Subject: Comment on proposed rulemaking
Date: Thursday, December 30, 2010 3:43:35 PM

This comment is in reference to PM25 and GHG as regulated pollutants.

The designation on Greenhouse Gases and Global Warming is based on flawed scientific research and conclusions. Despite what the EPA is asking or requiring the State of Oregon (DEQ and all other agencies) to do, I call upon you to step forward on behalf of the citizens of this State and put a stop to all of this.

This legislation and/or rulemaking will do nothing but to significantly raise costs to business and thereby to the consumer, and create more bureaucracy and inefficiency with the DEQ, all because of fear and false research.

This madness must stop. I call upon the DEQ to cease all further efforts supporting and establishing Greenhouse Gas and Global Warming regulation, rulings and enforcement.

Thank you.
