Former Brassworks Building, 1127 SE 10th Ave, Portland, OR
(ECSI Site ID: 2250)

Amy DeVita-McBride:

On behalf of Orchid Orthopedic Solutions Oregon, Inc., we are requesting a second extension of their deadline to complete the Cleaner Air Oregon (CAO) Emissions Inventory.

At the start of September 2024, Orchid Ortho were victims of a malicious large scale external computer hacking event, preventing employee access to any of their network drives. This issue was just recently resolved, but it delayed the CAO information gathering process during the first half of September.

Orchid Ortho CAO project has made significant progress before and after the network issues, including:

- identification of all individual processes at the facility,
- identification of all of the control devices,
- identification of all products used,
- collection of almost all the SDSs, and
- a technical review of all the SDSs for TACs/HAPs and the product's potential to emit (PTE).

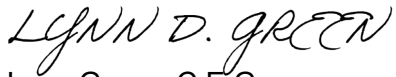

Environmental and Natural Resource Consulting

Current tasks are focused on information gathering around product use amounts (Daily Max and Annual), resolution of questions around specific products and their PTE TACs/HAPs and obtaining manufacturer literature specific to emission control devices.

Please let us know if this second 30-day extension is approved. If you have any questions about this request, please do not hesitate to phone me. Thank you for considering a second extension request.

Kind regards,

EVREN Northwest, Inc.

Lynn Green, C.E.G.

Principal Engineering Geologist
