It looks like the comment page for the temporary air quality rules (http://www.oregon.gov/deq/RulesandRegulations/Pages/comments/Ctoxics2016temp.aspx) is not displaying some characters correctly; at least words that end in 's or that have quotation marks around them. And it looks like these errors get even stranger when downloaded into excel.

For example, if you look at the comments online, and in the attached excel, by Blake Peterson, though it is true for others as well. It looks like the words "serious prejudice to the public interest" in the last sentence was meant to have quotation marks around it.

There is no immediate health risk. The recent Oregon Healthy Authority (â€œOHAâ€□) studies found that there was no increased cancer risk in SE Portland attributed to Bullseyeâ€™s use of these materials. As the OHA states on its website, â€œit is unlikely that the level of metals detected in the air would cause any immediate health problems for people.â€□ OHA also concluded that current data shows â€œlong-term health risks are relatively low.â€□ Further, DEQ found no health concerns due to cadmium, arsenic, total chromium or hexavalent chromium in the soil around Bullseyeâ€™s factory Soil samples showed soil levels were generally below naturally occurring or â€œbackgroundâ€□ levels of heavy metals. Keith Johnson, manager for the DEQâ€™s Northwest Region Cleanup Program, stated, â€œe[o]ngoing emissions from the Bullseye facility are not resulting in harmful impacts to soils around the facility.â€□ DEQâ€™s and OHAâ€™s own statements provide that the rule is not needed to prevent â€œserious prejudice to the public interest.â€□
