*Re: Response to ODEQ March 6, 2025, email and Letter Requesting Additional Modeling
"Protocol and Workplan" Information from Reworld Marion, Inc.*

Dear Ms. DeGagne,

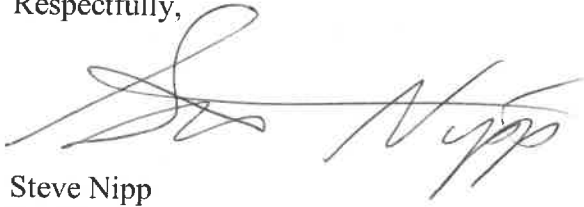

As you know, the Reworld Marion facility has been working with the Oregon Department of Environmental Quality (ODEQ), Cleaner Air Oregon (CAO) team to fulfil requirements of the CAO program. The Reworld Marion site has completed and has an approved Emission Inventory, including actual emissions measured under the CAO program and those actual emissions with safety factors applied that are designed to ensure potential CAO additional emission permit requirements could always be met. Reworld Marion has been in the process of completing a Modeling Protocol and Health Risk Assessment (HRA) Workplan for the CAO Program.

In January 2025, the facility stopped receiving and processing waste and shutdown operations in order to evaluate the future operational status of the facility.

Reworld has recently determined that a sale of the facility will not occur and that operations will be permanently shut down. As such, we will be commencing the process of surrendering our ODEQ permits. Reworld Marion will now prepare for both the decommissioning and demolition of the facility based on our current land use requirements. Because of this, we will be withdrawing from the CAO program.

We appreciate the efforts that ODEQ, CAO staff, have made while working with Reworld during this process. Please let me know if you have any questions.

Respectfully,
