Use this copy. Thanks for catching that. Not sure what happened since it is supposed to auto-update.

Thanks Lynn!

This is a lot of information to review, but hopefully I can get through most of it in the next month. (I'll be out on vacation the latter half of September).

We'll need a hard copy of the Data Gap Investigation report. Note that two of the documents are dated June 2015. I think those should be June 2016!

Kevin Dana  
Cleanup Project Manager

Kevin, attached is our report, addressing a few data gaps identified by the State. AS you will read, concentrations at the outfall are less than those in the pond, as expected, and attenuation sharply to background concentrations before the confluence with the Milton Creek. This supports our recommendations for treating the storm water pond (and outfall) as part of continued storm water management. Methane concentrations in previously tested locations were much less than during previous testing, suggesting attenuation with time. Please review, along with the two plans I previously sent you, and let me know if you have any questions. Thanks Kevin!
