So the results of our meeting yesterday is that for dredge and fill projects, non-commercial projects by residential owner occupants would be on the lowest matrix and Steve will look at a scheme for assigning violations to the other matrices based on how much material is moved. We agreed that hydroelectric should not be on the \$2,500 matrix and Judy will work with Marilyn to see if we can come up with a scheme for distributing the hydros between the next two highest matrices. When I get back on the 8th, I'll check and see if we need another chat or are ready to move forward.
