

Fiscal Adv. Comm Meeting

6/10/2016

Al: more E&E meeting up, in case they reject?

Leah: E&E meets in September

Al: for Bullseye, include \$s if 1 allotted
bayhouse

Chris: suggests amending the capital
cost \$s

Al: likes the 1-2% + annual
and annualized

Abe: bayhouse lifetime 30-40 years

. 25-30 years

E&E replace every 5-8 years

Amanda: amortize good way to go.

Amanda: build capacity to
quantify health impacts in future

health impacts on employer too
public may pay if ER or publicly
funded health

Jacob: lost economic dev, home values

Chris: property rules,

Jacob: language from EPA
Amanda: Ted,

Jacob: use "will" or "is anticipated to"
instead of "may"

Amanda: the rule does reduce cost

Al: other polluters too

Paul: other sources too

Jacob: ^{PDR} mercury reporting, Bulls eye increasing
prices

Abe: Chinese, Indian capital

Al: home glass making, dozens in Oregon

Abe: lower threshold

Chris: why Portland-specific rule?
make statewide

1st
Time
Public

Paul: economic impact of competitors
£10 tons/year - lost business

pottery glazes
welding frames

Al: set threshold at 1 paul, might not
need to enforce against all

Chris: to try & POK only has cosmetic
disadvantage & impact on human health.

Eric: yes,

POK estimate legitimate

yes, significant adverse impact

no, can't be relied

Jacob: lower threshold could reduce ^{& more scope of geography}
negative econ impact

Al: scope of application could reduce
signif. adverse impact.

Paul: expanding to all of OR or US
would make biggest difference.

Al: better threshold: 1 lb

Abc:

Al: better if based on amount of HAPs
not amount of glass

Abc: 100 - 1000 lb/year better threshold.
Tier 1 costs are 10-20% of
annual revenue

Amara: 1 lb OK, stable

Eric: stable: applied rules seem
lower threshold for
other activities also use HAPs
OSHA consulting + enforcement
→ DER technical assistance if in
gray area.

Al, Abc agree

threshold Tier 1 borosilicate (?)
Tier 2 soda lime

Paul: some processors don't melt

Eric: phase change vs "from batch"
applicability →

Bl: advisory committee to decide
on language of applicability
with range of processes in industry

Jacob: signif. red. inputs can be
reduced w/ threshold & statewide
 $\approx 100 - 1000$ lbs

Abe: 100 lb/year goal distribution

extra \$40 - 100 / lb
wholesale = $\frac{1}{2}$ of that

Abe: BPA has codes for glass milk
Kobe

Linde: statewide

12.5%
Don Forbes: Bullseye price increase
in press release
