Subject: staff report- mentioning that fiscal impact estimate has been updated

Hi All,

I updated the fiscal impact tables to reflect the new requirements for BLDS/HEPA afterfilter. But, so far I don't mention in the body of the staff report that the fiscal impact estimate has been edited since the advisory committee reviewed it.

I'm thinking we need to mention that in the staff report text, so I'm proposing adding this text at the end of the 'Advisory committee' section on page 13:

> After fiscal advisory committee review and the public comment period, requirements for baghouse leak detection or HEPA afterfilter systems were added to this proposal. The fiscal impact estimates discussed above for Tier 2 CAGMs have been increased by a range of $10,000 to $30,000 per baghouse to reflect the new rule requirements. Fiscal impact estimates for Tier 1 CAGMs were not affected because they can choose either a 'grain loading' source test or a baghouse leak detection system or a HEPA afterfilter.

Your thoughts welcome.

-Joe
