Date:	Tuesday, March 12, 2024 2:33:31 PM

Sure, I can fit it in by the end of March – I have the BODR for RM2E that just came in and will surely need a bit of a break from that at some point, so this will fit right in – thanks for some flexibility.

Subject: Revised Basin L Performance Verification Report for Terminal 4 Slip 3 (0272)

Heidi-

Would you have an opportunity to review the RTC and revised Year 2 report for the end-of-pipe treatment (Aequip) filter SCM installed in Basin L? Previously, we had received the revised reports for Basins M and K1, which I approved. The report for Basin L was delayed and was not submitted to DEQ until February 26.

Based on the post-treatment concentrations in stormwater, as well as the knee-of-curve evaluations, they are requesting permission to suspend source control stormwater sampling. I think it's a reasonable request but would like to get your opinion. I understand you are busy. Would the end of March give you enough time to review? The link goes to the folder in the V drive where the revised report, RTC, and RLSO are saved.

Thanks, and Sorry,
Jeff
