Subject: criteria for fine levels for 401 certifications

Good morning Jeff – based on conversations with regional staff and review of current and future 401 certifications, the 401 hydropower program proposes that the criteria to determine a \$6000 fine vs. an \$8000 fine be based on power generating capacity.

Facilities that generate <100 MW would be fined at the \$6000 level and facilities that generate ≥ 100 MW would be fined at the \$8000 level for violations of 401 hydropower certification conditions.

Please let me know if you have any questions or need more information.

Thank you,

Marilyn Fonseca
