Oh man ok. I understand that there are rules to follow and the quality of air is important but what I don't think is being considered is how stopping production is affecting and going to affect more than just the area of the factory. Yes the factory will take a hit in more ways than one but what about the people who have careers using this specific material? You will just cut them off like that? And how is that fair to them? You are cutting off people who have invested their lives into something and then for what now? You are affecting a huge community as well as the factory but if there was a way for compromise or to help reduce pollution, wouldn't that be far more successful than stopping production? I hope that as a company you have the decency try more than one way to help lessen the problem other than just shutting it down.

We're in the process of going through and addressing the comments we've received in response to the Colored Art Glass Manufacturer Emissions temporary rulemaking, and it looks like you submitted a comment to us but the comment field is empty. If you would like your comments to be considered, please respond to this email with them either in the body of the text, or as a pdf or word attachment.
