Hi Jeff,

Thank you for the information and your detailed email.

We will start reviewing the information next week and agree that follow up conversations will be warranted.

Enjoy the weekend.

Hello Chris and Mark-

DEQ received the green light from EPA to share the May 16, 2024 report titled *Final Data Evaluation Report, Supplemental Remedial Investigation (RI) and Focused Feasibility Study (FFS) at the Northwest Pipe & Casing Superfund Site, Clackamas, Oregon* prepared by CDM Smith. The purpose of the report was to address data gaps identified in 2018, refine the CSM, and document revisions to the numerical groundwater model (i.e., changing from steady-state model to transient model). The data gaps were addressed through the installation of shallow, intermediate and deep borings and monitoring wells in 2023.

YDO https://ormswd2.synergydcs.com/HPRMWebDrawer/Record?q=webdrawercode%3A%22*082*%22+And+recAnyWord%3A%22ECSI0139%22&sortBy=

I just received this report myself and am starting to go through it, but I wanted to share the document with you. A quick review reveals there are some findings of potential interest to Temco.

Maps of simulated TCE concentrations by model layer are shown in Figures 5-69 to 5-88
Interpreted present-day TCE contours are shown in Figures 5-95 to 5-100

The EPA report concludes that the off-site source at Temco is uncontrolled and that the TCE plumes at the Temco and NWPC sites have comingled. I wanted to make you and Temco aware of the information in EPA's possession as soon as it was available to the public. I'm sure we will have opportunities to discuss this information in the future when we have completed our respective reviews.

Hope you have a nice weekend. Best regards,

Jeff K. Schatz, R.G.
