Updated Phase II Environmental Site Assessment
Modera Morrison
1120 SE Morrison
Portland, Oregon
GeoDesign Project: MillCreek-19-01-03

GeoDesign, Inc. is pleased to submit this updated report summarizing the results of a Phase II ESA conducted at the Modera Morrison site located at 1120 SE Morrison Street in Portland, Oregon. Our services were performed in accordance with our proposals dated March 7, 2019 and July 1, 2019 and emailed authorization received on July 30, 2019.

We appreciate the opportunity to be of service to Mill Creek Residential Trust. Please contact us if you have questions regarding this report.

Sincerely,

GeoDesign, Inc.

Jason O'Donnell, R.G.
Principal Geologist

1.0 INTRODUCTION

This updated report summarizes the results of Phase II ESA activities conducted at the Modera Morrison site located at 1120 SE Morrison Street in Portland, Oregon (Property). The 0.86-acre Property includes Tax Lot 5100 of Multnomah County Tax Map 1S1E02BA. The Property includes the entire city block (Block 245) located southeast of the intersection of SE Morrison Street and SE 11th Avenue. The Property is currently occupied by a 19,593-square-foot commercial structure and an AC-paved parking lot.

Based on preliminary information provided by Mill Creek Residential Trust, GeoDesign understands that the proposed development will include demolition of the existing structure and construction of a new mixed-use building consisting of ground floor (first floor above the parking level) retail spaces, building services, common areas and apartment units, and apartment units on levels two through seven. The proposed building will be seven stories tall with one level of underground parking on the west side of the structure and two levels of underground parking on the east side of the structure.

The Phase II ESA activities summarized in this report were conducted in three phases. The initial phase of work was conducted in May 2019 and is summarized in our initial Phase II ESA report dated July 30, 2019. The initial Phase II ESA report was submitted to DEQ on July 30, 2019 to support our SWPE request. This report has been updated to include two additional phases of work conducted on July 18 and 30, 2019. The purpose of the additional phase of work conducted on July 18, 2019 was to (1) evaluate soil conditions adjacent to two USTs identified beneath the north sidewalk of SE Belmont Street that adjoins the project site and (2) delineate the extent of shallow lead-containing fill at concentrations greater than the DEQ CFSL in the vicinity of direct-push boring DP-4. The purpose of the additional phase of work conducted on July 30, 2019 was to further delineate the extent of shallow lead-containing fill in the vicinity of boring DP-4 (in support of our SWPE).

The Property is shown relative to surrounding physical features on Figure 1. The Property layout is shown on Figure 2. Acronyms and abbreviations used herein are defined above, immediately following the Table of Contents.

2.0 BACKGROUND AND REGULATORY STATUS

Our review of historical sources from 1889 through 2019 indicated that the Property was vacant land until sometime prior to 1901. By 1901 a residence was constructed on the southeast portion of the Property. By 1909 additional residences and a telephone office had been constructed. By 1924 a pie bakery was constructed on the southwestern portion of the Property. By 1969 the residences were demolished and a parking lot was constructed. By 2005 the Property was occupied by AJP Northwest and A&S Marketing. The Property has remained relatively unchanged since that time. The Property currently consists of office space and a warehouse for the storage and sale of paper products, janitorial supplies, and tobacco products.

According to information obtained during GeoDesign's Phase I ESA, the following two LUST file numbers pertain to the Property: 26-16-1462 and 26-91-0267. In addition, the Property is listed

on the DEQ RGA LUST and DEQ UST databases and the EPA FINDS database. The DEQ RGA LUST database contains a list of leaking UST incidents derived from historical databases and includes many records that no longer appear in current government lists. The DEQ UST database includes a listing of facilities with registered USTs. The Property is identified on the DEQ UST database as UST Facility I.D. 6680. The EPA FINDS database is an inventory or reference list and does not imply a release or REC at the Property. Further information regarding the LUST files and the UST database listing are summarized in Section 3.0.

DEQ reviewed GeoDesign's application for an SWPE determination, dated July 30, 2019, and issued a letter, dated August 22, 2019, concluding that the soil proposed for excavation at the Property (with the exception of lead- and benzo(a) pyrene-containing fill within the main parking lot) is essentially the same as clean fill and is exempt from solid waste permitting regulations pursuant to OAR 340-0093-0080 (2). The lead- and benzo(a)pyrene-containing fill present in the main parking lot that does not meet DEQ's definition of clean fill was further delineated during the July 30 Phase II investigation, the results of which are presented herein. GeoDesign's SWPE request and DEQ's August 22, 2019 SWPE are presented in Appendix A.

3.0 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

GeoDesign performed a Phase I ESA of the Property in 2019. The results of the Phase I ESA are summarized in the Phase I ESA report prepared by GeoDesign dated May 16, 2019. The May 16, 2019 Phase I ESA revealed the following:

- Residual petroleum hydrocarbons and related constituents in soil associated with a former heating oil UST located in the sidewalk adjacent to the southwest portion of the Property (LUST File No. 26-16-1462) represents a REC at the Property.
- LUST File No. 26-91-0267 associated with two former gasoline USTs located on the northwest portion of the Property represents an HREC at the Property.
- The historical presence of a decommissioned in-place UST on the Property represents a REC at the Property.
- Historical records of one heating oil UST and one heating oil AST located on the Property represent a REC in connection with the Property.
- Evidence of two USTs located in the sidewalk along SE Belmont Street adjacent south of the Property and one UST located in the parking lot on the east portion of the Property represents a REC at the Property.
- Chemical constituents identified in groundwater beneath the Piacentini Property, located approximately 130 feet southeast of the Property (upgradient of the Property relative to the groundwater flow direction), represents a REC at the Property. Based on our review of environmental information for surrounding sites, it is possible that chemical constituents may be present in groundwater beneath the Property from multiple off-site sources
- A suspect circular feature was observed in the east-central portion of the Property's main parking lot and could not be ruled out as a possible drywell.

Based on the results of the Phase I ESA, GeoDesign recommended conducting a Phase II ESA at the Property (including a geophysical survey) to evaluate potential releases from the former and existing on- and off-site USTs and the potential drywell. GeoDesign also recommended that the

Phase II ESA should include a clean fill evaluation to evaluate the quantity of soil that may need to be disposed of as solid waste if exported during future redevelopment.

4.0 SCOPE OF SERVICES

4.1 INITIAL PHASE II ESA

The purpose of the initial Phase II ESA was to evaluate the nature and extent of potential chemical constituents in various media at the Property. The initial Phase II ESA scope of services was developed to evaluate the RECs identified during the Phase I ESA and to confirm the presence or absence of the on- and off-site USTs and the potential drywell. In addition, the initial Phase II ESA was conducted to evaluate chemical constituents in soil with respect to risk to human health (by comparison to DEQ RBCs) and with respect to DEQ CFSLs to estimate the quantity of soil that may need to be disposed of as solid waste if exported during future redevelopment. The specific scope of services conducted at the Property included the following:

- Coordinated and managed the field investigation, including utility checks, Property access authorizations, access preparations, and scheduling subcontractors and GeoDesign field staff.
- Subcontracted a geophysical surveyor to conduct a geophysical survey in the accessible exterior portions of the Property to evaluate for the presence of magnetic anomalies (including potential USTs) and drywells.
- Contacted the Oregon Utility Notification Center to mark the locations of public utilities beneath the rights-of-way surrounding the Property.
- Subcontracted a private utility locator to clear an approximately 10-foot radius around each proposed boring location.
- Subcontracted ESN Northwest Inc. of Olympia, Washington, to advance 17 direct-push borings (DP-1 through DP-17) to depths of up to 30 feet BGS.
- Advanced two hand auger borings (HA-1 and HA-2) to depths of 16 feet and 10 feet BGS, respectively, using hand-held equipment owned and operated by GeoDesign.
- Collected continuous soil samples from each boring for visual evaluation and field screening. Field screening consisted of visual observation, water sheen testing, and headspace vapor measurements using a hand-held PID.
- Based on the results of field screening and/or the boring locations relative to features of interest (such as the USTs and the suspect circular features), submitted two soil samples from borings DP-5, DP-6, DP-7, DP-11 and DP-12 and one sample from boring HA-1 for hydrocarbon identification analysis by Method NWTPH-HCID. In addition, submitted up to three soil samples from each boring (except boring DP-17) for analysis of one or more of the following:
  - VOCs by EPA Methods 5035A/8260C
  - RCRA 8 total metals by EPA Method 6020A (ICP-MS)
  - Leachable lead by EPA Methods 1311/6020A (ICP-MS)
  - PAHs by EPA Method 8270D SIM
  - PCBs by EPA Method 8082A

- Advanced two additional borings (SG-1 and SG-2) for the purpose of collecting soil gas samples and collected one sub-slab vapor sample (SV-1) to evaluate potential future vapor intrusion conditions as follows:
  - Advanced the Geoprobe PRT system to a predetermined depth in SG-1 and SG-2 using equipment owned and operated by ESN Northwest Inc. of Olympia, Washington.
  - Drilled a ¼-inch-diameter hole through the concrete floor slab of the basement using equipment owned and operated by GeoDesign to facilitate collection of sub-slab vapor sample SV-1.
  - Connected new Teflon® tubing to the PRT system (for SG-1 and SG-2) and the new Teflon® tubing advanced below the concrete floor slab (for SV-1) to laboratory-supplied summa canisters.
  - Sealed the annular spaces between the vapor point and the boring sidewall and between the tubing and the concrete floor slab with hydrated bentonite to minimize ambient air migration into the sampling zone.
  - Installed a leak-check system at the soil gas and sub-slab vapor sample locations.
  - Collected the soil gas samples and the sub-slab vapor sample using 1-liter summa sample canisters with in-line filters (2 microns) and flow controllers (less than 200 milliliters per minute). The initial and final vacuum pressures of each summa canister were measured and recorded on the laboratory chain-of-custody form.
- Submitted the soil gas samples to a chemical analytical laboratory for analysis of gasoline-range hydrocarbons and VOCs by EPA Method TO-15.
- Following sampling, abandoned each borehole in accordance with OWRD rules and regulations and repaired the ground surface, as appropriate.
- Placed soil cuttings and decontamination water in Department of Transportation-approved drums for temporary storage at the Property and pending disposal at an approved facility.
- Summarized the results of the Phase II ESA in this report.

4.2 SOUTH USTS/LEAD-CONTAINING FILL INVESTIGATION

The purpose of the south USTs/lead-containing fill investigation conducted on July 18, 2019 was to (1) evaluate soil conditions adjacent to the two USTs identified beneath the north sidewalk of SE Belmont Street that adjoins the Property and (2) delineate the extent of shallow lead-containing fill at concentrations greater than the DEQ CFSL in the vicinity of boring DP-4. The specific scope of services conducted during the south USTs/lead-containing fill investigation included the following:

- Contacted Oregon's one-call Utility Notification Center to mark the location of public utilities beneath the Property.
- Obtained a Right-of-Way Closure Permit from the City of Portland.
- Subcontracted a private utility locator to clear the proposed boring locations of utility conflicts prior to drilling.
- Prepared a site-specific Health and Safety Plan.
- Subcontracted a licensed driller to advance seven direct-push borings (DP-18 through DP-24) around the perimeter of the two USTs located in the north sidewalk of SE Belmont Street and eight direct-push borings (DP-25 through DP-32) around former boring DP-4 to depths up to 18 feet BGS.

- Collected continuous soil samples from the borings for field screening purposes. Field screening consisted of visual observation, water sheen testing, and headspace vapor measurements using a hand-held PID.
- Submitted up to two soil samples from borings DP-18 through DP-24 for chemical analysis of gasoline-range hydrocarbons by Method NWTPH-Gx and diesel- and oil-range hydrocarbons by Method NWTPH-Dx. In addition, based on preliminary field screening results, submitted one soil sample from borings DP-19 and DP-23 for the following:
  - VOCs by EPA Methods 5035A/8260C
  - PAHs by EPA Method 8270D SIM
- Submitted up to two soil samples from borings DP-25 through DP-32 for chemical analysis of total lead by EPA Method 6020A (IC-PMS). Based on the total lead results, submitted one soil sample from borings DP-26 and DP-32 for TCLP lead by EPA Method 6020A (ICP-MS).
- Following sampling, abandoned each borehole in accordance with OWRD rules and regulations and repaired the ground surface, as appropriate.
- Placed soil cuttings and decontamination water in Department of Transportation-approved drums for temporary storage at the Property and pending disposal at an approved facility.
- Summarized the results of the south USTs/lead-containing fill investigation in this report.

4.3 SUPPLEMENTAL LEAD-CONTAINING FILL INVESTIGATION

The purpose of the supplemental lead-containing fill investigation phase of work conducted on July 30, 2019 was to further delineate the extent of shallow lead-containing fill in the vicinity of boring DP-4 as requested by DEQ to support the requested SWPE determination request. The specific scope of services conducted during the supplemental lead containing fill investigation included the following:

- Prepared a site-specific Health and Safety Plan.
- Advanced 12 hand auger borings (HA-3 through HA-14) in the vicinity of boring DP-4 to depths of up to 1.6 feet BGS.
- Conducted a limited GPR survey using equipment owned and operated by GeoDesign to identify the location and depth of fill potentially containing lead at concentrations greater than the DEQ CFSL in the main parking lot.
- Collected continuous soil samples from the borings for field screening purposes. Field screening consisted of visual observation, water sheen testing, and headspace vapor measurements using a hand-held PID.
- Submitted up to two soil samples from borings HA-4 through HA-14 for chemical analysis of total lead by EPA Method 6020A (ICP-MS). Based on the total lead results, submitted one soil sample from borings HA-7, HA-10 and HA-11 for TCLP lead by EPA Method 6020A (ICP-MS). In addition, submitted one sample from borings HA-8 and HA-10 for analysis of the following:
  - Gasoline-range hydrocarbons by Method NWTPH-Gx
  - Diesel- and oil-range hydrocarbons by Method NWTPH-Dx
  - VOCs by EPA Methods 5035A/8260C
  - PAHs by EPA Method 8270D SIM
  - PCBs by EPA Method 8082A

- Following sampling, abandoned each borehole by replacing the soil cuttings into the explorations and repaired the ground surface, as appropriate.
- Summarized the results of the supplemental lead-containing fill investigation in this report.

5.0 FIELD ACTIVITIES

The initial Phase II ESA field activities were performed on May 4, 11, and 15, 2019 and included (1) a geophysical survey, (2) collecting soil samples from 16 direct-push soil borings (DP-1 through DP-16) and two hand auger borings (HA-1 and HA-2) for chemical analysis, and (3) collecting soil gas samples from two borings (SG-1 and SG-2) and a sub-slab vapor sample (SV-1) for chemical analysis. The south USTs/lead-containing fill investigation field activities were performed on July 18, 2019 and included collecting soil samples from 15 direct-push soil borings (DP-18 through DP-32) for chemical analysis. The supplemental lead-containing fill investigation field activities were performed on July 30, 2019 and included collecting soil samples from 12 hand auger borings (HA-3 through HA-14) for chemical analysis. Upon completion of all sampling activities the borings were backfilled in accordance with OWRD rules and regulations and the ground surface was patched. The locations of direct-push borings DP-1 through DP-32, hand auger borings HA-1 through HA-14, soil gas borings SG-1 and SG-2, and sub-slab vapor point SV-1 are shown on Figures 2 and 3. A description of our field procedures is summarized in Appendix B. The geophysical survey and soil, soil gas, and/or sub-slab vapor sampling activities conducted during the initial Phase II ESA, the south USTs/lead-containing fill investigation, and the supplemental lead-containing fill investigation are described below.

5.1 GEOPHYSICAL SURVEY

On May 4, 2019 Pacific Geophysics of Portland, Oregon, conducted a geophysical survey of the exterior portions of the Property (including the adjacent sidewalks) using GPR and radio detection transmitter equipment. The objective of the geophysical survey was to (1) identify the location, depth, and orientation of two known USTs beneath the sidewalk adjacent south of the Property; (2) confirm the removal of the gasoline USTs in the small parking lot/loading dock area at the northwest corner of the Property; (3) identify the location, depth, and orientation of the suspected decommissioned in-place UST immediately east of the Property structure in the main parking lot; (4) determine the location of the piping associated with a catch basin located in the small parking lot/loading dock area; (5) determine the location of the piping associated with a catch basin located in the main parking lot; and (6) evaluate two suspect circular features in the main parking lot (potential drywells). The report prepared by Pacific Geophysics, dated May 17, 2019, is presented in Appendix C. The results of the geophysical survey are briefly summarized in Sections 5.1.1 through 5.1.6.

On July 30, 2019 GeoDesign conducted a limited GPR survey of the main parking lot to identify the location and depth of shallow fill suspected of containing lead at concentrations greater than the DEQ CFSL. The results of the limited GPR survey are discussed in Section 5.1.7.

5.1.1 USTs – South Adjacent Sidewalk

Two off-site USTs were confirmed located beneath the sidewalk adjacent south of the Property (Figure 2). The access ports to both USTs were opened, revealing brick-lined manways to secured lids on the top of the USTs. The lids could not be opened at the time of the survey, and

the depths to the bottom of the USTs could not be measured. The tops of the USTs were measured between approximately 4 and 5 feet BGS. Based on the results of the geophysical survey, the western UST is approximately 15 feet long and the eastern UST is likely similar in length (as underground utilities prevented an accurate location of the east end of the eastern UST). The width of both USTs appears to be approximately 4 to 5 feet. Therefore, it is likely the bottoms of the USTs are approximately 8 to 10 feet BGS.

5.1.2 Removed USTs – Small Parking Lot/Loading Dock Area

The geophysical survey did not reveal the presence of metallic objects within the area of the asphalt patch (Figure 2) visible at the surface of the parking lot/loading dock area. Reflections typical of a UST excavation were observed across the patch. Although several tank-like reflections were observed in parallel profiles conducted at the east end of the assumed former UST pit, corresponding magnetic anomalies were not observed. The reflections were irregular in the profiles conducted in a perpendicular direction. The geophysical survey report indicates that it is unlikely the reflections are from a UST and are more likely debris, but the existence of a non-metallic tank cannot be ruled out. Given the historical information reviewed and summarized in GeoDesign's Phase I ESA report, dated May 16, 2019, it is likely the two former gasoline USTs were removed as previously reported by others.

5.1.3 On-Site Decommissioned In-Place UST – Main Parking Lot

The location and orientation of one on-site UST was identified in the main parking lot immediately east of the Property structure (Figure 2). The fill port and access port to the UST were located and opened. The cap to the fill port was removed and the depth of the UST and residual product were gauged. The top of the UST is approximately 4.6 feet BGS, the bottom of the UST is approximately 11 feet BGS, and approximately 2.75 feet of sludge was measured in the UST at the location of the fill port. Granular backfill material was observed to the top of the access port. Presumably, this material was used to "decommission" the UST in place in 1988. The length of the decommissioned in-place UST could not be accurately determined due to interference from nearby parked vehicles.

It is possible this UST is the same UST that was documented as decommissioned in place in DEQ's files that were reviewed as part of GeoDesign's Phase I ESA. However, since detailed documentation regarding the former location of the decommissioned in-place UST were not available or provided, GeoDesign cannot be certain the observed decommissioned in-place UST at the Property is the same decommissioned in-place UST noted in DEQ's files.

5.1.4 Catch Basin Piping Route – Small Parking Lot/Loading Dock Area

The outflow pipe from the catch basin in the small parking lot/loading dock area extends toward the southwest, beneath the loading dock and likely connects to previously marked storm sewer pipes identified by the City of Portland located beneath the sidewalk adjacent west of the Property (Figure 2). The geophysical survey corroborates the information obtained from James Hyatt (engineering technician with the City of Portland Bureau of Environmental Services) in an interview conducted during our Phase I ESA. Mr. Hyatt indicated that the City of Portland has records of catch basins permitted on the Property that connect to the Property's sewer line and likely discharge to the City of Portland's combined sewer system.

5.1.5 Catch Basin Piping Route – Main Parking Lot

The outflow pipe from the catch basin in the central portion of the main parking lot extends toward the south for several feet, then elbows approximately 90 degrees, and extends toward the east. The signal was lost, but again picked up in the vicinity of a pair of sewer pipes that were previously marked by the City of Portland (Figure 2). This catch basin appears connected to the City of Portland's sewer system and not to the suspect circular features described in Section 5.1.6. The geophysical survey corroborates the information obtained from Mr. Hyatt in an interview conducted during our Phase I ESA. Mr. Hyatt indicated that the City of Portland has records of catch basins permitted on the Property that connect to the Property's sewer line and likely discharge to the City of Portland's combined sewer system.

5.1.6 Suspect Circular Features – Main Parking Lot

The results of the geophysical survey conducted in the vicinity of the circular features near the east-central portion of the main parking lot did not identify reflections from buried objects similar to drywells.

Upon completion of the survey in the vicinity of the above features, a suspect circular access port was observed in the sidewalk adjacent north of the Property. The lid to the access port could not be opened. Reflections typical of rebar above a void were observed. A vaulted basement extending beneath the sidewalk spanning the structure's facade may be present. It is possible the port is a coal (or similar fuel) chute or access for a possible tank in the basement or beneath the access port. GeoDesign personnel did not observe the presence of an AST in the basement.

5.1.7 Limited GPR Survey – Main Parking Lot

The results of limited GPR survey conducted in the main parking lot identified three distinctive subsurface "layers" including aggregate base rock (beneath the AC), fill (including demolition debris), and native soil. The thickest zones of demolition debris generally correlated with the locations of the former buildings (residences) identified on the eastern portion of the Property in GeoDesign's Phase I ESA report dated May 16, 2019. In addition, the thicknesses of the identified fill generally correlate with the thickness of the fill material encountered in borings HA-3, HA-4, HA-5, HA-7, HA-10, HA-11, and HA-13. Borings HA-4, HA-8, and HA-10 met refusal due to the debris encountered. The foundation remnants and estimated extent of fill/demolition debris is shown on Figure 3.

5.2 SUBSURFACE INVESTIGATION – SOIL

The direct-push borings were advanced using drilling equipment owned and operated by ESN Northwest, Inc. of Olympia, Washington, to depths between 5 and 20 feet BGS (except for borings DP-4 and DP-17). Boring DP-4 was advanced to a depth of 30 feet BGS to evaluate deeper native soil conditions. Boring DP-17 was advanced to a depth of 2 feet BGS, where it met refusal (possible utility). Borings DP-1 through DP-17 were located on the Property to evaluate potential releases from the USTs, and subsurface conditions beneath the exterior portions of the Property (including the USTs and the suspect circular features near the east-central portion of the Property) and beneath the interior portions of the Property structure (including the basement and main floor of the structure and near the interior floor drains). Borings DP-18 through DP-24 were located off the Property to evaluate soil conditions adjacent to the two USTs identified beneath the north sidewalk of SE Belmont Street that adjoins the Property. Borings DP-25 through DP-32

were located on the Property to delineate the extent of shallow lead-containing fill at concentrations greater than the DEQ CFSL in the vicinity of boring DP-4.

The hand auger borings were advanced with hand-held equipment owned and operated by GeoDesign. Borings HA-1 and HA-2 were advanced to depths of 16 and 10 feet BGS, respectively, to evaluate subsurface conditions within the interior of the structure that could not be accessed by the direct-push drilling equipment. Borings HA-3 through HA-14 were advanced to depths of up to 1.6 feet BGS (unless refusal terminated the boring at a shallower depth) to further delineate the extent of shallow lead-containing fill at concentrations greater than the DEQ CFSL in the vicinity of boring DP-4.

A GeoDesign representative observed the drilling activities and conducted the hand auger boring activities and collected soil samples from the borings for field screening purposes and potential chemical analysis (excluding borings DP-17 and HA-3). Field screening included visual observation, water sheen screening, and headspace vapor screening using a hand-held PID. Field screening evidence of contamination was not observed in soil collected from the borings, with the exception of HA-8 and HA-10. Soil from HA-8 exhibited a slight sheen, a PID reading of 216 ppm, and a petroleum like odor at a depth of approximately 1.3 feet BGS. Soil from HA-10 exhibited a slight sheen, a PID reading of 4,300 ppm, and a petroleum like odor at a depth of 0.3 foot BGS. Field screening results for the soil samples collected from the direct-push borings are shown on the boring logs presented in Appendix B. A description of our field exploration program is also summarized in Appendix B.

5.2.1 Subsurface Conditions

In general, subsurface conditions at the Property consist of alluvial clay, sand, and gravel underlying exterior AC pavement or interior concrete floor slabs. The AC pavement located at the surface of the exterior borings was 1.5 to 6 inches thick. The concrete floor slabs at the locations of the interior borings was 4 to 12 inches thick. Some borings in the main parking lot encountered 3 to 18 inches of aggregate base underlying the AC and up to 7 inches of aggregate base in the small parking lot/loading dock area. Up to approximately 2.7 feet of fill (consisting of concrete rubble, wood, and brick fragments) was encountered beneath the AC and/or aggregate base in select borings advanced in the main parking lot. The thickest zones of fill (building debris) correlate with the locations of the former structures located in the main parking lot. It appears, based on the subsurface conditions encountered in the borings advanced in the main parking lot, that the former structures were demolished and the building debris was used to backfill the foundations and was also spread at various thicknesses throughout the majority of the main parking lot. The approximate limits of the remnant foundations and building debris are shown on Figure 3. Approximately 12 and 19 inches of pea gravel was encountered beneath the concrete floor slab at the locations of interior borings DP-13 and DP-17, respectively.

Alluvial clay, sand, and silt were encountered underlying the AC pavement, concrete floor slab, and/or fill (aggregate base, pea gravel, and construction debris) to the maximum depths explored (with the exception of boring DP-17, which met refusal at 2 feet BGS due to an unidentified obstruction; HA-3, which met refusal at approximately 1.6 feet BGS due to concrete rubble; HA-4, which met refusal at approximately 1.3 feet BGS due to concrete; and HA-8, which met refusal at approximately 1.5 feet BGS due to wood debris). Trace organic remnants (plant-

based remnants) were observed in the alluvial silty sand at depths of 2.5 and 8 feet BGS in boring HA-1. Groundwater was not encountered in the borings but was measured at depths between 34.1 and 35.1 feet BGS in a vibrating wire piezometer installed during our geotechnical investigation in March and April 2019.

5.2.2 Soil Sampling

Up to three soil samples were collected from each boring. A total of 103 soil samples were collected from the borings and submitted to Apex Laboratories (Apex) of Tigard, Oregon, under standard chain-of-custody protocols for one or more of the following analysis:

- Hydrocarbon identification by Method NWTPH-HCID
- Gasoline-range hydrocarbons by Method NWTPH-Gx
- Diesel- and oil-range hydrocarbons by Method NWTPH-Dx
- VOCs by EPA Methods 5035A/8260C
- RCRA 8 total metals by EPA Method 6020A (ICP-MS)
- Leachable lead by EPA Methods 1311/6020A (ICP-MS)
- PAHs by EPA Method 8270D SIM
- PCBs by EPA Method 8082A

Soil sample designations and sample depths are shown in Tables 1 through 5. The chemical analytical program details, laboratory reports, and chain-of-custody documentation are presented in Appendix D.

5.3 SUBSURFACE INVESTIGATION – SOIL GAS

Two soil gas borings (SG-1 and SG-2) were advanced with equipment owned and operated by ESN Northwest, Inc. of Olympia, Washington. The soil gas samples were collected from the borings at approximately 15 feet BGS. The soil gas samples were submitted to PACE Analytical of Mount Juliet, Tennessee, for analysis of gasoline-range hydrocarbons and VOCs by EPA Method TO-15. The soil gas sample designations and chemical analytical data are summarized in Table 6. The chemical analytical program details, laboratory report, and chain-of-custody documentation are presented in Appendix D.

5.4 SUBSURFACE INVESTIGATION – SUB-SLAB VAPOR

One sub-slab vapor sample (SV-1) was collected with equipment owned and operated by GeoDesign. The sub-slab vapor sample was collected immediately beneath the concrete floor slab in the basement of the Property structure. The sub-slab vapor sample was submitted to PACE Analytical of Mount Juliet, Tennessee, for analysis of gasoline-range hydrocarbons and VOCs by EPA Method TO-15. The sub-slab vapor sample designation and chemical analytical data are summarized in Table 6. The chemical analytical program details, laboratory report, and chain-of-custody documentation are presented in Appendix D.

6.0 REGULATORY SCREENING LEVELS

A conceptual site model was not prepared for the project as part of this assessment. However, as described above, GeoDesign understands that redevelopment will include demolition of the existing on-site commercial structure and construction of a new mixed-use, seven-story structure

with one level of underground parking on the west side of the structure and two levels of underground parking on the east side of the structure. The ground floor level (first floor above the parking levels) will include retail spaces and apartment units. The second through seventh levels will consist of apartment units. GeoDesign also understands that groundwater beneath the Property will not be used as a drinking water source in the foreseeable future and the future redevelopment will likely include excavation and off-site disposal of subsurface soil.

Considering the redevelopment plans for the Property, the following DEQ RBCs were selected for comparison of soil and soil gas chemical analytical results obtained during this assessment:

- *Soil Ingestion, Dermal Contact, and Inhalation:* occupational, construction worker, and excavation worker receptors
- *Volatilization to Outdoor Air:* occupational receptors
- *Vapor Intrusion into Buildings:* occupational receptors

The DEQ *Leaching to Groundwater* RBCs are not used for comparison purposes as the *Leaching to Groundwater* exposure pathway is not considered complete due to the fact that the City of Portland provides potable water to the Property and the surrounding properties.

Soil chemical analytical results were compared to DEQ *Soil Ingestion, Dermal Contact, and Inhalation* RBCs for occupational, construction worker, and excavation worker receptors and to DEQ *Volatilization to Outdoor Air* and *Vapor Intrusion into Buildings* RBCs for occupational receptors in Tables 1 through 5. Soil gas and sub-slab vapor chemical analytical results are compared to DEQ *Vapor Intrusion into Buildings* RBCs for occupational receptors in Table 6.

To facilitate characterization of soil for disposal purposes, soil chemical analytical results were also compared to established DEQ CFSLs, updated February 21, 2019. Soil containing chemical constituents at concentrations below the DEQ CFSLs can be re-used on site or disposed of offsite without regulatory restrictions. Soil containing chemical constituents at concentrations greater than DEQ CFSLs must be managed as solid waste and disposed of at a RCRA Subtitle C or D landfill, or other appropriately permitted facility, if exported from the Property. In addition, as recommended in DEQ's internal management directive, updated on February 21, 2019, statistical analysis was used in cases where one or more analytes were detected at concentrations greater than DEQ CFSLs. As noted in the directive, the calculation of a 90% UCL is often an appropriate statistical method to determine if the soil meets DEQ's clean fill criteria. The statistical software ProUCL was used for analysis to select the best-fit UCL based on sample size, data distribution, and skewness. Soil chemical analytical results were compared to the applicable DEQ CFSLs in Tables 1 through 5. The ProUCL-calculated 90% UCLs for select analytes are presented in Table 3. As noted in Table 3, the calculated 90% UCLs exclude data from samples DP-4(0.5-1.5), DP-25(1-1.5), DP-26(1-1.5), DP-27(1-1.5), DP-28(1-1.5), DP-30(1-1.5), DP-31(1-1.5), DP-32(1-1.5), HA-4(0.5-1), HA-5(0.0-0.7), HA-7(0.2-0.7), HA-8(1-1.3), HA-8(1.3-1.5), HA-10(0.3-0.7), HA-11(0.5-1), and HA-13(0.5-1). Fill represented by these samples will be segregated from native soil (that does not exhibit elevated concentrations of contaminants above DEQ CFSLs) and managed separately from native soil. An SWMP will be prepared to provide protocol for the

management of contaminated fill and soil meeting DEQ CFSLs at the Property during redevelopment. The ProUCL output data sheets for the calculated 90% UCLs are presented in Appendix E.

7.0 CHEMICAL ANALYTICAL RESULTS

7.1 SOIL SAMPLE ANALYTICAL RESULTS

A total of 103 soil samples were submitted for chemical analysis. A comparison of the soil sample chemical analytical results to applicable regulatory criteria is shown in Tables 1 through 5 and discussed below. The laboratory reports are presented in Appendix D.

7.1.1 Hydrocarbon Identification

Twenty two[1] soil samples were qualitatively analyzed for hydrocarbon identification by Method NWTPH-HCID. Gasoline-, diesel-, and oil-range hydrocarbons were not qualitatively detected in the soil samples submitted for analysis.

7.1.2 Gasoline-, Diesel-, and Oil-Range Hydrocarbons

Two[2] soil samples were quantitatively analyzed for gasoline-range hydrocarbons by Method NWTPH-Gx and diesel- and oil-range hydrocarbons by Method NWTPH-Dx. Gasoline-range hydrocarbons were detected in sample HA-8(1.3-1.5) at a concentration greater than the DEQ CFSL. Otherwise, gasoline-, diesel-, and oil-range hydrocarbons were not quantitatively detected or were detected at concentrations less than established applicable DEQ RBCs and CFSLs in the soil samples submitted for analysis. DEQ has not established RBCs or CFSLs for oil-range hydrocarbons.

7.1.3 VOCs

Each sample collected from borings DP-1 through DP-16, HA-1, HA-2, HA-8, and HA-10 were analyzed for full scan VOCs by EPA Methods 5035A/8260C. Samples collected from borings DP-19 and DP-23 were analyzed for select VOCs by EPA Methods 5035/8260C. VOCs were not detected at concentrations above the laboratory MRLs in the soil samples submitted for analysis, with the exception of 1,2,4-TMB, 1,3,5-TMB, m-p xylenes, and o-xylenes in sample HA-8(1.3-1.5). VOCs 1,2,4-TMB, 1,3,5-TMB, m-p xylenes, and o-xylenes were detected in this sample at concentrations of 0.134 mg/kg, 0.0752 mg/kg, 0.119 mg/kg, and 0.0678 mg/kg, respectively. These concentrations are less than applicable DEQ RBCs and CFSLs.

7.1.4 RCRA 8 Total Metals

Each sample collected from borings DP-1 through DP-16 was analyzed for RCRA 8 total metals by EPA Method 6020A (ICP-MS). Barium, chromium, mercury, selenium, and silver were either not detected at concentrations greater than the laboratory MRLs or were detected at concentrations less than applicable DEQ RBCs and CFSLs. In addition, samples collected from borings DP-25 through DP-32 and HA-4 through HA-14 were analyzed for lead by EPA Method 6020A (ICP-MS).

---

[1] DP-5(8.5-9.5), DP-5(13-14), DP-6(8-9), DP-6(12.5-13.5), DP-7(6.5-7.5), DP-7(11.5-12.5), DP-11(10-11), DP-11(18-19), DP-12(12-13), DP-12(16-17), DP-18(10-11), DP-19(11-12), DP-20(10-11), DP-21(10-11), DP-21(13-14), DP-22(10-11), DP-22(12.5-13.5), DP-23(10-11), DP-23(11-12), DP-24(12-13), DP-24(16-17), HA-1(15-15.5)

[2] HA-8(1.3-1.5), HA-10(0.3-0.7)

Arsenic was detected in each soil sample [with the exception of DP-7(1-2)] at concentrations ranging from 3.32 to 13.0 mg/kg, which are greater than the DEQ *Soil Ingestion, Dermal Contact, and Inhalation* RBCs for occupational receptors. In addition, the detected concentrations of arsenic in 16 of the 40 soil samples exceed the DEQ-established naturally occurring background concentration (the CFSL) for arsenic of 8.8 mg/kg. However, the calculated 90% UCL concentration for arsenic (8.039 mg/kg) is less than the DEQ CFSL of 8.8 mg/kg. Therefore, the arsenic concentrations in the soil will not present unacceptable risk to future receptors and do not necessitate the need for the soil to be managed as solid waste.

Cadmium was detected in each soil sample [with the exception of samples DP-7(1-2) and DP-8(1.5-2.5) at concentrations ranging from 0.318 to 1.08 mg/kg. The detected concentrations of cadmium are less than the applicable DEQ RBCs. However, the detected concentrations of cadmium in 24 of the 41 samples are greater than the DEQ-established naturally occurring background concentration (the CFSL) for cadmium of 0.63 mg/kg. The calculated 90% UCL concentration of cadmium (0.75 mg/kg) is slightly greater than the DEQ CFSL of 0.63 mg/kg. It is GeoDesign's professional opinion that the cadmium concentrations represent naturally occurring background conditions and by themselves do not necessitate the need for the soil to be managed as solid waste and do not pose an unacceptable risk to future users of the Property based on the following:

- The subsurface soil is native alluvium and there is no known anthropogenic source for the elevated cadmium.
- The detected concentrations of cadmium do not exhibit a high degree of variability.
- The calculated 90% UCL concentration of cadmium is only 16 percent greater than the DEQ CFSL of 0.63 mg/kg (a difference of 0.12 mg/kg).
- All detected cadmium concentrations are less than the most conservative DEQ RBCs.

Lead was detected in each of the samples submitted for analysis at concentrations ranging from 3.06 to 1,580 mg/kg. The detected concentrations of lead in natural soil are less than the applicable DEQ RBCs with the exception of the lead detected in samples DP-26(1-1.5) and DP-32(1-1.5). The concentrations of lead detected in shallow fill samples DP-4(0.5-1.5), DP-5(1-2), DP-25(1-1.5), DP-26(1-1.5), DP-27(1-1.5), DP-28(1-1.5), DP-30(1-1.5), DP-31(1-1.5), DP-32(1-1.5), HA-4(0.5-1), HA-5(0.3-0.7), HA-7(0.2-0.7), HA-8(1-1.3), HA-8(1.3-1.5), HA-10(0.3-0.7), HA-11(0.5-1), and HA-13(0.5-1) are greater than the DEQ-established naturally occurring background concentration (the CFSL) for lead of 28 mg/kg. However, by excluding the lead concentrations represented by these samples from the dataset, the calculated 90% UCL concentration of lead in the soil (13.18 mg/kg) is less than the DEQ CFSL of 28 mg/kg. Therefore, the lead concentrations in the native soil do not necessitate the need for the soil to be managed as solid waste.

Fill represented by the above-referenced samples (the limits of which are shown on Figure 3) within the majority of the main parking lot should either be removed and disposed of at a RCRA Subtitle D landfill (such as the Hillsboro Landfill) or alternatively be temporarily stockpiled and re-characterized to evaluate disposal options.

7.1.5 Leachable Lead

Since soil samples DP-4(0.5-1.5), DP-26(1-1.5), DP-32(1-1.5), HA-7(0.2-0.7), HA-10(0.3-0.7), and HA-11(0.5-1) exhibited a lead concentration exceeding the EPA threshold limit of 100 mg/kg, these samples were also submitted for TCLP lead analysis by EPA Methods 1311/6020A (ICP-MS). Samples DP-27(1-1.5) and HA-13(0.5-1) also exhibited a lead concentration greater than the EPA threshold limit of 100 mg/kg, but were not submitted for TCLP lead analysis since their total concentrations fall within the range of concentrations for those samples submitted for TCLP analysis. The TCLP analysis simulates the leaching action of water seeping through waste in a landfill. If the concentration of the contaminant (in this case lead) is greater than EPA's TCLP limit (5.0 mg/L), the waste is considered a "toxicity characteristic" hazardous waste. TCLP lead was either not detected in the samples submitted for analysis at concentrations greater than the laboratory MRL (0.0500 mg/L) or were detected at concentrations less than the EPA's TCLP limit of 5.0 mg/L. Therefore, the lead-impacted fill at the locations and depths of samples DP-4(0.5-1.5), DP-26(1-1.5), DP-32(1-1.5), HA-7(0.2-0.7), HA-10(0.3-0.7), and HA-11(0.5-1) does not need to be managed as hazardous waste.

7.1.6 PAHs

Each sample collected from borings DP-1 through DP-16, DP-19, DP-23, HA-1, and HA-2 and samples HA-8(1.3-1.5) and HA-10(0.3-0.7) were submitted for analysis of PAHs by EPA Method 8270D SIM. With the exception of benzo(a)pyrene detected in samples DP-4(0.5-1.5), HA-8(1.3-1.5), and HA-10(0.3-0.7) and naphthalene detected in sample HA-8(1.3-1.5), none of the detected PAHs exceeded the DEQ applicable RBCs or CFSLs. The concentrations of benzo(a)pyrene detected in samples DP-4(0.5-1.5), HA-8(1.3-1.5), and HA-10(0.3-0.7) and the concentration of naphthalene detected in sample HA-8(1.3-1.5) exceed the DEQ CFSLs.

7.1.7 PCBs

Each sample collected from borings DP-1 through DP-16, HA-1, and HA-2 and samples HA-8(1.3-1.5) and HA-10(0.3-0.7) were submitted for analysis of PCBs by EPA Method 8082A. PCBs were not detected at concentrations greater than the laboratory MRLs.

7.2 SOIL GAS SAMPLE ANALYTICAL RESULTS

A comparison of the soil gas sample chemical analytical results to applicable regulatory criteria is shown in Table 6 and discussed below. The laboratory report is presented in Appendix D.

7.2.1 Gasoline-Range Hydrocarbons

Soil gas samples SG-1(15) and SG-2(15) were submitted for analysis of gasoline-range hydrocarbons by EPA Method TO-15. Gasoline-range hydrocarbons were not detected above the laboratory MRL in soil gas sample SG-1(15). Gasoline-range hydrocarbons were detected in soil gas sample SG-2(15) at a concentration of 454 $\mu g/m^3$. The detected concentration of gasoline-range hydrocarbons is less than the applicable DEQ RBCs.

7.2.2 VOCs

Soil gas samples SG-1(15) and SG-2(15) were submitted for analysis of VOCs by EPA Method TO-15. VOCs were either not detected in the soil gas samples at concentrations greater than the laboratory MRLs or were detected at concentrations ranging from 1.89 µg/m^3 [styrene in sample SG-2(15)] to 60.8 µg/m^3 [acetone in sample SG-2(15)]. The detected concentrations of VOCs are less than the applicable DEQ RBCs.

7.3 SUB-SLAB VAPOR SAMPLE ANALYTICAL RESULTS

A comparison of the sub-slab vapor sample chemical analytical results to applicable regulatory criteria is shown in Table 6 and discussed below. The laboratory report is presented in Appendix D.

7.3.1 Gasoline-Range Hydrocarbons

Sub-slab vapor sample SV-1 was submitted for analysis of gasoline-range hydrocarbons by EPA Method TO-15. Gasoline-range hydrocarbons were not detected above the laboratory MRL in sub-slab vapor sample SV-1.

7.3.2 VOCs

Sub-slab vapor sample SV-1 was submitted for analysis of VOCs by EPA Method TO-15. VOCs were either not detected in the sub-slab vapor sample at concentrations greater than the laboratory MRLs or were detected at concentrations ranging from 1.12 µg/m^3 (chloromethane) to 104 µg/m^3 (acetone). The detected concentrations of VOCs are less than the applicable DEQ RBCs.

8.0 CONCLUSIONS AND RECOMMENDATIONS

GeoDesign conducted a Phase II ESA of the Property to evaluate the nature and extent of chemical constituents in media at the Property. The Phase II ESA was conducted in several phases, including (1) the initial Phase II ESA, (2) the south USTs/lead-containing fill investigation, and (3) the supplemental lead-containing fill investigation. The results of the Phase II ESA indicate the following:

- In general, historical use of the Property does not appear to have introduced chemical constituents to native subsurface soil, or soil gas beneath the Property.
- Shallow lead-containing fill exceeding DEQ RBCs and/or CFSLs is present beneath the majority of the main parking lot. Native soil underlying the fill material does not exhibit lead concentrations greater than DEQ RBCs or CFSLs. The shallow lead-containing fill material is visibly distinguishable from the underlying native soil. The shallow lead-containing fill material should be managed in accordance with the forthcoming SWMP that will provide protocol for the management of soil and fill at the Property during redevelopment.
- Arsenic and cadmium were detected in select samples at concentrations above DEQ CFSLs, but within typical naturally occurring concentrations for the area. The calculated 90% UCL for arsenic (8.039 mg/kg) is below the DEQ CFSL of 8.8 mg/kg. The calculated 90% UCL concentration for cadmium (0.75 mg/kg) is slightly greater than the DEQ CFSL of 0.63 mg/kg. Based on the low concentrations detected, the lack of an anthropogenic source of arsenic and cadmium, and general low variability of the detected concentrations in the

native soil, it is our opinion that the arsenic and cadmium concentrations are representative of naturally occurring background concentrations and meet DEQ's definition of clean fill. DEQ reviewed GeoDesign's application for an SWPE determination, dated July 30, 2019, and issued a letter, dated August 22, 2019, concluding that the soil proposed for excavation at the Property (with the exception of lead- and benzo(a) pyrene-containing fill within the main parking lot) is essentially the same as clean fill and is exempt from solid waste permitting regulations pursuant to OAR 340-0093-0080 (2).

- The geophysical survey confirmed the presence of two known off-site USTs (beneath the north sidewalk of SE Belmont Street that adjoins the Property) and one known on-site previously decommissioned in-place UST (east of the Property structure in the main parking lot). These known USTs should be decommissioned by removal by a licensed UST service provider in accordance with current applicable DEQ rules and regulations. Although petroleum hydrocarbons and related constituents were not detected in the limited soil samples collected near the former USTs, the potential for petroleum hydrocarbons near the USTs exists. If during decommissioning or construction activities soil containing petroleum- is encountered, the contractor should cease work in the area of the discovery and notify Mill Creek Residential Trust to ensure the soil is managed properly. Additional soil sampling and characterization of soil maybe necessary based on field observation during decommissioning.

Based on the findings of the Phase II ESA, GeoDesign recommends the preparation of an SWMP to provide protocol for the management of soil at the Property during redevelopment. The SWMP will consist of the following elements:

- Description of known soil conditions
- Guidance on how to identify suspect soil
- Identification of actions to be taken if suspect soil is encountered
- Description of how to manage stockpiled soil, if needed
- A description of proper management and disposal of soil
- Protocols for the collection of soil samples for characterization purposes, as warranted

As a contingency, the SWMP will include appropriate UST management protocols, if encountered during construction.

9.0 LIMITATIONS

This report has been prepared for Mill Creek Residential Trust. This report is not intended for use by others, and the information contained herein is not applicable to other sites. Reliance by other parties must be approved by GeoDesign, Inc. in accordance with our standard contractual process for third-party reliance. Our interpretations of subsurface conditions are based on data from select soil and soil gas/sub-slab vapor samples collected from this limited area. The results of the analyses only indicate the presence or absence of those chemical constituents analyzed in those discrete sample locations. It is always possible that chemical constituents could exist between the widely spaced exploration locations. Analytical data from the laboratory samples should only be considered as indicators of Property conditions and not a guarantee of the absence of subsurface impact in areas not sampled.

The conclusions presented in this report are based on our observations made during field investigations and chemical analytical data. The findings of this assessment should be considered as a professional opinion based on our evaluation of selected and limited data.

Our services have been executed in accordance with the generally accepted practices in this area at the time this report was prepared. No warranty or other conditions, express or implied, should be understood.

DEQ Generic RBCs[1]							
Soil Ingestion, Dermal Contact, and Inhalation							
Occupational		NE	NE	NE	20,000	14,000	NE
Construction Worker		NE	NE	NE	9,700	4,600	NE
Excavation Worker		NE	NE	NE	>Max	>Max	NE
Volatilization to Outdoor Air							
Occupational		NE	NE	NE	>Max	>Max	NE
Vapor Intrusion into Buildings							
Occupational		NE	NE	NE	>Max	>Max	NE
DEQ CFSLs[2]		NE	NE	NE	31	1,100	NE

Notes:
1. DEQ Generic RBCs dated May 2018
2. DEQ CFSLs dated February 21, 2019

>Max: The constituent RBC for this pathway is calculated as greater than 1,000,000 mg/kg or 1,000,000 mg/L. Therefore, this substance is deemed not to pose risks in this scenario.

U: Not detected. Reporting or detection limit shown.

Bolding indicates analyte detection.

Shading indicates analyte detection at a concentration greater than DEQ CFSL.

--: not analyzed

TABLE 2
Summary of Soil Sample Chemical Analytical Results
VOCs
Modera Morrison
1120 SE Morrison Street
Portland, Oregon

Sample I.D. (depth in feet BGS)	Sample Date	VOCs by EPA Methods 5035A/8260C (mg/kg)

Notes:
1. DEQ Generic RBCs dated May 2018
2. DEQ CFSLs dated February 21, 2019
>Csat: This soil RBC exceeds the limit of three-phase equilibrium partitioning. Refer to Appendix D of DEQ's RBDM guidance document for the corresponding value of Csat. Soil concentrations in excess of Csat indicate that free product might be present.
>Max: The constituent RBC for this pathway is calculated as greater than 1,000,000 mg/kg or 1,000,000 mg/L. Therefore, this substance is deemed not to pose risks in this scenario.
U: Not detected. Reporting or detection limit shown.

EPA Maximum Threshold Limits[6]			100	2,000	20	100	100	4	20	100	NA
EPA TCLP Limits[7]			NA	NA	NA	NA	NA	NA	NA	NA	5.0
DEQ CFSLs[8]			8.8	790	0.63	76	28	0.23	0.71	2.6	NA

Notes:

1. Calculated 90% UCL based on data size, data distribution, and skewness, as recommended in DEQ's Internal Management Directive updated on February 21, 2019. See ProUCL Outputs for arsenic, cadmium, and lead in Appendix E. The calculated 90% UCLs exclude data from DP-4(0.5-1.5), DP-25(1-1.5), DP-26(1-1.5), DP-27(1-1.5), DP-28(1-1.5), DP-30(1-1.5), DP-31(1-1.5), DP-32(1-1.5), HA-4(0.5-1), HA-5(0.0-0.7), HA-7(0.2-0.7), HA-8(1-1.3), HA-8(1.3-1.5), HA-10(0.3-0.7), HA-11(0.5-1), and HA-13(0.5-1).
2. ProUCL-recommended use of the Gamma KM Adjusted Gamma 90% UCL value for this analytes data set.
3. ProUCL-recommended use of the Normal KM Student's-t 90% UCL value for this analytes data set.
4. ProUCL-recommended use of the Normal Student's-t 90% UCL value for this analytes data set.
5. DEQ Generic RBCs dated May 2018
6. Section 1.2 of EPA Method 1311 (TCLP) allows for a total constituent analysis in lieu of the TCLP extraction. The maximum allowable limits equate to 20 times the maximum leachable limit.
7. Analytes exceeding the maximum leachable limits are defined as toxicity characteristic hazardous waste.
8. DEQ CFSLs dated February 21, 2019

>Max: The constituent RBC for this pathway is calculated as greater than 1,000,000 mg/kg or 1,000,000 mg/L. Therefore, this substance is deemed not to pose risks in this scenario.
NV: chemical is considered non-volatile
U: Not detected. Reporting or detection limit shown.
Bolding indicates analyte detection.
Shading indicates analyte detection at a concentration greater than DEQ RBCs and/or CFSLs.
--: not analyzed

Notes:
1. DEQ Generic RBCs dated May 2018
2. DEQ CFSLs dated February 21, 2019
>Csat: This soil RBC exceeds the limit of three-phase equilibrium partitioning. Refer to Appendix D of DEQ's RBDM guidance document for the corresponding value of Csat. Soil concentrations in excess of Csat indicate that free product might be present.
>Max: The constituent RBC for this pathway is calculated as greater than 1,000,000 mg/kg or 1,000,000 mg/L. Therefore, this substance is deemed not to pose risks in this scenario.
NV: chemical is considered non-volatile
U: Not detected. Reporting or detection limit shown.
Bolding indicates analyte detection.
Shading indicates analyte detection at a concentration greater than DEQ CFSLs.

APPENDIX A

GeoDesign Inc

July 30, 2019

Oregon Department of Environmental Quality
Northwest Region
700 NE Multnomah Street, Suite 600
Portland, OR 97232

Attention: Heather Kuoppamaki

Request for SWPE Determination
Modera Morrison
1120 SE Morrison
Portland, Oregon
GeoDesign Project: MillCreek-19-01-04

On behalf of Mill Creek Residential Trust, GeoDesign is respectfully requesting the Oregon Department of Environmental Quality's (DEQ's) assistance with obtaining a Solid Waste Permit Exemption (SWPE) determination for the Modera Morrison redevelopment project located at 1120 SE Morrison Street in Portland, Oregon (Property). Accompanying this letter are the following documents:

- The SWPE determination application (the SWPE determination application and check for $500 was previously submitted to DEQ by mail)
- The Phase I Environmental Site Assessment (ESA) report dated May 16, 2019.
- The Phase II ESA report dated July 30, 2019

The project redevelopment will include demolition of the existing site structures, excavation for one level of underground parking, and construction of a seven-story apartment building with commercial and retail spaces on the first floor.

In preparation for redevelopment GeoDesign conducted a Phase I ESA and Phase II ESA of the Property. Based on the Phase II ESA chemical analytical soil results, GeoDesign has made a determination that soil located at the Property with the exception of an isolated area at the location of boring DP-4 (where lead was detected at concentrations in shallow soil exceeding the DEQ Clean Fill Screening Level), meets DEQ's definition of "clean fill" and can be managed and disposed of off site for unrestricted use. GeoDesign is currently conducting further investigation of the shallow, lead-impacted area at the location of DP-4. Once the limits of the shallow soil containing elevated concentrations of lead are defined, the results will be summarized in an

addendum to the Phase II ESA report. Further, the proposed management of the lead-contaminated soil during construction will be described in the forthcoming site-specific Soil Water Management Plan.

The project team has requested that GeoDesign obtain DEQ's formal written concurrence with the clean fill determination made for project soil, specifically as it pertains to arsenic and cadmium concentrations present in the soil. Based on a previous conversation with you, we understand that applying for an SWPE determination from DEQ is the most efficient way to achieve this objective.

♦ ♦ ♦

We appreciate your assistance with this project. Please call if you have questions concerning the information provided.

Sincerely,

GeoDesign, Inc.

Kyle R. Sattler, L.G. (Washington)

- Northwestern Region: DEQ-NWR
- Western Region: DEQ-Eugene

Under OAR 340-93-080(2), DEQ may exempt from permit persons seeking to dispose of certain inorganic solid waste (e.g.: foundry sand, glass) in specified locations provided the applicant can demonstrate that the waste is substantially the same as "clean fill" exempted by OAR 340-93-050(3)(c). Each exemption is unique to the given waste and disposal location. A new exemption must be obtained any time the waste or the disposal location changes. A change in waste may be caused by a change in process, raw materials, waste management, etc. DEQ considers disposal without notification of a change in waste or disposal location to constitute the disposal of solid waste without a permit, a Class I violation.

THIS APPLICATION IS NOT COMPLETE UNLESS ALL ITEMS HAVE BEEN ADDRESSED.

A. REFERENCE INFORMATION *Attach additional sheets if needed. Please type or print clearly.*

1. APPLICANT INFORMATION

Name	Cassidy Bolger c/o Jason O'Donnell (GeoDesign, Inc 503-726-3123)
Company name	Mill Creek Residential Trust
Address	220 NW 2nd Avenue, Suite 900
City, State, Zip	Portland, Oregon, 97209
Telephone	503-928-3952
Email	cbolger@mcrtrust.com

2. DISPOSAL SITE PROPERTY OWNER INFORMATION

Name	Not Applicable

B. SIGNATURE: I hereby certify by my signature below that the information contained in this application and the documents I have attached, are true and correct to the best of my knowledge and belief.

Signature: Jason O'Donnell	Date: 07/25/2019
Print name: Jason O'Donnell	Title: Principal Geologist

Note: The application must be signed by the applicant or by a duly authorized agent, employee, officer, or representative of the applicant. When another person signs on behalf of the applicant, his/her title or relationship to the applicant should be shown. In all cases, the person signing the form should be authorized to do so by the applicant. An application submitted for a corporation must be signed by (or the signatory must be authorized by)

a principal executive officer of at least the level of vice president; or for a partnership or sole proprietorship, by a general partner or the proprietor, respectively. In the case of a municipal, state, federal, or other public facility, the application shall be signed by either a principal operating officer or ranking elected official.

C. ATTACH TO THIS PERMIT EXEMPTION APPLICATION

To complete your exemption application attach the following if required for your application: (Note: If you have questions regarding requirements, please check with the regional permit coordinator).

NA 1. A STATEMENT OF APPROVAL from the property owner or person with long-term control of the property, if other than applicant.

NA 2. A DISPOSAL LOCATION MAP AND DESCRIPTION of the surrounding area. Include proximity to streams, waterways, flood plains, wells, springs, etc., and land use features such as housing developments, schools, parks, and playgrounds. Note: Disposal site must not be located in a residential area or a sensitive hydrogeologic environment.

NA If the disposal location has a NPDES Storm Water Discharge Permit or an Underground Injection Control Permit, the applicant must demonstrate that the disposal will not cause the conditions of the permit to be violated.

NA How the waste will be disposed, and whether it will be "encapsulated" or "non-encapsulated" disposal. Examples of encapsulated uses are for building, road and parking lot sub base where the waste will be covered by concrete or asphalt, or as an additive to cement or asphalt.

☑ A description of the process generating the waste and how that process integrates into the generator's operations.

☑ Documentation that the waste is not hazardous as defined in OAR Chapter 340, Division 101. The procedure for making a hazardous waste determination is found in OAR 340-102-011.

☑ A demonstration that the waste is inorganic, stable, and physically similar to soil, rock, concrete, brick, building block or tile.

Documentation provided electronically with approval by Heather Kuoppamaki

Such demonstration may be made as follows:

- Obtain three representative samples of the waste and provide a discussion of the QA/QC procedures used to obtain the samples. In the event there are significant differences in the results of the analyses, the waste must be sampled further to resolve the discrepancy and all analyses submitted. Note: It is recommended that the samples be composites of statistically selected individuals.

- Select any contaminants of concern that may be in the waste. Provide a rationale for omitting any contaminants indicated in a MSDS. DEQ may require the addition of other contaminants to those selected by the applicant.

- Analyze the extract for the selected contaminants using the methods in EPA Document SW-846 ("totals," not leaching tests, or "TCLP"). If other analysis methods are used, provide a rationale for their selection. Note: In the event the selected analytical method detects other compounds, report all the detected compounds.

- Compare the concentrations of the analyzed contaminants to the DEQ risk-based screening tables, EPA risk-based screening levels (if the contaminant is not present on DEQ's table), and DEQ ecological screening levels.

☐ Other information as may be appropriate or requested by DEQ (e.g., ash, TPH, oil/grease).

☑ Processing fee of $500 payable to Department of Environmental Quality (OAR 340-97-120(2)(e)).

D. APPLICATION PROCEDURE

Step 1
Contact a DEQ staff person in the region of the disposal site for assistance with the preparation of the application. DEQ staff will help with determination of the eligibility for a permit exemption of a particular waste or disposal site. Consult the chart below for help with initial DEQ contacts.

Step 2
Mail the original signed application, all attachments, including the fee payment, and one extra copy of the application materials to the appropriate regional office as shown below. Note that DEQ review work will not begin until a complete application packet is received. Incomplete applications may be returned. DEQ recommends the applicant keep a full copy of all application materials to guard against possible loss in transit.

Step 3
DEQ will contact the applicant, acknowledging receipt of the application and will identify the staff person assigned to carry out the review. This staff person will contact the applicant if any additional information is needed.

FEES – MUST ACCOMPANY THIS APPLICATION

Permit Fees: http://www.oregon.gov/deq/mm/swpermits/Pages/Fees.aspx

Make checks payable to Oregon DEQ.

Please mail the original application and one copy of the completed packet to the appropriate regional office. Note that action will not begin on an application until a complete application packet is received. Incomplete applications may be returned. DEQ recommends retaining a copy of all application materials to guard against loss in transit.

EXECUTIVE SUMMARY

GeoDesign performed a Phase I ESA of the Modera Morrison property located at 1120 SE Morrison Street in Portland, Oregon (project site). The Phase I ESA was conducted in conformance with the standards and practices for all appropriate inquiries specified in Title 40, Chapter I of CFR Part 312 and ASTM E1527-13. Contractual terms for our services are contained in our proposal to Mill Creek Residential Trust dated March 7, 2019. Any exceptions to or deletions from this practice are described in Sections 3.0 and 13.0. Please note that this section provides a summary of the findings of the Phase I ESA and some details were not included or fully developed. Therefore, this report must be read in its entirety for a more complete understanding of the findings, conclusions, and recommendations contained herein.

Acronyms and abbreviations used herein are defined immediately following the Table of Contents.

PROJECT SITE AND VICINITY DESCRIPTION

Size	0.86 acre
Tax Lot	5100
Tax Map	Multnomah County – 1S1E02BA
Current Use	office and warehouse space
Significant Features	19,593-square-foot commercial building and paved parking lot
Vicinity Use	commercial

ENVIRONMENTAL RECORDS REVIEW

Federal, tribal, state, and local environmental records and databases were compiled for the project site and facilities that currently or previously have occupied properties within the specified search distance from the project site. Information contained in the records and databases was reviewed by GeoDesign to evaluate the potential for environmental impacts to the project site.

Project Site

Based on our review of the EDR Radius Map Report, the project site (listed as Bernstein Brothers and AJP) was listed on the DEQ LUST, DEQ RGA LUST, and DEQ UST databases and the EPA FINDS database. The DEQ UST database includes a listing of facilities with registered USTs. The DEQ LUST database contains listings of sites with reported leaking UST incidents. The DEQ RGA LUST database contains a list of leaking UST incidents derived from historical databases and includes many records that no longer appear in current government lists. The EPA FINDS database is an inventory or reference list and does not imply a release or REC at the project site.

According to information obtained from the EDR Radius Map Report and GeoDesign's DEQ file review, the following two LUST file numbers pertain to the project site: 26-16-1462 and 26-91-0267. In addition, the project site was listed on the DEQ UST database as UST Facility I.D. 6680. Pertinent information regarding each LUST and UST file is summarized below.

LUST File No. 26-91-0267

DEQ established LUST File No. 26-91-0267 in 1991 after soil contamination was encountered during decommissioning of two 1,000-gallon gasoline USTs located in the northwestern portion of the project site. Approximately 100 cubic yards of gasoline contaminated soil were removed from the excavation and treated on site. The final off-site disposal location of the treated soil was not documented. Petroleum hydrocarbons were not detected above laboratory reporting limits in confirmation soil samples collected from the limits of the excavation. DEQ issued an NFA determination for LUST File No. 26-91-0267 in 1996. Based on the information contained in the EDR Radius Map Report and the DEQ files, it is our professional opinion that LUST File No. 26-91-0267 represents an HREC in connection with the project site.

LUST File No. 26-16-1462

DEQ established LUST File No. 26-16-1462 after soil contamination was encountered in 2016 when ROW construction activities damaged a heating oil UST located beneath the sidewalk adjacent to the southwest corner of the project site. The UST was decommissioned by removal and approximately 27.28 tons of contaminated soil were excavated from the vicinity of the former heating oil UST. Diesel-range hydrocarbons were detected in the soil samples collected from the limits of the excavation that were submitted for chemical analysis at a maximum concentration of 10,900 mg/kg at 9 feet BGS. This concentration exceeds the DEQ *Soil Ingestion, Dermal Contact, and Inhalation* RBCs for residential and urban residential receptors. Additional soil sampling via soil borings was conducted by K&S Environmental, Inc. (K&S) in 2017. The maximum detected concentration of diesel-range hydrocarbons was 1,980 mg/kg at 13 feet BGS. This concentration exceeds the DEQ *Soil Ingestion, Dermal Contact, and Inhalation* RBCs for residential receptors. Following the additional investigation by K&S, DEQ closed File No. 26-16-1462 in June 2017.

Based on the information contained in the EDR Radius Map Report and the DEQ files, it is our professional opinion that while the 2017 K&S investigation results regarding LUST File No. 26-16-1462 indicate remaining soil contamination concentrations representative of a CREC, the elevated concentration of diesel contamination detected in soil during the 2016 NRC investigation represents a REC in connection with the project site.

UST Facility I.D. 6680

UST Facility I.D. 6680 is listed as having three decommissioned USTs. According to information reviewed during GeoDesign's DEQ file review, two gasoline USTs were decommissioned by removal in 1991 and one UST was decommissioned in place in 1988. Detailed documentation regarding the former contents and location of the decommissioned in-place UST and soil sampling records were not available or provided. Based on the information contained in the DEQ files, the decommissioned in-place UST on the project site represents a REC at the project site.

City of Portland Fire Bureau UST Records

GeoDesign searched City of Portland Fire Bureau UST records on April 26, 2019 and the following permits associated with the project site were reviewed:

- Permit No. 43807, dated October 16, 1948, notes the installation of a UST in the "yard" located at 807 SE 12th Avenue.
- Permit No. 23458, dated May 11, 1946, notes the installation of an integral AST located at 821 SE 21st Avenue. The AST fueled the oil burner for an oil stove.

Based on historical permits obtained from the City of Portland Fire Bureau, one heating oil UST and one heating oil AST were historically located on the project site. The potential for subsurface impacts associated with the historical heating oil tanks on the project site represents a REC at the project site.

Surrounding Sites

The EDR Radius Map Report identified 434 surrounding sites listed on one or more regulatory databases within the ASTM search distances. Based on local topography, the inferred direction of shallow groundwater flow, the regulatory status of the listed sites, the media impacted at the listed sites, and information contained in the regulatory databases, it is our professional opinion that 1 of the 434 surrounding sites poses a risk of a REC at the project site. This site (the Piacentini Property) is briefly discussed below.

The Piacentini Property is located at 1206 SE Belmont Street in Portland, approximately 130 feet southeast of the project site and upgradient of the project site relative to the inferred groundwater flow direction. The Piacentini Property was listed on the DEQ LUST database (LUST File No. 26-16-0816) after soil and groundwater contamination was encountered during a site assessment in 2016. Two areas of contamination were identified on the property: (1) the northern area in the vicinity of two 600-gallon USTs and one 300-gallon UST and (2) the southern area in the vicinity of one 600-gallon UST and a hydraulic hoist.

Several environmental investigations have been conducted at the Piacentini Property, including soil (2016 and 2017), groundwater (2016 and 2017), and soil gas (2017) sampling.

- Up to 13,500 mg/kg of gasoline-range hydrocarbons remain in place in the soil in the northern area.
- Up to 17,300 mg/kg of diesel-range hydrocarbons and up to 2,850 mg/kg of oil-range hydrocarbons remain in place in the soil in the southern area.
- Up to 3,810 mg/kg of gasoline-range hydrocarbons and 341 mg/kg of diesel-range hydrocarbons were detected in a soil sample collected from one boring advanced to 11 feet BGS in SE Belmont Street.
- Numerous VOCs were also detected in the soil at concentrations ranging from 4.11 to 209 mg/kg.
- Up to 3,650,000 µg/m^3 of gasoline-range hydrocarbons and up to 95.1 µg/m^3 of benzene were detected in soil gas samples.
- Low levels of VOCs (including ethylbenzene, total xylenes, PCE, 1,2,4-TMB, and 1,3,5-TMB) and PAHs (including naphthalene) were detected in groundwater at concentrations below applicable DEQ RBCs.

DEQ stated that based on information from a nearby site, the PCE detected in the groundwater samples may be from multiple releases in the area. The detected concentrations of gasoline-

range hydrocarbons and benzene exceed the DEQ *Vapor Intrusion into Buildings* RBCs for residential, urban residential, and occupational receptors and the DEQ *Vapor Intrusion into Buildings* RBC for residential receptors, respectively. Two additional soil gas samples were subsequently collected to determine the magnitude of benzene impacts. Benzene was detected in both samples at concentrations greater than applicable RBCs.

DEQ issued a memorandum in September 2018 recommending a conditional NFA determination for the Piacentini Property contingent upon the development of a Contaminated Media Management Plan and the restriction of residential, urban residential, and occupational use of the property unless the owner conducts further evaluation to demonstrate there is no unacceptable risk for vapor intrusion into future structures developed on the property. The LUST file associated with the Piacentini Property is currently active.

Based on the inferred direction of groundwater flow, the media impacted at the Piacentini Property, and information contained in the regulatory database, it is our professional opinion that the Piacentini Property represents a REC at the project site.

HISTORICAL USES – PROJECT SITE AND ADJOINING PROPERTIES

Our review of historical sources from 1889 through 2019 indicated that the project site was vacant land until sometime prior to 1901. By 1901 a residence was constructed on the southeastern portion of the project site. By 1909 additional residences and a telephone office had been constructed. By 1924 a pie bakery was constructed on the southwestern portion of the project site. By 1969 the residences were demolished and a parking lot was constructed. By 2005 the project site was occupied by AJP Northwest and A&S Marketing. The project site has remained relatively unchanged since that time. The project site currently consists of office space and a warehouse for the storage and sale of paper products, janitorial supplies, and tobacco products.

Our review of historical sources from 1889 through 2019 indicated the adjoining properties were vacant or residential land by 1889. By 1901 St. David's Episcopal Church was constructed east of the project site. By 1909 Yale Laundry and a wagon stable were constructed west of the project site. By 1924 the wagon stable was demolished and a machine shop and a print shop were constructed. By 1935 the property southwest of the project site was developed with a warehouse-type structure and occupied by Gardner and Ranchers and fuel stations were constructed east and southeast of the project site. By 1950 commercial development increased on adjacent properties, including a gas station and a dry ice factory, north of the project site and a Multnomah County Road Department facility, including a motorcycle sales and service shop, a motorcycle repair shop, a radio shop, and a wash rack, west of the project site. Sometime after 1950 Yale Laundry vacated the building west of the project site. By 1960 St. David's Episcopal Church was demolished and an auto sales lot was constructed. By 1960 the property south of the project site was developed with a commercial structure. By 1969 a fuel station was constructed northeast of the project site. By 1994 the fuel station southeast of the project site was demolished. By 2005 the building located southwest of the project site was demolished. From 2012 through the present mixed-use development has increased on properties south and southwest of the project site. The adjoining properties to the north, west, and east of the project site have remained relatively unchanged since 2005.

Based on our review of historical sources, the property located southeast of the intersection of SE Belmont Street and SE 12th Avenue (the Piacentini Property), approximately 130 feet southeast of the project site and upgradient of the project site relative to the inferred groundwater flow direction, historically operated as a fuel station. Numerous investigations have identified soil, soil gas, and groundwater contamination on this property. Based on the inferred direction of groundwater flow, the media impacted at the Piacentini Property, and information contained in the regulatory database, it is our professional opinion that the Piacentini Property represents a REC at the project site.

SITE RECONNAISSANCE

During the site reconnaissance, two floor drains were observed (one in the office basement and one in the warehouse bathroom). Various containers of paint, cleaning chemicals, and anti-freeze coolant were also observed. Evidence of a release was not observed. Evidence of two USTs was observed in the sidewalk along SE Belmont Street adjacent to the south of the project site, and evidence of one UST was observed in the parking lot on the eastern portion of the project site. Based on the site reconnaissance, the potential presence of three USTs located on and adjacent to the project site represents a REC at the project site.

CONCLUSIONS AND RECOMMENDATIONS

GeoDesign performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13, all appropriate inquiries specified in 40 CFR Part 312, and the proposal to Mill Creek Residential Trust dated March 7, 2019 for the project site located at 1120 SE Morrison Street in Portland, Oregon. Any exceptions to or deletions from this practice are described in Sections 3.0 and 13.0. In our opinion, this assessment has revealed the following RECs in connection with the project site:

- Residual soil contamination associated with the former heating oil UST located in the sidewalk adjacent to the southwestern portion of the project site (LUST File No. 26-16-1462) represents a REC at the project site.
- LUST File No. 26-91-0267 associated with the former gasoline USTs located on the northwestern portion of the project site represents an HREC at the project site.
- The historical presence of a decommissioned in-place UST on the project site represents a REC at the project site.
- Historical records of one heating oil UST and one heating oil AST located on the project site represent a REC in connection with the project site.
- Evidence of two USTs located in the sidewalk along SE Belmont Street adjacent to the south of the project site and one UST located in the parking lot on the eastern portion of the project site represents a REC at the project site.
- Contaminated groundwater beneath the Piacentini Property, located approximately 130 feet upgradient of the project site relative to the groundwater flow direction, represents a REC at the project site.

In addition to the RECs described above, the following environmental concerns were identified at the project site:

- A suspect circular feature was observed in the east-central portion of the project site parking lot. With the exception of interview information, evidence that the two catch basins located on site discharge to the City of Portland combined sewer system was not obtained during this assessment. Although unlikely, it is possible that the catch basins discharge to on-site drywells. We recommend that the suspect circular feature and possible presence of on-site drywells be further evaluated using geophysical survey methods.
- Based on our review of environmental information for surrounding sites, it is possible that groundwater beneath the project site has been contaminated from multiple off-site sources.
- The presence of chemicals and hazardous substances stored in small-quantity containers at the project site does not represent a REC at the project site. The materials observed appeared to be properly stored and evidence of major leaks or spills was not observed in the vicinity of these containers. However, these stored substances should be removed from the project site and properly disposed of prior to redevelopment of the project site.
- This scope of services did not include the completion of surveys for lead-based paint, asbestos-containing materials, or other hazardous building materials in the project site structure. Prior to site demolition, the project site structure should be surveyed for hazardous building materials. If hazardous building materials are present in the project site structure, they should be removed and disposed of in accordance with federal, state, and local regulations prior to site demolition.

Based on the results of this Phase I ESA, GeoDesign recommends conducting a Phase II ESA at the project site to evaluate the current extent and magnitude of the soil contamination associated with the USTs formerly located on the project site. The analytical results from the Phase II ESA will be compared to current applicable DEQ RBCs to evaluate risk to human health. The Phase II ESA will also include a clean fill evaluation to evaluate the quantity of soil that may need to be disposed of as solid waste if exported during future redevelopment. In addition, the Phase II ESA will include a geophysical survey to attempt to locate the decommissioned in-place UST as well as evaluate the potential presence of undocumented USTs located on the project site.

After completion of the Phase II ESA, GeoDesign recommends preparing a Soil Management Plan for the management of known and potentially undocumented impacted soil at the project site. The site-specific Soil Management Plan will provide guidance to future earthwork contractors on the proper identification, management, handling, and disposal of contaminated soil that may be encountered during site redevelopment.

1.0 INTRODUCTION

This report summarizes the results of a Phase I ESA of the Modera Morrison property located at 1120 SE Morrison Street in Portland, Oregon (project site). The project site includes Tax Lot 5100 of Multnomah County Tax Map 1S1E02BA, consists of 0.86 acre, and is currently occupied by a 19,593-square-foot commercial structure and an asphalt-paved parking lot. The project site is shown relative to surrounding physical features on Figure 1. The project site layout and surrounding properties are shown on Figure 2. GeoDesign's firm profile and resumes of project personnel are presented in Appendix A. Acronyms and abbreviations used herein are defined above, immediately following the Table of Contents.

Phase I ESAs have a limited viability as specified in Section 4.6 "Continued Viability of the Site Assessment" of ASTM E1527-13. According to ASTM E1527-13, a Phase I ESA is valid for a period of 180 days. The Phase I ESA viability can be extended by 180 days by updating the assessment within one year of the initial assessment. If more than one year passes, a new Phase I ESA will need to be completed in order to qualify for Landowner Liability Protections under CERCLA. **On the basis of the data collection dates, this Phase I ESA report is considered valid through September 8, 2019.**

2.0 PURPOSE

2.1 PROTECTION FROM CERCLA LIABILITY

One purpose for conducting a Phase I ESA is to undertake all appropriate inquiries into prior ownership and uses of a property so that a prospective purchaser may potentially claim protection from CERCLA and/or state liability as an innocent landowner, a bona fide prospective purchaser, or a contiguous property owner. The standards and practices for all appropriate inquiries are specified in Title 40, Chapter I of CFR Part 312 and ORS 465. The inquiry must be conducted by an environmental professional to identify conditions indicative of releases and threatened releases of hazardous substances as defined in CERCLA Section 101(22). If the prospective purchaser is the recipient of an EPA Brownfields grant, the inquiry must also identify conditions indicative of releases and threatened releases of petroleum and petroleum products and controlled substances as defined in 21 U.S. Code 802. These standards and practices do not require the identification of quantities of hazardous substances, petroleum and petroleum products, and controlled substances that, because of said quantity, generally would not pose a threat to human health or the environment.

2.2 IDENTIFICATION OF RECOGNIZED ENVIRONMENTAL CONDITIONS

Another purpose for conducting a Phase I ESA is to identify RECs in connection with a property as they pertain to ASTM E1527-13. This practice is intended for use by parties who wish to assess the environmental condition of a property by taking into account commonly known and reasonably ascertainable information. Although conformance with ASTM E1527-13 constitutes all appropriate inquiry as described in Section 2.1, the standard is intended primarily as an approach to identify RECs in connection with a property. A REC is defined by the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment, (2) under conditions indicative of a release to the environment, or (3) under conditions that pose a material threat of a future release to the

environment. RECs do not include de minimis conditions that do not generally present a risk to public health or the environment and would not be the subject of legal enforcement if brought to the attention of appropriate governmental agencies.

A CREC is defined by ASTM E1527-13 as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. Examples of required controls include property use restrictions, activity and use limitations, institutional controls, and engineering controls. A condition considered by the environmental professional to be a CREC is considered a REC.

An HREC is defined by ASTM E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls such as property use restrictions, activity and use limitations, institutional controls, and engineering controls. An HREC is not considered a REC. Before calling the past release an HREC, the environmental professional must determine whether the past release is a REC at the time the Phase I ESA is conducted (for example, if there has been a change in regulatory criteria). If the environmental professional considers the past release to be a REC, such as not meeting regulatory standards for unrestricted use in place at the time the Phase I ESA is conducted, the condition shall be considered a REC.

3.0 SCOPE OF SERVICES

The scope of services performed for this project was conducted in conformance with the standards and practices for all appropriate inquiries specified in 40 CFR Part 312 and the scope and limitations of ASTM E1527-13. The specific scope of services performed included the following:

- Reviewed a current USGS topographic map to identify the physical setting of the project site.
- Reviewed federal, tribal, state, and local environmental records for listings of known or suspected environmental conditions at the project site or nearby properties as specified in 40 CFR Part 312 and ASTM E1527-13.
- Reviewed reasonably ascertainable standard historical sources, including aerial photographs, USGS topographic maps, reverse city directories, fire insurance maps, online property information (including available building department records, property tax information, and zoning/land use records), and other historical sources as appropriate, to identify development history on and adjacent to the project site relative to the possible use, generation, storage, release, or disposal of hazardous substances.
- Conducted a DEQ file review regarding known environmental record listings of known environmental conditions at the project site.
- Interviewed the current owner of the project site and state and local government officials regarding their knowledge of the project site.

- Conducted a visual reconnaissance of the project site and adjacent properties to obtain information indicating the likelihood of identifying RECs concerning the properties.
- Prepared this report that presents our findings and provides conclusions and recommendations.

The scope of services was limited to only the items listed above. This project did not include completion of an environmental compliance audit; an evaluation for the presence of PCBs in light ballasts; a survey for asbestos, lead-based paint, radon gas, toxic mold, biological pollutants, or urea-formaldehyde insulation; or a wetlands determination or delineation.

4.0 PROJECT SITE AND VICINITY DESCRIPTION

Information concerning the physical setting of the project site and vicinity is based on a review of the USGS 7.5-minute Portland, Oregon, topographic quadrangle map; information provided by EDR of Shelton, Connecticut; and observations made during a site reconnaissance conducted on March 20, 2019 and April 26, 2019

The project site encompasses 0.86 acre at 1120 SE Morrison Street in Portland, Oregon. The project site is currently owned by Campf Properties Limited Partnership and developed with a 19,593-square-foot commercial structure and an asphalt-paved parking lot. The project site is currently occupied by A&S Marketing and AJP Northwest and consists of office space and a warehouse for the storage and sale of paper products, janitorial supplies, and tobacco products. The project site includes Tax Lot 5100 in the northeast quarter of the northwest quarter of Section 2, Township 1 South, Range 1 East of the Willamette Meridian.

The project site is situated at an elevation of approximately 70 feet above MSL. The topography of the project site slopes slightly downward to the west. Based on a review of previous reports and topographic maps for the area, shallow groundwater beneath the project site is expected to be present at a depth of 30 to 40 feet BGS and is anticipated to flow to the west towards the Willamette River.

Land use in the vicinity of the project site is primarily commercial. According to the City of Portland Planning Department, the project site is zoned Central Employment (EX). Properties surrounding the project site are zoned Central Employment (EX) and Commercial Mixed Use 2 (CM2).

5.0 USER-PROVIDED INFORMATION

The purpose of this section is to describe information provided by the user of this report (Mill Creek Residential Trust) that was considered in the evaluation of potential RECs in connection with the project site.

The user was provided with a Phase I ESA User Questionnaire and was asked to provide the following information as described in ASTM E1527-13, Section 6. The user questionnaire information was provided by Cassidy Bolger of Mill Creek Residential Trust. The completed Phase I ESA User Questionnaire is presented in Appendix B.

5.1 USER QUESTIONNAIRE RESPONSES

Is the user aware of any environmental cleanup liens against the project site that are filed or recorded under federal, tribal, state, or local law?	No
Is the user aware of any Activity and Use Limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the project site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?	No
Does the user have any specialized knowledge or experience related to the project site or nearby properties?	No
Based on the user's knowledge and experience related to the project site, are there any obvious indicators that point to the presence or likely presence of contamination at the project site?	No
Does the user know the past uses of the project site?	No
Does the user know of spills or other chemical releases that have taken place at the project site?	No
Does the user know of specific chemicals that are present or once were present at the project site?	No
Does the user know of any environmental cleanups that have taken place at the project site?	No

6.0 PREVIOUS DOCUMENTS

GeoDesign reviewed previous environmental documents regarding the project site. The findings and conclusions of the following documents are summarized in the following sections:

- Letter *Re: Tank Removal – AJP, Facility #6680*, prepared by O'Sullivan Construction, Inc., dated July 29, 1991
- Letter *Re: AJP Tank Removal and Contamination*, prepared by O'Sullivan Construction, Inc., dated April 30, 1992
- Letter *Re: Heating Oil Underground Storage Tank Decommissioning; 1120 SE Morrison Street, Portland, Oregon 97214; Trackit Number 1090867, NRC Job Number 108524,* prepared by NRC, dated December 20, 2016
- Letter *Re: UST Decommissioning and Risk-Based Cleanup for H/O UST; Property Located at 1120 SE Morrison Street, Portland, OR; DEQ File No. 26-16-1462,* prepared by K&S Environmental, Inc. (K&S), dated April 17, 2017

6.1 O'SULLIVAN CONSTRUCTION, INC. (1991)

In 1991 O'Sullivan Construction, Inc. decommissioned two 1,000-gallon gasoline USTs on the northwestern portion of the project site. Approximately 100 cubic yards of contaminated soil were excavated and stored on site. Petroleum hydrocarbons were not detected above laboratory reporting limits in confirmation soil samples collected from the limits of the excavation. O'Sullivan Construction, Inc. indicated that the contaminated soil would be treated on site before being taken off site for disposal. DEQ assigned LUST File No. 26-91-0267 to the incident in 1991.

6.2 O'SULLIVAN CONSTRUCTION, INC. (1992)

In their 1992 letter, O'Sullivan Construction, Inc. indicated that the contaminated soil from the release associated with the two 1,000-gallon gasoline USTs (LUST File No. 26-91-0267) was moved behind the project site structure on SE 11th Avenue and SE Morrison Street and spread in a 6-inch layer and covered with Visqueen and surrounded by hay bales. The soil was left undisturbed for three months and later sampled and tested for gasoline-range hydrocarbons. Gasoline-range hydrocarbons were not detected above laboratory reporting limits. The final off-site disposition of the treated soil was not documented. DEQ issued an NFA determination for LUST File No. 26-91-0267 in October 1996.

6.3 NRC (2016)

In November 2016 a 1,000-gallon heating oil UST was discovered beneath the sidewalk adjacent to the southwest corner of the project site during ROW construction activities. The UST was damaged by excavation equipment and approximately 20 gallons of heating oil were released to the subsurface. The UST was subsequently decommissioned by removal. Field evidence of petroleum impacts was observed in the limits of the excavation. Approximately 27.28 tons of contaminated soil were excavated from the vicinity of the former heating oil UST and transported to Waste Management's Hillsboro landfill. Soil samples were collected from the limits of the excavation and analyzed for diesel- and oil-range petroleum hydrocarbons. Oil-range hydrocarbons were not detected above laboratory reporting limits in the soil samples submitted for chemical analysis. Diesel-range hydrocarbons were detected in the soil samples submitted for chemical analysis at a maximum concentration of 10,900 mg/kg. This concentration exceeds the DEQ *Soil Ingestion, Dermal Contact, and Inhalation* RBCs for residential and urban residential receptors. Groundwater was not encountered in the excavation during decommissioning activities. NRC reported the release to DEQ, and LUST File No. 26-16-1462 was assigned to the incident. NRC suggested further action was necessary to address the soil contamination still in place within the area of the former heating oil UST.

6.4 K&S (2017)

In April 2017 K&S conducted soil sampling in the vicinity of the former heating oil UST located beneath the sidewalk adjacent to the southwest corner of the project site. Five borings were installed to a depth of 15 feet BGS, and soil samples were collected from between 9 and 15 feet BGS. Diesel-range hydrocarbons were detected in 3 of the 11 soil samples submitted for chemical analysis at a maximum concentration of 1,980 mg/kg at 13 feet BGS. This concentration exceeds the DEQ *Soil Ingestion, Dermal Contact, and Inhalation* RBC for residential receptors. One soil sample was submitted for chemical analysis of BTEX and PAHs. BTEX and PAHs were not detected at concentrations greater than applicable RBCs. Based on the analytical results of the soil investigation, K&S concluded that the concentrations of the remaining diesel-contaminated soil were below applicable DEQ RBCs at the time of the investigation and that the release associated with LUST File No. 26-16-1462 appeared to qualify for regulatory closure. DEQ issued an NFA determination for LUST File No. 26-16-1462 in June 2016 following review of the report submitted by K&S.

7.0 ENVIRONMENTAL RECORDS REVIEW

Federal, tribal, state, and local environmental records and databases were compiled according to 40 CFR Part 312 and ASTM E1527-13 for the project site and those facilities that currently or previously have occupied properties within the specified search distance from the project site. Information contained in the records and databases was reviewed by GeoDesign to evaluate the potential for environmental impacts to the project site. Local environmental databases, including City of Portland Fire Bureau and PBOT ROW records, were also reviewed. The EDR Radius Map Report is presented in Appendix C.

7.1 PROJECT SITE

Based on our review of the EDR Radius Map Report, the project site (listed as Bernstein Brothers and AJP) was listed on the DEQ LUST database (LUST File Nos. 26-91-0267 and 26-16-1462), DEQ RGA LUST database, DEQ UST database (UST Facility I.D. 6680) and EPA FINDS database. The DEQ LUST database contains listings of sites with reported leaking UST incidents. The DEQ RGA LUST database contains a list of leaking UST incidents derived from historical databases and includes many records that no longer appear in current government lists. The DEQ UST database includes a listing of facilities with registered USTs. The EPA FINDS database is an inventory or reference list and does not imply a release or REC at the project site.

LUST File No. 26-91-0267 was established in 1991 after soil contamination was encountered during decommissioning of two 1,000-gallon gasoline USTs located in the northwestern portion of the project site. Approximately 100 cubic yards of gasoline-contaminated soil were removed from the excavation and treated on site. The final disposal location of the soil was not documented. Petroleum hydrocarbons were not detected above laboratory reporting limits in confirmation soil samples collected from the limits of the excavation. Groundwater was not encountered during excavation. DEQ issued an NFA determination for LUST File No. 26-91-0267 in 1996. In our professional opinion, LUST File No. 26-91-0267 represents an HREC at the project site. Information obtained from DEQ pertaining to LUST File No. 26-91-0267 is presented in Appendix C.

LUST File No. 26-16-1462 was established after soil contamination was encountered in 2016 after ROW construction activities damaged a heating oil UST located beneath the sidewalk adjacent to the southwest corner of the project site. Approximately 20 gallons of heating oil were released to the subsurface. In November 2016 the UST was decommissioned by removal. Field evidence of petroleum contamination was observed in soil at the limits of the excavation. A total of 27.28 tons of contaminated soil were excavated from the vicinity of the former heating oil UST and transported to Waste Management's Hillsboro Landfill. Soil samples were collected from the limits of the excavation and analyzed for diesel- and oil-range petroleum hydrocarbons. Oil-range hydrocarbons were not detected in any of the soil samples submitted for chemical analysis. Diesel-range hydrocarbons were detected in all of the soil samples submitted for chemical analysis. The maximum detected concentration of diesel-range hydrocarbons was 10,900 mg/kg. Groundwater was not encountered in the excavation. NRC suggested further action was necessary to address the soil contamination still in place within the area of the former heating oil UST.

Information obtained during GeoDesign's DEQ file review indicated that in April 2017 K&S conducted additional soil sampling in the vicinity of the former heating oil UST. Five borings were installed to a depth of 15 feet BGS, and soil samples were collected from between 9 to 15 feet BGS. Diesel-range hydrocarbons were detected in 3 of the 11 samples submitted for chemical analysis. The maximum detected concentration of diesel-range hydrocarbons was 1,980 mg/kg at 13 feet BGS. One soil sample was submitted for chemical analysis of BTEX and PAHs. BTEX compounds and PAHs were not detected at concentrations greater than the applicable DEQ RBCs. Following the additional investigation by K&S, DEQ closed File No. 26-16-1462 in June 2017. Although the 2017 analytical results indicate that residual contaminant concentrations are less than applicable DEQ RBCs, based on the elevated diesel-range hydrocarbons detected in 2016 and the lack of soil gas data, it is our professional opinion that the residual contaminated soil represents a REC at the project site. Information obtained from DEQ pertaining to LUST File No. 26-16-1462 is presented in Appendix C.

The project site was listed on the DEQ UST database as having three decommissioned USTs (UST Facility I.D. 6680). According to information obtained from a DEQ file review, two gasoline USTs were decommissioned by removal in 1991 (likely associated with LUST File No. 26-91-0267) and one UST was decommissioned in place in 1988. Detailed documentation regarding the former contents and location of the UST decommissioned in-place UST and soil sampling records were not identified during this assessment. Based on the limited information contained in the DEQ files, the decommissioned in-place UST on the project site represents a REC at the project site. The Information obtained from DEQ pertaining to UST Facility I.D. 6680 is presented in Appendix C.

See Section 6.0 for a summary of previous documents reviewed during this assessment.

7.2 SURROUNDING SITES

The EDR Radius Map Report identified 434 surrounding sites listed on one or more regulatory databases within the ASTM search distances. Based on changes in ownership, address, multiple regulatory listings, and multiple regulatory actions, two or more of the surrounding site listings may actually represent only one physical location. Therefore, the number of surrounding sites is likely less than reported by EDR. Based on local topography, the inferred direction of shallow groundwater flow, the regulatory status of the listed sites, the media impacted at the listed sites, and information contained in the regulatory databases, it is our professional opinion that 1 of the 434 sites represent a REC at the project site. This site (the Piacentini Property) and six additional listed sites in close proximity to the project site are discussed in the following sections.

7.2.1 Piacentini Property

The Piacentini Property is located at 1206 SE Belmont Street in Portland, approximately 130 feet southeast of the project site and upgradient of the project site relative to the inferred groundwater flow direction. The Piacentini Property was listed on the DEQ LUST database (LUST File No. 26-16-0816). The DEQ LUST database contains listings of sites with reported leaking UST incidents. According to information from DEQ's online database, soil and groundwater contamination was encountered during a site assessment in 2016. Two areas of contamination

were identified on the property: (1) the northern area in the vicinity of two 600-gallon USTs and one 300-gallon UST and (2) the southern area in the vicinity of one 600-gallon UST and a hydraulic hoist.

Several environmental investigations have been conducted at the Piacentini Property, including soil, groundwater, and soil gas sampling. During an initial sampling event in May 2016, gasoline-range hydrocarbons were detected in the northern area at concentrations up to 2,880 mg/kg. Diesel- and oil-range hydrocarbons were detected in the southern area at concentrations up to 1,790 mg/kg and 2,850 mg/kg, respectively. VOCs, PAHs, and metals were also detected in soil samples. Petroleum hydrocarbons were not detected above the laboratory reporting limits in groundwater samples; however, low levels of VOCs (including ethylbenzene, total xylenes, PCE, 1,2,4-TMB, and 1,3,5-TMB) and PAHs (including naphthalene) were detected below applicable DEQ RBCs. DEQ stated that based on information from a nearby site, the PCE detected in the groundwater samples may be from multiple releases in the area.

An additional investigation was conducted in September 2016 during UST decommissioning activities. Based on analytical laboratory results from confirmation soil samples collected from the northern area, up to 13,500 mg/kg of gasoline-range hydrocarbons remain in place at 6 feet BGS. Based on analytical laboratory results from confirmation soil samples collected from the southern area, up to 17,300 mg/kg of diesel-range hydrocarbons and 131 mg/kg of oil-range hydrocarbons remain in place at 10 feet BGS.

In April 2017 additional soil and soil gas samples were collected in the vicinity of the northern area in an attempt to delineate the extent of petroleum-contaminated soil located in the ROW of SE Belmont Street and to evaluate the risk for vapor intrusion into buildings. Up to 3,810 mg/kg of gasoline-range hydrocarbons and 341 mg/kg of diesel-range hydrocarbons were detected in one boring advanced to 11 feet BGS in SE Belmont Street. Numerous VOCs were also detected at concentrations ranging from 4.11 to 209 mg/kg. Up to 3,650,000 µg/m^3 of gasoline-range hydrocarbons and up to 95.1 µg/m^3 of benzene were detected in soil gas samples. These concentrations exceed the DEQ *Vapor Intrusion into Buildings* RBCs for residential, urban residential, and occupational receptors and the DEQ *Vapor Intrusion into Buildings* RBC for residential receptors, respectively. Two additional soil gas samples were collected to determine the magnitude of benzene impacts. Benzene was not detected at a concentration greater than applicable DEQ RBCs.

DEQ issued a memorandum in September 2018 recommending a conditional NFA determination for the Piacentini Property contingent upon the development of a Contaminated Media Management Plan and the restriction of residential, urban residential, and occupational use of the property unless the owner conducts further evaluation to demonstrate there is no unacceptable risk for vapor intrusion into future structures constructed on the property. The LUST file associated with the Piacentini Property is currently active.

Based on the inferred direction of groundwater flow, the media impacted at the Piacentini Property, and information contained in the regulatory database, it is our professional opinion that the Piacentini Property represents a REC at the project site.

7.2.2 Modera Buckman

The Modera Buckman site is located at 909 SE 12th Avenue in Portland, approximately 100 feet south of the project site and cross gradient of the project site relative to the inferred groundwater flow direction. The Modera Buckman site was listed on the DEQ ECSI database (ECSI File No. 6222). The DEQ ECSI database contains listings of sites that are or may be contaminated and may require cleanup. According to information from DEQ's online database, soil and groundwater contamination was encountered during a site investigation in 2016. The contamination was associated with USTs and hydraulic hoists associated with historical vehicle repair and maintenance shops located on the property. Petroleum hydrocarbons were detected in soil samples submitted for chemical analysis, and PCE was detected in groundwater samples at concentrations up to 2.25 µg/L. Contaminated soil was excavated in January 2018, and confirmation soil samples indicated that diesel- and oil-range hydrocarbons were not detected above laboratory reporting limits. DEQ issued an NFA determination for the site in September 2018.

Based on the inferred direction of groundwater flow, the regulatory status of the Modera Buckman site, the media impacted at the Modera Buckman site, and information contained in the regulatory database, it is our professional opinion that the Modera Buckman site does not represent a REC at the project site.

7.2.3 Gardner and Ranchers

The Gardner and Ranchers site is located at 1004 – 1036 SE Belmont Street in Portland, approximately 150 feet southwest of the project site and downgradient of the project site relative to the inferred groundwater flow direction. The Gardner and Ranchers site was listed on the DEQ ECSI database (ECSI File No. 4073), DEQ LUST database (LUST File No. 26-02-0032), and DEQ VCP database. The DEQ ECSI database contains listings of sites that are or may be contaminated and may require cleanup. The DEQ LUST database contains listings of sites with reported leaking UST incidents. The DEQ VCP database contains a listing of sites that have entered into an agreement with DEQ to voluntarily address contamination associated with the property.

According to information from DEQ's online databases, soil and groundwater contamination was encountered during UST decommissioning in 2002. Soil samples were collected from the limits of the excavation in the southeastern portion of the property. Gasoline- and diesel-range hydrocarbons were detected at concentrations up to 1,210 mg/kg and 1,010 mg/g, respectively. The maximum concentration of gasoline-range hydrocarbons exceeded the DEQ *Leaching to Groundwater* RBC for residential and occupational receptors. Oil-range hydrocarbons were not detected above laboratory reporting limits. VOCs and PAHs were not detected at concentrations above applicable DEQ RBCs. Gasoline-range hydrocarbons were detected at a concentration of 1,850 µg/L from a groundwater sample collected from the excavation. Low levels of VOCs and PAHs were also detected in groundwater collected from the excavation. Three groundwater monitoring wells were subsequently installed in 2003, and VOCs and PAHs associated with petroleum hydrocarbons were not detected above the laboratory reporting limits during four quarters of compliance monitoring. After developing a Conceptual Site Model and conducting a beneficial water use survey and an analysis of current and future land uses, DEQ issued a

conditional NFA determination for LUST File No. 26-02-0032 in May 2005 contingent upon the prohibition of beneficial groundwater use on the property and the restriction of the property for residential purposes.

Additional soil and groundwater investigations occurred in 2013 through 2015 in preparation for site redevelopment and excavation to approximately 20 to 30 feet BGS. Analytical results from composite soil samples indicated that the material was suitable for export as clean fill, with the exception of soil in the southeast corner of the property and three other small areas. Soil not suitable for use as clean fill was sent to appropriate disposal locations. DEQ issued an NFA determination for ECSI File No. 4073 in June 2016.

Based on the inferred direction of shallow groundwater flow, the regulatory status of the Gardner and Ranchers site, the media impacted at the Gardner and Ranchers site, and information contained in the regulatory databases, it is our professional opinion that the Gardner and Ranchers site does not represent a REC at the project site.

7.2.4 Gen44 LLC

The Gen44 LLC site is located at 1205 SE Morrison Street in Portland, approximately 125 feet northeast of the project site and upgradient of the project site relative to the inferred groundwater flow direction. The Gen44 LLC site was listed on the DEQ LUST database (LUST File No. 26-17-0584). According to information from DEQ's online databases, soil contamination was encountered during UST decommissioning in May 2017. Gasoline-, diesel-, and oil-range hydrocarbons were not detected above laboratory reporting limits in confirmation soil samples collected from the limits of the excavation. DEQ issued an NFA determination for the site in December 2017.

Based on the regulatory status of the Gen44 LLC site, the media impacted at the Gen44 LLC site, and information contained in the regulatory database, it is our professional opinion that the Gen44 LLC site does not represent a REC at the project site.

7.2.5 Multnomah County Elections

The Multnomah County site is located at 1040 SE Morrison Street in Portland, approximately 60 feet west of the project site and downgradient of the project site relative to the inferred groundwater flow direction. The Multnomah County site was listed on the DEQ LUST database (LUST File No. 26-97-0232). According to information from DEQ's online database, soil contamination was encountered during decommissioning of a UST in 1997. Oil contamination was detected at a maximum concentration of 630 ppm. BTEX and halogenated VOCs were not detected above laboratory reporting limits. Leachable cadmium and lead were detected below their most stringent cleanup criteria at concentrations of 0.03 mg/L and 0.06 mg/L, respectively. While the detected concentration of oil was above the established cleanup level, DEQ concluded that the absence of waste oil constituents in excess of risk-based cleanup levels indicated that the remaining contamination could remain in place. DEQ issued an NFA determination for the project in 2001.

Based on the inferred direction of shallow groundwater flow, the regulatory status of the Multnomah County site, the media impacted at the Multnomah County site, and information contained in the regulatory database, it is our professional opinion that the Multnomah County site does not represent a REC at the project site.

7.2.6 Heating Oil Tanks

Heating oil tanks were formerly located at 1117 SE Morrison Street and 1200 SE Morrison Street in Portland. The heating oil tank sites were listed on the DEQ LUST database (LUST File Nos. 26-07-1838 and 26-06-2041, respectively).

The property located at 1117 SE Morrison Street is approximately 80 feet north and cross gradient of the project site relative to the inferred groundwater flow direction. According to information from DEQ's online database, soil contamination was encountered during UST decommissioning in 2007. DEQ issued an NFA determination for the site in 2008.

The property located at 1200 SE Morrison Street is approximately 100 feet east and upgradient of the project site relative to the inferred groundwater flow direction. According to information from DEQ's online database, soil contamination was encountered during a site assessment in 2006. DEQ issued an NFA determination for the site in 2007.

Based on the inferred direction of shallow groundwater flow, the regulatory status of the heating oil tank sites, the media impacted at the heating oil tank sites, and/or information contained in the regulatory database, it is our professional opinion that the heating oil tank sites do not represent a REC at the project site.

7.3 ORPHAN SITES

Due to poor or inadequate address information, EDR was unable to successfully map 16 facilities identified on several environmental databases. However, enough information was available to ascertain the general location of these orphan facilities relative to the project site and, in some cases, the status of the investigations concerning these orphan sites. Based on the location of the orphan sites, the inferred direction of shallow groundwater flow, the regulatory status of the listed sites, the media impacted at the listed sites, and information contained in the regulatory databases, it is our professional opinion that these orphan sites do not represent a REC at the project site.

7.4 CITY OF PORTLAND FIRE BUREAU

City of Portland Fire Bureau UST records were searched on April 26, 2019 by GeoDesign personnel. The following City of Portland Fire Bureau permits associated with the project site were reviewed:

- Permit No. 43807, dated October 16, 1948, notes the installation of a UST in the "yard" located at 807 SE 12th Avenue.
- Permit No. 23458, dated May 11, 1946, notes the installation of an integral AST located at 821 SE 21st Avenue. The AST fueled the oil burner for an oil stove.

Based on historical permits obtained from the City of Portland Fire Bureau and our review of Sanborn fire insurance maps and historical property information (see Section 8.0), one heating oil UST and one heating oil AST were historically located on the project site. The potential for subsurface impacts associated with the historical heating oil tanks on the project site represents a REC at the project site. The City of Portland Fire Bureau records are presented in Appendix C.

7.5 PBOT

GeoDesign contacted PBOT on March 13 and April 29, 2019 for information regarding potential USTs in the ROWs adjoining the project site. Based on their review, the following PBOT permits are associated with the project site:

- Permit No. TR-16-160, dated November 9, 2016, notes UST decommissioning by removal of a heating oil UST located beneath the sidewalk adjacent to the southwest corner of the project site.
- Permit No. TR-17-044, dated November 5, 2017, notes the drilling of four test bores in the vicinity of the former heating oil UST located beneath the sidewalk adjacent to the southwest corner of the project site.

These records relate to the heating oil UST associated with LUST File No. 26-16-1462 and further described in Sections 6.3, 6.4, and 7.1. The PBOT permit records are presented in Appendix C.

8.0 PROJECT SITE HISTORY AND BACKGROUND

Reasonably ascertainable information concerning the history and background of the project site begins in 1889 and includes aerial photographs, USGS topographic maps, reverse city directories, Sanborn fire insurance maps, online property information (including available building department records, property tax information, and zoning/land use records), and personal knowledge of individuals familiar with the project site.

Historical aerial photographs of the project site were obtained from EDR and reviewed by GeoDesign. The scale of the photographs reviewed allowed for the interpretation of general site development/configuration but did not allow for the identification of specific project site features. Aerial photographs were reviewed for the following years: 1936, 1948, 1951, 1955, 1960, 1963, 1970, 1975, 1981, 1994, 2000, 2005, 2009, 2012, and 2016. The historical aerial photographs are presented in Appendix D.

Historical topographic maps of the project site were obtained from EDR and reviewed by GeoDesign. Topographic maps were reviewed for the following years: 1897, 1905, 1939/40, 1954, 1961, 1970, 1977/78, 1995, and 2014. The historical topographic maps are presented in Appendix D.

Reverse city directories for the project site and adjacent properties were obtained from EDR and reviewed by GeoDesign. Please note that in some locations, particularly in urban areas, addresses for a particular property may change over time. Based on a review of Sanborn fire insurance maps and historical property information, the following addresses historically correspond to the project site: 129 Belmont (1909), 131 Belmont (1909), 533 Belmont (1924),

535 Belmont (1901-1924), 140 E 11th Street (1924-150), 150 E 11th Street (1924), 154 E 11th Street (1909-1924), 141 E 12th Street (1909-1924), 143 E 12th Street, 145 E 12th Street (1909-1924), 147 E 12th Street (1924), 149 E 12th Street (1909-1924), 155 E 12th Street (1909), 526 E Morrison (1909-1924), 534 E Morrison (1909), 832 SE 11th Avenue (1950-1969), 822 SE 11th Avenue (1950-1969), 801 SE 12th Avenue (1950-1969), 807 SE 12th Avenue (1950), 817 SE 12th Avenue (1950-1969), 821-823 SE 12th Avenue (1950-1969), and 1135 SE Belmont (1950-1969). The city directories were reviewed (if available) at approximately five-year intervals for the years spanning 1924 through 2014. The EDR City Directory Report is presented in Appendix D.

Sanborn fire insurance maps for the project site were obtained from EDR and reviewed by GeoDesign. Sanborn fire insurance maps were reviewed for the following years: 1889, 1901, 1909, 1924, 1950, and 1969. The Sanborn fire insurance maps are presented in Appendix D.

Online property information for the project site and select adjacent properties was reviewed by GeoDesign. The online property information is presented in Appendix D.

8.1 PROJECT SITE

Based on the review of historical sources cited in Section 8.0, we have identified the following developmental history of the project site:

Year	Observations	Source
1889 through 1901	Until sometime prior to 1901 the project site was vacant land. By 1901 a residence was constructed on the southeastern portion of the project site.	• Topographic Map • Sanborn Fire Insurance Maps
1909 through 1963	By 1909 additional residences and delivery flats were constructed on the eastern portion of the project site and a telephone office was constructed on the northwestern portion of the project site. By 1924 a pie bakery was constructed in the southwestern portion of the project site that included an office, loading shed, cold storage room, and restroom. By 1950 the bakery expanded into the former telephone office and into the delivery flats to the east to include warehouse space.	• Aerial Photographs • Topographic Maps • City Directories • Sanborn Fire Insurance Maps
1969 through 2019	By 1969 the residences and delivery flats on the eastern portion of the project site were demolished and a parking lot was constructed. By 2005 the project site was occupied by AJP Northwest and A&S Marketing. The project site has remained relatively unchanged since that time.	• Aerial Photographs • Topographic Maps • City Directories • Sanborn Fire Insurance Map • Site Reconnaissance

Based on our review of historical sources, it is our opinion that the historical use of the project site does not represent a REC at the project site. However, during our review of historical aerial photographs a suspect circular feature was observed in the east-central portion of the project site parking lot. We recommend that this area be further evaluated using geophysical survey methods.

8.2 ADJOINING SITES

Based on the review of historical sources cited in Section 8.0, we have identified the following developmental history of properties adjoining the project site:

Year	Observations	Source
1889 through 1924	By 1889 the ROWs adjoining the project site were present in their current approximate configurations and adjoining properties were vacant or residential land. By 1901 St. David's Episcopal Church was constructed east of the project site. By 1909 Yale Laundry and a wagon stable were constructed west of the project site. By 1924 the wagon stable was demolished and a machine shop and a print shop were constructed west of the project site. By 1924 a public library was constructed north of the project site.	• Topographic Maps • Sanborn Fire Insurance Maps
1935 through 1955	By 1935 the property southwest of the project site was developed with a warehouse-type structure and occupied by Gardner and Ranchers and fuel stations were constructed east and southeast of the project site. By 1950 commercial development increased on adjacent properties, including a fuel station and a dry ice factory, north of the project site and a Multnomah County Road Department facility, including a motorcycle sales and service shop, a motorcycle repair shop, a radio shop, and a wash rack, west of the project site. Sometime after 1950 Yale Laundry vacated the building west of the project site.	• Aerial Photographs • Topographic Maps • City Directories • Sanborn Fire Insurance Map
1960 through 2000	By 1960 St. David's Episcopal Church was demolished and an auto sales lot was constructed. By 1960 the property south of the project site was developed with a commercial structure. By 1969 a fuel station was constructed northeast of the project site. By 1994 the fuel station southeast of the project site was demolished.	• Aerial Photographs • Topographic Maps • City Directories • Sanborn Fire Insurance Map
2005 through 2019	By 2005 the building located southwest of the project site was demolished. From 2012 through the present mixed-use development has increased on properties south and southwest of the project site. The adjoining properties to the north, west, and east of the project site have remained relatively unchanged since 2005.	• Aerial Photographs • Topographic Map • City Directories • Site Reconnaissance

Based on our review of historical sources, it is our opinion that the historical use of the property located southeast of the intersection of SE Belmont Street and SE 12th Avenue (the Piacentini Property) as a fuel station represents a REC in connection with the project site.

9.0 SITE RECONNAISSANCE

GeoDesign conducted a reconnaissance of the project site on March 20, 2019 and April 26, 2019. The observations described in this section apply to the project site as it appeared on those days. The site reconnaissance was performed to observe the current condition of the project site and obtain information indicating the likelihood of identifying RECs in connection with the project site. Access to the project site and its structure was unlimited. The adjoining properties were also observed from the boundaries of the project site as part of the site reconnaissance. A site plan is presented on Figure 2. Photographs of the project site were taken to document observations made during the site reconnaissance and are presented on Figures 3 through 5.

9.1 GENERAL PROJECT SITE USE

The project site consists of a 19,593-square-foot commercial structure and an asphalt-paved parking lot. The commercial structure is currently occupied by A&S Marketing and AJP Northwest and consists of office space; warehouse space for the storage and sale of paper products, janitorial supplies, and tobacco products; and restrooms.

9.2 PROJECT SITE OBSERVATIONS

Features of Concern	Observations
Project Site Structures	See Section 9.2.1
Project Site Drainage	See Section 9.2.2
Potable Water Supply	See Section 9.2.3
Sewage Disposal System	See Section 9.2.4
Roads	See Section 9.2.5
Hazardous Substances and Petroleum Products	See Section 9.2.6
ASTs and/or USTs	See Section 9.2.7
Emergency Generators	Not observed
Hydraulic Lifts	Not observed
Wash-Down Areas	Not observed
Vehicle Repair or Maintenance	Not observed
Sumps, Cisterns, Catch Basins, and Drywells	See Section 9.2.8
Oil/Water Separators	Not observed
Strong, Pungent, or Noxious Odors	Not observed
Pools of Liquid	Not observed
Drums, Barrels, or Containers (5 gallons or larger capacity)	Not observed
Unidentified Substance Containers	Not observed
Potential PCB-Containing Equipment	See Section 9.2.9
Pits, Ponds, and Lagoons	Not observed
Stained Soil or Stained Pavement	Not observed
Stressed Vegetation	Not observed
Solid Waste or Fill Material	Not observed
Wastewater	Not observed
Wells	Not observed

Features of Concern	Observations
Historical Septic Systems/Cesspools	Not observed
Heating and Cooling Systems	See Section 9.2.10
Interior Stains or Corrosion	Not observed
Interior Drains or Sumps	See Section 9.2.11

9.2.1 Project Site Structures

The project site structure is a 19,593-square-foot commercial building with office and warehouse space, including an attic and a basement with a concrete floor.

9.2.2 Project Site Drainage

Surface water at the project site is expected to flow into catch basins located in the parking lot on the eastern portion of the project site and the loading dock area on the northwestern portion of the project site. The catch basins reportedly drain to the City of Portland combined sewer system (see Section 10.3). Some surface water was observed in the catch basins located on the project site. Unusual sheens or odors were not observed.

9.2.3 Potable Water Supply

Potable water is supplied to the project site by City of Portland Water Bureau.

9.2.4 Sewage Disposal System

Sewage generated at the project site is discharged to the City of Portland Bureau of Environmental Services municipal sewer system. GeoDesign could not identify the year municipal sewer service became available at the project site. However, a "storm only" sewer connection permit (84686) dated August 2, 1967, was located that documents installation of a 6-inch lateral to the parking lot on the east side of the project site, 86 feet north of SE Belmont Street. The permit is presented in Appendix C.

9.2.5 Roads

Roads adjoining the project site include SE 12th Avenue to the east, SE Belmont Street to the south, SE 11th Avenue to the west, and SE Morrison Street to the north.

9.2.6 Hazardous Substances and Petroleum Products

Small-quantity containers of paint, cleaning chemicals, and anti-freeze coolant were observed throughout the project site. Evidence of leaks or spills were not observed in the vicinities of these containers.

9.2.7 ASTs and/or USTs

Evidence of two USTs was observed in the sidewalk along SE Belmont Street adjacent to the south of the project site, and evidence of one UST was observed in the parking lot on the eastern portion of the project site. The potential presence of USTs located on and adjacent to the project site represents a REC at the project site.

9.2.8 Sumps, Cisterns, Catch Basins, and Drywells

As described in Section 9.2.2, two catch basins were observed on the project site. One catch basin was observed near the center of the east parking lot and the other catch basin was

observed in the loading dock area in the northwest corner of the project site. The catch basins reportedly drain to the City of Portland combined sewer system (see Section 10.3). Some surface water was observed in the catch basins located on the project site. Unusual sheens or odors were not observed.

9.2.9 Potential PCB-Containing Equipment

Two pole-mounted transformers were observed immediately east of the eastern boundary of the project site. GeoDesign personnel could not determine if the transformers were labeled as containing "No PCBs." The transformers appeared to be in good condition, with no evidence of spills or leaks.

9.2.10 Heating and Cooling Systems

The project site structure is heated with a natural gas-fired furnace.

9.2.11 Interior Drains or Sumps

One interior floor drain was observed in the office basement and one interior floor drain was observed in the warehouse bathroom.

9.3 SURROUNDING PROPERTY USE

The project site is directly bound to the north by SE Morrison Street, across which is Buckman Veterinary Clinic and Plaid Pantry; to the east by SE 12th Avenue, across which is Northwest Fighting Arts and commercial and residential property; to the south by SE Belmont Street, across which is commercial/residential property; and to the west by SE 11th Avenue, across which is Multnomah County Elections. Evidence of adverse environmental conditions was not observed on adjacent properties.

10.0 INTERVIEWS

The project site is currently owned by Campf Properties Limited Partnership and occupied by A&S Marketing and AJP Northwest. GeoDesign interviewed the owner and state and local government officials during the course of this assessment. Information obtained from these interviews is presented in the following sections.

10.1 CURRENT OWNER

Alan Campf (property owner) completed a Phase I ESA Property Owner Questionnaire regarding the project site on March 14, 2019. Mr. Campf has been familiar with the project site for over 40 years. According to Mr. Campf, the project site was historically used for the storage and sale of Fuchs industrial lubricants, paper products, janitorial supplies, and tobacco products.
Mr. Campf is also aware of two gasoline USTs that were decommissioned by removal in 1991 and one heating oil UST that was decommissioned by removal in 2016. Mr. Campf does not have knowledge of the decommissioned in-place UST on the project site in 1988. According to documentation provided by Mr. Campf, DEQ has issued NFA determinations for the LUST files established to address the releases associated with these USTs (further described in Sections 6.0 and 7.1). Mr. Campf also identified a floor drain located in the warehouse bathroom. According to Mr. Campf, asbestos was discovered in flooring material of the office space.

10.2 CURRENT OR PAST OCCUPANT

At the request of the current owner, the current occupants of the project site were not interviewed.

10.3 STATE AND LOCAL GOVERNMENT OFFICIALS

Jennifer Claussen (state-wide LUST duty officer) was interviewed on March 20, 2019 regarding her knowledge of the project site. According to Ms. Claussen, DEQ has online records of three decommissioned USTs located on the project site. According to the online DEQ records, two USTs were decommissioned by removal in July 1991 and one UST was decommissioned in place in June 1988. Ms. Claussen indicated that she does not have any additional information regarding LUST File Nos. 26-91-0267 and 26-16-1462 since their closures in 1996 and 2017, respectively. Ms. Claussen did not have additional knowledge regarding the decommissioned in-place UST on the project site in 1988.

James Hyatt (engineering technician with the City of Portland Bureau of Environmental Services) was interviewed on April 4, 2109 regarding his knowledge of the catch basins located on the project site. According to Mr. Hyatt, the city has records of catch basins permitted on the project site that connect to the project site's sewer line and likely discharge to the city's combined sewer system.

11.0 DATA GAPS

At the request of the current owner, the current occupants of the project site were not interviewed. GeoDesign could also not identify the year municipal sewer service became available at the project site. It is our professional opinion that these data gaps are of low significance relative to our ability to identify RECs at the project site.

12.0 DECLARATIONS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR Part 312.10. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the project site. We developed and performed all the appropriate inquiries in accordance with the standards and practices set forth in 40 CFR Part 312.

13.0 LIMITATIONS

This Phase I ESA has been prepared for use by Mill Creek Residential Trust. GeoDesign makes no warranties or guarantees regarding the accuracy or completeness of information provided or compiled by others. The information presented in this report is based on the above-described research and two recent site visits. Information provided by others was relied on in our description of historical conditions and review of regulatory databases and files. The available data do not provide definitive information with regard to all past uses, operations, or incidents at the project site or adjacent properties. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property. There is always a potential that areas with contamination that were not identified during this

assessment exist at the project site or in the study areas. Further evaluation of such potential would require additional research, subsurface exploration, sampling, and/or testing.

Some substances may be present in the project site vicinity in quantities or under conditions that may have led or may lead to contamination of the project site but are not included in current local, state, or federal regulatory definitions of hazardous substances or do not otherwise present current potential liability. GeoDesign cannot be responsible if the standards of all appropriate inquiry or regulatory definitions of hazardous substance change or if you are required to meet more stringent standards in the future.

This report is not intended for use by others, and the information contained herein is not applicable to other sites. Reliance on this report by other parties is strictly at the risk of those parties, and GeoDesign will grant no third-party reliance unless specifically requested in writing by our client for whom this report was prepared.

Within the limitations of scope, schedule, and budget, our services have been executed in accordance with the generally accepted environmental science practices for Phase I ESAs in this area at the time this report was prepared. No warranty or other conditions, express or implied, should be understood.

APPENDIX A

GEODESIGN INC

FIRM PROFILE

Employee-owned and founded in 1997, GeoDesign provides geotechnical engineering, environmental, geological, mining, and pavement design consulting services from offices in Portland and Salem, Oregon; Vancouver, Seattle, Longview, and Tacoma, Washington; and Anaheim, California. Our team consists of more than 75 engineers, geologists, engineering geologists, environmental scientists, technical personnel, and administrative staff.

From planning and design through construction, we offer consulting services in support of commercial and residential developments, industrial facilities, property transactions, regulatory compliance, and transportation and water infrastructure systems. GeoDesign works on all phases of project development, including preliminary studies for due diligence, master planning studies, siting of new structures and utility and road alignments, regulatory studies (such as NEPA documents), comprehensive investigations for final geotechnical design, oversight of environmental clean-up activities, and construction observation and testing.

We value our client relationships and are dedicated to offering exemplary service. Our focus on communication and collaboration enables us to develop a targeted approach for our clients' project needs and objectives. In providing recommendations, we clearly present the issues, alternatives, and risks in order to assist our clients in making informed decisions. As a result, much of our business comes from repeat clients and referrals.

GEODESIGN INC

JASON O'DONNELL, RG, LG

Principal Geologist

Jason O'Donnell is a principal geologist with over 15 years of environmental assessment and remediation experience. He has managed a diverse range of environmental and water resource projects. Jason has experience in site reconnaissance; Level I and II hazardous materials corridor studies; monitoring well installations; UST decommissioning; subsurface investigations; remedial excavation sampling; air sparging and vapor extraction treatment systems; pumping tests; and electronic data acquisition, analysis, and database management.

Key Projects

- City of Tigard, Highway 99W to Railroad Corridor - Phase I; Tigard, OR
- Clackamas County, Southwest Connector Project; Clackamas, OR
- Clackamas County, Otty Street Realignment; Clackamas County, OR
- City of Portland Bureau of Environmental Services (BES), Interstate Facility Renovation (former Foundry facility); Portland, OR
- City of Portland BES, Phase II Sewer Rehabilitation Program - Rose City Park; Portland, OR
- Coos Head Hazardous Material Survey and Abatement; Charleston, OR
- The Abigail - Block 27; Portland, OR
- OHSU Collaborative Life Sciences Building; Portland, OR
- Washington County, Shadybook Landfill Reclamation; Washington County, OR
- Providence Health & Services, Various Facilities; OR and WA
- Parkrose School District, New Middle School; Portland, OR
- B&R Auto Wrecking Site; Portland, OR
- RS Davis/Portable Equipment Salvage Company Site; Clackamas, OR
- Esperanza Court Housing; Portland, OR
- Lake Oswego-Tigard Water Partnership, Water Supply System Expansion; Clackamas/Washington County, OR
- Washington County Facilities Management, Bridgeport Village (former Durham Quarry); Tigard/Tualatin, OR
- Proposed Rivers in Oregon City Development (Former Rossman Landfill); Oregon City, OR
- City of Salem, Minto Island Bicycle & Pedestrian Bridge; Salem, OR
- ODOT/City of Portland, N. Going Bike/Ped: N. Vancouver Avenue – N. Channel Avenue; Portland, OR
- Trust for Public Land, Bridal Veil Property; Bridal Veil, OR
- Trust for Public Land, Major Creek Parcels; Klickitat County, WA
- Clark County, 10th Avenue Improvements; Vancouver, WA
- 1238 Vandercook Way; Longview, WA
- English Pit Reclamation; Vancouver, WA
- City of Tukwila, East Marginal Way Stormwater Improvements; Tukwila, WA
- City of Seattle, Fire Station No. 20; Seattle, WA
- Catholic Charities of Spokane Building; Spokane, WA

GEODESIGN INC

KYLE R. SATTLER, LG

Senior Project Geologist

Kyle Sattler is a Senior Project Geologist with over 25 years of experience in a wide range of environmental, hydrogeologic, and geotechnical projects for private and public sector clients. His experience includes the investigation, evaluation, risk assessment, and remediation of numerous sites that have had impacted soil, sediment, groundwater, and surface water.

Kyle has extensive experience managing projects conducted under the Washington Department of Ecology's and Oregon Department of Environmental Quality's Voluntary Cleanup Programs. Project sites have included vacant lots, commercial properties, and highly industrialized facilities, as well as transportation corridors. Environmental tasks on transportation projects have ranged from simple re-pavement projects along specified roadway alignments to more complex projects involving reconstruction, road widening, utility improvements, and realignment. Many of Kyle's projects have involved implementing various types of soil remediation and groundwater treatment, and the application of risk-based protocols for site closure. Kyle was with GeoDesign from 2005 to 2009, and rejoined the firm in June 2017.

Key Projects

- Phillips 66, Site Investigations, OR and WA*
- NW Cornell Road Improvements; Tigard, OR
- SW Hall Boulevard and Highway 99W Intersection; Tigard, OR
- SW Greenburg Road/SW Main Street and Highway 99W Intersection; Tigard, OR
- Former Koch's Cleaners; Beaverton, OR
- Parr Lumber, Columbia East Business Park; Pasco, WA
- Former Summers Lane Service Station; Klamath Falls, OR
- Former Tube Specialties Site; Portland, OR
- Ross Island Sand & Gravel, Feasibility Study/Reclamation Support Services; Portland, OR
- Potlatch Corporation, Hydraulic Connection Study; Lewiston, ID
- Washington County Facilities Management, Former Shadybrook Landfill; North Plains, OR
- Vancouver Clinic at Columbia Tech Center; Vancouver, WA
- Canyon Clock Center; Frederickson, WA
- 85-Acre Clackamas Quarry Site; Clackamas, OR
- Bridgeport Village; Tigard/Tualatin, OR
- Burlington Northern and Santa Fe Railway; Vancouver, WA, and Klamath Falls, OR
- Bellevue Towers; Bellevue, WA
- City of Battle Ground, Public Works Operations Center; Battle Ground, WA
- Bellevue School District, Ardmore Elementary School; Bellevue, WA
- Proposed The Landing at Evergreen (former Evergreen Airport – 52-acre site); Vancouver, WA
- Turnbull Landfill; Vancouver, WA

** Experience outside of GeoDesign*

Credentials/Certifications

BA, Geology, Whitman College, 1989
Licensed Geologist, WA
OSHA Hazardous Materials Training (40-Hour and 8-Hour Refresher)
Certified First Aid/CPR

GEODESIGN INC

KRYSTA KRIPPAEHNE, EIT

Environmental Staff

Krysta Krippaehne joined GeoDesign in February 2019 as a full-time environmental staff, after spending the previous three summers as an intern at the firm. For GeoDesign's environmental team, Krysta is assisting with Phase I and II Environmental Site Assessments, hazardous building materials surveys, and other services. She has completed surface soil sampling, performed methane monitoring using a Gas Extraction Monitor and anemometer, performed soil field screening using a photoionization detector and a sheen pan, assisted in report writing, and conducted geotechnical construction observation services (including soldier pile and tieback installations and tieback testing) to ensure compliance with recommendations.

At Oregon State University, Krysta served as a both a graduate research assistant and teaching assistant. She also spent a summer in Costa Rica working for the Center for Sustainable Development, where she assessed trail conditions and carrying capacity within Carara National Park.

Key Projects

- Broadway Tower; Portland, OR
- Proposed Development (Block 295W); Portland, OR
- Capital Hill Station; Seattle, WA
- Totem Lake Mall Redevelopment (Village at Totem Lake); Kirkland, WA
- Proposed Coast Products Development Site; Portland, OR
- Corvallis Station; Corvallis, OR
- 14 Mile Ranch; Merced County, CA
- 1710 Webster Street Site (Proposed 23-Story Development); Oakland, CA
- SE Cedar Street and SE Golden Road Improvements; Hillsboro, OR
- Washington County RV Park; Hillsboro, OR
- Los Angeles Dept. of Water and Power, Sylmar Basin Monitoring Wells Installation; Sylmar, CA
- Warrenton Fiber Company Tansy Point Facility; Warrenton, OR
- Bridgeport Village Development (Methane Monitoring); Washington County, OR
- Springhill Road Bridge – Tualatin River Overflow; Washington County, OR
- Trust for Public Land, Cooke Property; Yamhill County, OR
- 27 B Avenue/504 N State Street Site; Lake Oswego, OR
- Comcast Field Fulfillment Office; Portland, OR
- Southshore Corporate Park, Lots 6 and 7; Portland, OR
- OHSU Knight Cancer Research Institute; Portland, OR
- ODOT, Stream and Wetland Compensatory Mitigation for Yaquina Basin US 20 Corridor; Lincoln County, OR

Credentials/Certifications

MS, Environmental Engineering, Oregon State University, 2018
BS, Environmental Engineering (Chemistry Minor), Oregon State University, 2016
Engineer-in-Training, OR
HAZWOPER Training (40-Hour)
AHERA Building Inspector

APPENDIX B

GEODESIGN INC

PHASE I ENVIRONMENTAL SITE ASSESSMENT USER QUESTIONNAIRE

Project Number:	MillCreek-19-01-01
Project Name:	Modera Morrison
Project Site Location:	1120 SE Morrison Street; Portland, OR
User Representative Name and Title:	Cassidy Bolger, Development Associate
Date Questionnaire Completed:	03/11/19
Years Associated with the Project Site:	less than one

Please answer the following questions ***to the best of your knowledge***. If the answers to any of the questions are "yes", or if you need to provide further explanation to any "no" answers, please provide additional detail in the space below each question.

1. To your knowledge, has a search of recorded land title records or judicial records[1] identified environmental liens that were filed against the project site under federal, tribal, state, or local law?

☒ No ☐ Yes

Describe if needed: _____

2. To your knowledge, has a search of recorded land title records or judicial records[2] identified Activity Use Limitations (AULs) such as environmental engineering controls, land use restrictions, or institutional controls that were filed against the project site under federal, tribal, state, or local law?

☒ No ☐ Yes

Describe if needed: _____

3. Do you have specialized knowledge or experience[3] related to the project site or nearby properties?

☒ No ☐ Yes

Describe if needed: _____

[1] Some jurisdictions specify that environmental liens be filed in judicial records rather than in land title records.
[2] Some jurisdictions specify that AULs be filed in judicial records rather than in land title records.
[3] For example, are you involved in the same line of business as the current or former occupants of the project site or adjoining properties, such that you would have specialized knowledge of the chemicals and processes used by this type of business.

GEODESIGN INC

4a. Does the purchase price being paid for the project site reasonably reflect the fair market value?

☐ No ☒ Yes ☐ Not Applicable

4b. If the answer to question 4a is no, have you considered whether the lower purchase price is because contamination is known or believed to be present at the project site?

☐ No ☐ Yes ☐ Not Applicable

Describe if needed: _____

_____

5a. Are you aware of commonly known or reasonable ascertainable information about the project site that would help the environmental professional to identify conditions indicative of releases or threatened releases?

☒ No ☐ Yes

5b. Do you know the past uses of the project site?

☒ No ☐ Yes

5c. Do you know of specific chemicals that are present or once were present at the project site?

☒ No ☐ Yes

5d. Do you know of spills or other chemical releases that have taken place at the project site?

☒ No ☐ Yes

5e. Do you know of any environmental cleanups that have taken place at the project site?

☒ No ☐ Yes

Describe if needed: _____

_____

6. Do you know of any obvious indicators that point to the presence or likely presence of releases at the project site?

☒ No ☐ Yes

Describe if needed: _____

_____

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/13/2018 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 9 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

OR ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the OR ECSI list, as provided by EDR, and dated 01/01/2019 has revealed that there are 64 OR ECSI sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 20 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
EAST PORTLAND GAS WO	110 SE 2ND AVE. & 5	NW 1/2 - 1 (0.527 mi.)	DG388	487

PORTLAND GAS AND COK	2620 SE 9TH AVE	S 1/2 - 1 (0.893 mi.)	DL421	1656

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 20 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 14 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: (1/28/04 RR/UST) Five gasoline and/or diesel underground storage tanks (USTs) decommissioned by removal in May 2002. Soil and groundwater contamination detected. Numerous site assessment borings and three groundwater monitoring wells installed. Four quarters of groundwater monitoring completed. Low concentrations of tetrachloroethylene detected along with petroleum constituents.

ppb detected in groundwater during petroleum release investigation. [6/17/2013 SAM/VCP] In 2005, DEQ UST program granted a no further action only for the USTs as long as commercial or industrial use occurs on site and groundwater is not used, but contamination remains. The current work will evaluate the site for potential future residential/mixed use. [6/27/16 SAM/VCP] Construction of a subsurface parking garage removed the remaining contaminated soil above applicable risk based concentrations. Five discrete soil floor samples were collected at approximately 14 ft bgs in the SE corner near the former UST area to characterize site soils for TPH before excavating below the water table. Diesel and gasoline were detected but below applicable RBCs. Four borings were advanced along SE 11th Ave and three borings advanced along SE Taylor St to determine if TPH extended outside the side walls of the excavation. Three soil samples were collected from each boring at 2ft, 5ft and approximately 12-16 ft bgs. TPH was detected at SETAY75 at 2ft bgs, but below applicable RBCs, except for Construction/Excavation RBC for Soil Vapor which slightly exceeded (552mg/kg vs 500mg/kg). The 20 other sample locations met applicable RBCs. Excavated soil was evaluated using Solid Waste Beneficial Reuse criteria. Approximately 500 tons of petroleum impacted soil in the SE corner was removed and disposed at Hillsboro Landfill. No soil samples were collected at the terminus of the excavation, or approximately 32 ft bgs. Soil conditions at 14ft bgs met applicable RBCs; as expected, all contamination was observed in the upper layers of the site. Since the excavation extends to native material with no visual contamination observed at this horizon, confirmation samples were not collected at the terminus of the excavation. A Batch Discharge Authorization Letter dated December 10, 2014 from the City of Portland authorized(with stipulations) discharge of up to 360,000 gallons per day of treated construction dewatering fluid (including groundwater) into the city sanitary/combined sewer system at manhole ABR096 at SE Yamhill and SE 10th Ave. Water treatment prior to discharge included turbidity and pH controls. Low concentrations of tetrachloroethylene found in groundwater are likely from an off-site source and may be regional contamination. See Staff report for more details.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: Diesel range organic compounds (DRO), oil range organic compounds (ORO), polynuclear aromatic hydrocarbons (PAH) and volatile organic compounds (VOC) associated with petroleum fuels were identified in former pump island area. Some other organic contaminants were observed but were not widespread (observed in one sample only, etc.). None of the organic contaminants observed in soil exceeded risk-based criteria for any of the completed exposure pathways (Construction Worker Soil Direct Contact, Soil Vapor Intrusion into Buildings and Soil Volatilization to Outdoor Air). Elevated levels of lead were observed in subsurface soils throughout the site. These levels were determined to be associated with historical fill materials. The mean concentration of lead was determined to be below DEQ Risk-Based Concentrations (RBCs) for soil for occupational, construction and

BRIGHT DAY COMMERCIAL PROPERTY (Continued) **S109051819**

excavation worker direct contact exposure. DEQ has determined that these soils would be considered solid waste if excavated during maintenance or development activities at the site. Furthermore, investigation results indicate these soils could potentially fail criteria and be classified as a characteristic hazardous waste. Analysis of groundwater samples collected from beneath the pump island area indicated the presence of DRO, ORO, PAH and VOC associated with petroleum fuels. Additional investigation to the west of this area (the downgradient direction) indicated that contaminants are attenuating close to the site. The stormwater sewer located adjacent to the site and within City right-of-way is constructed above the water table and is not expected to be impacted by groundwater. Tetrachloroethene was also detected in groundwater in one sample but no source of this contaminant was identified in soil at the site indicating the contaminant is from an unidentified off-site source. Metals in groundwater were not a concern. Further investigative activities identified a 500-gallon UST (formerly used in private fleet refueling) in the southeast quarter of the site near a former loading dock. Following removal of the UST, analytical results for soil samples indicated the presence of diesel and gasoline range petroleum hydrocarbons near the western end of the tank. The UST was assigned LUST file number 26-09-0389. The LUST file indicates that the cleanup and close-out of the 500-gallon UST would occur under ECSI file number 4977. Subsequent to the removal of approximately three tons of impacted soil from the former UST location, additional soil samples indicated contamination was below detection limits.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: (5/3/00 RGS/VCP) The current and past owners are working cooperatively to address outstanding site issues through the ICP. Site characterization report was submitted for DEQ review in April 2000. (2/6/01 RGS/VCP) Focused Risk Assessment and Feasibility Study were submitted to DEQ in January 2001. DEQ prepared staff report recommending the proposed remedy for the facility. The public comment period on the proposed remedy was open February 1 - March 9, 2001. Proposed remedy includes capping and institutional controls, including deed restrictions. (4/2/01 RGS/VCP) No comments received on proposed remedy. Record of Decision (ROD) being prepared. (11/25/01 RGS/VCP) The ROD was signed April 30, 2001. Deed restrictions recorded under an <quot>Easement and Equitable Servitude<quot> (EES). The EES prohibits groundwater use at the site; prohibits residential use of the property; requires maintenance of the cap, hazard communications, soil management, and DEQ approval of future site redevelopment or building demolition. The EES was signed by DEQ and the current owner, Puget Sound Casket Company, on November 7, 2001. Recording of the EES is imminent.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

OREGON BRASS WORKS (Continued) **1000236245**

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D008
. Waste name: LEAD

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment.

OREGON BRASS WORKS (Continued) **1000236245**

DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

AIR PRODUCTS AND CHEMICALS INC (Continued) **1001229640**

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 05/20/2003
Decode for NarcdID: Contamination
NARR Comments: A broken underground fuel line from an underground storage tank was believed to have caused the loss of approx 2000 gallons of gasoline. The leak was believed to have started on 11-24-87 and was noticed on 11-30-87. In October 1990 a diesel fuel line on another part of the site was severed, causing the release of 500 gallons. Subsequent investigation under DEQ LUST oversight (file #26-90-0440) resulted in discovery of significant hydrocarbon contamination of both soil and groundwater on-site.

Updated Date: 05/20/2003
Decode for NarcdID: Remedial Action
NARR Comments: Following the 1987 gasoline release, tanks and lines were allegedly excavated, and the site remediated by Crowley and NW Pump. Contaminated soil was removed and gasoline contaminated groundwater was pumped out of a sump. It's not clear whether a cleanup report was ever submitted. Soon after the 1990 diesel release, Carson initiated soil excavation, which led to the discovery of additional contamination beyond the area of the diesel spill. Borings installed to define the extent of hydrocarbons in soil encountered contaminated groundwater. Following the placement of monitoring and extraction wells, a groundwater pump-and-treat system operated between 1992 and 1994. Progress reports on this remediation program have been sent to the NWR LUST program, and filed in LUST #26-90-0440. Hydrocarbon contamination appears to have originated from underground tank systems, and it is therefore appropriate that the LUST section continue to track remediation and monitoring activities at the site. Site Assessment recommends referral of the site to NWR/LUST. (3/3/99

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments:	(12/15/11 KJR/VCP) A Phase One Environmental Site Assessment (ESA) was completed for the site in January 2011. The single story commercial building was constructed in 1921. The building covers the entire property. Tenants of the building have included various vehicle repair businesses and is currently occupied by an auto body shop. The site is bounded by commercial or apartment properties with buildings dating back to 1908 to 1931. The recognized environmental conditions (RECs) identified during the Phase One ESA are summarized below. The property has been occupied by various vehicle repair businesses. These businesses generate various waste products. Two open floor drains were observed and videoed. The drains are connected to the municipal system but the connections may have been compromised. Another floor drain was filled by a previous tenant. A concrete patch in the north bay was noted and was reportedly a former pit for hydraulic lifts. The hydraulic lifts were removed in 1991. A photo finishing/graphic business was previously located on the property adjacent to and northeast of the site from 1970 to 2005. The site is located in the presumed down gradient direction from former photo finishing/graphic business property.

NARR Comments: (12/15/11 KJR/VCP) A site investigation was performed in February 2011 to evaluate site conditions related to the RECs identified during the Phase One ESA. A geophysical survey was completed prior to subsurface explorations to identify the location of drain lines connecting the floor drains. Four soil borings were advanced to depths of 24 feet below ground surface (bgs) within the site building (see Figure 2). Groundwater was encountered between 18 feet and 18.5 feet bgs. Boring SB-1 was advanced in the west portion of the south service bay. Boring SB-2 was advanced adjacent to the floor drain located in the west portion of the south service bay. Boring SB-3 was advanced adjacent to a service pit located in the east portion of the north service bay. Boring SB-4 was advanced adjacent to the juncture of the drain lines from each of the floor drains observed within the building. One soil sample and one groundwater sample were collected from each of the four borings. The soil sample from boring SB-1 was collected at 16 feet bgs, near the soil/groundwater interface. The soil samples from borings SB-2, SB-3, and SB-4 were collected at depths of 8 feet, 10 feet, and 8 feet bgs, respectively. The samples were collected at depth to evaluate the drain lines and floor drains. All soil and groundwater samples were analyzed for hydrocarbon identification, volatile organic compounds (VOCs), and total RCRA eight metals. Concentrations of total petroleum hydrocarbons and VOCs were not detected in the four soil samples above the laboratory reporting limits. Concentrations of arsenic (5.9 milligrams per kilogram (mg/kg), 6.0 mg/kg), barium (160 mg/kg to 220 mg/kg), chromium (14 mg/kg to 25 mg/kg), and/or lead (11 mg/kg to 14 mg/kg) were detected in the soil samples. Concentrations of total petroleum hydrocarbons were not detected in any of the four groundwater samples. Concentrations of VOCs were not detected in the groundwater from boring SB-1. Concentrations of tetrachloroethene (PCE) were detected in groundwater samples from borings SB-2 (1.1 micrograms per liter (ug/l)), SB-3 (1.0 ug/l), and SB-4 (1.1 ug/l) at or just above

SPIKES AUTO UPHOLSTERY BUILDING (FORMER) (Continued) **S110818318**

the laboratory reporting limit of 1.0 ug/l. Concentrations of other VOCs were not detected in the four groundwater samples. Concentrations of the following total metals were detected in one or more groundwater samples: arsenic (4.3 ug/l, 5.7 ug/l), barium (290 ug/l to 870 ug/l), and lead (6.1 ug/l). (1/4/12 KJR/VCP) NFA issued for site on 1/4/12. no remedial actions required. Select site documents maybe viewed in the site documents section of this database.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

NARR Comments: There is no data indicating whether or not hazardous substances associated with the site's plating operations may have migrated beyond the confines of the facility's basement. However: 1. The facility is more than 80 years old, and plating operations have been conducted within the building for more than 75 years. 2. The concrete basement floor where plating operations are conducted is coated with an acid-resistant coating. However, a. cracks have been discovered in the coating within a diked secondary containment structure surrounding one of the process's rinse tanks; b. several photos of the coated floor suggest that cracks may be present beneath the floor coating outside of the secondary containment structures; and c. staining, and in some cases, spilled plating solutions, were present on the floor and walls outside of the facility's secondary containment structures; 3. The basement floor has floor drains which are believed to be plumbed to a basement sump, although there are no available as-built drawings of the subfloor plumbing, and it is unlikely that the subfloor plumbing would have originally been designed to withstand the corrosive effects of plating-related solutions. A Focused Feasibility Study (FFS) was completed in 2013 that documents soil and groundwater contamination below the building foundation. The FFS recommends Interim Remedial Actions for the site and is included as an attachment in WebDocs.

Decode for NarcdID: General Site Description
NARR Comments: The site is comprised of a 10,000 square foot, 1-story, reinforced concrete structure located on an 11,000 square foot tax lot within an area of SE Portland that is zoned for commercial and industrial use. The building shares its northern exterior wall with an adjoining commercial structure; public sidewalks and paved streets are located along the building s western and southern perimeters (see Figure 4). Oregon Plating Company owns the entire 10,000 square foot building, although plating operations (see Figure 5) are conducted only within the building s basement. The building s ground floor is currently rented to Art Home Company, an art and framing shop, Arno Piano Repair, and Liquid Moves Entertainment / Center Space, a dance and activity center. A Focused Feasibility Study (FFS) was completed in 2013 that documents soil and groundwater contamination below the building foundation. The FFS recommends Interim Remedial Actions for the site and is included as an attachment in WebDocs.

NARR Comments: Over the past 85 years, the facility has used a variety hazardous materials including acids, bases, toxic metals (chromium, copper, nickel, silver, zinc, lead, cadmium), cyanide salts, ammonium salts, and chlorinated solvents (methylene chloride). Hazardous substances have likely been present in the form of liquid solutions, liquid mists, gaseous vapors, and dusts generated through sandblasting and mechanical polishing.

NARR Code: Project Issues Summary
Created By: SFORTUN
Created Date: 04/10/2008
Updated By: SFORTUN
Updated Date: 04/11/2008
Decode for NarcdID: Project Issues Summary
NARR Comments: DEQ s Hazardous Waste program referred the Oregon Plating Company site to Site Assessment based on observed hazardous substance handling and storage conditions within the facility. DEQ s Cleanup Program only addresses sites where contaminants have been released to the environment, or where there is a significant threat of a release to the environment. Although there have been documented releases of hazardous substance within the facility, there is only circumstantial evidence and no test data - indicating that contaminants may have actually escaped the building confines. The concrete floor of the Oregon Plating Company s basement is coated with an acid-resistant coating. However, plating operations in this building began more than 75 years ago, and it is not known when acid-resistant coatings were first applied to the floor, or how well the coatings have been maintained over the years. Photos from DEQ s October 2005 HW Compliance Inspection of the facility also depict areas of the flooring where cracks may be present beneath the coating (see Plates 4 through 6) . In April 2008, DEQ Hazardous Waste inspectors learned that cracks had been discovered in the protective coating in a diked secondary containment structure surrounding one of the facility s rinse tanks . Discontinuities or disruptions in the floor s acid-resistant coating could allow waste plating solutions to migrate through the concrete floor and into underlying soils. It is not known how well seams between the basement s floor and concrete walls are sealed. Significant gaps are typically present between basement floors and walls at the time of building construction. Unless these gaps have been adequately sealed, accumulated particulates or ponded liquids at the wall / floor interface can migrate to the subsurface. Photo D of Plates 1 and 3, and photo A of Plate 3 each depict staining that extends upward from the facility s basement floor onto the basement walls. This should be a particular concern along the facility s collapsing east wall, where it would be difficult to maintain waterproof seals. The City of Portland suspects that a floor drain in the facility s basement floor is plumbed to a sump near the basement s south wall, although neither the city nor the plating company has plumbing diagrams of the floor drainage system. Since the building appears to have been constructed up to six years before site electroplating operations began, it is unlikely that special design features or engineering controls were applied during construction of the basement s floor drain or sump systems. Considering the age of the building and the corrosive nature of materials that have been handled within the building, subfloor plumbing components are likely to have significantly degraded over time, and leaked. Any leaks in the subfloor drainage system might allow hazardous substances to migrate to the subsurface. Any hazardous substances migrating to subsurface soils beneath the facility might also contaminate the area s seasonally shallow groundwater. Potential groundwater contamination could represent a threat to nearby downgradient wells. During periods of high groundwater tables, contaminated groundwater could also discharge to municipal stormsewers or preferentially migrate to the river along the sewer bedding. The nearest municipal stormsewer is a

OREGON PLATING COMPANY INC (Continued) **1000236252**

6-foot diameter, brick and concrete sewer pipe that was constructed 8.5-14.5 feet beneath SE Stark Street in 1911. It gravity-drains westward along SE Stark Street, then discharges to the Willamette River at City Stormwater Outfall #37 (see Figures 10 and 11). Depending on the character of material that was used to backfill the gulch that historically passed beneath the facility, contaminated groundwater might also preferentially migrate along the former gulch and discharge to the Willamette River between SE Stark and Oak Streets. Dye tests conducted by the City of Portland in February 2008 demonstrated that the facility s sump discharges only to the municipal sanitary sewer. However, a 1977 Portland Public Works wastewater sampling diagram of the facility suggests that the sump may have discharged to the municipal stormsewer at that time (see Figure 9). Plumbing permit records from the City of Portland describe modifications to the facility s plumbing in 1930, 1955, 1970, 2001, and 2006. The plumbing permits provide only very limited information about the actual changes in the building s plumbing. Only the 2001 and 2006 plumbing permits suggest potential modifications to the facility s stormsewer lateral feed line. Any potential discharges of the facility s plating wastes to the municipal stormsewer could have contaminated Willamette River surface water and sediments at City Outfall #37. GSI Water Solutions, Inc. has proposed the sampling of shallow and deep river sediments beneath City Outfalls #37 and #38 during April 2008 as part of a search for potential sediment contamination sources upstream from the Portland Harbor Superfund site (ECSI #2068; CERCLIS #SFN1002155). City Outfall #38 is located about 50 feet downstream from the area where the historic gulch is likely to have reached the river. Analyses of river sediments at Outfalls #37 and #38 should be useful in determining whether groundwater or stormwater discharging to this area of the river has been contaminated with significant concentrations of electroplating wastes. Water that infiltrated into Oregon Plating Company s basement during the December 2007 water main leak is likely to have dissolved residual wastes from the basement floor. The PFD pumped some of this water into the nearby stormsewer, but the concentrations of wastes in this water are unlikely to have been sufficiently high to significantly affect Willamette River sediments.

NARR Comments: The area surrounding the facility is zoned for mixed commercial and industrial use. While commercial land use predominates in the immediate vicinity of the site, low-income apartments are located as near as 160 feet west of the facility. Social service organizations operate from offices as near as 160 feet to the south, 225 feet to the southeast, and 440 feet to the north-northeast of the site (see Figure 6). A child daycare facility is located about 440 feet north-northeast of the facility.

Updated By: JORR
Updated Date: 11/12/2014
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Potential contaminant release and migration pathways include: 1. potential releases of airborne vapors, mists, or dust; 2. potential migration of plating wastes to soils and shallow groundwater beneath the facility; and 3. potential historic releases of wastes to the nearby municipal stormsewer, which discharges to the Willamette River at Outfall #37. Any airborne releases of contaminants might represent a threat to nearby residents, pedestrians, or workers and customers in nearby commercial facilities. There have been no reports of airborn releases since potential releases associated with two Pollution Complaints in 1990. Since the locale of the site is generally covered by buildings, concrete sidewalks, and paved streets, direct public contact with potential soil contamination should be quite limited. Potential subsurface soil contamination could represent a threat to: 1. utility trench workers; and 2. any future construction workers that may be working in soils excavated at the site. Potential releases to soils beneath the facility would

OREGON PLATING COMPANY INC (Continued) **1000236252**

likely also contaminated shallow groundwater. Groundwater contamination could represent a potential threat to: 1. downgradient well users; and 2. aquatic life in the Willamette River. The Portland Fire Department pumped potentially contaminated water from the facility's basement to the nearby municipal stormsewer on December 31, 2007. Plating wastes may also have been historically discharged to the nearby stormsewer. Contaminant releases to the stormsewer could represent a threat to: 1. sewer maintenance workers; and 2. aquatic life and wildlife in the Willamette River, including Threatened and Endangered anadromous fish, and migratory waterfowl protected by international treaty.

NARR Comments: Although the site is located in an area having a disproportionately high concentration of individuals living below the federal poverty level (a Vulnerable Area), the site locale is generally covered by buildings, concrete sidewalks, and paved streets. Direct public contact with any potential released contaminants, airborne releases notwithstanding, should be quite limited. The most likely receptors for hazardous substances potentially released at the site would likely be limited to: aquatic life and wildlife in the Willamette River; well water users directly downgradient from the site; sewer maintenance workers; utility trench workers; and any future construction workers that may be working in soils excavated at the site.

NARR ID: 5750339
NARR Code: Water Use (Current/Reasonably Likely)
Created By: SFORTUN

OREGON PLATING COMPANY INC (Continued) **1000236252**

Created Date: 04/10/2008
Updated By: SFORTUN
Updated Date: 04/11/2008
Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: Drinking Water Supply: The City of Portland has a well-developed and readily-accessible Community Drinking Water Supply system with surface water sources from reservoirs within in the Bull Run Watershed, on the west slope of Mt. Hood, at least 25 miles east-southeast of the site, and supplemental groundwater sources from deep wells along the south shore of the Columbia River, over 6 miles east-northeast of the site. Groundwater: Oregon Water Resources Department [OWRD] and the U.S. Geological Survey [USGS] have records for over 50 production wells within one mile of the site (see Figure 8). The vast majority of these wells appear to be industrial-use wells. The Willamette River channel is over 1,100 feet wide and more than 50 feet deep near the site, and substantial groundwater recharge occurs in the West Hills on the west edge of downtown Portland, so it appears very unlikely that wells on the west side of the river would be affected by any contaminant releases at the site. At least four production wells are located within + mile of the site; at least 14 wells lie within + mile of the site (see Figure 8). The nearest well appears to be a 90 foot deep well (MULT 1008) located at an outdoor supply and military surplus goods store about 250 feet northwest of the Oregon Plating Company facility. When the well was constructed in 1961, its proposed use was described as other , although a Certified Water Right was issued in 1963, allowing groundwater to be used for air conditioning. The nearest domestic-use well (MULT 83130 / MULT 86582) appears to be a 290 foot deep well about 0.3 mile northeast of the site. The well was installed in 2006 on an undeveloped lot adjacent to a commercial rock climbing gym and a Housing Authority of Portland transitional housing unit for the homeless. The boring log for this well proposed that the well be used for both domestic purposes and for thermal-use (such as heating and air conditioning). OWRD has records for three industrial wells located 850- to 1,500 feet west of the facility, between the facility and the Willamette River. The nearest is a 12-inch diameter, 263 foot deep well that was installed for the former Corvallis Creamery. The site is currently occupied by a cafT, a food-distribution warehouse, and several unrelated small businesses. It is not known if the well is still being used or still exists. OWRD records indicate that three industrial wells were installed for Northwest Ice & Cold Storage Company, about 1,500 feet west of the site, in 1912-28. The wells were 235-265 feet deep, and 8- to 12 inches in diameter. OWRD records indicate that one of the wells was decommissioned in 1988, although there are no decommissioning records for the two remaining wells. It is not know if the wells still exist or are still being used. A new building that houses a woodwork supplier was constructed on the northern portion of the former Northwest Ice & Cold Storage Company site in 1996. The Youth Progress Association, a non-profit independent living organization for adjudicated youth, and the Youth Progress Learning Center, a provisionally-accredited special purpose school for adjudicated youth, occupy part of the former site. OWRD also has records for an 8-inch diameter, 105 foot deep industrial well installed about 1,000 feet east of (upgradient from) the Oregon Plating Company. The well was installed in 1956 for Lewis Brothers, Inc., a food processor. The site is currently owned by Northwest Medical, Inc., a hospital and nursing home durable goods supplier.

OREGON PLATING COMPANY INC (Continued) **1000236252**

Current use of the well is not known, although a Water Right Certification that was issued in 1961 for industrial use of groundwater remains on file at OWRD, and has not been revoked. Surface Water: The nearest downgradient surface water body is the Willamette River, about 1,850 feet (0.35 mile) west of the site. In the Portland area, the Willamette River is used for recreational boating and swimming, and for sport, tribal, and limited commercial fishing. The river also provides important migratory and rearing habitat for Threatened and Endangered anadromous fish, including coho and Chinook salmon and steelhead trout, as well as seasonal habitat for migratory waterfowl, and foraging habitat for other protected bird species such as the bald eagle. Migratory waterfowl are protected by international treaty. The bald eagle is federally-listed Threatened Species.

NARR Comments: The plating company has had several owners, and has operated under several names and from several Portland locations since it was first established over 100 years ago. Oregon Plating Works was established in 1890, and previously operated at three SW Portland locations, and from another SE Portland facility at the nearby intersection of SE Oak Street and MLK Boulevard. The company changed its name to Oregon Plating Company in 1930. From 1920 to 1967, the company simultaneously operated under two names: Oregon Plating Company and Electro Products Company. The SE 6th Avenue facility was constructed in 1924, although plating operations did not begin at this facility until about 1930. Sanborn Fire Insurance Maps indicate that the facility was damaged by fire in about 1950. At that time, Sanborn maps depict another plating operation in a building less than one block south of the site, although there is no indication whether this may have been a temporary operating location for Oregon Plating Company. Linda Pitt and Gary Davis purchased the business in 1984. Ms. Pitt has been the sole owner since 1995.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Oregon Plating Company has conducted electroplating activities in the same SE Portland facility for over 75 years. Current electroplating activities are confined to the facility s basement. Although the company appears to have been in compliance with their Air Contaminant Discharge and Pre-Treated Wastewater Discharge Permits for the past six or more years, recent DEQ Hazardous Waste Compliance Inspections have documented operating and waste handling conditions and practices that could result in contaminant releases to the environment. The facility s concrete basement floor is coated with an acid-resistant coating. It is unclear when the floors were first coated, and how

OREGON PLATING COMPANY INC (Continued) **1000236252**

well the coating has been maintained. The basement floor also has floor drains which are believed to be plumbed to a basement sump. Plating wastewaters are collected in the sump, and recent dye tests have verified that the sump discharges to the municipal sanitary sewer. However, the building appears to have been constructed at least six years before site plating operations began, and subfloor plumbing may not have been adequately engineered to withstand corrosive electroplating wastes. Cracks in the acic-resistant floor coating or the underlying concrete could have allowed wastes to migrate through the floor and into underlying soils and shallow groundwater. Subfloor plumbing leaks could have released contaminants directly to underlying soils and shallow groundwater. Groundwater contamination could represent a threat to nearby downgradient well users. Subsurface soil contamination could represent a potential threat to utility trench workers or future construction workers that handle excavated soils. A historic city wastewater monitoring diagram of the facility suggests that the sump may have been plumbed to the municipal stormsewer in the past. Contaminants within the stormsewer system could represent a threat to sewer maintenance workers. The nearby stormsewer discharges to the Willamette River, so waste releases to the stormsewer could have contaminated river sediments and represent a longterm threat to the river s aquatic life and wildlife. Subsurface investigaitons have indicated contamination of soils below the site foundation by metals, VOCs, and acids. A Focused Feasibility (completed in 2013 and included in WebDocs) document the contaminaiton and proposed Interim Remedial Measures.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

OSHA ESTABLISHMENT

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: The current 7-Eleven building was reportedly constructed in 1920. According to Sanborn maps the site was used for auto repair in the 1920s and '30s and for auto sales and service in the 1950s and '60s. A dry cleaning and dyeing facility operated immediately to the north of the 7-Eleven building from about 1909 to 1959.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

HEATING OIL TANK (Continued) **S104907907**

Narrative:
Narrative Id: 7619
Incident Id: 990306
Incident Narrative: E-1 WAS CALLED TO THE SCENE OF A DAY CARE CENTER LOCATED AT 234 SE 7TH. OCCUPANTS INCLUDED WERE CHILDREN UNDER AGE 6 AND 10 ADULTS. OCCUPANTS COMPLAINED OF IRRITATING FUMES ENTERING THE STRUCTURE THROUGH OPEN WINDOW. E-1 ARRIVED AND INVESTIGATED. ONE ROOM HAD SOME TYPE OF SUBSTANCE OR GAS THAT IRRITATE THE RESPIRATORY TRACT BUT HAD NO SMELL. ALL OCCUPANTS WERE EVACUATED OUTSIDE INTO FRESH AIR. T-1 RESPONDED AND PROVIDED FANS FOR VENTILATION OF THE ENTIRE STRUCTURE. HM-41 WAS NOTIFIED BUT WERE NOT REQUESTED TO RESPOND. AN INVESTIGATION WAS CONDUCTED IN THE VICINITY TO TRY AND IDENTIFY A POSSIBLE SOURCE. ONE POSSIBILITY WAS AN INDUSTRIAL OCCUPANCY AT 436 SE 6TH KNOWN AS OREGON PLATING CO. THIS OCCUPANT WAS CLOSED UP FOR THE DAY AT 1230. BUT NEIGHBORS STATED IT WAS OPEN AT THE TIME OF THE INCIDENT. ALL OCCUPANTS OF THE BUILDING (DAY CARE) WERE OKAY AFTER REMOVAL TO FRESH AIR. THERE WERE NO RESIDUAL FUMES AFTER VENTILATION. CONTACT PERSON WAS TRINA GHERE THE HEAD TEACHER. NOTE: THE PLATING CO WAS DIRECTLY UPWIND OF THE DAY CARE CENTER AND HAS AN NFPA 704 PLACARD OF 3-0-2-OXY.

BROAD SPECTRUM ELECTRONICS #2 (Continued) **1000145186**

NARR Comments: This site was once leased by Peter O. Haney. It is alleged that Haney sold small electrical capacitors potentially containing PCBs from this shop, and may have stored articles containing PCBs in the basement of the building. DEQ could find no evidence of PCB releases at the site during its August 1987 site visit.

Decode for NarcdID: General Site Description
NARR Comments: A 4-story brick building that occupies 1/4 of the block, located at the NE intersection of SE Stark St. and SE Grand Ave. The upper three floors of the building are used as apartments, but were historically used as hotel rooms. The ground floor has historically housed commercial retail establishments. The north/south alley behind the building has been boarded off.

BROAD SPECTRUM ELECTRONICS #2 (Continued) **1000145186**

Updated Date: 05/20/2003
Decode for NarcdID: Site History
NARR Comments: Historic activities at five other Portland sites that were operated by Peter O. Haney suggested that this site may have been contaminated with PCBs from improper transformer and capacitor handling. This site was a sales outlet for salvaged electronic and electrical equipment. An August 1987 site visit by DEQ indicated no evidence of on-site releases, however.

NARR Comments: (10/08/2014 KPD/ICP) Approximately 2.5 gallons of a solvent/water mixture spilled from a dry cleaning machine at this site on October 9, 2013. It was reported that most of the spill was captured in a spill containment tray, and that much of the rest was soaked up by rags. However, a small amount reached the subsurface through a seam at the base of a wall. Sub-slab soil sampling in December 2013 found up to 60.7 ppm PCE. Sub-slab vapor sampling conducted in April, June,

MR FORMAL INC (Continued) **1008196083**

and August 2014 found up to 16,000 ug/m3 PCE and 2,500 ug/m3 TCE.

MR FORMAL INC (Continued) **1008196083**

NARR Comments: (10/08/2014 KPD/ICP) A soil vapor extraction (SVE) system was installed and activated at the site on December 10, 2013, discharging an estimated 8 cubic feet of sub-slab vapors per minute through a roof vent. The system operated through July 2014. Sampling found up to 16,000 ug/m3 PCE and 2,500 ug/m3 TCE, below DEQ's risk-based concentrations of 47,000 ug/m3 PCE and 2,900 ug/m3 TCE for soil gas in an occupational setting.

Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: Osborne Electric Corporation began operating at the site in 1954, and changed its name to OECO Corp. 12/61. In 1986, OECO moved to a site in Milwaukie, which has a separate ECSI file (#1119). OECO uses solvents to clean and degrease electrical parts. A copy of a 1991 e-mail found in OECO's Milwaukie site file suggested that solvent releases from a UST had occurred at this Portland site. Site Assessment obtained the 1990 UST removal report from OECO 5/96; it documented low levels of VOCs in soil beneath the decommissioned 1,000-gallon waste solvent tank (which had not been used since 1983). The tank and associated piping were in poor condition, suggesting leakage while the tank was in operation. After the hole was backfilled in 1990, a soil boring was installed to 3 feet below the fill end of the UST, reportedly encountering no VOC contamination. In 10/91, DEQ's RCRA program wrote a letter to OECO's attorney indicating that DEQ considered the tank to have been a hazardous waste generator accumulation unit, rather than a RCRA-regulated storage unit subject to permit. This letter also indicated DEQ's opinion that the tank had been closed adequately, according to RCRA regulations.

Updated Date: 05/25/2016
Decode for NarcdID: Remedial Action
NARR Comments: (7/5/96 GMW) Some documentation is missing from the site's DEQ files, and OECO could provide only a portion of relevant site documents following a 4/96 request for information. It appears that no further soil removal or other site investigation occurred after 11/90. Although a soil boring beneath the part of the UST that was contaminated came up non-detect for solvents, further investigation is needed to confirm that no soil contamination remains at the site. Groundwater in the vicinity of the former tank should also be sampled. Site Assessment believes these actions are necessary,

OECO CORP. - PORTLAND (Continued) **S103842609**

because: 1) the age and condition of the UST at removal suggest that significant quantities of solvent were released; and 2) the water table is expected to be relatively shallow in this area, so that any releases, especially of chlorinated solvent, would likely have migrated to groundwater. Further state action at the site is a low-to-medium priority. (5/25/16 SG) A site investigation was performed in December 2015 beneath the former tank area where soil impacts were identified in 1989-1990. Soil samples were collected and analyzed for petroleum hydrocarbons, VOCs, and metals. Petroleum hydrocarbons and VOCs were not detected. Metals were detected at concentrations below regional background levels. The soil boring hit refusal at 27 feet below ground surface and no groundwater was encountered. Since groundwater could not be collected for laboratory analysis, a soil gas sample was collected and analyzed for VOCs. VOC concentrations in soil gas were below the urban residential risk-based concentrations. Based on these findings, DEQ determined that the site is protective of human health and the environment and that no further action is required.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

OR SPILLS:
Facility ID: 2015-2581
Incident Status: Referred/Closed
Material: Oil - Diesel
Quantity: 20
Unit of Measure: Gallons
Release Date: 11/24/2015
Description: Yesterday morning, Portland Bottling Company, located at 1321 NE Couch Street, had a third party carrier spill about 20 gallons of diesel shortly after pulling out of their loading zone. The loading zone is located at the NE corner of NE Couch Street and NE 12th Avenue. The third party carrier turned north on NE 12th and pulled over near the intersection of NE Flanders Street and NE 12th Avenue. The spill was in the street between NE Couch and NE Flanders. River City degreased and pressure washed the street. They also used a vactor on the catch basins between Couch and Flanders. BES does not have details on which catch basins were affected yet however, this is a combined sewer area. At this point, BES is considering the third party carrier the responsible party for the 20 gallons of diesel spilled.

Description Of The Avg Qnty Code:	10,000-49,999
Most Hazardous Ingridient:	SUCROSE
United Nations/north America 4 Digit Class Number:	Not reported
Hazard Rank:	1
EHS Ingredient:	Not reported
Substance Pure:	True
Substance Mix:	False
First Hazardous Class Code For Chemical:	Miscellaneous Hazardous Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	9.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	LIQUID SUGAR
United Nations/north America 4 Digit Class Number:	Not reported
Chemical Abstract Service Identifier Number:	57501
Chemical Is Extremely Hazardous Substance (EHS):	Not reported
First Hazardous Class Code For Chemical:	Miscellaneous Hazardous Material

PORTLAND BOTTLING COMPANY (Continued) **U000433560**

Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	9.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	Not reported
EPA Pesticide Registration Number:	Not reported
Contains 112R:	Not reported
Contains EHS:	Not reported
Fertilizer:	Not reported
Pesticide:	Not reported
Contains 313:	Not reported

Chemical Name:	MALIC ACID
Physical Description:	SOLID
Case Number:	6915157
Facility Id:	020132
Physical State Of The Substance:	1
Avag Amt Possessed During Year CD:	20
Max Amt Possessed During Year CD:	21
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	J
Description:	BAG
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	5,000-9,999
Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	BUTANEDIOIC ACID
United Nations/north America 4 Digit Class Number:	Not reported
Hazard Rank:	1
EHS Ingredient:	Not reported
Substance Pure:	True
Substance Mix:	False
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	MALIC ACID
United Nations/north America 4 Digit Class Number:	Not reported
Chemical Abstract Service Identifier Number:	6915157
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Acute Health Hazard

PORTLAND BOTTLING COMPANY (Continued) **U000433560**

Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	MAPP GAS
Physical Description:	GAS
Case Number:	115071
Facility Id:	020132
Physical State Of The Substance:	3
Avag Amt Possessed During Year CD:	03
Max Amt Possessed During Year CD:	03
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	F
Description:	CAN
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	2
Pressure Description:	GREATER THAN NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	20-49
Description Of The Avg Qnty Code:	20-49
Most Hazardous Ingridient:	PROPYLENE
United Nations/north America 4 Digit Class Number:	1060
Hazard Rank:	2
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	True
Substance Mix:	False
First Hazardous Class Code For Chemical:	Flammable Gas
Second Hazardous Class Code For Chemical:	Acute Health Hazard
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	2.1
Hazard Class 2 Of The Chemical:	6.3
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	MAPP GAS
United Nations/north America 4 Digit Class Number:	1060
Chemical Abstract Service Identifier Number:	115071

Created Date: 05/01/2018
Updated By: MPUGH
Updated Date: 05/01/2018
Decode for NarcdID: Contamination
NARR Comments: A Phase II investigation was completed in 2006. Twenty soil borings were completed across the site, including exterior and interior borings. Twenty-two samples were submitted for NWTPH-HCID analyses. Hydrocarbons were detected in only two borings. Motor oil-range hydrocarbons, consistent with hydraulic fluid, were detected in two of four borings advanced near the three interior hoists. These samples were further analyzed by NWTPH-Dx and yielded diesel-range concentrations of 12,000 milligrams per kilogram (mg/kg) and 22,000 mg/kg, and heavy oil- range concentrations of 14,000 mg/kg and 21,000, respectively. Petroleum hydrocarbons were not detected in samples collected near the ends of each UST. Based on the Phase II results, the two USTs and three hydraulic hoists were removed. DEQ staff observed the UST removals, and no additional testing or soil removal was deemed necessary. Five additional borings were advanced in the hoist area. Testing results showed 40,000 mg/kg diesel range hydrocarbons and 10,000 heavy oil-range hydrocarbons at a depth of 10 feet, but no contamination at 15 feet below ground surface, indicating the contamination was localized around the hoists at depths between 10 and 15 feet, well above the estimated shallow groundwater depth of 40 feet. The most highly impacted sample also was tested for volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), selected metals, and polychlorinated bi-phenyls (PCBs). Low levels or non-detect results were reported. Diesel-range concentrations in soil are above DEQ risk-based concentrations (RBCs)for residential and occupational exposure. Given the current site use, and depth of contamination (10 feet), direct contact by residents, and occupational or construction workers is not a complete exposure pathway. The excavation worker exposure scenario is applicable, but the DEQ risk-based concentration (RBC) for this pathway is >Csat , indicating its RBC is calculated as greater than 1,000,000 mg/kg or 1,000,000 mg/L. Therefore, diesel-range hydrocarbon is deemed not to pose risks in this scenario under current conditions. All other detected contaminants are well below applicable DEQ RBCs for residential or occupational use, with the exception of arsenic, which is above its RBC but consistent with naturally occurring concentrations in soil. There is no DEQ RBC for heavy range oil. Because VOCs, PAHs, metals and PCBs were not detected above their respective RBCs in the worst-case sample, a screening using diesel range petroleum protocols is acceptable, and based on the discussion above, suggests the risk from heavy oil is low.

Updated By: MPUGH
Updated Date: 05/01/2018
Decode for NarcdID: Land Use (Current/Reasonably Likely)
NARR Comments: The Site property is zoned Storefront Commercial (CS) by the City of Portland. The CS zone is intended to preserve and enhance older commercial areas that have a storefront character. The zone allows a full range of retail, service and business uses with a local and regional market area. Residential use is allowed. Residential development, if it were to occur, would likely be second-story and higher apartments or condominiums, consistent with DEQ s urban residential exposure scenario.

Decode for NarcdID: Remedial Action
NARR Comments: MTPugh 5/24/18 The Site consists of two tax lots covering about 16,000 square feet. A building completely covers the northern tax lot, and the smaller southern lot is used for parking. The southern lot was developed for residential use by 1909. All structures were removed from the southern lot by 1970, and it has been used for parking since then. The northern property was developed as a filling station as early as 1915, based on City of Portland plumbing records. The existing building was constructed in 1948 and contained two interior catch basins, referred to as sumps on the plumbing permit diagram. Various auto-related businesses operated until at least 1996, most recently the Tire Factory. The site has been in commercial retail use since 2006, and current tenants include a day care center, tattoo parlor and restaurant. A Phase I Environmental Assessment Report was prepared by Evren Northwest, Inc. in 2005. Two underground storage tanks (USTs), observations of a parts cleaner, several drums and oil staining on the floor in the building interior, and damaged vehicles parked in the yard were listed as recognized environmental concerns. The USTs included a 500-gallon waste oil UST located beneath the sidewalk on the west side of the property, and a 1000-gallon diesel heating oil tank near the southeast corner of the building. The heating oil tank was decommissioned in January 2006 (File No. HOTD-15282). A Phase II investigation was completed in 2006. Twenty soil borings were completed across the site, including exterior and interior borings. Twenty-two samples were submitted for NWTPH-HCID analyses. Hydrocarbons were detected in only two borings. Motor oil-range hydrocarbons, consistent with hydraulic fluid, were detected in two of four borings advanced near the three interior hoists. These samples were further analyzed by NWTPH-Dx and yielded diesel-range concentrations of 12,000 milligrams per kilogram (mg/kg) and 22,000 mg/kg, and heavy oil- range concentrations of 14,000 mg/kg and 21,000, respectively. Petroleum hydrocarbons were not detected in samples collected near the ends of each UST. Based on the Phase II

1706 E BURNSIDE (Continued) **S121944261**

results, the two USTs and three hydraulic hoists were removed. DEQ staff observed the UST removals, and no additional testing or soil removal was deemed necessary. Five additional borings were advanced in the hoist area. Testing results showed 40,000 mg/kg diesel range hydrocarbons and 10,000 heavy oil-range hydrocarbons at a depth of 10 feet, but no contamination at 15 feet below ground surface, indicating the contamination was localized around the hoists at depths between 10 and 15 feet, well above the estimated shallow groundwater depth of 40 feet. The most highly impacted sample also was tested for volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), selected metals, and polychlorinated bi-phenyls (PCBs). Low levels or non-detect results were reported. Diesel-range concentrations in soil are above DEQ risk-based concentrations (RBCs) for residential, occupational and construction worker exposure scenarios. Given the current site use, and depth of contamination (10 feet), direct contact by residents, and occupational or construction workers is not a complete exposure pathway. The excavation worker exposure scenario is applicable, but the DEQ risk-based concentration (RBC) for this pathway is >Max , indicating its RBC is calculated as greater than 1,000,000 mg/kg or 1,000,000 mg/L. Therefore, diesel-range hydrocarbon is deemed not to pose risks in this scenario under current conditions. All other detected contaminants are well below applicable DEQ RBCs for residential or occupational use, with the exception of arsenic, which is above its RBC but consistent with naturally occurring concentrations in soil. There is no DEQ RBC for heavy range oil. Because VOCs, PAHs, metals and PCBs were not detected above their respective RBCs in the worst-case sample, a screening using diesel range petroleum protocols is acceptable, and based on the discussion above, suggests the risk from heavy oil is low.

Decode for NarcdID: Contamination
NARR Comments: No known site contamination. The site was added to the ECSI database based on past operations and the discovery of PCB and PAH contamination in Willamette River sediments near a municipal stormsewer outfall that drains the site location. There was no visual evidence that stormwater catchbasin sediments contain PCB contamination. Subsurface soils near the site's former heating oil LUST may still contain residual petroleum and PAH contamination, although concentrations are believed to be below Risk Based standards (see LUST File #26-02-1215).

NARR Comments: A 0.79 acre tax lot (Tax Lot 5500 of Township 1 South / Range 1 East Section 03AA) in SE Portland that occupies most of the city block bounded on the west by the Union Pacific Railroad (UPRR) Mainline Right-of-Way and vacated SE 1st Avenue, on the east by SE 2nd Avenue, on the north by SE Belmont Street, and on the south by SE Yamhill Street. The site is occupied by a trapezoidal, 22,500 square foot, commercial warehouse structure located on the northern 2/3 of the tax lot, with an attached, square, 3,200 square foot, two-story office structure on the southeast corner of the lot. A blacktop-paved parking area, with access to two of the warehouse s overhead loading dock doors, occupies the remaining, southwestern + of the site. Additional overhead loading dock doors are located along the warehouse s eastern, northern, and western exterior walls. An approximate 8-foot wide, 60-foot long landscaping strip lies along the western edge of the parking lot. Jersey barriers and chain-link fencing separate the landscaped strip from vacated SE 1st Avenue and the UPRR Right-of-Way.

NARR Comments: A June 2006 site reconnaisance by Point Source Solutions LLC (Phase I Environmental Site Assessment) found no obvious evidence of hazardous substance releases at the site or on the adjoining UPRR Right-of-Way. A heating oil was released was discovered at a LUST along the site's southern property line (LUST #26-06-1215) in 2006. The tank appears to have been decommissioned in place with no indication of a soil cleanup. DEQ closed the LUST site in September 2006. The LUST file should be examined to to verify that soils at the tank site were analyzed for PAH contamination.

NARR Comments: Site stormwater drains to the Willamette River both upstram and downstream from the Morrison Bridge, at City Outfalls #35 and #36, Oregon Highway Division outfall WR#316, and possibly Oregon Highway Division outfall WR#315. Contaminants reaching the river via stormsewers could represent an ecological risk for the river's aquatic life, and a potential human health risk for individuals consuming fish caught from the river. Subsurface soils at a former LUST along the site's southern property line may be contaminated with petroleum and PAHs. If present, elevated PAH concentrations could represent a potential direct dermal contact risk for future utility trench workers or construction workers.

Decode for NarcdID: Site History
NARR Comments: 1889: undeveloped land 1901: depot for farm engines, threshers, and saw mill equipment; the facility had a forge (southern half of property undeveloped) 1909: Two warehouses storing machinery and agricultural implements (occupied entire property). 1924-1950: northern warehouse stored machinery (Feenaughty Machine Co., agricultural implements)(Gardner-Denver Co., road machinery); southern warehouse occupied by a fruit products company (Starr Fruit Products). 1950's: occupied by a transportation line (DeLapp), bulb company (Mt. Angel Bulb Co.), and machinery and engine manufacturing operations (Pioneer Engine Works; Four Wheel Drive Auto Co.; Roberts Bros.). In 1959-61, site buildings were demolished for construction of a nearby, elevated Morrison Bridge ramp / I-5 off-ramp. 1962: new commercial building constructed on the site. Early occupants of the existing commercial building included an electrical supplies distributor (Consolidated Electrical Distributors; 1970-74 through 2006; currently located at 2555 NW Nicolai Street, Portland), a commercial and industrial heating and air conditioning equipment distributor (Nor-Air, Inc.; 1965-70 through 1975-80; currently located across SE 2nd Avenue from the subject site), and wholesale rug and carpet companys (Walter DN&E Co. and Cascade Sales Co.; 1962 through 1965-70). 1990: a two-story affice building was added to the southeast corner of the property. A 2000-gallon underground heating oil tank was added to the site in 1945, although there are no records to indiacte whether, or not, the tank was ever removed. Site facilities are currently heated with natural gas. Through at least 1924, site facilities were steam-heated. 2006 - A Phase I Environmental Site Assessment was completed for the site by Point Source Solutions, LLC, prior to sale to TKMInvestment Properties, LLC. 2006 - A leak was discovered at the site's 2000-gallon heationg oil UST (LUST #26-02-1215). Up to 10,000 ppm diesel fuel and 15,000 ppm heating oil were detected in subsurface soils. The tank was evidently decommissioned in place without a soil cleanup since petroleum concentrations were below Risk Base standards.

Updated By: KDANA
Updated Date: 02/11/2014
Decode for NarcdID: Contamination
NARR Comments: (12/05/2013 KPD/VCS) Fifteen borings were advanced at the site in December 2010 as part of an environmental assessment. Twenty soil samples and five sub-slab vapor samples were analyzed for petroleum products and volatile organic compounds. Diesel and VOCs were detected in all five vapor samples. Gasoline and VOCs were detected in the soil in the NW corner of the building, and diesel was detected in a soil sample from the SW quarter of the block. The consultant determined that the extent of vapor concerns at the site needed to be better defined. Ten additional soil samples were collected from borings advanced through the floor of the building in December 2011. No petroleum products were detected in the samples. Additional borings were advanced through the sidewalk along 3rd Avenue. Gasoline and Stoddard solvent were detected in soil samples near the SW corner of the block. Groundwater was encountered at 20-25 ft bgs and was

SALVATION ARMY FACILITY (Continued) **S110818319**

impacted with gasoline and diesel. In January 2012, four soil gas samples were collected from eight feet beneath 3rd Avenue and Ash Street. Gasoline and VOCs were detected in all four samples, with the highest concentrations beneath 3rd Avenue roughly mid-block between Ankeny and Ash. In February, samples were collected on the west side of 3rd Avenue (across from the site) to determine the extent of contamination. No petroleum products were detected in the soil, but one groundwater sample showed gasoline and diesel, and a soil gas sample showed gasoline and VOCs.

NARR Comments: Cleaning and dyeing companies were established on the block as of the first decade of the 1900s. Star Laundry, on the NE corner of the block, was replaced by a creamery by 1924. Ankeny Auto Service was established in the NW quarter of the block by 1935. As of 1950, the site was occupied by Ankeny Auto Service (NW quarter), Enkes City Dye Works (SW quarter), and a carpet cleaning company (SE quarter). (The NE quarter of the block was vacant). Enkes apparently left in the mid-1950s and was replaced by the Salvation Army, followed by Ankeny soon after 1960. The Salvation Army reportedly purchased the property in February 1964, and operated there until about 2010. The building is currently vacant. Prospective purchasers of the property submitted applications for a Prospective Purchaser Agreement (PPA) to DEQ in

SALVATION ARMY FACILITY (Continued) **S110818319**

January 2011 and March 2012. Both applicants completed environmental investigations at the site, but each ultimately backed out (in June 2011 and May 2012, respectively) before purchasing the property or completing a PPA. A third PPA application was received in March 2013, and a proposed Consent Judgment PPA was released for public comment in June 2013. No comments were received. The Consent Judgment was finalized in November 2013 and signed by the court on December 5, 2013.

NARR Comments: Concentrations of toxic metals in stormwater runoff have exceeded freshwater aquatic Continuous Maximum Concentrations (CMCs) and 99th percentile levels for all DEQ Northwest Region Industrial Stormwater. Metals of concern include arsenic, cadmium, chromium, copper, lead, nickel, and zinc. Stormwater pH has ranged between 4.3 and 10.1. TOC has ranged beween non-detect and 81 ppm. COD has ranged between non-detect and 870 ppm. Site has also used cyanide solutions and chlorinated solvents (including TCE and PCE), although stormwater has never been analyzed for these potential contaminants. Contaminated stormwater is directed to the Lower Willamette River. Acidic stormwater may have corroded stormsewers.

NARR Comments: Lots 1, 2, 7, and 8 of Block 53, East Portland Addition. Not to be confused with ECSI #644 (Plants#1-#3), or ECSI #1010 (Plant #4). The site occupies the northern half of the block between SE 2nd and SE 3rd Avenues, and SE Main and SE Madison Streets. The facilities include a plating shop, polish shop, warehouse, and an area for parking/shipping/receiving. Stormwater from the central parking area and downspouts is directed to Outfall #1, which feeds the city's combined sewer on SW 2nd Ave. Stormwater from the north roof downspout is directed to Outfall #2, which discharges to the city storm sewer on SW 2nd Ave. Stormwater at the northwest exterior and runoff along the north exterior is directed to Outfall #3. Outfalls #2 and #3 feed City of Portland Stormwater Outfall #35 in the Willamette River just upstream from the east end of the Morrison Bridge.

NARR Comments: Sources of the site's stormwater runoff contamination have not been fully defined. Contaminated stormwater reaching Outfalls #2 and #3

EAST SIDE PLATING - PLANT 5 (Continued) **S106115367**

eventually discharges to the Willamette River and could represent a direct toxicity threat to aquatic life, or could accumulate in river sediments. Stormwater and treated process water are discharged to the city sanitary sewer at Outfall #1. The city sanitary sewer in this area commonly overflows to the stormsewer during rainfall events. Acidic runoff could corrode stormsewers and combined sewers, exacerbating contaminant leakage into utility line beddings. Site has also used cyanide solutions and chlorinated solvents (TCA, TCE, PCE), although it is not known if these have contaminated site runoff. Because of inconsistencies in solvent usage reporting, there is concern that unreported solvent spills at the site could have contaminated underlying soils and shallow groundwater.

NARR Comments: Unclear. Plating vapors and buffing/grinding/polishing dusts may vent at, or through, the building roofs. There could be leakage through the facility foundations or through a plugged storm sewer within the plating shop. Contaminated liquids could also escape the building through an overhead door at a wastewater treatment area at the northwest corner of the facility.

NARR Comments: (8/25/04 MDK/C&ER): Initial project meeting held with owner on June 18, 2004. Owner clarifying insurance coverage prior to entering into voluntary cleanup letter agreement. (6/21/05 MDK/CU&ER) Negotiations on a letter agreement continued from March 2004 until the agreement was signed on May 23, 2005. The next steps are holding a scoping meeting and developing an investigation work plan. (12/28/06 MDK/CU&ER) DEQ approved a site investigation work plan on April 13, 2006. The field work was completed in July 2006 and a site investigation report submitted on November 15, 2006. DEQ provided review comments by letter dated November 30, 2006 and indicated that additional work is required to determine extent of contamination present in groundwater. (9/12/07 MDK/CU&ER) Additional soil site characterization workplan submitted for review on 7/28/07. DEQ comments issued 9/18/07.

NARR Comments: [12/15/2004, RH] The contaminants from the UST systems are present and cleanup via soil removal has occurred. Confirmation soil sampling and expanded subsurface investigation has been completed. Cleanup appears complete at the gasoline UST area, although one of the confirmation samples which previously detected gasoline did not detected benzene with a 5.0 ppm detection limit. Further soil sampling did not detect gasoline in a pit sample. In the vicinity of the former bunker C oil tank, high concentrations of deisel and oil remain in the pit area (this is where the PCE was detected). The expanded soil investigation did not detect diesel or oil to 15 feet bgs, which may not be cemented gravel and sand was reported and there was geoprobe refusal. No further investigation has been completed.

Decode for NarcdID: Contamination
NARR Comments: The site is a four-story building. Broad Spectrum Electronics, a division of Northwest Cast Metal Products, operated out of a small laboratory on the southeast corner of the third floor. Peter O. Haney, the founder of NW Cast Metal, had a record of illegal waste disposal practices involving transformer salvaging and secondary metal smelting operations. In March 1983, DEQ received an anonymous complaint alleging that Broad Spectrum had dumped sodium cyanide and nitric and sulfuric acids down the sink. Broad Spectrum replied that any discharges were unintentional and minor, and their operation shut down a few months later. (Peter Haney died in a truck accident in 1985. For more information on his activities, see ECSI #'s 96, 145, 690, 999, and 1279.) It has been alleged/suspected that Northwest Cast Metal Products stored PCB-containing transformers and capacitors on other floors of this building. A cavity in the concrete floor of the building's basement (exposing subsurface soils) has shallow petroleum contamination, suggesting that PCBs may also have been released in the cavity.

NARR Comments: Site is a 4-story brick building, former Southern Pacific Railroad warehouse, registered historic site 1912 International Harvester Building. The building has been used as warehousing for a large number of companies and individuals over the years. The building has sanitary sewer service, a basement, elevator, and has historically been heated with oil (a heating oil UST was located on the south side of the building, beneath the sidewalk). The building is at the northwest corner of SE Taylor and SE 1st on Portland's Central Eastside. Active railroad tracks run along the building's east side

NW CAST METAL PRODUCTS - SE TAYLOR ST. (Continued) **S106236416**

(Southern Pacific R/R). The building occupies a 10,000 sq ft area of the block, the rest of the 30,000 sq ft area being occupied by buildings owned by Promotion Products, Incorporated (PPI), a promotional display marketer. There are no exposed soils on the block, which is surrounded by industrial operations.

Decode for NarcdID: Project Issues Summary
NARR Comments: A 1983 anonymous complaint alleged that Broad Spectrum Electronics had dumped acids and cyanide down a <quot>laboratory<quot> drain on the building's third floor. The drain was attached to the Portland sanitary sewer system. There have also been allegations/suspicions that Northwest Cast Metal Products may have stored PCB containing transformers and capacitors on other floors of the building, and may have disposed of PCBs on the site. There are no exposed soils on the block where the building is located, and the nearest storm sewer is located nearly 200 feet to the west of the building. A 2-foot by 3-foot cavity (18-inches deep) in the building's basement floor is the only possible discharge site within the building. Soils within the cavity had 126 ppm TPH on the surface, and no detectable TPH at 5 feet deep. The presence of TPH suggests that PCBs may also be present, although these soils were not analyzed for PCBs.

NARR Comments: (CWH/CU 3/22/13) Site is developed as parking lot for adjacent building. Lot is leveled but is raised above a downhill sloping street. The SE Ankeny Street and SE 3rd Avenue corner of the lot appears to be a remnant of an outer concrete wall of the former circular gas holder tank. The surrounding area is primarily commercial and warehouse uses, with some light industrial use nearby.

NARR Comments: 10/21/13 CWH/CU - No remedial action was required. Based on data gathered during a Phase II environmental assessment completed in May 2013, there was no evidence that any significant releases had occurred from the former holder tank. DEQ issued a no further action determination on October 21, 2013. An updated no further action letter was issued by DEQ on November 13, 2013 that corrected some errors in the earlier letter.

NARR Comments: NOTE: This site was originally evaluated in DEQ Site Assessment under the East Portland Gas Works site (ECSI #4426). In March 2013, DEQ separated this tax lot - 400 from the larger site and renamed it Former Gas Holder Tank Site. The 300,000 cubic foot gas holder tank on this site was never used in conjunction with the East Portland Gas Works (EPGW) site. The 300,000 gas holder tank was constructed after 1901 and the EPGW site stopped operating in 1892. (CWH/CU 11/13/13) The Former Gas Holder Tank site once hosted a 300,000 cubic foot gas holder tank that received manufactured natural gas from a gas works that operated on a property on the west side of the Willamette River (Former Portand Gas Manufacturing Site, ECSI #1138). According to records, an adjacent gas plant, East Portland Gas Works, ceased operation around 1892. Records indicate that the holder tank was constructed sometime between 1900 and 1909 and used until around 1924. Sometime in the 1940s, the 300,000 cubic foot tank was demolished. In the 1950 s relatives of the current owners purchased the property plus surrounding properties and established a furniture store. The former holder tank property, located in the southwest corner of the block, was and continues to be used for parking.

NARR Comments: Removal of contaminated soil associated with the former UNOCAL station was completed in 1988 and 1992. USTs associated with this area (southwest portion of site) received a DEQ NFA in 1994. Following review of soil and groundwater investigation work complete at the site through 2005, DEQ Northwest Region Cleanup Program determinated that remaining soil and groundwater contamination at the site (minor) does not pose a risk to public health or the environment. An NFA was issued in May 2006. Three to four petroleum USTs remained at the site as of June 2006; the PDC agreed to decommission the tanks per UST rules as part of upcoming site development work. A Soil Management Plan was also prepared to address handling of any <quot>lightly-contaminated soil<quot> that will be removed from the site as part of site development work.

NARR Comments: A Remedial Investigation Report was issued for the site in August 2005 which presents the results of soil and groundwater sampling completed at the site, during which generally low levels of petroleum hydrocarbons and constituents were detected in soil and groundwater. The primary source of the releases was a UNOCAL station that formerly was located on Block 76. Site work included soil removal associated w/ UNOCAL USTs. DEQ reviewed the report under DEQ's ICP, and in a closeout memo dated March 15, 2006 determined that no additional site

BLOCK 76/67 SITE (Continued) **S106044950**

action was warranted, as remaining contaminants were below risk-based concentrations. Four known or suspected USTs remain at the site which will be addressed by the PDC or the site developer as part of site development work. DEQ received a commitment from the PDC (Dave Obern) to do the work in a letter dated November 25, 2005, a copy of which is attached to the site NFA letter. The NFA was issued on May 30, 2006 following a 30-day public comment period. No comment was received. USTs were subsequently addressed in 2008, with approval by DEQ LUST program in 2009 (see Webdocs 2009 NFA). Site environmental work is therefore considered complete.

NARR Comments: As part of the 2005 Remedial Investigation Report prepared by Hart Crowser for the site, a BWUD was completed. Shallow groundwater at and in the immediate vicinity of the site was determined to have no current or reasonably likely beneficial use other than recharge of deeper aquifers and the Willamette River. Deeper groundwater in the site vicinity could potentially be used for industrial or irrigation purposes, however site contaminants are generally <quot>floaters<quot> (lighter than water) and not expected to migrate deeper to any appreciable amount. Site contaminants have not migrated a significant distance off-site and therefore are not expected to impact the Willamette River.

Decode for NarcdID: Contamination
NARR Comments: (6/7/05 SMF/SAS) Soils beneath former Manufactured Gas Holding Tanks are often heavily contaminated with hazardous substances that condense from the manufactured gas. (8/9/12, SMF/SAS) A total of 2,184 tons (approx. 1,670 cubic yards) of contaminated soil was removed from three areas of Tax Lot 1400 in 1992. Subsurface soil contamination was attributed to both a leaking underground gasoline storage tank and to releases from historic gas manufacturing operations. Subsurface contamination at the north end of Tax Lot 1400, extending below the top of the groundwater table and beneath SE Ankeny Street, was not removed. Subsurface contamination may also remain in the former UPRR railroad Right-of-Way at the southwest corner of Tax Lot 1400, and may also extend to the south, beneath SE Ash Street. Most analyses that were conducted during the soil removal activities were limited to HCID, TPH-G, TPH-D, TPH-418.1, and TCLP leachable metals analyses as indicators and to generally characterize the soils for waste disposal options, so the complete character of site contamination has not been well-defined. There is no indication that potential subsurface contamination at Tax Lot 400, the location of a former 200,000 cubic foot manufactured gas holding tank, has ever been investigated. Contaminants of potential concern include PAHs, BTEX, trimethylbenzenes, total metals, cyanide, and PCBs. Potential sources for relatively low concentrations of PCB detected at the southwest end of Tax Lot 1400 are unknown.

NARR Comments: A Report on Underground Storage Tank Contaminated Soil Cleanup, John Alden Life Insurance Property, 220 SE Ankeny Street, Portland, Oregon, HAI Project #1958, prepared for John Alden Life Insurance Co., by Hahn and Associates, Inc., June 8, 1992. A Report on Petroleum Contaminated Soil Cleanup, John Alden Life Insurance Property, 220 SE Ankeny Street, Portland, Oregon, HAI Project #1958, prepared for John Alden Life Insurance Co., by Hahn and Associates, Inc., June 19, 1992. See LUST File 26-92-0006 for further information relating to the underground tank removal activities. Evidently, Technical Action Group, Inc. (TAG) previously performed Level I (Phase I Environmental Site Assessment, Block 65, Lots 1-8, East Portland Addition, prepared by Technical Action Group, Inc., December 31, 1991) and Level II (report title unknown, prepared by TAG in January 1992) environmental assessments for this property, although DEQ has not been able to obtained copies of either of these reports for review. A General Synopsis of TAG's Level II activities is included in Appendix A of Hahn and Associate's June 19, 1992 report. A November 7, 1987 survey map perpared by W.B. Wells and Associates, Inc. reportedly identified an historic fuel storage shed along the southern central boundary of Tax Lot 1400, although DEQ has not obtained a copy of the survey map for review, and is unaware of the

E PORTLAND GAS WORKS (FORMER) (Continued) **S107692390**

source of W.B. Wells' information.

Updated Date: 08/09/2012
Decode for NarcdID: Project Issues Summary
NARR Comments: There is no indication that subsurface soils and groundwater beneath the former 200,000 cubic yard gas holder tank on Tax Lot 400 have ever been investigated for potential contamination from manufactured gas condensates. A substantial soil cleanup was conducted on Tax Lot 1400 in 1992, although subsurface contamination was never fully characterized. Soil contamination at the north end of the tax lot that extended beneath the top of the groundwater was not cleaned up. Shallow groundwater in this area was contaminated with PAHs, although the extent of groundwater contamination was not defined, and no groundwater cleanup was conducted. Subsurface soil contamination that extended beneath SE Ankeny Street was also left in place. Potential subsurface contamination was not explored in a former railroad Right-of-Way at the southwest corner of Tax Lot 1400. Subsurface contamination may also extend to the south beneath SE Ash Street. Relatively low concentrations of PCB from an unknown source were detected in soils at the southwestern end of the site. it's not known how extensively soils may have been contaminated with PCBs. It is not

E PORTLAND GAS WORKS (FORMER) (Continued) **S107692390**

known where or how wastes from former gas manufacturing plant were disposed. An apparent common local gas manufacturing plant waste disposal practice at the time was to use the wastes as fill in nearby low-lying areas. At the time that the gas plant was operating, undeveloped low-lying areas were present immediately to the north, northwest, west, and southwest of the plant. Any residual subsurface contamination might represent a potential risk for utility trench workers, future construction workers, a potential vapor intrusion risk for workers in nearby buildings, or a potential ecological risk to Threatened and Endangered salmonids in the river, or to consumers of fish caught from this reach of the river.

Created Date: 01/31/2012
Updated By: SFORTUN
Updated Date: 08/09/2012
Decode for NarcdID: Site Location
NARR Comments: Location Summary: The site lies directly across the Willamette River from downtown Portland, and is comprised of two tax lots: Tax Lot 400 and Tax Lot 1400 of T1N/R1E-S34DD. Tax Lot 400 is NE of the intersection of SE 3rd Avenue and SE Ankeny Street, and Tax Lot 1400 is SW of the intersection. Tax Lot 400 occupies the southwestern quarter of East Portland Block 77, while Tax Lot 1400 occupies the entirety of East Portland Block 65. East Burnside Street, which is an elevated on-ramp to the east end of the Burnside Bridge in this area, lies along the northern edge of Block 77; SE M.L. King Jr. Blvd. (Oregon Hwy 99E) lies along the block's eastern edge. The Willamette River lies about 680 feet west of Block 65. Location Details: An 1899 Sanborn Fire Insurance Map shows the northern half of Tax Lot 1400 (then Block 950)(bounded by SE 2nd Ave (at that time, SE 2nd Street) on the west, SE 3rd Ave. (at that time, SE 3rd Street) on the east, SE Ankeny Street (at that time, G Street) on the north, and SE Ash Street (at that time, H Street) on the south as the location of E. Portland Gas Works. At that time, the site had a Gas Holder tank and a retort. A 1901 Sanborn Fire Insurance Map indicates a Gas Holder tank, Purifier Room, and Coal Shed on the northern half of Block 950, but notes that only the Gas Holder was in operation, being filled from Works on the West Side. (the note also mentions 3 retorts at the site). A 1909 Sanborn Fire Insurance Map indicates that a Gas Holder tank was present on Block 950, but was no longer used. However, diagonally across the intersection of E 3rd Street and E Ankeny Street (northeast of the former gas plant), a new 300,000 cu. ft. Gas Holder tank and Gas Pump were located on the southwest quarter of Block 977. A 1928 Sanborn Fire Insurance Map shows a Building

E PORTLAND GAS WORKS (FORMER) (Continued) **S107692390**

Materials Warehouse located on the northwest quarter of Block 950, and the 300,000 cu. ft. Gas Holder tank on the southwest quarter of Block 977. A 1950 Sanborn Fire Insurance Map shows that the Building Materials Warehouse on the northwest quarter of Block 950 had been expanded to cover the northeast quarter also, while the southwest quarter of Block 977 had been converted to an auto parking lot.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: (6/7/05 SMF/SAS) A fresh produce distribution business is currently located on Tax Lot 1400, over the location of the former gas plant, although all of the site appears to be paved or covered by a building. Tax Lot 400, the site of the more recent Gas Holder Tank, is a paved parking lot for Fishel's Furniture, a retail furniture business. Subsurface contamination could represent a potential threat to utility trench workers or future construction workers. Drinking water mains lie beneath SE 3rd Avenue and SE Ash Street, and municipal sewer mains lie beneath SE 3rd Avenue and SE 2nd Avenue. Vapors from any potential groundwater contamination might also represent a potential threat to workers within nearby businesses. Potential groundwater contaminants could discharge to the Willamette River either by direct groundwater discharge, or by entering stormsewer mains. Stormwater catchbasins are located near the northwest and southwest corners of Block 65. An Oregon Highway Division stormsewer originating near the northwest corner of Block 65 discharges to the river beneath the Burnside Bridge. A city stormsewer originating near the southwest corner of Block 65 discharges to the river near the western terminus of SE Oak Street (City Outfall #38). A combined sewer beneath SE 3rd Avenue was designed to overflow to a stormsewer that discharges to the river at City Outfall #38. The City of Portland is nearing completion of constructing a new combined sewer tunnel that lies about 95 feet below SE 3rd Avenue. It is unclear to Site Assessment at this time how the City of Portland will be redirecting stormwater flow in this area once the new combined sewer tunnel is in full operation. It is unclear if site contaminants may have contributed to sediment contamination that has been documented in the Willamette River reach nearest the site.

Created Date: 08/09/2012
Updated By: SFORTUN
Updated Date: 08/09/2012
Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: There are records for 10 groundwater production wells within 0.5-mile of the site. All are located either upgradient or cross gradient from the site. There are no known wells located directly downgradient from the site. Use of all but two of the wells is currently unknown. Two wells belong to a registered drinking water supply (serving drinking water to a transcient population of 110) located slightly less than 0.4 mile upgradient from the site. Groundwater probably discharges to the Willamette River. There are no known surface water drinking water intakes within about 30 miles downstream from the site. The Willamette River is heavily used for recreation (swimming, boating, water-skiing, fishing), along with some undefined subsistence fishing. The reach of the river nearest the site is Critical Habiata for migrating and rearing Threatened and Endangered salmonids.

NARR Comments: A gas manufacturing plant and gas holder tanks were present on the site from sometime in the 1800's (before 1889) until sometime before about 1948. The gas manufacturing plant was replaced by a building materials warehouse sometime between 1909 and 1924. The building materials warehouse was torn down in 1988, and replaced by a fresh produce distribution business in 1993. The large gas holder tank on the northeastern tax lot was installed sometime between 1901 and 1909, and replaced with a parking lot sometime before about 1948.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Further site investigation and cleanup or risk assessment are needed. An extensive cleanup of contaminated soils was conducted on Tax Lot 1400 prior to redevelopment of that lot in 1992. However, soil contamination that extended below the top of the shallow groundwater table was not cleaned up. A groundwater sample from the north end of Tax Lot 1400 was contaminated with PAHs, although no groundwater cleanup was conducted. Groundwater from other portions of the site was not analyzed. Subsurface contamination that is known to have extended beneath SE Ankeny Street was also left in place. Subsurface soil contamination may extend to the southwest, into an area of a former railroad Right-of-Way, and possibly to the south, beneath SE Ash Street. Soils and groundwater beneath the foundation of a former building materials warehouse (northwest quarter of Tax lot 1400) may not have been adequately investigated. There has been no known investigation or cleanups of soils on Tax Lot 400, where a 200,000 cubic yard gas holder tank was once located.

NARR Comments: In May 2017, apparently contaminated soil was observed in the City of Portland right-of-way, near the southwest building corner, during excavating for building renovations. No evidence of underground storage tanks (e.g., supply lines, vent pipes) was observed during the excavation. Point Source Solutions provided oversight during removal of 45.5 tons of soil, and subsequent site characterization sampling and reporting. The soil was disposed at a permitted solid waste landfill. A soil sample of apparently contaminated soil (SE1@5.5 bgs) was collected to characterize the contamination. The sample contained 775 milligrams per kilogram (mg/kg) of gasoline-range petroleum hydrocarbons. Diesel- and heavy oil-range hydrocarbons were not detected. The sample also was tested for volatile organic compounds (VOCs) and selected metals. The highest VOC concentration was reported for naphthalene (0.759 mg/kg). Lead was detected at 41 mg/kg. Soil in the SE-1 area was removed. Petroleum-range hydrocarbons were not detected in sample locations SE-2, SE-3 and SE-4. A sample of perched groundwater observed at a depth of 8 feet in the excavation also was tested for petroleum-related contamination. Gasoline-range petroleum hydrocarbons were detected at 856 micrograms per Liter (ug/L); detected VOCs included 1,2,4- and 1,3,5-tri-methylbenzene, ethylbenzene, xylenes and naphthalene. Naphthalene was detected at 68.6 ug/L; other VOCs were detected at less than 20 ug/L. Additional investigation was conducted in June 2017 to determine the extent of contamination and included advancing four soil borings (SB5 through SB8) for soil testing, and collecting a soil gas sample (SV1). Seven samples were collected for testing. Petroleum-range hydrocarbon detections were limited to SB7, where 590 mg/kg gasoline-range hydrocarbons was reported for the sample collected at a depth of 5.5 feet. VOCs were detected at somewhat higher levels than in previous testing. Naphthalene was detected at 7.68 mg/kg; 1,2,4- and 1,3,5-trimethylbenzene were detected at 0.446 and 0.215 mg/kg, respectively. The soil gas sample was collected near the building, adjacent to where the suspected highest levels of contamination remained. Gasoline-range hydrocarbons were detected at a concentration of 1,600 micrograms per meter cubed (ug/m3). VOCs,

TOWNE STORAGE PROPERTY (Continued) **S120851236**

including benzene, toluene, ethylbenzene, xylenes, 1,2,4-trimethylbenzene, and naphthalene were detected at relatively low concentrations of less than 40 ug/m3. Residual soil contamination exists at depths between about 3 and 8 feet over a 60 square foot area, with an estimated volume of 3.75 cubic yards. Concentrations in soil and groundwater are below applicable DEQ risk-based concentrations (RBCs) for direct contact under urban residential and occupational exposure scenarios. Soil gas testing showed that residual contamination does not present a risk through vapor intrusion.

Updated Date: 06/25/2018
Decode for NarcdID: Land Use (Current/Reasonably Likely)
NARR Comments: The site property is zoned Central Employment (EX), with Historic Resource Protection overlays. The zone allows mixed-uses and is intended for areas in the center of the City that have predominantly industrial type development. The intent of the zone is to allow industrial, business, and service uses which need a central location. Residential uses are allowed, but are not intended to predominate or set development standards for other uses in the area. Residential development, if it were to occur, would likely be second-story and higher apartments or condominiums, consistent with DEQ s urban residential exposure scenario.

NARR Comments: Fire suppression water entered the City storm drain system and resulted in a sheen on the Willamette River but no free product warranting recovery efforts was present. Likely elevated metals and possible PAHs in fire debris. PGE submitted a report that indicated PCB-containing transformers were consumed in the fire. however, no environmental media have been sampled. PGE conducted a <quot>Preliminary Assessment, Outfall 33 Drainage Area<quot> (5/7/10) that included the Rexel-Taylor property, then collected fire debris samples (<quot>Data Report,<quot> 8/19/10). Fire debris, primarily located on concrete slab foundations, contained elevated levels of metals, PCBs, dioxin/furans, and PAHs. The property owner, HMB Corp., removed fire debris and disposed of it off site, and removed sediment in adjacent stoirmwater catch basins and pipelines (<quot>Environmental Assessment and Remediation Report,<quot> October 15, 2012).

NARR Comments: The Rexel/Taylor Warehouse is located in SE Portland at the corner of Clay and 3rd Street. The fire started around 10:30 PM on May 17th and involved materials stored in the warehouse (mainly wiring), but reportedly some transformers. Three transformers owned by PGE were incinerated, with an estimated release of less than 10 gallons of oil. The balance of 110 gallons is presumed to have been consumed in the fire. An associated property that was not invloved in the fire is 1709 SE 3rd St. (Associated Busness/or Owner), the block located south of the fire.

NARR Comments: MTpugh, 7/14/06 Mr. Taylor, representing HMB corporation (owner) has indicated he would cooperate with DEQ but feels the operator should be responsible for entering the Voluntary Cleanup Program (VCP) as requested by DEQ. Rexel Inc., the tenant at the time of the fire, offered to enter the VCP to address our concerns but indicated that they do not have the authority to access the property. This has been rebutted by Mr. Taylor. Since the current circumstances do not indicate the VCP process is viable, we are referring the site to the DEQ Site Assessment Program for further evaluation. A timeline for this evaluation is uncertain. DEQ requested Rexel Inc. to provide complete information on the materials and equipment that were stored in the warehouse at the time of fire. DEQ has requested that Mr. Taylor provide information on the disposition of fire debris and any other material disposed off-site, and any subsequent environmental investigation or cleanup conducted at the site.

Decode for NarcdID: Remedial Action
NARR Comments: PGE removed their burnt transformers. Rexel hired Elder Demolition and reportedly salvageable metal has been removed from the fire debris. The property owner, HMB Corp., removed fire debris and disposed of it off site, and removed sediment in adjacent stoirmwater catch basins and pipelines (<quot>Environmental Assessment and Remediation Report,<quot> October 15, 2012). In May 2015 Coffman Excavation removed soil and fire debris to a depth of one foot in the northeast corner of the property. Concrete and wood debris was removed and disposed as construction debris. Approximately 157 tons of contaminated soil was disposed at Hillsboro Landfill. In July 2015 Coffman Excavation encountered a layer of bitumen covering approximately 200 square feet beneath the floor slab in the northwest corner of the property. Approximately 78 tons of bitumen and soil was removed in August 2015. Analysis of two discrete samples confirmed removal. In November 2015 Coffman Excavation removed PCB-impacted soil from the planned utility corridor trench in the area of the former pole-mounted transformers along the southern portion of the property. Three discrete samples were collected from the base of the trench for PCB analysis. No PCBs were detected. Based on completion

REXEL/TAYLOR ELECTRICAL SUPPLY (Continued) **S108059928**

of this work, DEQ issued a Certificate of Completion in September 2016 (JKS 11-21-17).

NARR Comments: Threat to human health may exist from fire debris. Once the fire debris is removed the risk from residual contamination will likely be low, as the soil at the site is almost completely covered with concrete. The storm drain lines and associated contaminants could present an ongoing source of residual contamination to the Willamette River, but due to the expected limited volume is not expected to present a signifcant threat to humans or wildlife.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [March 2016] DEQ negotiated a Prospective Purchaser Agreement with a developer constructing new office building on the site. The seller cleaned up fire debris and sediment in adjacent stormwater pipes, and the buyer undertook shallow soil removal. A Certificate of Completion was issued in September 2016.

Decode for NarcdID: Contamination
NARR Comments: Degraded diesel and gasoline range contamination Soil and shallow groundwater at the Site was impacted by petroleum hydrocarbons in the early 1900s. The fire in 1911 likely contributed to the petroleum releases. Kerosene and diesel are the primary petroleum contaminants in soil and groundwater beneath the Site. The petroleum is highly degraded and contains virtually no benzene, toluene, ethylbenzene or xylenes, and very low concentrations of polycyclic aromatic hydrocarbons (PAHs). Water samples were collected from two sumps that contained sufficient water after prolonged precipitation, and analyzed for extractable petroleum hydrocarbons (EPH) using Method NW-EPH and volatile petroleum hydrocarbons (VPH) using Method NW-VPH to evaluate if volatilization of petroleum constituents from shallow groundwater to indoor air was a pathway of concern. EPH and VPH compounds were not detected.

NARR Comments: Residual contamination is above DEQ risk-based concentrations for urban residents. However, the site is zoned industrial which prohibits residential use. Contamination above applicable risk-based standards is limited to soils and shallow groundwater within the Site property boundary. Petroleum-impacted soil and shallow groundwater are present immediately beneath the basement floor. Most of the contamination occurs within the smear zone of seasonal water table fluctuation between 10 and 20 feet below local grade (from 0 to 10 feet below the basement floor). The only contaminant detected above its applicable risk-based concentration (RBC) is diesel in soil. Diesel concentrations in soil are above the RBC for direct contact by construction workers at sample locations MW-1, MW-2 and MW-3. All other detected contaminant concentrations in groundwater, soil and water were below applicable RBCs based on occupational exposure scenarios.

NARR Comments: (B Schwarz, August 15, 2018) DEQ has been working with ODOT and Prosper Portland (formerly Portland Development Commission) in evaluating environmental conditions on this property. Prosper Portland plans to develop the property for light industrial use. Construction related to this development would not be done until 2019 or later. Based on a review of site documents, DEQ plans to propose issuing a conditional No Further Action determination. The primary conditions are recording of a deed restriction and adherence to a Contaminated Media Management Plan (CMMP), and a Remedial Action Approach Plan (RAAP). Copies of the CMMP and RAAP are attached, as well as a copy of DEQ's staff report in support of the proposed conditional No Further Action determination.

NARR Comments: (8/10/11 GMW/SAS) This is a LUST site (log #s 26-11-0584 and -0585) that DEQ closed administratively in June 2011 and referred to Cleanup. This is because of new funding from the OR Dept. of Business Development to investigate and clean up the site as a brownfields redevelopment project. (10/20/2011 KPD/VCS) A 375-gallon underground storage tank was decommissioned by removal from the site on June 13, 2011. Stoddard solvent was identified in soil around the tank. The property owner (Lawrence Koppy) signed up for DEQ oversight on June 27 but withdrew on October 19 after he sold the property.

Decode for NarcdID: Contamination
NARR Comments: (10/08/2015 KPD/ICP) Groundwater samples collected to the south of Block 75 in 1998 and 1999 identified a plume of PCE that appeared to originate on the Block. Soil samples collected on Block 75 in July 2004 found virtually no contamination of any kind. However, soil gas samples collected in November 2013 showed a plume of PCE extending roughly from the center of the Block to the southeast corner. PCE was also detected in on-site groundwater samples in October 2014.

NARR Comments: Soils at the site were generally described as sandy silts to about 20 ft bgs, grading to silty and sandy gravels below 30 ft bgs. The gravels extend to at least 75 ft bgs. Groundwater was encountered roughly 40 ft bgs and flows southwest. The nearest surface water body is the Willamette River, about 750 feet west of the site. The site and surrounding properties are currently zoned Central Employment with a design overlay (EXd) by the City of Portland.

NARR Comments: (10/08/2015 KPD/ICP) Redevelopment of the site began the last week of December 2014. Within days three former cesspools were discovered on the south half of the block. The cesspools were 3 ft in diameter, brick-lined, and extended to groundwater. Sediments at the bottom of the cesspools were contaminated with oil and metals. A total of 20.34 tons of sediments were vacuumed or augured out of the cesspools and shipped to the Hillsboro Landfill for disposal. Approximately 24,000 cubic yards of soil were excavated up to 22 ft bgs from the south half of the block and shipped to the Portside Lagoon and Landfill in Vancouver for disposal. No evidence of soil contamination (such as odors or staining) was observed during the excavations. Elevated concentrations of arsenic and lead remain at the bottom of one of the cesspools, and elevated concentrations of arsenic were detected in a composite surface soil sample from a parcel of former right-of-way immediately south of the block. However, DEQ has determined that the arsenic and lead at the bottom of the cesspool are too deep and too limited in extent to pose a direct contact risk, and the former right-of-way will be capped by the City of Portland to prevent contact with arsenic in the surface soils. DEQ also determined that the PCE concentrations in soil gas and groundwater did not pose an unacceptable risk to human health or the environment.

NARR Comments: Approximately 11 residences were present at the site as of 1889. The residences began to be removed in the mid-1930s. By 1950 all of the residences had been removed, and a building was constructed in the SW quarter of the block. The building was variously used for automotive maintenance, motorcycle assembly, and delivery vehicle maintenance. A second building was constructed in the SE quarter of the block in 1970. The building was used as a motorcycle repair shop in the 1970s, as an automotive paint mixing and matching facility in the 1980s and 1990s, and as a bakery and restaurant in the 2000s. Both buildings were torn down in 2008, and the site remained vacant until construction of the current building began in 2015.

NARR Comments:	Phase I ESA performed in February 2018 revealed an REC associated with the adjacent East Side Plating Plant 4 facility to the south.

BYRUM MOREHOUSE BUILDING (Continued) **S121802071**

East Side Plating performs electroplating operations and produces wastes including corrosives, metals and spent cyanide. Numerous hazardous waste violations noted between 1984 and 2014 at East Side Plating. In the early 1980s, the City had to replace a concrete sewer that failed due to corrosive wastes. The southern portion of the site property was occupied by a brass foundry from the mid-1920s to the late 1950s. A limited Phase II ESA in November 2017 revealed arsenic in soil above RBCs. Two of four soil samples also contained arsenic above regional background. Two of three soil gas samples contained TCE at concentrations above the occupational RBC for inhalatioon in soil gas. SG1 detected TCE at 5400 ug/m3 and SG2 detected TCE at 9600 ug/m3. PCE was also detected in soil gas, although not at levels above occupational RBCs. In December 2017, additional soil gas samples were collected (SG-4 through SG-8). TCE and PCE were detected in soil gas but not at concentrations exceeding RBCs. In April 2018, additional soil gas data were collected from two sumps installed for purposes of performing pilot testing and also from four permanent vapor monitoring points (VP-1 through VP-4). TCE was detected in Sump 2 at a concentration of 4500 ug/m3. In June 2018 TCE was detected in VP-4 and VP-6 at concentrations of 13,000 ug/m3 and 6500 ug/m3, respectively. Based on these findings, DEQ requested additional soil gas sampling north of VP-4. DEQ also recommended expansion of the proposed SSDS system footprint on the east side of the building toward the north. In September 2018 additional permanent soil gas sampling points VP-5 through VP-7 were installed. TCE was detected in VP-6 (6500 ug/m3) above the occupational worker RBC. The sample from VP-7 detected TCE at a level (2500 ug/m3) near the occupational worker RBC. (JKS 10-31-18).

NARR Comments: Phase I ESA performed in February 2018 revealed an REC associated with the adjacent East Side Plating Plant 4 facility to the south.
East Side Plating performs electroplating operations and produces wastes including corrosives, metals and spent cyanide. Numerous hazardous waste violations noted between 1984 and 2014 at East Side Plating. In the early 1980s, the City had to replace a concrete sewer that failed due to corrosive wastes. The southern portion of the site property was occupied by a brass foundry from the mid-1920s to the late 1950s. A limited Phase II ESA in November 2017 revealed arsenic in soil above RBCs. Two of four soil samples also contained arsenic above regional background. Two of three soil gas samples contained TCE at concentrations above the occupational RBC for inhalatioon in

BYRUM MOREHOUSE BUILDING (Continued) **S121802071**

soil gas. SG1 detected TCE at 5400 ug/m3 and SG2 detected TCE at 9600 ug/m3. PCE was also detected in soil gas, although not at levels above occupational RBCs. In December 2017, additional soil gas samples were collected (SG-4 through SG-8). TCE and PCE were detected in soil gas but not at concentrations exceeding RBCs. In April 2018, additional soil gas data were collected from two sumps installed for purposes of performing pilot testing and also from four permanent vapor monitoring points (VP-1 through VP-4). TCE was detected in Sump 2 at a concentration of 4500 ug/m3. Pilot test was performed April 10-11, 2018. In May 2018, Farallon Consulting subitted a Focused RAP proposing a vapor mitigation engineering control that included sealing of the floor and points of penetration through the slab. In addition, the FRAP proposed installation of a sub-slab depressurization system consisting of horizontal 4-inch SSDS wells and conveyance piping connected to a blower. In June 2018 TCE was detected in permanent soil vapor monitoring points VP-4 and VP-6 at concentrations of 13,000 ug/m3 and 6500 ug/m3, respectively. Based on these findingsa and based on review of the FRP, DEQ requested additional soil gas sampling north of VP-4. DEQ also recommended expansion of the proposed SSDS system footprint on the east side of the building toward the north. In September 2018 additional permanent soil gas sampling points VP-5 through VP-7 were installed. TCE was detected in VP-6 (6500 ug/m3) above the occupational worker RBC. The sample from VP-7 detected TCE at a level (2500 ug/m3) near the occupational worker RBC. In October Farallon consulting revised the Focused RAP to incorporate the results of additional soil gas testing. In addition, the FRAP proposed expansion of the SSDS footprint on the eastern side of the building to approximately 20 feet beyond the location of VP-7. DEQ approved the revised FRAP and expanded system footprint in October 2018. DEQ awaits notification of the construction schedule. (JKS 10-31-18).

Decode for NarcdID: General Site Description
NARR Comments: The Site is located on approximately 0.9 acres of urban industrial land approximately 600 feet east of the Willamette River at 1510 SE Water Avenue, Portland, Multnomah County, Oregon. The Site is occupied by a 19,400 square foot, two story warehouse/office structure with a full basement. PGE vacated the Site in 2012 and initiated cleanup activities in September 2013 on behalf of Killian Pacific, as part of their Prospective Purchaser Agreement with DEQ . Following cleanup activities and adequate confirmation sampling, the building was renovated as office space.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Potential receptors on-site are construction and occupational workers. Potential off-site exposures to receptors in the Willamette River may occur as a result of contaminant discharge to the Willamette River through the stormwater system. Significant groundwater contamination was not observed, and potential preferential groundwater pathways to subsurface utilities and associated backfill is incomplete because the subsurface utilities are located above the depth at which groundwater is encountered.

NARR Comments: (1/14/13 TG/VCP) PGE has entered the Voluntary Cleanup Program to perform removal assessment and implementation regarding on-site PCB contamination. (2/12/15 TG/VCP) Remedial actions at the Site included removal of contaminated components of the Site, including: basement sumps, soil, two underground storage tanks, and stormwater solids in the conveyance system.

Updated By: TGAINER
Updated Date: 02/12/2015
Decode for NarcdID: Residual Risk Assessment
NARR Comments: Post-remedial action confirmation samples showed contaminant concentrations were below applicable health-based screening levels. One exception was at the extent of the elevator shaft excavation where a small pocket of diesel-range petroleum-contaminated soil was left in place at 20 feet below ground surface. Future exposure to construction workers is unlikely at this depth, and an oxidant (RegenOx) was applied to treat the soil prior to backfilling. Groundwater impacts were not observed.

NARR Comments: The property had belonged to PGE or a predecessor company since 1905. The two-story building was originally constructed in 1911 by PGE predecessor companies for use as a railway depot and parking garage. Since 1935, various PGE departments occupied the building for storage and maintenance uses. Between 1935 and 2000, PGE operations in the basement included: bushing repair; automotive repair; a metal shop; a

PORTLAND GENERAL ELECTRIC HAWT (Continued) **1004770275**

paint booth; cleaning, repair and maintenance of electrical equipment (e.g., transformers); and the storage of associated supplies and wastes. Transformer repair ceased in the mid-1980s, and transformer storage ceased in January 2011. Since 2000, PGE operations at the Property have been primarily limited to routine maintenance of on-site systems. PGE vacated the Property in 2012 leaving only office equipment and miscellaneous supplies on site until the start of remedial activities in September 2013.

FINDS:

Registry ID: 110014281758

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

EAST SIDE PLATING WORKS (Continued) **1000393917**

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

NARR Comments: Site has a history of excessive discharge (in excess of discharge limits for hazardous compounds, particularly acids and cyanide) to city sewer. City had to replace corroded sewer pipe 3/80. A 40-foot length of 8-inch concrete pipe had been completely eaten out along its bottom. This plant is the largest source of plating wastes in the city (3/79). City initiated enforcement action to reduce facility's discharge. Site was in apparent compliance with RCRA conditions in 1984. See Strategy Recommendation in site files for more information. Beginning in 1987, TCE was found in monitoring wells downgradient of site; these wells were installed as part of PGE Station L investigation (ECSI #151). It is possible that the TCE originated from East Side Plating.

NARR Comments: A November 30, 2010 DEQ and EPA joint, unannounced Hazardous Waste Generator Compliance Inspection of this Large Quantity Hazardous Waste Generator facility noted that this is East Site Plating's

EAST SIDE PLATING WORKS (Continued) **1000393917**

oldest operating facility, operating since 1946. The facility itself is more than 60 years old. The concrete flooring is compromised by cracks and loosely-set blocks. Uncontained plating solutions were observed accumulated on the facility floors. Treated plating solutions are discharged to the municipal sanitary sewers under a permit from Portland Bureau of Environmental Services. Main Plating Room Operations: pre-plating operations (rinsate and caustic tanks), plating tanks for chromating and cadmium, copper, and zinc, and finishing rinses including a cyanide bath for copper and cadmium products. Facility also has a Specialty Plating Room, Deburring Room, Maintenance Shop, a Wastewater Treatment Room (filter press and sludge drying), and a 90-Day Waste Storage Area

NARR Comments: In response to DEQ review, RP conducted own PA with Hahn & Associates. Hahn completed the PA in June 1995, and it concluded that releases from corroded sewer piping prior to 1981 could have caused subsurface contamination. Hahn installed four soil borings beneath the replaced sewer pipe 11/95, which showed little or no metals or VOC contamination at this location. Based on this data, Site Assessment has downgraded the further-action priority to LOW. There is still no information on the fate of heavy metals that were released through the break in the city sewer line, nor does the Hahn PA address other possible release areas for metals or VOCs from the site to soil/groundwater.

Decode for NarcdID: Health Threats
NARR Comments: There is a good chance that the ESP facility has released metals and solvents to soil/groundwater. If this is the case, subsurface contamination could affect downgradient industrial supply wells, water in the on-site well, and surface water in the Willamette River.

NARR Comments: November 30, 2010 DEQ and EPA conducted a joint, unannounced Hazardous Waste Generator Compliance Inspection of this Large Quantity Hazardous Waste Generator facility. Three Violations were noted: (1) failure to clean up a hazardous waste release; (2) failure to store hazardous waste in a tank or container; and (3) failure to label stored hazardous waste with an accumulation date. Plating liquids had acumulated on the building floor (1.02% liquid chromium; 0.238% liquid cadmium), and plating sludges had accumulated outside and around the facility's plating and rinsate tanks (0.57% chromium sludge;12% cadmium sludge). A Pre-Enforcement Notice (PEN-NWR-HW-11-003) was issued on February 1, 2011. A DEQ Hazardous Waste inspector had twice visited the plant in 2005. At that time, the inpector observed acumulated plating liquid on the plant floor, and accumulated plating wastes that had not been containerized.

Hazmat Story of Release:	Not reported
Remark:	HM7 WAS CALLED TO A FIRST ALARM FIRE AT EAST SIDE PLATING INC. A FIRE STARTED WHEN A OVERHEATED MOTOR IGNITED A TUMBLER MADE OF PLASTIC. THE FIRE WAS IN A ROOM WHERE MULTIPLE HAZ. MATERIALS WERE STORED IN 500 GALLON VATS. THE FIRE WAS CONTROLLED BY AN OVERHEAD SPRINKLER SYSTEM AND EXTINGUISHED COMPLETELY BY FIRST ARRIVING CREWS. THE IC ON SCENE CALLED HAZMAT TEAM 7 TO COME INVESTIGATE AND MAKE SURE THE VATS (WHICH WERE NEVER INVOLVED WITH FIRE) WERE SECURE AND MONITOR AND TEST THE AREA TO CONFIRM THE SCENE COULD BE CALLED SAFE AND THE INCIDENT RECALLED. HAZMAT 7 MONITORED THE ROOM FOR GASES AND SAMPLED RUN OFF WATER FROM THE SPRINKLER SYSTEM AND FOUND NO HAZARDS OR SIGNIFICANT ISSUES AND ADVISED THE IC THE AREA WAS CLEAR TO BE INVESTIGATED BY THE ARSON INVESTIGATOR. THE INCIDENT WAS RECALLED AND PERSONNEL FROM THE BUSINESS WERE ALLOWED TO RE-ENTER THEIR PLACE OF BUSINESS.

Facility Status:	ACTIVE
Status TRI:	Inactive
Status RMP:	Active
Status PSM:	Active
Status CR2K:	Inactive
Status 302:	Inactive
Owner Name:	GARY REHNBERG
Latest Report ID:	28399
Case Number:	N/A
Chemical Name:	SULFURIC ACID 93%
EHS Name:	SULFURIC ACID
Is Pure:	Yes
Is Mix:	No
Is EHS:	Not reported
Mixture Component:	Not reported
Maximum DailyAmount Code:	4
Maximum DailyAmount Unit:	gal
Chemical Added Date:	08/30/2017
Is ChemPSM:	No
Is Chem112r:	No
Is Chem302:	Yes
Is Pesticide:	No
Is Fertilizer:	No
Physical State:	Liquid
UNNA Number:	1830
NFPA Health:	3

EAST SIDE PLATING WORKS (Continued) **1000393917**

NFPA Flammability:	0
NFPA Reactivity:	2
NFPA Special Notice:	N/A
Hazards:	Health Acute, Health Carcinogenicity, Health SeriousEye, Health SkinCorrosion, Physical Corrosive
No# of Days Onsite:	365

Temperature Description:	PLASTIC OR NON-METALLIC DRUM
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Temperature Description:	GREATER THAN NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	5
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	5,000-9,999
Description Of The Avg Qnty Code:	5,000-9,999
Most Hazardous Ingridient:	CHROMIUM TRIOXIDE
United Nations/north America 4 Digit Class Number:	0000
Hazard Rank:	2
EHS Ingredient:	NITRIC ACID
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Oxidizers
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	5.1

Chemical:

Chemical Name:	CHROMATE BATHS
United Nations/north America 4 Digit Class Number:	0000
Chemical Abstract Service Identifier Number:	1333820
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Oxidizers
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	8.0

EAST SIDE PLATING WORKS (Continued) **1000393917**

Hazard Class 3 Of The Chemical:	5.1
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	Y
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	COPPER ANODES
Physical Description:	SOLID
Case Number:	7440508
Facility Id:	004607
Physical State Of The Substance:	1
Avag Amt Possessed During Year CD:	30
Max Amt Possessed During Year CD:	30
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	K
Description:	BOX

Hazard Class 2 Of The Chemical:	5.1
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	DESMUT A-1714 BATH
United Nations/north America 4 Digit Class Number:	0000
Chemical Abstract Service Identifier Number:	7775271
Chemical Is Extremely Hazardous Substance (EHS):	N

EAST SIDE PLATING WORKS (Continued) **1000393917**

First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Oxidizers
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	5.1
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	PHOSPHORIC ACID BATH
Physical Description:	LIQUID
Case Number:	7664382
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	20
Max Amt Possessed During Year CD:	20
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	C
Temperature Description:	TANK INSIDE BUILDING
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE

Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	POTASSIUM CHLORIDE
Physical Description:	SOLID
Case Number:	7447407
Facility Id:	004607
Physical State Of The Substance:	1
Avag Amt Possessed During Year CD:	20
Max Amt Possessed During Year CD:	20
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	J
Description:	BAG
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	POTASSIUM CHLORIDE
United Nations/north America 4 Digit Class Number:	0000
Hazard Rank:	4
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	True
Substance Mix:	False
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

EAST SIDE PLATING WORKS (Continued) **1000393917**

Chemical:

Chemical Name:	POTASSIUM CHLORIDE
United Nations/north America 4 Digit Class Number:	0000
Chemical Abstract Service Identifier Number:	7447407
Chemical Is Extremely Hazardous Substance (EHS):	N
