Hi Emil, the language below looks good to me.

Leah, I imagine the language below is noncontroversial but let us know if you have any questions or edits.

Hello Joe,

I'm wanting to send out a notice about the advisory committee meeting for this rulemaking by Monday. This means that I'll need to have an external webpage created for this rulemaking. All of our rulemaking webpages have a description of what the rulemaking is trying to accomplish. I've attached and included below what I've put together to post based on what is on the temporary rulemaking webpage. Please look it over and make any changes you think are necessary.

Thanks.

Emil

Colored Art Glass Manufacturer Emissions

Proposed Rulemaking

Contact: Joe Westersund, 503-229-6240

Air toxics emissions from certain types of industrial businesses like colored art glass

manufacturers are not fully regulated under federal requirements. Based on ~~sampling~~monitoring DEQ undertook last October, and more recently, DEQ has concluded that uncontrolled furnaces used in such colored art glass manufacturing ~~are more likely than not to~~may emit potentially unsafe levels of certain metals, including arsenic, cadmium, hexavalent chromium and nickel. This rulemaking is intended to protect the public health and the environment by ensuring the air emissions from colored art glass manufacturers~~facilities~~ do not cause unsafe levels of metal~~s~~ emissions in the air nearby.

EQC adopted temporary rules on April 21, 2016 and this proposed rulemaking will make those rules ~~changes~~ permanent.
