The rules are posted with the staff report on DEQ's website. I directed Dan to them.

Hey Stephanie,

I realize that you already talked to Dan, but just wanted to reinforce with him that we are happy to let him know as soon as they rules are posted.

Thanks so much, Leah

Hi Dan,

Thanks for your interest in the new proposed rules. Yes, we can absolutely make those available to you. I believe Stephanie Caldera is in the process of finalizing the documents and getting those posted as I write.

Stephanie – can you please let Dan know when those are posted to EQC's page?

Thanks! Leah

Hi Leah:

I understand that events are moving quickly. Along with the qualifying letter from the EPA, I refer to the fact that DEQ will be issuing brand new, radically revised proposed temporary rules for the glass manufacturers. That's supposed to happen

sometime this afternoon.

Might I get a copy of these revised rules. I'd like to write about them and would need time to digest them so to write a cogent article for this afternoon.

Given that they no longer exclude lead and manganese; given that the limit for Cr VI is restored to the state ambient benchmark concentration level of 0.08 at nearby receptors; given some other changes, DEQ is to be applauded for taking public comments into account and revising the old rules--which some might call fairly ill-stitched.

Again, I'd like to write about the revised temporary rules and am asking for a copy pretty much as of now if I might.

Thanks,

Daniel Forbes

Dan,

Can you email me questions? I am on a phone meeting.

I also want to clarify one thing. I understand there may be a misunderstanding about which agency would issue an order for compliance for a company subject to the federal NESHAP. It would be DEQ under our delegated authority, not EPA.

Thanks, Leah
