

## ***Revised Emission Inventory Supporting Information***

Cascade Steel Rolling Mills, Inc. – Air Permit Number: 36-5034

Cleaner Air Oregon Emissions Inventory

May 9, 2022

Revised February 13, 2023

Revised July 3, 2023

Revised August 9, 2023

## **Introduction**

The purpose of this document is to provide information supporting the current air toxics emissions inventory including process flow diagrams and descriptions, TEU identification, source test data, emission factor references, analytical data and supporting engineering calculations.

## **Process Description & Emission Calculations**

Figure A-1 provides a process flow diagram and emission system schematic for Cascade's facility. The diagram includes the identification of emission units used in Cascade's Title V air permit. Emission point identifications for sources of CAO regulated toxic air contaminants are also included. The descriptions below provide the following information in support of the air toxics emissions inventory being submitted:

- A description of the process step or supporting activity that could generate TAC emissions.
- A description of how TAC emissions are generated.
- A general description of the methodologies used to calculate TAC emission rates. More details regarding these calculations are also provided in the emission calculation spreadsheet provided with this submission.

### **Scrap Preparation and Handling**

Scrap ferrous metal is transported to the scrap storage yards by rail and by truck. There are two scrap storage yards. The Main Yard is where the scrap is transported to the electric arc furnace (EAF) using scrap buckets, which are filled by electromagnets and grapples that pick up the scrap. The Secondary Yard is essentially a surge pile where scrap can be temporarily stockpiled prior to transfer to the Main Yard. Scrap handling can generate fugitive dust emissions that may contain TACs.

Infrequently larger pieces of scrap are cut to size to accommodate further handling. Cuts are made using hand held natural gas fueled torches. This activity is referred to as scrap preparation and it occurs within the charge bay of the melt shop with emissions controlled by the baghouse BH-1/1A system. Emissions of TACs during scrap preparation include byproducts

of natural gas combustion which are gas combustion TEU's under OAR 340-245-0050(4)(b) and qualify for the gas combustion exemption under OAR 340-245-0050(5). When the torch creates a kerf cutting through the metal scrap small amounts of fugitive metal TACs are emitted.

As shown in the Figure A-1 Process Flow Diagram there are four TEUs associated with scrap preparation and scrap handling.

- EU-9sp – Scrap preparation with metal TACs from torch creating kerf in scrap controlled by baghouses BH-1/BH-1A.
- EU-9ng – Scrap preparation torch gas combustion TEU primarily emitted through BH-1/BH-1A.
- EU-09sh\_Main – Scrap handling at the Main Yard generating fugitive dust that may contain TACs emitted at fugitive emission point SH\_Main.
- EU-09sh\_Sec – Scrap handling at the Secondary Yard generating fugitive dust that may contain TACs emitted at fugitive emission point SH\_Sec.

On January 30, 2023 Cascade submitted to DEQ a Dust Sampling Plan to collect and analyze scrap dust samples to support the speciation of TAC emissions in scrap dust. DEQ approved the plan on February 8, 2023. Scrap dust analytical data are included with this submission and the results are incorporated into the emissions inventory.

### Melt Shop

The melt shop consists of three major processes: the electric arc furnace (EAF), the ladle furnace, and the continuous caster. These processes and their potential TAC emissions are discussed below.

#### **Electric Arc Furnace**

The scrap from the scrap storage yard is transferred into the EAF. The charge bucket deposits the scrap into the EAF to produce molten steel which is poured into a ladle from a bottom tap in the EAF. Dolomitic lime, calcium carbide, and carbon, in the form of coal or coke, can also be added to arrive at the specified metallurgical properties in the melt. The EAF has three auxiliary burners that are fueled by natural gas.

Melted nonferrous scrap constituents, which are lighter than the molten metal, float to the top of the EAF vessel and are decanted off into a slag pit. Slag containing sufficient residual ferrous material is reclaimed by magnet and returned to the EAF.

#### **Ladle Furnace**

After initial melting and gross refining of the metal in the EAF, the chemistry of the molten metal is fine-tuned in the ladle furnace (LF) through the addition of alloys and other additives. The ladle furnace also utilizes an electric arc to melt and refine steel.

After the final chemistry and temperature adjustments are made, the ladle is moved to the casting area. Natural gas fired vertical preheaters (EU-4) are utilized to pre-heat ladles prior to filling with molten steel.

### **Continuous Caster**

From the ladle furnace, the molten metal is transferred to the continuous caster area in the ladle. In the caster area there are four natural gas fired heaters that are used to pre-heat a cold tundish prior to the first introduction of molten steel.

The molten metal is poured from the ladle into the tundish (a reservoir above the continuous caster molds). Molten metal funnels from the tundish into a continuous caster with a series of five molds. The solidified metal billets exiting the bottom of the mold are cut into appropriate lengths for rolling. After cooling and scale removal, the billets are transferred to the Rolling Mill for further processing. The process can generate off-spec billets that need to be cut down in size (using torches) so they can be reprocessed at the EAF. This scrap billet cutting occurs within the EAF charge bay with emissions primarily being controlled by baghouses BH-1/BH-1A.

The primary TEUs and emission points associated with the Melt Shop processes are as follows:

- EU-1 – Organic and inorganic TACs generated from Melt Shop process activities exhausted to baghouses BH-1,BH-1A and BH-2 emitted through emission points BH01, BH01A and BH02.
- EU-3\_RM - Organic and inorganic TACs generated from Melt Shop process activities not captured by the baghouses and emitted through the west end Melt Shop roof monitor (emission point RMELT). This emissions unit is identified on page 28 of DEQ's Review Report as "EU-3 Roof monitor".
- EU-3\_MF - Organic and inorganic TACs generated from Melt Shop process activities not captured by the baghouses and not emitted through the west end Melt Shop roof monitor but emitted through Melt Shop "other openings" (emission point MELTFUG). This emissions unit is identified on page 28 of DEQ's Review Report as "EU-3 Other openings". DEQ's Review Report indicates that emissions from the emissions unit are estimated based on 5% of the emissions exiting the roof monitor and this estimation methodology is used in this EI as appropriate.

- EU-4 Vertical Preheater natural gas combustion byproduct TEU emitted through stack emission point VERTP.
- EU-10 – Metal TACs released from billet kerf and exhausted through a vent (emission point BC01).
- EU-10ng – Torch natural gas combustion byproducts exhausted through a vent (emission point BC01).
- EU-12 – Metal TACs released from scrap billet kerf and exhausted to baghouses BH-1/BH-1A (emission points BH01 and BH-1A) and other Melt Shop openings (emission point MELTFUG).
- EU-12ng – Torch natural gas combustion byproducts exhausted to baghouses BH-1/BH-1A (emission points BH01 and BH-1A) and other Melt Shop openings (emission point MELTFUG).
- EU-16ng – From multiple Melt Shop heaters, natural gas combustion byproducts exhausted to baghouses BH-1/BH-1A (emission points BH01 and BH-1A), the roof monitor (emission point RMELT) and other Melt Shop openings (emission point MELTFUG).

### Slag Handling

Slag generated at the melt shop pit is dumped along a wall just northeast of the melt shop and wetted with city water. An oxidizing agent for hydrogen sulfide control is added to the water. Slag handling can generate dust containing TACs and sulfur present in the slag can generate hydrogen sulfide emissions upon wetting of the slag.

Additional details of the slag wetting process are as follows:

- It is a batch process.
- The approximate temperature of the slag is 1800F.
- The oxidizing agent is added via inline injection to a recirculating loop. A spray bar equipped with ~10 nozzles is used to wet the slag.
- The spray bars apply about 120 gpm of water to the slag over a period of about 10 hours. At this flow rate and duration and assuming 370 tons of slag produced in a batch the amount of water applied would be about 195 gallons per ton of slag

The TEU associated the melt shop slag handling is as follows:

- EU-5 – Fugitive particulate TACs and hydrogen sulfide generated from slag material transfers emitted at fugitive emission point SHF01.

#### Rod and Bar Mill

In the rod and bar mill billets are reformed into bars, smooth rods, rebar coils, wire rod and bar-length products. The rod and bar mill includes a large natural gas fired reheat furnace with a dedicated stack. Minor components of the rod and bar mill include the Aggregate Insignificant Activities (AIA) listed in the facility air permit: Merchant Bar Band Saw and Merchant Bar Straightener. These two activities are no longer operated.

The primary TEU associated the rod and bar mill is as follows:

- EU-7 – Reheat furnace natural gas combustion byproducts exhausted to a dedicated stack [RFS2].

#### Gasoline Dispensing Facility (GDF)

The facility includes a gasoline storage tank that dispenses fuel to vehicles. Organic TACs are emitted due to tank standing and working losses and during fuel transfer to vehicles.

The TEU associated the GDF is as follows:

- EU-15 – Organic vapor TAC emissions at gasoline dispensing facility emitted at emission point GDF.

#### Unpaved Roads

Vehicle traffic on unpaved roads can generate dust emissions. The dust may contain TACs. CSRM conducted a review of vehicle travel on unpaved roads at the facility and details are provided in the supporting calculations. The unpaved road at the facility will be constructed out of gravel and is located at a scrap handling area and the scrap handling emissions TAC speciation data will be used to estimate emissions.

The TEU associated the unpaved road is as follows:

- EU-11 – TAC emissions in dust generated from vehicle travel on an unpaved road segment (emission points SCRAP1 ).

#### Welding

Electric arc welding occurs at three maintenance shops at the facility with a majority of the welding occurring at the Maintenance and Fabrication Shop.

The TEU associated with welding is as follows:

- EU-17 – Metal TAC emissions from electric arc welding fumes controlled by a fume extractor/filter system that exhausts into the shop (emission point MaintFab).

### Material Handling

Silicon manganese and ferro manganese alloys are brought to the site via trucks which dump the aggregate-like material into a three-side and roofed storage bin. The alloys are then transferred to a feeder-hooper to convey the materials into the Melt Shop.

Dolomitic Lime and Quick Lime are stored in super sacks and periodically the entire super sack will be placed into a charge bucket containing scrap. The super sack can break during this transfer process and produce emissions of the lime materials.

The TEU associated with material handling is as follows:

- EU-18 – TAC emissions from handling materials including truck dumps of alloys [ALLOYTD], alloy unloading to feeder [ALLOYULD] and lime materials transferred to charge buckets [LIMEBCKT].

### Aggregate Insignificant Activities

The following is a description of the TEU status of other Aggregate Insignificant Activities listed in the facility's permit:

- Thermal Treatment Oven: Small natural gas combustion source with TEU designation (EU-14) emitted through stack with emission point designation [TTO]
- Mill Scale Handling: Not a source of TACs, composition is iron oxide.
- Merchant Bar Band Saw (no longer operated)
- Merchant Bar Straightener (no longer operated)
- Baghouse Dust Handling: The Review Report detail sheets indicate a PM loss rate of 0.001% based on a "DEQ Estimate". We believe this loss rate estimate is out of date because the dust handling system has been enclosed with air displacements routed back to the baghouse BH-1/BH-1A system.

### Categorically Insignificant Activities no Longer Categorically Exempt under CAO

See Attachment I for an assessment of CETEUs.

## **List of Attachments**

Attachment A – Figure A-1: Process Flow Diagram

Attachment B – Emission Calculations (This attachment provided as password protected electronic spreadsheet file)

Attachment C – August 6-8, 2019 Source Test Report (See 5/9/22 submittal. No changes with this revision.)

Attachment D – 2013 Filter Analysis Report (See 5/9/22 submittal. No changes with this revision.)

Attachment E – May 21-23, 2013 Source Test Report (See 5/9/22 submittal. No changes with this revision.)

Attachment F – Slag Composition Analytical Report (See 5/9/22 submittal. No changes with this revision.)

Attachment G – APEX Laboratories Analytical Report – Scrap Handling Dust (See 2/13/23 submittal. No changes with this revision.)

Attachment H – January 20, 2023 letter from Cascade to DEQ regarding Fluoride emissions (See 2/13/23 submittal. No changes with this revision.)

Attachment I – Discussion of TEU status of previously exempt Categorically Insignificant Activities (See 2/13/23 submittal. No changes with this revision)

Attachment J – Raw material usage information and safety data sheets (See 2/13/23 submittal. No changes with this revision.)

Attachment K – Wastewater PFD and Description (See 2/13/23 submittal. No changes with this revision)

Attachment L – March 10, 2023 letter from Cascade to DEQ regarding Fluorides & appended with Nucor Berkley air permit

Attachment M – Welding Materials SDSs

Attachment N – Slag Oxidizer SDSs

Attachment O – Cooling Tower SDSs

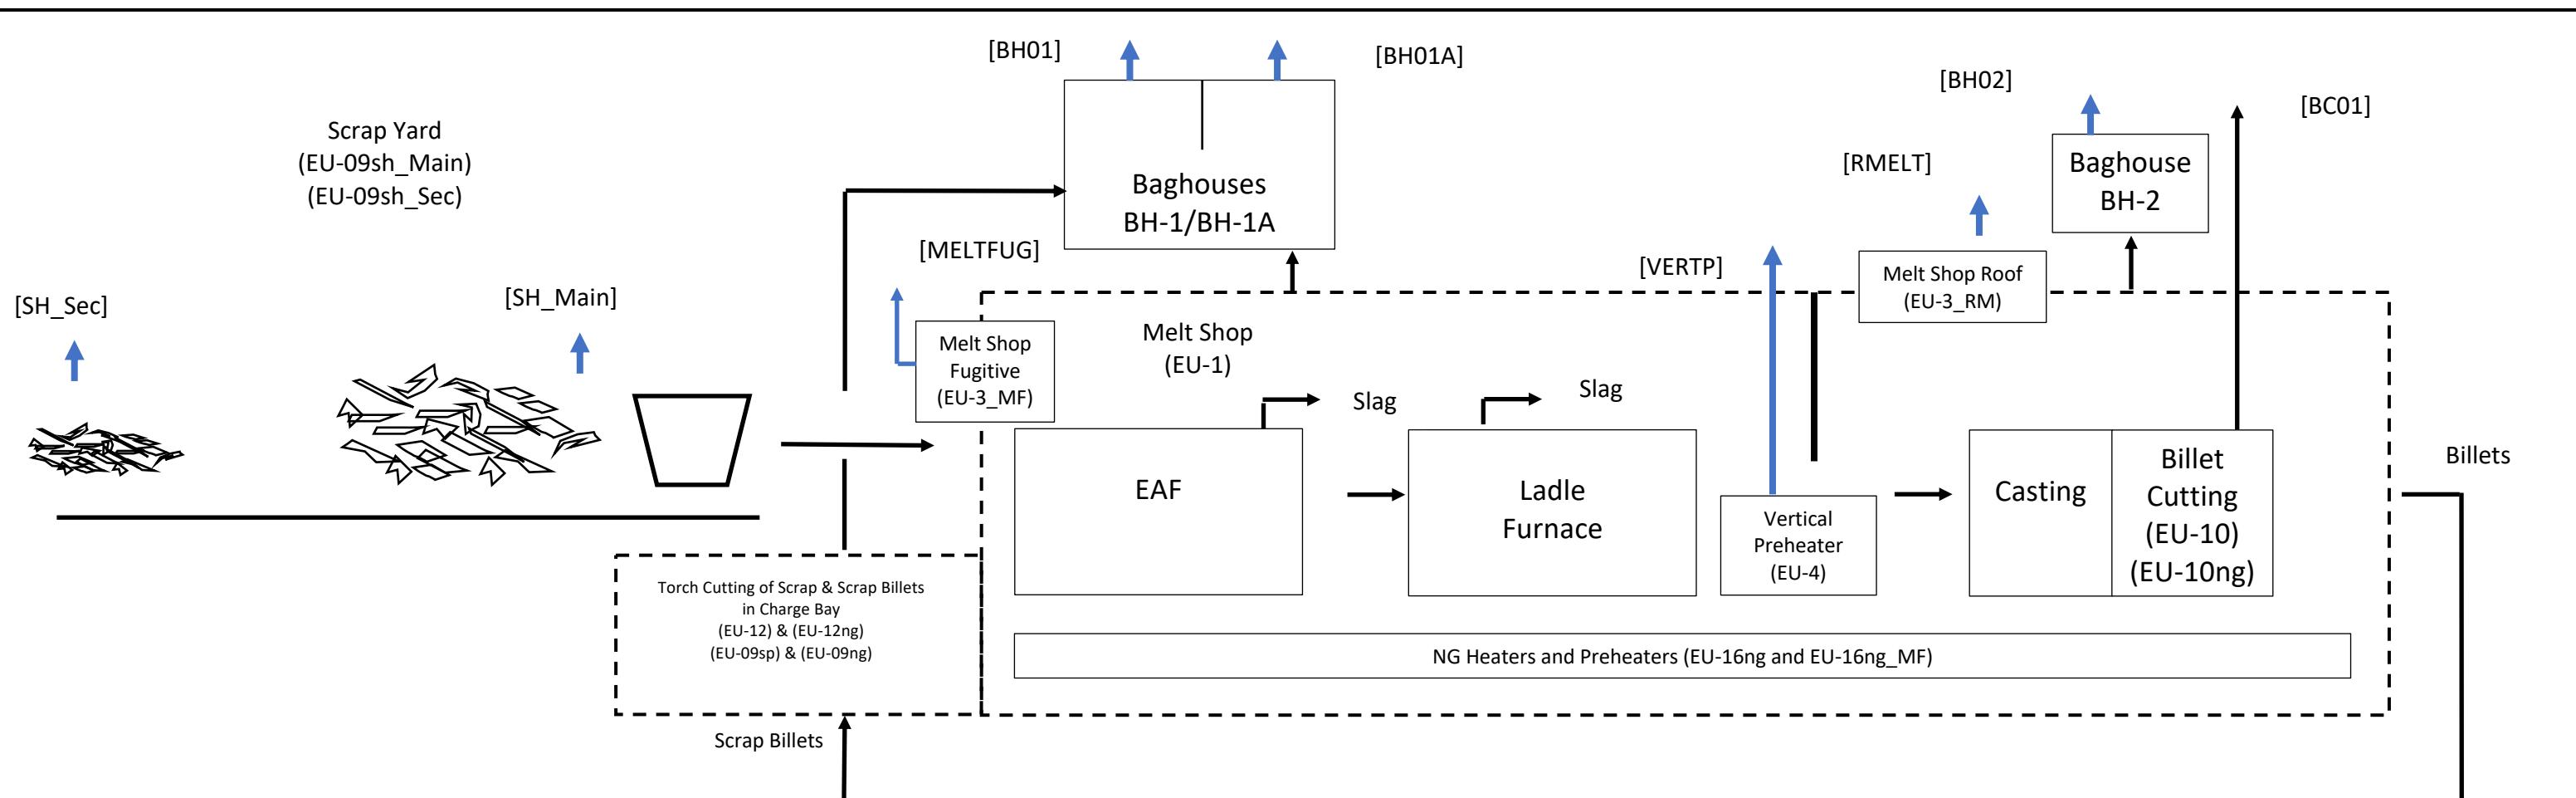

Attachment P – Slag Analytical Report for Fluoride

Attachment Q – Baghouse Dust Analytical Report for D/Fs, PCBs, and PAHs

**Attachment A**

**Figure A-1: Process Flow Diagram**

(See 7/3/23 submittal. No changes with this revision.)

Existing AIA Sources

- Thermal Trmntr Oven (EU-14) emitted through stack [TTO]
- Mill Scale Handling (no TACs, iron oxide)
- Merchant Bar Band Saw (no longer operated)
- Merchant Bar Straightener (no longer operated)
- Gasoline Dispensing Facility (EU-15) fugitive emission pt. [GDF]
- Baghouse Dust Handling (DEQ emission factor appears outdated. System enclosure routes emissions back to BH-1.)

Other Supporting Sources

- Cooling Towers
- Material Handling (EU-18) [ALOYTD, ALLOYULD, LIMEBCKT]
- Welding at Shops (EU-17) [MaintFab]
  - Maintenance & Fabrication Shop
  - Mobile Equipment Shop
  - Die, Machine and Electric Shop
  - (most welding occurs at Maintenance & Fabrication shop)

**RE: CSRM Dust Sampling / CSRM-007**

Dear Justin,

Enclosed are the results of the sample(s) submitted to our laboratory May 16, 2023  
For your reference, these analyses have been assigned our service request number **K2305592**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

Mark Harris  
Project Manager

## Table of Contents

- Acronyms
- Qualifiers
- State Certifications, Accreditations, And Licenses
- Case Narrative
- Chain of Custody
- Total Solids
- Polycyclic Aromatic Hydrocarbons by GCMS SIM
- Subcontract Lab Results

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

## Inorganic Data Qualifiers

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

## Metals Data Qualifiers

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

## Organic Data Qualifiers

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

## Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.alsglobal.com](http://www.alsglobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Case Narrative

**ALS Environmental—Kelso Laboratory**  
1317 South 13th Avenue, Kelso, WA 98626  
Phone (360)577-7222 Fax (360)636-1068  
[www.alsglobal.com](http://www.alsglobal.com)

**Client:** Bridgewater Group  
**Project:** CSRM Dust Sampling  
**Sample Matrix:** Soil

**Service Request:** K2305592  
**Date Received:** 05/16/2023

#### CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

#### Sample Receipt:

Four soil samples were received for analysis at ALS Environmental on 05/16/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

#### Semivolatiles by GC/MS:

The following analytes were flagged as outside the control criterion for Continuing Calibration Verification (CCV) KQ2309404-02: Benzo(a)pyrene and Indeno(1,2,3-cd)pyrene. In accordance with the EPA Method, 80% or more of the CCV analytes must have passed within 20% of the true value. The remaining analytes are allowed a 40% difference as per the ALS SOP. The CCV met these criteria. No further corrective action was required.

Method 8270D, 05/23/2023: Samples Baghouse 2 and Baghouse Dust 2 required dilution due to the presence of elevated levels of several target analytes. The reporting limits are adjusted to reflect the dilution.

Method 8270D, 05/23/2023: Samples Baghouse Dust 1 and Baghouse Dust 2 were received past holding time. The analysis was performed as soon as possible after receipt by the laboratory. The data was flagged to indicate the holding time violation.

#### Subcontracted Analytical Parameters:

Dioxins and Furans by EPA Method 1613B

The analysis for Dioxins and Furans was performed at ALS Burlington, Ontario Laboratory. The data for this analysis is included in the corresponding section of this report.

PCB Congeners by EPA Method 1668C

The analysis for PCB Congeners was performed at ALS Burlington, Ontario Laboratory. The data for this analysis is included in the corresponding section of this report.

Approved by \_\_\_\_\_

## Cooler Receipt and Preservation Form

Client Bridgewater Corp Service Request K23 CSS502  
 Received: 5/16/23 Opened: 5/16/23 By: VKM Unloaded: 5/16/23 By: VKM

1. Samples were received via? USPS Fed Ex UPS DHL PDX Courier Hand Delivered

2. Samples were received in: (circle) Cooler Box Envelope Other NA

3. Were custody seals on coolers? NA Y If yes, how many and where? 1 Front

If present, were custody seals intact? Y N If present, were they signed and dated? DA N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp Indicate with "X"	PM Notified If out of temp	Tracking Number	NA	Filed
	15.7	IR02		X	X	398330955249		

4. Was a Temperature Blank present in cooler? NA Y N If yes, notate the temperature in the appropriate column above:

If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":

5. Were samples received within the method specified temperature ranges? NA Y N

If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. NA Y N

If applicable, tissue samples were received: Frozen Partially Thawed Thawed

6. Packing material: Inserts Baggies Bubble Wrap Gel Packs Wet Ice Dry Ice Sleeves

7. Were custody papers properly filled out (ink, signed, etc.)? NA Y N

8. Were samples received in good condition (unbroken)? NA Y N

9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA Y N

10. Did all sample labels and tags agree with custody papers? NA Y N

11. Were appropriate bottles/containers and volumes received for the tests indicated? NA Y N

12. Were the pH-preserved bottles (see SMO GEN SOP) received at the appropriate pH? Indicate in the table below

13. Were VOA vials received without headspace? Indicate in the table below.

14. Was C12/Res negative? NA Y N

15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM

16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? NA Y N Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Temp not an issue due to matrix of sample

Results flagged with an asterisk (\*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

## Reference Information

**Sample Parameter Qualifier Key:**

Qualifier	Description
A	Method Blank exceeds ALS DQO. Refer to narrative comments for further information.
G	QC result did not meet ALS DQO. Refer to narrative comments for further information.
J,R	The analyte was detected below the calibrated range but above the EDL, and the ion abundance ratio(s) did not meet the acceptance criteria. Value is an estimated maximum.
M	A peak has been manually integrated.
M,J	A peak has been manually integrated, and the analyte was detected below the calibrated range but above the EDL.
M,J,R	A peak has been manually integrated, the analyte was detected below the calibrated range but above the EDL, and the ion abundance ratio(s) did not meet the acceptance criteria. Value is an estimated maximum.
M,R	A peak has been manually integrated, and the ion abundance ratio(s) did not meet the acceptance criteria. Value is an estimated maximum.
M,U	A peak has been manually integrated, and the analyte was not detected above the EDL.
R	The ion abundance ratio(s) did not meet the acceptance criteria. Value is an estimated maximum.
[J]	The analyte was detected below the calibrated range but above the EDL.
[U]	The analyte was not detected above the EDL.

**Test Method References:**

ALS Test Code	Matrix	Test Description	Method Reference**
DX-1613B-HRMS-BU	Solid	Dioxins and Furans HR 1613B	USEPA 1613B
Samples are extracted by Soxhlet. The extracts are prepared using column chromatography, reduced in volume and analyzed by isotope-dilution GC/HRMS.			
MOISTURE-BU	Soil	% Moisture	CCME PHC in Soil - Tier 1 (mod)
This method is used to determine the percent moisture in a sample. Samples are homogenized, moisture is removed by heating at 105°C until constant mass is achieved. The residues are measured gravimetrically and the difference in weight between the wet sample and the dried sample is used to determine the moisture content. This percent moisture can be used, in conjunction with analytical results, to report data on a dry weight basis.			
PCB-1668C-O2-HRMS-BU	Solid	All PCB congeners by GC/HRMS	USEPA 1668C
Samples are extracted by Soxhlet and the targets are isolated via multiple cleanup steps then analyzed by gas chromatography/high-resolution mass spectrometry using an SPB-Octyl column by isotope dilution			

\*\* ALS test methods may incorporate modifications from specified reference methods to improve performance.

*The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:*

Laboratory Definition Code	Laboratory Location
BU	ALS ENVIRONMENTAL - BURLINGTON, ONTARIO, CANADA

**Chain of Custody Numbers:**
**GLOSSARY OF REPORT TERMS**

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.

mg/kg - milligrams per kilogram based on dry weight of sample

mg/kg wwt - milligrams per kilogram based on wet weight of sample

mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight

mg/L - unit of concentration based on volume, parts per million.

< - Less than.

D.L. - The reporting limit.

N/A - Result not available. Refer to qualifier code and definition for explanation.

*Test results reported relate only to the samples as received by the laboratory.*

UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Total OctaCB			0.062	[J]	pg/g		10	13-JUN-23
Total NonaCB			<0.035	[U]	pg/g		5	13-JUN-23
DecaCB			0.104	[J]	pg/g		5	13-JUN-23
Total PCB			9.2	[J]	pg/g		40	13-JUN-23

COMMENTS: PCB-11 was detected in the blank that was within the reference method control limit. The recovery of 13C12-PCB-209 was above the method control limit. Native result, calculated via isotope dilution is not expected to be biased.

# Quality Control Report

Workorder: L2750776

Report Date: 27-JUN-23

Page 11 of 11

## Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

## Sample Parameter Qualifier Definitions:

Qualifier	Description
A	Method Blank exceeds ALS DQO. Refer to narrative comments for further information.
G	QC result did not meet ALS DQO. Refer to narrative comments for further information.
J,R	The analyte was detected below the calibrated range but above the EDL, and the ion abundance ratio(s) did not meet the acceptance criteria. Value is an estimated maximum.
M,J	A peak has been manually integrated, and the analyte was detected below the calibrated range but above the EDL.
M,J,R	A peak has been manually integrated, the analyte was detected below the calibrated range but above the EDL, and the ion abundance ratio(s) did not meet the acceptance criteria. Value is an estimated maximum.
M,R	A peak has been manually integrated, and the ion abundance ratio(s) did not meet the acceptance criteria. Value is an estimated maximum.
M,U	A peak has been manually integrated, and the analyte was not detected above the EDL.
[J]	The analyte was detected below the calibrated range but above the EDL.
[U]	The analyte was not detected above the EDL.

## Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.
