

Incidence Rates[†] for Oregon, 2003 - 2007

All Cancer Sites

All Races (includes Hispanic), Both Sexes, All Ages

Cancer statistics require careful interpretation. See the information page about [interpret rankings](#) for insight into interpreting cancer statistics particularly if you are a new user of cancer statistics.

There are many possible explanations for geographic variations in cancer mortality rates including differences in lifestyles, medical care availability and delivery systems, screening practices, reporting practices, environmental exposures, etc. Elevated rates in some areas may also be due to chance, particularly for relatively rare cancers and in areas with small populations. For more information on geographic variations and cancer clusters, see <http://www.cancer.gov/cancertopics/factsheet/Risk/clusters> and <http://www.cdc.gov/nceh/clusters/faq.htm>
