RE: DEQ Review – 2016 Station L Cap Inspection
ECSI #151

Dear Chris:

The Department of Environmental Quality (DEQ) reviewed the October 25, 2016 *2016 Station L Cap Inspection*. The memo presents results from the 2016 post construction inspection which was completed in accordance with the DEQ Consent Order ECSR-NWR-88-2.

An overview of the Record of Decision Requirements (ROD), cap inspection procedure, cap inspection results, summary of prior cap inspections, and proposed actions are presented. The cap was found to be in good condition and no near-term repair was proposed. The report recommended that the cap be inspected again in 2021.

DEQ accepts the report without modification and appreciates PGE's continued efforts monitoring the effectiveness of the Station L cap. DEQ did not receive an electronic copy of the report. Please provide an electronic copy within 30 days. If you have any questions or concerns regarding these comments, please feel free to call me at (503) 229-5354.

Sincerely,

David Lacey
