I can work with my schedule. We need to talk today I think.

OK, if it needs further discussion I'm thinking that needs to happen before Friday, because the deadline for public comments may apply to EPA as well.

There's no time when all 5 of us are available in the next few days. Can this discussion about EPA comments happen on the sidelines of the Tuesday rules team meeting or Wednesday DEQ/OHA tech workgroup?

-Joe

I agree – my email just said we needed further discussion on those items.

Yes that's what I meant. And, I don't think we are ready to ask for anything just yet from EPA in writing. Further discussion needed.

Keith, I didn't understand what you meant by 'final list'. Is that about expanding the list of 6 metal

HAPs?

Leah, you suggested we ask for written comment from EPA on:

- OAR 340-244-9070 when source test for 1 baghouse can be used as representative of others
- testing Cr6 on the outlet

I'd like to also receive comment from EPA on these other key ideas they mentioned:

- their suggested 0.005 gr/dscf source test standard for baghouse testing
- bag leak detection (triboelectric sensors)
- changes to text of OAR 340-244-9090

-Joe

I think also the final list will need some explanation, but I don't think this is a EPA issue. It will continue to be an issue in BE's MAO.

Testing C6 on the outlet.

In 9070 – the ability to use one source test for any/all baghouses.

These are the two main issues they identified that I think need consideration. (Although others probably also need to be considered, but they seemed to be ones we had already talked about.)
