RE: East Side Plating – Stormwater Tier II Treatment Completion Letter
File # 100551

To Whom it May Concern:

Aquarius Environmental, L.L.C. (AE) has prepared this letter on behalf of East Side Plating (ESP) for the facility at 8400 SE 26th Pl, Portland, Oregon (herein referred to as the Site) to notify the City of Portland Bureau of Environmental Services (BES) of the completion of the Tier II Corrective Actions at the Site

ESP Submitted Tier II Corrective Action Report in December 2021 for effluent zinc, to install Ion exchange polishers downstream of the existing Enpurion unit. A subsequent Tier II document was generated for copper exceedances in the 2021 – 2022 water year.

The ion exchange units were installed in October 2021 to allow for media testing. Enpurion was onsite to install new IX resin on June 13, 2023 and place the system into full operation capacity prior to the June 30, 2023 deadline.

The Tier II remedy has been completed prior to the deadline. A photograph of the installed equipment was provided to AE by ESP (exhibit 1 below). Subsequent monitoring will demonstrate performance and maintenance intervals.

Exhibit 1 – Treatment system as viewed from the North (looking south). The IX units are the tan colored rectangular vessels on page right.

Should you have any additional questions about the Tier 2 or the site in general you can contact me directly at 503.828.0265 or daniels@aquariusenv.com.

Sincerely,

Daniel A. Scarpine, PE
