BNSF Railroad reports an air release from one of their rail cars, #SHPX204767. The release was caused by a loose valve on the top of the car. The car contained alcohol N.O.S., and it is not known how much was released at this time. The local on scene contact is Darrin Sthenck @ 360-524-1511. Crews were working on securing the leak it is not known if they are finished.

Situation:			

Per NRC report:
CALLER IS REPORTING AN UNKNOWN SHEEN FROM AN UNKNOWN SOURCE IN THE WILLAMETTE RIVER. CALLER STATED MOTOR OIL RELEASED FROM A STORM DRAIN A FEW WEEKS AGO AND SINCE THEN THERE HAS BEEN SHEENING PERIODICALLY ON THE WATER AFTER HEAVY RAINS. Per ARCADIS: Recurring sheen due to contaminated site, outfall was already boomed. Hard rain in Portland in morning created stormwater flow/sheen on Willamette River from outfall #22.

Received an NRC report of a sheen on the Willamette River. The sheen passes underneath a dock and measures approximately 25 feet by 15 feet. There is a barrel nearby that maybe the source. I received a call from Petty Officer Comer with the USCG, 503-338-9463, who requested a call back from the DEQ duty officer.

Follow-up from Greenburg: sheen was outside the outfall #22 containment boom so likely did not emit from there. Drum was empty (river water).

Description of Events: IN THE PROCESS OF TRANSFERRING PRODUCT FROM CARGO TANK THROUGH A CARGO PUMP MOUNTED ON CARRIER'S VEHICLE TO CONSIGNEE'S RECEIVING LINE WHEN CARRIER'S CARGO HOSE FAILED. THE FAILED HOSE WAS CONNECTED FROM CARRIER'S CARGO PUMP TO CONSIGNEE'S RECEIVING LINE. SEPARATION OCCURRED WHERE HOSE END IS PERMANENTLY FASTENED TO STAINLESS STEEL CAMLOCK FITTING. WHEN PRODUCT BEGAN TO LEAK, CARRIER'S DRIVER DISENGAGED THE CARGO PUMP AND CLOSED VALVES. 20 GALLONS OF PRODUCT SPILLED INTO SECONDARY CONTAINMENT. CONSIGNEE RECOVERED SPILLED MATERIAL. FAILED CARGO HOSE WAS REPLACED AND DELIVERY COMPLETED WITHOUT FURTHER INCIDENT. FAILURE IS UNDER INVESTIGATION. FAILED HOSE WAS SENT TO MANUFACTURER TO DETERMINE CAUSE. MATERIALS OF CONSTRUCTION WERE RECOMMENDED BY MANUFACTURER FOR THE PRODUCTED BEING DELIVERED. ONCE INVESTIGATION IS COMPLETED, CORRECTIVE ACTIONS SHALL BE IDENTIFIED AND IMPLEMENTED.

2015-1162, 6/3/15 Multnomah Co. Phillip 66 reported a non-recoverable sheen near their Terminal Dock in Portland on the Willamette. Originally reported as 200x75 at 1900 hours, it had nearly completely dissipated by 2042. Phillip 66 staff reported that the sheen coincided with a tug maneuvering a barge on the adjacent Chevron terminal, and speculated that the tug may have stirred up something fro the sediments. Both Phillip 66 and Chevron examined their facilities and found no source for the sheen.

Description of Events: UNOCAL DRIVER JIM TESKE ARRIED TO LOAD SUPER & UNLEADED FOR ORD #796572, JIM SET THE METER TO LOAD 2450 GALS UNLEADED TO TRUCK 1228 COMPARTMENT #2 (COMP #2,2169 GAL MAX). JIM NOTICED PRODUCT OVERFLOWING THE COMPARTMENT AND SHUT DOWN LOADING. THE METER SHOWED 2253 GALS LOADED, 50 GALS WAS RECOVERED IN THE KOT TANK VIA THE VAPOR HOSE, 33 GALS SPILLED ONTO THE CONCRETE INTO THE STRIP DRAINS. THE CONCRETS WAS HOSED DOWN AND THE AREA WAS DECLARED VAPOR FREE BY SNIFFER TESTING. THE OVERFILL PROBE ON COMPARTMENT #2 ALSO FAILED TO SHUT DOWN LOADING.

Description of Events: WHILE INSPECTING AN INBOUND TRAIN, A CAR INSPECTOR DISCOVERED TANK CAR ACFX 18954 LEAKING FROM TOP OF CAR. CHEMTREC AND THE SHIPPER WERE NOTIFIED. THE SHIPPERS EVALUATION DETERMINED THAT THE LIQUID EDUCATION LINE AND VALVE WERE DEFECTIVE AND NOT REPAIRABLE; THEREFORE, THE LADING WAS TRANSFERRED TO AN OPERABLE CAR.

Description of Events: A TRAIN CREW DETECTED THE ODOR OF CHLORINE DURING SWITCHING OPERATION. THE CREW NOTIFIED YARDMASTER, WHO IN TURN, NOTIFIED THE NEARBY SHIPPER. HAZMAT EMERGENCY RESPONDERS DETERMINED THAT TANK CAR ACFX 19847, RESIDUE: LAST CONTAINED CHLORINE, 2.3, UN1017, WAS LEAKING DUE TO A LOOSE BOLT ON A LIQUID LINE VALVE. AFTER THE BOLT WAS TIGHTENED, THE LEAK STOPPED, AND THE CAR WAS RELEASED FOR MOVEMENT APPROXIMATELY 0.5 MILES TO FINAL DESTINATION. THE SHIPPER ADVISED THAT A NITROGEN BLANKET WAS APPLIED TO THE CAR PRIOR TO THE RESIDUE MOVEMENT. THE SHIPPER LATER ADVISED THAT THE WEIGHT OF PRODUCT IN THE CAR AT FINAL DESTINATION WAS LESS THAN 1 POUND.

Situation:			

Recology reporting the release of 10 gallons of hydraulic oil to pavement. Release was caused when a front loading garbage truck rolled over. There was no impact to any drains or waterways. The driver was transported to the hospital; safety section is contacting OSHA in regards to this. Apollo Cleaning is currently on scene to clean the release and spilled waste. Caller will be contacting the Portland Spills line.

Incident No:	2016-1911	**Latitude:**	45.5683
Incident Status:	Closed	**Longitude:**	-122.7383
Incident Date:	Tue Aug 9 2016	**County Name:**	Multnomah
Situation:			

2016-1911 & 1913: Multnomah Co. Portland. Two separate reports came in that a dark sheen of oil was visible near the Kinder Morgan Dock in Portland. The oil was described as dark, thin and patchy by observers and not thought to be recoverable. The second caller stated that in 20 years working down there he had never seen the Willamette River at such a low stage which made us think this could be oil falling underneath the retention wall and seeping out because the whole area is superfund sites in the area. Just a theory though. A barge was docked there carrying gasoline, diesel and jet fuel which effectively eliminates it from being involved in the spill due to a description of the sheen. USCG was not going to investigate.

Comment:

The US Coast Guard discovered oil seeping from the shoreline on 1/28/82. The site is between Union Oil and the Chevron Terminal. The site is on Union property but both Union and Chevron agreed to conduct groundwater contamination studies. The program was modified in 1986 and is continuing. (11/12/91 RP/NWR) There are currently four oil/water separators on-site that treat wastewater from surface runoff and groundwater treatment. However, they are designed to remove free product and not dissolved contamination. The extent of petroleum contamination of soil and groundwater, especially dissolved contamination has not been determined. At least 4 separate releases have been identified, based on work done by Riedel (diesel, gasoline, and heavy oil). Groundwater contamination continues to bypass the recovery systems as witnessed by ongoing seepage into the Willamette River (most recently on 10/28/91 by Andree Pollock DEQ/NWR). While NPDES permits have (10/15/97; SMF): Additional release of 11,700 gallons of premium grade gasoline at Tank Farm #2 on 2/22/97. MSDS suggests that the product may have contained MTBE (up to 11 percent) and tetraethyl lead (33 ppm).

Comment:

Somewhat less than 10 percent of the 11,700 gallons of gasoline released on 2/22/97 at Tank Farm #2 has been accounted for. The spilled product is presumed to be in soils and groundwater beneath Tank Farm #2. Exploration for the released product appears to have encountered historically released gasoline, diesel fuel, and oil in the subsurface.

Comment:			

Surface water, soil; recovery system and 4 oil/water separators to remove free product from groundwater maintained by Riedel Environmental Services. Free product on shallow groundwater table represents inhalation threat to on- and off-site workers, and contact/inhalation/fire/explosion hazard to potential utility trench workers along NW Front Street. Dissolved constituents represent a threat to aquatic life in the river.

Comment:			

Responsible party cleanup or removal recommended. (11/12/91 RP/NWR) Extent of petroleum and dissolved phase petroleum contamination is unknown. Recovery systems have dealt exclusively with free-product contamination of groundwater, mainly diesel. Other petroleum products have been released, but have not been adequately investigated. (8/9/95 DMC/SAS) For more information on remedial activities, refer to ECSI site #1549. Remedial action for 2/22/97 gasoline spill should be addressed through existing Consent Order for Willbridge Bulk Fuel Area (ECSI #1549). ECSI #25, 160, and 177 have been combined into ECSI #1549.

Comment:			

Remedial investigations have been conducted at the Shell Oil, Chevron, and Unocal facilities since the 1970s. A fairly extensive network of wells provide groundwater contamination data on all three facilities. There is free product and dissolved-phase contamination from petroleum products beneath all three facilities. There are high levels of heavy metals in groundwater beneath the three facilities. In addition, groundwater at the Shell Oil facility contains DDT.

The Willamette River is adjacent to all three sites, which is in direct hydraulic connection with the contaminated groundwater. The river is used for fishing and recreational purposes. Seepage of contaminated groundwater into the river is ongoing.

Created by Init:			
Comment:			

(1/17/96 JAK/SRS) Chevron, Shell, and Unocal signed a Consent Order with DEQ on 3/30/94, to conduct a remedial investigation, feasibility study, and interim remedial measures. Interim actions have been conducted since in 5/95 to address free product in groundwater and contaminant seepage into the Willamette River. These included: (1) free-product removal from existing monitoring wells via recovery canisters, auto-bailers, and/or petro-belts; (2) continued operation of a subsurface cutoff trench; (3) placement of containment booms around seepage areas in the Willamette River; and (4) construction of engineered cutoff walls around a storm sewer that acts as a migration pathway. The remedial investigation was initiated in September 1998. Semi-annual groundwater monitoring is ongoing. (8/15/06 JAK/SRP) Chevron installed a sheet-pile barrier wall along the waterfront to control LNAPL and dissolved-phase migration in groundwater to river. Barrier wall completed in July 2006.
NOTE: ECSI #25, 160, and 177 combined into ECSI #1549.

Comment:			

Contaminant concentrations in groundwater may present current and future threats to human health and the environment via discharge to the Willamette River. Volatile emissions from the free product in groundwater could affect the health and safety of utility/service line workers.

(1/17/96 JAK/SRS) Chevron, Shell, and Unocal signed a Consent Order with DEQ on 3/30/94, to conduct a remedial investigation, feasibility study, and interim remedial measures. Interim actions have been conducted since in 5/95 to address free product in groundwater and contaminant seepage into the Willamette River. These included: (1) free-product removal from existing monitoring wells via recovery canisters, auto-bailers, and/or petro-belts; (2) continued operation of a subsurface cutoff trench; (3) placement of containment booms around seepage areas in the Willamette River; and (4) construction of engineered cutoff walls around a storm sewer that acts as a migration pathway. The remedial investigation was initiated in September 1998. Semi-annual groundwater monitoring is ongoing. (8/15/06 JAK/SRP) Chevron installed a sheet-pile barrier wall along the waterfront to control LNAPL and dissolved-phase migration in groundwater to river. Barrier wall completed in July 2006.
NOTE: ECSI #25, 160, and 177 combined into ECSI #1549.

Comment:			

Contaminant concentrations in groundwater may present current and future threats to human health and the environment via discharge to the Willamette River. Volatile emissions from the free product in groundwater could affect the health and safety of utility/service line workers.

Comment:			

Remedial investigations have been conducted at the Shell Oil, Chevron, and Unocal facilities since the 1970s. A fairly extensive network of wells provide groundwater contamination data on all three facilities. There is free product and dissolved-phase contamination from petroleum products beneath all three facilities. There are high levels of heavy metals in groundwater beneath the three facilities. In addition, groundwater at the Shell Oil facility contains DDT.

Comment:			

The Willamette River is adjacent to all three sites, which is in direct hydraulic connection with the contaminated groundwater. The river is used for fishing and recreational purposes. Seepage of contaminated groundwater into the river is ongoing.

Network of 3 recovery wells to intercept flow of hydrocarbons to river. Storm sewer reconstructed to eliminate petroleum migration via storm sewer. API separator and hydro cleaner installed to process petroleum contaminated groundwater. Spill containment and catchment devices installed (mainly free product removal). (3/31/93 DBennett/EPA) No further investigation anticipated under the Federal Superfund program; recommend PRP continue working with DEQ. (5/25/94 KAM/SRS) Further action letter sent 6/30/93. (8/9/95 DMC/SAS) For more information on remedial activities, refer to site #1549. ECSI #25, 160, 177 have been combined into ECSI #1549.

Comment:

Past activities (inland spills, tank bottoms burial practices, leaky petroleum transmission lines at main distribution terminal) have allowed petroleum products to permeate fill sands and accumulate at top of shallow aquifer. Actual source of groundwater contamination is obscure. Shell and Union Oil have tank farms adjoining this site and may have contributed. (City of Portland) facility fined five times by Coast Guard as a result of oil seeps at edge of Willamette River. Waste in form of weatherized gasoline products, tank bottoms, and API separator product; leachate from old sludge burial pits. (11/13/91 RP/NWR) Petroleum seepage into Willamette River observed by DEQ staff 10/28/91.

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: No
Transfer Facility: No
Onsite Burner Exemption: No
Furnace Exemption: No
Underground Injection Activity: No
Commercial TSD: No
Used Oil Transporter: No
Used Oil Transfer Facility: No
Used Oil Processor: No
Used Oil Refiner: No
Used Oil Burner: No
Used Oil Market Burner: No
Used Oil Spec Marketer: No

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19801118
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: N
Generator Code Description: Not a Generator, Verified
Source Type: Part A

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19920301
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 3
Receive Date: 19920708
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 19940301
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 19940301
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 4
Receive Date: 19950301
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 3
Receive Date: 19960301
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 5
Receive Date: 19960301
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 6
Receive Date: 19970707
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 4
Receive Date: 19980301
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 7
Receive Date: 19980302
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 8
Receive Date: 19990301
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 5
Receive Date: 20000301
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 9
Receive Date: 20000303
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 10
Receive Date: 20010228
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 11
Receive Date: 20020219
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 6
Receive Date: 20020301
Handler Name: CHEVRON USA INC WILLBRIDGE DISTRIB CTR

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D021
Waste Code Description: CHLOROBENZENE

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

The 4.71-acre facility is located approximately 1,000 feet from the southwest shore of the Willamette River in the vicinity of river mile 8.5 within the Portland Harbor study area (Figure 1). The property is owned by the Greenstein Trust and has been used since 1968 for metal recycling activities, primarily copper, aluminum, and lead recovery from coated wires. Calbag has operated at the site since 1995. The facility is located in an industrial area and there are no residences within one-quarter mile. The site was initially developed with a warehouse building sometime after 1940.

Calbag operated a metal recycling facility. Operations included cutting, torching, segregation, storage and distribution of metals. The previous operators, Acme Trading and Supply Company (Acme), had conducted similar activities, but also recovered metal (primarily copper, aluminum, and lead) from wire. Wire coatings and insulation were separated from the wire using an incinerator that generated a significant volume of ash. Acme conducted their operation under hazardous waste, air emissions and water discharge permits.

Other features of interest include the granulator building, where raw wire was chopped prior to incineration, the wire burner, and the aluminum sweat furnace. The wire burner/incinerator was reportedly dismantled and replaced in 1989 by a more efficient system that operated for about two years until it was decommissioned in 1991.

Calbag ceased operations on the subject property in 2000, vacated the property in May 2003, and subleased it to NW Fleet Repair (April 2002 through February 2005) and O'Neil Transport (present).

The primary contaminant migration pathway of concern is dissolved and suspended solid metal, phthalate, polychlorinated biphenyl (PCB), and petroleum contamination in site storm water. The site has been covered with impervious surfaces since about 1968 and there have been no documented spills on the subject property and no other sources of potential groundwater contamination have been identified. A recent subsurface investigation confirmed that three underground storage tanks decommissioned in 1987 are not sources of Willamette River contamination. Therefore, the groundwater contaminant migration pathway to the Willamette River is not significant for the subject site.

[May 2020] This former Calbag site achieved a source control decision of no further action in 2005. Data collected by the City of Portland in 2007 and 2008 indicated that PCBs may still be migrating from the property in stormwater. The new property owner (BDC Properties LLC) entered into a letter agreement with DEQ in 2009 to conduct a source control evaluation for the stormwater pathway from the site. Work plans for investigation were approved and iterative sampling, implementation of source control measures and effectiveness monitoring were conducted. The site obtained coverage under the 1200Z Industrial Stormwater general permit in 2019. DEQ is currently preparing an amendment to the 2005 source control decision.

Sampling results from the Portland Harbor revealed elevated levels of barium, cadmium, lead, mercury, and zinc in Willamette River sediments adjacent to the site. Historic site storm water data, characterization data from the 2005 sediment cleanout of the on- and off-site storm water piping system, and the 2005 LWG in-water sediment data in the vicinity of outfall #19 to the Willamette River indicates that the site was a potential historic source of copper, lead, chromium, mercury, PCBs, and phthalates to the Willamette River.

Willamette River sediments; sediment in on-site storm water catch basins and on- and off-site storm water pipes.

Three underground storage tanks were installed at the site in 1968: a 1,000-gallon gasoline, 1,000-gallon diesel, and 500-gallon used oil. The tanks were decommissioned in October 1987, prior to DEQ's UST rules; therefore, there are no records of the decommissioning. Subsurface soil and groundwater data collected in the immediate vicinity and downgradient of the former USTs during a 2005 Site Investigation indicated that there was no significant release from the tanks (non-detectable to trace levels of petroleum, metals, and PCBs).

Comment:			

Based on initial sampling results from a river sediment quality study, the Calbag Metals site has been identified as a potential source of contamination to the Portland Harbor. (2/2/00 MTP/SAP) Strategy Recommendation completed December 1999. An Expanded Preliminary Assessment should be conducted at the site to evaluate sediment contamination as a result of discharges from the outfalls or shallow contaminated groundwater discharge to the Willamette River. (4/30/01 ELB/VCP) Voluntary Letter Agreement signed 1/01. (11/19/01 TBG/VCP) A Preliminary Assessment was submitted on June 26, 2001. Analytical results from on-site catch basin sediment were submitted on October 18, 2001, and indicated an ongoing source of metal contamination. Further analyses are pending.

(11/21/05 TBG/VCP) A 2004 City of Portland investigation of city stormwater pipes adjacent to the subject site indicated an accumulation of sediment that appeared site-related based on the presence of elevated metals. Calbag subsequently removed about 0.8 tons sediment from city pipes adjacent to the subject site and about 3.2 tons of sediment from on-site storm water pipes and catch basins in January 2005. Removed sediment significantly exceeded Portland Harbor source control screening levels for copper, lead, chromium, mercury, PCBs, and phthalates. Calbag repaved the entire site in June 2005 to address ongoing (i.e., after sediment cleanout activities) elevated metals in site stormwater, likely due to metal fines on the old pavement -- despite numerous sweepings. Stormwater monitoring and catch-basin sediment sampling will be conducted to confirm that removal actions were adequate.

(8/30/2016 Liverman) Data collected by the City of Portland in 2007 and 2008 indicated that PCBs may still be migrating from the property. Under new ownership (BDC Properties LLC) the property was the subject of a new letter agreement with DEQ in 2009 to conduct a source control evaluation for the stormwater pathway from the site. Work plans for investigation were approved and iterative sampling, implementation of source control measures and effectiveness monitoring is underway.

Comment:			

The site lies in an industrialized area. No residentially zoned properties occur within a quarter mile of the site. Because a substantial portion of the site is paved, the risk exposure to potentially contaminated surface soil appears low.

Comment:			

The 5315 NW St Helens Rd. site was used by a trucking firm for 40 years, primarily to transport bulk oil and gas. At one point the company had 30 trucks, all of which were serviced and repaired at the facility. Information regarding drums on-site suggest that other contaminants on-site included paint, solvents (toluene, mineral spirits), used motor oil, and varnish. The quantity of these other contaminants appears to be low in comparison to the quantity of oil and gas. One spill of paint is documented on-site. Soil was removed and one soil sample taken. Only EP Toxicity was performed for metals, not total metal analysis. Detection limits for the soil sample analysis for solvents (EPA 601) were high due to a significant amount of hydrocarbons present. Three drums of waste and 14 drums of paint-contaminated soil were removed.

(June 29, 2007, Bob Schwarz)
Soil and groundwater samples contained gasoline and diesel, as well as petroleum constituents (lead, VOCs and PAHs). However, concentrations of these contaminants were below acceptable risk levels.

(10/17/94 GMW/SAS) The former property owner decommissioned 5 underground storage tanks (USTs) from the site in 12/88, and minor diesel contamination was found in soil beneath the tanks. Contamination was removed to "sight and smell" standards then in place. Fourteen drums of contaminated soil associated with a 1989 paint spill were removed, but confirmation sampling failed to quantify remaining contaminants. The paint spill occurred at the 5315 address. Northwest Field Services, Inc, the current property leasee, identified 3 locations with visual evidence of petroleum contamination in early 1994. They removed 59 tons of soil from 1 of these 3 areas, and left soil contamination with up to 4,100 ppm diesel in place in the southern part of the excavation. This removal occurred at the 5275 address. The site warrants further action under a low to medium priority. In addition, Site Assessment recommends placing the site on the Confirmed Release List. (6/29/05 JD/SAS)The project came into the Cleanup program via the Independent Cleanup Pathway. The project involves providing Site Specific Technical Consultation for site investigations and cleanup work at a property in northwest Portland.

(June 29, 2007, Bob Schwarz)
Five underground storage tanks (USTs) containing gasoline, diesel and heating oil were decommissioned by removal in 1988. Diesel-impacted soil of moderate concentrations was encountered above one of the USTs, and the site was therefore entered into DEQ's leaking UST database (LUST file No. 26-88-0115). The file notes that about 50 cubic yards of contaminated soil were stockpiled for offsite disposal, and disappeared without explanation. Because residual petroleum contamination associated with USTs was reduced to acceptable levels (about 390 mg/kg), DEQ issued an NFA determination for this portion of the site on May 3, 1989. In the NFA determination, the Department expressed concern about the missing contaminated soil. This issue was never resolved.

In August 2005, Wohlers Environmental (Wohlers) completed 18 borings at five general locations:

- Heating oil tank at the 5275 building
- Area behind the 5275 building
- Former drum storage area
- Heating oil tank near the 5315 building
- Former septic holding tank/petroleum dispenser island/UST cavity

In October 2005, Wohlers oversaw excavation of 68 tons of petroleum-contaminated soil from the area adjacent to and beneath the former petroleum dispenser island. The excavation covered an area of about 20 by 20 feet and extended to a maximum depth of about 9 feet. A vertically-oriented tank

was uncovered that was apparently part of a former onsite septic system. The tank was removed and transported to a steel recycling facility. Solids from inside the tank (no liquids were present) were removed, along with the excavated soil, were disposed of at Hillsboro Landfill in Hillsboro, Oregon.

During the August 2005 investigation, groundwater grab samples were collected from the top of the saturated zone (where contamination is most likely to be present) in four of the 18 borings.

Groundwater was encountered at an approximate depth of 13 feet bgs. A groundwater sample was also collected in October 2005 from the excavation pit at the former fuel dispenser island.

In October 2006, Wohlers installed two soil and groundwater monitoring points along the presumed downgradient site boundary along NW St. Helens Road. These temporary points were sampled only one time. DEQ agreed to this because the sample results were similar to those collected during the August 2005 investigation and were below applicable risk based concentrations.

Soil and groundwater concentrations of contaminants were determined to be below applicable risk screening levels. DEQ therefore issued a partial No Further Action determination on February 5, 2007, concerning soil and groundwater. Storm water quality is still being evaluated. This is of particular concern at this site because storm water discharges to the Willamette River within the area designated as the Portland Harbor Superfund site.

(April 20, 2009, Bob Schwarz) The site owners conducted four rounds of stormwater sampling between December 2006 and December 2007. They have been following best management practices to reduce the amount of contaminants leaving the site with stormwater runoff. DEQ is currently reviewing a source control evaluation report that summarizes control measures and stormwater sample results.

(December 17, 2009, Bob Schwarz) On December 13, 2009, DEQ issued a Source Control Decision document regarding this site. This document is attached. As stated in that document, DEQ concludes that, provided that stormwater management measures are continued, sources have been adequately controlled at this site. Per DEQ's responsibilities as described in the Portland Harbor Joint Source Control Strategy, DEQ proposes no additional stormwater evaluation or source control measures, beyond the following:

1) Cleaning of onsite catch basins CB-1 through CB-5 annually. Cleanout activities will include removal of accumulated liquid and solids from each catch basin for offsite treatment and/or disposal. Disposal receipts will be maintained onsite.

2) Cleaning or replacing the catch basin filters during the annual catch basin cleanout.

3) Sweeping of the asphalt surface between the 5275 building and the newly-constructed warehouse building to minimize sediment and debris entering catch basins CB-1 and CB-3. This will be performed at least once every two weeks.

4) Installation and maintenance of approximately 350 lineal feet of rice wattles along the eastern portion of the 5315 property to capture sediment in stormwater leaving the site as sheet flow.

Based on this evaluation, DEQ issued a final No Further Action determination for the site on December 11, 2009. A copy of this document is attached.

This property was purchased, along with two adjacent parcels, by the City of Portland. Additional information on the three parcels is found under ECSI listing 5529.

Comment:

(2/24/00 JMW/SAP) Based on initial sampling results from a river sediment quality study, this site was identified as a potential source of contamination to the Portland Harbor. A Site Assessment Review Notice was sent 3/99; a response was received 2/00. A Strategy Recommendation for Front LP Properties was completed 12/99, recommending a Preliminary Assessment w/sampling, under a high priority. Front LP Properties consists of four contiguous tax lots occupied by three separate businesses: Tube Forgings of America, CMI Northwest/Hampton Lumber, and Glacier Northwest, Inc. (See ECSI #1239.)

From 1941 through 1981, the site was owned by FMC and Gilpin Construction. In 1983, Shaver Transportation purchased the site.
Since 1956, the site has been the operational headquarters for Shaver Transportation, which operates a shipping business using tugboats and barges. Currently Shaver operates a fleet of 11 tugboats and 16 barges. The predominant cargo is wheat. In addition to the Shaver offices, the site contains a garage area currently used for storage, a 30,000 gallon above-ground storage tank (AST) used for ship refueling, three piers that provide vessel mooring, and a dedicated maintenance barge.

Over-the-water activities include general ship maintenance activities, such as refueling and oil changes. Over the years various lubricating oils, fuels, paints and solvents have been used at the site. It is unclear where these materials were stored, but it would appear that outside areas where they would have been stored have since been paved. The maintenance building has a relatively thick concrete floor built to withstand the weight of ship engines. During a site visit by DEQ in August 2001 the floor of the maintenance building appeared to be in relatively good condition and would likely limit the vertical migration of drips and spills in this area. Shaver reports they have never conducted ship repairs or sandblasting in the upland site area.

The maintenance barge receives used oil from tugboats, and also provides fresh oil. Fuel is provided from the 30,000 gallon AST via hard piping to the dock area. The AST is refueled about two times a week. Oil and other petroleum, and approximately 110 gallons of water-based degreaser are stored in the drum storage area adjacent to the maintenance shop. Approximately 2,400 gallons of used oil are generated monthly from the maintenance barge. About 50 gallons of TARR solvent is used annually in a parts washer.

The 5.17-acre property includes a parking area that was paved in the late 1980s, a dry well, and a septic system that was abandoned in October 2000. The majority of the site is paved or is covered by buildings.

(6/7/99 JMW/SAP) Based on initial sampling results from a river sediment quality study, the Shaver Transportation property has been identified as a potential source of contamination to Portland Harbor. A Site Assessment Review Notice was sent 3/3/99. Response from Shaver Transportation received 4/15/99. (11/23/99 MTP/SAP) Strategy Recommendation completed 11/23/99. An Expanded Preliminary Assessment (XPA) is recommended, to include sediment sampling and an evaluation of operational history to determine if the site has contributed to metals contamination in adjacent sediment. (6/17/03 MTP/VCP) Based on its review of available information, DEQ has determined the upland site area poses no significant threat to human health or the environment, and has therefore determined that no further action is needed at the site.

Weston sampling results from the Portland Harbor Sediment Study revealed bis(2-ethylhexyl)phthalate, metals, and benzoic acid in river sediments adjacent to the site. (4/15/03 MTP/VCS) There have been two petroleum-related releases at the site. During decommissioning of two 10,000-gallon diesel underground storage tanks (USTs) in 1992 a release to soil was documented. Approximately 78 cubic yards of soil were removed, and confirmation sampling showed that residual diesel contamination was present at up to 230 parts per million (ppm), but was within the acceptable cleanup level of 500 ppm. Groundwater was not encountered in the excavation.

During a sediment sampling investigation conducted by EPA in 1997, sediment sample SD135 was collected near outfall #19 located just downstream of the site. While a number of metals were detected above Portland Harbor Baseline concentrations, polynuclear aromatic hydrocarbons (PAHs), which are the primary constituents of concern in petroleum, were not detected above Portland Harbor Baseline concentrations (Table 1). In 1998 Shaver collected seven subsamples near the dock areas as a requirement for their dredging permit. The subsamples were combined into one composite sample. As for sample SD135, concentrations of a number of metals exceeded their respective Portland Harbor Baseline concentrations, but PAH concentrations were below Portland Harbor Baseline concentrations. Polychlorinated biphenyls (PCBs), which can be associated with used oil, also were detected at concentrations below Portland Harbor Baseline concentrations. Because there is no apparent metals source at the site it does not appear the site has contributed significant contamination to the Willamette River sediment.

The other petroleum release occurred during filling of the AST. On March 24, 1994, a fuel hose was disengaged from the fill port, resulting in the release of an estimated 35 to 40 gallons of diesel onto the ground surface. The release was reportedly contained, and no diesel reached the Willamette River. A

total of 2.08 tons of soil, representing the upper 6 inches of soil in the spill area, were excavated and disposed of off-site at Waste Management. There were no confirmation samples collected to determine the effectiveness of the cleanup.

EPA Handler ID: ORD982654675
Gen Status Universe: No Report
Contact Name: CHARLES W GASKILL
Contact Address: 4850 NW FRONT AVENUE , , PORTLAND , OR, 97210 , US
Contact Phone No and Ext: 503-222-6421
Contact Email:
Contact Country: US
County Name: MULTNOMAH
EPA Region: 10
Land Type: Private
Receive Date: 20000330

Violation/Evaluation Summary

Note: NO RECORDS: As of May 2020, there are no Compliance Monitoring and Enforcement (violation) records associated with this facility (EPA ID).

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: No
Transfer Facility: No
Onsite Burner Exemption: No
Furnace Exemption: No
Underground Injection Activity: No
Commercial TSD: No
Used Oil Transporter: No
Used Oil Transfer Facility: No
Used Oil Processor: No
Used Oil Refiner: No
Used Oil Burner: No
Used Oil Market Burner: No
Used Oil Spec Marketer: No

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 19920527
Handler Name: LAKESIDE INDUSTRIES
Source Type: Notification
Federal Waste Generator Code: N
Generator Code Description: Not a Generator, Verified

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19930301
Handler Name: LAKESIDE INDUSTRIES

The Lakeside Industries Portland Plant is located at 4850 NW Front Avenue in Portland in Multnomah County, Oregon 97210 (Figures 1 and 2). The property is composed of two tax lots (1N1E19A-00600 and 1N1E19A-00700) in the northeast quarter of Section 19 in Township 1 North, Range 1 East of the Willamette Meridian (WM). The Site encompasses approximately 9.41 acres of uplands bordering on the "West" (southwest) bank of the Willamette River. The property is situated in an industrial area of northwest Portland that is included in the Portland Harbor Superfund site.

Lakeside operates a hot mix asphalt (HMA) plant on the approximate 9.41-acre subject property, which is located in an industrially-zoned and developed area on the west bank of the Willamette River at River Mile 8.4. The Lakeside property is located within the Portland Harbor National Priority List (NPL) study area, also known as the Portland Harbor Superfund Site, which includes an 11.5-mile reach of the Willamette River between River Miles 1 and 12.

Weston sampling results from the Portland Harbor Sediment Study revealed metals and semivolatile organic compounds in river sediments adjacent to the site.

(AV November 2004) Lakeside closed two UICs in early 2004/late 2003. The UICs were near the truck bed spray area and service garage bays. DEQ will comment on the sampling conducted for the UIC closures. Groundwater assessment will be necessary.

(6/11/99 JMW/SAP) Based on intitial sampling results from a river sediment quality study, the Lakeside Industries property has been identified as a potential source of contamination to the Portland Harbor. A Site Assessment Review Notice was send on March 3, 1999. Response from Lakeside Industries was received April 27, 1999. A site screening is scheduled (level III priority). (11/23/99 MTP/SAP) Strategy Recommendation completed November 23, 1999. Preliminary Assessment (PA) recommended for evaluation of operational history and potential contaminant sources. (ACV 4/03) Lakeside is in the process of closing out two UICs in the the service bays and vehicle spraying area.

(Bob Schwarz, March 21, 2012) Wohlers Environmental Services (Wohlers) directed sampling and cleanup of soil contaminated with polychlorinated biphenyls (PCBs). Previous environmental investigations indicated that PCBs were the only contaminants in significant quantities at this site.

Wohlers collected 50 soil samples between October 17, 2011 and November 15, 2011 and analyzed them for PCBs. Based on these sample results, soil was removed as required to reduce residual concentrations to below 0.75 milligrams per kilogram (mg/kg). The excavation covered an irregular area with maximum dimensions of approximately 58 feet by 110 feet.

Soil with PCB concentrations greater than 50 mg/kg (94.68 tons) was disposed of at the Chem Waste hazardous waste landfill near Arlington, Oregon. Soil with less than 50 mg/kg PCBs (544.19 tons) was disposed of at Hillsboro Landfill in Hillsboro, Oregon.

(Bob Schwarz, 12-5-2012) In support of a No Further Action determination, DEQ requested stormwater sampling. That work is underway.

(Bob Schwarz, 6-3-2014) DEQ conducted a source control evaluation, which is documented in a March 8, 2014 Source Control Decision document (attached). DEQ concludes that Anderson has identified and controlled upland sources of contamination from current and past operations such that contaminant transport pathways at the site do not pose a significant current or future threat to the Willamette River. This determination is predicated on continued implementation of interim stormwater source control measures until the site is eventually developed with stormwater controls that conform to City of Portland's stormwater manual, programs, codes or other requirements.

DEQ determined that residual contamination, following removal and offsite disposal of 640 tons of PCB-contaminated soil, does not exceed acceptable risk levels. DEQ therefore recommended issuance of a No Further Action determination. Notice regarding this decision was published in the Oregonian, the Secretary of State's Bulletin, and DEQ's website. Comments were requested by May 30, 2014. No comments were received. A No Further Action letter was issued on June 3, 2014. A copy is attached.

The City of Portland has applied for a prospective purchaser agreement for tax lot 200 and the adjacent undeveloped lot 300, also owned by Anderson

Portland Properties. Although the investigation and cleanup focused on lot 200, some sampling was done on tax lot 300. These results did not reveal contamination on this parcel.

(Bob Schwarz, Aug. 11, 2014) DEQ and the City plan to enter into a prospective purchaser agreement (PPA). Public notice regarding this planned agreement was issued on August 1, 2014. Comments are requested during the month of August.

(Bob Schwarz, Oct. 28, 2014) The PPA consent order was signed on Oct. 8, 2014. A copy is attached.

Waste Code Details

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Comment:			

This facility has historically been used for bulk chemical storage and distribution, as well as for transport and storage of some hazardous wastes (mostly chlorinated solvent wastes). Most of the site is paved, and chemical storage and handling took place on concrete pads or within concrete containment basins. Chemical storage and handling ceased at the site in late 1986, and in 1990, Van Waters & Rogers began to implement its RCRA Facility Closure plan. No known spills have occurred at the site since McKesson Chemical Co. began operations in 1961. A 1991 RCRA Facility Assessment prepared by DEQ supported RCRA "clean closure." A 1991 DEQ soil sample from the most downgradient portion of the site contained 460 ppb TCA, compared to the Oregon Soil Cleanup Standard of 9,000 ppb. Van Waters & Roger's sample from the same area was non-detect for VOCs, including TCA.

In 11/86, Van Waters & Rogers bought McKesson Chemical's business that had operated here. (VW&R operates a nearby site at 3950 NW Yeon, ECSI #330.) McKesson had distributed organic/inorganic chemicals and stored hazardous wastes under a RCRA permit. Because VW&R never used the site, it applied for RCRA site closure in 1989. The property owner, Mt. Hood Chemical Corp., operates at the adjacent 4444 NW Yeon site (ECSI #81).

(10/3/95 GMW/SAS) In 1/92, DEQ's Hazardous Waste Section determined that Van Waters & Rogers had accomplished "clean closure" of the site under RCRA. This was based on a full decontamination of the facility, including the concrete hazardous waste storage pad and sump. Concrete in the sump, although found to be stained, had no cracks that penetrated the matrix, and concrete core samples contained no significant contamination. Because there is no evidence of significant contamination anywhere else at this facility, Site Assessment recommends no further action.

Source Type: Part A

Waste Code Details

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19920326
Handler Name: DURA INDUSTRIES INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON

DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F019
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Last Updated on Dt: 12/17/2002

The facility has received NOVs for improper hazardous-waste management practices. From the source file, it is hard to confirm a release. Sampling by the source indicates a release occurred. Later samples (split w/DEQ) showed lower levels of contaminants (what appears to be the only soil sample is negative). (12/18/90 MJM) The soil sample run by the facility was for total metals. Cd and Cr appear to be above what is considered background in the area. The DEQ sample analysis was an EP-Tox, which showed the two metals were not leachable.

Comment:			

There was more sampling later and the values were lower. There appears to be one soil sample. The results from Federal Testing were inconsistent with the later results. This issue was never resolved.

(9/7/99 SAM/VCP) Signed agreement to participate in DEQ's Independent Cleanup Pathway Program. Requested ICP and site-specific technical consultation. Final report to be submitted to DEQ approx. 11/1/99. (12/1/00 ACV/VCP) Final report submitted 12/00. Review comments expected in January. (6/25/01 ACV/VCP) DEQ reviewed ICP report submitted in January 2001. ICP report indicates PGE removed over 1,000 tons of soil via excavation and off-site disposal (Arlington). Residual PCBs do not exceed PCB generic remedy cleanup level of 1.2 ppm. Public notice in April 2001. DEQ issued NFA decision on May 15, 2001.

(12/06/05 RGS/LWS) DEQ entered into a Prospective Purchaser Agreement with the City of Portland in April 2005. The intent of this agreement is to investigate and address potential contaminants in the stormwater system and identify potential offsite contributors to the stormwater system.

(March 2014 Liverman) In Aug 2007, DEQ concurred that the City of Portland's May 18, 2007 Stormwater System Investigation Technical Memorandum addressed the requirements of the Prospective Purchaser Agreement to investigate and analyze sediment from the historic stormwater conveyance features on the site and update the system maps. The City abandoned the old lines which eliminated discharge of stormwater from the site to the Portland Harbor, except for seasonal overland flows to street catch basins. The City is required to provide annual reports on on-going erosion control measures, as required by the PPA until redevelopment addresses all furture stormwater discharge from the site.

[May 2020] The City was not able to complete redevelopment per the terms of the 2005 PPA Consent Order. A second PPA was executed in Oct 2014 covering the site and also the adjacent tax lots aquired by the City following No Further Action and Source Control Decisions (see ECSI #970), which required completion of paving and permanent stormwater infrastructure by Oct 31, 2019. DEQ initiated enforcement of the consent order in Dec 2019. The City is currently pursuing permits and land use approval to complete paving and permanent stormwater features.

Brazil signed a letter agreement in 12/2010 with DEQ to undertake a stormwater assessment at the site. Surface soil date was collected in 7/2011, which indicated elevated concentrations of PCBs, cadmium, chromium, lead, mercury, nickel, selenium, and zinc.

In 12/2012, Brazil proposed implementation of source control measures to address potential migration of contaminants from the site to the river, followed by confirmatory stormwater sampling.

In late 2013, Brazil received a Brownfield grant from the City of Portland to conduct remedial investigation of the erodible soils on the site. A work plan and quality assurance plan were developed and implemented in Spring 2014.

Based on soil sampling results with elevated metals, Brazil prepared and implemented a work plan to remove soil in the majority of the north lot gravel area in 2015. Post-excavation sampling indicated acceptable levels of metals and PCBs, prior to placement of geotextile fabric and backfilling with approximately 2 feet of clean gravel. In addition, the only stormwater collection feature was abandoned and the City's conveyance line was capped at the property boundary.

(8/30/2016 Liverman) DEQ issued a Source Control Decision and No Further Action determination Mar 29, 2016.

Stormwater (12/2012, Liverman). Erodible soils are noted to be mobilized in stormwater runoff from unpaved, gravel lots at the site to street catch basins that discharge to the Willamette River through City of Portland outfall 19. Based on data collected by the City of Portland in 2006, DEQ requested Brazil Motors and Controls to enter VCP and undertake a stormwater soure control investigation under the Portland Harbor Joint Source Control Strategy.

Comment:			

Brazil signed a letter agreement in 12/2010 with DEQ to undertake a stormwater assessment at the site. Surface soil date was collected in 7/2011, which indicated elevated concentrations of PCBs, cadmium, chromium, lead, mercury, nickel, selenium, and zinc.

In 12/2012, Brazil proposed implementation of source control measures to address potential migration of contaminants from the site to the river, followed by confirmatory stormwater sampling.

In late 2013, Brazil received a Brownfield grant from the City of Portland to conduct remedial investigation of the erodible soils on the site. A work plan and quality assurance plan were developed and implemented in Spring 2014.

Based on soil sampling results with elevated metals, Brazil prepared and implemented a work plan to remove soil in the majority of the north lot gravel area in 2015. Post-excavation sampling indicated acceptable levels of metals and PCBs, prior to placement of geotextile fabric and backfilling with approximately 2 feet of clean gravel. In addition, the only stormwater collection feature was abandoned and the City's conveyance line was capped at the property boundary.

DEQ is currently preparing a draft source control decision and no further action determination and anticipates issuance in early 2016.

Description History:	The current Brazil Motors site owner, Silver Star LLC, has owned the site and company since 2007. However, the

business has operated on site since 1964 under previous owners. Prior to Brazil Motors, another electric motor company operated on this site but the number of years in operation is unknown.

Manufacturer doesn't produce hazardous waste as a byproduct: feedstocks are blended or diluted to make product. Feedstocks include corrosive acids & bases & flammable liquid chemicals. There have been two events since 1973 when there has been a discharge to a sanitary sewer of liquids with pH >12.5. In the past the company has admitted to washing out empty surfactant feedstock drums onto a gravel surface which may flow to a storm drain connection. However, no hazardous substances were detected in this area after sampling. A parking lot storm drain catchment basin was sampled & found to contain 4400 mg/L of methylene chloride. Rain could carry chemical to storm drain & ultimately to Willamette River. May have resulted from feedstock drum leaking to drain.

(6/8/92 KPD/SAS) In May 1985, DEQ's Northwest Region required Mt. Hood Chemical to clean out its storm drain catchment basin and alter its rinsing and storage practices. The company pumped and shoveled out the storm drain catchment basin in June 1985. Sand and gravel from the catchment was dried and stored in pails inside the building. Confirmation sampling in July 1985 found methylene chloride at less than 2.5 ppb. Empty drums were sent off-site for reconditioning, or washed out inside the building. Residues were funneled into a city-approved neutralization pit. The drum storage site was moved to where the residues could be contained. Site Assessment believes no further action is required at this site at this time under the state Superfund program.

12/23/09 Mt. Hood entered into a letter agreement with the Oregon Department of Environmental Quality (DEQ) Voluntary Cleanup Program on October 30, 2008. At the initiation of DEQ oversight, a plan was developed to identify and evaluate recent and historic sources of contamination, identify all chemicals of interest (COIs), and evaluate how these chemicals were released to the environment. Initial sample analyses focused on volatile organic compounds (VOCs), petroleum hydrocarbons, metals, polychlorinated biphenyls, and metals. Chlorinated VOCs have been characterized in groundwater beneath the site extending down-gradient to off-site properties to the northwest. The full off site extent of VOCs in groundwater is not yet known. Site screening indicated that only chlorinated VOCs were a significant COI for the site with Trichloroethene (TCE) as the most significant risk due to the vapor intrusion pathway for building occupants. Sub-slab vapor samples collected inside the warehouse indicated detections of TCE significantly exceeding risk screening levels for vapor intrusion.

Solvent Plume Pilot Testing and Remediation
In May of 2009 several phases of pilot testing were performed to characterize conditions within the solvent source area and to evaluate possible treatment technologies. Pilot testing included air sparging with dual phase vapor extraction and soil vapor extraction (SVE) above the water table and beneath the building floor. Air sparging treatment was determined to not be an effective treatment method. SVE within the unsaturated zone below the building floor and hydrogen release compound injection to the saturated zone were selected as the most favorable remedial treatment options.

DEQ approved an interim remedial action measure (IRAM) to address the main source-area impacts and vapor intrusion risk. The IRAM was performed under Oregon Revised Statue 465.260(3) that allows a remedial action necessary to protect public health without formal public notice and comment. The IRAM system was implemented beginning in November 2009. The treatment system consists of an in-situ injection of hydrogen release compound to the saturated zone in order to promote natural degradation of VOCs in groundwater and a source-area horizontal SVE collection system beneath portions of the building floor to remove residual VOCs from soil and soil vapor from below the warehouse floor.

Current Site Conditions
Additional groundwater and soil vapor monitoring for VOCs will be performed to evaluate offsite contamination risks. The ongoing risk to site workers from solvent impacts from VOC vapor intrusion is being addressed within the warehouse by groundwater treatment and sub-slab vapor collection. Recent monitoring of sub-slab vapor VOC concentrations and negative subsurface vapor pressures in the remediation area indicate that there is no significant risk to site workers while the extraction system is operating. Continued monitoring of VOCs in subsurface soil vapors and groundwater will determine if the IRAM treatment is effective and may be selected as the final remedy for the site.

Last Updated on Dt: 11/25/2019

11/25/2019 Two rounds of Portland Harbor-focused groundwater and stormwater are planned for fall and winter 2019/2020 to support source control evaluation work. Stormwater treatment system is managed to optimize contaminant removal and system effeciency evaluation is pending. Plugged Outfall B pipes continue to prevent preferential dry weather flow to Saltzman Creek.
11/18/2018 Several Source Control Measures have been implemented at this site. These include extensive reworking of the stormwater sewer system, installation of a StormWater Rx water treatment system, large batch tanks, improved site BMPs, street sweeping, and permanent sealing of stormwater discharge pipes B-1 and B-2 stopping all uncontrolled flow to Saltman Creek.

CertainTeed (GS) Roofing has been in the DEQ Cleanup Program since 2003 and is a Portland Harbor Site located at Willbridge Cove.

Stormwater and groundwater are the two pathways of concern to Portland Harbor. For stormwater, the plant has implemented many ISO 14,000 Environmental Management Standards such as painting roofs with zinc-free coatings, installing pole barns over dumpsters, plastic-cladding stored roofing products on pallets, sweeping, and catch basin filters. A three-stage stormwater filtration system is being designed to bring site stormwater into compliance with Portland Harbor Preliminary Remediaton Goals this summer.

Groundwater flows through a former landfill at the site before entering the fluvial system. To complete characterization of the groundwater to surface water pathway, additional groundwater characterization was performed in 2015 above the confluence of Saltzman Creek and the Willamette River. Further, a pore water study was performed on the Saltzman Creek Delta to complete this pathway evaluation.

With this work, it is hoped that a Source Control Decision can be made in the late 2016.

GS (CertainTeed) Roofing site is an irregularly-shaped 8.5 acre property located at 6350 NW Front Ave. in Portland, OR. The site is bordered by Arkema to the north, Saltzman Creek to the south, Kinder-Morgan Willbridge bulk fuel terminal and Front Ave to the west and the Willamette River to the east.

Approximately 90% of the site is covered with buildings, asphalt or other hard surfaces. Stormwater runoff from the site enters Saltzman Creek at three outfalls.

Comment:			

Catch basin solids and several stormwater sampling events have been performed to evaluate source control pathways to the Willamette River.

Other potentially complete contaminant pathways from uplands to the Willamette River include erodable soils, groundwater to surface water. Rivwerbank soils evaluated in 2011.

Comment:			

The site lies adjacent to the Willamette River, which provides habitat for a number of Threatened & Endangered fish, including steelhead and Coho salmon. The two pathways of interest for source control are stormwater and groundwater-to-surface water. The site is within the boundary of Portland Harbor, which EPA added to the National Priorties List (NPL) in December 2000.

Comment:			

A pipe leaked in 1/5/86 releasing 1200 to 1500 gallons of bunker oil at the NE portion of the site. Remedial excavation removed an unknown volume of contaminated soil.

In 1990, gasoline was released from a UST on the western portion of the site. The maximum concentration of gasoline in soil from this release was 2100 ppm. Remediation was not possible due to proximity of buried natural gas pipes.

In 1991, diesel was released from a UST on the western portion of the site. Remediation was performed by excavation of 90 cubic yards of contaminatd soil following diesel UST removal.

Buried waste including roofing material, mineral granules, and other debris is present along the southeastern portion of the site. This buried material may contribute petroleum hydrocarbons, PAHs, solvents, and metals to groundwater. Additional groundwater sampling will be needed to make this determination.

The site lies adjacent to the Willamette River, which provides habitat for a number of Threatened & Endangered fish, including steelhead and Coho salmon. The two pathways of interest for source control are stormwater and groundwater-to-surface water. The site is within the boundary of Portland Harbor, which EPA added to the National Priorties List (NPL) in December 2000.

Comment:			

Catch basin solids and several stormwater sampling events have been performed to evaluate source control pathways to the Willamette River.

Other potentially complete contaminant pathways from uplands to the Willamette River include erodable soils, groundwater to surface water. Rivwerbank soils evaluated in 2011.

11/25/2019 Two rounds of Portland Harbor-focused groundwater and stormwater are planned for fall and winter 2019/2020 to support source control evaluation work. Stormwater treatment system is managed to optimize contaminant removal and system effeciency evaluation is pending. Plugged Outfall B pipes continue to prevent preferential dry weather flow to Saltzman Creek.
11/18/2018 Several Source Control Measures have been implemented at this site. These include extensive reworking of the stormwater sewer system, installation of a StormWater Rx water treatment system, large batch tanks, improved site BMPs, street sweeping, and permanent sealing of stormwater discharge pipes B-1 and B-2 stopping all uncontrolled flow to Saltman Creek.

CertainTeed (GS) Roofing has been in the DEQ Cleanup Program since 2003 and is a Portland Harbor Site located at Willbridge Cove.

Stormwater and groundwater are the two pathways of concern to Portland Harbor. For stormwater, the plant has implemented many ISO 14,000 Environmental Management Standards such as painting roofs with zinc-free coatings, installing pole barns over dumpsters, plastic-cladding stored roofing products on pallets, sweeping, and catch basin filters. A three-stage stormwater filtration system is being designed to bring site stormwater into compliance with Portland Harbor Preliminary Remediaton Goals this summer.

Groundwater flows through a former landfill at the site before entering the fluvial system. To complete characterization of the groundwater to surface water pathway, additional groundwater characterization was performed in 2015 above the confluence of Saltzman Creek and the Willamette River. Further, a pore water study was performed on the Saltzman Creek Delta to complete this pathway evaluation.

With this work, it is hoped that a Source Control Decision can be made in the late 2016.

GS (CertainTeed) Roofing site is an irregularly-shaped 8.5 acre property located at 6350 NW Front Ave. in Portland, OR. The site is bordered by Arkema to the north, Saltzman Creek to the south, Kinder-Morgan Willbridge bulk fuel terminal and Front Ave to the west and the Willamette River to the east.

Approximately 90% of the site is covered with buildings, asphalt or other hard surfaces. Stormwater runoff from the site enters Saltzman Creek at three outfalls.

Comment:			

A pipe leaked in 1/5/86 releasing 1200 to 1500 gallons of bunker oil at the NE portion of the site. Remedial excavation removed an unknown volume of contaminated soil.

In 1990, gasoline was released from a UST on the western portion of the site. The maximum concentration of gasoline in soil from this release was 2100 ppm. Remediation was not possible due to proximity of buried natural gas pipes.

In 1991, diesel was released from a UST on the western portion of the site. Remediation was performed by excavation of 90 cubic yards of contaminatd soil following diesel UST removal.

Buried waste including roofing material, mineral granules, and other debris is present along the southeastern portion of the site. This buried material may contribute petroleum hydrocarbons, PAHs, solvents, and metals to groundwater. Additional groundwater sampling will be needed to make this determination.

Most spills were cleaned up. (3/24/93 KAM/SRS) Further action recommended; high priority. Site has been referred to the Site Response Program. (8/9/95 DMC/SAS) Ongoing remedial investigation and interim remedial actions now under the Willbridge Bulk Fuel Area project (site #1549). ECSI #25, 160, and 177 have been combined into ECSI #1549.

Control Comment:			

Contamination remains at Greenway Recycling. DEQ has approved leaving this contamination in place, based on adherence to controls described in the E&ES (posted below). The E&ES: 1) restricts use of groundwater on-site; 2) prohibits, without prior DEQ approval, construction of enclosed structures on parts of the property; 3) forbids residential or agricultural use of the site; and 4) requires adherence to the Contaminated Media Management Plan in the event of soil disturbance or excavation in or near contaminated soil locations.

(10/24/08 CWH/CU&ER) The major remedial and confirmation sampling actions taken at the Penske site to assess and remediate the site included the following -

a. Two former oil-water separators were excavated and contaminated soils removed.
b. Approximately 16,000 gallons of potentially contaminated excavation water was pumped from the site and taken to waste water handling facilities.
c. Soil excavation depths varied from near surface to as deep as 11' below ground surface.
d. A total of 1,213.35 tons of contaminated soils were removed from the areas of the former ASTs and the two-stage oil-water separator. 12.16 tons of "special waste", primarily contaminated concrete, was also removed.
e. Confirmation soil and groundwater samples collected after the soil removals did not detect petroleum-related contaminants at levels above Oregon's

risk-based concentrations.

DEQ has concluded the following for the Penske Truck Leasing site -

1) Site remediation efforts – primarily removal of subsurface contaminated soil and site redevelopment – have removed major areas of site contamination.
2) Residual concentrations of petroleum hydrocarbons, associated constituents and metals in subsurface soils and groundwater are unlikely to present a threat to human health or the Willamette River.

A 30-day public comment period for a proposed No Further Action determination will commence on November 1, 2008.

(10/24/08 CWH/CU&ER) A conceptual site model was not developed for this site. The consultant, LFR, did compare soil and groundwater sample results to several Oregon risk-based concentrations. Based on the nearby site land use DEQ has determined that the likely applicable exposure pathways for this site are –

- Future construction and excavation worker exposure via direct contact, ingestion and inhalation of surface (<3 ft) and subsurface (>3 ft) soil.
- Future construction, excavation and utility worker exposure via direct contact with groundwater.
- Current and future occupational worker exposure due to inhalation of indoor and outdoor air due to volatilization from soil.
- Current and future occupational worker exposure due to inhalation of indoor and outdoor air due to volatilization from groundwater.
- Ecological exposure from groundwater transport and recharge to the Willamette River.

LFR compared the site soil and groundwater data against the Oregon risk-based concentrations (RBCs) for the human health pathways above and there were no concentrations that exceeded the RBCs for the applicable pathways. In addition, DEQ evaluated groundwater concentrations from the site to Portland Harbor Joint Source Control Strategy (JSCS). DEQ's comparison did find that several polynuclear aromatic hydrocarbons (PAHs) from one groundwater sample (GW-3) and an open excavation pit sample (GW-1) did slightly exceed JSCS concentrations for PAHs. Weighing several factors, such as - the detected concentrations were relatively low as compared to JSCS; the collected water samples were unfiltered; site surface runoff is directed to the City storm sewer system after treatment through a bioswale; and that the site is nearly a half mile from the Willamette River, DEQ concludes that there is likely little to no risk to surface waters from this site.

STORMWATER NOTES - The Penske Truck Leasing property is located within the drainage basin of the lower Willamette River in Portland – an area that has been designated as a Federal SUPERFUND site by the U..S. Environmental Protection Agency (EPA), generally referred to as Portland Harbor. Given the site's location, DEQ, as part of this review, also evaluated it as a possible ongoing or future source of contamination to Portland Harbor.

A review of the site's available history does not indicate that it ever had a direct discharge to the Willamette River. Current records indicate that it does have a catch basin on site that is connected to the City of Portland's storm water sewer that discharges to City of Portland outfall #19. The site confirmation sampling and prior environmental investigations do not indicate that any past releases from the USTs, ASTs, or oil-water separator system migrated off of the site.

The City of Portland (COP) has also confirmed that the site redeveloped following the the COP Stormwater Manual. The site parking area is surrounded on three sides (west, north and east) with open slots between curbs that run into a planted bioswale, which will filter runoff before entering the storm system. Given the site's recent redevelopment, which included new building construction and new paving that covers nearly all of the property, plus the limited extent of historic petroleum releases, DEQ has concluded that the site is highly unlikely to be a current or future source of contamination to the Portland Harbor site.

Comment:			

(10/24/08 CWH/CU&ER) The Penske Truck Leasing site is a 5.2-acre property located in northwest Portland, in a heavy-industrial zoned area that is part of the Guilds Lake Industrial Sanctuary (see Attachment A of Staff Report – Site Location figure). The site is generally flat and is completely paved or covered in buildings except around the perimeter, which is planted with trees and grass that also serve as a stormwater treatment bioswale. The site is situated in Township 1 North, Range 1 East, Section 19 of the Willamette Meridian and defined by the legal boundary of tax lot 1N1E19DB 1000. The site was redeveloped in 2007-2008 into a commercial truck leasing facility.

The site is located approximately 2,200 feet south of the Willamette River. There is no direct surface discharge pathway to the river. Stormwater from the site, after passing through the bioswale is directed into a storm sewer system managed by the City of Portland.

The site is bordered to its north and south by NW Yeon Avenue and NW St. Helens Road, respectively. There is a motel, La Quinta Inn, adjacent to the west and Western Wire Works located on its east side.

Comment:			

(10/24/08 CWH/CU&ER) This site has been employed for various uses since the 1940's. Around 1948 the property was used as a school house and then warehouse for school supplies until approximately 1970. The school/warehouse was torn down in 1970. Another two buildings were constructed at the site in 1973, which supported several trucking and loading/distribution businesses, including I-Five Freightline (1977), Time D-C Inc. (1982), Silver Eagle Truck (1987).and ABF Freight Systems, Inc (1996-2007). The two buildings were demolished in 2007.

Prior site investigations and site research performed for a previous owner revealed the existence of several underground storage tanks (USTs), above-ground storage tanks (ASTs) used during the former operation and two oil-water separators on the site. The former USTs, a total of ten, were removed in 1989 under guidance from DEQ's Leaking UST Program (LUST file 26-89-0176). Approximately 512 yards of contaminated soil from the UST release area were removed from the site at that time. The LUST Program issued a No Further Action for the UST cleanup in August of 1990.

Based on the Phase II assessment and prior site uses, the primary contaminants of concern (COCs) at the site are petroleum hydrocarbons, polynuclear aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), and metals.

Comment:

The Rhone-Poulenc AG Company is located at 6200 NW St. Helens Road in the Doane Lake area of Portland. The industrial area was created a century ago on land reclaimed from Doane Lake. Remnants of Doane Lake border the Rhone-Poulenc property to the north and west. Rhone-Poulenc operated a pesticide and herbicide manufacturing facility at the site from 1943 to 1990. Process wastewater was discharged directly to Doane Lake until 1966, and to the nearby Willamette River from 1966 to 1977. In 1966 Doane Lake was pumped into the Willamette River druing high river flow conditions to mitigate impacts to chemical taste observed in migrating salmon which was caused by Doane Lake surface water seeping into the Willamette River during low river flow conditions. Spills, leaks, and other releases also occurred at the site and into Doane Lake. Contaminants of concern include heavey metals, arsenic, chlorinated pesticides and herbicides, chlorinated phenols, chlorinated volatile organic compounds, benzen, volitial organic compounds, PCBs and dioxin. North Doane Lake, upgradient from Rhone-Poulenc, is still surrounded by natural vegetation and serves as viable habitat. The lake remnants, as well as surface water runoff and contaminated groundwater, all discharge to the Willamette River. Willamette River sediments appear to be contaminated with chemicals released from the Rhone-Poulenc site. Contaminated groundwater from the site currently discharges to North Doane Lake and the Willamette River.

Rhone-Poulenc began investigating contamination at the site in the early 1980s through DEQ's water quality program. Contamination was found in soil at the site, shallow groundwater beneath the site, and in the waters and sediments of East Doane Lake. Free-product is present in the vicinity of the former herbicide plant. Rhone-Poulenc began pumping and treating contaminated groundwater at the site in October 1983.

In December 1989, Rhone-Poulenc entered into a Consent Order with DEQ to conduct a Remedial Investigation and Feasibility Study (RI/FS) at the site. Rhone-Poulenc's progress on the investigation was extremely slow. Eight (8) years after the Consent Order was signed, Rhone-Poulenc had not completed either the RI/FS or an associated risk assessment.

In December 1997, DEQ directed Rhone-Poulenc to conduct a removal of contaminated sediments from East Doane Lake. Rhone-Poulenc did not comply. In February 1998, DEQ terminated the Consent Order due to Rhone-Poulenc's lack of compliance and apparent unwillingness to complete necessary investigation and cleanup activities at the site. DEQ declared the site to be an Orphan Project 1 month later.

The adjacent Gould EPA-lead NPL site remediation of the soil operable unit (which includes the Lake Area of the Rhone-Poulenc site) involved placement of stabilized fill on the Gould site in a hazardous waste landfill. Contaminants from Rhone-Poulenc existed beneath the northwestern portion of the Gould site as groundwater and shallow soil contamination, and in sediments of East Doane Lake. Dredging of contaminated sediments from East Doane Lake began in August 1998, and was completed in November 1998. The dredged sediments were placed into an on-site containment facility,

constructed on the adjoining Gould Property in 1999. In 1999, DEQ prepared a new Consent Order that included a work plan for completing the remedial investigation at the site.

STATUS
Soil and Groundwater characterizations have been completed for areas on the Rhone-Poulenc property including a draft human health risk assessment. Additional characterization of the off-site areas including West Doane Lake and North Doane Lake is under way. Next steps will include the evaluation of groundwater migration pathways, an evaluation of interim remedial measures for West Doane lake, performance of human health and ecological risk assessments for North Doane Lake. In addition, Rhone-Poulenc must evaluate the need for source control to address groundwater contaminant migration to the Willamette River in conjuction with the Portland Harbor remedial investigation.

Chipman Chemical Company operated the plant from 1943 to 1964. Rhodia, Inc. purchased the chemical plant from Chipman in 1964. Rhodia became Rhone-Poulenc in 1979. The site is currenly owned by Bayor Crop Science and managed by StarLink Logistic Incorparted.

The site is located in the Doane Lake Study Area (ECSI #36) and the Portland Harbor area (ECSI #2068). The Gould/NL Superfund site (ECSI #49) is adjacent. Surrounding land use is industrial. Groundwater on- and off-site is contaminated, as is surface water and sediment in North Doane Lake. Runoff, surface water, and groundwater discharge to the Willamette River. Groundwater dischrage to North Doane Lake. The Rhone-Poulenc facility was largely demolished in 1992, except for the administrative and storage buildings, foundation slabs, and the wastewater treatment system.

(10/15/1999 ELB/SRS) In December 1997, DEQ determined that removal of contaminated sediments from East Doane Lake was warranted, and directed R-P to prepare a removal workplan. R-P argued that a removal was unnecessary. DEQ decided that R-P's refusal to conduct the removal, coupled with lack of progress on the RI/FS, demonstrated that R-P was "unwilling" to investigate and clean up the site. DEQ terminated the Consent Order in February 1998 and declared the site an Orphan project in March 1998. DEQ completed the East Doane Lake sediment removal in November 1998, using funds from the Orphan Site Account. R-P will be expected to reimburse DEQ for the removal costs.

DEQ developed a RI workplan in 1999 for completion of the Remedial Investigation (RI). This workplan was attached to a new consent order for the site. Numerous subsequent work plans have been developed and implemented as part of the RI including: Final Groundwater Transport Evaluation Data Needs Report Field Sampling Plan (2/8/02), Remaining Remedial Investigation Work Plan (5/24/02), Draft North Doane Lake Field Sampling Plan (5/7/03), Final NAPL Evaluation Work Plan (5/7/03), Final Post-Characterization Groundwater Monitoring Plan (2/17/04), North Doane Lake Fish Reconnaissance Survey (7/19/04), Outfall 22B Camera Survey Results and Field Sampling Plan (8/16/04), Draft Lake Area Geophysical Survey Report and Intrusive Investigation Work Plan (12/6/04), Draft North Doane Lake Fish Tissue Sampling Work Plan (4/18/04), Final Lake Area Geophysical Survey Report and Intrusive Investigation Work Plan (5/3/05), West Doane Lake Treatability Study Work Plan (6/27/05), Final Stage 1 Source Control Evaluation Work Plan (10/31/05), Final Outfall 22B Interim Remedial Action Measure Work Plan (11/11/05), Draft Lake Area Bioremediation Pilot Study and Colloid Evaluation Work Plan (1/7/06), Winter 2006 Groundwater Monitoring Event Work Plan (6/28/06), Draft Expanded Lake Area Geophysical Survey Work Plan (3/27/06), Draft Lake Area Hydrologic Investigation Work Plan (5/126/06), Draft Summer 2006 Groundwater Monitoring Event Work Plan (6/28/06), Draft Stage 2 Source Control evaluation Work Plan (7/24/06), Draft Spring 2007 Groundwater Monitoring Event Work Plan (4/4/07), Draft Expanded Lake Area Intrusive Investigation Work Plan (8/2/07), Request for Approval, Deep Gravel Hydrogeologic Zone Pumping Test, North Front Avenue Interim Source Control Measure (4/1/08), West Doane Lake Phase 5 Treatability Study Work Plan (7/31/08), Work Plan Storm Sewer Camera Survey Associated with City of Portland Outfall 22B (10/1/08), Draft Outfall 22B Pre-Remedy Investigation Work Plan (4/3/09), Draft Outfall 22B Expanded Interim Remedial Action Measure Work Plan (5/1/09), Final West Doane Lake Interim Remedial Action Measure Work Plan (4/29/10). Rhone Poulenc has implemented several interim remedial action measures (IRAM): Groundwater Extraction Treatment System (GETS) IRAM (mid

1980s) (shallow herbicide area groundwater extraction system), 1996 Insecticide Area IRAM (caped dust plant area soils), 2004 Facility Structures Assessment and IRAM (decommissioning of shallow infrastructure and capping of herbicide area soil), 2010 City Outfall 22B Expanded IRAM (lining of adjacent site and City storm sewer system), 2010 West Doane Lake IRAM (in-situ stabilization and solidification of West Doane Lake sediments). Rhone Poulenc has submitted the following milestone documents: Revised North Doane Lake Level II Aquatic Ecological Risk Assessment (8/3/04), Final North Doane Lake Human Health Risk Assessment (6/8/10), Draft RI/SCE Report (11/19/2010), Draft-Revised Ecological Risk Assessment for North Doane Lake (3/21/11). Revised Final Human Health Risk Assessment (6/25/2012), DEQ Final Outfall 22B IRAM Perforamance Monitoring, Sampling and Analysis Plan (2/1/2005), DEQ Rhone-Poulenc Remedial Invetigation Report: Addendum to Nov 19, 2010 RI/SCE Report (4/1/2015), Revised Off-Property Screening Level Human Health Risk Assessment (3/1/2016), Thrid Revised Draft Feasiblity Study Work Plan-OU1 (6/2/2017), Draft 2018 Preliminary Hot Spot Evaluation (5/1/2018), FS Data Gaps Report (12/30/2018)

(10/15/1999 ELB/SRS) Chemicals formulated or manufactured at the Rhone-Poulenc (R-P) facility were released to the environment through a variety of means, including spills, leaks, and direct discharges. Prior to 1966, wastewater was discharged directly to Doane Lake. From 1966 until 1975, the wastewater was discharged to the Willamette River. After 1975, wastewater was discharged to the Portland sewer system. R-P began investigating contamination at the site in the early 1980s under DEQ oversight. In October 1983, R-P began pumping and treating contaminated groundwater at the site. In December 1989, R-P entered into a Consent Order with DEQ to conduct a Remedial Investigation and Feasibility Study (RI/FS) at the site. R-P's progress on the investigation, however, was extremely slow. A workplan for conducting the RI/FS wasn't approved until May 1994, and to-date neither the RI/FS nor an associated Risk Assessment has been completed. (11/21/01 ELB/SRP) As a result of these delays, the 1989 order was terminated in February 1998. A new order was signed in July 1999.

(10/15/1999 ELB/SRS) Chemicals formulated or manufactured at the Rhone-Poulenc (R-P) facility were released to the environment through a variety of means, including spills, leaks, and direct discharges. Prior to 1966, wastewater was discharged directly to Doane Lake. From 1966 until 1975, the wastewater was discharged to the Willamette River. After 1975, wastewater was discharged to the Portland sewer system. R-P began investigating contamination at the site in the early 1980s under DEQ oversight. In October 1983, R-P began pumping and treating contaminated groundwater at the site. In December 1989, R-P entered into a Consent Order with DEQ to conduct a Remedial Investigation and Feasibility Study (RI/FS) at the site. R-P's progress on the investigation, however, was extremely slow. A workplan for conducting the RI/FS wasn't approved until May 1994, and to-date neither the RI/FS nor an associated Risk Assessment has been completed. (11/21/01 ELB/SRP) As a result of these delays, the 1989 order was terminated in February 1998. A new order was signed in July 1999.

Comment:			

The Rhone-Poulenc AG Company is located at 6200 NW St. Helens Road in the Doane Lake area of Portland. The industrial area was created a century ago on land reclaimed from Doane Lake. Remnants of Doane Lake border the Rhone-Poulenc property to the north and west. Rhone-Poulenc operated a pesticide and herbicide manufacturing facility at the site from 1943 to 1990. Process wastewater was discharged directly to Doane Lake until 1966, and to the nearby Willamette River from 1966 to 1977. In 1966 Doane Lake was pumped into the Willamette River druing high river flow conditions to mitigate impacts to chemical taste observed in migrating salmon which was caused by Doane Lake surface water seeping into the Willamette River during low river flow conditions. Spills, leaks, and other releases also occurred at the site and into Doane Lake. Contaminants of concern include heavey metals, arsenic, chlorinated pesticides and herbicides, chlorinated phenols, chlorinated volatile organic compounds, benzen, volitial organic compounds, PCBs and dioxin. North Doane Lake, upgradient from Rhone-Poulenc, is still surrounded by natural vegetation and serves as viable habitat. The lake remnants, as well as surface water runoff and contaminated groundwater, all discharge to the Willamette River. Willamette River sediments appear to be contaminated with chemicals released from the Rhone-Poulenc site. Contaminated groundwater from the site currently discharges to North Doane Lake and the Willamette River.

Rhone-Poulenc began investigating contamination at the site in the early 1980s through DEQ's water quality program. Contamination was found in soil at the site, shallow groundwater beneath the site, and in the waters and sediments of East Doane Lake. Free-product is present in the vicinity of the former herbicide plant. Rhone-Poulenc began pumping and treating contaminated groundwater at the site in October 1983.

In December 1989, Rhone-Poulenc entered into a Consent Order with DEQ to conduct a Remedial Investigation and Feasibility Study (RI/FS) at the site. Rhone-Poulenc's progress on the investigation was extremely slow. Eight (8) years after the Consent Order was signed, Rhone-Poulenc had not completed either the RI/FS or an associated risk assessment.

In December 1997, DEQ directed Rhone-Poulenc to conduct a removal of contaminated sediments from East Doane Lake. Rhone-Poulenc did not comply. In February 1998, DEQ terminated the Consent Order due to Rhone-Poulenc's lack of compliance and apparent unwillingness to complete necessary investigation and cleanup activities at the site. DEQ declared the site to be an Orphan Project 1 month later.

The adjacent Gould EPA-lead NPL site remediation of the soil operable unit (which includes the Lake Area of the Rhone-Poulenc site) involved placement of stabilized fill on the Gould site in a hazardous waste landfill. Contaminants from Rhone-Poulenc existed beneath the northwestern portion of the Gould site as groundwater and shallow soil contamination, and in sediments of East Doane Lake. Dredging of contaminated sediments from East Doane Lake began in August 1998, and was completed in November 1998. The dredged sediments were placed into an on-site containment facility, constructed on the adjoining Gould Property in 1999. In 1999, DEQ prepared a new Consent Order that included a work plan for completing the remedial investigation at the site.

STATUS
Soil and Groundwater characterizations have been completed for areas on the Rhone-Poulenc property including a draft human health risk assessment. Additional characterization of the off-site areas including West Doane Lake and North Doane Lake is under way. Next steps will include the evaluation of groundwater migration pathways, an evaluation of interim remedial measures for West Doane lake, performance of human health and ecological risk assessments for North Doane Lake. In addition, Rhone-Poulenc must evaluate the need for source control to address groundwater contaminant migration to the Willamette River in conjuction with the Portland Harbor remedial investigation.

The site is located in the Doane Lake Study Area (ECSI #36) and the Portland Harbor area (ECSI #2068). The Gould/NL Superfund site (ECSI #49) is adjacent. Surrounding land use is industrial. Groundwater on- and off-site is contaminated, as is surface water and sediment in North Doane Lake. Runoff, surface water, and groundwater discharge to the Willamette River. Groundwater dischrage to North Doane Lake. The Rhone-Poulenc facility was largely demolished in 1992, except for the administrative and storage buildings, foundation slabs, and the wastewater treatment system.

(10/15/1999 ELB/SRS) In December 1997, DEQ determined that removal of contaminated sediments from East Doane Lake was warranted, and directed R-P to prepare a removal workplan. R-P argued that a removal was unnecessary. DEQ decided that R-P's refusal to conduct the removal, coupled with lack of progress on the RI/FS, demonstrated that R-P was "unwilling" to investigate and clean up the site. DEQ terminated the Consent Order in February 1998 and declared the site an Orphan project in March 1998. DEQ completed the East Doane Lake sediment removal in November 1998, using funds from the Orphan Site Account. R-P will be expected to reimburse DEQ for the removal costs.

DEQ developed a RI workplan in 1999 for completion of the Remedial Investigation (RI). This workplan was attached to a new consent order for the site. Numerous subsequent work plans have been developed and implemented as part of the RI including: Final Groundwater Transport Evaluation Data Needs Report Field Sampling Plan (2/8/02), Remaining Remedial Investigation Work Plan (5/24/02), Draft North Doane Lake Field Sampling Plan (5/7/03), Final NAPL Evaluation Work Plan (5/7/03), Final Post-Characterization Groundwater Monitoring Plan (2/17/04), North Doane Lake Fish Reconnaissance Survey (7/19/04), Outfall 22B Camera Survey Results and Field Sampling Plan (8/16/04), Draft Lake Area Geophysical Survey Report and Intrusive Investigation Work Plan (12/6/04), Draft North Doane Lake Fish Tissue Sampling Work Plan (4/18/04), Final Lake Area Geophysical Survey Report and Intrusive Investigation Work Plan (5/3/05), West Doane Lake Treatability Study Work Plan (6/27/05), Final Stage 1 Source Control Evaluation Work Plan (10/31/05), Final Outfall 22B Interim Remedial Action Measure Work Plan (11/11/05), Draft Lake Area Bioremediation Pilot Study and Colloid Evaluation Work Plan (1/7/06), Winter 2006 Groundwater Monitoring Event Work Plan (6/28/06), Draft Expanded Lake Area Geophysical Survey Work Plan (3/27/06), Draft Lake Area Hydrologic Investigation Work Plan (5/126/06), Draft Summer 2006 Groundwater Monitoring Event Work Plan (6/28/06), Draft Stage 2 Source Control evaluation Work Plan (7/24/06), Draft Spring 2007 Groundwater Monitoring Event Work Plan (4/4/07), Draft Expanded Lake Area Intrusive Investigation Work Plan (8/2/07), Request for Approval, Deep Gravel Hydrogeologic Zone Pumping Test, North Front Avenue Interim Source Control Measure (4/1/08), West Doane Lake Phase 5 Treatability Study Work Plan (7/31/08), Work Plan Storm Sewer Camera Survey Associated with City of Portland Outfall 22B (10/1/08), Draft Outfall 22B Pre-Remedy Investigation Work Plan (4/3/09), Draft Outfall 22B Expanded Interim Remedial Action Measure Work Plan (5/1/09), Final West Doane Lake Interim Remedial Action Measure Work Plan (4/29/10). Rhone Poulenc has implemented several interim remedial action measures (IRAM): Groundwater Extraction Treatment System (GETS) IRAM (mid 1980s) (shallow herbicide area groundwater extraction system), 1996 Insecticide Area IRAM (caped dust plant area soils), 2004 Facility Structures Assessment and IRAM (decommissioning of shallow infrastructure and capping of herbicide area soil), 2010 City Outfall 22B Expanded IRAM (lining of adjacent site and City storm sewer system), 2010 West Doane Lake IRAM (in-situ stabilization and solidification of West Doane Lake sediments). Rhone Poulenc has submitted the following milestone documents: Revised North Doane Lake Level II Aquatic Ecological Risk Assessment (8/3/04), Final North Doane Lake Human Health Risk Assessment (6/8/10), Draft RI/SCE Report (11/19/2010), Draft-Revised Ecological Risk Assessment for North Doane Lake (3/21/11). Revised Final Human Health Risk Assessment (6/25/2012), DEQ Final Outfall 22B IRAM Perforamance Monitoring, Sampling and Analysis Plan (2/1/2005), DEQ Rhone-Poulenc Remedial Invetigation Report: Addendum to Nov 19, 2010 RI/SCE Report (4/1/2015), Revised Off-Property Screening Level Human Health Risk Assessment (3/1/2016), Thrid Revised Draft Feasiblity Study Work Plan-OU1 (6/2/2017), Draft 2018 Preliminary Hot Spot Evaluation (5/1/2018), FS Data Gaps Report (12/30/2018)

Comment:

The Metro Central Transfer Station is located in the industrial area of northwest Portland at 6161 61st Avenue. It encompasses 10.4 acres on tax parcel R32491 and is zoned for general industrial. Activities include accepting and processing municipal solid waste, organics (food waste and yard debris), recyclables, and household or conditionally exempt small quantity generator hazardous waste from commercial and residential sources. The hazardous waste include; acids, bases, cleaners, solvents, pesticides, herbicides, poisons, petroleum products, and paint.

Stormwater is discharged from the site under a 1200-Z NPDES permit via a private connection to the existing City of Portland stormwater system (discharge point Outfall-22B).

A succession of steel companies have operated a warehouse on the site since at least 1924. Industrialization of the Doane Lake area began in the 1930's when significant amounts of fill material were added to the lake. Most of the surface soil at the Metro Central Transfer Station has been converted by artificial fill or modified by re-grading. The northern half of the property was originally submerged by Doane Lake. In 1989, Trans Industries proposed purchasing the site and converting the warehouse into a solid waste transfer station for Metro.

Comment:

(6/28/93 KPD/SAS) An initial Site Investigation found that the groundwater was contaminated with pesticides, herbicides, BTEX compounds, and heavy metals. The contamination is believed to come from the adjacent Rhone-Poulenc site (ECSI #155).

(6/23/2014) Stormwater Source Control Evaluation determined that while site operations and documented releases do not appear to have resulted in substantial contaminant releases at the site, catch basin solids results for cadmium, mercury and PCBs exceeded their respective Joint Source Control Screening Level Values and were high relative to other heavy industrial sites. Stormwater results for cadmium, lead and nickel collected as part of the source control assessment also exceeded their respective screening level value and were high relative to other industrial sites. Additionally, stormwater results for several organic compounds such as PAHs, organochlorine pesticides and SVOCs were detected sporadically at concentrations above their respective SLVs. The predominant source of these constituents is likely associated with the large scale processing of municipal solid waste and truck traffic at the site.

Comment:

The site is located in a heavily industrialized part of NW Portland. The Willamette River is about a quarter-mile north and east of the site, and Forest Park is about a quarter-mile south and west of the site. Groundwater at the site is not used for drinking. The public is encouraged to drive onto the site to drop off household hazardous wastes, but are told to remain in their cars.

Stormwater was evaluated as a potential source to Portland Harbor.

Comment:

(2/23/95 KPD/SRS) Because contaminated groundwater is continuing to migrate onto the site, Site Response recommends that the site be placed on the Confirmed Release List (CRL). The source of the contamination is currently being cleaned up, so Site Response does not recommend any additional action be taken at this time. When the cleanup at the Rhone-Poulenc site has been completed, Site Response recommends that an expanded Preliminary Assessment (XPA) be performed to check that the cleanup has removed the contamination beneath the transfer station.
(6/23/14 DL) DEQ's source control decision for the site is that additional source control is needed at the site. Based on the identified contaminant sources and level of screening level exceedances, DEQ determined that continued implementation of the 1200-Z permit under DEQ cleanup oversight is appropriate for source control at this time. This is because, based on the 2012-2013 NPDES sampling results, DEQ anticipates that the site will require implementation of a Tier 2 corrective action for metals exceedances to be in compliance with the permit by 2016, which will also provide effective control of any potential legacy contaminants at the site.

(5/19/93 KPD/SAS) The facility primarily produced chlorine, but also produced hydrochloric acid, hydrogen, sodium chlorate, and sodium hydroxide. Asbestos (used as a diaphragm in electrolytic cells) was historically buried in a pit on-site. The buried asbestos was removed in 1992 with DEQ Air Quality Program oversight. Waste diaphragm asbestos was subsequently conveyed to a filter press and the filter cake placed into drums for off-site disposal. "Brine purification residue" (a mixture of calcium carbonate and magnesium hydroxide) was initially managed in on-site ponds. Brine pond residue was subsequently removed and disposed in a off-site landfill. Brine residue was more recently dewatered in a filter press and the dry solids landfilled at a DEQ permitted landfill. Four Willamette River outfalls are present. Only one is currently active which is the most down stream of the four. It discharges treated stormwater and groundwater under NPDES permits. Six chemical spills were reported to have occurred at the site in 1987, the first year reporting was required. Excavation activities in 1992 encountered residues determined to be associated with the manufacture of DDT by Pennwalt in the late 1940s and early 1950s. DDT residue was removed by Atochem in a trench disposal area from the northwestern portion of the plant site in 1994. Investigation of the former DDT-manufacturing area (current acid plant area) by Atochem in 1994 showed high concentrations of DDT in soil and monochlorobenzene in groundwater. (11/21/01 MJM/VCP). Remedial investigation work detected hexavalent chromium, perchlorate, chloroform and chloride in site groundwater associated with former facility operations.

The site is located in a heavily industrialized part of NW Portland. The Willamette River is adjacent to the site on the north and east. The Remedial Investigation, completed in 2006, identified surface soil impacts from DDT and other facility related contaminants. Groundwater in the Acid Plant area is impacted with DDT, chlorobenzene, perchlorate and VOCs (e.g., chloroform). Groundwater in the Chlorate Plant area is impacted by hexavalent chromium and perchlorate. Chloride levels are high in groundwater site-wide, but are most elevated in the Chlorate Plant area. Current complete exposure pathways are human and ecological exposure to site soils, groundwater and stormwater migration to the Willamette River and potential riverbank errosion.

(10/29/97 MJM/VCP) Elf Atochem entered the DEQ Voluntary Cleanup Program (2/96) and requested DEQ oversight for the investigation & cleanup of the former DDT manufacturing area (former Acid Plant area). Elf Atochem and DEQ entered Voluntary RI/FS Agreement to investigate former DDT manufacturing releases and to complete a RI of the facility. Fall 2000, ATOFINA removed approximately 3,000 cubic yards of soil with some of the highest levels of DDT . ATOFINA also paved or placed temporary covers over areas of the plant to control surface soils containing DDT from being transported by stormwater to the Willamette River. In December 2000, ATOCHEM constructed and started operation of a vapor-extraction system to remove chlorobenzene from vadose zone soils in the location of the former chlorobenzene recovery unit. Plant operations ceased in 2001; phased demoloition of the plant structures occurred through 2005. A number of pilot and full-scale interim removal measures have been implimented since 2000. These include attempts to treat chlorobenzene and DDT with sodium persulfate, in-situ reduction of hexavalent chromium to trivalent chromium using calcium polysulfide and treatment of chlorobenzene by air sparging and soil vapor recovery.

Construction of upland source control measures began in April 2012 to control the migration of impacted stormwater and groundwater to the Willamette River.

* Stormwater - The existing stormwater collection and conveyance system was decommissioned including the upstream three NPDES outfalls. Surface soils in the more contaminated portions of the site were covered with temporary clean caps to prevent transport by stormwater. New stromwater conveyance channels, detention basin and sand filter were constructed and operational in October 2012.

* Groundwater - Construction of a 1600 lineal foot soil-bentonite slurry groundwater cutoff wall was completed in 2012. The wall is up to 88 feet deep and in contact with basalt bedrock. Construction of a groundwater collection and treatment system associated with the cutoff wall was completed in 2013 and became operational in 2014.

Comment:			

[Jan. 2017] Various chemicals were produced at the facility, which began operations in 1941, including: sodium chlorate, potassium chlorate, chlorine, sodium hydroxide, dichloro-dephenyltrichloroethante (DDT), sodium orthosilicate, sodium hydroxide, magnesium chloride hexahydrate, ammonia, ammonium perchlorate, sodium perchlorate, and hydrochloric acid.

Manufacturing operations ceased in 2001, and the plant was decommissioned. Current site operations include the operation, monitoring and maintenance of source control measures which include: stormwater collection and treatment system, groundwater collection and treatment system and temporary soil caps.
Primary site contaminants of concern include: DDT, chlorobenzene, chloroform, hexavalent chromium, perchlorate and chlorinated furans.

Project focus since the completion of the remedial investigation in 2006 has been the implementation of upland source control measures to prevent the migration of contaminated stromwater and groundwater to the Willamette River in support of a planned U.S. Environmental Protection Agency early action to remove impacted river sediments adjacent to the site. Construction of a new site-wide stormwater collection and treatment system was completed in 2012, and construction of a groundwater barrier wall and groundwater treatment system was completed in 2013.

Current project focus is on the performance of the stormwater and groundwater source control measures and the upland feasibility study to evaluate remedial alternatives for the upland site remedy.

Manufacturing operations began at the site in 1941 by Pennsylvania Salt Manufacturing, and ceased in 2001. The facility produced various chemicals including sodium chlorate, potassium chlorate, chlorine, sodium hydroxide, DDT, sodium orthosilicate, magnesium chloride hexahydrate, ammonia, hydrogen, ammonium and sodium perchlorate (rocket fuel) and hydrochloric acid.

[Jan. 2017] Various chemicals were produced at the facility, which began operations in 1941, including: sodium chlorate, potassium chlorate, chlorine, sodium hydroxide, dichloro-dephenyltrichloroethante (DDT), sodium orthosilicate, sodium hydroxide, magnesium chloride hexahydrate, ammonia, ammonium perchlorate, sodium perchlorate, and hydrochloric acid.
Manufacturing operations ceased in 2001, and the plant was decommissioned. Current site operations include the operation, monitoring and maintenance of source control measures which include: stormwater collection and treatment system, groundwater collection and treatment system and temporary soil caps.
Primary site contaminants of concern include: DDT, chlorobenzene, chloroform, hexavalent chromium, perchlorate and chlorinated furans.

Project focus since the completion of the remedial investigation in 2006 has been the implementation of upland source control measures to prevent the migration of contaminated stromwater and groundwater to the Willamette River in support of a planned U.S. Environmental Protection Agency early action to remove impacted river sediments adjacent to the site. Construction of a new site-wide stormwater collection and treatment system was completed in 2012, and construction of a groundwater barrier wall and groundwater treatment system was completed in 2013.

Current project focus is on the performance of the stormwater and groundwater source control measures and the upland feasibility study to evaluate remedial alternatives for the upland site remedy.

Manufacturing operations began at the site in 1941 by Pennsylvania Salt Manufacturing, and ceased in 2001. The facility produced various chemicals including sodium chlorate, potassium chlorate, chlorine, sodium hydroxide, DDT, sodium orthosilicate, magnesium chloride hexahydrate, ammonia, hydrogen, ammonium and sodium perchlorate (rocket fuel) and hydrochloric acid.

(5/19/93 KPD/SAS) The facility primarily produced chlorine, but also produced hydrochloric acid, hydrogen, sodium chlorate, and sodium hydroxide.

Asbestos (used as a diaphragm in electrolytic cells) was historically buried in a pit on-site. The buried asbestos was removed in 1992 with DEQ Air Quality Program oversight. Waste diaphragm asbestos was subsequently conveyed to a filter press and the filter cake placed into drums for off-site disposal. "Brine purification residue" (a mixture of calcium carbonate and magnesium hydroxide) was initially managed in on-site ponds. Brine pond residue was subsequently removed and disposed in a off-site landfill. Brine residue was more recently dewatered in a filter press and the dry solids landfilled at a DEQ permitted landfill. Four Willamette River outfalls are present. Only one is currently active which is the most down stream of the four. It discharges treated stormwater and groundwater under NPDES permits. Six chemical spills were reported to have occurred at the site in 1987, the first year reporting was required. Excavation activities in 1992 encountered residues determined to be associated with the manufacture of DDT by Pennwalt in the late 1940s and early 1950s. DDT residue was removed by Atochem in a trench disposal area from the northwestern portion of the plant site in 1994. Investigation of the former DDT-manufacturing area (current acid plant area) by Atochem in 1994 showed high concentrations of DDT in soil and monochlorobenzene in groundwater. (11/21/01 MJM/VCP). Remedial investigation work detected hexavalent chromium, perchlorate, chloroform and chloride in site groundwater associated with former facility operations.

The site is located in a heavily industrialized part of NW Portland. The Willamette River is adjacent to the site on the north and east. The Remedial Investigation, completed in 2006, identified surface soil impacts from DDT and other facility related contaminants. Groundwater in the Acid Plant area is impacted with DDT, chlorobenzene, perchlorate and VOCs (e.g., chloroform). Groundwater in the Chlorate Plant area is impacted by hexavalent chromium and perchlorate. Chloride levels are high in groundwater site-wide, but are most elevated in the Chlorate Plant area. Current complete exposure pathways are human and ecological exposure to site soils, groundwater and stormwater migration to the Willamette River and potential riverbank errosion.

(10/29/97 MJM/VCP) Elf Atochem entered the DEQ Voluntary Cleanup Program (2/96) and requested DEQ oversight for the investigation & cleanup of the former DDT manufacturing area (former Acid Plant area). Elf Atochem and DEQ entered Voluntary RI/FS Agreement to investigate former DDT manufacturing releases and to complete a RI of the facility. Fall 2000, ATOFINA removed approximately 3,000 cubic yards of soil with some of the highest levels of DDT . ATOFINA also paved or placed temporary covers over areas of the plant to control surface soils containing DDT from being transported by stormwater to the Willamette River. In December 2000, ATOCHEM constructed and started operation of a vapor-extraction system to remove chlorobenzene from vadose zone soils in the location of the former chlorobenzene recovery unit. Plant operations ceased in 2001; phased demoloition of the plant structures occurred through 2005. A number of pilot and full-scale interim removal measures have been implimented since 2000. These include attempts to treat chlorobenzene and DDT with sodium persulfate, in-situ reduction of hexavalent chromium to trivalent chromium using calcium polysulfide and treatment of chlorobenzene by air sparging and soil vapor recovery.

Construction of upland source control measures began in April 2012 to control the migration of impacted stormwater and groundwater to the Willamette River.

* Stormwater - The existing stormwater collection and conveyance system was decommissioned including the upstream three NPDES outfalls. Surface soils in the more contaminated portions of the site were covered with temporary clean caps to prevent transport by stormwater. New stromwater conveyance channels, detention basin and sand filter were constructed and operational in October 2012.

* Groundwater - Construction of a 1600 lineal foot soil-bentonite slurry groundwater cutoff wall was completed in 2012. The wall is up to 88 feet deep and in contact with basalt bedrock. Construction of a groundwater collection and treatment system associated with the cutoff wall was completed in 2013 and became operational in 2014.

Comment:			

9/2008 (K. Tarnow) DEQ conducted site visit and collected/analyzed sediment samples from a storwmater catch basin as part of a Portland Harbor Site Discovery pilot project. There were SLV exceedances, but not high enough to require them to do a stormwater pathway evaluation under DEQ oversight at this time. DEQ recommended they work with City's Industrial Stormwater Program to look for ways to optimize BMPs and clean out their catch basins and storm lines to remove potential legacy conaminants. If Portland Harbor in-water RI indicates stormwater is a bigger problem than anticipated, DEQ may need to reevaluate the need for additional stormwater controls at this site.

Comment:			

A 5,000 gallon diesel underground storage tank (UST) and a 2,000 gallon gasoline UST were removed from the southeast portion of the Site in 1993. Evidence of a release was noted during the
tank removal and approximately 48 cubic yards of petroleum impacted soil were removed from the former tank cavity. Groundwater was reportedly not encountered in the excavation. Based on the post-removal confirmation soil samples, which indicated no detectable concentrations of diesel, DEQ issued a No Further Action (NFA) determination for this release on December 1, 1995 (DEQ LUST ID 26-94-0001).

None of the contaminants detected in the January 2018 samples exceeded applicable RBCs soil and groundwater and do not pose unacceptable risk to current and future human receptors.

As groundwater was not considered in the previous UST investigation, a subsurface investigation was completed in 2018 which indicated that the lateral extent of residual diesel-range petroleum hydrocarbons in shallow groundwater related to the former leaking UST decrease to below detection limits within approximately 75 feet, or less, in presumed down-gradient locations in the City of Portland right-of-way. Vertically, the extent of contamination is limited to the shallow water-bearing zone (less than 20 feet bgs).

Comment:			

(11/26/2019 KRT) The Site is a 1.77 acre commercial property in the northwest industrial area of Portland with a 69,293 square foot building. Previous work performed at this site includes evaluations of soils and groundater for metals and hydrocarbons.

in 2019 DEQ is requiring the completion of an stormwater source control evaluation for the Site, consistent with the Portland Harbor Joint Source Control Strategy. Even though this propoerty is located some distance from the Wilamette River, stormwater from the site drains to a river at Outfall 19.

Preparation of a stormwater source control evaluatoin is the next step for this project.

Comment:			

The Site is a 77,101 square-foot commercial property located in the northwest industrial area of Portland and is occupied by a 69,293 square foot building. A steelworks foundry and plate shop operated on the property from 1920's until at least 1950.

Since 1950, the Site has been occupied by several commercial and industrial tenants, including Steel Products Company of Oregon, Inc., LaGrand Steel Company, LaGrand Chain Corporation, GTS Interior Supply, McDowell Welding & Pipe Fitting, Inc., Omega Locksmith, and Intrepid Marble and Granite.

(Excerpted from E&ES for Gould Property) No action may be undertaken on the Property that may disturb or damage or otherwise interfere with the structural integrity of the On-Site Containment Facility (OCF) being constructed on the Gould Property, including the OCF cap, OCF liner, OCF leachate collection system, the OCF detection monitoring system, or any other remedial features that contain hazardous substances, pollutants or contaminants or the ability to monitor such containment undertaken pursuant to the ROD. This includes a prohibition of activities on the Property that would interfere with the sub-lateral support the Property itself provides to the OCF.

The site is located within the footprint of the former Doane Lake. From approximately the 1940s to 1990, other portions of the larger Doane Lake that were located on adjacent properties were filled with soil, dredge spoils, wastes, and fill material from various industrial activities by various property owners including ESCO (wastes from ESCO's off-site foundry operations including foundry sand, dust, yard debris, slag, scale, and metals), NL/Gould (discarded battery casing materials and other lead smelter wastes), BNSF (dredge spoils and imported fill), and Rhone-Poulenc (imported fill and herbicide/insecticide manufacturing wastes).

Air Liquide Portion - In the past, calcium hydroxide, a byproduct of the acetylene production process, was discharged onto former Doane Lake. The former calcium hydroxide pond was excavated and filled with a mixture of soil and demolition debris.

Schintzer Doane Lake Portion - In the early 1970's Auto shredder fluff material was used to fill the northern portion of the site. Auto shredder fluff is potential source of contamination, including PCBs, metals and VOCs.

Site previously entered as ECSI #66; Liquid Air Corp. - Acetylene Plant.

(8/30/95 GMW) It is unknown whether the calcium hydroxide remaining at the site has a pH above 12.5. If so, it would be classified as a RCRA corrosive waste upon excavation. This material could present a direct-contact hazard to site occupants. Air Liquide cleaned up the majority of compressor oil released in February 1995, although a small area of contaminated soil remains under the building. Remediation of this material revealed pre-existing contamination from an unknown source. Residual levels of acetone and MEK from the former acetone UST are low and do not appear to threaten human health or the environment. Site Assessment recommends further evaluation of the extent and magnitude of caustic soils, as well as of the subsurface contamination discovered during Air Liquide's compressor oil cleanup.

(1996 DL) 1,826 cubic yards of shredder residue that was present aboveground was removed in 1996. Subsurface materials were left in place. Prior to removing it from the site the above grade shredder residue was sampled. Laboratory analysis of the samples showed the presence of EP Tox lead using the extraction procedure for toxicity (EPA Method 1310), ranging from 6.3 milligrams per liter (mg/L) to 73 mg/L. EP Tox cadmium was detected and ranged from 0.2 mg/L to 2.0 mg/L, as shown in Table 1. EP Tox barium was detected and ranged from 8 mg/L to 14 mg/L. Total PCBs Aroclors were detected ranging in concentration from 27 mg/kg to 110 mg/kg

(7/8/1998 DL) NL/Gould Site. Following the removal of lead contaminated sediment from East Doane Lake on a portion of the Site and on the adjacent Gould superfund site, a deed restriction was placed on the Site in 1998. The deed restriction protects the integrity of the On-Site Containment Facility constructed on the adjacent Gould site. Lead contaminated sediment and other waste from the Gould site were disposed in the On-Site Containment Facility.

(12/24/2012 DL) Air Liquide started a stormwater source control evaluation in 2009. The evaluation included the collection of stormwater and catch basin solids samples. A Stormwater Source Control Evaluation Report was submitted in December 2012. A final source control decision was issued by DEQ on February 25, 2011 requiring continued management of stormwater through implementation of the 1200Z NPDES permit.

(9/22/2010 DL) Schnitzer Investment Corp. Started a focused source control evaluation for the northern undeveloped portion of the site where filling occurred. A Focused Source Control Evaluation Report & Proposed Source Control Actions report was submitted September 13, 2011 and an addendum to that report was submitted April 4, 2012. The report proposed capping area with exposed shredder residue to eliminate the potential for offsite migration. A source control decision was issued by DEQ on 5/9/2013 requiring capping and deed restrictions be implemented to address the potential for offsite migration of contaminated material. A proposed source control decision was issued by DEQ on 1/15/2016 documenting that source control measures at the site have been satisfactorily performed.

Air Liquide Site:
An acetylene manufacturing plant was built on the site in 1949. The process generates calcium hydroxide wastes, which was discharged into Doane Lake. Calcium hydroxide was detected in surface/subsurface soils, and in surface and groundwater around the lake, with many pH values over 12.

In March 1995, Air Liquide reported a spill of 200 gallons of waste compressor oil. Air Liquide's cleanup of this soil resulted in the discovery of a subsurface layer of contaminated soil (potential from asphalt shingles used a fill) that appeared to be unrelated to the compressor oil spill. This deeper layer of soil contamination extended to a depth of at least 3 feet, and contained PCB 1254 and three chlorinated solvents: TCA, PCE, and 1,1-DCA.

In 1993, Air Liquide removed a 1,500-gallon acetone UST low levels of acetone and MEK were detected in soil and groundwater in the tank vicinity.

Stormwater at the Air Liquide site has been investigated as part of portland harbor source control. DEQ determined that, while stormwater monitoring indicates some exceedances of Portland Harbor Joint Source Control Stratagy screening level values, DEQ determined that additional upland source control work is not warrented. Based on 2013/2014 stormwate monitoring results, DEQ anticipates the site will exceed NPDES permit benchmarks for several metals, which will necessitate implementation of an engineered system to address benchmark exceedances in 2016.

Schnitzer-Doane Lake:
In the early 1970's non-magnetic shredder residue were deposited on the site by Schnitzer. Constituents of interest (COIs) potentially associated with the various fill materials include PCBs, phthalates, volatile organic compounds (VOCs) and certain metals.

Adjacent Sites:
Former Doane Lake Sediments, (10 to 14 feet below ground surface) have also been impacted by releases from adacent sites (Rhone-Poulenc, NL/Gould and ESCO Willbridge Landfill).Sediment samples were collected from the former Doane Lake sediments as part of the adjacent NL/Gould and Rhone Poulenc investigations. Several contaminants were detected including; lead, PCBs, pesticides, herbicides, VOCs, metals and dioxin/furans.

Groundwater in the former Doane Lake vicinity has be impacted by pesticide/herbicide production from Rhone Poulenc site (ECSI #155) and is currently be investigated as part of the Rhone Poulenc remedial investigation. Low levels of dissolved lead (<20 ppb) in shallow groundwater may have originated from the adjacent NL/Gould Superfund site (ECSI #49).

Comment:

On-site disposal of calcium hydroxide sludges starting in 1950's. Auto shredder wastes disposal in early 1970's. Releases associated with acetone UST; 1995 spill of waste compressor oil. Former Doane Lake sediments impacted by releases from adjacnet sites into Doane Lake starting in 1940's. On-site groundwater may have originated from the adjacent NL/Gould Superfund site and Rhone Poulenc site.

The site is located in a heavily industrialized area of Northwest Portland. The Willamette River is about 0.25 mile north and east of the site, and Forest Park is about 0.25 mile south and west of the site.

The Schintzer-Doane Lake portion is currently vacant and fenced off. A surface soil cap designed to eliminate the potential for stromwater or wind transport of surface soil was implemented in 2014. Operations at the Air Liquide facilty are restricted from the general public.

Shallow groundwater was used by Air Liquide in its industrial processes, but was not used for drinking and is currenlty not used at all.

Stormwater from the Air Liquide site is discharged from the site under a 1200-Z NPDES permit via a private connection to the existing City of Portland stormwater system (discharge point Outfall-22B)

Shallow groundwater in the area is contamainted with inorganic and organic contaminants. High ph is observed downgradient of the Site along NW Front Ave.

The site consists of two parcels located in the industrial area of northewest Portland at 6529 NW Front Avenue. The Schnitzer Investment Corp.-Doane Lake Site and the Air Liquide Site. The sites are located within the footprint of a former lake (Doane Lake).

The Schnitzer Investment Corp.-Doane Lake site encompasses 3.5 acres on the northern portion of Tax Lot 700 and is zoned for general industrial. The

site is currently vacant. In the early 1970's portions of the site were filled with shredder residue. According to Schnitzer employees, the shredder mill feed stock included crushed automobile bodies, light sheet metal, household appliances, sheet-tin roofing, fence, wire fence, and light material with a ferrous component.

The Air Liquide Site encompasses 2.88 acres on the southern portion of Tox Lot 700 and is zoned for general industrial.
The southern portion has been leased from Schnitzer by Air Liquide since 1969. Air Liquide owns and operates an acetylene production facility on the property. Stormwater is discharged from the site under a 1200-Z NPDES permit via a private connection to the existing City of Portland stormwater system (discharge point Outfall-22B)

Industrialization of the Doane Lake area began in the 1930's when significant amounts of fill materal were added to the lake.

(10/25/99 MTP/SRS) Site referred to Site Assessment Program as a potential Portland Harbor site candidate. A Site Assessment Review Notice letter will be sent to V&K Service.

(8/6/13 GMW/SAS) Site has two LUST files, based on UST releases reported to DEQ in 1989 (log #26-89-0213 is open and log#26-89-0199 is closed).

Comment:

(6/28/91 MJZ/SAS) In August 1990, an unknown volume of mineral spirits leaked from a pipe fitting near two underground storage tanks (USTs). Soil sampling found up to 5,460 ppm TPH (6,170 ppm using HCID). Cleanup of the spill is ongoing in the LUST program. In October 1990, while investigating a suspected release of cyclohexanone, McWhorter discovered diesel fuel in on-site soils (2-12 feet bgs) at levels up to 8,650 ppm. The diesel is thought to have migrated onto the site from the adjacent Texaco Portland Terminal site (ECSI #169). DEQ recommends that McWhorter work with Texaco to address the petroleum contamination. Following approval of the Closure Plan, no further action is necessary for the pre-1990 identified releases.

Comment:

(6/28/91 MJZ/SAS) McCloskey Varnish Company began manufacturing paint products at the site in the 1940s. In September 1986, DEQ issued a Notice of Violation (NOV) for two minor releases of methyl methacrylate and polyvinyl acetate. The action apparently spurred McCloskey to retain Century Environmental Services to complete a Closure Plan (under RCRA?). In part, the Closure Plan outlined the steps that had been taken to address nine releases that had occurred in 1985 and 1986. Several of these releases had impacted a creek that ran through the property. As part of the remediation, the creek was routed through a pipe and covered over, although it is not clear from the file that contaminated sediments in the creek bed were ever removed. DEQ approved the Closure Plan in November 1987. In July 1989, the property was purchased by McWhorter, a wholly-owned subsidiary of Valspar Corporation.

The site is located in an industrial area in northwest Portland. The Willamette River is 0.5 mile north and east (downgradient) of the site. Forest Park is 0.25 mile southwest of the site.

Comment:			

Numerous small spills and releases documented between 1985 and 1990. Most were cleaned up. Also suspected migration of petroleum onto site from off-site source.

Comment:			

Sediment samples were collected from bed of creek that ran through site. Creek was covered over, but there is no information on whether sediments were removed. (6/12/96 KPD/SRS) Petroleum contamination is believed to have migrated onto the site from the adjacent Texaco site.

Comment:			

Soils consist of 2-10 feet of a silt/sand/gravel fill, over 23-40 feet of sand, over a layer of silt and clay. Groundwater fluctuates between 10-17 feet bgs. The site itself consists of two fenced parcels (separated by Yeon Ave.), with an underground encased product transfer pipeline between them. There are 25 underground and 36 above-ground storage tanks at the site that hold potentially hazardous materials. The above-ground tanks are on concrete slabs and are bermed. Most of the site is built or paved over.

Groundwater monitoring and dual-phase extraction of groundwater contamination has been conducted since approximately 2010, as part of a source control evaluation (SCE) of stormeater contamination by groundwater. The site is removed from Portland Harbor, but a potential for contaminated stormwater reaching the Willamette River exists. The site submitted an SCE report in early 2014 and is currently under review.

A small bulk petroleum storage, blending, and packaging facility located on a 2-acre tract between the southwest side of NW St. Helens Road and the foot of Portland's West Hills, in Portland's Northwest Industrial area. Texaco's Portland Terminal (ECSI #169) is located across NW St. Helens Road. Land to the southwest of the site is generally forested, unimproved residential property owned by the City of Portland, and Portland's Forest Park.

Free petroleum product was recovered from site surfaces following three site releases (October 1975, November 1995, and November 1998), although there are no records to indicate that site soils or creek sediments were ever sampled or cleaned up. 200 cubic yards (variously reported as 50 to 355 cubic yards) of soil contaminated with Stoddard solvent, diesel fuel, and heavy oil, which were excavated from a UST decommissioning location in October 1990, were aerated on-site in two stockpiles from February 1991 to August 1993. The soils were treated on the southwestern portion of the site and were to be spread across the site, although (as of September 1993) final disposition is unclear.
(4/30/01 ELB/VCP) UST decommissioning NFA issued in November 2000. Preliminary Assessment prepared by owner submitted October 2000. Currently under review. (11/19/01 TBG/VCP) After reviewing the Preliminary Assessment, DEQ recommended sampling and analysis of catch-basin sediment and soil in the tank farm. Results from tank-farm soil samples (9/13/01) showed near-surface heavy petroleum contamination, likely resulting from ongoing piping drips and not the 9/98 release of 715 gallons of flush oil. Additional sampling is pending. (10/30/02 TBG/VCP) On-going storm water and catch basin sediment evaluations and implementation of additional best management practices to reduce contaminants in site storm water.

(12/23/2015 Liverman) The site completed investigation and control of groundwater and stormwater guided by the EPA/DEQ Joint Source Control Strategy for Portland Harbor. DEQ issued a source control decision for the site in Dec 2015.

Oregon Water Resources Department has well logs for 5 domestic drinking water wells within 0.8 to 1.1 miles of the site. All five are located southwest of the site, within the Balch Creek watershed (a separate watershed) at 550 to 800 foot higher elevation than the site.

Several petroleum spills have occurred at the site, although DEQ does not know if site soils or creek sediments were examined to determine if soil/sediment contamination remains. One of the spills released petroleum to an unnamed creek at the site's northwestern boundary. The unnamed creek discharges to the Willamette River at City Stormwater Outfall #18. 10/97 sediment sampling in the Willamette River by Roy F. Weston, Inc. detected elevated concentrations of metals and petroleum in sediments near City Outfall #18. Site runoff is also directed to a catch basin that discharges to the unnamed creek. Periodic stormwater sampling at the site indicates that metal and oil & grease levels in the site's runoff have exceeded the site's stormwater permit contamination limits. Site runoff has also been found in the city's stormwater catch basin in St. Helens Road. Stormwater from this catch basin discharges to the Willamette River. Approximately 200 cubic yards of petroleum contaminated soils were excavated and treated on-site from a UST decommissioning in October 1990, although DEQ has no record to indicate that the source of this contamination was ever clearly identified, or that the vertical and horizontal extent of soil contamination were ever determined.

The site is zoned for heavy industrial use. Properties to the northeast are zoned for heavy industry, while those to the southwest are zoned residential. The properties southwest are mostly owned by the City of Portland and adjoin Forest Park. A privately owned and undeveloped residential parcel (33.63 acres; Parcel R94119 0070) is directly west of the site.

The facility is located along the southwest edge of NW St. Helens Road, in Portland's Northwest Industrial Area, between NW St. Helens Road and the foot of Portland's West Hills. The Texaco Portland Terminal (ECSI #169) is located directly across NW St. Helens Road from the site. An unnamed creek flows along the site's northwestern boundary and eventually discharges to the Willamette River at City of Portland Stormwater Outfall #18.

September 1998: a release of lube oil occurred during filling of a 20,000-gal. AST; approximately 715 gallons of product were recovered. No soil removal or sampling was conducted. In November 1995, approximately 60 gal. of hydraulic oil were released to soils at a bulk loading area at the northwest end of the property when a product transfer hose to a tank truck broke. About 60 gallons of oil and 52 gallons of rainwater were vacuumed up; there is no record of a soil sampling or removal. During the night of October 16-17, 1975, less than 1000 gallons of oil (bright stock) were released to the floor of the main building when a transfer valve was left open and unattended overnight, and a mixing tank overflowed. The oil entered the building's floor drains, which discharge to a small creek at the site's western property line. The release was not discovered until the following morning. The oil was reportedly contained within the creek, and cleanup was completed within two days. There is no record of soil or sediment samplings or removals. The creek discharges to the Willamette River at City of Portland Stormwater Outfall #18, near the Gunderson facility. Site stormwater discharges to an unnamed creek on the northwestern property line; some discharges to a City stormwater catch basin in St.Helens Road. Stormwater samples from the site have contained oil & grease, lead, and mercury at concentrations above the limits set in the site's stormwater permit. Levels of copper and zinc have exceeded acute freshwater aquatic toxicity criteria. Cadmium concentrations have exceeded chronic freshwater aquatic toxicity criteria. Stoddard solvent, diesel fuel, and heavier oil were detected in subsurface soils during an October 1990 decommissioning of two USTs at the site. The contamination did not appear to originate from the USTs, although the actual source was not clearly ascertained. The full vertical and horizontal extent of subsurface contamination was not defined. Approximately 200 cu. yds. (variously reported as 50 to 355 yds.) of contaminated soil were aerated on-site between February 1991 and August 1993. The soils were treated on the southeastern portion of the site and were to be spread across the site at completion.

13 drums of oil (715 gallons), 2 drums of sorbent pads, and 1 drum of floor dry were transferred by Merit Oil to Fuel Processors (4150 N Suttle Road, Portland) on October 13, 1998, following the September 25, 1998 release. Four drums plus 11.25 gallons of oily solids were subsequently transferred from Fuel Processors to Oil Re-Refining Co., Woodland, WA.

(5/1/95 TER/VCS) The first site subsurface investigation was performed in 1983 by Texaco Terminal personnel. The investigation was prompted by discovery of a hydrocarbon-like sheen on water in the drainage ditch near the oil/water separator. The drainage ditch (now relined with culvert) flowed across the site from beneath NW St. Helens Road in a timber flume which discharged into the Willamette River. Groundwater monitoring confirmed the release and product recovery actions were initiated in 1983. Between 1983 and 1986, 31,231 gal. of floating product were recovered from an on-site recovery well. A total of 38 monitoring wells have been installed at the site. Aquifer testing and sparge and vapor extraction tests have been conducted. No off-site work has been conducted by Texaco. However, file information for the downgradient McWhorter facility indicates that contamination likely extends off-site. Texaco entered into a Letter Agreement with the Voluntary Cleanup Program on August 12, 1993. At that time Texaco was completing field work for a focused remedial investigation and feasibility study (RI/FS) for the site. (1/12/00 TBG/SAP) A RI prepared for the site by Texaco's consultant in 1994 concluded that "the results of the RA indicate that risks associated with the chemicals of concern at the site are within DEQ and EPA's target risk limits for cancer and for non-cancer effects for human health. In addition, impacts to environmental receptors appear unlikely." The FS concluded that the no-action alternative was protective. Approximately 36 tons of lead contaminated surface soil were excavated from the site in 1996 and disposed of at an off-site facility. The source was historic sandblasting of the ASTs. (11/21/01 MJM/VCP) 1997/1998 investigation of gasoline vapors and soil and groundwater impacts at the Gunderson facility along Front Avenue concluded that gasoline had leaked from an abandoned terminal product transmission line connecting the Marine Fuel operations on the Equilon Dock to the terminal. Removal efforts via air sparging and soil vapor extraction have been ongoing.

Recent data indicates surface soil contamination from lead paint/sandblast grit. Potential point sources include former gasoline/diesel loading rack; former bunker-fuel loading rack; underground piping to barge dock; oil/water separator and feeder lines; USTs and ancillary underground piping; former underground piping to loading racks; current gasoline/diesel loading rack; diesel dispensing station; boiler/pump house. Potential area sources include former bunker fuel ASTs; diesel/fuel oil ASTs; former lube-oil ASTs. Nearest surface water is the Willamette River.

Scoring package mailed 10/5/92. Proposed overall score: 21, based in part on the 1969 dumping of separator sludge. (1/93 TER/VCS) RI in progress, should be completed by 1/94. VCS will proceed with a file review after submittal of the RI report. VCS Letter Agreement 8/27/93. Focused RI report completed 2/24/94. VCS file review completed 5/24/94. Additional work to proceed with VCS oversight. (5/2/95 TER/VCS) Meeting to discuss a formal Agreement held 11/7/94. RI/FS Addendum and Groundwater Monitoring Proposal received 9/94 and comments provided 1/4/95. Lead impacts on surface soils from the 1969 separator sludge dumping evaluated. Determined that no further work regarding sludge dumping was necessary. Draft Agreement prepared 3/95. Quarterly Monitoring Report and additional information received from Texaco 3/95. (7/5/95 TER/VCS) Off-site sampling plan submitted 4/30. Quarterly Monitoring Report received 6/16. (8/31/95 TER/VCS) Bid for Lead Dust Cleanup Services received 7/95. Quarterly Groundwater Monitoring Report received 8/95. Comments on the Draft Agreement received 8/95. VCP participation terminated 8/31/95. (1/20/00 TBG/SAP) Based on initial sampling results from a river sediment quality study, the Texaco Terminal and pipeline (ECSI #2117) have been identified as a potential source of contamination to the Portland Harbor. A strategy recommendation was completed on September 2, 1999. A Remedial Investigation (RI) is required to evaluate the potential ecological threat of the sediment contamination (high priority). (1/19/01 MJM/VCP) DEQ and Equilon entered into a Voluntary RI Agreement on August 16, 2000. Equilon submitted a Draft Pre-Remedial Investigation Assessment Workplan in October 2000. (11/21/01 MJM/VCP) A revised Pre-Remedial Investigation Assessment work plan was approved on September 26, 2001. (1/7/03 MJM/VCP) Investigation activities are on-going to determine the potential for migration of hazardous substances released from the facility and pipeline to reach the Willamette River. Source control RI and source control evaluation completed June 2013. DEQ, 11/19/2013, concluded that the upland releases from current and past facility operations have been removed, controlled or do not present a risk to the Willamette River requiring additional remedial measures. The site remains on the CRL and Inventory and is considered a low priority for further remedial action under current site condtions.

Comment:			

Shell completed a Source Control Evaluation (2013, URS) for the groundwater and stormwater pathways at the site in accordance with the 2005 EPA/DEQ Portland Harbor Joint Source Control Strategy, also known as the JSCS. DEQ concludes from review of the SCE and supporting documents that Shell has controlled
upland sources of contamination from current and past operations such that contaminant transport pathways at the site do not pose a significant threat to the Willamette River. This determination is predicated on continued implementation of the Stormwater Pollution Control Plan and stormwater monitoring required by the NPDES 1200Z permit for the Shell Terminal. DEQ will continue to review site monitoring reports and permit compliance to ensure the
effectiveness of source control.

The site remains on the CRL and Inventory and is considered a low priority for further remedial action work under current site conditions.

Shell completed a Source Control Evaluation (2013, URS) for the groundwater and stormwater pathways at the site in accordance with the 2005 EPA/DEQ Portland Harbor Joint Source Control Strategy, also known as the JSCS. DEQ concludes from review of the SCE and supporting documents that Shell has controlled
upland sources of contamination from current and past operations such that contaminant transport pathways at the site do not pose a significant threat to the Willamette River. This determination is predicated on continued implementation of the Stormwater Pollution Control Plan and stormwater monitoring required by the NPDES 1200Z permit for the Shell Terminal. DEQ will continue to review site monitoring reports and permit compliance to ensure the
effectiveness of source control.

The site remains on the CRL and Inventory and is considered a low priority for further remedial action work under current site conditions.

(5/1/95 TER/VCS) The first site subsurface investigation was performed in 1983 by Texaco Terminal personnel. The investigation was prompted by discovery of a hydrocarbon-like sheen on water in the drainage ditch near the oil/water separator. The drainage ditch (now relined with culvert) flowed across the site from beneath NW St. Helens Road in a timber flume which discharged into the Willamette River. Groundwater monitoring confirmed the release and product recovery actions were initiated in 1983. Between 1983 and 1986, 31,231 gal. of floating product were recovered from an on-site recovery well. A total of 38 monitoring wells have been installed at the site. Aquifer testing and sparge and vapor extraction tests have been conducted. No off-site work has been conducted by Texaco. However, file information for the downgradient McWhorter facility indicates that contamination likely extends off-site. Texaco entered into a Letter Agreement with the Voluntary Cleanup Program on August 12, 1993. At that time Texaco was completing field work for a focused remedial investigation and feasibility study (RI/FS) for the site. (1/12/00 TBG/SAP) A RI prepared for the site by Texaco's consultant in 1994 concluded that "the results of the RA indicate that risks associated with the chemicals of concern at the site are within DEQ and EPA's target risk limits for cancer and for non-cancer effects for human health. In addition, impacts to environmental receptors appear unlikely." The FS concluded that the no-action alternative was protective. Approximately 36 tons of lead contaminated surface soil were excavated from the site in 1996 and disposed of at an off-site facility. The source was historic sandblasting of the ASTs. (11/21/01 MJM/VCP) 1997/1998 investigation of gasoline vapors and soil and groundwater impacts at the Gunderson facility along Front Avenue concluded that gasoline had leaked from an abandoned terminal product transmission line connecting the Marine Fuel operations on the Equilon Dock to the terminal. Removal efforts via air sparging and soil vapor extraction have been ongoing.

Recent data indicates surface soil contamination from lead paint/sandblast grit. Potential point sources include former gasoline/diesel loading rack; former bunker-fuel loading rack; underground piping to barge dock; oil/water separator and feeder lines; USTs and ancillary underground piping; former underground piping to loading racks; current gasoline/diesel loading rack; diesel dispensing station; boiler/pump house. Potential area sources include former bunker fuel ASTs; diesel/fuel oil ASTs; former lube-oil ASTs. Nearest surface water is the Willamette River.

Scoring package mailed 10/5/92. Proposed overall score: 21, based in part on the 1969 dumping of separator sludge. (1/93 TER/VCS) RI in progress, should be completed by 1/94. VCS will proceed with a file review after submittal of the RI report. VCS Letter Agreement 8/27/93. Focused RI report completed 2/24/94. VCS file review completed 5/24/94. Additional work to proceed with VCS oversight. (5/2/95 TER/VCS) Meeting to discuss a formal Agreement held 11/7/94. RI/FS Addendum and Groundwater Monitoring Proposal received 9/94 and comments provided 1/4/95. Lead impacts on surface soils from the 1969 separator sludge dumping evaluated. Determined that no further work regarding sludge dumping was necessary. Draft Agreement prepared 3/95. Quarterly Monitoring Report and additional information received from Texaco 3/95. (7/5/95 TER/VCS) Off-site sampling plan submitted 4/30. Quarterly Monitoring Report received 6/16. (8/31/95 TER/VCS) Bid for Lead Dust Cleanup Services received 7/95. Quarterly Groundwater Monitoring Report received 8/95. Comments on the Draft Agreement received 8/95. VCP participation terminated 8/31/95. (1/20/00 TBG/SAP) Based on initial sampling results from a river sediment quality study, the Texaco Terminal and pipeline (ECSI #2117) have been identified as a potential source of contamination to the Portland Harbor. A strategy recommendation was completed on September 2, 1999. A Remedial Investigation (RI) is required to evaluate the potential ecological threat of the sediment contamination (high priority). (1/19/01 MJM/VCP) DEQ and Equilon entered into a Voluntary RI Agreement on August 16, 2000. Equilon submitted a Draft Pre-Remedial Investigation Assessment Workplan in October 2000. (11/21/01 MJM/VCP) A revised Pre-Remedial Investigation Assessment work plan was approved on September 26, 2001. (1/7/03 MJM/VCP) Investigation activities are on-going to determine the potential for migration of hazardous substances released from the facility and pipeline to reach the Willamette River. Source control RI and source control evaluation completed June 2013. DEQ, 11/19/2013, concluded that the upland releases from current and past facility operations have been removed, controlled or do not present a risk to the Willamette River requiring additional remedial measures. The site remains on the CRL and Inventory and is considered a low priority for further remedial action under current site condtions.

A RCRA cap was put in place. Quarterly inspections, maintenance, and groundwater monitoring are being performed by the RPs. In addition, EPA and DEQ together perform 5-year reviews of the cap.

Narrative

Narrative ID: 5730068
Narrative Code: PATH
Narrative Desc: Pathways & Other Hazards
Created by Init:
Comment:
Created on Dt: 12/17/2002
Last Updated by Init: KDANA
Last Updated on Dt: 03/20/2003

Air, surface water, groundwater, soil were contaminated. The primary pathways of contamination considered during the remedial action were direct contact and the air pathway. Surface water and groundwater did not appear to be impacted above health-based levels. Sediments in East Doane Lake contained lead (from Gould) and other contamination (in all likelihood from surrounding facilities).

(3/20/2003 JAK/SRS) EPA issued Unilateral Administrative Orders to seven companies (PRPs) in January 1992 requiring implementation of remedial actions specified in the ROD. Remedial actions were initiated at the site in June 1993. An estimated 24,000 tons of battery casings were excavated and processed through the separation/treatment plant, with 244 tons of plastic and 88 tons of lead recycled. Contaminated soils and matte were stabilized, producing 20,000 cubic-yard blocks, which were stored at the site. Several problems were encountered with the battery separation/treatment process: despite several modifications to this process, it was determined that it was not efficient or cost-effective and that only limited quantities of processed materials were recyclable. In addition, the volume of battery casings to be excavated and processed was overestimated in the ROD. In May 1994, EPA allowed the PRPs to suspend operations and evaluate alternative remedial actions. After conducting a focused Feasibility Study, the PRPs submitted a proposed alternative cleanup plan to EPA in October 1995. EPA prepared a Proposed ROD Amendment, which went out for public comment April 1 - May 31, 1996. Major components of the alternative cleanup plan included construction of an 8.5-acre on-site containment facility (OCF) to RCRA (40 CFR 264, Subpart N) standards, excavation of remaining battery casings on the Gould site, excavation of contaminated sediment in East Doane Lake, stabilization of lead fines, consolidation of approximately 60,000 cubic yards of excavated and previously stockpiled material in the OCF, filling of East Doane Lake, wetlands mitigation measures, institutional controls, and groundwater monitoring. The PRPs initiated pre-design in November 1996. EPA issued the Amended Record of Decision on June 3, 1997. EPA issued a Unilateral Order to the RP Group in July 1997, requiring the design and implementation of an early remedial action for the East Doane Lake portion of the remedy on a time-critical path. EPA filed a Consent Decree in March 1998 addressing the design and implementation of the amended remedy. The implementation of the early remedial action for East Doane Lake was conducted from June to October 1998. Approximately 8000 cubic yards of contaminated sediment were excavated from East Doane Lake and stockpiled on-site for subsequent disposal in the OCF. The remedial design activities related to the OCF construction were conducted from December 1997 to April 1999. Construction activities were initiated in June 1999 and continued until early December 1999, when unfavorable weather precluded completion of the OCF. Construction of the OCF was approximately 90% complete at the time. Construction resumed in May 2000 and was completed in September 2000. Approximately 77,000 cubic yards of contaminated material was placed into the OCF, including the 20,000 cubic yard blocks. Operation and maintenance of the OCF has been on-going, including the conductance of quarterly inspections and groundwater monitoring. EPA delisted the Gould site from the NPL in September 2002.
(1/28/10 MDK/CU&ER) Site is in O&M with quarterly inspections made of the onsite containment landfill cap and leachate collection system. No leachate has collected for the past two plus years. No significant issues have been identified in the past year.

The long-term environmental threats from this site were localized. When the smelter was operational (pre-1980), the environmental threat was greatest. The remedy was designed to stabilize and bind the lead contamination so that it could be disposed of on-site in a protective manner.

(3/20/2003 JAK/SRS) Operations consisted of lead-acid battery recycling, secondary lead smelting and refining, and lead oxide production. An estimated 86,900 tons of battery casings were disposed of on-site and on adjacent properties. About 6,570,000 gallons of waste battery acid was discharged to East Doane Lake. EPA added the site to the National Priorities List (NPL) in September 1983. A Remedial Investigation and Feasibility Study (RI/FS) was conducted at the site from 1985 to 1988. EPA issued a Record of Decision (ROD) for the Soils Operable Unit at the site in March 1988, requiring the excavation of all buried battery casings and matte, treatment of battery casings to remove and recycle lead, and treatment of the contaminated soils, sediment, and matte to reduce the mobility of lead. The contamination extended to the adjacent Rhone-Poulenc property (ECSI #155). Rhone-Poulenc's former operations (the manufacture, formulation, and distribution of pesticide products) resulted in organic contamination of soil and groundwater on both the Rhone-Poulenc and Gould sites. DEQ coordinated the investigation and cleanup of Rhone-Poulenc with that of Gould.

On-site disposal. Batteries were crushed and processed. Residuals were dumped into Doane Lake; some casings also were buried on the adjacent Rhone-Poulenc property. Time of release: Between 1949 and 1981.

[Sept. 2016] EPA delisted the Gould site from the NPL/Superfund list in 2002. Since then, long-term operation and maintenance (O&M) of the on-site landfill's final remedy has occurred. Each quarter, site inspections are made and O&M reports submitted to DEQ. No significant issues have been identified in the recent past.

From the 1940s to the late 1970s, this site was used as a "battery breaker" and secondary lead smelter. The original owners, Morris P. Irk & Sons, were a subsidiary of National Lead, which later changed its name to NL Industries, Inc., and sold the site to Gould in 1979. EPA added the Gould/NL site to the National Priorities List in 1983. In 1985, a Consent Order was signed between EPA, Gould, and NL Industries to perform an RI/FS. Completed in late 1987, the RI/FS showed lead contamination in soils, groundwater, surface water, and sediments.

From the 1940s to the late 1970s, this site was used as a "battery breaker" and secondary lead smelter. The original owners, Morris P. Irk & Sons, were a subsidiary of National Lead, which later changed its name to NL Industries, Inc., and sold the site to Gould in 1979. EPA added the Gould/NL site to the National Priorities List in 1983. In 1985, a Consent Order was signed between EPA, Gould, and NL Industries to perform an RI/FS. Completed in late 1987, the RI/FS showed lead contamination in soils, groundwater, surface water, and sediments.

Comment:			

[Sept. 2016] EPA delisted the Gould site from the NPL/Superfund list in 2002. Since then, long-term operation and maintenance (O&M) of the on-site landfill's final remedy has occurred. Each quarter, site inspections are made and O&M reports submitted to DEQ. No significant issues have been identified in the recent past.

Comment:			

Air, surface water, groundwater, soil were contaminated. The primary pathways of contamination considered during the remedial action were direct contact and the air pathway. Surface water and groundwater did not appear to be impacted above health-based levels. Sediments in East Doane Lake contained lead (from Gould) and other contamination (in all likelihood from surrounding facilities).

(3/20/2003 JAK/SRS) EPA issued Unilateral Administrative Orders to seven companies (PRPs) in January 1992 requiring implementation of remedial actions specified in the ROD. Remedial actions were initiated at the site in June 1993. An estimated 24,000 tons of battery casings were excavated and processed through the separation/treatment plant, with 244 tons of plastic and 88 tons of lead recycled. Contaminated soils and matte were stabilized, producing 20,000 cubic-yard blocks, which were stored at the site. Several problems were encountered with the battery separation/treatment process: despite several modifications to this process, it was determined that it was not efficient or cost-effective and that only limited quantities of processed materials were recyclable. In addition, the volume of battery casings to be excavated and processed was overestimated in the ROD. In May 1994, EPA allowed the PRPs to suspend operations and evaluate alternative remedial actions. After conducting a focused Feasibility Study, the PRPs submitted a proposed alternative cleanup plan to EPA in October 1995. EPA prepared a Proposed ROD Amendment, which went out for public comment April 1 - May 31, 1996. Major components of the alternative cleanup plan included construction of an 8.5-acre on-site containment facility (OCF) to RCRA (40 CFR 264, Subpart N) standards, excavation of remaining battery casings on the Gould site, excavation of contaminated sediment in East Doane Lake, stabilization of lead fines, consolidation of approximately 60,000 cubic yards of excavated and previously stockpiled material in the OCF, filling of East Doane Lake, wetlands mitigation measures, institutional controls, and groundwater monitoring. The PRPs initiated pre-design in November 1996. EPA issued the Amended Record of Decision on June 3, 1997. EPA issued a Unilateral Order to the RP Group in July 1997, requiring the design and implementation of an early remedial action for the East Doane Lake portion of the remedy on a time-critical path. EPA filed a Consent Decree in March 1998 addressing the design and implementation of the amended remedy. The implementation of the early remedial action for East Doane Lake was conducted from June to October 1998. Approximately 8000 cubic yards of contaminated sediment were excavated from East Doane Lake and stockpiled on-site for subsequent disposal in the OCF. The remedial design activities related to the OCF construction were conducted from December 1997 to April 1999. Construction activities were initiated in June 1999 and continued until early December 1999, when unfavorable weather precluded completion of the OCF. Construction of the OCF was approximately 90% complete at the time. Construction resumed in May 2000 and was completed in September 2000. Approximately 77,000 cubic yards of contaminated material was placed into the OCF, including the 20,000 cubic yard blocks. Operation and maintenance of the OCF has been on-going, including the conductance of quarterly inspections and groundwater monitoring. EPA delisted the Gould site from the NPL in September 2002.
(1/28/10 MDK/CU&ER) Site is in O&M with quarterly inspections made of the onsite containment landfill cap and leachate collection system. No leachate has collected for the past two plus years. No significant issues have been identified in the past year.

Narrative Desc: Health Threats ***Last Updated on Dt:*** 03/20/2003
Created by Init:
Comment:

The long-term environmental threats from this site were localized. When the smelter was operational (pre-1980), the environmental threat was greatest. The remedy was designed to stabilize and bind the lead contamination so that it could be disposed of on-site in a protective manner.

Comment:

(3/20/2003 JAK/SRS) Operations consisted of lead-acid battery recycling, secondary lead smelting and refining, and lead oxide production. An estimated 86,900 tons of battery casings were disposed of on-site and on adjacent properties. About 6,570,000 gallons of waste battery acid was discharged to East Doane Lake. EPA added the site to the National Priorities List (NPL) in September 1983. A Remedial Investigation and Feasibility Study (RI/FS) was conducted at the site from 1985 to 1988. EPA issued a Record of Decision (ROD) for the Soils Operable Unit at the site in March 1988, requiring the excavation of all buried battery casings and matte, treatment of battery casings to remove and recycle lead, and treatment of the contaminated soils, sediment, and matte to reduce the mobility of lead. The contamination extended to the adjacent Rhone-Poulenc property (ECSI #155). Rhone-Poulenc's former operations (the manufacture, formulation, and distribution of pesticide products) resulted in organic contamination of soil and groundwater on both the Rhone-Poulenc and Gould sites. DEQ coordinated the investigation and cleanup of Rhone-Poulenc with that of Gould.

On-site disposal. Batteries were crushed and processed. Residuals were dumped into Doane Lake; some casings also were buried on the adjacent Rhone-Poulenc property. Time of release: Between 1949 and 1981.

Stormwater (12/2012, Liverman) - Based on data collected by the City of Portland in catch basins and storwater lines that the site discharges to, in

12/2011, DEQ requsted the site to enter VCP to undertake a stormwater source control evaluation under the Joint Source Control Strategy for the Portland Harbor Superfund Site.

Narrative ID:	5754421	***Created on Dt:***	12/28/2012

Comment:			

In 11/2012, the site signed a Letter Agreement with DEQ to undertake a stormwater assessment.

A Stormwater Assessment Work Plan was approved and implementation began in Oct 2013. A portion of the sotrmwater conveyance lines on the site were jetrod cleaned and solids removed were analyzed. Catch basin solid samples were collected and analyzed throughout the site.

(March 2014 Liverman) Stormwater sampling and evaluation are on-going toward implementation and effectiveness monitoring of source control measures and development of a source control evaluation report in support of a source control decision.

Created by Init:	ALIVERM		
Comment:			

[Jan 2019] The site indicated continued work on a source control evaluation report for the stormwater pathway at the site, but has been non-responsive to status update requests since then.

[March 2014] In 2012, the site entered DEQ's Cleanup program for oversight of a stormwater assessment. DEQ approved the work plan, and implementation began in Oct 2013. Stormwater solids and stormwater sampling and source control measure implementation was undertaken.

(3/26/09 SRR/VCP) The property consists of 67 acres along the west bank of the Willamette River, at River Mile 9.

An above-ground TCA dip tank used for degreasing is located on the northwest end of the facility ("Area 1"). A spill occurred at this dip tank in 1980, and an active remediation system is in place to treat the release to groundwater.

A total of 11 underground storage tanks (USTs) were identified throughout the property, and the majority of the USTs stored petroleum fuels, though one stored toluene, and one was used for waste oil. Most of the USTs were located in the larger central portion of the facility ("Area 2"), and petroleum hydrocarbon contamination is the primary contaminant in Area 2. The riverband portions of Area 2 include the barge building area and the barge launchways. This area also has metals in the soil and groundwater, and PCBs have been detected in shallow soils and offshore sediments.

Historically, the southeast end of the property ("Area 3") was used by Schnitzer Steel Products & American Ship Dismantlers as a ship and automobile salvage yard. Soil sampling identified in this area has identified various metals, PCBs, phthalates, and dioxins. Loose asbestos was also found near the riverbank area. Groundwater contamination in this area is similar to the soil contamination.

(3/26/09 SRR/VCP) Ongoing issues that are site wide include source control, which include storm water, operational changes procedures and system upgrades, and materials handling.

Area 1 - The primary issue in Area 1 is the groundwater contamination related to the 1980 TCA solvent release. An air sparging/soil vapor extraction system (AS/SVES) and a groundwater extraction and treatment system (ETS) have been installed in Area 1. The ETS was installed to limit offsite plume migration and the AS/SVES system was installed near the source of the release to decrease concentrations at the source of the release.

Area 2 - The issues in Area 2 focus on the former UST related petroleum and solvent releases to soil and groundwater, and source control activities in the area of the Marine Barge Assembly Area (MBAA). Issues in this area are primarily focused on source control, as spent grit and residual concentrations of metals and PCBs have been detected in upland soils and river sediments.

Area 3 - Area 3 is a large open area on the upstream portion of the property that was at one time owned by Schnitzer Steel, who operated a ship dismantling facility and an auto wrecking facility in the area. Primary issues in this area are elevated concentrations of PCBs, PAHs, petroleum, metals, phthalates, and dioxins have been detected in various areas of surfave, shallow, and deeper soil, groundwater, and riverbank soils. A large volume of asbestos is located on the riverbank under the Gantry portion of the outfitting dock.

(3/26/09 SRR/VCP) Primary exposure pathways include exposure of workers onsite to contaminants in surface and shallow soils, and in groundwater in excavations. Vapor intrusion may be a minor exposure route, though many buildings are open. Currently, high priority pathways involve source control in Areas 2 and 3, where storm water, erodible surface soils, riverbank soils, and spent blasting grit can transport contaminants into the river through various transport media.

Narrative ID: 5731821
Narrative Code: REMA
Narrative Desc: Remedial Action
Created by Init:
Comment:
Created on Dt: 12/17/2002
Last Updated by Init: ALIVERM
Last Updated on Dt: 05/27/2020

(3/26/09 SRR/VCP) Several USTs were removed from the central portion of the facility (generally Area 2) in the late 1990s/early 2000s.

The nature & extent of the TCA in groundwater has been determined, and the groundwater treatment systems (ETS and AS/SVES) have been in place since 2006. In the railcar finishing area, a small release of solvents on the stencil wash area warranted an SVE system to remove solvents in the soil in Area 2.

Future plans for remedial action involve source control actions in the Marine Barge Assembly Area (MBAA), and in Area 3. aside from the early actions for soil and groundwater remediation and source control activities, Gunderson is working on completing the RI process for Areas 1, 2, and 3.

(11/9/14 SRR/VCP) Site undergoing Source Control Evlauations (SCE) and implementing source control measures (SCMs) for stormwater and groundwater (SCE reports submitted), and riverbank soils (Feasability Studies for SCMs sumbmitted, interim measures being installed and evaluated).

(10/5/2015 Liverman) Site is working toward submittal of revised/final SCEs for groundwater & stormwater, revised/final FFSs for Area 1 & 2 banks and revised FS for Area 3 bank. The Area 3 final bank remedy is anticipated be integrated into the schedule and design of the EPA in-water remedy.

(5/27/20 Liverman) Following release of EPA's Portland Harbor Record of Decision in Jan 2017 and Guidance for Riverbank Characterization in Sep 2019, oversight of site riverbanks was shifted from DEQ to EPA. Beginning in 2011, installation of stormwater infiltration facilities became a focus of stormwater management at the site. With more than 90 infiltration features installed by 2016, DEQ required monitoring of groundwater quality and mobility via installation of additional monitoring wells. Responsive to 2018 DEQ and EPA comments on revised groundwater source control evaluation reports, the site prepared a comprehensive groundwater conceptual site model, which was submitted in May 2020 and is currently under review.

Since 2009, Gunderson has been evaluating Source Control at the site for various media. This has primarily included evaluation of groundwater (sitewide), stormwater (sitewide), and erodible riverbank soils (Area 2 and Area 3).

In 2013/2014 Gunderson has done implemented interim source control Measures (SCMs) on Area 2 and Area 3 riverbanks to stabilize potentially erodible soils, pending final feasibility studies and remedial action. Where needed, final riverbank SCMs are expected to be implemented at the same time as the in-water remedies.

Narrative Desc: Project Activity Status ***Last Updated on Dt:*** 03/11/2014
Created by Init: SRAPP
Comment:

Since 2009, Gunderson has been evaluating Source Control at the site for various media. This has primarily included evaluation of groundwater (sitewide), stormwater (sitewide), and erodible riverbank soils (Area 2 and Area 3).

In 2013/2014 Gunderson has done implemented interim source control Measures (SCMs) on Area 2 and Area 3 riverbanks to stabilize potentially erodible soils, pending final feasibility studies and remedial action. Where needed, final riverbank SCMs are expected to be implemented at the same time as the in-water remedies.

Narrative ID: 5731818 ***Created on Dt:*** 12/17/2002
Narrative Code: ISUM ***Last Updated by Init:*** SRAPP
Narrative Desc: Project Issues Summary ***Last Updated on Dt:*** 03/26/2009
Created by Init:
Comment:

(3/26/09 SRR/VCP) Ongoing issues that are site wide include source control, which include storm water, operational changes procedures and system upgrades, and materials handling.

Area 1 - The primary issue in Area 1 is the groundwater contamination related to the 1980 TCA solvent release. An air sparging/soil vapor extraction system (AS/SVES) and a groundwater extraction and treatment system (ETS) have been installed in Area 1. The ETS was installed to limit offsite plume migration and the AS/SVES system was installed near the source of the release to decrease concentrations at the source of the release.

Area 2 - The issues in Area 2 focus on the former UST related petroleum and solvent releases to soil and groundwater, and source control activities in the area of the Marine Barge Assembly Area (MBAA). Issues in this area are primarily focused on source control, as spent grit and residual concentrations of metals and PCBs have been detected in upland soils and river sediments.

Area 3 - Area 3 is a large open area on the upstream portion of the property that was at one time owned by Schnitzer Steel, who operated a ship dismantling facility and an auto wrecking facility in the area. Primary issues in this area are elevated concentrations of PCBs, PAHs, petroleum, metals, phthalates, and dioxins have been detected in various areas of surfave, shallow, and deeper soil, groundwater, and riverbank soils. A large volume of asbestos is located on the riverbank under the Gantry portion of the outfitting dock.

Comment:

Suspected leaks and spills from degreasing operations, leaking underground storage tanks, sandblasting, painting and salvage-yard operations. Time of release: unknown.

Narrative ID: 5731820 ***Created on Dt:*** 12/17/2002

Narrative Code:	PATH	***Last Updated by Init:***	SRAPP
Narrative Desc:	Pathways & Other Hazards	***Last Updated on Dt:***	03/26/2009
Created by Init:			
Comment:			

(3/26/09 SRR/VCP) Primary exposure pathways include exposure of workers onsite to contaminants in surface and shallow soils, and in groundwater in excavations. Vapor intrusion may be a minor exposure route, though many buildings are open. Currently, high priority pathways involve source control in Areas 2 and 3, where storm water, erodible surface soils, riverbank soils, and spent blasting grit can transport contaminants into the river through various transport media.

Narrative ID:	5731821	***Created on Dt:***	12/17/2002
Narrative Code:	REMA	***Last Updated by Init:***	ALIVERM
Narrative Desc:	Remedial Action	***Last Updated on Dt:***	05/27/2020
Created by Init:			
Comment:			

(3/26/09 SRR/VCP) Several USTs were removed from the central portion of the facility (generally Area 2) in the late 1990s/early 2000s.

The nature & extent of the TCA in groundwater has been determined, and the groundwater treatment systems (ETS and AS/SVES) have been in place since 2006. In the railcar finishing area, a small release of solvents on the stencil wash area warranted an SVE system to remove solvents in the soil in Area 2.

Future plans for remedial action involve source control actions in the Marine Barge Assembly Area (MBAA), and in Area 3. aside from the early actions for soil and groundwater remediation and source control activities, Gunderson is working on completing the RI process for Areas 1, 2, and 3.

(11/9/14 SRR/VCP) Site undergoing Source Control Evlauations (SCE) and implementing source control measures (SCMs) for stormwater and groundwater (SCE reports submitted), and riverbank soils (Feasability Studies for SCMs sumbmitted, interim measures being installed and evaluated).

(10/5/2015 Liverman) Site is working toward submittal of revised/final SCEs for groundwater & stormwater, revised/final FFSs for Area 1 & 2 banks and revised FS for Area 3 bank. The Area 3 final bank remedy is anticipated be integrated into the schedule and design of the EPA in-water remedy.

(5/27/20 Liverman) Following release of EPA's Portland Harbor Record of Decision in Jan 2017 and Guidance for Riverbank Characterization in Sep 2019, oversight of site riverbanks was shifted from DEQ to EPA. Beginning in 2011, installation of stormwater infiltration facilities became a focus of stormwater management at the site. With more than 90 infiltration features installed by 2016, DEQ required monitoring of groundwater quality and mobility via installation of additional monitoring wells. Responsive to 2018 DEQ and EPA comments on revised groundwater source control evaluation reports, the site prepared a comprehensive groundwater conceptual site model, which was submitted in May 2020 and is currently under review.

Groundwater has been impacted across the site to varying degrees by several contaminants. PCBs, metals, PAHs, dioxins, phalates, solvents and petroleum hydrocarbons are present in surface soils, riverbank soils and deeper soils in several locations across the site.

(3/26/09 SRR/VCP) The property consists of 67 acres along the west bank of the Willamette River, at River Mile 9.

An above-ground TCA dip tank used for degreasing is located on the northwest end of the facility ("Area 1"). A spill occurred at this dip tank in 1980, and an active remediation system is in place to treat the release to groundwater.

A total of 11 underground storage tanks (USTs) were identified throughout the property, and the majority of the USTs stored petroleum fuels, though one stored toluene, and one was used for waste oil. Most of the USTs were located in the larger central portion of the facility ("Area 2"), and petroleum

hydrocarbon contamination is the primary contaminant in Area 2. The riverband portions of Area 2 include the barge building area and the barge launchways. This area also has metals in the soil and groundwater, and PCBs have been detected in shallow soils and offshore sediments.

Historically, the southeast end of the property ("Area 3") was used by Schnitzer Steel Products & American Ship Dismantlers as a ship and automobile salvage yard. Soil sampling identified in this area has identified various metals, PCBs, phthalates, and dioxins. Loose asbestos was also found near the riverbank area. Groundwater contamination in this area is similar to the soil contamination.

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: Yes
Transfer Facility: Yes
Onsite Burner: No
Smelting, Melting and Refining: No
Underground Injection Control: No
Commercial TSD: No
Used Oil Transporter: No
Used Oil Transfer Facility: No
Used Oil Processor: No

Used Oil Refiner: No
Used Oil Burner: No
Used Oil Market Burner: No
Used Oil Spec Marketer: No

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19810713
Handler Name: UNIVAR USA INC
Federal Waste Generator Code: N
Generator Code Description: Not a Generator, Verified
Source Type: Part A

Waste Code Details

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19900326
Handler Name: VAN WATERS & ROGERS INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 3

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT

SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: LABP
Waste Code Description:

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U043
Waste Code Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Hazardous Waste Code: U076
Waste Code Description: ETHANE, 1,1-DICHLORO- (OR) ETHYLIDENE DICHLORIDE

Hazardous Waste Code: U078
Waste Code Description: 1,1-DICHLOROETHYLENE (OR) ETHENE, 1,1-DICHLORO-

Hazardous Waste Code: U079
Waste Code Description: 1,2-DICHLOROETHYLENE (OR) ETHENE, 1,2-DICHLORO-,(E)-

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U107
Waste Code Description: 1,2-BENZENEDICARBOXYLIC ACID, DIOCTYL ESTER (OR) DI-N-OCTYL PHTHALATE

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U210
Waste Code Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U226
Waste Code Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U359
Waste Code Description: ETHANOL, 2-ETHOXY- (OR) ETHYLENE GLYCOL MONOETHYL ETHER

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D007

Waste Code Description:	CHROMIUM
Hazardous Waste Code:	D029
Waste Code Description:	1,1-DICHLOROETHYLENE
Hazardous Waste Code:	D035
Waste Code Description:	METHYL ETHYL KETONE
Hazardous Waste Code:	D039
Waste Code Description:	TETRACHLOROETHYLENE
Hazardous Waste Code:	D040
Waste Code Description:	TRICHLORETHYLENE
Hazardous Waste Code:	D043
Waste Code Description:	VINYL CHLORIDE
Hazardous Waste Code:	F002
Waste Code Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F003
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F005
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	U043
Waste Code Description:	ETHENE, CHLORO- (OR) VINYL CHLORIDE
Hazardous Waste Code:	U076
Waste Code Description:	ETHANE, 1,1-DICHLORO- (OR) ETHYLIDENE DICHLORIDE
Hazardous Waste Code:	U079
Waste Code Description:	1,2-DICHLOROETHYLENE (OR) ETHENE, 1,2-DICHLORO-,(E)-
Hazardous Waste Code:	U080
Waste Code Description:	METHANE, DICHLORO- (OR) METHYLENE CHLORIDE
Hazardous Waste Code:	U107
Waste Code Description:	1,2-BENZENEDICARBOXYLIC ACID, DIOCTYL ESTER (OR) DI-N-OCTYL PHTHALATE
Hazardous Waste Code:	U210
Waste Code Description:	ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE
Hazardous Waste Code:	U220
Waste Code Description:	BENZENE, METHYL- (OR) TOLUENE
Hazardous Waste Code:	U226
Waste Code Description:	ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM
Hazardous Waste Code:	U228
Waste Code Description:	ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U359
Waste Code Description: ETHANOL, 2-ETHOXY- (OR) ETHYLENE GLYCOL MONOETHYL ETHER

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D038
Waste Code Description: PYRIDINE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U043
Waste Code Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Hazardous Waste Code: U055
Waste Code Description: BENZENE, (1-METHYLETHYL)- (I) (OR) CUMENE (I)

Hazardous Waste Code: U076
Waste Code Description: ETHANE, 1,1-DICHLORO- (OR) ETHYLIDENE DICHLORIDE

Hazardous Waste Code: U078
Waste Code Description: 1,1-DICHLOROETHYLENE (OR) ETHENE, 1,1-DICHLORO-

Hazardous Waste Code: U079
Waste Code Description: 1,2-DICHLOROETHYLENE (OR) ETHENE, 1,2-DICHLORO-,(E)-

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U161
Waste Code Description: 4-METHYL-2-PENTANONE (I) (OR) METHYL ISOBUTYL KETONE (I) (OR) PENTANOL, 4-METHYL-

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U210
Waste Code Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U226
Waste Code Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Waste Code Description: CHROMIUM

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U003
Waste Code Description: ACETONITRILE (I,T)

Hazardous Waste Code: U055
Waste Code Description: BENZENE, (1-METHYLETHYL)- (I) (OR) CUMENE (I)

Hazardous Waste Code: U078
Waste Code Description: 1,1-DICHLOROETHYLENE (OR) ETHENE, 1,1-DICHLORO-

Hazardous Waste Code: U079
Waste Code Description: 1,2-DICHLOROETHYLENE (OR) ETHENE, 1,2-DICHLORO-,(E)-

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U161
Waste Code Description: 4-METHYL-2-PENTANONE (I) (OR) METHYL ISOBUTYL KETONE (I) (OR) PENTANOL, 4-METHYL-

Hazardous Waste Code: U210
Waste Code Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Hazardous Waste Code: U213
Waste Code Description: FURAN, TETRAHYDRO-(I) (OR) TETRAHYDROFURAN (I)

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U226
Waste Code Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Hazardous Waste Handler Details

Sequence No: 30
Receive Date: 20181231
Handler Name: UNIVAR USA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Waste Code Details

Hazardous Waste Code: NA
Waste Code Description: NA

Hazardous Waste Handler Details

Sequence No: 32
Receive Date: 20191009
Handler Name: UNIVAR SOLUTIONS USA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Waste Code Details

(11/30/93 KPD/SAS) Van Waters & Rogers, a subsidiary of Univar Corp., started as a chemical supply company in 1946. About 1974, the company expanded into recycling and distilling spent solvents. In August 1980, methylene chloride spilled from a ruptured tank hose. The spill was confined to the pavement and mopped up. In September 1983, about 515 gallons of trichloroethylene (TCE) spilled from a ruptured tank gauge across a paved road and into the storm sewers. An emergency valve in the sewer line blocked the spill, and the TCE was pumped out. The City of Portland recorded a series of low pH discharges (0.8 to 3.2) in 1984 and 1985. VWR decided not to renew its hazardous waste storage permit in December 1985. Soil and groundwater sampling was required as part of RCRA Closure activities. The sampling, performed in the summer of 1987, found high levels of solvents in the soil (down to 11 feet) and in the groundwater. In January 1989, toluene spilled from a leaking valve into the storm sewers. The toluene was contained and pumped out. In June 1990, DEQ was informed of a release of 3,900 gallons of nitric acid, phosphoric acid, and water. No information on the cleanup is in the files. As of May 1992, 16 substances were present in the groundwater at the site at levels above the federal Maximum Contaminant Levels (MCLs) for drinking water.

Comment:

(11/30/93 KPD/SAS) Surface contamination apparently was cleaned up by January 1992. Groundwater contamination at the site is presently being remediated, via corrective action, under the federal RCRA program. Site Assessment recommends that the site be placed on both the Confirmed Release List and Inventory. Once the site has been closed under RCRA, the site can be reevaluated to determine if any further action is necessary under the state Superfund program.

(11/14/07 BAG/CU) DEQ is not providing oversight or tracking this project in the Cleanup Program. For information on site status, contact Howard Orlean at EPA Region 10 in Seattle: 206-553-2851.

(10/5/2015 Liverman) EPA continues to be the lead for groundwater cleanup at the site under RCRA authorities. In July 2015, DEQ signed a voluntary cleanup agreement with the site for investigation and control of the stromwater pathway to Portland Harbor, including any facilitated transport of groundwater via the stormwater conveyance system. A work plan for the investigation is under development.

(3/6/2018 Liverman) EPA determined that the RCRA Order can be satisfied while Portland Harbor Source Control coordination continues with support from EPA's CERCLA team. Therefore, DEQ terminated the Voluntary Agreement for Stormwater Source Control at the site and EPA leads the RCRA Corrective Action and Source COntrol process for the site.

Comment:

At least a dozen chemicals (mostly solvents) are present in the groundwater at levels above the federal MCLs for drinking water.

Comment:

(11/30/93 KPD/SAS) Surface contamination apparently was cleaned up by January 1992. Groundwater contamination at the site is presently being remediated, via corrective action, under the federal RCRA program. Site Assessment recommends that the site be placed on both the Confirmed Release List and Inventory. Once the site has been closed under RCRA, the site can be reevaluated to determine if any further action is necessary under the state Superfund program.

(11/14/07 BAG/CU) DEQ is not providing oversight or tracking this project in the Cleanup Program. For information on site status, contact Howard Orlean at EPA Region 10 in Seattle: 206-553-2851.

(10/5/2015 Liverman) EPA continues to be the lead for groundwater cleanup at the site under RCRA authorities. In July 2015, DEQ signed a voluntary cleanup agreement with the site for investigation and control of the stromwater pathway to Portland Harbor, including any facilitated transport of

groundwater via the stormwater conveyance system. A work plan for the investigation is under development.

(3/6/2018 Liverman) EPA determined that the RCRA Order can be satisfied while Portland Harbor Source Control coordination continues with support from EPA's CERCLA team. Therefore, DEQ terminated the Voluntary Agreement for Stormwater Source Control at the site and EPA leads the RCRA Corrective Action and Source COntrol process for the site.

Comment:			

(11/30/93 KPD/SAS) Van Waters & Rogers, a subsidiary of Univar Corp., started as a chemical supply company in 1946. About 1974, the company expanded into recycling and distilling spent solvents. In August 1980, methylene chloride spilled from a ruptured tank hose. The spill was confined to the pavement and mopped up. In September 1983, about 515 gallons of trichloroethylene (TCE) spilled from a ruptured tank gauge across a paved road and into the storm sewers. An emergency valve in the sewer line blocked the spill, and the TCE was pumped out. The City of Portland recorded a series of low pH discharges (0.8 to 3.2) in 1984 and 1985. VWR decided not to renew its hazardous waste storage permit in December 1985. Soil and groundwater sampling was required as part of RCRA Closure activities. The sampling, performed in the summer of 1987, found high levels of solvents in the soil (down to 11 feet) and in the groundwater. In January 1989, toluene spilled from a leaking valve into the storm sewers. The toluene was contained and pumped out. In June 1990, DEQ was informed of a release of 3,900 gallons of nitric acid, phosphoric acid, and water. No information on the cleanup is in the files. As of May 1992, 16 substances were present in the groundwater at the site at levels above the federal Maximum Contaminant Levels (MCLs) for drinking water.

Release Comment Desc: General Comments

An estimated 300 gallons of Bunker fuel was released from an inactive Texaco pipeline during the late winter of 1998/99 when a fiber-optic cable trenching contractor evidently ruptured the pipeline during trenching activiti es along Front Avenue. DEQ has received no cleanup report for the release.

The Shell Oil Products US Terminal (former Equilon and Texaco Terminals) located at 3800 NW St. Helens Road in Portland previously received petroleum product from a fuel dock on the south bank of the Willamette River which was transferred via pipeline to the Terminal. The pipeline corridor runs beneath property occupied by Gunderson and Burlington Northern Santa Fe (Railroad Hub Center and Guilds Lake Yard).

In 1997 hydrocarbon odors reported at the Gunderson facility led to an investigation that determined that a gasoline release had occurred from one of the pipeline corridor lines. A soil and groundwater remediation system, using air sparging and soil vapor extraction wells, was installed and began active remediation in March 1998. The remediation system was turned off on September 25, 2003 with approval from DEQ based on the steady decline of gasoline concentrations in groundwater performance monitoring wells. The air sparge and soil vapor extraction wells were decommissioned in 2007.

In November 2013, DEQ issued a Portland Harbor source control decision for the Shell Terminal and the pipeline corridor which concluded that the 1997 pipeline release did not present a risk to the Willamette River. URS Corporation, on behalf of Shell, submitted an April 4, 2014 letter report evaluating the residual risk to upland occupational and potential excavation and construction workers at the Gunderson facility. This evaluation considered the risk to occupational workers from exposure to potential vapors from site soil and groundwater in outdoor and indoor air. The assessment also evaluated the risk to excavation and construction workers who would be exposed to direct contact with soil and groundwater. Gasoline constituents in site soil and groundwater are either non detect or below the risk based concentrations in the DEQ Risk Based Decision Making for the Remediation of Petroleum-Contaminated Sites. DEQ agrees with the assessment in the report, the evaluation of potential risk to current and future site workers and the conclusion that the pipeline release does not pose unacceptable risk to human receptors.

DEQ issued a public notice on June 1, 2014 seeking public comment on a proposal to approve the cleanup of the pipeline release and remove the site from the DEQ Confirmed Release List and Inventory List. The comment period ended June 30, 2014. No comments were received. DEQ issued a No Further Action letter dated August 5, 2014 and removed the site from the DEQ Confirmed Release List and Inventory List.

Gasoline with some diesel fuel. Primarily BTEX contamination, with possible MTBE. Possible lead if historic releases were also involved. Possible PAHs, depending on overall diesel fuel concentrations. One of Texaco's inactive underground pipelines was also ruptured during the late winter of 1998/99 when a trenching contractor who was installing a fiber-optic cable struck the pipeline, releasing approximately 300 gal. of bunker fuel. (1/20/00 TBG/SAP) Soil and groundwater investigation was conducted in 1997 to evaluate petroleum hydrocarbons around Texaco's pipelines located under the Gunderson facility. Gasoline-range contamination was found in soil and groundwater, and petroleum vapors turned up in nearby sewers and inside the Gunderson building. Because the downgradient extent of contamination is not known, it is unclear whether contaminants released from the pipeline have migrated to the Willamette River.

(1/20/00 TGB/SAP) Based on sampling results from a river sediment study, the Texaco pipeline has been identified as a potential source of contamination to Porltand Harbor. DEQ completed an initial investigation in September 1999. A remedial investigation (RI) is required to evaluate potential ecological threats posed by sediment contamination (high priority). (1/19/01 MJM/VCP) DEQ and Equilon entered into a Voluntary RI Agreement 8/16/00. Equilon submitted a draft pre-remedial investigation work plan for both the bulk-fuel facility and the pipeline 10/00, and is currently revising it based on DEQ review comments. Equilon constructed a soil vapor extraction and air-sparge system 12/99 on the Gunderson site to remediate vadose-zone soils and groundwater from the suspected pipeline release. Groundwater monitoring indicates the system has effectively reduced contaminant levels. DEQ requested additional investigation to establish the nature and extent of the original release.

Texaco's product-transfer pipelines are a pair of 10-inch subsurface pipelines (3 to 5 feet bgs) that extend from a Willamette River dock located along the northern edge of the Gunderson property (4350 NW Front Ave.; ECSI #1155) to the Texaco (bulk storage and delivery) Terminal (ECSI #169) at 3800 NW St Helens Road, 0.4 miles to the south. Subsurface soil and groundwater data indicate that a pipeline leak apparently occurred where the pipeline passes beneath NW Front Ave., and an asphalt parking lot on the southern edge of the Gunderson property. The petroleum plume may extend beneath manufacturing buildings on the Gunderson property (Fabrication Bay #2). When one of Texaco's underground pipelines was ruptured by a trenching contractor during the winter of 1998/99, it was reported that Texaco may actually have four pipelines in its right-of-way.

Petroleum products, including BTEX constituents (benzene, toluene, ethylbenzene, and xylenes); MTBE, PAHs, and lead may also be present. The accidental rupture of one of Texaco's inactive pipelines during the late winter of 1998/99 released up to 300 gallons of Bunker oil, so PAHs may also be a significant concern at the site.

Shallow subsurface contamination data suggest that the release occurred on the Gunderson property, beneath Texaco's product transfer pipelines. Contaminated soils and groundwater may extend beneath Gunderson manufacturing buildings (Fabrication Bay 1), a paved parking lot on the Gunderson property, and NW Front Ave. Gasoline was found in local sanitary sewer lines, and may continue to enter them, depending on static water levels. Subsurface free petroleum might also affect other nearby subsurface utility lines (phone, gas, water, storm-sewer lines). Potential release of benzene vapors into Gunderson buildings is a major concern. Texaco began installing a sparging system along the pipeline, and excavated some contaminated soils along the pipeline in November 1997, although the full extent of subsurface contamination is not clear, and Texaco's sparging system has yet to be activated. Rupture of an inactive Bunker fuel pipeline near the same location could complicate contamination issues. Free product gasoline could mobilize any residual PAHs from the Bunker fuel release.

Soil contamination data suggests that the release originated from an underground pipeline leak. It is unclear if the pipline is the only source of petroleum releases. One of Texaco's nearby inactive Bunker fuel pipelines was also ruptured during fiber-optic cable trenching activities in the late winter of 1998/99, releasing approximately 300 gallons of Bunker fuel.

Subsurface soils and groundwater. Contaminant concentrations in groundwater suggest the presence of LNAPL. Gasoline was also detected in a nearby sanitary sewer line, suggesting the potential for releases to nearby storm sewer lines also. Storm sewers discharge to the nearby Willamette River.

Most significant concerns are: vapor releases (benzene) to nearby buildings on the Gunderson property; vapor and free-product releases to the sanitary sewer line that could create explosive conditions within the sewer lines; potential hazard to utility trench workers; potential damage to other nearby underground utilities (natural gas, water, telephone); potential discharges to storm sewers that discharge to the Willamette River; potential discharge of contaminated groundwater to the Willamette River; and potential exacerbation of existing subsurface contamination at the Gunderson site.

Comment:

(2/23/95 KPD/SRS) Because contaminated groundwater is continuing to migrate onto the site, Site Response recommends that the site be placed on the Confirmed Release List (CRL). In addition, Site Response recommends that a PA be performed to check the current status of the landfill (sufficiency of cap, etc.) and to determine the potential for zirconium migration to groundwater.

Comment:

(5/18/93 KPD/SAS) Privately-owned landfill that received non-recyclable wastes from ESCO's foundry operations. Wastes include mildly radioactive zirconium sand. Landfill was closed in 1983 with the approval of DEQ and the Oregon State Health Division. Groundwater at the site is contaminated with lead. The lead is thought to have migrated from the adjacent NL/Gould Superfund site (ECSI #49).

Comment:			

The site is located in a heavily industrialized part of NW Portland. The Willamette River is a few hundred yards north and east of the site, and Forest Park is about a quarter-mile south and west of the site. Groundwater in the area is not used for drinking.

Comment:			

Gasoline and diesel spills in 1991 and 1994 have impacted soil and groundwater on and off-site. A drainage ditch adjacent to the site flows first into North Doane Lake, then discharges to the Willamette River through City of Portland outfall #22C. Considering the nature of this potential surface water migration pathway and that the site is 0.5 mile from the Willamette River, it appears unlikely that the site has significantly impacted river sediment.

Comment:			

(6/17/99 JMW/SAP) Based on initial sampling results from a river sediment quality study, the Kinder Morgan property has been identified as a potential source of contamination to the Portland Harbor. A Site Assessment Review Notice was sent on March 5, 1999. A site screening is scheduled (level II priority). (2/7/00 JMW/SAP) Strategy Recommendation completed November 1999. Further action will proceed in the Site Assessment process (not as part of the Portland Harbor sediment investigation). An Expanded Preliminary Assessment should be conducted to evaluate potential sediment contamination in North Doane Lake, potential upland site contaminant sources, migration pathways, and past waste-management practices.

(March 2014 Liverman) In December 2013 DEQ requested that the current operator, SFPP (Kinder Morgan), enter the voluntary cleanup program to investigate and control, as warranted, groundwater and stormwater as potetnial pathways to Portland Harbor. A Letter Agreement was executed in January 2014.

Comment:			

(March 2014 Liverman) Past spills at the site have resulted in soil removal and operation of a vapor extraction system to adress contaminated groundwater under the site. A source control evaluation is needed to assess the potential for impacts to the Portland Harbor Superfund site via the groundwater and stormwater pathways.

In December 2013 DEQ requested that the current operator, SFPP (Kinder Morgan), enter the voluntary cleanup program to investigate and control, as warranted, groundwater and stormwater as potetnial pathways to Portland Harbor. A Letter Agreement was executed in January 2014.

Comment:			

(March 2014 Liverman) Past spills at the site have resulted in soil removal and operation of a vapor extraction system to adress contaminated groundwater under the site. A source control evaluation is needed to assess the potential for impacts to the Portland Harbor Superfund site via the groundwater and stormwater pathways.

Comment:			

(6/17/99 JMW/SAP) Based on initial sampling results from a river sediment quality study, the Kinder Morgan property has been identified as a potential source of contamination to the Portland Harbor. A Site Assessment Review Notice was sent on March 5, 1999. A site screening is scheduled (level II priority). (2/7/00 JMW/SAP) Strategy Recommendation completed November 1999. Further action will proceed in the Site Assessment process (not as part of the Portland Harbor sediment investigation). An Expanded Preliminary Assessment should be conducted to evaluate potential sediment contamination in North Doane Lake, potential upland site contaminant sources, migration pathways, and past waste-management practices.

(March 2014 Liverman) In December 2013 DEQ requested that the current operator, SFPP (Kinder Morgan), enter the voluntary cleanup program to investigate and control, as warranted, groundwater and stormwater as potetnial pathways to Portland Harbor. A Letter Agreement was executed in January 2014.

Comment:			

Gasoline and diesel spills in 1991 and 1994 have impacted soil and groundwater on and off-site. A drainage ditch adjacent to the site flows first into North Doane Lake, then discharges to the Willamette River through City of Portland outfall #22C. Considering the nature of this potential surface water migration pathway and that the site is 0.5 mile from the Willamette River, it appears unlikely that the site has significantly impacted river sediment.

(April 2004, ACV) Groundwater (GW) contamination by chlorinated solvents. Property transfer set for December 2004. GW Remedial Investigation (RI) in progress. GW conditions influenced by GW recovery system operating on adjacent site, VOPAK, which is federal lead site (EPA). Risk assessment in progress.
(November 2004, ACV) Groundwater impacts were limited to the western portion of the property, Volatile Organic Compounds (VOCs) were degrading, and plume was deemed to be stable and declining in area. Concerns regarding preferential migration pathways (storm sewer line) were addressed. The risk assessment indentified no current risks but future potential risks to trenchworkers and indoor workers, if a building was constructed over the plume. The proposed remedy was to notify workers of potenial risks, restrict groundwater use and land use, and include engineering controls if there was new construction over the plume.
(December 2004, ACV) Completed the Remedial Investigation/Feasibility Study in August 2004. Public notice on the proposed remedy was in September 2004. The proposed remedy was institutional controls (worker notification, groundwater use restrictions, land use restrictions, and required engineering controls if new construction was conducted over the area of the groundwater plume. Project was completed in November 2004. Final public notice on completed remedy was December 1, 2004. Conditional No Further Action (NFA) determination dated December 2, 2004.

Stormwater: (10/2008, K. Tarnow) DEQ conducted site visit and collected/analyzed a catch basin sediment samples as part of a Portland Harbor Site Discovery pilot project. The objective was to determine whether a Portland Harbor Stormwater Pathway Evaluation would be necessary. Several chemicals exceeded JSCS SLVs, most notably metals, PAHs, phthalates and PCBs. Based upon this, DEQ asked Container Recovery to enter into an agreement with VCP to conduct a stormwater evaluation. They responded on 6-20-08 indicating that they declined to enter into an agreement with DEQ but are willing to work with DEQ in resolving the issues. On 9-4-08, CR contacted DEQ to say that they planned to cleanout CBs and lines and then resample sediments and discuss the results.

In Dec 2012, DEQ sent another request for the site, now operated as Oregon Beverage Recycling Cooperative, to assess the stormwater pathway. A letter agreement for stormwater assessment was executed in Apr 2013.

(November 2004, ACV) An October 2004 Record of Decision (ROD) stated that contaminated groundwater was not a current risk, but posed a potential future risk to site workers (if built over) and excavation workers (if work were done in the area of groundwater impact). The ROD required worker notification, building restrictions, and groundwater use limits in an EES. Both the property owner, Michael Malone, and the buyer, Container Recovery, agreed to the restrictions in the Easement & Equitable Servitude (EES) and Remedial Design/Remedial Action (RD/RA) agreement.

(December 2004, ACV) Completed the Remedial Investigation/Feasibility Study in August 2004. Public notice on the proposed remedy was in September 2004. The proposed remedy was institutional controls (worker notification, groundwater use restrictions, land use restrictions, and required engineering controls if new construction was conducted over the area of the groundwater plume. Project was completed in November 2004. Final public notice on completed remedy was December 1, 2004. Conditional No Further Action (NFA) determination dated December 2, 2004.

(10/25/05 JMW/SAP) Because the site has restrictions on groundwater use, land use and worker notifications (institutional control, Easement and Equitable Servitude), Container Recovery was proposed for listing on DEQ's Confirmed Release List (CRL) and Inventory.

(March 2014 Liverman) In April 2013, DEQ executed a voluntary Cleanup program Letter Agreement with the current site operator, Oregon Beverage Recycling Cooperative, to conduct an assessment for stormwater source control of the complete pathway to Portland Harbor. A work plan was developed, approved and implemented in June 2013. The stormwater system is being investigated to confirm connections, underground injection facilities, and discharge pathways. Stormwater solids have been collected from site catch basins and analyzed. Stormwater sampling and evaluation is underway toward implementation of source control measures, as warranted and development of a source control evaluation report in support of a source control decision.

(Feb 2015 Liverman) Sampling and evaluation of stormwater solids, stormwater and source tracing efforts began in 2009 and evaluation indicated that source control measures were warranted. Measures, including enclosure of glass processing activities, comprehensive sweeping, catch basin and stormline repairs, catch basin inserts and biobag installation and downspout disconnection, were iteratively applied until perfomance monitoring indicated sources were adequately controlled. On-going monitoring and compliance actions will be regulated under the site's 1200Z industrial stormwater general permit. A Source Control Evaluation Report was prepared by the site in Sep 2014 and a draft Source Control Decision was prepared by DEQ in Feb 2015 for review by EPA and Partners. DEQ issued the Source Control Decision March 17, 2015.

Oregon Beverage Recycling Cooperative currently uses the site to process used beverage containers in preparation for recycling. The same operations, along with and management of damaged beverage products, were conducted on the site previously by Container Recovery. The site was initially developed and operated as two separate properties in the mid 1940s. The western portion was initially developed with the construction of a single story building immediately north of the currently existing building on the western edge of the site. The currently existing small warehouse building was added in the late 1940s. An approximate 20,000 square foot building was constructed in the southern portion of the site in 1950. The original single story building was also expanded in the early 1950s. A truck scale was constructed in the NW corner of the property in the mid 1950s. The original single story building and the 20,000 square foot building were removed in the early 1960s. The western portion of the site was used staring with its initial development by Convoy Corporation to stage automobile hauling and fabricate auto hauling trucks. Auto hauling trucks were constructed in the 20,000 square foot building. Convoy moved their truck fabricating operation to the eastern portion of the site in the early 1960s. Convoy was purchased by Ryder in the 1980s. Ryder continued to use the western portion of the site until Container Recovery started operations on the site in 1990. The eastern portion of the site was initially developed in the mid 1940s. The existing two story building in the NE corner of the site was constructed in 1953 for Ackroyd Photography and was used for a photography studio. Starting with its initial development, the eastern portion of the site was used by Sandberg Manufacturing to manufacture furnaces and fabricate sheet metal. Starting in the early 1960s, Convoy started using the southern portion of the Sandberg building to manufacture auto hauling trucks. By the 1970s, Convoy occupied the entire building and eastern portion of the site. Container Recovery started operation in 1990, recycling used beverage containers and managing damaged beverage products. Oregon Beverage Recycling Cooperative continued recycling operations on the site beginning around 2010.

DEQ issued a No Further Action for groundwater and soil contamination at the site in Dec 2004 that included a requirement for the stormwater pathway to be evaluated.

In Jun 2007, DEQ conducted a site visit and collected/analyzed a catch basin sediment samples as part of a Portland Harbor Site Discovery pilot project. Several chemicals exceeded Portland Harbor Joint Source Control Strategy screening level values, most notably metals, PAHs, phthalates and PCBs. Based upon this, DEQ asked Container Recovery to enter into a voluntary cleanup agreement to conduct a stormwater evaluation. They responded in Jun 2008 indicating that they declined to enter into an agreement with DEQ but were willing to work with DEQ in resolving the issues. In Sep 2008, the site contacted DEQ to say that they planned to cleanout catch basins and stormwater lines and then resample sediments and discuss the results.

In Dec 2012, DEQ sent another request for the site, now operated as Oregon Beverage Recycling Cooperative, to assess the stormwater pathway. A letter agreement for stormwater assessment was executed in Apr 2013.

Stormwater system investigation and sampling and analysis of stormwater and stormwater solids and source tracing efforts were completed during 2013 and 2014. A Sep 2014 Source Control Evaluation Report describes investigations, repairs, implementation of source control measures and effectiveness monitoring demonstrating control. DEQ prepared a draft Source Control Decision in Feb 2015 for review by EPA and Partners. DEQ issued the Source Control Decision March 17, 2015.

Comment:			

(December 2004, ACV) Completed the Remedial Investigation/Feasibility Study in August 2004. Public notice on the proposed remedy was in September 2004. The proposed remedy was institutional controls (worker notification, groundwater use restrictions, land use restrictions, and required engineering controls if new construction was conducted over the area of the groundwater plume. Project was completed in November 2004. Final public notice on completed remedy was December 1, 2004. Conditional No Further Action (NFA) determination dated December 2, 2004.

(10/25/05 JMW/SAP) Because the site has restrictions on groundwater use, land use and worker notifications (institutional control, Easement and Equitable Servitude), Container Recovery was proposed for listing on DEQ's Confirmed Release List (CRL) and Inventory.

(March 2014 Liverman) In April 2013, DEQ executed a voluntary Cleanup program Letter Agreement with the current site operator, Oregon Beverage Recycling Cooperative, to conduct an assessment for stormwater source control of the complete pathway to Portland Harbor. A work plan was developed, approved and implemented in June 2013. The stormwater system is being investigated to confirm connections, underground injection facilities, and discharge pathways. Stormwater solids have been collected from site catch basins and analyzed. Stormwater sampling and evaluation is underway toward implementation of source control measures, as warranted and development of a source control evaluation report in support of a source control decision.

(Feb 2015 Liverman) Sampling and evaluation of stormwater solids, stormwater and source tracing efforts began in 2009 and evaluation indicated that source control measures were warranted. Measures, including enclosure of glass processing activities, comprehensive sweeping, catch basin and stormline repairs, catch basin inserts and biobag installation and downspout disconnection, were iteratively applied until perfomance monitoring indicated sources were adequately controlled. On-going monitoring and compliance actions will be regulated under the site's 1200Z industrial stormwater general permit. A Source Control Evaluation Report was prepared by the site in Sep 2014 and a draft Source Control Decision was prepared by DEQ in Feb 2015 for review by EPA and Partners. DEQ issued the Source Control Decision March 17, 2015.

Comment:			

Groundwater impacts were limited to the western portion of the property, VOCs were degrading, and plume was deemed to be stable and declining in area. Concerns regarding preferential migration pathways (storm sewer line) were addressed. The risk assessment indentified no current risks but future potential risks to trenchworkers and indoor workers, if a building was constructed over the plume. The proposed remedy was to notify workers of potenial risks, restrict groundwater use and land use, and include engineering controls if there was new construction over the plume.

Stormwater: (10/2008, K. Tarnow) DEQ conducted site visit and collected/analyzed a catch basin sediment samples as part of a Portland Harbor Site Discovery pilot project. The objective was to determine whether a Portland Harbor Stormwater Pathway Evaluation would be necessary. Several chemicals exceeded JSCS SLVs, most notably metals, PAHs, phthalates and PCBs. Based upon this, DEQ asked Container Recovery to enter into an agreement with VCP to conduct a stormwater evaluation. They responded on 6-20-08 indicating that they declined to enter into an agreement with DEQ but are willing to work with DEQ in resolving the issues. On 9-4-08, CR contacted DEQ to say that they planned to cleanout CBs and lines and then

resample sediments and discuss the results.

In Dec 2012, DEQ sent another request for the site, now operated as Oregon Beverage Recycling Cooperative, to assess the stormwater pathway. A letter agreement for stormwater assessment was executed in Apr 2013.

(November 2004, ACV) An October 2004 Record of Decision (ROD) stated that contaminated groundwater was not a current risk, but posed a potential future risk to site workers (if built over) and excavation workers (if work were done in the area of groundwater impact). The ROD required worker notification, building restrictions, and groundwater use limits in an EES. Both the property owner, Michael Malone, and the buyer, Container Recovery, agreed to the restrictions in the Easement & Equitable Servitude (EES) and Remedial Design/Remedial Action (RD/RA) agreement.

Oregon Beverage Recycling Cooperative currently uses the site to process used beverage containers in preparation for recycling. The same operations, along with and management of damaged beverage products, were conducted on the site previously by Container Recovery. The site was initially developed and operated as two separate properties in the mid 1940s. The western portion was initially developed with the construction of a single story building immediately north of the currently existing building on the western edge of the site. The currently existing small warehouse building was added in the late 1940s. An approximate 20,000 square foot building was constructed in the southern portion of the site in 1950. The original single story building was also expanded in the early 1950s. A truck scale was constructed in the NW corner of the property in the mid 1950s. The original single story building and the 20,000 square foot building were removed in the early 1960s. The western portion of the site was used staring with its initial development by Convoy Corporation to stage automobile hauling and fabricate auto hauling trucks. Auto hauling trucks were constructed in the 20,000 square foot building. Convoy moved their truck fabricating operation to the eastern portion of the site in the early 1960s. Convoy was purchased by Ryder in the 1980s. Ryder continued to use the western portion of the site until Container Recovery started operations on the site in 1990. The eastern

portion of the site was initially developed in the mid 1940s. The existing two story building in the NE corner of the site was constructed in 1953 for Ackroyd Photography and was used for a photography studio. Starting with its initial development, the eastern portion of the site was used by Sandberg Manufacturing to manufacture furnaces and fabricate sheet metal. Starting in the early 1960s, Convoy started using the southern portion of the Sandberg building to manufacture auto hauling trucks. By the 1970s, Convoy occupied the entire building and eastern portion of the site. Container Recovery started operation in 1990, recycling used beverage containers and managing damaged beverage products. Oregon Beverage Recycling Cooperative continued recycling operations on the site beginning around 2010.

DEQ issued a No Further Action for groundwater and soil contamination at the site in Dec 2004 that included a requirement for the stormwater pathway to be evaluated.

In Jun 2007, DEQ conducted a site visit and collected/analyzed a catch basin sediment samples as part of a Portland Harbor Site Discovery pilot project. Several chemicals exceeded Portland Harbor Joint Source Control Strategy screening level values, most notably metals, PAHs, phthalates and PCBs. Based upon this, DEQ asked Container Recovery to enter into a voluntary cleanup agreement to conduct a stormwater evaluation. They responded in Jun 2008 indicating that they declined to enter into an agreement with DEQ but were willing to work with DEQ in resolving the issues. In Sep 2008, the site contacted DEQ to say that they planned to cleanout catch basins and stormwater lines and then resample sediments and discuss the results.

In Dec 2012, DEQ sent another request for the site, now operated as Oregon Beverage Recycling Cooperative, to assess the stormwater pathway. A letter agreement for stormwater assessment was executed in Apr 2013.

Stormwater system investigation and sampling and analysis of stormwater and stormwater solids and source tracing efforts were completed during 2013 and 2014. A Sep 2014 Source Control Evaluation Report describes investigations, repairs, implementation of source control measures and effectiveness monitoring demonstrating control. DEQ prepared a draft Source Control Decision in Feb 2015 for review by EPA and Partners. DEQ issued the Source Control Decision March 17, 2015.

Comment:			

Since 2000, the Port completed facility-wide remedial investigation activities which included soil and groundwater investigations, and included soil sampling, groundwater grab sampling, groundwater monitoring well installation, four quarters of groundwater sampling, and five years of annual groundwater sampling. The results of these investigations, as well a 1998 investigations performed as part of the OU1 sale to Vigor Industrial, are documented in a series of remedial investigation and groundwater monitoring reports. The status of investigation in each operable unit is presented below.

Operable Unit 1
Human Health Risk Assessment was submitted by the Port on 3/3/09 and concluded no areas of unacceptable risk to human health are present.

Ecological Risk Assessment was submitted by the Port on 4/5/10 and concluded no areas of unacceptable risk to ecological receptors are present. Source Control Decision was issued by DEQ on 6/11/14 regarding the non-stormwater pathways. DEQ's source control decision is that contaminant transport pathways at the site do not pose a significant current or likely future threat to the Willamette River with the exception of the riverbank erosion pathway. Two areas totaling 1,100 feet of riverbank have been identified as needing source control. Based on the need for at least a portion of the work to be below the ordinary high water line where inwater work is anticipated, DEQ recommends that source control for the identified riverbank areas be incorporated by EPA into the final remedy for the in-water cleanup.

Vigor Stormwater Source Control Evaluation was submitted on 4/15/10. Results showed that stormwater from the Vigor facility is an uncontrolled upland source to the Willamette River for arsenic, copper, lead, mercury, zinc, tributyltin, PCBs, phthalate esters, and PAHs. The Stormwater Source Control Work Plan Rev 1 was submitted on 4/30/17 and out lines source control measures to be implemented at the site. Stormwater source control measures identified include electrocoagulation, and media filtration systems.

Operable Unit 2
Human Health Risk Assessment was submitted on 11/5/09 and concluded additional actions are necessary to address arsenic contaminated surface soil resulting from sand blasting operations.
Ecological Risk Assessment was submitted on 4/5/10 and concluded that no areas of unacceptable risk are present on the current operable unit 2 areas (Cemax or Dialmer lease hold areas). Concentrations of metals are above screening levels in river bank soils (currently operable unit 5).
Removal Action to address elevated levels of arsenic in surface soil was approved by DEQ on 2/27/14. In order to expedite the cleanup schedule, the selected remedial action was implemented as a removal action prior to completion of the record of decision. DEQ will issue a public comment for issuing a No Further Action after the removal action is complete, the source control decision is issued, and reviewing the project file.
Proposed Source Control Decision issued by DEQ 10/9/2017. Contaminant transport pathways from the site do not pose a significant current or likely future threat to the Willamette River.

Operable Unit 3
Source Control Decision was issued by DEQ on 4/30/12. DEQ concluded that OU3 is adequately characterized and does not appear to be a current or reasonably likely future source of Willamette River or sediment contamination.
No Further Action

Operable Unit 4
Human Health Risk Assessment submitted 4/23/2012
Ecological Risk Assessment submitted 4/23/202.
Source Control Decision issued 2/26/2015.
Conditional No Further Action issued 3/18/2015. The proposed remedial action selected by DEQ is Capping (cap, access control, deed restriction, soil management plan). The port is currently in negations with Vigor to implement the proposed remedial action.

Berth 311 information requested May 2005. (11/7/05 JLS/CU&LW) Berth 311 information provided August 2005. DEQ site visit September 2005. DEQ request for catch basin sampling prior to NFA, October 2005. Request for evaluation of storm water releases with DEQ oversight sent to Cascade General in October 2005.

In 2009, 12 surface soil samples (SS-01-BWTP-01 through -12) were collected to support the Level II Ecological Risk Assessment. The samples were collected along the top of the riverbank adjacent to the ballast water treatment plant. Samples were analyzed for total petroleum hydrocarbons, metals, PAHs, PCBs, and tributyltin

Comment:			

Vigor Industrial operates the facility under a general 1200z NPDES stormwater permit, an individual NPDES permit for treating oily ballast water and discharging treated water, and under an individual NPDES permit for the drydock operation itself. Until 1996, the Port of Portland maintained responsibility for the permits, and was cited for inadequate cleaning of the drydocks prior to submerging. Since 1993, sandblast material has been removed from the drydocks prior to each submersion; before 1993, this was either not done, or done occasionally. Spent sandblast materials may contain elevated levels of copper, lead, arsenic, zinc, tributyl tin, and PAHs. In 1991-93, prior to and after dredging around the drydocks, the Port sampled sediments beneath Drydocks #1, #3, and #4. Dredge spoils were disposed of on Ross Island. Post-dredge samples show that sediment contamination remains in the Willamette River, especially around Drydocks #1 and #3.

Upland areas of potential concern are generally associated with the sites long history of industrially use and are focused around buildings where ship repair and manufacturing activities occurred in operable unit 1. Elevated levels of metalsand PCBs are observed in operable unti 2 and 5 surface soil and are likely associated with sand blasting operation. Petroleum hydrocarbon and PAH contamination is observed in operable unit 4 shallow soils.

This site occupies most of the north, south, and west perimeters of Swan Island. Three drydocks are located at the northern end of the island, with in-water berths arranged along the Willamette River and Swan Island basin sides of the island. The yard is all paved, except a 22-acre channel fabrication site along the island's south shore, and 34-acre undeveloped area at the eastern end of Swan Island lagoon. In 2006 the Port and DEQ agreed to split the shipyard into two separate components: 1) the upland portion above ordinary high water; and 2) the in-water portion of the site below ordinary high water and within the Portland Harbor Superfund in-water study area.

(DL2017)The upland site has been divided into five operable units designated as follows:
OU1-57 acres of upland property owned by Vigor Industrial (formerly Cascade General) and operated as the Vigor Marine Ship Repair Yard and formerly known as the Portland Shipyard.
OU2-19 acres of upland property owned by the Port of Portland south of North Channel Avenue. Currently there are two lease holds: 1) the Cemex concrete patch plant and 2) the Daimler temporary truck staging area.
OU3-2.5 acres of upland property owned by the Port of Portland on North Lagoon Avenue that includes the property at 5420 North Lagoon Avenue and the adjacent property to the north that provides access to Berths 308 and 309.
OU4-7.8 acres of upland property between OU1 and OU2. Until 2008, OU4 was part of OU2, but was designated a separate operable unit to facilitate the potential sale of the property from the Port to Vigor Industrial.
OU5-5 acres of upland property that includes the riverbank adjacent to OU2 and OU4. Until 2014, OU5 was part of OU2, but was designated a separte OU to facility the potential sale of the OU2 property.

Paint-stripping sands and dry paint were released to river when drydocks were submerged; time of release: continuous past practice -- specific dates unknown.Suspected sources of contamination inlclude, but are not necessarily limited to the following: 1)Dry dock & berth operations; 2)Upland ship repair operations; 3)Wastewater and stormwater discharge; 4)UST releases; 5)Surface runoff; 6)Utility service; 7)Storage of equipment, materials and waste; 8)Contamination from historical operations; 9)Potential contamination in dredged fill placed in shipways and south end of Swan Island Lagoon.

EPA inspectors noted oil slick on Willamette River 11/14/87, originating from dry dock. Sandblast materials may contain elevated levels of copper and zinc, as well as other metals. Willamette River sediments in the vicinity of the dry docks have been contaminated as a result of historical facility operations.

Possible contaminant migration pathways include, but are not necessarily limited to the following: 1)above-ground air and surface runoff; 2)infiltration of precipitation and surface runoff; 3)direct releases; 4)groundwater advection 5) suspension or dissolution of river sediments; 6)volatilization; 7)food web

(consumption). Possible exposure pathways for humans include, but are not necessarily limited to the following: 1)direct contact with either contaminated upland soils or sediments; 2)incidental ingestion/inhalation of contaminated soils and possibly sediments; 3)incidental ingestion and/or dermal contact with surface water contaminated by facility sources; 4)direct contact, inhalation of volatiles or particulates and/or incidental ingestion of particulates from direct releases; 5)inhalation of volatiles and contaminated soil and/or groundwater and particulates from contaminated soils; 6) ingestion and/or other exposure to contaminated groundwater; and 7)consumption of aquatic species impacted by site contaminants. Possible likely exposure pathways for ecological receptors include, but are not necessarily limited to the following: 1)direct uptake of surface water and/or sediments contaminated by facility sources; and 2)ingestion of aquatic or benthic organisms in the river by aquatic or terrestrial consumers or decomposers.

Comment:			

The Port of Portland acquired Swan Island in 1922. Swan Island was then developed and served as the airport for Portland until 1942. In 1942 Kaiser Company constructed an operated a shipbuilding yard at the site which operated until 1949. In 1949 the Port purchased the shipyard and managed the Swan Island Ship Repair Yard as a multi-user facility. Through 1995 the Port of Portland expanded capabilities including the addition of dry docks; construction of a ballast water treatment plant, and development of berths along the Willamette River. In 1996 operations were transferred to Cascade General and in 2000, the Port sold the portion of the shipyard defined as operable unit-1 to Vigor Industrial LLC.1990.

The Port submitted a Remedial Investigation/Feasibly Study Work Plan for the Portland Shipyard in 2000. Implementation of the work plan proceeded through 2006, when the Port and DEQ agreed to split the shipyard into two separate components: 1) the upland portion above ordinary high water; and 2) the in-water portion of the site below ordinary high water and within the Portland Harbor Superfund in-water study area. The Port entered into a voluntary agreement for remedial investigation, source control measures, and feasibility study with DEQ for the Swan Island Upland Facility on July 24, 2006. The agreement covers the upland portions of the site and divides the Swan Island Upland Facility into operable units. A Supplemental Preliminary Assessment Swan Island Upland Facility was conducted by the Port in 2006 and subsequent investigations have focused on the individual operable units.

DEQ entered into to a Voluntary Agreement with Vigor Industrial to oversee a stormwater source control evaluation on the potential of contaminant transport from stormwater to the Willamette River. In 2016 DEQ and Vigor issues a Consent Order to design and implement removal actions to address the transport of contaminants in site stormwater to the Willamette River.

The Port of Portland acquired Swan Island in 1922. Swan Island was then developed and served as the airport for Portland until 1942. In 1942 Kaiser Company constructed an operated a shipbuilding yard at the site which operated until 1949. In 1949 the Port purchased the shipyard and managed the Swan Island Ship Repair Yard as a multi-user facility. Through 1995 the Port of Portland expanded capabilities including the addition of dry docks; construction of a ballast water treatment plant, and development of berths along the Willamette River. In 1996 operations were transferred to Cascade General and in 2000, the Port sold the portion of the shipyard defined as operable unit-1 to Vigor Industrial LLC.1990.

The Port submitted a Remedial Investigation/Feasibly Study Work Plan for the Portland Shipyard in 2000. Implementation of the work plan proceeded through 2006, when the Port and DEQ agreed to split the shipyard into two separate components: 1) the upland portion above ordinary high water; and 2) the in-water portion of the site below ordinary high water and within the Portland Harbor Superfund in-water study area. The Port entered into a voluntary agreement for remedial investigation, source control measures, and feasibility study with DEQ for the Swan Island Upland Facility on July 24, 2006. The agreement covers the upland portions of the site and divides the Swan Island Upland Facility into operable units. A Supplemental Preliminary Assessment Swan Island Upland Facility was conducted by the Port in 2006 and subsequent investigations have focused on the individual operable units.

DEQ entered into to a Voluntary Agreement with Vigor Industrial to oversee a stormwater source control evaluation on the potential of contaminant transport from stormwater to the Willamette River. In 2016 DEQ and Vigor issues a Consent Order to design and implement removal actions to address the transport of contaminants in site stormwater to the Willamette River.

Since 2000, the Port completed facility-wide remedial investigation activities which included soil and groundwater investigations, and included soil sampling, groundwater grab sampling, groundwater monitoring well installation, four quarters of groundwater sampling, and five years of annual groundwater sampling. The results of these investigations, as well a 1998 investigations performed as part of the OU1 sale to Vigor Industrial, are documented in a series of remedial investigation and groundwater monitoring reports. The status of investigation in each operable unit is presented below.

Operable Unit 1
Human Health Risk Assessment was submitted by the Port on 3/3/09 and concluded no areas of unacceptable risk to human health are present. Ecological Risk Assessment was submitted by the Port on 4/5/10 and concluded no areas of unacceptable risk to ecological receptors are present. Source Control Decision was issued by DEQ on 6/11/14 regarding the non-stormwater pathways. DEQ's source control decision is that contaminant transport pathways at the site do not pose a significant current or likely future threat to the Willamette River with the exception of the riverbank erosion pathway. Two areas totaling 1,100 feet of riverbank have been identified as needing source control. Based on the need for at least a portion of the work to be below the ordinary high water line where inwater work is anticipated, DEQ recommends that source control for the identified riverbank areas be incorporated by EPA into the final remedy for the in-water cleanup.

Vigor Stormwater Source Control Evaluation was submitted on 4/15/10. Results showed that stormwater from the Vigor facility is an uncontrolled upland source to the Willamette River for arsenic, copper, lead, mercury, zinc, tributyltin, PCBs, phthalate esters, and PAHs. The Stormwater Source Control Work Plan Rev 1 was submitted on 4/30/17 and out lines source control measures to be implemented at the site. Stormwater source control measures identified include electrocoagulation, and media filtration systems.

Operable Unit 2
Human Health Risk Assessment was submitted on 11/5/09 and concluded additional actions are necessary to address arsenic contaminated surface soil resulting from sand blasting operations.
Ecological Risk Assessment was submitted on 4/5/10 and concluded that no areas of unacceptable risk are present on the current operable unit 2 areas (Cemax or Dialmer lease hold areas). Concentrations of metals are above screening levels in river bank soils (currently operable unit 5).
Removal Action to address elevated levels of arsenic in surface soil was approved by DEQ on 2/27/14. In order to expedite the cleanup schedule, the selected remedial action was implemented as a removal action prior to completion of the record of decision. DEQ will issue a public comment for issuing a No Further Action after the removal action is complete, the source control decision is issued, and reviewing the project file.
Proposed Source Control Decision issued by DEQ 10/9/2017. Contaminant transport pathways from the site do not pose a significant current or likely future threat to the Willamette River.

Operable Unit 3
Source Control Decision was issued by DEQ on 4/30/12. DEQ concluded that OU3 is adequately characterized and does not appear to be a current or reasonably likely future source of Willamette River or sediment contamination.
No Further Action

Operable Unit 4
Human Health Risk Assessment submitted 4/23/2012
Ecological Risk Assessment submitted 4/23/202.
Source Control Decision issued 2/26/2015.
Conditional No Further Action issued 3/18/2015. The proposed remedial action selected by DEQ is Capping (cap, access control, deed restriction, soil management plan). The port is currently in negations with Vigor to implement the proposed remedial action.

Berth 311 information requested May 2005. (11/7/05 JLS/CU&LW) Berth 311 information provided August 2005. DEQ site visit September 2005. DEQ request for catch basin sampling prior to NFA, October 2005. Request for evaluation of storm water releases with DEQ oversight sent to Cascade General in October 2005.

In 2009, 12 surface soil samples (SS-01-BWTP-01 through -12) were collected to support the Level II Ecological Risk Assessment. The samples were collected along the top of the riverbank adjacent to the ballast water treatment plant. Samples were analyzed for total petroleum hydrocarbons, metals, PAHs, PCBs, and tributyltin

Vigor Industrial operates the facility under a general 1200z NPDES stormwater permit, an individual NPDES permit for treating oily ballast water and discharging treated water, and under an individual NPDES permit for the drydock operation itself. Until 1996, the Port of Portland maintained responsibility for the permits, and was cited for inadequate cleaning of the drydocks prior to submerging. Since 1993, sandblast material has been removed from the drydocks prior to each submersion; before 1993, this was either not done, or done occasionally. Spent sandblast materials may contain elevated levels of copper, lead, arsenic, zinc, tributyl tin, and PAHs. In 1991-93, prior to and after dredging around the drydocks, the Port sampled sediments beneath Drydocks #1, #3, and #4. Dredge spoils were disposed of on Ross Island. Post-dredge samples show that sediment contamination remains in the Willamette River, especially around Drydocks #1 and #3.

Upland areas of potential concern are generally associated with the sites long history of industrially use and are focused around buildings where ship repair and manufacturing activities occurred in operable unit 1. Elevated levels of metalsand PCBs are observed in operable unti 2 and 5 surface soil and are likely associated with sand blasting operation. Petroleum hydrocarbon and PAH contamination is observed in operable unit 4 shallow soils.

This site occupies most of the north, south, and west perimeters of Swan Island. Three drydocks are located at the northern end of the island, with in-water berths arranged along the Willamette River and Swan Island basin sides of the island. The yard is all paved, except a 22-acre channel fabrication site along the island's south shore, and 34-acre undeveloped area at the eastern end of Swan Island lagoon. In 2006 the Port and DEQ agreed to split the shipyard into two separate components: 1) the upland portion above ordinary high water; and 2) the in-water portion of the site below ordinary high water and within the Portland Harbor Superfund in-water study area.

(DL2017)The upland site has been divided into five operable units designated as follows:
OU1-57 acres of upland property owned by Vigor Industrial (formerly Cascade General) and operated as the Vigor Marine Ship Repair Yard and formerly known as the Portland Shipyard.
OU2-19 acres of upland property owned by the Port of Portland south of North Channel Avenue. Currently there are two lease holds: 1) the Cemex concrete patch plant and 2) the Daimler temporary truck staging area.
OU3-2.5 acres of upland property owned by the Port of Portland on North Lagoon Avenue that includes the property at 5420 North Lagoon Avenue and the adjacent property to the north that provides access to Berths 308 and 309.
OU4-7.8 acres of upland property between OU1 and OU2. Until 2008, OU4 was part of OU2, but was designated a separate operable unit to facilitate the potential sale of the property from the Port to Vigor Industrial.
OU5-5 acres of upland property that includes the riverbank adjacent to OU2 and OU4. Until 2014, OU5 was part of OU2, but was designated a separte OU to facility the potential sale of the OU2 property.

Possible contaminant migration pathways include, but are not necessarily limited to the following: 1)above-ground air and surface runoff; 2)infiltration of precipitation and surface runoff; 3)direct releases; 4)groundwater advection 5) suspension or dissolution of river sediments; 6)volatilization; 7)food web (consumption). Possible exposure pathways for humans include, but are not necessarily limited to the following: 1)direct contact with either contaminated upland soils or sediments; 2)incidental ingestion/inhalation of contaminated soils and possibly sediments; 3)incidental ingestion and/or dermal contact with surface water contaminated by facility sources; 4)direct contact, inhalation of volatiles or particulates and/or incidental ingestion of particulates from direct releases; 5)inhalation of volatiles and contaminated soil and/or groundwater and particulates from contaminated soils; 6) ingestion and/or other exposure to contaminated groundwater; and 7)consumption of aquatic species impacted by site contaminants. Possible likely exposure pathways for ecological receptors include, but are not necessarily limited to the following: 1)direct uptake of surface water and/or sediments contaminated by facility sources; and 2)ingestion of aquatic or benthic organisms in the river by aquatic or terrestrial consumers or decomposers.

EPA inspectors noted oil slick on Willamette River 11/14/87, originating from dry dock. Sandblast materials may contain elevated levels of copper and zinc, as well as other metals. Willamette River sediments in the vicinity of the dry docks have been contaminated as a result of historical facility operations.

(11/26/91 RP/NWR) In 7/88, during decommissioning of an underground fume line, soil and groundwater contamination by petroleum hydrocarbons were discovered at the site. Initial investigation by Crosby and Overton found two distinct areas of petroleum hydrocarbon contamination. One area was similar to diesel fuel, the other appeared to be blowing distillate (BD) related to asphalt processing and the old fume line.

(11/25/91 RP/NWR) At present, groundwater contamination remains, including free product in at least one area. It may or may not have migrated off-site. The PRP intends to continue and perhaps expand groundwater monitoring efforts. Since most of the contaminated areas are covered with asphalt, no soil removal or remediation has been planned or attempted. Further assessment and continued monitoring of the site is recommended. Owens/Corning Fiberglass conducted a PA at the Trumbull Asphalt Plant. Inventory ranking package needs to be completed. (4/13/93 EB/VCS) Significant levels of TPH contamination remain in the soil. Analysis of contaminants is required (BTEX, PAHs). Effort to remove as much contaminated soil as reasonably possible is required. TPH is still present in groundwater (BTEX, BDL). PAH and TPH analyses should be continued.

[Nov. 2013] In 2007, DEQ conducted a site visit and collected a catch basin sediment sample to evaluate the potential for this site to be a significant source of contamination to Portland Harbor via the stormwater pathway. For details and results, see DEQ's letter on the WebDocs page, entitled Owens Corning Follow-up Letter, as well as Owens Corning's response letter.

(11/25/91 RP/NWR) At present, groundwater contamination remains, including free product in at least one area. It may or may not have migrated off-site. The PRP intends to continue and perhaps expand groundwater monitoring efforts. Since most of the contaminated areas are covered with asphalt, no soil removal or remediation has been planned or attempted. Further assessment and continued monitoring of the site is recommended. Owens/Corning Fiberglass conducted a PA at the Trumbull Asphalt Plant. Inventory ranking package needs to be completed. (4/13/93 EB/VCS) Significant levels of TPH contamination remain in the soil. Analysis of contaminants is required (BTEX, PAHs). Effort to remove as much contaminated soil as reasonably possible is required. TPH is still present in groundwater (BTEX, BDL). PAH and TPH analyses should be continued.

[Nov. 2013] In 2007, DEQ conducted a site visit and collected a catch basin sediment sample to evaluate the potential for this site to be a significant source of contamination to Portland Harbor via the stormwater pathway. For details and results, see DEQ's letter on the WebDocs page, entitled Owens Corning Follow-up Letter, as well as Owens Corning's response letter.

Comment:			

Soil, groundwater, air, sediments, and surface water may serve as exposure or transport media for contaminants released at the facility. However, given the type and distribution of impacted media at the site, the potential for human or ecological exposure appears limited. Perhaps the most significant possible risk to human health is incidental ingestion and/or direct contact with contaminated soils. Perhaps the most significant possible risk to ecological receptors is from contaminated sediments.

(12/26/02 JMA/VCP) The site has been used for a variety of industrial activities since at least 1900. In the early 1970s the site was owned by Riedel International. Riedel's main business was dredging river bottoms, pole driving, and marine construction. In 1972 they became involved in hazardous waste spill cleanups, especially near railroads. They created Environmental Emergency Services (EES), a division of Riedel International. EES completed a RCRA Part B permit in 1984 which would enable them to build a 100' X 100' hazardous waste storage building. Neighbors protested so vehemently about the storage area that the city refused to grant a conditional use permit. EES decided to close the storage area and move it to another site. A RCRA closure plan was submitted to DEQ in March 1986. Soil sampling was conducted in December 1986. Samples taken from 6 feet ranged from 0.58 ppm to 230 ppm PCBs. Subsequent assessments at the site (GeoEngineers, 1/92; EMCON Northwest, 12/93; Hahn & Associates, 1995; Geraghty & Miller, 1995) indicated additional contamination concerns across much of the property. Sandblast grit and soils in several areas of the site contained elevated levels of toxic metals. Arsenic concentrations were of primary concern, although lead, copper, nickel, and chromium were also present. Groundwater in several areas was contaminated with arsenic, antimony, beryllium, chromium, copper, lead, and nickel. Soils in other areas of the site may also be contaminated with PCBs, chlorinated solvents, and PAHs. PCP-contaminated wastewaters had been stored in the former Hazardous Waste Storage Facility, and polychlorinated benzene compounds were detected in soils in this area, suggesting possible PCP decomposition. Underground storage tank excavations encountered high TPH concentrations, including PAHs and free petroleum.

A 51.6-acre site along the Willamette River, at the base of Waud Bluff, in the University Park area of North Portland. The site's industrial history dates back to at least 1900 (nearly 50 industrial operations have occupied the site). Residential property and the University of Portland lie at the top of Waud Bluff. The site shares its northwestern property line with the McCormick & Baxter federal Superfund site. The site also lies within the boundaries of the Portland Harbor federal Superfund site.

(12/26/02 JMA/VCP) Several early removal actions were conducted at the site. A soil removal plan was approved by DEQ 12/15/87, but there is no file info on an actual cleanup. RCRA Closure certifications were received 12/13/88 and accepted by DEQ on 1/31/89. EMCON supervised the removal of waste storage tanks, waste drums, some sandblast grit and misc. debris from the site, and removed leaking underground storage tanks. Hahn & Associates also removed petroleum USTs from the Sakrete area of the site. A sludge pond near the former Sakrete facility was backfilled. In May 1997 Triangle Park, a limited liability corporation associated with Zidell, signed a Prospective Purchaser Agreement (PPA) with DEQ, and purchased the property in June 1997. The PPA indemnified Triangle Park for environmental liability for groundwater contamination and sediment contamination at the site. The PPA required Triangle Park to perform a RI/FS for soil and perform any remedial action for soil contamination selected or approved by DEQ. Triangle Park committed to spend up to $750,000 on the PPA obligation. Triangle Park satisfactorily completed a Baseline Sediment Assessment in November 1997. DEQ approved Triangle's RI workplan in April 1999, and the initial field work for the RI was conducted in mid-1999. Phase II RI field work was conducted in spring 2000. During the RI field effort in June 1999, DEQ worked with Maul Foster, the contractor, to collect approximately 20 grab groundwater samples. DEQ officially designated groundwater and sediments at site to be an Orphan project in March 2001, so Orphan funds could be used to pay for groundwater and sediment investigation and cleanup. Maul Foster completed a Beneficial Water Use Determination and a Land Use Assessment for the site in December 2001. Maul Foster submitted a human health risk assessment report in December 2002 that idenified "hot spots" of contamination (highly contaminated soil) and soil that exceeded risk-based criteria. Based on the results of the risk assessment a site feasibility study was completed and a final remedy selected. The final remedy includes excavation of soil hot spots and capping the remaining soil with detected concentrations of contaminants below hot spot levels but above risk-based concentrations. DEQ's final remedial action is described in the 2005 Record of Decision (ROD) for the site.
(04/01/14, DSB/CU&SA) The University of Portland acquired the property in 2008 pursuant to a 2006 DEQ Prospective Purchaser Agreement (PPA) Consent Judgment and a 2006 Bona Fide Prospective Purchaser's Agreement (BFPPA) and Order with the U.S. Environmental Protection Agency (EPA). The BFPPA with EPA required the the University of Portland to perform further site investigations and prepare an Engineering Evaluation and Cost Analysis to support a final EPA selected removal action for the site. Under the BFPPA and consistent with DEQ's 2005 ROD, the University of Portland removed the soil hot spots and capped the remaining soils that were found to be above risk-based levels. The BFPPA also required the university to regrade, cap, and revegetate the riverbank along the site shoreline. The University of Portland performed the EPA selected removal action in 2012 and 2013.
In 2014, the university recorded the DEQ and EPA-approved Easement and Equitable Servitudes (EES) for the property that prohibits residential use as well as agricultural food production use. The EES includes a Soil Management Plan that requires the university to maintain the soil caps and assure proper handling and disposal of any remaining contaminated soils excavated during construction, development or other activities. In addition, the University of Portland must monitor the shallow groundwater beneath the site for at least six years to assure the continued effectiveness of the removal action.
On March 6, 2014, EPA issued its Notice of Completion letter to the University of Portland based on its determination that the removal action had been performed in accordance with the requirements of the EPA Order. DEQ reviewed the conditions stated in the 2006 PPA and concludes that the work completed by the University of Portland satisfies the requirements of the DEQ Consent Judgment.

Comment:

Soil, groundwater, air, sediments, and surface water may serve as exposure or transport media for contaminants released at the facility. However, given the type and distribution of impacted media at the site, the potential for human or ecological exposure appears limited. Perhaps the most significant possible risk to human health is incidental ingestion and/or direct contact with contaminated soils. Perhaps the most significant possible risk to ecological receptors is from contaminated sediments.

Comment:

(12/26/02 JMA/VCP) The site has been used for a variety of industrial activities since at least 1900. In the early 1970s the site was owned by Riedel International. Riedel's main business was dredging river bottoms, pole driving, and marine construction. In 1972 they became involved in hazardous waste spill cleanups, especially near railroads. They created Environmental Emergency Services (EES), a division of Riedel International. EES completed a RCRA Part B permit in 1984 which would enable them to build a 100' X 100' hazardous waste storage building. Neighbors protested so vehemently about the storage area that the city refused to grant a conditional use permit. EES decided to close the storage area and move it to another site. A RCRA closure plan was submitted to DEQ in March 1986. Soil sampling was conducted in December 1986. Samples taken from 6 feet ranged from 0.58 ppm to 230 ppm PCBs. Subsequent assessments at the site (GeoEngineers, 1/92; EMCON Northwest, 12/93; Hahn & Associates, 1995; Geraghty & Miller, 1995) indicated additional contamination concerns across much of the property. Sandblast grit and soils in several areas of the site contained elevated levels of toxic metals. Arsenic concentrations were of primary concern, although lead, copper, nickel, and chromium were also present. Groundwater in several areas was contaminated with arsenic, antimony, beryllium, chromium, copper, lead, and nickel. Soils in other areas of the site may also be contaminated with PCBs, chlorinated solvents, and PAHs. PCP-contaminated wastewaters had been stored in the former Hazardous Waste Storage Facility, and polychlorinated benzene compounds were detected in soils in this area, suggesting possible PCP decomposition. Underground storage tank excavations encountered high TPH concentrations, including PAHs and free petroleum.

Created by Init:
Comment:

A 51.6-acre site along the Willamette River, at the base of Waud Bluff, in the University Park area of North Portland. The site's industrial history dates back to at least 1900 (nearly 50 industrial operations have occupied the site). Residential property and the University of Portland lie at the top of Waud Bluff. The site shares its northwestern property line with the McCormick & Baxter federal Superfund site. The site also lies within the boundaries of the Portland Harbor federal Superfund site.

Comment:

(12/26/02 JMA/VCP) Several early removal actions were conducted at the site. A soil removal plan was approved by DEQ 12/15/87, but there is no file info on an actual cleanup. RCRA Closure certifications were received 12/13/88 and accepted by DEQ on 1/31/89. EMCON supervised the removal of waste storage tanks, waste drums, some sandblast grit and misc. debris from the site, and removed leaking underground storage tanks. Hahn & Associates also removed petroleum USTs from the Sakrete area of the site. A sludge pond near the former Sakrete facility was backfilled. In May 1997 Triangle Park, a limited liability corporation associated with Zidell, signed a Prospective Purchaser Agreement (PPA) with DEQ, and purchased the property in June 1997. The PPA indemnified Triangle Park for environmental liability for groundwater contamination and sediment contamination at the site. The PPA required Triangle Park to perform a RI/FS for soil and perform any remedial action for soil contamination selected or approved by DEQ. Triangle Park committed to spend up to $750,000 on the PPA obligation. Triangle Park satisfactorily completed a Baseline Sediment Assessment in November 1997. DEQ approved Triangle's RI workplan in April 1999, and the initial field work for the RI was conducted in mid-1999. Phase II RI field work was conducted in spring 2000. During the RI field effort in June 1999, DEQ worked with Maul Foster, the contractor, to collect approximately 20 grab groundwater samples. DEQ officially designated groundwater and sediments at site to be an Orphan project in March 2001, so Orphan funds could be used to pay for groundwater and sediment investigation and cleanup. Maul Foster completed a Beneficial Water Use Determination and a Land Use Assessment for the site in December 2001. Maul Foster submitted a human health risk assessment report in December 2002 that idenified "hot spots" of contamination (highly contaminated soil) and soil that exceeded risk-based criteria. Based on the results of the risk assessment a site feasibility study was completed and a final remedy selected. The final remedy includes excavation of soil hot spots and capping the remaining soil with detected concentrations of contaminants below hot spot levels but above risk-based concentrations. DEQ's final remedial action is described in the 2005 Record of Decision (ROD) for the site.
(04/01/14, DSB/CU&SA) The University of Portland acquired the property in 2008 pursuant to a 2006 DEQ Prospective Purchaser Agreement (PPA) Consent Judgment and a 2006 Bona Fide Prospective Purchaser's Agreement (BFPPA) and Order with the U.S. Environmental Protection Agency (EPA). The BFPPA with EPA required the the University of Portland to perform further site investigations and prepare an Engineering Evaluation and Cost Analysis to support a final EPA selected removal action for the site. Under the BFPPA and consistent with DEQ's 2005 ROD, the University of Portland removed the soil hot spots and capped the remaining soils that were found to be above risk-based levels. The BFPPA also required the university to regrade, cap, and revegetate the riverbank along the site shoreline. The University of Portland performed the EPA selected removal action in 2012 and 2013.
In 2014, the university recorded the DEQ and EPA-approved Easement and Equitable Servitudes (EES) for the property that prohibits residential use as well as agricultural food production use. The EES includes a Soil Management Plan that requires the university to maintain the soil caps and assure proper handling and disposal of any remaining contaminated soils excavated during construction, development or other activities. In addition, the University of Portland must monitor the shallow groundwater beneath the site for at least six years to assure the continued effectiveness of the removal action.
On March 6, 2014, EPA issued its Notice of Completion letter to the University of Portland based on its determination that the removal action had been

performed in accordance with the requirements of the EPA Order. DEQ reviewed the conditions stated in the 2006 PPA and concludes that the work completed by the University of Portland satisfies the requirements of the DEQ Consent Judgment.

Comment:

Magnus Co. (from 1930-1936) and National Lead Company (from 1936-1967) operated a bearing rehabilitation plant at the site. Furnaces were used to melt lead from the bearings. Cracks in the building's concrete floor were filled with lead. Also, lead dust settled on structural beams within the building.

Some lead dust may have settled outside the building on unpaved areas.

Further DEQ information or investigation needed. (3/25/93 DRobinson/EPA) Based on a review by EPA's contractor, PRC Environmental Management, no further investigation is anticipated under the Federal Superfund program. PRC recommended the mitigaton of soil contamination on-site, to reduce the threat through the soil and air pathways.

Release Comments

Release Cmnt ID: 305390
Release Comment Code: DSRC
Release Comment Desc: Data Sources
Comment:

March 1998 CH2M Hill "Remediation of Lead Contaminated Soil"; July 2010 PBS "Subsurface Remedial Investigation"; April 2017 PBS "Stormwater Sewer Cleanout Report".

Release Cmnt ID: 305391
Release Comment Code: GCOM
Release Comment Desc: General Comments
Comment:

Average residual lead concentration in soils (from over 50 samples) is 630 ppm.

Release Cmnt ID: 305393
Release Comment Code: MDCM
Release Comment Desc: Media Contamination Footnote
Comment:

Groundwater sample from Boring B-13. Sediment and leachate samples from Manhole 2.

Release Cmnt ID: 305392
Release Comment Code: RLFT
Release Comment Desc: Release Containment
Comment:

The lead contamination is believed to have resulted from battery manufacturing activities at the site (1946-1958).

Hazard Release

Release Comments

Release Cmnt ID:	305395
Release Comment Code:	DSRC
Release Comment Desc:	Data Sources
Comment:	

July 2010 PBS "Subsurface Remedial Investigation" report (2010 samples), February 2015 PBS "Phase 2 RI" report (soil gas sample), and PBS Groundwater Monitoring reports.

Release Cmnt ID:	305404
Release Comment Code:	GCOM
Release Comment Desc:	General Comments
Comment:	

Also known as perchloroethylene or "PCE". "Other" Medium = soil gas.

Release Cmnt ID: 305394
Release Comment Code: MDCM
Release Comment Desc: Media Contamination Footnote
Comment:

Groundwater sample results from Boring B-9 (Jan. 2010), Boring B-20 (April 2010), and Monitoring Well MW-4 (2012 & 2015). Soil gas result from SG-1.

Release Cmnt ID: 305405
Release Comment Code: RLFT
Release Comment Desc: Release Containment
Comment:

PCE was likely released from a former 10,000-gallon AST and/or a former solvent barrel storage building.

(01/27/2020 KPD/VCP) An environmental assessment conducted at the site in September 1997 identified lead-contaminated soil along a railroad spur on the east side of the warehouse. Over 50 soil samples were collected from along the rail spur and from the SE corner of the site and analyzed for lead. Lead was detected in 10 surface soil samples at concentrations over 1,000 ppm, with a maximum concentration of 94,600 ppm. However, a maximum of only 207 ppm lead was detected 36 inches below ground. (Soil samples from other portions of the site consistently showed about 3 ppm lead). Almost 300 tons of lead-contaminated soils were subsequently removed from the area in December 1997.

In January and April 2010, soil and groundwater samples were collected from a total of 22 borings at the site as part of a Phase II Environmental Site Assessment. High concentrations of chlorinated solvents were detected in shallow groundwater in the SE corner of the site. The contaminants included PCE (up to 71,300 ppb), TCE (9,970 ppb), cis-1,2-DCE (10,200 ppb), and vinyl chloride (448 ppb).

Four shallow groundwater monitoring wells were installed at the site in September 2011. No solvents were encountered in the soil during installation. Over several years of groundwater sampling little to no contamination was detected in MW-1 (east side of the warehouse) or MW-2 (SW corner of the warehouse). PCE (up to 19,600 ppb), TCE (9,210 ppb), cis-1,2-DCE (5,960 ppb), and vinyl chloride (143 ppb) were detected in MW-3 (SW corner of the site) and MW-4 (SE corner of the site), with the highest contaminant levels in MW-4.

Four soil gas samples were collected on and south of the site in July 2014. The highest concentrations of PCE (19,000 ug/m3) and TCE (1,400 ug/m3) were observed just south of the on-site warehouse. A fifth groundwater monitoring well (MW-5A) was also installed, on the south-adjacent property. No VOCs were detected in the well. However, a pre-existing monitoring well on the south-adjacent property showed PCE (up to 2,940 ppb), TCE (up to 935 ppb), and cis-1,2-DCE (up to 1,240 ppb). The results were summarized in a Remedial Investigation report in February 2015.

A sediment sample collected from a storm sewer line beneath the south end of the site in December 2016 identified a high concentration of lead (23,200 ppm, with 958 mg/l leachable lead). The storm line was subsequently cleaned out in February and March 2017.

PCE was likely released from a former 10,000-gallon aboveground storage tank and/or from a former solvent barrel storage building, both of which were located in the SE corner of the property. The lead release was likely the result of battery manufacturing activities at the site.

The site is located atop the former Guilds Lake. Guilds Lake and surrounding marshes were filled in from 1905 through the 1940s. Soils at the site generally consist of fine sand down to 35 ft bgs, underlain by silts and clay to 50 ft bgs. Shallow groundwater begins 6-11 ft bgs and continues down to the clay layer at 35 ft bgs. The groundwater gradient is nearly flat but tilts slightly to the south-southeast (away from the Willamette River, which is 2,300 ft NE of the site). The site and all surrounding properties are located within the Guilds Lake Industrial Sanctuary and are zoned Heavy Industrial (IH) by the City of Portland.

(01/27/2020 KPD/VCP) Two underground storage tanks have been removed from the site. A 1,000-gallon gasoline UST adjacent to the SW corner of the warehouse was removed in March 1988. A soil sample from beneath the tank found only trace levels (0.2 ppm) of PCE and TCE. In August 1996, a 12,000-gallon bunker fuel UST was removed from the SE corner of the site. Confirmation soil samples found no petroleum hydrocarbons.

In December 1997, a total of 295 tons of lead-contaminated soil and debris were removed from beneath a 300-foot section of rail line on the east side of the site and shipped to the Chemical Waste Management landfill in Arlington. The average residual lead concentration in the soil is 630 ppm. (The applicable cleanup standard is 800 ppm).

Contaminated sediments were cleaned out of a storm sewer line at the south end of the property in February 2017. A total of 7,919 gallons of liquids and solids were collected from the line, of which 1,126 gallons were disposed of as a hazardous waste due to high concentrations of lead.

PCE and TCE remain in groundwater in MW-4 at concentrations exceeding risk-based standards for direct contact by construction and excavation workers. TCE concentrations in MW-4 also exceed risk-based standards for vapor intrusion into buildings. The nearest buildings are 150 feet from the well, however, so there is little current vapor intrusion risk.

In January 2020, DEQ selected chemical oxidation of contaminated soil and groundwater in the vicinity of MW-4 as the remedial action for the site.

Comment:			

Chlorinated solvents in groundwater in the SE corner of the site pose a potential threat to adjacent building occupants (through vapor intrusion into indoor air) and excavation workers (through direct contact). The contaminated groundwater has migrated off-site to the south but appears to be stable and limited in extent. Lead-contaminated soil was originally present along a rail spur on the east edge of the site but has largely been removed. Stormwater at the site originally discharged through Outfall 17 to the Willamette River in Portland Harbor. However, stormwater in the area was diverted to the Balch Creek Consolidated Conduit in 2011 and now flows to a sewage treatment plant on the Columbia River.

A plume of chlorinated solvents (PCE, TCE, etc.) is present in the groundwater in the SE corner of the site, extending onto the adjacent property to the south (ECSI #1076). The plume poses no current risks but is a concern to construction and excavation workers who may come into direct contact with it. The plume will be treated to reduce the contaminant concentrations to acceptable levels.

The site is located in the Guilds Lake area. Guilds Lake and surrounding marshes were filled in from 1905 through the 1940s. The site was originally developed for wartime housing in the early 1940s. The current on-site building was constructed in 1948 and was originally occupied by the Willard Storage Battery Company, a battery manufacturer. Great Western Chemical Company, a chemical manufacturer, operated at the site from 1958 to 1971. Ace Hardware used the building as a warehouse from 1971 to 1976, and Barker Manufacturing manufactured furniture at the site from 1976 to 1978. Chase Bag Company, a paper bag manufacturer, operated at the site from 1978 to 1992. Since 1992 the building has been used as a storage warehouse by Daisy Kingdom (crafts and textiles, 1992-1997), DWA Trade Show & Exposition Services (trade show displays, 2000-2010), and Convoy Supply Ltd. (roofing, siding & fencing, 2010 to present).

Schnitzer Investment Corporation reportedly purchased the site from "Mitchell Brothers" in June 1968. Schnitzer subsequently sold the site to Donald & Stephanie Wirfs in August 1998. Don Wirfs sold the site to Conax Properties USA, Inc. in 2010.

Comment:

July 2010 PBS "Subsurface Remedial Investigation" report (2010 samples), February 2015 PBS "Phase 2 RI" report (soil gas sample), and PBS Groundwater Monitoring reports.

Release Comment ID: 305404
Release Comment Desc: General Comments
Release Comment Code: GCOM
Comment:

Also known as perchloroethylene or "PCE". "Other" Medium = soil gas.

Release Comment ID: 305394
Release Comment Desc: Media Contamination Footnote
Release Comment Code: MDCM
Comment:

Groundwater sample results from Boring B-9 (Jan. 2010), Boring B-20 (April 2010), and Monitoring Well MW-4 (2012 & 2015). Soil gas result from SG-1.

Release Comment ID: 305405
Release Comment Desc: Release Containment
Release Comment Code: RLFT
Comment:

PCE was likely released from a former 10,000-gallon AST and/or a former solvent barrel storage building.

Comment:

A plume of chlorinated solvents (PCE, TCE, etc.) is present in the groundwater in the SE corner of the site, extending onto the adjacent property to the south (ECSI #1076). The plume poses no current risks but is a concern to construction and excavation workers who may come into direct contact with it. The plume will be treated to reduce the contaminant concentrations to acceptable levels.

Schnitzer Investment Corporation reportedly purchased the site from "Mitchell Brothers" in June 1968. Schnitzer subsequently sold the site to Donald & Stephanie Wirfs in August 1998. Don Wirfs sold the site to Conax Properties USA, Inc. in 2010.

The site is located in the Guilds Lake area. Guilds Lake and surrounding marshes were filled in from 1905 through the 1940s. The site was originally developed for wartime housing in the early 1940s. The current on-site building was constructed in 1948 and was originally occupied by the Willard Storage Battery Company, a battery manufacturer. Great Western Chemical Company, a chemical manufacturer, operated at the site from 1958 to 1971. Ace Hardware used the building as a warehouse from 1971 to 1976, and Barker Manufacturing manufactured furniture at the site from 1976 to 1978. Chase Bag Company, a paper bag manufacturer, operated at the site from 1978 to 1992. Since 1992 the building has been used as a storage warehouse by Daisy Kingdom (crafts and textiles, 1992-1997), DWA Trade Show & Exposition Services (trade show displays, 2000-2010), and Convoy Supply Ltd. (roofing, siding & fencing, 2010 to present).

The site is located atop the former Guilds Lake. Guilds Lake and surrounding marshes were filled in from 1905 through the 1940s. Soils at the site generally consist of fine sand down to 35 ft bgs, underlain by silts and clay to 50 ft bgs. Shallow groundwater begins 6-11 ft bgs and continues down to the clay layer at 35 ft bgs. The groundwater gradient is nearly flat but tilts slightly to the south-southeast (away from the Willamette River, which is 2,300 ft NE of the site). The site and all surrounding properties are located within the Guilds Lake Industrial Sanctuary and are zoned Heavy Industrial (IH) by the City of Portland.

(01/27/2020 KPD/VCP) Two underground storage tanks have been removed from the site. A 1,000-gallon gasoline UST adjacent to the SW corner of the warehouse was removed in March 1988. A soil sample from beneath the tank found only trace levels (0.2 ppm) of PCE and TCE. In August 1996, a 12,000-gallon bunker fuel UST was removed from the SE corner of the site. Confirmation soil samples found no petroleum hydrocarbons.

In December 1997, a total of 295 tons of lead-contaminated soil and debris were removed from beneath a 300-foot section of rail line on the east side of the site and shipped to the Chemical Waste Management landfill in Arlington. The average residual lead concentration in the soil is 630 ppm. (The applicable cleanup standard is 800 ppm).

Contaminated sediments were cleaned out of a storm sewer line at the south end of the property in February 2017. A total of 7,919 gallons of liquids and solids were collected from the line, of which 1,126 gallons were disposed of as a hazardous waste due to high concentrations of lead.

PCE and TCE remain in groundwater in MW-4 at concentrations exceeding risk-based standards for direct contact by construction and excavation workers. TCE concentrations in MW-4 also exceed risk-based standards for vapor intrusion into buildings. The nearest buildings are 150 feet from the well, however, so there is little current vapor intrusion risk.

In January 2020, DEQ selected chemical oxidation of contaminated soil and groundwater in the vicinity of MW-4 as the remedial action for the site.

Comment:			

Chlorinated solvents in groundwater in the SE corner of the site pose a potential threat to adjacent building occupants (through vapor intrusion into

indoor air) and excavation workers (through direct contact). The contaminated groundwater has migrated off-site to the south but appears to be stable and limited in extent. Lead-contaminated soil was originally present along a rail spur on the east edge of the site but has largely been removed. Stormwater at the site originally discharged through Outfall 17 to the Willamette River in Portland Harbor. However, stormwater in the area was diverted to the Balch Creek Consolidated Conduit in 2011 and now flows to a sewage treatment plant on the Columbia River.

(01/27/2020 KPD/VCP) An environmental assessment conducted at the site in September 1997 identified lead-contaminated soil along a railroad spur on the east side of the warehouse. Over 50 soil samples were collected from along the rail spur and from the SE corner of the site and analyzed for lead. Lead was detected in 10 surface soil samples at concentrations over 1,000 ppm, with a maximum concentration of 94,600 ppm. However, a maximum of only 207 ppm lead was detected 36 inches below ground. (Soil samples from other portions of the site consistently showed about 3 ppm lead). Almost 300 tons of lead-contaminated soils were subsequently removed from the area in December 1997.

In January and April 2010, soil and groundwater samples were collected from a total of 22 borings at the site as part of a Phase II Environmental Site Assessment. High concentrations of chlorinated solvents were detected in shallow groundwater in the SE corner of the site. The contaminants included PCE (up to 71,300 ppb), TCE (9,970 ppb), cis-1,2-DCE (10,200 ppb), and vinyl chloride (448 ppb).

Four shallow groundwater monitoring wells were installed at the site in September 2011. No solvents were encountered in the soil during installation. Over several years of groundwater sampling little to no contamination was detected in MW-1 (east side of the warehouse) or MW-2 (SW corner of the warehouse). PCE (up to 19,600 ppb), TCE (9,210 ppb), cis-1,2-DCE (5,960 ppb), and vinyl chloride (143 ppb) were detected in MW-3 (SW corner of the site) and MW-4 (SE corner of the site), with the highest contaminant levels in MW-4.

Four soil gas samples were collected on and south of the site in July 2014. The highest concentrations of PCE (19,000 ug/m3) and TCE (1,400 ug/m3) were observed just south of the on-site warehouse. A fifth groundwater monitoring well (MW-5A) was also installed, on the south-adjacent property. No VOCs were detected in the well. However, a pre-existing monitoring well on the south-adjacent property showed PCE (up to 2,940 ppb), TCE (up to 935 ppb), and cis-1,2-DCE (up to 1,240 ppb). The results were summarized in a Remedial Investigation report in February 2015.

A sediment sample collected from a storm sewer line beneath the south end of the site in December 2016 identified a high concentration of lead (23,200 ppm, with 958 mg/l leachable lead). The storm line was subsequently cleaned out in February and March 2017.

The site is located southeast of the intersection of 35th Avenue and Yeon Avenue in northwest Portland. A separate parcel (Tax Lot 300) lies between the site and 35th Avenue. The site is bordered by the Standard Steel Property (ECSI 1076) to the south.

PCE was likely released from a former 10,000-gallon aboveground storage tank and/or from a former solvent barrel storage building, both of which were located in the SE corner of the property. The lead release was likely the result of battery manufacturing activities at the site.

Comment:			

A Remedial Investigation was completed for the site in November 2000 excamining current and historical source of contamination. the RI concluded that site soil and groundwater are not the source of contamination observed in Willamette River sediment near the facility. USCG entered into an letter agreement with DEQ in 2004 to complete a source control investigation for the upland portion of this site. Catch basin and stormwater samples were collected at the site during several sampling events between April 2006 and January 2009. As the events did not conform to DEQ's stormwater guidance, additional sampling was requested by DEQ and performed. The 2012 Comprehensive Stormwater Assessment submitted in June 2012 presented the results of additional source control work.

DEQ reviewed the report, and in a letter dated February 25, 2013 indicated that additional source control concerns remain.

A revised report was submitted in June of 2013. A site visit is scheduled to occur on July 10th to discuss DEQ comments, potential site BMPs and sources, etc.

A comprehensive stormwater catch basin and stormline cleanuout was completed by the USCG in summer 2013, and a tech memo discussing the work submitted to DEQ (dated September 24, 2013). DEQ has requested additional stormwater sampling to confirm that the site is not an ongoing source control concern, and "backup" information regarding the cleanout action, as outlined in a December 24, 2013 letter to USCG.

In March 2015, a work plan was submitted for USCG to address remaining DEQ source control concerns, including the collection of catchbasin sediment sampling, and up to six stormwater monitoring events. The work plan is currently under review by DEQ.

(11/18/88 AGoodman/EPA) Ltr requesting further information to complete PA/SI. (5/8/92 CERCLIS) PA completed; no further action planned under the Federal Superfund program. (6/17/99 JMW/SAP) Based on initial sampling results from a river sediment quality study, the Coast Guard facility has been identified as a potential source of contamination to the Portland Harbor. (8/19/99 TG/SAS) Strategy Recommendation for a high priority Remedial Investigation. Site appears to be the primary source of mercury and PAH sediment contamination. (4/30/01 ELB/VCP) A Remedial Investigation report was submitted in February 2001. However, because the Coast Guard had been unwilling to sign an agreement with DEQ, the site has been referred to EPA as a federal facility.
(3/8/04 TBG/VCP) The USCG signed a DEQ Letter Agreement, so DEQ will review the RI documents and evaluate the site.

Comment:			

SAS has not received a copy of the Federal preliminary assessment to review for compliance with State regulations. (8/18/99 TG/SAP) Weston sampling results from the Portland Harbor Sediment Study and Port of Portland Shipyard Investigation revealed copper, mercury, zinc, phthalates, PAHs, PCBs and pore water organotins in river sediments.

Last Updated on Dt: 07/16/2013

(7/14/00 MTP/SAP) During construction of an approximate 0.25 mile long sewer line by the City of Portland, petroleum-contaminated soil (PCS) and groundwater were encountered. Approximately 500 cubic yards of PCS were removed during sewer construction. Several PAHs were detected in groundwater at relatively low levels of <100 ppb. TPH was detected at elevated levels. Elevated diesel concentrations were detected near NW Saltzman, elevated heavy oil was detected near NW 63rd, and elevated gas and BTEX were detected near NW 64th. Contamination may be related to nearby LUST site 26-89-0213, or historic spills/releases from the Olympic Pipeline. It is not clear which sample results represent excavation sidewall (i.e. in place) samples or waste characterization samples from the excavated soil. It is likely that significant soil contamination above health-based screening levels remains beneath and adjacent to NW St Helens Road. Metal concentrations appeared to be within or near the range of naturally occurring concentrations; PCBs were not detected.

Site worker exposure to impacted surface and subsurface soil; extent of groundwater impact is unknown.

Narrative ID:	5739844	***Created on Dt:***	12/17/2002
Narrative Code:	THRT	***Last Updated by Init:***	
Narrative Desc:	Health Threats	***Last Updated on Dt:***	12/17/2002
Created by Init:			
Comment:			

Direct contact of impacted surface soil and subsurface soil to site workers is likely, as the site is a utility cooridor. There may be a significant impact to shallow groundwater, but there does not appear to be a receptor.

The City investigation of the CSO alignment will generate a considerable amount of data on local geology and the presence of hazardous substances in soils and groundwater. This information is and will be summarized in CSO segment-specific sampling plans and contaminated media management plans. Where hazardous substances are detected, DEQ will follow up either on a site specific or area-wide basis. Any identified sites will be tracked separately via DEQ's Environmental Cleanup Site Information (ECSI) database.

Southwest Parallel Interceptor - A 9,400-lineal-ft. sewer project extending from Taylors Ferry Rd. and ending near SW Bancroft St. West Side CSO Tunnel - A 4.4-mi. tunnel planned to run adjacent to the Willamette River, from near the Marquam Bridge north to an area between NW Nicolai and NW 26th Sts. The tunnel will then cross to Swan Island under the Willamette River. Peninsular Force Main - This sewer line will connect the pump station planned for Swan Island with the existing Peninsular Tunnel. The WRWCSO also includes construction of a large pump station at Swan Island, expansion of the existing California Pump station, and stream-separation projects in the Tanner Creek and Carolina Stream basins.

Comment:			

DEQ and the City of Portland signed a Voluntary Agreement in March 2001 to provide for DEQ review/approval of the city's characterization and management of contaminated media (i.e. soil and groundwater) during construction of the WRWCSO. The WRWCSO consists of a major CSO structure being designed and constructed along the west side of the Willamette River from Taylors Ferry Rd. north along NW Front Ave. to an area near NW Nicolai. It includes a river crossing in the NW industrial area and eastside portion, which extends northeast to Swan Island. The main CSO structure along the river includes three major design projects and four smaller projects. General objectives of the Agreement between DEQ and the City of Portland are: 1) identify contaminated media that may be encountered during construction; 2) agree on a plan to properly store and dispose of contaminated media generated; 3) prevent the spread of contaminated media beyond the limits of the construction project; and 4) make DEQ staff available to respond to unanticipated contamination encountered during construction. Environmental data is currently available for the Southwest Parallel Interceptor section, the Tanner Creek Basin, and portions of the other construction segments.

Year:	Year 2008 Reports		

Description of Incident: CALLER IS REPORTING A DISCHARGE OF HYDRAULIC OIL INTO THE MULTNOMAH CHANNEL FROM A BARGE. CALLER STATED THAT THE BARGE HAD A CONTAINMENT PAN ONBOARD AND WHEN THE TIDE WENT DOWN THE VESSEL LISTED CAUSING THE OIL TO SPILL OUT. THIS IS A BRIDGE CONSTRUCTION SITE AND THE BARGE IS PERMANENTLY BOOMED OFF, AND ALL OIL WAS CONTAINED WITHIN THE BOOM.

i375:This fire was caused by a train derailment. The property involving the derailment and subsequent fire is owned by Oregon Department of Transportation (ODOT) and is leased to Burlington Northern Railroad. BNR sub-leases the right-of-way to Portland Western Railroad. Portland & Western is responsible for the rail track maintenance, and operation.
The train involved in the derailment was a 59 car train carrying wood products, primarily unfinished logs, but also finished lumber and some manufactured siding. According to P&W rail workers the 46th car is the one that derailed and it was believed by them that only the rear "truck" of the 46th car actually left the track. This car left the track several hundred feet south of the Mill Rd. rail crossing. the train traveled approximately 2 miles including crossing a trestle dragging the disabled car and tearing up the track. Multiple witnesses along the line stated first hearing very loud "scraping" noises and then seeing the rear of one of the cars "off the tracks"and appearing very unstable and likely to tip over. This car did not tip over until it came to a switch where a siding (rail line used for storage of cars)located on the west side of the track snagged the disabled truck and pulled the car(s) over in the western direction. On the siding-line 20 rail tank cars were parked. It was reported that these cars contained either fuel oil or ethyl alcohol. Several cars of the train collided with the parked tank cars. The exact cause of the fire is unknown at this time, but was likely ignited by sparks from the colliding metal. Rail crew members state that the derailment was not caused by any problems with the track, but may have been caused by mechanical malfunction of the train car truck, or through operation where cars collided causing the truck to "pop" off the track.

INCIDENT NARRATIVE:

ACCORDING TO THE DRIVER OF THE TANKER TRUCK INVOLVED, DALE MCVEY, 4549 OHIO, LONGVIEW WA, PHONE 636-8352, HE HAD JUST TAKEN ON A FULL LOAD OF GASOLINE AND WAS PROCEEDING NORTH ON ST. HELENS RD. HE SAID THAT HE WAS OVERTAKING AN AUTO IN FRONT OF HIM AND WAS IN THE ACT OF PULLING INTO THE OTHER LANE WHEN THE WOMAN DRIVING THE AUTO PULLED OVER AND CUT HIM OFF. MCVEY SAID THAT HE HAD TWO CHOICES- HIT THE CAR OR HIS BRAKES. HE SAID THAT HE LOCKED UP THE

TANKERS BRAKES AND THE TRAILER WENT OUT OF CONTROL THE TANKER ROLLED OVER AND SKIDDED ON ITS LEFT SIDE AND FINALLY CAME TO REST ON ITS RIGHT SIDE. THE SECOND TRAILER (REAR ONE) ROLLED AND WENT UP THE EMBANKMENT NEXT TO SOUTH BOUND LANES FOR AWAYS AND CAME TO REST ON ITS RIGHT SIDE. THE TRUCK TRACTOR WAS STILL HOOKED UP TO THE TRAILERS AND WAS COCKED AT ABOUT A 45 DEGREE ANGLE. GASOLINE WAS RUNNING OUT OF THE REAR TANK REAR TRAILER HATCHCOVER AT A RATE OF ABOUT 10 GALLONS/MINUTE. GASOLINE WAS RUNNING OUT OF A VENT ON THE FRONT TRAILER. HAZMAT UNIT 16 ATTEMPTED TO PUT A HATCH COVER CLAMP ON THE REAR TRAILER HATCH COVER AND DID SO. BUT RATHER THAN STAUNCH THE FLOW OF GASOLINE IT INCREASED IT. THE GASOLINE HAD TO BE PUMPED FROM BOTH TRAILERS/TANKERS IN ORDER TO UPRIGHT THEM. IN ORDER TO DO THIS IT WAS NECESSARY TO CUT HOLES IN THE TANKER TRAILER OVER EACH PARTITION IN THE TRAILERS. GASOLINE ESCAPING FORM THE TANK TRAILERS WAS RUNNING DOWN THE DITCH ON WEST SIDE OF HIGHWAY TO EAST SIDE OF A DAM INITIALLY OF SAWDUST & GRAVEL WAS PUT IN PLACE UP HILL FROM STORM DRAIN AND LATER A DUST DRAIN WAS PLACED UPSTREAM FROM THAT TO PREVENT GASOLINE FROM GETTING INTO STORM DRAIN. TRAFFIC ON THE HIGHWAY WAS STOPPED FROM BOTH DIRECTIONS UNTIL APPROX 13:05 WHEN ONE LANE WAS OPENED. PRIOR TO THAT TRAFFIC WAS REROUTED UP LOGIE TRAIL OF CORNELIUS PASS. WHEN WE ARRIVED ON THE SCENE OF THE INCIDENT MR MCVEY WAS SITTING IN THE CAB OF A PICKUP TRUCK ACROSS FROM THE ACCIDENT SCENE. HE DENIED ANY PAIN EXCEPT FOR SOME SLIGHT PAIN IN HIS RIBS ON THE LEFT SIDE. HE WAS CHECKED OUT BY CAPT/EMT EDWARDS. MCVEY AGAIN SAID HE DIDN'T WANT AN AMBULANCE, THAT HE WAS JUST SHOOK UP, AND THAT HE WOULD GO TO DOCTOR VIA PRIVATE TRANSPORT FOR A CHECK UP. HE WAS TRANSPORTED TO LONGVIEW, WA VIA A WILSON OIL CO. VEHICLE, ACCORDING TO JOHN JABUSCH, WHOLESALE MGR FOR WILSON OIL CO. CAPT GE

Description of Events: SHIPMENT CONSISTED OF THREE DRUMS. ONE DRUM WAS FITTED WITH A VENTED BUNG; THE OTHERS WERE FITTED WITH NON-VENTED BUNGS. THE DRUM WITH THE VENTED BUNG EXPELLED A MINIMAL QUANTITY OF LIQUID THROUGH THE BUNG AND ONTO THE DRUM HEAD. INITIALLY, THE CONSIGNEE REFUSED TO ACCEPT IT. AFTER CONSULTATION WITH THE SHIPPER, THE CONSIGNEE ACCEPTED IT. AS NO PRODUCT ESCAPED BEYOND THE DRUM HEAD, NO FURTHER ACTION ON THE PART OF THE CARRIER WAS IN ORDER.

Description of Events: THE CUSTOMER ORDERED 18,360 LBS OF SULFIURIC ACID 66' BE'. THE DRIVER DELIVERED 17,840 LBS. AND THE TANK OVERFLOWED. THE DELIVERY POINT IS ON THE OUTSIDE OF THE BUILDING AND THE TANK IS ON THE INSIDE OF THE BUILDING. THE TANK IS CONTAINED IN A BERM ABOUT 10' BY 10'. THERE WERE NO GAUGES ON THE TANK AND THE TANK WAS COMPLETELY FULL. THE DRIVER WAS NOTIFIED BY THE CUSTOMER'S EMPLOYEE THAT THE TANK HAD OVERFLOWED. THE CELAN UP WAS DONE BY SPENCER ENVIRONMENTAL AND IS DUE TO BE SHIPPER OUT THIS WEEK TO PHILIP ENVIRONMENTAL. SINCE THE WASTE HAD NOT SHIPPED OUT YET, WE DO NOT HAVE A COPY OF THE MANIFEST. THERE WILL BE TWO PERSONS REQUIRED FOR EACH OFF-LOAD AT THIS FACILITY IN THE FUTURE. ONE TO WATCH THE TRUCK HOOK UPS AND ONE TO WATCH THE TANK. THIS SECOND PERSON WILL BE SUPPLIED BY THE CUSTOMER. ALSO THE CUSTOMER MUST ENSURE THAT THE AMOUNT OF PRODUCT ORDERED WILL FIT INTO THEIR TANK.

Description of Events: Diesel fuel spill from an accident, where a motor vehicle ran a red light and struck our semi trailer causing approximately 30 gallons of diesel to spill to the roadway and impact a storm drain. There were no injuries reported. Truck Driver contacted DEQ Emergency Response System, which triggered response by the Oregon Department of Transportation, Dept. of Environmental Quality, and the Bureau of Environmental Services. Cleanup was performed by NRC, which was fully contained and cleaned up within one and one-half hours.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Mar 26, 2020

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Jun 26, 2020

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Jun 26, 2020

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Jun 26, 2020

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: May 22, 2020

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: May 22, 2020

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: May 4, 2020

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: May 4, 2020

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: May 4, 2020

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: May 4, 2020

RCRA Conditionally Exempt and Very Small Quantity Generators List: RCRA CESQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt and Very Small Quantity Generators (VSQG and CESQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG and CESQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: May 4, 2020

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: May 4, 2020

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 26, 2020

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Feb 26, 2020

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 25, 2019

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Sep 3, 2019

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Jul 10, 2020

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jan 13, 2020

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: May 22, 2020

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Apr 27, 2020

State

Confirmed Release List/Inventory: CRL

List of sites on the Oregon Department of Environmental Quality (DEQ)'s Confirmed Release Inventory, a subset of the Environmental Cleanup Site Information (ECSI) database. ECSI is the Cleanup Section's master database of sites with known or potential contamination. This database is state equivalent CERCLIS.

Government Publication Date: Jun 25, 2020

Environmental Cleanup Site Information Database: ECSI

The Department of Environmental Quality's (DEQ) Environmental Cleanup Program protects human health and the environment by identifying, investigating, and remediating sites contaminated with hazardous substances. This database is state equivalent CERCLIS.

Government Publication Date: Jun 25, 2020

Delisted Release List and Cleanup Sites: DSHW

This database contains a list of closed sites contaminated with hazardous substances that were removed from the Oregon Department of Environmental Quality (DEQ)'s, Environmental Cleanup Site Information (ECSI) database.

Government Publication Date: Jun 25, 2020

Solid Waste Facilities and Landfills: SWF/LF

The Department of Environmental Quality (DEQ) makes a list available of all permitted solid waste and landfill facilities.

Government Publication Date: Jul 1, 2020

Historic Closed and Terminated Disposal Sites: HIST SWF

A list of historic, closed solid waste and landfill facilities made available by the Department of Environmental Quality (DEQ). Public Land Survey System (PLSS) locations provided by the source are subject to accuracy limitations inherent to the PLSS system.

Government Publication Date: Jun 1, 1986

Underground Storage Tank Cleanup List: LUST

An inventory of leaking underground storage tanks (LUSTs) reported to the Department of Environmental Quality (DEQ). Includes records made available via public records request, as well as Leaking Underground Storage Tanks from the Oregon Drinking Water Protection Program Interactive Map Viewer and the DEQ Facility Profiler map.

Government Publication Date: Apr 9, 2020

Delisted Leaking Storage Tanks: DELISTED LST

This database contains a list of leaking storage tank sites that were removed from the Oregon Department of Environmental Quality (DEQ).

Government Publication Date: Apr 9, 2020

Underground Storage Tank (UST) Facilities: UST

List of underground storage tanks made available by the Oregon Department of Environmental Quality (DEQ), and Oregon State Police (OSP), Oregon State Fire Marshall (OSFM). DEQ provides records relating to Underground Storage Tank Facility, UST Facilities with Operating Certificates, and Facilities with Temporary Closure Certificates and Facilities not in Operational Compliance. OSP, OSFM provides chemical information stored in Underground Storage Tanks.

Government Publication Date: Jun 25, 2020

Drinking Water Protection Program UST: UST DWP

A list of underground storage tank (UST) locations from the Drinking Water Protection Interactive Map Viewer made available by the Oregon Department of Environmental Quality (DEQ), in partnership with the Oregon Health Authority's Drinking Water Protection Program.

Government Publication Date: Jun 25, 2020

Hazardous Substance Information System: HSIS

This database contains detailed information regarding the storage of hazardous substances in facilities located throughout the State of Oregon, collected through the Hazardous Substance Information Survey. It is made available by the Oregon Office of State Fire Marshal's (OSFM), Community Right to Know (CR2K) Services Unit.

Government Publication Date: Sep 5, 2017

Aboveground Storage Tanks: AST

List of registered aboveground storage tanks made available by the Oregon Office of State Fire Marshal (OSFM).

Government Publication Date: Jun 25, 2020

Delisted Storage Tanks: DTNK

This database contains a list of closed UST and AST storage tank sites that were removed from the Oregon Department of Environmental Quality (DEQ).

Government Publication Date: Jun 25, 2020

Heating Oil Tank Clean Decommissioning Sites: TANK HOT DECOM

List of Heating Oil Tank (HOT) Clean Decommissioning Sites maintained by the HOT Program, Department of Environmental Quality (DEQ). Sites with former heating oil tanks that have a registered certificate of voluntary decommissioning (started March 2000) are filed with DEQ. Tanks on this list were closed following DEQ rules and a leak was not found.

Government Publication Date: Apr 15, 2020

Engineering Controls Reported in the ECSI Database: ENG

The Department of Environmental Quality (DEQ) makes a list available of sites that have engineering controls in place. Engineering controls are physical measures designed to prevent or minimize exposure to hazardous substances remaining on-site. Engineering controls may include such measures as fencing, capping, horizontal or vertical barriers, hydraulic controls, or provision of clean water supplies.

Government Publication Date: Jun 25, 2020

Institutional Controls Reported in the ECSI Database: INST

The Department of Environmental Quality (DEQ) makes a list available of sites that have institutional controls in place. Institutional controls are legal or administrative tools to prevent unacceptable exposures to contamination left in place at the completion of removal or remedial actions. Common examples are restricting groundwater use or preventing residential uses of a property.

Government Publication Date: Jun 25, 2020

Voluntary Cleanup Program Sites: VCP

The Department of Environmental Quality (DEQ) created its Voluntary Cleanup Program (VCP) to provide oversight to property owners and others wishing to investigate and clean up hazardous substance sites in a voluntary, cooperative manner. The goal of the program is to increase the number of remediated sites by streamlining the cleanup process while ensuring compliance with Oregon environmental regulations.

Government Publication Date: Jun 30, 2020

Environmental Cleanups on Former or Current Brownfields: BROWNFIELDS

List of Brownfields sites made available by the Department of Environmental Quality (DEQ). A brownfield is a vacant or underused property where actual or perceived environmental contamination complicates its expansion or redevelopment.

Government Publication Date: Jun 25, 2020

Tribal

Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 10, which include Oregon.

Government Publication Date: Apr 14, 2020

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 10, which includes Oregon.

Government Publication Date: Apr 14, 2020

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

PFOA/PFOS Contaminated Sites: PFAS NPL

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Jul 7, 2020

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Mar 25, 2020

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Releases: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Dec 20, 2019

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Jan 8, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Mar 19, 2020

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: May 22, 2020

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Nov 18, 2016

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jan 20, 2020

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jan 20, 2020

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Jan 28, 2020

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Oct 31, 2019

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Oct 31, 2019

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: May 1, 2020

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Jun 22, 2020

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 31, 2020

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Oct 9, 2019

State

Per- and Polyfluoroalkyl Substances (PFAS): PFAS

A list of sites from the Environmental Cleanup Site Information Database (ECSI) where Per- and Polyfluoroalkyl substances (PFAS) containing materials may be of concern. This list is made available by the Oregon Department of Environmental Quality.

Government Publication Date: Aug 10, 2020

Historical Hazardous Materials Incident Reports: HIST HAZMAT

Since January 1, 1985, the Oregon Office of State Fire Marshal (OSFM) has collected Hazardous Material Incident Reports from emergency responders. This list also includes Clandestine Drug Sites.

Government Publication Date: Dec 31, 2009

Hazardous Materials Incident Reports: HAZMAT

A list of Hazardous Material Incidents reported to the Oregon Office of State Fire Marshall (OSFM) from emergency responders. Covers the time period from 1986 through the current listed date.

Government Publication Date: Jun 3, 2020

Spills: SPILLS

List of spills and/or releases reported to The Department of Environmental Quality's (DEQ) Emergency Response Program. The program is designed to carry out legislative direction to work with other agencies and industry to prevent and respond to spills of oil and hazardous materials.

Government Publication Date: Jul 1, 2020

Dry Cleaning Facilities: DRYCLEANERS

The Department of Environmental Quality tracks registered dry cleaner facilities.

Government Publication Date: Jun 24, 2020

Tier 2 Report: TIER 2

A list of Tier 2 facilities in Oregon made available via the Oregon Community Right to Know Hazardous Substance Manager (CHS) overseen by the Oregon State Police, Office of State Fire Marshal.

Government Publication Date: Mar 26, 2019

Uninhabitable Drug Lab Properties: CDL

List of properties which have been declared by a law enforcement agency to be unfit for use due to meth lab and/or storage activities. The properties are considered uninhabitable until cleaned up by a state certified decontamination contractor and a certificate of fitness is issued by the Oregon Health Authority, Public Health Division. This list is made available by the Department of Consumer & Business Services.

Government Publication Date: Apr 6, 2020

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.
