

Andrea Matzke  
Oregon DEQ, Water Quality Division

Andrea Matzke,

I am writing to express my support for DEQ adopting its proposed new toxics standards immediately. I also urge you to apply the new toxic limits to polluted stormwater, and to keep the rules strong without loopholes for polluters.

I believe that changing the toxics standards to more accurately reflect the amount of fish that Oregonians really eat (175 grams per day) will more effectively help protect our citizens and our environment. These changes will result in better water quality and healthier people and fish. However, I am concerned that the new standards could be undermined if DEQ issues "variances" from the new rules.

I would also like to see the new rules cover toxics contained in stormwater pollution. The current DEQ proposal does not attempt to change rules for cities and industrial stormwater discharge permits for the same pollutants that are rendering our waterways toxic. I see this as unacceptable as study after study shows that stormwater is laden with toxics.

It's time to revise our state's toxics standards. I urge you to enact these changes immediately to protect the people of Oregon and our water now.

I believe that changing the toxics standards to more accurately reflect the amount of fish that Oregonians really eat (175 grams per day) will more effectively help protect our citizens and our environment. These changes will result in better water quality and healthier people and fish. However, I am concerned that the new standards could be undermined if DEQ issues "variances" from the new rules.

I would also like to see the new rules cover toxics contained in stormwater pollution. The current DEQ proposal does not attempt to change rules for cities and industrial stormwater discharge permits for the same pollutants that are rendering our waterways toxic. I see this as unacceptable as study after study shows that stormwater is laden with toxics.

It's time to revise our state's toxics standards. I urge you to enact these changes immediately to protect the people of Oregon and our water now.

I would also like to see the new rules cover toxics contained in stormwater pollution. The current DEQ proposal does not attempt to change rules for cities and industrial stormwater discharge permits for the same pollutants that are rendering our waterways toxic. I see this as unacceptable as study after study shows that stormwater is laden with toxics.

It's time to revise our state's toxics standards. I urge you to enact these changes immediately to protect the people of Oregon and our water now.

Andrea Matzke  
Oregon DEQ, Water Quality Division

Andrea Matzke,

I am writing to express my support for DEQ adopting its proposed new toxics standards immediately. I also urge you to apply the new toxic limits to polluted stormwater, and to keep the rules strong without loopholes for polluters.

I believe that changing the toxics standards to more accurately reflect the amount of fish that Oregonians really eat (175 grams per day) will more effectively help protect our citizens and our environment. These changes will result in better water quality and healthier people and fish. However, I am concerned that the new standards could be undermined if DEQ issues "variances" from the new rules.

I would also like to see the new rules cover toxics contained in stormwater pollution. The current DEQ proposal does not attempt to change rules for cities and industrial stormwater discharge permits for the same pollutants that are rendering our waterways toxic. I see this as unacceptable as study after study shows that stormwater is laden with toxics.

Oregon DEQ, Water Quality Division

Andrea Matzke,

I am writing to express my support for DEQ adopting its proposed new toxics standards immediately. I also urge you to apply the new toxic limits to polluted stormwater, and to keep the rules strong without loopholes for polluters.

I believe that changing the toxics standards to more accurately reflect the amount of fish that Oregonians really eat (175 grams per day) will more effectively help protect our citizens and our environment. These changes will result in better water quality and healthier people and fish. However, I am concerned that the new standards could be undermined if DEQ issues "variances" from the new rules.

I would also like to see the new rules cover toxics contained in stormwater pollution. The current DEQ proposal does not attempt to change rules for cities and industrial stormwater discharge permits for the same pollutants that are rendering our waterways toxic. I see this as unacceptable as study after study shows that stormwater is laden with toxics.

It's time to revise our state's toxics standards. I urge you to enact these changes immediately to protect the people of Oregon and our water now.

Greg Freer  
P.O. Box 1795

Andrea Matzke  
Oregon DEQ, Water Quality Division

Dear Andrea Matzke,

I hereby express support for DEQ adopting its proposed new toxics standards immediately. I also request that you apply the new toxic limits to polluted stormwater, and to keep the rules strong WITHOUT LOOPHOLES for polluters.

I believe that changing the toxics standards to more accurately reflect the amount of fish that Oregonians really eat (175 grams per day) will more effectively help protect our citizens and our environment. These changes will result in better water quality and healthier people AND FISH.

However, I am concerned that the new standards could be undermined if DEQ issues "variances" from the new rules.

Therefore, I would like to see the new rules cover toxics contained in stormwater pollution. That is because the current DEQ proposal does NOT attempt to change rules for cities and industrial stormwater discharge permits for the same pollutants that are rendering our waterways toxic. Thus, I see this as UNACCEPTABLE because, as study after study shows, stormwater is laden with toxics.

It's time to revise our state's toxics standards. I IMPLORE AND EXHORT you to enact these changes IMMEDIATELY to protect the people of Oregon and our water now.

Fred Fleetwood

Andrea Matzke,

I am writing to express my support for DEQ adopting its proposed new toxics standards immediately. I also urge you to apply the new toxic limits to polluted stormwater, and to keep the rules strong without loopholes for polluters.

The present standard is not realistic. I eat more fish than that in a week. I do not know what the agenda of those who set this standard was, but I am pretty sure it was not for my benefit. I like to have politicians and state officials working for me, not to benefit polluting industry by permitting them to increase profit by externalizing the cost of control of pollution.

I would also like to see the new rules cover toxics contained in stormwater pollution. The current DEQ proposal does not attempt to change rules for cities and industrial stormwater discharge permits for the same pollutants that are rendering our waterways toxic. I see this as unacceptable as study after study shows that stormwater is laden with toxics.

It's time to revise our state's toxics standards. I urge you to enact these changes immediately to protect the people of Oregon and our water now.

Andrea Matzke  
Oregon DEQ, Water Quality Division

Dear Andrea Matzke,

While my letter is critical of your department, I have the utmost respect for the hard work you are doing on behalf of Oregonians. Thank you for your service.

I am deeply concerned that the Department of Environmental Quality has allowed levels of toxins into the water of Oregon based on a very low estimation of fish consumption per a person. Given that indigenous people in Oregon probably consume a larger amount of fish than the average settler, setting a threshold based on settler-consumption levels can easily be shown to be an act of ethnic-cleansing. This is deeply offensive to me; there is no place in a civilized society for this type of childish and underhanded behaviour.

I support the quick adoption of proposed new toxic standards. Please apply the new limits to polluted storm water. Please do not include loopholes for polluters—we don't need to issue variances; polluters can follow the rules.

Toxic standards must accurately reflect the maximum amount of fish consumed by Oregonians. To allow toxic levels which harm a few while protecting most is not democratic, and bespeaks a lack of true care for human life and well-being. While the proposed 175 grams per a day may be sufficient, I suggest an assumption that Oregonians consume 500 grams of fish per a day.

Storm water is filled with toxic pollutants and needs to be regulated as well.

Please enact good changes to water quality standards immediately. Failure to do so will confirm that the Department of Environmental Quality serves the interests of corporate polluters. Please serve the people whom you represent by enacting strong standards to protect the health of Oregonians.

Sincerely and with much thanks for your hard work,

-- Daniel Dalegowski

I believe that changing the toxics standards to more accurately reflect the amount of fish that Oregonians really eat (175 grams per day) will more effectively help protect our citizens and our environment. These changes will result in better water quality and healthier people and fish. However, I am concerned that the new standards could be undermined if DEQ issues "variances" from the new rules.

I would also like to see the new rules cover toxics contained in stormwater pollution. The current DEQ proposal does not attempt to change rules for cities and industrial stormwater discharge permits for the same pollutants that are rendering our waterways toxic. I see this as unacceptable as study after study shows that stormwater is laden with toxics.

It's time to revise our state's toxics standards. I urge you to enact these changes immediately to protect the people of Oregon and our water now.

Andrea Matzke  
Oregon DEQ, Water Quality Division

Andrea Matzke,

In addition to the following statements, I would like to see these toxics standards applied to federal lands (BLM and US Forest Service) and private lands. Currently there are plans to aerial spray a piece of privately owned timberland which is very close to Lake Selmac in Josephine County. The run off from this property goes directly into Lake Selmac, which is a prime fishing spot for area residents. Between the property that is slated for spraying and the lake is a piece of farmland that produces naturally grass fed beef and organic roses for market. The proposed spraying will ruin that landowner's business, besides polluting the lake which is stocked with bass and trout. Please help protect Oregon's citizens and fauna from toxic sprays.

I have recently read that some of the herbicides currently being used are linked to increased miscarriages in animals. I recall that back in the late 1970s and early 1980s 2,4 D and 2,4 DT (both related to Agent Orange) were linked to miscarriages in humans in the Alsea drainage (herbicides frequently used in clearcuts).

I am writing to express my support for DEQ adopting its proposed new toxics standards immediately. I also urge you to apply the new toxic limits to polluted stormwater, and to keep the rules strong without loopholes for polluters.

I believe that changing the toxics standards to more accurately reflect the amount of fish that Oregonians really eat (175 grams per day) will more effectively help protect our citizens and our environment. These changes will result in better water quality and healthier people and fish. However, I am concerned that the new standards could be undermined if DEQ issues "variances" from the new rules.

I would also like to see the new rules cover toxics contained in stormwater pollution. The current DEQ proposal does not attempt to change rules for cities and industrial stormwater discharge permits for the same pollutants that are rendering our waterways toxic. I see this as unacceptable as study after study shows that stormwater is laden with toxics.

It's time to revise our state's toxics standards. I urge you to enact these changes immediately to protect the people of Oregon and our water now.

I see this as unacceptable as study after study shows that stormwater is laden with toxics.

It's time to revise our state's toxics standards. I urge you to enact these changes immediately to protect the people of Oregon and our water now.

Clean water is the basis of life. Ensure that Oregonians will enjoy clean water for the future.

Andrea Matzke  
Oregon DEQ, Water Quality Division

Andrea Matzke,

I am writing to express my support for DEQ adopting its proposed new toxics standards immediately. I also urge you to apply the new toxic limits to polluted stormwater, and to keep the rules strong without loopholes for polluters.

I believe that changing the toxics standards to more accurately reflect the amount of fish that Oregonians really eat (175 grams per day) will more effectively help protect our citizens and our environment. These changes will result in better water quality and healthier people and fish. However, I am concerned that the new standards could be undermined if DEQ issues "variances" from the new rules.

I would also like to see the new rules cover toxics contained in stormwater pollution. The current DEQ proposal does not attempt to change rules for cities and industrial stormwater discharge permits for the same pollutants that are rendering our waterways toxic. I see this as unacceptable as study after study shows that stormwater is laden with toxics.

It's time to revise our state's toxics standards. I urge you to enact these changes immediately to protect the people of Oregon and our water now.
