Hello, Paul --
I like your phrasing much better than mine. I've been spending too much time with the OHA toxicologists, apparently.

My thoughts:

I wonder whether the phrase "protect public health from adverse effects" should be something like "protect members of the public from suffering adverse health effects." The adverse effects are suffered by individuals, as opposed to the faceless term "public health," right? I'm concerned that "public health" refers to a broad cross-section of the community, and whether adverse effects suffered by a very small number of particularly sensitive people would be an adverse effect to public health, generally? Perhaps it would. Maybe I'm parsing this too much. (And to make it even more demanding, you could say, "protect any member of the public from suffering adverse health effects," but that might create too great a burden, and make it more difficult for the Director to approve any emission level.)

Here's the provision, for ease of reference for everyone:

> (G) Selenium, at a concentration that the CAGM demonstrates to the satisfaction of the Director is adequate to protect public health from adverse effects. The Director shall consult with the Oregon Health Authority when considering whether a proposed concentration will be adequately protective.

The staff report language looks fine to me.

Hi All,

Per our conversations today, here is a draft of the rule language and staff report that includes the change at 340-244-9050(3)(a)(G) to replace the 710 ng/m3 selenium level with 'demonstrate to the satisfaction of the Director' language. You can use track changes to see what's new.

Sue, I used some but not all of your suggested language.

George, I edited the 'clean' copy of the rule language but I / you will also have to update the other two (redline compared to current permanent and redline compared to temp) when we have final language.

Please reply all with your comments. It'd be ideal if we can get this finalized by the end of the day today.

-Joe
