Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	GREATER THAN NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	5
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	ZINC CHLORIDE
United Nations/north America 4 Digit Class Number:	1840
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Corrosive Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	8.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

EAST SIDE PLATING WORKS (Continued) **1000393917**

Chemical:

Chemical Name:	ZINC BATHS
United Nations/north America 4 Digit Class Number:	1840
Chemical Abstract Service Identifier Number:	7646857
Chemical Is Extremely Hazardous Substance (EHS):	Not reported
First Hazardous Class Code For Chemical:	Corrosive Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	8.0

Avag Amt Possessed During Year CD:	03
Max Amt Possessed During Year CD:	04
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	E
Description:	PLASTIC OR NON-METALLIC DRUM
Type Code:	C
Temperature Description:	TANK INSIDE BUILDING
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	50-199
Description Of The Avg Qnty Code:	20-49
Most Hazardous Ingridient:	SULFURIC ACID
United Nations/north America 4 Digit Class Number:	1830
Hazard Rank:	2
EHS Ingredient:	SULFURIC ACID
Substance Pure:	True
Substance Mix:	False
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Reactive Material

EAST SIDE PLATING WORKS (Continued) **1000393917**

Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	4.4
Hazard Class 3 Of The Chemical:	8.0

Chemical:

Chemical Name:	SULFURIC ACID 93%
United Nations/north America 4 Digit Class Number:	1830
Chemical Abstract Service Identifier Number:	7664939
Chemical Is Extremely Hazardous Substance (EHS):	Y
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Reactive Material
Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	4.4
Hazard Class 3 Of The Chemical:	8.0
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	WASTE CHROMIUM PROCESS
Physical Description:	LIQUID
Case Number:	7440473
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	11

Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	STANNOUS SULFATE
United Nations/north America 4 Digit Class Number:	0000
Hazard Rank:	2
EHS Ingredient:	SULFURIC ACID
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Reactive Material
Second Hazardous Class Code For Chemical:	Corrosive Material

EAST SIDE PLATING WORKS (Continued) **1000393917**

Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.4
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	ARCHITECTURAL BLACK SOLUTION
United Nations/north America 4 Digit Class Number:	0000
Chemical Abstract Service Identifier Number:	7488553
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Reactive Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.4
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	Y
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	CADMIUM ANODES
Physical Description:	SOLID

Physical Description:	SOLID
Case Number:	20427592
Facility Id:	004607
Physical State Of The Substance:	1
Avag Amt Possessed During Year CD:	21
Max Amt Possessed During Year CD:	30
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	R
Description:	OTHER
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	10,000-49,999
Description Of The Avg Qnty Code:	5,000-9,999
Most Hazardous Ingridient:	COPPER HYDROXIDE
United Nations/north America 4 Digit Class Number:	3077
Hazard Rank:	2
EHS Ingredient:	NONE LISTED ON MSDS

EAST SIDE PLATING WORKS (Continued) **1000393917**

Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Chronic Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.4
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	F006 FILTERCAKE
United Nations/north America 4 Digit Class Number:	3077
Chemical Abstract Service Identifier Number:	20427592
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Chronic Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.4
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	HYDROCHLORIC ACID BATHS
Physical Description:	LIQUID
Case Number:	7647010

Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	20-49
Description Of The Avg Qnty Code:	10-19
Most Hazardous Ingridient:	CHROMIC ACID
United Nations/north America 4 Digit Class Number:	2922
Hazard Rank:	3
EHS Ingredient:	NITRIC ACID

EAST SIDE PLATING WORKS (Continued) **1000393917**

Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Reactive Material
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	4.4

Chemical:

Chemical Name:	CHROMAX 4101 YL
United Nations/north America 4 Digit Class Number:	2922
Chemical Abstract Service Identifier Number:	1333820
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Reactive Material
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	4.4
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	Y
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	CHILLER SYSTEM SOLUTION
Physical Description:	LIQUID
Case Number:	107211
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	20
Max Amt Possessed During Year CD:	20

Chemical:

Chemical Name:	WASTE CYANIDE PROCESS
United Nations/north America 4 Digit Class Number:	Not reported
Chemical Abstract Service Identifier Number:	143339
Chemical Is Extremely Hazardous Substance (EHS):	Not reported
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	Not reported
EPA Pesticide Registration Number:	Not reported
Contains 112R:	Not reported
Contains EHS:	Not reported
Fertilizer:	Not reported
Pesticide:	Not reported
Contains 313:	Not reported

Chemical Name:	WASTE PROCESS MIXED
Physical Description:	LIQUID
Case Number:	Not reported
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	30
Max Amt Possessed During Year CD:	30
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	10,000-49,999

EAST SIDE PLATING WORKS (Continued) **1000393917**

Description Of The Avg Qnty Code:	10,000-49,999
Most Hazardous Ingridient:	ZINC/CHROME/NICKEL
United Nations/north America 4 Digit Class Number:	3077
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Miscellaneous Hazardous Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	9.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Description Of The Max Qnty Code:	1,000-4,999

EAST SIDE PLATING WORKS (Continued) **1000393917**

Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	PHOSPHORIC ACID
United Nations/north America 4 Digit Class Number:	1805
Hazard Rank:	2
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Reactive Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.4
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	PHOSPHORIC ACID BATH
United Nations/north America 4 Digit Class Number:	1805
Chemical Abstract Service Identifier Number:	7664382
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Reactive Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.4
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	ANODIZING DYE BATHS
Physical Description:	LIQUID
Case Number:	127093
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	20
Max Amt Possessed During Year CD:	20

Chemical:

Chemical Name:	POTASSIUM CHLORIDE
United Nations/north America 4 Digit Class Number:	0000
Chemical Abstract Service Identifier Number:	7447407
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	Y
Pesticide:	N
Contains 313:	N

Chemical Name:	POTASSIUM CYANIDE
Physical Description:	SOLID
Case Number:	151508
Facility Id:	004607
Physical State Of The Substance:	1
Avag Amt Possessed During Year CD:	04
Max Amt Possessed During Year CD:	04
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	D
Description:	STEEL DRUM
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported

EAST SIDE PLATING WORKS (Continued) **1000393917**

Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	50-199
Description Of The Avg Qnty Code:	50-199
Most Hazardous Ingridient:	POTASSIUM CYANIDE
United Nations/north America 4 Digit Class Number:	1680
Hazard Rank:	3
EHS Ingredient:	POTASSIUM CYANIDE
Substance Pure:	True
Substance Mix:	False
First Hazardous Class Code For Chemical:	Poisonous Material

Hazard Class 3 Of The Chemical:	8.0

Chemical:

Chemical Name:	COPPER CYANIDE BATH SOLUTION
United Nations/north America 4 Digit Class Number:	1689
Chemical Abstract Service Identifier Number:	544923
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Reactive Material
Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	4.4
Hazard Class 3 Of The Chemical:	8.0
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	Y
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	ACID COPPER BATH
Physical Description:	LIQUID
Case Number:	7758987
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	20
Max Amt Possessed During Year CD:	20
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	C
Temperature Description:	TANK INSIDE BUILDING
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	GREATER THAN NORMAL TEMPERATURE

Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	ZINC CHLORIDE
United Nations/north America 4 Digit Class Number:	1840
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Corrosive Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	8.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	ZINC BATHS
United Nations/north America 4 Digit Class Number:	1840
Chemical Abstract Service Identifier Number:	7646857
Chemical Is Extremely Hazardous Substance (EHS):	Not reported
First Hazardous Class Code For Chemical:	Corrosive Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	8.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	Not reported
EPA Pesticide Registration Number:	Not reported
Contains 112R:	Not reported
Contains EHS:	Not reported
Fertilizer:	Not reported
Pesticide:	Not reported
Contains 313:	Not reported

Chemical Name:	ZINC CYANIDE
Physical Description:	SOLID
Case Number:	557211
Facility Id:	004607
Physical State Of The Substance:	1
Avag Amt Possessed During Year CD:	04
Max Amt Possessed During Year CD:	04
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	D
Description:	STEEL DRUM
Type Code:	Not reported

Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	CAUSTIC BEADS
United Nations/north America 4 Digit Class Number:	1823
Chemical Abstract Service Identifier Number:	1310732
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Reactive Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.4
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	CAUSTIC SODA SOLUTION
Physical Description:	LIQUID
Case Number:	1310732
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	11
Max Amt Possessed During Year CD:	11
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	E
Temperature Description:	PLASTIC OR NON-METALLIC DRUM
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	1

EAST SIDE PLATING WORKS (Continued) **1000393917**

Pressure Description:	NORMAL PRESSURE
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	500-999
Description Of The Avg Qnty Code:	500-999
Most Hazardous Ingridient:	SODIUM HYDROXIDE
United Nations/north America 4 Digit Class Number:	1824
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Corrosive Material
Second Hazardous Class Code For Chemical:	Acute Health Hazard
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	8.0
Hazard Class 2 Of The Chemical:	6.3
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	CAUSTIC SODA SOLUTION
United Nations/north America 4 Digit Class Number:	1824

Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	50-199
Description Of The Avg Qnty Code:	20-49
Most Hazardous Ingridient:	SULFURIC ACID
United Nations/north America 4 Digit Class Number:	1830
Hazard Rank:	2
EHS Ingredient:	SULFURIC ACID
Substance Pure:	True
Substance Mix:	False
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Reactive Material
Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	4.4
Hazard Class 3 Of The Chemical:	8.0

Chemical:

Chemical Name:	SULFURIC ACID 93%
United Nations/north America 4 Digit Class Number:	1830
Chemical Abstract Service Identifier Number:	7664939
Chemical Is Extremely Hazardous Substance (EHS):	Y
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Reactive Material
Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	4.4
Hazard Class 3 Of The Chemical:	8.0
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	WASTE CHROMIUM PROCESS
Physical Description:	LIQUID
Case Number:	7440473
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	11
Max Amt Possessed During Year CD:	11
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING

EAST SIDE PLATING WORKS (Continued) **1000393917**

Contains 313:	Y

Chemical Name:	NITRIC SOUR BATH
Physical Description:	LIQUID
Case Number:	7697372
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	20
Max Amt Possessed During Year CD:	20
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING

EAST SIDE PLATING WORKS (Continued) **1000393917**

Type Code:	C
Temperature Description:	TANK INSIDE BUILDING
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	GREATER THAN NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	5
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	NITRIC ACID
United Nations/north America 4 Digit Class Number:	2031
Hazard Rank:	2
EHS Ingredient:	NITRIC ACID
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Oxidizers
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Poisonous Material
Hazard Class 1 Of The Chemical:	5.1
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	6.1

Chemical:

Chemical Name:	NITRIC SOUR BATH
United Nations/north America 4 Digit Class Number:	2031
Chemical Abstract Service Identifier Number:	7697372
Chemical Is Extremely Hazardous Substance (EHS):	N

Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	10,000-49,999
Description Of The Avg Qnty Code:	5,000-9,999
Most Hazardous Ingridient:	COPPER HYDROXIDE
United Nations/north America 4 Digit Class Number:	3077
Hazard Rank:	2
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Chronic Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.4
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	F006 FILTERCAKE
United Nations/north America 4 Digit Class Number:	3077
Chemical Abstract Service Identifier Number:	20427592
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Chronic Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.4
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	HYDROCHLORIC ACID BATHS
Physical Description:	LIQUID
Case Number:	7647010
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	21
Max Amt Possessed During Year CD:	21

EAST SIDE PLATING WORKS (Continued) **1000393917**

Avag Amt Possessed During Year CD:	04
Max Amt Possessed During Year CD:	04

EAST SIDE PLATING WORKS (Continued) **1000393917**

Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	GREATER THAN NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	5
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	50-199
Description Of The Avg Qnty Code:	50-199
Most Hazardous Ingridient:	COPPER CYANIDE
United Nations/north America 4 Digit Class Number:	1689
Hazard Rank:	2
EHS Ingredient:	SODIUM CYANIDE
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Reactive Material
Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	4.4
Hazard Class 3 Of The Chemical:	8.0

Chemical:

Chemical Name:	BRASS CYANIDE BATH SOLUTION
United Nations/north America 4 Digit Class Number:	1689
Chemical Abstract Service Identifier Number:	544923
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Reactive Material
Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	4.4
Hazard Class 3 Of The Chemical:	8.0
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	Y
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	HYDROCHLORIC ACID 31-33%
Physical Description:	LIQUID
Case Number:	7647010
Facility Id:	004607
Physical State Of The Substance:	2

Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	4.4

Chemical:

Chemical Name:	CHROMAX 4101 YL
United Nations/north America 4 Digit Class Number:	2922
Chemical Abstract Service Identifier Number:	1333820
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Reactive Material
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	4.4
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	Y
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	CHILLER SYSTEM SOLUTION
Physical Description:	LIQUID
Case Number:	107211
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	20
Max Amt Possessed During Year CD:	20

EAST SIDE PLATING WORKS (Continued) **1000393917**

Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	R
Description:	OTHER
Type Code:	C
Temperature Description:	TANK INSIDE BUILDING
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE

Case Number:	Not reported

EAST SIDE PLATING WORKS (Continued) **1000393917**

Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	30
Max Amt Possessed During Year CD:	30
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	10,000-49,999
Description Of The Avg Qnty Code:	10,000-49,999
Most Hazardous Ingridient:	ZINC/CHROME/NICKEL
United Nations/north America 4 Digit Class Number:	3077
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Miscellaneous Hazardous Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	9.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	WASTE PROCESS MIXED
United Nations/north America 4 Digit Class Number:	3077
Chemical Abstract Service Identifier Number:	Not reported
Chemical Is Extremely Hazardous Substance (EHS):	Not reported

Chemical:

Chemical Name:	PHOSPHORIC ACID BATH
United Nations/north America 4 Digit Class Number:	1805
Chemical Abstract Service Identifier Number:	7664382
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Reactive Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.4
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	ANODIZING DYE BATHS
Physical Description:	LIQUID
Case Number:	127093

EAST SIDE PLATING WORKS (Continued) **1000393917**

Facility Id:	004607

Chemical:

Chemical Name:	BOILER CHEMICAL CONDENSATE
United Nations/north America 4 Digit Class Number:	3267
Chemical Abstract Service Identifier Number:	110918
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Combustible Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.5
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

EAST SIDE PLATING WORKS (Continued) **1000393917**

Chemical Name:	ACID ETCH AX2050 BATH
Physical Description:	LIQUID
Case Number:	000000
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	11
Max Amt Possessed During Year CD:	11
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING

Chemical Name:	ZINC BATHS
United Nations/north America 4 Digit Class Number:	1840
Chemical Abstract Service Identifier Number:	7646857
Chemical Is Extremely Hazardous Substance (EHS):	Not reported
First Hazardous Class Code For Chemical:	Corrosive Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	8.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	Not reported
EPA Pesticide Registration Number:	Not reported
Contains 112R:	Not reported
Contains EHS:	Not reported
Fertilizer:	Not reported

EAST SIDE PLATING WORKS (Continued) **1000393917**

Pesticide:	Not reported
Contains 313:	Not reported
Chemical Name:	ZINC CYANIDE
Physical Description:	SOLID
Case Number:	557211
Facility Id:	004607
Physical State Of The Substance:	1
Avag Amt Possessed During Year CD:	04
Max Amt Possessed During Year CD:	04
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	D
Description:	STEEL DRUM

Chemical:

Chemical Name:	SULFURIC ACID 93%
United Nations/north America 4 Digit Class Number:	1830
Chemical Abstract Service Identifier Number:	7664939
Chemical Is Extremely Hazardous Substance (EHS):	Y
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Reactive Material
Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	4.4
Hazard Class 3 Of The Chemical:	8.0

EAST SIDE PLATING WORKS (Continued) **1000393917**

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	WASTE CHROMIUM PROCESS
Physical Description:	LIQUID
Case Number:	7440473
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	11
Max Amt Possessed During Year CD:	11
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE

Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	F006 FILTERCAKE
United Nations/north America 4 Digit Class Number:	3077
Chemical Abstract Service Identifier Number:	20427592
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Chronic Health Hazard

EAST SIDE PLATING WORKS (Continued) **1000393917**

Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.4
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	HYDROCHLORIC ACID BATHS
Physical Description:	LIQUID
Case Number:	7647010
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	21
Max Amt Possessed During Year CD:	21
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	E
Temperature Description:	PLASTIC OR NON-METALLIC DRUM
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	5,000-9,999
Description Of The Avg Qnty Code:	5,000-9,999
Most Hazardous Ingridient:	HYDROCHLORIC ACID
United Nations/north America 4 Digit Class Number:	1789
Hazard Rank:	2
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Corrosive Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	8.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	50-199
Description Of The Avg Qnty Code:	50-199
Most Hazardous Ingridient:	COPPER CYANIDE
United Nations/north America 4 Digit Class Number:	1689
Hazard Rank:	2
EHS Ingredient:	SODIUM CYANIDE
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Reactive Material
Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	4.4
Hazard Class 3 Of The Chemical:	8.0

Chemical:

Chemical Name:	BRASS CYANIDE BATH SOLUTION
United Nations/north America 4 Digit Class Number:	1689
Chemical Abstract Service Identifier Number:	544923
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Poisonous Material

EAST SIDE PLATING WORKS (Continued) **1000393917**

Second Hazardous Class Code For Chemical:	Reactive Material
Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	4.4
Hazard Class 3 Of The Chemical:	8.0
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	Y
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	HYDROCHLORIC ACID 31-33%
Physical Description:	LIQUID
Case Number:	7647010
Facility Id:	004607
Physical State Of The Substance:	2
Avag Amt Possessed During Year CD:	10
Max Amt Possessed During Year CD:	11
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported

Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	50-199
Description Of The Avg Qnty Code:	50-199
Most Hazardous Ingridient:	POTASSIUM CYANIDE
United Nations/north America 4 Digit Class Number:	1680
Hazard Rank:	3
EHS Ingredient:	POTASSIUM CYANIDE
Substance Pure:	True
Substance Mix:	False
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Corrosive Material

EAST SIDE PLATING WORKS (Continued) **1000393917**

Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	POTASSIUM CYANIDE
United Nations/north America 4 Digit Class Number:	1680
Chemical Abstract Service Identifier Number:	151508
Chemical Is Extremely Hazardous Substance (EHS):	Y
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	Y
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	SODIUM CYANIDE
Physical Description:	SOLID
Case Number:	143339
Facility Id:	004607
Physical State Of The Substance:	1
Avag Amt Possessed During Year CD:	04

Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	DI RESIN CANISTERS
United Nations/north America 4 Digit Class Number:	0000
Chemical Abstract Service Identifier Number:	000000
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	MACRO BRITE C-9
Physical Description:	SOLID
Case Number:	1333820
Facility Id:	004607
Physical State Of The Substance:	1
Avag Amt Possessed During Year CD:	04
Max Amt Possessed During Year CD:	04
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	D
Description:	STEEL DRUM
Type Code:	Not reported

Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	GREATER THAN NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	5
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	COPPER (II) SULFATE PENTAHYDRATE
United Nations/north America 4 Digit Class Number:	0000
Hazard Rank:	2
EHS Ingredient:	SULFURIC ACID
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Reactive Material
Second Hazardous Class Code For Chemical:	Corrosive Material

EAST SIDE PLATING WORKS (Continued) **1000393917**

Third Hazardous Class Code For Chemical:	Chronic Health Hazard
Hazard Class 1 Of The Chemical:	4.4
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	6.4

Chemical:

Chemical Name:	ACID COPPER BATH
United Nations/north America 4 Digit Class Number:	0000
Chemical Abstract Service Identifier Number:	7758987
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Reactive Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Chronic Health Hazard
Hazard Class 1 Of The Chemical:	4.4
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	6.4
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	Y
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Decode for NarcdID: Contamination
NARR Comments: (9/15/03 MTP) Earth Tech Inc. (Earth Tech) conducted a Phase I Environmental Investigation and documented the results in a draft report dated August 17, 2001. During the investigation Earth Tech advanced 3 soil borings. Chemical analysis detected total residual range organics (RRO; similar to total petroleum hydrocarbon (TPH) as heavy oil) at a concentration of 2,900 milligrams per kilogram (mg/kg) from a sample collected from 1 to 2 feet below ground surface (bgs) in boring B-2, advanced near an oil storage area. Residual diesel-range organics (DRO; similar to TPH as diesel) was detected at a concentration of 220 mg/kg in this sample. The sample from 5 feet bgs at this location contained RRO at 1,000 mg/kg, but did not contain detectable DRO. DRO and RRO were not detected in the other two borings. Earth Tech concluded that the TPH contamination represented approximately 10 to 15 cubic yards of soil, and was the only environmental concern at the site. Northwest Envirosearch conducted a Phase I investigation in 2002. They observed excess petroleum oils in the outside storm water catch basin, which is connected to the City of Portland sanitary sewer. Northwest Envirosearch recommended the catch basin be cleaned, but it is not clear if this occurred. DEQ did not observe petroleum in the catch basin during a site visit on April 22, 2003. Northwest Envirosearch concluded that the petroleum in the catch basin was the only environmental concern at the site. As indicated in a later report, Northwest Envirosearch was unaware that a previous Phase I investigation had been conducted, and that elevated TPH concentrations had been detected in soil. Phase II Investigation (ECS, 2003) ECS conducted A Phase II investigation in October 2002 to evaluate the extent of contamination detected in the earlier investigation. A total of six borings were advanced to total depths ranging from 8 to 12 feet bgs (ECS B-1 through ECS B-6). In borings ECS B-3 and ECS B-4, a horizon of soil from approximately 3- to 4.5 feet bgs brick fragments and charred wood was observed that appeared to be residue from a fire. The borings did not encounter groundwater at the maximum depth of 12 feet bgs. ECS submitted one sample from each boring for hydrocarbon identification analyses (HCID). Based on the HCID results, the sample collected from 4 feet bgs from ECS-B3 was further analyzed for extended range diesel (TPH-Dx). The analysis indicated TPH as heavy oil at a concentration of 180 mg/kg, and TPH as diesel (TPH-D) at a concentration of 60 mg/kg. TPH was not detected in sample ECS B-1, collected with about 1 foot of Earth Tech s boring B-2, where an elevated petroleum hydrocarbon concentration had been detected. Both samples from ECS-B-1 (2 and 4 feet) were analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX), in addition to polynuclear aromatic hydrocarbons (PAHs). BTEX were not detected, but a number of PAHs were detected. With the exception of benzo(a)pyrene (0.0713 mg/kg) in ECS B-4, all PAH concentrations were below DEQ s risk-based concentration (RBC) for direct contact with soil under a residential-use scenario. All

GRANT STREET PROPERTY (Continued) **S105807711**

concentrations were below the RBC for direct contact under an occupational-use scenario. Based on DEQ s comments to the ICP Report, which contained results from the previous Phase I and Limited Phase II investigations, ECS conducted additional site characterization sampling in May 2003 to better define the extent of contamination. A total of seven borings were advanced to a total depth of 8 feet bgs (ECS B-7 through ECS B-13). Groundwater was not encountered in any of the borings. Borings ECS B-9 and ECS B-13 exhibited evidence of a fire (i.e., charred debris and black staining) at a depth of 3.5 feet, similar to previous observations ECS B-3 and ECS B-4. One sample from each boring was submitted for HCID analyses. Petroleum hydrocarbons were detected in the stained interval (3 feet bgs) in ECS B-9, and follow up TPH-Dx analysis indicated the sample contained 245 mg/kg TPH as heavy oil. TPH was not detected in a sample collected from 4 feet bgs from ECS B-9, immediately below the stained interval. The 3-foot sample was further analyzed for BTEX, in addition to PAHs. BTEX were not detected; a number of PAHs were detected. All PAH concentrations were below their respective RBCs for direct contact with soil under an occupational-use scenario. To evaluate the presence of waste oil constituents, the sample from ECS B-9 also was analyzed for cadmium, chromium and lead, and polychlorinated biphenyls (PCBs). These additional analyses are consistent with DEQ guidance for evaluation of waste oil contamination. PCBs were not found above method detection limit of 67 micrograms per kilogram (ug/kg). Reported cadmium (1.5 mg/kg) and chromium (28.6 mg/kg) concentrations appear to be within the range of naturally occurring concentrations, and are well below their respective U. S. Environmental Protection Agency Region 9 Preliminary Remediation Goals (PRGs) for industrial use soil. The lead concentration of 3,390 mg/kg in ECS B-9 is over three times its RBC of 1,000 mg/kg for industrial use soil. A Toxicity Characteristic Leaching Procedure (TCLP) analysis also was conducted, with a lead result of 0.41 milligrams per liter (mg/L). Cadmium and chromium were not detected in the TCLP leachate. At DEQ s request, ECS requested further lead analysis on soil samples that had been retained by the analytical laboratory. Additional lead analysis was conducted on four samples. Three of the samples collected from borings in the vicinity of ECS B-9 (i.e., ECS B-10, ECS B-11, ECS B-12) were within the range of expected naturally occurring lead concentrations (~17 mg/kg), and appear to define the extent of lead impacted soil in this area. The lead concentration reported for ECS B-7 was 66.8 mg/kg, and although elevated with expect to the expected background level of 17 mg/kg, is well below the RBC for direct contact with industrial soil (1,000 mg/kg).

Updated Date: 03/21/2012
Decode for NarcdID: Contamination
NARR Comments: (03/21/2012 KPD/ICP) In September 2009, URS Corporation advanced four borings along SE Water Avenue as part of a Phase II Environmental Site Assessment. The borings were located where Bent 4 and a ramp at the south end of the viaduct would be located. Two soil samples were collected from each boring, and groundwater samples were collected from two of the borings. All of the samples were analyzed for petroleum products and petroleum constituents, as well as polychlorinated biphenyls (PCBs) and heavy metals. Diesel (at concentrations up to 154 ppm), lube oil (up to 1,280 ppm), and lead (up to 396 ppm) were detected in the soil samples. The highest concentrations were all collected from Bent 4. Only metals, likely at background concentrations, were detected in the groundwater. Environmental Health Management was retained to sample and dispose of contaminated soils during construction of the viaduct. Two soil samples were collected from Bent 3 in April 2010, finding up to 672 ppm lube oil. Additional samples from Bent 3 in July 2010 found elevated concentrations of diesel, lube oil, and polycyclic aromatic hydrocarbons (PAHs). A soil sample from Bent 2 in September 2010 found 609 ppm lube oil.

NARR Comments: (03/21/2012 KPD/ICP) In April 2010, a total of 17.19 tons of petroleum-contaminated soil (PCS) were excavated from Bent 4. This was followed by 213.59 tons of PCS from Bent 3 in July 2010, 505.72 tons of PCS from the south ramp in August 2010, and 200.51 tons of PCS from Bent 2 in September 2010. (No contaminated soil was excavated from Bent 1). In all, a total of 937.01 tons of PCS were excavated and shipped to the Hillsboro Landfill for disposal.

OREGON RAIL HERITAGE FOUNDATION (Continued) **S111286601**

Decode for NarcdID: General Site Description
NARR Comments: The Oregon Rail Heritage Foundation is planning to build a Restoration Facility & Interpretation Center for three locomotives owned by the City of Portland. The triangular site, owned by TriMet, is bordered by a rail line to the north, SE Water Ave to the west, and the MLK Blvd / Grand Ave viaduct to the east. Environmental oversight of the project will be funded through an existing Intergovernmental Agreement between DEQ and TriMet. Construction is scheduled to begin in the fall of 2011, with completion in the summer of 2012.

NARR Comments: The Inman-Poulsen Lumber Company operated at the site for about 100 years (late 1880s to 1980) and disposed of wood wastes by filling in Stephens Slough, which extended from about Division Street to the Willamette River. The wood waste (mainly sawdust) extends from about 4 to 45 feet below ground surface at the site.

Updated By: CHARMAN
Updated Date: 03/06/2013
Decode for NarcdID: Remedial Action
NARR Comments: (CWH/CU 3/6/13) Remedial measures undertaken at site are as follows: 1. Soil and Contaminated Media Management and Disposal During site development and construction, contaminated and uncontaminated media and soils were collected and managed to prevent unnecessary exposures. Based on the degree of contamination and in accordance with the CMMP, these materials were disposed or used as fill material at off-site location. Table 1 (attached) from the supplemental report, summarizes the amounts and locations where site media was taken. Contaminated soils were taken to the Subtitle D Hillsboro landfill. During pre-construction work, a total of 489 tons of contaminated soils from existing berms on the site were removed and taken to Hillsboro. During site development another 2,500 tons of contaminated soil was also taken to Hillsboro. As approved by DEQ, 3,000 cubic yards of soil from the site were also taken for cover at the former Shadybrook Landfill in Washington County. 2. Building Construction Due to the extent of wood waste below the site, and to

OREGON RAIL HERITAGE FOUNDATION (Continued) **S111286601**

prevent potential building subsidence, several deep iron beam pilings were driven down through the wood waste to native alluvial gravels that are present at depths near 90 to100 feet bgs (on average). The building foundation was attached to the pilings, supporting the building above the wood waste. 3. Methane Barrier and Venting System As part of the site construction, a spray-on low-permeability barrier was installed below the building foundation and flooring. A sub-slab gas collection system was installed below the low-permeable surface and consisted of porous base rock with horizontal perforated piping. All concrete joints, pipe fittings and electrical conduits were sealed to prevent gas escaping the collection system or entering interior building spaces. Sub-slab pipes were then connected to vertical vent riser pipes that were routed to the building roof. Together, these constitute a building vapor barrier with underlying passive vapor collection system. Any methane present below the building slab will be impeded by the barrier and routed to the vapor collection system for discharge above the building roof. During installation of the low-permeable membrane, subcontractors qualified to install the selected product (Liquid Boot), followed manufacturers specifications and practices, which included use of a carrier fabric with 6 overlapping seams, coupon sampling to ensure desired membrane thickness was applied, and smoke testing to check for leaks. Sampling ports are present in two of the vent riser pipes and in three sub-slab gas monitoring probes (SSPs) that are located at the northeast (SSP-3), east (SSP-2), and west (SSP-1) sides of the building. The piping system and monitoring points are detailed in drawing H102, provided in Appendix C of the Construction Completion Report. The methane monitoring schedule is provided in the Institutional Controls narrative.

NARR Comments: As part of March 2013 Conditional No Further Action decision, site owners and operators are required to follow two site controls - A. All construction or ground disturbing activity needs to follow measures described in the Contaminated Management Plan (CMMP) approved by DEQ in November 2011. B. The methane mitigation system installed on the site needs to be maintained and periodic measurements need to be collected and reported to DEQ for the site records, as outlined below: Schedule for Methane Monitoring 1. First Two years (Jan. 2013 Dec. 2014): Vent Risers and Sub-Slab Probes (SSPs) sampled twice yearly 2. Years 3 to 5 (Jan. 2015 Dec. 2017): Once per year sampling based on first two years results 3. Trigger Event requiring more frequent monitoring. Frequency of added monitoring to be determined by DEQ and property owners. If one or more SSPs show methane at 5 pbv or greater, combined with lower or no measurable methane in vent riser ports. Based on sampling, there may be requirements to continue methane monitoring beyond the 5-year timeframe outlined above. Alternatively, if methane measurements indicate that levels are below criteria established to prevent asphyxiation or explosive dangers in enclosed spaces, DEQ will work with owners/operators to discontinue methane controls and monitoring.

NARR Comments: (CWH/CU 3/6/13) The ORHF site sits on top of fill in a portion of what was historically referred to as Stephen s Slough, a 1,500-foot-long waterway that extended from the east bank of the river to SE Division Street in east Portland. In the late 1880s, the Inman-Poulsen Lumber Company operated a lumber mill along the south bank of Stephens Slough and soon after began to use wood waste materials from the mill to fill in the slough, also identified in Sanborn maps as Stephen s Gulch. From approximately 1890 through 1954, the Inman-Poulsen Lumber Mill was one of the largest in the United States and included operations both on and west and southwest of the site. The ORHF site area itself was used for varying purposes that included cut timber storage area. The estimated area where wood waste fill underlies the site is shown in several reports for the site. The site was reportedly used as a telephone/utility pole storage yard from the mid-1920s to the 1970s. In addition, the site was identified as a Portland General Electric right-of-way between 1924 and 1969 and more recently was used for truck and trailer parking and construction equipment storage and staging. Various environmental investigations have been conducted on surrounding sites, with indications that the wood waste and surrounding perched groundwater may contain low concentrations of petroleum hydrocarbons, polynuclear aromatic hydrocarbons (PAHs), and volatile organic compounds (VOCs). The results of various investigations in the area suggest that such impacts may be broadly distributed due to uncontaminated and contaminated fill comprising the slough backfill material, with contributing impacts from various nearby known and suspected release sources.

NARR Comments: As part of the now completed PCB cleanup at PGE Station L (ECSI #151), which is the current location of the Oregon Museum of Science and Industry (OMSI), PGE's contractor installed two off-site and upgradient monitoring wells. Sampling of these wells in 1987 showed dissolved PCE at 73 ppb and TCE at 23 ppb. By 1990, these wells, located on property owned by the East Portland Traction Company, had disappeared, and PGE's contractor installed another upgradient well, this time on PGE/OMSI property. 1993 sampling of this well showed PCE at 41 ppb and TCE at 5.4 ppb. Groundwater locally flows towards the Willamette River. There is no known source for the VOCs found in these wells. One of the wells was thought to have been on land sold by the East Portland Traction Co. to Portland Community College (PCC); however, a 1995 survey by PCC showed that no wells had been installed on what is now PCC property.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: Chlorinated solvents have been detected in groundwater only at the upgradient edge of the former PGE Station L property and in two off-site, upgradient wells. Therefore, the plume of VOCs may be of limited extent and may have originated on or near Portland Traction Company's right-of-way. Site Assessment recommends that property owner/operators determine the present extent and magnitude of the groundwater plume, and investigate its source. Further DEQ action warrants a low-to-medium priority.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

NARR Comments: Previous environmental sampling at the site identified heavy metals and PCBs in sediment collected from an on-site drywell, elevated heavy metals in shallow soil along the western perimeter, and low level petroleum hydrocarbons and associated constituents in shallow soil collected from below a removed building. Groundwater at the property was slightly impacted by leaking USTs located adjacent to the east and up gradient from the site. Groundwater remediation activities were conducted at the east-adjacent site and subsequently issued an NFA. Groundwater sampling conducted at the subject property since the cleanup has not verified if petroleum hydrocarbons were still present in groundwater.

PGE WILLAMETTE RIVER SEDIMENT INVESTIGATION (Continued) **S110072093**

Created Date: 01/29/2015
Updated By: DLACEY
Updated Date: 11/14/2016
Decode for NarcdID: General Site Description
NARR Comments: The river mile (RM) 13.1 and 13.5 Study Areas located on the east bank of the Willamette River in Portland, Oregon. The December 2011 Remedial Investigation defined the extent of nearshore and in-water sediment contamination in both Study Areas, and the November 2014 Feasibility Study identified and evaluated remedial alternatives. The primary chemical of concern are polychlorinated biphenyls (PCBs) in surface sediment. Upland source control evaluations identified two potential contaminant sources (the Rexel-Taylor and PGE Hawthorne building sites) via City Outfall 33 to the RM13.1 Study Area and the PGE Power Station L was identifed as a potental contaminant source to the RM 13.5 study area. Source control measures were implemented and completed at these locations and no known significant upland sources of contamination are currently discharging to the RM 13.1 and 13.5 Study Areas. Based on the FS evaluation of the alternatives, DEQ selcted the following remedies in a 4/8/15 Record of Decision: Alternative 2a isolation cap with discrete amended cap areas to address hot spots, and Alternative 2 isolation cap, as the remedial action for the RM 13.1 and RM 13.5 Study Areas, respectively.

Decode for NarcdID: Manner of Release
NARR Comments: PGE was the owner and operator of three transformers, which housed dielectric fluids containing polychlorinated biphenyls (PCBs) and were located on a power pole at or near a property at 240 S.E. Clay Street in Portland (Rexel-Taylor Property). On May 17, 2006, a fire at the Rexel-Taylor Property breached the transformers and released dielectric fluids, some of which were washed into storm sewers during fire suppression activities. Those storm sewers discharge to the Willamette River at Outfall 33, located on the east bank of the Willamette River at River Mile (RM) 13.1. Contaminants from other sources associated with the fire may also have been washed into storm sewers and discharged. PGE maintenance and operations of Power Stations L and F the area of RM 13.5 may have created spills and

PGE WILLAMETTE RIVER SEDIMENT INVESTIGATION (Continued) **S110072093**

other releases of hazardous substances.

NARR Comments: The Remedial Investigation determined that contaminants are found in sediments at or near River Mile (RM) 13.1 at concentrations posing a risk to human health and ecological receptors that warranted remedial action. The contaminants of concern at RM 13.1 include PCBs, heavy metals, dioxins/furans, polycyclic aromatic hydrocarbons, and pesticides. The remedial investigation also determined that contaminants are found in sediments at or near RM 13.5 at concentrations posing a risk to human health and ecological receptors that warranted remedial action. The contaminants of concern at RM 13.5 include PCBs, heavy metals, dioxins/furans, polycyclic aromatic hydrocarbons, and pesticides.

Decode for NarcdID: Site History
NARR Comments: PGE was an operator of upland properties near RIver Mile (RM) 13.1 (adjacent to the Hawthorne Street Bridge) and RM 13.5 (adjacent to the Tilikum Crossing Bridge). Operations included power generation at former Stations L, transformer and electrical equipment maintenance and repairs at the Hawthorne Building, electrical substations, and transmission and storage/maintenance facilities, including railroad

PGE WILLAMETTE RIVER SEDIMENT INVESTIGATION (Continued) **S110072093**

facilities. Station L operated until 1975, at which time it was taken out of service, with the property ultimately deeded to the Oregon Museum of Science and Industry. Other PGE maintenance and operations yards in this area may have created spills and other releases of hazardous substances. Sediment sampling conducted in May 2008 detected elevated concentrations of PCBs in sediments at the City of Portland Stomrmwater Outfall 33. Sediment sampling also found elevated concentrations of other hazardous substances (including pesticides, mercury, and dioxins) at RM 13.1 and 13.5. On January 8, 2010, DEQ issued an Order Requiring Remedial Investigation. The purpose of the Remedial Investigation was to investigate the nature and extent of hazardous substance contamination at the Site.The Remedial Investigation determined that contaminants are found in sediments at or near RM 13.1 at concentrations posing a risk to human health and ecological receptors that warranted remedial action. In July 2012, DEQ and Portland General Electric Company signed Order on Consent, in which PGE agreed to complete a feasibility study (FS). In November, 2014, PGE submitted the Final Feasibility to DEQ. DEQ published notice of a proposed remedial action and provided opportunity for public comment. Based on the Remedial Investigation and Feasibility Study, DEQ s Northwest Region Administrator selected the remedial action set forth in a Record of Decision dated April 8, 2015 (ROD). The remedial action selected in the ROD requires the installation of two separate isolation caps over the remaining contaminated sediments present at the Site. The caps will preclude human and ecological receptor contact with the contaminated sediments, and will thereby be protective of human health and the environment via the implementation of the required engineering controls as described in the April 8, 2015 ROD. In the fall of 2015, PGE implemented the River Mile 13.5 sediment isolation cap. In January, 2016, PGE submitted the River Mile 13.5 Sediment Isolation Cap Construction Completion Report to document completion of the RM 13.5 sediment isolation cap. Design of the RM 13.1 sediment isolation cap was completed in July 2017. Implementation of the RM 13.1 sediment isolation cap is planned to start July 24, 2017 and be completed by September 15.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (1/17/1996 JAK/SRS) Several areas on the site were used for the storage of electrical equipment. PCB oils were generally used in electrical equipment from the mid-1930s to the 1970s. Soils, various structures on-site, and Willamette River sediments are known to be contaminated with PCBs. This contamination was likely to have occurred from releases of oil from transformers.

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (1/17/1996 JAK/SRS) River sediment remediation, including dredging and capping, was conducted from July 1990 to January 1991. Maximum residual concentration of PCBs in sediment is approximately 21 ppm, with an average concentration of 8 ppm. The multi-layer cap was constructed with sand, gravel, and riprap to a thickness of greater than 6 feet. DEQ issued a Certificate of Completion for the sediment cleanup in April 1991. Monitoring of the sediment cap ongoing through 2020. Upland investigation (Phase III) for hazardous substance releases anywhere on the 28-acre site completed. DEQ issued a Certificate of Completion for this phase in November 1993. A Record of Decision (ROD) for No Further Action at site was issued by DEQ on 9/26/94.

Decode for NarcdID: Contamination
NARR Comments: (08/14/2017 KPD/ICP) Soil sampling in February 2005 found low levels of PCE, a dry cleaning solvent. Additional sampling found PCE in soil gas (January 2010) and groundwater (May 2010). A total of 21 soil samples, six groundwater samples, and eight soil gas samples were collected at the site in November 2012, followed by six soil samples and four ambient air samples in February 2013. PCE was prevalent in the air and groundwater samples but not in the soil samples. A prospective purchaser of the site collected four soil gas samples from the property boundaries in July 2015 (when the SVE system was shut down) and two follow-up samples each in November and December 2015 (when the SVE system was on). As expected, soil gas concentrations were lower when the soil vapor extraction system was on. The prospective purchaser acquired the site in March 2016 after signing a Prospective Purchaser Agreement with DEQ.

NARR Comments: Soils at the site are a mix of silty sands, sandy silts, and clayey silts to at least 29 feet below ground surface. Groundwater is approximately 15-19 feet bgs and based on topography is believed to flow west toward the Willamette River (1.5 miles away).

Decode for NarcdID: Remedial Action
NARR Comments: (08/15/2017 KPD/ICP) A sub-slab vapor extraction system was installed beneath the onsite building in June 2014. Three east-west trenches approximately 55 feet long, 18 inches wide and 33 inches deep were dug beneath the building, connected by two north-south trenches. Slotted PVC pipes were placed in the trenches and surrounded by coarse sand. A fan pulled air from the pipes through a canister of activated carbon. Approximately 65 cubic yards of soil and 10 cubic yards of concrete were removed during construction of the SVE system.

WASH WORLD - BELMONT (Continued) **S106386341**

A total of 18 soil samples and three concrete samples were collected and analyzed for contamination, finding only 0.370 ppm PCE. DEQ agreed that the soil and concrete could be disposed of as a non-hazardous waste in a permitted solid waste landfill. The SVE system began operating in October 2014. A series of pre- and post-treatment air samples were collected over the next three months. Pre-treatment concentrations of PCE dropped from 78,000 ug/m3 in October 2014 to 6,000 ug/m3 in January 2015. Post-treatment concentrations of PCE started at 19 ug/m3 and dropped to 7.6 ug/m3 over the same time period. Soil gas sampling along the property boundaries at the end of 2015 found only up to 3,280 ug/m3 PCE. Power to the site (and the SVE system) was cut off in October 2016. Soil gas sampling along the building edges in July 2017 found 4,000 ug/m3 PCE, below the urban residential risk-based standard of 5,100 ug/m3.

NARR Comments: A single-family residence was shown on the north half of the site in a 1909 Sanborn map. A construction company office apparently operated out of the residence between 1935 and 1965. The residence was replaced with a commercial building in 1968. Washworld is believed to have operated in the eastern half of the building as a retail laundrymat and dry cleaners from 1968 to 1999, as a dry store from 1999 to 2005, and again as a dry cleaners from 2005 to 2009. Small grocery stores reportedly operated in the western half of the building from at least 1970 through the 1980s. The building was vacant from 2009 through 2016.

Decode for NarcdID: Contamination
NARR Comments: (12/02/2015 KPD/VCP) Parametrix advanced nine borings at the site in April 2011 as part of a Phase II Environmental Site Assessment for TriMet. Diesel-range and lube oil-range hydrocarbons were detected in most of the soil samples, along with PAHs. The same contaminants were also detected in groundwater 30 feet below ground surface. Additional sampling was conducted by URS in July-August 2014. Composite surface soil samples were collected from across the site, finding diesel and oil and elevated concentrations of arsenic, lead, and PAHs. High levels of methane were also detected in two soil gas sample locations. Not reported

NARR Comments: The site occupies a city block bordered by SE Sherman Street to the north and SE Caruthers Street to the south. The site encompasses the former SE 6th Avenue right-of-way on the west, and a Union Pacific rail line runs diagonally NW to SE on the east property line. Keller Supply Company formerly bordered the site on the west. The Grand Avenue viaduct lies 200 ft west of the site. The site address has also been given as 600-604 SE Sherman Street.

Decode for NarcdID: Manner of Release
NARR Comments: The manner and time of the contaminant releases are unknown. Notably, the site was only connected to municipal water and sewer systems in 1998. How these services were provided prior to 1998 is not known. The nearest stormwater inlet (catch basin) is 175 feet west of the site and was likely installed in 2011.

NARR Comments: The site sits atop 30 feet of wood waste fill. Groundwater (approx. 20-30 ft bgs) likely flows either west toward the Willamette River (1,100 ft from the site) or northwest along the former Stephen's Slough. The site and surrounding areas are zoned General Industrial 1 (IG1) by the City of Portland.

NARR Comments: (12/02/2015 KPD/VCP) Contractors for TriMet demolished the two on-site buildings in October 2012. In February 2013, approximately 2,500 cubic yards of soil were excavated to a depth of 4 ft bgs along the light rail alignment. The soil was shipped to the Hillsboro Landfill for disposal. The excavated area was backfilled with 2<quot> x 4<quot> cobble rock. An additional 270 cubic yards of soil was later excavated for a stormwater swale along the south edge of the alignment. The soil was also taken to the Hillsboro Landfill. Construction activities at the site were completed by the end of 2014. An Easement & Equitable Servitudes (EES) was recorded on the property deed in October 2015, requiring maintenance of the existing gravel cover and site fencing prior to redevelopment, approval by DEQ of methane engineering controls and a Contaminated Media Management Plan prior to construction, and eventual capping of the site with buildings and/or three feet of clean soil.

Updated Date: 09/22/2015
Decode for NarcdID: Site History
NARR Comments: Stephen's Slough, a 30-foot deep gulch, originally covered most of the site, and extended northwest to the Willamette River. Beginning around 1900, the gulch was filled in with sawdust and other wood wastes, most likely from the Inman Poulsen lumber mill two blocks west of the site. The site was identified on Sanborn maps as a wood yard in 1924 and 1950. Those same years, the Holman Fuel Company bordered the site to the south (across Caruthers Street). A small fuel warehouse was present on the SW corner of the site in the early 1950s. Balzer Pacific Equipment Company occupied the site beginning in 1964, and used it for the assembly and repair of mining and construction equipment. (Balzer manufactured the equipment at another site in Portland). Two buildings, a warehouse and a shop, were constructed in the southeast corner of the site in 1964 and 1970, respectively. TriMet obtained possession of the site through condemnation in May 2012 for construction of the Portland-Milwaukie

BALZER PACIFIC EQUIPMENT CO. STORAGE LOT (Continued) **S112231357**

Light Rail line, and became the site owner in July 2013. TriMet demolished the on-site structures in October 2012, and the rail alignment was constructed across the northern portion of the site in 2013-14.

Updated By: GWISTAR
Updated Date: 05/16/2013
Decode for NarcdID: General Site Description
NARR Comments: The properties are located on approximately 2.5 acres in a mixed commercial and industrial NE Portland neighborhood. The site is comprised of a West Parcel (541 NE 20th Ave.) and an East Parcel (518 NE 20th Ave. and 2035 NE Glisan Street). The West Parcel was developed in 1929 with the Jantzen Park Building that was used as a textile manufacturer, and included dry cleaning, dyeing and machine shop operations. Columbia Gorge Motor Freight occupied the East Parcel from 1943 through 1950 and reportedly operated an on-site gasoline pump station. A number of environmental investigations have been conducted since the late 1980s. A 12,000-gallon heating oil tank was removed in 1989 along with approximately 30 cubic yards of impacted soil.

ROSE CITY PLATING I (Continued) **S109346046**

NARR Comments: In 1987, the Portland Development Commission purchased approximately 17 city blocks in inner northeast Portland to make way for the Oregon Convention Center. Rose City Plating Works had been operating on one of those blocks since 1944. Investigations in 1988 found soil and groundwater contamination at the Rose City site. Soil contamination extended as much as 32 feet below the surface. Close to 1600 tons of contaminated soil and debris were removed from the site and properly disposed of. DEQ signed off on the cleanup, and construction of the convention center was completed in 1989. Rose City Plating, meanwhile, relocated its operations to 7884 SE 13th Ave., in the Sellwood district of Portland. (See ECSI #269 for more information on the Rose City Plating II site.)

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soils at the site consist of a mixture of silts, sands, and gravels, generally grading from silts near the surface to gravels at depth. The water table is approximately 60 feet below the site; the groundwater flow direction appears to be to the south-southwest. The site is now completely built over/paved over.

NARR Comments: Polynuclear aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), metals, and cyanide have been released to soils in the vicinity of the gas holding tanks. Most of the contaminated surface soils and accessible wastes from abandoned was removed from the site in 1991-92. Soil testing and soil and waste removal conducted around the two southern tank pads were largely based on visual indications of staining. Minor concentrations of petroleum (diesel fuel and heavy oil or bunker fuel) also remain in localized areas of subsurface soils where gasoline, diesel fuel, and waste oil underground storage tanks were decommissioned in 1993-95. Diesel fuel contamination was encountered during a 2004 heating oil tank decommissioning (LUST #26-97-0130) at the neighboring Irwin-Hodson Company facility, located immediately south of the site. Contaminated soils were left in place because they contained relatively low concentrations of VOCs and PAHs, and did not to represent a significant threat to groundwater or to site workers. The DEQ Heating Oil Tank program may re-examine the decision for no further action at Irwin-Hodson based on the results of additional investigation at the site.

NARR Comments: Contaminated soils and waste piles associated with the site s two southern gas holder tank pads were excavated and shipped to Chem Waste Management s hazardous waste disposal facility in Arlington for disposal in 1991-92. Most of the nearly 1,300 cubic yards of material was classified as hazardous waste due to elevated concentrations of leachable lead and cyanide. Approximately 19,000 gallons of cyanide-contaminated water within the three gas inlet vaults at the site s eastern gas holder tank pad (Pad #7) was discharged to the city sanitary sewer in August 25 to September 3, 1993. 49 tons of petroleum-contaminated soil excavated during cleanup of the site s various leaking petroleum underground storage tanks (LUSTs) was sent to Oregon Hydrocarbons in 1994 for treatment. 32 tons of contaminated soil was sent to Marion County Soil Recycling in 1995 for treatment. Thirty eight tons of petroleum contaminated soils/waste was remove from the southwest portion of the site in December 2008.

Decode for NarcdID: General Site Description
NARR Comments: The Site is a 5-acre property located at 2630 SE 9th Avenue in southeast Portland, and is currently owned by NW Natural. TriMet intends to purchase a .9 acre portion (Parcel 1) of the Site for use as part of the Portland-Milwaukie Light Rail Project. As planned, light rail tracks would be located on the parcel. The Site was previously used for manufactured gas storage (above ground tanks) and transmission (underground lines) from 1921 to 1956. Plant operations were discontinued in 1956. The Site is currently used by NW Natural as an operations facility, containing administrative offices and serving as a vehicle fueling and maintenance center. Two large, aboveground, 155- to 175 foot diameter, circular concrete manufactured gas storage tank holder pads are located on the southern portion of the site, and a third pad located on the north portion of the site has been buried beneath fill and covered by a paved parking lot. At least four leaking petroleum underground storage tanks (gasoline, diesel fuel, and waste oil) have been removed and stormwater drains to any of 13 on-site catchbasins and associated drywells at the site.

Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Petroleum and/or coal tar constituents (including PAHs, other semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs)), lead, and cyanide. Contamination is present in soil and groundwater. Minor/residual subsurface petroleum contamination is also present in areas where former underground petroleum storage tanks (USTs) and piping were decommissioned. Soil in the waste oil tank decommissioning location contained elevated concentrations of leachable lead. Soils beneath a 130 foot, abandoned in place long gasoline/diesel fuel transfer pipe were contaminated with heavier oil or bunker fuel, which is inconsistent with the transfer line s use. Debris encountered during the August 1995 removal of two of the sites USTs (LUST #26-95-0218), as well as soil boring lithologies from an investigation of subsurface transfer piping between the tanks and a former fuel dispensing island suggest that fill material at the site includes silt, gravel, and construction debris.

NARR Comments: NNG removed contaminated waste piles, some of the contaminated

CENTRAL SERVICE CENTER (Continued) **U000432123**

debris, and some of the contaminated soils associated with the site s two southernmost concrete gas holder tank pads through an independent cleanup action in 1991-92. However, soils with lower levels of contamination, contaminated soils that were inaccessible, much of the contaminated debris and water within capped and abandoned gas transmission piping, contaminated water and debris within stormwater sumps surrounding the pads, and contaminated water within that pad s gas inlet vaults were left in place. Minor contamination also remains in subsurface soils surrounding the site s former LUST locations, and along fuel piping that was abandoned in place. Remeidal investigations are ongoing to determine that extent and nature of site contaminants. DEQ has no information to indicate that the ultimate fate of rainwater that accumulates in the depression on the southern 1/3 of the site has ever been defined. At least five stormwater sumps are located around the perimeters of the two southern tank pads. Ponded water in or near two of the sumps contained elevated concentrations of total cyanide (up to 120 ppm) and TCLP leachable lead (up to 12 ppm) when sampled in March 1991 and April 1992. Soil and groundwater samples were collected in August 2011 to decommission these sumps (data submittal to DEQ pending). A stream that historically crossed the southern 1/3 of the site (per 1909 records) was apparently directed to a sewer on the site s western property line. No ifnofrmation is available to determine if this sewer was ever fully abandoned, or if it may discharge to the existing municipal stormsewer. A monitoring well that the City of Portland constructed in the street near the site s southwest corner in March 2001 encountered groundwater at 21 feet bgs. Contamination associated with the former gas holder tank pads could easily extend into shallow groundwater. Darigold, Inc., a wholesale manufacturer of dairy products for human consumption, owns a 16-inch diameter, 450-foot deep industrial well and associated Certified Water Right Claim, located about 550-feet west of the contaminated area. The well casing is perforated beginning at 105-feet below ground surface, and appears to withdraw groundwater from the underlying Troutdale and Sandy River Mudstone formations. Groundwater contamination at the site could impact this well, and will be determined as part of the current groundwater remedial investigation.

NARR Comments: The site is likely to be used long term as industrial land. It is located in an area of mixed industrial, commercial, and residential properties. All properties immediately surrounding the site are either commercial or industrial use, as are more distant properties to the west, northwest, and southeast. However, residential areas are located south of SE Powell Boulevard, east of SE 12th Avenue, and north of SE Division Street. The nearest residential properties are located about 215 feet north, 290 feet east, and 490 feet south of the site.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Stormwater to the Willametter River. An existing municipal stormsewer on the western edge of the site, constructed in 1963, is located 11- to 15-feet below SE 9th Avenue. This western stormsewer may not be deep enough to capture stormwater from the depression on the southern end of the site - at its westernmost extent, the depression is about 15 feet below the level of SE 9th Avenue. However, the western stormsewer could overlie an older sewer that once drained the creek. A municipal stormsewer, constructed in 1906, also lies along the site's southern boundary, at least 34 feet beneath SE Taggard Street. Potentially-contaminated groundwater and/or stormwater runoff from the southern third of the site could discharge to the stormsewer beneath SE Taggard Street, then discharge to the Willamette River, 0.25 mile west of the site. Subsurface contamination could represent a potential health threat to underground utility workers, or to utility trench workers. Contaminants could also discharge to the stormsewer, and contaminate Willamette River sediments. Former Creek Drainage. The former creek drainage might also provide a preferential migration pathway for contaminants to reach the river. The former creek drainage appears to parallel the southern edge of the Union Pacific Railroad mainline, and may pass beneath the Oregon Museum of Science and Industry (OMSI) building, near the eastern end of Interstate Highway 5 s Marquam Bridge. Groundwater to the Willametter River. The Irwin-Hodson Company, located immediately south of the site, has a 153-foot deep industrial well. The well log indicates that this well was deepened from its original depth of 113 feet bgs in 1967. Prior to 1967, the well appears to have withdrawn groundwater from a loose gravel formation (possibly fluviolacustrine deposits). The well may have abandoned in January 2005, however Oregon Water Resources Department (OWRD) still has no record of the well abandonment. Potentially-contaminated groundwater could also preferentially migrate to the Willamette river through the fluviolacustrine deposits, or possibly also along the nearby stormsewer s bedding.

NARR Comments: (1/5/94 GMW/SAS) Options letter sent; no further remedial action anticipated by RP. Further evaluation recommended. (9/8/06 SMF/SAS) Site priority for further investigation and cleanup was revised to high. (6/6/2007 CWH/CU) Northwest Natural entered into DEQ's Voluntary Cleanup Program to investigate suspected site contamination described in Site Assessment evaluation. (February 2008 SM/CU) Representative soil and groundwater sampling from twelve push probe borings in areas of potential contamination. Test pit samples were also collected from visually discolored soils located at the

CENTRAL SERVICE CENTER (Continued) **U000432123**

southwestern portion of the site. Sample results confirmed the presence of contaminated soil and groundwater at several locations. (December 2008 SM/CU) Thirty-eight tons of visably stained, petroleum cobntaminated soil/waste material removed from southwest portion of the site. (June 2009 SM/CU) Borings were completed at ten locations on the site. Seven shallow- and three intermediate-depth groundwater wells were constructed to determine the nature and extent of groundwater contamination. (August 2011 SM/CU) Soil and groundwater samples collected from boring locations to decommission thirteen dry wells historically used to collect stormwater at the Site. (September 2011 SM/CU) Borings completed at three locations on site and 3 locations west of the site. Groundwater wells constructed at each boring location.

Updated Date: 12/20/2011
Decode for NarcdID: Health Threats
NARR Comments: Contaminated surface and subsurface soils, and shallow groundwater contamination could be a potential inhalation, direct contact or vapor intrusion threat to on-site workers and off-site workers at nearby commercial and industrial facilities. Subsurface contamination could also be a potential threat to on-site, and nearby off-site, utility trench workers, construction workers, or to stormsewer utility workers. Groundwater contamination at the subject site could reach the nearby Darigold, Inc. production well, and possibly contaminate food products used for human consumption, or represent a potential risk for Darigold workers. It appears very unlikely that nearby residents and pedistrians would ber affected by direct contact with site contaminants. Residential neighborhoods are located as near as 215 feet to the north, 290 feet to the east, and 490 feet to the south of the site. A Buddhist temple is located about 290 feet east of the site. Abernethy Elementary School and Portland Environmental Middle School are located about 765 feet northeast of the site. The Oregon Museum of Science and Industry (OMSI) is located about 2,150 feet (0.4 mile) northwest of the site. Any contaminants reaching the Willamette River could represent a potential threat to the river s recreational users. The Willamette River is important rearing and migration habitat for coho salmon, spring and fall Chinook salmon, and winter steelhead trout. The river also provides important migratory habitat for summer steelhead, as well as habitat for searun cutthroat trout and the Pacific lamprey. Coho salmon is a state-listed Endangered Species. Chinook salmon and steelhead trout of the Lower Columbia River Estuary and Upper Willamette are

CENTRAL SERVICE CENTER (Continued) **U000432123**

federally-listed Threatened Species. Searun cutthroat trout and the Pacific lamprey are federal Species of Concern. Any contaminants reaching the Willamette River could represent a threat to the river s Threatened and Endangered fish species.

NARR ID: 5748566
NARR Code: Water Use (Current/Reasonably Likely)

Created Date: 08/29/2006
Updated By: SMANZAN
Updated Date: 12/20/2011
Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: Well records at Oregon Water Resources Department (OWRD) and the U.S. Geological Survey (USGS) indicate that groundwater within the nine survey sections (9 square mile area) surrounding the site is predominantly used for industrial purposes, although a few domestic and irrigation wells are also present. Within the nine square mile area (approximately equivalent to a 1.7 mile radius), there are 44 industrial wells (83%), 4, irrigation wells (8%), and 5 domestic wells (9%). The nearest domestic wells are three domestic wells (53- to 74 feet deep) located approximately 1.65 mile southeast of the site, in a presumed upgradient location. The nearest industrial well is a 490-foot deep well at the Darigold, Inc. facility, approximately 550 feet west of the site. The well was constructed in 1946, and penetrates fill (0-12 feet bgs), fluviolacustrine deposits (12-43 feet bgs), Troutdale formation (43-258 feet bgs), and Sandy River Mudstone (below 258 feet, bgs). The well has an associated Water Right claim, certified in 1960, which states that the well was in continuous use since it was first constructed. Although the well log for this well provides no well construction details, the associated Water Right registration form indicates it has a 16-inch diameter casing from the ground surface to 450 feet bgs; the casing is perforated from 105- to 425 feet bgs (in the Troutdale and Sandy River Mudstone formations). The Darigold facility (Darigold / Land O'Lakes / Purina / Concentrates, Inc.) is a wholesale distributor of dairy products for human consumption, and a manufacturer of livestock feeds, pet foods, and organic garden-soil amendments. OWRD also has a well log for the deepening of an industrial well at the Irwin-Hodson Company, adjacent to the subject site s southern boundary. In 2005, Cascade Environmental Services reported that this well s casing had been backfilled with concrete about 1985, although no abandonment record was ever filed with OWRD. The Willamette River, which lies about 0.25 miles (1,385 feet) west of the site, is used for recreational fishing, boating, and swimming, as well as providing critical rearing and migration habitat for Threatened and Endangered salmonid species. The river also likely provides an important food source for bald eagles.

NARR Comments: A 1909 Sanborn Fire Insurance Map depicts the subject site as vacant, low-lying land with a creek flowing southeast to northwest, across the southern portion of the site, then entering a sewer at the site s western boundary along SE 9th Avenue. The site s manufactured gas holder tanks were constructed in 1921-1925. A 1924 Sanborn Fire Insurance map depicts two, 2 million cubic foot, gas holder tanks and several gas compressor houses located on a property owned by Portland Gas and Coke Company. A 1950 Sanborn Fire Insurance map shows the same tanks, plus an additional 3+ million cubic foot gas holder tank near the southwest corner of the site. The facility ceased operations (gas storage) in 1956. Subsurface gas transmission piping that was attached to the tanks had been capped and decommissioned in place within the site boundaries when the tanks were decommissioned sometime in the late 1970 s or early 1980 s.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: The Site is the former location of the NW Natural Central Service Center and the Portland Gas and Coke Company (PG&C) Station E gas holder facility. The gas holders were operational between 1914 and 1956 and used for storage of manufactured gas prior to distribution to the surrounding region. Manufactured gas was a predecessor of natural gas and was distributed for uses such as heating, lighting, and cooking. A 0.9-acre portion of the 5.2-acre Site was sold by NW Natural to TriMet in 2012 and is being developed by TriMet for light rail use. DEQ issued a partial NFA determination letter for the Parcel 1 portion of the Site in 2011. Cleanup-related activities completed at the Site have included: Excavation and disposal of 250 cubic yards of lead paint-contaminated soils from the area south of Holder Pad No. 8 in 1992. Removal and disposal of 950 cubic yards of manufactured gas residue/debris contaminated with petroleum hydrocarbons, lead, and cyanide from the areas of Holder Pad Nos. 7 and 8 in 1991 and 1993. Management of water contained within the gas inlet vaults of Holder Pad Nos. 7 and 8 followed by the filling of these vaults in 1993. Removal of 38 tons of soil/manufactured gas residue material contaminated with petroleum hydrocarbons, metals, and cyanide from the southwestern corner of the Site in 2008. Decommissioning of three drywells located at the western portion of

CENTRAL SERVICE CENTER (Continued) **U000432123**

the Site within an area of shallow groundwater contamination was completed in 2013 to mitigate any effects that direct subsurface infiltration of stormwater in this area could have with regard to plume behavior. Remedial Investigaton work activities conducted at the Site involved near-surface and subsurface investigations, land and water Beneficial Use Determination (UD), human health and ecological risk assessment, and preparation of this RI report. Based on the results of the remedial investigation and risk assessment activities conducted for the Site, further active remedial measures at the Site are not warranted. Although remedial measures are not warranted, the following recommendations are presented due to the presence of contaminated media at the Site. Residual contaminated soil and groundwater are present at the subject property. If left in-place, undisturbed, no actions are necessary with respect to the impacted soils and groundwater that remain beneath the property, as long as the property continues to be utilized for non-residential purposes only. If future Site development activity encounters impacted soil and/or groundwater at the property, special management of this soil or dewatered groundwater will be necessary for removal and/or disposal purposes. If future Site development activity has the potential for Excavation Workers to come in contact with impacted groundwater then measures need to be taken to ensure workers are informed of this, and that protective measures are implemented to mitigate the potential risk of exposure to contaminated media. Drainage improvements related to future Site development will need to include best management practices and controls such that any re-establishment of stormwater discharge to the adjacent storm sewer do not contain an unacceptable contaminant load. Site data indicate that removal of total suspended solids load from stormwater will largely address this issue. It would be prudent to prepare a Contaminated Media Management Plan (CMMP) prior to conducting future subsurface work at the Site. The purpose of a CMMP is to provide guidelines for appropriate management and disposal of contaminated soil and/or groundwater that may be encountered during potential future subsurface activities at the property, as well as to outline the measures to be taken to protect site workers during subsurface work activities.

Narrative:

NARR ID: 5726194
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: DHAFLEY
Updated Date: 07/07/2014
Decode for NarcdID: Contamination
NARR Comments: (2/6/92 ALB/SAS) In 1988, the Portland Development Commission (PDC) had an environmental audit of the site performed as a prelude to development of the site. The history of the site was uncertain, and the PDC apparently was concerned that contamination found on neighboring sites might have impacted this site. Soil borings and analysis of soil and groundwater samples indicated the site holds construction rubble, some oily soils, some coal tar residues, and low levels of gasoline constituents. The oily soil was detected near the south end of the site while the BTEX and coal tar constituents were found at the north end at a depth of 30 - 31.5 feet. The Old Town Parking/Helistop Structure (ECSI #383) site is across Front Avenue from the middle portion of the site. It appears that during the period of operation of the coal gasification plant near this site, coal tar residues were deposited rather widely in the area. Coal tar residues are of extremely low mobility and are generally considered to be a low-level hazard, in the absence of organic solvents. While samples did indicate the presence of BTEX compounds often associated with gasoline, neither gasoline nor diesel were detected. The benzene contamination in the groundwater exceeds the the federal drinking water standard. Groundwater in the area is not likely to be used for drinking purposes, however. Available information indicates that area wells are air conditioning and other industrial application wells, which appear to draw from deeper aquifers. The contamination is not believed to be presently posing a threat to human health or the environment. (7/16/92 KPD/SAS) The coal tar contaminants at the north end of the park came from the Portland Gas Manufacturing site (ECSI #1138), the site of a former coal gasification plant. The Old Town Parking site (formerly Broadway Cab) is active in the Site Response Section. The source of the contaminants at the south end of the park is unknown.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (2/6/92 ALB/SAS) Site Assessment has reviewed the site files and determined that the contamination does not pose an immediate threat through direct contact or drinking water use. It is recommended that no action be taken on this site until the results of the Site Response project (ECSI #383) soil/gas survey are received and evaluated. (7/16/92 KPD/SAS) Contamination from Broadway Cab has not spread to Waterfront Park. However, Site Assessment recommends a Preliminary Assessment (PA) to more fully evaluate site contamination and exposure pathways.

NARR Comments: [July 2014] North Waterfront Park is an old site and a <quot>Study Area<quot> with several adjacent member sites, such as Broadway Cab/Old Town Helistop (ECSI# 383) and Portland Gas Manufacturing (PGM - ECSI#1138). A NFA has been issued for Broadway Cab, and a DEQ source control evaluation is ongoing at PGM. While no DEQ action is anticipated at the North Waterfront Park site, additional work may occur in the future on adjacent sites added to the Study Area.

NARR Comments: (01/31/2012 KPD/ICP) Contamination was encountered at eight separate locations along the project alignment: 1) Petroleum-contaminated soils (PCS) associated with a former manufactured gas plant were encountered beneath roadways surrounding the intersection of NW 9th Avenue and Lovejoy Street. Sampling identified diesel, heavy oil, and PAHs in the soil, and 417 ppb diesel in the groundwater (23-25 ft bgs). 2) Lead-contaminated paint was sandblasted off of the Broadway Bridge from March-August 2010. Samples of the paint chips found total lead concentrations ranging from 26,900 parts per million to 121,000 ppm. 3) An underground storage tank (UST) was identified near the NE corner of the intersection of NE Weidler Street & Victoria Avenue in April 2011. The site address was given as 51 NE Weidler Street. PCS was identified atop the tank, a sample of which found 4,630 ppm gasoline and 883 ppm diesel. 4) A 370-gallon capacity UST was

PORTLAND STREETCAR LOOP (Continued) **S110818297**

discovered on the SE corner of NE 2nd & Broadway in February 2010. Sampling found up to 726 ppm gasoline in the soil. 5) A pole for the overhead catenary system (OCS) was installed on the north side of NE Broadway between MLK & Grand (at 425 NE Broadway). Sampling found 279 ppm gasoline in the excavation hole. 6) An OCS pole needed to be installed at 418 SE Grand Avenue, where a basement for the adjacent building extended beneath the sidewalk. The pole was ultimately installed through the sidewalk and through the basement. In February 2011, PCS was encountered beneath the basement floor in the excavation for the pole foundation. A soil sample from 2 feet below the floor (10 ft bgs) found 1,480 ppm diesel and 1,320 ppm heavy oil, along with low levels of PAHs. 7) PCS was encountered beneath the intersection of SE MLK Jr Blvd & Alder Street during installation of a manhole and sewer pipe. 8) The OMSI Viaduct was built to carry the Streetcar line over existing railroad tracks, and extends from SE MLK at Harrison Street to SE Water Avenue. In September 2009, soil samples were collected from borings at the south end of the viaduct. The samples found up to 154 ppm diesel and 1,280 ppm heavy oil, along with 396 ppm lead. Soil sampling at Bent 3 (between the railroad tracks) in April 2010 found up to 672 ppm lube oil. (See ECSI #5392 for more information on the OMSI Viaduct).

NARR Comments: (01/31/2012 KPD/ICP) In addition to the contaminated areas, seven potential underground storage tanks were encountered along the project alignment but were not sampled or decommissioned: 1) A potential UST was encountered along NE Broadway between 3rd Ave & MLK Jr Blvd. The address was given as 307 NE Broadway. The UST was left in place beneath a landscape planter. 2) A potential UST was

PORTLAND STREETCAR LOOP (Continued) **S110818297**

encountered on the north side of NE Weidler Street (beneath the sidewalk) west of MLK Jr Blvd in January 2010. The location was given as 76 ft west of MLK and 9 ft east of a utility pole. 3) A potential UST was encountered on the east side of NE Grand Avenue (beneath the sidewalk) south of Holladay Street in April 2010. The UST was described as being 1.5 ft west of the overhead catenary system (OCS) pole. The site address of the adjacent building was 518 NE Grand Avenue. 4) A potential UST was encountered on the east side of NE Grand Avenue (beneath the sidewalk) between Irving & Oregon Streets in April 2010. The UST was described as being 13 ft north of the OCS pole. 5) A potential UST was encountered on the SE corner of the intersection of Grand Ave & Burnside in March 2010. A Streetcar station is now located on the corner. However, a cap for the tank fill pipe is reportedly still visible in the sidewalk. 6) A potential UST was encountered on the west side of SE Martin Luther King Jr Blvd (beneath the sidewalk) midway between Oak & Stark Streets. The tank reportedly was already filled with grout (i.e. had been decommissioned in-place). 7) A potential UST was encountered on the east side of SE Grand Avenue between Alder & Morrison Streets. The UST was described as being 35 ft south of the OCS pole.

NARR Comments: (01/31/2012 KPD/ICP) Removals were conducted at seven separate locations along the project alignment. Except as indicated, the removals were of petroleum-contaminated soil (PCS). NW 9th & Lovejoy - A total of 624.7 tons of PCS were removed from around the intersection and shipped to the Hillsboro Landfill for disposal. 51 NE Weidler St - A total of 14.32 tons of PCS were excavated from atop the UST and shipped to the Hillsboro Landfill for disposal. The soil was removed from the bottom 6-8 inches of the planter between Victoria & 1st Avenue on Weidler. The UST was not decommissioned. 228 NE Broadway - About 9 tons of PCS were excavated from around the UST and shipped to the Hillsboro Landfill for disposal. The UST was decommissioned in-place with controlled-density fill (CDF). 425 NE Broadway - About 12.5 tons of PCS were removed from an OCS pole excavation and disposed of at the Hillsboro Landfill. 418 SE Grand Ave - Approximately 5 cubic yards (9.1 tons) of PCS and 500 gallons of groundwater were removed from an OCS pole excavation and disposed

PORTLAND STREETCAR LOOP (Continued) **S110818297**

of at the Hillsboro Landfill. SE MLK & Alder - Approximately 20 cubic yards of PCS were removed from beneath the intersection and disposed of at the Hillsboro Landfill. OMSI Viaduct - A total of 937.01 tons of PCS were removed as part of the viaduct construction and shipped to the Hillsboro Landfill for disposal. Contaminated soils were excavated from Bent 2 (200.51 tons), Bent 3 (213.59 tons), and Bent 4 (17.19 tons), as well as for construction of the south ramp (505.72 tons). No contaminated soil was excavated from Bent 1. (See ECSI #5392 for more information on the OMSI Viaduct).

Updated Date: 12/27/2017
Decode for NarcdID: Current Site Summary Statement
NARR Comments: Site is currently vacant, and being considered for redevelopment. Investigation starting in 2003 identified low to moderate levels of contaminants including TPH, PAHs, and metals is soil, with lesser contamination at depth. Groundwater in the far northeast site corner is impacted with volatile and semi-volatile organic compounds attributable to an off-site source. PDC has signed a letter agreement with DEQ (2012) requesting oversight of investigation and cleanup work. Additional characterization sampling (soil) requested by DEQ was completed in late 2012, and a RI/RA/FS report submitted in January 2013. Based on DEQ comments, the report was revised and resubmitted in February 2013. This report includes a proposed remedial action for the site consisting of limited soil excavation and installation of a soil vapor barrier and collection system in the northeast site corner. DEQ has approved the report, and will move forward with a staff report outlining the proposed remedy. May 1, 2013. A Record of Decision (ROD) for the site has been approved by DEQ outlining a site remedy. A Remedial Action Plan will follow at

PDC - BLOCK 8L DOWNTOWN WATERFRONT (Continued) **S112504466**

the discretion of the PDC. A Remedial Action Plan and Contaminated Media Management Plan were submitted in 2013 and approved by DEQ. In 2014, the PDC indicated that site development plans had changed, eliminating the need for some subsurface soil excavation. An alternative remedy focused on capping was proposed, and determined to be acceptable. DEQ prepared a ROD Amendment in August, and public notice completed in September on the revised remedy. A revised RAP and CMMP have been received and approved by DEQ. October 2017. Remedial actions (capping and vapor barrier installation) were completed as part of site redevelopment. Construction is complete, with a mixed residential and business development covering the entire site. DEQ approved a Construction Completion Report, and is awaiting EES development. Once completed, a conditional NFA will be issued for the site. DEQ Conditional NFA issued for the site on December 27, 2017. Requires ongoing cap inspection and maintenance.

NARR Comments: In April 2006 construction began on the OR99E: Division Street - Ross Island Bridge Project. This project was the first phase of a larger one involving replacement of the MLK and Grand viaduct structures that cross over Division Street and the Union Pacific Railroad right-of-way near OMS1 in Portland. Environmental activities associated with this construction project include the following: - Two dry wells were cleaned out and backfilled with slurry on January 30, 2006 by ODOT's contractor (UIC #12598; 2505 SE Grand Ave, Portland) - On July 5, 2006, DEQ issued a Solid Waste Permit Exemption, under which approximately 10,300 cubic meters of soil with low levels of contamination were placed in utility trenches within the construction site. A copy of the exemption letter is attached. - On April 9, 2007, DEQ provided a letter concurring with a proposal by ODOT that soil at depths to 4 feet be disposed of at a permitted landfill. Deeper soil could be left in place because sample results indicate that contamination in this soil does not exceed safe levels for construction workers. - Dry wells were discovered on a portion of the site formerly occupied by Commercial Iron Works. These were referred to DEQ's UIC Program. - VOC contamination in soil was

ODOT - MLK/GRAND VIADUCT PROJECT (Continued) **S107421159**

discovered in 2009 at a location where ODOT needed to drive piles. The concern was that the piles could drive contamination down into groundwater. One solution we considered was to require a bentonite plug at the top of the piles. However, we then learned that reinforced concrete pile caps at the top of the piles would be installed anyway, and would serve this purpose.

Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (4/10/95 KAC/SRS) Location of Broadway Cab Company service center for its taxicab fleet from the mid-1950s until about 1985. The site contained two 10,000-gallon underground storage gasoline tanks, installed in the mid-1950s. A 5,000-gallon tank was installed in 1974. One or both of the 10,000-gallon tanks were unearthed in 1976 and subsequently relined after water was detected in the gasoline. The site is also located directly south of a historic coal and oil gasification facility known as the Portland Gas Manufacturing Facility (see ECSI #1138). A large volume of coal and oil tar wastes was estimated to have been generated at this facility; however, no records indicating how they were disposed of have been located, so it is possible that these wastes were disposed of at or near the plant site - possibly on the Broadway Cab site. Wastes removed from the site were disposed of at Porter Yett Landfill (pit). The City of

OLD TOWN PARKING/HELISTOP STRUCTURE (Continued) **1006864255**

Portland acquired the site and constructed a parking structure and shops. Wells were installed in 1991 and gasoline compounds were found in the groundwater beneath the site and across Davis Street to the south.

NARR Comments: Leaking underground storage tanks. Disposal of coal tars from old Portland Gas Manufacturing Facility. Source of benzene contamination is leakage from underground gasoline storage tanks formerly located on-site. Acenaphthalene is a polynuclear aromatic hydrocarbon (PAH) that is a coal/oil tar constituent. PAHs are not very soluble in water but are being mobilized by the gasoline. Time of release: during operation of the cab company.

NARR Comments: Bunker fuel/heating oil - mix of mostly diesel and heavy range hydrocarbons - contains polynuclear aromatic hydrocarbons. May be some limited groundwater impacts from petroleum hydrocarbons. Trichloroethene and perchloroethene were detected in groundwater at the site, but were determined to have originated from off-site sources and not in need of further investigation.

NARR Comments: (5/4/05 CK/ICP) Nine soil push probes were advanced and groundwater samples collected in 2002, during a Level II Environmental Site Assessment. (12/6/06 MGreenburg/ICP) Residual contaminants are below site-specific Risk-Based Contaminant levels for Excavation Worker soil contact and Urban Residential and Occupational Volatilization to Indoor/Outdoor Air pathways. Therefore, DEQ has made a no-further-action determination for this site.

NARR Comments: Four contiguous properties were designated with different tax lots (7072, 7074, 7075, and 7077) and operated as a car dealership. The Timberline Dodge properties were investigated together but identified separately in three ECSI files. Properties 7072 and 7074 were listed under ECSI # 2180. Property 7077 was listed under ECSI # 2178. Property 7075 was listed under ECSI #2179. Property 7072 was used as a car dealership and had 7 hydraulic hoists, 6 ASTs, 1 HOT, and 1 waste oil UST. Soil samples were collected near the areas of concern in 1997. Soil analysis did not identify any releases of petroleum, volatile organic compounds, PCBs or metals above human health risk-based criteria. Property 7074 had no history of hazardous materials use or storage. A soil sample collected from the property did not exhibit TPH, VOCs, PCBs, or metals above human health risk-based criteria. Property 7077 had a service building with floor drain and paint booth. No release to the environment was detected near the paint booth. A release of petroleum was detected at the floor drain but was determined to be diminimus because it was not detected at a depth of 5 feet below the floor grade. Property 7075 was used as a car display lot. Historic uses had been as a battery and tire business and car service station. No USTS were found on the lot. TPH, metals, PCBs and VOCs were not detected at levels of concern in soil samples collected in 1997 and 1999. (AVC 2000)

NARR Comments: As early as the 1920s, the site was developed as the Inman Poulsen Lumber Company and had a pier/dock structure for loading and unloading of ships. No other lumber mill operations appears to have occurred at the site. In the 1960s, the site was occupied by Willamette Sand and Gravel and Oregon Asphalt Company. The 1969 Sanborn Map shows structures related to motors, compressors, kilns, conveyors and storage facilities. At least one structure was likely used for oil and gas storage. This equipment was largely removed by the late 1990s. The western portion of the site contains fill material of unknown origin. In addition, several large stockpiles of sand and gravel, soil and asphalt are present on the site. Lastly, petroleum-contaminated soil, reportedly containing concentrations below Soil Matrix levels, was placed on the site in December 1997. Contaminants detected in soil at the site during investigations in

IVON STREET WATERFRONT PROJECT (Continued) **S109154969**

2012 incuded gasoline, diesel and heavy oil range hydrocarbons, metals (arsenic, barium, chromium, and lead), PCBs, and PAHs. Groundwater contaminants include PAHs and metals. Petroleum hydrocarbons, VOCs and PCBs largely not detected. (JKS 6-22-18)

Decode for NarcdID: Site History
NARR Comments: As early as the 1920s, the site was developed as the Inman Poulsen Lumber Company and had a pier/dock structure for loading and unloading of ships. No other lumber mill operations appears to have occurred at the site. In the 1960s, the site was occupied by Willamette Sand and Gravel and Oregon Asphalt Company. The 1969 Sanborn Map shows structures related to motors, compressors, kilns, conveyors and storage facilities. At least one structure was likely used for oil and gas storage. This equipment was largely removed by the late 1990s.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Creekside Environmental Consulting performed a preliminary environmental investigation (Phase I ESA)for the site in early 2012. Several RECs were noted: 1) Historical use of oil/gas in association with the asphalt plant, wood product storage, cement production and a marine dock. 2) Historical placement of fill from unknown sources on the property. 3) Placement of 30-60 tons of petroleum-contaminated soils associated with a former UST. 4) Presence of several large stockpiles of sand and gravel, asphalt and soil on the property. 5) Contaminated sediments in proximity to site. In June 2012, borings, test pits, composite sampling of the large stockpiles and discrete soil groundwater samping were performed at the site. Associated with this work, a geophysical survey was performed and magnetic anomalies were investigated. The following were detected in soil from the site: gasoline, diesel and heavy oil hydrocarbons, PAHs, and metals (primarily lead). Lead exceeded screening levels in three samples and arsenic exceeded screening levels in one sample. The following were identifed as COPCs: lead, benzo(a)pyrene and benzo(b)flouranthene. Groundwater samples from two borings detected only barium. Creekside concluded that further asessment of the stockpiles was warranted. In August 2012, samples were collected from near-site sediments. Selected VOCs and PAHs were detected in sample S1 near the down-stream part of the property. In August 2012, 12 additional borings were advanced and 22 soil trenches were excavated at the site to further characterize subsurface conditions. Three of the borings were converted to groundwater monitoring wells. Groundwater was encountered at a depths ranging from 31 to 35 feet bgs at the site. Gravimetric analysis showed that many of the petroluem hydrocarbons detected in soil within the top 15 feet were in the asphalt range.

IVON STREET WATERFRONT PROJECT (Continued) **S109154969**

Arsenic was detected in soil samples from across the site but at levels below the naturally occurring background levels. PCBs were largely not detected in the soil or groundwater samples. (JKS 6-25-18)

PORTLAND GAS MANUFACTURING SITE (Continued) **S106497096**

Decode for NarcdID: Contamination
NARR Comments: (4/27/88 MER/SRS) This site covers four city blocks and was used for a coal gas manufacturing facility from 1860 to 1906. In 1906, the plant converted to produce oil gas and carbureted water gas. Portland Gas Company discontinued operation of the gas plant in 1913. Based on data for similar coal and oil gas plants, the major wastes likely are: coal and oil tars, process wastewater, and spent iron oxide. Coal and oil tars are composed mainly of PAHs. Process wastewaters may contain dissolved aromatic hydrocarbons and ammonia. Spent iron oxides contain iron, sulfur, and some heavy metals. It is estimated that coal tar production at the site could have been as much as 44,000 gallons per year, and oil tar around 59,000 gallons per year. There was no information available as to how these wastes and products were disposed of, but it is historically likely that they were disposed of on-site. It is also reasonable to assume that process wastewater was discharged to the Willamette. (6/22/92 KPD/SAS) Much of the above information was derived from a federal Preliminary Assessment (PA) performed by Ecology & Environment (E&E) for EPA in 1987. Although no sampling was performed, E&E concluded that any remaining contamination would be immobile and blocked from reaching the Willamette River by the seawall, and so recommended no further action be taken. In 1988, excavation for a parking garage immediately south of the site encountered <quot>green<quot> clay and a strong gasoline odor at least 20 feet below the surface. Coal tar was found below this. Although some contamination was excavated and shipped off-site, a major cleanup was not attempted. Instead, DEQ approved a plan to monitor and vent gasoline vapors (to prevent the vapors from building up in the basement of the garage). Also in 1988, the Portland Development Commission (PDC) hired Sweet-Edwards/EMCON to look at the site as part of a study to extend Waterfront Park north from the Burnside Bridge to the Steel Bridge. As expected, contaminants consistent with coal and oil tars were found at the Portland Gas site. EMCON agreed with E&E that the tars posed no public health threat so long as they were not disturbed by excavation. See ECSI #383 for more information on the parking garage, and ECSI #876 for more information on North Waterfront Park. (3/7/09, DJH/VCP) Based on a February 2009 draft Historical Summart Report submitted by NW Natural (Hahn & Associates), MGP operations included 5 city blocks (5,6,7,15,23) and included use of coal, carbureted water (oil/water mixture), and crude oil as feed stock. Manufacturing ceased in 1913. Investigation is ongoing to assess sediment impacts in the Willamette River adjacent to the site, and in upland areas adjacent to the river. During Phase I investigation activity in the site uplands, and in Willamette River sediment adjacent to the site, MGP contamination was detected. The most notable contamination was in sediment, where oil, tar, and black solid material (lampblack?) were detected off of Block 5, where gas manufacturing activities were concentrated. Additional investigation completed in the 2010 through 2015 time period has identified elevated VOCs and PAHs in groundwater near the eastern site boundary, most notably at 75’ below ground surface. Significant VOC, PAH, petroleum, and metals contamination has also been detected in sediment adjacent to Blocks 4 and 5. In-water contamination includes a area of tar-like material at the sediment surface; significant debris associated with sea wall construction has also been found in the contamination area.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Based on completed site characterization and source control evaluation, upland (direct contact) concerns are low given filling of the former industrial area and subsequent redevelopment. In the upland, groundwater contamination is present along the seawall area, and is expected to discharge to the Willamette River. Within the river, contaminated sediment has been found which poses a risk to both human and ecological receptors.

Updated By: DHAFLEY
Updated Date: 10/21/2018
Decode for NarcdID: Remedial Action
NARR Comments: 3/7/09, DJH/VFCP) Remedial investigation planning begun October 2008. Field Sampling Plan for Willamette River sediment investigation approval by DEQ in mid 2009, and sampling completed in August. Upland Source Control Investigation Work Plan approved by DEQ in September 2009, and work completed in August 2009. A draft Sediment Investigation Report was submitted to DEQ in December 2009. An Upland Source Control Investigation Report was submitted in March 2010. In May 2010 DEQ identified remaining source control data gaps. (9/20/12, DJH). See SUMMARY text. Four rounds of upland groundwater investigation completed, along with Phase 2 sediment sampling in the Willamette River adjacent to the site. Phase 3 work consisting of additional sediment collection, seepage measurements, pore water sampling, and geophysical survey is ongoing as of September 2012. (11/14/13) Upland and in-water investigation has been completed, and source control risk analysis is in progress. Excess risk has been identified for upland groundwater near the seawall, and within Willametter River sediments bordering the site. A feasibility study is pending. (11/1/16) Feasibility study completed and approved by DEQ. Staff Report outlining proposed remedial actions for groundwater and sediment contamination completed October 2016. Public notice completed. (06/06/18). Record of Decision issued in June 2018 following public notice and comment, including response to EPA and tribal comments. RD/RA Work Plan approved in July 2018. (10/21/18). 50% design documents submitted to DEQ in June 2018. Following comment and response, 90% Design submitted to DEQ in October 2018 for review. DEQ response expected in early December 2018. Permitting work associated with in-water action ongoing.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [May 2017] A comprehensite source control investigation effort has been completed at the site under a Consent Order with DEQ. Work has included installation and monitoring of numerous upland wells to determine the potential for contaminated groundwater to discharge to the Willamette River, and a comprehensive investigation of river sediment and water adjacent to the site.

 Near the seawall (eastern upland boundry), groundwater impacts have been observed in upland wells, notably in the 65-75’ bgs, with MGP constituents including benzene and naphthalene observed. Groundwater above and below has minimal or no contamination. In the river, significant sediment contamination has been detected off of Block 4 and 5, and to a lesser extent Block 21. Contaminants detected included VOCs, PAHs, metals, and cyanide (all MGP waste constituents). Block 5 was the locus of MGP operations at the former PGM facility. As of summer 2012, two rounds of sediment investigation had been completed, and

PORTLAND GAS MANUFACTURING SITE (Continued) **S106497096**

the extent of riverbed contamination generally defined.

 In October 2012, additional source control work was completed at DEQ's request. Work included sediment sampling to define the lateral extent of sediment impacts, pore and river water sampling, seismic profiling of the riverbed, and a diver survey of riverbed debris and a tar area. Upland work included a transducer study using site wells. Results were presented in a site investigation report presented to DEQ.

 A Draft Integrated Sediment Investigation/Source Control Evaluation Report, including a comprehensive risk screening for both upland and in-water contamination, was completed by Anchor for NW Natural in April 2013. Based on comments by DEQ, a Revised Integrated Sediment Investigation/Source Control Evalution Report was submitted in Aug. 2013. Risk screening identified elevated concentrations of MGP contaminants in both upland groundwater (largely in the 65-75' bgs zone), and Willamette River sediment adjacent to the site.

 To finalize the RI and risk screening work and prepare for a site feasibility study, a Supplement to the Integrated Sediment Investigation/Source Control Evaluation (Nov. 2013) was submitted by NW Natural. A revised Supplement was approved by DEQ in Feb. 2014.

 Two FS-related documents, a FS Work Plan and Annotated FS Outline were submitted by NW Natural in early 2014. The work plan outlined additional in-water investigation work including porewater and seepage rate measurements, and advancing cores to better delineate sediment impacts in the northeast portion of in-water contamination. This work was approved in June 2014 and implemented that summer.

 An Integrated Feasibility Study report was submitted for DEQ review in December 2015. DEQ issued comments on the FS dated February 11, 2016. Under the draft FS, the proposed remedy consists of a combination of active (dredging, capping) and passive (natural attenuation) elements. The FS was finalized (Aug. 2016) and subsequently approved by DEQ. A DEQ Staff Report outlining the proposed site remedy has been prepared (Oct. 2016) and approved by DEQ management. The document is available on <quot>Webdocs.<quot> Public notice of the proposed remedial action was begun on November 1, 2016, and will continue for 30 days. As requested by EPA and Tribes, the comment period was extended through January 2017. Numerous comments were received. DEQ's Record of Decision is pending. Contamination in the 5-block upland portion of the site is not included in the proposed remedy. Given filling and redevelopment that has occurred, the <quot>direct contact<quot> risk is considered low, and will likely be evaluated in the future. DEQ previously issued a conditional NFA for Block 15, which lies within the historical <quot>footprint<quot> of PGM upland activities. Record of Decision issued by DEQ July 3, 2017. Included response to EPA, tribal, and public comments and evaluation of remedy consistency with that for Portland Harbor. A Pre-Design Work Plan was completed by NWN in August 2017 and approved by DEQ. Work including an updated bathymetric survey, diver survey, and sediment collection and was completed in September/October 2017. Remedial design is in progress, and included submission of 50% design materials in June 2018. A final RD/RA Work Plan was approved in July 2018, and 90% design documents were received in late October 2018. Remedy implementation is planned for 2019.

NARR Comments: (3/17/08 CHarman/SAS) There are some indications of low levels of chlorinated hydrocarbons in subsurface soils. Source area and extent of this contamination is not known. a site investigation is needed to evaluate the nature and extent of contamination. (June 2010, Greenburg) Levels of Stoddard solvent were determined to be below site-specific risk-based values, while tetrachloroethene levels were below generic risk-based criteria. Site was issued a NFA letter.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Decode for NarcdID: Contamination
NARR Comments: In December 1996, a resident living next to this former substation called DEQ to inquire about contamination she had heard might be present. This led to Site Assessment’s contacting PGE to obtain site information. PGE indicated that it had inherited the substation from PP&L about 1971, and had declared it <quot>surplus<quot> in 1979. Transformers and other equipment were not removed from the site, however, until 1990. At that time, PGE sampled several areas of stained soil beyond the three concrete transformer pads, and found up to 6.3 ppm PCBs. PGE had also sampled the site in 1985, finding slightly lower levels of PCBs at that time; PGE was unable to find records of 1985 sample locations.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in a predominantly residential neighborhood, and direct contact and incidental ingestion are the most likely pathways of exposure. However, according to PGE, a 7-foot fence with barbed wire at the top surrounds the 0.25-acre property, and the small areas of stained soil are covered with a layer of gravel.

Decode for NarcdID: Remedial Action
NARR Comments: (GMW 12/19/96) No cleanup of PCBs has occurred at this site. Although the extent of contamination appears to be minor and PCB concentrations are low, this former substation is located in a residential area, and PCBs should therefore be cleaned up to residential exposure standards. Further state action at the site is a low priority. (12/28/00 ACV/VCS) DEQ review of independent site investigation concluded PCB concentrations do not exceed 1.2 ppm cleanup level based on 90% UCL. No Further Action (NFA) in November 2000.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018
Date Data Arrived at EDR: 03/28/2018
Date Made Active in Reports: 06/22/2018
Number of Days to Update: 86

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018
Date Data Arrived at EDR: 03/28/2018
Date Made Active in Reports: 06/22/2018

Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018
Date Data Arrived at EDR: 03/28/2018

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 01/01/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

MODERA MORRISON
1120 SE MORRISON STREET
PORTLAND, OR 97214

TARGET PROPERTY COORDINATES

Latitude (North):	45.516832 - 45° 31' 0.60''
Longitude (West):	122.654154 - 122° 39' 14.95''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	527012.6
UTM Y (Meters):	5040207.0
Elevation:	69 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	6067252 PORTLAND, OR
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

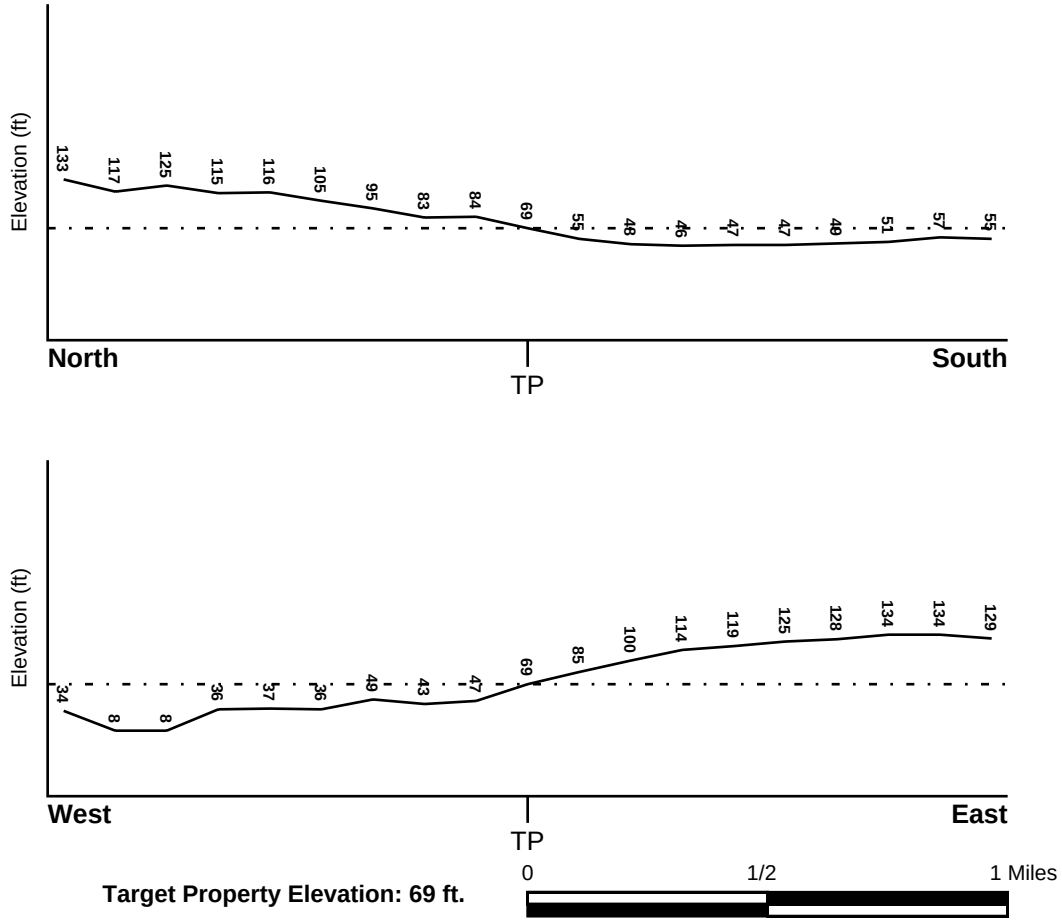
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 69 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
4101830035D	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
4101830040C	FEMA Q3 Flood data
4101830093E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

CAMPF PROPERTIES LIMITED PARTNERSHIP
ALLEN CAMPF
1120 SE MORRISON ST
PORTLAND, OR 97214

Re: Campf, Allen
File No: 26-16-1462

Dear Campf Properties Limited Partnership:

The Department of Environmental Quality has received a report and K&S Environmental, Inc. certification concerning the heating oil underground storage tank (HOT) assessment and/or cleanup conducted at 1120 SE Morrison St, in Portland, Oregon.

K&S Environmental, Inc. was licensed to provide heating oil tank services and has certified that the cleanup has met the Department's requirements. The Department has registered this report and certification and closed its file on the project.

The decision to register the report and certification and to close the Department's file will no longer apply if new or undisclosed facts show that the project does not comply with the rules governing heating oil tank cleanups.

Please note that you are required by state law (ORS 105.464) to provide potential buyers a disclosure statement that includes information regarding underground storage tanks, HOTs and the environmental conditions on your property.

Accordingly, we recommend that you keep a copy of this letter, the certification and any reports of testing or corrective actions relating to your HOT with the permanent property records.

Your efforts to comply with Oregon's environmental rules and regulations to ensure that your heating oil tank has been adequately addressed have been appreciated. Proper decommissioning and cleanup helps ensure protection of the environment from future heating oil tank leaks and ensures that the heating oil does not adversely impact human health or the environment.

If you have any questions, please feel free to contact the HOT Program at (503) 229-6170.

Sincerely,

Michael H Kortenhof, Manager
DEQ Heating Oil Tank Program

PORTLAND OREGON 97214

Re: AJP
File No. 26-91-267

Dear Mr. Campf:

The Department has reviewed its file on the underground storage tank decommissioning and cleanup conducted at 1120 SE Morrison in Portland, Oregon. The Department has determined that the cleanup appears to have met the requirements of Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgment based on the regulations and facts as we now understand them, including:

1. Two 1,000 gallon gasoline USTs were decommissioned at this location. The tanks were recycled at Mt. Hood Metals.

2. Gasoline contamination was discovered during the decommissioning. Approximately 100 cubic yards of contaminated soil were removed from the excavation and treated onsite. After treatment was complete, no contamination was detected in the treated soil.

   The final disposal location of the contaminated soil was not documented. The person responsible for the disposal is no longer able to provide documentation.

3. After excavation was complete, no contamination was detected in the soil.

4. No groundwater was encountered in the excavation.

The Department's determination will not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report(s).

John A. Kitzhaber
Governor

Re: File No. 26-91-267

Sir:

As you requested, per our telephone conversation on Tuesday morning July 2, 1996, the following statement is made based upon what I know referencing your letter, (see attached copy).

The contaminated soil was treated on site (on our parking lot). A gentleman named Daniel Lindenberger, his company name I do not remember, was in charge of the project. Where his company took the soil, once treated, and okayed by your department for removal, I do not know. Mr. Lindenberger, unfortunately is now institutionalized in Salem, do to a diabetic coma he went into, which rendered him brain dead.

If you have any further questions please call.

Sincerely,

Alan Campf
CEO

Re: AJP
File No. 26-91-267

Dear Mr. Campf:

The Department has reviewed its file on the underground storage tank decommissioning and cleanup conducted at 1120 SE Morrison in Portland, Oregon. Based upon this review the cleanup appears to be complete with the exception of documentation of the final disposal location for the treated soil.

Please submit a letter that describes what happened to the treated soil. Please find attached a property owner statement that needs to be filled out by the receiving property owner and the Department's policy on soil reuse.

Once we have received the requested information, the Department can complete its review of the cleanup. If you have any questions, please call me at (503) 229-5474.

Sincerely,

Andree Pollock

POLICY FOR REUSE OF PETROLEUM CONTAMINATED SOIL

A. BACKGROUND

Many leaking underground storage tank sites produce significant volumes of petroleum contaminated soils (PCS). Frequently the owners and operators of these sites wish to treat and reuse the PCS rather than dispose of the soils in landfills. In order to protect human health, welfare, and the environment, it is necessary for DEQ to establish a formal policy recommending standards for treatment and reuse of PCS. The purpose of the policy is to define the recommended treatment standards which should be met in order to reuse PCS.

B. APPLICABILITY

This policy applies to treatment and reuse of soils contaminated by releases of petroleum products only.

C. POLICY STATEMENT

1. Soils which will be used as backfill in the excavation from which they were removed are required to be treated to the matrix cleanup standard applicable to the site of origin in accordance with OAR 340-122-335.

2. Soils which will be used off-site should meet the appropriate level one matrix cleanup standard for the substance released; if the soils are used off-site, the property owner receiving the treated soil should acknowledge in writing that the soils have been placed in accordance with this policy; this acknowledgement should also indicate that the owner of the property accepting the contaminated soil understands the nature and origin of the soils.

3. In all cases, reuse of the treated PCS should be such that soils are placed above the seasonal high groundwater level and are isolated from human contact or possible exposure. Treated PCS should not be placed in wetlands or within the 100-year floodplain.

4. In all cases, disposition of soils (including reuse on-site or off-site) must be reported to DEQ in accordance with OAR 340-122-360.

5. In accordance with OAR 340-122-250 (corrective action plan requirements), DEQ will consider alternate cleanup standards for reuse of PCS on a case by case basis; under no circumstances will DEQ approve of cleanup standards which do not adequately protect human health, safety, welfare, and the environment.

Although these treatment standards and reuse control measures are considered adequate to protect human health, safety, welfare and the environment, the Department strongly supports and encourages efforts to attain the lowest practicable treatment levels and thereby reduce the impact to the environment.

Re: AJP
File No. 26-91-267

Dear Mr. Campf:

The Department has reviewed its file on the underground storage tank decommissioning and cleanup conducted at 1120 SE Morrison in Portland, Oregon. Based upon this review the cleanup appears to be complete with the exception of documentation of the final disposal location for the treated soil.

Please submit a letter that describes what happened to the treated soil. Please find attached a property owner statement that needs to be filled out by the receiving property owner and the Department's policy on soil reuse.

Once we have received the requested information, the Department can complete its review of the cleanup. If you have any questions, please call me at (503) 229-5474.

Sincerely,

Andree Pollock
UST Cleanup Specialist

POLICY FOR REUSE OF PETROLEUM CONTAMINATED SOIL

A. BACKGROUND

Many leaking underground storage tank sites produce significant volumes of petroleum contaminated soils (PCS). Frequently the owners and operators of these sites wish to treat and reuse the PCS rather than dispose of the soils in landfills. In order to protect human health, welfare, and the environment, it is necessary for DEQ to establish a formal policy recommending standards for treatment and reuse of PCS. The purpose of the policy is to define the recommended treatment standards which should be met in order to reuse PCS.

B. APPLICABILITY

This policy applies to treatment and reuse of soils contaminated by releases of petroleum products only.

C. POLICY STATEMENT

1. Soils which will be used as backfill in the excavation from which they were removed are required to be treated to the matrix cleanup standard applicable to the site of origin in accordance with OAR 340-122-335.

2. Soils which will be used off-site should meet the appropriate level one matrix cleanup standard for the substance released; if the soils are used off-site, the property owner receiving the treated soil should acknowledge in writing that the soils have been placed in accordance with this policy; this acknowledgement should also indicate that the owner of the property accepting the contaminated soil understands the nature and origin of the soils.

3. In all cases, reuse of the treated PCS should be such that soils are placed above the seasonal high groundwater level and are isolated from human contact or possible exposure. Treated PCS should not be placed in wetlands or within the 100-year floodplain.

4. In all cases, disposition of soils (including reuse on-site or off-site) must be reported to DEQ in accordance with OAR 340-122-360.

5. In accordance with OAR 340-122-250 (corrective action plan requirements), DEQ will consider alternate cleanup standards for reuse of PCS on a case by case basis; under no circumstances will DEQ approve of cleanup standards which do not adequately protect human health, safety, welfare, and the environment.

Although these treatment standards and reuse control measures are considered adequate to protect human health, safety, welfare and the environment, the Department strongly supports and encourages efforts to attain the lowest practicable treatment levels and thereby reduce the impact to the environment.

Re: AJP Tank Removal and Contamination

Dear Dick;

In response to your request I have enclosed a copy of the initial report for the above project. In addition, I would like to explain the apparent discrepancy on soils testing.

O'Sullivan encountered contamination while excavating and removing two tanks at the AJP site. We extracted five samples on July 19,1991, AJP 1 through AJP5. AJP 5 sample was taken at eight feet, the remaining samples were recovered at nine feet. Having detected the presence of contamination during tank removal before any soils testing, we sampled the area of contamination and then removed it from the excavation. The quantity was 418 PPM for gasoline on sample AJP5. Subsequent tests at nine feet confirmed we had removed the extent of contamination. We used this methodology in an attempt to save our client the expense of additional testing and response time from the testing lab.

The contamination excavation consisted of approximately one hundred yards of material. We moved that material to behind the AJP building on 11th & Morrison and spread it out in 6" layers covered with visqueen and surrounded by hay bales. In October (see attached testing reports), Chad Walker took three additional samples for TPH-G and the results were non-detect.

We notified the owner of AJP that the soil from the tank decommissioning was now safe for removal and final reports for its removal need to be sent to the D.E.Q. for closure purposes.

If you have any further questions or I can be of additional assistance, please feel free to contact either myself or Chad Walker at the above Oregon number.

Sincerely,

Jeffrey Spencer

RE: Tank Removal - AJP
Facility #6680

Dear Mr. Pollock:

This letter serves as an initial notice on the AJP tank removal project. Through our phone conversation on 7-19-91, you were aware that soil contamination was found while removing the two existing 1,000 gallon gas tanks, and that we planned to overexcavate the area, take soil samples, remediate the soil on site and backfill the tank excavation. In that conversation you stated that this was the appropriate action to take. Enclosed you will find a sketch showing all soil sample locations and results.

We have excavated approximately 100 cubic yards of contaminated material from the tank location. These spoils are still on site, covered with visqueen. Soils tests have indicated to us that the excavation is clean. We have backfilled this area. The contaminated material remediation will take place on site.

If you have any questions or comments, please feel free to contact me. Thank you for your prompt attention in this matter.

Very truly yours,

O'SULLIVAN CONSTRUCTION, INC.

UNDERGROUND STORAGE TANK DECOMMISSIONING/SERVICE CHANGE REPORT

DEQ FACILITY NUMBER: 6680 DATE: 08/21/91

FACILITY NAME: ATP

FACILITY ADDRESS: 1120 SE Morrison St

Portland, OR 97214

PHONE: (503) 235-8341

Dept. of Environmental Quality
RECEIVED
SEP 3 1991
NORTHWEST REGION

The following information MUST be submitted by the underground storage tank owner, operator or licensed DEQ Supervisor within 30 days following completion of the tank decommissioning or changing tank contents to a non-regulated substance. (OAR 340-150-001 though -150)

The attached supplemental checklist should be prepared by the person performing the decommissioning. The checklist should be provided to DEQ and the tank owner to demonstrate that all required practices were followed.

Ordinarily the checklist is filled out by the DEQ licensed Service Provider or Supervisor. Owners who wish to personally decommission a tank must follow all DEQ and other applicable standards. The owner should contact the DEQ Regional Office prior to starting the decommissioning to receive current copies of underground storage tank regulations.

A. DATES:

Decommissioning/Service Change Notice - Date Submitted: 05/15/91 (30 days before work starts)

Work Start Telephone Notice - Date Submitted: 07/16/91 (3 working days before work starts)

DEQ Person Notified: Catherine Blaine

Date Work Started: 07/19/91

Date Work Completed: 07/25/91

Note: Provide the following information if any soil or water contamination is found during the decommissioning. Contamination must be reported by the UST owner or operator within 24 hours. The licensed service provider must report contamination within 72 hours after discovery unless previously reported.

Date Contamination Reported: 07/19/91 By: Chad A. Walker

DEQ Person Notified: Andree Pollack

Backfill Telephone Notice - Date Called: 07/19/91 (before backfilling)

DEQ Person Notified: Andree Pollack

B. PERMITS:

Note: DEQ permits or an addendum to the UST permit(s) may be needed where soil or water cleanup is required.

B. PERMITS (Continued)

UST Soil Treatment Permit Addendum - Type: On-Site Date: 08/12/91

Soil Disposal or Treatment Location: AJP 1120 SE Morrison Portland OR 97214

C. TANK INFORMATION:

Tank #	DEQ UST Permit	Tank Size in (Gallons)	Product: Gasoline, Diesel, Used Oil, Other?		Closure or Service Change?			Tank to be Replaced?	
			Present	New	Tank Removal	Closure∞ Inplace	New ∞ Product	Yes*	No
1	NA	1000	Gasoline		✓				✓
2	NA	1000	Gasoline		✓				✓

* Where decommissioned tank(s) are replaced by new underground storage tanks the UST owner or operator must submit a new permit application containing information on the new tanks 30 days before placing them in service.

∞ Submit a soil sampling plan to the DEQ regional office and receive plan approval prior to starting work if 1) tank is to be decommissioned in-place, 2) tank contents are changed to a non-regulated substance, or 3) tank contains a regulated substance other than petroleum.

D. DISPOSAL INFORMATION:

Tank #	Tank & Piping Disposal Method				Disposal Location of Tank Contents *	
	Scrap	Land-fill	Other	Identify Location & Property Owner	Liquids	Sludges
1	✓			MT Hood Metals	Pacific Coast	
2	✓			MT Hood Metals	Pacific Coast	

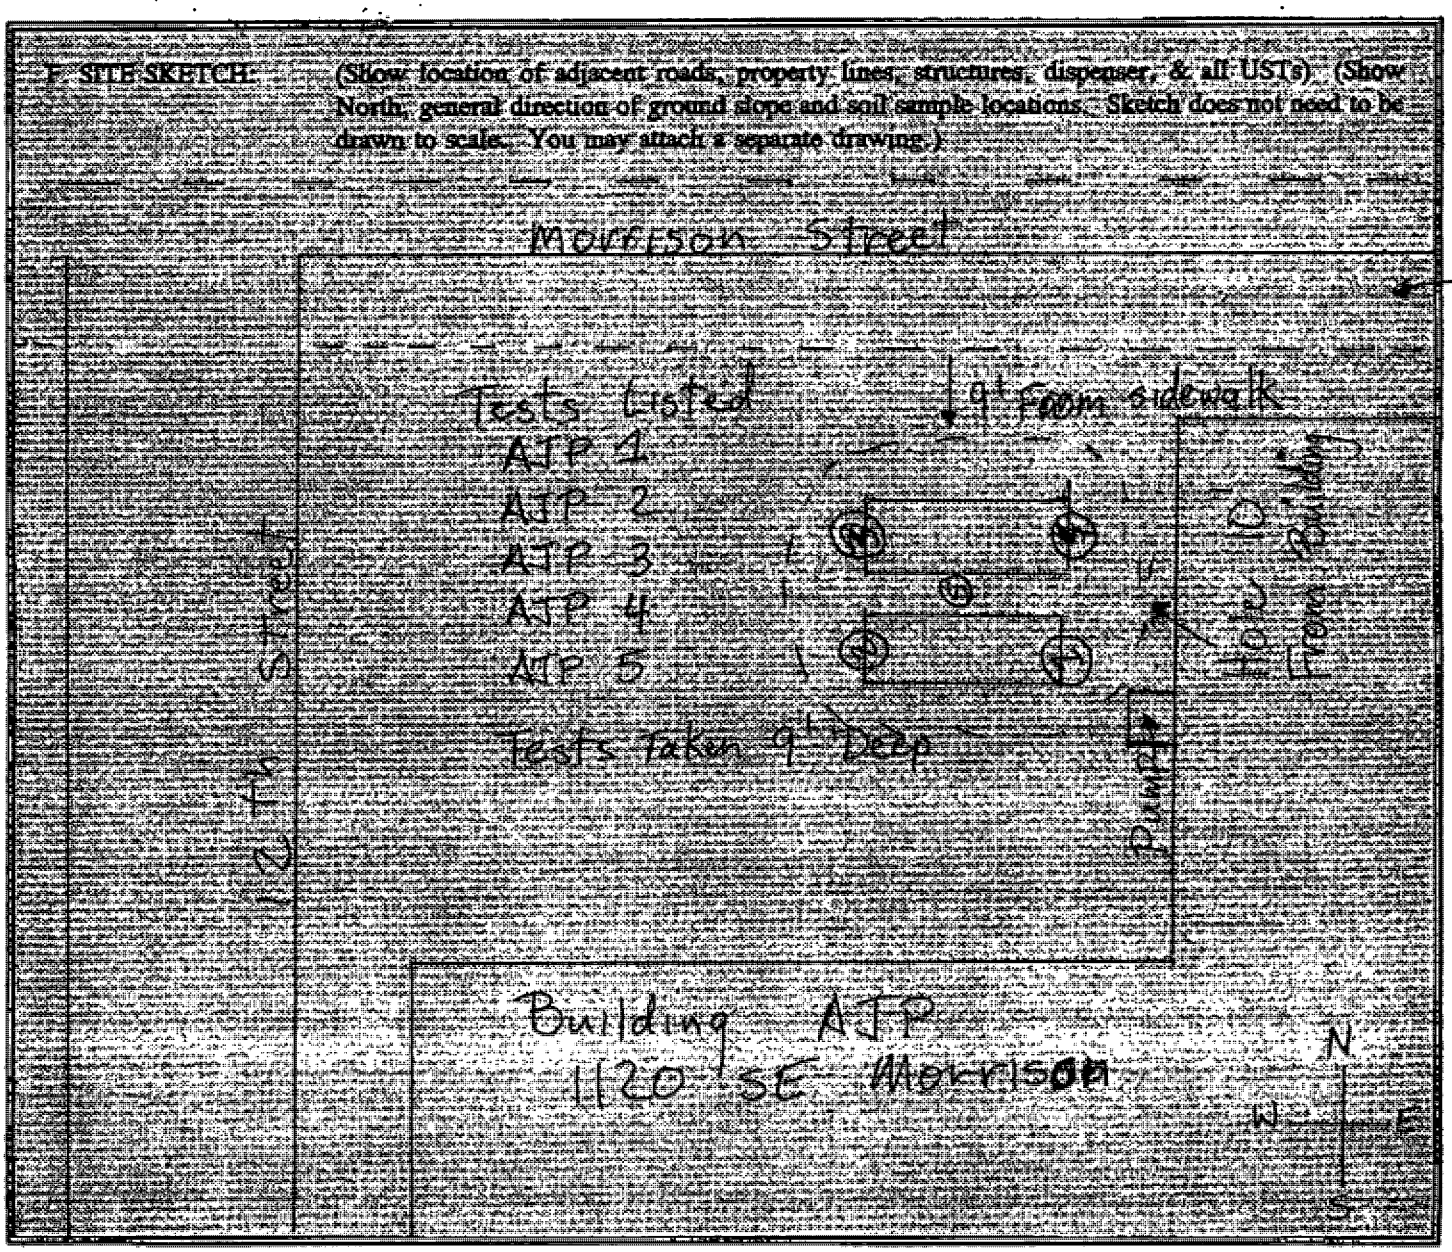
* Note: The tank contents, the tank and the piping may be subject to the requirements of Hazardous Waste regulations. If you have questions, contact the DEQ Hazardous Waste Section at (503) 229-5913 or DEQ regional office hazardous waste staff.

E. CONTAMINATION INFORMATION:

Tank #	Ground* water in pit?	Product odor in soil?	Product stains in soil?	Number of Samples	Laboratory (Name, City, State, Phone)
1	No	Yes	Yes	2	Haymond + Assoc. Portland, OR 223-2737
2	No	Yes	Yes	2	Haymond + Assoc. Portland OR 223-2737

*** Note: Sampling is required if groundwater is encountered. See cleanup rules.**

F. SITE SKETCH: (Show location of adjacent roads, property lines, structures, dispenser, & all UST(s). (Show North, general direction of ground slope and soil sample locations. Sketch does not need to be drawn to scale. You may attach a separate drawing.)



G. WORK PERFORMED BY:

DEQ Service Provider's License #: 810 Construction Contractors License #: 64201

Name: O'Sullivan Construction

Telephone: (503) 682-0275

DEQ Decommissioning Supervisor's License #: 905

Name: Win Brown

Telephone: (503) 682-0275

Name: O'Sullivan Construction

Telephone: (503) 682-0275

DEQ Soil Matrix Supervisor's License #: 1807 (If applicable)

Name: Win Brown

Telephone: (503) 682-0275

H. ATTACHMENTS TO THIS REPORT:

1. Attach a copy of the laboratory report showing the results of all tests on all soil and water samples. The laboratory report must identify sample collection methods, sample location, sample depth, sample type (soil or water), type of sample container, sample temperature during transportation, types of tests, and copies of analytical laboratory reports, including QA/QL information. Include laboratory name, address and copies of chain-of-custody forms.

2. If contamination is detected and a Level 2 or Level 3 soil matrix cleanup standard is selected attach a copy of the soil matrix analysis for the site including methods of determining soil type, depth to groundwater, and sensitivity of uppermost aquifer.

I. REPORT FILING:

This report, signed by the tank owner or operator, complete with all applicable attachments must be filed with DEQ headquarters within 30 days after the excavation is backfilled or change-in-service is complete. Contact the DEQ regional office prior to filing this report where special circumstances exist at the site (such as water in pit, remaining pockets or contamination, etc.).

NOTE: If contamination was found during site assessment at decommissioning or change-in-service and reported to DEQ regional office, this report may be submitted with either the first interim cleanup report or the final cleanup report, whichever is first.

Return Completed Form to:

Department of Environmental Quality
UST Program - Decommissioning Report
811 S.W. Sixth Ave.
Portlane, Oregon 97204

I have personally reviewed this report and the attachments and find them to be true and complete.

RECEIVED, subject to the classifications and lawfully filed tariffs in effect on the date of issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of contents of packages unknown), marked, consigned, and destined as indicated above which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination, if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of, said property over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the bill of lading terms and conditions in the governing classification on the date of shipment.
Shipper hereby certifies that he is familiar with all the bill of lading terms and conditions in the governing classification and the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.

This is to certify that the above-named materials are properly classified, described, packaged, marked and labeled and are in proper condition for transportation according to the applicable regulations of the Department of Transportation.

QUALITY

March 10, 1992

MR. ALLEN CAMPF
AJP
1120 SE MORRISON
PORTLAND OR 97214

RE: AJP
File No. 26-91-267
NWR-UST-92-071
NOTICE OF NONCOMPLIANCE

According to our records, the Department has not yet received any written report concerning the underground storage tank (UST) decommissioning and contaminated soil cleanup conducted at your facility located at 1120 SE Morrison, Portland. The release was originally reported to the Department on July 19, 1991, and you were notified at that time that a cleanup report was due within 45 days from that date. A copy of the UST Cleanup regulations was also provided at that time.

Failure to submit reports within the required time-frame is a violation of the Department's UST Cleanup regulations, specifically:

Oregon Administrative Rules (OAR) 340-122-225(2) and 340-122-230(2) outline the rules for interim reports of cleanup activities associated with releases from underground storage tanks. If cleanup is not yet complete, you are required to submit an interim report in order to keep us informed of your progress at the site. The interim report must briefly summarize the actions taken to-date, site conditions (including presence or absence of groundwater, the concentrations of contamination, etc.), and an outline of your planned actions. Include the date you anticipate completing additional investigation and/or cleanup.

If cleanup has been completed, a final report must be submitted as required by OAR 340-122-360(1). This rule contains specific details on what information is required in the report.

811 SW Sixth Avenue
Portland, OR 97204-13
(503) 229-5696
TDD (503) 229-6993

DEQ-1

In order to correct this violation, you must submit either a final report or an interim report regarding the investigation and cleanup conducted at your facility by no later than **March 27, 1992.** Please reference the file number noted for your facility on all correspondence.

Your cooperation in complying with the reporting requirements is appreciated. However, please be aware that if you fail to submit the required report or if additional violations are documented, the Department will need to determine if more formal enforcement is necessary, which may include civil penalties. If you have any questions, please contact me at (503) 229-5634.

Sincerely,

Elizabeth M. Brady

RECEIVED
NOV 18 1991
NORTHWEST REGION

November 15, 1991

Loren Garner;

This is to follow up on our phone conversation of Thursday, November 14, 1991.

I informed you that Haymond and Associates Inc., gave the once contaminated soil, the green light to be removed to a "land fill". See the attached two copies. Once I know where the soil is to be taken I will inform you of the site.

I am therefore, going to have the soil removed from the present location at 1120 S.E. Morrison, Portland, Oregon 97214, without any letter of permission from yourself representing the D.E.Q., because you tell me that the D.E.Q. will not issue a letter of permission, I therefore assume that this is a statement from you, the D.E.Q. will take no action against AJP Northwest for removing the soil.

If any of the above mentioned is incorrect, in any way I will expect to hear from you, on or before Wednesday, November 20, 1991. If I have not heard from you by that date I will in fact remove said clean soil.

Sincerely,

Alan Campf, CEO

UNDERGROUND STORAGE TANK DECOMMISSIONING/SERVICE CHANGE REPORT

DEQ FACILITY NUMBER: 6680 DATE: 08/21/91

FACILITY NAME: AJP

FACILITY ADDRESS: 1120 SE Morrison St
Portland, OR 97214

PHONE: (503) 235-8341

The following information MUST be submitted by the underground storage tank owner, operator or licensed DEQ Supervisor within 30 days following completion of the tank decommissioning or changing tank contents to a non-regulated substance. (OAR 340-150-001 though -150)

The attached supplemental checklist should be prepared by the person performing the decommissioning. The checklist should be provided to DEQ and the tank owner to demonstrate that all required practices were followed.

Ordinarily the checklist is filled out by the DEQ licensed Service Provider or Supervisor. Owners who wish to personally decommission a tank must follow all DEQ and other applicable standards. The owner should contact the DEQ Regional Office prior to starting the decommissioning to receive current copies of underground storage tank regulations.

A. DATES:

Decommissioning/Service Change Notice - Date Submitted: 05/15/91 (30 days before work starts)

Work Start Telephone Notice - Date Submitted: 07/16/91 (3 working days before work starts)

DEQ Person Notified: Catherine Blaine

Date Work Started: 07/19/91

Date Work Completed: 07/25/91

Note: Provide the following information if any soil or water contamination is found during the decommissioning. Contamination must be reported by the UST owner or operator within 24 hours. The licensed service provider must report contamination within 72 hours after discovery unless previously reported.

Date Contamination Reported: 07/19/91 By: Chad A. Walker

DEQ Person Notified: Andree Pollack

Backfill Telephone Notice - Date Called: 07/19/91 (before backfilling)

DEQ Person Notified: Andree Pollack

B. PERMITS:

Note: DEQ permits or an addendum to the UST permit(s) may be needed where soil or water cleanup is required.

B. PERMITS (Continued)

UST Soil Treatment Permit Addendum - Type: On-Site Date: 08/12/91

Soil Disposal or Treatment Location: AJP 1120 SE Morrison Portland OR 97214

C. TANK INFORMATION:

Tank #	DEQ UST Permit	Tank Size in (Gallons)	Product: Gasoline, Diesel, Used Oil, Other?		Closure or Service Change?			Tank to be Replaced?	
			Present	New	Tank Removal	Closure∞ Inplace	New ∞ Product	Yes*	No
1	NA	1000	Gasoline		✓				✓
2	NA	1000	Gasoline		✓				✓

* Where decommissioned tank(s) are replaced by new underground storage tanks the UST owner or operator must submit a new permit application containing information on the new tanks 30 days before placing them in service.

∞ Submit a soil sampling plan to the DEQ regional office and receive plan approval prior to starting work if 1) tank is to be decommissioned in-place, 2) tank contents are changed to a non-regulated substance, or 3) tank contains a regulated substance other than petroleum.

D. DISPOSAL INFORMATION:

Tank #	Tank & Piping Disposal Method				Disposal Location of Tank Contents *	
	Scrap	Land-fill	Other	Identify Location & Property Owner	Liquids	Sludges
1	✓			MT Hood Metals	Pacific Coast	
2	✓			MT Hood Metals	Pacific Coast	

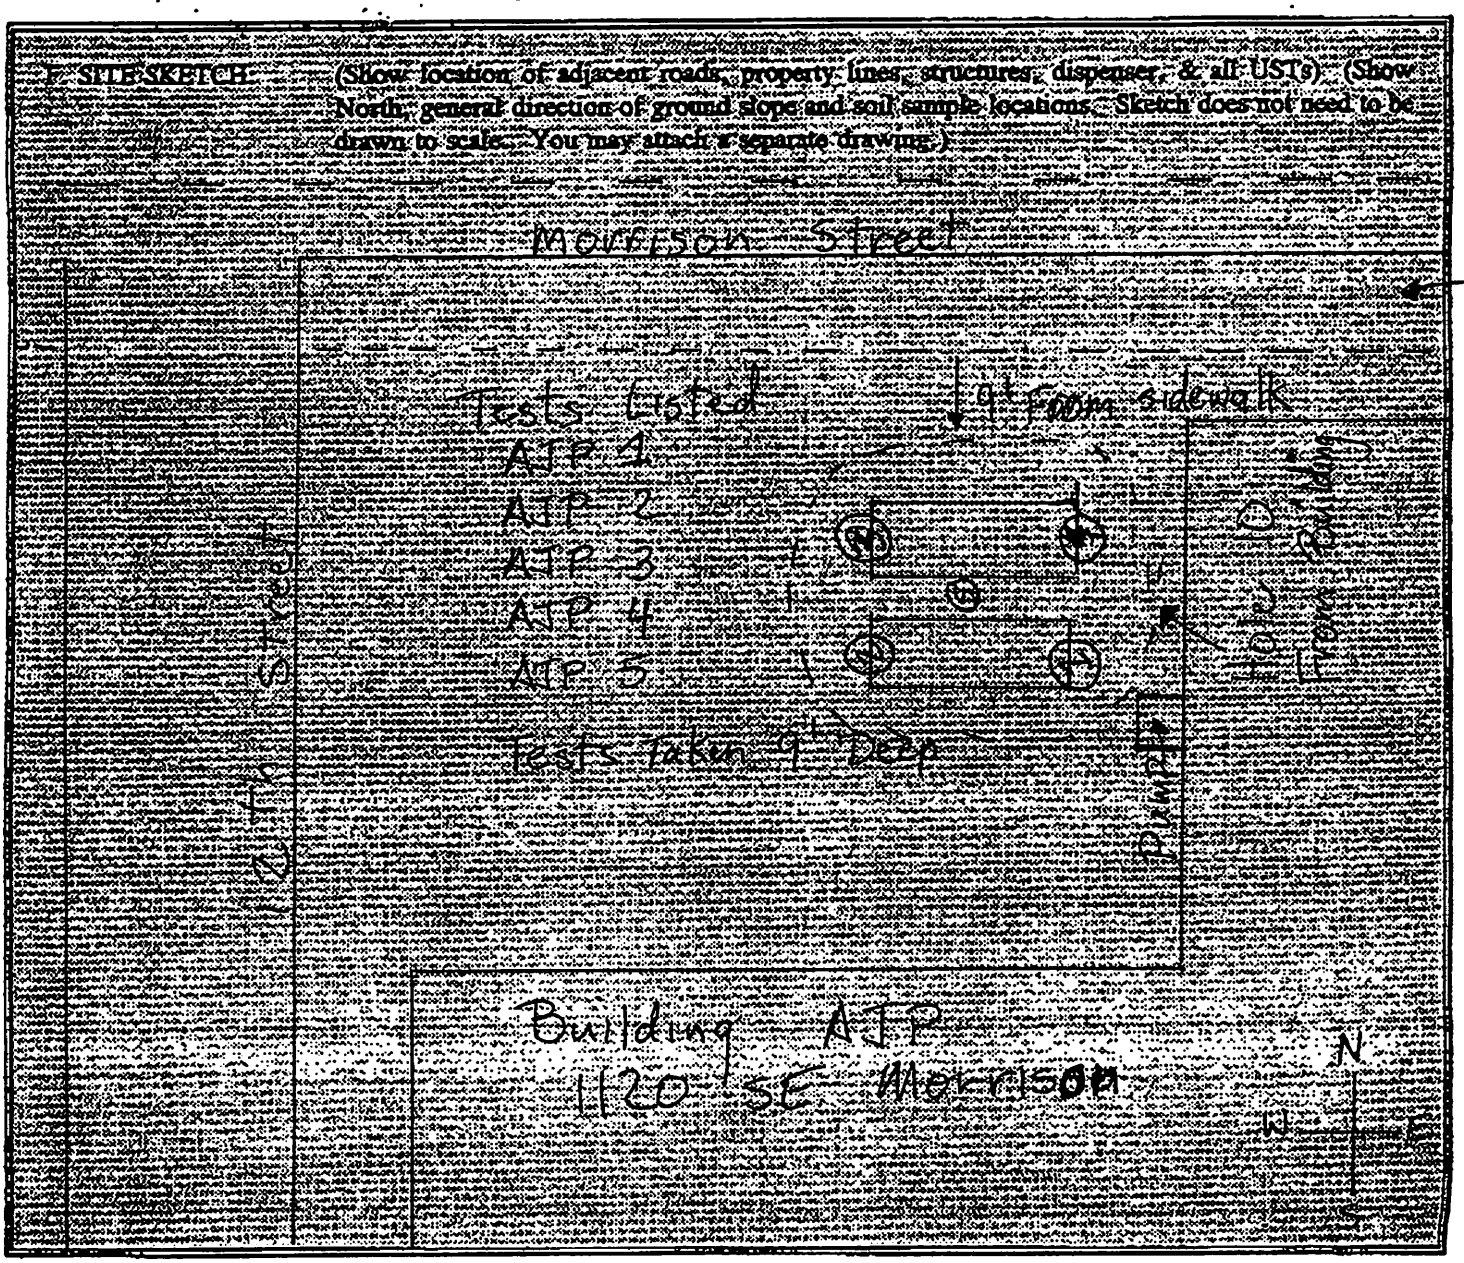
* Note: The tank contents, the tank and the piping may be subject to the requirements of Hazardous Waste regulations. If you have questions, contact the DEQ Hazardous Waste Section at (503) 229-5913 or DEQ regional office hazardous waste staff.

E. CONTAMINATION INFORMATION:

Tank #	Ground* water in pit?	Product odor in soil?	Product stains in soil?	Number of Samples	Laboratory (Name, City, State, Phone)
1	No	Yes	Yes	2	Haymond + Assoc. Portland, OR 223-2737
2	No	Yes	Yes	2	Haymond + Assoc. Portland OR 223-2737

* Note: Sampling is required if groundwater is encountered. See cleanup rules.

F. SITE SKETCH: (Show location of adjacent roads, property lines, structures, dispenser, & all UST(s). (Show North, general direction of ground slope and soil sample locations. Sketch does not need to be drawn to scale. You may attach a separate drawing.)



G. WORK PERFORMED BY:

DEQ Service Provider's License #: 810 Construction Contractors License #: 64201

Name: O'Sullivan Construction

Telephone: (503) 682-0275

DEQ Decommissioning Supervisor's License #: 905

Name: Wm Brown

Telephone: (503) 682-0275

DEQ Soil Matrix Service Provider's License #: 1768 (If applicable)

Name: O'Sullivan Construction

Telephone: (503) 682-0275

DEQ Soil Matrix Supervisor's License #: 1807 (If applicable)

Name: Wm Brown

Telephone: (503) 682-0275

H. ATTACHMENTS TO THIS REPORT:

1. Attach a copy of the laboratory report showing the results of all tests on all soil and water samples. The laboratory report must identify sample collection methods, sample location, sample depth, sample type (soil or water), type of sample container, sample temperature during transportation, types of tests, and copies of analytical laboratory reports, including QA/QL information. Include laboratory name, address and copies of chain-of-custody forms.

2. If contamination is detected and a Level 2 or Level 3 soil matrix cleanup standard is selected attach a copy of the soil matrix analysis for the site including methods of determining soil type, depth to groundwater, and sensitivity of uppermost aquifer.

I. REPORT FILING:

This report, signed by the tank owner or operator, complete with all applicable attachments must be filed with DEQ headquarters within 30 days after the excavation is backfilled or change-in-service is complete. Contact the DEQ regional office prior to filing this report where special circumstances exist at the site (such as water in pit, remaining pockets or contamination, etc.).

NOTE: If contamination was found during site assessment at decommissioning or change-in-service and reported to DEQ regional office, this report may be submitted with either the first interim cleanup report or the final cleanup report, whichever is first.

Return Completed Form to:

CHAD WALKER
OSULLIVAN CONSTRUCTION
28395 SW BOBERG ROAD
WILSONVILLE OREGON 97070

RE: AJP
UST Log Number: 26-91-267
Facility ID No: 6680

Dear Mr. Walker:

This letter is to confirm the verbal authorization given on July 19, 1991, to backfill or close the excavation located at the facility referenced above, pursuant to OAR 340-162-020(7) or OAR 340-163-020(6). Following completion, a copy of your signed checklist, as required by OAR 340-162-020(5) or OAR 340-163-020(4) and a copy of your final report, as required by OAR 340-122-350 must be submitted to the Department.

This authorization merely signifies that the Department was notified of a proposed excavation closure and was unable to schedule a field inspection at that time.

Authorization to close is not a Department determination that the soil cleanup has been completed in compliance with the requirements of OAR 340, Division 122. Upon a review of the checklist and final report referenced above, the Department will make a final determination on compliance with numeric cleanup standards.

Sincerely,

Andree Pollock

RE: Tank Removal - AJP
Facility #6680

Dear Mr. Pollock:

This letter serves as an initial notice on the AJP tank removal project. Through our phone conversation on 7-19-91, you were aware that soil contamination was found while removing the two existing 1,000 gallon gas tanks, and that we planned to overexcavate the area, take soil samples, remediate the soil on site and backfill the tank excavation. In that conversation you stated that this was the appropriate action to take. Enclosed you will find a sketch showing all soil sample locations and results.

We have excavated approximately 100 cubic yards of contaminated material from the tank location. These spoils are still on site, covered with visqueen. Soils tests have indicated to us that the excavation is clean. We have backfilled this area. The contaminated material remediation will take place on site.

If you have any questions or comments, please feel free to contact me. Thank you for your prompt attention in this matter.

Very truly yours,

O'SULLIVAN CONSTRUCTION, INC.

ALLEN CAMPF
AJP
1120 SE MORRISON
PORTLAND OREGON 97214

RE: UST - Multnomah County
Site Name: AJP
File No. 26-91-267

Dear Mr. Campf:

As required by Oregon Administrative Rules (OAR), on July 19, 1991, a release was reported from an underground storage tank (UST) system at your facility located at 1120 SE Morrison in Portland, Oregon. As the owner of the facility, you are required to clean up the release according to OAR 340-122-201 through 340-122-360, "Cleanup Rules for Leaking Petroleum UST Systems and Numeric Soil Cleanup Levels for Motor Fuel and Heating Oil". A copy of these rules is enclosed.

The following is an outline of the reporting process required by the Northwest Region, Department of Environmental Quality:

1. If the cleanup is to be completed within 45 days of identifying the release, a single, final report can be submitted within 30 days of cleanup completion. This will satisfy the documentation requirements, provided you meet the provisions of OAR 340-122-360.

2. If cleanup cannot be completed within 45 days, submittal of an initial status report is required within 45 days of reporting the release. The report must summarize the findings to-date, outline your planned actions, and include anticipated dates of completion for each action. Additional interim reports may also be required depending on individual circumstances. A final report will be required within 30 days of completion of the project.

Please read the enclosed rules carefully. Note that one of the first things you must do is determine the scope of the problem in order to select the best method of remediation. The enclosed information will give you the guidance necessary to meet the specific documentation requirements for your site. As the owner, you should be aware of the regulations, even if you have hired a qualified consultant to do the actual work.

811 SW Sixth Avenue
Portland, OR 97204-1390
(503) 229-5696

Please keep the Department up-to-date on activities at the site. This will help to expedite cleanup and closure of the site. **File No. 26-91-267** has been assigned to this project. Please reference this number in all future correspondence.

Removing contaminated soils to the matrix cleanup levels is only one of many options that you may wish to consider for your site. You may find the services of a qualified consultant helpful in evaluating different cleanup options. Cleanup options other than removal to matrix standards require that a Corrective Action Plan (CAP) be submitted to the Department for approval. If a CAP is appropriate for your site, additional information about this process may be obtained from the region.

The Department is required to recover costs from the responsible party for oversight of CAP cleanups. You will be notified if the Department determines that cost recovery will be implemented for your site. For general information about the cost recovery process, please contact Mr. Rick Silverman at (503) 229-6384.

Thank you for your cooperation and continued efforts to comply with the regulations. If you have any questions, please contact the Northwest Region at (503) 229-6385.

Sincerely,

UST CLEANUP SECTION
