Michael & Laurie Johnson 3637 Hunters Ridge Rd. Klamath Falls, OR 97601

RE: Annual Inspection for Parcel A

North Ridge Estates Superfund Site

ECSI No. 5994

Dear Michael & Laurie Johnson:

The Oregon Department of Environmental Quality completed an annual inspection of the protective cap on your property located at 3637 Hunters Ridge Road during the week of July 3, 2023. Enclosed for your information is a summary of the inspection and recommended actions.

This letter provides notice of the following violation:

1. **Vegetation.** Areas of sparse vegetation were noted, similar to previous inspection.

Corrective Action. Seed and water these areas to promote vegetation growth prior to June 2024.

2 **Cap Damage.** Areas of damage (rills, tire tracks, burrows) to the soil protective cap have been noted (see enclosed figure).

Corrective Action. Fill in the damaged areas. Armor as needed to prevent reoccurrence by November 12, 2023.

DEQ will perform an inspection the week of November 13, 2023 to confirm the repairs have been made.

The Easement and Equitable Servitude recorded with Klamath County requires you to maintain and keep the protective caps in good repair. If the repairs are not completed by November 12, 2023, DEQ may perform the corrective action at your expense in accordance with Paragraph 4.1 of the Easement and Equitable Servitude.

The next inspection will be performed in June 2024. Please continue to contact DEQ prior to any disturbing any of the protective caps on your property with the exception of soil disturbances less then 2 feet below the ground surface. A fact sheet with additional information is enclosed.

If you have any questions, please contact me at 503-860-3943, or via email at Katie. Daugherty@deq.oregon.gov.

Sincerely,

Katie Daugherty, R.G. Project Manager

Katie DAUC

NWR Cleanup Section

Enclosures

Digging at the North Ridge Estates Superfund Site

What do I need to do or know?

- 1) Perform all other normal permitting and utility locates as you would for any other project.
- 2) Be familiar with the types of protectives caps at North Ridge Estates. The protective cap is intended to prevent people's exposure to any remaining asbestos-contaminated materials, including asbestos fibers in soil. Protective caps include:
 - A two-foot layer of clean soil with vegetation
 - Asphalt and concrete surfaces, such as garage concrete floor or basement concrete floor
 - Boulders
 - Black liners installed below covered porches and in home crawl spaces
 - Orange liners below the soil cap
- 3) Review the terms of the Easement and Equitable Servitude (EES) document recorded on the deed of your property. Determine if your planned activity is within the area covered by restrictions outlined in the EES. Some properties on the edge of the Superfund site only have a portion of the property restricted. *General rule of thumb: if the area was excavated during the Superfund Cleanup, the area is restricted.* Can't find your EES? Contact the Oregon Department of Environmental Quality (DEQ) project manager and they will email you a copy.
- 4) All activities or uses that could jeopardize the function of the protective cap, are prohibited without prior written approval from the DEQ.
- 5) Follow the steps below for your specific activity.

I want to dig less than two feet - what are the required steps?

- 1) Minor activities are allowed within the *soil protective cap*, such as installing fence posts, planting, or other activities that go no deeper than two feet below the ground surface without prior written approval from DEQ.
- 2) You must fully restore the cap to the surface after the activities are completed.
- 3) Stop immediately and call the DEQ project manager if you see an orange liner. *No matter the depth!* You are entering an asbestos contamination zone and risk exposure to asbestos if you continue.

Example of Orange Liner. 2018. Installing marker barrier consisting of rock base and orange liner on Parcel B prior to covering with clean soil.

Example of Black Liner. 2018. Black liner with rock to hold in place on Parcel A.

I want to dig deeper than two feet, dig below a black or orange liner, dig through asphalt or concrete, or move boulders on my property - what are the required steps?

1) Fill out the *North Ridge Estates Earthwork Notification and Reporting Form* and submit this form to the DEQ project manager. Can't find the form? Contact the project manager and they will email you a copy.

The project manager will review the information provided in the form and work with you to determine the conditions under which your work may be performed.

If your work will breach the cap, you must, at your own expense, use an Oregon-licensed asbestos abatement company during any action that may disturb a contaminated area. Any excavated material, including soil, will be required to be disposed at a landfill. If the liner is damaged during work, you must replace it at your expense.

2) Once work is complete, fill out the reporting section of the *North Ridge Estates Earthwork Notification and Reporting Form* and return to the DEQ project manager.
