RE: Revised Environmental Investigation Work Plan for Valmont Industries' Pacific States Galvanizing Facility Located at 9700 SW Herman Road in Tualatin, Oregon; ECSI File #5353

Dear Mr. Dana,

As discussed during our meeting at Valmont Industries, Inc.'s Pacific States Galvanizing (PSG) facility located at 9700 SW Herman Road in Tualatin, Oregon (the Site), PSG will be completing an environmental investigation regarding potential zinc impacts to soil and groundwater proximal to the stormwater detention pond on the southern portion of the Site. The location of the Site is illustrated on **Figure 1** and **Figure 2**. The results will ultimately support removing further requirements for Environmental Cleanup Site Information (ESCI) database File #5353.

This letter presents a Revised Work Plan describing a scope of work for Alpine Environmental Consultants, LLC (AEC) to complete an environmental investigation of soil and groundwater proximal to the stormwater pond where zinc from Site operations may have been released and impacted soil and groundwater. This Revised Work Plan builds upon the Draft Work Plan dated April 18, 2022, and includes responses to comments AEC received from the Oregon Department of Environmental Quality in a letter dated May 26, 2022. This Revised Work Plan also includes revisions discussed during a conference call between personnel from DEQ, PSG, and AEC on August 3, 2022. We would appreciate your technical review of the Revised Work Plan prior to completing the environmental investigation.

## BACKGROUND

Site operations commenced in approximately 1996 when the current structure was purpose built for galvanizing operations. It should be noted that PSG does not own the Site and has been leasing the Site since operations commenced. Prior to this time, the Site had been undeveloped forest

and agricultural land. The history of development at the Site and surrounding properties is documented in the historical aerial photographs for the period 1936 through 2011 obtained from the University of Oregon Map Library. These historical aerial photographs are included as **Attachment A.** It should be noted the historical aerial photographs did not identify any historical orchards at the Site or proximal properties.

In approximately March/April 2010, PSG installed a GSE 40-mil HDPE ballasted liner in the stormwater pond that was constructed in approximately 1996 when operations began. The stormwater pond has been continuously used since Site operations began to collect stormwater from the Site. Water collected from the pond has been and continues to be treated to remove zinc prior to the water being discharged to the Hedges Creek wetland area immediately south of the site property line. Installation of the stormwater pond liner was completed in 2010 at the request of Clean Water Services. Documents related to pond liner installation from PSG's records are included as **Appendix B**. These documents include telephone notes, bids from contractors, pond liner construction notes, a waste disposal summary, and an itemized construction invoice.

To facilitate the installation of the pond liner, PSG excavated approximately 400 tons of sediment and soil from the bottom and edges of the stormwater pond. This sediment and soil were properly disposed of at the Hillsboro Landfill in Hillsboro, Oregon as non-hazardous waste per Resource Conservation and Recovery Act (RCRA) characterization requirements. However, no records of sediment and soil removal (i.e. landfill disposal receipts, post-excavation confirmation sampling) beyond characterization associated with liner installation are available. In June 2010, the Oregon Department of Environmental Quality (DEQ) recommended a Site screening be performed at the Site stormwater pond to determine if there is any residual zinc contamination.

During our meeting at the Site on December 1, 2021, you had requested a copy of a Phase I Environmental Site Assessment (ESA) for the Site. PSG is aware of a Phase I ESA that was completed by the property owner of the Site in 1997; however, PSG has been unable to obtain a copy of this report. In the absence of such a report, PSG ordered an environmental database report for the Site to facilitate your review of environmental conditions at the Site. A copy of the environmental database report for the Site prepared by EDR Lightbox and dated March 1, 2022, is included as **Attachment C**.

## OBJECTIVES

The objectives of the environmental investigation are the following:

- Collect soil and groundwater quality data to determine if Site-related zinc contamination is present in the vicinity of the stormwater pond at concentrations above regional background concentrations in soil and/or above potentially applicable screening levels in soil and groundwater.
- Provide a technically adequate dataset to determine if additional characterization data are warranted or if DEQ can close out ECSI File #5363.

As discussed during our conference call on August 3, 2022, PSG and AEC personnel are aware that these data objectives and the proposed scope of work described below may be inadequate for DEQ to issue a full No Further Action (NFA) for the Site given concerns regarding the adjacent property to the west (i.e. Oregon Sandblasting & Coating, ECSI File #5478), those concerns involving various metals in stormwater runoff and spent sandblast grit, as well as a 300-400 gallon diesel spill that entered a drainage ditch from that property along the Site property line in January 2000. As discussed previously, PSG does not own the Site and is focused on obtaining an NFA associated with potential impacts associated with Site-related zinc in the vicinity of the stormwater pond under ECSI File #5363.

## PROPOSED SCOPE OF WORK

In order to meet these objectives, AEC recommends the following scope of work be pursued. The scope of work has been broken into the following tasks:

### Task 1 – Investigation Pre-Field Activities

Prior to any subsurface disturbances associated with drilling any soil borings, AEC will contact the Utility Notification Center to locate and trace any potential public ungrounded infrastructure of pipes, mains, and utility lines that may be present in the vicinity of the proposed soil boring locations. The Utility Notification Center provides this service at no cost. Additionally, AEC will consult with PSG to review facility utility diagrams and retain a private utility locator to identify any private underground pipes, mains, or utility lines that may be located on the Site in the vicinity of proposed soil boring locations.

AEC will also schedule subcontractors and prepare all necessary equipment for field investigation activities.

### Task 2 – Investigation Soil and Groundwater Sampling

AEC will supervise the drilling of five soil borings using a track-mounted direct-push drilling rig operated by Steadfast Services Northwest, LLC (Steadfast) of Vancouver, Washington. Steadfast is licensed by the Oregon Water Resources Department (WRD) for environmental drilling, including the installation of monitoring wells. These five soil borings, identified as B1 through B5, will be located proximal to the stormwater pond on the southern portion of the Site. The proposed locations of these five borings are illustrated on **Figure 2**.

All five borings will be advanced to an estimated depth of approximately 15 feet below ground surface (bgs). This estimated depth is based on the land surface topography at the Site relative to the stage of the wetland south of the Site. The stage of the wetland appears to be approximately 5 feet lower than the Site's land surface and AEC assumes the elevation of the shallow water table will be at approximately the same elevation as the stage of the wetland. The objective will be to intersect approximately 10 feet of saturated formation.

AEC personnel will collect one soil sample and one groundwater sample from each of the five borings. This will result in the collection of a total of five primary soil samples and five primary groundwater samples. AEC will also collect the following quality control samples:

- One field duplicate soil sample. Thus, a total of six soil samples will be collected (i.e., five primary samples and one duplicate sample).
- One field duplicate groundwater sample. Thus, a total of six water samples will be collected (i.e. five primary groundwater samples and one duplicate groundwater sample).

Soil samples will be collected from the liners of the soil borings. Soil samples will be collected near the groundwater interface and transferred to laboratory-supplied containers.

A log of soil from each of the five soil borings will be prepared in the field by an Oregon-registered geologist or a trained geologist working under the supervision of an Oregon-registered geologist. Field logs will be prepared and include the project name and location, name of the drilling subcontractor, drilling method, sampling method, soil sample depths, and descriptions of the soils encountered. Subsurface lithology will be described consistent with the American Society for Testing and Materials (ASTM) D2488-84, *Standard Practice for Description and Identification of Soils* (Visual-Manual Procedures).

Groundwater samples will be collected from borings B1 through B5 using temporary wells completed with both blank and screened casing made of polyvinyl chloride (PVC). AEC anticipates each temporary well will have 10 feet of screen. Each temporary well will be purged prior to groundwater sample collection to reduce turbidity of the groundwater samples. Following purging, groundwater samples will be collected and transferred directly to laboratory-supplied containers. Groundwater purging and sampling activities will be completed with a peristaltic pump.

After collection of the soil and groundwater sample collection has been completed, the PVC casings will be removed from borings B1 through B5 and all five borings will be backfilled with bentonite chips consistent with WRD regulations.

Before and between the drilling of soil borings, drilling equipment will be cleansed using an Alconox (or similar) solution and rinsed with de-ionized water. Any re-usable sampling equipment will also be cleansed prior to each use by scrubbing with a brush and an Alconox (or similar) solution and rinsed with de-ionized water.

During drilling, water used to clean sampling equipment as well as excess soil from the drilling rods and purged groundwater will be stored in 55-gallon drums or 5-gallon buckets. Once the final laboratory report is received, the water and soil will be disposed appropriately.

All soil and groundwater samples will be placed into appropriate laboratory-prepared sample containers, labeled with unique sample identifiers, placed in a cooler, and submitted to Apex

Laboratories, LLC (Apex) of Tigard, Oregon for a 2-week turnaround time using standard AEC chain-of-custody protocol. Apex is a licensed analytical laboratory.

**Task 3 – Investigation Laboratory Analyses**

All soil and groundwater samples will be analyzed for the following parameters as described below:

- Zinc using by U.S. Environmental Protection Agency (USEPA) Method 6020. For the groundwater samples, both total and dissolved zinc will be analyzed after field filtering using 0.45-micron filters.

**Task 4 – Data Evaluation and Reporting**

AEC will prepare an Environmental Investigation Report which will contain a summary of the sampling activities. The report will include a description of the soil boring, soil sampling, and groundwater sampling activities. The report will also include analytical data tables with a comparison to applicable generic DEQ risk-based concentrations (RBCs) for occupational receptors, construction workers, and excavation workers. If appropriate, the results will also be compared to additional potentially applicable screening levels. Finally, the report will include figures illustrating sampling locations, soil boring logs, photographs documenting field activities, and analytical laboratory reports.

## PROJECT TEAM

The project will be managed by Jonathan Williams, RG, Senior Hydrogeologist, assisted by Antonela Vadan, RG, Senior Geologist and Mr. Toby Shallcross, Project Geologist. This team of personnel has worked together for more than 10 years on numerous projects throughout the Pacific Northwest.

## SCHEDULE

AEC has scheduled the driller and we anticipate the field work will occur on Tuesday October 18, 2022. AEC anticipates the Environmental Investigation Report will be available for DEQ's review within 2 weeks of receiving the final analytical results.

Please feel free to contact me at 541-944-4685 or jwilliams@alpine-enc-llc.com if you have any questions about this Revised Work Plan.

Sincerely,

**Alpine Environmental Consultants, LLC**

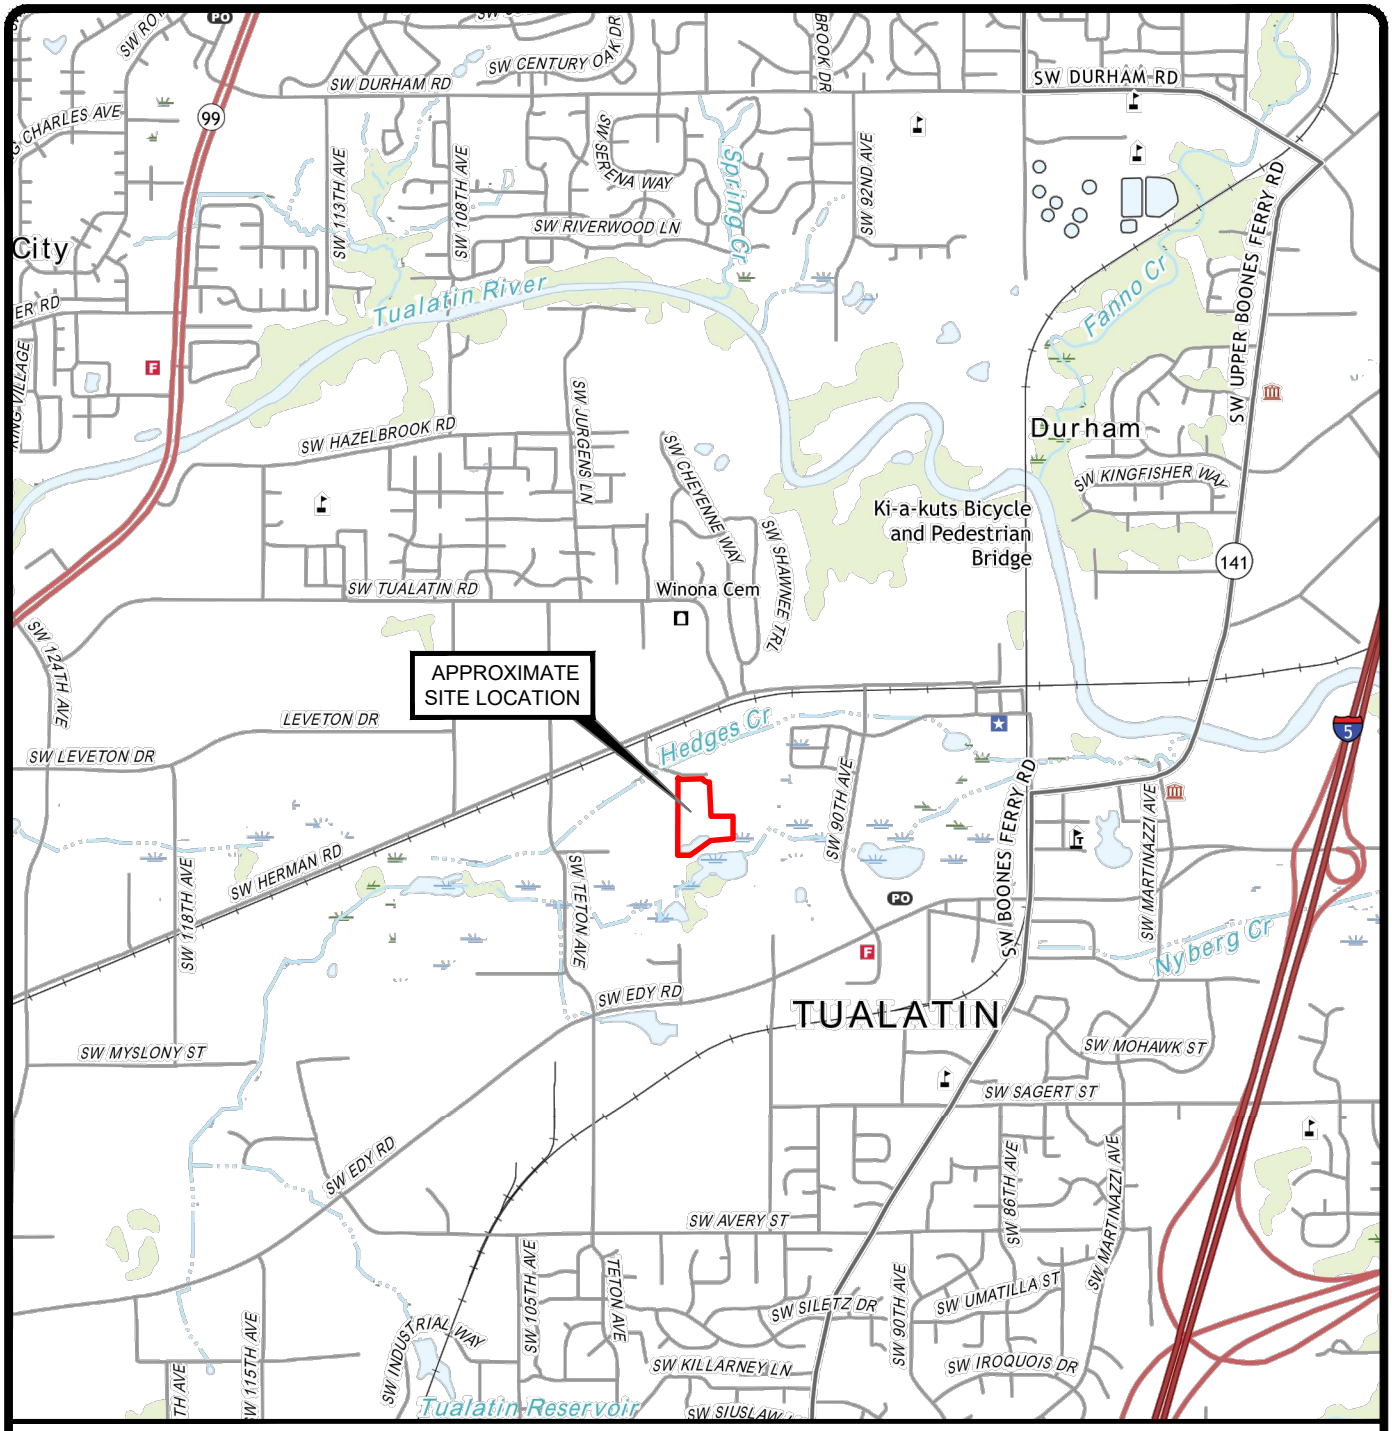

Jonathan D. Williams, RG
Senior Hydrogeologist, Principal

# PHONE LOG

| | | |
|---|---|---|
| CALL WITH: Various | | COMPANY: OR DEQ |
| BY: | D. Scarpine | COMPANY: Aquarius Environmental |
| DATE: | March 2, 2010 | LOCATION: PDX Office |

**SUMMARY OF FINDINGS:**
CWS is in lead as stormwater issue until there is a known groundwater issue that would enter DEQ jurisdiction. Proactive Installation of liner most likely way to mitigate issues. Followup with Rick Fischl required to close communication loop.

**DETAILS:**

**Dennis Jurries DEQ Industrial Stormwater NW Region 12:50 pm** (incoming)– Dennis, calling on behalf of Rodney Weick.
Explained to Dennis that we are confused, asked why is CWS telling us our system is not approved, the permit authorizes us to operate treatment. Dennis says this is true, but only for stormwater. Told Dennis doesn't make sense what is the issue?

Dennis advised that Root issue is that if GW can come into the pond, we cannot pump it and run through treatment this is not allowed under the 1200Z permit. Asked 'How does DEQ or CWS know that GW comes into the pond?' Dennis said we(DEQ) don't; burden of proof on owner. Asked Dennis why we would get a letter in January from Pete Gayeska, saying our pond is fine. Dennis not sure... Dennis has to talk to Rick Fischl; however as he understands it since the pond does not go dry in the summer, it must have groundwater. Advised Dennis I consider that circumstantial and not a valid data point, only way water leaves pond is overflow, so a lot of water to evaporate to go fully dry. Dennis says only way know for sure is to sink onsite well and discern groundwater elevation.

Told Dennis I see it as two issues, one stormwater and one groundwater. We are going forward with the treatment system. He advised we cannot and should not, since we are pumping groundwater. I replied that again the permit allows us to operate a treatment system, again he agreed, but advised we cannot pump groundwater out of the pond, the permit does not allow it.

Dennis advised that we should contact David Coles of the UIC program and followup with Rick Fischl. Asked Dennis why we have to follow-up with Rick, he said because we are intending to operate a stormwater treatment system that is influenced by groundwater .Dennis said alternative would be to intercept all water before it gets to the pond and de-commission the pond. I advised pond was required for Tualatin building permits, how could we de-commission? He advised we should talk to David Coles.

Dennis advised we should follow-up with Rick, he will do the same. Don't worry about following up with DEQ, Rick has been in communication with them (DEQ).

**David Coles – Hydrogeologist – DEQ UIC Program (503) 229-6371 1:25pm** – Introduced myself to David, advised, just talked to Dennis. Explained situation, retention pond in Tualatin, installed in '98 – '99,

Dennis was concern with groundwater communication stormwater to groundwater. David advised that the pond could be a UIC if it is discharging to groundwater, inadvertently or not. Though, since it was not specifically designed to do so, it is not automatically a UIC. The owner would need to install wells to verify, probably 3 wells, David would need to see submittals of the pond and wells. This would need to be done soon since seasonal high groundwater is in the spring, would need seasonal high groundwater data.
Asked David could we just line it (pond)…. David said if there is an impermeable barrier yes that would eliminate the question of if it is a UIC or not. Would DEQ need data on the liner or showing it works… David said, if we had data that showed the pond was acting as a UIC that we would need to prove that it was closed; however, if we installed the liner as a means to insure the pond is not a UIC, then there is no DEQ paperwork, since the pond was never in the UIC program to begin with. Would it be in CWS services jurisdiction? David – if it is a UIC then no, but as described it sounds like a stormwater pond, so yes CWS would be responsible for its operation. Asked David about the letter from Clean Water Services… He doesn't know Pete Gayeska, but CWS would not issue any letters about UICs unless directed to do so by DEQ.

Asked David, if not a UIC now, and we proactively install liner, where do we go from here? David advised tell Rick Fischl that is our plan as part of stormwater project. DEQ UIC program would not apply at this point, no reason to followup with him (David).

KENNEC

Kennec Inc.

March 8, 2010

Mr. Patrick Gilmore
General Manager
Valmont
Pacific States Galvanizing Facility
9700 S.W. Herman Road
Tualatin, Oregon 97062

Subject: Detention Pond Liner

Dear Mr. Gilmore:

KENNEC is pleased to present the following scope of work for the installation of a liner system for Valmont at the Pacific States Galvanizing Facility located at 9700 S.W. Herman Road, in Tualatin, Oregon. It is KENNECs understanding based on conversations with Patrick Gilmore that Valmont is interested in lining an onsite treatment detention pond as part of the existing stormwater treatment system at the Herman Road Facility. It is also our understanding that Kennec's project responsibilities are only those related to the installation of the liner system.

Based on the project described above Kennec, has prepared the following outline to briefly summarize the proposed construction approach for both discussion as well as budgeting purposes. KENNEC anticipated the following major tasks will be required for the successful completion of this project:

1. Mobilization to site;
2. Installation of pump at an existing manhole to divert stormwater entering the ponds to a temporary baker tank storage system;
3. Installation of baker tank(s) for temporary storage and treatment of stormwater diverted from existing manhole;
4. Drain detention pond;
5. Clearing and grubbing of the area;
6. Removal of sediment buildup;
7. Installation of dewatering trench(es) to remove any stormwater present in the area of construction;
8. Installation of dewatering trench(es).
    - Trench(es) will be filled with perforated piping bedded in geotextile wrapped 3/4-inch gravel infiltration gallery;

9. Subgrade preparation;

10. Subgrade preparation will consist of clearing and grubbing and grading the surface smooth for the installation of the liner.

11. Installation of liner system;

    - Based on discussions with Patrick Gilmore, Kennec will be installing the following liner system as approved by Valmont (From the ground surface up).

        - Subgrade (native material);
        - Geocomposite (geogrid wrapped in 12-oz. geotextile both sides);
        - 36-mil reinforced HDPE geomembrane or 60-mil HDPE membrane;
        - 16-oz. geotextile cushion along base of pond under gravel ballast; and
        - 12 inches of 3/4" minus clean gravel ballast across the bottom of the detention pond.

12. Installation of liner penetration boot(s) for the piping to and from the stormwater collection system;

13. Installation of two boots for catchbasins located at south slope of pond; and

14. Demobilization.

**PROJECT UNDERSTANDING (EXPERIENCE)**

KENNEC's project team has an in-depth understanding of liner and containment systems. Our construction superintendent has performed CQA and installation services on over one million square feet of containment liner over the past 15 years. Several of these liner projects have required extensive Construction Quality Assurance (CQA) to meet requirements set forth by federal and state regulators. KENNEC will perform the containment liner upgrade with the same level of quality.

Our team also performs heavy excavation projects on a regular basis that require dewatering and sub grade preparation activities.

**MATERIAL SELECTION**

KENNEC is prepared to offer the installation of several types of liner. However for the purpose of this proposal KENNEC submits two material types for consideration.

**36-mil reinforced HDPE**, which is generally accepted as an industry standard for a basic stormwater containment liner.

**60-mil textured HDPE**, this material is generally accepted by state and federal regulators for containment of non-hazardous waste, solid waste, sewage and a variety of other applications. Both products will be suitable for this project however the 60-mil textured may offer a higher level of confidence to federal, state and local regulators due to its extensive service history.

**PROPOSED PROJECT ORGANIZATIONS AND RESPONSIBILITIES**

**KENNEC** – KENNEC the General Contractor:

- All project activities including work plan, submittals, schedules, and estimates;
- Project management, execution and direction of on-site activities;
- Project closeout.

**Tricter Rig** – Equipment Operators:

- Supplying heavy equipment;
- Supplying crew personnel such as construction laborers and heavy equipment operators.

**ACF West** – Liner Installation Subcontractor:

- Supply Liner geosynthetics such as; HDPE Liner, Geotextile Cushion, and Geocomposite;
- Supplying crew personnel to fabricate and install geosynthetic components as well as provide construction quality assurance documentation of the geosynthetic installation.

**Waste Management Oregon (WMO)** – Disposal Company:

- Accepting contaminated soil at the Hillsboro Landfill (HLF) in Hillsboro, Oregon;
- Accepting vegetation cleared from site.

**Celore Bros. Trucking** – Trucking Company:

- Trucking contaminated soil to Hillsboro Landfill;
- Trucking of vegetative material

**ASSUMPTIONS**

1. The above scope of work and attached budget are based on information available at the time the proposal was assembled and are being presented as Kennec's best construction effort estimate for the project. Because of the uncertainties that may exist at the site, e.g. extent and quantity of contaminated soil, volume of material at the base of the pond needing removal, level of dewatering effort, actual field quantities, etc., Kennec will perform the above scope of work on a time and materials basis. All efforts above the proposed scope of work will be discussed with Valmont prior to execution to verify approval for said work. All additional work not consistent with this proposal will have written approve prior to execution.

2. Construction quantities presented are based on a photocopied drawing provided by owner and may not represent actual field quantities. Actual quantities will be verified in the filed and approved by both parties prior to construction or during various phases of construction as the case may be, e.g. depth of pond to be verified after dewatering efforts.

3. Any additional work outside of general grading such as engineering quality control testing or other preparation or treatment of the subgrade will be the responsibility of Valmont. A subgrade acceptance sign-off sheet will be used as the authorization from the owner or owner's engineering representative to approve the subgrade for placement of the liner system.

4. KENNEC assumes no responsibility for the engineering or functionality of the system or geotechnical work. Specifically, KENNEC has provided no engineering guidance on this project and therefore assumes no liability for any design or work outside of the construction activities listed in this scope of work.

5. Kennec has assumed 32 tons of contaminated soil will be disposed of at the Hillsboro Landfill for budgeting purposes. Due to the uncertainty of the level or quantity of contaminated soil being disposed of for this project, any additional quantities will be billed at the same unit rate and will be the responsibility of the owner.

6. Kennec assumes additional space for staging, storage tank placement, C & D debris stockpile, etc. will be available at the site and located in the immediate area of construction as coordinated with Valmont.

**PROJECT DELIVERABLES**

Upon completion of this project KENNEC will be prepared to deliver a Construction Report. This report will detail construction activities, photographs and construction quality control documentation regarding the testing of the liner.

**BUDGET AND SCHEDULE**

KENNEC proposes to perform the work on a time and materials basis. Our estimated budget for the project $65,330.04 (see attached table). This cost represents the installation of the 60 mil. HDPE geomembrane. The 36 mil reinforced HDPE may be installed for approximately $0.05 per square foot less. In the event conditions change, unforeseen circumstances are encountered, or work efforts are redirected, we will seek your authorization to modify the scope of work and cost estimate. Both parties must accept any modifications to the attached language. Due to variations in construction costs over time, the presented proposal and estimate is valid until April 15, 2010.

KENNEC appreciates the opportunity to provide services for Valmont and look forward to working with you on this project. Please let us know if you have any questions or require additional information.

Sincerely,

**Kennec, Inc.**

Cory LaVelle,

Construction Manager

Mr. Pat Gilmore
Valmont Pacific States Galvanizing
9700 SW Herman Road
Tualatin, OR 97062

March 9, 2010

***Subject: Pond Cleaning and Lining***

Mr. Gilmore,

PSC Industrial Outsourcing, Inc. appreciates the opportunity to provide Valmont with the following proposal for the liner system installation at the Valmont Pacific States Galvanizing plant located at 9700 SW Herman Road, Tualatin, Oregon. It is our understanding that this project is a component of Valmont's stormwater management system upgrade and is considered a critical path environmental project.

PSC understands through site visits and discussions with Valmont staff the following objectives and tasks are to be completed:

1. Mobilization to site
2. Provide for stormwater diversion, (bypass) for stormwater during project activities.
    a. Plugging all inlets to the pond and diverting water to wetlands.
3. Clearing of vegetation from pond bank areas.
    a. Removal of all vegetation along the banks of the pond and dispose.
4. Removal of sediment in pond.
    a. Build stockpile area in case of the need to solidify the pond sediment to meet landfill subtitle D acceptance criteria. (This step may or may not be needed depending on waste material consistency).
    b. Removal of sediments in the pond down to native soil.
5. Groundwater control system – Installation of dewatering conveyance systems for groundwater management during internal pond grading and sediment removal activities.
    a. Includes pumping and drainage systems.
6. Finish grade pond – preparation of the surface smooth for liner system install
7. Liner installation – 60 mil HDPE liner, membrane type
    a. Construct rockwiers for welding
    b. Lay down and welding, (potentially) of liner.
    c. Install 100 tons of ¾" minus clean gravel as ballast for liner
    d. Key in liner to bank
    e. Backfill perimeter of liner and key trench
8. Site clean up
9. Demobilization from site

***Estimated Project Costs:*** ***$55,566.00****

***Additional equipment, materials and supplies not listed will be charged at cost plus 15%***

Valmont_Pond Liner Project
136-1003-0038

PSC and its project team will complete all the work on a time and materials basis based on the attached rate schedule. The time and materials estimates are based on certain assumptions that are subject to change as conditions warrant. The unknown information will affect the scope of work. In the event, the projects are completed in less or more time than estimated, equipment and labor rates will apply. PSC assumes no liability or responsibility for geotechnical engineering elements including the functionality or engineering performance of the liner system. PSC has not been issued or provided any geo-engineering guidance or data on the project that relates to any subgrade or grade conditions of the impacted pond and therefore assume no liability for any design or work outside of the specific activities listed in this scope of work. Selection of the 60-mil liner has been made solely by Valmont and its associates.

Daily work summaries will be completed for sign off by Valmont's designated representative.
Please note that you will be billed for actual time and materials use according to the attached rates.

***Assumptions:**

- Any changes to project scope will require a change order to be signed by both parties
- Client will provide access to the area as necessary for operations.
- Soils are assumed non-hazardous and can be disposed of at a Subtitle "D" landfill
- Dewatering of the pond can be done using standard sump pumps
- No utilities are present throughout the work area
- Estimated cost includes 12,000 sf of 60-mil liner
- Estimated cost does not include a security fence
- Estimated cost for cleanup and parking lot includes up to 50 tons of rock
- Transport vehicles have a 30 ton minimum charge
- Tonnages will be based on landfill weight tickets
- Trees will be transplanted but no warranty will be made
- No permits are required
- Power and water are available onsite

**Safety Certification:**
All PSC personnel are 40-hour HAZMAT, confined space, confined space rescue, CPR/First Aid trained. PSC personnel adherer to a mandatory drug policy and are under a medical monitoring program. The PSC Site Foreman will conduct and document a daily tailgate heath and safety meeting with all onsite personnel prior to commencement of daily activities.

**Terms and Conditions**
Net 15 Days from date of invoice. Past due amounts are subject to a service charge at the maximum rate allowed by state law plus cost of collection including attorney fees if incurred.
**Proposal is good for 30-days**

1. Subcontractor charges and non-scheduled equipment, services, and supplies will be charged at cost plus 15%.
2. Applicable federal, state and local taxes as they pertain to services, equipment rental, sales of material, manufacturer repair, delivery and/or transportation shall be charged to the customer.
3. Certifications of Insurance will be issued upon request, and include coverage for Worker's Compensation, General Liability, Pollution Liability, and automobile/vehicle.
4. Labor Hours: Monday thru Friday, first 8 hours (8 am – 5 pm), straight time, after 8 hours and/or before 8 am / after 5 pm, overtime (straight x 1.5) applies; Weekends are at over time (straight x 1.5); Holidays are at Double Time (straight x 2)
5. PSC will not be responsible for work stoppages outside of our control or not related to work performance and safety. Unit rates will be charged for work stoppages.

Valmont_Pond Liner Project
136-1003-0038

**Approval and Acceptance:** The undersigned agrees and certifies that he/she is authorized to act on behalf of Customer, and Customer guarantees by his/her signature to compensate PSC in full for all actual services performed as described above, which are due and payable 15 days after receipt of the invoice. All past due accounts shall accrue interest at the rate of 1.5% per month. **No verbal estimates are valid or enforceable.** Customer shall pay all reasonable costs of collection, including but not limited to attorneys fees and expenses incurred by PSC.

Please contact us if you have questions or require additional information. If you would like PSC to proceed, sign the customer authorization and fax back to our corporate office. We look forward to working with you on this project.

Sincerely,

Bob Anderson
PSC Industrial Outsourcing
Business Development Manager
(541) 409-0170

**Customer Authorization, notice to proceed:**

RE: Valmont Coatings Pacific States Galvanizing
DEQ File Number #108675
Stormwater Action Plan

Dear Mr. Jurries, Mr. Gayeska,

Under the provisions of the 1200Z permit, we are submitting attached Stormwater Action Plan.

Should you have questions about this action plan you can contact me directly at (503) 692-8888 or via email at pgilmore@valmont.com.

Best regards,

Patrick Gilmore
General Manager

**DEQ INDUSTRIAL STORMWATER PERMITS – ACTION PLAN FORM**

1. **Permit Registration Information**

Date: March 10, 2010

Facility Name: Valmont/Pacific States Galvanizing, DEQ File Number 108675

Prepared by: Daniel A Scarpine, P.E., Aquarius Environmental, LLC on behalf of Pat Gilmore, General Manager Valmont Pacific States Galvanizing

Contact Information: daniels@aquariusenv.com, 503.427.8368, 3204 NE 40th Avenue, Portland, OR 97212

2. **If you are making routine changes to the SWPCP, describe the proposed changes below:**

   **n/a**

3. **If you are filling out this form in response to benchmark (s) exceedence, please provide the following information:**

(a)Describe the nature of the benchmark(s) exceedence and whether the SWPCP is being followed properly:

Historical exceedence for Total Zinc has been observed. The SWPCP continues to be followed.

(b) Describe the corrective action you will take to address the benchmark exceedence:

Summary: A supplemental treatment best management practice will be installed and implemented. As indicated in October 2009 Action Plan, membrane filtration has been selected.

Background: Valmont/Pacific State Galvanizing ("PSG") implemented additional source controls and management actions beginning in 2006, which have included but are not limited to: additional housekeeping, rainwater harvesting, and pilot testing of passive adsorptive sandfilters. In 2009, PSG retained the services of Aquarius Environmental, LLC (AE), to evaluate whether additional stormwater best management practices would be appropriate. AE determined that installation of treatment best management practices will provide the highest likelihood of consistent attainment of benchmark values. AE has since evaluated a number of treatment best management practices that have been either used at other galvanizing facilities or are otherwise commonly employed in industrial stormwater treatment. The treatment technologies AE evaluated included: passive enhanced sandfilters, ion exchange, electrocoagulation, membrane separation, chemical flocculation and settling, chemical precipitation.

This treatment best management practice evaluation has led AE to recommend implementation of either (1) membrane filtration or (2) electrocoagulation as additional best management practices treatment technologies at the PSG facility.

PSG first submitted an Action Plan to Clean Water Services ("CWS") to select and implement one of the two recommended treatment technologies in October 2009. CWS did not provide formal comments on that proposed Action Plan within the time allotted by the subject Permit. Valmont has since elected to proceed with the Beta Controls membrane filtration system, and provided a detailed submittal to CWS dated February 25, 2010.

CWS verbally responded to PSG's February 25, 2010 submittal seeking a change to address concerns about the hydraulic integrity of the existing stormwater detention pond currently serving the facility. The Description below includes a description of measures to address CWS's stated concern.

Selected Technology Description:

Beta-Controls - Membrane Filtration: Semipermeable membranes are used in this process to remove suspended solids and organics, as well as soluble or colloidal inorganics such as metals. Stormwater is passed through the membrane(s) retaining the impurities on one side and allowing the pure water to pass to the other side. The membrane filtration process will produce two effluent streams, commonly referred to as permeate and concentrate. Under the proposed design, the permeate would discharge via the existing stormwater outfall and the concentrate, a low-volume highly concentrated brine, would be used as a process additive to the hot dip galvanizing line and not be discharged.

Site Integration Measures:

The Beta-Controls – Membrane Filtration system described above has been prefabricated and will not require significant construction for installation. The system will be integrated to the existing stormwater conveyance system providing treatment prior to discharge via existing outfall. Installation will include two primary site integration activities: (1) interconnecting piping and pump system and (2)pond improvements.

(1)Interconnection piping – Piping will be minimal and consist of a submersible pump located within the detention pond, feeding to the treatment system and associated discharge of treated stormwater. Interconnecting piping of vendor supplied components will be PVC or equal suitable for permanent service.

(2)Pond Improvements - To ensure the long term integrity of the detention pond, a geomembrane liner will be installed. The pond floor, side and forebay will be lined for a total lined area of approximately 12,000 square feet. The liner will be a geomembrane of high density polyethylene, with underlying support and non-woven geotextile cover. A protective rock armoring of approximately 6" – 12" will be placed on top of the liner at the pond floor area. Liner penetration for stormwater inlet pipes will be sealed.

The liner seams will be welded and the liner material will be equivalent to a GSE 60 mil product as detailed in attached specification sheet. This material is rated for continuous outdoor service and includes UV inhibitors to prevent premature aging of the material. A 60 mil HDPE material is generally accepted by DEQ and similar agencies for containment of non-hazardous wastes, process wastewater lagoons and sewage, as such it meets standards exceeding those commonly required for stormwater installations. The liner will be installed by a qualified contractor.

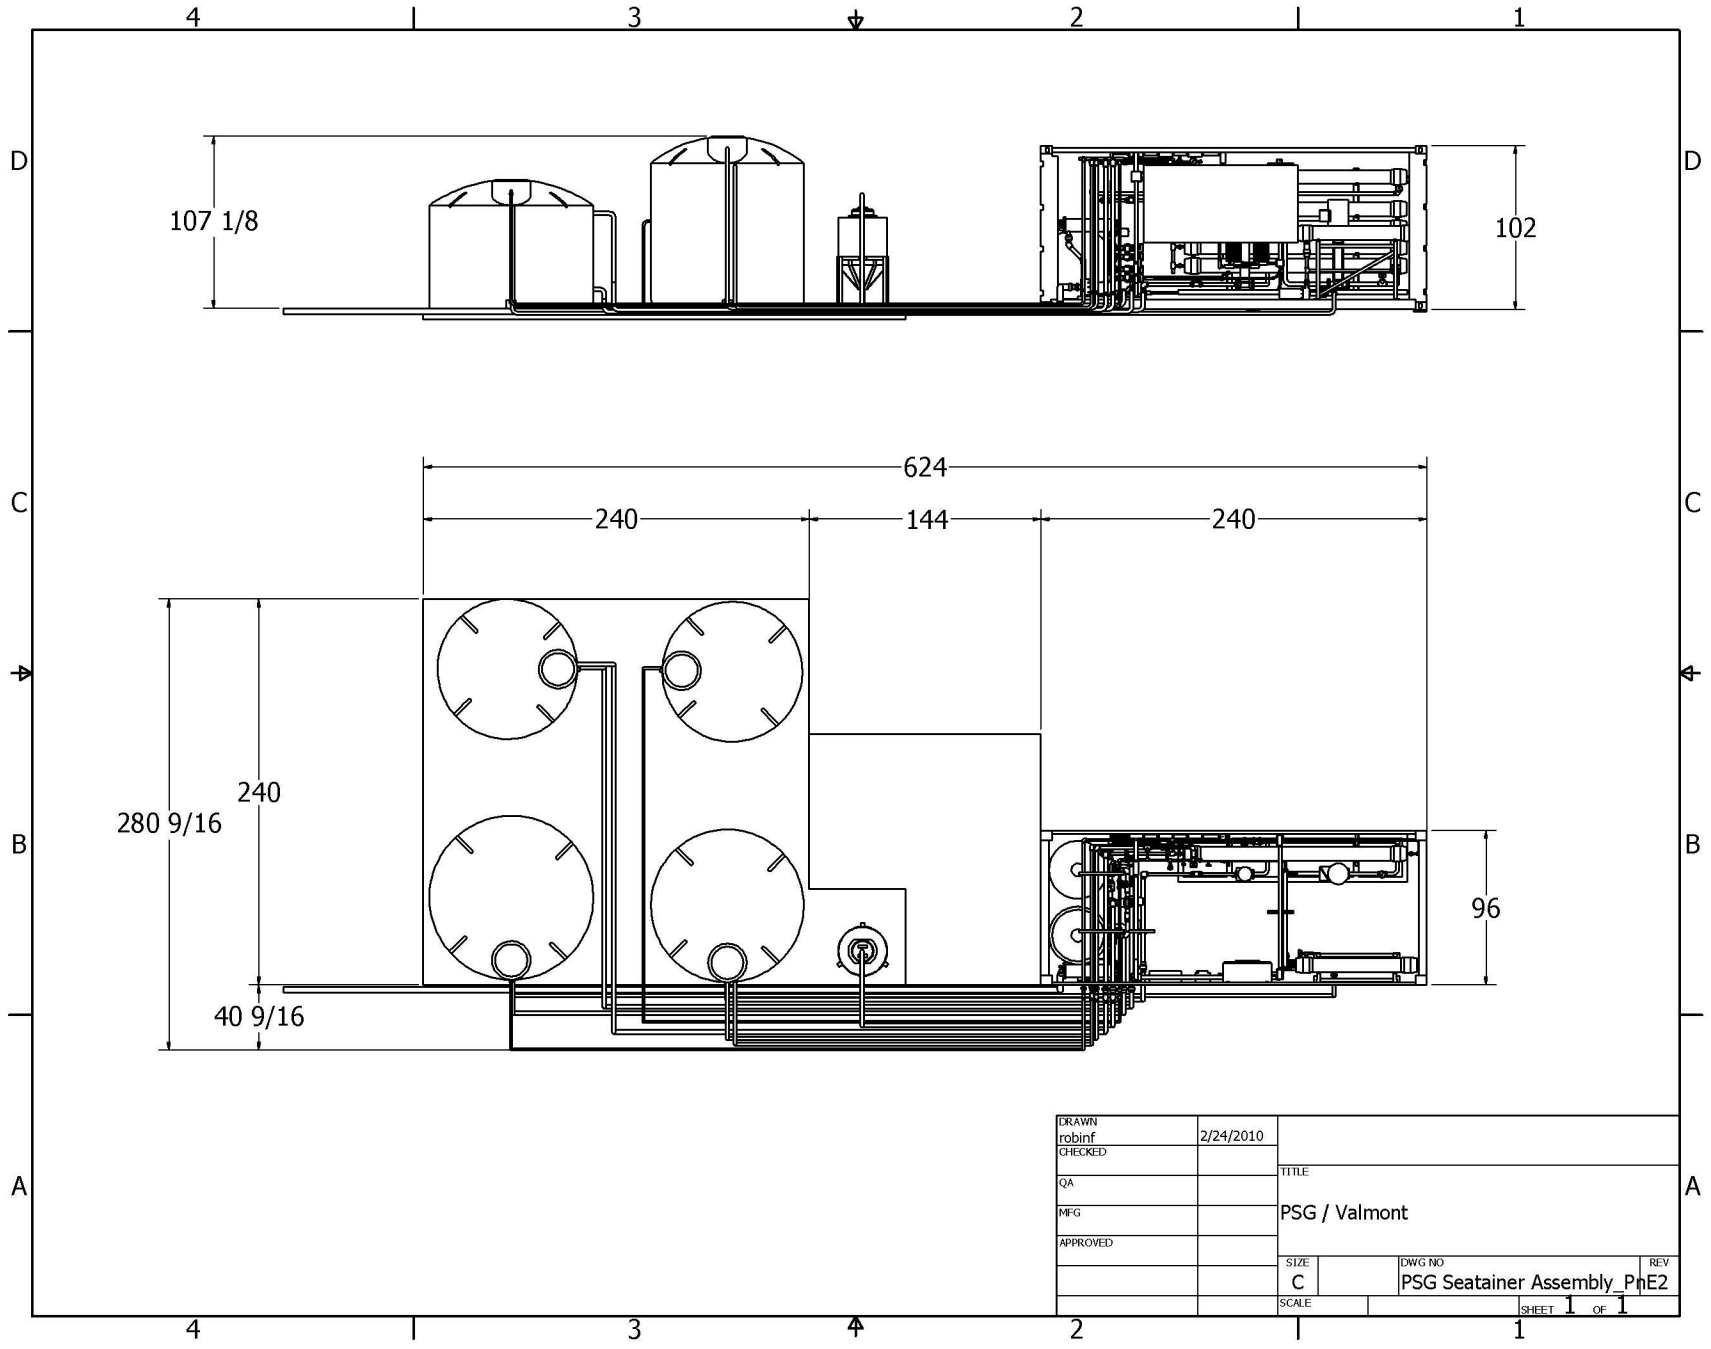

Prior to installation of the liner, existing stormwater will be released from the pond in conformance with the existing 1200Z permit requirements. To prepare for liner installation, grading equipment will be used and operation of this equipment may generate or disturb solids or materials from the pond. To mitigate potential impacts, standard construction best management practices such as silt fence, fabric wrapped inlets or feed pipes and pre-settling of released stormwater. Any solids removed from the pond will be handled in a manner conforming to state and local regulations for solids from stormwater systems.

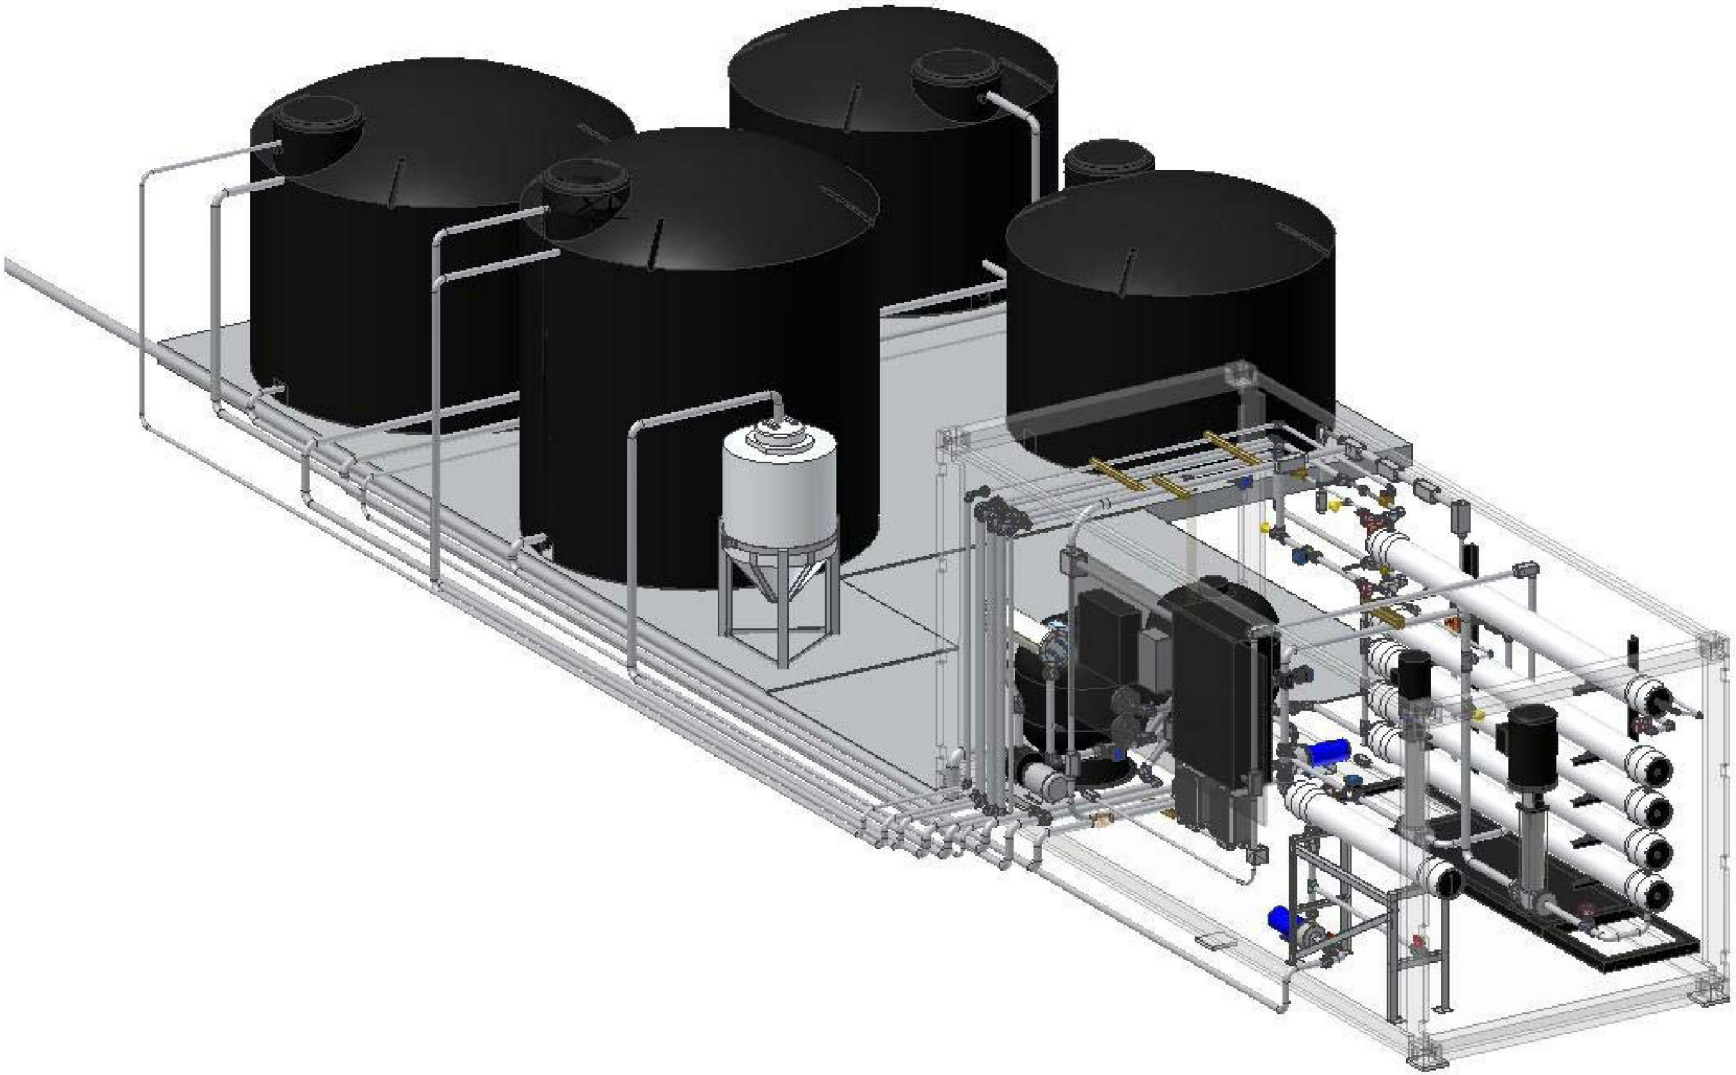

(c ) Provide an implementation schedule for either modifying the existing site controls or implementing additional site controls.

Valmont will immediately begin implementation (pending 10 day review period for this action plan). Long lead capital equipment has been procured (Beta Controls) . Completion of installation will vary depending on spring weather and any installation difficulties. The goal is to implement treatment installation, start-up before the end of May 2010.

4. **If you believe the benchmark exceedence is due to natural or background conditions not related to industrial activities at your site, describe the sampling plan or methodology for supporting that determination**

GSE STANDARD PRODUCTS

# Product Data Sheet

## GSE HD Geomembranes

GSE HD is a smooth, high quality, high density polyethylene (HDPE) geomembrane produced from specially formulated, virgin polyethylene resin. This polyethylene resin is designed specifically for flexible geomembrane applications. It contains approximately 97.5% polyethylene, 2.5% carbon black and trace amounts of antioxidants and heat stabilizers; no other additives, fillers or extenders are used. GSE HD has outstanding chemical resistance, mechanical properties, environmental stress crack resistance, dimensional stability and thermal aging characteristics. GSE HD has excellent resistance to UV radiation and is suitable for exposed conditions. *These product specifications meet or exceed GRI GM13.*

Removed 414 tons of sediment on 4/23/10

## Bjorkman, Robert W.

**From:** Gilmore, Patrick L.
**Sent:** Wednesday, April 14, 2010 6:15 PM
**To:** Bjorkman, Robert W.; Fritz, Don; Taylor, William R.

Gents:

Update on the pond:

Ground water infiltrated the pond excavation this AM to a depth of about 1 foot. Contractor has installed a sump to keep the water out. The all material has been moved to the upper end of the pond (the fore bay), and because of the ground water, is pretty wet. Contractor is bringing in two truckloads of diatomaceous earth tomorrow to mix with the soupy material so that it can be landfilled. Hopefully, the material can be removed tomorrow AM, and the liner delivered. This is a little setback, and things may not be wrapped up until Monday. I'll keep you posted.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal RCRA generators***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Created Date: 11/12/2010
Updated By: KDANA
Updated Date: 07/19/2012
Decode for NarcdID: Remedial Action
NARR Comments: In March-April 2010, Valmont reportedly removed about 400 tons of sediments from their on-site stormwater settling pond. The pond was subsequently lined with a GSE 40-mil HDPE ballasted liner, and a new sedimentation weir system was installed. At the time, DEQ expressed concern that the pond had previously been unlined and may have intercepted groundwater. No documentation of the sediment removal (disposal receipts, confirmation sampling) was provided, so the potential for residual contamination is unknown.

Incident Id: 040196
Incident Narrative: E34 was dispatched as a single engine response to a commercial fire alarm at industrial hazmat facility. Upon arrival complex fence was locked and nothing was visible form the street. Information enroute indicated a water flow alarm form alarm company. E34 cut lock on fence and entered complex and found visible vapor or smoke coming from open end of large, commercial building. This was indicated on preplan as having several open hazardous chemical tanks/vats used for galvanizing. A full hazmat first alarm was called and E34 made a two-in, two-out recon on the building to find that there had been a break in the overhead sprinkler pipe above the Sulfuric Acid tank and that an approximately 50 gallon per minute flow into the tank was occurring which had several thousand gallon tank overfilling and spilling into secondary containment around the tank. After discussion with RP who ultimately showed up to scene about shutting water off to the building a decision was made to turn off sprinkler system only to mitigate current problem. After water was shut off a second entry was made to visualize problem and do continued air monitoring. Scene left with two RP's and DFM Bonollo who would do the follow up with sprinkler issues and follow up with DFM Forster over Hazmat issues. Both RP's indicated that they had internal plans for clean-up of the contained spillage.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

| Chemical Is A Toxic 313 Chemical: | N |
| EPA Pesticide Registration Number: | Not reported |
| Contains 112R: | N |
| Contains EHS: | N |
| Fertilizer: | N |
| Pesticide: | N |
| Contains 313: | Y |

| | |
|---|---|
| Chemical Name: | PROPANE |
| Physical Description: | GAS |
| Case Number: | 74986 |
| Facility Id: | 005305 |
| Physical State Of The Substance: | 3 |
| Average Amount Possessed During The Year Code: | 11 |
| Maximum Amount Possessed During The Year Code: | 11 |
| Applicable Unit Of Measure Code: | 2 |
| Description Of The Unit Of Measure: | GALLONS |
| Type Code: | A |
| Description: | ABOVEGROUND TANK |
| Type Code: | Not reported |
| Temperature Description: | Not reported |
| Pressure of Code: | 2 |
| Pressure Description: | GREATER THAN NORMAL PRESSURE |
| Pressure of Code: | Not reported |
| Pressure Description: | Not reported |

**OREGON SANDBLASTING & COATING INC (Continued)** **1000236261**

| | |
|---|---|
| Temperature Description: | NORMAL TEMPERATURE |
| Temperature of The Hazardous Substance Code: | 4 |
| Temperature Description: | Not reported |
| Temperature of The Hazardous Substance Code: | Not reported |
| Days Hazardous Substance On Site During Year: | 365 |
| Is The Substance Protected A Trade Secret: | False |
| Description Of The Max Qnty Code: | 500-999 |
| Description Of The Avg Qnty Code: | 500-999 |
| Most Hazardous Ingridient: | PROPANE |
| United Nations/north America 4 Digit Class Number: | 1075 |
| Hazard Rank: | 2 |
| EHS Ingredient: | NONE LISTED ON SDS |
| Substance Pure: | True |
| Substance Mix: | False |
| First Hazardous Class Code For Chemical: | Flammable Gas |
| Second Hazardous Class Code For Chemical: | Acute Health Hazard |
| Third Hazardous Class Code For Chemical: | Not reported |
| Hazard Class 1 Of The Chemical: | 2.1 |
| Hazard Class 2 Of The Chemical: | 6.3 |
| Hazard Class 3 Of The Chemical: | Not reported |

Additional Chemical:

| | |
|---|---|
| Chemical Is A Toxic 313 Chemical: | N |

Updated By: SFORTUN
Updated Date: 09/01/2011
Decode for NarcdID: Contamination
NARR Comments: The site's stormwater runoff has contained elevated concentrations of zinc, copper, lead, cadmium, and chromium. Surface runoff is ultimately discharged to Hedges Creek Marsh. Spent sandblast grit contained elevated concentrations of total and TCLP leachable zinc, total copper, and TCLP leachable barium when analyzed on 1/10/08. Wheelabrador baghouse dust contained elevated concentrations of total and TCLP leachable zinc, total copper, and TCLP leachable barium when analyzed on 1/10/08. East baghouse dust contained elevated concentrations of TCLP leachable zinc and barium when analyzed on 1/10/08. On the evening of January 15, 2000, approximately 300- to 400-gallons of diesel fuel was released to the ground surface, although the release was not discovered until the morning of January 17, 2000. Overland flow and rainfall carried the diesel fuel to a drainage ditch along the site's eastern property line (approximately 0.4-inches of rain fell between the evening of January 15 and midnight January 16/17). The drainage ditch discharges to Hedges Creek Marsh. Diesel fuel and contaminated stormwater was vacuumed from the ditch, but soils and sediments were not analyzed or removed. A stormwater sump along the site's western property line receives stormwater runoff from an area where spent sandblast grit is stockpiled outdoors. The sump might act as an Underground Injection Control [UIC] device to allow contaminated stormwater to contaminate site groundwater, and discharge to subsurface soils that have substantially-higher hydraulic conductivity. No soil or groundwater testing has been conducted at the site or in the adjoining Hedges Creek Marsh to verify that contamination is not present. (6/13/11,

**OREGON SANDBLASTING & COATING, INC. (Continued)** **S110764076**

smf) Zinc and lead concentrations in stormwater at OS&C and the adjoining Valmont Industries site (ECSI #5353) may be related (student t-test: p = 0.008 and <0.0001, respectively), although stormwater copper concentrations may not (p = 0.320).

NARR Comments: The site's stormwater runoff discharges to Hedges Creek marsh. An August 1993 confidential Pollution Complaint (NWR-1993-1546) alleged that the company was improperly disposing of its waste sands and waste thinners at the back of its property. There is no indication that the complaint was ever investigated or resolved. Oregon Sandblasting & Coating historically disposed of the site's spent sandblast grit by sending it off-site for use as fill material at construction sites.

NARR Comments: Two adjoining tax lots (Tax Lots 1000 & 1100 of T2S/R1W-S23BD) located between SW Herman Road on the north, and Hedges Creek Marsh on the south. The eastern tax lot (T.L. 1000) is 3.86 acres in size, and the location of Oregon Sandblasting & Coating, Inc. The L-shaped western and southern tax lot (T.L. 1100) is 6.84 acres in size, and the location of Powder Tech, Inc. Both facilities conduct metal sandblasting and coating acitvities; both tax lots are owned by Oregon Sandblasting & Coating, Inc. Oregon Sandblasting & Coating is a privately-owned sandblasting and metal surface coating job-shop. Powder Tech, Inc. is a privately-owned business that sandblasts, phosphate-treats, and applies polyester and epoxy powder-coatings to large metal surfaces. Operations also include the application of blown, rigid polyurethane foam.

Updated Date: 04/26/2011
Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Predominantly, metals and petroleum. Materials handled at the site are generally limited to steel, enamel paints, epoxy, vinyl, and polyethylene coating compounds, mineral spirits, epoxy thinners, zinc, phosphoric acid, isocyanante foams, foaming agent, bituminous asphalt, hydraulic oils, diesel fuel, parts cleaning solvents, and lubricating oils for compressors. Hazardous substances at the site would include metals, petroleum constituents (including BTEX, other substituted aromatics, and PAHs), other Volatile- and Semi-Volatile Organic Compounds [VOCs and SVOCs], including butanol, methyl ethyl ketone [MEK], methyl isobutyl ketone [MIBK], tetrafluoroethane (foaming agent), and phthalates. Analyses of waste rags from the site in 2006 detected leachable barium, BTEX, methylene chloride, phthalates (bis(2-ethylhexyl)phthalate and butylbenzyl phthalate), and methylphenols.

Decode for NarcdID: Project Issues Summary
NARR Comments: The site's stormwater runoff has been contaminated with elevated concentrations of metals. Stormwater runoff is directed to Hedges Creek Marsh, a protected wetlands area with habitat for Threatened & Endangered fish, at least one Threatened plant species, protected migratory waterfowl and songbirds, sensitive amphibians and reptiles, and a variety of other native fish, wildlife, and plant species. Accumulated dust, spent sandblast grit, contaminated stormwater, and petroleum releases may also have contaminated site soils and shallow groundwater. Site groundwater is likely present at 3- to 10-feet bgs. A stormwater sump along the site's western property line could also be acting as a UIC, allowing contaminated stormwater to contaminate groundwater within subsurface soils that have high hydraulic conductivity. 300- to 400-gallons of diesel fuel was released at the site in January 2000, although there is no indiaction that soils or groundwater were ever investigated for potential contamination. A site investigation is needed to determine if site soils and groundwater have been contaminated, and if site contaminants may have migrated into adjoining Hedges Creek Marsh.

NARR Comments: Site stormwater is contaminated with metals. In 2000, diesel fuel was released to the ground surface, and flowed overland to a stormwater drainage ditch along the site's eastern property line. From there, some of the diesel fuel could have discharged to Hedges Creek marsh. No investigation has been conducted to determine whether site soils or groundwater have been contaminated, or whether contaminants have reached Hedges Creek Marsh.

Created Date: 04/26/2011
Updated By: KDANA
Updated Date: 07/10/2012
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site s accumulated surface dust and stockpiled spent sandblast grit could represent a potential windblown inhalation or dermal contact risk for off-site commercial and industrial workers, or nearby residents, or to fish, wildlife, and vegetation in the adjoining Hedges Creek Marsh. The detected concentrations of lead in site stormwater have frequently exceeded DEQ s Risk-Based Concentrations [RBCs] for residential and occupational tapwater, as well as the federal Maximum Contaminant Level [MCL] for drinking water. Concentrations zinc in site stormwater have exceeded EPA tapwater screening levels, although DEQ has no RBC for zinc in tapwater. Although metals concentrations in site stormwater have exceeded DEQ Risk-Based Concentrations for residential and occupational tapwater and Drinking Water MCLs; diesel fuel that was released at the site in 2000 could adversely affect shallow groundwater quality at the site; the site lies within an area having a high density of domestic wells (16 domestic wells were identified in the same township/range/section as the site); and the site lies within the Sherwood-Wilsonville Groundwater Limited Area, and less than +-mile south of the Coopers Mountain - Bull Mountain Critical Groundwater Area, the site s paved surfaces, soil types, and likely groundwater flow direction suggest that on-site hazardous substance releases would most likely drain or run off to surface water in nearby Hedges Creek Marsh. Copper and zinc have frequently been detected in site stormwater at concentration that exceed the Federal Recommended Acute Toxicity standards for freshwater aquatic life. The stormwater metal concentration might also represent a potential risk to other wildlife and plants in the marsh. Potential residual constituents from the diesel fuel released at the site in 2000 have not been quantified in on- or off-site soils, although potential petroleum contamination in off-site soils could also represent a threat to plants, fish, or wildlife in the marsh.

NARR Comments: Site surface contaminants could represent a potential dermal contact or inhalation threat to on-site workers. Windblown dust from the site could represent a threat to workers at adjoining properties, nearby residents, or to fish, wildlife, and vegetation in adjoining Hedges Creek Marsh. Site stormwater runoff is contaminated with metals at concentrations that could represent a threat to local groundwater and to fish, wildlife, and plants in adjoing Hedges Creek Marsh. Site groundwater should be very shallow (3- to 10-feet bgs). The site is located within the Sherwood-Wilsonville Groundwater Limited Area, and in a survey section having a high densite of domestic wells. if site groundwater is contaminated, it could represent a potential health risk for nearby well water users, although it is more likely that the site's shallow groundwater drains to Hedges Creek Marsh.

Updated Date: 04/26/2011
Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: The site lies within the OWRD-declared Sherwood-Wilsonville Groundwater Limited Area, and less than 0.5-mile south of OWRD's Coopers Mountain - Bull Mountain Critical Groundwater Management Area. The site also lies within a survey section that has a high density of domestic wells, although the City of Tualatin has its own Community Water Supply. The City of Tualatin obtains its Community Water Supply [CWS] from the Portland Water Bureau (source: Bull Run Reservoirs, on Mt. Hood; and the Columbia South Shore wellfield, along the south bank of the Columbia River). However, the City of Tualatin also seasonally used local groundwater as a supplemental CWS. The City of Tualatin's nearest supplemental CWS well is located 1.9-miles south-southwest of the site. The City of Tigard, on the north side of the Tualatin River, also obtains its Community Water Supply [CWS] from the Portland Water Bureau, but has its own seasonal supplemental groundwater supply wells. The City of Tigard's nearest supplemental CWS wells are located 2.0-miles north, and 2.2-miles north-northwest of the site. Oregon Water Resources Department [OWRD] and U.S. Geological Survey [USGS] have records for at least 4

**OREGON SANDBLASTING & COATING, INC. (Continued)** **S110764076**

domestic wells, 3 industrial wells, and an irrigation well within 1/4 mile of the site. Three, or possibly four, domestic wells appear to be located within about 850-feet northwest of the site. Hedges Creek Marsh, comprised of nearly 70-contiguous-acres of wetlands, lies immediately south of the site. A newly-developed, eastward-flowing drainage ditch lies between the site and marsh, although the drainage ditch appears to drain to the marsh less than 150 feet east of the site. Hedges Creek Marsh provides rearing and migration habitat for winter steelhead trout and coho salmon. Hedges Creek Marsh drains to the Tualatin River about 1-mile downstream from the site.

Updated Date: 04/18/2012
Decode for NarcdID: Current Site Summary Statement
NARR Comments: Oregon Sandblasting & Coating, Inc. has operated at the site for approximately 25 years, and possibly as long as 30 years. Poor outdoor dust control and spent sandblast storage practices are probably related to elevated concentrations of metals that have been detected in the site's stormwater runoff. Site soils and shallow groundwater may also have been similarly contaminated. A stormwater retention pond at the southeast corner of the property, and a stormwater sump along the western property line, could have provided preferential migratory pathways for contaminated stormwater to reach the site's shallow groundwater table. The stormwater retention pond and stormwater drainage ditches along the site's eastern and western property lines have discharged stormwater to Hedges Creek Marsh. The site's shallow groundwater probably also discharges to Hedges Creek Marsh. Site contaminants could represent a threat to sensitive fish, birds, wildlife, and vegetation within the marsh. The site also lies within the Sherwood-Wilsonville Groundwater Limited Area, and within a survey section having a high density of domestic wells. At least five Public or Supplemental Community Water Supply wells are also located within 1.0- to 2.2-miles of the site. Local degredation of groundwater can adversely affect important local drinking water supplies. Site soils and groundwater should be investigated to determine whether contaminants are present at concentrations that could represent a significant threat to Hedges Creek Marsh or local drinking water supplies. Further, shallow soils and groundwater at the neighboring Hedges Creek Marsh should also be investigated to determine if the site's stormwater runoff or the site's January 2000 diesel fuel release may have contaminated the marsh.

Environmental Interest/Information System:

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Evaluation Action Summary:
Evaluation Date: 20070129
Evaluation Responsible Agency: State
Found Violation: No
Evaluation Type Description: COMPLIANCE ASSISTANCE VISIT
Evaluation Responsible Person Identifier: ORDPK
Evaluation Responsible Sub-Organization: NWR
Actual Return to Compliance Date: Not reported
Scheduled Compliance Date: Not reported
Date of Request: Not reported
Date Response Received: Not reported
Request Agency: Not reported
Former Citation: Not reported

Evaluation Date: 20150714
Evaluation Responsible Agency: State
Found Violation: Yes
Evaluation Type Description: COMPLIANCE EVALUATION INSPECTION ON-SITE
Evaluation Responsible Person Identifier: Not reported
Evaluation Responsible Sub-Organization: NWR
Actual Return to Compliance Date: 20151216

**PRECISION WIRE CO (Continued)** **S108835245**

| | |
|---|---|
| Physical State Of The Substance: | 2 |
| Average Amount Possessed During The Year Code: | 10 |
| Maximum Amount Possessed During The Year Code: | 10 |
| Applicable Unit Of Measure Code: | 2 |
| Description Of The Unit Of Measure: | GALLONS |
| Type Code: | E |
| Description: | PLASTIC OR NON-METALLIC DRUM |
| Type Code: | Not reported |
| Temperature Description: | Not reported |
| Pressure of Code: | 1 |
| Pressure Description: | NORMAL PRESSURE |
| Pressure of Code: | Not reported |
| Pressure Description: | Not reported |
| Temperature Description: | NORMAL TEMPERATURE |
| Temperature of The Hazardous Substance Code: | 4 |
| Temperature Description: | Not reported |
| Temperature of The Hazardous Substance Code: | Not reported |
| Days Hazardous Substance On Site During Year: | 365 |
| Is The Substance Protected A Trade Secret: | False |
| Description Of The Max Qnty Code: | 200-499 |
| Description Of The Avg Qnty Code: | 200-499 |
| Most Hazardous Ingridient: | DIPROPYLENE GLYCOL MONOMETHYL ETHER |
| United Nations/north America 4 Digit Class Number: | 0000 |
| Hazard Rank: | 2 |
| EHS Ingredient: | NONE LISTED ON MSDS |
| Substance Pure: | False |
| Substance Mix: | True |
| First Hazardous Class Code For Chemical: | Acute Health Hazard |
| Second Hazardous Class Code For Chemical: | Not reported |
| Third Hazardous Class Code For Chemical: | Not reported |
| Hazard Class 1 Of The Chemical: | 6.3 |
| Hazard Class 2 Of The Chemical: | Not reported |
| Hazard Class 3 Of The Chemical: | Not reported |

Additional Chemical:

| | |
|---|---|
| Chemical Is A Toxic 313 Chemical: | N |
| EPA Pesticide Registration Number: | Not reported |
| Contains 112R: | N |
| Contains EHS: | N |
| Fertilizer: | N |
| Pesticide: | N |
| Contains 313: | Y |

| | |
|---|---|
| Chemical Name: | LEAD ACID BATTERIES |
| Physical Description: | SOLID |
| Case Number: | Not reported |
| Facility Id: | 052947 |
| Physical State Of The Substance: | 1 |
| Average Amount Possessed During The Year Code: | 20 |
| Maximum Amount Possessed During The Year Code: | 20 |
| Applicable Unit Of Measure Code: | 1 |
| Description Of The Unit Of Measure: | POUNDS |
| Type Code: | R |
| Description: | OTHER |
| Type Code: | Not reported |
| Temperature Description: | Not reported |
| Pressure of Code: | 1 |

NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (5/4/95 MHK/VCP) Spent casting sand and foundry debris (electrical capacitors, barrels, wood automobile parts) have been landfilled over 4.5 acres on-site and on adjacent land to the west. The debris appears to have been limited to the oldest fill area, called the South Fill Area. The remaining area (West Fill Area) appears to have been filled with relatively homogenous spent casting sands, which contain low levels of phenols, chromium and other metals. Petroleum-contaminated sediments were identified in four storm water outfall areas. An inactive water-supply well was present on-site.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in a low-lying area with very shallow groundwater and nearby surface water. A hand-dug drainage ditch (now called Hedges Creek) crosses the site and federally designated wetlands lie immediately to the south. Surface water drains into the wetlands and ultimately to the Tualatin River, which is located 3000 feet to the east. Shallow and deep groundwater is used nearby for drinking water supply.

NARR Comments: (5/4/95 MHK/VCP) Preliminary Assessment initiated by SAS January 1991. Independent investigation and cleanup work was performed in 1991, including removal of 11 buried capacitors and associated PCB

**DURAMETAL CORPORATION (Continued)** **1000149700**

contaminated soil. Durametal joined VCP in July 1991 because of a pending sale of the foundry. Review of reports constituting a PA equivalent completed 10/16/91. Agreement for Removal Action and Focused Remedial Investigation (# ECVC-NWR-92-02) completed 2/3/92. RI workplan approved 7/15/92. Initial sampling of the inactive water well on 7/28/92 detected significant levels of chlorinated solvents. A report summarizing solvent usage and handling at the facility was submitted 4/20/93. The Health Division checked surrounding water supply wells and did not find related contamination. Solvents were never detected in soils or shallow groundwater. Continued sampling for a year did not detect solvents and approval to permanently abandon the well was given on 12/9/94. Approximately 1800 cubic yards of debris were removed from the South Fill Area from August to November 1992, including three capacitors and a drum containing solvent liquid. Additional excavation to remove residual contamination was done in May and June 1994. An Endangerment Assessment (including ecological evaluation) for the West Fill Area demonstrating that no significant risks exist was approved 5/9/94. Development plans for the West Fill Area were reviewed and approved on 8/31/94. A Storm Water Pollution Control Plan was submitted on 10/26/92. An expedited storm water sediment removal was completed in December 1993 because of construction work on the adjacent property. Sediment removal in the other outfall areas was performed in September 1994. A draft Endangerment Assessment for the South Fill Area was submitted on 10/24/94. The report documenting the storm water sediment removal was approved on 3/2/95. (7/13/95 MHK) Additional groundwater sampling was performed 4/6/95 and PCBs were detected below the levels of concern. Final page revisions for the Endangerment Assessment received 4/95. Final cut and fill plans for the West Fill area were approved 4/28/95. Inactive water well reabandonment was performed 5/22/95 at Water Resources Department request. Public comments on DEQ recommendation for no further action requested 6/1/95, none were received. No further action for the South Fill and Stormwater Sediment areas approved 7/11/95.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions,

**DURAMETAL CORPORATION (Continued)** **1000149700**

and settlements.
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Decode for NarcdID: Contamination
NARR Comments: Based on a 4/94 complaint to DEQ about improperly managed waste oil drums at this facility, complaint and hazardous waste staff conducted two inspections later in 1994. The result of these inspections were: 1) discovery of about 50 drums on the property that contained waste oil or an oil/water mix; and 2) oil staining on the ground in one area. These observations resulted in an 11/8/94 NON for violations of RCRA waste oil rules.

NARR Comments: Westway Manufacturing has not responded to the Notice of Noncompliance sent out in November 1994. David Shepherd, the facility

**WESTWAY MANUFACTURING CO (Continued)** **U000431126**

owner, indicated in an 11/29/95 phone conversation that the drums had been removed from the site and disposed of in a proper manner. He also said that the stained soil had been caused by a one-time spill of up to 15 gal. of oil from a machine, and that the soil cleanup consisted of one-third of a yard. Clean gravel has been placed over this area. Site Assessment recommends that Westway collect confirmation samples from the area of soil removal. This site is a low priority for further agency action.

| Temperature Description: | Not reported |
| Pressure of Code: | 2 |
| Pressure Description: | GREATER THAN NORMAL PRESSURE |
| Pressure of Code: | Not reported |
| Pressure Description: | Not reported |
| Temperature Description: | NORMAL TEMPERATURE |
| Temperature of The Hazardous Substance Code: | 4 |
| Temperature Description: | Not reported |
| Temperature of The Hazardous Substance Code: | Not reported |
| Days Hazardous Substance On Site During Year: | 365 |
| Is The Substance Protected A Trade Secret: | False |
| Description Of The Max Qnty Code: | 500-999 |
| Description Of The Avg Qnty Code: | 200-499 |
| Most Hazardous Ingridient: | ARGON |
| United Nations/north America 4 Digit Class Number: | 1006 |
| Hazard Rank: | 2 |
| EHS Ingredient: | NONE LISTED ON SDS |
| Substance Pure: | True |
| Substance Mix: | False |
| First Hazardous Class Code For Chemical: | Non-flammable Gas |
| Second Hazardous Class Code For Chemical: | Not reported |
| Third Hazardous Class Code For Chemical: | Not reported |
| Hazard Class 1 Of The Chemical: | 2.2 |
| Hazard Class 2 Of The Chemical: | Not reported |
| Hazard Class 3 Of The Chemical: | Not reported |

Additional Chemical:

| | |
|---|---|
| Chemical Is A Toxic 313 Chemical: | N |

**WESTWAY MANUFACTURING CO (Continued)** **U000431126**

| | |
|---|---|
| EPA Pesticide Registration Number: | Not reported |
| Contains 112R: | N |
| Contains EHS: | N |
| Fertilizer: | N |
| Pesticide: | N |
| Contains 313: | N |

| | |
|---|---|
| Chemical Name: | SHIELDRITE 75/25 |
| Physical Description: | GAS |
| Case Number: | 7440371 |

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: (12/20/05 RP/HW) Site referred to SA Program from NWR HW Program. Property is being sold, old operations are gone. (8/10/2006 CWH/CU&ER) Site entered into ICP in December 2005. Project picked up in June 2006. Initial review of site investigation work performed in April of 2006 indicated that subsurface soils in one area of plating operations - near the wastewater treatment system - had concentration of total chromium above the EPA Region 9 PRG for industrial setting. This soil sample, S5-1.5, had a total chromium concentration of 506 ppm. On June 21, 2006 DEQ recommended additional work in this area of plant to determine extent (horizontal and vertical) of chromium and cyanide in this area. Subsequent investigation was initiated in July 2006. Findings of the additional investigation was that the subsurface soil chromium contamination was limited to a very small area below the concrete floor around the sump in the wastewater treatment area. A deeper soil sample tested at the S5 boring location showed that total chromium had dropped well below any applicable risk-based screening levels. There were no detections of cyanide above any DEQ or EPA risk-based screening criteria. Since this site's present likely future land use is for industrial/commercial, the contaminated soils are already capped by concrete and there was no impact to groundwater, DEQ has determined that no further remedial action (NFA) is required at this site. A NFA determination letter was sent to the property owners on August 10, 2006.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F019
Waste Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Updated By: KDANA
Updated Date: 06/23/2011
Decode for NarcdID: Contamination
NARR Comments: Sampling conducted at the 19700 address in 2002 found solvents in the soil and shallow groundwater. A Phase I ESA conducted in 2010 noted the solvent results and added that there was a potential for petroleum contamination. Also, the stormwater system was noted to be discharging directly to wetlands on the east side of the site (and possibly to wetlands on the north side of the site). Sampling in July 2010 found low levels of petroleum in on-site soils, low levels of solvents in on-site groundwater, and moderate levels of petroleum at the East Storm Water Outfall.

Decode for NarcdID: Land Use (Current/Reasonably Likely)
NARR Comments: Land use. The site is zoned by the City of Tualatin as General Manufacturing (MG), a commercial/light industrial zoning classification. Prior to the existing development, the site and general area were rural farm lands. Development of the site, adjacent properties and the general area transitioned to light industrial over the past 30 years. Adjacent properties to the west and south and distant properties to the north and east are all light industrial uses. Future land use is expected to be consistent with current use. The MG zoning allows for a wide range of light industrial uses with flexibility for limited similar commercial uses (for example, a small storefront associated with manufacturing and warehouse activities). Residential and urban residential uses are prohibited under this zoning. The development code for MG may be viewed here

Decode for NarcdID: Remedial Action
NARR Comments: (7/13/15 KJR/VCP) Several investigations were performed from 2010 through 2015 including subsurface and evaluation of adjacent man-made stormwater pond. The repair and replacement of the process water and stormwater systems was performed in May 2012. A total of 482 tons of petroleum-contaminated soil (PCS) or gravel were transported off-site for disposal at Hillsboro Landfill during this phase of work. Several unknown underground pipes were encountered during the May 2012 work. These pipes were cleaned and abandoned in October 2012. The primary contaminants of potential concern at the site are chlorinated VOCs and to a lesser degree petroleum (diesel and heavy oil), associated constituents (PAHs, VOCs), and metals. Releases have impacted soil and shallow groundwater on the site. Soils impacted by chlorinated VOCs (TCE. etc.) were generally encountered between 3 feet and 5 feet bgs, excepting detections to 15 feet bgs in the vicinity of the former wash rack system. Petroleum and associated constituents were generally encountered in shallow soils up to 2 feet bgs in the vicinity of the former wash rack system. Groundwater contamination was documented in the shallow (approximately 8 feet to 12 feet bgs) groundwater aquifer. Groundwater contamination is localized to the site, confirmed by the absence of groundwater detections in downgradient areas, with the highest concentrations found in the vicinity of the former wash rack. Metals detected in both soil and groundwater samples were consistent with regional background levels. Based on the available data, a no further action determination is recommended for the Teton Ave. Property site. Localized and limited areas of contamination remain on the site. DEQ approves leaving this contamination because the contamination does not present an unacceptable risk to human health, safety, welfare and the environment. (7/16/15 KJR/VCP) NFA issued on 7/16/15. Select site documents may be viewed from the Site Document section of this databse.

Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: Groundwater use. The site and surrounding area are served potable water by City of Tualatin which receives its water from the City of Portland. Portland groundwater is generally from the Bull Run Reservoir, located east of Portland and well away from the site. No drinking water wells have been identified on, or adjacent to, the site. Groundwater was encountered in discontinuous perched zones in the upper 15 feet of soil at the site. In general, the water level was deeper to the north, with groundwater detected at 5 feet to 6 feet bgs on the south end of the site and at 12 feet to 15 feet bgs (if encountered) on the northern edge of the site. A search of the OWRD database identified six water wells presumed (insufficient information to determine actual well location on the well log) to be within an approximate quarter mile of the site. The wells ranged from 20 feet to 150 feet deep, with water produced from a range of depths. A review of these wells showed the wells are used for domestic, irrigation, and industrial purposes. The wells are in the expected down gradient direction from the shallow discontinuous perched groundwater found on-site based on conditions observed during site investigations. Surface water use. The nearest surface water body is a man-made stormwater pond adjacent to the north and east boundaries of the site. Narrow portions of the pond encroach onto the site along the north and northeast edges. The pond is a constructed stormwater retention pond designed primarily to serve stormwater run-off from adjacent public roads. The pond also receives stormwater from other commercial and industrial zoned properties south and northeast of the site. The stormwater system at the site discharged into the pond prior to improvements made in May 2012. Stormwater is now routed to an on-site bio-swale for infiltration.

NARR Comments: Prior to 1970 the site was a rural farm. The on-site building was constructed in about 1970. Pro Car Care operated at the 19650 address from 1996-2000. A-La-Car Auto Detailing currently operates at that address. Geo-Tech Explorations operated at the 19700 address from at least 1994-2002 and was subsequently acquired by Boart Longyear, which continues to operate at that address.

NARR Comments: (4/1/93 KPD) The site was owned by Energy Alternatives from 1980 to 1984. The company manufactured wood stoves, and generated some hazardous waste in the painting process (generally paint sludge and paint thinner). A memorandum from a 6/81 DEQ inspection mentioned that there was <quot>evidence<quot> of past leaks or spills from the drums temporarily stored on-site. (The drums were stored outside on a concrete pad.) Energy Alternatives declared Chapter 7 bankruptcy 4/84. A DEQ inspection that month found two improperly labelled drums of hazardous waste still on the property. These two drums were apparently still on the property during a subsequent inspection

**SCHRAMM PLASTIC FABRICATORS (Continued)** **U000431112**

(8/84), but were properly disposed of soon thereafter. Hahn and Associates completed a property transfer assessment of the site for Anthro Corp. 10/92. The report said the property had been owned and operated since 1988 by Schramm Plastic Fabricators. The report also mentioned that five USTs had been removed 7/88. According to a letter from the removal company, post-removal soil sampling found no petroleum hydrocarbons above 50 ppm. (The removal is not listed on DEQ's UST Cleanup List.) Hahn resampled the area 12/92 and found no petroleum hydrocarbons above 20 ppm.

Decode for NarcdID: Remedial Action
NARR Comments: (4/1/93 KPD) There is no evidence of property contamination. Releases of paint sludge or paint thinner, if any, have not occurred since at least 1984. Any contamination has likely broken down since that time. Site Assessment recommends no further action at this time.

NARR Comments: (06/28/2012 KPD/ICP) Eight borings were advanced at the site in December 2009 as part of an Environmental Site Assessment. A single soil sample was collected from each boring and analyzed for diesel and heavier oils. Diesel was encountered near the hydraulic lift in service bay 6 (counting north to south) at a concentration of 9,000 parts per million, along with heavier oil at 11,000 ppm. Samples were collected from six additional borings around service bay 6 in March 2010 to determine the extent of the contamination. Only up to 181 ppm diesel and 141 ppm heavier oils were detected. Groundwater was encountered at a depth of 6 feet below ground surface in some borings and 8 ft bgs in other borings. A single groundwater sample identified diesel at 3,080 parts per billion and heavier oils at 2,730 ppb. Additional borings were advanced next to the lifts in service bays 1 & 8 in August 2011. Two soil samples and one groundwater sample were collected from each boring and analyzed for diesel and heavier oils. No contamination was encountered in service bay 1. Diesel (at 2,740 ppm) and heavier oils (at 1,160 ppm) were detected in a soil sample from 6 ft bgs in service bay 8. Groundwater (also at 6 ft bgs) showed 43.2 ppb diesel. No soil contamination was present at 15 ft bgs.

Decode for NarcdID: Remedial Action
NARR Comments: (06/28/2012 KPD/ICP) A release from a 550-gallon waste oil UST at the site was reported to DEQ in March 1996. The tank was removed and shipped to Schnitzer Steel Products for recycling. Approximately 63 tons of PCS were excavated from around the UST and shipped to TPS Technologies for thermal treatment. Confirmation sampling found no residual soil contamination and only minor concentrations of petroleum constituents in the groundwater. DEQ issued a No Further Action letter for the cleanup in March 2001. (See LUST file #34-96-0148 for more information). A total of 199.71 tons of PCS were excavated from around the hydraulic lift in service bay 6 (counting north to south) at the end of May 2011 and shipped to the Hillsboro

**HINKEL TIRE SERVICE, DEX #7020 (Continued)** **U003115518**

Landfill for disposal. Confirmation sampling found no petroleum remaining in the soil and only 47.3 ppb diesel in the groundwater. Additional sampling in August 2011 found 2,740 ppm diesel and 1,160 ppm heavier oils in soil adjacent to the lift in service bay 8, along with 43.2 ppb diesel in the groundwater. The residual contamination is acceptable under DEQ's risk-based cleanup standards, so no further action was deemed to be necessary.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

| Decode for NarcdID: | Contamination |
| NARR Comments: | (2/25/00 JMW/SAP) After review of UST decommissioning at this site, DEQ concluded that non-petroleum contamination remained in on-site soil. Up to 3.1 ppm acetone was detected in soils around the UST piping. UST file closed, site referred to Site Assessment. |

Decode for NarcdID: Remedial Action
NARR Comments: (2/25/00 MTP/SAP) A 1,300-gallon acetone UST was decommissioned by removal at the site in August 1993. Does not appear to pose an environmental threat. Acetone may be a lab contaminant. They apparently entered a letter agreement with DEQ for petroleum tank closure. If they contact DEQ in the future and request action, DEQ will pursue as low priority unless Air Products and Chemicals enters the ICP or VCP.

NARR Comments: On March 7, 1984, DEQ investigated a complaint at Pacific Fireplace Furnishings, Inc.'s former plant site at 20210 SW Teton Avenue in Tualatin, and discovered three empty abandoned 55-gallon drums that had contained hazardous wastes. One drum had a hazardous warning label with Pacific Fireplace Furnishings marked as the generator. PFFI went into Chapter 7 Bankruptcy in April 1987. At that time, First Interstate Commercial Corp. took over all assets of the corporation. The company was operated by FICC until approximately July 1987, when the assets were sold to a newly formed corporation named Pacific Fireplace Inc., owned by a number of California investors. PFI closed its doors as of 1/11/88. Pacific Fireplace Furnishings is no longer in existence.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Decode for NarcdID: Contamination
NARR Comments: (6/17/92 RP/NWR) The drainpipe from a steam cleaning pad discharged wastewater containing oil-based machining fluid and perhaps other solvents onto the surface of a natural seep or drainage area. The total discharge is estimated at 28,000 gallons, resulting in soil and groundwater contamination (groundwater sampling was limited).

NARR Comments: (5/28/02 JMW/SAS) Owner submitted an Intent to Participate in DEQ's Independent Cleanup Program in March 2002. DEQ sent a Letter Agreement to the owner on March 12, 2002. The Letter Agreement was not returned, and the site dropped out of the ICP. Contamination documented in the materials initially submitted to DEQ needs follow-up investigation. (12/9/02 MJM/ICP) DEQ received signed ICP Agreement. DEQ reviewed site environmental reports in September 2002 and requested some additional testing and the preparation of a Beneficial Water Use Determination. Owner provided this additional information to DEQ in November 2002. DEQ issued a No Further Action (NFA) letter for the site on December 5, 2002.

Decode for NarcdID: Remedial Action
NARR Comments: (4/9/1998 SAM/VCP) Based on the investigative reports submitted for the Wetland Mitigation Area and vicinity properties (East Leveton Property, West Leveton Property, Contractor's Inc. and Crystal Lite) dating from 1993 to December 1997, DEQ has determined: TCE contamination and its associated degradation products are likely the result of migration from off-site releases into the Wetland Mitigation Area. No releases of hazardous substances have occurred from on-site sources. Based on this information, No Further Action (NFA) is required of the current property owners, or future owners or operators at the site, unless additional information becomes available indicating that DEQ's re-evaluation is warranted.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

NARR Comments: The Minute Man Cleaners Site is currently an active dry cleaner facility within the Tualatin K-Mart shopping center. Minute Man Cleaners has operated as a tenant since at least the mid-1990s and was historically a small-quantity generator of hazardous waste from spent cleaning solvents. Currently Minute Man Cleaners is not using tetrachloroethene (PCE) or trichloroethene (TCE), but a petroleum based solvent in their operations. Investigations indentified limited chlorinated solvent contamination in soil, soil-gas and shallow groundwater at the Site primarily near the dry cleaner. The detected concentrations are below applicable exposure pathway levels and are protective of human health and the environment.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal NPL (Superfund) sites***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/25/2022

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2021

***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2021
Date Data Arrived at EDR: 09/15/2021

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Data Release Frequency: Annually

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A

Data Release Frequency: No Update Planned

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 01/01/2019
Date Data Arrived at EDR: 10/29/2021
Date Made Active in Reports: 01/19/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

**USGS TOPOGRAPHIC MAP**

| | |
|---|---|
| Target Property Map: | 14878100 BEAVERTON, OR |
| Version Date: | 2020 |
| | |
| South Map: | 14878154 SHERWOOD, OR |
| Version Date: | 2020 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

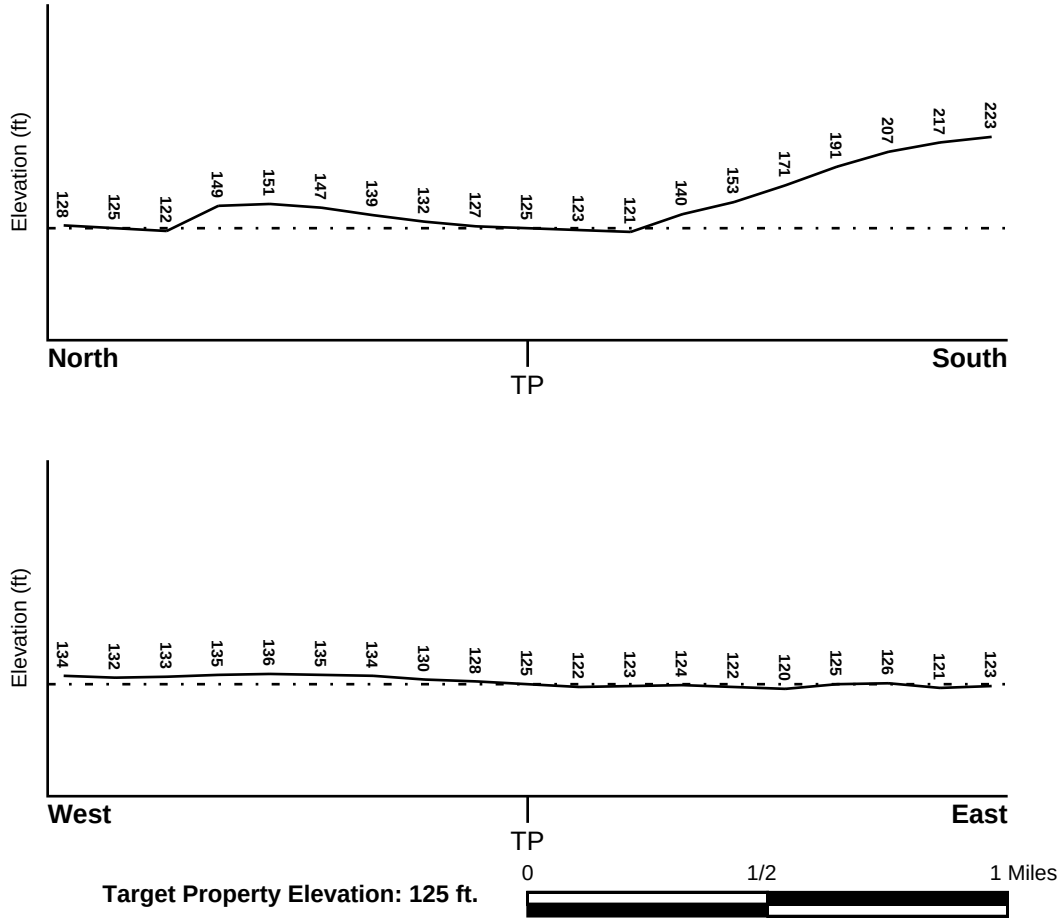

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General SSE

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

**Target Property Elevation: 125 ft.**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**FEMA FLOOD ZONE**

| Flood Plain Panel at Target Property | FEMA Source Type |
|---|---|
| 4102380519C | FEMA FIRM Flood data |

| Additional Panels in search area: | FEMA Source Type |
|---|---|
| 4102760518C | FEMA FIRM Flood data |
| 41047C0050G | FEMA FIRM Flood data |

**NATIONAL WETLAND INVENTORY**

| NWI Quad at Target Property | NWI Electronic Data Coverage |
|---|---|
| BEAVERTON | YES - refer to the Overview Map and Detail Map |

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| MAP ID | LOCATION FROM TP | GENERAL DIRECTION GROUNDWATER FLOW |
|---|---|---|
| Not Reported | | |

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**ROCK STRATIGRAPHIC UNIT**

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

---

**Soil Map ID: 1**

Soil Component Name: Cove

Soil Surface Texture: silty clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Component Name: Hillsboro

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Boundary | | | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 14 inches | loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141 Min: 42 | Max: 6 Min: 5.6 |
| 2 | 14 inches | 48 inches | loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141 Min: 42 | Max: 6 Min: 5.6 |
| 3 | 48 inches | 57 inches | fine sandy loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141 Min: 42 | Max: 6 Min: 5.6 |
| 4 | 57 inches | 81 inches | fine sand | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 141 Min: 42 | Max: 6 Min: 5.6 |

---

**Soil Map ID: 5**

Soil Component Name: Cove

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

| Soil Layer Information | | | | | | | |
|---|---|---|---|---|---|---|---|

| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 7 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay. | Max: 0.42<br>Min: 0.01 | Max: 7.3<br>Min: 6.1 |
| 2 | 7 inches | 59 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay. | Max: 0.42<br>Min: 0.01 | Max: 7.3<br>Min: 6.1 |

---

**Soil Map ID: 6**

Soil Component Name: Woodburn

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 76 inches

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data
Source: Oregon Geospatial Enterprise Office
Telephone: 503-378-2166

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Data
Source: Department of Water Resources
Telephone: 503-986-0843

## OTHER STATE DATABASE INFORMATION

Oil and Gas Well Locations
Source: Department of Geology and Mineral Industries
Telephone: 971-673-1540
A listing of oil and gas well locations in the state.

RADON

State Database: OR Radon
Source: Oregon Health Services
Telephone: 503-731-4272
Radon Levels in Orgeon

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey
