Hi Jeff. I spoke with Les briefly yesterday and my impression was that he would make sure the edits got into Division 12 this time. Les, does that sound right to you?

I'd like to get out of the middle of this. Can one of you explain to Mike and Ranei what is going on?

Ranei – thanks for getting back to Jeff on this.

Jeff – we (Les, Bryan, Ranei and I) came to an agreement on these amendments being included to the Div. 12 rulemaking and my understanding is that they will be included. After you discuss with Les, please let me know if there is a different understanding. These are very important rule amendments that will significantly improve the way we address septic system violations so if there is any chance that they won't be included as was agreed, I really need to know sooner rather than later.

Thanks!

Mike

I'll follow up with Les. Bryan started a job rotation yesterday.

We talked about it with Les and Bryan. Here is the last email on the subject. Apologies for not sending them to you; I thought Les and Bryan were going to do that. We also asked them to take all of onsite out of 340-012-055 so I'm not sure how they think that should be done.

Hi Ranei: I don't recall, and have no record of, receiving any proposed changes to -0060. I don't think it's too late to suggest some though.

I am working my way through this draft and I noticed the onsite sewage disposal classification changes for 340-012-006 are not included. Are those expected to be presented at a different time?

Thanks!

Attached are the most recent draft division 12 revisions which are to be shared soon with the advisory committee. There are a number of changes/additions to water quality matrix assignments. Please review and let me know if you have any comments by Friday. This is not the last crack at revisions, but it is a step further along towards adoption in August. This draft does include proposed increases to the civil penalty matrices developed by the advisory committee which have not previously been shared with you all.
