Katie,
I reviewed this and had the following thoughts.

1. Seems like they could go to ¼'ly on this soon.
2. They are up to 60 gpm…where they have been for a while. The areas of inward gradient are much larger than any of those achieved with the initial extraction wells. (as expected). The rpt stated that they are limited by the filtration system and that they are planning on expanding it..however there are not any details on what is going to be done or when. It would nice to have more detail but they seem to be making progress.

Dave

Subject: Arkema June 2023 MPR

Hello Everyone

The Arkema June MPR has arrived and is in the project folder HERE. Let me know if you want to discuss.

Qcat 24820

Thanks,
Katie
