These changes look fine to me.

Subject: art glass rulemaking staff report- language re Se benchmark
Importance: High

Hi David,

Jaclyn, Paul Garrahan and I discussed whether the new selenium monitoring data should change the art glass rule proposal we're sending out today. The plan we came up with is to leave the 710 ng/m3 number in the rule, and add text to the staff report indicating that that number is likely to go up in the future.

The edited staff report is attached, with the selenium-related edits in track changes. Do you have time to take a quick review of those changes?

The key language concerning OHA is:

> 340-244-9050(3)(a)(G) of the proposed rules includes a selenium health benchmark set at 710 ng/m3 on a 24-hour average basis. OHA has indicated that this number is very conservative and is likely to be revised upward when they complete their review process of these benchmarks. Updated benchmarks could be incorporated into this rule in a future rulemaking.
