Hi Brian,

Yes, that's right- please do send that info if you can.

I'm trying to better understand how baghouses are designed and tested, to see if there are less onerous but equally effective source testing requirements we could use in our rulemaking.

If the filter media specs include information about capture % at various particle sizes, that could be especially helpful.

-Joe

Subject: Filter media information

Joe,

I've talked with Tom Abels (whom you talked to last Friday).

My understanding is that you are looking for efficiency information for the type of filter we are planning on using at Northstar Glassworks?

If this is correct please let me know and I will get that sent over to you.

Sincerely,

Brian Arbizzani
