Construction Completion Report

Holden of Pearl
Northeast of the Intersection of NW 13th Avenue and NW Quimby Street
Portland, Oregon
DEQ ECSI No. 6352

Project: AllianceRC-7-02-06

NV5 is pleased to submit this Construction Completion Report for the Holden of Pearl development located northeast of the intersection of NW 13th Avenue and NW Quimby Street in Portland, Oregon (subject property). This report summarizes the construction work within the context of previously documented impacts to soil and related conditions set forth in the DEQ-approved CMMP for the subject property dated September 23, 2019. Specifically, this report details measures employed during handling and management of impacted soil and groundwater during redevelopment activities at the subject property. Based on the completed construction that prevents contact with residual impacted materials and the results of the confirmation soil sample analytical results, we respectfully request that DEQ issue an NFA determination for the subject property.

1.0 INTRODUCTION

This Construction Completion Report has been prepared by NV5 on behalf of US Alliance Holden of Pearl, LLC (Alliance) for the Holden of Pearl development located northeast of the intersection of NW 13th Avenue and NW Quimby Street in Portland, Oregon (subject property). This report details measures employed for the handling and management of impacted soil and groundwater during construction activities at the subject property. The subject property is shown relative to surrounding physical features on Figure 1. The subject property layout is shown on Figure 2.

Acronyms used herein are defined above, immediately following the Table of Contents.

2.0 BACKGROUND

The following sections describe the background of the subject property, including a summary of previous investigations conducted at the subject property and a description of the soil and groundwater conditions at the subject property.

2.1 SUBJECT PROPERTY HISTORY

In the late 1800s, the subject property was covered with fill material and initially used as a storage area and horse corral/stable by Willamette Steam Mills, a lumber and manufacturing company. Between 1908 and 1911, Spokane Portland and Seattle Railway (BSNF's predecessor) took occupancy of the subject property and used the subject property generally for railway and possible maintenance activities. Except for a small automotive-type garage, the subject property was used for storage purposes. Between 1954 and 1956, the garage was removed. In 1998, BNSF vacated the subject property. In 2005, grading activities were conducted at the subject property. Except for use as a construction staging area, the subject property was unused, vacant land until construction of Holden of Pearl.

The subject property consists of one city block (Block 23) that encompasses Tax Lot 712 of Multnomah County Tax Map 1N1E28DD. The subject property encompasses 1.32 acres within the former Hoyt Street Railyard property. The Hoyt Street Railyard site is listed on DEQ's ECSI database (DEQ ECSI Site No. 1080) due to the presence of soil and groundwater contamination from historical railyard operations. In December 2000, DEQ issued the ROD for the former Hoyt Street Railyard. In anticipation of the site redevelopment, in 2019, DEQ extracted the subject property (Block 23) from the Hoyt Street Railyard ECSI site and assigned the subject property ECSI No. 6352.

2.2 PREVIOUS INVESTIGATIONS

The findings and conclusions of the following documents and reports applicable to the subject property are briefly summarized in the following sections:

- Record of Decision, Selected Remedial Action For Hoyt Street Railyard; Portland, Oregon, prepared by DEQ, Environmental Cleanup, Northwest Region, Site Response Program, dated December 15, 2000
- Phase V Environmental Soil Report; Hoyt Street Yards; Portland, Oregon, prepared by Anchor Environmental L.L.C. (Anchor), dated February 2006

- Former Hoyt Street Railyard Groundwater Project Closeout, prepared by AECOM Environment (AECOM), dated February 12, 2010
- Due Diligence Environmental Services; Confidential Pearl District Development;
 Blocks 23/24, NW Quimby Street and NW 13th Avenue; Portland, Oregon, prepared by GeoDesign, Inc., dated December 21, 2010
- Phase I Environmental Site Assessment; Block 23 Former Hoyt Street Railyard; Northeast of the Intersection of NW 13th Avenue and NW Quimby Street; Portland, Oregon, prepared by GeoDesign, Inc., dated October 15, 2018 (2018a)
- Limited Phase II Environmental Site Assessment; Holden of Pearl; Northeast of the Intersection of NW 13th Avenue and NW Quimby Street; Portland, Oregon, prepared by GeoDesign, Inc., dated October 30, 2018 (2018b)
- Report of Geotechnical Engineering Services; Holden of Pearl; NW 13th Avenue and NW Quimby Street; Portland, Oregon, prepared by GeoDesign, Inc., dated June 19, 2019

With the exception of GeoDesign (2018a) and GeoDesign (2018b), the previous environmental reports listed above pertain to the former Hoyt Street Railyard as a whole. The former Hoyt Street Railyard is a 26-acre property that is bound by NW Naito Parkway to the north, NW 9th Avenue to the east, NW Lovejoy Street to the south, and NW 12th Avenue to the west. In addition, the Hoyt Street Railyard includes the two blocks south of NW Lovejoy Street between NW 10th Avenue and NW 9th Avenue and four blocks between NW 12th Avenue and NW 14th Avenue in the northwest portion of the railyard.

For the purposes of this report, only information contained in previous reports that pertains to the subject property (Block 23) is discussed in detail herein.

2.2.1 DEQ (2000)

DEQ issued the ROD for the former Hoyt Street Railyard in December 2000. According to the ROD, one of the seven identified soil impact areas, referred to in the ROD as the "General Petroleum Area," encompasses the south portion of the subject property. Petroleum hydrocarbons have been detected in soil samples from the General Petroleum Area at concentrations ranging from less than 25 mg/kg to 6,000 mg/kg. The information in the ROD did not indicate the presence of significant groundwater contamination beneath the subject property. Total PAH concentrations detected in groundwater beneath the subject property were reported to not exceed 18.6 μ g/L.

The DEQ ROD presented site-specific soil RBCs that were developed to satisfy the remedial action objectives for the Hoyt Street Railyard. Site-specific soil RBCs for Soil Ingestion, Dermal Contact, and Inhalation were developed for three potential receptors, including an urban child for soil from 0 to 5 feet BGS, a construction worker for soil from 0 to 15 feet BGS, and a future maintenance worker for soil from 0 to 15 feet BGS.

Based on subject property conditions, current and future planned use, and overall protectiveness, DEQ's selected remedial alternative for soil for the former Hoyt Street Railyard site includes the following components:

- Excavation, treatment, and/or landfill disposal of hot spot soil
- Excavation, stabilization (as needed), and landfill disposal of TCLP lead soil
- Excavation of soil in utility corridors where concentrations exceed the construction worker RBCs in the upper 5 feet of soil
- Capping the entire subject property with 2 to 3 feet of clean soil, buildings, pavement, or other site improvements
- Installing a demarcation layer between contaminated soil and clean fill
- Institutional controls

With respect to the subject property, the applicable components of the remedial alternative for soil included the following:

- Excavation and landfill disposal of soil (petroleum hydrocarbons, lead, and PAHs)¹
- Excavation of soil in utility corridors where concentrations exceed the construction worker RBCs in the upper 5 feet of soil
- Capping the entire subject property with 2 to 3 feet of clean soil, buildings, pavement, or other site improvements
- Installing a demarcation layer between contaminated soil and clean fill
- Institutional controls

DEQ's selected remedial alternative for subject property groundwater included groundwater monitoring and institutional controls.

2.2.2 Anchor (2006)

Anchor's February 2006 report summarized the results of two test pit investigations conducted on the former Hoyt Street Railyard site, which included five test pits on the subject property (EB-23A and EB-23C through EB-23F), in 1998 by EMCON. The results of the investigations indicated that surface fill present at the subject property overlies a layer of sawdust mixed with wood debris present at depths between approximately 9 and 14 feet BGS. The 1998 investigation report also indicated that free-phase petroleum was observed floating on the water table in test pit EB-23F at approximately 12 feet BGS. The locations of the 1998 test pits conducted on the subject property are shown on Figure 2.

The 2006 report included a preliminary assessment of potential alternative disposal options for the sawdust and wood debris present beneath the subject property, including use as landscape material or as boiler fuel. However, because the wood waste rapidly decomposes after it is excavated and exposed to the atmosphere, these options were determined to be unfeasible. The report concluded that the most cost-effective option for disposing of the wood waste would be disposal at a RCRA Subtitle D landfill.

2.2.3 AECOM (2010)

As a function of DEQ's ROD Selected Remedial Action, AECOM, on behalf of BNSF, has been conducting semi-annual monitoring of seven groundwater monitoring wells (LTM-101 through LTM-107) present on the north portion of the former Hoyt Street Railyard site. None of the seven

NV5

3

¹ Hot spots of contamination in soil were not identified on the subject property during previous investigations.

groundwater monitoring wells are located on the subject property; however, groundwater monitoring well LTM-105 is located approximately 20 feet east of the eastern boundary of the subject property. In addition, the Former Hoyt Street Railyard – Groundwater Project Closeout report indicated that groundwater analytical results from groundwater monitoring well LTM-105 have not exceeded the trigger levels for the contaminants analyzed since 2007.

Since 2006, groundwater monitoring events indicate local groundwater flow direction variability due to the nature of subsurface conditions (fill) and recently completed construction activities. Groundwater elevations have indicated flow directions both away from and toward the Willamette River.

2.2.4 GeoDesign (2010)

In 2010, GeoDesign (now NV5) conducted a Phase I ESA and a limited subsurface investigation at the subject property and the adjoining property to the east. The limited subsurface investigation consisted of advancing seven direct-push borings (DP-7 through DP-13) on the subject property and collecting composite soil samples from the borings between depths of 0 and 14 feet BGS (DP-10) and between 0 and 20 feet BGS (DP-9). The 2010 boring locations are shown on Figure 2. In addition, methane concentrations were measured in borings DP-7, DP-8, and DP-10 through DP-12. The results of the 2010 investigation indicated the following regarding the subject property:

- Fill was encountered beneath the subject property at thicknesses ranging from approximately 10.5 to 19 feet. The fill generally consists of sand, silty gravel, and woody debris with occasional man-made debris.
- Fill soil beneath the subject property is impacted with petroleum hydrocarbons, lead, and PAHs at concentrations greater than select DEQ RBCs and/or CFSLs.
- Methane gas was measured at concentrations ranging from 6.2 pbv (DP-10) to 49.5 pbv² (DP-7).
- A magnetic anomaly or an unidentified metal structure, possibly a UST, was identified on the west portion of the subject property during a private utility locate.
- Groundwater was encountered at depths between approximately 4 and 6.5 feet BGS. VOCs were not detected above the laboratory method detection limits in the groundwater samples collected for laboratory analysis.

2.2.5 GeoDesign, Inc. (2018a)

GeoDesign conducted a Phase I ESA of the subject property in 2018, which identified that the subject property is part of the Hoyt Street Railyard property as previously discussed. The Phase I ESA identified the following environmental concerns at the subject property:

- Known contamination present in soil at the subject property associated with the former Hoyt Street Railyard
- The presence of elevated concentrations of methane beneath the subject property
- The suspect magnetic anomaly that could represent a UST

OAR 340-122-0040 requires removal or remedial actions (i.e., methane mitigation system) to prevent concentrations of methane exceeding or likely to exceed 1.25 pbv in confined spaces and structures.

4

2.2.6 GeoDesign, Inc. (2018b)

GeoDesign conducted a limited Phase II ESA of the subject property in 2018 that included analyzing 12 discrete soil samples from 4 direct-push borings (DP-1 through DP-4) advanced to depths of up to 20 feet BGS; analyzing 2 groundwater samples (DP-1 and DP-3); installing 4 temporary methane probes (MP-1 through MP-4); measuring methane, oxygen, and carbon dioxide concentrations in the 4 temporary methane probes; and completing a geophysical survey across the northwest portion of the subject property. The locations of the borings and methane probes are shown on Figure 2. The limited Phase II ESA indicated the following:

- Fill material was encountered beneath the subject property to the maximum depth explored
 of 20 feet BGS. A layer of wood debris was encountered in the four borings at depths
 between approximately 12.5 and 13.5 feet BGS and extends to the maximum depths
 explored (20 feet BGS).
- Diesel-range hydrocarbons were detected in soil sample DP-4(6-8) at a concentration exceeding the DEQ CFSL and DEQ Soil Ingestion, Dermal Contact, and Inhalation RBC for urban residential receptors. Diesel-range hydrocarbons were detected in soil sample DP-2(7-9) at a concentration exceeding the DEQ CFSL, but less than the applicable DEQ RBCs.
- Arsenic was detected in soil sample DP-3(5.5-7.25) at a concentration exceeding the DEQ Soil Ingestion, Dermal Contact, and Inhalation RBCs for urban residential receptors, occupational, and construction workers as well as the DEQ CFSL. Lead was detected in soil sample DP-1(5-7) at a concentration exceeding the DEQ Soil Ingestion, Dermal Contact, and Inhalation RBC for urban residential receptors as well as the DEQ CFSL. Arsenic and lead were not detected at concentrations greater than the corresponding DEQ RBCs for excavation workers.
- Arsenic, cadmium, lead, and various PAHs were detected in soil samples at concentrations greater than the corresponding DEQ CFSLs.
- Groundwater was encountered during drilling in each of the four borings at depths between approximately 11 and 12 feet BGS.
- PAHs, VOCs, total metals, and dissolved metals were either not detected or were detected at concentrations less than applicable DEQ RBCs in the two groundwater samples analyzed.
- Methane was detected beneath the subject property at concentrations ranging from 0 to 63.4 pbv.
- A geophysical survey was performed on the northwest portion of the subject property in the area of the prior magnetic anomaly and evidence of a potential UST was not encountered.

2.3 SOIL CONDITIONS

Subsurface soil encountered during previous environmental and geotechnical investigations generally consists of a layer of fill that is at least 15 to 23 feet thick. The fill may extend to a depth of approximately 30 feet BGS in the northeast corner of the subject property. The upper portion of the fill generally consists of an 8- to 15.5-foot-thick layer of silt, sand, and gravel. The lower portion of the fill generally consists of a 5- to 10-foot-thick continuous layer of wood chips and sawdust. Several hard obstructions were encountered during drilling in the fill layer that were attributed to concrete rubble or some other type of debris.

Alluvial silt was encountered beneath the fill material that extends to depths between 41.5 and 100 feet BGS. The silt layer is generally thinner on the northwest side of the subject property and increases in thickness to the south and east. The silt is generally gray; wet; and contains varying amounts of fine-grained sand, thin lenses of silty sand, and occasionally wood.

Alluvial gravel is present beneath the alluvial silt at a thickness of approximately 10 feet. Gravel, interpreted to be the Troutdale Formation, was encountered beneath the alluvial gravel to the maximum depths explored (110.8 feet BGS).

2.4 GROUNDWATER CONDITIONS

GeoDesign installed a vibrating wire piezometer in a geotechnical boring in 2018 and periodically measured the groundwater level, as summarized in the table below.

Vibrating Wire Piezometer Groundwater Readings

Date	Groundwater Depth (feet BGS)
09/21/18	12.6
09/28/18	12.8
10/03/18	12.7

During geotechnical and environmental drilling, groundwater was observed at depths between 11 and 13 feet BGS (elevations of approximately 16 to 18 feet). During a November 2010 environmental investigation, groundwater was reported to range between 4 and 6.5 feet BGS. The depth to groundwater is expected to fluctuate in response to seasonal changes, changes in surface topography, and other factors.

3.0 CONTAMINATED MEDIA MANAGEMENT PLAN

Prior to the initiation of earthwork activities, GeoDesign prepared a CMMP for the subject property, dated September 23, 2019, to support subject property redevelopment activities.³ The CMMP indicated that, based on the analysis of soil samples collected from the limits of the planned mass excavation, soil removed from the subject property during site redevelopment would require disposal at a RCRA Subtitle D landfill or other DEQ-approved facility. The CMMP indicated that the planned depth of the mass excavation was 17 feet (COP datum). DEQ approved the September 2019 CMMP in a letter dated September 17, 2019.⁴

4.0 SITE REDEVELOPMENT

The development includes a new senior living building that will consist of a 16-story tower over a 3-story podium around a central courtyard. The development includes one level of below-grade parking. To accommodate the subgrade parking level, mass excavation was required over the

AllianceRC-7-02-06:052323

³ GeoDesign, Inc., 2019. Contaminated Media Management Plan; Holden of Pearl; Northeast of the Intersection of NW 13th Avenue and NW Quimby Street; Portland, Oregon, dated September 23, 2019.

⁴ The DEQ letter dated September 17, 2019, approved the draft CMMP dated September 5, 2019, with the exception of four comments that were addressed in the final CMMP dated September 23, 2019.

entire footprint of the subject property to a depth of approximately 13 feet BGS (17 feet, COP datum). The mass excavation included the removal of approximately 46,037 tons of soil and debris. In addition to the mass excavation, other earthwork activities that generated soil requiring off-site disposal included shoring installation, the installation of new utilities, and foundation construction (footings, grade beams, piles, etc.). Intermittent dewatering was required during earthwork activities to prevent water buildup in the mass excavation. The layout of the planned development is shown on Figure 3.

5.0 EARTHWORK ACTIVITIES

The following sections provide a summary of earthwork activities completed in accordance with the CMMP. Because all soil from the mass excavation and soldier pile installation was disposed of at RCRA Subtitle D landfills and field screening or soil segregation was not conducted, it was not warranted for NV5 environmental personnel to be on site at the time of earthwork activities.

5.1 MASS EXCAVATION

The mass excavation was primarily completed between March 26 and April 30, 2021, with some finish grading and utility excavations continuing through May 2022. The final grade of the mass excavation was between 14.5 and 18.3 feet (COP datum). The mass excavation included the removal of approximately 46,037 tons of soil and wood debris that were disposed of at Hillsboro Landfill in Hillsboro, Oregon, under WM Profile No. 1347400R, or Wasco County Landfill in The Dalles, Oregon. The limits of the mass excavation are shown on the shoring plan presented in Appendix A.

5.2 SOLDIER PILES

Soldier pile walls were installed along the limits of the mass excavation to provide lateral support for the railroad ROW northeast of the subject property. One-hundred eight soldier piles were installed to depths between approximately 35 and 41.5 feet BGS between April 1 and April 24, 2021. Spoils generated from soldier pile installation were disposed of at Hillsboro Landfill in Hillsboro, Oregon. The shoring plan is presented in Appendix A.

5.3 ROW EXCAVATIONS

Construction included utility excavations that extended into the ROWs along the western and southern borders of the subject property. Soil removed from the ROWs was disposed of at Hillsboro Landfill in Hillsboro, Oregon, or Wasco County Landfill in The Dalles, Oregon. The excavated areas in the ROWs were backfilled with 3/4-inch-minus crushed rock from the CalPortland Santosh Aggregate Plant in Scappoose, Oregon.

5.4 EXCAVATION DEWATERING

Excavation dewatering was completed at the subject property between May 7 and November 3, 2021, under Authorization No. 19-175536-EXC-01CO. A total of 1,135,815 gallons of water were removed from the excavation and discharged to the COP combined sewer system. The discharge reports are presented in Appendix B.

6.0 SOIL MANAGEMENT

In accordance with the CMMP, all soil exported from the subject property was disposed of at a RCRA Subtitle D landfill. A total of 46,037 tons of soil and wood debris exported from the subject property were disposed of at Hillsboro Landfill in Hillsboro, Oregon, or Wasco County Landfill in The Dalles, Oregon. A summary of the daily tonnage reports for the soil disposed of at Hillsboro Landfill and Wasco County Landfill are presented in Appendix C.

7.0 CONCEPTUAL SITE MODEL

A CSM defines the potentially complete exposure pathways by which receptors may be exposed to site contaminants under current or anticipated future conditions. A complete pathway from the contaminant source to a human or ecological receptor is necessary in order for contaminant exposure to occur. DEQ provided a summary of the primary sources of contamination, nature and extent of contamination, contaminants of interest, beneficial land and water use determinations, and human health and ecological risk assessments in the 2000 ROD. This information is summarized in the following sections.

7.1 PRIMARY SOURCES

The 2000 ROD identified the sources of contamination associated with the Hoyt Street Railyard as fill material, railroad operational areas, and the operational areas of other industrial activities at or adjacent to the Hoyt Street Railyard property. Primary source areas at the subject property include fill material and the General Petroleum Area, an operational area of other industrial activities at or adjacent to the Hoyt Street Railyard. The General Petroleum Area was the location of a petroleum fuel-handling facility partially located on the south portion of the subject property.

7.2 NATURE AND EXTENT OF CONTAMINATION

7.2.1 Soil

Diesel- and oil-range hydrocarbons, VOCs, PAHs, and metals have been detected in soil samples collected from soil and wood debris throughout the subject property. As previously stated, the only identified source area at the subject property was the General Petroleum Area. The detected concentrations of petroleum hydrocarbons, VOCs, PAHs, and metals appear to be the result of minor spills/releases during historical fueling operations, placement of previously contaminated fill material, or a combination of the two. Previous investigation results indicate that oil-range hydrocarbons, PAHs, and lead are present in soil throughout the subject property to a depth of at least 18 feet BGS, and possibly deeper.

7.2.2 Groundwater

Based on the most recent groundwater analytical data (2018) collected from beneath the subject property, PAHs, VOCs, total metals, and dissolved metals were either not detected or were detected at concentrations less than applicable DEQ RBCs. The presence of PAHs in groundwater beneath the subject property is likely related to historical fueling operations conducted in the General Petroleum Area. VOCs were historically detected in groundwater from the former Hoyt Street Railroad site and appear to be related to a regional groundwater plume

with low levels of VOCs from historical industrial activities in the area. There is no known on-site source of VOCs, and VOCs were not detected in groundwater samples collected in 2018 beneath the subject property.

7.3 CONTAMINANTS OF CONCERN

7.3.1 Soil

Soil sample results indicate that diesel- and oil-range hydrocarbons; VOCs; PAHs; and elevated concentrations of arsenic, cadmium, and lead are present in soil throughout the subject property.

7.3.2 Groundwater

Groundwater sample results indicate that relatively low concentrations of PAHs and metals (arsenic, cadmium, lead, and mercury) are present in groundwater beneath the subject property. PAHs, total metals, and dissolved metals were either not detected or were detected at concentrations less than applicable DEQ RBCs.

7.4 BENEFICIAL LAND AND WATER USE DETERMINATIONS

The ROD indicated that beneficial land uses at the subject property include commercial, urban residential, and urban recreational (parks). Beneficial groundwater uses were not identified in the ROD, with the exception of discharge to the Willamette River. Currently and reasonably likely future beneficial uses of the Willamette River in the vicinity of the Hoyt Street Railyard identified in the ROD included support of aquatic life, commercial navigation and transport, industrial supply, and recreation. While the Willamette River is classified for potable use, this classification is based on the assumption that water would be treated prior to use for drinking, irrigation, or livestock purposes.

7.5 HUMAN HEALTH AND ECOLOGICAL RISK ASSESSMENTS

The human health risk assessment in the ROD evaluated risks from exposure to contaminants from direct contact and inhalation for five receptors, including urban resident children, urban resident adults, site workers, construction workers, and future maintenance workers. The urban residential child and adult receptors represent future residents living on site after property redevelopment. Risks to these receptors were evaluated for exposure to contaminated soil to a depth of 5 feet BGS. The construction worker receptor represents construction workers on site completing tasks associated with property redevelopment, including site preparation work and excavating and handling contaminated soil during excavations for basements and utilities. Risks to construction workers from exposure to contaminated soil were evaluated to a depth of 15 feet BGS. The future maintenance worker receptor represents workers involved in maintenance workers from exposure to contaminated soil were evaluated to a depth of 15 feet BGS.

The ecological risk assessment evaluated risks to aquatic receptors from potentially contaminated groundwater discharging to the Willamette River and included an evaluation of exposure to both surface water and sediment. The risk assessment did not indicate unacceptable risks to ecological receptors from surface water or sediment.

7.6 RECEPTORS AND EXPOSURE PATHWAYS

Based on the above information, the ROD included site-specific RBCs for the following receptors and exposure pathways:

- Urban Resident Child (soil from 0 to 5 feet BGS)
- Construction Worker (soil from 0 to 15 feet BGS)
- Future Maintenance Worker (soil from 0 to 15 feet BGS)

Because the Urban Resident Child is a more conservative receptor scenario, site-specific RBCs for Urban Resident Adult receptors were not included in the ROD. In addition, because the Construction Worker receptor scenario only represents construction workers on site during earthwork associated with property redevelopment and earthwork associated with property redevelopment has been completed, the confirmation soil sample analytical results were not compared to the site-specific RBCs for this receptor scenario.

8.0 METHANE MITIGATION SYSTEM

Due to the detected concentrations of methane of up to 63.4 pbv in soil gas beneath the subject property, a methane mitigation system was incorporated into the building design. The methane mitigation system was installed in general accordance with the design submitted by GeoDesign in July 2019. The methane mitigation system consists of GeoVent sub-slab venting and a MiraPLY-H flexible waterproofing membrane and gravel blanket under the entire building footprint. Due to the use of shotcrete for the below-grade foundation walls and the presence of hydrostatic conditions up to top of grade level, the DEQ-approved PREPRUFE® vapor membrane barrier was not used. However, the MiraPLY-H membrane meets and/or exceeds the methane vapor barrier requirements and is a suitable replacement.

The sub-slab venting is connected to five 4-inch Schedule 80 PVC vent risers equipped with wind-activated turbine ventilators to passively extract sub-slab vapors and prevent the migration of methane gas into the building. Trench dams were included in the design to help prevent off-site migration of methane gas through on-site utility trenches. However, utilities entered the building through the below-grade walls, eliminating on-site utility trenches. Therefore, trench dams for utility trenches were not required. Three permanent methane monitoring probes were installed in the basement floor slab of the building to facilitate measurements of subsurface concentrations of methane and balance gasses beneath the building if required. Each methane monitoring probe consists of a horizontal section of 3/4-inch PVC with a minimum 10-foot screened interval (0.010-inch slot).

The methane mitigation system design sheet set is presented in Appendix D. The MiraPLY-H membrane product specifications and methane permeability test data are presented in Appendix E.

9.0 FINAL COVER

Prior to placement of final cover, the previously excavated areas outside of the building footprint were backfilled with 3/4-inch-minus crushed rock from CalPortland Santosh Aggregate Plant to

approximately 3 feet BGS. The backfilled areas outside of the building footprint will be brought to grade with either additional hardscaping or clean imported topsoil, as shown on Sheets L1.00 and L1.01, which are presented in Appendix F. Beneath the building footprint, the MiraPLY-H methane barrier serves as the demarcation layer.

The distribution of final cover associated with the development is shown on Sheets L1.00 and L1.01 (Appendix F). The following sections detail the specific components.

9.1 HARDSCAPES

Hardscape cover comprises approximately 99.5 percent of the subject property and includes the following:

- Building foundation elements
- Concrete paving along boundaries of the subject property
- Sand-set concrete unit pavers along courtyards and walkways
- Concrete-lined, flow-through planters routed to the COP stormwater system

9.2 SOFTSCAPES UNDERLAIN BY HARDSCAPES

Softscape cover comprises approximately 0.5 percent of the subject property. A portion of two bioretention planter areas located north of the subject property structure are outside the limits of the mass excavation. The bioretention planter areas are encased on five sides with concrete, including the bottoms of the bioretention planter areas. Potential residual contamination left in place under the bioretention planter areas is covered with a combination of at least 2 feet of clean soil and at least 3 inches of concrete meeting the requirements of the CMMP and the ROD. Discharge from the bioretention planter areas is directed to the COP storm sewer system through piping present at the bottom of each bioretention planter.

10.0 CONCLUSIONS

The evaluation and management of soil generated during site development activities was completed in general accordance with the objectives set forth in the CMMP dated September 23, 2019. During installation of soldier piles and mass excavation, 46,037 tons of soil were exported from the subject property and disposed of at Hillsboro Landfill of Hillsboro, Oregon, or Wasco County Landfill of The Dalles, Oregon. Under Authorization No. 19-175536-EXC-01CO, a total of 1,135,815 gallons of water were removed from the excavation and discharged to the COP combined sewer system.

Contact to soil with residual concentrations of contaminants has been eliminated through the construction of hardscapes, including softscapes underlain by concrete, at the subject property. Based on this information and the results of the confirmation soil sample analytical results, we respectfully request that DEQ issue an NFA determination for the subject property.

Certified Mail # 70190140000067012354

RE: Groundwater Discharge associated with Permit # 19-175536-EXC-01-CO

Dear Evan Lawler,

The City is in receipt of your Source Control Dewatering request and Submeter Application for the discharge of groundwater from temporary dewatering associated with Holden of the Pearl, Permit # 19-175536-EXC-01-CO to the City's storm sewer system at node AMY989. The 1200-C NPDES Permit, DEQ File No. 126566, issued to the site serves as your authorization for this discharge. Please note, any discharge to the City storm sewer system that is in violation of the 1200-C NPDES Permit and associated dewatering plan is considered a prohibited discharge under Portland City Code (PCC) 17.39.040 and is subject to enforcement per PCC 17.39.110. The approved discharge rate is 200 gallons per minute.

In addition, this discharge is subject to user charges under Portland City Code 17.36.050 and ENB 4.32, BES Sub-Meter Program Administrative Rules. User charges are applicable to clean non-stormwater discharges to the City storm sewer system and require a submeter to meter the volume discharged to the City storm sewer system. You are required to purchase, install, maintain and calibrate a private submeter (totalizing flow meter) for this discharge. Prior to commencing discharge, you must notify this office (via email) that meter installation is complete and submit a photo of the face of the meter. You will also be required to report the volume discharged each month by the 15th day of the following month. Please submit the enclosed Dewatering Discharge Report form to report the volume each month. The report will be used for billing purposes. The volume will be charged in accordance with the Bureau of Environmental Services Sewer Rates and Charges annual rate ordinance as described in 17.36.030. Per the Submeter Application, invoices will be sent to your attention at the address above.

Please let me know if you have any questions regarding this letter. I can be reached at 503.823.5547 or stacy.hibbard@portlandoregon.gov

Respectfully,

Stacy Hibbard

Industrial Stormwater Program Manager

APPENDIX D

HOLDEN OF PEARL

NORTHEAST OF NW 13TH AVENUE AND NW QUIMBY STREET PORTLAND, OR METHANE MITIGATION SYSTEM

SHEET INDEX

SHEET TITLE VICINITY MAP, SHEET INDEX, AND GENERAL NOTES

SITE PLAN - TRENCH DAMS

METHANE MITIGATION SYSTEM - VENT PIPING

METHANE MITIGATION SYSTEM - FLEXIBLE MEMBRANE AND GRAVEL BLANKET

DETAILS DETAILS **DETAILS**

GENERAL NOTES:

- 1. PERFORATED HORIZONTAL VENTILATION PIPES SHALL BE PLACED NO MORE THAN 50 FEET FROM THE BUILDING PERIMETER.
- . PERFORATED HORIZONTAL VENTILATION PIPES SHALL BE LIQUID BOOT GEOVENT OR ENGINEER/OREGON DEPARTMENT OF ENVIRONMENTAL QUALITY (DEQ)-APPROVED EQUIVALENT. THE TOTAL PIPE PERFORATION AREA SHALL BE EQUAL TO OR GREATER THAN 5% OF THE PIPE SURFACE AREA.
- HORIZONTAL VENTILATION PIPE SHALL BE CONNECTED TO VERTICAL VENTILATION RISERS. THE VERTICAL VENTILATION RISERS SHALL BE 4 INCHES IN DIAMETER, SCHEDULE 80 PVC PIPE. VENTILATION RISER PIPES SHALL BE PROTECTED WITH NAIL-GUARDED STUDS WHERE APPLICABLE.
- 4. VENTILATION RISER OUTLETS SHALL BE LOCATED AT LEAST:
- 10 FEET AWAY FROM ANY WINDOW, DOOR, ROOF HATCH, OR AIR INTAKE INTO
- 3 FEET AWAY FROM ANY PARAPET.
- 4 FEET AWAY FROM PROPERTY LINE.
- 5 FEET AWAY FROM ANY ELECTRICAL DEVICE. 3 FEET ABOVE HIGHEST POINT OF ROOF WITHIN A 10-FOOT RADIUS OF OUTLET (IF VENTED TO COMBUSTIBLE ROOF).
- 1.5 FEET ABOVE HIGHEST POINT OF ROOF WITHIN A 10-FOOT RADIUS OF OUTLET (IF VENTED TO NON-COMBUSTIBLE ROOF).
- 5. ANY VENTILATION RISER LOCATED WITHIN AN OPEN YARD SHALL TERMINATE AT A HEIGHT OF NOT LESS THAN 10 FEET ABOVE ADJACENT GRADE, UNLESS NOTED
- 6. CONTRACTOR SHALL VERIFY EXACT TYPE OF CONSTRUCTION AT EACH VENT RISER. RISERS MUST AVOID WINDOWS AND MUST NOT BE INSTALLED WHERE STRUCTURAL
- 7. THE TERMINATION OF ALL VENTILATION PIPES SHALL BE PROVIDED WITH A WIND TURBINE, TEE CONNECTION, OR OTHER APPROVED RAIN CAP TO HELP PREVENT THE INTRUSION OF RAIN WATER. RAIN GUARDS SHALL BE NON-RESTRICTING.
- 8. VENTILATION RISERS SHALL BE CLEARLY MARKED TO INDICATE THAT THE PIPE MAY CONTAIN COMBUSTIBLE GAS. PIPES SHALL BE MARKED 6 INCHES BELOW THEIR TERMINATION POINT AND AT 5-FOOT INTERVALS ALONG THE REMAINDER OF THE VENTILATION RISER. THIS INCLUDES SECTIONS ENCASED WITHIN THE WALLS OR OTHER ENCLOSURES. THE IDENTIFIER SHOULD INCLUDE THE WORDS "CAUTION METHANE GAS IN PIPE NO SMOKING OR ELECTRICAL EQUIPMENT WITHIN 5 FEET." THE PLACARD SIGN SHALL BE 3 INCHES HIGH BY 4 INCHES WIDE WITH 1/4-INCH-HIGH, BLACK LETTERS ON WHITE BACKGROUND AND BE PLASTIC WITH ADHESIVE BACKING, UNLESS OTHERWISE SPECIFIED BY ENGINEER.
- 9. ALL UNDERGROUND ELECTRICAL, PLUMBING, AND SIMILAR CONDUITS PENETRATING THE SLAB-ON-GRADE SHALL BE SEALED AS SHOWN ON DETAIL 3,
- 10. ALL ELECTRICAL CONDUITS ENTERING OR LEAVING THE INTERIOR BUILDING OR EXTERIOR ELECTRICAL BOXES SHALL BE COMPLETED IN ACCORDANCE WITH APPLICABLE ELECTRICAL CODES. ALL CONDUITS SHALL BE SEALED AS SHOWN ON DETAIL 2, SHEET H502.
- 11. FINAL PRODUCT APPROVAL OF FLEXIBLE MEMBRANE WILL BE SUBJECT TO DEQ REVIEW. THE MINIMUM THICKNESS FOR THE FLEXIBLE MEMBRANE OR DEQ-APPROVED EQUIVALENT SHALL BE 46 DRY MILS.
- 12. FLEXIBLE MEMBRANE THICKNESS SHALL BE VERIFIED BY THE CONTRACTOR FOLLOWING APPLICATION OR INSTALLATION. CONCRETE FORMING, PLACEMENT, AND FINISHING SHALL BE CONDUCTED SO AS TO MAINTAIN THE INTEGRITY OF THE FLEXIBLE MEMBRANE. INTERNAL FORM STAKING SHALL BE COMPOSED OF STEEL AND SHALL BE BELOW THE SURFACE OF THE FINISHED CONCRETE. REPAIR SLAB AS NECESSARY WITH NON-SHRINK GROUT. UNDER NO CIRCUMSTANCES SHALL THE FLEXIBLE MEMBRANE BE PENETRATED WITH FINISHING APPARATUS DURING CONCRETE PLACEMENT. IF THE FLEXIBLE MEMBRANE IS DAMAGED, CONTRACTOR'S WORK SHALL DISCONTINUE UNTIL THE APPROPRIATE REPAIRS TO THE FLEXIBLE MEMBRANE ARE MADE. REINFORCING STEEL, PIPING, FORMS, ETC. SHALL NOT BE SUPPORTED DIRECTLY ON THE FLEXIBLE MEMBRANE OR PROTECTIVE COVERING AND EQUIPMENT SHALL NOT BE DRIVEN OVER THE FLEXIBLE MEMBRANE OR ITS PROTECTIVE COVERING.
- 13. A QUALIFIED PROFESSIONAL KNOWLEDGEABLE IN THE INSTALLATION OF METHANE MITIGATION SYSTEMS SHALL BE PRESENT DURING CONSTRUCTION AND TESTING OF THE METHANE MITIGATION SYSTEM FOR THIS PROJECT. THE QUALIFIED PROFESSIONAL SHALL OBSERVE AND DOCUMENT THE DESIGN ELEMENTS AS DESCRIBED HEREIN WERE INSTALLED IN GENERAL ACCORDANCE WITH THE DRAWINGS AND SPECIFICATIONS. DOCUMENTED OBSERVATIONS AND/OR REPORTS GENERATED BY THE QUALIFIED PROFESSIONAL MAY BE SUBJECT TO DEQ REVIEW AND DEQ APPROVAL OF THE METHANE MITIGATION SYSTEM INSTALLATION MAY BE NECESSARY BEFORE OCCUPANCY OF THE BUILDING IS ALLOWED.
- 14. COPIES OF THIS PLAN SET SHALL BE DISTRIBUTED TO AND RECEIVED BY THE EARTHWORK, ELECTRICAL, AND PLUMBING CONTRACTORS AT A MINIMUM. ALL ELECTRICAL AND PLUMBING INSTALLATIONS FOR BUILDINGS WITH SUB-SLAB VENTING SHALL COMPLY WITH NOTES 8, 9, AND 10 ABOVE.

Safety Related Information

SAFETY

- Information on handling, storage and safety considerations including personal protection is available in the Safety Data Sheets (SDS's) and are available at www.carlisleccw.com
- Carefully read the products' Technical Data Sheets, product labels and SDS's prior to use
- · Be aware of your surroundings and those working in adjacent areas

FIRST AID MEASURES

If exposed or concerned, get medical advice/attention.

MiraPLY-H, MiraPLY-V, MiraPLY Seam Tape, MiraPLY Detail Tape and MiraPLY Tieback Cover:		
Inhalation	Cannot be inhaled under normal circumstances.	
Skin	Repeated contact with skin may result in irritation due to adhesive nature of product. Protective creams may be useful. If skin irritation occurs, get medical advice/attention.	
Eyes	Cannot get into eyes under normal circumstances	
Ingestion	Cannot be ingested under normal circumstances	

CCW-703-V Liquiseal:		
Inhalation	Remove person to fresh air and keep comfortable for breathing. If experiencing respiratory symptoms: Call a POISON CENTER/doctor.	
Skin	Wash with plenty of soap and water. Take off contaminated clothing and wash before reuse. Immediately call a POISON CENTER or doctor/physician	
Eyes	Rinse cautiously with water for 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists, get medical advice/attention.	
Ingestion	Do NOT induce vomiting. If swallowed, get medical attention.	

Sure-Seal® Lap Sealant:		
Inhalation	Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or doctor if you feel unwell.	
Skin	Remove/Take off immediately all contaminated clothing and wash it before reuse. Rinse skin with water/shower. If skin irritation occurs, get medical advice/attention.	
Eyes	Flush eyes with plenty of water for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists, get medical advice/attention.	
Ingestion	Do NOT induce vomiting. If swallowed, get medical attention.

FIRE FIGHTING MEASURES AND OTHER SAFETY RELATED INFORMATION

Refer to the products' Safety Data Sheets

The information contained herein is based upon data and information available to Carlisle Coatings and Waterproofing Incorporated, and reflects our best professional judgment. This information is furnished upon the condition that the person receiving it shall make their own determination of the suitability of the material for their particular use.

Product Name	Description	Packaging	Coverage Rate
	CCW Waterpro	oofing Membranes	
CCW MiraPLY-H	MiraPLY-H with SeamLOCK Technology is a nominal, 70-mil horizontal grade, self-adhering, blindside waterproofing membrane. The dual laminate membrane fuses a 45-mil thick, reinforced TPO sheet to a 25-mil butyl adhesive coating.	4' x 50' (1.22 m x 15.24 m) rolls. Weight: 80 lbs (36 kg)	200 sq. ft./roll
CCW MiraPLY-V	MiraPLY-V with SeamLOCK [™] Technology is a nominal 70 mil vertical grade, self-adhering, blindside waterproofing membrane. This membrane is a fully adhered composite comprised of a tough, durable and flexible 45- mil reinforced TPO backing with a 25-mil butyl alloy membrane/adhesive.	4' x 50' (1.22 m x 15.24 m) rolls. Weight: 80 lbs (36 kg)	200 sq. ft./roll
CCW Tie-Back Cover	CCW Tie-Back cover is a pre-formed, high-impact resistant, heavy-duty thermoplastic cover designed to protect the waterproofing membrane integrity. The CCW Tie-Back cover is an integral part of the CCW MiraPLY system. CCW Tie-Back Covers are designed to provide a pre-formed tie-back cover shaped to cover most tie-back conditions and can withstand both concrete and shotcrete placement.	Sold Individually	N/A

Product Name	Description	Packaging	Coverage Rate	
	CCW Waterproofing Membranes (continued)			
CCW Sure-Seal Term Bar	Extruded Aluminum Termination Bar	50 pcs; 500 LF(152 m) per carton 69 lbs. (31 kg) carton	1" (25 mm) wide x 10' (3 m) long	
CCW HP-250 Primer	Apply the primer with a clean HP Splice Wipe. Scrub the area of the membrane in a circular motion to achieve a thin, even coating on the membrane.	1-gallon (3.8 L) cans 5-gallon (9.5 L) pails	Approximately 250 sq/ft (23 m2) per	
CCW CAV-GRIP	Connect gun to hose and connect hose to cylinder. CAV-GRIP can be applied at ambient temperature of 25°F and up. Propellant in cylinders needs to be maintained above 60°F for the product to spray well.	#40 aerosol cylinder, Fill weight: 30 lbs of adhesive	Varies	

Product Name	Description	Packaging	Coverage Rate
	CCW Waterpro	oofing Membranes	
CCW Seam Tape	MiraPLY Seam Tape is a double-sided tape with a tough, conformable carrier and aggressive adhesive system for sealing and holding to difficult-to-stick- to surfaces under a variety of conditions.	Roll - 75' x 6" 8 rolls per carton	37.5 sq. ft./roll
CCW Detail Tape	MiraPLY Detail Tape is a reinforced butyl- based, fabric-faced detailing tape for use with MiraPLY. MiraPLY Detail Tape offers an aggressive grip and remains flexible during application, ensuring immediate adhesion on contact and long-term bonding. The pressure sensitive properties of MiraPLY Detail Tape allow for a fast, clean and easy application.	Roll - 50' X 6" 8 rolls per carton	25 sq. ft./roll
CCW-703-V	CCW-703-V is a two-component polyurethane PRODUCT. It is self-curing, forming a seamless, impermeable coating that bonds tightly to an appropriate substrate, preventing the lateral transfer of water. CW 703 V is easily mixed at the jobsite and applied using a squeegee, trowel, or BRUSH.	3.5 gal Part A 0.5 gal Part B 45 lbs/unit	Varies upon use; reference Tech Data Sheet

Product Name	Description	Packaging	Coverage Rate
	CCW Detailing Seal	ants/Mastics (continued)	
CCW Universal Sealant	Carlisle's Universal Single-Ply Sealant is a 100% solids, solvent-free, one-part polyether sealant that provides a weather-tight seal. Universal Single-Ply Sealant can be used as a sealant above Termination Bar or cut edges.	24 Cartridges, 10.1 Fl. Oz. (298 mL) each	25' (7.6 m) per tube or 600' (183 m) per carton using a ¼" (8 mm) bead
CCW Lap Sealant	Sure-Seal Lap Sealant is an extremely durable material Its cured rubber consistency enables it to expand and contract with the movement of the membrane without cracking or loss of adhesion.	25 tubes/carton	22' (6.7m) per tube or 256' (78m) per gallon using 5/16" (8mm) bead
CCW Weathered Membrane Cleaner	Sure-Seal Weathered Membrane Cleaner is used to clean the CCW MiraPLY membrane prior to the seaming process. Sure-Seal Weathered Membrane Cleaner is solvent-based.	5 gallon pails 2 1-gallon closed top pail	Varies upon use; reference Tech Data Sheet

General Guidelines

COORDINATION

- Pre-construction meeting shall cover all decisions pertaining to design of waterproofing system to achieve a continuous, water-tight building structure.
- Review submittals, surface preparation, installation procedures, special details, sequence of construction, responsibilities, mock-up requirements, inspection, testing, protection of membrane, and repair procedures.
- Mock-up shall establish procedures and workmanship that must be maintained during installation.
- Review adjacent materials such as drains, doors, parapets, penetrations, and other site conditions for conformance to manufacturer's application instructions.
- Ensure proper dewatering system and techniques are in place prior to installation of the waterproofing system and remain in place until after concrete placement.

DELIVERY, STORAGE AND HANDLING

- Deliver CCW materials in original unopened packages.
- Protect CCW materials during transportation, storage, and installation to avoid physical damage.
- Store CCW materials in a cool dry area protected from direct sunlight and extreme heat.

SUBSTRATE REQUIREMENTS

- Before any waterproofing work is started the waterproofing applicator shall thoroughly examine all surfaces for any deficiencies. Should any deficiencies exist, the architect, owner, or general contractor should be notified in writing and corrections made.
- The substrate must be relatively even without noticeable high spots or depressions, relatively smooth, free of protrusions, debris, sharp edges or foreign materials and must be free of accumulated water, ice and snow. All substrates and detailed work areas including penetrations should be sound and stable to withstand traffic and concrete placement.
- Earth, crushed stone, or soil as a subbase shall be compacted such that the
 earth, stone or soil is not displaced from traffic or concrete placement. Typically,
 #57 stone compacted to 85% Proctor density provides a suitable substrate for
 MiraPLY. As per ACI1 302 "Concrete Floor and Slab Construction," the subbase
 should remain stable and support construction traffic.
- Concrete mud slabs or rat slabs shall be minimum 2" thick and be free of any
 exposed aggregate, loose debris or sharp protrusions. CSP-1 to CSP-6 finishes as
 per the ICRI2 Concrete Surface Profile Scale are acceptable to receive MiraPLY.
- Shoring Systems, Soil Retention Systems or support of excavation receiving MiraPLY shall be relatively smooth and even. The surface smoothness shall be CSP-1 to CSP-6 with a surface evenness no more than 1:15.
- MiraPLY can span voids and gaps up to 1".
- MiraDRAIN can span voids and gaps up to 2" and shall be installed over the subbase or against the shoring system prior to MiraPLY installation.

MiraPLY-H Installation

DESCRIPTION

MiraPLY-H with SeamLOCK Technology is a 70-mil horizontal grade, self-adhering, blindside waterproofing membrane. The dual laminate membrane fuses a 25-mil gray, butyl adhesive coating (top surface) to a 45-mil thick, black, reinforced TPO sheet (bottom surface). The top surface has a Factory-Applied-Tape (FAT™) providing the primary self-adhesive selvedge while the bottom surface has a pre-primed strip providing a secondary self-adhesive selvedge. Together, these dual self-adhesive selvedges create the MiraPLY's SeamLOCK technology.

INSTALLATION

- Start the installation at one corner of the building. Unroll the first sheet of MiraPLY-H square/parallel to the shoring system or formwork starting at one corner with the black TPO side facing down and the gray adhesive coating side facing up.
- Unroll the next sheet of MiraPLY-H lapping the SeamLOCK pre-primed strip onto the previously installed sheet a minimum of 3".
- Stagger end laps in open field areas and extend onto adjoining sheets a minimum of 3".
- Ensure that the membrane lays flat and no openings are visible.
- In cold weather installations, contact your local CCW Representative or CCW Technical Services at (888) 229-2199 for "Best Practices" and techniques.

SIDE LAPS

- At side laps, simultaneously remove the release liner on the factory applied tape and pre-primed strip then mate the two sheets together to form the SeamLOCK.
- Roll the side lap using a hard rubber roller and firm hand pressure.
- Avoid overlapping beyond the edge of the FAT; best practice is to have ½-¼" of exposed FAT adhesive along the length of the side lap.
- Refer to Detail MP-90.

END LAPS

- At end laps, ensure the TPO and adhesive coating surfaces are clean and free of debris and surface contaminants.
- Position 6" MiraPLY Seam Tape in the lap area and align with the end of a roll or a field cut. Roll MiraPLY Seam Tape using a hard rubber roller and firm hand pressure.
- With both release liners still in place, align the next roll of CCW MiraPLY over the Seam Tape. Avoid overlapping beyond the edge of the Seam Tape; best practice is to have a ½-½" of exposed Seam Tape adhesive along the width of the end lap. Remove the release liner and join the two sheets together.
- After seam is fully constructed, roll the entire seam area with a hard rubber roller using firm hand pressure.
- The T-joints formed at either end of the end lap shall be sealed with a 6" x 6" patch of MiraPLY Detail Tape. Align the patch over the center of the T-joint, remove the release liner and roll into place. Care should be taken to ensure the tape has adequate contact to all 3 sheets that formed a T-joint. This is best accomplished using a "V" roller or detail roller in addition to the hard rubber roller.
- Refer to Details MP-90 and MP-91

MiraPLY-V Installation

DESCRIPTION

MiraPLY-V with SeamLOCK Technology is a 70-mil vertical grade, self-adhering, blindside waterproofing membrane. The dual laminate membrane fuses a 25-mil gray, butyl adhesive coating (front surface) to a 45-mil thick, black, reinforced TPO sheet (back surface). The front surface has a Factory-Applied-Tape (FAT) providing the primary self-adhesive selvedge while the back surface has a pre-primed strip providing a secondary self-adhesive selvedge. Together, these dual self-adhesive selvedges create the MiraPLY's SeamLOCK technology.

INSTALLATION

- Start the installation at one corner of the building. Unroll the first sheet of MiraPLY-V and install it square/parallel to building wall centered in the corner with the black TPO facing the shoring system and the gray adhesive coating with release liner facing towards the installer.
- Align the next sheet of MiraPLY-V lapping the SeamLOCK pre-primed strip onto the previously installed sheet a minimum of 3".
- Stagger end laps in open field areas and extend onto adjoining sheets a minimum
 of 3".
- Ensure that the membrane lays flat and no openings are visible.
- Ensure that the membrane is not blousing, tenting, pillowing, etc. greater than 1" along shoring system, corners and other transitions.

SIDE LAPS

- At side laps, simultaneously remove the release liner edge of the preceding sheet and the release liner from the pre-primed strip of the subsequent sheet to mate the two sheets together to form the SeamLOCK.
- Roll the side lap using a hard rubber roller and firm hand pressure.
- Avoid overlapping beyond the edge of the FAT; best practice is to have ½-¼" of exposed FAT adhesive along the length of the side lap.
- Leave remaining release liner on MiraPLY-V until ready for steel reinforcement placement and concrete placement.
- Side laps shall be held back a minimum of 12" from any inside or outside corner.
- Refer to Detail Drawing MP-92 MiraPLY-V End and Side Lap.

END LAPS

- At end laps, ensure the TPO and adhesive coating surfaces are clean and free of debris and surface contaminants.
- Remove release liner from the field of the MiraPLY-V as necessary during
 installation to assist with detailing and fastening. Release liner may be replaced
 after detailing and fastening is complete but is required to be removed prior to
 steel reinforcement placement and concrete placement.
- Position 6" MiraPLY Seam Tape in the lap area and align with the end of a roll or a field cut. Roll MiraPLY Seam Tape using a hard rubber roller and firm hand pressure.
- With both release liners still in place, align the next roll of CCW MiraPLY over the Seam Tape. Avoid overlapping beyond the edge of the Seam Tape; best practice is to have a ½-1/4" of exposed Seam Tape adhesive along the width of the end lap. Remove the release liner and join the two sheets together.

MiraPLY-V Installation

- After seam is fully constructed, roll the entire seam area with a hard rubber roller using firm hand pressure.
- The T-joints formed at either end of the end lap shall be sealed with a 6" x 6" patch of MiraPLY Seam Tape or Detail Tape. Align the patch over the center of the T-joint, remove the release liner and roll into place. Care should be taken to ensure the tape has adequate contact to all 3 sheets that formed a T-joint. This is best accomplished using a "V" roller or detail roller in addition to the hard rubber roller.
- Refer to Detail Drawing MP-92 MiraPLY-V End and Side Lap and MP-93 MiraPLY-V "T"-Joints.

MECHANICAL FASTENERS

- Fastener type and means to install the fastener is substrate-dependent. Fastener should be flush and tight with the surface of the MiraPLY-V once installed.
- Care should be taken not to over drive the fastener through the membrane.
- Install fasteners a minimum of 6" from the top or perimeter edges of MiraPLY-V at approximately 12" on-center.
- For membrane lengths greater than 8 ft., fasten the field of the MiraPLY-V at approximately 24" on-center.
- · Avoid overdriven fasteners which can cause stress in the membrane and seams.
- Cover fastener heads with a minimum 6" x 6" piece of MiraPLY Seam Tape or MiraPLY Detail Tape. If fastener heads are not tight and flush to the surface of the MiraPLY, a minimum 3" x 3" patch of MiraPLY Seam Tape or MiraPLY Detail Tape shall be installed prior to the 6" x 6" patch.

Quality Assurance

PROTECTION

Coordination between various trades is essential to avoid unnecessary traffic to prevent damage to the membrane. Unavoidable traffic areas must be protected by placing temporary protection courses over the MiraPLY to prevent damage.

FIELD INSPECTIONS

Field inspections are recommended to confirm proper installation and detailing for the MiraPLY System and at critical stages of relevant work by other Trades. These "Hold Points" should be clearly understood and coordinated with the party responsible for inspections, the General Contractor, the Waterproofing Contractor and the relevant Trades. CCW recommends that the 1st Hold Point for each specific condition or sequence (aka "First Point of Verification") is allotted ample time to review and make any necessary corrections for any unforeseen challenges.

MIRAPLY REPAIR

- The MiraPLY surrounding a damaged area should be cleaned with a cloth dampened with Weathered Membrane Cleaner and then allowed to dry.
- Repair slices, cuts and small punctures (½" or less) with MiraPLY Detail Tape.
- Repair larger areas with a piece of MiraPLY (patch) extending beyond damaged area a minimum of 6" in all directions. Install Seam Tape along the perimeter of the area to be patched, then position the patch onto the Seam Tape. Remove the release liner and roll the patch with a hard rubber roller using firm hand pressure. Note: remove release liner from the MiraPLY-V prior to any repairs.

MiraPLY Seam Tape

DESCRIPTION

MiraPLY Seam Tape is a primer-less, double-sided adhesive tape with a tough, conformable carrier and an aggressive adhesive. It is used with the MiraPLY System for sealing end laps, repair work and other various detailing conditions. It is primarily installed between overlapping sheets of MiraPLY.

- All surfaces to receive the Seam Tape must be clean. The Seam Tape will not adhere to dusty, dirty or contaminated surfaces.
- Unroll 2-3' of Seam Tape, align the tape and press the tape onto the surface of the MiraPLY membrane with firm, even hand pressure. Continue applying the tape for the required length for the detail condition. Roll the tape using a hard rubber roller and firm hand pressure.
- Position the overlapping MiraPLY over the Seam Tape. Remove the tape's release liner and roll the MiraPLY using a hard rubber roller and firm hand pressure.
 Ensure ½-½" of exposed tape extends beyond the edge of overlapping MiraPLY.
- Tape to tape seams should be overlapped a minimum of 3".
- Care should be taken so that the tape lays flat and no openings are visible.

MiraPLY Detail Tape

DESCRIPTION

MiraPLY Detail Tape is a primer-less, one-sided adhesive tape with a tough, conformable carrier and an aggressive adhesive. It is used with the MiraPLY System for sealing seams, repair work and other various detailing conditions. It is intended to be installed on top of the MiraPLY System.

- All surfaces to receive the Detail Tape must be clean. The Detail Tape will not adhere to dusty, dirty or contaminated surfaces.
- Unroll 2-3' of Detail Tape, align the tape, remove 6-12" of release liner and press
 the tape onto the surface of the MiraPLY System with firm, even hand pressure.
 Continue to remove the release liner and apply the tape for the required length
 for the detail condition. Roll the tape using a hard rubber roller and firm hand
 pressure.
- Tape to tape seams should be overlapped a minimum of 3".
- Care should be taken so that the tape lays flat and no openings are visible.

CCW-703-V LIQUISEAL®

DESCRIPTION

CCW-703-V liquid-applied waterproofing membrane is a two-component polyurethane waterproofing system. It is self-curing, forming a seamless, impermeable coating that bonds tightly to an appropriate substrate, preventing the lateral transfer of water. It is used with the MiraPLY System as the liquid detailing component for various detailing conditions.

MIXING

- Remove the lid from the Part-A container and pour the entire contents of Part-B into the Part-A container. The CCW-703 material comes as a "kit" and is intended to be mixed as a complete unit and not as partial mixes.
- Use a variable-speed ½" drill with mixing paddle. Avoid using a high shear mixing blade as they may entrap air in the material.
- Insert the mixing paddle into the materials. Start to mix the materials manually by plunging the mixing paddle up and down a few times.
- Anchor the container to avoid spills before mixing. Slowly increase the speed of the mixing drill until the materials easily mix with one another.
- Mix for a minimum of 5 minutes and until there are no visible streaks of the Part-B
- Pot life at 40° to 60°F is 1-2 hours. Pot life at 80°F is 1/2 1 hour.

- Apply CCW MiraPLY Seam Tape onto MiraPLY-H and MiraPLY-V prior to applications of CCW-703-V.
- As soon as the CCW-703-V is mixed, apply directly to the MiraPLY Seam Tape or substrate in a uniform application.
- Use a squeegee, trowel or brush to achieve a minimum thickness of 60-mil.
- Refer to detail drawings for specific thickness and dimensions.

Sure-Seal® Lap Sealant

DESCRIPTION

Sure-Seal Lap Sealant is a single-component sealant which dries to the touch in approximately 30 minutes depending on thickness of application and weather conditions. It is used with the MiraPLY System for various detailing conditions.

- Install the Lap Sealant as shown in the CCW Detail Drawings.
- All surfaces to be sealed with Lap Sealant must be firm, dry and free of oil, dust and other foreign materials.

CCW Tie-Back Cover

DESCRIPTION

CCW Tie-Back Cover is a pre-formed, high-impact resistant, heavy-duty thermoplastic detailing accessory for the MiraPLY System. It is intended to detail most tie-back heads or soil anchors and is designed to withstand both concrete and shotcrete placement.

- Ensure the CCW Tie-Back Cover fits over the tie-back assembly.
- Install MiraPLY-V within 1" of the base of the tie-back. If installing a MiraPLY-V target piece over the center of the tie-back, ensure that the target piece will extend a minimum of 6" beyond the perimeter of the Tie-Back Cover; this is easily done with a 4' x 4' target piece of MiraPLY-V centered over the tie-back.
- Peel off enough of the MiraPLY-V release liner around the tie-back to install Tie-Back Cover. Center the Tie-Back Cover over the tie-back head and mechanically fasten into place.
- Fastener type and means to install the fastener is substrate-dependent. The goal
 for a given shoring system is to identify a fastener that will provide a tight, flush
 head to the surface of the Tie-Back Cover.
- Care should be taken not to over drive the fastener through the Tie-Back Cover.
- Install a minimum of (6) fasteners: (4) at the corners and (1) centered on either side. Fasteners should be located within 1" from the edge of the Tie-Back Cover
- When necessary use CCW primer / contact adhesive to promote adhesion of CCW Detail Tape to the CCW Tie-Back Cover.
- Seal all (4) edges of the Tie-Back Cover to the MiraPLY-V with MiraPLY Detail Tape.
- Care should be taken to not remove the Tie-Back Cover once installed in-place as this will cause damage to the MiraPLY-V.

Sure-Seal Termination Bar

DESCRIPTION

The Sure-Seal Termination Bar is an extruded aluminum bar designed for securing and sealing flashing and membrane terminations in accordance with current Carlisle Specifications. It is used with the MiraPLY System for various detailing conditions.

INSTALLATION

Install termination bar by fastening 12" on-center maximum with a fastener compatible with the substrate to achieve constant compression. Start fastening at one end of the bar and proceed to the next slot (12" max.) to eliminate bowing caused by improper installation. The termination bar will be sealed but sealant type and dimensions will vary depending on the detailing condition. Refer to detail drawings for more information.

Sure-Seal Weathered Membrane Cleaner

DESCRIPTION

Sure-Seal Weathered Membrane Cleaner is solvent-based and is used to clean CCW MiraPLY membranes prior to the seaming process. Sure-Seal Weathered Membrane Cleaner is also used to clean and prepare existing membrane for tie-ins and seam construction.

INSTALLATION

Remove all foreign materials with damp rag. Saturate a clean, absorbent, natural fiber rag with the cleaner. Thoroughly scrub the membrane to be sealed in the seaming process. Change the rag periodically to prevent recontamination of membrane surface and refresh frequently with cleaner (typically 15 –20 feet). Allow the membrane surface to dry completely before proceeding with the seaming process.

Enhanced MiraPly-H End and Side Lap

(MP-94)

- 1. For Side Laps, install sheets of MiraPLY—H with a minimum 3" side overlap with ¼" of exposed adhesive. Ensure the membrane lays flat and no openings are visible. Stagger end laps. Remove the release liners on the Miraply Seam Tape, for end lap, and Factory Applied Tape (FAT) mating the two sheets together. After the seam is fully constructed, roll the seam with a hard rubber roller.

 2. Refer to Technical Data Sheets for additional information.

Enhanced MiraPLY-V End and Side Lap

(MP-95)

- 1. For Side Laps, install sheets of MiraPLY-V with a minimum 3" side overlap with ¼" of exposed adhesive. Ensure the membrane lays flat and no openings are visible. Stagger end laps. Remove the release liners on the Miraply Seam Tape, for end lap, and Factory Applied Tape (FAT) mating the two sheets together. After the seam is fully constructed, roll the seam with a hard rubber roller.
- For shotcrete application, the shotcrete company must be a licensed company and the nozzleman must be ACI Certified.
- 3. Refer to Technical Data Sheets for additional information.

(MP-100)

- 1. Extend BarriCOAT a minimum of $\frac{1}{2}$ " beyond MiraPLY Seam Tape.
- CCW-MiraDRAIN HC or CCW approved perimeter drain not shown for clarity.
- 3. Refer to Technical Data Sheets for additional information.

(MP-101)

- Extend BarriCOAT a minimum of ½" beyond MiraPLY Seam Tape.
 CCW-MiraDRAIN HC or CCW approved perimeter drain not shown for clarity.
- 3. Refer to Technical Data Sheets for additional information.

MiraPLY-H to CCW-MiraTITE at Footing Tie-In

- 1. Extend CCW-MiraTITE a minimum of $\frac{1}{2}$ " beyond MiraPLY Seam Tape.
- CCW—MiraDRAIN HC or CCW approved perimeter drain not shown for clarity.
- 3. Refer to Technical Data Sheets for additional information.

(MP-103)

- 1. Extend MiraTITE a minimum of $\frac{1}{2}$ " beyond MiraPLY Seam Tape. 2. Refer to Technical Data Sheets for additional information.

MiraPLY-H to MiraSEAL at Footing Tie-In

- 1. Extend MiraSEAL a minimum of $\frac{1}{2}$ beyond MiraPLY Seam Tape.
- CCW—MiraDRAIN HC or CCW approved perimeter drain not shown for clarity.
- 3. Refer to Technical Data Sheets for additional information.

(MP-105)

- 1. Extend MiraSEAL a minimum of $\frac{1}{2}$ " beyond MiraPLY Seam Tape.
- 2. Refer to Technical Data Sheets for additional information.

MiraPLY-H to MiraDRI 860 at Footing Tie-In

- CCW-MiraDRAIN HC or CCW approved perimeter drain not shown for clarity.
- 2. Refer to Technical Data Sheets for additional information.

(MP-107)

NOTES:

1. Refer to Technical Data Sheets for additional information.

MiraPLY-H to MiraDRI 860 Lower Wall Tie-In

NOTES:

1. Refer to Technical Data Sheets for additional information.

MiraPLY-H to MiraPLY-V Foundation Tie In

- 1. Install sheets of MiraPLY-V with a minimum 3" side overlap with ¼" of exposed adhesive. Ensure the membrane lays flat and no openings are visible. Stagger end laps. Remove the release liners on the Miraply Seam Tape, for end lap, and Factory Applied Tape (FAT) mating the two sheets together. After the seam is fully constructed, roll the seam with a hard rubber roller.
- 2. Refer to most current details on www.carlisleccw.com.

MiraPLY-V to MiraDRI 860 at Vertical Wall

NOTES:

1. Refer to Technical Data Sheets for additional information.

(MP-111)

- CCW-MiraDRAIN HC or CCW approved perimeter drain not shown for clarity.
- 2. Refer to Technical Data Sheets for additional information.

(MP-112)

NOTES:

1. Refer to Technical Data Sheets for additional information.

(MP-113)

52

- 1. Refer to Technical Data Sheets for additional information.
- 2. Retention wall system at new concrete wall not shown for clarity.
- 3. Miradrain/protection course not shown for clarity. Add in as required to complete the system.
- 4. Add CCW-703V Liquiseal 6" strip over existing membrane and under the shown Miraply Seam Tape when the existing membrane type is unknown. Allow the CCW-703V Liquiseal to cure a minimum of 12 hrs prior to applying the Miraply Seam Tape.

^{*}AOS (Apparent Opening Size) - A higher Percent Opening Area will be less susceptible to long-term clogging.

CCW MiraDRAIN prefabricated drainage panels may be installed in a variety of construction applications including: retaining walls, foundation walls (both waterproofed and non-waterproofed), lagging systems, split slabs, plaza decks, planters, buttress/landfills, interceptor/edge drains and greenroofs. The following section is provided for use of MiraDRAIN with the MiraPLY System. Contact your local MiraDRAIN representative for specific guidelines.

FOUNDATION WALLS - VERTICAL APPLICATIONS

MiraDRAIN panels can be installed in rows or columns with the fabric side toward the soil. Each method has its advantages depending on the criteria of the project.

Installing MiraDRAIN in Columns

- Start at the low point of the wall and attach the panel to the wall with approved CCW adhesive.
- 2. Attach adjacent panels together by:

Overlapping the core flanges.

Mate fabric flaps together and fold over adjacent panel. Adhere fabric with approved CCW adhesive.

Installing MiraDRAIN in Rows (Horizontally)

- 1. Place the longitudinal edge of the core against the wall, flush with the wall footing, or place the longitudinal edge of the core on the footing and turn up the wall (as shown on cover).
- 2. Attach subsequent panels in shingle fashion as follows:

Attach the longitudinal edge of MiraDRAIN to longitudinal edge of either MiraDRAIN or CCW MiraDRAIN HCTM.

Overlap the geotextile fabric flaps from both panels folded in a shingle fashion over the adjacent panel. Adhere fabric with approved CCW adhesive.

DRAINAGE COLLECTOR - DISCHARGE SYSTEM

Collector Pipe

- Place CCW MiraDRAIN HC or collector pipe as required in project design details. CCW MiraDRAIN HC should be installed adjacent to MiraDRAIN. Care must be taken to ensure a continuous drainage path between CCW MiraDRAIN HC and MiraDRAIN panels. MiraDRAIN Connectors are designed to connect to a mormal 4" drainage pipe.
- 2. For installations where a collector pipe is specified, encapsulate the collector pipe in a gravel bed with a supplemental section of filter fabric as a separator/filter.

DRAIN CONNECTORS, APPROVED CCW ADHESIVES & ACCESSORIES

6" & 12" HC Sideout Connectors

When installing end-of-roll seams:

Cut approximately 3" (75 mm) of core leaving the geotextile fabric to overlap the adjacent panel. The fabric can be adhered with approved CCW adhesive. (Optional: Cover butted core with additional geotextile fabric.)

Termination drainage panel:

The top or terminal edge of CCW MiraDRAIN should be sealed by applying a piece of filter fabric sufficient to prevent soil or other foreign construction materials from intruding into or behind CCW MiraDRAIN panels, an alternative would be to cut the core from the fabric by a depth of 3 dimples to provide excess fabric for wrapping behind the core.

CCW PRODUCT LINE SHELF LIFE

The following is a list of the minimum shelf lives for the Carlisle Coatings & Waterproofing product line. Shelf lives are based on the date of manufacture and are referenced on batch codes found on labels placed on the products. Since many batch codes are structured differently, please contact either CCW Customer Service or Technical Service for specific batch code interpretation.

All products must be stored in accordance with CCW requirements, as improper handling and storage will adversely affect product quality and workability.

MIRAPLY WATERPROOFING – "BEST PRACTICES" AND JOBSITE REQUIREMENTS

This Technical Bulletin is provided to support the installation of the CCW MiraPLY Blindside Waterproofing System. The sequencing and coordination with the General Contractor, Waterproofing Contractor and relevant Trades is critical for the success of a blindside waterproofingsystem.

Quality Assurance: Field inspections are recommended to confirm proper installation and detailing for the MiraPLY System and at critical stages of relevant work by other Trades. These "Hold Points" should be clearly understood and coordinated with the party responsible for inspections, the General Contractor, the Waterproofing Contractor and the relevant Trades. CCW recommends that the 1st Hold Point for each specific condition or sequence (aka "First Point of Verification") is allotted ample time to review and make any necessary corrections for any unforeseen challenges.

Repairs: Ample time regardless of which Hold Point or inspection stage should be provided for responsible party to make corrections for any non conformances. Repair procedures to the MiraPLY System are as follows:

- For small damaged areas: Clean the MiraPLY membrane with a cloth dampened with Weathered Membrane Cleaner and allow to dry. Repair slices, cuts and small punctures (½" or less) with MiraPLY Detail Tape. Center the MiraPLY Detail Tape over damaged area and roll tape with hard rubber roller using firm hand pressure.
- For larger damaged areas: Repair larger areas with a new piece of MiraPLY
 membrane (i.e. patch) extending beyond damaged area by approximately 6" in all
 directions. Clean the existing MiraPLY membrane beyond the patch with a cloth
 dampened with Weathered Membrane Cleaner and allow to dry.
 - Option-1: Apply MiraPLY Seam Tape to the underside of the patch. Remove release liner of MiraPLY Seam Tape; then position patch over damaged area and roll patch with a hard rubber roller using firm hand pressure.
 - Option-2: Position patch over damaged area; then apply MiraPLY Detail Tape around all edges of patch and roll tape with hard rubber roller using firm hand pressure.

Site Preparation: Proper preparation not only allows an opportunity to optimize installation time but more importantly, allows an opportunity to maximize workmanship quality. Support of excavation, site dewatering, substrate prep and anticipated future tie-ins all have a significant impact on the overall quality of a blindside waterproofing system.

- Support of Excavation: Various types of shoring systems are acceptable for the
 MiraPLY System provided they provide a relatively even and regular surface. The
 whalers, rakers, struts, bracing and soil anchors (i.e. tiebacks) often used with
 shoring systems can all be easily addressed with the MiraPLY System provided
 that work is properly sequenced and coordinated with relevant Trades.
- Site Dewatering: Water, ice, snow, etc. may compromise the installation
 and detailing of blindside waterproofing system and therefore, adequate site
 dewatering is required and must remain in-place at minimum until after concrete
 placement. When site dewatering asdesigned is not adequate, the use of
 additional or temporary dewatering may be required and also remain in-place at

minimum until after concrete placement. Any dewatering plan should be reviewed and approved by the Engineer of Record or similar.

- Horizontal Surface Prep: MiraPLY may be installed directly against a concrete mud slab or a gravel/earth subbase. The concrete mudslab should be relatively smooth and regular without any sharp protrusions or significant unconsolidated concrete. When installing MiraPLY System without MiraDRAIN® or rigid insulation, the concrete mudslab should be screeded, floated, troweled, etc. to provide an ICRI1 Concrete Surface Profile of PC1 PC6 and the gravel/earth subbase must be ¾" or smaller aggregate, level and compacted to a minimum of 85% Proctor density. Sand, pea gravel, etc. that may be displaced after compaction requires additional surface prep that may include MiraDRAIN, rigid insulation or similar. MiraDRAIN may be installed over a concrete mudslab or gravel/earth subbase as part of the overall as-designed drainage system. The concrete mudslab should be screeded, floated, troweled, etc. to provide an ICRI¹ Concrete Surface Profile of PC1 PC8 and the gravel/earth subbase must be ¾" or smaller aggregate, level and compacted.
- Crane Pads, Elevator Pits, Block-Outs, etc.: Areas where the MiraPLY System
 is installed in advance of or after normal installation sequencing and production
 typically requires additional attention in preparation, coordination and protection.
 CCW recommends that any MiraPLY membrane not intended to receive concrete
 placement within 60 days is protected from both physical damage and ultraviolet
 exposure to allow for proper tie-in.
- Vertical Surface Prep: MiraPLY may be installed directly against most shoring
 systems or concrete formwork (see below). Shoring systems such as secant
 piles, diaphragm walls or sheet piles may require additional surface preparation
 of a leveling material or facing material. When installing MiraPLY System without
 MiraDRAIN or rigid insulation, the vertical surface should be relatively smooth and
 regular without any sharp protrusions or gaps/voids larger than 1". MiraDRAIN may
 be installed directly onto shoring systems with gaps/voids up to 2".

Membrane Installation: As with any blindside waterproofing system, the installation and detailing of the MiraPLY System is pre-applied and therefore, subject to traffic and subsequent work by other Trades. The MiraPLY System shall be protected from this adjacent and relevant work to prevent damage. Once substrate prep is complete, the installation area should be limited to the Waterproofing Contractor or any pertinent work by other Trades necessary to complete the MiraPLY installation. Upon completion of the MiraPLY System in a given installation area, no other Trade should have access to this area until the party responsible for inspection has "released" the area. Any unavoidable high-traffic areas where other Trades and construction personnel are required to walk on or above the MiraPLY System, the MiraPLY in those areas should have temporary protection to prevent physical damage and contamination.

Steel Reinforcement Bar (Rebar): Various types of rebar supports are compatible with the MiraPLY System. The MiraPLY System should be protected from physical damage during the installation of the steel reinforcement bar.

 Reinforcing Bar Supports: Common acceptable rebar supports are concrete bar supports (e.g. pavers, dobies, etc.), fiber-reinforced bar supports and all-plastic bar supports provided the support's base is flat and smooth. Wire bar supports

(e.g. bolsters, chairs, etc.) even if plastic coated or epoxy coated are generally not compatible with a blindside waterproofing system. When feasible, the spacing or location of rebar supports should be positioned such that they are not directly on a MiraPLY seam or other waterproofing detail area. A general rule of thumb is to keep all rebar supports 6" away from any seams or detailed areas.

- Reinforcing Bar Placement: The delivery, handling and placement of rebar should be done in a manner so as not to cause any physical damage to the MiraPLY System. The rebar should not be stockpiled or temporarily stored on the MiraPLY System without proper protection, coordination and approval from the Waterproofing Contractor. Paint should not be applied to the MiraPLY System; use lumber crayon, keel or Sharpie® marker for markings, layouts, etc.
- Reinforcing Bar Anchoring: Penetrations thru a blindside waterproofing system
 to assist with the installation and securing of the rebar should be limited. The use
 of anchors or mechanical fasteners should be coordinated with and accepted by
 the Waterproofing Contractor whether penetrating the MiraPLY post membrane
 installation or installed prior to membrane installation.

Mechanical, Electrical & Plumbing: The delivery, handling and placement of utility work should be done in a manner so as not to cause any physical damage to the MiraPLY System. Any pipe, sleeve, conduit, etc. that the MiraPLY System needs to tie-in to shall have a smooth surface (i.e. outer wall), be properly secured and stable prior to the MiraPLY installation and detailing, and be free of any fittings, connections, bracing, anchoring, etc. for minimum 9" off the face of the MiraPLY membrane. Duct banks, penetration clusters, etc. shall require review and approval for each project specific condition to determine proper waterproofing detailing. The utility work should be properly sequenced and coordinated with the Waterproofing Contractor.

Concrete Forms: A conventional two-sided form is not acceptable for use with the MiraPLY System. Formwork for wall construction should be of the one sided type thus limiting penetrations through the blindside waterproofing. Headers, edge forms, pour stops, bulkheads, etc. should be externally braced to prevent penetrations through the MiraPLY in the adjacent areas. For edge of slab, footings, top of wall, etc. where the backside of MiraPLY will be exposed for tie-in to postapplied waterproofing, the formwork should remain in-place a minimum of 3 days after concrete placement and/ or until a minimum of 3,000 psi concrete compressive strength is achieved. "Earth forms" and leave-in-place forms (e.g. stay-form) are not acceptable for use with the MiraPLY System without prior approval by CCW.

Concrete Placement: The concrete should be placed as per ACl² guidelines to provide properly consolidated concrete. CCW recommends that any internal vibrating equipment uses a rubber coated vibrator head to protect the blindside waterproofing from damage. Adjacent areas of the MiraPLY System outside of any given concrete pour, should be protected from concrete oversplash. For shotcrete applications, shotcrete should be placed as per ACl guidelines by an AClcertified Shotcrete Nozzleman.

Special Conditions: Additional attention in preparation, coordination and protection for conditions outside of normal waterproofing installation is often required on most projects. The Pre-Installation Conference dedicated to waterproofing is often a good start for this preparation and planning, but often times there are unforeseen challenges that may arise on a given project.

Technical Bulletins

- Transition or Termination at Grade: If the shoring system will be exposed and
 removed near top of grade, the MiraPLY System should be protected in advance
 from excavation, burning/cutting operations, etc. Install a fire resistant protection
 board/sheathing between the waterproofing system including the drainage
 system and the shoring system from minimum 2 ft. below the anticipated
 excavation grade and extend to top of grade.
- Block-Outs: The MiraPLY should extend into any block-out area a minimum of 6" beyond any rebar to provide clearance and allow proper tie-in or detailing. The MiraPLY should be protected from uv, physical damage and burning/cutting operations. When space between the edge of the block out and a dewatering well, column, penetration, tieback head, etc. may be limiting the Waterproofing Contractor enough space and access to allow proper detailing, consider the use of rebar couplers to provide the 6" clearance.
- Tieback De-Tension: If tiebacks (soil anchors) will be removed, the blindside waterproofing system must be protected from burning/cutting operations.

Technical Bulletins

MIRAPLY WATERPROOFING – USE WITH SHOTCRETE FOUNDATION WALLS

This Technical Bulletin is provided to support the installation of the CCW MiraPLY Blindside Waterproofing System for structural below grade walls constructed of shotcrete. The sequencing and coordination with the General Contractor, Waterproofing Contractor, Shotcrete Contractor and other relevant Trades is critical for the success of a blindside waterproofing system.

MiraPLY Detailing: All MiraPLY seams (both side and end laps) shall be installed as per standard CCW requirements with an additional layer of MiraPLY tape. Center the MiraPLY Detail Tape or MiraPLY Seam Tape over all seams and roll firmly into place. If necessary, clean the MiraPLY membrane surface with Carlisle Weathered Membrane Cleaner or apply Sure Seal HP 250 Primer to seam areas to promote tape adhesion.

Steel Reinforcing Anchoring: Penetrations through a blindside waterproofing system to assist with the installation and securing of the rebar should be limited. The use of anchors or mechanical fasteners should be coordinated with and accepted by the Waterproofing Contractor whether penetrating the MiraPLY post membrane installation or installing prior to membrane installation.

Shotcrete Design: The structural shotcrete wall should be designed as per ACI 506.2 – Specification for Shotcrete.

Shotcrete Placement: The shotcrete should be placed as per ACI 506R – Guide to Shotcrete to provide properly consolidated shotcrete with the exception to the waterproofing specific precautions noted within this Technical Bulletin. The blindside waterproofing in the adjacent areas not receiving shotcrete should be protected from shotcrete, shotcrete overspray, shotcrete rebound and shotcrete dust/mist.

Shotcrete Nozzleman: The Nozzelman must have a current "ACI Shotcrete Nozzleman Certification" for shotcrete to be placed against the blindside waterproofing.

Shotcrete Finishing: Bracing, dowels, etc. used to install guide wires (i.e. screed wires) must not penetrate or damage the blindside waterproofing. The installation and removal of guide wires should be coordinated with and accepted by the Waterproofing Contractor.

Footnotes:

"ACI" refers to the American Concrete Institute

MiraPLY Pre-Install Meeting Checklist

This checklist is provided in addition to traditional Pre-Install topics (e.g. material storage) to support the discussions necessary to ensure that the CCW MiraPLY preapplied waterproofing system is installed correctly, properly coordinated with relevant trades and protected from adjacent work. The General Contractor should take meeting minutes that includes attendance list & any action items, and then distribute accordingly.

Tools of the Trade

This list of tools and equipment is required on most projects. Depending on the size, scope and complexity of the project, additional tools and equipment may be required. The applicator should familiarize themselves with the proper use of each tool/equipment and follow the manufacturer's recommended safety equipment.

Required tools for proper installation of the CCW MiraPLY membranes

- Small rubber seam roller
- Aluminum "V" Roller
- · Sharp utility knife
- Rags for applying weathered membrane cleaner
- Tape measure
- Tools for Mechanically Attaching CCW MiraPLY-V to Lagging
- Paint Brush or Paint Roller for applying primer and CCW 703-V
- Use a variable-speed ½" drill with mixing paddle
- Proper Safety Equipment

Recommend tools for easing the installation of the CCW MiraPLY Membranes

- Large 2 handed 7½" rubber roller for sealing seams
- Straight edge for cleaner cuts and less waste
- · Scissors for small detail cuts
- Sharpie Markers for Pre-Marking Membrane prior to cutting
- Hand Cleaner
