Hi Jeff,

Please find attached the *Stormwater Source Control Evaluation Report – Final Update* for the Terminal 4 Slip 3 site (ECSI #272).

The report combines and reflects the information previously provided in 1) Stormwater Evaluation Report, September 2021 and 2) Source Control Completion Letter, November 7, 2023. The objective of the report is to demonstrate that existing and potential sources of contamination at the site have been addressed and no additional characterization or source control measures (SCMs) are needed at the site, as outlined in DEQ's 2009 guidance for evaluating the stormwater pathway at upland sites. The conclusion of this report is that these objectives have been met and the next step is a source control determination for the stormwater pathway at this site.

Feel free to follow-up with any questions.

Thanks and enjoy the weekend!
Kelly
