Subject: interpretation of 10 tpy threshold in temporary art glass rule
Date: Monday, August 01, 2016 4:55:41 PM

Hi Al,

You called this morning with a question about how DEQ is interpreting the 10 tpy threshold at OAR 340-244-9000(2).

OAR 340-244-9000(2) Manufacture 10 tons per year or more of colored glass using raw materials that contain any of the following metal HAPs: arsenic, cadmium, chromium, lead, manganese and nickel.

I checked with George about how DEQ has been interpreting that line. If for example a CAGM makes 6 tpy of glass containing arsenic, and another 6 tpy of glass containing cadmium, then that's a total of 12 tpy that contain at least some metal HAP, and that facility would be subject to the rule. They don't have to produce 10 tpy of glass containing any individual one of the metal HAPs.

-Joe
