

## REGION 10

SEATTLE, WA 98101

November 3, 2025

### **MEMORANDUM**

**SUBJECT:** 2024-2025 Groundwater Arsenic and Manganese Background Evaluation for the EPA Region 10, Teledyne Wah Chang Superfund Site

**FROM:** Taylor Law Remedial Project Manager  
Site Cleanup Section 2  
EPA Region 10, Remedial Cleanup Branch

**TO:** ATI Specialty Alloys & Components  
Superfund and Emergency Management Division

This memorandum represents a formal request from EPA Region 10 to ATI Specialty Alloys & Components to not finalize the 2024-2025 Arsenic and Manganese Background Evaluation report for the site record at this moment. The original request to conduct this evaluation came from the 2019 Sitewide EPA Optimization report and completion of the evaluation was encouraged during the 2024 Partial Deletion event for the site. After recent submission of comments, response to comments by ATI's contractor, and additional review, EPA believes that potentially, additional data collection efforts are warranted before completion of this evaluation. EPA also believes that finalization of the evaluation, at this moment, is not a priority for the site considering other ongoing site priority activities and the time and resources that would be needed to complete an updated Arsenic and Manganese Background Evaluation for the site.
