Summary of Key Findings

This summary is not intended as a stand-alone document and must be evaluated in context with the entire document.

At the request of City of Eugene, Maul Foster & Alongi, Inc. (MFA), conducted a Phase I environmental site assessment (ESA) of the site at Tax Lot 1703322405300 (the Property). The purpose of the Phase I ESA is to identify, to the extent reasonably feasible, recognized environmental conditions (RECs), per ASTM E1527-21. The findings are summarized as follows:

Property Summary

The approximately 7.13-acre Property is located in township 17 south, range 3 west, section 32 of the Willamette Meridian, on tax lot 1703322405300 (see Figures 1-1 and 2-1). The Property is currently vacant consisting only of unpaved roads, paved pathways for both bikes and walking, grass fields, and trees. Three areas of pavement were noted that did not have an obvious current use. Historical uses of the Property indicated industrial uses as early as 1900 for gravel and concrete production, Then between 1975 and 1999, a utility company used the property for storage and ancillary activities for their nearby plants. These industrial uses impacted the Property and environmental assessment, and cleanup activities have taken place at the Property between 1984 and 2006. DEQ has issued multiple No Further Action (NFA) determinations for the Property which are discussed in the report.

Recognized Environmental Conditions

MFA did not identify any RECs for the Property.

Historical Recognized Environmental Conditions

MFA did not identify any historical RECs on the Property.

Controlled Recognized Environmental Conditions

MFA identified the following controlled RECs (CRECs):

- The DEQ files indicate that residual contamination is present on the Property below applicable regulatory screening levels for site receptors. Deed restrictions requiring the use of a Site Management Plan, and the presence of residual contamination are considered CRECs for the Property.

De minimis Conditions

MFA did not identify any de minimis conditions on the Property.

© 2025 Maul Foster & Alongi, Inc.

Data Gaps

MFA identified the following data gaps:

- During the site visit, a limited portion of the eastern property boundary along Mill Race was inaccessible due to vegetation and the steepness of the ground surface. Observations were made from the top of the bank. This is considered a non-significant data gap.
- A site, with an unknown boundary, believed to be adjacent to the east-southeast of the Property has an unassigned and open leaking underground storage tank (LUST) file. This status is likely because the site was initially administered through the DEQ cleanup program and not the LUST program. An approximately 6,500-gallon diesel underground storage tank (UST) was decommissioned by removal in 2010, impacted soils were excavated and disposed of off-site, and subsurface explorations were completed to sample soil and groundwater. Chemical concentrations from laboratory testing results were identified in several locations, however, the report noted that all concentrations were below applicable screening levels that were in use in 2011 and an NFA designation was requested.

  In September 2025, MFA conducted subsequent screening of the report data against current applicable screening levels. The results of this screening indicated that two of the samples collected at this site during tank decommissioning exceeded current screening levels for direct soil exposure for the construction worker pathway. The exact location of this site is unknown. GPS coordinates are not available, and location documentation is vague or conflicting. It is unknown if this site is located within the portion of the Parcel P-B property included in this assessment. The unknown location of this site and the open LUST file are considered a significant data gap.

Conclusions

MFA has conducted a Phase I ESA of Tax Lot 1703322405300, in conformance with the scope and limitations of ASTM E1527-21.

The Phase I ESA revealed no RECs or HRECs in connection with the Property. The following findings were identified:

CRECs

- The DEQ files indicate that residual contamination is present on the Property below applicable screening levels for site receptors. Deed restrictions requiring the use of a Site Management Plan, and the presence of residual contamination are considered CRECs for the Property.

Data Gaps

- During the site visit, a limited portion of the eastern property boundary along Mill Race was inaccessible due to vegetation and the steepness of the ground surface. Observations were made from the top of the bank. This is considered a non-significant data gap.
- A site, with an unknown boundary, believed to be adjacent to the east-southeast of the Property has an unassigned and open leaking underground storage tank (LUST) file. This status is likely because the site was initially administered through the DEQ cleanup program and not the LUST program. An approximately 6,500-gallon diesel underground storage tank (UST) was decommissioned by removal in 2010, impacted soils were excavated and disposed of off-site, and subsurface explorations were completed to sample soil and groundwater. Chemical

concentrations from laboratory testing results were identified in several locations, however, the report noted that all concentrations were below applicable screening levels that were in use in 2011 and an NFA designation was requested.

In September 2025, MFA conducted subsequent screening of the report data against current applicable screening levels. The results of this screening indicated that two of the samples collected at this site during tank decommissioning exceeded current screening levels for direct soil exposure for the construction worker pathway. The exact location of this site is unknown. GPS coordinates are not available, and location documentation is vague or conflicting. It is unknown if this site is located within the portion of the Parcel P-B property included in this assessment. The unknown location of this site and the open LUST file are considered a significant data gap.

1 Introduction

1.1 Purpose

On behalf of City of Eugene, Maul Foster & Alongi, Inc., conducted a Phase I environmental site assessment (ESA) of the property located at Tax Lot 1703322405300 (the Property) (see Figure 1-1). MFA conducted the Phase I ESA in accordance with the requirements of the ASTM International Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21). In addition, this Phase I ESA report was prepared to support the Bona Fide Prospective Purchaser defense (Comprehensive Environmental Response, Compensation and Liability Act [CERCLA] § 101(4)), as amended by the Superfund Amendments and Reauthorization Act of 1986 and the Small Business Liability Relief and Brownfields Revitalization Act of 2002, 42 US Code §9601 et seq. and the innocent purchaser defense (CERCLA § 101(35)(A)(i)), if applicable. The Phase I ESA generally complies with 40 Code of Federal Regulations (CFR) Part 312, adopted by the U.S. Environmental Protection Agency (EPA) on November 5, 2005, and effective November 1, 2006. These rules identify the standards and practices for all appropriate inquiries (AAI) under CERCLA § 101(35)(B). The purpose of the Phase I ESA is to identify, to the extent reasonably feasible, recognized environmental conditions (RECs). ASTM E1527-21 defines RECs as the following:

> (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

RECs include the presence of hazardous substances or petroleum products even under conditions that comply with applicable environmental laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

1.2 Scope of Work

The scope of work, as outlined in ASTM E1527-21, included four components—site reconnaissance, records review, interviews, and preparation of a report—each of which is briefly described below.

1.2.1 Site Reconnaissance

On July 17, 2025, Connor Anderson of MFA conducted reconnaissance of the Property to look for evidence of RECs. Section 2 documents the results of this site visit.

1.2.2 Records Review

MFA reviewed the following records:

© 2025 Maul Foster & Alongi, Inc.

- State and federal agency database records as described in Section 4.1.
- Aerial photographs of the Property as described in Section 4.3.1.
- Historical topographic maps related to the Property. See Section 4.3.2.
- Sanborn Fire Insurance Maps (SFIMs) for the Property. See Section 4.3.3.
- Historical city directories for the Property. See Section 4.3.4.
- Prior site assessment reports for the Property. See Section 4.4.

MFA used the U.S. Geological Survey 7.5-minute quadrangle map (2020) for Eugene East as the physical setting source (see Figure 1-1).

1.2.3 Interviews

To obtain site-specific information regarding the Property, MFA completed interviews of representatives of the current owners, and state and local government officials for information about the Property. Section 5 of this report discusses the interviews MFA completed.

1.2.4 Report Preparation

MFA prepared this report in accordance with ASTM E1527-21. The recommended format was adjusted to improve usability and comprehension. Consistent with this ASTM guidance document, the following issues were not evaluated during the Phase I ESA: asbestos-containing materials unrelated to releases into the environment; biological agents; cultural and historic resources; ecological resources; endangered species; health and safety; indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; industrial hygiene; lead-based paint unrelated to releases into the environment; lead in drinking water; mold or microbial growth conditions; building materials containing polychlorinated biphenyls (PCBs) (for example, interior fluorescent light ballasts, paint, and caulk); naturally occurring radon; regulatory compliance; substances not defined as hazardous substances (including some substances sometimes generally referred to as emerging contaminants) unless or until such substances are classified as a CERCLA hazardous substance; and wetlands. Fluorescent light ballasts, caulk, paint, and other materials that may contain PCBs and that are located inside and/or are part of the building or structure are outside the scope of this ESA.

1.3 Presumed Viability

To qualify for one of the threshold criteria for satisfying the landowner liability protections (LLPs) to CERCLA liability, the AAI components listed below must be conducted or updated within 180 days of and prior to the date of acquisition of the Property, and all other components of AAI must be conducted within one year prior to the date of acquisition of the Property. The date of the report generally does not represent the date the individual components of AAI were completed and should not be used when evaluating compliance with the 180-day or one-year AAI requirements. Based on the earliest conducted AAI component noted below, this assessment is presumed to be viable until January 13, 2026.

- Interviews with owners, operators, and occupants—July 24, 2025.
- Searches for recorded environmental cleanup liens (a user responsibility).

© 2025 Maul Foster & Alongi, Inc.

- Reviews of federal, tribal, state, and local government records—July 23, 2025.
- Visual inspections of the Property and of adjoining properties—July 17, 2025.
- The declaration by the environmental professional responsible for the assessment—per the date on the cover of this report.

1.4 Significant Assumptions

Significant assumptions include any assumptions made during the Phase I ESA process that have the potential to impact the opinions put forth in this report.

1.5 Limitations and Exceptions

Any opinions and recommendations presented in this Phase I ESA report apply to conditions that existed at the Property when MFA performed the services. No environmental assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of a Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the existence of RECs in connection with a property.

MFA conducted AAI regarding the potential for RECs at the Property. ASTM E1527-21 defines AAI as:

> inquiry constituting "all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial or customary practice" as defined in CERCLA, 42 U.S.C. § 9601(35)(B) and 40 C.F.R. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the LLPs to CERCLA liability (42 U.S.C §§ 9601(35)(A) & (B), § 9607(b)(3), § 9607(q), and § 9607(r)), assuming compliance with other elements of the defense.

MFA is not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of services and does not warrant the accuracy of information supplied by others or the use of segregated portions of this report.

Identification of activity and use limitations or findings based on implementation of required controls does not imply evaluation or confirmation of the adequacy, implementation, or continued effectiveness of the controls.

1.6 Special Terms and Conditions

No special terms or conditions apply to this Phase I ESA other than those set forth in ASTM E1527-21, CERCLA 101(35)B(iii), and 40 CFR Part 312.

1.7 Deviations

There were no deviations from ASTM E1527-21, CERCLA 101(35)B(iii), and 40 CFR Part 312.

1.8 Additional Services

MFA performed no services outside the scope of ASTM E1527-21 for Phase I ESAs.

© 2025 Maul Foster & Alongi, Inc.

1.9 Qualifications of Responsible Environmental Professionals

Environmental professionals experienced in performing ESAs and familiar with ASTM E1527-21 conducted the Phase I ESA of the Property. Résumés of the environmental professionals involved in performing the Phase I ESA are provided in Appendix A.

1.10 Reliance

For the purposes of the contractual relationship, the term Client refers to the City of Eugene, which has sole permission to rely on this report. ASTM E1527-21 defines the user as the party seeking to use Practice E1527 to complete an ESA of the Property. The Client is the user of this Phase I ESA. At the request of the Client, the University of Oregon may also rely upon the report.

2 Current and Historical Site Setting and Property Reconnaissance

2.1 Site Setting

2.1.1 Property Location and Legal Description

The approximately 7.13-acre Property is located at tax lot 1703322405300, in township 17 south, range 3 west, section 32 of the Willamette Meridian, on tax lot 1703322405300 (see Figures 1-1 and 2-1).

2.1.2 Site and Vicinity Characteristics

According to the Eugene Property Explorer (Eugene 2025), the Property is currently zoned S-RP Riverfront Park Special Area. This zoning as defined in City Code 9.3700, the zoning allows for industrial, commercial, or general office uses when in connection to research or education functions. The Property is currently developed as open space and has walking and biking paths through the Property to connect it with parkland adjacent to the Willamette River.

2.1.3 Current Uses of Property

The Property is currently vacant consisting only of unpaved roads, paved pathways for both bikes and walking, grass fields, and trees. Three areas of pavement were noted that did not have an obvious current use.

2.1.4 Current Uses of Adjoining Properties

The following border the Property:

© 2025 Maul Foster & Alongi, Inc.

- North—the Willamette River
- South—Railroad tracks, followed by a parking lot and motel, then Franklin Boulevard.
- East—Additional Riverfront Research parcels including Millrace, Northern, and Silva parcels. The parcels appear to largely be open space including bike and walking paths, undeveloped grassland, and vegetated Mill Race outlet to the Willamette River.
- West—Downtown riverfront parking lot followed by multiple new development buildings.

2.1.5 Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

In general, the Property is level at an elevation of about 428 feet above mean sea level, except along the bank of the Willamette River, north of the property where the ground surface steeply slopes down to the river elevation.

Environmental reports in the vicinity of the Property generally indicate that groundwater depth is approximately 10 to 20 feet below ground surface (bgs) with a flow gradient northwesterly toward the Willamette River (DEQ 2010). According to the Environmental Data Resources, Inc. (EDR), report, the dominant soil type in the vicinity of the Property is Newberg fine sandy loam, which is well drained with moderate infiltration rates.

2.2 Site Reconnaissance Visit

Connor Anderson conducted a site reconnaissance visit on July 17, 2025, to obtain information indicating the presence of RECs in connection with the Property. During the site visit, Connor Andrson visually and physically observed the Property for evidence of the presence of RECs, including evidence of underground storage tanks (USTs) and aboveground storage tanks (ASTs), petroleum products, transformers containing PCBs, and the use, storage, or disposal of hazardous materials. Connor Anderson also observed the Property and adjacent properties from public thoroughfares. There were no buildings present on the Property. Photographs taken during this site visit and during a prior site visit in August 2024 are provided in Appendix B.

2.2.1 Limiting Conditions

Limiting conditions included the inability to access the banks along the Mill Race that makes up the eastern boundary of the Property. Observations were made from the top of the bank, however, vegetation and steepness of the ground surface limited completed access. This is considered a non-significant data gap.

2.3 Interior and Exterior Observations

Feature	Observed on the Property		Notes
	Yes	No	
Structures		X	No buildings were present on the Property, however, three paved areas were observed. The purpose of these areas or their current use were not identified.

© 2025 Maul Foster & Alongi, Inc.

Feature	Observed on the Property		Notes
	Yes	No	
Roads	X		The Property is accessed from 8th Avenue via Hilyard Street. There is one unpaved gravel road along the southern portion of the Property following the railroad line and a paved pedestrian and bicycle pathway is present along the northern portion of the Property.
Potable water supply		X	
Sewage-disposal system		X	
Hazardous substances and petroleum products in connection with identified uses		X	
Storage tanks		X	
Odors		X	
Pools of liquid		X	
Drums, totes, and intermediate bulk containers		X	
Hazardous-substance and petroleum-product containers not connected with identified uses		X	
Unidentified-substance containers		X	
Items potentially containing polychlorinated biphenyls		X	
Stains or corrosion		X	
Drains or sumps		X	
Pits, ponds, or lagoons		X	
Stained soil or pavement		X	
Stressed vegetation		X	
Solid waste	X		Refuse was noted in several locations throughout the Property. These were generally individual items of litter and are not considered a REC. A trash can was also noted in a central location on the Property which is maintained by the University of Oregon maintenance staff (see Section 5.1). Significant refuse has previously been noted on adjacent properties to the south, by the motel building, and was determined to be unlikely to impact the Property.
Wastewater		X	
Stormwater		X	
Wells		X	
Septic systems		X	

© 2025 Maul Foster & Alongi, Inc.

2.4 Historical Setting

2.4.1 Past Uses of Property

An Oregon Department of Environmental Quality (DEQ) staff report summarized the historical uses of the Property. The report indicated that as early as 1900, Eugene Sand and Gravel owned and operated at the Property (DEQ 2010). Site activities included gravel screening, sediment settling, concrete batching, and manufacturing pre-cast concrete products. The Property was then purchased by the University of Oregon in 1968. The University of Oregon cleared the Property prior to leasing to Eugene Water and Electric Board (EWEB). The report indicates that EWEB leased the Property between 1975 and June 1990. EWEB is believed to have stored transformers and utility poles and handled and used waste oils in the process of constructing concrete utility vaults. An adjacent manufactured gas plant (MGP) to the west of the Property may have had some operations under the western edge of the Property. The MGP is discussed further in Sections 2.2.6 and 4.2.2.

2.4.2 Past Uses of Adjoining and Nearby Properties

The Property is bounded to the north by the Willamette River and south by a Union Pacific Railroad (UPRR) and these uses have not changed. Past adjacent uses include the Eugene MGP (see Section 4.2.2), EWEB Willamette Substation, other EWEB related facilities, and commercial and retail uses along Franklin Boulevard and East Broadway. Several additional parcels of the larger Riverfront Research Park properties are present to the southeast and east. DEQ has indicated that the parcels have largely been redeveloped and that each parcel has prior industrial uses.

3 Records Review

3.1 Standard Environmental Record Sources

MFA contracted EDR to search state and federal agency record sources for information regarding the Property and sites near the Property. MFA searched all databases using the standard approximate minimum search distances specified in ASTM E1527-21 or the search distances used by EDR, if those are greater. The following table shows the sites identified by this database search. MFA also researched a list of orphan sites with inadequate address information for mapping; orphan sites found to be within the appropriate search radii are also included in this table. The EDR-generated report is provided in Appendix C.

Databases Searched	Sites Listed	
	EDR GeoCheck	Orphan
Approximate Minimum Search Distance: 1 Mile from Property Boundary		
U.S. Environmental Protection Agency (EPA) National Priorities List (NPL) Sites	0	0
Federal Resource Conservation and Recovery Act (RCRA) Facilities Undergoing Corrective Action	0	0

© 2025 Maul Foster & Alongi, Inc.

Databases Searched	Sites Listed	
	EDR GeoCheck	Orphan
Oregon Department of Environmental Quality (DEQ) Environmental Cleanup Site Information (ECSI)	29	0
State and/or Tribal Equivalent NPL – Confirmed Release List (CRL)	4	0
Approximate Minimum Search Distance: 0.5 Miles from Property Boundary		
Superfund Enterprise Management System (SEMS) or EPA's Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)	0	0
SEMS Archive or CERCLA No Further Remedial Action Planned	1	0
Federal Delisted NPL	0	0
RCRA Information System Non-CORRACTS Treatment, Storage, and Disposal	0	0
Federal CERCLA Removals and CERCLA Orders	0	0
State and/or Tribal Leaking Underground Storage Tank (LUST)	66	4
State and/or Tribal Voluntary Cleanup Program (VCP) Sites	8	0
State and/or Tribal Brownfield Sites	3	0
State and/or Tribal Landfill and Solid Waste Disposal Sites	1	0
Federal Engineering or Institutional Control Sites	0	0
State and/or Tribal Engineering or Institutional Control Sites	3	0
Approximate Minimum Search Distance: 0.25 Miles from Property Boundary		
EPA RCRA Large-Quantity Generator	0	0
EPA RCRA Small-Quantity Generator	0	0
State and/or Tribal Underground Storage Tank (UST) Database	9	2
State and/or Tribal Aboveground Storage Tank (AST) Database	3	0
Approximate Minimum Search Distance: Target Property		
Federal Emergency Response Notification System	0	0
Underground Injection Control Program	0	0

The Property was identified in the Environmental Cleanup Site Information (ECSI) and LUST databases. The Property is connected to a DEQ cleanup file (ECSI 1018) known as the "UO Riverfront Research" property. The Property is discussed further in Section 4.2.1.

Based on the review of EDR's report, MFA identified the following sites for further review of their potential to impact the Property. Sites requiring research in regulatory files are discussed further in Section 4.2.

- Eugene MGP – 700 Block of E 8th Avenue, Eugene, Oregon. This site is located adjacent to the west of the Property. This site as listed in EDR's proprietary MGP database, ECSI, CRL, Engineering Controls, Institutional Controls, Voluntary Cleanup program (VCP), and RCRA Non-Generator databases. This site is discussed further in Section 4.2.2.
- UPRR Eugene – Hilyard Street at Franklin Boulevard, Eugene, Oregon. This site is located approximately 40 feet southwest of the Property. The site was located in the ECSI and FINDS databases. This site is discussed further in Section 4.2.3.
- Eugene Crystal Ice and Storage – 703 East Broadway, Eugene, Oregon. This site is approximately 90 feet south-southwest of the Property. This site is listed in the UST Finder, LUST, UST, UST Finder Release, and Historic Automotive databases. Other addresses also associated with the site include 755, 777, and 787 East Broadway. The site is discussed further in Section 4.2.4.

© 2025 Maul Foster & Alongi, Inc.

- Senica Sawmill – 90201 Highway 99N, Eugene, Oregon. This site appears to be mislocated. Researching this location appears to indicate the site is over 6 miles from the Property. The site was located in the UST and LUST databases, however, based on distance this site does not appear to pose a risk to the Property.
- EWEB Utility Trench – Adjacent to the south of the Property. The distance between this area and the Property is approximately 130 feet. The listing was found in the LUST database and is discussed further in Section 4.2.5.
- Café Yumm – 730 East Boadway, Eugene, Oregon. This site is approximately 350 feet southwest of the Property. This site was located in the ECSI and VCP databases. This site is discussed further in Section 4.2.6.
- Laurita Ruth/Yord Dee Property – 901-933 Franklin Boulevard, Eugene, Oregon. The site is approximately 150 feet south-southeast of the Property. Listings for this site were located in the ECSI, VCP, US Brownfields, and LUST databases. The site is discussed further in Section 4.2.7.
- University of Oregon site at 1155 Franklin Boulevard, Eugene, Oregon. This site is located approximately 525 feet southeast of the Property, across Mill Race. The site is located in the AST, Hazardous Substance Information Survey, and National Pollutant Discharge Elimination System databases. The listings are associated with ASTs between 500-999 gallons to hold corrosive liquids and wet irritants. The HSIS listing indicates a number of potentially hazardous substances are present in the Central Power Station, including petroleum products and corrosives. The National Pollutant Discharge Elimination System listing is connected with a stormwater construction project in 2015. None of the listings were connected to known or suspected releases or environmental investigations. Based on the nature of the listings, the distance, and the separation of the site from the Property by Mill Race, this site does not appear to pose a risk to the Property.
- Fill-Up Stations Inc./Chapman/Busterud – 782 East Boardway, Eugene, Oregon. This site is located approximately 335 feet south-southwest of the Property. The site was listed in the UST, UST Finder, and Historical Automotive databases. The site is discussed further in Section 4.2.8
- Former Auto Station – 947 Franklin Boulevard, Eugene, Oregon. The site is located approximately 400 feet southeast of the Property and separated from the Property by Mill Race. This site is located in the LUST, UST Finder databases. This site is discussed further in Section 4.2.9.

The remaining sites have no reported releases, have reported that cleanup is complete, have received NFA determinations from DEQ, or have little potential to impact the Property, based on their proximity or elevation in relation to the Property.

3.2 Regulatory File Review

3.2.1 The Property – University of Oregon Riverfront Research, ECSI 1018

According to DEQ files, between 1984 and 2006 the University of Oregon completed investigation and cleanup activities at the Property under a VCP with DEQ (DEQ 2010). The portions of the Property that were assessed are known as P-A and P-B (see Figure 2-1). The P-A property was then subdivided into the upland portion and the riverbank portions for decision making during the cleanup

© 2025 Maul Foster & Alongi, Inc.

and assessments. The P-B portion of the Property had previously been issued an NFA determination in 2001.

On October 2010, the P-A (Upland) site was issued a conditional NFA determination for the upland portion of the Property (DEQ 2010). This NFA indicated that the upland portion of the site was adequately assessed and that contamination in the soil and groundwater at the site was known and concentrations were below applicable regulatory screening levels for complete pathways at the site, with the exception of groundwater exposure for construction and excavation workers. The 2010 Conditional NFA letter stated the following facts:

- Historical contamination was the result of petroleum products and byproducts of the adjacent MGP site impacting soil and groundwater at the Property.
- Impacted shallow soils were removed from the western portion of the Property, however, some residual contamination is present below screening levels for construction and excavation worker exposure.
- Groundwater monitoring was completed at the Property, and results indicated that contamination is limited to the western portion of the Property.
- Groundwater contamination at the Property was believed to only pose a risk to future construction and excavation workers as no other complete pathways had screening level exceedance.
- The contamination exposure could be controlled through implementation of a Site Management Plan, to require safe work practices for future construction and excavation work.
- The Property owner would be required to have future construction or excavation work at the Property conform to the requirements of the Site Management Plan.
- The Property would continue to be listed in DEQ's inventory of confirmed release sites as long as residual contamination is present exceeding screening levels for complete exposure pathways or as long as institutional or engineering controls are required at the Property.

MFA performed an updated screening of available data on the P-A (Upland) site to evaluate if conclusions in the DEQ NFA were still appropriate. There were a few new exceedances based on current relevant DEQ RBCs, however those exceedances would also be controlled through implementation of the Site Management Plan.

In April 2015, a partial NFA was issued for the P-A (Riverbank) Site (DEQ 2015). The NFA determination letter indicated that additional ecological receptors were included in the assessment of residual contamination. This additional review was performed to ensure that no additional actions were required for the cleanup to be considered protective of the environment. The determination indicated that the remaining contamination was within acceptable risk-based determinations for surface water or riverbank sediment ecological receptors.

The DEQ files indicate that residual contamination is present on the Property, however, at the time of the NFA determinations in 2001, 2010, and 2015, the known contaminant was below applicable screening levels for site receptors (DEQ 2025a). Deed restrictions requiring the use of a Site Management Plan, and the presence of residual contamination are considered controlled recognized environmental conditions (CRECs) for the Property.

© 2025 Maul Foster & Alongi, Inc.

3.2.2 Eugene MGP, ECSI 1723

The Site, adjacent to the west of the Property and to the east of EWEB's Willamette Substation. Mixed commercial land is located to the south of the Site beyond the railroad tracks and 8th Avenue. Manufactured gas was produced at the Site from 1906 through approximately 1950 and EWEB purchased the property in 1976 (MFA 2020). According to site reports, while the principal MGP operations were performed in the upland portion of the Site, MGP-related contamination is present in subsurface soil/fill beneath portions of the shoreline area from past fill placement activities and from shallow groundwater movement (DEQ 2014). The site has a lengthy investigation and cleanup history that was primarily managed through remedial actions to address requirements of the site's record of decisions.

Remedial construction was completed in the fall of 2019. Following remediation, a cap was installed, the surface soil of the riverbank was stabilized with bioengineered with plantings to prevent erosion, and the shoreline was stabilized to minimize the potential for underlying contamination to be exposed in the Willamette River. A Site Management plan was developed in May 2020 and deed restrictions were recorded to prohibit groundwater use and to manage and inspect the cap and bank stabilization areas. DEQ determined that the cleanup was complete and issued a Certification of Completion in December 2020 (DEQ 2025b). The site requires ongoing institutional and engineering controls. The City of Eugene purchased the site under a Prospective Purchaser Agreement (PPA) in October 2021. Based upon the current use of the site, regulatory status, extensive investigation history, and implemented controls, this site is not considered a REC for the Property.

3.2.3 UPRR Eugene, ECSI 2041

DEQ lists this site as unassigned and suspected (DEQ 2025c). The project narrative indicates that UPRR spilled approximately 120 gallons of diesel fuel onto the tracks and ballast materials in 1997. Cleanup actions were undertaken and soil sample concentrations for total petroleum hydrocarbons (TPH) and polycyclic aromatic hydrocarbons (PAHs) were detected below excavation worker risk-based concentrations. A note in the file from April 1998 states that an NFA determination is being withheld until the potential responsible party reimburses DEQ for oversight costs. Based on the relatively limited nature of the release, DEQ notes indicating that groundwater impacts are not expected, and based on the regulatory oversight of the site, this listing is not considered a REC for the Property.

3.2.4 Eugene Crystal Ice and Storage, LUST 20-91-4203

Two 2,000-gallon USTs were decommissioned at the site in July 1991 (DEQ 2001). A release was located adjacent to the fill port and 35 cubic yards of impacted material were excavated. Confirmation samples indicated that no petroleum hydrocarbons were detected in the remaining soil. In August 1991, an additional four USTs (two 2,000-gallon, one 6,000-gallon, and one 8,000-gallon USTs) were decommissioned by removal. Approximately 150 cubic yards of impacted soil were excavated and confirmation sampling indicated that samples from remaining soils were non-detect. Excavated soils were treated on site using aeration and bioremediation. Sampling conducted after treatment indicated that soil was remediated to below soil matrix cleanup levels. Groundwater was not encountered at the site during decommissioning or remediation activities. DEQ issued an NFA determination for the site on January 17, 2001. At the time of the NFA, the stockpile of treated soil remained on site, but final use or removal had not been confirmed. In February 2025, a public notice

© 2025 Maul Foster & Alongi, Inc.

for the site was posted by DEQ regarding a PPA for the site (DEQ 2025d). The notice provided background information contained in the DEQ records and indicated that in July 2024, an additional site investigation was completed that identified residual volatile organic carbon contamination on the site. Supplemental investigation work in November 2024 indicated that concentrations of volatile organic carbons were below screening but recommended implementation of institutional and engineering controls during site redevelopment and reuse. Based on the regulatory oversight, the November 2024 investigation indicating no exceedances of regulatory screening levels, and implementation of engineering and institutional controls for the site, this listing is not considered a REC for the Property.

3.2.5 EWEB Utility Trench, LUST 20-10-1128

An open LUST file is listed adjacent to the east-southeast of the Property, however the exact location of this site is not confirmed. No GPS coordinates were provided in the site record and locations descriptions and figures include conflicting information. During utility installation activities, an approximately 6,500-gallon diesel UST was discovered (DEQ 2025e). The UST was decommissioned by removal on October 28, 2010. Approximately 66 tons of impacted soil was excavated and disposed of off-site (PBS 2011).

In February 2011, subsurface explorations were completed to sample soil and groundwater. Samples were analyzed for diesel-range TPH, BTEX (benzene, toluene, ethylbenzene, and xylenes), and PAHs. Detections were identified in several locations, however, the report noted that all concentrations were below applicable screening levels in use in 2011. The report requested an NFA for the LUST file, noting that the residual contamination was below screening levels and the Property has an existing management plan to address impacted media. Groundwater impacts were noted but based on the available reconnaissance groundwater sampling, PBS estimated that concentrations would be not detectable prior to reaching the Willamette River, downgradient to the north of the site.

This site is listed as within the larger P-B parcel, however, it is not known if this is within the portion of P-B that is included in the Property. In September 2025, MFA conducted subsequent screening of the 2011 report data with current DEQ RBCs. The results of this screening indicated that two of the samples collected from the site during tank decommissioning in 2010 exceeded current screening levels for direct soil exposure for the construction worker pathway. The unknown location of this site and the open LUST file are considered a significant data gap.

3.2.6 Café Yumm, ECSI 6350

This site is a former gas station and car wash, addressed as 710 or 740 East Broadway (see historical directories in Section 4.3.4). The gas station is listed in ESCI and VCP databases. Available DEQ files were reviewed and indicated that petroleum contamination was reported, and a Phase II investigation was completed in 2019 (DEQ 2025f). Removal actions were completed in late 2020 and early 2021 in preparation for site redevelopment. All known soil contamination was reportedly removed from the site, with excavations completed to 18 feet bgs. A NFA designation was issued for the site in November 2022 and DEQ listed the project as closed (DEQ 2022). DEQ has indicated in subsequent communications that redevelopment was completed, and the site is currently residential housing. Based upon the regulatory status and redevelopment of the property, this listing is not considered a REC for the Property.

© 2025 Maul Foster & Alongi, Inc.

3.2.7 Laurita Ruth/Yord Dee Property, ECSI 1455/LUST 20-18-1096

The site is also known under the names Yord Dee, Laurita Ruth, and Tangtrongjita properties. The site was a former truck sales and service center that operated from 1946 through the 1980s (DEQ 1995). According to DEQ records, the site was redeveloped in the early 2010s for use as a parking lot. Various investigations and preliminary assessments have been completed for the site; DEQ issued an NFA for the site in August 1995. The site was purchased by the University of Oregon in 2018 for redevelopment. Investigations were performed to assess the potential for the existence of up to four historical USTs. Two small USTs (approximately 30 gallons each) were located. The USTs were decommissioned, and minor soil staining was noted. Gasoline and naphthalene were detected in soil samples above leaching to groundwater concentrations. DEQ files indicated the leaching to groundwater pathway is considered incomplete because groundwater is not used in the vicinity of the site. DEQ issued a second NFA designation on March 14, 2019 (DEQ 2019). This site is at the same elevation as the Property, however, groundwater is presumed to travel north toward the river. Based on the nature of the remaining contamination, the regulatory status, and distance from the Property, this listing is not considered a REC for the Property.

3.2.8 Fill-Up Stations Inc./Chapman/Busterud Property

This listing is associated with the decommissioning of one UST. The site was once a service station (Pride of Oregon Service Station/Fill-up, see Section 4.3.4). The property was eventually redeveloped into a restaurant which is currently operating at the site. No LUST file or other indications of releases to the environment were located in DEQ records. Based on the nature of the listings, no known or suspected contamination, and distance, this listing is not considered a REC for the Property.

3.2.9 Former Auto Station

The site was formerly a gas station and service facility from 1938 to 1958. A UST is believed to have been installed in 1956; however, no records relating to the size or contents are known (DEQ 2025g). In 2016, a ground-penetrating radar survey was conducted on the facility, and no USTs were identified. Site redevelopment was completed in 1958, which may have included the UST removal. In preparation of site redevelopment, soil and groundwater samples were collected at the site in 2016 and 2017 (DEQ 2018). DEQ files indicate that TPH, benzene, and lead were detected in soil; however, all concentrations were below the applicable screening levels, which included excavation and construction worker exposures pathways. No gasoline, metals, PAHs, or volatile organic compounds were detected in groundwater at the site. The site was redeveloped in 2018 and included excavation. Two areas of soil impacts were identified and approximately 157 tons of soil were removed for off-site disposal. DEQ issued an NFA determination on June 14, 2018. Based on the nature of the contamination on site, no known groundwater impacts, and distance, this listing is not considered a REC for the Property.

3.3 Historical Use Information about Property and Adjoining Properties

MFA used the following information sources to obtain historical use(s) information.

© 2025 Maul Foster & Alongi, Inc.

3.3.1 Historical Aerial Photographs Review

MFA obtained aerial photographs of the Property from EDR and reviewed the photographs to identify historical changes to the Property and its historical uses, if any (see Appendix D).

Year of Image	Observations
1936	The Property appears to be partially developed along the western end. The eastern portion of the Property appeared to be within the area of the river and vegetated. Two buildings or piles of materials appear to be present on the developed portion of the Property. Industrial buildings are visible to the west of the Property in the locations of the EWEB's Willamette Substation and the Eugene MGP. Much of the greater area is rural or undeveloped. Street grids are visible but do not match the present-day configuration.
1951	Development along the western portions of the Property have increased. Additional buildings or equipment are visible. Portions of the Property that appeared to be within the river in the 1936 photograph appear to be vegetated with tree cover and the edge of the river is more defined along the northern Property boundary. Franklin Boulevard and East Broadway appear to be developed similar to the present-day configuration.
1955 through 1974	Tree cover that was visible in the 1951 photograph has been cleared for much of the Property. A large AST appears to be visible on the western Property line with the MGP site. The majority of the Property appears to be for storage. Development to the west of the Property appears to be industrial (MGP and electrical substation) with residential and commercial to the southwest. To the east, piles of material are visible. By 1974, the MGP site appears to have reduced the number of buildings and sites to the east of the Property have been cleared.
1980 and 1982	The Property has been developed with roadways, and several buildings are present along the southern portions of the Property. Much of the surrounding area further south appears developed for use by the University. The site to the east of the Property has pathways but appeared to be park land or open space. The MGP site appears to be cleared of buildings and storage.
1994	The photo is poor quality and details are not visible.
1995 through 2020	Property appears vacant. The Property appears to be grassland with some tree cover. An unpaved road and main pathways are present in photos after 2000.

3.3.2 Historical Topographic Maps

EDR provided historical topographic maps from 1910, 1940, 1946, 1949, 1967, 1975, 1986, 2014, 2017, and 2020 for the area (see Appendix E). The City of Eugene street grid and railroad line along the southern Property boundary are visible in each of the maps. All of the historical topographic maps indicate the presence of the railroad tracks that continue to make up the southern boundary of the property. The maps show additional changes in transportation of road construction near the Property, however limited additional value is evident in the maps.

3.3.3 Sanborn Map Review

MFA requested SFIMs from EDR. MFA reviewed SFIMs to identify historical changes to the Property and the Property's historical uses, if any (see Appendix F).

Year of Map	Observations
1888	A fraction of a map is shown for the 1888 SFIM. Two tannery buildings are present along a waterway marked Mill Drain. The exact location of these buildings on this map cannot be determined.

© 2025 Maul Foster & Alongi, Inc.

Year of Map	Observations
1890	No significant changes from prior SFIM.
1895	A portion of a map is shown. A shed and vacant structure are shown along the bank of the Willamette River.
1902	The Willamette Tannery is shown between Willamette River and railroad line with East 8th Street to the north and East 9th Street to the south. That location would appear to align with the MGP site and the western edge of the Property.
1912	The Property is not visible, but a portion of the Electrical Power Substation is present to the northwest of the Property.
1925	The Property is shown with the Willamette Sand & Gravel company facility and a concrete products facility present. Markings showing an oil and repair are present at buildings along the railroad spur to the southwest. Industrial uses for Eugene Fruit Growers Association, Eugene City Water Works, and Mountain States Power Company are present where the eventual EWEB substation and Eugene MGP sites are located. Additional uses to the southwest appear to be large residential.
1962	The Property has sand and gravel related buildings represented including truck repair, gravel bins, scales, and electric drying areas. Industrial users at the Eugene Water Works and Cascade Natural Gas Corporation are present where the eventual EWEB substation and Eugene MGP sites are located. Additional uses to the southwest appear to be canning and food storage, residential, Crystal Ice Co., truck sales (865 Franklin Boulevard), and a service station is present in the current Café Yumm location.
1970	No significant changes noted. Markings for oil and gas storage are noted in several of the Sand & Gravel buildings at the Property.

3.3.4 City Directories

EDR reported that city directories for the Property were not available. EDR provided city directories for East Broadway (see Appendix G). Listings are present from 1932 to 2020. Listings with potential to impact the Property or sites that are connected to other environmental records in Sections 4.1 and 4.2 are summarized below.

Year of Directory	East Broadway Directory Listings
1932 through 1947	777 – Crystal Ice & Coal Co. (See Section 4.2.4)
1954	777– Eugene Crystal Ice & Storage Co. 782 – Pride of Oregon Service Station (See Section 4.2.8)
1960	728 – First National Auto Sales (maps to same location as Café Yumm, Section 4.2.6) 777 – Eugene Crystal Ice & Storage Co. 782 – Pride of Oregon Service Station
1964	703 – Crystal Dry Ice & Oil Co. (maps to the same location as 777 East Broadway) 728 – First National Auto Sales 777 – Eugene Crystal Ice and Storage Co 782 – Pride of Oregon Service Station
1968	710 – Nix's Chevron Station (maps to same location as Café Yumm) 777 – Eugene Crystal Ice & Storage 782 – Fill-up Service Station

© 2025 Maul Foster & Alongi, Inc.

Year of Directory	East Broadway Directory Listings
1975	710 – Cairns Chevron Service (maps to same location as Café Yumm) 740 – Broadway Car Wash (maps to same location as Café Yumm) 755 – Sixty-Six Motel 777 – Eugene Crystal Ice and Storage Company 787 – Crystal Tire and Oil Co. (maps to the same location as Laurita Ruth, Section 4.2.7)
1979	703 – B&C Auto Sales 710 – University Chevron Service 755 – Sixty-Six Motel 782 – Foreign Auto Clinic
1983	755 – Sixty-Six Motel 782 – Foreign Auto Clinic
1987	703 – Lane Auto Imports 755 – Sixty-Six Motel
1992 through 2020	755 – Sixty-Six Motel

3.4 Prior Environmental Reports or Other Helpful Documents for Property

MFA requested prior environmental reports and other helpful documents from the owner, key site manager, and user (see Section 4 for further information about the people MFA contacted). Appendix H outlines the types of documents requested.

The Client provided a figure indicating which portions of the Property were assessed under DEQ cleanup oversight (ECSI 1018) and when NFA determinations were issued. According to this document, Site P-A (Upland) was issued a conditional NFA for commercial use of the land in 2010, Site P-A (Riverbank) was issued a partial NFA in 2015 assuming continued park and ecological habitat uses, and Site P-B was issued a NFA in 2001.

4 Interviews

4.1 Questionnaire/Interview with User

MFA provided a Client/User Questionnaire to the Client. The Client is the user of this Phase I ESA, and a completed Client/User Questionnaire is included in Appendix I. The Client did not provide land title records for MFA review.

Jonathan Patrick, the representative of the user, indicated that, to their knowledge, there were no pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products on the Property, with the exceptions of the issues discussed in the NFAs and address in DEQ files under ECSI #1018).

© 2025 Maul Foster & Alongi, Inc.

They were aware of no notices from any government agency regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products relative to the Property except as addressed in the NFAs.

They reported that, to the best of their knowledge, there were no environmental liens or activity and use limitations on the Property, however, a PPA currently under negotiation with DEQ would require the filing of an Easement and Equitable Servitudes which would restrict uses of the Property.

The Client indicated in prior communications that they were aware of DEQ cleanup files for the Property and that multiple NFA determinations had been designated for the Property. No additional information, commonly known in or reasonably ascertainable from the local community, that is relevant to RECs in connection with the Property was provided for MFA review.

They reported that the purpose of this Phase I ESA is to perform due diligence in preparation for a Property exchange with the University of Oregon. They have determined that the purchase price has not been affected by the presence of contamination.

4.2 Interview with Representative of Owner and Key Site Manager

Chris Clough contacted Michael Harwood, the representative of the current Property owner, for general and site-specific information regarding the Property. Michael Harwood is the University of Oregon's Associate Vice President & University Architect and has been involved with the Property since 2016. On July 24, 2025, Michael Hardwood indicated that, to their knowledge, there were no pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products on the Property, with the exception of the historical impacts that were addressed by the NFAs. They were aware of no notices from any government agency regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products relative to the Property. According to Michael Harwood, there are no known environmental liens on the Property. During the interview it was indicated that unhoused individuals occasionally trespass and camp on the Property and adjacent parcels. The University of Oregon addresses this through routine security sweeps. At least one trash can is present on the Property to reduce littering. During the interview it was indicated that University of Oregon maintenance staff service the trash receptacle. The public is generally allowed to access the Property to transit along the walkways. Michael Harwood mentioned that a brush fire had broken out during a dry period several years ago and burned a limited amount of grass along the railroad right-of-way south of the Property. There were no known impacts to the Property.

4.3 Interview with State a Government Officials

Chris Clough interviewed Don Hanson of Oregon DEQ on July 31, 2025. Don Hanson was involved with the regulatory oversight of a number of the environmental cleanups completed in the area of the Property. Don Hanson indicated that they were involved with ongoing discussions with the City regarding reuse of the Property and negotiations of a PPA between the City and DEQ. They indicated that the Property was impacted by historical contamination from the MGP site adjacent to the Property and that there were at least two NFAs in the environmental files associated with the Property (upland and riverbank). Don Hanson indicated that a deed restriction is not currently in

© 2025 Maul Foster & Alongi, Inc.

place on the Property, however, a future PPA would require use restrictions. Don Hanson indicated that the Property is one of several parcels that make up the larger Riverfront Research Park The overall Riverfront Research Park includes over 67 acres of University of Oregon owned properties, many of which have been redeveloped since the 1990s. Don Hanson stated that the NFAs for the P/A-Upland, P/A-Riverfront, and P-B parcels, located on the west end of the Western RRP Property, are the only NFAs for the overall Riverfront Research Park.

5 Findings and Opinions

5.1 Recognized Environmental Conditions

ASTM E1527-21 defines RECs as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

MFA did not identify any RECs for the Property.

5.2 Historical Recognized Environmental Conditions

ASTM E1527-21 defines historical RECs (HRECs) as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

MFA did not identify any HRECs on the Property.

5.3 Controlled Recognized Environmental Conditions

ASTM E1527-21 defines CRECs as a REC affecting the subject property addressed to the satisfaction of the applicable regulatory authority or authorities, with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls.

MFA identified the following CRECs:

- The DEQ files indicate that residual contamination is present on the Property below applicable screening levels for site receptors. Deed restrictions requiring the use of a Site Management Plan, and the presence of residual contamination are considered CRECs for the Property.

© 2025 Maul Foster & Alongi, Inc.

5.4 De Minimis Conditions

A de minimis condition, as defined by ASTM E1527-21, generally does not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. An identified de minimis condition is neither a REC nor a CREC.

MFA did not identify any de minimis conditions on the Property.

5.5 Data Gaps

MFA identified the following data gap:

- During the site visit, a limited portion of the eastern property boundary, along Mill Race was inaccessible due to vegetation and the slope of the ground surface. Observations were made from the top of the bank. This is considered a non-significant data gap.
- A site, with an unknown boundary, believed to be adjacent to the east-southeast of the Property has an unassigned and open leaking underground storage tank (LUST) file. This status is likely because the site was initially administered through the DEQ cleanup program and not the LUST program. An approximately 6,500-gallon diesel underground storage tank (UST) was decommissioned by removal in 2010, impacted soils were excavated and disposed of off-site, and subsurface explorations were completed to sample soil and groundwater. Chemical concentrations from laboratory testing results were identified in several locations, however, the report noted that all concentrations were below applicable screening levels that were in use in 2011 and an NFA designation was requested.

  In September 2025, MFA conducted subsequent screening of the report data against current applicable screening levels. The results of this screening indicated that two of the samples collected at this site during tank decommissioning exceeded current screening levels for direct soil exposure for the construction worker pathway. The exact location of this site is unknown. GPS coordinates are not available, and location documentation is vague or conflicting. It is unknown if this site is located within the portion of the Parcel P-B property included in this assessment. The unknown location of this site and the open LUST file are considered a significant data gap.

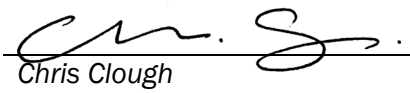

5.6 Statement of Environmental Professionals Conducting Phase I Environmental Site Assessment

University of Oregon Property

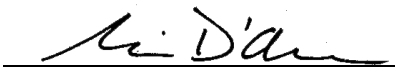

Tax Lot 1703322405300

The material and data in this report were prepared under the supervision and direction of the undersigned.

© 2025 Maul Foster & Alongi, Inc.

Chris Clough
Project Environmental Scientist

Merideth D'Andrea, RG
Principal Geologist

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

6 Conclusions

MFA has conducted a Phase I ESA, in conformance with the scope and limitations of ASTM E1527-21 of Tax Lot 1703322405300*, the Property. MFA describes any exceptions to, or deviations from, this practice in Section 1 of this report.*

The Phase I ESA revealed no RECs or HRECs in connection with the Property. The following findings were identified:

CRECs

- The DEQ files indicate that residual contamination is present on the Property below applicable screening levels for site receptors. NFA requirements to implement a Site Management Plan, and the presence of residual contamination are considered CRECs for the Property.

Data Gap

- During the site visit, a limited portion of the eastern property boundary along Mill Race was inaccessible due to vegetation and the steepness of the ground surface. Observations were made from the top of the bank. This is considered a non-significant data gap.
- A site, with an unknown boundary, believed to be adjacent to the east-southeast of the Property has an unassigned and open leaking underground storage tank (LUST) file. This status is likely

© 2025 Maul Foster & Alongi, Inc.

because the site was initially administered through the DEQ cleanup program and not the LUST program. An approximately 6,500-gallon diesel underground storage tank (UST) was decommissioned by removal in 2010, impacted soils were excavated and disposed of off-site, and subsurface explorations were completed to sample soil and groundwater. Chemical concentrations from laboratory testing results were identified in several locations, however, the report noted that all concentrations were below applicable screening levels that were in use in 2011 and an NFA designation was requested.

In September 2025, MFA conducted subsequent screening of the report data against current applicable screening levels. The results of this screening indicated that two of the samples collected at this site during tank decommissioning exceeded current screening levels for direct soil exposure for the construction worker pathway. The exact location of this site is unknown. GPS coordinates are not available, and location documentation is vague or conflicting. It is unknown if this site is located within the portion of the Parcel P-B property included in this assessment. The unknown location of this site and the open LUST file are considered a significant data gap.

Limitations

The services undertaken in completing this report were performed consistent with generally accepted professional consulting principles and practices. No other warranty, express or implied, is made. These services were performed consistent with our agreement with our Client. This report is solely for the use and information of our Client unless otherwise noted. Any reliance on this report by a third party is at such party's sole risk.

Opinions and recommendations contained in this report apply to conditions existing when services were performed and are intended only for the Client, purposes, locations, time frames, and project parameters indicated. We are not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of services. We do not warrant the accuracy of information supplied by others, or the use of segregated portions of this report.

The purpose of an environmental assessment is to reasonably evaluate the potential for or actual impact of past practices on a given site area. In performing an environmental assessment, it is understood that a balance must be struck between a reasonable inquiry into the environmental issues and an exhaustive analysis of each conceivable issue of potential concern. The following paragraphs discuss the assumptions and parameters under which such an opinion is rendered.

No investigation is thorough enough to exclude the presence of hazardous materials at a given site. If hazardous conditions have not been identified during the assessment, such a finding should not, therefore, be construed as a guarantee of the absence of such materials on the site, but rather as the result of the services performed within the constraints of the agreed-upon scope, limitations, and costs.

Environmental conditions that cannot be identified by visual observation may exist at the site. Where subsurface work was performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at unsampled locations.

Except where there is express concern by our Client, or where specific environmental contaminants have been previously reported by others, the presence of naturally occurring toxic substances, potential environmental contaminants inside buildings, or contaminant concentrations that are not of current environmental concern may not be reflected in this document.

Chris Clough

Project Environmental Scientist

cclough@maulfoster.com | 503.330.7781

Chris Clough has over 12 years of professional experience as an environmental consultant conducting and managing Phase I/II ESAs, site characterization, remedial investigations, and hazardous building materials projects. He has performed projects throughout the Pacific Northwest for a variety of industrial, municipal, governmental, and commercial clients.

Education

- BS, Community Development: Portland State University

Certifications

Relevant Projects

Phase I and II Environmental Site Assessments

Former Creamery Site Investigation, Oregon DEQ, Mt. Angel, Oregon

Chris was the project manager in charge of a site investigation conducted to assess subsurface contamination in the vicinity of a historically decommissioned underground storage tank system. The site investigation included direct-push borings to collect soil and groundwater samples and collection of groundwater from previously installed monitoring wells. Impacts associated with each of the gasoline, diesel, and heating oil tanks were identified. MFA prepared a conceptual site model to evaluate impacts to human and ecological receptors. Risks were determined to be below applicable DEQ screening levels for the intended use of the site. The project is ongoing and is expected to reach regulatory closure during future site redevelopment.

Prospective Purchaser Environmental Due Diligence—Large Residential Developments, Vancouver, Washington

Chris prepared Phase I ESAs and managed subsequent Phase II ESA actions for a national residential property developer. The client requested due diligence work to assess four simultaneous project sites for potential acquisition for future development of hundreds of single-family residential structures. Historical conditions identified during Phase I assessment necessitated additional Phase II sampling at two of the four sites to characterize potential soil and groundwater contamination. The projects were completed on time and within the proposed budget.

Groundwater and Soil Gas Assessment for Former Logging Equipment Yard, McMinnville, Oregon

Chris is the project manager in charge of a groundwater and soil gas assessment at an industrial property with historical petroleum releases. The former operator of the site had an incomplete UST removal that required further investigation and assessment. The project activities included oversight to remove remaining UST system components, conducting test pitting for soil evaluation, direct-push borings for grab sampling, installation of monitoring wells for groundwater and soil gas, and long-term monitoring. The first two phases of the project have been completed on time and within budget, and monitoring at the site is ongoing.

Chris Clough

Site Characterization and Remedial Investigations

Former Petroleum Service Station, Glendale, Oregon

Chris was the project manager in charge of a site assessment at a historical service station. The investigation included decommissioning a fuel island and three regulated USTs (by removal). Impacts to soil were identified and approximately 21 tons of petroleum-contaminated soil was removed for off-site disposal. A conceptual site model was developed for the property and used to support a request for No Further Action determination. DEQ issued an NFA related to the UST release in March 2023.

Groundwater/Air Monitoring and Bioremediation Injections for Commercial Property, Portland, Oregon

Chris was project manager for groundwater and indoor air monitoring at a commercial property with legacy PCE contamination associated with historical dry-cleaning operations. This site required regular monitoring and assessment to maintain indoor air concentrations below regulatory risk-based concentrations. The site utilized multiple methods for removal and prevention of PCE constituents from the indoor spaces, including sub-slab vapor removal, bioremediation injections, and active carbon filtration of indoor air. Bioremediation injections were necessary to break down the residual contamination plume present in the groundwater and soils below site buildings. Indoor air quality was maintained through the conclusion of Chris's involvement in the project in December 2021.

Soil Remediation for Dioxin Contamination at a Public Park, Eugene, Oregon

Chris is the project manager and technical lead supporting a government client required to remediate a public park with recently discovered dioxin contamination. The project included document review and assessment of previously completed investigations, soliciting public comment from neighborhood stakeholders, development of a site-specific cleanup level, preparation of a remedial approach, and completion of an EPA Brownfields Program Cleanup grant for funding to complete the remedy. The preferred remedial alternative to reduce soil dioxin concentrations below the site-specific regulatory levels includes excavation, off-site disposal, and backfill. Project activities completed to date were conducted on an accelerated time line to meet regulatory deadlines for the funding request and other project milestones. The project promotes environmental justice, as it is located in an environmentally overburdened community. Completion of the project will allow the client to fully open the park, which is a critical asset to the local community.

Soil Assessment and Targeted Removal, Upland Site Adjacent to Portland Harbor, Portland, Oregon Port of Portland Willamette Cove

Chris led the field effort to perform assessment of soils at an upland property adjacent to the Portland Harbor Superfund Site. ISM sampling was used to identify and characterize locations of significant contamination for subsequent removal. Removal efforts were completed over several months and required daily oversight of subcontractors and coordination with City of Portland, Metro, DEQ, and neighboring residents. Targeted hot spot removal efforts were considered successful; however, additional site remediation efforts likely are required in order to reach regulatory closure.

Underground Storage Tank Removal, Former Card Lock Gas Station and Regional Petroleum Distribution Facility, Mt. Angel, Oregon

Chris provided task order management and field oversight for this months-long construction and demolition project. The project was undertaken to remove a former card lock gas station and regional distribution tank farm, and included the decommissioning of several USTs and assessment of soil conditions. Residual contamination necessitated groundwater investigation. Monitoring wells were installed, and quarterly monitoring data were utilized to reach site closure. Chris worked as liaison between various stakeholders, including regulatory agencies, multiple construction crews, property owners, and the public. In 2016, the DEQ issued a conditional No Further Action determination for the site, prohibiting the reuse of the site for residential development.

Chris Clough

Construction Support

Terminal Expansion Compliance Support—Aviation Facility, Portland, Oregon

Chris manages compliance support associated with the expansion of an airport terminal building. A portion of the project site overlaps a 1970s-era jet fuel release area, which received No Further Action letters in the mid-2000s. A contaminated media management plan (CMMP) was prepared to support the construction process. The CMMP presents the protocols for handling contaminated soil and groundwater, including (1) dewatering wells, treatment of groundwater, and discharge to the sanitary and/or storm sewers; (2) removal of light nonaqueous-phase liquids as part of the dewatering process; (3) installation of deep micropiles for seismic upgrades to the existing terminal building; and (4) installation of a network of deep monitoring wells and implementation of a groundwater monitoring program to demonstrate that there were no impacts to the water quality of the lower aquifer. In addition, MFA is providing regular compliance monitoring and on-call oversight during the redevelopment activities.

Regulatory Compliance

Stormwater Permit Compliance Sampling, Portland, Oregon

Chris was the project manager and field lead for this project, which maintained compliance with City of Portland, DEQ, and NPDES permits to collect and analyze stormwater runoff from multiple industrial sites throughout the Portland Metro area. Chris tracked and evaluated storms, coordinated with relevant parties, conducted the sampling events, and compared analytical data to permit standards.

Long-Term Monitoring, Former Aluminum Smelter, Troutdale, Oregon

Chris managed the field tasks for this long-term groundwater monitoring project performed at a former aluminum smelting site. He supervised semiannual monitoring and monthly inspection work to ensure regulatory compliance. Regular work included scheduling and oversight of staff to operate and maintain groundwater extraction system equipment, ongoing sampling and reporting, subcontractor coordination, on-call services during redevelopment and construction projects, and other support services as needed by this client. The site was redeveloped for use as warehouse and shipping distribution hubs, and on-site work required coordination with multiple property owners, tenants, and operations and security personnel.

Environmental Assistance, Aviation and Marine Terminal Sites, Portland, Oregon

Chris was the project manager and field lead providing this governmental client with ongoing assistance for its aviation and marine terminal environmental sites. Project work included permit compliance inspections, annual audit documentation, tenant compliance inspections, data analysis, and documentation.

Exposure Assessment and Industrial Hygiene

Regulated Building Materials Program, Portland, Oregon

Chris is the project manager for the regulated building materials contract with a government client. Numerous quick turnaround hazardous building materials assessments have been completed at client properties including industrial, marine, and aviation sites as part of this ongoing contract. Projects have included document review, lead paint, asbestos, and other hazardous materials assessment and support during abatement planning.

Hazardous Building Materials Inspection, School Buildings, Portland, Oregon French International School

Chris was the project manager leading this project to assess multiple school buildings and former residential structures. School leadership requested assistance to conduct assessment of the structures to inform redevelopment planning. The redevelopment would include demolishing several structures on and adjacent to the school grounds to allow for expansion of the school and modernization of the buildings. The team assessed lead paint, asbestos, and other hazardous materials present at multiple structures for planning demolition and disposal. The assessment project was completed on schedule and within budget. The redevelopment project is ongoing; abatement and demolition are expected to be completed in 2024, and MFA will continue to provide third-party assessment during abatement activities.

Chris Clough

Emergency Response Sampling and Exposure Assessment, Roseburg, Oregon

Chris performed the field support and subcontractor oversight for the collection of soil and airborne dust sampling data to assess several residential properties that had been built on and adjacent to a former mine site. State of Oregon officials were alerted to the possible exposure issues when residents' blood tests indicated exposure to heavy metals. Preliminary X-ray fluorescence soil data were collected and mapped to locate areas of highest contamination. Subsequent soil removals were performed by subcontractors over a period of several weeks, and the site was restored for continued residential use.

Reoccupancy Air Monitoring, Residential Highrise Structure Fire, Honolulu, Hawaii

Chris was the field lead conducting air monitoring and inspection after a fire in a 36-story residential condominium. The work was performed to assess indoor air quality before approving units for reoccupancy. Additional work performed included reporting data to stakeholders, coordinating with tenants and condominium association members, working with stakeholders to implement equitable site procedures, and coordination with local officials to meet regulatory expectations for this unique emergency response project.

Lead Paint and Asbestos Inspection and Air Monitoring, Municipal Buildings, Salem, Oregon

Chris led a three-person team performing lead paint assessment and asbestos inspection in several public municipal buildings in preparation for significant seismic retrofitting and renovation. His team collected hundreds of asbestos samples, extensive X-ray fluorescence analysis results for lead paint, and confirmation paint chip sampling. During abatement and renovation activities, his team performed daily air monitoring to assess abatement containment integrity and regulatory compliance. The project was completed in September 2021 with the grand reopening of the renovated buildings.

Hazardous Building Materials Inspection and Air Monitoring, Shopping Center Redevelopment, Seattle, Washington

Chris was the field lead for a team of consultants performing hazardous building materials sampling and assessment before the demolition and redevelopment of an extensive shopping center property in Seattle, Washington. The sampling and assessment of materials were conducted over a number of months in 2018, and renovation was under way by spring 2019. The team continued to provide third-party, independent air monitoring during the demolition to assure the property owner that abatement contractors were complying with local air regulations and that reported quantities removed were accurate. Redevelopment activities were ongoing at the conclusion of Chris's involvement with the project in mid-2020.

Moisture Monitoring and Mold Assessment, Retail Stores, Various Locations, Oregon and Washington

Chris has performed numerous moisture and mold assessments in a national retail chain's superstores throughout the Pacific Northwest. These assessments included inspection of suspect areas in the stores, using moisture meters, infrared cameras, and other equipment to evaluate mold growth and potential for additional damage without disrupting store activities. Each of these inspections was performed within the scoped time and the allotted budget.

Hazardous Building Materials Inspection and Abatement, Nonprofit Developer, Washington County, Oregon

Chris was the field lead that assessed former single-family residential structures prior to redevelopment of the property for affordable high-density residential use by a local nonprofit developer. Four structures were assessed prior to demolition for site redevelopment. The project identified numerous hazardous building materials and heating oil tanks. MFA conducted the tank decommissioning and subcontractor oversight during abatement activities. The project was coordinated with the site general contractor to limit impacts to the development schedule; the project was completed on time and on budget. MFA continues to provide assistance to this client at numerous other sites in the Portland metro area.

Industrial Hygiene Assessments, Various Locations, Oregon and Washington

Chris has conducted and managed projects to assess asbestos, lead-paint, and mold at numerous sites for industrial, commercial, and governmental clients. These sites include retail stores, shopping malls, government buildings, and industrial brownfields properties. Chris has been performing assessment activities and abatement oversight since 2012.

Merideth D'Andrea RG, LG, PG

Principal Geologist
mdandrea@maulfoster.com | 503.501.5216

Merideth D'Andrea has over 20 years of compliance and environmental cleanup experience focused on collaborating with clients and regulatory agency personnel to support community-improving projects and get sites back into productive use. As the lead for MFA's sustainability initiatives, she brings her passion for sustainability into project approaches and solutions. She is widely recognized for her collaborative style in managing multidisciplinary efforts and her skill at finding solutions that support the goals of regulators and clients.

She is the program manager for a client with a suite of bulk petroleum and petroleum distribution sites throughout Oregon and Washington. She also oversees investigation and cleanup projects at the Portland Harbor Superfund Site, for affordable housing redevelopment, and for EPA-funded brownfield projects. Merideth led MFA's large-scale rapid-response cleanup associated with the 2020 Oregon wildfire. She has in-depth knowledge of Washington and Oregon environmental regulations, as well as the Clean Water Act; the federal Resource Conservation and Recovery Act; the Comprehensive Environmental Response, Compensation and Liability Act; and federal and state processes required by the Endangered Species Act and state historic preservation offices. She shares her extensive expert knowledge of site assessment, cleanup, and redevelopment regulations and processes with the project teams she mentors and MFA's clients to support successful cleanup decisions and sustainable redevelopment planning across the Pacific Northwest.

Education

Relevant Projects

Portland Harbor Superfund Site

Source Control for an Industrial Client in the Portland Harbor Superfund Site, Portland, Oregon

Merideth is the principal geologist for a source control evaluation for an industrial client located in the Portland Harbor Superfund Site. This project includes evaluating groundwater, stormwater, upland and riverbank soils, and overland flows to determine if any potential contamination on site is affecting sediment quality. This is an investigation under the DEQ; however, it is required to meet both DEQ Joint Source Control Strategy standards and the cleanup criteria established in the EPA record of decision for the Portland Harbor Superfund Site.

Project Management and Allocation Support for an Industrial Client in the Portland Harbor Superfund Site, Portland, Oregon

Merideth was the project manager for an industrial client involved with the Portland Harbor Superfund Site. She and her team provided support for allocation litigation, including extensive document research; stormwater basin analysis to identify potential sources of contamination; mass loading evaluations; and sediment fingerprinting to distinguish between sources.

Merideth D'Andrea RG, LG, PG

Environmental Site Investigation and Remediation

Community Partners for Affordable Housing, Joyce Hotel, Portland, Oregon

Merideth is the principal geologist for an affordable housing renovation project in downtown Portland. As part of the redevelopment efforts and to support property redevelopment, MFA conducted a Phase I ESA that identified multiple environmental issues. A Phase II ESA was subsequently conducted. Based on the results of the Phase II, MFA prepared a remedial action scope of work, which included the decommissioning of an underground heating oil tank, as well as the abatement of asbestos-containing materials throughout the interior of the building and in and on the roof. MFA facilitated the implementation of the remedial action activities at the property (by providing fieldwork preparation and subcontractor coordination, followed by remedial action activity oversight), and a remedial action completion report. The building was successfully renovated and CPAH celebrated its grand opening in June of 2023.

Community Partners for Affordable Housing, Plambeck Gardens Remedial Action, Tualatin, Oregon

Merideth is the principal geologist overseeing MFA's comprehensive environmental services for CPAH since the agency acquired an approximately 4.66-acre property in Tualatin, Oregon, in 2020. The property was historically used for agricultural purposes that included field crops, orchards, and a nursery. CPAH intended to redevelop the property into 116 new units of affordable housing.

To support the acquisition and redevelopment of this property, MFA completed several ESAs in 2020, including surface and subsurface soil sampling and a geophysical survey of a suspected underground heating oil tank to understand environmental conditions, resolve data gaps, and reduce uncertainty about environmental risk and liability associated with property acquisition. In addition, MFA conducted hazardous building material surveys in 2022 and 2023 that identified the presence of ACM, lead-based paint, and fluorescent light fixtures that potentially contain mercury vapors or polychlorinated biphenyls in on-site structures. In March 2023, MFA updated the initial Phase I ESA to support funding for the redevelopment of the property.

Based on the findings of the assessments and preliminary redevelopment plans, MFA prepared and implemented a remedial action scope of work that included the decommissioning of the underground HOT, a 300-foot water supply well, and three septic systems, as well as the removal of an aboveground storage tank in the basement of one of the residences and abatement of the identified HBM. Because the work had to be conducted prior to any demolition activities, the remedial actions were completed over the span of two consecutive weeks and required MFA to closely coordinate with CPAH and the general contractor on the timing and progress of the remediation. The remedial actions were completed on time and did not cause any delays to the demolition schedule.

Program Management, Environmental Assessments for Wildfire Cleanup, Oregon

Merideth was the principal geologist and MFA program manager for a massive wildfire cleanup in 2020 following the most destructive wildfire season on record in the state of Oregon. The wildfires caused substantial damage to structures and residences throughout the state. MFA worked with federal, state, and local partners to safely address ash and debris created by the wildfires. Responsibilities included conducting asbestos surveys, overseeing air monitoring during removal activities, and performing confirmation soil sampling once cleanup efforts were completed at approximately 2,500 properties throughout the state. Merideth worked with the DEQ and ODOT to develop sampling and analysis plans that supported the removal of debris, waste, and hazardous materials and identified the procedures for sampling debris and protecting response personnel, the surrounding community, public health, and the environment.

Project Management, Remedial Investigation, Feasibility Study, and Cleanup Action Plan at a Former Dry-Cleaning Facility, Ridgefield, Washington

Merideth is the principal geologist and project manager for RI and cleanup alternative development at this facility. The RI included an evaluation of environmental impacts caused by dry-cleaning activities formerly conducted at the site. Merideth prepared the RI work plan and coordinated and completed soil, groundwater, soil-gas, and indoor-air sampling at the former facility and on downgradient properties, using direct-push and sonic drilling techniques. Installation and monitoring of a groundwater monitoring well network to evaluate the nature and extent of impacts have also been completed. Merideth worked with the Washington State Department of Ecology and Department of Health to define the scope of an appropriate sampling plan and develop informational materials for the local residents. As a result of the vapor assessment, MFA was able to show that there was no current risk to indoor

air at the site. Merideth's team performed an FS to identify potential cleanup alternatives for soil and groundwater at the site, including source removal and in situ bioremediation. Ecology approved the final RI/FS and selected a preferred remedy for the site. MFA supported the City of Ridgefield with property acquisition and helped secure both state and federal grant funding to allow this cleanup to move forward. MFA designed the remedy with Ecology approval, and cleanup was completed in the winter of 2025.

Project Management, Remedial Investigation, Feasibility Study, Remedy Implementation, and Source Control Evaluation at an Aluminum Extruding and Anodizing Facility, Portland, Oregon

Merideth was the project manager and geologist for the RI and cleanup at this facility, which is adjacent to the Columbia Slough. The RI included an evaluation of environmental impacts caused by historical process-water-handling activities. Merideth conducted a soil and groundwater investigation to characterize the nature and extent of contamination and determine whether site-related chemicals could migrate to the Columbia Slough. Merideth employed a triage approach in which sampling locations were adjusted, based on real-time data collection and field observations, during drilling activities. Metals were the contaminants of interest; it was discovered through the field investigations that a caustic release to former metal sludge ponds had increased pH and was mobilizing some of the metals. Results of these investigations were used to characterize potential risks that site-related chemicals may pose to human health and the environment and to assist in development of the selected remedial action alternative. MFA worked with the DEQ and the City of Portland to design, permit, and implement the remediation at the facility. MFA monitored the effectiveness of the remediation as well as stormwater system upgrades and treatment, performed a stormwater mass loading evaluation, and received a source control decision and a conditional No Further Action (NFA) determination from the DEQ.

Project Management, Independent Cleanup Action at an Industrial Facility, Washougal, Washington

Merideth managed an investigation and cleanup of a property used to store and manage quarried material and equipment. The property had a wide range of environmental issues resulting from site operations. The contaminants of concern included petroleum hydrocarbons and associated constituents in soil and groundwater. The property required site characterization, risk assessment, and a feasibility study to support the remedial action. The remedial action, consisting of in situ bioremediation, was implemented on an independent cleanup track, and an independent cleanup report was submitted to Ecology. Post-cleanup groundwater monitoring indicated that the remedial action was successful. MFA is currently working with Ecology on an NFA determination for the property.

Project Management, Remedial Investigation, Feasibility Study, Remedy Implementation, and Source Control Evaluation at a Chrome-Plating Facility and Former Landfill, Portland, Oregon

Merideth was the project manager and geologist for an RI/FS at this facility, which is adjacent to the Columbia Slough. She also served as primary coordinator for the site's NPDES permit, compliance stormwater monitoring, and implementation of best management practices. The RI included an evaluation of environmental impacts caused by chrome-plating and historical landfilling activities at the site. Merideth coordinated and completed soil and groundwater sampling using direct-push and hollow-stem-auger drilling techniques. Installation and monitoring of groundwater monitoring wells also were completed to evaluate possible impacts from historical fill and to assess the groundwater gradient under the site near the slough. Merideth worked on obtaining a consent judgment with the DEQ, waiving liability in the Columbia Slough, and facilitating negotiations on the record of decision for the site cleanup remedy. Merideth oversaw the implementation and completion of the remedy, which included a process with the City of Portland and the Portland Bureau of Transportation for the vacation of an adjacent right-of-way. The DEQ issued an NFA status for the site in 2015, which paved the way for the eventual sale and redevelopment of the slough-front property.

Project Management, Remedial Investigation, and Feasibility Study at a Former Chrome-Plating Facility, Seattle, Washington

Merideth was the project manager and geologist for an RI/FS for this site adjacent to the Duwamish River and in the Duwamish River Valley industrial area. The RI included oversight of exploratory drilling and soil and groundwater sampling, installation and quarterly sampling of groundwater monitoring wells, sub-slab soil vapor sampling, a beneficial water use survey, and groundwater fate and transport modeling using EPA's BIOCHLOR program.

Merideth D'Andrea RG, LG, PG

Project Management and Remedial Investigation at a Dry-Cleaning Facility, Tualatin, Oregon

In less than six months, through an investigation that included modeling, MFA helped obtain an NFA determination and achieved closed-out status for the site. Merideth was the project manager and geologist for this site, which was located in a populated strip mall in Tualatin, Oregon. Other environmental consultants had completed work on the site, but the DEQ believed that the site was still a potential risk to receptors. The property owner sought MFA's assistance in obtaining closed-out status from the DEQ.

Former Demolition Landfill Investigation, Oregon State University, Bend, Oregon

Merideth was responsible for reviewing historical investigation data for a former demolition landfill in central Oregon to identify data gaps and inform follow-up investigations. She helped design an investigation, including assessing landfill cap material, conducting groundwater monitoring, and evaluating the potential presence of landfill-related compounds in soil gas. The work was completed in support of landfill closure and redevelopment activities.

Former Construction Debris Landfill Investigation, City of St. Helens, Oregon

Merideth was responsible for reviewing historical data and developing an investigation strategy for a construction debris landfill associated with a former paper mill in St. Helens, Oregon. Merideth identified data gaps and performed an investigation to assess risk to potential occupants above the former landfill footprint and to inform redevelopment opportunities. The investigation she designed evaluated depth to bedrock and conditions of soil and groundwater impacts, as well as whether landfill-related compounds (including methane) were present in soil gas. The work was completed in support of redevelopment activities.

Community-Wide Brownfield Assessment, City of Beaverton, Oregon

Merideth was the senior geologist on the consultant team, supporting the city in implementation of its community-wide brownfield program. She coordinated and managed Phase II ESAs for strategic properties in the city's enterprise zone. Merideth's responsibilities included researching historical documents, preparing scopes and budgets for performing multimedia investigations (e.g., soil, groundwater, vapor), preparing final Phase II ESA summary reports, and coordinating with the EPA and DEQ project managers. In addition, Merideth supported the city and EPA in meeting site assessment requirements of the State Historic Preservation Office and the Endangered Species Act.

Community-Wide Brownfield Assessment, City of Oregon City, Oregon

Merideth served as the senior geologist on the consultant team supporting Metro in implementation of its community-wide brownfield program, specifically on a former industrial paper mill site in Oregon City. Merideth coordinated and managed the subsurface media investigations. Her responsibilities included researching historical documents, preparing scopes and budgets for multimedia investigations (e.g., soil, groundwater, vapor), preparing final Phase I/Phase II ESA summary reports, and presenting results to the client team.

Community-Wide Brownfield Assessment, City of St. Helens, Oregon

Merideth was the senior geologist on the consultant team supporting the city in implementation of its community-wide brownfield program. Merideth's responsibilities included researching historical documents, preparing scopes and budgets for multimedia investigations (e.g., soil, groundwater, vapor), preparing final Phase II ESA summary reports, and coordinating with the DEQ and EPA project managers.

Brownfield Coalition Assessment, Chelan Douglas Regional Port Authority, Washington

After helping the port write a successful $600,000 EPA Brownfield Coalition Assessment Grant application, MFA is leading the implementation of the project to facilitate public engagement, create an inventory of priority brownfields sites in the region, and begin assessment and cleanup planning work to facilitate redevelopment of strategic properties. Merideth is the principal geologist on the project team responsible for providing technical support in development of site assessment work plans, data evaluation, and Phase I and II ESA summary reports.

Community-Wide Brownfield Assessment, Skamania County, Washington

Merideth is the principal geologist on the consultant team supporting the county in implementation of its community-wide brownfield program. MFA is currently working on multiple assessments for petroleum and hazardous materials on key catalyst sites in the project area. Merideth's responsibilities include providing technical support to develop multimedia investigation (e.g., soil,

groundwater, vapor) work plans, data evaluation and screening, preparation of Phase I and II ESA summary reports, and coordinating with Ecology project managers.

Integrated Planning Grant Remedial Investigation for Multiple Brownfield Properties, Ridgefield, Washington

Merideth was the geologist responsible for development of the RI—including a subsurface field investigation involving direct-push drilling; soil, groundwater, and vapor sample collection; and logging exploratory borings—for a maintenance facility, a former fuel station site, and a former dry-cleaning property located in downtown Ridgefield. She was responsible for data analysis and source characterization as well as for conducting a risk screening and evaluation. Merideth also provided support on the feasibility study and cleanup action plan development. This work was conducted under an integrated planning grant for brownfield assessments through the Washington State Department of Ecology. Primary contaminants include petroleum compounds and chlorinated solvents.

Underground Injection Control Assessment, Central City Concern, Portland, Oregon

Central City Concern redeveloped a property (the Blackburn Center) on East Burnside Street in Portland to provide housing, medical, and other services to support people facing addiction and in recovery. As part of that redevelopment, Merideth oversaw preparation of regulatory forms and sampling and analysis plans, field confirmation sampling, and reporting in support of closure of a UIC in accordance with the DEQ UIC program.

Field Investigation and Underground Injection Compliance at an Industrial, Medical, and Specialty Gases Distributor, Portland, Oregon

Merideth was the project lead for a site environmental investigation at this gas distributor facility located adjacent to the Columbia Slough, including conducting historical file reviews, subsurface investigations, monitoring well installation, groundwater monitoring, and communications with the DEQ. In conjunction with the subsurface environmental investigation, Merideth worked with the DEQ to register one dry well by applying for rule authorization, and to register and decommission three on-site dry wells. MFA then designed, permitted, and oversaw construction of substantial upgrades to the client's existing stormwater system, including manufactured treatment devices, surface improvements to prevent off-site runoff, a new connection to an existing City of Portland storm main, and appurtenant piping and storm structures. As a result, this site received an NFA determination from the DEQ.

Field Investigation and Drilling at a Former Pesticide- and Herbicide-Manufacturing Facility, Portland, Oregon

To fulfill the requirements of a remedial investigation for a prospective purchaser agreement, Merideth oversaw the drilling and installation of rotosonic borings for soil and reconnaissance groundwater sampling. Merideth conducted surface soil sampling, quarterly groundwater sampling, and monthly water-level monitoring. She oversaw the removal and disposal of listed investigation-derived waste. She managed data, prepared analytical tables, and assisted with report preparation.

Field Investigation, Drilling, and Overwater Sampling at a Silicon Wafer Manufacturing Facility, Portland, Oregon

Merideth assisted with the remedial investigation at this facility, including overseeing drilling for soil and reconnaissance groundwater sampling. As part of the RI, she conducted routine groundwater monitoring in on-site wells, using low-flow sampling techniques. She also developed a sampling plan to acquire data for determination of the nature and extent of impacted sediment and groundwater under the Willamette River and for use in ecological and human health risk assessments. Merideth led the fieldwork, which included upland drilling to over 200 feet below ground; overwater drilling to depths of over 100 feet below the mudline; and collecting soil, sediment, and groundwater samples.

Field Investigation and Drilling at a Concrete Pipe and Precast Manufacturing Facility, Portland, Oregon

Merideth oversaw the installation of groundwater monitoring wells and reconnaissance soil sampling in a permitted landfill at this facility to evaluate the nature and extent of chemicals of interest. Methane gas was continuously monitored and managed during drilling.

Merideth D'Andrea RG, LG, PG

Vapor Extraction Well Installations at a Former Wood-Treating Facility, Ridgefield, Washington

Merideth oversaw the installation of groundwater extraction wells for steam-injection remediation at a former wood-treating facility and installed temperature and pressure transducers and monitoring wells to monitor the system's effectiveness. She oversaw well abandonments and new monitoring well installations. The drilling was performed using hollow-stem-auger and air rotary drilling techniques. Chemicals of interest included pentachlorophenol; polycyclic aromatic hydrocarbons; and arsenic, chromium, and copper.

Soil and Groundwater Investigations at a Truck-Manufacturing Facility, Portland, Oregon

The investigations conducted by Merideth at this site adjacent to the Portland Harbor involved focused reconnaissance drilling and sampling. After the investigations were completed, Merideth assisted in completing reports of the findings and procedures and in compilation of historical site data, including previous investigations and removals and beneficial water and land use.

Dredge-Fill Permitting, Toledo, Oregon

Merideth was the field lead for the development of a sampling and analysis approach to characterizing sediment, consistent with Sediment Evaluation Framework for the Pacific Northwest and project stakeholder requirements, in order to proceed with maintenance dredging. The work included screening dioxins in the dredge prism and leave surface sediments.

Refineries and Fuel Stations

Project Management, Environmental Investigations, Cleanup, Permitting, and Due Diligence at Active Cardlock and Bulk Fuel Facilities, Oregon and Washington

Merideth currently serves as programmatic project manager providing general environmental consulting for multiple sites in Oregon and Washington, including tracking environmental cleanup status; communicating with regulatory agencies; assisting in the development of spill prevention, control and countermeasure plans; performing environmental site assessments, subsurface investigations, and sampling; overseeing remedial design and remedial actions; and reporting. For four of the sites in Washington, Merideth oversaw a team of people who designed and implemented multiple removal and cleanup actions. For several sites, Merideth led environmental site assessment efforts in accordance with DEQ and Washington State Department of Ecology underground storage tank regulations during site equipment upgrades and decommissioning.

Project Management at a Former Service Station and Active Automotive Repair Shop, Oregon City, Oregon

Leaking underground storage tanks at a former service station released petroleum into the soil and shallow groundwater. Merideth was able to obtain an NFA determination from the DEQ for the petroleum contamination through conducting historical file reviews, subsurface investigations, monitoring well installation, groundwater monitoring, and communications with the DEQ.

Project Management at a Former Service Station, SE Portland, Oregon

Leaking underground storage tanks and associated equipment at a former service station released petroleum into the soil. On behalf of the property owner, Merideth oversaw service station and tank decommissioning activities and subsequent soil removal to address petroleum contamination. Merideth was able to assist the owner and its attorney in negotiations with the service station operator and to obtain an NFA determination from the DEQ for the property to prepare it for transaction and/or future development.

Groundwater Sampling, Right-of-Way Permitting, and Environmental Cleanup at an Active Service Station, Hillsboro, Oregon

Leaking underground storage tanks at an active service station released gasoline into the soil and shallow groundwater. Merideth conducted quarterly groundwater and monthly water-level monitoring. She assisted in obtaining a right-of-way permit from the City of Hillsboro to perform this work by preparing a traffic control plan for this high-traffic site. She also assisted in completing the remedial investigation report summarizing the results of long-term monitoring and remedial actions completed at the property, leading to DEQ approval of the remedial investigation report and a conditional NFA determination for the site.

Merideth D'Andrea RG, LG, PG

Groundwater Sampling and Nonaqueous-Phase Liquid Monitoring at a Former Manufactured Gas Plant and Petroleum Terminal, Astoria, Oregon

Merideth conducted quarterly groundwater monitoring as well as monthly NAPL monitoring and removal from wells and replaced absorbent pads over a petroleum seep in the intertidal zone.

Subsurface Investigation Using a Triage Approach at an Active Truck Stop and Service Station, Klamath Falls, Oregon

Gasoline and diesel were released into the soil and shallow groundwater on site. Merideth coordinated a subsurface investigation using Geoprobe techniques, to delineate the impacted area. Merideth collected soil and reconnaissance groundwater samples, managed and compiled data, and assisted in writing the reports.

Permitting and Environmental Compliance at Various Underground Storage Tank and Underground Injection Control Sites, Pacific Northwest

Merideth provided assistance in the decommissioning and/or rule authorization process for USTs and UICs on various sites, including preparation of regulatory forms and sampling and analysis plans, field confirmation sampling, closure reporting, and communications with regulatory agencies.

Mining

Project Management and Study of Thermal Transport from Mine Reclamation Lakes, Yakima, Washington

As a staff geologist for David Brown & Assoc, Inc., of Troutdale, Oregon, Merideth was the project manager for two years of a five-year thermal transport study along the Yakima River in Yakima, Washington. The study, part of a Washington State Department of Natural Resources Surface Mine Reclamation Permit for the Selah Lakes sand and gravel pit, was conducted to assess whether heated surface water from the mining ponds was infiltrating the adjacent Yakima River and affecting salmon spawning. Over half a million data points were collected annually from thermal sensors along the river for the statistical analysis. The study concluded that the heated pond waters were not causing river temperatures to rise above background fluctuations.

Project Management and Dewatering Study, including Groundwater Modeling, Dallesport, Washington

As a staff geologist for David Brown & Assoc., Inc., of Troutdale, Oregon, Merideth was responsible for conducting a hydrogeologic study for the dewatering of a gravel mining operation in Dallesport, Washington. Merideth monitored groundwater levels in nearby residential domestic wells. The information generated from this work allowed the client to manage concerns with owners of the adjacent property.

Project Management and Dewatering Study, including Groundwater Modeling, Grants Pass, Oregon

As a staff geologist for David Brown & Assoc, Inc., of Troutdale, Oregon, Merideth was responsible for conducting a hydrogeologic study for the dewatering of a gravel mining operation at the confluence of the Applegate and Rogue rivers in Grants Pass, Oregon. This study included groundwater modeling using MODFlow and aquifer tests and analyses.

Environmental Due Diligence and Redevelopment

Due Diligence, Property Acquisition for Community Partners for Affordable Housing, Cedar Grove Affordable Housing, Beaverton, Oregon

Merideth is the principal geologist for an affordable housing construction project in Beaverton. CPAH sought to acquire a former commercial property in Portland for construction of an apartment complex to provide 44 units of affordable housing for homeless families in need of subsidized housing and services. MFA conducted Phase I and Phase II ESAs of the property to support the property transaction. Former uses of the property included a fuel/service station and dry cleaner. The Phase II ESA included advancement of seven borings and collection of soil and groundwater samples for laboratory analysis of petroleum hydrocarbons and volatile organic compounds. MFA compared the chemical data to Oregon DEQ risk-based concentrations for the residential

and urban residential exposure scenarios and confirmed that the site environmental conditions together with the proposed future construction and use were protective of human health. CPAH proceeded with property acquisition and construction of the first regulated and affordable units designated for the purpose of housing homeless families in the City of Beaverton.

Due Diligence, Property Acquisition, and Environmental Compliance for Mass Timber Construction Facilities, Oregon

Merideth is the principal geologist for a client planning to construct and operate mass timber construction facilities, providing environmental support at multiple facilities throughout Oregon. MFA has supported the client in property acquisitions and due diligence, including performing Phase I and II ESAs and hazardous building materials assessments. In anticipation of redevelopment and facility operation, MFA has also assisted with stormwater, wastewater, and air permit compliance.

Historical Research, Due Diligence, and Prospective Purchaser Agreement for Industrial Lands Purchase, City of St. Helens, Oregon

Merideth managed due diligence efforts associated with multiple major industrial land acquisitions for the city. Industrial landfills, a wastewater lagoon, and former and active industrial facilities were involved, with potential cleanup actions for groundwater, soil, and near-shore sediment. Merideth conducted extensive historical document review to identify and summarize known and potential sources of contamination. She completed Phase I and Phase II site investigation work, including preparing a sampling and analysis plan and performing soil and groundwater sampling. On the city's behalf, Merideth oversaw the investigation and cleanup activities performed by the seller and prepared a contaminated media management plan to support redevelopment efforts. In addition, Merideth conducted extensive agency negotiations, including obtaining a Prospective Purchaser Agreement with the DEQ.

Due Diligence, Property Acquisition Support for a Semiconductor Manufacturing Company, Beaverton, Oregon

In support of acquisition of a site in Beaverton and its planned redevelopment as an expansion to a neighboring semiconductor manufacturing facility, Merideth was the principal geologist and project manager overseeing the preparation of a complex Phase I ESA, and subsequent Phase II ESA. The Phase II ESA was focused on potential vapor intrusion risk associated with a chlorinated solvent plume from previous site operations. Currently, MFA is representing the client through revision of a RCRA permit for the former facility that will remove the newly acquired property from the RCRA permit.

Phase I Environmental Site Assessment, Contaminated Media Management Plan, and Construction Oversight, Innovative Housing, Inc., Portland, Oregon

In support of the acquisition of a site in Lincoln City and its planned redevelopment as affordable housing, Merideth oversaw the preparation of a Phase I ESA and a CMMP. MFA is planning to support Innovative Housing during the redevelopment activities by performing soil sampling to help inform soil management options.

Phase I Environmental Site Assessments for the City of Lincoln City, Oregon

Merideth has performed or overseen the preparation of ten separate Phase I ESAs for the city over the span of a few years in support of potential property transactions and the city's hope for beneficial reuse. Some of those properties led to a Phase II ESA investigation to evaluate potential risks and the development of a CMMP to manage risk during redevelopment. The sites include a former gas station property that is being redeveloped as affordable housing and a former elementary school that the city and parks department plan to redevelop as a community park.

Phase I Environmental Site Assessment for a Metal Fabrication Facility, Milwaukie, Oregon

Merideth was responsible for project coordination and completion of a determination of beneficial water use and land use in areas surrounding this company's facility. In addition, the investigation involved a reconnaissance site walk, along with compilation of historical data from Phase I and II ESAs. Merideth assisted in the report preparation. As a result of this work, the client received an NFA determination from the DEQ. The NFA determination will allow the client to develop or sell the property and, if necessary, to obtain funding from a financial institution.

Merideth D'Andrea RG, LG, PG

Phase I and II Environmental Site Assessments for Various Commercial and Industrial Sites, Oregon and Washington

Merideth was the geologist for several Phase I and II ESAs for commercial client and development company sites throughout Oregon and Washington. Projects were completed within a condensed time frame to provide clients with information critical to transaction determinations. Some aspects of work were completed in support of litigation with other parties.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/26/2025 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the ECSI list, as provided by EDR, and dated 04/16/2024 has revealed that there are 29 ECSI sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Quality's UST List on Disk.

A review of the UST list, as provided by EDR, and dated 11/04/2024 has revealed that there are 9 UST sites within approximately 0.25 miles of the target property.

Lists of state and tribal voluntary cleanup sites

VCP: Responsible parties have entered into an agreement with DEQ to voluntarily address contamination associated with their property.

A review of the VCP list, as provided by EDR, and dated 03/17/2025 has revealed that there are 8 VCP sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there are 7 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 03/24/2025 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 24 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within

approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
EUGENE MGP	700 BLOCK E 8TH AVE	0 - 1/8 (0.000 mi.)	A1	8

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 5 records.

Site Name	Database(s)
WELLS FARGO 13TH AVENUE	LUST
SCOTTISH RITE TEMPLE	LUST
FAITH CENTER FOURSQUARE CHURCH	LUST, UST
BUDGET RENT A CAR OF EUGENE	LUST, UST
RIVERFRONT RESEARCH PARK	RGA HWS

OVERVIEW MAP - 8055847.2S

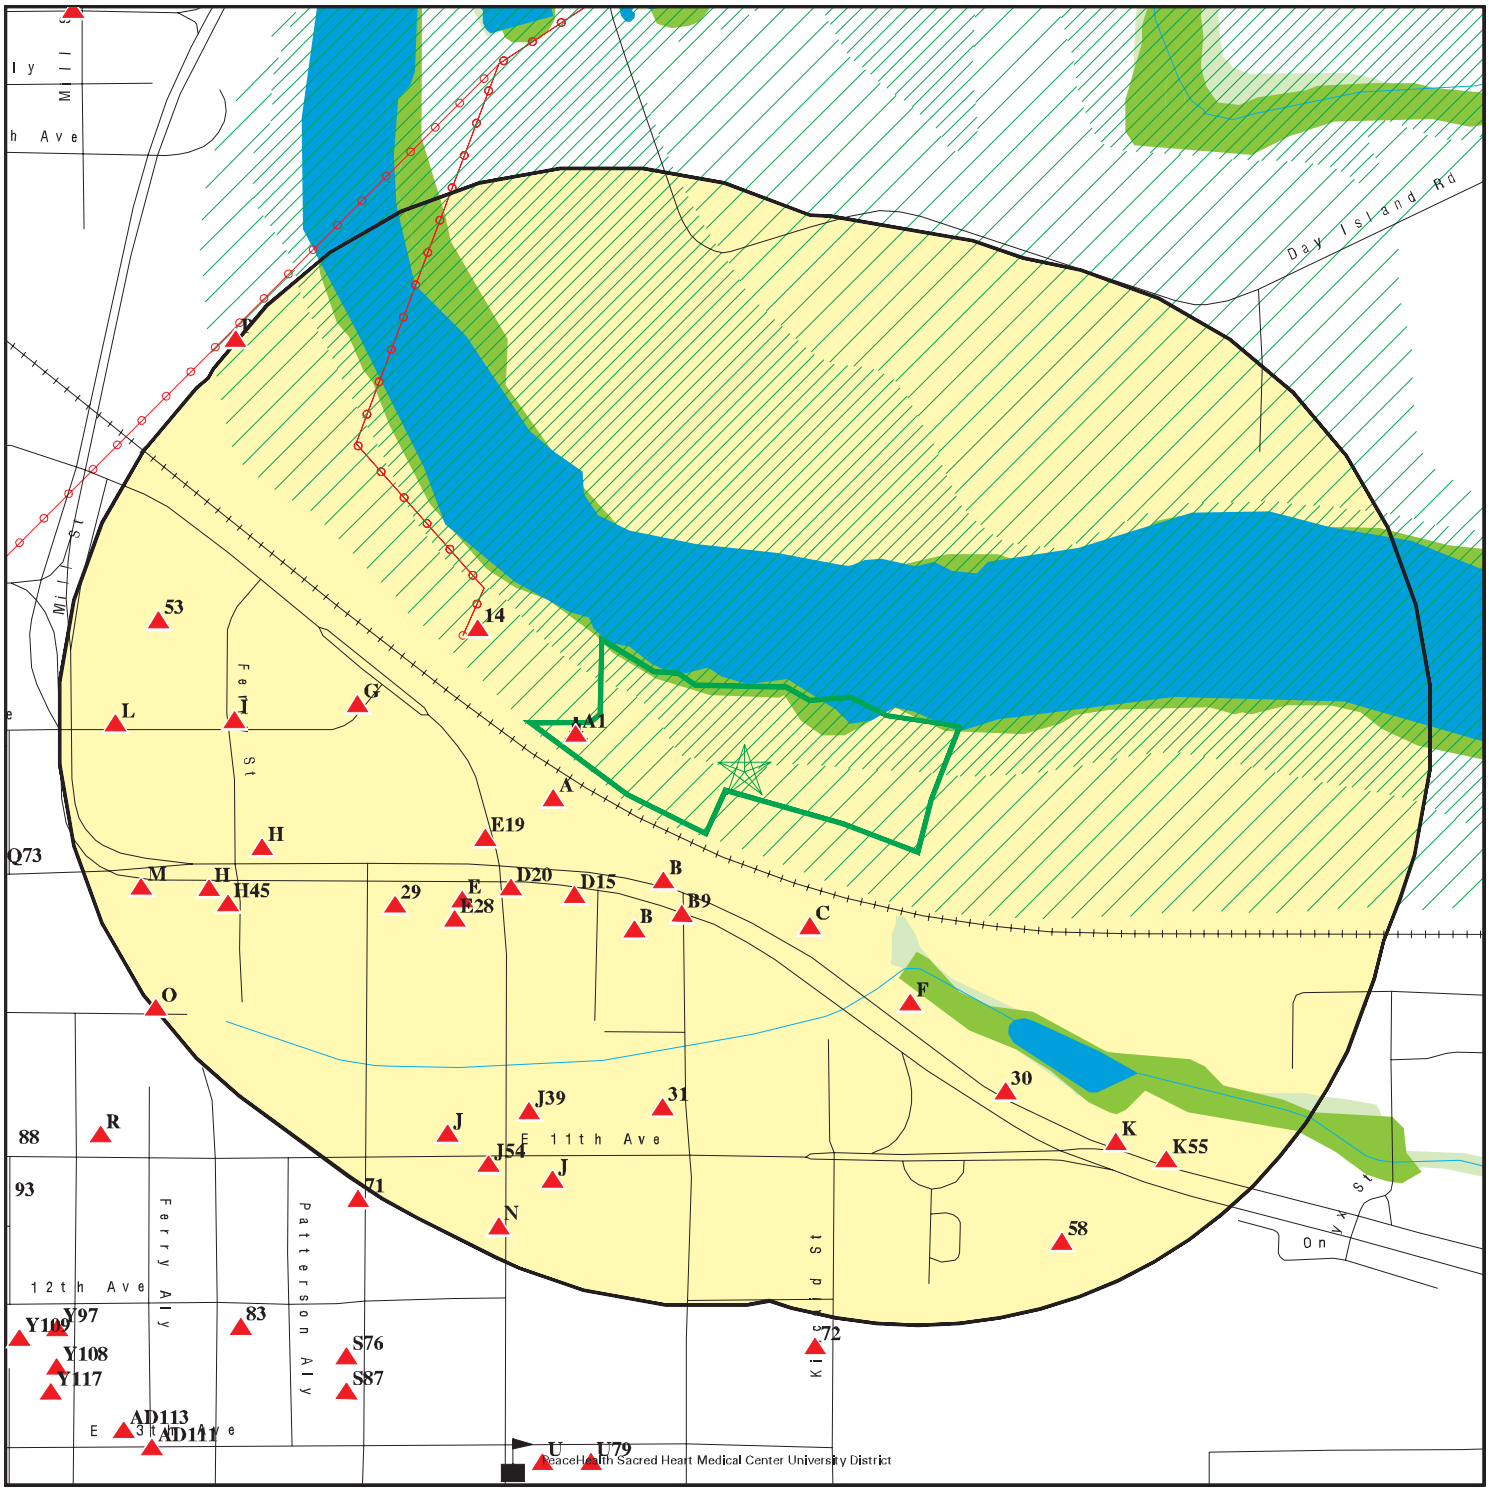

- Target Property
- Sites at elevations higher than or equal to the target property
- Sites at elevations lower than the target property
- Manufactured Gas Plants
- National Priority List Sites
- Dept. Defense Sites
- Indian Reservations BIA
- Power transmission lines
- Special Flood Hazard Area (1%)
- 0.2% Annual Chance Flood Hazard
- National Wetland Inventory
- State Wetlands
- Areas of Concern

This report includes Interactive Map Layers to display and/or hide map information. The legend includes only those icons for the default map view.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

NARR Comments: (7/6/1995 KNA/VCS) Voluntary XPA initiated by Laurita Ruth in order to address data gaps noted in Voluntary PA. AGRA Earth and Environmental (former RZA-Agra) is consultant for Laurita Ruth. SAP submitted and approved in late January 1995. Field work was completed in March 1995. Final report was submitted by RP in May 1995. Review completed by DEQ in June 1995. No further action required at the site. September 2018, U of O purchased property. Stantec excavated four locations on-site in search of potential USTs. Stantec located 2 small USTs (~35 gallon) approximately 11 feet bgs. One contained residual gasoline. Excavated very small amount of residual PCS. Collected confirmation soil samples and provided report. Site was listed under LUST database as 20-18-1096 and DEQ issued NFA on March 14, 2019.

Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (7/26/95 KNA/SAS) Information gathered during cleanup/investigation at the U of Oregon Riverfront Research Park (ECSI #1018) suggested the presence of contamination in soils at the EWEB former MGP. This was confirmed when EWEB provided DEQ a copy of a work plan that included site sampling data. The EWEB document indicated that petroleum products, metals, and PAHs were present in soils. It is believed that the contamination resulted from past operations at the MGP. Spring 1998 groundwater investigation confirmed on-site NAPL and contaminated groundwater downgradient from the site. (11/9/99 M5M/VCS) Summer 1999 investigation of underground structures confirms presence of tar waste in abandoned tar tank.

NARR Comments: (7/17/96 MJM/VCS) EWEB joined VCP in February 1996 in an effort to address on-site contamination at the site. Currently negotiating an intergovernmental agreement and scope of work with EWEB. (7/6/98 M5M/VCS) EWEB completed an independent assessment of site groundwater conditions in 5/98 including the installation and sampling of five monitoring wells. (11/13/98 M5M/VCS) EWEB has proposed a source area investigation. (2/10/99 M5M/VCS) Intergovernmental Agreement signed 11/25/98. Phase I Remedial Investigation Work Plan received 12/98, approved 1/99. EWEB preparing to investigate source areas on-site. (11/9/99 M5M/VCS) Source investigation identified liquid tar waste present in abandoned tar tank. Removal completed 11/99. (3/28/00 M5M/VCS) Draft Beneficial Use Report submitted and received in March 2000. (6/29/00 M5M/VCS) Comments on draft beneficial use report made in April 2000. Draft Phase 1 RI Report submitted in June 2000. (9/25/00 M5M/VCS) Comments on Draft Phase 1 RI Report made in

EUGENE MANUFACTURED GAS PLANT (FORMER) (Continued) **S106497114**

September 2000. (12/19/00 M5M/VCS) Response to RI comments received and reviewed in December 2000. (10/3/01 ALS/VCS) Risk Assessment work plan is to be submitted in October 2001. Groundwater monitoring is being conducted on semi-annual basis to monitor site conditions. DEQ approved the Human Health Risk Assessment, Ecological Risk Assessment and the RI. EWEB is currently preparing the Feasibility Study for soils at the site. Remedial alternatives include no action, engineering and institutional controls, limited soil removal with engineering and institutional controls, and excavating a large portion of the site to the depth of groundwater. EWEB is currently incorporating changes to their Draft Focused Feasibility Study recommended by the DEQ in 1/05. (2/15/05 - GCB) (07/21/14 SJS/VCS) A staff report has been prepared recommending remedial action. This recommendation will be presented fro public comment in September of 2014. (01/27/15 SJS/VCP) RODs have been approved for the main portion of the site and for the Cul-deSac area. The recommended remedial action includes:Excavation and off-site disposal of high-concentration residuals/waste at the first gas plant structure and the small relief holder; assessment and removal for similar residuals/waste from the vaults at the large gas holder; Engineering controls consisting of (1) a cap and (2) bank stabilization action; Institutional controls consisting of an Easement & Equitable Servitude restricting property use, and development of a site management plan (SMP); Inspection and maintenance of the Site conditions and features according to the SMP. (7/25/2016 cjr) Preliminary Bank Stabilization Design submitted for comments; Upland remedial design (90%) approved March 2016. (8/31/2017 cjb) 90% Upland Removal design plan submitted April 2017, comments sent 8/25 (no changes); 90% Bank Stabilization plan submitted June 2017, engineer review completed (no significant changes). Approval for final design on bank stabilization provided 8/31/2017. (5/29/20 DEH) EWEB completed the upland and shorline remedial actions required under the RODs in fall of 2019. In May 2020 the Site Management PLan was prepared and approved by DEQ

NARR Comments: A DEQ-approved Easement and Equitable Servitude (E&ES) will be recorded in the county property records with the following general requirements for the Management: 1 - Groundwater Use Restrictions: The Site owner may not extract through wells or by other means or use the groundwater at the Site for consumption or other beneficial use. This prohibition does not apply to extraction of groundwater

EUGENE MANUFACTURED GAS PLANT (FORMER) (Continued) **S106497114**

associated with groundwater treatment or monitoring activities approved by DEQ or to temporary dewatering activities related to construction, development, or the installation of sewer or utilities at the Site. The Site owner must conduct a waste determination on any groundwater that is extracted during such monitoring, treatment, or dewatering activities and handle, store and manage waste water according to applicable laws. 2 - Soil Cap Engineering Control. Except in accordance with the SMP as approved in writing by DEQ, the Site owner may not conduct or allow operations on the Site or use of the Site in any way that will or likely will penetrate the cap at the Site or jeopardize the cap's protective function as an engineering control that prevents exposure to contaminated soil, including without limitation any excavation, drilling, scraping, or uncontrolled erosion. The Site owner will maintain the cap in accordance with the SMP as approved in writing by DEQ. The Site owner shall notify DEQ prior to any subsurface work at the shoreline area or any modification of the bank stabilization measures that might expose human or ecological receptors to hazardous substances at the Site. 3 - Land Use Restrictions. The following land use activities are prohibited on the Site; Residential use of any type. The Site owner shall notify DEQ of zoning changes or any development activities or change in use of the Site that might expose human or ecological receptors to hazardous substances at the Site. 4 - No buildings for continuous human occupancy shall be constructed at the Site (e.g., offices, shops, retail development) unless additional Site-specific analyses are conducted in the future to demonstrate that RAOs would be met and the analyses are coordinated with and approved by DEQ, and aspects of the building construction to meet RAOs are approved by DEQ. Institutional Controls Site Management Plan A DEQ-approved SMP will be prepared for the Site, which will cover the following general topics: 1 - Excavation Worker Health and Safety. The SMP will describe how work shall be conducted at the Site, who may complete the work, what notifications will need to occur prior to work commencing, measures for personal protective equipment and training required to work on the Site, and general protocols for excavating, storing, characterizing, and disposing of any excavated materials from the Site. 2 - Cap Maintenance. The SMP will detail how and at what interval the cap will be inspected and outline any regularly scheduled cap maintenance that may be required. 3 - Shoreline Inspection and Maintenance. The SMP will detail a shoreline inspection and maintenance plan designed to ensure that conditions in the shoreline area remain stable (i.e., no exposure or release of impacted soils or soil contaminants). 4 - Shoreline Area and Bank Stabilization Measures. The SMP will include measures for inspection and maintenance of the shoreline area, including any implemented bank stabilization measures and coordination with the DEQ as required. 5 - Reporting. The SMP will detail a simple annual report form to be submitted to the DEQ containing records of excavation work at the Site, cap maintenance/inspection, and shoreline inspection.

EUGENE MANUFACTURED GAS PLANT (FORMER) (Continued) **S106497114**

Decode for NarcdID: Current Site Summary Statement
NARR Comments: (11-22-2021 DEH) The former Eugene Manufactured Gas Plant site is located on the Willamette River in downtown Eugene. The plant operated from 1907 until 1950. Contamination from the plant consisting of petroleum related MGP waste contaminated soil and groundwater at the site and adjacent to the river. DEQ approved final remedial design plans in early 2019. Cleanup of contaminated soil and MGP waste, as well as river bank stabilization were completed between September and December 2019. EWEB developed a Site Management plan in May 2020 and recorded a deed restriction on the property on August 6, 2020 to prohibit groundwater use and to manage and inspect the cap and bank stabilization areas. DEQ has determined that the cleanup is complete (with ongoing institutional and engineering controls), and issued a Certification of Completion on 12/22/2020. The City of Eugene purchased the site under a Prospective Purchaser Agreement (PPA) in October 2021. The city will use the site for access to its new downtown Riverfront Park development. The city must comply with the Easement and Equitable Servitudes recorded on the property and the approoved Site Management Plan

Decode for NarcdID: Current Site Summary Statement
NARR Comments: This site was historically the location of a car wash and gas station with underground storage tanks. Petroleum related contaminants were detected in soil samples collected during a phase II site assessment in 2019. Subsequent characterization of the property defined the lateral and vertical extent of contamination. Contaminated soil was limited to the property and extended to a maximum depth of 12 feet below ground surface. Excavation activities were conducted at the site between December 2020 and February 2021. Soil was removed from the entire site to a depth of 18 feet below ground surface. All contaminated soil was removed from the site and disposed of at an approved landfill. The site is currently occupied by a multi-story appartment complex.

Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	500-999
Description Of The Avg Qnty Code:	500-999
Most Hazardous Ingridient:	VARIOUS
United Nations/north America 4 Digit Class Number:	1830
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Corrosive Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	8.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Name:	DEICER
Physical Description:	SOLID
Case Number:	10043524
Facility Id:	006164
Physical State Of The Substance:	1
Average Amount Possessed During The Year Code:	20
Maximum Amount Possessed During The Year Code:	20
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	K
Description:	BOX
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported

NARR Comments: (10/8/01 GEA/ICP) Given the historic use of the Chiquita site for food- processing activities, and the documented results of soil and groundwater sampling, DEQ concluded that there are no unacceptable risks to human health or the environment associated with the low levels of hazardous substances detected in soil, groundwater, and sump sediments/liquids at the site.

NARR Comments: (10/8/01 GEA/VCP) Since the early 1900s, operations at the Chiquita site have included vegetable receiving, processing, canning, cooking, packing, product warehousing, and shipping. Support operations include office work, dry goods storage, warehousing, and equipment maintenance and storage. The facility is scheduled to close at the end of 2001 canning season, and will be demolished by the City of Eugene in early 2002 to make way for a new federal courthouse building.

Environmental Interest/Information System:
The Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D009
Waste Description: Mercury

Waste Code: D011
Waste Description: Silver

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003

OREGON MEDICAL LABORATORIES (Continued) **1004770322**

Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

OREGON MEDICAL LABORATORIES (Continued) **1004770322**

The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Decode for NarcdID: Contamination
NARR Comments: In September 2002, while completing an asphalt patching project, EWEB encountered visibly contaminated soils in two areas, to the north of the Steam Plant and to the north of the Willamette Substation. Both areas are in or adjacent to an access road that parallels a bike path and provides access to EWEB facilities. Approximately four inches of impacted soil were removed from both areas (to prepare the asphalt sub-grade). The impacted soil was sampled and found to contain arsenic (1.4 ppm) and carcinogenic PAHs above acceptable levels for industrial sites. The contamination in the areas may be due to historical operations at the Manufactured Gas Plant (MGP) (See ECSI # 1723), which is just southwest of the impacted areas. The MGP site is in the Voluntary Cleanup Program and a Feasibility Study will be completed soon there. There is pervasive heavy MGP-waste (similar to coal tar or creosote) buried at the MGP site, with DNAPL present in the groundwater. EWEB has requested, and DEQ has agreed, to split out

EUGENE WATER AND ELECTRIC BOARD SHOP (Continued) **1005649490**

the recently discovered soil contamination from the MGP site. Other possible sources for the contaminated soils include the Willamette Substation and the Steam Plant. Specific releases at either location are unknown; however the Steam Plant does have a 100,000-gallon Bunker C tank. (5/19/2017 cjb) Assessments were completed in 2014 that identified three areas of contamination at the large EWEB Operations site. Arsenic-contaminated soil was found at the former Credit Union building (Tax Lot 2700) above background levels. PCBs were present in soil where transformers were stored near the former Substation A building. Oil was found in soil at various locations in the southern portion of the site near the Steam Plant building. Each area of concern was cleaned up in 2016-2017 through removal of contaminated soil.

NARR Comments: (5/19/2017 cjb) Arsenic was detected in soil above background concentrations for the Southern Willamette Valley at the former Credit Union building. PCBs were found in soil near the former Substation A building. Oil-related contamination was present in soil at three areas in the southern portion of the site. Each area of concern was cleaned up through remedial excavation with proper disposal of contaminated soil at an approved landfill.

NARR Comments: (5/19/2017 cjb) The EWEB operations site includes 21 acres of land historically used by the utility. Three areas of concern were identified in assessments conducted in 2014 through a Eugene brownfield grant funded by the U.S. Environmental Protection Agency. EWEB investigated the three areas and began cleanup in November 2016. Soil contaminated with arsenic was removed at the former EWEB Credit Union building on Fourth Avenue, and soil containing old transformer oil chemicals was removed from a former substation on the southeast portion of the property. Soil contaminated with oil was also removed from three areas near the current Willamette Substation. Over 570

EUGENE WATER AND ELECTRIC BOARD SHOP (Continued) **1005649490**

tons of contaminated soil was removed from the site and disposed of at an approved landfill. An evaluation of soil confirmed there is no risk to human health or the environment following cleanup under expected land uses. Construction work will require proper safety measures and management of contaminated soil encountered through excavation.

NARR Comments: Because of the presence of carcinogenic PAHs in proximity to the Willamette River and the bike path, DEQ recommends that Site Assessment complete a site screening and develop a strategy recommendation for the site. (10-13-05;KLS/SAS): The site has been changed to a medium-low priority. DEQ did receive a response to questions from the notice of site assessment review (EV notice), and it is availalbe to review in the ECSI file. For now, the screening is on hold. (5/19/2017 cjb) Arsenic-contaminated soil was excavated from

EUGENE WATER AND ELECTRIC BOARD SHOP (Continued) **1005649490**

the site in Nov. 2016 at the former credit union building. PCB-contaminated soil was also removed at this time near the former Substation A building. Soil with oil contamination was removed from three areas in the southern portion of the site in 2016-2017 cleanup actions. (3/22/24, DEH) DEQ issued renewed conditinal NFAs for downtown riverfront development parcels 3B/C and 7 on 3/22/24 as part of the Downtwown Riverfront Development PPA project by Atkins and Dames. The NFAs were requested following additional soil cleanup at the properties during development in 2023.

NARR Comments: (5/19/2017 cjb) The site has been developed as industrial property since 1885, operating as a woolen mill, flour mill, furniture manufacturer, and wood products. The Eugene Water and Electric Board first began operation at the property in 1911. The Steam Plant was initiated in 1931 and used Bunker C oil for fuel. A separate cleanup site for a release from the Bunker C storage tank was previously issued No Further Action by DEQ. Additional tax lots were acquired by EWEB in the 1950s and 1980s. The Steam Plant operated until 2012. Investigation of potential contamination at the large EWEB facility (referred to as the <quot>Operations<quot> site) was initiated in 2014 by the City of Eugene through an EPA brownfield grant. Arsenic, PCBs, and oil were identified as contaminants in soil. Additional assessment and cleanup were conducted by EWEB. Successful removal of contaminated soil was achieved in April 2017. The site is proposed for redevelopment for commercial and multi-family (apartment) use.

NARR Comments: (11/10/2021 DEH) The property was used for industrial operations by the forner owner/operator Eugene Water and Electric Board beginning about 1911. Investigations found three areas of soil contaminated with arsenic, polychlorinated biphenyls, or oil. EWEB contractors removed contaminated soil in 2016. A Conditional No Further Action was issued to the cleanup site (Environmental Cleanup Site Information #3808) associated with the property in December 2017. An Easement and Equitable Servitudes was recorded on the property which prohibits single-family residential housing and requires proper soil management with a Contaminated Media Management PLan. The City of Eugene Urban Renewal Agency purchased the property under a Prospective Purchaser Agreement (PPA) that was recorded on the property in April 2017. In October 2021 Eugene Riverfront Development LLC purchased parcels within the site (excluding the city rights-of-way) under a PPA with DEQ, to develop the property for commercial, restautant, hotel, multi-family housing, townhomes and affordable housing. A separate CMMP was developed to manage soil associated with the development and future activities on these lots. The Conditinoal No Further Action determination remains in effect and requires adherance to conditions in the Easement and Equitable Servitudes.

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental

EUGENE WATER AND ELECTRIC BOARD SHOP (Continued) **1005649490**

regulations.
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

NARR Code: Pathways Other Hazards
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Groundwater: There is potential for leaching of remaining soil contaminants to groundwater, particularly from soils under the bridge. Well location information indicates domestic wells were installed in the site vicinity. However, city water lines now serve this area, reducing the likelihood of impacts to receptors via this pathway. Surface Water: The Willamette River is located approximately 100 feet east of the contamination. Potential for impacts to the river via overland runoff has been reduced by soil removal, paving, and backfilling. Remaining uncharacterized subsurface contamination (e.g., the backfilled area directly west of the bike path alignment, adjacent to/under the bridge) poses potential for impacts to the river via groundwater-to-surface water discharge. Direct Contact: Benzo(a)pyrene was detected in surface soils at concentrations exceeding the residential soil PRG, but below respective non-residential screening levels. The bike path is for public use, but potential direct-contact exposure has been reduced by backfilling and paving. Soils directly east of the bike path were not evaluated for contamination during construction activities. Air: VOCs were not detected in soil samples. There is a low potential for impacts to individuals via this pathway.

NARR ID: 5738765
NARR Code: Remedial Action
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 06/02/2003
Decode for NarcdID: Remedial Action
NARR Comments: (9/12/00 BTM) Tar-like substance was removed, along with some of the soil. Confirmation sampling showed benzo(a)pyrene at concentrations above the residential Preliminary Remedial Goal (PRG), but below the industrial PRG. Some soil and substances under the bridge remain uncharacterized due to access problems. Soils directly east of the bike path were not explored during construction activities.

OAK ST (FORMER BUTTERFLY LOT) (Continued) **S127580561**

NARR Comments: Phase 2 report lists an 8,000 UST and dispenser piping was found during a geophysical survey of the area near the west access driveway. Soil and groundwater sampling for gasoline & volatile organic compounds were non-detect. Lead in soil and GW was not above background levels.

NARR Comments: 750 Oak Street, Eugene. Tax Lot 17-03-31-11-09500 The Property and surrounding area are generally flat. The elevation of the Property is approximately 427 feet above mean sea level (msl). Depth to shallow groundwater in the area is approximately 10-15 feet below ground surface (bgs). The presumed groundwater flow direction is to the north toward the Willamette River. It is anticipated that stormwater that falls on the exterior of the parking structure would flow into one of the storm drains on the Property, and from there into the city s stormwater system. Stormwater that enters the lower level of the parking structure is diverted to a sump and pumped into the city s stormwater system. The 1.23-acre Property is currently in use as a two-story parking garage.

NARR Comments: During site redevelopment, a geophysical survey of the area found the former tank pit, approximately 10 x20 in size, and indications of dispenser piping leading from the former tank pit and the former dispenser. Radar magnetics indicated the presence of debris in the pit, but not a tank. Subsequently, a Phase 2 Environmental Assessment was completed, which included soil and groundwater (GW) sampling in

OAK ST (FORMER BUTTERFLY LOT) (Continued) **S127580561**

the area surrounding the discovered tank. Soil and GW sample results for gasoline & volatile organic compounds were non-detect. Lead in soil and GW was not above background levels and was below the acceptable risk levels for the current and future uses of the property. No other reasons for environmental concern were found in either the Phase 1 or 2 reports. An Administrative Closure is approved for this site.

NARR Comments: The Property is zoned commercial and is owned by Lane County. Historical aerial photographs and fire insurance maps indicate that the Property has been in use as a parking structure since prior to 1965, and that previous uses of the Property included residences, a dry goods store, City Hall, a blacksmith, a fire station, and jail. Phase 2 report lists an 8,000 UST and dispenser piping was found during a geophysical survey of the area near the west access driveway. Soil and groundwater sampling for gasoline & volatile organic compounds were non-detect. Lead in soil and GW was not above background levels. No other reasons for environmental concern were found in either the phase 1 or 2 reports.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: (I. Balcom 7/24/09 - SRS) Reports of heating oil in the basement of an apartment building located at 740 E 15th Ave, Eugene, OR were received by OERS on 4/1/09. OERS responded to the scene and identified dyed diesel (heating oil) located in the sump and floor drain of the basement (see pictures). No onsite source was identified. Suspected offsite souces may have migrated through underground utility conduit or other preferential pathway, but this has not been verified.

Updated By: KDAUGHE
Updated Date: 03/13/2024
Decode for NarcdID: Contamination
NARR Comments: 408 - 412 Pearl St. (12/23/94 NW/SRS) Four large USTs and 4 small USTs were decommissioned at the site. High petroleum product contamination remains on-site, particularly in the soil beneath an office building. High levels of PCE, TCE, and benzene have been found in groundwater on-site. Contamination is migrating south and west towards the Eugene Train Station.

Decode for NarcdID: Manner of Release
NARR Comments: Leaking underground storage tanks undoubtedly account for the diesel and petroleum products in soil and groundwater. However, the source of the solvent concentrations in groundwater was apparently a dry well that was located near the southwest corner of the office building. A solvent UST may have been a source as well. Dates of releases are unknown.

Updated Date: 12/17/2002
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Based upon site information, the pathway of concern is groundwater. According to the Oregon Water Resources Department, there are at least 10 water wells within 0.5 mile downgradient; these could be affected by contaminated groundwater. Depth to groundwater in this area varies seasonally between 10-16 feet bgs. It does not appear that there are other pathways of concern at the site.

Updated Date: 04/29/2005
Decode for NarcdID: Remedial Action
NARR Comments: Site has a long history of gasoline, petroleum, and solvent distribution dating back to 1930s. Some soil was removed in the early 1990s. A report submitted 4/92 documented VOCs (PCE, TCE, DCE, and vinyl chloride) at MW-1 in very high concentrations. A phase II soil and groundwater investigation at the adjacent site (Eugene Train Station, owned by same RP) showed the plume extending several hundred feet SW of the source area. Letter Agreement signed 9/12/94. (1/19/95 NMW) Groundwater Investigation and Monitoring Report submitted confirming chlorinated solvent plume extending onto Eugene Train Station Property. (8/14/95 NMW) Site Investigation Report confirmed historical presence of dry well near MW-1 location. Proposal also submitted for additional soil removal and on-site treatment. (7/1/98 GEA/VCS) IRAM workplan received 11/97; IRAM construction finished 6/98; IRAM consisting of high vacuum soil vapor and groundwater extraction & treatment system operational 1/99. (10/1/01 ALS/VCS) Risk Assessment submitted for DEQ review. LOF determination using BioChlor modeling showed that the current and future extent of the plume was limited to the facility. (2/15/05 GCB/VCS) Currently, an air pathway analysis consisting of soil gas sampling and vapor intrusion modeling is being conducted to support the risk assessment.

Decode for NarcdID:	Contamination
NARR Comments:	Low levels of solvent contamination were detected in samples from groundwater monitoring wells at the St. Vincent DePaul Property located at 110 East 11th Ave. The source of contamination has not been determined. Historical records indicate that a dry cleaning facility has operated at the property to the north. Concentrations in the shallow groundwater appear to increase to the north.

Updated Date: 10/02/2009
Decode for NarcdID: Contamination
NARR Comments: 10/02/09 - Western Parcel consisting of the former Eugene Sand and Gravel facility located on the eastern margin of the former Eugene Manufactured Gas Plant facility contains soil impacted with petroleum hydrocarbons and MGP Waste. After a 2006 removal, all soil exceeding occupational RBCs was removed from the site. Groundwater contamination consisting of PAHs exceeds DEQ RBCs for direct contact for construction/excavation workers. The Western Parcel has been spit into two operable units, an upland unit and a riverside unit. Conditions on the upland portion of the site are unlikely to impact the riverside unit. The riverside unit should be evaluated in the 09/10. (5/3/95 RMD/VCS) The University of Oregon, City of Eugene and a private developer are building the Riverfront Research Park on a north campus property. The University is conducting an environmental assessment prior to construction. The entire area is 67 acres and is bounded by the Willamette River on the north, Garden Avenue to the east, the Southern Pacific Railroad Tracks or the Mill Race on the south and the Eugene Water and Electric Board and Hillyard Street to the West. The area was subdivided into four parcels: the Silva Parcel, the Millrace Parcel (Physical Plant), the Parcel North of the Railroad Tracks and the Western Parcel. A 1990 environmental assessment and a DEQ PA recommended further action on all parcels. The Silva Parcel was the first priority. As of 1/1/09, only two parcels of the Park retain environmental issues, the Western Parcel and the basement of

NARR Comments: 10/02/2009 GCB - Removal of a UST in 2001 near the southwest corner of th Western Parcel. Removal of 33 tons of mgp-contaminated soil in 2006. (12/3/91 RD) Assessment currently taking place on entire site. (5/3/95 RMD/VCS) Silva Parcel no further action decision in September 1991. An Intergovernmental Agreement was signed in December 1992. Field work conducted on the three remaining parcels was summarized through August 1993 in a March 1994 report. The site has been inactive since then. Eleven of the 20 environmental issues/areas of concern that DEQ identified have been addressed. Assessment of the MGP portion of the Riverfront Research Park continues in 2004-2005. MGP wastes are present in shallow soils adjacent to the property line shared with EWEB. Low level VOC and PAH contaminants are present in on-site monitoring wells.

NARR Comments: (12/22/20 DEH) The Riverfront Research Park (RRP) site is located adjacent to the Willamette River near downtown Eugene. It is adjacent to the former Eugene Water and Electric Board (EWEB) Manufactured Gas Plant (MGP) site. Parts of the former MGP were located on the west side of the RRP property, and they resulted in releases of petroleum and MGP biproducts in soil and groundwater. DEQ issued a Conditional No Further Action (NFA) for the upland part of the site in 2010 under the condition that the Site Management Plan (SMP) be followed and a Health and Safety Plan be prepared and followed whenever construction work was done on the site that could expose workers to contaminated groundwater. The remaining Riverfront Porton of the site was issued a

RIVERFRONT RESEARCH PARK (Continued) **S107134175**

partial NFA by DEQ in April 2015 after the completion of an ecological risk aassessment.

NARR Comments: (8/30/88 JMO/SAS) A 1,000-gallon UST with gasoline product was maintained by Lane Electric Co-op at its headquarters in Eugene. After selling the property, Lane Electric Co-op decided to remove the tank. The contractor while removing the tank discovered fuel-contaminated soils around the tank's former location (Spring 1988).

NARR Comments: (1/23/17 MOTT) DEQ received a call on January 19, 2107 regarding petroleum contaminated soil discovered during construction activities at the Campbell Community Center. The source of the contamination is not known. It does not appear to be related to a UST. Appears to extend approximately 4 feet deep. Geoscience was contractor onsite excavating soil (taking to landill) and collecting soil samples. Excavation 10' x 15' as of 1/19/17. No data or reports have been submitted to confirm impacts.

Decode for NarcdID: Contamination
NARR Comments: (6/25/01 MME/SAS) Due to a pending sale of the Hammer/Furtick Property to LTD, a site evaluation was conducted by DEQ on September 17, 1996. The following potential sources of surface & subsurface contamination include: possible USTs at the site; a spray paint area in the NW corner of the site when it was an auto dealership; and a former service station located off-site, but near the subject property.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: (6/25/01 MME/SAS) TPH-D, PCBs, and VOCs were detected in subsurface soils. However, PCBs and VOCs were not detected in confirmation samples collected on-site. The potential for migration of contaminants to surface water appears unlikely based on the subsurface nature of the contaminants. It appears that groundwater at the site has been impacted with low levels of HVOCs. There are no domestic wells within 1.5 miles of the site. There do not appear to be air quality impacts associated with the site.

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (6/25/01 MME/SAS) During a Level II Environmental Site Assessment conducted in 1995, soil and groundwater samples were collected from areas adjacent to the site. No samples were actually collected on-site. Only two samples contained detectable levels of constituents (heavy oil-54 mg/kg and toluene-6.7 ug/kg). HVOCs were detected in each of the six groundwater samples, including perchloroethene, trichloroethene, and cis-1,2-DCE. An on-site groundwater and soil investigation took place in December 1995, in which two monitoring wells were drilled adjacent to the site and six hand-auger borings were installed to the top of the gravel layer. 1,2,4-trimethylbenzene and xylenes were detected at low levels in one of the soil borings. TPH-diesel was detected in two soil borings. Five of the six groundwater samples contained low concentrations of one or more HVOCs.

NARR Comments: (4/11/91 CW/WVR) The site is the location of a former Sears automotive store. Soil contamination was discovered after the old automobile hoists were dug up during a UST cleanup. (8/25/10 DEH/CU) Contamination in soil consisted of petroleum hydrocarbons, PCBs (Arachlor 1260 at 2.5 mg/kg), and the volatile organic compounds tetrachloroethylene (PCE, at 5.5 mg/kg) and trichloroethylene (TCE, at 0.47 mg/kg). Groundwater was not encountered in excavations and has not been evaluated at this site.

NARR Comments: (4/11/91 CW) Release was discovered during the removal of the hoists from the automotive building. Some cleanup may have been completed, but WVR has not been notified. Further action recommended. (8/25/10 DEH/WRCU) In June 1990 ten hydraulic lifts were removed from the former Sears Building under oversight of the DEQ Tanks Program. Petroleum contamination was encountered and reported to DEQ. Lifts 3 and 4 were the two where obvious contamination was observed. In July 1990 about 48 cubic yards of contaminated soil were excavated from the locations of lifts 3 and 4. No groundwater was encountered during the excavation and groundwater has not been evaluated. The Tanks Program issued an NFA for the site in August 2001. Groundwater sampling conducted in June 2008 nearby the site (samples from probes P-1 (presumed upgradient) and P-2 (presumed upgradient) location did not detect PCE or TCE. Groundwater sampling of monitoring well MW-1 (cross gradient to the east) detected PCE at 1.14 ug/L. Groundwater samples from presumed downgradient probes P-3 and P-4 did not detect PCE or TCE.

Updated Date: 12/21/2011
Decode for NarcdID: Health Threats
NARR Comments: (8/25/2010 DEH/CU) Original health threats included possible exposure to contaminated soil by indivuduals/workers, vapor intrusion into buildings of volatile organic chemicals (namely PCE and TCE), leaching to groundwater (which could also pose a threat of vapor intrusion). Groundwater in this part of downtown Eugene often is found to contain varying, relatively low levels of PCE and TCE. There are several known sources of PCE contamination, but there are likely other sources of this contamination that were not identified. The levels of PCE and TCE in soil prior to the excavation exceeded 2010 RBCs for vapor intrusion into buildings. Contaminated soil was removed in 2001, but confirmation sampling for PCE and TCE was not completed. However, it was assumed in 2001 that because levels of petroleum hydrocarbons in post-removal confirmatoin samples were 1,400 to 1,500 times less than before the removal, concentrations of PCE, TCE and PCBs were also likely to substantially decrease or be completely removed.

NARR Comments: (8/26/10 DEH/CU) The former Sears Automotive facility at 942 Olive Street in Eugene had 10 hydraulic hoists. The hoists were removed in 1990 under oversight of DEQ's Underground Storage Tank Program. Contamination was found at two hoist locations. Contaminants initially identified included petroleum hydrocarbons (TPH), the PCB Arochlor 1260, and the chlorinated solvents tetrachloroethylene (PCE) and trichloroethylene (TCE). Contaminated soil was excavated and disposed of off-site in July 1990. Confirmation sampling included soil sampling and analysis for TPH only. Groundwater was not observed or evaluated during the investigation. The site was closed by the Underground Storage Tank Program in August 2001 using the Soil Matrix Cleanup Option. No further action required in the Cleanup Program.

NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: KDANA
Updated Date: 03/24/2003
Decode for NarcdID: Contamination
NARR Comments: (1/15/2003 DH/SRS) The site was brought to DEQ's attention after groundwater contamination commonly associated with dry cleaners was found at an adjacent site (the Eugene Library, ECSI #2405). The City of Eugene signed up for DEQ's Independent Cleanup Pathway (ICP) in July 1999 to obtain limited DEQ oversight for evaluating the contamination at the library site. Groundwater investigations conducted by the city found groundwater at the library site to be contaminated with PCE and associated breakdown products, and that the highest levels of PCE were located near the McAyeal's site. McAyeal's applied to DEQ's Dry Cleaner Program in April 2000, and was accepted in June 2000.

Decode for NarcdID: General Site Description
NARR Comments: (9/7/04 DEH, SRS) The McAyeal's Cleaners site was a dry cleaners in downtown Eugene, which closed in 2010. The site is adjacent to the Eugene public library, which was constructed in 2000. Dry cleaning solvents from the site have contaminated groundwater in the vicinity of the site. Groundwater is pumped from the library via footing drains to keep water out of subterrainian parking and basement storage areas. The City of Eugene installed an air stripper at the McAyeal's site to treat the contaminated water they pump from the sumps before discharging the water to city sewers. The water was initially sent to wastewater (sanitary) sewers but in April 2004 DEQ began pumping the treated water to storm sewers under an NPDES permit. The NPDES permit was transfered to Bob McAyeal in August 2010. Not reported

NARR Comments: The site is located in a commercial district of downtown Eugene. This area of Eugene has undergone significant redevelopment beginning in the late 1990s with the LTD bus mall and the Eugene library. It is expected that the land will be used for commercial/occupational uses. Urban residential is another possible use.

Updated Date: 07/20/2011
Decode for NarcdID: Manner of Release
NARR Comments: From 1972 through 1978, McAyeal's used a transfer unit as backup to the dry to dry unit. The filter sustem for the transfer unit used a filter powder and darko (charcoal). The filter cartridges were disposed of in the garbage. The water from the separator went down the drain to the wastewater treatment system. A dry to dry unit was used from 1972 until 1997. The filter cartridges were disposed of in the garbage, and water from the separator went down the drain to the wastewater treatment system. During the 1970s, McAyeal's used between 40-50 gallons of PERC per month. In 1997, McAyeal's replaced the dry-to-dry machine with a <quot>dry-to-dry<quot> model that used 5-8 gallons of PERC per month. The cartridges are disposed of by Safety-Kleen Systems, and the water is filtered through a carbon unit and then through the still on the side of the machine. The still-bottom wastewater is also disposed of by Safety-Kleen Systems.

NARR Comments: McAyeal's Wardrobe Cleaners took ownership of the facility in 1972 from Eugene Dodge Dealership. Eugene Dodge used the facility as a paint shop and garage. McAyeal's Wardrobe Cleaners moved to this location (1060 Olive St.) from the northeast corner of 10th & Olive. The property owners were Margery and Robert McAyeal. Robert McAyeal was the operator and manager of the dry cleaner. Robert passed away in January 2012. In September 2012 Lane County foreclosed on the property due to unpaid taxes.

Updated Date: 09/04/2014
Decode for NarcdID: Remedial Action
NARR Comments: (1/15/2003 DH/SRS) There was a soil removal at this site around 1985. Oily soil from car oil filters was removed from the alleyway on the west side of the dry-cleaning building. McAyeal thought the previous owners had buried the filters, and could not locate any paperwork detailing the removal. This site has been accepted into DEQ's Dry Cleaner Program, but work has been postponed due to a shortage of funds. Once funds are available, DEQ plans to investigate the magnitude/extent of PCE in site soil and groundwater. This investigation will include the collection of soil and groundwater samples at and around the site. It will also include a preliminary survey of local land and groundwater uses, and an evaluation to determine whether site contamination could pose any risks to human health or the environment. (1/26/04 DEH) DEQ is currently treating contaminated groundwater that is pumped from the sump pumps of the adjacent city library building. The water is pumped through an air stripper to remove PCE, cis-1,2 DCE and TCE before the water dishcarges to the sanitary sewer under permit with the City of Eugene. An NPDES permit is currently being prepared so that treated water can be discharged to the storm drain. (9/4/04 DEQ, SRS) In April 2004 DEQ began discharging treated water from the library sump to stormwater under NPDES permit. The wastewater permit has been terminated with the City and the wastewater disposal line has been grouted per instructions from the City of Eugene. Site is still awaiting further work based on site prioritization in the dry cleaner program. (3/8/08 DEH/DC) DEQ is negotiating with the property owner, who has reportedly identified environmental liablity insurance. The owner discontinued participation in the Dry Cleaner Program in January 2008. (8/3/2010 DEH VCP) Robert McAyeal signed a voluntary cleanup letter agreement with the DEQ to conduct investigations and possible cleanup related to releases of hazardous substance releases at the site. (9/28/11 DEH VCP) In July and August 2011 DEQ conducted a Time Critical Removal action to stabilize and remove PCE containing hazardous wastes related to former dry cleaning operations. Removed from the site were used solvent, still bottoms, filter canisters, muck, lint, and spotting fluids. All of these media contain PCE. DEQ conducted the removal after the owner did not respond to DEQ's demands to conduct the removal in a timelly manner. (9/4/14 DEH) Between 2011 and August 2014 DEQ oversaw some limited site investigation activities that were conducted by the McAyeal's insurer. In August 2014 DEQ settled with the McAyeals and was reimbursed for some DEQ's past costs for the site, and also received funds to help complete the cleanup at the site. DEQ will commence

MCAYEAL'S WARDROBE CLEANERS (Continued) **1000473691**

cleanup work in late 2014 to address residual contamination at the site, in coordination with the property owner, Lane County.

NARR Comments: (ABC 9/6/19) McAyeal's was a dry cleaner in downtown Eugene, which closed in 2012. Contamination from past activities contaminated soil and groundwater beneath the site with petroleum hydrocarbons and the dry cleaning solvent tetrachloroethylene (PCE). Groundwater entering the adjacent City Library foundation drainage is pumped to keep the basement dry. This water contains PCE believed to be largely from McAyeal's, and is treated before discharge to the storm drain. In August 2014 DEQ reached a settlement with the McAyeal s in which DEQ received funds for some of its past site management costs and to conduct additional cleanup. In the spring of 2016, 150 cubic yards of soil were excavated from the source area of the site. Prior to backfilling, 2,000 pounds of Daramend , a dry bioremedial soil amendment, was placed within the excavation. Quarterly groundwater monitoring continued at the site. In 2018, to help reduce groundwater concentrations still entering the treatment system, DEQ implemented chemical and biological groundwater amendment injections. Groundwater monitoring data on the site indicates remedial actions have been successful in reducing PCE to below cleanup standards, including the discharge permit substantive requirements concentration limit for PCE of 1.7 g/l. However, groundwater entering the treatment system via the Library foundation drainage system is still above the discharge permit s substantive requirement for PCE. Because McAyeal s site has been remedied, it is likely the Library s drainage system is pulling PCE contamination from a different source. Remedial activities at the McAyeal s Wardrobe Cleaners site are complete and the Oregon DEQ Cleanup Program is currently working towards regulatory closure.

Last Updated Date: 08/25/2022
Site Comment: In early 2000 the City of Eugene installed a groundwater pump and treat system (stacked tray stripper) at the site. The air stripper also was designed to treat water from library construction activities that occurred on the property to the north. After library completion that air stripper was configured to treat dewatering water from the library sumps. DEQ assumed control and ownership of the treatment system from the City in 2003. Originally the treated water was sent to the city sanitary sewer under a wastewater permit.The water is routed to the air stripper. Treated water is currently discharged to the storm sewer under an NPDES permit. DEQ monitors flow and tests the discharge water monthly.

MCAYEAL'S WARDROBE CLEANERS (Continued) **1000473691**

Type Code: E
Type Description: Engineering
Comments: In early 2000 the City of Eugene installed a groundwater pump and treat system (stacked tray stripper) at the site. The air stripper also was designed to treat water from library construction activities that occurred on the property to the north. After library completion that air stripper was configured to treat dewatering water from the library sumps. DEQ assumed control and ownership of the treatment system from the City in 2003. Originally the treated water was sent to the city sanitary sewer under a wastewater permit.The water is routed to the air stripper. Treated water is currently discharged to the storm sewer under an NPDES permit. DEQ monitors flow and tests the discharge water monthly.

NARR Comments: (12/11/01 GJW/VCS) Many commercial businesses have been located in the past at this site or on adjacent properties. Former businesses operations that had potential to cause environmental impacts to the area were dry cleaners, service stations, paint shops, and automobile repair shops. Currently, there is a dry-cleaning business (McAyeal's - ECSI #2490) immediately south of the library site. (McAyeal's joined DEQ's Dry Cleaner Program to address potential environmental contamination present on-site. Investigations at McAyeal's will be initiated by DEQ in 2002.) Between September 1998 and March 2000, the City of Eugene conducted several environmental investigations to

EUGENE CITY OF LIBRARY (Continued) **1004771726**

determine the nature/extent of soil and groundwater contamination. Petroleum-contaminated soils were encountered predominantly at the southeast corner of the site. Groundwater contaminated with solvents above U.S. EPA Drinking Water Maximum Contaminant Levels (MCLs) was also detected in samples from monitoring wells and push probes located on, and south of, the site.

NARR Comments: (12/11/01 GJW/VCP) The City of Eugene entered the Voluntary Cleanup Program (VCP) in July 1999, electing the Independent Cleanup Pathway (ICP) to obtain limited DEQ technical assistance and document review. DEQ has assisted the City with technical review of reports prepared by the City's consultant, Solid Waste Letter Authorizations (SWLA) to dispose of petroleum-contaminated soils excavated from the site, and coordinated efforts to get the nearby dry cleaner (McAyeal's - ECSI #2490) involved in addressing contamination at their site. During excavation for the library's basement and foundation in Fall 1999, petroleum-contaminated soil (PCS) was removed and segregated from non-impacted soil. DEQ approved use of this PCS as fill in a Eugene-area road project. Due to the scheduling of the library-construction project, a groundwater pump-and-treat system had to be installed to treat solvent-contaminated groundwater encountered during dewatering of the building excavation. The groundwater pump-and-treat system consists of an air stripper, an extraction well, and piping to connect sumps located in the library foundation to the treatment system. The system began operating in August 2000.

NARR Comments: When the Eugene Library was constructed in 2001 and 2002, contamination was identified on the site. Most of the site was excavated and contaminated soil was disposed of properly. Groundwater was found to be contaminated with dry cleaning solvent from the neighboring McAyeal's Cleaners. DEQ, and later insurance, investigated McAyeal's cleaners. Refer to ECSI 2490 for more details on McAyeal's Cleaners. (8/26/14 DEH)

Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (2/26/97 GEA/VCP) KBTC, a development company, purchased the site with the intent of constructing a five-story office building. As part of the process to obtain financing for the construction, the bank required KBTC to conduct an environmental site assessment. Contamination was detected, and KBTC signed up for DEQ oversight under the Voluntary Cleanup Program. A Site Investigation was completed in November 1993. Groundwater samples taken at the site around September 1995 showed low levels of PAH contamination.

NARR Comments: (2/26/97 GEA/VCP) The site was remediated in January 1994 when about 4,000 cubic yards of soil were excavated. About 500 yards of the excavated soil were disposed of at the Short Mountain Landfill in Lane County, and the remaining 3,500 yards were stockpiled at a site on West 11th Ave. and Willow Creek Rd. in Eugene. A total of 5,700 cubic yards of contaminated soil were finally removed from the stockpile site in August 1996 and disposed of at the Arlington Landfill. Confirmation sampling showed that all contaminated soil had been successfully removed from the West 11th Ave. site, and DEQ issued an NFA letter for the West 11th Ave. site (ECSI #3178) on December 17, 1996.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: There is a confirmed release from UST (gasoline, BTEX, PAH) impacting soil and groundwater; there's also a suspected release from a sump in building. Sludge in the sump was removed and found to have F-listed and characteristic hazardous wastes. The sludge tested at very high levels for metals and HVOCs and there may have been an impact to the surrounding soil and groundwater.

Decode for NarcdID: Remedial Action
NARR Comments: Site investigation proceeding under LUST program; Cleanup staff will assist LUST staff. If sump is found to be the source of HVOC or metals, there may be more formal Cleanup Program involvement at site. (7/12/01 GMW/SAS) DEQ's UST Program issued an NFA for underground tank issues at the site in February 2001 (LUST log #20-91-4352). (4/20/04 DBelyea/Tanks) This site had two non-UST related issues. First, HVOCs were detected in groundwater, including 1,1,1-TCA, 1,1-DCA, and PCE during initial sampling in 1992. Concentrations of 1,1,1-TCA and 1,1-DCA were never detected above EPA Region 9 tap-water PRGs (Preliminary Remediation Goals). PCE only exceeded the tap-water PRG during quarterly sampling in 1994 and 1995. There is no beneficial use of groundwater within the Locality of the Facility (i.e. no wells used for drinking water), and the UST Program's NFA prohibits the installation of water wells on the property. Second, sludge from a removed sump was tested, and found to contain high levels of HVOCs and metals. Three soil borings completed around the former sump in 1995 revealed only petroleum constituents and MEK. The detections of MEK were well below the residential soil PRG. No metals were detected. Therefore, it appears that Cleanup Program issues at the Rainier Properties site have been resolved, and that the site should be closed in the ECSI database.

Decode for NarcdID: Remedial Action
NARR Comments: (3/31/94 KNA/SAS) The site needs an expanded preliminary assessment (XPA), under a low priority. (1/10/06 BET/UST) This project was administered within DEQ in the Leaking UST program and the Cleanup program. Because levels of hazardous-substance contamination (i.e., chlorinated VOCs in groundwater) were below applicable risk-based concentrations, DEQ has made an NFA determination in Cleanup as well as in LUST.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/26/2025

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Local Land Records

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Maul Foster & Alongi, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

List of Requested Helpful Documents

MAUL FOSTER ALONGI

Helpful Document Types Requested

1. Environmental site assessment reports
2. Environmental site investigation reports
3. Environment compliance audit reports
4. Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permits, wastewater permits, National Pollutant Discharge Elimination System permits, underground injection permits)
5. Registrations for underground and aboveground storage tanks
6. Registrations for underground injection systems
7. Safety data sheets (a list may be adequate)
8. Community right-to-know plan
9. Safety plans; preparedness and prevention plans; spill prevention, control, and countermeasure plans, etc.
10. Reports regarding hydrogeologic conditions at the property or in the surrounding area
11. Reports regarding any self-directed or other cleanup activities conducted at the subject property
12. Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property
13. Hazardous waste generator notices or reports
14. Geotechnical studies
15. Risk assessments
16. Recorded activity and use limitations
17. Title records

Appendix I

Client/User Questionnaire

CLIENT/USER QUESTIONNAIRE

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the User (defined as the party requesting the Phase I Environmental Site Assessment [ESA]) must conduct the following inquiries required by 40 Code of Federal Regulations (CFR) §§ 312.25, 312.28, 312.29, 312.30, and 312.31. The User should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete. This Client/User Questionnaire is to be completed by the User. Typically, the User is NOT the current owner of the property that is the subject of the ESA (the property).

Property Address: Map and Taxlot 17-03-32-24-05300

Name of User Completing Form: Jonathan Patrick - Real Property Officer

Relationship to Property: City of Eugene/Grantee Representative

1. Environmental liens that are filed or recorded against the property (40 CFR § 312.25).

Did a search of land title records (or judicial records where appropriate, see the note below) identify any environmental liens filed or recorded against the property under federal, tribal, state, or local law?

> Note: In certain jurisdictions, federal, tribal, state, or local statutes or regulations specify that environmental liens and Activity Use Limitations (AULs) be filed in judicial records rather than in land title records. In such cases judicial records shall be searched for environmental liens and AULs.

No

2. Activity and land use limitations that are in place on the property or that have been filed or recorded against the property.

Did a search of land title records (or judicial records where appropriate, see the note above) identify any AULs filed or recorded against the property under federal, tribal, state, or local law?

No

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR § 312.28).

Do you have any specialized knowledge of or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property and therefore would have specialized knowledge of the chemicals and processes used by this type of business?

4. Relationship of the purchase price to what would be the fair market value of the property if it were not contaminated (40 CFR § 312.29).

Does the purchase price for the property reasonably reflect the fair market value of the property?

■Yes ☐ No

If you conclude that **there is a difference**, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

---

5. Commonly known or reasonably ascertainable information about the property (40 CFR § 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional identify conditions indicative of releases or threatened releases? For example:

(a) Do you know the past uses of the property? ☐ Yes ■ No (If yes, summarize below.)

(b) Do you know of specific chemicals (including petroleum products) that are present or once were present at the property? ☐ Yes ■ No (If yes, summarize below.)

(c) Do you know of spills or other chemical releases that have taken place at the property?
☐ Yes ■ No (If yes, summarize below.)

(d) Do you know of any environmental cleanups that have taken place at the property?
☐ Yes ■ No (If yes, summarize below.)

---

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR § 312.31).

Based on your knowledge of and experience related to the property, are there any obvious indicators that point to the presence or likely presence of releases at the property?

I don't know

Before MFA's visit to the property, the User must respond to the following questions. It is acceptable to write "I don't know" or "Not that I'm aware of":

Is there any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?

I don't know

Are there any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?

I don't know

Are there any notices from any government agency regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?

I don't know

Additional Information

In addition, certain information should be collected, if available, and provided to the environmental professional selected to conduct the Phase I ESA. This information is intended to assist the environmental professional but is not necessarily required to qualify for one of the LLPs. The information includes:

a. The reason the Phase I ESA is being performed

Due diligence

b. The type of property and type of property transaction; for example, sale, purchase, or exchange

Exchange

c. The complete and correct address for the property (a map or other documentation showing property location and boundaries, tax lot numbers, and parcel size is helpful)

Map and Taxlot 17-03-32-24-05300

d. The scope of services desired for the Phase I ESA (including whether any parties to the property transaction may have a required standard scope of services or whether any considerations beyond the requirements of ASTM International (ASTM) Practice E1527-21 are to be considered)

I don't know

e. Identification of all parties who will rely on the Phase I ESA report

City of Eugene and University of Oregon

f. Identification of the site contacts and how these contacts can be reached

Jonathan Patrick - City of Eugene - 541-729-2111; JPatrick@eugene-or.gov

g. Any special terms and conditions that the environmental professional must agree to

I don't know

h. Any other knowledge of or experience with the property that may be pertinent to the environmental professional (for example, copies of any available prior ESA reports, documents, or correspondence concerning the property and its environmental condition)

I don't know

Jonathan Patrick
