I fully support responsible use of toxic materials, and I support the state's effort to protect the health of everyone.

However, I am concerned that the proposed temporary rules related to Chromium are not well based.

Regulatory decisions must be based on science, not political issues. A leading scientist, Dr. LaCourse, has said Bullseye’s furnaces do not produce toxic chromium. We urge DEQ to rely on science and fact, and not to rush to impose these poorly written and misdirected rules.
