Subject:	update re 10 tpy threshold + Northstar
Date:	Wednesday, July 27, 2016 12:59:13 PM

Hi All,

FYI- I got a call from Abe Fleishman at Northstar Glass. He says he did the math for Northstar's production and found that their production of metal HAP-containing glass was under the temp rule 10 tons per year threshold by about 800 lbs. He estimates that Glass Alchemy and Trautman would also be under the 10 tons per year threshold (at about 5 tpy and 2 tpy, respectively).

Abe plans to submit a comment for the art glass rule tomorrow and supports a lower threshold so that Northstar, Glass Alchemy and Trautman would be subject to the rules.

-Joe
