. D. B. Charlton, Charlton Laboratories, reported the burning of raw garbage at a refuse dump about 200 yards east of the Northwest Nut Growers plant. He explained that garbage of all types was being burned and great quantities of smoke is emitted from this operation. Dr. Charlton stated that he wished this matter could be investigated.

The Chairman asked Mr. Hatchard if the staff had complaints regarding this dump. Mr. Hatchard replied that he had talked with Dr. Charlton about a month ago regarding several dumps located north of Portland where refuse is burned and that a tour of the area had been made to determine if the previous refuse burning operation was going on.

Mr. Hatchard explained that there was no burning at the former Seivert refuse dump. However, there were a number of other burning refuse dumps operating and that the Multnomah County Health Department has been maintaining routine inspections of all refuse burning dumps in the county. Mr. Hatchard reported that he had talked with Mr. Noel McKeehan, Sr. Sanitarian, Multnomah County Health Department who assured the Authority no garbage burning was being conducted and that the Authority had not received complaints from property owners in that vicinity.

Mr. James Nelson representing Northwest Nut Growers was present and stated that about two years ago his firm had made a fallout study and placed it on file with the Authority for their information. He explained since that time the situation has not improved and that the Northwest Nut Growers operate under a continual fallout of half burned cedar cinders and that this deposited material plugs the rain gutters and also sifts into the buildings. Mr. Nelson explained that he had talked with a sheet metal company and was told this problem could be overcome with proper collectors but nothing has been done as yet. He advised the Authority that many business concerns are suffering from this refuse dump located east of their plant but that it wasn't affecting their plant at this time. He stated it was hoped the Authority would effect some improvement in the condition now present in their area.

The Chairman asked if all this burning was located outside the city limits.

Mr. Hatchard replied that the refuse burning areas were north of Columbia Boulevard outside the city.

Mr. Dixon asked if complaints had been received by the Authority.

The Chairman explained that no specific complaints had been received regarding the refuse burning but the Authority had received a complaint signed by about 150 Kenton District residents.

The Chairman requested Dr. Charlton to submit his complaint in writing to the Authority for the record.

Mr. Wendel suggested that the staff investigate the burning refuse dumps and submit a report at the next meeting.

Mr. Hatchard stated that the Multnomah County Planning Commission and the Health Department would be interested in the matter and that the staff would contact these agencies.

The Chairman stated that the Authority would expect a report from the staff at the next meeting.

PORTLAND RE: RICH MANUFACTURING COMPANY

The Secretary stated that a letter had been received from J. Gullickson, 725 N. Watts St., Portland, Oregon, transmitting a complaint signed by 49 residents which alleged that the smoke and odor from the Rich Manufacturing Company was causing nuisance conditions.

The Chairman asked the Secretary if this was close to the Kenton District. The Secretary replied that the company was located on Columbia Blvd., near Albina Avenue which is east of Kenton district.

Mr. Dixon suggested that the Authority's staff follow this petition up and make a report on this as soon as possible.

The Chairman reminded the Authority that this complaint involves the question brought up sometime ago regarding what extent we could work within the city of Portland and that it was not our wish to complicate matters and confuse the relationship with the city.

ABI 228

The Secretary stated that the Authority has been referring complaints within Portland to the City officials unless the complaint claimed human health injury.

The Chairman asked if it would be proper to transmit this petition to the Mayor and City Council for their investigation of the matter with the understanding that the Authority would assist if requested.

MOTION RE: RICH MANUFACTURING COMPANY

It was MOVED by Mr. Dixon and seconded by Mr. West and carried that this matter be referred to the Mayor and City Council of Portland with the offer of cooperation and assistance of the Air Pollution Authority.

PORTLAND RE: PABCO ROOFING COMPANY

The Secretary stated that a letter from E. A. Bird, Secretary, Metal Trades Council of Portland and Vicinity had been referred to the Authority on October 27, 1954 by the State Industrial Accident Commission and that a complaint petition enclosed with the letter alleged that the fumes and smoke from the Pabco Roofing Company, 6350 N.W. Front Ave., were injurious to the health of the employees of the Penn Salt Company, 6400 N. W. Front. The Secretary advised that the complaint was signed by nine union officials and 150 union members.

Mr. Al Bird of Portland Metal Trades, 410 Labor Temple, appeared at the meeting and stated that employees at Pennsylvania Salt Manufacturing Company have become ill due to fumes from the Pabco Roofing Company operations and that it was difficult to keep employees on the job under these conditions. He stated the atmosphere becomes so heavy with these fumes that visibility was affected and an oily scum which seems to attack the paint gathers on the cars parked nearby. Mr. Bird emphasized that this condition is definitely a health hazard and for that reason was first referred to the State Industrial Accident Commission.

Mr. John T. Sharkey, employee of Pennsylvania Salt Company, stated that Pabco has a stack about three stories high and when the asphalt fumes are released during southerly winds these fumes seem to enter right into Penn Salt Plant's enclosed working

rooms and that within 12 or 13 minutes working under those conditions employees develop headaches and nausea and at times in 30 to 45 minutes even chest pains occur. Mr. Sharkey stated that these fumes are more intensive at night than in the daytime and that on the swing shift some employees have become so ill it was almost impossible to stay on the job. He reported that the employees were very much concerned about this condition and that their union is very interested in the health and welfare of its employees. He read an excerpt from an article entitled "Cancer at Work" by Dr. H. Abrams which pointed out that the asphalt fumes cause a higher incidence of lung cancer to workers exposed to such fumes.

ARI228

Mr. Stores Waterman of Pennsylvania Salt stated that he thought Mr. Bird and Mr. Sharkey had expressed vividly employees' complaints and that his company had hoped that improvements would be made so that official action would not be needed. Mr. Waterman advised that the oily fumes and dust in the air settles on the high voltage equipment in their plant and that causes a hazardous condition to their employees and property since explosions could occur. He explained that they tried to keep the high voltage installation clean but since their plant operates 24 hours a day continuously it is almost impossible.

Mr. Waterman also reported that an oily substance covered cars, buildings, shrubs and any materials which may be stored in the open.

Mr. Wendel asked if this complaint had been taken up with Pabco Company's head office in San Francisco.

Mr. Waterman replied they had taken this up through the Pabco Portland office.

Mr. Hatchard said that he believed the efforts of both management and the employees' union had caused Pabco to consider methods for the control of their fumes since Mr. D. C. Bird, Portland Pabco Manager had advised the Authority's staff on November 5, 1954, that their company had authorized the installation of fume control equipment.

Mr. Hatchard stated that the Pabco Company had a consultant, C. E. Lapple, Stanford Research Institute, study the problem and that his recommendations were being followed.

Mr. Hatchard reported that the Drew Engineering Company, 809 N. E. Lombard Street

Portland, Oregon, was designing the project and that the installation of the fume control on the first asphalt saturator tank would be completed within six to eight weeks.

MOTION RE: PABCO ROOFING COMPANY

It was MOVED by Mr. Wendel and seconded by Mr. Dixon and carried that the Authority's staff investigate the conditions in cooperation with the City of Portland and if Pabco does not proceed with the fume control system to arrange for a special meeting of the Authority to consider the matter further.

The Chairman added that the Authority will expect a progress report at the next meeting and he requested the gentlemen who represented the employees of Penn Salt Company to keep the Authority advised on the situation in the interim.

ASPHALT PAVING PLANTS RE: STATUS OF DUST AND VAPOR CONTROL

The Chairman requested Mr. Hatchard to report on the efforts of the owners of the asphalt paving plants to reduce the dust and vapor discharges. Mr. Hatchard reported that the staff had investigated the discharges from eight paving plants during the summer and that in Eugene Mr. Byrnes, owner of the Byrnes Paving Plant, had installed a Madsen type water scrubber that had substantially reduced the dust and vapor discharges. He explained that District Engineer Merryman had collected filter samples before and after improvements were made; that although significant improvement had occurred it was not yet clear whether the nuisance conditions had ceased.

Mr. Hatchard explained that Mr. T.M. Wildish had advised the Authority that a water scrubber had been secured from the Madsen Company; however, the staff had not collected filter samples after the scrubber had been installed. Mr. Hatchard reported that one of the State Highway's portable paving plants had started operation approximately 1,000 feet east of the Byrnes Paving Plant; however, it was observed that excessive discharges were occurring and District Engineer Merryman discussed the matter with the maintenance superintendent and the plant was moved to a more remote location.

Mr. Hatchard stated that complaints had been received regarding the operation of

the Highway Commission's portable paving plants in east Tillamook and North Bend. He stated that the staff investigated the conditions and the paving plants were moved to more isolated regions where the dust and vapor discharges would cause no nuisance.

The Authority received complaints from the Forest Park Zoning Commission, Mr. Hatchard continued, which involved the discharges from the Babler and Roger Company's paving plant. He explained that this particular paving plant had already been equipped with a Madsen type water scrubber; however, it appeared that an insufficient quantity of water was being provided to the scrubber. The plant ceased operating at this location before it was determined whether adequate improvements had been made. Mr. Hatchard reported that the Parker Schram Paving Plant located at N.E. Cully and Columbia Boulevard had installed improvements to their dust control system; however, staff investigations after the improvements indicated that further corrections would be needed to eliminate nuisance conditions.

Mr. Hatchard advised the Authority that during the past two years the investigation of 14 paving plants had been made and he emphasized that the nuisance conditions caused by these plants could have been prevented if the owners had:

1. Provided control equipment before paving operations started or;
2. Had located these plants in areas far enough away from other land uses.

He advised the Authority that the staff had secured data regarding the general conditions under which nuisance conditions are created by paving plant operations. In order to prevent recurrence of such conditions in the future he suggested that this information be provided to the Associated General Contractors and to the Oregon Highway Commission.

Mr. Ray Beeler, representing the Associated General Contractors, advised the Authority that the various owners of the paving plants operating in the area had effected dust control improvements and he promised that his association would continue to work towards the prevention of future nuisance conditions. He pointed out that often it is not easy for the paving plant owner to satisfactorily control the plant discharges under a variety of field conditions. Mr. Beeler requested that his organization be

ABI228

advised of the meetings of the Authority in order that they might be represented. The Chairman directed the Secretary to forward the information regarding the prevention of nuisance conditions from paving plants to the Associated General Contractors and the State Highway Commission.

HUNTINGTON RE: DUST DEPOSITION

The Secretary stated the Authority had received a complaint-letter signed by about 120 Huntington residents alleging that cement dust from the Oregon Portland Cement plant in Lime, Oregon, was being deposited on their properties and was causing nuisance conditions and that the complainants requested an investigation and correction of this condition.

The Chairman asked if the representatives of the Oregon Portland Cement Company wanted to make any statement.

Mr. Frederic Yerke stated that the Lime plant had been operating 31 years and at present has just the one kiln similar to the original kiln at the Oswego plant and he pointed out that the area in the Huntington vicinity is one characterized by extremely high natural lime deposits. Further, he informed the Authority that this is an extremely windy location and a constantly shifting dust condition which contributes much to air pollution alone. Mr. Yerke stated that the company seriously doubted if the Lime plant was contributing substantially to the dust deposition in the city of Huntington.

Mr. Wendel asked if this case could not be referred to the Authority's staff for investigation.

Mr. Hatchard explained that when the complaint was received we were not able to do much sampling due to heavy commitments at the time; however, District Engineer Patterson had made a preliminary survey of area conditions and had located a fallout station.

Mr. Hatchard stated that fallout information is being collected but the fallout results alone would not be conclusive since no separation can be made of lime from the plant or from natural sources. He explained that special type sampling procedures would

be necessary and that it would be next spring before such a study could be started. The Secretary was instructed to advise the people of Huntington that studies will be made when possible.

PORTLAND RE: CITY OF PORTLAND AIR POLLUTION COMMITTEE

The Chairman requested Mr. Hatchard to report activities of the City of Portland's Air Pollution Committee.

Mr. Hatchard explained that Mr. Whitsell and he had met with the members of the City of Portland Committee in July to discuss the Authority's program and explain the results of air sampling and investigation in the Portland area. Mr. Hatchard stated that four members of the Committee had been appointed early in the summer and that at this time the committee was mostly engaged in educating the new members. He explained that the City Council had transferred the committee from Building Department to the City Health Department and that the Health Department was investigating air pollution complaints mostly to advise the committee regarding the type of problems existing in the city.

Mr. Hatchard reported that the Authority has been reporting complaints received in Portland to the Health Department so the Portland Air Pollution Committee would be advised.

DATE OF NEXT MEETING

The Secretary was instructed to arrange a regular meeting date during the latter part of January 1955.

MEETING ADJOURNED

There being no further business, the meeting adjourned at 5:00 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, Jr., Secretary  
Oregon State Air Pollution Authority

SPECIAL MEETING OF THE  
OREGON AIR POLLUTION AUTHORITY

MARCH 2, 1955

ABI 228

A special meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M. Wednesday, March 2, 1955, in Room 36, State Office Bldg., 1400 S.W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Dr. Harold M. Erickson, Merle S. West, Harold F. Wendel, Members, and Curtiss M. Everts, Jr., Secretary, R. E. Hatchard, Chief of the Air Pollution Control Section, State Board of Health, W. J. Whitsell, Associate Sanitary Engineer, State Board of Health, Frank P. Terraglio and Eugene E. Lee, Chemists, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The Secretary summarized the minutes of the November 10, 1954 meeting. The Chairman declared that if there were no corrections or additions the minutes would stand approved as prepared by the Secretary.

ELECTION OF OFFICERS

The Chairman informed the members that the time had come again when officers must be elected.

It was MOVED by Mr. Wendel and seconded by Dr. Erickson and carried that Carl E. Green be elected Chairman of the Oregon State Air Pollution Authority for the year of 1955.

It was MOVED by Dr. Erickson and seconded by Mr. Wendel and carried that Mr. West be elected Vice-Chairman of the Authority for the year 1955.

REYNOLDS METALS COMPANY

George W. Mead, Attorney, Public Service Bldg., Portland, Oregon, representing Paul Martin, requested to be heard relative to complaints against the Reynolds Metals Company. He stated that the Martins are owners of a large cattle ranch of approximately 1500 acres located in Multnomah County immediately east of the

Troutdale aluminum plant and that it was their purpose to register a formal complaint before the Authority with respect to the operations of Reynolds Metals Company because of the trespass and nuisance which the Martins have endured uninterruptedly since the operation of the plant. Mr. Mead explained that the U.S. District Court in Oregon has on file all records available from the civil actions brought by the Martins and others who have been damaged. He also stated that the Martins were put out of business in 1946, had to remove the cattle from the property and had to move away from the property themselves because they were physically affected. Mr. Mead stated further that since 1951 the Martins have had a test herd of about 300 cattle on the property and that every six months or so they have had the cattle tested and all were found to be suffering from fluorosis. He reported that the condition still prevails and that this statement is supported by the record of Civil Suit No. 6151, U. S. District Court.

The Chairman read the policy of the Authority with respect to the procedure for handling complaints and advised Mr. Mead that the Authority would be glad to hear the factual data at a future meeting supporting the complaint.

Mr. Mead replied that he would arrange for the presentation; however, he explained that his appearance before the Authority today was only to get on record and to determine what the Authority will do about the situation.

Mr. Mead expressed his concern regarding the actions of the Joint Ways and Means Subcommittee over the 1955-57 biennial budget of the Authority and hoped that all funds requested had been approved. He stated that if the budget request had not been approved by the Subcommittee he would assist in any way possible as there is a great need for the Authority to investigate the fluoride situation in the Troutdale area. Mr. Mead reiterated again that he had not intended to present supporting information on this complaint at this time for it would take a weeks' time or more but that he wanted to be on record regarding the complaint.

The Chairman advised Mr. Mead that a written complaint would have to be submitted

to the Authority if an investigation of the situation is to be made.

Mr. Mead replied that he could file a complaint with the Authority today if desired but that the fluoride problem is a nebulous thing and difficult to understand and that he was not sure what form of complaint should be prepared.

Mr. Mead explained that Judge James Alger Fee made findings of fact which brought out that the corrective measures instituted by Reynolds Metals Company were ineffective and that in this particular case the Martins and others were awarded damages. He further explained that the findings in the case in which Judge Fee presided showed enormous quantities of fluorine being emitted from the plant and that the findings from January through December 1947 were that 2800 pounds of fluoride per day were being released and that it increased to 3900 pounds in September 1950. Mr. Mead stated that the fluoride released was reduced because the Governor had instituted an agricultural and livestock study of fluoride damage in Troutdale and that a large sum of money was spent on the program. He reported that the fluoride emissions were reduced to around 1,000 to 1,100 pounds per day and it was last reported that 700 pounds of fluorine per day are emitted from the plant. He stated that Reynolds Metals Company may say it was evidence of good faith, that they now have the fluoride controlled and would get an expert to say no damage is being done.

Mr. Mead pointed out that prior to the time the controls were installed all evidence showed that the livestock had ingested large amounts of fluorine and that his point was that controls have helped and that now instead of fluoride discharges in the thousands of pounds per day, prior to the controls, it has been reduced to 700 pounds per day according to plant estimates. However, Mr. Mead continued, damage is still resulting and the test herd show signs of fluorosis and unmistakable evidence of considerable damage and that these statements are findings of fact based on months of testimony. Mr. Mead added that he thought the matter to be sufficiently serious at this time to justify a careful examination by the Air Pollution Authority since, as a public authority, the Authority may

ABI228  
ABI228

wish to be on record with respect to these facts that show and determine that there is still toxic materials emitted from the plant which are trespassing and causing damage at this present time. Mr. Mead emphasized that this is a much more serious aspect than would normally be called a common nuisance and it surely is time that some public authority go into this matter and do a thorough investigation.

Chairman Green asked Mr. Hatchard if he would please review briefly the work that has been done to date in that area.

Mr. Hatchard reviewed briefly the air sampling activities in the Troutdale-Corbett area explaining that the Authority's staff had been conducting an area survey since July 1953, collecting air samples from seven stations. He stated that the location of these stations was selected to supplement the Oregon State College Agricultural Experiment Station data regarding fluoride concentrations found at test plots carried on from 1948 to 1954. He stated that the sampling data is published to July 1, 1954 in the Authority's First Biennial Report and that supplementary reports have been presented at previous meetings.

Mr. Hatchard pointed out that during the progress of the area survey the staff had consulted with F. E. Price, Dean, School of Agriculture, and Dr. O.C. Compton, Associate Horticulturist, Oregon State College, Agricultural Experiment Station, and Dr. M. B. McKay, resident in the Troutdale-Corbett vicinity. He explained that Oregon State College Agricultural Experiment Station reports showed a need for air sampling at test plot stations in the direction east-southeast of the plant and that our work has been done in that direction. Mr. Hatchard stated that these activities were a part of the area survey to determine present conditions and not based upon complaints since to date no written complaints have been received regarding fluoride damage to agriculture or livestock in the Troutdale-Corbett vicinity. He reported that no air sampling has been conducted since August 1954 due to the investigation on Sauvie Island and other commitments.

ARI228

Mr. Mead again stated that they are not satisfied with the agriculture and live-stock studies done by Dean Price's staff and that he believed there was no co-operation rendered in this situation. He stated that when the Martins entered into the case they appealed to Dean Price and the University of Oregon Medical School to do research work for them and offered to pay for it but they were unable to obtain cooperation. Mr. Mead implied that it finally was disclosed that they were doing research work for the aluminum companies.

He reported that the Martins then had to seek opinions of veterinarians and doctors in the east and had research work done outside of the State of Oregon and expressed the opinion that the Authority had an important duty to perform and should not rely on other data sources. Mr. Mead concluded that there is no secret about the fluoride situation, and it is common knowledge in Troutdale vicinity that Judge Fee found there is contamination discharged from the Reynolds Metals Company's plant.

Mr. Wendel asked Mr. Mead the basis of these conclusions.

Mr. Mead replied that it was based upon the admissions the company itself made regarding the fluoride quantity discharged, the opinion of expert veterinarians brought here from the east to testify in court and the opinion of pathologists that the cattle were damaged.

Mr. Wendel said he would like to explain that during the consideration of the Sauvie Island fluoride sampling the only matters brought before the Authority were hearsay and innuendo and that there was never any evidence of bias on the part of the Oregon State College or Washington State College.

Mr. West added that it is a serious charge to make that a college was biased and that it was his understanding that colleges, engaged in research projects are searching for the facts and that their conclusions would be based only upon the facts.

Mr. Mead retorted that he did not say "bias", and he repeated that they did not get

cooperation from the colleges.

Mr. West commented that if Mr. Mead did not use the word "bias" that he implied that meaning.

Chairman Green explained that recent agricultural and livestock research on Sauvie Island was supported by a grant from Alcoa and that the Authority arranged a special meeting to allow Mr. H. Fraser and others to present factual data to the Authority that would support their objections to the conclusions made in the colleges' report. He stated that it has been difficult to establish the truth by the Sauvie Island residents because the data presented at the special meeting, September 28, 1954, regarding Sauvie Island was all hearsay.

Mr. Mead emphasized that his statements regarding fluoride in Troutdale were not innuendo but facts supported by the courts. He stated, however, that Reynolds might believe that the Martin claim is unjust and did not want to cooperate but the damages are real, so real that they have destroyed the Martin property.

Mr. Martin, he explained, recovered about \$47,000 damages plus \$900.00 court cost which just about paid for their experts.

Mr. Mead stated that numerous people had come to him with fluoride complaints in the Troutdale area and that he also had a number of smaller cases involving the Reynolds Metals Company that were settled out of court but the company did not admit liability in any of these cases.

Dr. Erickson asked if the findings of fact made by Judge J.A. Fee would be submitted to the Authority.

Mr. Mead replied that the transcript certainly was available together with depositions from many witnesses.

Dr. Erickson stated he understood Mr. Mead to say they were dealing with a toxic substance endangering the health of animals and humans.

Mr. Mead said that the case he referred to was a case involving only cattle but that there are three cases pending which involve human health damage and there is

plenty of evidence and medical testimony from physicians to support the cases.

Dr. Erickson then asked if the case just referred to revealed any findings on human beings.

Mr. Mead replied that it did not.

Mr. Wendel advised Mr. Mead that if the complaint is submitted to the Authority in accordance with the procedure already explained that it will receive attention.

The Chairman explained that the Authority's investigation would necessarily be limited by budget and staff available.

Mr. West advised Mr. Mead that some of his assertions and charges were rather serious and should be proven.

Mr. Mead wanted to know if a letter from Mr. Martin stating he has been damaged or is being damaged now would be sufficient, to comply with requirement of a written complaint.

The Chairman advised Mr. Mead that was the correct procedure.

Mr. Mead said he would submit a formal letter bringing this situation to the attention of the Authority.

Mr. Fredric Yerke, Attorney, American Bank Bldg., Portland, Oregon, representing Reynolds Metals asked to be heard stating this matter is one very vigorously disputed between the parties and their attorneys. He stated that Oregon State College was requested to do work on the Martin ranch and that Dr. Compton went on the ranch in 1951 and collected samples and the results were introduced at the trial but they were found to be lower in fluorine content than necessary to cause fluorine poisoning in cattle. Mr. Yerke stated that Oregon State College carried on extensive studies in the area but as far as he knew there was only one visit made to the Martin property. He stated further that insofar as the research work was concerned Reynolds Metals Company has never supported any research at either Oregon State or Washington State Colleges. He explained that at the time the plant was constructed in 1941 Mr. Martin was running a dairy ranch and continued to use the property for eight years and then he bought land one mile northwest of the plant,

ABI 228

then purchased another parcel of land known as Reed Island about 3 miles to the east of the plant.

Mr. Yerke explained further that one year later Martin bought land east of the Sandy River, about 900 acres there, and in another year he bought land nearer to the plant, about on-half mile away from the plant. He stated that this presents a situation covering three and a half years wherein a man and his family had been buying property closer and closer to the plant. Mr. Yerke stated that the plant was constructed by Alcoa for the U.S. Defense Plant Corporation and operated the plant from 1941 to 1945 and the plant was closed down from 1945 to 1946 until September when Reynolds Metals Company leased the plant from the Government. He explained that after a fume control system was installed Reynolds started operating the plant and that the company's first contact with the Martins was in 1946 or 1947. He stated that some foliage sampling was done then but was discontinued in 1948 because of a dispute. Mr. Yerke advised the Authority that from that time on Reynolds have had claims presented by Martin and that first there was the law suit filed in August 1951 to cover the period from 1946 up to 1951. He stated that this case was tried by Judge Fee more than two years ago and that the decision rendered by Judge Fee was prior to August 1951 with the exception of one case and that Judge Fee refused to award damages after 1951 for reasons of his own. The main case Mr. Mead referred to, Mr. Yerke advised the Authority, is over two years ago and one case was over nine years ago. Therefore, he stated, this record is irrelevant to any situation that is occurring at this time and that Reynolds has competent medical testimony in every phase.

He pointed out that the amount of fluorine found by the Authority's staff one mile southeast of the plant was less than one part per billion whereas fluorine on top of the State Office Bldg., measured four parts per billion and that Reynolds have no doubt that no damage has been caused since August 1951 to the Martins. Mr. Yerke requested formally that if the Authority is going to consider the Troutdale fluoride matter that Dean Price, Dr. Compton and Dr. Remmert be requested to carry on the

study of agriculture and livestock since these are well qualified men in their respective fields and their results will be reliable. Mr. Yerke added that the Authority should also retain a veterinarian.

Mr. Yerke stated that for the months of June, July, August and September of 1954 the fluorine content of the pasture one mile east of the Sandy River averaged only 35 parts per million. Mr. Yerke requested that the Authority secure the services of experts, make investigations and run necessary tests and then study the scientific results.

The Chairman concluded this case by explaining the Authority had a long agenda to review and it would be advisable for the Board to set a date in the future for further hearings on this matter.

Mr. Wendel stated that he thought the Authority should have a written complaint on record to establish this case for a special hearing and that we will have legal counsel at such a time who will advise us on all phases. Mr. Wendel advised both attorneys that the Authority was desirous of learning the facts on both sides.

EUGENE: CITY AIR POLLUTION COMMITTEE ACTIVITIES

The Chairman requested a report on the activities of the Eugene Air Pollution Committee.

Mr. Hatchard stated that Mayor Johnson had appointed a nine man committee during December 1954, to study the cinder and flyash complaint in west Eugene and also consider the city wide situation. Mr. Hatchard explained that the Authority's staff has met with the committee several times and that a survey of lumber mills in west Eugene had been completed and a report prepared. He noted that the survey of the Eugene mills disclosed that 5 of the 10 mills contributing to the excessive cinders and flyash conditions had recently installed equipment that would reduce the quantity of wood waste burned. He also explained that the City of Eugene had requested the Air Pollution Authority to cooperatively plan for extension of air sampling to secure additional data.

ABI228

NORTH BEND: CINDER AND FLYASH CONTROL RESULTS

The Chairman requested a progress report on the North Bend cinder problem.

Mr. Hatchard reviewed the area study by the staff and explained that the Weyerhaeuser mill had installed their cinder control system in September and since that time the fallout had reduced. He pointed out that the fallout varied between 1400 and 1700 tons per square mile per month during the winter months; however, during a comparable period after the control system was installed the fallout had reduced to 38 tons per square mile per month. He reported that the Irwin-Lyons mill is operating less frequently at this time which has helped to cut the emissions and that the Menasha Plywood Company had been delayed in starting their wood flour by-product plant. However, that next samples would show if the change has caused a reduction.

As a matter of interest Mr. Wendel asked if this work could have been accomplished without the air pollution law.

Mr. Hatchard replied that he doubted that it would have been since an extensive study was needed to show the sources.

OSWEGO: AREA SAMPLING DATA, DESCRIBING CEMENT DUST DEPOSITION.

The Chairman requested a summary of the area survey in Oswego.

Mr. Whitsell explained that since the last Authority meeting the staff expanded the directional air sampling in the Oswego vicinity by setting up two new stations on the roof of the fire station and the Forrest Hills School. He stated that directional sampling at the Elementary School previously had shown that on an average of two to three times as much dust was present when the wind was from the cement plant to the station. He stated that subsequent sampling showed a repetition of the cement was from the plant to the station compared with the other directions. He explained that the previous sampling had shown the higher concentration was cement dust since the lime present accounted for 25 to 45% of the sample. He pointed out that the most recent series showed that over 30% of the samples collected was lime and that

the ordinary cement contained about 60% lime. It can be concluded that 53% of the particulate material was cement dust.

Mr. Whitsett explained that the purpose in establishing the sampling station at Forrest Hills School was to determine what level of dust and calcium oxide concentrations would be indicative of an area where nuisance conditions are not a problem to the residents. He reported that the average lime concentrations found at the Forrest Hills station on wind from the direction of the plant is 23 micrograms per cubic meter compared with 110 micrograms per cubic meter found at the Elementary School. He stated that the staff will be able to submit recommendations to the Oregon Portland Cement Company for additional dust control.

The Chairman invited representatives of the Oregon Portland Cement Company to report on their progress.

Mr. Yerke advised the Authority that they do not have their report ready since Mr. Leche is in the east and could not be present to give a report.

The Chairman stated the Authority realized there was no time to prepare a report since the meeting had been called on very short notice.

PORTLAND: ASPHALT ROOFING PLANT FUME DISCHARGE

The Chairman requested a report regarding the status of fume problems from the Pabco plant discharge.

Mr. Terraglio summarized the Pabco Roofing Company complaint registered by the employees of Pennsylvania Salt Mfg. Co., and stated that a survey was undertaken by the staff to determine levels of contaminants existing in the area. Mr. Terraglio explained that only the physical properties such as viscosity, softening point, weight etc., were of importance to asphalt users and that the exact composition of asphalt was unknown. He reported that samples have been collected continuously at a station using a directional high volume sampling unit and other equipment to learn the levels of particulate matter, sulfur dioxide and other contaminants present.

AB1228

He stated that the results have shown a high level of particulate material present and that sampling was continuing.

Mr. Hatchard explained that at the last meeting there was the health concern expressed by the Pennsylvania Salt employees; that Dr. Sullivan was advised of this complaint and he had requested the employees to submit detailed information describing their individual health effects to him.

Mr. Hatchard reported that there was considerable delay in preparing these statements but that Dr. Sullivan received 92 employee statements on February 19th. He explained that Dr. Sullivan was out of town and unable to attend the meeting.

The Chairman asked Mr. Hatchard if satisfactory progress was being made.

Mr. Hatchard stated he thought that Pabco is progressing with the installation of the three unit filter systems to collect the fumes and condensates from the saturators.

Mr. Stores Waterman of Pennsylvania Salt Mfg. Company advised the Authority that their cooperation was appreciated but that complaints were still being received from their employees that they are affected whenever the wind blows in the direction that brings Pabco fumes into the employees' work area. He stated this progress report gave hope that there would be elimination of condensed material and odor which has had a marked physiological effect on the employees. He also wished to be advised when the Authority would meet again.

Chairman Green assured him he would be notified.

PORTLAND: HYDROGEN SULFIDE ODOR PROBLEM IN SOUTHWEST AREA

The Chairman requested a report on the hydrogen sulfide problem in southwest Portland.

Mr. Hatchard reported that this problem had appeared before but due to the intermittent nature of the emission it had proven very difficult to set up equipment to sample before the fumes dispersed. He stated that the city of Portland and the Authority received many complaints and that by reviewing the previous field investigations the probable source was found to be a chemical plant located near

the Willamette River at S.W. Carruthers Street. He explained that arrangements were made for the plant management to notify the staff when they expected to produce the lime - sulfur spray since the hydrogen sulfide is released intermittently then. The staff was at the plant site February 19th, and established three sampling stations; however, it proved to be a good day for the plant to operate since the discharges were being dispersed. He reported that on February 23rd, and 24th, Chemist Lee collected hydrogen sulfide samples from the area and found concentrations from 0 to 8 parts per million.

Chairman Green pointed out to the members this was not only an odor problem but a toxicity problem as well and he asked if the hydrogen sulfide could be removed from the discharge before going into the atmosphere.

Mr. Hatchard replied that this could be done and that the company is now giving consideration to providing proper scrubbing equipment.

PORTLAND: KENTON DISTRICT SMOKE, FLYASH AND CINDER STUDY

The Chairman requested a report on the smoke, flyash and cinder study in the Kenton District.

Mr. Whitsell reported on this complaint stating that the staff had made a survey of twenty-three industrial establishments and later decided only five had a reasonable chance to contribute to air pollution. Mr. Whitsell stated that the information secured from these fine plants was as follows:

Portland Shingle Company

The plant was not in operation at the time of the visit but there was considerable evidence to show that they were contributing heavy discharges in the nature of cedar sawdust.

Nicolai Door

It was noted that some of their cyclones used for handling the sawdust from the saws

ABI228

and other equipment was not collecting too well since much material escaped. The steam plant stack produced some smoke but it was not determined if it produced enough to be a problem.

M & M Plywood Company

One cyclone collector was discharging sawdust and not removing as much material as it should. The steam plant uses wood waste and does discharge excessive smoke but the cinder and flyash discharge is unknown.

Mayhew Company

No burning was being done at this plant and the cyclones were performing very well.

Montag Company

There are two possible sources of pollution at this plant, fumes from the paint spray booth and dust from the foundry pouring operation. The plant management believes that the fumes from the paint spray booth are now under control since deposition on the automobiles parked in the vicinity has ceased. The foundry pouring operation occurs for only one hour each day. Mr. Whitsell stated he did not believe that discharges from this plant are a major source of excessive fallout occurring in the Kenton District.

PORTLAND: DUST AND FUME DISCHARGE FROM FOUNDRY IN NORTH COLUMBIA BLVD., & ALBINA AVE.

The Chairman requested a report regarding the dust and fume discharge from the Rich Mfg. Company.

Mr. Hatchard reported that the complaint was referred to the Portland City Council and on December 24, the city requested the Authority's assistance and that a plant survey was made in cooperation with Mr. Brooks, of the Portland Health Bureau. He explained that Mr. Brooks and he had visited Rich Mfg. Company and had conferred with Mr. Fred Menzel, Ass't Plant Mgr. He stated that Mr. Brooks had contacted about fifteen complainants to determine if the complaint was mostly regarding dust, fumes or odor and it was learned that the complaint involved the plant's operation in general. He explained due to the prevailing wind at this time of the year and other commitments no sampling has been carried on in the complainants' area to date.

Mr. Fred Menzel, Rich Manufacturing Company appeared before the Authority and stated that his company did not know which discharges needed control. He stated they realize this is a problem "not of smog but a smoke and dust nuisance". He had contacted two firms for their recommendations as to what sort of equipment could be installed. He further said that they have received one quotation proposal for installing a scrubber type control unit on the cupola but that they had not received any replies from either of the companies as yet regarding the dipping operation which causes the creosote type odor.

PORTLAND: SUPERPHOSPHATE PLANT FLUORIDE DISCHARGE

The Chairman requested a report of the studies of the superphosphate fluoride survey. Mr. Terraglio explained that this was the first opportunity for the staff to make an area study before the plant started and that an automatic impinger has been located at a station at the former Oregon Shipyard grounds and on a Sauvie Island station located about  $1\frac{1}{2}$  miles northwest of the superphosphate plant. He reported that the sampling is continuing.

Mr. Hatchard stated that Mr. Hughes of Hughes-Johnson Chemical Company had conferred with the staff to determine what would be his solution for the fluoride discharge problem and that the management realized the need for control, were working on the control system and that Mr. Hughes had agreed to notify the Authority when test operations occur so that air samples could be collected.

REQUESTS FROM CITY OF PORTLAND FOR JOINT INVESTIGATION OF NEW COMPLAINTS

The Secretary advised the Authority that three requests had been received for assistance in connection with investigation of atmospheric contamination originating in the City of Portland.

He explained that Mr. Grenfell, representative from Portland, requested the Authority to take some action regarding conditions arising from the roasting of coffee, and that the Authority had received a complaint from Dr. Dewey regarding soot, cinders and flyash being emitted from Northwest Electric Plant and the Jones Lumber Company. The Secretary stated the third situation involved excessive smoke discharge from

ABI 228

the B. P. Johns Furniture Company and that joint field investigations would be made by the city and Authority representatives as soon as schedules will permit.

ASPHALT PAVING PLANT DUST AND FUME DISCHARGES

The Chairman asked if the Authority staff was working on this problem.

Mr. Hatchard informed him that a memorandum had been prepared on the prevention of dust and fume problems associated with the location of paving plants not equipped with adequate dust control and these recommendations had been sent to the Associated General Contractors and State Highway Commission.

He explained that the Authority had received a request from the State Highway Commission for information regarding control equipment for asphalt plants and that all available information had been provided.

ASSOCIATED FOREST INDUSTRIES AIR POLLUTION COMMITTEE

The Chairman stated that he had written to Mr. C. E. Ogle, Secretary-Manager, Associated Forest Industries of Oregon expressing his dissatisfaction in the lack of progress that their air pollution committee has made in working out a method to solve their industry problems. He further added that a reply from Mr. Ogle substantiated this conclusion. The Chairman explained that he did not believe that the Authority was getting the type of cooperation it should have from industry to find some answers for air pollution problems to accomplish something definite, and establish a working program with the Authority.

The members of the Authority agreed that the Authority should look for more assistance from the Associated Forest Industries of Oregon.

Dr. Erickson stated that it seemed to him that the Associated Forest Industries of Oregon was depending upon the individual mill owners to take action on specific problems instead of approaching it as a general industry problem.

Mr. Hatchard explained this to the Authority that the staff had frequent contact with lumber mill owners and since no representative of the Associated Forest Industries of Oregon committee was present he stated that the larger size mills make up the membership and that they use more of the wood waste than the smaller

size mills. He explained that the Association believes that the cinder and flyash problems would be reduced by increased use of wood waste; however, they are considering a much longer time period than present complainants would wait for solution of specific problems.

Mr. Hatchard stated that the problems can be solved as there is sufficient basic data but there is a present need to apply the knowledge to the wigwam waste burner situation.

The Chairman stated that the time would be too far into the future, such as 10 to 20 years away before the wood waste would be used and that the Authority should contact the officers of the committee to promote more activity by the lumber industry.

Mr. West stated that a cooperative effort was the logical procedure instead of each lumber mill owner having to develop individual solutions.

Dr. Erickson stated it appeared to him a matter of education and that it would be worthwhile to get together and discuss the problem and also get the Association's point of view.

MOTION RE: ASSOCIATED FOREST INDUSTRIES OF OREGON

It was MOVED by Dr. Erickson and seconded by Mr. West that the Secretary of the Authority contact Mr. Ogle and meet with the Board of Directors of the Association to arrange a meeting with the Association at the earliest possible date.

SWEET HOME: SANTIAM LUMBER COMPANY CINDER AND FLYASH DISCHARGE

The Secretary informed the members that the Authority had received a complaint-petition signed by 65 residents in the Sweet Home vicinity regarding the discharge of cinders and flyash from the Santiam Lumber Company. The Authority has advised the complainants that studies were underway in that area. The Secretary explained that since these complainants resided outside of Sweet Home and the plant is partly inside the city, a copy of the correspondence has been sent to the city. The Secretary stated that the complainants and the Santiam Lumber Company would be notified of the next regular meeting so they can arrange to be present.

ABI 228

Mr. Hatchard advised the Authority of the District Engineers' survey of the conditions and submitted pictures taken showing the cinder deposition on the complainants' property. He stated that it is clear that the installation of cinder controls are needed and that from the nature of the fallout it appeared that much of the deposition originated with the steam plant. He reported that a letter has been sent to the Santiam Lumber Company explaining the situation and a reply was received saying that it is their intention to take care of the matter and requested the Authority advise regarding cinder control equipment available commercially.

The Chairman asked if the staff had any recommendations to make at this time.

Mr. Hatchard stated that we would like to consider this problem at the next Authority meeting when the data from the fallout station will be available.

DATE OF NEXT MEETING

It was decided that the next meeting of the Authority would be at the call of the Chairman.

MEETING ADJOURNED

There being no further business, the meeting adjourned at 4:30 P. M.

Respectfully submitted,

  
CURTISS M. EVERTS, Jr., Secretary  
Oregon State Air Pollution Authority

## THIRTEENTH MEETING

OF THE

## OREGON AIR POLLUTION AUTHORITY

June 23, 1955

The thirteenth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 1:30 P.M. Thursday, June 23, 1955, in Room 579, State Office Bldg., 1400 S.W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Mr. R. P. Dixon, Dr. Harold M. Erickson, Harold F. Wendel, Members and Curtiss M. Everts, Jr., Secretary, Charles D. Burt, Legal Advisor, R. E. Hatchard, Chief of the Air Pollution Control Section, W. J. Whitsell, Associate Engineer, State Board of Health, Frank P. Terraglio and Eugene E. Lee, Chemists, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The Secretary summarized the minutes of the special meeting of March 2, 1955. The Chairman declared that if there were no corrections or additions the minutes would stand approved as prepared by the Secretary.

TROUTDALE-CORBETT AREA

The Chairman requested the Secretary to read communications received regarding the fluoride problem.

The Secretary read a letter dated March 8, from Paul and Verla Martin in which a formal complaint was entered that the discharges from the Reynolds Metals Company were adversely affecting livestock on their ranch near Troutdale, Oregon.

The Secretary also read a letter dated March 29, from Attorney F.A. Yerke, Jr., representing Reynolds Metals Company which recommended that the Authority collect basic data regarding the fluoride conditions in the vicinity of the Martin ranch and that samples of vegetation be collected and submitted to Oregon State College for analytical purposes. Mr. Yerke's letter also recommended that experienced veterinarians make an immediate inspection of the cattle, collect urine samples from at least twenty head of cattle; that the Martins notify the Authority of

AB1228

any cattle deaths that occurred so that appropriate samples could be collected and analyzed and that the Martins notify the Authority of any sales of animals that were contemplated so that the cattle could be examined and samples collected.

The Secretary also read a letter dated April 11, from Paul Martin requesting immediate action by the Authority on the complaint entered March 8, 1955 and enclosing a copy of the findings of fact, conclusions of law, and judgment rendered by Judge James Alger Fee of the U.S. District Court, in the case of Paul and Verla Martin versus Reynolds Metals Company.

The Chairman then requested a report from the staff regarding the area fluoride studies.

Mr. Whitsell stated that sampling for atmospheric fluorides in the vicinity of the Reynolds Metals Company Plant, Troutdale, Oregon, was resumed April 28, 1955 and that two automatic impingers have been operating day and night since that time except for the period from May 27, to June 6. He stated that an interim report had been prepared including results of the first 160 samples and that a copy of the report had been provided to each member of the Authority.

Mr. Whitsell explained that one automatic impinger was located at the Schutze residence which is 4,000 feet southeast of the aluminum plant and that the second automatic impinger had been operating at the Graham residence located 3,500 feet east southeast of the plant. He stated that both instruments used the standard Smith-Greenberg impingers and were operated at sampling rates between 0.9 and 1.1 cubic feet per minute and that each unit had automatic controls which operated the equipment on regularly repeating cycles.

Mr. Whitsell stated that the weather data included in the report was incomplete since the U.S. Weather Bureau Troutdale data was available only during the daylight hours from 0700 to 1500. He explained that where weather data is more complete in the report that these results are from the staff's own weather

ARI 228

equipment which is also located at the Troutdale Airport. Mr. Whitsell advised that on the last page of the interim report was a tabulation that showed that the fluoride concentrations present, when the wind was from the direction of the aluminum plant, was slightly higher compared with the winds from the opposite direction. He also pointed out that the average fluoride concentration of 1.3 ppb found at the Graham station is 60% higher than the average concentration for all Portland fluoride samples. He explained that the maximum concentration found at the Graham station was 4 parts per billion which is equal to the maximum concentration found in Portland in June 1954.

Mr. Whitsell pointed out that the meaning of these concentrations is still somewhat obscure since extensive research studies have not been carried on relating the effect upon livestock or agriculture in an area to the air fluoride concentration. However, he stated it is known that a few of the more sensitive varieties of the gladioli sustain some leaf damage when grown in an area where the fluoride concentration in the air is from one to two parts per billion.

Mr. Wendel asked if the fluoride air concentrations could be interpreted with regard to their effects on livestock and agriculture.

Mr. Whitsell replied that the exact meaning of the air concentrations was a little obscure; however, it was found that air concentrations coming from the direction of the plant were slightly higher than those when the wind is blowing in an opposite direction for the same station. He added that this is an indirect method and was not conclusive since research activities in other areas have not developed correlations between air concentrations and effects upon livestock or agriculture in the area.

The Chairman asked if there were any statements in the reports made by Oregon State College and Washington State College that would correlate the air concentrations with livestock and agricultural effects.

Mr. Whitsell replied that the colleges' reports did not include that information.

Mr. Wendel stated that he would like to see the Authority send the findings to Oregon State College and request interpretation with regards to livestock and agricultural damage in the vicinity.

Mr. Dixon asked if any studies had been done on livestock in the Troutdale area.

Mr. Whitsell stated that neither Oregon State nor the staff has done any work with regard to fluoride damage to the livestock; however, both the Reynolds Metals Company and plaintiffs in several civil suits had been carrying on independent studies.

Mr. Whitsell explained that the colleges' ability to interpret the air concentrations would depend upon whether they had collected foliage and other samples in the same area where the staff had collected air samples.

The Chairman emphasized that there is a need for correlation so the efforts being devoted to solving the problem will produce usable data. The Chairman asked if there were others present who wished to be heard.

George W. Mead, Attorney, Public Service Bldg., representing Paul Martin stated that he had previously filed a complaint against Reynolds Metals Company before the Authority at the March 2, 1955 meeting for his client, Paul Martin and that the findings of fact have been established by the U.S. District Court bringing out the fact that a serious problem is present. Mr. Mead also stated he and his client were present today to learn what has been done and that he believed a thorough investigation should be carried on.

Mr. Fredric Yerke, Attorney, representing Reynolds Metals Company stated they were not present with the intention of making any explanation at this time of the claims made by the Martins since these matters are being litigated in the Federal and Circuit Courts. Mr. Yerke explained that they have attempted for a period of some months to collect samples on the Martin property to secure data and that the Reynolds Metals Company now has a court order which will permit them to have a team of veterinarians examine the cattle and collect samples on the first

Tuesday of each month. Mr. Yerke assured the Authority that all of the information obtained could be made available to the Authority. He further stated that the Reynolds Metals Company believes their position is sound - that no damage is occurring now and none has appeared for several years.

The Chairman asked if Special Assistant Attorney General Burt had any comment regarding the action to be taken.

Attorney Burt advised the Authority that if the complainants against Reynolds Metals had any information that would shed light on this problem it should be presented but that in the meantime the Authority should make its own independent investigations.

Mr. Wm. M. Fraser, Rt. 1, Box 118, Portland, Oregon appeared before the Authority and stated he had moved about 700 head of cattle to Government Island on the Columbia River with the hope that less fluorine contamination was present in that locality than at Sauvie Island and that he would have a chance to raise livestock but now many of the cattle are dead. He stated that both Mr. Zeh and Mr. Yerke have seen the condition of his cattle and that they know the plant is emitting "poison". He added that there is no safe level for fluoride since it is a cumulative poison. He said it is impossible to breed cattle within the vicinity of an aluminum plant and that he has seen the Martin cattle and they are all lame and dying. He stated the Authority is just stalling along and that the only thing to do is for the Authority to close the Reynolds Metals Company plant.

Mr. Wendel asked how long Mr. Fraser had his cattle on Government Island.

Mr. Fraser replied that he moved the stock from Sauvie Island about two years ago.

Mr. Wendel wanted to know why Mr. Fraser moved his cattle to a place in between two aluminum plants.

Mr. Fraser stated that he thought there were no fluorine emissions there at the time but later found that there were. He said that he had no law suit against

ABI228

Reynolds but that between Reynolds Metals and Alcoa he had gone broke.

Mr. Wendel repeated that the Authority wants only factual evidence in writing and not hearsay.

He stated the Authority would have to have more expert assistance such as veterinarians, chemists, etc., so the Authority could develop its own data from which conclusions could be drawn.

Mr. Fraser concluded that he was just wasting his time coming before the Authority.

The Chairman advised Mr. Fraser that if he had a complaint or evidence regarding the fluoride problem that it should be presented to the Authority in writing.

Mr. Fraser asked if he did bring in evidence would the Authority close the Reynolds Metals Company plant.

Mr. Green explained that the Authority must have evidence from both sides and that the Authority could not arbitrarily close either Alcoa or Reynolds Metals but would have to follow legal procedures in both cases if such action were indicated.

MOTION RE: TROUTDALE-CORBETT AREA

It was MOVED by Mr. Wendel and seconded by Mr. Dixon and carried that any evidence which comes before the Air Pollution Authority must be submitted in writing and that the Authority proceed to supplement its staff with specialized technical assistance to obtain further information on the problem.

MOTION RE: TROUTDALE-CORBETT AREA

It was MOVED by Mr. West and seconded by Mr. Wendel and carried that the staff be instructed to proceed further with the investigation of fluoride emissions from Reynolds Metals Company.

OSWEGO: OREGON PORTLAND CEMENT COMPANY

The Chairman requested Mr. Hatchard to report on the status of the area study in Oswego. Mr. Hatchard stated that a summary report had been prepared by

the staff including the results of all air sampling, field investigations and plant surveys completed during the past two years in Oswego. He explained that since this report had previously been sent to the members of the Authority in advance of the meeting that at this time only the conclusions contained in the report would be restated:

\* \* \* \* \*

1. The Oswego area is still being polluted excessively by emissions of cement dust from the Oregon Portland Cement Company's plant.

2. These emissions are causing economic losses and inconvenience to many Oswego residents and business establishments.

3. The cement company stack is releasing cement dust which accounts for the major part of the area problem.

4. It has been calculated from sampling results that these stack emissions must be reduced 80% to reduce nuisance conditions to tolerable levels.

5. There are stack-filtering equipment and engineering knowledge available which can reduce these emissions as described.

Mr. Hatchard advised the technical staff had met with the representatives of the Oregon Portland Cement Company to consider the area sampling data and he reported that the company provided the results of 70 stack emission measurements made during 1953 and 1954. He explained that consideration of the available data resulted in the recommendations contained in the Authority's letter of May 31, 1955 to Mr. D. H. Leche and that these recommendations are as follows:

1. That appropriate additional dust control equipment for the rotary kilns be installed.

2. That the dust control systems provided for the rotary kilns have the capacity to remove 99.5% of the dust discharged from the kilns.

3. That the plans and specifications for additional dust control equipment be submitted to the Authority for review before installation is made.

AB1228

4. That a narrative description or a schematic plan of the proposed additional dust control systems be submitted to the Authority in advance of the next regular meeting which is tentatively scheduled for June 23, 1955.

The Secretary then read a letter dated June 17, 1955 which had been received from Oregon Portland Cement Company and to which there was attached a schematic plan of the proposed new facilities for the elimination of dust in accordance with the fourth recommendation set forth in the Authority's letter of May 31, 1955.

The Chairman advised Mr. McCaslin that the Authority appreciated the cooperation shown by Oregon Portland Cement Company and assured him that the technical staff would work with them on the problem.

Mr. Yerke informed the Authority that since the letter of June 17, 1955 was mailed Western Precipitation Corporation has been engaged to install the precipitator and that it would take approximately ten months to complete construction of the second precipitator and modification of the present precipitator.

Mr. Yerke stated that the project will cost about \$261,000 when completed.

Mr. Wendel asked if this control equipment would result in recovery of their product.

Mr. Yerke said they were sure it would.

Mr. McCaslin added that the value of the cement collected over the amount of cement collected with the present precipitator will be small compared with the cost of the installation.

Chairman Green instructed that the City of Oswego be advised of the progress.

PORTLAND: PARTICULATE MATTER FOUND AT FIVE PORTLAND STATIONS

The Chairman requested Mr. Hatchard to report on the area study of particulate matter present at five Portland sampling stations.

Mr. Hatchard explained that in September 1953, a national air sampling project was started under the sponsorship of the Public Health Service to obtain information showing the concentration of particulate matter present in U. S.

urban communities and to develop sampling and analytical methods that will consistently describe the concentration and type of contaminants present. Since September 1953 the staff has operated five area sampling stations using a high volume sampler and an 8" X 10" glass fiber filter. He explained further that approximately 2,000 cubic meters of air are passed through the filter and that initially at least one sample was collected each week.

Mr. Hatchard pointed out that there are at present 90 sampling stations in 39 U.S. communities collecting samples under identical procedures and equipment and that in April 1955 Dr. Leslie Chambers, Director, Research, Taft Sanitary Engineering Center had prepared a report summarizing the sample data secured. Mr. Hatchard stated that the staff had prepared a preliminary report summarizing the data secured at the Portland stations and that this report had been furnished to each member. He stated further that in Table I of the report is shown the maximum, average and minimum total particulate matter found at the sample stations on the State Office Building roof, the U.S. Forestry Service, Bldg., at N. W. Yeon near Nicolai Street and the Hill Military Academy near N. E. 92nd and Fremont. He explained that the average of all Portland samples collected was shown on Table III together with the comparison of the values found in six other cities having populations between one-half to two million.

Mr. Hatchard pointed out that the 143 micrograms per cubic meter average concentration present in Portland was exceeded only by Kansas City and Cincinnati. He stated further that Table III also shows what portion of the average particulate matter found was acetone soluble. He explained that this value is a measure of the amount of particulate matter present as hydrocarbons. He explained that this is a significant value since this material originates from general community activities. He reported that the 32.1 micrograms per cubic meter acetone soluble portion found at the Portland stations was the highest value found in comparable sized urban communities.

Mr. Hatchard stated that a continuous sampling period was carried on from

ABI228

October 27, to November 6, using five area sampling stations. The data secured from these stations is shown in Table V.

Mr. Hatchard indicated that the data thus far secured supports the following general comments.

1. The concentration of particulate matter found at the Portland stations is greater than the concentration present in San Francisco, Minneapolis, Houston and Atlanta and slightly less in Kansas City.

2. The Portland sampling stations showed the highest concentration of acetone soluble portion for cities from one-half million to two million population.

3. The exceptionally high Portland concentration of particulate matter found during the October and November sampling is similar to values found in Los Angeles during the same time of the year. This time period also coincides with the occurrence of frequent temperature inversions which limit the ability of the atmosphere to disperse the contaminants.

4. The lowest concentrations found during the continuous series of sampling occurred on Saturday and Sunday which may indicate the reduction caused by the normal weekend shut-down of industrial and commercial activities.

Chairman Green directed the staff to continue area studies in Portland.

Mr. Wendel suggested that the Authority send a letter to the City of Portland advising that the study of particulate matter shows that Portland has the highest value of acetone soluble of any cities of comparable size in the U.S. He suggested that in this letter we should ask what action the city is taking in the problem.

PORTLAND: KENTON DISTRICT: SMOKE FLYASH AND CINDER STUDY

Chairman Green requested Mr. Eugene Lee to make a report on the staff's investigation of the problem.

Mr. Lee reported that since the last meeting of the Authority two series of fall-out samples have been collected from three stations in the area. The first

series had been collected March 9, and the second on May 18. Mr. Lee advised that the laboratory results on these samples showed fallout values lower than the 25 tons per square mile per month rate that has previously been found to be the amount where nuisance conditions are created. He explained that the low fallout results obtained thus far may be attributed to poor wind conditions for sampling.

The directional fallout unit located in the Kenton district has not produced samples that showed the source and therefore it is planned to move the instrument in the near future. Mr. Lee concluded that a study should be continued and the reports submitted at the next Authority meeting.

Chairman Green directed the staff to continue the investigation.

PORTLAND: PABCO ROOFING PLANT

Chairman Green requested that Dr. Ralph R. Sullivan, Director, Occupational Health Section, State Board of Health, to report on the investigation of health effects regarding the fumes from the Pabco Roofing Company.

Dr. Sullivan stated that in October 1954 Mr. Wm. Callahan, Chairman, State Industrial Accident Commission, advised him that the complaint had been received from the employees of the Pennsylvania Salt Company alleging health injury due to fumes from the nearby Pabco Roofing Company. Dr. Sullivan explained that the State Industrial Accident Commission referred the complaint petition to the State Board of Health for investigation. Dr. Sullivan reported that in response to the Authority's request for investigation of alleged health injury a visit was made to the Pennsylvania Salt Company in November 1954 to confer with the plant superintendent, supervisors and several employees known to have been affected by the fumes. Dr. Sullivan explained that from the result of these discussions it was decided that a health questionnaire would be circulated among the employees of the Pennsylvania Salt Company in order to obtain:

1. Names of all employees affected.

ABI 228

2. Symptoms and their frequency.

3. Medical consultation.

4. Name of the attending physician.

Dr. Sullivan stated that considerable time was required in securing the completed questionnaires and evaluating the results obtained. He stated further that the findings based upon 92 returned employee questionnaires are as follows:

1. That the fumes objected to come from the neighboring Pabco plant.

2. That approximately 50% of the Pennsylvania Salt Company employees suffered ill affects according to their statements without any substantial difference shown regarding the location of their work area in the Pennsylvania Salt Plant.

3. That over 50% of the Pennsylvania Salt employees believe that the objectionable fumes were associated with the times when the wind direction was from the Pabco Plant to the Pennsylvania Salt Plant.

4. That the most frequent symptom was the inability to eat, nose and throat irritation, headaches, burning of the eyes, pain in the chest with breathing difficulty.

5. Five employees had seen personal physicians and in two of these cases indication of bronchial irritation and irritation of the nose and throat were noted by the physicians.

Dr. Sullivan summarized the results of his investigation as follows:

1. That the investigation dealt with the one part of the complaint alleging injury to health as a result of the fumes from the Pabco Plant and that over 50% of the Pennsylvania Salt employees reported symptoms such as nose and throat irritation, nausea, inability to eat, headaches, etc. Dr. Sullivan stated that limited medical evidence available indicated chronic irritation of the respiratory tract, chiefly of the nose and throat. However, the analyses of the employees' questionnaire suggested that most of the employees' symptoms were an annoyance or nuisance rather than a health hazard.

2. That previous studies of the Pennsylvania Salt Company including analyses of the air samples indicate that the symptoms or findings are not due to chlorine or other working atmospheric contaminants originating within the Pennsylvania Salt Plant.

3. That this investigation did not include the employees of Pabco or other plants in the vicinity which should be done if a study were to be set up to determine the long range effects on health such as cancer of the lung, skin, etc.

4. The second aspect of the complaint referring to asphalt causing cancer of the lung was not investigated at this time except to review the medical literature. Special research study would be necessary to identify chemically the presence of carcinogenic hydrocarbons and to establish a long range epidemiologic study of cancer of the lung in the exposed group.

The Chairman requested Mr. Frank Terraglio to report on the air sampling carried on by the staff since the last meeting.

Mr. Terraglio stated that a high volume air sampler with a pleated filter had been continuously run since the 2nd of March, using a wind direction switch for controlling the sampling and that it has taken usually several days to obtain a representative sample. He reported that fifteen samples were collected to show the discharges from the Pabco Roofing Plant from 10:00 AM to 6:00 PM. The total particulate matter found ranged from 228 to 3,885 micrograms per cubic meter with the average being 1,357. Mr. Terraglio reported that five samples were collected during the period from 10:00 PM to 6:00 AM and the total particulate matter varied from 344 to 5,120 with an average of 1,364 micrograms per cubic meter. Mr. Terraglio compared these averages with the 176 micrograms per cubic meter found in samples collected at the station in the industrial area in Portland. He also reported that on January 31, a special sample was collected using an 8" X 10" glass fiber filter and that this sample was submitted for analyses to

ABI228

the Taft Sanitary Engineering Laboratory in Cincinnati. He stated that the total particulate matter found was 1,350 micrograms per cubic meter and that the organic particulate matter material composed 1,100 micrograms per cubic meter of the sample or 81% of the total.

Mr. Terraglio advised that the management of the Pabco Roofing Company had provided records of their plant operation units and that an attempt has been made to correlate plant operations with our sampling results. He stated that it has been extremely difficult to develop a relationship because of the extended sampling period. However, in one case on the 5th of February all operations at the Pabco Roofing Plant were shut down and at that time one of the lowest results, 195 micrograms per cubic meter was obtained.

Mr. Terraglio stated that on March 18, the installation of the three saturator tank filter systems was completed and that since that time from 25 to 30 gallons of oil condensate has been collected per shift. He pointed out, however, that high particulate matter concentrations have been obtained since the installation of these filters. Mr. Terraglio concluded that the staff would like more information from the company regarding their emissions at the point of discharge during representative plant operations.

Mr. Walter Simon, Mgr. Pabco Roofing Company, Portland, stated that about the end of July they will have completed additional changes so that fumes from the asphalt plant will be eliminated. He further stated that before they proceeded with new installations they wished to know what sort of results will be obtained from corrections now underway. Mr. Simon explained that his company spent about \$12,000 on the filters thus far and that they expected to spend another \$7,000 to \$8,000 for additional facilities. He reported that they intend to run tests on their discharges when this work is completed.

Mr. Wendel asked if any civil actions were pending.

Mr. Simon replied that there were none as a result of fumes; however, there

was one situation two or three months ago when the plant discharged some oil into the air accidentally and the damage to cars was handled by their insurance company.

Mr. Wendel stated that he was pleased to learn that the company was making progress with the corrections.

Chairman Green stated that the staff should continue the investigation and submit a report at the next meeting.

PORTLAND: HYDROGEN SULFIDE IN S.W. PORTLAND

The Chairman requested a report from Mr. Hatchard regarding the staff's investigation of hydrogen sulfide in southwest Portland.

Mr. Hatchard stated that the staff had prepared a preliminary report summarizing their area investigations and sampling activities; that a copy of this report had previously been sent to each Authority member. He also stated that the report has been sent to the management of the Miller Products Company and to Dr. T. L. Meador, City Health Officer. Mr. Hatchard stated the following recommendations were made in the report.

1. That the Miller Products Company advise the City Health Department or the Authority in advance when they are planning to produce lime sulfur spray.
2. That the company develop appropriate plans for controlling the discharge of hydrogen sulfide.
3. That plans and specifications for the control system be submitted to the Air Pollution Authority for review before any installation is made.

The Secretary stated that a letter dated June 22, 1955 had been received from F. E. Stewart, Assistant General Mgr., Miller Products Company, advising that a control installation would be in operation prior to their next processing period this fall and that experiments were being carried on by the Airkem Company to determine if the odor counteractant would remove the nuisance condition.

The Chairman asked Mr. Hatchard if the staff was receiving satisfactory cooperation

ABI228

from the company.

Mr. Hatchard replied that the management of the Miller Products Company had been very cooperative. However, no plans had been submitted by the company as yet describing the proposed control system. Mr. Hatchard stated that the staff would review the experimental work being carried on by the Airkem Company since the hydrogen sulfide discharges from the Miller Products Company were not associated only with an odor problem. He pointed out that hydrogen sulfide of relatively low concentrations is a toxic material.

PORTLAND: DUST AND FUMES DISCHARGED FROM RICH MFG. COMPANY

The Chairman requested the staff to report on the investigation of fumes from the Rich Mfg. Company plant.

Mr. Hatchard advised the Authority this matter had been previously referred to the City of Portland and that the Authority had received a request for assistance from the City. The staff has been continuing studies cooperatively with the City and had made several plant visits. He stated that the study was delayed due to other commitments but in April sampling had been started at a station approximately 200 feet S.E. of the Rich Mfg. Company. Mr. Hatchard reported that the findings are very preliminary at this time but the samples collected showed excessive particulate matter present. Mr. Hatchard stated that the company management realized there is a problem that needs correction and that the company has been working for some time on plans for re-designing the pipe dipping process. He explained that the other major discharge originates from the cupola and that the company has a similar plant in Los Angeles County and therefore acquainted with the available methods for correcting the problem. He reported that the company has advised the Authority's staff that engineering work is going on at the present time to control the cupola discharge. Mr. Hatchard stated that the management is concerned regarding the degree of control needed to remove the nuisance conditions and that Mr. Fred Menzel, Ass't Plant Mgr. is now in the

east and part of his tour will be to observe other similar operations and control systems. The company had requested the staff to obtain samples during the worst conditions so the data would be available for consideration with their plans for control.

Chairman Green directed the staff to continue the investigation.

PORTLAND: SMOKE AND CINDERS FROM M & M LUMBER COMPANY DOOR PLANT

The Chairman requested a staff report of the smoke and cinders from the M & M Lumber Company Door plant.

Mr. Hatchard stated that a petition signed by 48 persons was received by the Portland Health Bureau regarding the smoke and cinder discharge from the M & M Door Company's plant at N.E. 25th and Multnomah and that the City had requested assistance from the Air Pollution Authority. He reported that a plant visit was made to the M & M Lmbr. Company with a representative from the City Health Bureau in May and that the problem was discussed with the management. The company was aware of the problem and is proceeding with investigations, Mr. Hatchard explained, and the Dohrer Company of Seattle has been retained by the company to study the steam plant emissions. He advised that the Dohrer Company was at the plant during the week of June 13th, and that a report is expected during the week of June 27th. He reported that the M & M Lumber Company management has advised the City that they will proceed as soon as recommendations are available to provide the control that is needed and that a progress report will be made at the next meeting. Mr. Hatchard stated that there has been an increase in cooperative work done in the Portland area with representatives of the City on complaint investigations and plant visits during recent months.

Chairman Green stated that the Authority should commend the Portland City Club's Air Pollution Study Committee for their thorough and well prepared report on the Portland air pollution conditions.

MULTNOMAH COUNTY: REFUSE DUMP -- S.E. 127th and Stark Streets

The Chairman requested a staff report on the refuse dump at S.E. 127th and Stark

ARI 228

Streets.

Mr. Whitsell reported that the County Commissioners had received numerous complaints relative to conditions at this dump over a period of several years and recommendations had been made to correct the nuisance.

In September 1954 after receipt of a petition with 79 signatures Mr. Hatchard discussed the matter with the Multnomah County Health Department and offered assistance of our staff if necessary to investigate the air pollution problem of the complaint and that in February a member of the staff had visited the area and determined that at least 50 occupied residences are located so as to <sup>be</sup> adversely affected by operations of the dump.

Mr. Whitsell explained that after receipt of another petition naming the Air Pollution Authority as one of the petitioned agencies Mr. Hatchard attended the Board of County Commissioners' public hearing on May 10th, 1955 at which meeting the complainants stated that the dump caused fire and traffic safety hazards, mosquito and rat infestation and smoke, odor and flyash nuisances. Mr. Whitsell advised that the defendants presented a counter-petition signed by residents and customers who declared that the dump was not a nuisance, that the dump was necessary to prevent uncontrolled dumping along the roadways, and that rats and mosquitoes were being controlled. Mr. Whitsell stated that Chairman Gleeson advised that the Board would need reports from County and State Departments based upon their investigations before any decision could be made regarding the dump. He reported that on May 26, Mr. Hatchard and Mr. Porti, Sr. County Sanitarian, inspected the refuse dump and conferred with Mr. Talbot, one of the owners and that a tour of the surrounding residential areas revealed sharp odors and the likelihood of smoke and flyash nuisances with north and northwest winds and that on June 8, following a request for a report from the County Commissioners two fallout stations were established in the residential areas. He also reported that on June 20, a member of the staff again visited the dump and observed burning operations which were producing considerable smoke and flyash.

Mr. Whitsell stated that the staff recommends that a study be continued and that a report be made to the Board of County Commissioners as requested.

Chairman Green stated that if there were no objections the work would be continued and a report made at a later date.

The Secretary read a letter dated June 15, to the Authority signed by Dr. Charleton regarding the continued operation of burning refuse dumps north of the Portland city limits and suggesting that these conditions be controlled.

The Chairman asked if there was a refuse burning conducted at the site of the former Seivert dump.

Mr. Hatchard replied that there was not but that there was refuse burning at several locations nearby and that the staff had received numerous telephone complaints but no formal complaints had been submitted.. He explained that both the City and County have also received complaints regarding the smoke, odor and flyash for the refuse burning dumps in this vicinity.

Mr. Wendel added that burning is definitely going on as one can notice it when driving by.

Chairman Green wished to know if conditions are comparable to the Seivert dump that was closed down.

Mr. Hatchard replied that the situations are very similar.

EUGENE: STATUS OF THE AIR POLLUTION STUDY

The Chairman requested a staff report regarding the Eugene air pollution study.

Mr. Hatchard advised the Authority that the City of Eugene had organized a City Air Pollution Committee last year and that the staff had met with them on about four occasions, and that District Engineer Merryman has also worked with the committee. He explained that at present the committee is formulating their report for the consideration of the City Council and that Committee. Chairman Westling has reported that they intend to have the report before the Council in early July.

Mr. Hatchard reported that the staff has been working closely with the City of

AB1228

Eugene who has made available a part-time employee from the City Engineer's office so that air sampling could be expanded in the Eugene area. He stated that the five fallout stations had been increased to 17 and that observations of the characteristics of the 17 steam plants in Eugene have been made to accumulate basic data. He advised that at present the City of Eugene is taking more action toward developing a city ordinance than any other city in the state and that other cities have indicated interest. He pointed out that there is an obvious need to develop local ordinances for cities in Oregon.

SWEET HOME: SANTIAM LUMBER COMPANY

The Chairman requested a staff report on the investigation of the cinder and fly-ash discharged from the Santiam Lumber Company.

Mr. Hatchard recalled that at the last meeting of the Authority a complaint petition signed by 65 residents in the Sweet Home area was presented and that the complaint involved deposition of cinder and flyash from the Santiam Lumber Company. Mr. Hatchard reported District Engineer Merryman has been investigating this problem and has made visits to the plant and located fallout stations in the vicinity and that the Authority had notified the company of the results of the sampling and survey of their plant. He stated that the company had been advised that their present discharges are in violation of state statutes and that the installation of cinder control equipment was recommended.

The Secretary read a letter from Mr. Walter Leisy, Mgr. Santiam Lumber Company dated June 21, 1955 that advised the Authority that the company is installing a log debarker which will be in operation September 1955 and will allow a utilization of a higher percentage of the plant wood waste and that the McManama Company, Seattle, Washington has been studying the steam plant and has proposed the installation of Western Precipitation Corporation's multiclones at a cost of \$50,000 and that the company wished to postpone purchase of the collectors until the log debarker is completed.

Mr. West stated that the company's plan for control was another example of

cooperation from industry.

Mr. Wendel asked if any attempt had been made to determine the attitude of residents after being informed of the company's intentions.

The Secretary explained that we had just received the letter and that there had not been time to contact the residents.

Mr. Dixon suggested the staff take a further look at this installation after the barker is installed and then advise the complainants that something is being done about the cinder and flyash problem.

Chairman Green suggested sending a letter to the local newspaper so that the residents would be informed of the progress.

Mr. Leisy was in accord and said "The New Era" was the name of the Sweet Home paper.

Mr. Leisy added that the Chamber of Commerce had considered the company's proposal and heartily endorsed the plan.

#### ASSOCIATED FOREST INDUSTRIES OF OREGON

Chairman Green asked if the Secretary had anything to report regarding activities of the Associated Forest Industries Air Pollution Committee.

The Secretary stated he discussed the matter with Messrs. Ogle and Sanford and at that time it was Mr. Ogle's suggestion that a meeting should be arranged with their Air Pollution Committee and preliminary arrangements have been set for such a meeting but without a definite date set. The meeting, he explained, would take place before the next Air Pollution Authority meeting and an attempt would be made then to outline a program.

Chairman Green urged to follow through since there is a need for increased efforts by the lumber industry to control air pollution from their operations.

#### NEW COMPLAINTS RECEIVED

##### EMPIRE

The Secretary read a letter to the Authority dated June 10, 1955 from R.L. Thomas, Attorney for the City of Empire, requesting the Authority to investigate and

ABI228

take action regarding the excessive cinder and flyash deposition in Empire. Chairman Green asked if the Authority could set up sampling points and start collecting data.

Mr. Hatchard said the staff has had two fallout stations operating for 1½ years and that complaints from the residents or any requests from the city had not been received.

The Authority had been awaiting receipt of official complaint before proceeding on control effects.

Mr. Dixon suggested the staff continue its work and turn information over to the City of Empire when sufficient data is accumulated.

#### COTTAGE GROVE

The Secretary read a letter dated April 26, 1955 from Joan H. Gallo, City Councilwoman, requesting an air pollution survey in the City of Cottage Grove.

The Chairman asked if the staff could make the requested survey.

Mr. Hatchard informed the Authority that he had requested District Engineer Merryman to make a preliminary survey in Cottage Grove to determine how much work was involved and that a progress report could be made at the next meeting.

#### SALEM: EMISSIONS FROM THE OREGON PULP AND PAPER COMPANY

The Secretary read a complaint-letter from a resident from the City of Salem regarding the fumes discharged from the Oregon Pulp and Paper Company plant. He reported that the Marion County Health Department had not received any formal complaints regarding the fumes and that the staff has had a sulfur dioxide recorder in Salem during April of 1954.

Mr. Wendel asked if any complaints had been received regarding smoke in the Salem vicinity.

Mr. Hatchard replied that no complaints had been received.

Mr. Dixon asked about the status of the City Council's action on air pollution in Salem.

Mr. Hatchard explained we have had no contact with the Council.

Chairman Green asked if the Authority were to rent the sulfur dioxide recorder would it have the manpower to operate it.

Mr. Hatchard replied that we did not without interrupting studies now underway. He added that the plant management is very concerned with the fumes and has co-operated with the staff on past studies.

Chairman Green asked if there were methods by which SO<sub>2</sub> could be eliminated from the atmosphere.

Mr. Hatchard stated that there were a variety of recovery processes available.

Chairman Green directed we advise the management of this complaint and that a problem exists and that we should also notify the city officials.

MULTNOMAH COUNTY: LIME DEPOSITION FROM PACIFIC CARBIDE AND ALLOY COMPANY

The Secretary read a letter dated April 26, 1955 from R.E. Labbee, Warehouse Mgr. of Western Auto Supply Company and signed by 62 other employees regarding the deposition of lime on their automobiles from the Pacific Carbide and Alloy Company located east of their building.

Mr. Hatchard stated a preliminary visit has been made to Pacific Carbide and Alloy Company and it was found the company management was aware that other persons are being affected by the lime discharge.

The Secretary stated that receipt of the petition has been acknowledged and the company had been notified of the complaint.

Mr. Wendel stated the Authority should notify complainants that this problem is receiving our attention.

Chairman Green directed that the company be advised to investigate control methods.

MULTNOMAH COUNTY: LIME DEPOSITION FROM PACIFIC MINERAL AND SHELL COMPANY

The Secretary read a letter dated April 11, 1955 from W. N. Sommer, Spe-de-Way Products Company regarding the deposition of lime dust discharged from the Pacific Mineral and Shell Company located east of their plant.

ABI228

Chairman Green directed the staff to proceed with the investigation of the complaint.

PORTLAND: CITY HEALTH BUREAU REQUEST FOR JOINT INVESTIGATION OF CINDER AND FLYASH DEPOSITION IN THE VICINITY OF 6500 block N. Willamette Boulevard.

The Secretary read a letter dated June 22, 1955 from the Portland Health Bureau requesting assistance in evaluating the complaint.

Chairman Green wished to know if the Authority could provide the assistance to the City.

Mr. Hatchard stated that the staff had established a fallout station in the vicinity and that this is a cinder and flyash problem from a waste burner operated by McCormick Baxter Company.

Chairman Green suggested this sampling be continued and submit a report at a later meeting.

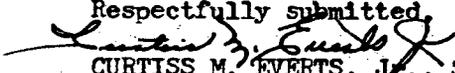

DATE OF NEXT MEETING

It was decided that the next meeting would be at the call of the Chairman.

MEETING ADJOURNED

There being no further business, the meeting adjourned at 4:10 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, JR., Secretary  
Oregon State Air Pollution Authority

FOURTEENTH MEETING  
OF THE  
OREGON AIR POLLUTION AUTHORITY

November 4, 1955

ABI 228

The fourteenth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M. Friday, November 4, 1955, in Room 36, State Office Bldg., 1400 S.W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Mr. R. P. Dixon, Harold F. Wendel, Members and Dr. Gordon C. Edwards (representing Dr. Harold M. Erickson) and Curtiss M. Everts, Jr., Secretary, Charles D. Burt, Legal Advisor, R. E. Hatchard, Chief of the Air Pollution Control Section, W. J. Whitsell, Associate Engineer, State Board of Health, Frank P. Terraglio and Eugene E. Lee, Chemists, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The Secretary summarized the minutes of the thirteenth meeting of June 23, 1955. The Chairman declared that if there were no corrections or additions the minutes would stand approved as prepared by the Secretary.

INTRODUCTION OF PUBLIC HEALTH SERVICE OFFICIALS

The Chairman requested the Secretary to introduce Public Health Service officials present at the meeting.

The Secretary introduced the following officials:

A. C. Stern, Chief, Air Pollution Control Program, Taft Sanitary Engineering Center, Cincinnati, Ohio.  
Mr. F. E. DeMartini, Regional Engineer for PHS, San Francisco, California.  
Dr. Wilfred D. David, U.S. Public Health Service, San Francisco, California.  
Herbert C. Clare, Basin Engineer, Public Health Service, Portland, Oregon.  
Leonard H. Male, U.S. Public Health Service, San Francisco, California.

CURRENT AIR AND FOLIAGE SAMPLING IN COOPERATION WITH THE OREGON STATE COLLEGE AGRICULTURAL EXPERIMENT STATION AND OTHER STUDIES.

The Chairman requested Mr. Whitsell to report on the status of the air and foliage sampling project.

Mr. Whitsell stated that the Authority had requested that the staff make every effort to work in cooperation with Oregon State College Agricultural Experiment Station to determine if a correlation could be developed between air and foliage concentrations by collecting concurrent air and foliage samples. He explained that first tests were necessary to determine whether or not there was any appreciable variation in foliage concentrations throughout the day. He reported that the first phase of the study was now completed and the data has shown no appreciable variation in fluoride concentrations of the pasture grass samples during the day caused by the affects of sun light or other biochemistry taking place in the plants.

Mr. Whitsell further stated that the air sampling program is continuing in the same area and that after the first detailed sampling run Dr. O.C. Compton, Associate Horticulturist, Oregon State College Agricultural Experiment Station, had collected additional foliage samples at two week intervals and that Dr. Compton was obtaining another series of samples today. He pointed out that the pasture growing season would soon be over which would curtail the project somewhat, but the staff will continue the air sampling in the area as long as weather conditions will permit. He reported that the air sampling was resumed in early September and a continuous series of samples has been obtained and that a continuous record of wind speed and direction during the period was secured using the Authority's equipment located at the Troutdale airport. Mr. Whitsell stated that the staff has not had the opportunity to complete the tabulation of the air fluoride concentrations with the weather data for later correlation with the foliage fluoride concentration being analyzed by Oregon State College Agricultural Experiment Station.

The Chairman explained that the Authority had been seeking additional assistance from other state and federal agencies for some time to extend the investigation of agriculture and livestock conditions in the areas near aluminum reduction plants. He stated that arrangements had been made by the State Board of Health

to secure assignment of a veterinarian with the Public Health Service to develop a Public Health Veterinarian program in Oregon and provide assistance on air pollution investigations.

The Chairman stated that Dr. Monroe Holmes, Veterinarian with the Public Health Service, Epidemiology Section, Communicable Disease Center, has been working in Oregon since early October and requested Dr. Holmes to advise the Authority on his livestock investigations.

Dr. Holmes stated that an understanding has been arranged that he will work half time with both the State Board of Health, Epidemiology Section, and the Air Pollution Authority, and that his work on the investigation of livestock conditions in Troutdale and Sauvie Island had included study of the past reports and review of the literature available. He reported that Mr. Whitsell and he had contacted individuals at both locations who have had long experience with the fluoride problems but who were not involved in litigation. Dr. Holmes advised that he had not formulated any conclusions or specific suggestions for future work but that he had become familiar enough with the situation to realize that a complete investigation of the livestock aspects will be a long term undertaking.

Mr. Dixon asked Dr. Holmes how long he thought it would be before definite conclusions would be available regarding the livestock conditions.

Dr. Holmes stated it would be rather difficult to say at this time but it would be more like a year instead of a month or two. However, he added there are fewer numbers of livestock visibly affected now compared with the published data from previous livestock studies.

The Chairman asked if it would be reasonable for the Authority to anticipate definite answers regarding the livestock conditions at Troutdale and Sauvie Island within a two year period.

Dr. Holmes agreed that the two year period would be realistic.

ABI228

FEASIBILITY OF AGRICULTURAL AND LIVESTOCK RESEARCH AND INVESTIGATIONS PROJECT  
UNDER PROVISIONS OF PUBLIC LAW 159

The Chairman requested A.C. Stern, Director, Public Health Service, Air Pollution Control Program to advise the Authority regarding the assistance available from his agency to investigate the agriculture and livestock conditions in the areas near the aluminum reduction plants.

Mr. Stern explained that an agricultural and livestock research project with funds available under Public Law 159 is highly improbable during the current fiscal year since the April 1955 report of the Federal Ad Hoc Interdepartmental Committee on Community Air Pollution recognized that the Department of Agriculture has had the Authority to conduct such activities for several years. He stated that no funds are available under the reimbursable contract research arrangement because the Department of Agriculture advised that the budget included these activities. He stated that if the air pollution involves agriculture or livestock considered to be economic crops then it is a primary concern of the U.S. Department of Agriculture and not the Public Health Service. Mr. Stern explained that they were interested in plants as indicators as to where air pollution exists; however, the Public Health Service could cooperate in the environmental phases of the problem such as obtaining information regarding the extent of the pollution of the atmosphere or methods to control sources.

Mr. Wendel asked if the effects of air pollution on human health was the main basis for developing the Public Health Service program.

Mr. Stern replied that the provisions of Public Law 159 does not delineate the detailed elements of the air pollution program but the purpose as stated in the law is "to provide research and technical assistance relating to air pollution control in recognition of the dangers to public health and welfare injury to agricultural crops and livestock, damage to and deterioration of property and hazards to air and ground transportation."

The Chairman explained that the Oregon Air Pollution Control Statute includes

air pollution effects on public health welfare, agriculture and livestock and other economic losses and that a major concern of the Authority is to develop a program which includes all effects instead of only part of the problem.

Mr. Stern stated that he hoped the problem of providing Federal assistance on agriculture and livestock air pollution to supplement local and state resources could be worked out during the next year. He stated that the present arrangement between the Department of Agriculture and Public Health Service is not satisfactory since several requests by Public Health Service to Agriculture that specific studies be made by Agriculture have not produced results. Mr. Stern pointed out that PL-159 has been in effect only a few months and it will take some time to develop satisfactory relationships with other Federal agencies that have been concerned with some aspects of the problem for several years.

The Secretary stated that during the exploratory discussions this morning it was mentioned that the Air Pollution Authority staff, in cooperation with the Oregon State College Agricultural Experiment Station, has been engaged in an exploratory project to determine if there is a relationship between atmospheric concentrations of fluorides and the resulting concentration of fluoride in foliage. The Secretary explained that neither the college nor the staff have the personnel or equipment to pursue this study to a successful or unsuccessful conclusion and this matter was discussed with Dean Price and it was suggested that a research project be developed between the two agencies to secure grant-in-aid under the provisions of Public Law 159. The Secretary pointed out that if a relationship between air fluoride concentration and the foliage concentration can be developed then it would be a step in the right direction and would produce data needed for consideration of a standard. The Secretary suggested that the Authority and Oregon State College Agricultural Experiment Station should explore the possibility of developing a more detailed program in the areas near the aluminum reduction mills.

ABI228

The Secretary stated that if it is the desire of the Authority that the staff proceed with studies with Public Health Service or the Department of Agriculture or any other agency responsible for carrying on work of this nature, then this activity should be authorized.

MOTION RE: AGRICULTURAL AND LIVESTOCK RESEARCH AND FIELD INVESTIGATION PROJECTS UNDER PROVISIONS OF PUBLIC LAW 159.

It was MOVED by Mr. Wendel and seconded by Mr. Dixon and carried that the Secretary be instructed to proceed with the investigation of research and field survey projects in cooperation with Oregon State College, Washington State College, Public Health Service, U.S. Department of Agriculture and other interested agencies.

MEETING WITH MUNICIPAL REPRESENTATIVES ON PROVISIONS OF PUBLIC LAW 159.

The Secretary reported that a discussion meeting was held on November 3, 1955 so that some of the representatives of city governments in the state could meet with Mr. Stern and discuss some of the implications of Public Law 159 on city control programs. The Secretary stated that representatives from Portland, Eugene, Roseburg and The Dalles attended and Mr. Stern described very ably what the law could and could not do.

The Secretary explained that the City of Eugene created an Anti-Air Pollution Committee which has been very active this year and during the discussions on November 3, 1955 the Eugene City Manager indicated that the City would like to develop some program with industry to arrange for study of various methods for burning waste wood so that improvements in the cinder and flyash conditions could be made.

The Secretary stated it was his opinion that the Authority should stimulate the proposed project in cooperation with Oregon State College Engineering Experiment Station, the lumber industry and interested cities. He added that it might be possible that if such a project could be developed that the Public Health Service could assign one of their engineers to work in Oregon.

MOTION RE: ORGANIZATION OF RESEARCH PROJECT TO STUDY WASTE WOOD BURNING PROCEDURES

It was MOVED by Mr. Dixon and seconded by Mr. West and carried that the Secretary be instructed to proceed with the organization of a project to make an engineering study of waste wood burning procedures in cooperation with Oregon State College Engineering Experiment Station, lumber industry, interested cities, Public Health Service and others.

AREA AND SOURCE DISCHARGE STANDARDS

The Chairman requested Mr. Hatchard to report on the need for area and source discharge standards.

Mr. Hatchard reported that during the past three years the Authority's staff has been conducting area atmosphere pollution surveys and field investigations of specific complaints throughout the state and that considerable data has been secured describing the air sanitation problems now affecting urban communities where air pollution nuisance conditions exist. Mr. Hatchard explained that the Authority's staff has used this data to develop field investigation standards to limit fallout of particulate matter within the various types of land use and the fallout rate for some specific air contaminants such as cement dust or lime and the density of smoke discharged from combustion processes. He stated that use of this data has stimulated control installations through cooperative efforts by industries and cities except for situations involving waste wood burners and some odor conditions.

Mr. Hatchard reported that during the past few months there has been increasing city activity in the development of municipal air pollution ordinances particularly at Eugene and Portland. He stated that at previous meetings of the Authority the staff has reported on activities with the City of Eugene's Anti-Air Pollution Committee and with the Portland Health Bureau. Mr. Hatchard pointed out that one of the major needs for the development of appropriate city ordinances is to assemble enough basic air pollution data so that the prohibitions established are closely

ABI 228

related to the communities' desire to correct present problems and prevent new nuisance conditions.

He reported that air sanitation standards have also been requested by the Multnomah County and Lane County Planning and Zoning agencies in order that air conditions can be adequately incorporated into their rules and regulations. He recommended that the Authority's staff be instructed to prepare tentative standards for source discharges and the area effects resulting from air pollution based upon the Authority's accumulated data and experience and to submit the proposed standards for consideration at the next regular meeting of the Authority.

Mr. Hatchard advised that another major concern of the officials developing municipal ordinances is how the sources of air contaminants located outside of city boundaries which are affecting areas within the city will be controlled. Mr. Hatchard explained that in January 1955 the Authority's staff prepared a report regarding municipal air pollution control in cooperation with the League of Oregon Cities and it was stated in this report that "it is anticipated that the Authority will institute air pollution control activities in the areas outside of city boundaries equivalent to those established by the city for application within the city". Mr. Hatchard stated that this report was submitted to the individual members of the Authority before distribution was made to city officials. However, no policy action had been taken at previous Authority meetings. He recommended that the Authority establish the official policy that it will administer the control of sources of air contamination in the urban fringe that affect areas within the city boundaries when the city has a municipal control program underway providing that the cities' control standards are equivalent to the standards adopted by the Authority.

Mr. Wendel asked if cities should adopt standards equal to those of the state.

Mr. Hatchard replied that the standards used by the city should be equal to the standards adopted by the Authority and that the actual control should be a

cooperative effort with the city directly handling the sources within the city and the Authority supervising the control activities in the urban fringe.

The Secretary explained that on several occasions the question has arisen that before cities adopt standards locally the city officials want to be assured that the Authority will administer equivalent standards in an area outside the boundaries of their control. The Secretary stated if the Air Pollution Authority adopted such a policy it should be made certain that the standards adopted in the city would be equivalent to the standards adopted by the Air Pollution Authority.

Mr. Wendel stated that he thought that the cities should not adopt separate standards and that they should use the Air Pollution Authority standards.

The Chairman asked if the staff was ready to recommend for adoption a set of rules and regulations.

Mr. Hatchard replied that sufficient data was available to prepare recommended standards for the control of smoke, particulate matter and a few specific substances such as cement dust.

The Chairman instructed the staff to prepare these standards and send them to each Authority member within the next thirty to forty-five days for review in advance of the next regular meeting.

LUMBER INDUSTRY, SMOKE, CINDER AND FLYASH DISCHARGE.

The Chairman requested Mr. Hatchard to report on the efforts of the lumber industry to solve industry air pollution problems.

Mr. Hatchard reported that smoke, cinder and flyash discharges from lumber and wood products plants continue to be the most numerous type of complaint received. He explained that the staff and the Authority's approach on the waste wood burner complaints has been to stimulate an air pollution committee appointed by the Associated Forest Industries of Oregon. Mr. Hatchard stated that in view of the delay in securing lumber industry activity towards a solution of the wood waste

ABI228

burner problem the staff recommended that the Authority cite individual mill managements who have not been able or willing to correct their waste burners and cinder and flyash problems.

The Chairman stated that the Authority has been working for nearly three years to get lumber industry action to solve the waste wood burner problems and in the last year or so have met with representatives of that group on several occasions. The Chairman said it was his belief that industry is not making any serious efforts to take care of the problems.

The Secretary suggested that the Air Pollution Authority invite the offenders to the next meeting and discuss the existing problems with them to stimulate correlations before actually citing the mills.

The Chairman asked if there were complaints regarding cinder and flyash discharges from stream generating plants where satisfactory progress is not being made.

Mr. Hatchard advised that no action has been taken by the Cape Arago Lumber Mill in Empire or the Coos Bay Lumber Company and that the cities of Empire and Eastside have requested the Authority to bring about corrections.

The Chairman suggested that the Authority cite in Cape Arago Lumber Company of Empire, Oregon, Coos Bay Lumber Company of Coos Bay, Oregon, to appear at the next meeting.

MOTION RE: LUMBER INDUSTRY, SMOKE, CINDER AND FLYASH DISCHARGE.

It was MOVED by Mr. Wendel and seconded by Mr. Dixon and carried that Cape Arago Lumber Company of Empire, Oregon, and Coos Bay Lumber Company of Coos Bay, Oregon, be cited to appear at the next Air Pollution Authority meeting.

STAFF PROGRESS REPORTS.

The Chairman requested brief reports from the staff regarding the progress or status of complaint investigations underway.

PORTLANDPABCO ROOFING PLANT

Mr. Terraglio explained that since the last meeting the asphalt blowing operation at the plant has been transferred to the Shell Oil Company located a few hundred feet west of the Pabco plant and that the Shell Oil Company had installed new equipment including a condensing and water scrubber system. He reported that filter samples have been collected at a station near the new Shell Oil Company's discharge point both before and after operations started. He explained that the results have been difficult to compare since the process has been operated intermittently. He reported that several plant visits have been made with a representative from the Portland Health Bureau and that some of the Pennsylvania Salt Company employees still believe that nuisance conditions are present. He stated that plans have been made to resume sampling at the Pennsylvania Salt Company station to show the degree of improvement compared with previous data.

PORTLANDHYDROGEN SULFIDE IN S. W. PORTLAND

Mr. Hatchard reported that the Miller Products Company in S. W. Portland had been adding an odor counteractant material to their stack discharge when the lime-sulfur dormant spray was being produced; however, it was found that this method alone did not adequately handle the problem and they have ceased operations until a condensing and water scrubber unit can be installed.

PORTLANDDUST & FUMES DISCHARGED BY RICH MANUFACTURING CO.

Mr. Hatchard reported that this matter had been referred to the Portland Health Bureau and the staff has continued the joint field investigations including collection of samples. He explained that Mr. Fred Menzel had advised that their company recognized that a problem exists and that they are planning dust control facilities on the foundry cupola and completely changing the pipe dipping process. Mr. Hatchard reported that the company was still in the plan preparation stage and it did not seem that corrections would be made before next summer. He suggested that the Portland Health Bureau and the Authority's staff should review the matter.

ABI228

PORTLANDKENTON DISTRICT CINDER & FLYASH STUDY

Mr. Hatchard stated that the results obtained from fallout stations in the area show that a heavy deposition of cinders and flyash is not occurring. He explained that the Portland Shingle Company has been using their waste burner less than half time which probably accounts for the reduction.

MULTNOMAH COUNTYLIME DEPOSITION FROM PACIFIC CARBIDE & ALLOY COMPANY

Mr. Whitsell reported that petition complaint signed by over sixty employees of the Western Auto Supply Company located nearby had been received in April 1955 and that after preliminary surveys the Authority advised the Pacific Carbide and Alloys Company that the discharges from their plant were causing nuisance conditions and that the installation of an appropriate control system was recommended. Mr. Whitsell reported that a sampling station was established in September using a directional switch and a high volume filter sampler and that the data obtained showed conclusively that Pacific Carbide Plant was contaminating the area with carbon and lime. He stated that on October 11, the Authority had sent a letter to Mr. Waters, General Mgr., Pacific Carbide and Alloy Company, advising him of the results obtained recommending again that they proceed with the design and installation of the necessary control facilities and that the company advise the Air Pollution Authority by November 10, regarding the progress. Mr. Whitsell advised that representatives of the company had conferred with the staff and had indicated that they were actively investigating the problem to determine what could be done to reduce the dust emissions.

OSWEGOOREGON PORTLAND CEMENT COMPANY

Mr. Terraglio reported that Mr. D. H. Leche, Vice President, of Oregon Portland Cement Company had advised that construction for the new electrostatic collectors was proceeding according to schedule and that excavation was being completed and the steel erection for the installation will start about the 15th of December. Mr. Terraglio explained that after the two new precipitators are in operation

the company will overhaul the existing unit so that the dust collection efficiency meets the requirements.

The Chairman stated that he believed satisfactory progress was being made.

SWEET HOME

SANTIAM LUMBER COMPANY

Mr. Hatchard reported that the manager of the Santiam Lumber Company had advised the Authority at its last meeting that a log-debarker would be in operation by September 1955, and that less wood waste would go to the waste burner. Mr. Hatchard advised that District Engineer Merryman had recently visited the plant and had reported that the debarker was in operation and that 6.5 box cars of pulp chips are being sent to the Western Kraft Mill in Albany each day compared with 4.5 per day before the debarker unit was installed. Mr. Hatchard stated that the company has completed the foundation work for the installation of two cinder collection units and that the delivery of the equipment was expected early this month and that the units would be in operation January 1956. He stated that the cost for this work was approximately \$50,000.

COTTAGE GROVE

AIR POLLUTION SURVEY

Mr. Hatchard reported that District Engineer Merryman had made a preliminary survey of the sources in Cottage Grove to determine how many sampling stations will be needed but that the stations will not be started until other studies have been completed.

LANE COUNTY

McKENZIE RIVER ODOR

Mr. Hatchard stated that the staff has made reports at previous meetings regarding the area control efforts by Weyerhaeuser Timber Company at their Springfield Kraft Mill. He explained that the management of Weyerhaeuser Timber Company has provided considerable research to develop odor control methods and that the equipment installed at their Springfield Kraft Mill had brought about substantial improvements. Recently Mr. Hatchard reported a complaint was received from the Oregon Superintendent of State Parks regarding the odor nuisance conditions in the McKenzie River

ABI228

downstream from water waste discharge from the Weyerhaeuser Springfield plant. Mr. Hatchard stated that two groups of property owners on both sides of the McKenzie River were complaining to county officials and that this odor problem originated from the water waste discharged from the plant into the McKenzie River. He advised that arrangements had been made for Mr. Spies of the Sanitary Authority and a representative of the Air Pollution Authority to meet November 8, with the complainants concerned with the odor problem, and other aspects of the water waste problem.

DATE OF NEXT MEETING

It was decided that the next meeting would be about the middle of January to consider the recommended standards.

MEETING ADJOURNED

There being no further business, the meeting adjourned at 3:25 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, Jr., Secretary  
Oregon State Air Pollution Authority

FIFTEENTH MEETING

OF THE

OREGON AIR POLLUTION AUTHORITY

February 9, 1956

The fifteenth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M. Thursday, February 9, 1956, in Room 36, State Office Bldg., 1400 S.W. 5th Ave., Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Mr. R. P. Dixon, Dr. Harold M. Erickson, Members and Curtiss M. Everts, Jr., Secretary, Charles D. Burt, Legal Advisor, R. E. Hatchard, Chief of the Air Pollution Control Section and W. J. Whitsell, Assoc. Engineer, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The Secretary summarized the minutes of the fourteenth meeting of November 4, 1955.

The Chairman declared that if there were no corrections or additions the minutes would stand approved as prepared by the Secretary.

ELECTION OF OFFICERS - 1956

The Chairman advised the members of the Authority that it was again time to elect officers for the calendar year of 1956.

It was MOVED by Mr. West and seconded by Mr. Dixon and carried that Carl E. Green be re-elected Chairman of the Oregon State Air Pollution Authority for the year of 1956.

It was MOVED by Dr. Erickson and seconded by Mr. Dixon and carried that Mr. West be re-elected Vice-Chairman of the Authority for the year 1956.

PROPOSED ADMINISTRATIVE RULES AND STANDARDS TO CONTROL AIR POLLUTION

The Chairman stated that the staff had prepared proposed Administrative and Control Regulations and suggested that the Administrative Regulations be considered first. He requested the Secretary to report on comment received regarding the regulations.

The Secretary reported that a letter had been received from W.W.Wyse, Attorney, representing Alcoa suggesting that the regulations include a section outlining the procedure that the Authority would follow at future public hearings.

The Chairman invited C. D. Burt to comment on the suggestion.

Mr. Burt replied that it was his understanding that the preparation of public hearing procedures was being delayed until the Authority had more experience in holding public hearings.

The Chairman asked if there were representatives present that desired to make comments regarding the proposed regulations.

Mr. Fred N. Packwood, representing Columbia Empire Industries, stated that their organization had not had sufficient time to study the proposals and requested that this matter be deferred for at least a 60 day period until his organization could secure comments from their membership.

Mr. Charles Sanford of Associated Forest Industries of Oregon stated that his organization had mailed 200 copies of the proposals to its members but that so far only one telephone reply had been received. He requested a delay of at least 60 days in order to submit the comments of members of their association to the Authority.

Mr. Sanford further asked if a statement could be prepared which they could send to their members explaining the Ringelmann Chart. He stated that the technical terms were confusing to many persons and that the regulations could be clarified by using ounces and pounds.

Mr. Hatchard advised Mr. Sanford that the Ringelmann Smoke Chart, Information Circular #7718, published by the U.S. Bureau of Mines included the Ringelmann Smoke Chart and instructions for its use. He stated that the Authority had a few copies available and additional copies could be secured from the Publications Distribution Section, U. S. Bureau of Mines, 4800 Forbes St., Pittsburgh 13, Pa.

Mr. Robert R. McKean, Mgr., Columbia Empire Industries, Inc., stated that his organization would also like 60 days or more to study the proposed regulations and hold two or three meetings with members to obtain their views. Mr. McKean asked if he could have a sufficient supply of the proposals to send to their members. Mr. McKean also reported that his organization had been securing funds from their membership to retain Stanford Research Institute to make a study of air pollution in metropolitan Portland and that almost enough funds were available.

Mr. Charles K. Sterrett, Mgr., Industries Department, Portland Chamber of Commerce, stated that as a member of the City of Portland Air Pollution that additional time was needed for the Portland City Attorney to study the proposed regulations. He stated that the Chamber of Commerce would also like enough time to study the regulations and formulate their comments and requested the staff to furnish more details regarding the background values included in the proposed regulations.

Mr. Hatchard explained that there is a rather wide range of concentrations of particulate matter originating from natural sources throughout the state and that initially regional type regulations were considered to allow for the differences. He stated that this approach became rather involved and would have created administrative and technical difficulties. Mr. Hatchard advised that use of a background value allows for the natural difference in the proposed regulations.

Mr. Dixon asked how the background figures compare with other states such as California or Washington.

Mr. Hatchard stated there were no detailed reports of background values for these states but that there was considerable background information available regarding Oregon's particle fallout. He reported that the background for western Oregon would vary from 2 to 10 tons per square mile per month depending upon the season of the year and location within the area. Mr. Hatchard pointed out that the background value would have to be obtained during a survey instead of referring to a previous result and that this measurement would be secured by locating a control station away from the community sources of air pollution.

The Chairman asked if there are other states accumulating this data.

Mr. Hatchard replied that there were not many states securing data but that many cities had data available.

Mr. West wished to know if these methods and values were used throughout the country.

Mr. Hatchard replied that there is no standard method of securing fallout values but that efforts were being made by the Air Pollution Control Association to bring about standardization. He explained that the Authority's staff had followed in general the method published in laboratory procedures used by the Los Angeles Control District.

ABI228

Mr. D. J. McNeil of Electric Steel Foundry Company asked if the staff had any data showing chemical analyses of the fallout materials.

Mr. Hatchard stated the staff had data regarding the physical nature of fallout material such as solubility, volatility or pH but that specific identification was limited to a few substances such as lime or sodium chloride.

Mr. R. E. Sinclair, Pacific Power and Light Company, referred to Section #6 of the proposed regulations and standards and wished to know how 250 micrograms per cubic meter was arrived at. He further wished to know just how to evaluate these figures and whether this type of measurement was used in other areas.

Mr. Hatchard explained that the Authority's staff has collected several hundred air filter samples using a high volume sampler with an 8" X 10" glass fiber filter and that the procedures used were the same as those used in the Public Health Service national air sampling network. He replied that the value of 250 micrograms per cubic meter plus background for limiting the suspended particulate concentration was derived from experience in field investigations where nuisance conditions existed compared with the data obtained from sampling stations in the area.

Mr. Ray L. Beeler, Associate General Contractors, stated that there had not been enough time for his organization to study the proposals and secure comments from their membership. Mr. Beeler requested the Authority to allow another 60 days to submit comments.

Mr. Porter W. Yett, representing Associate General Contractors, asked if the staff had done any sampling on dust from paving plants to establish definitely the source of the discharge and if any detailed investigation of road construction projects had been made in isolated areas.

Mr. Hatchard replied that the staff's investigation was usually limited to the adjacent area around an asphalt paving plant where residents or other property

owners believed a nuisance condition existed and that the staff had not made any investigation of paving plants in isolated areas except where complaints were received regarding suspected injury to agriculture.

Mr. Yett stated further that his organization desired more time to study the proposed regulations and would like more information as to what procedure the staff intended to follow regarding the asphalt paving work on roads throughout the state in situations where water is not available.

The Chairman reviewed the previous complaints involving asphalt plants located in Portland, Gold Hill and in the Keiser area north of Salem and stated that the staff had studied the control of dust discharges and found there is equipment available for reducing the discharges from paving plants.

Mr. Hatchard added that the Authority had investigated dust discharges from about 16 paving plants and that corrections were made by the installation of appropriate equipment or by moving the plant to an isolated location and that lack of water supply to serve the control unit had not been a severe problem in a case brought to our attention.

Dr. Thomas Meador, Health Officer, City of Portland, said he believed that there were many pit-falls in the proposed regulations and that he desired more time to study the matter.

Mr. Fred M. Menzel, Rich Manufacturing Company of California, stated that he believed the standards the Authority proposed in regard to particulate matter were very good for larger companies that have large engineering staffs to interpret the findings but that he would like the standards to be expressed in common units so that the layman could understand them.

Mr. J. A. Hooper, Pacific Power and Light Company, also requested interpretation of micrograms per cubic meter units.

The Chairman explained that the standards could be expressed in several units of

ABI228

measure to clarify the proposals. The Chairman suggested that the members of the Authority dictate a memorandum to the staff transmitting their comments regarding the regulations. The Chairman announced that the Authority requested all organizations and individuals concerned with the proposed regulations to submit comments within the next sixty days so that the staff could prepare a revised draft at the next meeting tentatively scheduled for May.

EMPIRE: Cinder and flyash deposition from Cape Arago Lumber Company

The Chairman requested Mr. W. J. Whitsell to report on the Empire cinder and flyash deposition problems.

Mr. Whitsell stated that the particle fallout study began in Empire in 1954 in response to reports that a problem existed in Empire. He reported that two fallout stations were used and that the data secured was sent by letter to the City of Empire on May 12, 1955. He explained that the stations were discontinued at that time since no written complaints or requests from the city had been received.

On June 10, 1955 Mr. Whitsell reported that a letter was received from R. L. Thomas, City Attorney, Empire, requesting that the Authority continue its study and take necessary action to correct the situation since the city officials had received complaints regarding cinder and flyash deposition particularly during the summer season.

Mr. Whitsell reported that on June 29, a representative of the Authority conferred with Mayor Kenneth Adams, Empire, and that a survey of the Cape Arago Lumber Company was also made.

Mr. Whitsell stated that Mr. Miller, Vice President, Cape Arago Lumber Company, requested a letter from the Authority describing conditions and making recommendations. He stated that on July 13, 1955 a letter was sent to Mr. D. Miller describing conditions and pointed out the results of the fallout stations showed 54 to 120 tons per square mile per month fallout was occurring and that nuisance conditions existed. He stated that it was recommended by letter that the company

take appropriate measures to reduce the cinder and flyash discharges; however, no reply was received from the company.

Mr. Whitsell reported further that on September 16, 1955 the City of Empire wrote the Authority again protesting the continuance of the cinder deposition problem and requested abatement. He explained that on October 26, and 27, 1955 one of the Authority's engineers tried without success to see Mr. Miller, Vice President, Cape Arago Lumber Company, to determine what progress the company had made based on the Authority's recommendations. Mr. Whitsell reported that on October 31, 1955 a letter was sent to Mr. Miller stating that since no reply had been received from their company that it was presumed no corrective steps had been taken and that the company was advised that they would be requested to attend an Authority meeting where the matter would be considered.

Mr. Whitsell reported that a representative of the Authority was in Empire on January 13, 1956 and was unable to obtain an appointment with Mr. Miller. However, in a telephone conversation Mr. Miller advised that it would be best to talk with their attorney, Mr. F. A. Yerke, Jr.

Clifford N. Carlsen, Jr., Attorney, represented Cape Arago Lumber Company, stated that the steam plant was shut down in November 1955; that the sawmill was now shut down; that the planing mill was being operated every other week and that the company had no present plan for re-opening. Mr. Carlsen advised the Authority that this information had been given to the Authority's staff by telephone some time ago.

Mr. Hatchard stated that this information had been received and in addition it was understood that the Cape Arago Lumber Mill is considering a reorganization of the mill from lumber production to plywood manufacture. He pointed out that if the changes are made and the steam plant is to be used, the Authority needed information regarding the company's plans to install cinder collection systems.

ABI228

Mr. Carlsen reiterated that there are at present no plans for continuing or converting the mill operation; however, if any plans should be made the Air Pollution Authority will be notified.

The Chairman asked Mr. Carlsen if he did not think the company should have replied to the Authority's letters and recommendations.

Mr. Carlsen replied that the company certainly should have kept the Authority advised.

The Chairman asked Mr. Whitsell if the excessive cinders in Empire originated from the steam plant.

Mr. Whitsell replied that in the opinion of the staff the steam plant in itself was a very large contributor to the situation.

Mr. Carlsen asked if the waste burner serving the sawmill had been a significant source of cinders.

Mr. Whitsell stated that part of the sawmill waste which is not handled in the power plant together with the planer shavings was conveyed to the burner.

Mr. Whitsell further explained that on the present level of operation the cinder discharge conditions seemed fairly good at the mill; that the last time he was there the planing mill was operating about two days out of the week and for that reason the fallout was low. Mr. Whitsell stated that he had learned from some of the residents and from Mr. Miller, Vice President, Cape Arago Lumber Mill, that the mill planned to go to a plywood operation.

The Chairman stated that the Authority expected a specific statement in writing from the company regarding their future plans and that the management should not ignore the Authority's correspondence but put in writing all of their plans as they are formulated. The Chairman further stated that if the Authority can not get cooperation from the management that management representatives must be present at the next meeting.

Mr. Carlsen stated that the company would send a letter to the Authority regarding their plans.

EASTSIDE: Regarding cinder and flyash deposition in Eastside.

The Chairman requested Mr. W. J. Whitsell to report on the Eastside cinder and flyash deposition problem.

Mr. W. J. Whitsell reported that the first complaint regarding the Eastside cinder and flyash conditions was received May 27, 1953 from a private citizen and that on November 23, 1953 Mr. J. C. Merchant, Eastside City Recorder, requested the Authority to make an investigation; that on February 15, 1954 representatives of the Authority conferred with Mr. Merchant and Mayor Alto; that a preliminary survey was made and a fallout station established on the Elementary School, and that on July 16, 1954 a member of the Authority's staff conferred with Mr. Forrester, General Manager Coos Bay Lumber Company, regarding the excessive fallout found at the Eastside station. The Authority's representative recommended at that time that cinder control efforts be made and pointed out that it would include a combination of the operational control measures, the installation of cinder collection equipment or increased use of wood waste material to produce by-products.

Mr. Whitsell stated that on October 5, 1954 a letter was received from City Recorder Merchant advising that citizens of Eastside had petitioned the Council and requested abatement action. Mr. Whitsell reported that he had conferred with Mr. Forrester on June 30, 1955 and learned that the company hoped to defeat the problem by eliminating wood waste. He explained that on the same day the steam generating plant at Coos Bay Lumber Company was visited accompanied by Mr. R.G. Southwick, Chief Engineer.

Mr. Whitsell stated that on August 2, 1955 another letter was received from Mr. Merchant regarding the future action to be taken by the Authority to reduce the cinder and flyash problem. Mr. Whitsell stated that the Authority sent a

ABI228

letter to the City of Eastside dated August 5, transmitting the fallout results obtained from the sampling station for the period September 1954 to April 1955 which showed a fallout from 121 to 990 tons per square mile per month.

Mr. Whitsell advised the Authority that on September 1, 1955 a letter was sent to Mr. Forrester transmitting the complete particle fallout results and recommending that the company provide appropriate cinder collection equipment. He stated that this letter also requested plans for such installation be submitted to the Authority's staff for review before any changes were made. Mr. Whitsell stated that no reply was received to this letter.

He explained that on October 27, 1955 a representative of the Authority again contacted Coos Bay Lumber Company and learned that no significant changes had been made and that on October 31, 1955 the Authority sent another letter to the Coos Bay Lumber Company advising the company that since no progress had been made toward the correction of cinder and flyash discharges that a representative of their company would be requested to attend an Authority meeting where the matter would be considered further.

Mr. Whitsell stated that on November 3, 1955 a letter was received from the Coos Bay Lumber Company stating that they have plans for utilizing more waste materials and that the company hoped the Authority would "bear with us for another few years." On November 16, 1955 Whitsell stated that the Authority sent a reply to Coos Bay Lumber Company again calling attention to the original findings that the steam plant is a major source of excessive cinder deposition in Eastside and that it was pointed out that knowledge, experience and equipment was available to effect a satisfactory control.

Mr. R. G. Southwick, representative of Coos Bay Lumber Company stated that his company is not convinced that these conditions were originating from their steam plant since there are several other mills who also could be contributing

to the pollution problem. He also wished to know why Coos Bay Lumber Company was designated as the main contributor.

Mr. Whitsell replied that the staff had enough experience with air pollution problems in other areas to rule out plants over one quarter mile distance.

Mr. Whitsell explained that it appeared that Coos Bay Lumber Company waste burner was not being heavily loaded at the time of his visit, and also the fact that the material carries as far away as it does seems to indicate that it is coming from a source at a higher elevation than the waste burner.

Mr. Southwick stated there have been no changes made in the smoke stack since 1928; that forced draft is not used and that the company must be convinced that this discharge is coming from the steam plant. He explained that at present they are securing equipment to make a stack survey and that if they found it very bad and was causing a real nuisance that then the company wished to make corrections. He pointed out that the management contacted one company from Medford to make a study for them but it "didn't work out".

The Chairman advised Mr. Southwick that the Authority's staff believes their mill is the main source causing excessive fallout in Eastside.

Mr. Hatchard stated that the staff's measurements in Eastside are not as detailed as the studies made in North Bend, but that there is a characteristic wind pattern in the Coos Bay vicinity that also is applicable to the Eastside situation.

Mr. Hatchard explained how prevailing winds effect fallout conditions and during the period of the lumber strike in 1954 the fallout was 19 tons per square mile per month when Coos Bay Lumber Company was shut down while the other mills were still operating. He advised the Authority that the fallout samples from the Eastside station ranged from 44 to 990 tons per square mile per month when Coos Bay Lumber Mill was operating from February 1954 to January 1956.

Mayor Louis Linder of Eastside, Oregon, submitted a petition signed by residents

ABI228

and explained that this was not solicited but was placed in a couple of grocery stores and the post office to obtain signatures. Mayor Linder described how the cinders became lodged under roof shingles and caused them to curl, how the cinder dust fills the roof valleys; that residents can't open windows at night because the cinders would pour in. He explained further that cinders enter buildings under doors, through windows and plug the roof drains. He stated that in the Eastside area there are two prevailing winds, north and south, up and down the bay.

The Mayor stated that it was necessary for him to clean his drywells which were packed solid with cinders. He also stated that homes have depreciated markedly in selling price due to the nuisance conditions. The Mayor briefly reviewed the success that Weyerhaeuser Timber Company attained in removing the fallout problem in North Bend and how grateful the citizens are. Mayor Linder stated that he at one time was employed by the Coos Bay Lumber Company and that they had used forced air so that they could burn as much wood waste as possible which caused the steam plant to blow off excess steam.

Mr. Southwick told the Authority that their management does not have to force the boilers to get rid of the waste; that now they have a new hardboard plant, and are utilizing 300 tons of waste a day. Mr. Southwick agreed that there still may be an occasional steam blow off but he attributed it to the change in the steam load; that the planer shavings are now used by mixing with hog fuel and utilizing it as fuel in the boiler.

Mayor Linder stated that the management tore down the whole planing mill in 1937. Mayor Linder stated that the cinder situation seemed worse since Coos Bay Lumber Company built the hardboard plant, as this fallout used to blow away but now it is finer and lighter and does not go as far.

Mr. Southwick said that none of the cinders go through the boiler at all because

the fuel is not wasted.

The Chairman stated that the data collected by the staff indicates that there is a serious fallout problem in Eastside.

Mr. Dixon asked Mr. Southwick if the engineers of Coos Bay Lumber Company had made any attempt to work with the Authority and secure data regarding the stack discharge from the steam plant.

Mr. Southwick said their company is in an out of the way location but it certainly would be agreeable to the management to work with the Authority's staff and especially since they would have knowledge they could provide that would benefit the Coos Bay Lumber Company's engineers in making this study.

The Chairman asked Mr. Southwick if his company had any technically trained personnel.

Mr. Southwick stated the company did have technically trained personnel but not professional and mechanical engineers.

Mr. Dixon stated he was under the impression that the data the Authority sent to Coos Bay Lumber Company had been ignored and now they wish a few more years to make a study.

Mayor Linder stated that he was told by an individual in the area that Coos Bay Company had no intention of cooperating but that this was only hearsay.

Mr. Dixon asked Mr. Southwick if his staff could work with our personnel and run the necessary stack measurements.

Mr. Southwick replied that they certainly could, that he and the other engineers would undertake this study. Mr. Southwick stated that he was certain that Mr. Forrester would abide with the suggestion of working with the Authority's staff and that any practical solution would be acceptable.

The Chairman advised Mr. Southwick that this problem is his company's obligation and they must do something about abating it and not wait around for a few more years. Mr. Southwick stated that in 1950 the company started operation of a

ABI228

pilot plant and since there was no water available they had to develop a dry process and that they are now using about 50% of the wood waste but the company wants to double the capacity and that a new building is available for another production line which would utilize all remaining wood waste.

Mayor Linder added that the company used to sell excess electric power but now that they have the hardboard plant they do not sell any and that sometimes the flames shoot into the air for about 100 feet when they shut down the boiler draft and smoke from the steam plant stack is coal black and can be seen for a mile or so.

Mr. West stated that it appears that the Coos Bay Lumber Company has not shown a spirit of cooperation and that he believed it was now time that there was some action taken on the matter.

Dr. Erickson suggested that the company send in progress reports of their activities.

The Chairman stated the Authority should request remedial measures to bring about progress.

Mr. Whitsell stated that the staff has information available to help the Coos Bay Lumber Company in their remedial work and would be glad to assist them in any way possible.

Mr. Southwick appreciated this offer of help. Mr. Southwick stated that Mr. Forrester or Mr. Dashney should be at any meeting of the Authority and that it was unfortunate that another meeting prevented them from being present today. He stated that the company would work with the Authority.

Mr. Dixon suggested that the Authority write a letter to Coos Bay Lumber Company and offer willingness to cooperate with them and evaluate with them conditions which show their steam plant to be the main source of the Eastside problem.

MOTION RE: EASTSIDE Cinder and flyash deposition in Eastside.

ABI228

It was MOVED by Mr. Dixon and seconded by Mr. West and carried that the Authority again bring to the attention of the Coos Bay Lumber Company the data which has been accumulated on cinder fallout in the city of Eastside, point out the lack of cooperation from the company to date, to offer the assistance of the staff in the interpretation of the data, to request the cooperation of the company in undertaking a study of their problem and to notify them that unless prompt action was taken the Authority will have no alternative but to institute proceedings to gain compliance with state statutes.

The Chairman directed the Secretary to prepare a letter advising the company again of the facts regarding the Eastside problem, point out that the company has not cooperated with the Authority and offer the assistance of a field engineer to evaluate the fallout conditions and that cooperation of their company was again being requested. The Chairman asked members of the Authority if 30 days appeared a reasonable time in which to expect Coos Bay Lumber Company to begin their work. Mr. Dixon stated that 30 days was sufficient.

The Secretary explained that 30 days may seem reasonable but he pointed out that the time period depends on the company being able to employ a competent engineer to make the stack studies and he suggested the Authority set the 30 days as a beginning time and then adjust it accordingly if necessary.

The Authority agreed to this recommendation.

STATUS OF PROPOSED WOOD WASTE AND INCINERATION STUDY

The Chairman requested Mr. Hatchard to advise the Authority the status of the waste wood burner study.

Mr. Hatchard reported that on December 14, 1955 a meeting had been held at Oregon State College and that 15 representatives of lumber or wood products mills were present. He explained that the group supported the fact that there is a need

for engineering study of waste wood burning practices; that the concensus of those present was that a planning committee be organized. Mr. Hatchard explained that representatives of the committee had been selected and included a representative from the West Coast Lumbermens' Association. The Oregon Coast Operators, Western Pine Association, Western Forest Industries Association and Oregon Forest Products Laboratory and that Professor M. Popovich, Assistant Dean of Engineering, Oregon State College, was acting as the chairman. He stated that a commitment had been secured from the Public Health Service, Taft Sanitary Engineering Center, to pay the salary of an engineer to work at the engineering experiment station in Corvallis. He stated that a committee meeting has been scheduled for the week of February 27; that plans would be made for securing equipment and funds to conduct the study.

The Chairman stated that the Authority was glad to learn of this progress.

STATUS OF PROPOSED STUDY TO CORRELATE FLUORIDE AIR CONCENTRATIONS WITH RESULTING FOLIAGE CONCENTRATIONS IN COOPERATION WITH OREGON STATE COLLEGE, AGRICULTURAL EXPERIMENT STATION.

The Chairman requested W. J. Whitsell to advise the Authority of the status of the proposed air and foliage concentration study in the Troutdale vicinity. Mr. Whitsell reported that the field work was scheduled to begin during April at test plots in Troutdale west and east of the Reynolds Aluminum reduction plant and that three automatic impingers were being built for the study. He explained that the project had been scheduled to begin on a smaller scale in April and would be expanded in June if research funds were secured by Oregon State College, Agriculture Experiment Station, from the Public Health Service.

INVESTIGATION OF LIVESTOCK - FLUORIDE CONDITIONS

The Chairman requested Dr. Monroe Holmes, State Board of Health, Public Health Veterinarian, to report on his investigation of the livestock - fluoride situation.

Dr. Holmes stated that during December 1955 and January 1956 he had been obtaining background material regarding animal afflictions and development, pathology, etc., in the Troutdale area. He reported that he had contacted Drs. Seabert Carter, Thomas Carter and Dr. Brimble, practicing veterinarians in the area, and learned that none of them believed that the present afflictions or diseases that they found in herds near Reynolds plant are due to fluorides specifically. Dr. Holmes stated that there is some doubt regarding the cause of minor ailments such as hoof rot, diarrhea and general poor condition since the occurrence of these disorders has been more frequent than in the past.

Dr. Holmes stated that he had also contacted Mr. William Averill, Multnomah County Agricultural Extension Agent and with him interviewed William Tegart, Townsend, Schlenneger and Tebbart on the S. B. Hall farm and had endeavored to ascertain their past experience with livestock afflictions and deaths correlated to the present conditions in their animals. He advised that the data obtained from these interviews indicated that none of the people raising livestock in this area are presently afflicted with conditions which may be allied with fluorosis damage, but that two of the dairymen interviewed have firm convictions that there may be damages caused by fluoride from the Reynolds plant.

During the same period Dr. Holmes stated that he had also interviewed Mr. Herbert Howell, Farm Manager and Dairy Supervisor of the John Jacob Astor Experimental Station at Astoria, Oregon, who may be considered a nutritional specialist of animals and has been with the lower Columbia River Valley for several years and is well acquainted with the feeding problems of livestock on the lower Columbia River. Dr. Holmes reported that Mr. Howell was of the firm conviction that some of the livestock people on Sauvie Island had suffered fluoride damage during the early operation of the Alcoa plant but that the continued complaints and problems within the animals are due to either poor farm management or lack of

ABI228

nutritional knowledge regarding the mineral and protein needs of them. Dr. Holmes advised that Mr. Howell's experiments have indicated animals of the Sauvie Island and lower Columbia River area are suffering largely from imbalance of trace minerals especially copper cobalt relation and possibly molybdenum and that liver biopsies on cows taken from the Fraser herd have shown only 10 to 11 parts per million by Wisconsin and Stanford Laboratories whereas the normal cow may be expected to have 150 to 300 parts per million of copper in the liver tissues. Dr. Holmes explained that present experiments on the experimental station herds have shown the copper deficient animals to have lesions and symptoms similar to those which are claimed to be damaged from fluorides but that he had not seen any of these animals personally but 35 mm color pictures showed such animals manifesting signs which were similar to those that several of the complaining dairymen have stated.

Dr. Holmes stated that there were two courses of action for utilization of livestock as sentinals or criterias of possible human health hazards from fluoride emissions by the Reynolds Metals Company, and that one would be to continue consistent physical observation and recording of all conditions, illnesses of each herd in this area. Dr. Holmes explained that the disadvantage of this approach was that dairymen and livestock raisers lack cooperation particularly when such observations may not be of specific benefit to themselves and that physical observations are long and tedious having a tendency to lower milk production and cause minor damages to dairy animals and also that such observations required the unlimited use of the dairyman's manpower taking considerable time from his routine work.

Dr. Holmes stated that the advantage would be to obtain specific records of each animal over a current period where major changes and minor changes may be noted; and that a period of 2 to 3 years would allow development of younger animals into adults providing growth stages which would accurately mirror any condition

which may cause pathological or physiological changes. Dr. Holmes pointed out that the second approach would be to provide experimental and control herds within the afflicted area; however the disadvantage would be the initial cost of purchasing animals and providing pasture and housing and care for them. He explained that the advantage to this approach would be that the animals would be under specific observation and synergistic factors could be evaluated to a greater extent than in normal farm animals.

The Chairman stated this was a good report and the Authority was glad to receive it. He asked Dr. Holmes to keep the Authority informed of his subsequent work.

Mr. Clifford N. Carlsen, Jr., Attorney representing Reynolds Metals Company, asked Dr. Holmes if he intended to check urine samples and bone samples, etc.

Dr. Holmes replied that the bone conditions should be studied in a research program, but that this was all largely depending on the wishes of the Authority.

Dr. Erickson asked Dr. Holmes what would be the approximate cost of an experimental herd, how many animals it would involve and where would they be pastured.

Dr. Holmes stated he had not figured out the details but believed arrangements could be made with farmers so that a herd could be maintained at an economical level which would be self supporting; that the feed and animal care probably could be paid out of the sale of the animals or milk production.

Dr. Erickson then asked the Authority members if there was enough interest in the project to have Dr. Holmes explore it further.

The Chairman suggested it may be well to explore this phase of fluoride study from the standpoint that if there was need, efforts should be made to secure Public Health Service funds under the provisions of Public Law 159.

Dr. Erickson indicated that he was in agreement to this approach.

Dr. Holmes explained that at the November Authority meeting with Mr. A.C. Stern, Chief, Public Health Service Air Pollution Program, it was indicated that the

ABI 228

relationship between Public Health Service and U. S. Department of Agriculture would have to be developed before such a proposal could be considered.

The Authority agreed that Dr. Erickson and Secretary Everts could submit this proposal to the Public Health Service if further study indicated that approach was desirable.

Dr. Erickson stated he would like a letter direct from the Authority describing what type of project should be explored, and whether Dr. Holmes should proceed with it.

Mr. Carlsen asked that in the event an experimental herd would be placed close to the plant would there be a control area away from the plant.

Dr. Holmes assured him that a control herd would also be maintained if such a study were undertaken.

SPRINGFIELD: Re: McKenzie River Odor Problem

The Chairman requested Mr. Hatchard to report on the progress of the odor problem originating from the discharge of the Weyerhaeuser Timber Company's pulp mill waste into the McKenzie River.

Mr. Hatchard reported that the staff had made surveys of the river problem and had met with representatives of Weyerhaeuser Timber Company and that the company had started research to determine the most practicable solution to the condition. He advised that the Sanitary Authority's staff and the Air Pollution Authority's staff had met with the company's Technical Director and learned that chlorination of about one million gallons of Bergstrom effluent with about 100 parts per million should remove the odors. He stated that the log pond would receive the chlorinated waste and that several hundred feet of pipe would be layed so that approximately 50 days detention before discharge would be available.

Mr. Hatchard pointed out that chlorination would start in May and that additional surveys would be made to determine the change in the river odor conditions.

The Chairman stated the Authority was glad to learn that progress had been made.

ALBANY: Re: Odor from Western Kraft Mill

The Chairman requested the Secretary to report on the complaints received regarding the odors from the Western Kraft Mill located north of Albany.

The Secretary stated that seven complaints had been received and that preliminary investigations had already started; and that as soon as staff time permits a more detailed report will be made.

Mr. Hatchard replied that representatives of the Authority had visited the plant on January 24, and learned that no specific odor control systems had been installed as a part of the plant construction. Mr. Hatchard stated that a dust control installation had been made as a part of the recovery furnace operation. However, this is not closely related to the odor conditions. Mr. Hatchard reported that District Engineer Merryman was contacting complainants to secure additional information and that odor surveys would be made when staff time permitted.

The Chairman instructed the staff to proceed with the necessary field surveys.

DATE OF NEXT MEETING

It was decided that the next meeting would be tentatively scheduled for May at the call of the Chairman.

MEETING ADJOURNED

There being no further business, the meeting adjourned at 4:20 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, Jr., Secretary  
Oregon State Air Pollution Authority

SIXTEENTH MEETING  
OF THE  
OREGON AIR POLLUTION AUTHORITY

June 22, 1956

The sixteenth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 1:30 PM Friday, June 22, 1956, in Room 36, State Office Bldg., 1400 S.W. 5th Ave., Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Mr. R. P. Dixon, Dr. Harold M. Erickson, members and Curtiss M. Everts, Jr., Secretary, Charles D. Burt, Legal Advisor, R. E. Hatchard, Chief of the Air Pollution Control Section, W. J. Whitsell, Associate Engineer, Mr. Frank P. Terraglio, Ronald D. Nance and J. R. Faust, Chemists, and H. W. Merryman, District Engineer, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The Secretary summarized the minutes of the fifteenth meeting of February 9, 1956.

The Chairman declared that if there were no corrections or additions the minutes would stand approved as prepared by the Secretary.

NORTH ALBANY: WESTERN KRAFT CORPORATION MILL

The Chairman requested the Secretary to report on the complaints received regarding odors discharged from the Western Kraft Corporation Mill north of Albany.

The Secretary read a letter dated April 10, 1956 from the City of Jefferson requesting the Authority to investigate the conditions and bring about abatement of the offensive odors, originating from Western Kraft Mill at Albany. The Secretary summarized a letter dated Marcy 10, 1956 from A. L. Harding, City Recorder, Independence, which stated that a council meeting was held on 3-7-56 wherein it was agreed that an offensive odor being emitted from the paper mill at Albany was causing nuisance conditions at times in Independence and that

the city council instructed the Recorder to seek assistance from the Air Pollution Authority to abate this nuisance. The Secretary stated that since the Authority meeting on 2-9-56 a total of 15 other complaints had been received from residents near Albany.

The Chairman requested Mr. Hatchard to discuss the staff's investigation of the odor conditions.

Mr. Hatchard stated that the Western Kraft Corporation began operation of the 120 ton per day mill in September 1955 and that the production process included the following steps: (1) Cooking wood chips in a pressure cooker for 4 hours, (2) Washing and refining the pulp for use in the kraft paper machine, (3) Recovery of chemicals removed from the pulp and, (4) Makeup of chemicals for reuse in the process.

He stated that there are many points of atmospheric discharge from a plant of this size but the major emissions included the digester blow and relief gases, recovery furnace stack and the lime kiln. He explained that other plant discharges include the various condenser relief valves, pulp washer, paper drying, oil fired boilers. He stated that the existing plant control systems included a condenser to remove the condensible part of the digester blow and relief gases, a venturi scrubber to serve the recovery furnace together with centrifugal type collector and a water scrubber and vacuum filter connected to the lime kiln discharge. He explained other plant control arrangements included an operational balance of excess air through the recovery furnace to prevent the formation of odorous sulfide compounds.

Mr. Hatchard stated that the complaints received were based upon objectionable odors from the plant and that the main source of odor came from the non-condensable digester relief and blow gases and the black liquor recovery furnace discharge.

Mr. Hatchard reported that the staff had made five area odor surveys since March in the vicinity of the plant. He explained that no satisfactory field odor sampling equipment is available and that the surveys are made by observing the

AB1228

odor frequency and intensity at various distances from the plant. He explained that the odor intensity is recorded on a basis of 0 to 4 and that there was good agreement between the independent determinations by two observers at the same sampling station.

Mr. Hatchard stated that the variable weather conditions in Albany complicated the study since fixed sampling stations could not be used. Mr. Hatchard reported that the surveys showed frequent odor intensities of number 1 and 2 and occasional observations of #3 and 4 intensity for short durations usually less than one minute. Mr. Hatchard stated that the company was planning to use an odor masking additive and that arrangements would be made for the staff to conduct another survey at that time.

Mr. R. V. Hansberger, Executive Vice President, Western Kraft Corporation, stated that the management is fully aware of the problem in north Albany and that representatives of the Air Pollution Authority have conferred with him a number of times regarding the information from the surveys and studies. He explained that since the date of the Air Pollution Authority's last meeting Western Kraft had been shut down for a period of 30 hours in which time changes were made in the system. Mr. Hansberger said that he believed the mill is doing a good job removing the materials and odor although, he stated, they have found it extremely difficult to separate them entirely with water or liquid showers because all substances were not soluble. One of the changes made during their shutdown, he explained, was to force more air in the recovery system burning process and to prevent the formation of odorous compounds. Mr. Hansberger said he felt it was quite successful although it had not entirely solved the problem. In addition to that in the period between June 2nd, and June 5th, they inaugurated experiments and tests using Alamask. It was pointed out that its function is to mask the odors. He stated that their observations indicated that Alamask was performing quite successfully in reducing the odor from the recovery system. He stated that another test was scheduled in July which would include use of Alamask in the pulp digester. He added that as far as the expansion program

was concerned, the technical staff had been studying the problem continuously including the recovery system and that they had purchased a larger and more powerful fan and separation system which will greatly assist the oxidation of the odorous materials before discharge.

Mr. Hansberger stated that the experiments are continuing and although the improvements will not be 100% effective he was certain they would be able to substantially reduce the odors from their kraft mill. Mr. Hansberger stated that he would like very much to have a representative of the Air Pollution Authority present at the next experiment using the odor masking agent.

Chairman Green asked Mr. Hansberger to advise the Air Pollution Authority when the next test run would be made and a representative would be present. The Chairman asked Mr. Hansberger if other kraft mills were using this odor control method.

Mr. Hansberger replied that every kraft mill has this type of odor problem and is concerned and working on improvements and that he and his staff are keeping in touch with developments in other mills. He added that Western Kraft system is somewhat novel but they thought it was better than some conventional systems of reducing odors. In general, he stated, that if there was a way of measuring relative odor compared with production he was sure that Western Kraft was doing as well as any kraft mill in the business.

Mr. Dixon suggested that Mr. Hatchard attend the next experiment and submit a report to the Air Pollution Authority.

The Chairman asked Mr. Hatchard if he had received plans for the control of odors to serve the expanded plant.

Mr. Hatchard stated that the staff had not made a specific request but that it was normal practice to receive plans before an installation is completed.

The Chairman requested Western Kraft Corporation to submit their plans describing the control systems for the expanded plant to the Authority for review.

ARI 228

Mr. Hansberger stated that it is their intention to make the plans available. The Chairman requested a report from the staff at the next meeting.

EMPIRE: Official public hearing regarding cinders and flyash discharges from the Cape Arago Lumber Mill.

The Chairman stated that the representatives of the Cape Arago Lumber Company were now present and that the Authority would proceed with the public hearing regarding the cinder and flyash deposition on property near the Cape Arago Lumber Mill in Empire.

The Chairman requested the Secretary to summarize the previous actions of the Authority regarding the matter.

The Secretary stated that at the last Authority meeting Mr. Clifford Carlson, Attorney, representing Cape Arago Lumber Company, stated he would advise the Authority regarding the company's plans. The Secretary explained that since November 1955 the mill had been closed except for partial operation of the planer; that there had been some reports that the mill production may be completely reorganized. The Secretary pointed out that the Authority did not receive any communication from the Cape Arago Lumber Company although an additional request had been sent to the company requesting the information. He reported that the company had notified the Authority that the lumber mill had resumed operation on May 1st, and that it had also been decided at the last Authority meeting that the company would be cited in if appropriate arrangements were not made to control their cinder and flyash discharges.

During the hearing Mr. Whitsell reported that the Authority's studies began in March 1954 with the location of two fallout stations and that the Authority had notified the City of Empire regarding the fallout results obtained and announced that the station would be discontinued unless complaints were received. The City of Empire requested the Authority to continue the investigation and take necessary action to reduce the cinder and flyash deposition. Mr. Whitsell stated that the data obtained from the fallout station showed excessive deposition was occurring during various periods and that a maximum of 417 tons

per square mile per month had been found. He stated that the Authority's recommendations had been submitted to the management of the Cape Arago Lumber Company regarding the installation of cinder control equipment to serve the steam generating plant but that no changes had been made. He also stated that during his past two field trips to Empire he was unable to contact Mr. Miller to discuss the situation.

Mr. Hatchard stated that the Empire City Council had sent subsequent letters to the Authority again requesting abatement action.

Mr. Miller, Vice President, Cape Arago Lumber Company, stated that he had operated the company since May 1950; that he had received some complaints at the mill regarding cinder conditions. He explained that he had attempted to minimize the discharges from the waste wood burner. Mr. Miller stated that he regretted that his company appeared not to be concerned about the problem; that inadvertently letters from the Authority had not been properly answered. He stated that the company would investigate the matter of installing cinder collection equipment to serve the steam generating plant.

MOTION RE: EMPIRE CAPE ARAGO LUMBER COMPANY

It was MOVED by Mr. Dixon and seconded by Dr. Erickson and carried:

1. That the Authority continue the hearing.
2. That the management of Cape Arago Lumber Company obtain technical assistance to advise them regarding the correction of the excessive cinder and flyash discharges.
3. That they cooperate with the Air Pollution Authority staff.
4. That we receive statement of progress toward solution of the problem within 90 days.
5. That the staff advise the Authority of specific recommendations for further action or consideration in the matter.

The Chairman requested the company to submit a progress report within the next 90 days.

API228

Dr. Erickson stated he would like a progress report submitted sooner than 90 days if possible.

MULTNOMAH COUNTY: BURNING REFUSE DUMPS NORTH OF PORTLAND

The Secretary stated that several complainants were present who wished to be heard regarding air pollution from the burning refuse dumps.

Mrs. Carlie Gilstrap, 405 N. Russett Street, stated that after the establishment of her residence a series of garbage dumps have been started in the area north of Columbia Boulevard and that now when these dumps operate over 100 trucks a day deliver wet garbage to the dumps. She reported that two of the dumps receive permits from the county to operate but that the County did not give them any permit to burn and that they are burning in violation of that permit. She stated that they are anxious to have this situation corrected as soon as possible and to have this Authority take necessary action that will bring about proper handling of garbage. Actually she stated they would like to get the dumps closed but if that can not be arranged it is their understanding that the Authority could make recommendations to reduce the air pollution. She advised that they realized that the County and City are both involved, the city in licensing the trucks and hauling the garbage out of the city and the county in general supervision of the dump operations. She stated that the city has provided an incinerator to properly burn garbage but that the dumps north of Columbia Boulevard are closer for these garbage trucks to unload. Mrs. Gilstrap said she understood there was a requirement that the dumps should be covered with five feet of dirt which definitely is not being done. Mrs. Gilstrap presented a map showing locations of complainants' homes and the refuse dumps. She reported that one new dump had been established near north Vancouver and Columbia Boulevard which was very close to their homes and that they suffer all summer and fall when the prevailing winds carry smoke, flyash and odors from the dumps to their homes. She stated that they have flyash deposited on their homes and yards and that the smoke is so thick that

automobiles have to use their lights during daylight hours. Mrs. Gilstrap stated that there is practically always a cloud of dense smoke in one direction or another and that it is hoped the Authority's staff will make a preliminary survey since all the residents consider this a serious health hazard.

The Chairman asked the Secretary if written complaints had been received regarding these refuse dumps.

The Secretary replied that a complaint had been received May 18, 1956 regarding the dumps which contained the signatures of eight residents.

The Chairman stated that this matter should be investigated not only by our staff but in cooperation with the County and City officials.

Mr. Dixon stated that if these trucks were operated in violation of a county permit, it appears that conditions could be improved by the county enforcing its regulations. Mrs. Gilstrap replied that the burning at the dumps is being done in violation of the permit.

Chairman Green asked Mrs. Gilstrap what agency issued the permit.

Mrs. Gilstrap replied that she understood it was the Board of County Commissioners.

Dr. Erickson stated that the matter should be investigated with the County and City agencies and that independent studies should be made if necessary to determine the nuisance conditions in the area.

Chairman Green directed the staff to investigate the matter when other commitments will allow and to confer with the city and county officials concerned.

EASTSIDE: CINDER AND FLYASH DEPOSITION FROM COOS BAY LUMBER COMPANY

The Chairman requested W. J. Whitsell to report on the cinder and flyash deposition in Eastside.

Mr. Whitsell stated that at the February 9, 1956 Air Pollution Authority meeting the Authority directed that the Eastside problem again be brought to the attention of the Coos Bay Lumber Company and that the data which had been accumulated by the staff showing the company to be the major source of cinders

ABI228

and flyash be interpreted to the company management, and that the lack of cooperation by the Coos Bay Lumber Company be pointed out; that the company's cooperation in undertaking a study of their problem be encouraged and that the company be notified that unless prompt action be taken the Authority will have no alternative other than to institute proceedings to gain compliance with state statutes.

Mr. Whitsell advised that on March 20, a letter containing the above recommendations was sent to the Coos Bay Lumber Company and that in a letter of March 21, from the Coos Bay Lumber Company a meeting date with the Authority's staff was arranged. Mr. Whitsell reported that on March 30, Mr. Hatchard met in Coos Bay with Mr. J. W. Forrester, President, Coos Bay Lumber Company.

Mr. D.D. Dashney, Vice President, Coos Bay Lumber Company and Mr. R.G. Southwick, engineer, Coos Bay Lumber Company and that the fallout and area survey data was discussed. Mr. Whitsell stated that Mr. Forrester advised that an engineering and contracting firm in Medford had made measurements of the steam plant stack but the Coos Bay Lumber Company believed the information was inadequate. Mr. Whitsell stated that C.C. Moore Company had been contacted to make another study but the Moore Company had not yet started the work. He stated that arrangements were made to notify the Authority when the stack study would be made so that a staff member could be present. Mr. Whitsell reported that the company management declared they intend to proceed with necessary corrections. On June 13, Mr. Whitsell reported that he conferred with Mr. R. G. Southwick at Coos Bay and learned that the company had just received a proposal from the Preferred Equipment Engineers in Seattle to conduct stack tests but that the nature of their requirements would necessitate considerable work in the preparation of scaffolding and opening the re-enforced concrete stack and that a building project already underway was expected to occupy their personnel completely until the middle of July.

The Chairman requested the Secretary to read a letter dated June 20, signed

by Mr. D. D. Dashney, Vice President, Coos Bay Lumber Company, regarding the Company's efforts to investigate the cinder discharge from their plant.

The Chairman asked if the staff had any recommendations to make in this matter.

Mr. Hatchard stated that the staff was concerned regarding the length of time required before corrections are made. He explained that we do have fallout measurements from our Eastside stations and that the data shows a very high rate of deposition. He stated that the city officials urged that the matter be corrected just as soon as possible since the residents were pressing for action. In view of our information and what the company has advised it would appear that the report at the next meeting would be the progress taken in the meantime but really what was needed was to reach the stage of determining what specific installations will be made to correct the steam plant discharge.

The Chairman asked if this problem was similar to those which have been encountered elsewhere and that there are solutions available.

Mr. Hatchard stated that the situation is similar but there has been some difficulty on the part of the staff to convince the management of Coos Bay Lumber Company that it is their plant discharge that was creating the problem since there are other plants in the vicinity. Mr. Hatchard stated that the staff is certain that the Coos Bay Lumber Company is the major contributor but that a measurement of the steam plant was needed to determine quantitatively the amount of cinders and flyash discharged.

The Chairman asked over how long a period has the Coos Bay Lumber Company been advised to reduce the discharge.

Mr. Hatchard stated that the Authority's recommendations were made 1½ years ago and that the actual corrections are not yet started.

Mr. Whitsell stated that there is another matter which the members of the Authority might consider since the ownership of the mill is to be changed and Mr. Southwick, Coos Bay Lumber Co., Engineer, had stated that a new owner may have different plans as far as the steam power plant was concerned and

ABI228

that there was a possibility of dismantling it.

Mr. Green asked if there had been a change of ownership announced yet.

Mr. Whitsell said no but the general opinion was that Georgia-Pacific Corporation would purchase this firm.

Mr. Dixon suggested that a registered letter be sent notifying the company of its violation of the statute and then give them a reasonable time to figure out what they wish to do about it and if it is their plan to dismantle the plant it should be so stated but in any event the new buyer should be aware of the situation.

MOTION RE: EASTSIDE: COOS BAY LUMBER COMPANY

It was MOVED by Dr. Erickson and seconded by Mr. West and carried that the Coos Bay Lumber Co., be notified that they appear to be in violation of the Oregon laws pertaining to air pollution and that the Authority would expect from them a statement regarding their plans for compliance with the state statute and that they shall advise us of such action within a period of 90 days.

SWEET HOME: SANTIAM LUMBER COMPANY

The Chairman requested Mr. H. W. Merryman to give a resume of the progress being made at the Santiam Lumber Co., in Sweet Home, Oregon.

Mr. Merryman stated that the staff first became aware of this situation in 1954 when residents complained of nuisance conditions adjacent to Santiam Lumber Company and that a staff member made an investigation on November 29, 1954 and found a considerable nuisance condition caused by cinder and flyash fallout. He reported that a sampling station was established in November 1954 and in January 1955 the Authority received a complaint-petition signed by 65 residents near the mill and that the staff had made a plant visit. He stated that the main sources of the cinder and flyash were the two hog fuel steam boilers and the waste wood burner and that recommendations were sent to the company that cinder collection equipment be installed.

Mr. Merryman stated that the Santiam Lumber Company then engaged engineering services and proceeded with a program to correct the problem which included the installation of a log barker, a cinder collection system for both boilers and an additional hog fuel chipping unit. He advised that the barker was installed in September 1955 and the collectors were finished in January 1956 and that now all of the wood waste from this plant is used for pulp mill chips or for hog fuel. He stated that the waste wood burner was dismantled in May 1956.

The Chairman asked if this solution had remedied the cinder and flyash conditions. Mr. Merryman stated there has been considerable reduction of flyash as a result of the cinder collection installation and other changes but subsequent fallout samples would show the reduction quantitatively.

Mr. Hatchard stated that the staff is extremely pleased with the progress and pointed out that the company made corrections beyond the scope of the Authority's original recommendations.

The Chairman suggested that the Secretary prepare a letter in behalf of the Authority expressing appreciation for the cooperation extended.

PROPOSED ENGINEERING STUDY OF WASTE WOOD BURNERS - Charles M. Sanford, Associated Forest Industries of Oregon.

The Chairman called upon Mr. Sanford to give a report on the status of the plan to organize an engineering study of waste wood burning.

Mr. Sanford stated that with the cooperation of R.E. Hatchard, some members of the industry, Oregon State College Engineering Experiment Station and Public Health Service that at least there is a sound program proposed. He stated that the only remaining step was to get the lumber industry to pay its part of the cost. Mr. Sanford reported that the program and plans of the waste burner research included the following arrangements:

1. U. S. Public Health Service has agreed to pay the salary of the chief investigator who will probably be an Oregon State College faculty member working during the summer of 1957.

2. The Oregon Forest Products Laboratory will provide technical service.
3. Sawmill and plywood industries will pay the wages of an engineering aide, provide sampling equipment, pay necessary traveling expenses of the two persons conducting surveys and pay for publication of a report to be distributed widely throughout the industry. This cost is estimated to be about \$6,000.
4. The Oregon State College Engineering Experiment Station will coordinate the project and assume responsibility to see that the research is carried out in a diligent manner and publish a report.

Mr. Sanford stated that the remaining arrangement is to get industry together and collect the \$6,000 but that some of the mills belong to no industry association of any kind so the \$6,000 will be solicited from companies directly involved with burner cinder and flyash complaints.

The Secretary informed the members of the Authority that this program may have seemed to progress slowly at first but that we have received excellent cooperation from the staff of the Associated Forest Industries of Oregon and that they have made a considerable effort to get the program organized. The Secretary stated that it has been a real pleasure working with Associated Forest Industries of Oregon.

PORTLAND: Staff report regarding summary of air sampling data, 1952-56, City of Portland Air Pollution Committee activities and Stanford Research Institute Survey.

The Chairman suggested that the staff could send a written report to members of the Air Pollution Authority regarding Portland air pollution activities and make only a brief report at this meeting.

Mr. Hatchard advised that the Secretary and members of the staff had met with the members of the City of Portland Air Pollution Committee on four occasions since the last Authority meeting and it was believed that there has been renewed interest regarding Portland air pollution conditions during the past six months. He stated that an effort was being made to establish an air pollution

program by the City of Portland which the staff and members of the Authority can advise and assist. Mr. Hatchard said that Dr. Meador has requested technical assistance from Public Health Service to provide technical assistance to the city under the provisions of Public Law 159. Arrangements have been completed for an engineer to meet with all groups concerned with Portland's air pollution conditions and that the overall survey would proceed along the following general plan:

1. Determine the nature and extent of air pollution surveys needed.
2. Determine staff and equipment requirements to make the study.
3. Determine source of personnel and funds needed to support survey.
4. Detailed project development.

Mr. Hatchard advised that the Public Health Service engineer would be in Portland during the week of July 9, 1956.

EUGENE: EUGENE AIR POLLUTION CONTROL ORDINANCE

The Chairman stated that it was his understanding that the City Council of Eugene has passed an air pollution control ordinance.

Mr. Hatchard reported that the Eugene City Council had unanimously passed the air pollution ordinance on May 28th, and that the control provisions adopted had been based upon the report prepared by the Eugene Anti-Air Pollution Committee following over a years study.

He stated that the staff had actively participated in the study of Eugene air pollution and had submitted recommendations which were incorporated with the committee's report.

Mr. Hatchard stated that the air sampling and surveys in Eugene had been increased to obtain more data and that this work has been carried on in cooperation with the city.

He advised that the control provisions contained in the ordinance were equivalent to the Authority's proposed regulations and that the city council had allowed a time period until January 1, 1958 for conformance.

ABI 228

Mr. Dixon stated that he believed it was a very good ordinance and that the City would get good cooperation.

BEAVERTON: PACIFIC ADHESIVES COMPANY ODOR CONTROL

The Chairman requested Mr. Terraglio to report on Pacific Adhesives progress towards an appropriate odor control system. Mr. Terraglio reported that additional equipment was on order and the complete installation is expected within six weeks at which time the staff will re-evaluate the odor conditions as they exist.

The Secretary stated that the staff received a letter of appreciation from Circuit Judge Charles Foster regarding the work accomplished.

ADMINISTRATIVE MATTERS

The Chairman advised that any proposed legislation for consideration by the state legislature which will convene in January 1957 should be considered.

The Secretary stated that September 1, 1956 was the deadline for submitting the proposed legislation to the Legislative Council for review.

The Chairman asked the staff if there was a need for additional legislation it should sponsor or recommend for the adoption of the Legislature.

Mr. Hatchard stated that one point that comes up frequently is the question whether there is a need for enabling legislation to allow a county or group of counties to carry on a local air pollution program. He advised that cities with the local rule provisions have the power to set up their own program and the question has come up in the Eugene-Springfield vicinity whether or not a two city or part of a county operation would be the best approach for a local program.

The Chairman asked if this matter could not come through the League of Oregon Cities and Association of Oregon counties if so desired.

The Secretary replied that this approach could be followed and he explained that the Legislative Interim Committee on Local Government is now engaged in the

study of state and county relationships and state and city relationships. He advised that if this Committee believes that such legislation is needed, it would be introduced.

The Chairman felt there was no particular need for the Authority to go into this matter at this time but instead the request for any such legislation should come from other agencies concerned. He stated that the Authority would consider any legislation that might be proposed and decide whether it should be supported.

Budget for 1957-59 Personnel, Equipment needs, Biennial report, 7-1-54 to 6-30-56.

The Chairman requested the Secretary to discuss the major changes in the proposed 1957-1959 budget.

The Secretary stated the proposed budget provides for one additional public health engineer II over our present operating personnel and an additional chemist in the second year and one third of the salary of a Public Health Veterinarian.

The Chairman said since this item requires considerable study and deliberation he suggested that the review and recommendation of the budget be assigned to a committee of 2 or 3 members of the Authority.

The Secretary stated that the biennial report and budget preparation period coincided and that time was needed to prepare both items for presentation.

Dr. Erickson stated that he believed the Authority will be needing more data than ever before to justify the budget items requested. He advised that the Governor had requested an intensive review before his recommendation to the Legislature would be prepared.

NEW COMPLAINTS: CORNELIUS RE: DUST FROM DUGDALE NUT PROCESSING COMPANY

A complaint regarding dust from the Dugdale Nut Processing Company dated May 11, 1956 sent in by City Manager J. D. Harleman was read and was placed on the staff's work schedule for investigation.

MYRTLE CREEK: CINDER AND FLYASH FROM UMPQUA PLYWOOD CORPORATION

The Secretary stated several letters of complaint were received from residents

ABI228

in Myrtle Creek regarding cinder and flyash from the Umpqua Plywood Corporation and that the Authority has written to W. H. Gonyea, General Manager, Umpqua, regarding this nuisance and that a reply had been received from Mr. Gonyea that the mill would be closed if the Authority insisted that changes be made. The Chairman wished to know if there has been any investigations in Myrtle Creek. Mr. Hatchard stated that T. M. Gerow has investigated complaints and that a fallout station was operating and that the fallout has been very high and that the major source was the Umpqua Plywood Corporation's steam generating plant. Mr. Dixon stated that he knew Mr. Gonyea and that in the past the company has been involved in labor troubles and each time he is approached to change some practice he advises that he is closing operation for 30 to 60 days and he will follow through if it is to his advantage.

Dr. Erickson stated that if there is violation of the law the Authority should proceed with necessary steps to bring about correction.

Chairman Green instructed the Secretary to prepare a reply to Mr. Gonyea and point out that the cinders can be controlled.

MARION COUNTY: ODOR FROM THE LABISH COLD STORAGE COMPANY

The Chairman requested the Secretary to report on the Labish Cold Storage Company's odor problem.

The Secretary stated the Authority had received complaints from School District No. 31 relative to odor conditions from a pile of decomposing onions at the Labish Cold Storage Company in Brooks, Oregon. He reported that a field investigation was made and a letter was sent the company recommending that action be taken to abate this nuisance and that this complaint would be presented at the June 22, 1956 Authority meeting. The Secretary stated that no action had been taken by the company.

Dr. Erickson stated that he believed the company should be cited to appear at a public hearing since the company is apparently unwilling to cooperate on the

problem.

The Chairman asked Dr. Erickson if this matter could be handled by the Marion County Health Department using the local nuisance statutes normally enforced by their department.

Dr. Erickson replied that there was no specific statute that applied to this condition which could be used.

The Chairman asked Attorney Burt if there were other statutes regarding public nuisances which the Marion County District Attorney could act on.

Mr. Burt stated that he could not recall a state law covering this matter but that he would be glad to investigate the matter with the District Attorney.

MOTION RE: MARION COUNTY, ODOR, LABISH COLD STORAGE COMPANY

It was MOVED by Mr. West and seconded by Dr. Erickson and carried that C.D. Burt discuss this complaint with the District Attorney of Marion County and that if a satisfactory solution is not found that the Secretary or Chief of the Air Pollution Authority be authorized to hold a hearing on behalf of the Authority to resolve the matter.

MEDFORD: CINDER AND FLYASH DEPOSITION

The Chairman requested the Secretary to review the complaints regarding flyash from sawmills in the Medford area.

The Secretary read a letter-complaint from Mr. Wallace W. Watkins of Medford alleging cinder and flyash fallout from three sawmills were causing public nuisances in the vicinity and reported that a reply had been sent to Mr. Watkins advising that T. M. Gerow, State Board of Health District Engineer, would investigate the three waste burners in his vicinity.

Mr. West asked if the city of Medford was preparing an air pollution ordinance.

Chairman Green replied that the city was not preparing an ordinance at this time but this complaint should be discussed with the City Manager of Medford.

AB1228

PORTLAND: TRUMBULL ASPHALT ROOFING - FUMES AND OIL DEPOSITION

The Chairman requested the Secretary to report on Trumbull Asphalt Roofing nuisance condition.

The Secretary read a letter from the Portland Health Bureau dated May 16, 1956 advising that a complaint had been filed by the employees of the Hazeltine Company regarding the deposition of oily substances on their automobiles in the vicinity and requesting the Authority to assist with air sampling to determine the source of discharge. The Secretary reported that the Authority had advised the Portland Health Bureau that a study would be made as soon as the work schedule would permit.

The Chairman directed the staff to start the study as soon as other commitments will allow.

CLACKAMAS COUNTY: FUMIGANT USED AT CARGILL GRAIN COMPANY

The Chairman asked the Secretary to report on the status of the Cargill Grain Company's dust nuisance conditions.

The Secretary read the complaint dated May 31, 1956 submitted by Attorney Harry A. Harris in behalf of Mr. and Mrs. C. Wicks alleging that the Wicks were exposed to a health hazard due to the grain company's operations which allowed the wind to carry fine dust from their operation to the Wicks' residence. The Secretary advised that representatives of the State Board of Health, Occupational Health Section and the Authority had immediately investigated the human health aspects and it was learned that the Cargill Company had completed operations and that the new company would completely change the grain handling methods.

The Secretary reported that the staff had advised Dr. H. Stolte, Clark County Health Officer, of the situation since the complaint had been referred from their department, and asked Dr. Stolte to request another investigation if the new company appears to be causing a dust problem.

WILLAMETTE CITY: CINDER AND FLYASH DEPOSITION.

The Secretary was instructed by the Chairman to review the complaints regarding

cinder and flyash deposition in Willamette City.

The Secretary read a letter from Mr. Ned. S. Warriner, Corps of Engineers, Oakridge, regarding the deposition of cinders and flyash originating from two waste wood burners which were causing nuisance conditions.

The staff had advised Mr. Warriner that H.W. Merryman, State Board of Health District Engineer, would investigate the conditions.

THE DALLES: CINDER AND FLYASH FROM THE DALLES LUMBER COMPANY

The Chairman requested the Secretary to report on the complaints regarding the deposition of cinder and flyash near The Dalles Lumber Company in The Dalles.

The Secretary stated the Authority had received a petition signed by 37 residents located in the Riverview area alleging that smoke and unburned sawdust from the burner of The Dalles Lumber Company was contaminating the air and injuring health and soiling the personal property of the residents. He reported that the group had been advised by letter that the complaint would be referred to the Authority at its June 22nd, meeting.

The Chairman directed the staff to investigate this complaint as time permitted.

THE DALLES: DRIFT OF LEAD-ARSENATE FROM ORCHARD DUSTING.

The Chairman requested Mr. Hatchard to report on the investigation of a lead arsenate orchard dust drift into The Dalles.

Mr. Hatchard stated that on May 22, 1956 the State Board of Health had received a request for assistance from Dr. H. R. Davidson, Wasco-Sherman County Health Officer, to evaluate complaints regarding a health hazard caused by the lead arsenate dust. He reported that Dr. Sullivan and he had attended a public meeting in The Dalles on May 23, and arrangements were made for investigation of the matter.

Mr. Hatchard stated that Dr. Sullivan was caring for the human health aspects and the Authority's staff had arranged for air sampling. He explained that subsequent field visits indicated that some of the orchardists near The Dalles had

ARI 228

changed from dusting operations to solution spraying which had thus far prevented another occurrence.

He stated that arrangements were made with the County Health Department to notify The Authority if the situation occurred again so that samples could be collected.

Dr. Erickson stated that the State Board of Health appreciated having the staff investigate the problem and as a result of the investigations the orchardists may apply the insecticides in such a manner that no problem is created.

The Chairman directed the staff to continue cooperative efforts to prevent the problem from occurring again.

ALBANY: CINDERS AND FLYASH FROM BORDEN MILK COMPANY

The Chairman requested the Secretary to report on the investigation of sawdust and flyash deposition near the Borden Milk Company in Albany.

The Secretary read a letter dated May 31, from City Manager J.J. Salovaara regarding the deposition of flyash resulting from the Borden Company's plant on nearby residential areas. He reported that a letter had been sent to Mr. Salovaara on June 5, advising that an investigation would be made.

LINN COUNTY: CINDERS, SAWDUST & FLYASH FROM LEE PRUITT'S FUEL COMPANY

The Secretary stated that the Authority received a petition signed by 17 residents of Lebanon, Oregon, on June 22, complaining about cinders and flyash from a mill located along highway No. 20. Since the petition had arrived this morning the Authority's staff has had no opportunity to investigate the situation.

The Chairman directed the Secretary to investigate the matter when the staff schedule will allow.

DATE OF NEXT MEETING

It was decided that the next meeting would be held in September at the call of the Chairman.

MEETING ADJOURNED

There being no further business, the meeting adjourned at 5:25 P.M.

Respectfully submitted,

*Curtiss M. Everts, Jr.*  
CURTISS M. EVERTS, Jr., Secretary

## SEVENTEENTH MEETING

OF THE

## OREGON AIR POLLUTION AUTHORITY

October 25, 1956

The seventeenth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M. Thursday, October 25, 1956 in Room 36, State Office Building, 1400 S.W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Mr. R. P. Dixon, Dr. Harold M. Erickson, Members and Kenneth H. Spies, Acting Secretary, Charles D. Burt, Legal Advisor, R. E. Hatchard, Chief of the Air Pollution Control Section and W. J. Whitsell, Associate Engineer, R. D. Nance and R. B. Percy, Chemists, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The Acting Secretary summarized the minutes of the sixteenth meeting of June 22, 1956. The Chairman declared that if there were no corrections or additions the minutes would stand approved as prepared by the Secretary.

PROPOSED REGULATIONS AND STANDARDS TO CONTROL AIR POLLUTION

The Chairman requested Mr. R. E. Hatchard to explain changes made in the proposed regulations and standards since the last meeting.

Mr. Hatchard stated that the Authority had authorized the preparation of proposed rules and regulations to control air pollution at the December 1955 meeting primarily to assist municipal officials with organization of local programs. He explained that over 400 copies of the initial draft of the proposed regulations had been sent to interested industrial organizations, city officials, consulting engineers, planning and zoning commissions and others. Mr. Hatchard advised that the comments and recommendations received on the first draft had been used in modification and clarification of various sections included in the revised draft. He pointed out that the regulations were being formulated under the provisions of Section (5) 449.725 Oregon Revised Statutes and that the Authority's specific objectives were as follows:

ABI228

1. To establish methods of measurement that will assist in the application of effective control wherever necessary.
2. To establish concentration ranges for air contaminants that have been measured intensively and which may be used in municipal air pollution programs.
3. To promote and stimulate the organization of complete community control efforts.
4. To clarify what is considered reasonable air pollution based upon data obtained from state-wide air sampling since 1952.
5. To prevent excessive expenditure for the installation of control measures which may provide a higher degree of correction than should be required based upon the local topography, meteorology and land use.
6. To prevent new air pollution problems being created by stimulating the installation of appropriate controls.

Mr. Hatchard explained that there are two basic approaches to establishing regulations for community control; one is to regulate the discharges at the source and the second is to base the regulations upon the effects created in downwind areas. He explained that the discharge limitation at the source had been used primarily in local smoke and dust control programs in other parts of the country mostly for emissions from combustion processes. He pointed out that there are several disadvantages to this approach when applied to general air pollution control since no allowance is made for the number of individual sources existing within a single pollution zone and that this approach gives no consideration to local differences in topography, meteorology or land use. He stated that in the Authority's proposed regulations that only smoke control provisions were based upon discharge at the source and that this regulation is based upon the American Society of Mechanical Engineers recommendations. He stated that suggested limitations for other air contaminants have been developed from air sampling data obtained from both area surveys and the investigation of specific complaints throughout the state since 1952 and that

ABI 228

these regulations were based upon the effects produced in the vicinity of the discharge source. He explained that the Authority believed that this approach would overcome the long-term disadvantages of reliance upon source regulation alone. Mr. Hatchard emphasized that several of the comments received indicated a misunderstanding regarding the proposed use of normal background values as stated in Sections 2.2, 2.3, and 2.4. He pointed out that actually what is proposed will require recognition of the presence of air contaminants originating from natural sources which are present at relatively constant levels over a large area during a particular period. He explained that the determination of this value within a municipality would be made by operating an air sampling station removed from the metropolitan sources of air pollution concurrently with sampling units being operated at stations within the city. The background values found at the rural sampling station would then be subtracted from the total concentrations found at the city stations. He added that this field practice has been used for over two years and has worked effectively.

He emphasized that the proposed regulations were based upon data from over 2,000 fallout samples collected within the state, the analyses of several hundred filters obtained from municipal sampling stations and published reports of comparable studies made in other states.

The Chairman stated that the Authority would now like to hear statements from others concerned with the proposed regulations.

Mr. Robert R. McKean, Mgr. Columbia Empire Industries Association, Inc., said that his statements represented the collective thinking of the Air Pollution Committee of the Association and that the Association's policy regarding air pollution control, which was adopted four years ago, was to support reasonable efforts to control present situations and prevent future air pollution contamination and that their organization would not oppose the adoption of appropriate regulation. Mr. McKean stated that he had hoped that members of the Authority could have received copies of reports regarding air pollution which the

Association is obtaining, prior to the meeting today. He further stated that for the purpose of this meeting he would present the following conclusions based upon available information concerning Portland:

1. That at the present time air pollution is not a serious city-wide problem in the Portland area.
2. That smoke, fallout and other contamination in large amounts is caused by activities of the general public.
3. That particle fallout is a nuisance but it is not a health hazard.

Mr. McKean assured that their Association will do the best they can to inform various industries to obtain their opinions. He stated that the committee has held many meetings and at this time their Association requests the Authority to delay action on the proposed regulations until the Stanford Research Institute's report on Portland air pollution and other reports are available for study.

Mr. McKean had with him a report from his sub-committee composed of consulting engineers, a report from J. H. Miller and a report from the Association's Director of Safety Hygiene Committee. He stated that he would supply the Authority's staff with copies of all reports so they can be studied and that when the Stanford report is received he would send a copy to the Authority and to the City of Portland committee also. It was further stated that Columbia Empire Industries Association had already spent \$10,000 on the Stanford report and are considering a proposal from Stanford Research Institute involving about \$30,000 for a more intensive investigation of Portland conditions.

He reported that he had made a survey of expenditures made by Association members for air pollution control installations during 1954 and the amount was over \$800,000 which did not include the large installations made by Reynolds Metals at Troutdale or Oregon-Portland Cement Company plant in Oswego.

The Chairman stated that this matter was before the Authority in February 1956 and at that time the matter was delayed until June to allow time for review and suggestions by industry and interested parties and because of a request for

additional time from Columbia Empire Industries Association consideration of the regulation was postponed to today's meeting.

The Chairman stated that it was the Authority's intent to give a reasonable length of time for all concerned to review standards and submit recommendations to the Authority's staff. Many recommendations and suggestions, he said, have already been incorporated in the revised regulations.

Mr. F. A. Yerke, Attorney representing Oregon-Portland Cement Company stated that Mr. F. E. McCaslin, President, Oregon-Portland Cement Company, was present, and that they joined with Columbia Empire Industries Association in requesting the Authority to consider delay of the adoption of the regulations until the Stanford study and other reports are available. He stated he believed this request was reasonable, since the fact that if the standards were not adopted today it would not impair any action by the Authority with respect to any type of air pollution problem.

Mr. Yerke stated further that in addition to supporting the remarks made by Mr. McKean he had comments regarding the lime dust Section 2.4 but he believed this could wait if the delay was granted until the staff has had an opportunity to read and digest the Stanford Report and other reports. He stated he would be glad to send his reports in writing at a later date.

The Chairman asked if the members wished to hear further comments or defer them.

Mr. Dixon stated that the Authority could defer hearing the comments on lime dust until later in the meeting.

Mr. Fred Menzel, representing Rich Manufacturing Company, advised the Authority that for quite some time he has been working with the City and the Authority's staff regarding the dust problem at Rich Manufacturing Company. He stated he concurred with Mr. McKean in that he too would like further time for study of the standards before adoption. Mr. Menzel gave a little of the background of his company and said he knew the Authority was aware of the complaints which have been made regarding dust and vapor. He added that he had been working with

ABI228

the City and State to determine what type of control equipment should be installed to satisfy the City and State requirements. He stated that he had presented one proposal to the City which was referred to the Authority's staff for review and that it was recommended that he install collection equipment that would operate at 92 to 95% efficiency. The most expensive equipment, he said, would cost about \$100,000 and only an 85% efficiency guarantee would be secured. He stated that from this experience it appeared that the standards are not equitable to everyone and that he would like to go into the matter further to get a better understanding of the problem.

The Chairman asked Mr. Menzel if he preferred to discuss this further with a member of the Authority's staff.

Mr. Menzel replied that he would.

Chester Sterrett of the Portland Chamber of Commerce stated his organization had submitted data to Mr. R.E. Hatchard and wished to know if that data was circulated to the Board members.

Mr. Hatchard stated that it was used by the staff in preparation of the revised regulations; however, it was not transmitted to each member of the Authority.

Mr. Sterrett explained that industry was very willing to cooperate with the Authority's staff and there would not be anything lost in taking more time to work out the application of the regulations in more detail. He stated he had further objections to some sections in the standards but that he would submit them in writing.

Mr. Irvin Luiten, representing Weyerhaeuser Timber Company, stated he had a few comments to submit and his first comment pertained to sub-section 1.3 where the word "predominantly" causes some concern since there were many conflicting opinions. Mr. Luiten explained that their Klamath Falls plant was located in a primarily rural area but there were a few residences in the area. He added that their legal department thought it was feasible to delete the phrase after the word "predominantly". The second comment, Mr. Luiten stated, regarded

Section 2.5 since it was their understanding that the interpretation of a public nuisance is one which is of substantial detriment to the public. It was Mr. Luiten's thought that the word "substantial" should be added, and should be added after the word "annoyance". He stated that the Weyerhaeuser Timber Company would also like to delay for more study of the revised regulations. He expressed their company's appreciation to the Authority for the assistance and cooperation in solving air pollution problems.

Mr. Dixon said he understood Section 2.5 was a direct quotation from the statute.

Mr. Hatchard replied that it was not a direct quotation but the Authority did not intend to add any meaning other than what was in the statute.

Mr. Burt stated also that Section 2.5 was not a direct quotation but that he did not believe this particular statement was more stringent than the Air Pollution Control Statute.

Mr. Fred Packwood, Attorney, Columbia Empire Industries Association, made the statement that they had hoped the Stanford report would have arrived in time to allow study before this meeting since there is so much technical material to consider. He urged the Authority to allow additional time before acting on the proposed regulations.

Mr. McKean requested a meeting with the Authority's staff when all reports are available so that all the information could be considered and discussed.

The Chairman asked how long a delay the industry representatives were requesting-- 30, 45 or 60 days.

Mr. McKean replied that 30 days would be sufficient for their group.

Mr. Yerke stated they could be ready also in 30 days, and that all they are waiting for is the receipt of the Stanford report.

Mr. Hatchard stated that there was really nothing new in the proposed regulations since the staff had been using the regulations as a basis for establishing whether a public nuisance was present and to formulate general recommendations for control during the past two years. He also pointed out that the regulations

ABI228

are needed by city officials for use in local programs and also for use in preventing excessive discharges from new sources.

The Chairman stated that regulations which the Authority adopts are subject to modifications in the future as more information becomes available. The Chairman asked the Authority members what action they wished to suggest.

Dr. Erickson asked how a 30 day delay would affect the staff's activities during the next 30 days.

Mr. Hatchard replied that it would not alter staff activities in any way but that we are concerned about the basic policy of the Authority to encourage the medium and larger Oregon cities to work with the staff to develop local programs. He explained that Eugene had adopted an ordinance in May 1956 and that in Portland there is increased activity through Dr. Meador's office toward expanding the present program. Mr. Hatchard pointed out that the cities would probably delay until the Authority adopted regulations and from this standpoint it would be unfortunate if delays occurred.

Mr. Dixon felt there was a definite need for some code which is fair to the state and he stated he would like to review the correlation of the figures contained in the Stanford report which would apply to Section 2 which is the only one that has figures in it and the reference to the Ringelmann chart, etc. He explained that he wanted to be certain that the Authority and the Stanford report agreed on the figures included in the regulations. For this reason, Mr. Dixon stated that he would like to wait for the Stanford Research Institute's report.

The Chairman asked for a motion to be made; that industry have reports and comments submitted within 30 days from today, and that by the middle of December the Authority have a meeting for further consideration and adoption. The Chairman asked Mr. Hatchard if 30 days would give the staff enough time for review.

Mr. Hatchard replied that 30 days would be satisfactory.

Mr. Dixon stated that it was his impression that the Stanford report would verify or disagree with the findings of the staff.

ABI228

Mr. Hatchard stated that it was his understanding that the Stanford Research Institute's report on Portland consisted of a review of all available data from industrial groups, city, state and federal agencies including the U. S. Weather Bureau. However, he explained, that unless the project had been increased he did not believe that the Stanford Research Institute report included any review of the Authority's proposed rules and regulations. He stated that the staff had provided Dr. Wohler of Stanford Research Institute with a report dated July 26, 1956 summarizing all air sampling completed in Portland since 1952 but that Stanford Research Institute was not collecting and analyzing air samples independently.

Mr. Menzel informed the members that the Stanford Research Institute's report is not in criticism or against the proposed standards in any way; that it is merely a survey of the City of Portland and surrounding territory and a comparison with the City of Los Angeles problem; that they took into consideration all of the discharge sources in the city and made an over-all report. Mr. Menzel added that he thought the proposed Authority standards are too rigid and that they could be changed to be more equitable to industry and to the public.

Mr. Dixon asked if Mr. Menzel read the finished report.

Mr. Menzel stated he had read a preliminary report.

Mr. Dixon pointed out that this is a state-wide proposal and that Multnomah County was one of thirty-six counties.

Mr. Dixon stated that standards should be adopted before the first of the year and that then there would be something to work from and that actually we are all trying to solve the problem cooperatively.

MOTION RE: PROPOSED REGULATIONS AND STANDARDS TO CONTROL AIR POLLUTION

It was MOVED by Mr. West and seconded by Mr. Dixon and carried that the final consideration of regulations and standards be deferred until the next regular meeting of the Authority and that 30 days from today be granted to interested parties to submit additional data to the Authority for consideration.

PORTLAND: STAFF REPORT REGARDING PROPOSED EXPANSION OF CITY AIR POLLUTION PROGRAM

The Chairman requested Mr. Hatchard to report on activities in the City of Portland.

Mr. Hatchard explained that since the June 22nd, Authority meeting there had been considerable activity toward the expansion of the existing city program. He explained that J. J. Schuneman, an engineer representing the Public Health Service, Community Air Pollution Program, had made an intensive survey of Portland air pollution conditions during the week of July 9, and that this survey had been requested originally by Dr. Meador and endorsed by Dr. Erickson as State Health Officer.

Mr. Hatchard reported that the staff had conferred at length with Mr. Schuneman and that all available sampling data had been provided to him. He advised that copies of the Public Health Service report were received in early October and that each member had previously been sent one. He reported that a member of the staff has attended three meetings with the Portland Air Pollution Committee since June which included consideration of Mr. Schuneman's verbal report and also detailed consideration of a cinder and flyash problem in north Portland. Mr. Hatchard reported that the staff had been working with Dr. Meador and his staff to formulate suggestions for the revision of existing city air pollution ordinances and with the organization of an expanded city program.

He pointed out that the joint investigation of specific complaints within the city has continued; however, the lack of staff in both agencies has caused delays in bringing about needed corrections. He advised that it was extremely unfortunate that the additional public health engineer position, requested by the Authority for the current biennium, had been deleted since this position was essential to provide adequate advice and technical assistance to city officials with the development of appropriate local programs.

Mr. Hatchard concluded in saying that Dr. Meador, Health Officer, City of Portland, was present and may also wish to comment upon recent activities.

Dr. Meador stated the information in the Public Health Service report is a result

from sampling surveys and the difficulties in handling local problems. He reported that the Mayor had requested that he prepare an ordinance which would be workable and enforceable and also to recommend sufficient personnel to operate the program. He explained that he is now waiting for the Stanford report and action by the Authority on the proposed regulations.

EMPIRE: CINDER AND FLYASH CONTROL AT CAPE ARAGO LUMBER COMPANY

The Chairman requested W. J. Whitsell to present a report regarding the correction of the cinder and flyash deposition in Empire.

Mr. Whitsell stated that a public hearing had been held at the June 22nd, Authority meeting and that as a result of these discussions the Authority directed that the Cape Arago Lumber Company proceed with plans to correct the cinder fallout conditions; that the company cooperate with the Authority staff and submit a report of activities to bring about appropriate control within the next 90 days and that the public hearing be continued.

He reported that one of the Authority's engineers had visited the Cape Arago Lumber Company on August 13, 1956 and was advised that their chief engineer, Mr. Blake, was in Eugene obtaining information on cinder collectors. He stated that a letter dated August 16, was received from the Cape Arago Lumber Company advising that work had started on the installation of a cinder collector similar to the unit used by a steam generating plant in Eugene. He reported that on September 12, 1956 schematic plans for the cinder collector together with a description of test runs on its efficiency was received.

He stated that on October 11, 1956 another field visit was made to the Cape Arago Lumber Company and it was learned that one cinder collector was operating and returning trapped cinders to the boiler for further combustion. He explained that the company plans to operate this unit for several weeks to note any need for improvements and then proceed with the construction of the second unit.

He reported that the Authority's representative had conferred with Mayor Adams in Empire and learned that the City is very pleased with the progress being made. He stated that the fallout stations in Empire would be continued as a check upon degree

ABI228

of improvement made by the installations.

The Chairman stated that this progress report would be accepted by the Authority.

EASTSIDE: CINDER AND FLYASH DEPOSITION

The Chairman requested Mr. Hatchard to report on the status of the cinder and flyash deposition problem in Eastside.

Mr. Hatchard stated that at the June Authority meeting the members directed that the Coos Bay Lumber Company be notified again that they appear to be in violation of the Oregon Air Pollution Statute and that the Authority expected a statement from the company regarding their plans for compliance within the next 90 days. He explained that on July 10, 1956 the Georgia-Pacific Corporation acquired ownership of the Coos Bay Lumber plants; and that on August 14th, a staff member had conferred with D. D. Dashney, former vice president of Coos Bay Lumber Company and now with the Georgia-Pacific Corporation's Coos Bay Division. He stated that at that time Mr. Dashney had indicated that the steam plant cinder control program would continue since the new company was aware of the situation before the ownership changed.

Mr. Hatchard stated that a letter was received on August 27, 1956 from Mr. Dashney advising that the files of the Coos Bay Lumber Company regarding the cinder and flyash problem had been transmitted to Mr. R. E. Flowerree, Vice President of the Georgia-Pacific Corporation for his review and instructions.

Mr. Hatchard reported that on October 11, a staff member had conferred with representatives of the Georgia-Pacific Corporation in Coos Bay and learned that no progress had been made by the new company. He stated that the city officials were advised of the present status. Mr. Hatchard reported that a letter had been sent on October 19th, to Mr. R. E. Flowerree and that a request had been made for a report regarding their company's plans; that unfortunately Mr. Flowerree had another commitment and could not be present at this meeting, however, the Secretary had a letter from the company regarding the situation.

The Secretary read a letter dated October 22, 1956 from R. E. Flowerree, Vice-President, Georgia-Pacific Corporation.

AB1228

"Gentlemen: With reference to your letter of October 19, 1956 regarding the excessive cinder and flyash discharge from the steam plant stack, I regret to say that because of prior commitments I will be unable to attend the meeting of the Air Pollution Authority on October 25. However, confirming the conversation of October 22, with Mr. Whitsell, we would like to know: (1) if the installation made at Cape Arago at the lumber company near Coos Bay will meet the requirements of the Authority; and (2) if you have any further information on effective devices for elimination of flyash."

"It is Georgia-Pacific Corporation's intention to cooperate fully with the Air Pollution Authority, and as soon as we have received the above requested information from you we will take steps to eliminate the flyash from the steam plant stack."

Yours very truly,

GEORGIA-PACIFIC CORPORATION

/s/ R.E. Flowerree, Jr.

The Chairman asked if the staff had answered this communication.

Mr. Hatchard replied it would be answered as soon as the requested information could be prepared.

The Chairman asked Mr. Hatchard if satisfactory progress was not being made.

Mr. Hatchard stated Mr. Flowerree's letter indicated that appropriate controls would be forth coming.

The Chairman suggested the staff proceed in cooperation with the company and submit a progress report at the next Authority meeting.

NORTH ALBANY: REPORT REGARDING CONTROL OF ODORS AT WESTERN KRAFT CORPORATION'S  
KRAFT MILL.

The Chairman requested Mr. Hatchard to report on the status of the control of odors at the Western Kraft Corporation's plant in North Albany.

Mr. Hatchard stated that at the June 22nd, Authority meeting arrangements had been made for conducting area odor surveys at a time when the management of the Western Kraft Corporation was experimenting with the use of an odor masking agent. He explained that this work had been completed and that subsequent area odor surveys

had also been made and that a report had been prepared as of July 25, 1956 summarizing the odor conditions based upon these surveys and that the report had been sent to the company. He explained that the recommendations included with this report were as follows:

1. That additional odor control facilities were needed at the plant to be in conformance with the Oregon Statutes.
2. Appropriate equipment should be provided to treat the digester blow and relief non-condensable gases before discharge into the atmosphere.
3. That the discharge from the lime kiln operation be changed to prevent the drift at ground level.

He advised the Authority that members of the staff had conferred with company representatives regarding these recommendations and that the company had advised that an engineer was preparing specific plans for an odor control system to be incorporated in the expansion program.

Mr. Hatchard stated that a representative of the company was present and had a report to present.

The Chairman invited Mr. R. O. Beatty, Ass't to the President, Western Kraft Corporation, to present a report regarding their activities since the last meeting. Mr. Beatty stated that the company is acutely aware of the odor problem created by the kraft mill and is deeply interested in doing everything feasible to abate it and still stay in business. He pointed out that most people fail to recognize the very minute quantity of such odor causing substances as mercaptans which are sufficient to be detectable and that this condition complicates the solution of the problem. Mr. Beatty advised the Authority that in the original plant construction there were several air purifying devices which tend to reduce the atmospheric discharges in various steps of the process; and that within the past six months a considerably larger induced draft fan motor was installed on the recovery boiler which should help in the reduction of the odors from the recovery furnace by combustion or oxidation of odor causing materials.

He also stated that they are completely re-working the vent stack from the lime

AB1228

kiln which would be completed next March or April and that this improvement would reduce lime dust and drift at ground level. He explained that this change was made in response to the Authority's recommendations in their letter of September 6th. Mr. Beatty explained that other improvements were now under study which included an odor control system similar to that used at a kraft mill in Port Alberni, B.C. He pointed out that such a system would include a rather elaborate blow-steam condensation system to remove the odor causing condensibles from the digester relief and blow gases ahead of the oxidation towers. He said that the study of economic feasibility is now being made and that it was quite a costly installation for a mill of their size. He stated that W. O. Hisey, Engineering Vice President, was studying the matter of oxidation towers and would, of course, keep the Authority informed regarding the progress. He stated that the experiments made with the use of Alamask P-6D odor masking agent were quite inconclusive. He explained that such materials replaced one odor with another which was less objectionable to some people but perhaps equally objectionable to others. He stated that perfect masking of all of the kraft mill odor sources would be virtually impossible and it hardly seems as desirable as mechanical or chemical removal. He stated their company had not completely discontinued experiments with such materials and that they would keep the Authority advised on any further progress in this connection.

He concluded by saying that a review of their activities during the twelve months, since their operation began, would show intense interest in providing appropriate odor controls and that the company appreciated the friendly cooperation of the Authority. He stated that if the company finds that the objectionable odors from the mill can be substantially reduced at a cost which will still permit their operation to be competitive, he assured the Authority those changes would be made.

BEAVERTON: STAFF REPORT REGARDING TECHNICAL ASSISTANCE REQUESTED BY CIRCUIT JUDGE C. H. FOSTER

The Chairman requested Mr. Whitsell to give a report upon the investigations at

the Pacific Adhesives Company in Beaverton.

Mr. Whitsell stated that the Authority members may recall that complaints had been made by residents of Beaverton regarding odors from the Pacific Adhesives Company's plant which finally led to court action in which the City of Beaverton requested an injunction against operation of the plant. He stated that as a result of this action Circuit Judge C. H. Foster decreed that the plant's operation constituted a public nuisance and requested the Air Pollution Authority to complete an intensive investigation and make recommendations for further control. He reported that the staff had spent considerable time and effort on this matter which included area odor surveys, conferences with company officials, plant surveys, stack tests and experimental runs on pilot plants. He stated that the investigation extended over a period of approximately 3 months and that on June 12, a report was submitted to the company including recommendations for further odor control.

He stated that a plant visit was made on August 30, and it was found that the company has complied with all recommendations; that a report had been submitted to Judge Foster. He stated that since the improvements were complete several area odor surveys had been made and that it was evident that considerable odor reduction had been affected. He pointed out that Judge Foster's decree now allows the city of Beaverton to request the Court for further hearings during the next six months to determine whether the plant still constitutes a public nuisance. He stated that the correction of odor problems consumes a great amount of time and effort since odors do not lend themselves readily to known methods of physical and chemical treatment. He also pointed out that odor problems within the state are increasing in number.

The Chairman stated it appeared that satisfactory progress had been made.

OSWEGO: INSTALLATION OF DUST CONTROLS

Mr. Hatchard stated there were representatives here from Oregon-Portland Cement but this item was not on the agenda. Mr. Hatchard stated he had the opportunity to make a visit to the plant recently and that the plant management had been

AB1228

routinely collecting stack sampling data. He reported that Mr. Leche, Vice President, had conducted him through the plant and they had conferred with the Oregon-Portland technical staff. He stated that all the major work was completed and a report had been received from Mr. Leche summarizing the additional installations made. Mr. Hatchard advised that the remaining part of the work of the Authority's staff is to resume the dust sampling study in Oswego to establish the present conditions. He explained that an extended period of time would be needed to advise the City of Oswego of conditions during the various weather conditions.

The Chairman stated that this matter was proceeding satisfactorily.

Mr. Hatchard stated while there may be minor problems which the study would determine there had been a real improvement and that it was a pleasure to report on their progress.

Mr. F. A. Yerke, attorney representing Oregon-Portland Cement Company stated all the information had been provided to the staff previously and he had no additional information to present.

The Chairman suggested that the Secretary send a letter of thanks to Oregon-Portland Cement Company for proceeding to correct this matter.

STAFF REPORT: REGARDING AREA SURVEY IN THE DALLES

The Chairman requested Mr. R. Nance to report upon the area study in The Dalles. Mr. Nance reported that the purpose of this sampling is to establish background values for air concentration of fluorides before the Harvey Aluminum Company begins operation next year. He explained that an automatic impinger operating on a six hour cycle was collecting four samples per day at a station located at a State Highway Department Bldg., in The Dalles. Mr. Nance stated that sampling began August 24, and to date 210 samples had been collected and 76 have been analyzed and reported. He advised that the median concentration of fluorides recorded so far is 1.3 parts per billion, a value which is considered to be low and normal for this type of community.

He stated that uninterrupted sampling will be continued to the extent that weather conditions will permit and he pointed out that without automatic equipment, developed as authorized by the Authority, this program would not be possible.

He reported that the Authority had written the Harvey Aluminum Company when the project was announced in 1953 and that in their reply the company had assured the Authority that "they definitely will avoid any air pollution in connection with their aluminum reduction plant." He explained that the staff will be contacting the company again to advise them of the background survey data and to discuss air pollution controls for the plant which is now under construction.

STAFF REPORT: REGARDING AREA SURVEY IN ALBANY

Mr. Hatchard stated that representatives of the Sanitary Authority and the Air Pollution Authority had made a survey of the U.S. Bureau of Mines Zirconium processing plant in Albany to become familiar with the process. For the past few months the Wah Chang Corporation has been operating the plant and was now constructing a new plant east of Albany to process part of the ore. He reported that the company will be installing dust and fume control systems to prevent later problems in the area. He stated that the staff would follow the progress.

NEW COMPLAINTS RECEIVED

Mr. Dixon asked if the new complaints had been received in writing.

The Secretary stated that they had.

PORTLAND REGARDING DUST DEPOSITION NEAR SMITHWICK CONCRETE PRODUCTS COMPANY

Henry G. Keeney, 1757 N.E. Morgan St., wished to present his case regarding dust from Smithwick Concrete Plant and he was aware that the staff was working on this nuisance. Mr. Keeney stated he attended a public meeting that was held recently where about 200 affected residents considered the problem and that Dr. Meador and Mr. Hatchard had explained the City-State investigations. Mr. Keeney stated that the Smithwick Company has been taking some measures to eliminate part of their dust nuisance; but the conditions are still bad in the residential district south of the plant. He explained that the stack dust discharge is one problem

alone but there is a large amount of dust from other sources emitted which settles on the house roofs, fills the eave troughs and it was not possible to paint houses in that vicinity when a north wind blows. He stated the dust filtered into the homes and there still was much to be done to control the dust. Mr. Keeney stated he had received very good cooperation from the Authority's staff. Mr. Hatchard stated that sampling activities have been carried on since last May and that there is considerable data available. He explained that there were some recent changes made at the plant but at this time the staff was not prepared to say what degree of correction has been brought about. Mr. Hatchard stated there is an intermittent dust deposition problem present. He stated this complaint goes back to 1950 when the original problem was presented at a public hearing before the City Commissioners; that it has been a matter that has had concern from the management. Mr. Hatchard explained that it was unfortunate the staff was unable to complete the preparation of a report for submission to Dr. Meador, City Health Officer.

The Chairman asked Mr. Hatchard if a report could be submitted to the City by November 1st.

Mr. Hatchard replied that it could.

The Chairman stated this would then be accepted as a progress report and that the staff would proceed to work on this matter with the City.

#### REGARDING CINDER AND FLYASH DEPOSITION

The Secretary read a letter from Harry Reese dated July 6, 1956 regarding deposition of cinders on his residence near Ashland.

The Chairman asked if field investigations had been made.

Mr. Hatchard stated that District Engineer T. M. Gerow had made investigations and his observations were that nuisance conditions were present from cinder and flyash deposition and that the management of the company had been advised and that they have responded as to what actions they will take.

The Chairman asked if the staff had advised the complainants of the status and progress.

ABI228

Mr. Hatchard replied that it had been done.

Mr. Dixon noted there were five cases on cinder and flyash and suggested that the Secretary get in touch with the offending parties and notify them and follow through in each case.

Mr. Charles M. Sanford of Associated Forest Industries requested the names of the lumber mills involved be sent to their organization.

The Chairman stated that the information would be provided.

CLACKAMAS COUNTY: DUST AND VAPOR FROM PORTLAND SAND & GRAVEL COMPANY

Mr. Hatchard stated the Authority has received 4 or 5 letters from residents and most were referred from the Clackamas County Health Department for investigation. It was pointed out that this is a condition which requires sampling and field surveys which have been delayed because of previous commitments.

DOUGLAS COUNTY: PORTABLE ASPHALT PAVING PLANT - CENTRAL HEATING COMPANY

Mr. Hatchard stated that five complaints were received regarding dust and vapor from the Central Heating Company located about six miles north of Myrtle Creek.

Mr. Glenn Byrnes, owner, was advised by letter on October 18, of a field investigation made by District Engineer Gerow that the dust and vapor from the plant were in violation of the statute. Mr. Hatchard stated that a reply was requested by October 24th, so that the actions of the company would be known prior to this meeting. However, no reply has been received.

Mr. Ray L. Beeler, Associated General Contractors, stated that they knew about this complaint and that it has been in existence for some time now.

Mr. West asked if the State Highway Commission included in their contract the phrase that the air pollution law must be complied with.

Mr. Hatchard replied that there has been no recent contact with Mr. Williams, State Highway Engineer; that the Authority routinely sends a copy to the Highway Department of letters if it involves any activities of one of their departments; that contractors and the Highway Department have been very cooperative in encouraging a solution.

Mr. Dixon asked how long the Central Heating Company would be operating before the contract was completed.

Mr. Hatchard stated that Mr. Gerow advised that there was 5 to 6 miles of paving to be completed.

Mr. Dixon asked if the State Highway Department had been advised of the situation.

Mr. Hatchard stated only by copy of letter sent to Mr. Byrnes.

The Chairman suggested that it would be more satisfactory to write the Highway Department separately and request their assistance.

Mr. Hatchard said the staff would follow this suggestion.

ADMINISTRATIVE MATTERS: REGARDING DEMONSTRATION PROJECTS UNDER GRANT-IN-AID PROVISION OF PUBLIC LAW-159.

Mr. Hatchard explained that in each members' notebook there was an announcement of a new Public Health Service Grant-in-Aid program to encourage the organization of local and state demonstration projects. Mr. Hatchard stated we had written for detailed instructions from Public Health Service but the forms and instructions were not ready but could be expected soon.

The Chairman asked if Public Health Service would provide funds only or would personnel also be available.

Mr. Hatchard stated that it was understood that Public Health Service would grant funds to assist City and State demonstration projects but that personnel might be obtained for short term technical assistance.

The Chairman stated that if it were agreeable to the Authority to apply for application a grant should be made when appropriate projects such as the waste wood burner engineering study were organized.

OUT-OF-STATE TRAVEL TO ATTEND A SEMINAR ON THE ADMINISTRATION OF AIR POLLUTION CONTROL PROGRAMS.

Mr. Hatchard stated that there was the program in each notebook showing the subjects which will be discussed at the seminar and if the Authority approved that he planned to participate.

The Chairman asked what was the policy of the Board of Health and the Department of Finance and Administration regarding out-of-state travel.

ABI228

Dr. Erickson stated there was a limitation on the amount of out-of-state travel, and there is some difficulties having funds alloted at this time; however, he stated that this is a very important meeting and perhaps the travel expenses could be provided from staff training funds.

The Chairman asked if funds would come from the Air Pollution Authority's budget.

Dr. Erickson replied that these funds are general health funds provided to the state from Public Health Service.

MOTION RE: OUT-OF-STATE TRAVEL TO ATTEND THREE DAY CONFERENCE

It was MOVED by Dr. Erickson and seconded by Mr. Dixon and carried that a representative of the technical staff be sent to this seminar to be held November 7th, to 10th, in Cincinnati, Ohio.

STATUS OF PROPOSED BUDGET FOR THE BIENNIAL PERIOD JULY 1, 1957 to JUNE 30, 1959.

Mr. Hatchard reported that the proposed budget would be reviewed by the Department of Finance at a meeting scheduled for October 26th, and that some additions had been made in the salaries item to conform with the new amounts.

Dr. Erickson added that the budget preparation had been complicated by the Civil Service Commission new salary schedule which increased the amounts and required revisions in the proposed budgets. He explained that the State Board of Health would have to show a great deal of justification for increases in the budgets. If this justification were shown to the Budget Director he in turn would recommend to the Governor that the increase be recommended to the Legislature.

DATE OF NEXT MEETING

The Chairman called the next Air Pollution Authority meeting for December 13, 1956.

MEETING ADJOURNED

The meeting was adjourned at 4:35 P.M.

Respectfully submitted,

K. H. Spies  
Acting Secretary

COMMENTS:

## EIGHTEENTH MEETING

OF THE

## OREGON AIR POLLUTION AUTHORITY

December 13, 1956

The eighteenth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M. Thursday, December 13, 1956 in Room 36, State Office Bldg., 1400 S.W. 5th Ave., Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Mr. R. P. Dixon, members Dr. Gordon C. Edwards representing Dr. Erickson, Kenneth H. Spies, Acting Secretary, Charles D. Burt, Legal Advisor, R.E. Hatchard, Chief of the Air Pollution Control Section and W. J. Whitsell, Associate Engineer, R. D. Nance and R. B. Percy, Chemists, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The minutes of the seventeenth meeting held October 25, 1956 were summarized by the Acting Secretary. The Chairman declared that if there were no corrections or additions the minutes would stand approved as prepared by the Acting Secretary.

CHAPTER V "AIR POLLUTION CONTROL STANDARDS"

The Chairman stated that for the past year the Authority and its staff have been preparing regulations to prevent and control air pollution and that several drafts of the proposed regulations had been distributed for review and comment. He explained that the adoption of regulations had been delayed twice at the request of industrial organizations until the Stanford Research Institute Report and other information regarding air pollution was available for study. He stated that these reports have been released over a month ago and that the Authority wanted to give the proposed regulations final consideration today.

The Chairman asked Mr. Robert McKean, Manager, Columbia Empire Industries Inc., if their organization had statements to present regarding the regulations. Mr. McKean replied that eleven representatives desired to make reports. He said that several years ago when accusations were made regarding industrial sources, their Association recognized that there was need for an unbiased report by a

ABI228

qualified organization regarding Portland air pollution.

He reported that on page 2 of the Stanford Research Institute report it was stated "that activities of the general public in the Portland area contribute approximately 75% of the compounds (hydrocarbons and oxides of nitrogen) which are thought to cause smog; manufacturing industry the remaining 25%". He stated that industry was glad to have this fact established and expected it would be important to the Authority since it was directly concerned with regulating the public sources also.

He stated that population and industrial growth was a factor to consider and quoted from page 12 of the report "on the basis of expected population and industrial growth, with no further control measures than exist at present concentrations of smog-forming and other pollutants in the Portland atmosphere will probably increase by about 50% by 1965. Even this increase would not result in as high concentrations of smog-forming material as occur presently in Los Angeles". He concluded that other representatives had information to present at this time.

Herbert J. Weber, Director, Safety, Hygiene & Air Pollution Control Program, American Foundrymen's Society, Des Plaines, Illinois, stated he had studied the Stanford Research Institute's report and noted that atmospheric concentration of pollutants in Portland are only one-sixth of those in Los Angeles. He pointed out that inversions in Portland occur between one and seven o'clock in the morning when most industry is shut down; that allowing for growth the calculated emissions of SO<sub>2</sub> in 1965 would be 15% to 48% of the 1956 calculation for the Los Angeles area. He stated he was aware of the fact that this report was written especially for Portland but wanted to emphasize that the Portland area is the most heavily industrialized area in the state. He felt that the conclusion of the report would apply somewhat to other areas in the state but that there is no need to impose unnecessary restrictions. He pointed out that the foundry industry has always opposed state-wide codes because an emission limit adequate in one community may impose needless control in other communities. He felt it would be

improper to imply the Los Angeles code to perhaps Fresno where the conditions would not be the same.

He stated that the proposed regulations do not provide specific limitations for stack emissions. He asked how would one determine the normal background value when a specific city was already built up and when collection equipment is required what will be an acceptable collection efficiency. He pointed out that these factors are very important when one spends \$30,000 to \$125,000 for a piece of dust collection equipment; that an industry must have a guarantee from the supplier that it will satisfy the Authority. Mr. Weber stated that equipment manufacturers will not guarantee their equipment on the basis of these regulations since they can't guarantee a decrease in accordance with the area concentrations. Mr. Weber concluded that based on the Stanford Research Institute's report, the foundry industry submitted the following recommendations:

1. The Ringelmann Chart should not be used to evaluate emissions from foundries.
2. The amount of particulate fallout and the concentration of suspended particulate matter should be used only as a guide to determine the degree of control needed.
3. The cost for stack emission studies should be borne by the public.
4. The control of industrial sources where particle fallout or concentration of suspended material exceeds stated limits in no case should require a collection efficiency greater than 75% for any existing stack; and 85% for a new source.

Mr. Herbert Vonhof, M and M Woodworking Division, Simpson Logging Company, stated that he felt that the limitations on smoke density are unnecessarily severe as applied particularly to industries which are burning hog fuel. Mr. Vonhof stated he felt these standards to be severe for the following reasons:

1. According to the Stanford Report there is information which indicates there is no air pollution problem in this area at this time and therefore,

ABI228

there is ample time to prevent excess air pollution.

2. Unfortunately hog fuel often results in much more dense smoke discharge than allowed in the regulations. The use of the hog fuel as a fuel is constantly being decreased with the event of natural gas and oil in this area and with the increased utilization of waste wood products, there is not so much burning of hog fuel. However, there are industries which are still dependent upon hog fuel in the boilers. He stated that changing to other types of fuel would impose a severe financial burden on industry.
3. Another important point is that hog fuel represents types of waste which can not be burned efficiently in power generating units and it would be very expensive to haul this material to a dump.

In conclusion Mr. Vonhof stated that he was fearful that under the proposed regulations corrective regulations may become repetitive. He explained that if there is 25% excessive fallout in an area from industry then each contributor would be asked to reduce the discharge and if the area is developing industrially it is logical to expect an increase in emissions which may again require further corrective action that could require the scrapping of the original equipment and obtain new equipment. Mr. Vonhof suggested that the regulations prescribe the stack allowances if and when corrective action is necessary so that an industry can take the action required and know it won't be called upon for further expenses until the industry can write off the original expenses.

Mr. E. G. Huffschtmidt, representing Lumber Manufacturers Inc., stated that Mr. Gordon Wilkinson is unable to be present and had requested that the following statement be submitted.

"Our operation is a typical dutch-oven boiler operation, of the same type that is used by a great number of similar operations in this state.

A dutch oven is fed from the top by gravity feed, and is fired every one and one-half hours to four hours depending on the load on the boiler at the time.

When fuel is being fed into the port from the top, a cross draft is created across the top of the fire which results in dense black smoke. The duration of this smoke from the time the port is opened until all smoke dissipates is 12 to 15 minutes. During all other times of operation, there is no smoke as combustion is complete. Further, there is no indication of a fallout problem. We feel that for this type of an operation, the proposed regulations should adopt provisions to these:

1. An allowance of 15 minutes in every  $1\frac{1}{2}$  hours. This is because it takes about one minute to open the port and start the fuel into the dutch oven, and about 2 minutes for the smoke to dissipate after the port is closed - equaling the 3 minute allowance under the regulations. We need an additional 10 minutes to load the dutch oven.
2. An increase in the Ringelmann reading to cover our smoke during the furnace loading period.
3. The reason for our belief that we need a change in the proposed regulations is that the only estimate we have been able to get on the cost of smoke control equipment was prohibitive.
4. Installation of a gas or oil fired furnace would cost approximately \$6,000 but the cost of fuel and getting rid of the wood waste we are now consuming would cost approximately \$5,000 per month. For instance, the nearest place that we can dump the wood waste is the dump at St. Johns, a 14 mile haul.

If the regulations are passed and enforced as written, our firm will be put out of business. Further, in the 10 years that this plant has operated, there has been only one complaint lodged, and in that case, smoke from the plant was held down to the ground, but the condition did not last for longer than 3 or 4 hours. Again we would stress that this operation of ours is a typical dutch oven operation which is used throughout the entire state, and our case is not an isolated one. This type of installation is utilized by all sizes of industry - small, medium

ABI228

and large.

We would urge that your regulations consider this problem, and that some equitable answer is found to it before these regulations are enacted."

Mr. Harvey Pullin, B. P. John Furniture Company stated that his firm too operates a dutch type oven; that they feed wet fuel and dry fuel; that they add fuel to the boilers twice an hour and the smoke lasts 10 to 15 minutes at a time. He stated that the alternatives available to their operation are out of the question; that they would have to install separate heating units which would be prohibitive. He felt their only alternative was to move out of town; that they are now contemplating a plant either in Mississippi or Carolina; that this move would be considered for a subsidiary plant. He stated that his plant management is now in a frame of mind that if the severe regulations are adopted they will consider a permanent removal.

Mr. Chester Sterrett, Portland Chamber of Commerce, Portland Mayor's Air Pollution Committee, stated it was his wish to hold up the regulations for consideration until the next meeting of the Air Pollution Authority. He stated that it seemed academic to him if the regulations were adopted that each one of the cities would have to establish regulations along the lines of the Air Pollution Authority's standards. Mr. Sterrett stated that he talked to a number of industries in the east which he felt he would like to see come here but the competition for new industry is quite intense. Mr. Sterrett stated that after the last hearing he dictated a memo embracing some of his thoughts on the subject which might be considered in the proposed rules and regulations. Mr. Sterrett stated further that he feared if the regulations were put down in black and white that the good will of industry may be lost; that it was necessary to deal with specifics and there would be the risk of including recommendations to follow that would eventually cause industry to move from this area.

He pointed out that the Authority has fallout levels figured for heavy industrial

districts; that in the new county zoning law and new city zoning law that there are three types of industrial areas. He stated as he understood the regulations the 45 tons per square mile per month fallout would only apply to the heavy industry areas and that general and light industrial areas would come under the residential categories.

He further said that he was concerned about the way in which these background levels and fallout requirements were written into the regulations; that in the long run these may cause more trouble and misunderstanding than all of it is worth.

Mr. Porter Yett, Sr., Assoc. General Contractors stated that asphalt paving plants are used state-wide but fortunately they are able to move every 3 to 4 months.

He added that in the concentrated area of Portland there are about 7 paving plants operating and there have been no complaints recently. Mr. Yett said it was his understanding that there has been only 3 or 4 asphalt paving companies that have had any serious nuisance reports in the past years. He stated that contractors owning these plants and doing construction work in grading operations have discussed the matter and have no yardstick to depend upon as the dust and soot varies from day to day and county to county in all of Oregon. He stated whatever might be adopted in Portland would not be of help in Bend or Klamath Falls or Roseburg. Therefore, he felt they would be in a predicament should there be any legislation adopted to set restrictions.

Mr. Yett suggested that any regulations which might be found necessary should also be approved by the Oregon State Highway Department.

Mr. Fred Menzel, Rich Manufacturing Company, stated that most of this information he presented today to the Board has been presented at previous meetings. He added that sometime ago his company was advised of a number of complaints south of the plant and that he had contacted several of the equipment companies requesting they submit prices for types of control equipment. He said that these companies refused to give any guarantees of dust control and the type of equipment the

ABI228

companies recommend range in price from \$14,000 to \$75,000 F. O. B.

Mr. Menzel stated that the estimate cost for his firm would range as high as \$60,000 to install control equipment. He explained that in addition to this each company recommended that his company install burners in the upper stack of the cupola which has been at a cost of approximately \$10,000. He stated with this equipment the discharge still could not pass the Ringelmann Chart standards. He said their estimate of the cost of just stack measurements is about \$6,000 and that the most expensive piece of dust control equipment would remove only 85% at an actual cost of \$73.00. Therefore, Mr. Menzel said, it stands to reason all of the foundries could not stand such an expensive outlay and as a result would cause some small size foundries to close or move out of Oregon. He felt therefore, the standards should be revised.

James K. P. Miller, Morris P. Kirk and Son, Inc., stated that if regulations such as these were adopted alone it would have a tendency to emphasize industrial air pollution problems which is the same approach as was taken initially in Los Angeles. However, Mr. Miller stated, that the problem today is more acute in Los Angeles than when the air pollution district was started. He stated that the approach of looking to industry for the initial effort to control air pollution has given the public the impression that air pollution is an industrial problem. He pointed out that this makes it difficult later to get public support for correcting public sources such as incineration and vehicle discharges. Mr. Miller stated that he thought the Authority intended to develop controls for other segments of the population but he urged that the whole picture be presented to the public at one time and not piece by piece.

He stated that he concurred in Mr. Weber's statements regarding the standards since it would be extremely difficult to appraise the background in Portland and that studies throughout the country indicate this is a difficult problem. He indicated that in Los Angeles the problem is being intensely investigated; that

in the Stanford Research Institute's report the figures indicate that the real culprits are the hydrocarbon vapors and gases in the air coming principally from the public. Mr. Miller further stated that if an industrial emission is controlled there is still the contaminants from public sources to cope with.

Mr. Fred W. Packwood, Attorney, Columbia Empire Industries, Inc., stated that his group had adopted the policy from the beginning that they do not intend to impose any legal stumbling block or hardship; that it is appreciated that the law is enacted for a purpose and that the Air Pollution Authority is trying to enforce it. He further added that he firmly believed the proposed standards are premature, and that more study and research is needed. He stated that if the standards were not adopted at this time it would not prevent the Air Pollution Authority from going into the study of a specific source of pollution that was causing complaints. Mr. Packwood stated he did not see how the proposed standards can operate as they are and that every heating engineer and every manufacturer of control equipment says the regulations will not work satisfactorily.

Mr. Hatchard stated that the intent of the area fallout regulation was to determine first if there was a problem then bring about control for the individual sources of that problem and that the regulations would be effective using this approach.

Mr. Weber stated that it seemed to him that the salient points would be that he would like to see the Ringelmann Chart used only to measure combustion emissions from a stack. As it is now, he stated, it is used in measuring discharges from vehicles, foundries and others. He stated that the method can not be used for non-combustion sources.

The next point of importance, stated Mr. Weber, is that the particle fallout rate and suspended particulate matter are excellent as a guide only to indicate if a problem exists. He explained that if there was a problem then a stack analyses is needed to decide upon the control needed. Mr. Weber stated he appreciated that the Air Pollution Authority has a job, and industry has a problem and that it was his hope with true cooperation that the Authority will produce a program.

ABI228

that will be a model to others.

Mr. Wendel asked Mr. H. Pullin if he had any suggestions for acceptable standards.

Mr. Pullin stated he was not an expert on this matter but he felt there was a problem of putting specifically in the regulations an allowance for certain substances beyond the control of the people causing the nuisance. He stated he realized the Authority has a responsibility to the public. He further added that the amount of time allowed for smoke issuance and the Ringelmann Chart's evaluation should be reviewed. He felt convinced the Ringelmann Chart is open to serious questioning, and that the time element was too restrictive without regard to particular types of industries.

Mr. Dixon stated that he operates two dutch oven-type boilers and that excessive smoke had been eliminated by controlling the fuel addition rate. He stated that this procedure is not expensive and is very practical.

Mr. Pullin informed Mr. Dixon that this would help but was not a complete solution. He stated that his firm used both wet and dry fuel and that the smoke emitted often was in the early morning before they started feeding dry fuel.

Mr. Dixon stated that according to Mr. Yett no complaints have been received by the Authority regarding dust from highway work, etc., and that this was probably because the public is very patient and long suffering as long as they will be provided with modern highways.

Mr. Yett said that he hoped that some understanding could be agreed upon regarding the application of the standards to highway construction dust problems.

Mr. Dixon stated that it was his impression that this code is a guide to control and not mandatory by itself and that it is necessary to establish initial regulations.

The Chairman asked Mr. Hatchard to comment on the regulations pertaining to smoke and dust and asked if methods were available to satisfactorily control these discharges.

ABI228

Mr. Hatchard quoted Dean George Gleason, School of Engineering, Oregon State College, that any discharges from combustion process through a stack can be satisfactorily controlled with known techniques. Mr. Hatchard pointed out that the staff's experience in the investigation of complaints regarding specific problems show that in general satisfactory control measures can be installed, to satisfy the regulations proposed today without severe economic burden to industrial concerns. He stated that there have been several references to dust problems associated with asphalt paving plants and that the Authority had investigated 22 complaints near these plants during the past four years. He explained that in each case the problem was solved either by moving the plant to a remote location or providing control equipment. He stated that the staff has had excellent cooperation from Associated General Contractors and State Highway Commission in bringing about solutions.

Mr. Hatchard reported that the staff had conferred with representatives of several industrial organizations since the October 25, 1956 Authority meeting to consider the proposed regulations. He stated that several changes were made in the regulations as a result of these discussions. He stated that most of the remaining opposition is involved with the administration instead of the wording of the regulations.

Mr. Hatchard stated that several references have been made to statements contained in the Stanford Research Institute's report on air pollution which may be misleading. He explained that the staff questioned the validity of comparing Portland to Los Angeles County where there has been ten years of intensive control effort. He stated that in Portland there have been no complaints regarding the presence of the type of smog that cause human eye and throat irritation. He emphasized that Portland does not have this condition at present and that actually these regulations are directed to more elementary forms of air pollution such as smoke and dust emissions. He referred to Figure 1, page 3, of the Stanford Research Institute's report which graphically showed that most of the particulate

matter in the Portland atmosphere is discharged from industrial sources. Mr. Hatchard stated that there had been several statements made objecting to the use of the Ringelmann Chart for certain discharges. He explained that the staff has used the Ringelmann Chart only for primary combustion sources and agree that it should not be used for measurement of foundry dust, vehicle exhaust and others. The Chairman asked if Mr. Whitsell wished to make a report.

Mr. Whitsell stated that he felt Mr. Hatchard had covered the main points but that he would like to point out that most of the statements made by persons opposing the regulations have been considered by the staff before. However, Mr. Whitsell stated that concern regarding the staff's ability to establish background values had been expressed. He referred to the definition of background in the regulations and stated that over a period of years the staff has accumulated data from area studies and complaint investigations.

Mr. Sterrett asked Mr. Whitsell if we had a situation like that of the Tillamook burn a number of years ago emitting all the ash into the air, would a flyash like this be added to the normal background value or disregarded.

Mr. Whitsell said it would not be disregarded; that we would have to consider it with other factors; and that if it had appreciable effect on the normal background then it would alter the values. Mr. Whitsell stated that it would tend to raise the level of the background value for the particular period but it might not affect the long-term background.

Mr. Miller stated he felt that it is entirely possible that the Air Pollution Authority could get complaints in which the excess of the fallout was not 15 tons per square mile per month. Mr. Miller wished to know what the Authority could do in a case of this kind.

Mr. Whitsell stated the Authority could possibly be placed at a disadvantage but the values in the regulations are a result of the staff's experience with complaints.

Mr. Wendel wished to know if the staff has had conferences with industries.

Mr. Hatchard stated he and Mr. Whitsell have attended a number of meetings and

that the recommendations and suggestions were used to prepare the revised regulations. Mr. Hatchard briefly outlined the sections which were clarified or changed since the last meeting.

The Chairman asked Dr. Edwards if he had any comments to make.

Dr. Edwards stated he was at somewhat of a loss to comment at length since he was substituting for Dr. Erickson and had only a short time to read the Stanford Research Institute's report. Dr. Edwards stated that Mr. Vonhof had said earlier that no serious air pollution problem existed in Portland and that Mr. Menzel likewise made a similar statement to the effect that no major air pollution problem existed.

The Chairman asked Mr. Vonhof if he wished to clarify his remarks.

Mr. Vonhof replied that was his statement which was made on the basis of the Stanford Research Institute's report; but whether a serious problem exists is one of relativity. He stated that the group had been referring to the Los Angeles problem and set it up as a standard and therefore this was the basis for his statement.

Dr. Edwards quoted this section from page 13 of the Stanford Research Institute's report. "However, the fact that the air concentrations presently are 25% as high as those encountered in Los Angeles during periods of intensive smog is ample cause for concern. Projected 1965 air concentrations for Portland show that the values might be 40% as high as those during intense Los Angeles smog (1956).

Again attention should be given to controlling present and future emissions in the Portland area"; and on page 16, "particulate matter sampling by the Oregon State Air Pollution Authority under sponsorship of the Public Health Service showed that measured concentrations approximated those from cities of comparable size where air pollution problems are recognized, e. g. Cincinnati, Kansas City, Houston and San Francisco".

The Chairman stated that generally the standard of comparison is something ideal or at least satisfactory for water supply or waste treatment studies and similar

ABI228

studies but in the Stanford Research Institute's report the comparison of Portland with Los Angeles is comparing Portland to the worst air pollution in the country. He pointed out that this appears to be a negative approach and we must not lose sight of the fact the comparison standard used is far from the ideal. He stated that over the last several years the staff has accumulated much data which has been presented at past meetings and that now the staff has summarized this data into regulations which are real and factual. The Chairman pointed out that the staff has been using this data as a guide in field activities during the past years and that regulations which may be adopted by this Authority can be amended in the future when additional data is available or when problems arise.

The Chairman assured the groups present that the members and staff have given serious consideration to the regulations.

Mr. West said that as he read and studied the Stanford Research Institute's report it seemed the difference in the problem from that of Los Angeles is largely meteorological.

The Chairman again emphasized the report indicated that there is a problem.

Mr. West said that practically all of the complaints which the Authority has received have come from locations within cities and that he believed that it is the policy of the Authority to encourage cities to take care of their own problems and that these regulations should serve as a guide for the cities in setting up local air pollution control programs.

Mr. Dixon added his opinion that the Authority has been operating for four years and is charged with the responsibility for adopting appropriate rules and regulations and he believed that it is time the Authority established some guide posts to assist local efforts.

Mr. Wendel stated that he concurred with Mr. Dixon's thoughts in that we must establish regulations which would become standards when considering cases which will come before the Authority.

Mr. Vonhof wished to make himself clear that he and his group are concerned with the general problem of the industries; that the paragraph Dr. Edwards quoted indicated there is cause for concern and no industrial representative will deny it. He stated that they are mainly concerned with the degree of corrective action proposed at this time.

The Chairman asked if a motion would be in order now.

Mr. Wendel suggested that the Secretary read the duties of the Authority.

The Secretary read Section 449.755 of the Statute.

Mr. Packwood requested the Chairman have the Secretary read from Section 449.730, sub-section (1) as he felt that is the key section to the Authority's action.

The Chairman asked the members if they wished to consider the regulations for adoption.

Mr. Wendel asked if most of the differences now existing could be reconciled if more time were provided.

Mr. Hatchard replied that the staff is confident that this will eventually happen when the regulations have been in effect for a period of time. He stated that the staff is very cognizant of the fact that the Authority represents the communities of Oregon, the cities, industrial and commercial groups as well as the public and that in the long range interest of each group we recommend the adoption of the regulations. He explained that it is essential that the State agency provide all concerned with appropriate standards applicable to particular problems.

Mr. Hatchard stated that the staff was happy to report that in conferences with the city officials it was found they share the same viewpoint; and that these regulations would stimulate the formation of local programs. He also pointed out that the fundamental objectives of the state statute will not be realized unless there is full cooperation by all parts of the community.

Mr. Vonhof stated that the Columbia Empire Industries Association, technical sub-committee, had met several times with the staff to discuss the regulations

ABI228

and reach an agreement, that the most important part of these discussions has been over-looked for we have not been discussing the points in agreement.

Mr. Miller stated that one of the big problems is determining the allowable discharge from a stack which is not included in the regulations.

Mr. Hatchard explained how the area concentration levels are related to the control of individual sources and how agreement is worked out between the staff and the person responsible for an excessive discharge. He stated that this approach is preferable to an arbitrary limitation required by regulations.

Mr. Miller asked what was more arbitrary than the opinion of one of the men on the Air Pollution Authority's staff who decides how much industry has to collect.

Mr. Miller asked what efficiency was expected by the staff and when decided why couldn't this be written in the standards.

Mr. Hatchard replied that regulations specifying collection efficiency would apply state-wide and could result in requiring too much or too little control since there would be no consideration of important local factors such as the number of discharge sources in the problem area, prevailing wind, elevations or unique characteristics of a particular discharge.

Mr. Hatchard explained that this is not an unusual problem; that the staff has arrived at general recommendations to persons responsible for correcting a particular source and that the ranges of collection efficiency recommended usually fall within what is accepted as good engineering practice. It was admitted after the staff has found special problems and that solutions have been developed by giving special attention to the unusual situation. Mr. Hatchard stated that the only difficulty with this approach is the small staff available. He stated plans and specifications have been carefully checked when sent in but frequently the plans do not come by request, and that the plans are needed to be certain the control provided is satisfactory.

The Chairman asked if it were not true that in the past the staff has consulted and conferred with industries having a discharge problem.

Mr. Hatchard stated it certainly was.

Mr. D. J. McNeil of Electric Steel Foundry wished to read Section 2.1 "Smoke Discharge". He stated that as far as the foundry industry is concerned it was felt the use of the Ringelmann Chart will be used regarding emissions other than smoke.

Mr. McNeil said that the phrase, "smoke from fuel burning equipment" is one of the factors which bothers a good number of people. He stated that the Ringelmann Chart should only be used to measure smoke from fuel burning equipment. He wished to know if it were not within the power of the Authority to change the regulations from time to time as circumstances develop. He stated that Mr. Weber expressed the statement concerning the foundry industry that control of stack emissions could remove 75% of the discharge without undue economic hardship. He said that he hoped the Authority would not expect 90% collection efficiency at this time although he advised that in future years improvements in control equipment will be made so that higher efficiencies will be economically feasible. He stated he saw no reason why industry could not have some definite limits. He said he believed from all discussions and contact with the staff that the work is being done impersonally and entirely fair.

The Chairman asked if there was any question regarding the use of the Ringelmann Chart for only smoke from fuel burning sources.

Mr. Hatchard replied that there was none since the staff agreed with the limitation.

Mr. Burt added that he believed the provisions in Section 2.1 are more a question of engineering than anything else; that from a legal point of view these regulations do not set up standards that every industry must immediately comply with. The Authority should set up a general standard; that industries in the area who have a problem should get together with the staff and correct their

individual problems. Mr. Burt emphasized that a violation of these regulations, assuming they were adopted, would not immediately determine that an industry was in violation of the state law. Mr. Burt concurred with the Chairman by saying the standards are more for the convenience of Air Pollution Authority than for anyone else.

Mr. Miller asked the Chairman what is the legal power of the Authority.

The Chairman stated that after an order has been adopted by the Authority it is possible for any person or groups affected to appeal the order in the circuit court.

Mr. Burt read Section 449.705 of the statute for clarification and stated that the Circuit Court would thoroughly review any order that was appealed and that if the Circuit Court thought the Authority's order was unreasonable it would be over-ruled. If the order were not over-ruled and not complied with then there would be basis for the Authority to obtain an injunction.

Mr. Wendel stated he did not remember an instance where an order was adopted except where good faith has been lacking; that he recalled only few instances where orders were necessary.

The Chairman stated it was time to consider a motion regarding the standards.

Mr. Dixon wished to ask that under the definition of smoke in Section 4 a, would it apply to gases emitted from a foundry.

The Chairman read from Chapter 5, Section 1.8 to clarify this question.

Mr. Menzel said it was then his understanding that the Board would not consider the discharge from a cupola with the standards based on the Ringelmann Chart.

The Chairman stated Mr. Menzel understood this point correctly.

Mr. Wendel said the Authority must have some starting place and now would seem the proper time to adopt these regulations.

The Chairman read from page 22, "Lime Dust", the major heading Chemical Substances, 2.4 a, and stated that later other substances added in addition to lime.

MOTION RE: ADOPTION OF AIR POLLUTION CONTROL STANDARDS

It was MOVED by Mr. Wendel and seconded by Mr. Dixon and carried that the Authority adopt the Rules and Regulations Pertaining to Air Pollution Control Standards.

CHAPTER I - III ADMINISTRATIVE PROCEDURES

The Chairman asked if the members had any comments or corrections regarding Chapter I, Administrative Procedures.

Mr. Dixon asked if the procedures will meet all of the requirements in the statute.

Mr. Burt stated he believed the regulations met all requirements of the statute.

Mr. Dixon wished to know if Mr. Burt had any further additions or corrections.

Mr. Burt stated there was one in Chapter I, Section 1.5, the definition of The Act. Mr. Burt stated it would be appropriate to add the words "and amendments thereto"; to include any subsequent changes by the Legislature.

Mr. Wendel asked about the enforcement provisions in this Act.

Mr. Burt explained that the enforcement provisions were included in the Statute and would apply after a Public Hearing was held.

MOTION RE: ADOPTION OF RULES AND REGULATIONS PERTAINING TO PRACTICE AND PROCEDURE

It was MOVED by Mr. Dixon and seconded by Mr. West and carried that Chapter I, II and III of the Rules and Regulations Pertaining to Administrative Procedures be adopted by the Authority with the addition of the phrase, "and amendments thereto", in Section 1.5.

CHAPTER V PUBLIC HEARINGS

The Chairman requested Attorney Burt to discuss the Public Hearings regulations.

Mr. Burt stated that Chapter IV, Sections on Public Hearings, are basically a set of rules which cover the procedure to be followed during a hearing. He explained that the rules are written so that any person who appears at a hearing will know what procedures will be used and that he will have an opportunity to prepare his presentation and bring legal counsel along. Mr. Burt explained that

ABI228

regulations are included which will produce a written record of the hearing which is essential for appeal or enforcement actions.

The Chairman stated that he had one suggestion regarding the definition of the examiner on Page 9 of Chapter IV. Mr. Green proposed the addition (Item 1.1 page 9) to read, "the term examiner shall designate the Chairman of the Air Pollution Authority or the Authority or the members of the Authority as designated by the Chairman."

MOTION RE: CHAPTER V PUBLIC HEARINGS

It was MOVED by Mr. West and seconded by Mr. Wendel and carried that the Authority adopt the Rules and Regulations Pertaining to Public Hearing Procedures including the change in the definition of the examiner in Section 1.1, "the term examiner shall designate the Chairman of the Air Pollution Authority or the officer designated by the Air Pollution Authority to conduct hearings and to act as Hearings Officer pursuant to Section 449.735, Sub-section (4) O.R.S."

NEW COMPLAINTS

North Albany: Regarding odor from the Western Kraft Corporation's mill.

The Secretary read a letter from Mr. Dale L. Turnidge, dated November 19, 1956 regarding the continued presence of oppressive fumes from the Western Kraft Mill north of Albany. The Secretary stated that a reply was sent to Mr. Turnidge dated November 28, 1956 advising him of the status of the Authority's studies and recommendations to the Western Kraft Corporation.

The Chairman asked Mr. Hatchard if any further action had been taken on this complaint.

Mr. Hatchard replied that District Engineer Merryman had conferred with Mr. Turnidge to explain in more detail what odor control installations had been completed and what further corrections were being planned.

The Chairman directed the staff to continue the investigations and cooperative work with the Western Kraft Corporation to bring about reduction of the odors.

Oswego: Regarding cement dust deposition.

The Secretary read a letter dated September 29, 1956 from R. Bradley Jones regarding the continued presence of cement dust in the city of Oswego. The Secretary stated that Mr. Jones had been advised that the study would be resumed in Oswego when other investigations now under way are completed.

The Chairman asked if a date had been set for resuming the sampling.

Mr. Hatchard replied that the staff is planning to resume the study during January.

Portland: Regarding odors from the Chipman Chemical Co., 6200 NW St. Helens Road.

The Secretary read a letter dated November 28, 1956 from Mrs. Fred D. Glennon requesting an investigation of a strong odor near the Chipman Chemical Company.

The Secretary advised since the source of the odor is within the city of Portland the complaint was transmitted to the Portland Health Bureau and Mrs. Glennon was notified that the city would make an investigation.

PUBLIC HEALTH SERVICE Demonstration Projects Program, Public Law - 159

The Chairman requested Mr. Hatchard to discuss the new Public Health Service Demonstration Projects Program under provisions of Public Law-159.

Mr. Hatchard stated that recently Public Health Service had established a grant-in-aid program for demonstration projects related to air pollution and its control. He explained that these projects are for the purposes of evaluating or demonstrating the effectiveness of various methods of preventing or controlling air pollution problems, of assessing the type, extent and effects of air pollution and of planning, organizing and operate a program for the control of air pollution. He reported that an instruction manual had been sent to city officials and others who may be interested in the program. One application has been submitted to the Authority from Oregon State College Engineering Experiment Station which concerned a grant request to support the waste wood burner research project.

Mr. Hatchard advised that the Authority had endorsed this application and urged the Public Health Service to make the grant of \$9,218. Mr. Hatchard reported that this grant request had reached Public Health Service in time to be considered with

AB1228

the first group of projects and it was hoped approval would be given in time so that the project could begin at Oregon State College in March 1957.

There are several potential projects in Oregon which could be organized and submitted to Public Health Service for approval. Mr. Hatchard reported that these projects should be planned on the basis of participation by the local, state and federal agencies. He pointed out that the new Harvey Aluminum Company's plant in The Dalles creates a need for additional area surveys. Another project could be an extension of air sampling and investigations in the city of Portland.

The Chairman suggested that the staff investigate the desirability of submitting applications for these projects and present a report at the next meeting.

The date for the next meeting was set at the call of the Chairman.

There being no further business the meeting adjourned at 5:00 P.M.

Respectfully submitted,

K. H. Spies,  
Acting Secretary

NINETEENTH MEETING  
OF THE  
OREGON STATE AIR POLLUTION AUTHORITY

June 27, 1957

ABI 1228

The nineteenth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M. Thursday, June 27, 1957 in Room 36, State Office Building, 1400 S.W. 5th Ave., Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Mr. R. P. Dixon, Dr. Harold M. Erickson, members and Curtiss M. Everts, Jr., Secretary, R. E. Hatchard, Chief of the Air Pollution Control Section, W. J. Whitsell, Associate Engineer, R. B. Percy and J. R. Faust, Chemists, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The Secretary summarized the minutes of the eighteenth meeting held December 13, 1956. The Chairman declared that if there were no corrections or additions the minutes would stand approved as prepared by the Secretary.

MOTION RE: ELECTION OF OFFICERS

The Chairman stated that it was necessary to elect officers for the year of 1957. It was MOVED by Mr. Dixon and seconded by Mr. West and carried that Carl E. Green be re-elected Chairman of the Oregon State Air Pollution Authority for 1957. It was MOVED by Mr. West and seconded by Dr. Erickson and carried that R. P. Dixon be elected Vice-Chairman of the Authority for the year 1957.

TOLEDO: GEORGIA-PACIFIC CORPORATION'S Kraft Mill

The Chairman requested Mr. Hatchard to summarize the staff activities regarding the control of air pollution from the Georgia-Pacific Corporation's kraft mill, now under construction in Toledo.

Mr. Hatchard stated that Georgia-Pacific Corporation started construction in the fall of 1956 of a 250 ton per day kraft mill located in the southern section of Toledo on the north bank of the Yaquina River. He explained that the design of the mill facilities allows for future expansion to 500 tons of pulp per day.

He stated that the pulp chips for the new kraft mill will be provided from the company's lumber mills in Toledo and Coos Bay and other mills in the vicinity. He reported that the staff was conducting area surveys in Toledo to establish the existing value of air pollutants such as particle fallout, suspended particulate matter, sulfur dioxide and odors. He stated that the staff had conferred with Georgia-Pacific Corporation's management and technical representatives regarding the control facilities and had reviewed the plans for the installation of facilities to control the major discharges from the mill as follows:

- a. Pulp digester blow and relief gases and vapors control include removal of condensable compounds followed by secondary treatment of non-condensibles in an oxidation tower before discharge into the atmosphere.
- b. The black-liquor recovery boiler flue gases will pass through two electrostatic precipitators in parallel which will remove 95% of the particulate matter before discharge. The boiler controls will include an automatic system to assure an excess of oxygen through the boiler to minimize the formation of sulfides.
- c. The lime kiln recovery unit will be equipped with a two stage dust control unit to prevent excessive discharge of lime.

Mr. Hatchard stated that the proposed control facilities should prevent the occurrence of public nuisance conditions in the future caused by the deposition of particulate matter but he pointed out there probably will be periods when objectionable odors are present. He explained that it is not possible to predict the frequency or intensity of excessive odors since there is little data available regarding the Toledo meteorological conditions and the affects of the local topography. He stated that the odor controls to be installed are equivalent to other recently constructed kraft mills and that the staff had no recommendations for additional odor control at this time.

He stated that there is a recognized need for continued research and development by the pulp industry to develop further control of kraft mill odors.

He recommended that the Authority grant tentative approval of the Georgia-Pacific Corporation's plans for controls with the understanding that additional odor control facilities will be provided if public nuisances are created and that the area studies be continued in cooperation with the city of Toledo.

MOTION RE: GEORGIA-PACIFIC CORPORATION'S Kraft Mill in Toledo

It was MOVED by Mr. Dixon and seconded by Mr. West and carried to grant tentative approval of the plans submitted by Georgia-Pacific with the qualification that additional facilities may be required if public nuisances are created and also to continue area surveys in cooperation with the city of Toledo.

THE DALLES: Harvey Machine Company's Aluminum Reduction Mill

The Chairman requested Mr. Whitsell to report on activities regarding the Harvey Machine Company's Aluminum reduction mill.

Mr. Whitsell reported that construction of the mill was begun last fall and Harvey Machine Company expects to begin production of aluminum early in 1958. He explained that the Soderberg process will be used and the method differs from the Reynolds Metals Company mill at Troutdale in several respects which appear important in air pollution control since the escape of gases is confined to a small area close to the anode, making collection much easier and more complete. He stated that this eliminates the need for handling and cleaning great volumes of air and there should be less dust, too, in the building area, since the manner of adding raw materials permits maintenance of negative pressure within the cell, thus drawing dusts into the collection system. He stated further that the Soderberg process lends itself better to air pollution control because in place of several pre-baked carbon electrodes, there is a single steel-encased electrode which contains unconsolidated carbon materials which bake into a hard material as the process continues and the electrode is consumed. He reported that the staff had collected more than 300 air samples in The Dalles area and that these results indicate a "background" fluoride level of approximately one part per billion which is typically low for small communities with little industrial development. He stated that sampling would be resumed and

ABI 228

an additional station would be established at one of the stations where Oregon State College will be collecting foliage samples this summer and fall.

Mr. Whitsell reported that the company had been notified in April 1953 and that the Air Pollution Control statute provides for review of air pollution control plans and specifications but to date no plans nor specifications have been received by the Authority. He stated that the Harvey Machine Company has assured the Authority that the latest and most complete control facilities will be provided, but as yet no written description of these facilities has been received.

Mr. Whitsell presented the following staff recommendations for consideration:

1. That the company be directed to submit plans and specifications describing the air pollution control facilities.
2. That the plans for control be considered by the members of the Authority after review by the staff since no regulations have been adopted regarding fluoride concentration.
3. That a staff member be authorized to visit the nearest aluminum plant using the Soderberg process.

The Chairman asked if any representatives of the Harvey Machine Company would like to present information at this time.

Mr. Herbert Harvey, Vice-President appeared and stated that the process they are using is a modified Soderberg method and that their company would install the most efficient controls that could be obtained. He explained that the delay in submitting formal plans and specifications was caused because the company wished to take advantage of the most recent technical developments.

The Chairman suggested that plans be submitted to the staff for study as soon as possible.

Mr. Rene E. Legault, Chief Process Engineer, Harvey Aluminum Company, presented the plans and specifications describing the proposed control systems for The Dalles Aluminum Reducation Mill to the Authority.

Mr. Dixon asked Mr. Harvey where the nearest aluminum plant was located that was using the Soderberg method.

Mr. Harvey replied the Anaconda plant in Columbia Falls, Montana used the same modified process.

Mr. West asked if the Montana plant controls were operating effectively.

Mr. Harvey stated that the company reports a fluoride removal of 95% efficiency and that they have had no air pollution difficulty whatsoever.

Mr. Legault explained that there is a limit to the controls which Harvey Aluminum can provide since the equipment manufacturers will guarantee removal efficiencies to a set value but that the company anticipates removal of about 95% using the controls described in the plans and specifications.

The Chairman stated the Authority should accept the plans and specifications for review and that the Authority should decide whether or not to send a representative to visit a similar plant in Montana.

Mr. West stated that the determination of whether livestock or agriculture is being injured requires technical study and he questioned whether a one-two day visit by a staff member would be worthwhile.

Dr. Erickson stated that a staff member would not be sent unless the trip would produce worthwhile and informative data since it was very difficult to obtain state funds for out-of-state travel.

MOTION RE: The Dalles, Harvey Machine Company.

It was MOVED by Dr. Erickson and seconded by Mr. Dixon and carried that the plans and specifications submitted by the company be considered by the Authority after the staff had completed its review and that a staff member be authorized to visit the Anaconda mill in Montana only if necessary.

MULTNOMAH COUNTY: Pacific Carbide and Alloy Company.

The Chairman called on W. J. Whitsell to summarize the staff activities regarding the investigation of dust deposition near the Pacific Carbide and Alloy Company's plant. Mr. Whitsell stated that the staff began work in April 1955 after receiving a letter-petition from Western Auto Supply Company complaining of lime dust deposition on automobiles and merchandise. Several field investigations since that time have

ABI228

been conducted and the Pacific Carbide and Alloys Company had been advised of the results which showed that severe nuisance conditions existed and recommendations for control installations were made by the Authority in October 1955. In November 1955 the company presented plans for a control installation which was completed in February 1956. He reported that complaints were subsequently received from Morrison Oil Company that wet material was being deposited. He stated that on November 30, 1956 a letter was sent to Pacific Carbide and Alloy Company calling attention to progressive decline in collection efficiency as shown by fallout sampling results obtained from a nearby station.

Mr. Whitsell stated that maintenance problems with the control equipment have been persistent and fallout sampling results have continued to show values considerably above the maximum permissible amount for an industrial area. The substantial amount of lime present in the fallout makes it more objectionable.

It is recommended that the company be directed to proceed with additional controls which will result in a substantial reduction in emissions and that the Air Pollution Authority's staff be consulted in the development of these plans and that stack sampling studies be completed by the company.

Mr. T. J. Waters of Pacific Carbide stated that he believed the chronological history was very correct; that it is a difficult process making carbide let alone collecting the dust produced. He felt his company had made considerable progress in collecting the dust during the past few years. He stated that over two years ago they had complaints from Western Auto Supply Company but none have been received recently even though the control system is not performing as well as it should. He stated that the Morrison Oil Company was located just south of the carbide plant and he agreed that Mr. Morrison has a just complaint.

Mr. Waters stated they were over-whelmed by the dust in the furnace which has to be removed and that they do have water sprays installed in the stack which are very difficult to keep operating effectively. He explained that there seems to be no way to measure their performance but he estimated the deposition of dust is about 90% effective in their dust removal. Mr. Waters explained that it is

worse at times when the wind is blowing in the right direction and a mist is mixed with the lime. He believed that their problem now is to control the mist and the company did not know just how this would be accomplished, whether taller stacks would help, burning the sprays down or just what would rectify this baffling problem.

He stated that they had obtained advice from other carbide companies but for the type of furnace installed and the raw material available there is no known safe and sure method to collect the dust. He added that if there were available a dust collector which was safe and efficient the company would purchase it.

The Chairman asked whether or not an electrostatic precipitator would be of any use in this particular type of problem.

Mr. Hatchard stated that he was not acquainted with the use of an electrostatic precipitator on a carbide furnace discharge but the staff was familiar with the control of dust from the calcium carbide furnace at the Electrometallurgical plant.

He explained that several years ago there was a large area of north Portland experiencing heavy fallout but that this nuisance has been removed after installation of a covered furnace and centrifugal type water scrubber at Electrometallurgical plant.

Mr. Waters stated they know little about Electrometallurgical operations since no information is made public.

Mr. Hatchard stated that the staff was not familiar with other dust control installations at calcium carbide plants in other parts of the country, however, the staff was aware of considerable activity by industry associations in other fields.

Mr. Waters replied that there are only four carbide producers other than Union Carbide and Alloy and there is free exchange of information between the four but there is no formal industry association.

The Chairman inquired if there was any possibility of getting data through Public Health Service.

Mr. Hatchard stated that the Public Health Service, Community Air Pollution Program, does provide technical advice and assistance where problems are difficult and local

ABI 228

resources are not adequate.

The Chairman asked Mr. Waters if he had contacted Public Health Service for information/<sup>on</sup>this particular problem.

Mr. Waters stated he has been in contact with Public Health Service during the past years.

Mr. Hatchard added that there is increasing activity by many engineering and research groups; that there are several sources of Federal funds for engineering study and development. Mr. Hatchard stated that a considerable amount of time could be saved by utilizing engineering study methods rather than a trial and error process. He stated that almost any problem of particulate matter control can satisfactorily be solved by application of known engineering facts.

The Chairman stated that it was his opinion that this particular situation, in the past, had not been conforming to the state laws or regulations and that the problem is not solved and that a satisfactory solution is needed.

Dr. Erickson said it was his opinion that we needed to know what controls can be instituted and suggested that we explore with Public Health Service for additional controls and also that the industry do their part in making studies. Dr. Erickson suggested that Mr. Waters cooperate with the staff and obtain additional information then get together with the findings and work out an answer to the problem.

It was concluded by the Chairman that this problem be handled as suggested and the company and staff present progress reports at the next meeting.

MUNICIPAL AIR POLLUTION ACTIVITIES: Eugene, Portland and Klamath Falls.

The Chairman requested Mr. Hatchard to give a report on the progress towards the development of municipal control programs in Eugene, Portland and Klamath Falls.

Eugene Mr. Hatchard stated that the city of Eugene had adopted a municipal air pollution ordinance in May 1956 and that the control provisions in the ordinance were equivalent to those contained in the Authority's regulations. He explained that the effective date for the control regulations in Eugene was January 1, 1958 and that the city budget for fiscal year 1958 provided for the employment of an individual to work full time developing the city program beginning September 1, 1957.

He reported that area air sampling activities in Eugene have been continued in cooperation with the city and there was now available considerable data regarding particle fallout and the concentration of suspended particulate matter.

Portland Mr. Hatchard reported that a member of the Authority's staff had continued to meet with the City of Portland Air Pollution Committee to assist with the investigation of specific complaints, when requests are received from the Portland Health Bureau, and to participate in area air sampling activities. He explained that the major problem in expanding the municipal air pollution program has been the difficulty to obtain authorization for a minimum budget to employ a technical staff and to purchase air sampling and analytical equipment. He reported that the city of Portland's air pollution advisory committee had submitted urgent requests for budgetary approval and had appeared as a committee of the whole before Mayor Schrunck and Commissioners Bean and Boody. Mr. Hatchard stated that the city officials had indicated that approval would be given just as soon as budgetary restrictions allowed and that the failure of the salaries measure on the November 1956 general election had created the need to reduce existing programs and to restrict new municipal activities.

Klamath Falls Mr. Hatchard stated that the city of Klamath Falls in preparing a revised air pollution control ordinance and that Mr. Mark Westling, Public Works Consultant, League of Oregon Cities, and a representative of the Authority's staff met with the City Council to discuss the proposed ordinance. He explained that several revisions were recommended and that at the present time the city attorney is incorporating these recommendations into the proposed ordinance. The Chairman requested that a letter from Dr. T. L. Meador, Health Officer, City of Portland, dated June 17, 1957 be read in which he requested assistance from the Air Pollution Authority.

The Chairman stated that the Authority had received similar requests in previous years and that it has been the policy of the Authority to cooperate and assist municipalities in developing local programs but not to assign any staff members to any particular city.

ABI228

MOTION RE: MUNICIPAL AIR POLLUTION ACTIVITIES:

It was MOVED by Mr. Dixon and seconded by Mr. West and carried that the Authority acknowledge receipt of the letter of June 17, from Dr. Meador and reply that the Air Pollution Authority would accomplish the following:

1. Continue and increase area sampling in Portland.
2. Secure additional information on the fallout values of particulate matter in Portland compared to rural areas and the metropolitan area, and assist with the evaluation of these values, but that no engineer could be assigned to the Portland Health Bureau.

GARBAGE AND REFUSE DISPOSAL

The Chairman requested the Secretary to review Senate Bill 424 relating to regulation of garbage and refuse dumps by County Health Departments. The Secretary stated the Authority had received a letter dated May 24, 1957 from Mr. J.R. Boydston, Multnomah County Sanitary Engineer, requesting the Air Pollution Authority to submit recommendations concerning the prevention and control of air pollution from refuse dumps.

The Chairman asked how soon the staff could start this study.

Mr. Hatchard replied that the Authority had begun collecting information from agencies and that there is a general effort going on to control burning refuse dumps. Mr. Hatchard indicated that within a month the staff could have a draft of the recommendations prepared.

The Chairman requested that these recommendations be mailed to the members of the Authority for study.

The Secretary replied that this would be done.

APPLICATION FOR PUBLIC HEALTH SERVICE DEMONSTRATION PROJECT GRANTS

The Secretary explained that an application for a demonstration project grant under the provisions of Public Law 159 was made by the Engineering Experiment Station, Oregon State College which provided for a waste wood burner study.

The Chairman requested Dean Popovich of Oregon State College, who is directing the project, to report on activities.

Dean M. Popovich stated that the three objectives outlined in the study were as follows:

1. Study several typical types of burners presently in use and determine rates of loading which would allow satisfactory operation with a minimum amount of fallout.
2. Complete surveys of incinerators to obtain data for re-design of burners if necessary.
3. Make an economic survey with the Oregon Product Laboratories to show the economics of wood waste utilization compared with costs of burning.

He stated that at the present time a 50 foot burner at the Swanson Lumber Mill in Springfield was being equipped to begin sampling measurements. He explained that this is the first of several burners which will be studied this summer; that two instructors from the college staff have been employed for this work and that Oregon Forest Products Laboratories and the Authority were providing cooperative assistance.

The Secretary thanked Dean Popovich for the excellent cooperation by the Engineering Experiment Station.

The Chairman requested the Secretary to report on the status of the suggested demonstration project for fluoride study by the Agricultural Experiment Station, Oregon State College.

The Secretary stated that the staff was authorized by the Air Pollution Authority at the last meeting to investigate the feasibility of increasing fluoride studies. He stated that F.E. Price, Director, Oregon State College Agricultural Experiment Station, had advised that the fluoride studies be continued at present levels and no expansion be made because of the limited area in Oregon where agricultural injury is caused by fluoride concentrations and because of the large number of variables involved.

The Secretary explained that the staff has been collecting data regarding the fluoride concentration in air near aluminum reduction plants and the Agricultural

ABI228

Experiment Station has obtained fluoride data from foliage samples from stations near aluminum plants. He pointed out that evaluation of this data may indicate some maximum and minimum relationships. The Authority members indicated that these studies should be continued at present levels.

STAFF REPORTS: EASTSIDE, EMPIRE, NORTH ALBANY

Eastside, Georgia-Pacific Corporation's Coos Bay Division

The Chairman requested Mr. Hatchard to report on the progress of the Georgia-Pacific Corporation on the installation of cinder control equipment to correct the excessive deposition in the City of Eastside.

Mr. Hatchard stated that at the last Authority meeting the Georgia-Pacific Corporation had announced plans for the installation of cinder control equipment in the hog fuel fired steam plant at their Coos Bay mill. He explained that the mill is located in the southeast part of Coos Bay and public nuisance conditions were being created in the city of Eastside which is located 1/4 mile north of the mill. He stated that the Georgia-Pacific Corporation had subsequently submitted plans advising that multiclone cinder control units would be installed in boilers numbers 5, 6, 7 and 8. He stated that the plan had been tentatively approved with the understanding that if the changes in the steam plant and the installation of collectors on the four boilers do not satisfactorily reduce the cinder and flyash deposition in Eastside that the company would then provide additional control for the remaining four boiler units.

He stated that the installation of the collectors was started during the week of June 17, and that there would be a delay in the project completion date since it had been necessary to change the size of the cinder fans. He explained that the delivery date of the fans is now August 1st, and it was expected that the project would be completed by the end of August.

Mr. Hatchard reported that pulp chipping equipment had been installed in the Coos Bay mill and that the company had started shipping chips to the kraft mill now under construction in Toledo. He stated that the company planned to install additional chipping capacity and that the chief engineer reported that by the end

of this year the mill wood waste burner would be needed for intermittent operation only.

Empire, Cape Arago Lumber Company

The Chairman directed Mr. Whitsell to summarize the activities related to the installation of cinder controls at the Cape Arago Lumber Company.

Mr. Whitsell stated that last year, it will be recalled, the Authority cited Mr. D. H. Miller to Cape Arago Lumber Company, Empire, to a public hearing regarding the correction of public nuisances in Empire caused by the deposition of an excessive quantity of cinders and flyash. Mr. Whitsell stated that the company decided to install controls and early this year the first of two units was completed on one of the two steam boilers. He reported that the second unit is scheduled to be installed during the seasonal shutdown after July 8th.

Mr. Whitsell stated that he had inspected the first installation and there was doubt that a considerable amount of cinders were being collected and returned to the boiler. However, he pointed out that a waste burner still operates near the steam plant which contributes considerable quantities of cinder and sawdust to the area.

He indicated that the cinder control installations will remove a greater part of cinders deposited in the downtown area.

North Albany, Western Kraft Corporation

The Chairman requested Mr. H. W. Merryman to report on the status of odor controls at Western Kraft Mill located north of Albany.

Mr. Merryman said he would report on the area odor surveys and observations and conferences with Western Kraft officials which were the outcome of the report made by the staff July 25, 1956. He stated the chief recommendations from the odor surveys and conferences with complainants was that additional odor control facilities be installed before the plant expansion was in production. Mr. Merryman stated that the company had completed the installation of several improvements towards the compliance with this recommendation. He explained that additional condensers and evaporators had been installed and that modifications were completed on the lime

ABI228

kiln recovery effluent which previously had resulted in reduced visibility on U.S. Highway 99 and was also the source of some odor. Mr. Merryman stated that the management is developing plans for additional control of digester blow and relief gases since further treatment of this discharge was necessary. He said that the Authority had not received additional complaints during the past several months, however, it should be understood that the previous complainants have been informed that the company and the Authority's staff are working towards the improvement of the odor conditions.

Mr. Merryman added that another control unit had been installed on the black liquor recovery boiler and that he had visited the plant last Saturday but it was difficult to establish whether significant odor reduction may have occurred.

He stated that the staff recommended that area odor surveys be continued to evaluate the odor conditions now that the increased plant production is under way and that the company be requested to submit plans and specifications describing the installation of additional odor control facilities and when the projects would be completed.

The Secretary read a letter dated July 20, from Western Kraft Corporation in which they acknowledged the Authority's invitation to attend today's meeting and advised that there was no additional information regarding their activities which had not already been submitted.

Dr. Erickson asked Mr. Hatchard if the staff comment - that the plans and specifications for odor control installations at the Toledo kraft mill being equivalent to other recently constructed mills - included the Western Kraft mill.

Mr. Hatchard replied: no - the staff meant kraft mills in other states. He explained that the Toledo mill will be provided with pulp digester blow and relief gas controls for condensible and non-condensable components. He indicated that the Toledo kraft mill will begin production with the odor control facilities the staff expects will eventually be completed at Western Kraft.

Dr. Erickson asked if the Western Kraft Corporation had plans for odor control facilities in addition to what is now in use.

Mr. Hatchard replied that Mr. R. O. Beatty, Ass't. to the President, Western Kraft Corporation indicated that during the year of 1957 that the company had authorized installation of a unit to remove the condensable vapors which would be operating about December 1957 and that it was their plan to install a secondary odor control which would treat the digester blow and relief non-condensable discharges and completion was expected in 1958.

Dr. Erickson stated that he had received more complaints personally regarding the odors from Western Kraft mill than any other plant in the state of Oregon. He said that Western Kraft should install any equipment that is available at the earliest possible time to eliminate this severe pollution situation. He explained that tourists coming into Oregon certainly would get a poor impression of the state with this plant located adjacent to U.S. Highway 99.

Mr. Hatchard stated that in the staff's report dated July 25, 1956 the recommendation was made to the company that the odor control facilities be completed and installed in time to serve the expanded plant capacity. From the staff's meetings with the company and the technical staff it was understood that the delay in completing all of the controls was caused by economic factors. He said that so far as the complainants and City Councils are concerned that it would be helpful to have specific dates when the steps of odor control installations will be completed. He explained that the company had been very helpful in keeping the staff advised regarding the installations completed and their general plans for future controls. The Chairman wished to know if the plant was now operating at the greater capacity. Mr. Hatchard replied yes.

Mr. Dixon suggested that the Secretary write to Western Kraft and refer to the report of July 25, 1956 at which time it was recommended that they install controls before increasing the production; that we request specific dates when the additional controls would be completed and at the same time call to their attention the complaints and that the company should realize that the Authority requires a definite plan.

AB1228

The Chairman asked the members if they did not feel they should cite Western Kraft to appear before the Authority in a public hearing.

Dr. Erickson stated he believed that a hearing should be arranged to formulate an understanding as to when the additional controls will be installed.

Mr. Dixon asked if it would be proper to instruct Mr. Burt, Special Ass't Attorney General, to invite them to appear.

MOTION RE: Odor control at Western Kraft Mill, North Albany

It was MOVED by Dr. Erickson and seconded by Mr. Dixon and carried that the Authority take necessary steps to call a public hearing and have Western Kraft show cause why an order should not be issued to abate this type of air pollution in conformance with state statutes.

PLANNING AND ZONING AGENCIES REGULATIONS

Mr. W. L. Myllenbeck, Planning Consultant, Beaverton, Oregon stated that recently he has done industrial consulting and planning with the cities of Vancouver and Beaverton; and that Vancouver had been urged to write regulations on air pollution.

Mr. Myllenbeck stated that the zoning regulations which limit what type of industries could locate in certain parts of the city are out of date as many of the new industrial areas are attractive. Mr. Myllenbeck added that there should be a set of standards prepared which an individual industry must meet to be able to operate at a particular location.

Mr. Myllenbeck stated that representatives of planning and zoning agencies in metropolitan Portland have worked with Mr. Hatchard and others in different regulatory activities to get information on just how to approach the formulation of planning and zoning regulations, and the use of some types of controls. He explained that his group was concerned with the proper regulation of community growth to prevent air pollution problems. He stated that attempts to gather information throughout the country showed that it was difficult to obtain, but if appropriate regulations were available various cities and counties could adopt planning and zoning regulations beneficial to the State Air Pollution Authority. He also stated he had talked with various agencies hoping to use them as consulting

resources so that all facts may be submitted and a report would then be supplied from the consulting agencies to guide the planning commission. Mr. Myllenbeck concluded by saying that there is so very much research to be done on this subject and would greatly appreciate having the assistance and cooperation of the Air Pollution Authority.

Mr. Hatchard stated that there were several references in the statute to the prevention of air pollution; and that the staff was not satisfied that enough was being done towards the prevention of air pollution problems. He explained that a part of the prevention work could be handled through planning and zoning agencies, if additional regulations were available for planning groups. He said the staff was concerned over the length of time it would take to formulate the regulations since at present time the staff had been able to complete regulations only for smoke discharge, particulate matter and lime dust.

The Chairman stated that Mr. Myllenbeck would like to have additional air pollution regulations promptly and the staff has been working towards this objective but there was no immediate prospect of completing the project. He stated one of the major steps was adopting the initial standards in December 1956 since some of these regulations are performance standards. He stated the staff should proceed as rapidly as time would permit since this program is one of utmost importance.

Mr. Myllenbeck stated that there was the possibility of obtaining grants-in-aid under the provisions of Public Law 159 and such a project would be a benefit to all cities and counties in the state.

The Chairman suggested that the grant-in-air project be investigated further.

ADMINISTRATIVE MATTERS:

Budget 1957 - 59

The budget for fiscal year 1957-59 biennium was reviewed by the Secretary and the Secretary stated that because of a proposed revision in the compensation plan the salary figures would have to be revised.

Changes in Regulations

The Secretary reviewed several minor changes made in the regulations and stated

AB1228

the staff would like approval for those changes so the regulations can be filed with the Secretary of State.

MOTION RE: CHANGES IN THE REGULATIONS

It was MOVED by Mr. Dixon and seconded by Mr. West and carried to adopt the revisions as described by the Secretary.

Proposed field training course.

Mr. Hatchard reported that the Public Health Service, Robert A. Taft Sanitary Engineering Center, had been presenting courses on several phases of air pollution study, research, control and administration at their headquarters, Cincinnati, Ohio since 1955. He explained that the first field course on "Community Air Pollution" would be held in Tacoma, Washington under the local sponsorship of the Washington Department of Health and the Oregon Air Pollution Authority. He stated that the course instructors would be provided by the Taft Center.

He reported that invitations were being sent to industries, public health agencies, colleges and universities and control agencies. He stated that an enrollment of 75 was expected.

He requested approval of the Authority to send as many staff members, including district engineers, as the work schedule would allow.

The Chairman suggested and recommended that all the staff members who can be spared attend the field course in Tacoma, Washington August 22-24, 1957.

Other staff travel:

The Chairman requested comments by the members regarding staff travel to the aluminum mill in Columbia Falls, Montana and the kraft pulp mill in Missoula, Montana.

Mr. Dixon stated he did not see what would be gained since what the staff is seeking is performance and the company's information would have to be obtained.

Dr. Erickson added that perhaps it would be of value to visit the area, talk to the officials and residents in the area and listen to their complaints.

The Chairman stated that inasmuch as Harvey Aluminum operation is not scheduled to start until 1958 perhaps then it would be advisable to have a staff member make

a visit to another plant and that perhaps the two plants might be visited on one trip.

It was suggested by the Chairman that this matter be tabled and reconsidered at a later time this year.

Mr. Dixon stated this was agreeable.

NEW COMPLAINTS

Multnomah County Re: Smoke and flyash from burning vehicle bodies at Ben's Auto Wrecking Yard.

The Chairman stated that perhaps this complaint would be covered by SB-424.

The Secretary said the complaint had been acknowledged by letter and that an investigation was promised.

Multnomah County Re: Smoke and odor from burning refuse at Portland Meadows.

North Bend Re: Cinder and flyash deposition from Menasha Plywood Corporation.

Mr. Willard Friesen, owner, City Center Motel, letter concerning the deposition of cinders was read by the Secretary. Mr. Friesen was advised that the staff would make an investigation when a representative was in North Bend.

Multnomah County Re: Fumes from Silver Plating Company.

The Secretary read a letter from Mrs. Carmen Elfving regarding fumes from the Silver Plating Company and the Secretary stated that the complaint had been acknowledged and investigation will be made as soon as commitments will allow.

DATE FOR THE NEXT MEETING

The date for the next meeting was set at the call of the Chairman.

There being no further business, the meeting was adjourned at 4:15 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, Jr. Secretary  
Oregon State Air Pollution Authority

TWENTIETH MEETING  
OF THE  
OREGON STATE AIR POLLUTION AUTHORITY

The twentieth meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M. Monday, December 16, 1957 in Room 36, State Office Bldg., 1400 S.W. 5th Avenue Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Mr. R. P. Dixon, Mr. Harold Wendel, Dr. Harold M. Erickson, members and Curtiss M. Everts, Jr., Secretary, Mrs. Catharine C. Barsch, Special Assistant Attorney General, R.E. Hatchard, Chief of the Air Pollution Control Section, W. J. Whitsell, Associate Engineer and R. B. Percy, Chemist, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The minutes of the nineteenth meeting held June 27, 1957 were summarized by the Secretary. The Chairman declared that if there were no corrections the minutes would stand approved as prepared by the Secretary.

THE DALLES Re: Harvey Aluminum Company, Aluminum Reduction Mill

The Chairman requested W. J. Whitsell to give a report on the staff activities concerning the Harvey Aluminum Company's plant now under construction at The Dalles. Mr. Whitsell reported that at the last Authority meeting the Harvey Aluminum Company officials presented general performance specifications for the fluoride fume control installations to serve the aluminum reduction plant at The Dalles. He stated that after reviewing the specifications the Authority had advised the company that more specific information would be required to describe the selected control equipment as soon as the data is available.

He explained that on December 5, 1957 the company was advised that the Authority members would consider the matter of the Harvey Aluminum Company at The Dalles at their regular meeting scheduled December 16, 1957 and at the same time they were reminded that the additional information requested had not yet been received.

Mr. Whitsell reported that C.A. Rochon, Chief Chemist, Harvey Aluminum Company

in a telephone conversation relative to the Authority's letter of December 5, 1957 had stated that "he just returned to the company's headquarters in Torrence, California following two weeks of travel. He advised that the requested information was not available at the present time from the designers and manufacturers of the control equipment, however, the Harvey Aluminum Company expected to receive the information from the suppliers within the next month and that he would be able to attend the meeting approximately one month later".

Mr. Whitsell stated that a meeting was held October 1, 1957 with the state officials from Oregon and Washington at the request of Mr. Rochon for the purpose of determining what additional studies were needed in The Dalles area before the aluminum plant started production. Mr. Whitsell reported that it is our understanding that plant pathologists and horticulturists from Oregon and Washington Agricultural Experiment Stations conduct a joint survey on both sides of the Columbia River as consultants to Harvey Aluminum Company. Mr. Whitsell reported that additional air sampling had been completed at The Dalles and the staff believes that the normal fluoride concentrations have been established at two representative stations in the vicinity. He stated that a total of 629 samples had been collected and analyzed which show the fluoride concentrations to be typically low for a community of this size and limited industrial development.

The Chairman requested Dr. Monroe Holmes, Public Health Veterinarian, to give a resume of his work in The Dalles concerning the livestock and dairy operations. Dr. Holmes stated his activities so far have been very limited; that he has only had the opportunity to survey the area near the Harvey Aluminum plant just recently and that he plans to check the condition of the animals in this area within the near future.

The Chairman suggested that the Harvey Aluminum Company follow the recommendations already provided; that the Secretary furnish any additional data to the company which may be available and notify the company again that additional information is needed as soon as possible; and that if it were agreeable with the members that he recommend the consideration of the company's control equipment be deferred until the next meeting.

AB1228

The Chairman asked R. L. Stockman, Engineer in charge, State of Washington Air Sanitation program, if he would like to present any information.

Mr. Stockman stated that the Washington Agricultural Experiment Station had made limited surveys starting about 6 months ago and that they expect to make foliage examinations very soon. Also, he reported that the station had submitted an application to Public Health Service Community Air Pollution Program for a demonstration project grant to carry on fluoride studies in agricultural regions north of The Dalles. Mr. Stockman advised that the proposal was being studied by a special committee and no decision had been made yet.

NORTH ALBANY RE: WESTERN KRAFT CORPORATION

The Chairman stated that the Authority had decided at the last meeting to hold a public hearing regarding the need for additional air pollution controls to serve the Western Kraft Corporation's mill north of Albany; however, the company had subsequently submitted plans for the installation of more facilities, had conferred with the staff and had started a stack measuring program. The Chairman requested Mr. Hatchard to summarize the staff activities.

Mr. Hatchard stated that since the Authority's report dated July 25, 1956 was prepared the Western Kraft Corporation had completed expansion of the mill production facilities from 100 tons to 200 tons of pulp per day and that several installations have been completed which effect the atmospheric discharges from the mill such as a second recovery boiler and venturi scrubber system and the installation of an additional lime dust control unit.

He reported that the staff had completed 4 area odor syrveys during the period August to October 1957 in order to:

1. Determine the area odor conditions resulting from the mill expansion, installation of partial odor control systems and other operational changes.
2. Determine whether the addition of a masking agent effects the area odor conditions.

He stated that the procedure used in the surveys was similar to the 1956 field investigations where two observers individually recorded the odor intensity if an

odor was detected from a station downwind from the plant. He explained that the intensities noted were based on the following scale.

- 0 - no odor present
- 1 - threshold level of a kraft component
- 2 - definite odor of a kraft component
- 3- strong odor of a kraft component
- 4 - over-powering odor of a kraft component.

Mr. Hatchard stated that the observations were made each minute at a station until two successive zero values were recorded and then the observations were interpreted until the odor appeared again or until the observers moved to another station. He stated that a summary report had been prepared dated October 21, 1957 which included a comparison of the 1956 and 1957 area survey information. He explained that the data showed that higher odor intensities occurred during over-cast and rainy weather conditions and that the percentage of observations for the various odor intensities should not be interpreted as exposure time of the area to a specific odor intensity since the field method used limited the observations to stations and periods of time when the kraft odor was detected either continuously or intermittently. He stated that the addition of a masking agent on October 15, 1957 did not substantially reduce the odor intensity, however; approximately 20% of the observations made on October 15, actually represented the odor of the masking agent rather than a kraft mill component. He reported that in the opinion of the observers the masking agent would be objectionable but that the use of the masking agent might be effective for short period use when it was desirable to substitute another odor for kraft type. He reported that the comparison of the total observations made in 1957 with the data for 1956 indicated that the odor conditions have not changed significantly. He pointed out that from the comparison of the 1956 and 1957 data it might appear that the increased atmospheric discharge from the mill expansion was approximately balanced by the installation of control facilities or operational changes. He stated that this conclusion should not be made since the human nose is not a satisfactory quantitative measure of odors. He explained further that the average human olfactory sense is a very good qualitative measure of odor. He stated that the actual quality of odor compounds discharged from the kraft mill may have either increased or decreased as

ABI228

a result of recent changes and would not be shown by these field surveys and for this reason the Authority recommended the company undertake a stack sampling program to measure the quantity of odorous compounds emitted from the major mill discharge points.

Mr. Hatchard presented the following recommendations or observations for consideration.

1. Presence of odor in the area around the plant is at times creating public nuisance conditions.
2. The company should complete stack sampling procedures so that the discharge characteristics digester blow and relief gases may be compared before and after the blow heat recovery system is installed.
3. The Authority's staff should continue the area odor surveys after each change in the mill odor control facilities and preferably the surveys should be made concurrently with stack sampling operations.

Mr. R. O. Beatty of Western Kraft, stated he had a written report he would submit to the Secretary and reported that his company was installing the blow heat recovery system which will be completed in the next two weeks. Mr. Beatty pointed out that this unit would cost \$70,000 and that this is not the first odor control installation which has been undertaken. He stated that this project is one in the series of steps and that to date the company has spent about \$200,000 on equipment related to the reduction of odors in the plant. Mr. Beatty emphasized that these expenditures were difficult to make with the current market conditions for Kraft paper. Mr. Beatty stated that since there are so many variables affecting the area odor conditions such as wind, weather and temperature, mill discharges and others, that his company questions the area odor survey data as a basis for recommendations for control actions. However, he added, that it is the best system developed to date to measure the presence of area odor.

Mr. Beatty stated that Mr. Waldemar Seton, Chief Chemist, Western Kraft Corporation also had a report to present regarding the stack sampling program.

Mr. Seton stated that there was no doubt that the gas chromatography method was the best for the stack measurement but this involved expensive laboratory equipment

and precise methods which are not available. He said Western Kraft has followed a method devised by Dr. McCarthy of the University of Washington and that the company has consulted with Dr. McCarthy. He added that the work to date done on kraft mill effluents shows there are four major odorous components, hydrogen sulfide, methyl mercaptan, dimethyl sulfide and dimethyl disulfide. He reported that Dr. McCarthy is also working on non-condensable gases given off by kraft mills and that they are trying to analyze the total component.

He stated that the stack samples showed that 0.42 lb. of hydrogen sulfide, 2.18 lb. of methyl mercaptan are present in the digester gases per ton of paper. He stated the other figure arrived at was a total titration figure for dimethyl sulfide which showed 4.1 lbs. bromine demand per ton of paper.

The Chairman stated the Authority would consider the progress reports and would expect further reports at subsequent meetings and that the Authority believes the Western Kraft Corporation is proceeding in good faith. He expressed to Mr. Beatty appreciation for the company's cooperation, promised that the staff will continue working with the company and requested the company to submit progress reports.

NORTH ALBANY Re: Wah Chang Corporation

The Chairman requested Mr. H.W. Merryman to report on activities concerning the complaints involving the Wah Chang Corporation's plant north of Albany. Mr. Merryman stated the company had started production during November 1956 and on July 30, 1957 the Authority received a petition-complaint signed by 20 nearby residents that considerable damage to trees and plants was occurring. On August 20, he reported that the staff made a preliminary field investigation and it was found that trees and vegetation were being affected.

On August 28, 1957 he stated the staff contacted James McClain, Director of Production and advised him of the complaints and the field investigations and on August 30, 1957 a letter was sent to Wah Chang Corporation regarding complaints and field investigations and notification that the discharges from the plant were in violation of the Air Pollution Control statutes and recommended that the management install appropriate controls. Mr. Merryman stated that the zirconium processing facilities were being expanded and it was requested that plans and specifications describing

ABI228

the control systems be submitted to the Authority for review.

Mr. Merryman stated an automatic impinger was started at a sampling station near the plant on September 9, and on October 9, the fluoride and chlorine concentrations found were sent to the company. He explained that the data showed that excessive discharges of fluorides were being emitted from the plant.

Mr. Merryman reported that the staff conferred with Mr. Yih, General Manager of Wah-Chang on October 17, and learned that their intent to install and operate air pollution controls to be in conformance with the Air Pollution Control statute and that following the receipt of the company's plans for atmospheric controls a letter was sent the firm on December 6, 1956 regarding the review of the plans and specifications. He explained that in general the plans were found to be reasonably satisfactory and it was further recommended that the firm proceed to develop techniques and methods for stack sampling at the plant which had been previously recommended and also that continuous monitoring for hydrogen fluoride discharges be incorporated in the plant.

The Chairman asked if a representative of Wah Chang Corporation wished to present a report.

Mr. Ralph Nielsen, Chemical Engineer, Wah Chang Corporation, stated he had nothing further to add except that the company had installed a scrubbing system and additional equipment has been ordered. He reported that they have contacted Dr. Donald F. Adams of Washington State College regarding advice on the installation of continuous monitoring equipment.

Mr. Hatchard stated that the plant is engaged in producing zirconium, tantalum-columbium for the Atomic Energy Commission, and that the staff believed the company has responded to recommendations quickly and the progress was reasonable at this stage.

The Chairman stated that the Authority accepted the progress reports and requested reports at the next meeting.

MULTNOMAH COUNTY Re: Pacific Carbide and Alloy Company

The Chairman requested W.J. Whitsell to present a report of staff activities concerning the investigation of dust discharged from the Pacific Carbide and Alloy Company's

plant at 9901 N. Hurst Avenue. Mr. Whitsell stated that in early 1956 the company had installed a stack water spray control system to remove particulate matter from the electric furnace discharges before release into the atmosphere. He reported that the Authority has continued to receive complaints regarding the deposition of dust on property near the plant and that the staff had investigated the complaints and completed the collection and analyses of air samples from stations in the vicinity. He explained that the particle fallout deposition rate was determined by analyzing samples collected periodically from polyethylene containers located on the roof of the Morrison Oil Company approximately 400 feet from the calcium carbide furnace stack. He stated that the small sized particles which remain suspended in the air were determined by high volume samplers using 8" X 10" glass fiber filters. He explained that the operation of the high volume samplers was limited to those periods when the wind direction was from the electric furnace stack to the sampling station within a 50° arc and a second high volume unit operated only when the wind was from the 50° arc in the opposite direction. He stated that the particle fallout rates found during the sampling periods from August 1955 to August 1957 showed a median fallout rate of 97 tons per square mile per month and a maximum of 540. He pointed out that a fallout rate of over 55 tons per square mile per month in an industrial area in the Willamette Valley is in violation of the Authority's regulations, Chapter V section 2.2. He reported that the suspended particulates collected on the high volume filter showed a median value for the northwest 50° arc of wind direction being 489 micrograms per cubic meter with a maximum of 787 and a minimum of 218. He explained that the Authority's regulations allow a concentration of 325 micrograms per cubic meter in a heavy industrial land use area of the Willamette Valley. Mr. Whitsell stated that the data supported the following conclusions.

1. The stack water spray control system is not removing enough particulate matter from the carbide furnace emissions.
2. The particulate matter discharged from the Pacific Carbide and Alloy Company is creating a public nuisance in the vicinity and is in violation of the Authority's

regulations, Chapter V Sect. 2.2, 2.3 and 2.4.

He presented the following recommendations for consideration.

1. That the Pacific Carbide and Alloy Company increase the particulate removal efficiency of the control systems as soon as practicable.
2. That the plans and specifications for the additional controls be submitted to the Authority for review before installation is started.

Mr. Clifton Glover, Ass't. Mgr., Pacific Carbide, explained that he represented the company since a serious transformer breakdown occurred that will stop production for about six weeks and Mr. T.J. Waters, Plant Mgr., was working on this project. He explained that about the first of August they shut off the water on the furnace stack scrubber because their operations were not satisfying the Morrison Oil Co., who has been their main complainant. Also, Mr. Glover explained the company had removed 500 tons of sludge which was collected from the stack in the past 18 months of operation, which will provide another sludge pond to avoid stream pollution. The first part of last month Mr. Glover reported that the company had completed work relining the stack from the scrubber down; and enclosed the furnace to reduce the air flow coming from the furnace stack, in line with recommendations from Stanford Research Institute.

He explained the company has hired an additional chemist and that a large part of his duties will be to measure the stack effluent which will allow the company to obtain more efficiency from the scrubber. He added that they believed that the recommendation of the Authority's to improve the scrubber is the proper approach and their consultants will continue investigating methods of collection at the furnace. He explained that the company is affiliated with Union Carbide Company and that it was their understanding that Electrometallurgical Company spent about \$300,000 for their system in Portland. Mr. Glover stated they have been in contact with the Louisville carbide plant control activity where several covered furnaces are operated that are about 4 times the size of the Pacific Carbide furnace unit. Mr. Glover stated his plant is working on this problem and hope to submit a good progress report at the next Authority meeting.

The Chairman stated that the emissions from this plant are in violation of the Authority regulations.

Mr. Dixon asked when the scrubber is started up again what does the company anticipate the amount of sludge would be.

Mr. Glover stated he hesitated to say because measurements had not been made after the improvements were completed.

The Chairman asked the staff for any additional recommendations.

W. J. Whitsell replied that the staff would like additional information regarding what improvements the company is planning.

The Chairman stated that the Pacific Carbide and Alloy Company must control the dust problem and that the staff is willing to cooperate in the activities.

Mr. Glover stated that the new chemist will be doing testing on the stack and will need considerable advice and help from the Authority.

The Chairman suggested to Mr. Glover that the plant's chemist get in touch with the Authority's staff and that the Authority be given a report within a month of the progress being made.

Mr. West stated that he believed this was a good procedure.

Mr. Hatchard stated that the staff was concerned with the adequacy of a water spray, since the random chance of collecting small size particulates was very limited.

Mr. Dixon stated that there are processes available which, if used, would solve the problem.

Mr. Wendel inquired whether the discharges were mostly CaO and asked how critical this discharge was since some contaminants were of a toxic nature and others were not.

Mr. Whitsell explained that the furnace discharge was mostly lime and carbon and the complaints were based upon deposition on vehicles, buildings and merchandise.

Mr. Hatchard explained that originally the petition came from the Western Auto Co., employees located west of the carbide plant and that complaints have not been made after the stack controls were put in about 18 months ago. He stated the Morrison Oil Company was the main complainant at present.

Mr. Wendel further reiterated that the Authority should move with some speed to help rectify this situation.

Mr. Dixon suggested that Pacific Carbide and Alloy Company work with the staff and prepare a report for the next meeting; that he wished to see full cooperation between the staff and the company.

The Chairman concluded by promising that the staff is available to work with the company and that the Authority will expect a representative of the company present at the next meeting and in the interim have progress reports from the staff.

#### CITY OF EUGENE PROGRAM

The Chairman introduced Robert A. Finlayson, City Manager, City of Eugene and asked if he would like to advise the Authority on the activities of the city air pollution program.

Mr. Finlayson stated that Eugene started considering air pollution about 3 years ago through study by a special committee appointed by the Mayor that worked with the Authority's staff. He reported that in May 1956 the Eugene air pollution ordinance was passed and the enforcement provisions were dated January 1, 1958.

Mr. Finlayson stated that on November 1, 1957 Mr. Verner Adkison was employed to head the air pollution program and was being trained in air pollution work. Mr. Finlayson added that although Mr. Adkison was new to air pollution he had considerable experience with lumber mills in Eugene through work with the Fire Marshal.

Mr. Verner Adkison, City of Eugene, presented a resume of his work with the city of Eugene since November and reported that a basic survey of the area was being made to be better informed of the problems; that public education activities were planned; that the air sample data activities were being reviewed with the Authority's staff. Mr. Adkison reported that he had attended the technical conference in San Francisco of the Air Pollution Control Association regarding problems relative to this air pollution work.

The Chairman thanked Messrs. Finlayson and Adkison for appearing at the meeting and stated the Authority appreciated the efforts of the City of Eugene on starting an active program and that the staff would certainly try to provide assistance as needed.

PROPOSED REGULATION OF OPEN-BURNING OF REFUSE

The Chairman requested the Secretary to review the need for regulations for open burning of refuse.

The Secretary read Chapt. 422 Oregon Laws 1957 which enables the Board of County Commissioners to adopt refuse disposal regulations and explained that the proposed Authority regulations could be applied to control open burning.

The Chairman said it would be proper for the Authority to consider the regulations and obtain any suggestions or comments from those affected by them and suggested that the Health Officers of the state and others submit suggestions after study.

Miss Carlie Gilstrap who represented a group of 170 home owners residing in the north section of Portland reviewed their problem regarding the open burning of refuse. She stated that it was unanimously believed that the county, and state are behind any movement which would bring about better sanitation conditions in that particular area. She stated all these residents have breathed and lived in this filth; from burning refuse and garbage; have tried to wash their homes; paint their houses but to no avail and that they considered it an extreme health hazard. She stated that on April 1956 this group petitioned the Air Pollution Authority to eliminate air pollution in this area discharged from the dumps. Miss Gilstrap stated that at the June 27, 1957 Authority meeting she reported that their group had unsuccessfully sought assistance from both the City and County; that some of the individuals have suffered from nasal congestion, throat irritations, etc., and had to seek medical advice. Miss Gilstrap stated she had two pertinent requests to present and they are as follows:

1. "We want you to prohibit now the open burning of garbage in open dumps."
2. "To set a definite target date for conformance; we have waited far too long but you seem to provide our best assistance".

Mr. Hatchard stated that in accordance with instructions from the Authority the staff had made area surveys in the vicinity to determine the frequency of conditions in the area that would be public nuisance under the statute. He stated that at almost any time one can observe public nuisance at 8 or 9 open burning refuse disposal sites

ABI228

near Portland city boundaries. In 1953 complaints had been filed regarding the Seivert dump and lacking any improvement the matter came before the Authority at a public hearing and an order was adopted which required that burning be stopped unless adequate equipment was installed to control the emissions, and that rather than comply with these instructions the owner ceased to operate. Mr. Hatchard stated that this produced no improvement in the area-wide problem since a new dump was started nearby. Mr. Hatchard stated that fortunately alternate methods of disposal are available that are practical and that are effective; that it was our understanding from refuse disposal specialists that sanitary landfill would be the answer. Mr. Hatchard said that the staff recommended that regulations governing open burning dumps be considered and that General Sanitation Section, State Board of Health, have prepared recommended standards for operation of refuse disposal sites intended to supplement Chapt. 422, Oregon Laws 1957.

Mr. Wendel wished to know if these offenders had been warned previously.

Mr. Hatchard replied that all dump operators have not been notified.

Mr. Wendel continued that if the burning is in violation of existing statues why was there a need to wait until additional laws or regulations are passed before acting now against the offenders.

Dr. Erickson stated the Authority acted once and wondered why this could not be done again.

Mrs. C.C. Barsch, Special Assistant Attorney General, stated that the 1957 Legislature provided counties with specific control outside city limits so it might be that the county's responsibility to enforce the act. Mrs. Barsch stated the Authority could contact the County District Attorney but the county commissioners have not yet made any rules governing open refuse burning.

Mr. Hatchard stated that the Multnomah County Board of County Commissioners had directed Dr. Sydney Hanzen to prepare regulations for refuse and garbage disposal according to a news item dated December 5, 1957.

The Chairman asked Miss Gilstrap if their group had considered this problem with the Multnomah County Commissioners.

Miss Gilstrap stated that they have presented the petitions to the Multnomah County Commissioners and that she understood the rules were being prepared.

Mrs. Barsch called attention to the section in the act which says the County Commissioners may prescribe rules and that it was up to the County Commissioners to act. Miss Gilstrap stated Chapt. 422, Oregon Laws 1957 would not take power from the Authority statute but instead would be supplementary.

The Chairman explained the act that became effective July 1, 1957 which involves the proper disposal of refuse and garbage and control of problems other than air pollution which concerns the Health Departments but not the Authority. The Chairman said the Authority still has the authority to control air pollution from refuse dumps and he asked Mrs. Barsch if it was proper for the Authority to proceed.

Mrs. Barsch stated the Authority would have difficulty if this procedure is followed before regulations are adopted; that then it could be said the offenders have no knowledge as to the required standards of garbage disposal and the action might end like that.

Mr. Wendel said it was his recollection that the Board had the authority from the statute and should now swear out a criminal complaint.

The Chairman said he recalled that at the last session of legislature a general bill was passed regarding procedures followed by state boards.

Mrs. Barsch replied that a statute was passed concerning the adoption of rules for public hearings.

Dr. Erickson asked if the problem here was one of general versus specific law. He stated we are empowered with a general state-wide law to control air pollution and now a specific law has to be enacted by legislature bearing on air pollution from refuse dumps. He asked if this may have taken away some of the Authority of the state agency.

The Chairman reiterated that we have a specific problem before us and to bring about a solution he suggested that the Authority should prepare specific regulations concerning open burning refuse dumps throughout the state and take action now.

Both Mr. Wendel and Dr. Erickson wondered why the Authority needed more regulations

ABI228

if we acted 4 years ago on a similar type violation; what has changed in the meantime to require us to consider new rules and regulations.

Mrs. Barsch stated that this is not the procedure here, that it was city and county relationship.

Dr. Erickson stated that there is some question as to whether we have the right to adopt regulations as Chapt. 422 applies to counties and cities.

Mr. Wendel suggested the Authority start some proceedings and in the meantime assume it has full authority.

Mr. West suggested that the Attorney General's office consider the jurisdiction of the Air Pollution Control statute and Chapt. 422, Ore. Law 1957 and at the next meeting have a report presented.

Mr. Hatchard stated that the staff had considered control of air pollution from an open burning refuse dump and believed that the practice is wrong by any measure of good environmental sanitation; that the adequate disposal of refuse requires different methods and he explained that the staff efforts had been devoted to assisting county health departments in any matter involving air pollution.

Mrs. Barsch stated she believed that the refuse disposal operations are up to the local agencies, the city or the county.

Miss Gilstrap stated that their group has had this problem passed around from one agency to another; that the Authority studied it for a year and a half and now are asking the residents to live with this condition longer.

Mrs. Barsch read from Chapt. 422 Ore. Laws 1957 and stated this bill is not limited to air pollution.

The Chairman suggested that the Authority considered the following procedure.

1. As far as the adoption of more detailed regulations on this matter state-wide, initiate the proposed regulations for consideration at the next meeting.
2. For the particular situation in Multnomah County the Authority is of the opinion that some action should be taken and should we proceed by preparing a complaint or shall we cite the owners and operators to appear before the Authority at a public hearing.

MOTION RE: Open-Burning Refuse Dumps

It was MOVED by Mr. Wendel and seconded by Dr. Erickson and carried that the Authority instruct the staff to proceed immediately to inspect the various open burning refuse operations and if it is found they are in violation of the law that the Authority proceed with the filing of a criminal complaint.

Mr. Dixon asked if the Authority can do what the motion implies.

Mrs. Barsch stated it could proceed but there was no guarantee matter would be settled.

Mr. West stated that he was not in favor of the motion but that the staff already has the authority to proceed.

The Chairman said the motion was carried and so ordered; that it is now up to the staff to check with the Attorney General and Multnomah County District Attorney regarding such a procedure.

Mrs. Barsch said that the Attorney General would confer to see whether the Air Pollution Authority would be a proper complainant or if this action should originate from a county authority.

Dr. Erickson stated that we have a state responsibility; that the county had failed to act and now it is the State's responsibility to do something.

The Chairman asked if the rules and regulations were adequate.

The Secretary replied that additional regulations are needed at this time to control air pollution from open burning dumps.

MOTION: Re: Proposed Regulation of Open-Burning Refuse Dumps

It was MOVED by Mr. Dixon and seconded by Mr. West and carried that we proceed with the preparation of proposed regulations pertaining to open burning and refuse or similar material.

Dr. Erickson stated that he understood when the Authority voted on the motion we were only going to explore them and not adopt them.

The Chairman suggested copies be sent to the Authority members for study before the next meeting.

WASTE WOOD BURNER STUDY

Professor M. Popovich, Director, Oregon State College, Engineering Experiment Station,

AB1228

has a demonstration grant from Public Health Service to study wood waste burners and that the approach to this problem included the following.

1. Testing of burners in lumber mills.
2. Collecting data on wood waste burners to include temperatures, gases, particulate loading, etc.
3. Studying the economic status of wood utilization.

Professor Popovich reported that the survey was completed and that his group had completed measurement of nine burners and that they are analyzing data obtained from the wigwam type burners and that the study seems to fall in a definite pattern. He said that they planned to start the economic survey in January and he thanked the Authority's staff for all the cooperation provided on this study; and that soon the conclusions based on the study would be formulated. He stated that the wigwam burner has a chance to function without excessive fallout and smoke; that some operational instructions are needed and that his group intends to include them in the report which will be published by July 1, 1958.

The Chairman introduced Robert L. Stockman, Engineer in Charge of Air Sanitation, Washington State Dept. of Health and Mr. V. Bacon, Executive Secretary, Northwest Pulp and Paper Association.

Mr. Stockman stated that their program is a new activity in Washington; that they appreciated working with the Air Pollution Authority staff and explained that at the state level they are responsible for providing technical assistance to local government. Mr. Stockman concluded by saying their activities are going to be much the same as that of the Air Pollution Authority and that he added appreciation for the work the Authority's staff did on the Seminar of last August which was very successful.

Mr. Bacon explained that their organization was called the Northwest Pulp and Paper Association which comprises 28 pulp and paper mills representing 16 companies in Oregon and Washington including Western Kraft Corporation. He explained that the purpose of the association is to support research on air and water discharge problems and to provide reports to the public.

Mr. A. Congleton, Mgr. of Columbia Empire Industries, Inc., announced the Seminar on Air Pollution to start at 10 A.M. January 22, 1958 in Portland. Mr. Congleton extended an invitation to all present at this meeting to attend and stated that he was sure this meeting was going to be very informative and especially wished the Air Pollution Authority staff to attend if possible.

ADMINISTRATIVE MATTERS      Staff Training Course, Taft Center, January 13-24.

The Secretary explained that a course was being offered by Public Health Service Robert A. Taft Sanitary Engineering Center, Cincinnati, Ohio, on "Analyses of Atmospheric Samples" on January 13-24, 1958; that it was requested that approval be given for R.B.Percy, Chemist, to attend and that application be made for State Board of Health training funds.

MOTION Re: Staff Training Course, Taft Center

It was MOVED by Mr. West and seconded by Mr. Dixon and carried that Mr. Percy be authorized to attend this course at Taft Center in Cincinnati, Ohio.

NEW COMPLAINTS:      Re: United Stud Planing Mill

The Secretary read a complaint from Mr. Wells, Heppner, Oregon, regarding smoke from the burning of wood waste at United Stud Planing Mill and reported that Mr. H.M. Patterson had investigated the complaint and submitted a report.

Re: Asphalt Paving Company

The Secretary read a petition from the Chelsea area, Klamath Falls, regarding the Asphalt Paving Company's dust and vapor discharges and reported that Mr. Gerow inspected the plant and the company was notified that the discharges were in violation of the statute.

Mr. Hatchard stated that the company had advised the Authority that a control system would be installed in accordance with previous recommendations.

The Chairman directed the staff to follow this case with reports from Mr. Gerow.

Re: Coquille Valley Lumber Company

The Secretary read a complaint from the City Manager of Milwaukie about smoke and odors from the plywood plant on E. 30th and Harrison Sts., Milwaukie.

Mr. Whitsell reported that the mill manager was contacted and on September 4, reported that work was completed which would correct the smoke and flyash conditions.

ABI 228

Re: Electro-Metallurgical Plant

The Secretary read a letter from the City Health Department relative to complaints received regarding depositions from the Metallurgical Company discharges.

Re: Monarch Shingle Company

The Secretary read two complaints regarding smoke, flyash and odor from the Monarch Shingle Company's refuse dump, 8414 N. Vancouver, Portland, and from the National Biscuit Company.

The Chairman requested that reports be prepared on these complaints.

STAFF VACANCIES AND FUTURE PROGRAM

The Secretary reported that the Authority staff was still one engineer short; that the Authority has been able to fill the chemist vacancy with a part-time laboratory technician. The Secretary announced that W.J. Whitsell will be resigning for a 2 year period on an International Cooperation Administration, Health Project in Costa Rica, and that one of the engineers on another program would transfer to the air pollution work.

MOTION RE: Election of Officers for 1958

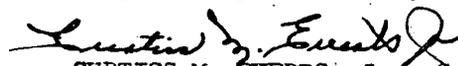

It was MOVED by Mr. Wendel and seconded by Mr. Dixon and carried that Carl E. Green and Merle S. West be re-elected Chairman and Vice Chairman respectively for 1958.

DATE FOR THE NEXT MEETING

The date for the next meeting was set at the call of the Chairman.

There being no further business, the meeting was adjourned at 5:00 P.M.

Respectfully submitted,

CURTISS M. EVERTS, Jr., Secretary  
Oregon State Air Pollution Authority

## TWENTY-FIRST MEETING

OF THE

## OREGON STATE AIR POLLUTION AUTHORITY

The twenty-first meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M. Thursday, April 10, 1958 in Room 36, State Office Bldg., 1400 S.W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Mr. R. P. Dixon, Dr. Harold M. Erickson, members and Curtiss M. Everts, Jr., Secretary, Mrs. Catharine C. Barsch, Special Assistant Attorney General, R.E. Hatchard, Chief of the Air Pollution Control Section, J. L. Agee, Associate Sanitary Engineer, R. B. Percy and Edward Taylor, Chemists, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The minutes of the twentieth meeting held December 16, 1957 were summarized by the Secretary. The Chairman declared that if there were no corrections the minutes would stand approved as prepared by the Secretary.

ADMINISTRATIVE RULES RE: Changes required by Chapter 717 Oregon Laws 1957

The Chairman stated that a year ago the Authority adopted administrative and technical rules and there was a need to consider revisions to the administrative rules under the provisions of Chapt. 717, Oregon Laws 1957. Mrs. Barsch reported that the Attorney General's office had prepared a model set of regulations which could be followed in the preparation of revisions of the Authority's existing regulations.

MOTION RE: Changes required by Chapt. 717 OL-1957

It was MOVED by Mr. West and seconded by Mr. Dixon and carried that the Authority hold a public hearing at its next regular meeting to consider the adoption of the revised administrative rules and regulations in accordance with the provisions of Chapt. 717 O.L. 1957 and that public announcement of such hearing be made.

THE DALLES RE: Harvey Aluminum Company

The Chairman requested Mr. Agee to report on the status of the Harvey Aluminum Company's plans for installing control equipment in their aluminum reduction

ABI228

plant now under construction at The Dalles.

Mr. Agee reported that the final plans and specifications of the fume disposal system have been received and reviewed by the staff and that a conference was held with Dr. Rochon and Mr. Rene Legault concerning the operation of this equipment. Mr. Agee stated that procedure for testing and determining the fluoride removal efficiency of this equipment was outlined by the company representatives. He explained that background samples have been collected to determine natural fluoride levels in The Dalles area for the past three years. He recommended that conditional approval be granted for the control equipment providing the company will agree to:

1. Comply with the regulations of the Oregon State Air Pollution Authority.
2. Make periodic stack sampling and analyses to determine the fluoride discharge.
3. Submit periodic reports to the State Air Pollution Authority.

The Chairman asked Mr. Agee if background values had been determined.

Mr. Agee replied that over 600 samples had been collected and most of the background fluoride concentrations were within 0.1 to 1.0 part per billion.

The Chairman asked Dr. M. Holmes if he had a report to present at this time.

Dr. Holmes stated that he would delay his report until the next meeting.

The Chairman asked if a representative of Harvey Aluminum was present.

Mr. Legault, General Superintendent, Harvey Aluminum Company stated that his company has conducted simulated tests, that the analyses would be completed soon and that the data could be presented at the next meeting of the Authority. He explained that the simulated test run will approximate the working conditions and should give a clear picture of the fluoride removal efficiency. Mr. Legault concluded by saying that his company will cooperate with the Authority and would have the best control equipment available.

MOTION RE: The Dalles Harvey Aluminum Company

It was MOVED by Dr. Erickson and seconded by Mr. West and carried that plans and specifications for the air pollution control installation at Harvey Aluminum

Company be given conditional approval with the understanding that the company will comply with regulations, make periodic stack sampling tests and submit periodic reports to the Authority.

NORTH ALBANY RE: Western Kraft Corporation

The Chairman requested Mr. Merryman to report on the control of air pollution at the Western Kraft Corporation's mill.

Mr. Merryman stated that the company had completed installation of the blow heat recovery system in December and that the staff had completed some area surveys since that time. He explained that area odor survey data was needed to indicate what change had occurred in the odor conditions near the Western Kraft mill.

He stated that the data obtained thus far is inconclusive since the weather conditions during the surveys had favored the dilution and dispersion of the mill effluents.

Mr. Merryman reported that the company had developed a stack sampling program to measure the concentration of several odorous compounds. He stated that some data was obtained before the blow heat recovery system was installed and after completion of the project. He stated that the information from the company's technical staff showed a reduction of 63% in the hydrogen sulfide concentration, 33% in methyl mercaptans and 68% in the organic solubles which would include the dimethylsulfide and dimethyl disulfide fractions. He stated that the staff recommended that the area odor surveys be continued; that the company continue the program of measuring the major mill effluents and that progress reports be submitted at the next meeting.

The Chairman asked Mr. Robert O. Beatty, Ass't to the President, Western Kraft if he wished to present a report.

Mr. Beatty replied that Mr. Merryman's report summarized the present status and that the company intended to continue the stack studies.

Mr. West stated that he passed the plant driving to Portland for this meeting and there was still quite an offensive odor in the air.

AB1228

Mr. Beatty replied that only one ppm would be just as offensive to the human nose as a great deal more. He further stated that this concentration could be reduced but that they would never reach the level of complete satisfaction for every human nose.

The Chairman stated that the Authority would accept these progress reports and that it appeared the company has been making progress.

MULTNOMAH COUNTY RE: Pacific Carbide and Alloy Company

The Chairman requested Mr. Percy to report on the Pacific Carbide Company's dust emission problem.

Mr. Percy stated that a plant survey was made in January when the calcium carbide electric furnace was shut down for maintenance. He reported that air samples were collected at a station on the roof of Morrison Oil Company from March 11-15, at a time when Pacific Carbide was also measuring their stack discharges.

Mr. Percy stated that the samples showed a suspended particulate concentration of 514 micrograms per cubic meter for the 50° arc of wind direction towards the plant and contained 34.2% lime (CaO). He explained that the filter from the high volume sampler which operated when the wind direction was away from the plant showed suspended particulates of 221 micrograms per cubic meter with 10.3% lime content. He stated that the results obtained when the wind was toward the plant are comparable to sampling results during August 1957. The suspended particulates for the opposite direction are higher than those obtained in August 1957 and this was probably caused by the changeable wind conditions in the area at this time of the year. He stated that the fallout samples collected during the March sampling period were comparable to those collected during the past and averaged 104 tons per square mile per month with an average calcium oxide of 23.5%. He pointed out that fallout samples collected during the plant shut down period showed a substantial decrease in weight and lime dust content. Mr. Percy stated that the staff recommended that a summary report be prepared including the company stack sampling data; that the company sample the discharge from other dust sources and that the company should continue development of additional

electric furnace dust control facilities.

The Chairman asked if a representative of the company was present.

Mr. Thomas J. Waters, Manager, Pacific Carbide, stated there was nothing further to report as Mr. Percy had covered it well. He added that their stack tests showed that they are able to reduce the electric furnace emissions by 83%; however, there will be more sampling and further testing. He stated that they will continue to make progress and will keep in close touch with the Authority.

The Chairman asked Mr. Hatchard if the staff had any additional comments.

Mr. Hatchard replied that the staff would like to work further with the company using the information obtained from area sampling. He stated that one problem was that Pacific Carbide's production now was less than the normal production periods.

The Chairman requested the company to continue working with the Authority's staff and that the Board would accept this as a progress report and would expect reports of further developments.

PUBLIC HEARING RE: Proposed Regulations for Open Burning Refuse Dumps

The Chairman stated that the public hearing would now be held to consider the proposed open burning refuse dump regulations; that the proponents and opponents would have an opportunity to present statements and give verbal testimony. He stated that the members of the Authority would not take final action today in view of a request from the League of Oregon Cities requesting more time to study the proposals.

The Secretary stated that copies of the proposed regulations had been sent to all parties who had indicated an interest at previous Authority meetings and to County Health Departments.

Mr. Joseph Hunt, Vector Control Specialist, Communicable Disease Center, US PHS, now assigned to the Umatilla County Demonstration Project, showed a series of colored slides which revealed typical open burning refuse disposal problems created in Oregon, Idaho and California. He explained the sanitary landfill dis-

ABI228

posal method outlining the various types of operations, equipment used and the lack of air pollution problems resulting from sanitary landfill. He answered questions regarding the cost comparison between sanitary landfill, complete incineration and open burning, disposal of lumber, brush and logs on sanitary landfill, methods of operation on low land, control of odors and the foundation conditions for building on former sanitary landfills.

Miss Carlie Gilstrap stated that the complainants in North Portland had been waiting for two years for appropriate action to control the smoke, odors and flyash from open burning refuse dumps. She indicated that some improvement had resulted from the Authority's action this spring but pointed out the problem was far from solved. She reported that her group has been in contact with the city and county officials but that little progress had been made as yet. She expressed her concern regarding the possible effect of excessive air pollution upon the increasing lung cancer and other human health aspects and requested the Authority members to take action to protect Oregon communities from the unnecessary air pollution from burning refuse dumps. She then narrated a series of colored slides which showed instances where refuse dumps north of Portland were burning during February to April 1958.

Mr. Walter A. Holt, representing the Oregon Centennial Commission, stated that there was a smoke problem in the area and that their organization hoped corrective action would be taken.

Clara Shaw, Rt. 2, Hillsboro, stated that the practice of open burning of refuse has to be changed and that satisfactory methods must be implemented that will protect our communities.

The Chairman stated that the Authority would now like to hear from those speaking against the proposed regulations.

Dean Bryson, Attorney, representing the Sanitary Truck Drivers Local No. 220, stated that the union was not opposed to a ban upon open burning but was concerned about the over-all problem. He stated that he believed something must be done

but questioned the provision in the proposed regulation that would allow the householder to burn refuse on their property. He suggested that the proposed regulations ought to consider segregating the types of refuse and also include consideration of the total cost to the community for changing from present disposal methods.

Mrs. Ezra Cook representing the City Sanitary Service, McMinnville, Oregon stated that about four years ago the McMinnville dump had been relocated to a site approximately seven miles west of the city and that their present operation consists of intermittent burning and covering. He pointed out that they have no problems since the nearest resident is about a mile away and he requested the Authority to give individual consideration to refuse dump operations which would be preferable to a blanket prohibition.

Mrs. George Heryford, Sanitarian, Lincoln County, stated that refuse disposal methods are necessarily individualized and that due to the rainfall and soil conditions on the coast the sanitary landfill procedure would not be practical.

E. N. McKinstry, City Engineer, North Bend, stated he agreed with the intent of the proposed regulations but if adopted would cause some difficult problems. He explained that the city of North Bend's refuse dump required burning because the strong prevailing trade winds would spread the refuse downwind.

Mr. Gordon Burt, City Engineer of Portland, submitted pictures of Portland's refuse disposal site and explained the operation of the city incinerator and modified landfill. He reported that since the Authority's action this spring the city has been reducing the amount of open burning through increased use of the incinerator. He pointed out that their problems involve the disposal of several thousand gallons of waste oil daily, large quantities of scrap lumber, tree stumps and also a lack of earth covering. He stated that the 1959 budget included a request for eight more employees and equipment purchases such as a chipper and cut-off saw and funds for purchasing excess earth fill. He explained that the Refuse Bureau could provide the type of refuse disposal that the citizens of

AB1228

Portland are willing to pay for.

Mr. Gene Fields, Sanitarian, Coos County, indicated that sanitary landfill methods would not be adaptable to many locations along the coast. He also questioned the provisions in Section 4.4 which gave the county health officer the responsibility for approving a variance in the open burning prohibition if it was in the public interest to protect undue hardship. He commented that any change in a city's disposal methods could be considered undue hardship and this section would be difficult for the health officer to administer. He suggested that other refuse disposal methods such as the Dano composting system may provide the answer.

The Chairman requested Mr. Hatchard to comment on questions raised during the discussion.

Mr. Hatchard stated that several references had been made to the California activities on refuse disposal to control air pollution. He reported that the first regulation of the San Francisco Bay Area Control District which includes six counties prohibited the open burning of all refuse, excepting for household rubbish, agricultural practices, and fireman training, and was adopted in October 1957.

He stated that the Los Angeles Control District began the control of refuse air pollution problems in 1948 when a regulation was adopted prohibiting open burning refuse dumps throughout the county and that other outdoor burning regulations had been adopted subsequently. He stated that the final step was taken in October 1957 when burning with the individual householder's single chamber incinerator was outlawed. The main point is to recognize that all air pollution control programs eventually must prohibit open burning. He pointed out that several references had been made during the discussion to the problem that may occur since the proposed regulations allow the householder to burn rubbish. He explained that rubbish does not include garbage or similar organic material.

The Secretary stated that the following letters had been received concerning the proposed regulations.

April 3, John C. Stoner, Sanitarian  
Lane County Health Dept.

April 3, Lester M. Bennett, Sanitarian  
Yamhill County

April 7, Mr. Ezra Cook  
McMinnville, Oregon

April 7, A. W. Westfall, Sanitarian  
Tri-County Health Dept.

April 4, Mr. Kenneth T. Adams  
Mayor of Empire

April 7, I. Hartley,  
Mayor of North Bend

April 8, Dean F. Bryson, Attorney

April 8, Edward Brown, City Recorder  
Powers, Oregon

April 9, Herman Kehrli, Executive Secretary  
League of Oregon Cities

April 9, John H. Fasnacht, Mgr. of Utilities  
City of Bandon

April 9, Ben E. Nicols, City Administrator  
City of Myrtle Point

April 7, George J. Spady  
Coos Bay Sanitary Service

April 10, Coos County Health Dept.

The Chairman stated that the comments, suggestions, recommendations would be reviewed and the matter would be considered at the next regular meeting of the Authority.

#### ADMINISTRATIVE MATTERS

The Chairman requested the Secretary to read the new complaints received.

The Secretary read a complaint against Hopkins Wrecking Yard submitted by Mrs. Yoes.

The Chairman asked if the staff could investigate the matter.

Mr. Hatchard replied that the staff should investigate this complaint along with several others involving the burning of wrecked automobile bodies.

The Chairman directed the staff to investigate the complaint and confer with all

ABI228

other parties concerned and report back to the Authority.

The Secretary read a complaint from the City of North Bend, signed by Mr. Herrington regarding open burning by Weyerhaeuser Timber Company.

The Chairman referred this to the staff for investigation when other activities permit.

The Secretary read a complaint dated 12-29-57 from Mrs. Emma Burk regarding emissions from the Chipman Chemical Company's plant in Guilds Lake, Portland.

The Chairman directed the staff to continue its work on this matter.

#### PLANNING & ZONING AGENCIES PERFORMANCE REGULATIONS

The Chairman requested Mr. Agee to report on the development of industrial park regulations to prevent air pollution.

Mr. Agee stated that the Air Pollution Authority has been requested by the Bureau of Municipal Research to recommend performance standards which may be applied to industrial park developments. The Bureau has indicated that a number of cities have requested such information to be used by their planning commissions. This approach to air pollution control is somewhat different than has been applied in Oregon to date. The Authority has approached air pollution control on an area air quality basis. Performance standards as such have not been employed to date. The staff has initiated a review of the literature and has tentatively developed performance standards as the Bureau requested. Mr. Agee stated that the staff expects to continue in this work to develop and test additional standards in the future.

The Chairman asked Mr. Agee how much more time was needed on this project.

Mr. Agee replied that this was an extensive study and would require a full scale investigation.

Mr. Hatchard stated that the time when the staff would have something definite would be determined on the success of getting an over-all research operation completed.

The Chairman instructed the staff to continue the work and to present the recommendations to the Authority for consideration.

BUDGET 1959-1961

The Secretary stated that the present staff consists of 4 engineers, 2 chemists and one stenographer; that the Authority is requesting one additional field representative be added to the budget for 1959-61. He stated this person would make initial field investigations that do not require engineering skill so the engineers can be used on more urgent work.

The Chairman asked if the budget had been submitted to the State Board of Health members.

The Secretary replied that it was still under discussion.

Dr. Erickson added that preliminary conferences had been held and the requests would be considered on May 8, 9, and 10th, by the members of the Board of Health and that he would support the request for the additional staff member.

Mr. Dixon stated he believed it right to have a field man do certain work if it would free the engineer for performing more technical duties.

The Chairman stated that those who attended the Authority meetings recognized that the Air Pollution Authority's staff has more than it can do; there are more requests for work and field trips than is possible for a staff of this present size; and that he thought it was appropriate to ask for the additional man to help on the field work.

MOTION RE: Budget 1959-1961

It was MOVED by Mr. Dixon and seconded by Mr. West and carried that a request be made for an additional field man for the Air Pollution Authority's 1959-1961 biennial budget.

There being no further business the meeting was adjourned at 4:50 P.M.

The next regular Air Pollution Authority meeting was set at the call of the Chairman.

Respectfully submitted

*Curtiss M. Everts, Jr.*  
CURTISS M. EVERTS, Jr. Secretary  
Oregon State Air Pollution Authority

AB1228

## TWENTY SECOND MEETING

## OF THE

## OREGON STATE AIR POLLUTION AUTHORITY

The twenty-second meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 P.M. Wednesday, August 27, 1958 in Room 732, State Office Bldg., 1400 S.W. 5th Ave., Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Dr. Harold M. Erickson, Harold F. Wendel, members and Curtiss M. Everts, Secretary, Mrs. Catharine C. Barsch, Special Assistant Attorney General, R.E. Hatchard, Chief of the Air Pollution Control Section, J. L. Agee, Associate Sanitary Engineer, R. Ott, Chemical Engineer, R. B. Percy and Edward Taylor, Chemists, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The minutes of the twenty-first meeting held April 10, 1958 were summarized by the Secretary. The Chairman declared that if there were no corrections the minutes would stand approved as prepared by the Secretary.

PUBLIC HEARING RE: Rules and Procedure in Hearings

The Chairman stated that in December 1956, the Authority had adopted administrative rules concerning public hearings and that the provisions of Chapter 717 OL-1957 required considerable revision of the existing regulations. The Chairman requested the Secretary to report on preparations that had been made for the hearing on proposed "Rules for Procedure in Hearings."

The Secretary stated that notice of the public hearing was published in the Daily Journal of Commerce on 8-7-58 and that the Authority has on file a certified copy of the publication and that the rules had been prepared and reviewed by Special Assistant Attorney General, Catharine Barsch.

Mr. West asked if these rules were patterned after the Board of Health's experience. Mrs. Barsch stated that the proposed rules include the provisions of the existing procedures for the conduct of hearings and also conform with Chapt. 717, OL-1957. Mrs. Barsch also stated that the model rules for hearings are subject to amendment by the Attorney General. She further stated that the proposed rules

include the original statutory hearing procedure and the existing administrative rules.

Mr. West asked if the proposed rules had been approved by the Attorney General's office.

Mrs. Barsch replied that the Authority's proposed Rules for Hearings almost exactly duplicated the Attorney General's model Rules for Hearings except that an emergency clause is included so that the rules will take effect immediately upon filing with the Secretary of State.

The Chairman asked if there were any additional questions regarding the proposed Rules for Procedure in Hearings.

Mr. West requested clarification of the statement, "Ultimate facts sufficient to show that the petitioner is entitled to the relief requested" in Chapt. IV, Rule 3A (3)(a).

Mrs. Barsch said that it required a statement of the facts in issue; that it was not expected or intended that a petition should state merely that someone caused the discharge of an air pollutant, but also that such discharge (or other condition created) constitutes a public nuisance. She said that the petition should contain a statement as to what conditions were created and that a public nuisance were created and that a public nuisance was thereby caused to exist.

The Chairman asked if this phraseology came from accepted legal procedures.

Mrs. Barsch replied that the phrase "ultimate fact" is a legal term and intended by the rule to be so understood.

MOTION RE: Rules for Procedure in Hearings

It was MOVED by Mr. Wendel and seconded by Mr. West and carried that the Authority finds that it is necessary that rules numbered 1 to 21 inclusive, Chapt. IV take effect immediately upon the filing thereof by the Secretary of State of the State of Oregon and that postponement would result in serious prejudice to the public interest and that the Air Pollution Authority orders therefore that these rules shall be effective immediately upon the filing thereof by the Secretary of State.

MOTION RE: The Adoption of Rules for Procedure in Hearings

It was MOVED by Mr. West and seconded by Mr. Wendel and carried that the Rules for

ABI 228

Procedure in Hearings numbered 1 to 21 inclusive, Chapt. IV, be adopted and that the existing rules in Chapt. IV be rescinded.

NORTH ALBANY RE: Wah Chang Corporation

The Chairman requested that Mr. Hatchard report on the staff activities concerning investigations of air pollution near the Wah-Chang Corporation's processing plant located north of Albany.

Mr. Hatchard stated that the last report was presented to the Authority at its meeting on December 16, 1957 and that several mill surveys and air sampling operations had been completed since that time. He reported that the company had been notified by letter on April 22, 1958 that the fluoride concentrations found in impinger samples collected at the Johnson residence just south of the plant were excessive. He explained that a maximum of 20.2 parts per billion of fluoride was present compared with a normal fluoride value of 0.1 to 1 ppb in a rural area. He stated that in this letter the staff had recommended that the company institute a stack sampling program and arrange to install continuous monitoring equipment which would determine any unusual concentration of fluoride or chlorine being released. He stated that while the company had completed the installation of several additional controls in the zirconium reduction process, subsequent air sampling still showed the presence of excessive concentration of fluoride. In the most recent series 111 samples were collected on a two hour sampling interval between July 21 and August 1958. Laboratory analyses of these samples showed a minimum of 1.12 ppb and a maximum of 20.99 ppb. He reported that a staff member had completed an intensive plant survey on July 21, 1958 and found that the intermittent high fluoride concentrations appeared to result from the mal functioning of process units during production and that more operational control was needed. He stated that unfortunately the previously recommended stack monitoring equipment for fluoride and chlorine had not been installed. However, the company had made several manual stack sampling checks. Mr. Hatchard presented the following recommendations for consideration.

1. That recommendations be made again for the installation of stack monitoring equipment before fluoride and chlorine are released to the atmosphere.

2. That the management take action necessary to assure better operational control so that when a mal functioning occurs corrections are made immediately.
3. That the stack monitoring equipment be designed to actuate an alarm system or otherwise bring the high concentration to the attention of operating personnel.

Mr. Wendel asked if the fluoride was less than that found in air samples collected in the vicinity of aluminum reduction mills.

The Chairman stated that most of the fluoride concentrations found from samples collected on Sauvie Island were within 1 to 2 ppb.

Mr. Hatchard said that occasionally there was a higher value found but none as high as the values found at the Johnson residence station near Wah-Chang.

The Chairman asked if there were methods which this concentration could be applied to reduce this concentration of fluoride.

Mr. Hatchard stated there were but that the specific applications of known techniques for controls had not been completely worked out yet; that there are unusual design problems and that he believed the Air Pollution Authority problems should have a high priority by the Wah-Chang management to bring about adequate control.

Mr. Hatchard concluded by stating he felt the need for stack monitoring equipment was very critical; that individual stack measurements involve difficult analyses and that the company should be aware of any excessive emission in order to make immediate operational changes to reduce the discharge.

The Chairman suggested that in addition to requesting monitoring of stacks the Authority should request that the company provide additional control facilities to remove the discharge.

Mr. Hatchard added that the stack discharges should be reduced to the level that would reduce the fluoride concentrations at sampling stations in the area to less than 1 ppb.

MOTION RE: North Albany - Wah Chang Corporation

It was MOVED by Mr. Wendel and seconded by Dr. Erickson and carried that:

1. That Wah Chang Corporation be instructed to install monitoring equipment on stacks where chemical reactive contaminants are being released which cause

AB1228

known injury.

2. That the corporation be instructed to proceed with plans for the installation of equipment or devices which would reduce the discharge to a ~~maximum~~ of 1 ppb fluorides in the vicinity of the plant.

NORTH ALBANY RE: Western Kraft Corporation

The Chairman requested that Mr. Agee report on staff activities concerning emissions from the Western Kraft Corporation mill north of Albany.

Mr. Agee stated that the staff had continued to investigate the operation of the Western Kraft Corporation through plant surveys and area odor investigations and that recent odor investigations have not shown definite nuisance conditions. He explained that with proper atmospheric conditions and wind direction public nuisance conditions were probably still occurring. He reported that the corporation has continued to make stack analyses at potential sources of pollution from the plant to determine the relative measurement of major sources of odor and that some of these analyses have been submitted to the Air Pollution Authority's staff. He stated that the following recommendations regarding the study and control of Western Kraft Corporation effluents were presented for consideration.:

1. The management of Western Kraft Corporation be requested to submit a written report outlining the sampling program that has been used in the past and future sampling which is contemplated, including the methods used, points of sampling, methods of analyses and the data that has been obtained to date.
2. The management institute routine representative sampling at these points concurrently.
  - a. Discharge of the recovery boiler venturi-scrubbers.
  - b. Stack discharge from the digester hot water accumulator.
  - c. The Corporation should submit a report of an analyses of the black liquor and flow rate to each venturi scrubber and blue prints of the venturi scrubbers as installed.

3. Submit future reports of all stack sampling measurements to the Authority when the results are obtained.
4. The Corporation should determine the rate of emission from the recovery furnaces and digesters to the atmosphere.
5. The Corporation should submit a summary of the area odor sampling program which Dr. Donald F. Adams of Washington State College is developing for the corporation.

The Chairman asked if a representative of the company was present.

Mr. E. J. Kirkpatrick, Project Chemist for Western Kraft stated that as far as analytical results were concerned he had talked to Authority Chemist Robert Percy regarding this; that his company will continue to run analyses but that all were not yet completed; that they have completed measurement of three sources out of 5 or 6 already. He added that he had no facts or figures to give today as he had been requested by Western Kraft to appear for Mr. Beatty who is out of town.

Mr. West wanted to know if the staff had suggested to the management it would like all the information which Mr. Agee had described.

Mr. Agee added that the staff has been receiving some data in more or less a piecemeal fashion.

The Chairman asked if Western Kraft had been requested to furnish this information.

Mr. Hatchard replied that the recommendations regarding stack sampling had been included in an interim staff report dated October 21, 1957 which had been sent to the management.

MOTION RE: North Albany Re: Western Kraft Corporation

It was MOVED by Dr. Erickson and seconded by Mr. Wendel and carried that the Authority request in writing from Western Kraft Corporation a complete report on stack sampling that has been carried on to date, a report on their plans for future sampling and controls and that the company be requested to submit blue prints of present pollution control equipment and any plans for additional equipment that may be available.

Mr. West asked Mr. Hatchard if the installations that Western Kraft have been using

ABI 228

are of the type used by other Kraft mills.

Mr. Hatchard replied that Western Kraft's is not as complete as other recently constructed kraft mills and that there are some differences such as the use of a venturi scrubber on the recovery furnaces, etc.

Mr. West asked if other plants were using satisfactory methods.

Mr. Hatchard replied that there is only one other new kraft mill in Oregon and he explained that the staff believed that there was additional odor control facilities that are technically sound that should be installed at Western Kraft. Mr. Hatchard stated that the present control installations are not complete but the staff had not established that public nuisance is present after the last improvement was made.

THE DALLES RE: Harvey Aluminum

The Chairman requested the Secretary to summarize the status of the Harvey Aluminum Company's plans for fume control facilities.

The Secretary reported that the Authority had granted conditional approval of the plans during the last meeting and that the company had requested an unqualified approval based only on the installation since the contract between the equipment supplier and the Harvey Aluminum Company requires full approval before payment is made.

The Chairman asked Dr. C. A. Rochon, Chief Chemist, Harvey Aluminum if he wanted to discuss the problem.

Dr. Rochon stated that his company was not in the same position as other aluminum producers as they are just starting their first aluminum plant but when Harvey decided to build the plant they were fully aware of the problems of fluorine emissions and that this phase had been studied extensively. He stated that in order to be assured that everything would be acceptable to the State they had incorporated a clause in the contract that the system should comply with all Oregon state regulations and that the officials had conferred with the Authority's technical staff and had submitted plans and specification describing the air pollution control facilities. He added that the staff had requested some minor modifications which were made. He explained that the company did not expect an unconditional

approval on the operation since no one really knows how it will work yet. He stated that installation of equipment is one thing and operation is another and that the company wants the installation approved separately. He stated his company had completed extensive stack tests and that samples were split with the Air Pollution Authority's staff. Dr. Rochon stated his company had submitted methods of analyses to the Authority, discussed stack sampling and they have done everything possible to exchange information and that everything is agreed upon except the approval of the installation.

The Chairman asked if it was Harvey Aluminum's desire that the Authority give an unconditional approval for the air pollution control equipment separate from operational performance.

Dr. Rochon replied that it was.

The Chairman stated that a contract was entered into by the Harvey Aluminum Company and an equipment supplier, and that the Authority as an outside party was referred to in the contract and that Harvey Aluminum was now asking the Authority to make a certain statement of approval so that the other parties may be satisfied and receive final payment for the work.

Mrs. Barsch stated that the statute does not require the Authority to give approval at any time.

Mr. Wendel stated to Dr. Rochon that he thought it would have been to their advantage to have determined in advance whether the plan approval arrangement written in their contract was feasible.

Dr. Rochon stated again that they had submitted all requested information regarding the fume controls but that they had never received an unconditional approval for the installation.

Mrs. Barsch said that it is possible that the staff could not tell whether the installation was correct until it has been operating.

The Chairman explained that for years the Sanitary Authority has given letters of approval for sewage treatment plants which are always qualified; that he had never

ABI228

received an unqualified approval. He pointed out that he did not think that a state authority could be in a position of entering into a contract with two other parties to say whether an installation is entirely satisfactory.

Dr. Rochon went on to state that the Authority administers a law which requires that before a plant can be started it must submit plans and obtain approval from the state and then after that there are quite a series of regulations.

The Secretary explained that it has been the policy of the Authority in the past to grant only conditional approval on installations and that conditional approval in effect was dependent upon the system operating in a satisfactory manner to prevent air pollution. He added that the Air Pollution Authority's law was different from that of the Sanitary Authority as it does not require the submission of plans as the Sanitary Authority act does; that the Air Pollution Authority's laws say the Authority may require the submission of plans, and that Harvey Aluminum was requested to supply plans for review and approval before the plant went into operation.

Mr. Wendel again stated that Harvey Aluminum has nothing to lose and everything to gain unless the staff became arbitrary.

Dr. Erickson explained to Dr. Rochon that the company would have to operate before the effectiveness of the equipment could be determined; that it was to their advantage to determine the equipment efficiency before making final payment to the installing company.

Mr. R.A. Pearce of Fluor Corporation, stated that his company also would like the Authority to state that the Harvey Aluminum plant control installations have been designed and installed with strict compliance to all laws.

Mr. Pearce informed the Authority that his company is trying to separate the design from operation.

Mrs. Barsch stated that the Authority can't give approval on design only since the Authority must know that the equipment has been properly installed and that can be determined through operation only.

Mr. Pearce did not agree with Mrs. Barsch and told the Authority this was entirely different; that a simulated test was run in May and they plan to continue testing. The Chairman added that if the Air Pollution Authority was expected to give this type of approval for all equipment throughout the state there would be no end of legal complications. He stated he would not clear such an approval and that the company should not expect it; and that the Authority has no obligation to do so. Dr. Rochon asked the Chairman if the Authority could reject plans.

The Chairman replied yes.

MOTION RE: The Dalles Harvey Aluminum

It was **MOVED** by Mr. Wendel and seconded by Dr. Erickson and carried that the Authority delay consideration of any final approval of the Harvey Aluminum Company's fume control systems until it was established that no public nuisance was being created.

MULTNOMAH COUNTY RE: Pacific Carbide and Alloy Company

The Chairman called on Mr. Clifton Glover, Asst. Mgr., Pacific Carbide and Alloy Company, to represent his company.

Mr. Glover stated that his company has submitted a stack sampling test today to the staff which had been conducted at the plant and that these tests showed an 83% removal. He stated their production was being reduced to 52% of capacity this month; however, the company will continue the stack sampling late in September to verify the 83% figure. He thanked the staff for locating another source of emission which had escaped the company. Mr. Glover added that the sources were more than they expected so are continuing testing in the immediate neighborhood. He added that these tests were from the lime kilns and that they are studying additional means and apparatus of controlling particulates from these kilns and hoped that within six months the problem will be solved. He added that when the plans are complete they will submit them to the staff for review.

Mr. Glover stated that during the hot, dry summer clouds of dust from trucks had fallen on their complaining neighbor's property. Mr. Glover stated they had ordered paving for the roads to handle this part of the problem. Mr. Glover stated

ABI228

they plan to cover their furnaces; that they have a new raw material contract and are working on everything to accomplish the best control.

The Chairman requested Mr. Hatchard to report on the staff activities concerning the Pacific Carbide and Alloy Company's dust emissions.

Mr. Hatchard reported that no air sampling had been carried on since March 1958 and that the data at that time supported the conclusions contained in the staff's report dated October 14, 1957. He explained that in this report it was found that the emissions from the company's calcium carbide production were in violation of Chapt. V, Sect. 2.2, 2.3 and 2.4 of the regulations. He stated that since that time the fallout station had been maintained and that complaints had continued from the Morrison Oil Company located just south of the Pacific Carbide and Alloy Company's plant.

Mr. Hatchard explained that the air sampling station on the Morrison Oil Company was in a heavy industrial land use area, but that just south of Columbia Blvd., which is the Portland municipal boundary an open land area exists which is now zoned for multiple family dwellings by the Portland Planning Commission and that this fact should be considered by the company when planning for additional dust control facilities.

Mr. T. Waters of Pacific Carbide wondered if the Authority was concerned regarding the University Homes property. He stated that there are many other kinds of operations like slaughter houses and rendering plants within a few hundred feet and wondered if this area should be used for residential use. He wished the staff to be aware of that aspect and added that when his company had an air pollution problem in the past before controls but they had very few complaints from that neighborhood since the wind was from other directions.

The Chairman wished to know if this aspect has been discussed with the Planning Commission.

Mr. Hatchard replied that it had not.

The Chairman stated that the location of the other plants nearby could be called to the attention of the City of Portland Planning Commission but added that the

staff could follow up this type of project. The Chairman asked if there were any comments or recommendations to make regarding this particular problem.

Mr. Hatchard stated that the staff would accept the invitation to confer with the company as the plans develop; and that he thought sampling should be delayed until the production of the plant was more normal.

Mr. West wished to know why production was now only 50% of normal.

Mr. Waters stated this was due to lack of business; that in time it was hoped the company would return to full production; that their rate of capacity expressed in electrical units is about 8000 kw. but would be about 4,000 kw next month.

Mr. West asked if the company doubled the present production would they have the same trouble as in the past.

Mr. Waters replied that they had the new controls.

The Chairman asked how many kw. they were operating on now.

Mr. Waters stated about 5000 kw.

The Chairman asked what was the maximum in the past year.

Mr. Waters stated about 6,000 kw, and added that the Morrison Oil Company was the only complainant.

Mr. Hatchard stated this was correct but lime concentrations, suspended particulates and fallout were a violation of the Authority's existing regulations.

The Chairman wished to know if satisfactory progress was being made to solve this problem.

Mr. Hatchard replied that the problem of whether reasonable control installations had been made or not would include economic aspects, land use and plans of the zoning commission for use of the land south of the plant and he indicated that more control be provided.

Mr. Waters stated in late September his company will be getting back to use of desirable raw materials and that the test results in September will be more comprehensive. MOTION RE: Pacific Carbide and Alloy Company

It was MOVED by Mr. Wendel and seconded by Dr. Erickson and carried that reasonable progress was being made; that the company was proceeding in good faith and desired

ABI228

to complete the controls and that the Authority postpone further consideration until a future meeting.

REVISION OF THE PROPOSED REGULATIONS FOR OPEN BURNING REFUSE DUMPS.

The Chairman asked if the proposed regulations for open burning refuse dumps were still being reviewed.

The Secretary explained that revisions were being made and that the reason the item appears on this agenda was that at the last meeting the Authority had directed that the comments be taken into consideration and that the matter be considered at the next meeting. He added that the staff was not ready to submit a revised draft for adoption; that further investigation was needed with municipal and county officials and others.

The Chairman stated that if this met with the approval of the Authority he would suggest the staff be directed to continue this study in conference with various parties and that the staff submit the proposed regulations for review before the next Authority meeting.

CONSIDERATION OF ODOR COMPLAINTS

The Chairman requested Mr. Hatchard to report on the odor complaint matter.

Mr. Hatchard stated that increasing numbers of complaints are being received regarding a variety of odor problems which originate from the discharges from such diverse activities as pea cannery operations, rendering plants, manure piles, glue factories and others. He stated that a large amount of staff time is required to establish whether public nuisance exists and whether it is within the jurisdiction of the air pollution control statute. He pointed out that many of these odor problems are of long standing, have involved local action and frequently could be handled by the local health department, district attorney or other local agencies by applying existing statutes regarding public nuisance. He stated that the staff investigation of some odor complaints created a problem since it caused delay in needed area atmospheric pollution surveys and our assistance to the planning and zoning agencies. He requested the Authority to instruct the staff as to a future procedure for handling these problems.

The Chairman asked if these could be classified as public nuisances and could the staff refer them to the health department.

Mr. Hatchard stated that many of the problems have been before various local agencies.

Mr. Wendel wished to know if some of these odor problems created a basis for civil action on the part of residents against the offender.

Mrs. Barsch stated they could as a private nuisance.

Mr. Wendel asked again if the Authority had instituted civil action against any offender.

Mr. Hatchard stated that the Authority had never done so.

Mrs. Barsch added that this may be the basis of a controversy; and the Authority should not appear to be instigating anything if it were a private nuisance and attempt to litigate responsibility.

Mr. Wendel said the Authority would not be proceeding properly if it was not advising the complainants what their rights were.

Mrs. Barsch said this could not be done because the staff would then be practicing law and that the staff should not instigate actions of this kind but perhaps the staff could advise local agencies what could be done to control the nuisance.

The Chairman stated that the problem was how to investigate pollution problems in the field that take so much time with an inadequate sized staff.

Mr. Hatchard stated that many situations were of long standing now; that the staff was working at it from a practical standpoint of trying to handle the increase.

Mr. Hatchard felt the answer was for more local action.

Dr. Erickson commented that there were various kinds of odors too and that some could be indicative of a contaminant which would have effects in addition to the odor.

Mr. Wendel stated that the Authority should encourage the staff to use its own judgment as to what sources of air pollution are the most serious and to treat those according to a priority of seriousness and that it is wrong to suggest to the staff they ignore any sources of air pollution.

The Chairman agreed with Mr. Wendel and added that wherever the staff knows that

ABI228

a particular problem might be handled by local health departments or the police department that this action be encouraged.

Mrs. Barsch stated that the handling of rendering plants and slaughter houses could be referred to the State Department of Agriculture and their attorney could bring action, and the responsibility would primarily be theirs since it was not air pollution alone.

The Chairman suggested that the staff could reduce some of this work by referring cases to other agencies wherever feasible.

#### City of Portland

The Chairman stated that the Authority has on occasions over many years discussed with representatives of the City of Portland the problems that pertain to air pollution within Portland and the city's lack of work in that connection. He stated he would like to receive a report from the staff at the next meeting summarizing the available data regarding existing conditions in the Portland area. He then suggested that at a subsequent meeting the Authority invite representatives of the city to meet and review the problem.

Mr. Hatchard asked if this would allow the staff to follow a priority on some of the complaint investigations.

The Chairman told Mr. Hatchard that if the staff could submit a report bringing the members up to date on the current work he believed then priorities could be worked out.

#### ADMINISTRATIVE: Cleaner Air Week

The Secretary then advised the members that National Cleaner Air Week has been set for October 19, through 25, and wished to obtain the members' guidance as to participation in any activities that the staff might wish to develop in Oregon both on a statewide basis and through some of the cities and other groups who would be interested in using the radio, television and other means of publication. The Secretary suggested that if the Authority indicated an interest in staff participation in Cleaner Air Week that sample proclamations would be prepared for the Governor's office and for the mayors of the cities to issue that week; and

would work with Health Education Section and prepare news releases calling attention to Cleaner Air Week.

The Chairman replied that he agreed with this approach.

National Conference on Air Pollution

The Secretary stated that a National Conference on Air Pollution was being called by the PHS Surgeon General during November 18, 19 and 20 and that the purpose of the meetings was to develop a 10 year plan of action and to outline steps necessary to achieve control objectives. The Secretary stated that the general public, specialists in all fields of air pollution, Federal, State, County and City Officials, Industries and other groups have been invited to participate in the conference which had been planned carefully by a committee appointed by the Surgeon General. The Secretary added he hoped the members would request the State Board of Health to authorize one of the staff members to attend; that he felt the information obtained would be worthwhile.

Mr. Wendel wished to know if the Air Pollution Authority's budget had sufficient funds.

The Secretary said it did.

Mr. Wendel stated he would recommend to the Board that an individual from the staff attend.

The Secretary added that if Dr. Erickson preferred another approach that he would withdraw the suggestion.

Dr. Erickson stated he thought that this is a very important meeting and Oregon should be represented.

MOTION RE: National Conference on Air Pollution

It was MOVED by Mr. Wendel and seconded by Mr. West and carried that the members request the State Board of Health for authority to send a representative to the National Conference on Air Pollution.

Planning and Zoning Agencies Performance Regulations

The Chairman requested Mr. Agee to report on Planning & Zoning Agencies Performance Regulations.

ABI228

Mr. Agee stated that at the request of the Bureau of Municipal Research the staff had prepared a set of air pollution standards which could be incorporated into performance standards for industrial park zoning and that the final copy of these standards were being reviewed for legal aspects. The staff had also been requested by a planning consultant employed by the cities of Forest Grove and Bend for assistance in preparing air pollution performance standards for zoning in these two cities. The staff will continue to work in the field of planning and zoning in an effort to prevent future air pollution problems.

Oregon State College Engineering Experiment Station's Wigwam Burner Study

The Chairman called on Mr. Hatchard to summarize the status of the college study of waste wood burners.

Mr. Hatchard reported that the findings from the first year of study were presented at a meeting of the lumber industry officials at Springfield on June 12, and approximately 40 representatives attended. He stated that the project engineers had prepared a summary report which showed that significant improvements in smoke, cinders and flyash emissions could be brought about by relatively simple operational controls.

He stated that the college had obtained a supplementary \$10,000 grant from the Public Health Service Community Air Pollution Demonstration Project and that the project would not attempt to define the design parameters which limits a waste burner operation. He stated that a pilot plant had been erected on the west side of Parker Stadium in Corvallis and that daily runs were being made with varying fuel compositions, air flow, temperature, etc.

The Chairman asked if the findings to date have been publicised and circularized to burner operators.

Mr. Hatchard stated that the college is going to publish the complete findings and they will be available in late September and that over 3000 copies would be distributed.

Area Atmospheric Sampling Surveys

The Chairman requested Mr. Percy to report on Area Atmospheric Sampling Surveys.

Mr. Percy stated that during June and July of 1958 intermittent high volume sampling for suspended particulate was conducted at three stations in the Portland area under different weather conditions. He stated that in August sampling at the three Portland sites was continued including sampling for oxidants, nitrogen dioxide and sulfur dioxide contaminants which are considered important in the formation of a Los Angeles type smog condition. He reported that sampling was also conducted in Pendleton during the latter part of August and first part of September utilizing two stations; one to establish normal background for suspended particulate and the other to measure suspended particulate in the city. He stated that additional suspended particulate sampling would be completed during September and October in Springfield, Eugene, Klamath Falls, Roseburg and Medford.

During October plans have been made for a one week of intensive sampling in the Portland area in conjunction with representative of PHS to determine concentration of suspended particulate, fallout, nitrogen dioxide, sulfur dioxide, fluoride, total oxidants, smoke concentrations and visibility recordings. These area surveys will furnish information that will be correlated with sampling data collected at regular stations in these areas.

#### Status of Open Burning Refuse Dumps in Multnomah County

The Chairman invited Mr. Hatchard to summarize the status of the open burning refuse dumps in Multnomah County.

Mr. Hatchard stated that the staff had maintained its surveillance of the five Multnomah County refuse dumps where open burning caused complaints. He explained that intermittent burning is still occurring; however, two complaints have been filed with the Multnomah County District Attorney's office involving the dump at S.E. 126th and Stark and the Knapp Refuse Dump at 1233 N. Columbia Blvd. He stated that arrests had been made; bail posted and the defense attorney had filed demurrers and that at the present time the matter would be heard in the Multnomah County District Court on September 24, 1958. He stated that the staff was serving as a consultant to the Multnomah County District Attorney's office in obtaining air sampling data and field observations including photographs in accordance with previous Authority instructions.

ABI228

New Complaints

The Chairman wished to know if there were any written complaints to be considered.

The Secretary then summarized the following complaints.

1. R. Davis complaining of smoke from Electro Metallurgical plant in Multnomah County.
2. Complaint signed by Mgr. of N.W. Liquid Feed Company regarding Electro Metallurgical plant.
3. Complaint signed by a number of residents from Washington County regarding the Stanton Manufacturing Company.
4. Request from Clackamas County Health Dept. regarding odor nuisances in the vicinity of Oregon City.
5. Petition from 12 Washington County residents petitioning the Air Pollution Authority to abate a refuse and garbage dump at Laurel.
6. Complaint relative to fumes from a mill in the rear of property located on 6535 S.E. 62nd Ave., Portland.
7. Complaints from Gen. Vachon, Shady Cove, Oregon regarding cinder deposition.
8. Complaints from Beaverton, Oregon relating to disposal of sludge from the sewage treatment plant.
9. Petition relative to soot, etc., from Brown Paper & Pipe Company, Corvallis, Oregon.
10. Petition containing 21 signatures registering complaint of Kosher and Sons Fertilizer Plant, N.E. 44th and Holman, Multnomah, Oregon.

The Secretary added that the staff has made every effort to investigate as many complaints as possible but with the number of staff members we have and the other work to do we have not been able to take care of them all. He pointed out that this was an example of some investigations being made on the basis of priority regarding the seriousness of the problem.

Mr. Wendel wished to know if all of these complaints have been acknowledged.

The Secretary answered that they were.

The Chairman instructed the staff to complete investigations as possible and ask other agencies to help.

Clara H. Shaw of Laurel Community stated that there was a severe problem in Washington County regarding an open dump on an 80 acre hillside which was close to the highway and about 200 to 300 feet to the closest house. She stated that people are trying to raise families, enjoy the outdoors but none of this can be done on account of this dump and that air pollution has been a very big problem along with rodent infestation which has gotten so bad some residents have moved away. She stated her group has tried to obtain legal counsel on this problem and for the past week or so have been in Salem and that they are always referred back to the Air Pollution Authority. She stated Mr. Laverne S. Miller of State Board of Health, Vector Control Program, has tried to help and her group had the services of two attorneys who came out to the site one hot day this summer and they claimed the odor was so obnoxious that it alone was enough to convince an attorney to take the case. At this time, she stated, they are prepared to take legal action but thought they would try this petition for abatement first before going into a damage suit.

The Chairman asked Mrs. Shaw if this matter had been referred to Washington County. Mrs. Shaw stated that Mr. Sweet, Washington County Sanitarian, had given her a letter saying this nuisance should be abated and that L. Miller came out with Mr. Sweet to investigate but the Washington County Commissioners claim there was no garbage there so they requested abatement through the Air Pollution Authority. The Chairman asked her if there has been a written complaint made to the County Commissioner in Washington County.

Mrs. Shaw stated that there was a petition with 108 signatures which was filed in the Washington County records.

The Chairman asked if the 80 acres are owned by the county.

Mr. Hatchard stated that no staff member has made an investigation; that the complaint was filed July 23. He stated the Authority has acknowledged receipt of the complaint

ABI228

and investigation will be made when other commitments allow. He stated that court action is pending in the local circuit court and that if action in court involved the situation then the staff probably could not make the investigation. The Chairman asked if this was a problem of public health rather than air pollution.

Mr. Hatchard thought so and further believed there has not been burning at the dump for the past year.

Mrs. Barsch stated this is only a partial air pollution problem and this Authority can't call for abatement on rodent and fire hazard.

The Chairman explained to Mrs. Shaw that this agency can not dictate to anyone what to do; that it seems the problem presented is one that is a public nuisance and a public health problem and not basically an air pollution problem.

Mr. Wendel asked if it would be appropriate to ask Mr. Hatchard if the staff could give this case some priority and if found to any degree to be an air pollution problem he consult with the Chairman and take appropriate steps to alleviate this. If this is not then an air pollution problem and is a health problem then refer it to the proper agency.

The Chairman stated to Mrs. Shaw that the Authority will refer this case to the staff for investigation.

Mr. Wm. Templeman, 7302 N.E. 42nd St., stated a petition was sent to the Air Pollution Authority regarding a fertilizer dump near his home. He stated that Mr. Hatchard had checked it. He stated the day Mr. Hatchard called there and since that time the situation has not been as bad as previously when the situation was unbearable. He stated that this manure pile was started about a year ago and it now extends over 5 or 6 acres and that it was only 120 feet from his home. He stated he would like something done about this and wished to know the procedure which will be taken.

The Chairman invited the staff to comment.

Mr. Hatchard stated this problem is the type which would take a series of observations to evaluate and was an example of the staff problem. He informed

the members that his staff was only able to make one field investigation thus far and had found the owner quite responsive and that some recommendations had been made.

Mrs. Barsch asked what the general land use was out there.

Mr. Hatchard stated it is mixed and felt it to be non-conforming land use but that he has not checked with Multnomah County Planning Commission.

Mrs. Barsch wanted to know if others have complained.

Mr. Hatchard said that several residents had signed the letter and that several telephone calls had been received when the odors were especially strong.

Mrs. Barsch wanted to know if there were chemicals to spray on the manure to neutralize the odors.

Mr. Hatchard stated that several companies have masking agents available.

Mrs. Barsch added that the owner of the dump must use every known facility to reduce the nuisance.

The Chairman stated that here again was a health problem that should be referred to the local Health Department.

Mr. Templeman stated they had Multnomah County Health Department make an investigation about two years ago.

Mr. Wendel stated he felt this case was severe enough and that the same direction to the staff could apply here as on the preceding case.

The Chairman directed the staff to try to give this complaint priority and that if it appears to belong in another category that the staff channel it to the appropriate agency.

The next regular Air Pollution Authority meeting was set at the call of the Chairman and the meeting was adjourned at 4:15 P.M.

Respectfully submitted,

  
CURTISS M. EVERTS, Secretary  
Oregon State Air Pollution Authority

## TWENTY THIRD MEETING

## OF THE

## OREGON STATE AIR POLLUTION AUTHORITY

The twenty-third meeting of the Oregon State Air Pollution Authority was called to order by the Chairman at 2:00 PM Wednesday, March 4, 1959, in Room 36, State Office Bldg., 1400 S.W. 5th Avenue, Portland, Oregon. Those present were Carl E. Green, Chairman, Merle S. West, Vice Chairman, Dr. Harold M. Erickson, Harold F. Wendel, members and Curtiss M. Everts, Secretary, Mrs. Catharine C. Barsch, Special Assistant Attorney General, R. E. Hatchard, Chief of the Air Pollution Control Section, J. L. Agee, Associate Sanitary Engineer, R. Ott, Chemical Engineer, R. B. Percy, and Edward Taylor, Chemists, State Board of Health.

MOTION RE: MINUTES OF PREVIOUS MEETING

The minutes of the twenty-second meeting held August 27, 1958 were summarized by the Secretary. The Chairman declared if there were no corrections the minutes would stand approved as prepared by the Secretary.

MOTION RE: ELECTION OF OFFICERS

The Chairman announced that it was necessary to elect Authority officers for 1959. It was MOVED by Mr. West and seconded by Mr. Wendel and carried that Carl E. Green be re-elected Chairman of the Air Pollution Authority for 1959.

It was MOVED by Mr. Wendel and seconded by Dr. Erickson and carried that Mr. West be re-elected Vice-Chairman of the Authority for 1959.

PORTLAND RE: The Occurrence of Air Pollution in Portland and Vicinity

The Chairman requested Mr. Hatchard to report on the staff's preparation of "A Report on Air Pollution Conditions in the City of Portland" February 1959. Mr. Hatchard stated that during the last Authority meeting the staff was instructed to summarize all available information regarding air pollution conditions in Portland. He explained that the staff had been conducting area surveys since 1952 and that data from air sampling, such as particle fallout, covered a 6 year period. He pointed out that originally 27 stations were used in Portland and that after the first year the number was reduced to 4 representative stations. He reported that

over 50 particle fallout stations had operated at various times to study local air pollution problems. He identified the locations of the existing area sampling stations on a map of Portland which also included the collection of high volume filter samples to identify the suspended particulate concentrations. He displayed a filter sample collected from the State Office Bldg., station on March 4, at 10:40 AM and reported that the suspended particulate concentration was 386 micrograms per cubic meter.

He stated that the report also included data obtained in October 1958 during a one week period of intensive sampling for gaseous contaminants such as oxidant, sulfur dioxide, oxides of nitrogen and carbon monoxide. He reported that during this period the prevailing meteorological conditions allowed the collection of data that described air contaminant concentrations during temperature inversion periods.

He stated that the report had been delivered to the City of Portland on February 18, 1959, and that 10 copies were transmitted by letter to the Health Officer, Portland Bureau of Health, and five copies were sent to the Mayor and City Commissioners.

He reported that additional copies were sent to individuals and organizations that had previously requested the report. He stated that the summary included in the report showed that particle fallout values exceeded the Authority's regulations approximately 70% of the time at the downtown sampling stations. He stated that the concentration of suspended particulates found during temperature inversion conditions also showed concentrations in excess of the Authority's regulations and that this data was tabulated for the past six years of area-wide sampling.

He stated that since the report had been available for the past two weeks that there appeared no need to summarize each conclusion.

The Chairman asked Mayor Terry Schruk if he wished to present information on this subject.

Mayor Schruk stated that the City Engineer, Health Officer and various members of the Portland staff are vitally concerned with the Portland air pollution problem. However, he stated, that he and others took a dim view of the release of this report to the press and that he did not think it spoke well for good, sound relationship

ABI228

of the city and state governments. He stated that the city and state should work together with problems and that he believed the situation created by this report was ironic because the state was merely criticizing the city and was not acting in a constructive, helpful manner.

He stated that the City of Portland had improved programs in many departments and cited the milk, meat and slaughter house inspections as examples of the reduction or duplication of effort that had been brought about by cooperation of the city and State Department of Agriculture.

He stated that it would appear in this "attack" that has been made by the state that the state's philosophy was much different than the policies the city has been trying to pursue. He stated that air pollution problems stem from metropolitan sources and that all should work together on controls. He promised to keep ahead of the problem and take whatever corrective steps possible in the City of Portland with the available personnel. He stated that the state "in its attack had beat down the City of Portland", that the city wants to work with the state and not continually battle. He said the city was aware and recognized that air contamination occurs during certain periods but he thought certainly that the study covered a small period of time. Mayor Schrunk said he had included a request in the 1960 fiscal year budget for employing a staff and that the previous budget requests had not been approved. He stated again that they want to work with the state's assistance and not bickering between them. He added that apparently the state chose to make a big issue of this report in the press rather than discuss it with city representatives which builds barriers that are hard to break down.

Dr. Thomas L. Meador, Health Officer, Portland Health Bureau, stated that according to the Mayor's statement the state's actions had been one of coercion rather than one of assistance. Dr. Meador stated that it had been difficult to get any assistance from the Authority. He explained that the specific statement in the report regarding the relationship of the Authority to municipalities was not consistent with what has been occurring.

He stated that the report is an excellent summary of what is known and summarized it in one report but adds little new knowledge about Portland's air pollution conditions. He said there were no active, specific suggestions presented on how to meet the problems present in the City of Portland, and that is what is desperately needed. He stated, however, that he did not think the situation was as bad as the report presented it to be, but that the city wants assistance and that the city was entitled to it. He added that the state promised it would be provided, if possible, and that the state would take care of situations outside of the city. He stated that after all the City of Portland is inside the State of Oregon. He said that the state is assuming the attitude that it is glad to tax the city in any way possible but unwilling to give assistance. Dr. Meador said the city asked about a year ago for some type of good assistance to develop a realistic program in Portland. He stated even though it meant personnel and time that it should get started now and quit wrangling back and forth.

Mr. Sherman Washburn of 18222 S.E. River Road, Milwaukie, Oregon, stated he wished to speak as a resident of the metropolitan Portland area and that during the past two years he had been close to this civic problem. He stated that in studying the problem he found local government to be a hodgepodge of small administrations. He asked the state to take the leadership and set up the nucleus for metropolitan air pollution control. He stated that if left to communities to solve among themselves that the program would fail.

Mr. Carleton Whitehead, Secretary, Portland Air Pollution Advisory Committee, spoke also as an individual. He reiterated Mr. Washburn's words that the most important and encouraging thing was that all parties concerned want to work together on the Portland air pollution problem. Failure to cooperate, he said, would only lead to disaster for the community. He further stated that everyone should realize that the Advisory Committee to the City of Portland has for several years believed that money should be found for the creation of the initial staff for control of air pollution in the City of Portland. He said to make a start now and then work out the problems as the activity progressed. He added, that, speaking as a citizen and not for the

ABI 228

city's Advisory Committee, that the City of Portland has a responsibility to help initiate, cooperate and provide the basic staff and train personnel which will make it possible to work with the state towards the development of a constructive program. He stated that air pollution definitely will increase if something is not done now.

The Chairman asked if others wished to be heard.

Mr. West asked Mayor Schrunk if he thought the situation was not as serious as stated in the report. He asked further if the city had any scientific basis for their conclusions.

Mayor Schrunk replied that the city did not and that he did not think the state did either. He stated that there was a problem but if the city always followed all theories then Portland could become a "ghost town" by arbitrary rules and regulations; that 1/2 million dollars has been spent on air pollution control in the city already and that he did not believe arbitrary "hounding of industry by scare headlines was any good" but that this activity should be approached on a good sound basis.

Mr. West informed the Mayor that the Portland report was made on the basic scientific findings.

Mayor Schrunk said that the city has not been able to get technical answers on the scientific basis that Mr. West was talking about.

Mr. West asked if there was any information the staff had that the city could not obtain.

The Chairman replied that the staff has provided all the information on hand to assist the city.

Mr. Hatchard stated that was correct; that the Authority's staff has tried to assist wherever it could and that the staff could not release data until the completed work was available. Mr. Hatchard stated that in following the Authority's policies of the past and present it was not the staff's responsibility to work out specific solutions; that the Authority has responded to requests throughout the state to assist, in any way possible; that the Authority has a reference file and information

for, that was provided. Regarding the question of technical facilities engineering-wise or the cost of materials, etc., the work that is going on now established that assistance is provided.

Dr. Meador stated there had been only about 25 trips by the Authority's staff to various industries; that one of the Authority's staff member had attended about twelve at the city's Air Pollution Committee meetings. He stated that in the past year the city did not ask for help because letters were received each time regarding the lack of personnel and more important pending matters. He informed the Authority that the city has taken care of 250 specific complaints without the help of the Air Pollution Authority since they couldn't get it. He further added that there is one operation in progress at the present time involving 125 complaints; and that it was very active and has to do with odor. He stated the city had asked for help on it; that 4 visits were made and one engineer stated that it was all right at that time but since then the problem goes on and the city has had no assistance at all. He added that he agreed that Portland should have some staff of its own but believed that the city was entitled to assistance from the state also.

Mr. Wendel said that he couldn't understand why this report was regarded as an "attack". He said certainly he could not construe it as an attack; that it was supposed to be a factual report which is intended as assistance to the City of Portland. He said that the manner in which it was made public was not meant to be in an unfriendly way. Mr. Wendel stated that this report was delivered to the city at least 12 hours in advance of release to the press. He stated that if we are agreed that a program must get underway for the control of air pollution in Portland before we have the horrible conditions that are present in other cities, and we have similar potential here, it was important to get started and forget the bickering over the report.

Dr. Erickson stated that he was concerned about the manner in which the city officials thought the release was made. He stated it was his understanding that the city had the report before it was released to the press; and that he felt the Authority and its staff were anxious to cooperate with Portland.

ABI228

The Chairman concluded that he thought he was speaking for all and stated that it was the intent of the Authority to cooperate with the city fully; that the Authority and the staff were ready to meet with the City of Portland and consider further the objectives to be accomplished in the control and prevention of air pollution.

PUBLIC HEARING RE: Proposed Regulations for Open-Burning Refuse Dumps

The Chairman requested Mr. Agee to report on the proposed regulations for open burning refuse dumps.

Mr. Agee stated that the first public hearing on the proposed regulations for open burning of refuse dumps was held April 1958 and that the present draft of the regulations was a revision based on comments presented. He stated that the proposed regulations prohibit open burning of refuse wherever nuisance conditions exist and specifically the proposed regulations would prohibit open burning in cities greater than 45,000 to a distance six miles beyond their city boundaries. He stated that the proposed regulations for cities between 10,000 and 45,000 population prohibit open burning of refuse and garbage to a distance beyond 3 miles from the city boundaries. He explained that exceptions to the proposed regulations were included which would allow open burning for weed abatement and pest control, controlled burning for fire prevention and open burning from two-family residences or less. He reported that the regulations provide for a city or a community, which have adopted rules or ordinances controlling the disposal of garbage and refuse, to permit variances to these regulations where no public nuisances are created.

The Chairman asked the Secretary to review the letters received regarding the proposed open burning regulations.

The Secretary reported that letters had been received from the following cities and individuals after review of the proposed open burning regulations:

1. State Department of Agriculture by Frank McKennon, 12-17-58.
2. City Manager of Eugene, 2-26-59.
3. Dr. H. T. Osterud, Director of Eugene-Lane County Health Dept. 2-20-59.
4. City of Klamath Falls by City Mgr. G.S. Vergeer. 2-24-59.
5. City of Bend, City Mgr. W. T. Thompson. 2-25-59.
6. Walter P. Browne, MD Health Officer, Umatilla County Health Dept. 2-27-59.
7. Mr. Adkison, Air Pollution Officer, City of Eugene on 3-2-59.

The Chairman asked if anyone was present who wished to be heard.

Mr. John H. Deines, Sanitary Truck Driver, Union 220, stated he would like to make a report on what happened in Portland since the last meeting of the Authority.

Mr. Deines stated that burning has been curtailed and that several dumps have been closed which created a hardship. He added that there was only one disposal site remaining near the City of Portland where it was legal to burn refuse. He stated his phone rings constantly from people asking where they may dispose of refuse. He pointed out that the outcome of this is that in various areas people are now burning trash and residue on their own property. He also reported that people are installing incinerators because the cost of hauling the refuse is too high. He asked if it was the policy of the Authority to force people to take these actions. He informed the Authority that Portland gets on an average of 500 to 600 truck loads of garbage a day and unless provisions are made for disposal, trouble will be encountered. He explained that it is too costly to haul refuse and garbage 25 to 30 miles for a round trip. He stated that there was need for a long-range study and that his union was now feeling the effects of the proposed rules and regulations; that the general public was not getting any service and all the Authority had accomplished by the regulations for open burning refuse dumps was to make many people irate. He felt he was at a loss to find a solution and no matter what was done there was the chance of arrest.

He stated that last summer his group had made an agreement with the County Court of Clackamas County but that was just a temporary arrangement. He said each individual has to do the best he can with his own project; but instead that he would prefer to be invited to the discussion when the Authority was ready to consider the whole refuse and garbage disposal problem. He indicated that from this hearing something definite should be decided upon rather than just criticism of the existing practices. He emphasized that all that was desired was something workable. He reported that Los Angeles County had done a lot of expensive work on this so why couldn't a similar project get started here. He concluded that he hoped something constructive would come from this meeting so that everybody wouldn't be mad at each other.

ABI228

Miss Carlie Gilstrap of 405 N. Russett St., stated she was on the receiving end of this problem and that she represented about 1100 people and was asking again that something be done. She stated that there was a provision that has been made by Multnomah County but that Mr. Deines forgot to mention that the county was establishing sanitary landfills. She said that the night before there was heavy smoke from refuse burning near her residence. Miss Gilstrap said everyone would welcome some kind of regulation that would once and for all take care of the refuse problem. She stated that there has been a long stalling process; that communications have been sent with no replies; that public hearings and discussions have been held and still nothing had really been accomplished. She stated that Multnomah County had provided about 3 months for dump operators to get plans ready but no plans were submitted to the county. She added that the Authority has been one agency that has given some of the best support for removing public nuisance from refuse burning and she commended the efforts of the Authority. Concluding, she stated, that she believed the proposed regulations reasonable and that they do not work a hardship but instead made allowances for exceptions and until something was done state-wide, this problem will go on and on. She requested that something concrete be decided upon right now at this meeting.

The Chairman called on Mr. Gordon L. Burt, City Engineer, Portland. Mr. Burt said he wished to know if the Section 4.4 f was intended to apply to the City of Portland at its remote refuse fill on N. Swift Blvd., and would allow continuation of the same type of operation that was currently underway which included controlled burning of tires at night and tramp lumber and dry refuse in a small burning dump. He told the Authority again that the bulk of the refuse generally goes on the sanitary fill and was compacted; that there is some open burning of casual loads that do not pack into the fill.

The Chairman requested Mr. Hatchard clarify whether the City of Portland refuse dump could continue present burning.

Mr. Hatchard stated that the Authority had received no direct complaints regarding the City of Portland's refuse disposal practices; that this location was

remote compared with other dumps. He stated that it was difficult to operate controlled burning since the weather conditions can change rapidly. He explained that the staff had not collected air samples downwind from the Portland refuse disposal site when burning operations were underway.

The Chairman asked if the city incinerator was available for use.

Mr. Burt replied that the incinerator was operating and that at the Authority's suggestion open refuse burning was being reduced. He informed the Authority that the city was including funds in the budget for a chipper to handle brush so it may be added to the fill rather than burned. He said the city had authorized a representative to travel to California to learn what was being done in this regard. He stated that his opinion was that the city had a refuse disposal program which was very economical. He reported that the burning of tires caused lots of black smoke and it was his hope that any smoke would be carried away from town; but if the tires are placed in a fill, air spaces are created and, when a loaded truck moves over the top, the tires move to the surface and that also would cause quite a problem.

Mr. Burt stated that the proposed regulations appear to give the Council the privilege of exempting the Portland refuse disposal site from the regulations.

The Chairman replied that the City Council may provide a variance with procedure if a public nuisance is not created by the burning refuse as defined by 449.730 ORS.

The Chairman asked Mr. Burt if the tramp lumber and tires could be burned in the present incinerator without it being chipped.

Mr. Burt replied it could not be done without a large hammermill that would cost the city about \$60,000. He explained that the existing incinerators are the old beehive type and can not be heavily charged.

Mr. Wendel asked Mr. Burt if the regulations were satisfactory to the City of Portland.

Mr. Burt said the regulations are satisfactory and wanted to confirm that the refuse disposal operation could continue the existing practices.

Mr. Wendel replied that as long as there are no complaints of nuisance the procedure was satisfactory. Mr. Wendel asked Mr. Hatchard if this was correct.

ABI228

Mr. Hatchard answered this was agreeable at the present time.

Mrs. Barsch asked if Mr. Burt was sure that there was no nuisance created beyond the city area.

Mr. Burt said he was not sure and that it would take a court of law to determine that.

Dr. Erickson asked if the city had received any complaints.

Mr. David B. Westby, Refuse Disposal Superintendent, Portland, replied that no complaint had been received.

Mr. Burt explained that several years ago heavy firing of the incinerator was done and if the incinerators are fired heavily, partially burned paper and flyash are discharged.

The Chairman asked the Authority if action should be taken today on the proposed regulations; that have been under consideration for about  $1\frac{1}{2}$  years.

Mr. William Schlitt, Sanitary Service Company, Salem, Oregon, stated that he had a question about the application of the proposed regulations. He stated that he operated a city dump approximately  $7\frac{1}{2}$  miles east of the Salem City Hall or five miles east of the city limits. He asked if the adoption of the regulations for a city of 40,000 population or more to be six miles from the city limits and then wouldn't the county court have something to say.

Mrs. Barsch said that the county court probably would be concerned for a new installation and could be interested in an existing dump if the county had adopted regulations for garbage and refuse disposal.

Mr. Schlitt explained that he has tried to stay within the existing regulations and that they only burn at night when the winds are away from the community.

Mrs. Barsch asked Mr. Schlitt if he was referring to a municipal dump.

Mr. Schlitt stated it is privately owned but used by the citizens of Salem also.

The Chairman explained that the Authority has reviewed and revised the proposed regulations many times and everyone concerned has had the opportunity to be heard; that the Authority will need now to determine an effective date for adoption.

Mr. West stated he thought the 3 mile limit in the proposed regulations arbitrary and could it be stated in some other manner depending perhaps upon the topography?

The Chairman wanted to know if any specific distances should be included in the regulations.

Mr. Wendel said what if it is outside the six mile radius and still creates a nuisance.

Mr. Hatchard replied that recommendations would be made to the person responsible.

The Chairman asked the members if they thought about a year was enough time to provide before the regulations were enforced.

Dr. Erickson agreed and suggested January 1, 1960.

Mrs. Barsch asked the Chairman if he was considering building facilities and the extent of work involved with construction.

The Chairman explained that for open refuse burning no particular structures were required and that these regulations do not apply to incinerators.

MOTION RE: Proposed Regulations for Open-Burning Refuse Dumps

It was MOVED by Mr. Wendel and seconded by Dr. Erickson that the rules and regulations on open refuse burning be adopted and that the effective date for prohibition be January 1, 1960.

Mr. Wendel stated he understood that a copy of these regulations will be sent to all interested parties and publicised so that everyone will be informed.

MULTNOMAH RE: Pacific Carbide and Alloy Company

The Chairman asked Mr. Agee to report on progress at Pacific Carbide and Alloy Company.

Mr. Agee stated that at the last meeting of the Air Pollution Authority a representative from Pacific Carbide and Alloy Company submitted stack sampling data to the Authority. On the basis of this data, and area survey sampling results, violation of the Authority's regulations was shown. He reported that the company was requested to proceed with the design and installation of additional air pollution control facilities and that a plan for a stack scrubbing installation was submitted by the company which would remove particulate matter and lime dust from the lime kiln stacks. He explained that the plan was reviewed and permission for the company to proceed

ABI228

with the installation was granted in a letter dated February 24, 1959. He stated that the company management was advised that the plant emissions must not cause nuisance as defined by the Authority regulations and that the company was requested to advise the Authority when the installation had been completed and when stack sampling information would be obtained.

NORTH ALBANY RE: Western Kraft Corporation.

The Chairman instructed R.R.Ott to report on activities concerning Western Kraft Corporation.

Mr. Ott stated that since the last Air Pollution Authority meeting the technical staff of the Authority had reviewed Western Kraft's Second Interim Report dated September 24, 1958 and on the basis of this report, it was believed that the sampling data could be used in the design of further control equipment for their recovery furnaces and digester gas emissions. He reported that stack sampling at other emission sources along with surveys were included in the future activities that Western Kraft Corporation agreed would be done. He reported that limited odor surveys in the area near Western Kraft have been made since the last Authority meeting and that when meteorological and weather effects are not favorable for the dispersion of odors, threshold and definite characteristic odors of the constituents were still present. He stated that Western Kraft, in a letter from Mr. Seton dated 12-8-58, had advised the Air Pollution Authority equipment had been installed to improve furnace combustion control and that the No. 2 recovery boiler stack would be extended. He stated that the staff will complete intensive odor surveys near Western Kraft Corporation and that this data along with other information will be presented at the next Air Pollution Authority meeting.

THE DALLES RE: Harvey Aluminum

The Chairman requested Mr. Percy to report on the Harvey Aluminum Company in The Dalles.

Mr. Percy stated that staff activities in The Dalles included atmospheric sampling for fluorides from stations at the City Hall and the State Highway Department Building. He said that continued plant and area surveys have been made and

Harvey Aluminum is conducting fallout sampling on a weekly basis, making occasional stack sampling tests and maintaining full operation of scrubbers and dust collectors on all pot lines. He stated that Oregon State College Agricultural Experiment Station was conducting fluoride tests on foliage and other plant life in the area collected from 19 stations in the vicinity of The Dalles. He stated that the information gained from this study will be correlated, at a later date, with atmospheric fluoride data collected by the Authority's staff. He stated one written complaint had been received by the Authority from a resident who operated a farm approximately 800 feet from the aluminum plant. He added that the complainant has been contacted and the effect on the complainant and his property was being investigated. Mr. Percy said the staff plans to continue monitoring the atmosphere in The Dalles to determine fluoride levels and to insure effective operations of scrubber and dust removal system at Harvey Aluminum Company. He recommended that Harvey Aluminum make stack sampling test runs at more frequent intervals in order to evaluate the over-all efficiency of the control system.

The Chairman indicated that the Secretary should send this recommendation to the management of Harvey Aluminum.

NORTH BEND RE: Menasha Plywood Corporation

The Chairman requested Mr. Hatchard to report on the North Bend complaint investigations.

Mr. Hatchard stated that the City of North Bend had received complaints from residents near the Menasha Plywood Corporation's mill regarding an excessive cinder and flyash deposition. The city had requested assistance in the investigation of the problem and that a survey and plant visit had been completed in February. He reported that the mill management was currently working on the control of the emissions from the waste wood burner; that a decision had been made to install a new burner that would be adequate in size for the quantity of wood waste. He stated that the new burner would include facilities for controlling the combustion conditions by temperature thermocouples and other devices. He stated that the plans and specifications for this work will be submitted to the Authority for review.

ABI228

NORTH BEND RE: Weyerhaeuser Timber Company

The Chairman requested Mr. Hatchard to report on the status of the investigation of the Weyerhaeuser Timber Company.

Mr. Hatchard stated that a comprehensive summary statement was prepared by Weyerhaeuser Timber Company explaining why a waste burner was now needed. He explained that in the middle of January 1959 the Pacific Power and Light Company's steam generating plant in North Bend was placed on a standby status which resulted in an excess of 300 to 400 units of hog fuel per day. The Weyerhaeuser Timber Company had studied alternate use of the wood residue but due to current economic conditions temporary use of waste burner appeared to be the only solution. He explained that the company had retained the services of Professor M. Popovich as a consultant in order to provide wood waste disposal facilities that would produce no flyash problem downwind from the burner. He stated that Professor Popovich is also Director of the Oregon State College Engineering Experiment Station and that the staff had reviewed the proposal with A. O. Karlen, Mgr. of the North Bend Weyerhaeuser mill and his staff. Mr. Hatchard pointed out that a thorough test of the burner unit, which was completed during the latter part of January had not been made since the mill has been shut down since January 22, due to a labor strike.

EASTSIDE: Georgia-Pacific, Coos Bay Lumber Division

The Chairman requested Mr. Hatchard to present a report on the status of the Eastside cinder and flyash deposition conditions.

Mr. Hatchard reported that a plant survey was made February 1959 and it was noted that the company had completed the installation of an additional new steam boiler which replaced two obsolete dutch oven units and that multiclone type cinder collecting facilities were installed on the new boiler which was operating on removal efficiency of 90-92%. He explained that the Georgia-Pacific Corporation's Coos Bay Lumber Division, included a green cut lumber mill, a wood fiber hardboard plant and a new plywood mill which started production early this year. The survey disclosed that an excessive deposition of unburned wood particles was evident in Eastside particularly during the past 2-3 weeks. He stated that the General Mgr.

Mr. Joseph Stronko, had assured that the company would complete changes in the disposal of wood fiber residue from the hardboard process and cinder dust from the plywood mill so that the material would be burned in the steam generating plant.

Mr. Hatchard explained that the current disposal was through the waste burner.

The Chairman decided to accept the progress reports and requested subsequent reports at the next meeting.

MUNICIPAL SURVEYS IN SALEM, Springfield, Roseburg, Medford and Pendleton.

The Chairman requested Mr. Agee to present a report on the status of Salem, Springfield, Roseburg, Medford and Pendleton area surveys.

Mr. Agee stated the staff has initiated air pollution surveys in Salem, Springfield, Roseburg, Medford and Pendleton and that the cities were invited to participate in a joint project to determine existing and potential sources of air pollution. He explained that a city representative will survey sources within the city limits and the Authority's staff will complete survey activities beyond the city limits. He indicated that approximately one day each week will be spent by each city worker for about six months. He stated that the joint report would include sampling information and field survey data with recommendations and would be submitted to each city Council at the end of the six month period. He advised that some specific complaint problems were included in the surveys.

The Chairman asked if anyone from the 5 cities came to be heard.

Three representatives of the Salem Chapter of the League of Women Voters, Mrs. M. Cleveland, President, Mrs. Churchill and Mrs. Howe, were present but they stated they did not come prepared to make any statements except they would like to be notified who is going to conduct the city survey in Salem.

Mr. Hatchard stated that the complaint in Salem related to the Oregon Pulp and Paper Company; that last week the staff had started a sampling program in Salem for sulfur dioxide and that traces of sulfur dioxide had been found. He advised the Authority that the staff was handling this problem in the same fashion as other investigations are handled and that the matter was discussed with City Manager Kent Mathewson and that assistance would be provided by the city-county health department.

AD1228

Dr. Erickson asked if there is to be one survey of the Oregon Pulp and Paper problem and another over-all survey.

Mr. Hatchard replied that the two surveys will be made concurrently.

ADMINISTRATIVE Budget 1959-1961

The Chairman called upon the Secretary to report on the status of the 1959-1961 biennial budget.

The Secretary stated that in the members' notebooks was included a tabulated summary of the budget and that the Authority had previously authorized the request for a sanitarian for the use in field investigations during the 1959-61 biennium. The Secretary stated that the total budget for 1959-1961 would be \$142,293; and that the budget was being considered by a Ways and Means Sub-Committee.

PROPOSED PROJECT WITH PHS TO DEVELOP PERFORMANCE STANDARDS.

The Chairman requested Mr. Agee to report on the proposed project with Public Health Service to develop additional performance standards.

Mr. Agee stated that an application has been submitted to US PHS for a technical assistance grant to develop performance standards for industrial park zones to prevent air pollution. He explained that the purpose of the study was to develop atmospheric discharge standards which can be applied to new industrial developments and that the standards would be used by local planning and zoning agencies. He reported that a conference was held with planning and zoning representatives from the City of Portland and the counties of Multnomah, Clackamas and Washington and each planning agency offered to assist in the proposed study. He stated that we have not received notification of the USPHS action on this project application.

NEW COMPLAINTS

The Chairman asked the Secretary to present the new complaints which have been sent to the Authority's attention.

The Secretary stated that a complaint was referred by member R.W. Perry which was signed by Mr. Henry Klindt, The Dalles, regarding emissions from Harvey Aluminum plant and that the situation was being investigated in connection with the other

field work. The Secretary reported that the following additional complaints were received:

- (a) From Dr. D. M. Hadjimarkos, Portland, regarding smoke and flyash emitted from a Safeway Store incinerator, S.W. Vermont St., and that the investigation had been made.
- (b) A petition was received from Caroline M. Bach, 2433 N.E. Clackamas St., containing 105 signatures from residents complaining of air pollution originating from the Simpson Logging Company's plant at 2506 NE Multnomah.
- (c) From Mr. Geo. Blome, R. 1, Box 445 A, Clackamas, relative to odors and smoke in the vicinity of Oregon City and that preliminary investigations had been made.
- (d) Complaint from Carl Klinkenbeard, Medford, Oregon, regarding cinder deposition in Central Point.
- (e) Petition including 832 signatures relative to strong disagreeable odors from pulp mill in Salem and that field investigations were underway. Mr. Hatchard reported that a part of this complaint was being followed up by Marion County Health Department and the State Board of Health; and that Dr. Edwards and Dr. Wilcox had a conference with Dr. Stone two months ago where it was decided that further investigation was required since the complaint included a health question. He stated that postcard follow up surveys had been sent to about 700 complainants and that a county-state investigation was underway.
- (f) A request from Mr. Angus Crawford, City Mgr. North Bend for assistance and field investigation of the Menasha Plywood Corporation's emissions.
- (g) A complaint from Mrs. S.R. Moe, North Bend relative to soot, deposition.
- (h) A petition signed by 184 Springfield residents relative to the deposition of soot, cinders and flyash on their properties. The Secretary stated that the petition was referred to the City Mgr. and a follow up study was underway.
- (i) Complaint from Mr. Corbett regarding the B.P. John Lumber Company, Macadam Avenue, Portland.
- (j) Letter from Mrs. Arnold Hertzell of Rainier regarding objectionable odors.
- (k) Complaint from Mr. Ray Montgomery of Coos Bay regarding Georgia-Pacific Company's lumber mill in Millington. The Secretary stated that this complaint has been referred to the District Engineer for investigation.
- (l) Letter from Mrs. Frank Murphy of Oakridge regarding particulate matter deposition. The Secretary reported that the investigation has been referred to the District Engineer in Eugene.

The Chairman directed the staff to investigate these complaints as other commitments allowed and that he would accept the progress reports and expect to receive additional reports at the next meeting.

Since there was no further business the meeting was adjourned at 4:10 PM; the next meeting to be at the call of the Chairman.
