RE: 2020 Annual Progress & Performance Report, Troutdale Gravel Aquifer, Boeing Portland Facility, Gresham, Oregon. ECSI #13

Dear Ms. Taege,

The Oregon Department of Environmental Quality (DEQ) has reviewed the document entitled *2020 Annual Progress & Performance Report, Troutdale Gravel Aquifer, Boeing Portland Facility*, dated March 16, 2021. This report was prepared for The Boeing Company by Landau Associates.

DEQ approves the document as presented and approves recommendations proposed in Section 6.0. The approved recommendations include decreasing the well gauging and VOC and bioremediation parameter sampling intervals from quarterly to semi-annually for BOP-9(i); and discontinuing gauging and sampling of BOP-61(ds) for the Troutdale Gravel Aquifer Remedy (while leaving this well available for East Multnomah County Troutdale Sandstone Aquifer Remedy monitoring and sampling).

DEQ appreciates the descriptions and analyses of aerobic and anaerobic in-situ bioremediation findings and the iterative approach used to meet remediation objectives.

Please feel free to call me with questions.

Sincerely,

Kenneth Thiessen, RG/CEG
