

# Technical Memorandum

To: Mark Pugh, Oregon DEQ

From: Krysta Krippaehne-Stein  
Kathy Lombardi, PE

Date: December 20, 2024

Project No.: M0496.02.004

Re: Mill E Demolition Completion Summary

---

This memorandum summarizes demolition of the former Blue Heron Mill E building complex (Mill E Complex), located at the former Blue Heron paper mill site at 419 and 427 Main Street, Oregon City, Oregon (the Property) (Figure 1-1), and was prepared by Maul Foster & Alongi, Inc. for the owner of the Property, The Confederated Tribes of Grand Ronde. Mill E Complex was located at the southwest end of the Property, adjacent to a constructed lagoon on the Willamette River (Figure 1-2). Work was completed per the Removal Action Plan (RAP) dated August 27, 2021.

## Project Description

The Mill E Complex was a wood, steel, masonry, and concrete structure. Exterior walls were typically steel columns with horizontal steel girts and steel siding. Interior steel columns supported cast-in-place concrete floors and a wood or steel roof structure. Concrete floors at the second level were supported by steel beams. The building is primarily one or two stories high, with the exception being the Mill Offices area at the southwest corner, which was previously five stories.

On December 5, 2020, a fire damaged Building 2 of the Mill E Complex, leaving a portion of the building unsafe to access. The main fire damage to the building occurred at the Mill Offices area. The upper floors of the mill offices were destroyed by the fire and collapsed onto the second floor; burned materials were confined to the mill offices.

## Permits

Work was performed under building and demolition permit (No. B-DEMO-21-00009) issued by the City of Oregon City. A copy of the permit is included as Attachment 1. No other permits were required.

## Demolition Summary

Demolition was performed from September 2021 to January 2022 by Elder Demolition (Contractor) in accordance with the RAP. Details of the demolition are described below. A photo log of demolition activities is included as Attachment 2.

## Hazardous Building Materials Abatement

Hazardous building materials (HBM) were removed from accessible areas before structural demolition started. Portions of the structure were not accessible for initial abatement due to dangerous conditions resultant of fire damage. IRS Environmental completed remediation of asbestos at the site from September through November of 2021. Materials abated included cement asbestos board (CAB), built up roofing, and miscellaneous fire debris. Fire debris was not tested but was assumed to contain asbestos for the purposes of handling and disposal.

Materials were packaged according to Oregon Administrative Rules 340, Division 248 in double 6-mil bags or loaded to a 40 cubic yard roll-off box and enclosed in a similar 6-mil plastic membrane. Sealed packages were labeled with an asbestos hazard warning label, then disposed offsite at Waste Management Hillsboro Landfill. Asbestos waste shipment report forms (ASN 4) are included in Attachment 3.

## General Demolition

Once accessible HBM was removed, the Contractor removed structures generally as described in the RAP. Non-hazardous materials were either loaded to 40 cubic yard roll-off containers and collected by Oregon City Garbage for offsite disposal or salvaged for recycling. The Contractor salvaged structural timbers from portions of the building that were stored onsite in a covered area for potential reuse in future projects at the site. Disposal records for demolition materials are included in Attachment 4.

The Contractor implemented and maintained stormwater best management practices and dust control throughout the project. Floating wood panels were installed in the lagoon adjacent to work areas to prevent debris from entering the water.

## Site Cleanup

Once demolition was complete, the Contractor removed all debris and swept the concrete building slab and surrounding work areas to remove small debris and dust. Steel plates were placed over small openings in the slab and marked with high-visibility spray paint. A 6-foot chain link fence was installed along the slab edge bordering the lagoon and around larger openings in the slab. Photos of the final site condition are included in Attachment 2.

## Issues and Changes

There were no noted issues or changes from the RAP during demolition.
