Attention: Steven Streimer

**Phase I Environmental Site Assessment**
829 N Russell Site
829 North Russell Street
Portland, Oregon
Project: Streimer-3-01

NV5 is pleased to submit this Phase I ESA of the 829 N Russell Site located at 829 North Russell Street in Portland, Oregon. Our services were performed in conformance with the standards and practices for all appropriate inquiries specified in Title 40, Chapter I of CFR Part 312 and ASTM E1527-13, as well as the considerations of ASTM E1527-21. Contractual terms for our services are contained in our proposal dated July 11, 2022.

We appreciate the opportunity to be of service to Streimer Sheet Metal Works, Inc. Please contact us if you have questions regarding this report.

Sincerely,

NV5

Colby R. Hunt, C.H.M.M.

## EXECUTIVE SUMMARY

NV5 performed a Phase I ESA of the 829 N Russell Site located at 829 North Russell Street in Portland, Oregon (subject property). The Phase I ESA was conducted in conformance with the standards and practices for all appropriate inquiries specified in Title 40, Chapter I of CFR Part 312 and ASTM E1527-13, as well as the considerations of ASTM E1527-21. Contractual terms for our services are contained in our proposal to Streimer Sheet Metal Works, Inc. dated July 11, 2022. Any exceptions to or deletions from this practice are described in Sections 3.0 and 13.0. Please note that this section provides a summary of the findings of the Phase I ESA and some details were not included or fully developed. Therefore, this report must be read in its entirety for a more complete understanding of the findings, conclusions, and recommendations contained herein.

Acronyms and abbreviations used herein are defined immediately following the Table of Contents.

### *SUBJECT PROPERTY AND VICINITY DESCRIPTION*

| | |
|---|---|
| **Size** | 1.26 acres |
| **Tax Lots** | 7100, 7200, 7300, 7400, 7500, 7900, 8000, and 8200 |
| **Tax Map** | Multnomah County – 1N1E27BD |
| **Current Use** | Commercial |
| **Significant Features** | Four single-story commercial buildings with paved and gravel parking areas |
| **Vicinity Use** | Residential, commercial, and industrial |

### *ENVIRONMENTAL RECORDS REVIEW*

Federal, tribal, state, and local environmental records and databases were compiled for the subject property and facilities that currently or previously have occupied properties within the specified search distance from the subject property. Information contained in the records and databases was reviewed by NV5 to evaluate the potential for environmental impacts to the subject property.

#### Subject Property

The subject property was listed on the following environmental databases:

| Database | Listing Summary |
|---|---|
| DEQ LUST No. 26-95-0131 | Heating oil release to soil on Tax Lot 7500. NFA issued in February 2008 with petroleum-impacted soil remaining. |
| DEQ LUST No. 26-08-0191 | Heating oil release to soil on Tax Lot 7900. NFA issued in July 2008 with petroleum-impacted soil remaining. |

#### Surrounding Sites

The EDR Radius Map Report identified 131 surrounding sites listed on one or more regulatory databases within the ASTM search distances. Based on local topography, the inferred direction

of shallow groundwater flow, and the regulatory status of, it is our professional opinion that 2 of the 131 surrounding sites pose a risk of a REC at the subject property. The following identified surrounding sites represent a REC to the subject property:

| Site Name and Database I.D. | Distance | Listing Summary |
|---|---|---|
| Former Campbell Dry Cleaner (DEQ ECSI No. 5680) | Adjoining to the east | PCE, TCE, and chloroform in soil gas and/or groundwater |
| Tarr Inc. (DEQ ECSI No. 1139) | 220 feet southeast of the subject property | VOCs in ambient air, soil vapor, and groundwater |

***HISTORICAL USES***

**Subject Property**

Our review of historical sources from 1885 through the present indicates that the subject property was vacant land from at least 1885 through 1887. By 1889, the subject property was developed with a mix of residential and commercial buildings. Between the early 1900s and the 2000s, the subject property was gradually redeveloped for commercial uses. Previous commercial occupants have included a banquet hall, several mixed-use buildings, an asbestos factory, a drug store, and a clothes cleaning business, potentially including dry cleaning. The subject property has resembled its existing configuration since at least 2016.

**Adjoining Properties**

Our review of historical sources from 1885 through the present indicates that the adjoining properties largely consisted of residences in the late 1800s. By 1901, the adjoining areas consisted of a mix of residential and commercial structures with increasing commercial development to the south and east through the present. From at least 1950 through 1994, a dry cleaning facility (former Campbell Dry Cleaner) operated east of Tax Lot 7900 at 819 North Russell Street. By 1994, the adjoining properties generally resembled their existing configurations with an apartment building and parking areas to the north; Streimer Sheet Metal Works, Inc. to the east; several commercial properties to the south; and a parking lot, apartment building, and commercial office building to the west.

***SITE RECONNAISSANCE***

Based on the site reconnaissance, RECs were not identified in conjunction with the current use of the subject property.

***FINDINGS AND OPINIONS***

- LUST File No. 26-08-0191 received an NFA determination from DEQ on July 25, 2008. However, petroleum-impacted soil remains on the subject property at concentrations greater than one or more applicable DEQ RBCs. Therefore, the historical release associated with LUST File No. 26-08-0191 represents a CREC at the subject property.
- While LUST File No. 26-95-0131 received an NFA determination from DEQ on February 26, 2008, petroleum-impacted soil remains on the subject property at concentrations greater than one or more DEQ RBCs. In addition, the analytical method used to analyze soil samples is no longer a recognized analytical method for petroleum hydrocarbons. Therefore, the release associated with LUST File No. 26-95-0131 represents a REC at the subject property.

- The former Campbell Dry Cleaner operated on the east adjoining property from approximately 1952 through 1996. Previous environmental investigations conducted between 2008 and 2015 documented the presence of PCE and TCE in soil, groundwater, soil vapor, and indoor ambient air at the site. In 2014, chloroform, PCE, and TCE were detected in groundwater and/or soil gas samples collected from the subject property at concentrations greater than one or more DEQ RBCs. In 2016, a partial NFA determination was issued for ECSI No. 5680 and applied to only the former dry cleaner site and did not apply to off-site properties. Based on the historical detections of dry cleaner-related compounds in groundwater and soil gas at the subject property and given that the NFA determination does not apply to the subject property, on-site impacts in connection with the Former Campbell Dry Cleaner site represent a REC at the subject property.
- The Tarr Inc. site (ECSI No. 1139) is located approximately 220 feet southeast of the subject property. Soil, soil vapor, and groundwater have been impacted by VOCs and petroleum hydrocarbons and the Tarr Inc. site entered into the DEQ VCP in 2005. Remediation and monitoring efforts are ongoing. The southern portion of the subject property is located within the LOF for the Tarr Inc. site. In addition, VOCs have historically been detected in ambient indoor air, soil vapor, and groundwater on or in the immediate vicinity of the subject property at concentrations greater than one or more DEQ RBCs. Given that a portion of the subject property is within the LOF for ECSI No. 1139 and the ECSI file remains open, the release from the Tarr Inc. facility represents a REC at the subject property.
- An asbestos factory operated on the eastern portion of the subject property, in the general vicinity of Tax Lot 7400, from at least 1924 through sometime prior to 1936. Because of the potential for a release of asbestos fibers to soil, the former presence of an on-site asbestos factory represents a REC at the subject property, and the potential presence of an on-site dry cleaning facility represents a REC at the subject property.
- A clothes cleaning facility, which may have included dry cleaning operations, was historically present on Tax Lot 7900. The presence of a potential on-site dry cleaning facility represents a REC at the subject property.
- A suspect UST vent pipe was observed on the south side of the north adjoining Left Bank Lofts building. Based on the inferred groundwater gradient, depth to groundwater at the subject property, and distance of the suspect vent pipe from the subject property across North Knott Street, it is unlikely to have impacted the subject property. Therefore, it is our professional opinion that a UST at the north adjoining property, if present, does not represent a REC at the subject property.
- Because there is no record of decommissioning, the likely presence of a heating oil UST associated with the oil burner on Tax Lot 8000 represents a REC at the subject property.
- The heating oil tank site at 836 North Russell Street adjoins the subject property to the south across North Russell Street and cross-gradient to downgradient of the subject property in the inferred groundwater flow direction and was listed on the DEQ LUST database (LUST File No. 26-09-0517) in July 2009 for a release from a heating oil UST. Groundwater was reportedly not impacted by the release. DEQ issued an NFA determination for LUST File No. 26-09-0517 in August 2009. Based on the regulatory status of this site, the distance from the subject property, and the inferred groundwater flow direction, this site does not represent a REC at the subject property.

- Evidence of fill material was not observed at the subject property. However, up to 11 feet of undocumented fill material were encountered during a geotechnical investigation on Tax Lot 7900. It is also possible that undocumented fill material may be present beneath other areas of the subject property. In our experience, historically placed fill material in the Portland area frequently contains low concentrations of contaminants, primarily PAHs and/or metals. While frequently present at concentrations greater than DEQ CFSLs, contaminants are rarely present at concentrations greater than applicable DEQ RBCs. Therefore, the possible presence of undocumented fill material does not represent a REC at the subject property.

***CONCLUSIONS AND RECOMMENDATIONS***

NV5 performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13, as well as the considerations of ASTM E1527-21; all appropriate inquiries specified in 40 CFR Part 312; and the proposal to Streimer Sheet Metal Works, Inc. dated July 11, 2022, for the subject property located at 829 North Russell Street in Portland, Oregon. Any exceptions to or deletions from this practice are described in Sections 3.0 and 13.0. In our opinion, this assessment has revealed the following RECs and CRECs associated with the subject property:

- LUST File No. 26-08-0191 represents a CREC at the subject property.
- LUST File No. 26-95-0131 represents a REC at the subject property.
- The release at the Former Campbell Cleaner site (ECSI No. 5680) represents a REC at the subject property.
- The release at the Tarr Inc. site (ECSI No. 1139) represents a REC at the subject property.
- The potential historical presence of an on-site dry cleaning facility represents a REC at the subject property.
- The former presence of an on-site asbestos factory represents a REC at the subject property.
- The likely presence of a heating oil UST associated with the oil burner on Tax Lot 8000 represents a REC at the subject property.

To evaluate potential impacts to the subject property from the RECs identified during this assessment, NV5 recommends conducting a Phase II ESA of the subject property.

In addition, NV5 identified the following environmental concerns:

- The stored chemicals and hazardous substances at the subject property should be removed from the subject property and properly disposed of if future use is not anticipated.
- The solid waste should be removed from the subject property and transferred to a disposal facility prior to site redevelopment. If hazardous materials are found in the solid waste piles, they should be separated, characterized, and properly disposed of.
- Undocumented fill material was previously encountered at the subject property. While rarely present at concentrations that would pose a risk to human health, it may be prudent to analyze samples of the fill material.

- It is possible that undocumented heating oil USTs or septic systems are present in the areas of historical residences on the subject property. If an undocumented heating oil UST or septic system is encountered during future construction or redevelopment, they should be decommissioned and removed in accordance with state and local regulations. If a septic system is encountered and hazardous disposal to the septic system is evident, soil samples should be collected from beneath the septic system.
- This scope of services did not include the completion of surveys for lead-based paint, asbestos-containing materials, or other hazardous building materials in the subject property structures. Prior to potential site renovation or demolition, the subject property structures should be surveyed for hazardous building materials. If hazardous building materials are present in the subject property structures, they should be handled of in accordance with federal, state, and local regulations.

## 1.0 INTRODUCTION

This report summarizes the results of a Phase I ESA of the 829 N Russell Site located at 829 North Russell Street in Portland, Oregon (subject property). The subject property includes Tax Lots 7100, 7200, 7300, 7400, 7500, 7900, 8000, and 8200 of Multnomah County Tax Map 1N1E27BD and consists of 1.26 acres currently developed with four single-story commercial buildings, including an office building, a storage building, a vacant shop building, and a warehouse, and associated paved or gravel-covered storage and parking areas. The subject property is shown relative to surrounding physical features on Figure 1. The subject property layout and surrounding properties are shown on Figure 2. A site plan detail is shown on Figure 3. NV5's firm profile and resumes of project personnel are presented in Appendix A. Acronyms and abbreviations used herein are defined above, immediately following the Table of Contents.

Phase I ESAs have a limited viability as specified in Section 4.6 "Continued Viability of the Site Assessment" of ASTM E1527-13 and ASTM E1527-21. According to ASTM E1527-13, a Phase I ESA is valid for a period of 180 days from the date of the first data collected for the assessment. The Phase I ESA viability can be extended by 180 days by updating the assessment within one year of the initial assessment. If more than one year passes, a new Phase I ESA will need to be completed in order to qualify for Landowner Liability Protections under CERCLA. **On the basis of the first data collected (July 25, 2022), this Phase I ESA report is considered valid through January 21, 2023.**

## 2.0 PURPOSE

### *2.1 PROTECTION FROM CERCLA LIABILITY*

One purpose for conducting a Phase I ESA is to undertake all appropriate inquiries into prior ownership and uses of a property so that a prospective purchaser may potentially claim protection from CERCLA and/or state liability as an innocent landowner, a bona fide prospective purchaser, or a contiguous property owner. The standards and practices for all appropriate inquiries are specified in Title 40, Chapter I of CFR Part 312. The inquiry must be conducted by an environmental professional to identify conditions indicative of releases and threatened releases of hazardous substances as defined in CERCLA Section 101(22). If the prospective purchaser is the recipient of an EPA Brownfields grant, the inquiry must also identify conditions indicative of releases and threatened releases of petroleum and petroleum products and controlled substances as defined in 21 U.S. Code 802. These standards and practices do not require the identification of quantities of hazardous substances, petroleum and petroleum products, and controlled substances that, because of said quantity, generally would not pose a threat to human health or the environment.

### *2.2 IDENTIFICATION OF RECOGNIZED ENVIRONMENTAL CONDITIONS*

Another purpose for conducting a Phase I ESA is to identify RECs in connection with a property as they pertain to ASTM E1527-13 and the considerations of ASTM E1527-21. This practice is intended for use by parties who wish to assess the environmental condition of a property by taking into account commonly known and reasonably ascertainable information. Although conformance with ASTM E1527-13 constitutes all appropriate inquiry as described in Section 2.1

the standard is intended primarily as an approach to identify RECs in connection with a property. A REC is defined in ASTM E1527-21 by (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. RECs do not include de minimis conditions that do not generally present a risk to public health or the environment and would not be the subject of legal enforcement if brought to the attention of appropriate governmental agencies.

A CREC is defined by ASTM E1527-21 as a REC affecting the subject property that has been addressed to the satisfaction of the regulatory authority or authorities, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. Examples of required controls include property use restrictions, AULs, institutional controls, and engineering controls. A condition considered by the environmental professional to be a CREC is considered a REC.

An HREC is defined by ASTM E1527-21 as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authorities without subjecting the property to any required controls such as property use restrictions, AULs, institutional controls, and engineering controls. An HREC is not considered a REC. Before calling the past release an HREC, the environmental professional must determine whether the past release is a REC at the time the Phase I ESA is conducted (for example, if there has been a change in regulatory criteria). If the environmental professional considers the past release to be a REC, such as not meeting regulatory standards for unrestricted use in place at the time the Phase I ESA is conducted, the condition shall be considered a REC.

## 3.0 SCOPE OF SERVICES

The scope of services for this project was performed in conformance with the standards and practices for all appropriate inquiries specified in 40 CFR Part 312 and the scope and limitations of ASTM E1527-13, as well as the considerations of ASTM E1527-21. The specific scope of services performed included the following:

- Reviewed a current USGS topographic map to identify the physical setting of the subject property.
- Reviewed federal, tribal, state, and local environmental records for listings of known or suspected environmental conditions at the subject property or nearby properties as specified in 40 CFR Part 312 and ASTM E1527-13.
- Reviewed reasonably ascertainable standard historical sources, including aerial photographs, USGS topographic maps, reverse city directories, fire insurance maps, online property information (including available building department records, property tax information, and zoning/land use records), and other historical sources, as appropriate, to

identify development history on and adjoining the subject property relative to the possible use, generation, storage, release, or disposal of hazardous substances.
- Interviewed the current owner of the subject property and a state government official regarding their knowledge of the subject property.
- Conducted a visual reconnaissance of the subject property and adjoining properties to obtain information indicating the likelihood of identifying RECs concerning the subject property.
- Prepared this report that presents our findings and provides conclusions and recommendations.

The scope of services was limited to only the items listed above. This project did not include completion of an environmental compliance audit; an evaluation for the presence of PCBs in light ballasts; a survey for asbestos, lead-based paint, radon gas, toxic mold, biological pollutants, or urea-formaldehyde insulation; or a wetlands determination or delineation.

## 4.0 SUBJECT PROPERTY AND VICINITY DESCRIPTION

Information concerning the physical setting of the subject property and vicinity is based on a review of the USGS 7.5-minute Portland, Oregon, topographic quadrangle map; information provided by EDR of Shelton, Connecticut; and observations made during a site reconnaissance conducted on August 2, 2022.

The subject property encompasses 1.26 acres at 829 North Russell Street in Portland, Oregon. The subject property includes Tax Lots 7100, 7200, 7300, 7400, 7500, 7900, 8000, and 8200 in the southeast quarter of the northwest quarter of Section 27, Township 1 North, Range 1 East of the Willamette Meridian. A summary of subject property tax lots, corresponding addresses, acreage, and associated development is presented in the table below.

| Tax Lot | Address | Acreage | Development |
|---|---|---|---|
| 7100 | 2651 North Albina Avenue | 0.21 | Office building with paved parking area |
| 7200 | Within 2651 North Albina Avenue | 0.06 | Gravel-covered parking/storage area |
| 7300 | Within 2651 North Albina Avenue | 0.06 | Gravel-covered parking/storage area |
| 7400 | 2631 North Albina Avenue | 0.07 | Storage building with paved and gravel-covered area |
| 7500 | 2621 North Albina Avenue | 0.14 | Paved and gravel-covered parking/storage area |
| 7900 | 829 North Russell Street | 0.20 | Vacant shop building with paved and gravel-covered parking/storage areas |
| 8000 | No address | 0.11 | Paved parking/storage area |
| 8200 | 2630 North Mississippi Avenue | 0.41 | Warehouse building with paved parking/storage areas |

Tax Lots 7100, 7200, 7300, 7400, and 7500 are currently owned by Michael R. and Frederick L. Streimer. Tax Lot 7900 is currently owned by Streimer Sheet Metal Works, Inc. Tax Lots 8000 and 8200 are currently owned by Frederick L. Streimer 2012 Irrevocable Trust.

The subject property is situated at an approximate elevation of between 65 and 75 feet above MSL. The topography of the subject property slopes moderately downward to the southwest. Based on a review of OWRD well logs, previous subsurface investigations, and topographic maps for the area, shallow groundwater beneath the subject property is expected to be present at a depth between approximately 50 and 60 feet BGS and is anticipated to flow southwest toward the Willamette River.

Land use in the vicinity of the subject property is primarily commercial, industrial, and residential. According to the City of Portland, the subject property is zoned Central Employment (EX) and General Industrial 1 (IG1). Properties surrounding the subject property are zoned Central Employment (EX) and General Industrial 1 (IG1).

## 5.0 USER-PROVIDED INFORMATION

The purpose of this section is to describe information provided by the user of this report (Streimer Sheet Metal Works, Inc.) that was considered in the evaluation of potential RECs in connection with the subject property. Information provided by Steven Streimer of Streimer Sheet Metal Works is provided below.

### *5.1 USER QUESTIONNAIRE RESPONSES*

| | |
|---|---|
| Has the user conducted a search of recorded land title records or judicial records to identify environmental liens or AULs, such as engineering controls, land use restrictions, or institutional controls, that are filed under federal, tribal, state, or local law? | No |
| If a search of recorded land title records or judicial records was conducted, were any environmental liens or AULs identified? | NA |
| Does the user have any specialized knowledge or experience related to the subject property or nearby properties? | See below |
| Does the user believe the purchase price being paid for the subject property reasonably reflects the fair market value? | NA |
| If the purchase price does not reasonably reflect the fair market value, is the lower purchase price because contamination is known or believed to be present at the subject property? | NA |
| Is the user aware of commonly known or reasonably ascertainable information about the subject property that may help the environmental professional identify conditions indicative of releases or threatened releases? | See below |
| Does the user know the past uses of the subject property? | See below |
| Does the user know of specific chemicals that are present or once were present at the subject property? | See below |

| | |
|---|---|
| Does the user know of spills or other chemical releases that have taken place at the subject property? | No |
| Does the user know of any environmental cleanups that have taken place at the subject property? | See Section 5.1.1 |
| Is the user aware of any obvious indicators that point to the presence or likely presence of contamination at the subject property? | No |

During a July 25, 2022, telephone interview discussed in further detail in Section 10.1, Mr. Streimer provided information related to specialized knowledge or experience, commonly known or reasonably ascertainable information regarding the subject property, past uses of the subject property, and specific chemicals that are present or once were present at the subject property.

### 5.1.1 Environmental Cleanups

Mr. Streimer was aware of soil removal on Tax Lot 7500 following the decommissioning of a heating oil UST, discussed in further detail in Section 6.1.

## 6.0 PREVIOUS REPORTS

NV5 reviewed previous environmental reports regarding the subject property and adjoining properties. The findings and conclusions of the following reports are summarized in the following sections:

- *Report; Phase II Site Investigation at 2621 N Albina Avenue; Portland, OR 97212; ODEQ LUST #26-95-131*, prepared by ESU, Inc., dated July 10, 1995
- *Phase I Environmental Site Assessment of the Willamette Electrical Building; Portland, Oregon,* prepared by De Minimis Inc. Environmental Management, dated March 28, 2002
- *Willamette Electrical Building Phase II Site Assessment Investigation; 2630 N. Mississippi, Portland, Oregon,* prepared by De Minimis Inc. Environmental Management, dated April 23, 2022
- *Phase Two Environmental Site Assessment; 829 N. Russell Street; Portland,* Oregon, prepared by Anderson Geological, Inc. (Anderson), dated March 2008
- *Results of Risk-Based Decision Making Cleanup for a Residential Underground Heating Oil Tank; Nez Hallett; 829 N. Russell Street; Portland, Oregon 97227*, prepared by Alpha Environmental Services, Inc. (Alpha), dated July 10, 2008
- *Phase III Environmental Site Assessment; Campbell Dry Cleaner Brownfield Project; 817 and 819 North Russell Street; Portland, Oregon*, prepared by GeoDesign, Inc., dated May 14, 2014
- *Site Investigation Report; Former Campbell Dry Cleaner; Portland, Oregon*, prepared by Hart Crowser, dated February 5, 2015
- *IRAM Completion Report; Former Campbell Dry Cleaner; Portland, Oregon; ECSI No. 5680*, prepared by Hart Crowser, dated July 30, 2015

- *Memorandum; Former Campbell Dry Cleaner building, Staff Memorandum in support of a Partial Conditional No Further Action Determination. ECSI #5680*, prepared by DEQ, dated July 14, 2016
- *Easement and Equitable Servitudes*, prepared by DEQ, dated August 25, 2020

### *6.1 ESU (1995)*

In June 1995, a 500-gallon heating oil UST was decommissioned by removal from Tax Lot 7500 on the eastern portion of the subject property. Oil-range hydrocarbons were detected in a sample collected from beneath the UST at a concentration of 6,200 mg/kg, the release was reported to DEQ, and Tax Lot 7500 assigned LUST File No. 26-95-0131. Approximately 51.14 tons of impacted soil were removed from the UST cavity. Four confirmation soil samples collected from the excavation pit were analyzed for petroleum hydrocarbons by Method TPH 418.1. Petroleum hydrocarbons were detected in one of the four samples at a concentration of 7,100 mg/kg. ESU estimated that approximately 5 to 10 cubic yards of impacted soil remained at a depth of approximately 10 to 15 feet BGS. Groundwater was reportedly not encountered in the UST excavation.

While LUST File No. 26-95-0131 received an NFA determination from DEQ on February 26, 2008, petroleum-impacted soil remains on the subject property at concentrations greater than one or more DEQ RBCs. In addition, Method TPH 418.1 is no longer a recognized analytical method for petroleum hydrocarbons. Therefore, the release associated with LUST File No. 26-95-0131 represents a REC at the subject property. The approximate location of the former heating oil UST is shown on Figures 2 and 3.

### *6.2 DE MINIMIS ENVIRONMENTAL MANAGEMENT INC. (MARCH 2002)*

De Minimis Environmental Management Inc. conducted a Phase I ESA in 2002 that included Tax Lots 8000 and 8200 of the subject property as well adjoining Tax Lot 8100, which is not a portion of the current subject property. The results of the 2002 Phase I ESA identified two sources of potential contamination on Tax Lot 8200 including (1) several floor drains that may or may not be connected to the municipal sewer system that were historically used for wastewater disposal, and (2) significant amounts of a black powdery substance that had accumulated inside ventilation hoods. The 2002 Phase I ESA recommended conducting an asbestos survey of the on-site structures; characterizing and properly disposing of sludge inside of an interior catch basin; and characterizing and properly disposing of the black, powdery substance. The Phase I ESA also recommended sampling soil adjacent to the catch basin if the sludge was determined to contain hazardous waste.

### *6.3 DE MINIMIS ENVIRONMENTAL MANAGEMENT INC. (APRIL 2002)*

De Minimis Environmental Management Inc. conducted a Phase II site assessment investigation of Tax Lot 8200 in April 2002. The investigation included a limited asbestos survey; collecting a sample of the black, powdery substance (S-1); and collecting a sample of sludge present in the interior catch basin (S-2). The results of the asbestos survey indicated the presence of detectable concentrations of asbestos in floor tile mastic and sheetrock/plaster. Analysis of sample S-1, collected from the black, powdery substance in the ventilation hoods, indicated the presence of elevated concentrations of oil-range hydrocarbons, cadmium, and lead, as well as total PCBs at a concentration of 1.1 mg/kg. Analysis of sample S-2, collected from the catch

basin sludge, indicated the presence of elevated concentrations of oil-range hydrocarbons, barium, lead, and selenium, as well as total PCBs at a concentration of 0.3 mg/kg. Based on information contained in the report, it appears that the black, powdery substance and catch basin sludge were properly disposed of off site.

### *6.4 ANDERSON (2008)*

Anderson conducted a Phase II ESA of Tax Lot 7900 in 2008. The Phase II ESA included a summary of a 2008 Phase I ESA conducted by Anderson, which identified the following RECs:

- Diesel-contaminated soil was identified adjacent to an existing 675-gallon heating oil UST west of the existing vacant shop building on Tax Lot 7900. Anderson recommended decommissioning the UST and removing any associated impacted soil.
- The former Campbell Dry Cleaner operated on the east adjoining property beginning in the mid-1950s. Anderson recommended soil sampling along the eastern boundary of Tax Lot 7900 to evaluate for potential impacts from the former Campbell Dry Cleaner.

The Phase II ESA included advancing two hand auger borings (SB-1 and SB-2) to a depth of 12 feet BGS along the eastern boundary of Tax Lot 7900. The locations of the hand auger borings are shown on Figures 2 and 3. Two soil samples collected from each boring at depths of 6 feet and 12 feet BGS were analyzed for VOCs. TCE was detected in samples collected from boring SB-1 at 6 and 12 feet BGS at concentrations less than the most conservative DEQ RBCs. VOCs were not detected in the remaining soil samples analyzed.

### *6.5 ALPHA (2008)*

In April 2008, Alpha decommissioned in place the 675-gallon heating oil UST on Tax Lot 7900. After cleaning the interior of the UST and cutting a portion of the bottom out of the UST, approximately 4.86 tons of petroleum-impacted soil were removed from beneath the decommissioned UST. Following excavation, soil samples were collected to further delineate petroleum-impacted soil that would be left in place. The maximum concentration of diesel-range hydrocarbons detected in soil by Method NWTPH-Dx was 17,500 mg/kg, greater than some applicable DEQ RBCs for diesel-range hydrocarbons. Alpha concluded that the full vertical and horizontal extents of petroleum-impacted soil had been delineated and the estimated volume of remaining impacted soil was approximately 34 cubic yards. According to Alpha, the impacted soil appeared to attenuate vertically to approximately 15.5 feet BGS. Groundwater was reportedly not encountered.

LUST File No. 26-08-0191 received an NFA determination from DEQ on July 25, 2008. However, petroleum-impacted soil remains on the subject property at concentrations greater than one or more applicable DEQ RBCs. Therefore, the historical release associated with LUST File No. 26-08-0191 represents a CREC at the subject property. The approximate location of the former heating oil UST on Tax Lot 7900 is shown on Figures 2 and 3.

### *6.6 GEODESIGN (2014)*

In 2014, GeoDesign (now NV5) conducted a Phase III ESA of the east adjoining Former Campbell Dry Cleaner site (DEQ ECSI No. 5680). The purpose of the Phase III ESA was to further delineate PCE, TCE, and related breakdown compounds in soil, groundwater, and soil gas related to releases at the Former Campbell Dry Cleaner Site. The Phase III ESA consisted of a geophysical

survey and soil, groundwater, and soil gas sampling from three borings (DP-7 through DP-9) advanced on the southern portion of the subject property and two borings (DP-6 and DP-10) advanced immediately south of the southern subject property boundary. The locations of the borings are shown on Figures 2 and 3. The results of the Phase III ESA indicated the following:

- The geophysical survey included the sidewalk ROW south of the subject property and Former Campbell Dry Cleaner site as well as exterior areas in the vicinity of the vacant shop building. Evidence of USTs was not observed in the areas surveyed.
- Groundwater was encountered in the borings at depths between 52 and 56 feet BGS.
- PCE and TCE were either not detected or were detected at concentrations less than DEQ RBCs and DEQ CFSLs in the soil samples collected from the subject property during this investigation.
- Chloroform, PCE, and TCE were detected at concentrations greater than the DEQ *Ingestion and Inhalation from Tapwater* RBC for residential, urban residential, and/or occupational receptors In groundwater samples collected from borings DP-5 and DP-7.
- PCE was detected in soil gas samples collected from borings DP-7 through DP-9 at concentrations ranging from 81,000 to 200,000 µg/m$^3$. The detected concentrations were greater than the DEQ *Vapor Intrusion into Buildings* RBCs for residential, urban residential, and occupational receptors.

### *6.7 HART CROWSER (FEBRUARY 2015)*

In February 2015, Hart Crowser conducted a site investigation of the Former Campbells Dry Cleaner site. The site investigation included soil gas sampling in cross- and up-gradient locations relative to the former dry cleaner; ambient indoor air sampling of the crawl space, first floor, and second floor of the former dry cleaner building; and developing a CSM. The results of the site investigation indicated the following:

- In the six soil gas samples collected, gasoline-range petroleum hydrocarbons and VOCs were either not detected or were detected at concentrations less than applicable DEQ RBCs for the site. Based on the soil gas data collected during this assessment and soil gas data from previous assessments, Hart Crowser estimated the extent of impacted soil gas at the Former Campbell Dry Cleaner site and the subject property. The extent of impacted soil gas posing unacceptable risk estimated by Hart Crowser, which extends onto Tax Lot 7900 of the subject property, is shown on Figure 3.
- PCE was detected in each of the ambient indoor air samples at concentrations greater than the DEQ *Inhalation* RBCs for urban residential and occupational receptors. In addition, benzene and chloroform were detected in the second floor sample at concentrations greater than one or more of their respective DEQ RBCs.
- The CSM concluded that unacceptable vapor intrusion risks to current and future on- and off-site urban residential and occupational receptors existed. In addition, the CSM concluded that unacceptable risk was present for urban residential and occupational receptors via inhalation at the Former Campbells Dry Cleaner site.

### *6.8 HART CROWSER (JULY 2015)*

In July 2015, Hart Crowser completed an IRAM completion report for the east adjoining Former Campbell Dry Cleaner site. The report included a summary of IRAMs completed at the site, which

included removal of approximately 3 cubic yards of PCE-impacted soil from under the southwestern portion of the building, installing a soil gas venting system in the building, sealing/weatherizing the boundaries between different levels of the building, constructing a sealed crawl space hatch, and follow-up ambient air sampling. The estimated extent of remaining soil posing unacceptable risk at the Former Campbell Dry Cleaner site following limited excavations is shown on Figure 3.

### *6.9 DEQ (2016)*

In July 2016, DEQ issued a staff memorandum recommending a partial NFA determination for the Former Campbell Dry Cleaner Site. Based on a review of the memorandum, DEQ concluded that confirmation indoor air sampling following the implementation of remedial measures demonstrated that indoor air conditions were protective for current and future building occupants at the former dry cleaner. DEQ stated that the vapor mitigation system should operate until it is demonstrated that it is no longer necessary and that future floor penetrations should be repaired and sealed to limit vapor intrusion. In addition, DEQ stated that soil containing PCE and/or TCE would require appropriate characterization and management if removed from the property during future site development or excavation activities.

The memorandum stated that the estimated horizontal extent of off-site soil and soil gas data lateral to the former dry cleaner is only an estimate. DEQ estimated that the vertical extent of soil impacts extends downward to approximately 25 feet BGS. The horizontal extents of impacted soil and soil gas estimated by Hart Crowser are shown on Figure 3.

DEQ proposed issuing a partial NFA determination conditioned on the continuous operation of the soil gas ventilation system to ensure protection of current and future building occupants. According to DEQ, the NFA determination is partial because it is restricted to the Former Campbell Dry Cleaner site only and not the affected adjoining properties, of which includes the subject property.

Given the presence of contaminants in groundwater and soil gas beneath Tax Lot 7900 at concentrations greater than applicable DEQ RBCs, and the fact that the subject property is not included in the conditional NFA determination issued by DEQ, the release from the Former Campbell Dry Cleaner site represents a REC at the subject property.

### *6.10 DEQ (2020)*

In August 2020, an Easement and Equitable Servitudes was recorded for ECSI No. 5680 and included a summary of required actions and restrictions on use at the Former Campbell Dry Cleaner site, which include the following:

- The vapor removal system must be continuously operated in the building crawl space until it is demonstrated that the system is no longer necessary.
- The owner of the property may not extract groundwater through wells or by other means for consumption or beneficial use.
- The owner or other parties may not occupy the property unless the above controls are maintained.

## 7.0 ENVIRONMENTAL RECORDS REVIEW

Federal, tribal, state, and local environmental records and databases were compiled according to 40 CFR Part 312 and ASTM E1527-13 for the subject property and those facilities that currently or previously have occupied properties within the specified search distance from the subject property. Information contained in the records and databases was reviewed by NV5 to evaluate the potential for environmental impacts to the subject property. The EDR Radius Map Report is presented in Appendix B.

### *7.1 SUBJECT PROPERTY*

Based on our review of the EDR Radius Map Report, the subject property was listed on the EPA RCRAInfo database and DEQ LUST database. The EPA RCRAInfo database contains information on facilities that generate, store, transport, treat, or dispose of hazardous waste. The subject property was most recently listed in 2003 as a CESQG of hazardous waste as Blessing Electric, Inc. CESQGs generate less than 100 kg per month of hazardous waste or less than 1 kg of acutely hazardous waste per month. There were no reported violations associated with the RCRAInfo database listing.

The DEQ LUST database contains listings of sites with reported leaking UST incidents. According to the information in the EDR Radius Map Report, the subject property is listed on the DEQ LUST database for releases from two heating oil USTs (LUST File Nos. 26-95-0131 and 26-08-0191). LUST File No. 26-95-0131 was previously discussed in Section 6.1 and represents a REC at the subject property. LUST File No 26-08-0191 was previously discussed in Section 6.5 and represents a CREC at the subject property.

### *7.2 SURROUNDING SITES*

The EDR Radius Map Report identified 131 surrounding sites listed on one or more regulatory databases within the ASTM search distances. Based on changes in ownership, address, multiple regulatory listings, and multiple regulatory actions, two or more of the surrounding site listings may actually represent only one physical location. Therefore, the number of surrounding sites is likely less than reported by EDR. Based on the local topography, the inferred direction of shallow groundwater flow, the regulatory status of the listed sites, the media impacted at the listed sites, and information contained in the regulatory databases, it is our professional opinion that 2 of the 131 sites represent RECs at the subject property and are discussed in Sections 7.2.1 and 7.2.2. Due to its proximity to the subject property, one additional site is discussed in Section 7.2.3.

#### 7.2.1 Former Campbell Dry Cleaner

The Former Campbell Dry Cleaner site is located at 817 North Russell Street, adjoining Tax Lot 7900 to the east and upgradient of the subject property in the inferred groundwater flow direction. This site is listed in the DEQ ECSI database (ECSI No. 5680), DEQ Engineering Controls database, DEQ VCP database, DEQ Brownfields database, EPA RCRAInfo database, and DEQ Drycleaners database. The DEQ ECSI database contains listings of sites that are or may be contaminated and may require cleanup. The DEQ Engineering Controls database contains listings of sites with selected physical measures for the purpose of preventing or minimizing exposure to hazardous substances. The DEQ Brownfields database contains listing of

Brownfields investigations and/or cleanups that have been conducted in Oregon. The DEQ Drycleaners database contains listings of active and closed dry cleaning facilities.

ECSI No. 5680 was previously discussed in Sections 6.6 through 6.10 and represents a REC at the subject property. The inclusion of the Former Campbell Dry Cleaner site on the remaining databases is associated with the ECSI database listing.

### 7.2.2 Tarr Inc.

The Tarr Inc. site (also known as Conger Northwest, Inc.) is located at 2429 North Borthwick Avenue, approximately 220 feet southeast of the subject property, and cross-gradient of the subject property in the inferred groundwater flow direction. The Tarr Inc. site is listed on the EPA RCRAInfo database, DEQ ECSI database, DEQ LUST database, and DEQ VCP database.

Based on a review of the EDR Radius Map Report and information obtained from DEQ, this site was listed on the DEQ ECSI database (ECSI No. 1139) and includes the majority of the block bound by North Russell and North Page Streets and North Borthwick and North Albina Avenues. A variety of chemicals were historically handled at the site, including fuels, solvents, and lubricating oils. In 1990, 18 of 19 chemical storage USTs were removed from the site. The USTs contained gasoline, diesel, fuel oil, petroleum solvents, chlorinated solvents, and alcohols. Petroleum-impacted soil was observed around and beneath the USTs. Soil was excavated to depths of 30 to 65 feet BGS and disposed of off site. From 2001 through 2011, several phases of investigation were performed at the site. Tarr Inc. entered the DEQ VCP in 2005. From 2009 through 2012, several interim actions were implemented to address TCE and PCE in source areas.

A remedial investigation report was prepared by Apex in 2014.[1] Three vapor sampling locations (VP-8, VP-22, and VP-26), two ambient indoor air sampling locations (807-W-A and 807-B-A), and two groundwater sampling locations (MW-11 and B-60) were included in the remedial investigation data and are located on or in the vicinity of the subject property. In 2008 and 2009, PCE and TCE were detected in VP-8, located approximately 100 feet southeast of the subject property, at concentrations greater than the DEQ *Vapor Intrusion into Buildings* RBC for multiple receptors. In 2009, an ambient indoor air sample (807-B-A) was collected from the mixed-use building southeast of the subject property at 807 North Russell Street. PCE and TCE were detected at concentrations greater than the DEQ *Inhalation* RBC for residential, urban residential, and occupational receptors. Groundwater samples were not collected from the subject property. However, groundwater samples collected from B-60, located near the eastern subject property boundary, contained PCE and TCE at maximum concentrations greater than DEQ *Ingestion and Inhalation from Tapwater* RBCs. Between 2008 and 2019, an outdoor ambient air sample (A-2) was collected from the North Mississippi Avenue sidewalk ROW near the warehouse. VOCs were either not detected or were detected at concentrations less than applicable DEQ RBCs.

[1] Apex, 2014. *Final Remedial Investigation Report; Tarr, Inc.; 2429 North Borthwick Avenue; Portland, Oregon*, dated September 19, 2014.

The LOF was defined to include the southern portion of the subject property and extend west-southwest to the Willamette River. Soil impacts are largely limited to the Tarr Inc. property and do not appear to have migrated to the subject property. A site plan showing the established LOF is presented in Appendix B.

DEQ issued a ROD for ECSI No. 1139 in 2017. COPCs for soil include as PCE, TCE, diesel-range hydrocarbons, and benzo(a)pyrene. COPCs for soil vapor include as PCE, TCE, 1,2-dichloroethane, benzene, 1,2,4-trimethylbenzene, 1,4-dioxane, chloroform, and methylene chloride. COPCs for groundwater include PCE, TCE, cis-1,2-dichloroethene, 1,1-dichloroethane, benzene, chloroform, and methylene chloride. The selected remedial action included the following:

- Development of a CMMP
- Operation of an existing soil vapor extraction system
- Enhanced bioremediation using emulsified vegetable oil
- Monitored natural attenuation for constituents of concern in groundwater
- Compliance monitoring
- Permitting
- Institutional controls
- Annual review of OWRD records
- Contingency plan

In 2019, an Order on Consent was issued by DEQ to Conger Northwest, Inc. in accordance with the 2017 ROD. Monitoring and remediation activities in source areas are reportedly ongoing. Based on a monitoring and performance evaluation report dated June 2021, TCE was detected in a February 2021 groundwater sample collected from MW-11, located in the sidewalk ROW east of the office building, at a concentration of 0.580 µg/L.[2] The detected concentration is greater than the DEQ *Ingestion and Inhalation from Tapwater* RBC for residential receptors of 0.49 µg/L. PCE was not detected above its corresponding RBCs. VOCs were otherwise not detected in the February 2021 groundwater sample collected from MW-11. Groundwater samples were not collected from within the subject property boundaries during monitoring of the Tarr Inc. site; however, VOCs were detected in groundwater samples collected from Tax Lot 7900 as part of a subsurface investigation of the Former Campbell Dry Cleaner site (see Sections 6.6 through 6.10).

Based on soil vapor and ambient indoor air data included in the most recent monitoring and performance evaluation report for the soil vapor remedy dated March 2022, an ambient air sample was collected from 807-B-A in August 2020.[3] VOCs were either not detected or were detected at concentrations less than DEQ RBCs. In August 2021, a vapor sample was collected from VP-8, located southeast of the subject property and in the North Albina Avenue western

---

[2] Farallon Consulting, L.L.C., 2021. DRAFT *Monitoring and Performance Evaluation Report – Groundwater Remedy; Conger Facility; ECSI File No. 1139 (Priestley/Tarr Facility); 2429 North Borthwick Avenue; Portland, Oregon*, dated June 30, 2021.

[3] Farallon Consulting, L.L.C., 2022. *Monitoring and Performance Evaluation Report – Soil Vapor Remedy; Conger Facility; ECSI File No. 1139 (Priestley/Tarr Facility); 2429 North Borthwick Avenue; Portland, Oregon*, dated March 9, 2022.

sidewalk ROW. VOCs were either not detected or were detected at concentrations less than DEQ RBCs in the sample collected from VP-8. The most recent sampling of locations VP-22 and VP-26 was conducted in June 2019. VOCs were either not detected or were detected at concentrations less than DEQ RBCs. Soil vapor, ambient air, and groundwater monitoring locations on or in the vicinity of the subject property are shown on Figures 2 and 3.

The DEQ project manager for the Tarr Inc. site provided NV5 with a second quarter progress report for the Tarr Inc. site dated July 8, 2022.[4] Based on our review of the progress report, Farallon Consulting, L.L.C. (Farallon) has continued routine operation and maintenance of an SVE system and sub-slab venting system at the Tarr Inc. property. A semi-annual groundwater monitoring event is planned for August 2022. In addition, Farallon plans to submit a work plan for pulsing the SVE system and a quarterly progress report to DEQ.

The southern portion of the subject property is located within the LOF for the Tarr Inc. site. In addition, VOCs were detected in ambient indoor air, soil vapor, and groundwater on or in the immediate vicinity of the subject property at concentrations greater than one or more DEQ RBCs. Given that a portion of the subject property is within the LOF for ECSI No. 1139 and the ECSI file remains open, the release from the Tarr Inc. facility represents a REC at the subject property.

#### 7.2.3 Heating Oil Tank – 836 N Russell Street

This site adjoins the subject property to the south across North Russell Street and cross-gradient to downgradient of the subject property in the inferred groundwater flow direction. According to the EDR Radius Map Report, this site was listed on the DEQ LUST database (LUST File No. 26-09-0517) in July 2009 for a release from a heating oil UST. Groundwater was reportedly not impacted by the release. DEQ issued an NFA determination for LUST File No. 26-09-0517 in August 2009. Based on the regulatory status of this site, the distance from the subject property, and the inferred groundwater flow direction, this site does not appear to represent a REC at the subject property.

### *7.3 ORPHAN SITES*

Due to poor or inadequate address information, EDR was unable to successfully map 15 facilities identified on several environmental databases. However, enough information was available to ascertain the general location of these orphan facilities relative to the subject property and, in some cases, the status of the investigations concerning these orphan sites. Based on the location of the orphan sites, the inferred direction of shallow groundwater flow, the regulatory status of the listed sites, the media impacted at the listed sites, and information contained in the regulatory databases, it is our professional opinion that these orphan sites do not represent a REC at the subject property.

### *7.4 CITY OF PORTLAND FIRE BUREAU*

On July 27, 2022, NV5 submitted a public records request to the Portland Fire Bureau for available storage tank records for the subject property. On August 15, 2022, the Portland Fire Bureau responded, stating that there are no records of tank permits for the subject property.

---

[4] Farallon Consulting, L.L.C., 2022. *RE: Progress Report – Second Quarter 2022; Conger Facility – ECSI File No. 1139 (Priestley/Tarr Facility); 2429 North Borthwick Avenue, Portland, Oregon*, dated July 8, 2022.

### *7.5 PBOT*

NV5 contacted PBOT on August 5, 2022, regarding records of USTs in the ROWs adjoining the subject property. On August 9, 2022, a representative of PBOT responded, stating that they do not have records of USTs located in the ROWs adjoining the subject property.

### *7.6 CITY OF PORTLAND BDS*

On July 27, 2022, NV5 submitted a public records request to BDS for available permits and plans for the subject property. On July 29, 2022, BDS provided several permits and plans for the subject property. NV5's review of the provided records did not identify RECs.

## 8.0 SUBJECT PROPERTY HISTORY AND BACKGROUND

Reasonably ascertainable information concerning the history and background of the subject property begins in 1885 and includes aerial photographs, USGS topographic maps, reverse city directories, Sanborn fire insurance maps, online property information (including available building department records, property tax information, and zoning/land use records), and personal knowledge of individuals familiar with the subject property.

Historical aerial photographs of the subject property were obtained from EDR and reviewed by NV5. The scale of the photographs reviewed allowed for the interpretation of general site development/configuration but did not allow for the identification of specific subject property features. Aerial photographs were reviewed for the following years: 1936, 1948, 1951, 1955, 1960, 1963, 1970, 1975, 1981, 1990, 1994, 2000, 2005, 2009, 2012, and 2016. The historical aerial photographs are presented in Appendix D.

Historical topographic maps of the subject property were obtained from EDR and reviewed by NV5. Topographic maps were reviewed for the following years: 1897, 1905, 1940, 1954, 1961, 1970, 1977, 1995, 2014, 2017, and 2020. The historical topographic maps are presented in Appendix D.

Reverse city directories for the subject property and adjoining properties were obtained from EDR and reviewed by NV5. The following addresses currently correspond to the subject property: 2630 North Mississippi Avenue; 2621, 2631, and 2651 North Albina Avenue; and 829 North Russell Street. Please note that in some locations, particularly in urban areas, addresses for a particular property may change over time. Based on a review of Sanborn fire insurance maps and historical property information, the following addresses historically correspond to the subject property: 800, 822, and 826 North Knott Street; 2643 North Albina Avenue; 847 and 855 North Russell Street; and 2600 and 2604 North Mississippi Avenue. The city directories were reviewed (if available) at approximately five-year intervals for the years spanning 1924 through 2017. The EDR City Directory Report is presented in Appendix D.

Sanborn fire insurance maps for the subject property were obtained from EDR and reviewed by NV5. Sanborn fire insurance maps were reviewed for the following years: 1885, 1887, 1889, 1901, 1909, 1924, 1950, and 1969. The Sanborn fire insurance maps are presented in Appendix D.

Online property information for the subject property and select adjoining properties was reviewed by NV5. The online property information is presented in Appendix D.

### *8.1 SUBJECT PROPERTY*

Based on the review of historical sources cited in Section 8.0, we have identified the following developmental history of the subject property:

| Year | Observations | Source |
|---|---|---|
| 1885 through 1897 | From at least 1885 through 1887, the subject property was vacant land. By 1889, several residences and associated outbuildings were constructed on the northern portion of the subject property with a commercial building along the eastern boundary. | • Topographic Map<br>• Sanborn Fire Insurance Maps |
| 1901 through 1909 | By 1901, several residences remained on the northern portion of the subject property, a banquet hall was present on the eastern portion, several mixed-use buildings were present on the southern portion, and a drug store with paint and oil storage was present on the southwestern portion (Tax Lot 8000). By 1909, two buildings on the eastern portion (Tax Lots 7400 and 7500) were vacant. | • Sanborn Fire Insurance Maps |
| 1924 through 1936 | By 1924, the formerly vacant buildings on the eastern portion were converted to an asbestos factory. A clothes cleaning business, possibly including dry cleaning operations, was present on Tax Lot 7900. The northern portion of the subject property consisted of residences and the southwestern portion was developed with a mixed-use building.<br><br>By 1936, the asbestos factory was no longer present and buildings were removed from Tax Lots 7900 and 8200. | • Aerial Photograph<br>• City Directories<br>• Sanborn Fire Insurance Map |

| Year | Observations | Source |
|---|---|---|
| 1948 through 1975 | In 1948, a portion of the existing storage building and the existing office building were constructed as a restaurant and gage rod facility, respectively. By 1950, several residences had been removed from the northern and northwestern portions of the subject property. In addition, the existing vacant shop was constructed and occupied by a pipe warehouse.<br><br>Heating oil USTs appear to have been installed on Tax Lots 7900 and 7500 in 1950 and 1951, respectively. In 1952, additional heating oil UST may have been installed on Tax Lot 8000. In addition, an oil burner appears to have been installed at an apartment building formerly located on Tax Lot 8000.<br><br>By 1969, the existing warehouse was constructed on Tax Lot 8200. The remainder of the subject property remained relatively unchanged. | • Aerial Photographs<br>• Topographic Maps<br>• City Directories<br>• Sanborn Fire Insurance Maps<br>• Online Property Information |
| 1981 through present | By 1981, the existing storage building on Tax Lot 7400 was expanded to the west and the residence was removed from Tax Lot 7200. By 1990, the mixed-use building was removed from Tax Lot 8000 and a majority of the subject property consisted of commercial buildings, storage areas, and parking areas.<br><br>By 2016, the residence was removed from Tax Lot 7500 and the subject property roughly resembled its existing configuration. | • Aerial Photographs<br>• Topographic Maps<br>• City Directories<br>• Online Property Information<br>• Site Reconnaissance |

Because of the potential for a release of asbestos fibers to soil, the former presence of an on-site asbestos factory represents a REC at the subject property and the potential presence of an on-site dry cleaning facility represents a REC at the subject property. In addition, the likely presence of a heating oil UST associated with the oil burner on Tax Lot 8000 represents a REC at the subject property.

### *8.2 ADJOINING SITES*

Based on the review of historical sources cited in Section 8.0, we have identified the following developmental history of properties adjoining the subject property:

| Year | Observations | Source |
|---|---|---|
| 1885 through 1897 | By 1885, the existing adjoining ROWs had been constructed and the adjoining properties, including the property between Tax Lots 7900 and 8200, generally consisted of residences with a vacant commercial building and skating rink to the southwest. By 1887, commercial structures were added to the south. The adjoining properties remained relatively unchanged through at least 1889. | • Topographic Map<br>• Sanborn Fire Insurance Maps |
| 1901 through 1948 | By 1901, additional structures were constructed south of the subject property, consisting of a mix residential and commercial structures. Areas north, east, and west of the subject property generally remained residential.<br><br>By 1924, the areas to the southeast, south, and west primarily consisted of commercial properties. In addition, a commercial building was constructed north of Tax Lot 8200. By 1936, the existing apartment building to the west was constructed. Residences remained to the north, northeast, and east. | • Aerial Photographs<br>• Topographic Maps<br>• City Directories<br>• Sanborn Fire Insurance Maps |
| 1950 through 1990 | By 1950 and through at least 1955, an auto repair facility (Turner S Auto Repair Shop) operated east of Tax Lot 7500 at 2624 North Albina Avenue. Also by 1950, structures were removed from the property between Tax Lots 7900 and 8200.<br><br>From at least 1950 through 1994, a dry cleaning facility (Campbell Dry Cleaner) operated east of Tax Lot 7900 at 819 North Russell Street.<br><br>By 1969, the existing sheet metal shop (Streimer Sheet Metal) was constructed east of the subject property and an office building was added to the northwest. General commercial development of adjoining properties continued through at least 1990. | • Aerial Photographs<br>• Topographic Maps<br>• City Directories<br>• Sanborn Fire Insurance Maps |
| 1994 through present | By 1994, the adjoining properties generally resembled their existing configurations with an apartment building and parking areas to the north; the Streimer Sheet Metal facility to the east; several commercial properties to the south; and a parking lot, apartment building, and commercial office building to the west. | • Aerial Photographs<br>• Topographic Maps<br>• City Directories<br>• Site Reconnaissance |

The former Campbell Dry Cleaner operated at 819 North Russell Street from at least 1950 through 1994. This property is associated with DEQ ECSI No. 5680 and is discussed in Section 7.2.1.

## 9.0 SITE RECONNAISSANCE

Connor Ellis of NV5 conducted a reconnaissance of the subject property on August 2, 2022. The observations described in this section apply to the subject property as it appeared on that day. The site reconnaissance was performed to observe the current condition of the subject property and obtain information indicating the likelihood of identifying RECs in connection with the subject property. Access to the subject property and its structures was unlimited. The adjoining properties were also observed from the boundaries of the subject property as part of the site reconnaissance. A site plan is presented on Figures 2. Photographs of the subject property were taken to document observations made during the site reconnaissance and are presented on Figures 4 through 7.

### *9.1 GENERAL SUBJECT PROPERTY USE*

The subject property is currently used for temporary construction materials storage, parking, and administrative space by Streimer Sheet Metal Works, Inc., a fabricator of architectural sheet metal and HVAC ducting and accessories.

### *9.2 SUBJECT PROPERTY OBSERVATIONS*

| Features of Concern | Observations |
|---|---|
| Subject Property Structures | See Section 9.2.1 |
| Subject Property Drainage | See Section 9.2.2 |
| Potable Water Supply | See Section 9.2.3 |
| Sewage Disposal System | See Section 9.2.4 |
| Roads | See Section 9.2.5 |
| Hazardous Substances and Petroleum Products | See Section 9.2.6. |
| ASTs and/or USTs | See Section 9.2.7 |
| Strong, Pungent, or Noxious Odors | Not observed |
| Pools of Liquid | Not observed |
| Drums (5 gallons or larger capacity) | See Section 9.2.8 |
| Unidentified Substance Containers | Not observed |
| Potential PCB-Containing Equipment | See Section 9.2.9 |
| Pits, Ponds, and Lagoons | Not observed |
| Stained Soil or Stained Pavement | Not observed |
| Stressed Vegetation | Not observed |
| Solid Waste or Fill Material | See Section 9.2.10 |
| Wastewater | Not observed |
| Wells | See Section 9.2.11 |
| Historical Septic Systems/Cesspools | Not observed |
| Heating and Cooling Systems | See section 9.2.12 |
| Interior Stains or Corrosion | Not observed |
| Interior Drains or Sumps | See Section 9.2.13 |

### 9.2.1 Subject Property Structures

The subject property consists of the following structures:

- The office building is located on Tax Lot 7100 and consists of a one-story, slab-on-grade commercial building encompassing approximately 4,000 square feet. This building was constructed in 1948 and consists of accounting offices and records storage.
- The storage building is located on Tax Lot 7400 and consists of a one-story, slab-on-grade commercial building encompassing approximately 1,440 square feet. This building was constructed in 1948 and consists of materials storage.
- The vacant shop building is located on Tax Lot 7900 and consists of a one-story, vacant commercial building encompassing approximately 3,284 square feet. The office portion of the building consists of a slab-on-grade foundation and an exposed dirt floor is present in the shop. The building was constructed in 1952.
- The warehouse is located on Tax Lot 8200 and consists of a one-story, slab-on-grade commercial building with a mezzanine level. This building encompasses approximately 16,848 square feet and consists of finished product storage areas, training rooms, mechanical rooms, architectural sheet metal fabrication areas, and a loading dock. The warehouse was constructed in 1969.

In addition, a portable storage structure was observed west of the storage building on Tax Lot 7400. The portable storage structure was empty at the time of the site reconnaissance.

### 9.2.2 Subject Property Drainage

Surface water at the subject property is expected to infiltrate into the ground surface, flow into a catch basin located on Tax Lot 8000, or flow into catch basins located in the adjoining ROWs. The catch basins are connected to the municipal storm sewer. NV5 personnel did not observe surface water at the subject property at the time of our site reconnaissance.

### 9.2.3 Potable Water Supply

Potable water is supplied to the subject property by the City of Portland.

### 9.2.4 Sewage Disposal System

Sewage generated at the subject property is discharged to the City of Portland municipal sewer system. Based on information provided by the City of Portland, municipal sewer service has been available at the subject property since at least 1932.

### 9.2.5 Roads

Paved and gravel parking and storage areas are present on multiple portions of the subject property. In addition, the subject property is bound by paved ROWs and a paved parking and storage area. Evidence of spills or waste disposal was not observed in the vicinity of the gravel and paved roads or parking/storage areas.

### 9.2.6 Hazardous Substances and Petroleum Products

We observed two unlabeled, 55-gallon drums located inside the storage building on Tax Lot 7400. According to Steve Streimer (owner), the drums contain gasoline for his personal boat. We did not observe evidence of releases or spills from drums at the time of the site reconnaissance.

### 9.2.7 ASTS and/or USTs

We observed an apparent vent pipe on the west side of the vacant shop building. The vent pipe appears to be associated with the decommissioned-in-place 675-gallon heating oil UST associated with LUST File No. 26-08-0191 previously discussed in Section 6.5.

### 9.2.8 Drums

Except for the drums previously discussed in Section 9.2.6, drums were not observed on the subject property.

### 9.2.9 Potential PCB-Containing Equipment

Three pole-mounted transformers were observed on the northwestern corner of the subject property and one pole-mounted transformer was observed on the southwestern corner of the subject property. Stickers or labels identifying potential PCB content of the transformers were not observed. The transformers appeared to be in good condition with no evidence of spills or leakage.

### 9.2.10 Solid Waste or Fill Material

Evidence of fill material was not observed on the subject property. During a previous geotechnical investigation at Tax Lot 7900, up to 11 feet of undocumented fill were encountered. Based on this information, it is also possible that undocumented fill material may be present beneath other areas on the subject property. In our experience, historically placed fill material in the Portland area frequently contains low concentrations of contaminants, primarily PAHs and/or metals. While frequently present at concentrations greater than DEQ CFSLs, contaminants are rarely present at concentrations greater than applicable DEQ RBCs. Therefore, the possible presence of undocumented fill material does not represent a REC at the subject property.

### 9.2.11 Wells

Two monitoring wells were observed in the sidewalk ROW along the eastern boundary of the subject property. The monitoring wells appear to be related to the off-site Tarr Inc. property, as previously discussed in Section 7.2.3. Monitoring wells were not observed within the subject property boundaries.

### 9.2.12 Heating and Cooling Systems

The warehouse and office building are heated and cooled by roof-mounted HVAC equipment fueled by natural gas. The storage building is heated by a ceiling-mounted natural gas heater. In addition, the vacant shop building is heated by electric baseboard heaters and a ceiling-mounted natural gas heater and cooled by a wall-mounted electric air conditioning unit.

### 9.2.13 Interior Drains or Sumps

A metal plate was observed on the floor of the south-central portion of the warehouse. Mr. Streimer stated that the metal plate is covering a capped floor drain that may be connected to the municipal sanitary system but that has not been used since Streimer has owned the property. We did not observe evidence of releases or chemical storage in the vicinity of the capped floor drain.

## *9.3 SURROUNDING PROPERTY USE*

The subject property is directly bound to the north by North Knott Street, across which are the Left Bank Lofts and a parking lot; to the northeast by a residence; to the east by North Albina Avenue, across which is Streimer Sheet Metal Works, Inc.; to the southeast by a mixed-use building; to the south by North Russell Street, across which are a multi-tenant commercial building and the White Eagle bar; to the west by North Mississippi Avenue, beyond which are a parking lot, Mississippi Court Apartments, and a vacant commercial building; and to the northwest by a vacant lot. In addition, the property located between Tax Lots 7900 and 8000 consists of a paved storage and parking area that is leased by Streimer Sheet Metal Works, Inc.

A suspect UST vent pipe was observed on the south side of the north adjoining Left Bank Lofts building. Based on the inferred groundwater gradient, depth to groundwater at the subject property, and distance of the suspect vent pipe from the subject property across North Knott Street, it is unlikely to have impacted the subject property. Therefore, it is our professional opinion that a UST at the north adjoining property, if present, does not represent a REC at the subject property.

# 10.0 INTERVIEWS

The subject property is currently owned by Michael R. and Frederick L. Streimer (Tax Lots 7100, 7200, 7300, 7400, and 7500), Streimer Sheet Metal Works, Inc. (Tax Lot 7900), and Frederick L. Streimer 2012 Irrevocable Trust (Tax Lots 8000 and 8200). The subject property is occupied by Streimer Sheet Metal Works, Inc. NV5 interviewed the owner and a state government official during the course of this assessment. Information obtained from these interviews is presented in the following sections.

## *10.1 CURRENT OWNER*

Steve Streimer (owner representative) was interviewed on July 25, 2022, regarding his knowledge of the subject property and accompanied NV5 during the site reconnaissance on August 2, 2022. Mr. Streimer has been familiar with the subject property for approximately 30 years. Mr. Streimer was aware of the former heating oil USTs that were formerly located on Tax Lots 7500 and 7900 previously discussed in Sections 6.1 and 6.5. In addition, Mr. Streimer was aware of the former Campbell Dry Cleaning facility that operated on the property adjoining Tax Lot 7900 previously discussed in Sections 6.6 through 6.10. Mr. Streimer was not aware of imported fill material at the subject property. Mr. Streimer was otherwise not aware of the historical use of the subject property prior to Streimer Sheet Metal Works, Inc. Mr. Streimer was not aware of environmental complaints or lawsuits, environmental liens, AULs, or other environmental concerns in connection with the subject property.

### *10.2 STATE GOVERNMENT OFFICIAL*

On August 11, 2022, NV5 contacted Ximena Cruz-Cuevas (DEQ cleanup program coordinator) regarding USTs or releases from USTs at the subject property. Ms. Cruz Cuevas responded, stating that there are no records of USTs on file in connection with the subject property.

## 11.0 DATA GAPS

Data gaps were not identified during the course of this assessment.

## 12.0 DECLARATIONS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR Part 312.10. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We developed and performed all the appropriate inquiries in accordance with the standards and practices set forth in 40 CFR Part 312.

## 13.0 LIMITATIONS

This Phase I ESA has been prepared for use by Streimer Sheet Metal Works, Inc. NV5 makes no warranties or guarantees regarding the accuracy or completeness of information provided or compiled by others. The information presented in this report is based on the above-described research and a single recent site visit. Information provided by others was relied on in our description of historical conditions and review of regulatory databases and files. The available data do not provide definitive information with regard to all past uses, operations, or incidents at the subject property or adjoining properties. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property. There is always a potential that areas with contamination that were not identified during this assessment exist at the subject property or in the study areas. Further evaluation of such potential would require additional research, subsurface exploration, sampling, and/or testing.

Some substances may be present in the subject property vicinity in quantities or under conditions that may have led or may lead to contamination of the subject property but are not included in current local, state, or federal regulatory definitions of hazardous substances or do not otherwise present current potential liability. NV5 cannot be responsible if the standards of all appropriate inquiry or regulatory definitions of hazardous substance change or if you are required to meet more stringent standards in the future.

This report is not intended for use by others, and the information contained herein is not applicable to other sites. Reliance on this report by other parties is strictly at the risk of those parties, and NV5 will grant no third-party reliance unless specifically requested in writing by our client for whom this report was prepared.

Within the limitations of scope, schedule, and budget, our services have been executed in accordance with the generally accepted environmental science practices for Phase I ESAs in this area at the time this report was prepared. No warranty or other conditions, express or implied, should be understood.

♦ ♦ ♦

We appreciate the opportunity to be of service to Streimer Sheet Metal Works, Inc. Please call if you have questions regarding this report.

Sincerely,

NV5

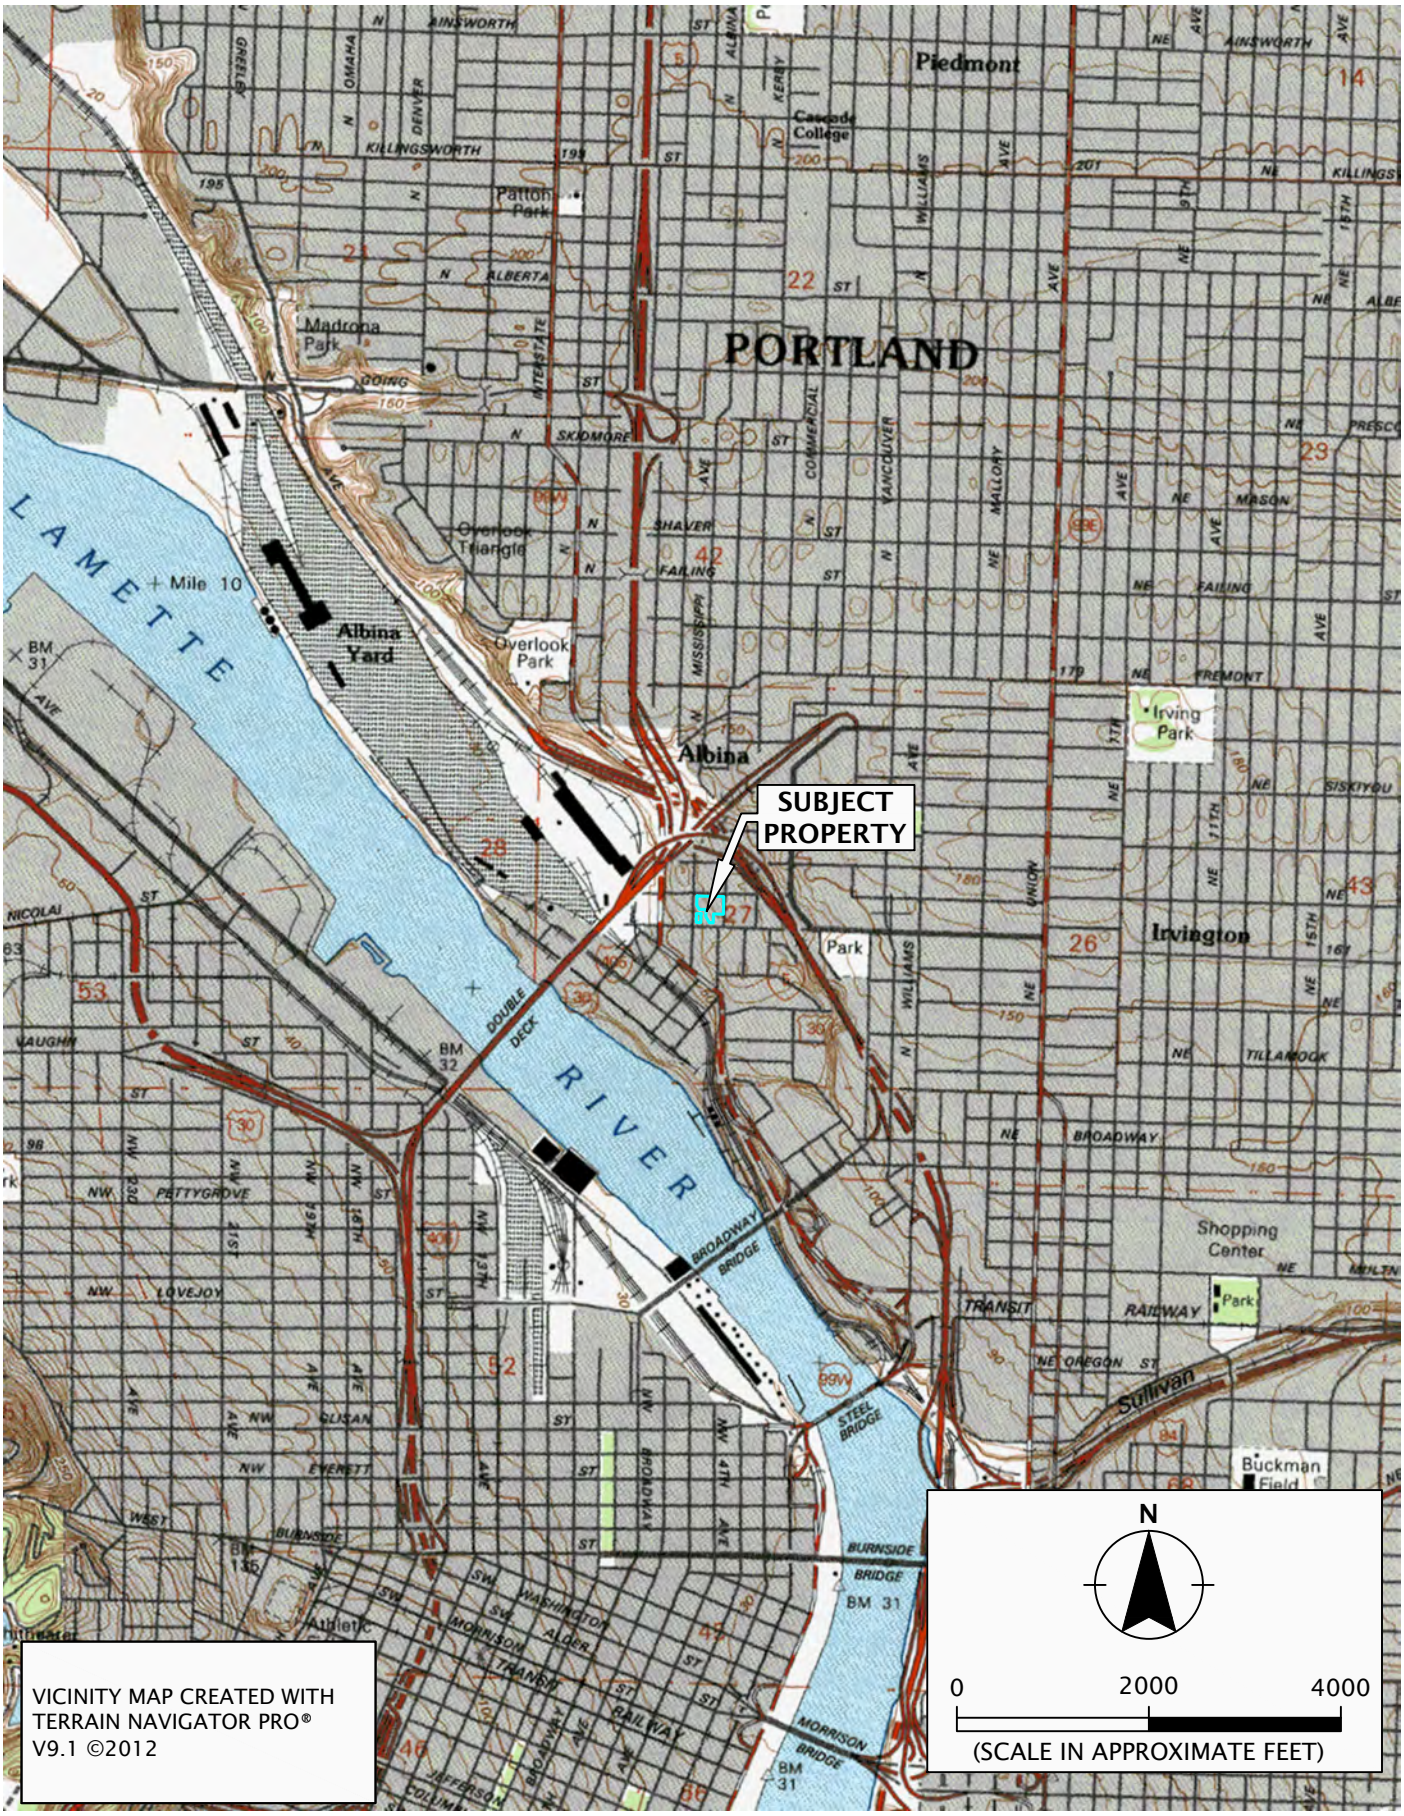

Connor J. Ellis
Project Manager

# APPENDIX A

NV5

## FIRM PROFILE

NV5 offers a wide array of civil engineering-related services with over 100 offices nationwide and overseas and more than 4,000 staff. In 2020 gross revenue was over $600 million, NV5 has a proven ability to help clients plan, design, build, test, and operate projects that improve the communities where we live and work. Locally, the NV5 team provides integrated environmental and geotechnical engineering services from Wilsonville, Oregon; and Vancouver, Longview, Tacoma, and Bothell, Washington. Locally, the NV5 team (formerly GeoDesign) has more than 60 engineers, geologists, environmental scientists, engineering geologists, hydrogeologists, technical personnel, and support staff.

From planning and design through construction, we offer consulting services in support of commercial and residential developments, industrial facilities, property transactions, regulatory compliance, and transportation and water infrastructure systems. NV5 works on all phases of project development, including preliminary studies for due diligence, master planning studies, siting of new structures and utility and road alignments, regulatory studies (such as NEPA documents), comprehensive investigations for final geotechnical design, oversight of environmental clean-up activities, and construction observation and testing.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

MINES MRDS Mineral Resources Data System

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

# EXECUTIVE SUMMARY

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/27/2022 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

| Lower Elevation | Address | Direction / Distance | Map ID | Page |
|---|---|---|---|---|
| RIVER STREET WAREHOU | 1300 NORTH RIVER STR | WSW 1/4 - 1/2 (0.295 mi.) | S74 | 391 |

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2022 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

# EXECUTIVE SUMMARY

Site ID: 1000430
EPA Id: ORD058147166

***Lists of Federal RCRA generators***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 10 RCRA-VSQG sites within approximately 0.25 miles of the target property.

***Lists of state- and tribal hazardous waste facilities***

OR ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the OR ECSI list, as provided by EDR, and dated 03/01/2022 has revealed that there are 23 OR ECSI sites within approximately 0.5 miles of the target property.

***Lists of state and tribal landfills and solid waste disposal facilities***

OR SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Quality's Closure & Regular Solid Waste Active Disposal Permits database.

A review of the OR SWF/LF list, as provided by EDR, and dated 04/29/2022 has revealed that there is 1 OR SWF/LF site within approximately 0.5 miles of the target property.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

|---|---|---|---|---|
| NW PORTLAND MGP | 715 NW HOYT ST | S 1/2 - 1 (0.871 mi.) | 135 | 516 |

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

# EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 7 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

NARR Comments: (KRT 3/2016) The subject property is located at 817 & 819 (upstairs/downstairs addresses) on North Russell Street in Portland. The Campbell Dry Cleaner site operated from 1952 to 1996. Previous investigations involving soil and soil vapor sampling have found concentrations of PCE and TCE in soil and soil vapor that exceed applicable risk-based concentrations. Additional site investigations to determine appropriate cleanup alternatives have been conducted using the City of Portland's Brownfield Program funds in conjunction with State of Oregon Orphan funds. Evaluaiton of cleanup alternatives will be performed using State of Oregon Orphan funds.

NARR Comments: [KRT 3/2016] Site investigations conducted between 2008 and 2014 identified tetrachloroethene (PCE) and trichloroethene (TCE) in soil, groundwater, soil vapor, and indoor ambient air. Analytical data from the site were compared to DEQ s human health risk-based concentrations (RBC) for potentially complete exposure pathways to site receptors (DEQ 2012). Risk screening identified concentrations of PCE in indoor air exceeding DEQ s inhalation RBC for urban residential and occupational receptors. PCE in soil and soil gas also exceeded the RBC for urban residential receptors via the vapor intrusion pathway. [SA/SAM 3/5/12] Vapor instrusion into buildings from subsurface contamination is the primary pathway of concern.

Updated Date: 08/25/2020
Decode for NarcdID: Current Site Summary Statement
NARR Comments: (KRT 8/2020) (KRT 12/16) Revised Easement and Equitable Servitudes document signed 8/25/2020 and will be recorded on property deed by Multnomah County. Plan for five year performance review of remedy with air quality testing. (KRT 9/16) Working with property owner to craft acceptable Easement and Equitable Servitudes document. Latest draft E&ES provided to property owner on 7/15/2016 for review. Receipt of E&ES being attached to deed is required for DEQ to issuance NFA letter. (KRT 3/16) Oregon DEQ recommends a partial, conditional No Further Action (NFA) determination for the Former Campbell Dry Cleaner building, in Portland which was sent out for a 30-day public comment period in March 2016. The multiple cleanup tasks performed in response to site characterization and risk evaluation constitute a protective final remedy and are the basis for a partial conditional NFA proposal. The multiple cleanup tasks, especially the building crawlspace mechanical ventilation system, have been demonstrated to effectively mitigate vapor intrusion into the building from contaminated site soils. To ensure continued operation of the building crawlspace mechanical ventilation system, an Easement and Equitable Servitudes deed restriction has been prepared for submittal to Multnomah County. This No Further Action proposal is partial because if pertains only to the subject property, not the adjacent affected properties. It is conditional because protectiveness to building occupants requires continuous use of the building crawlspace mechanical ventilation system. The Campbell Dry Cleaner site operated from 1952 to 1996. Previous investigations involving soil and soil vapor sampling have found concentrations of PCE and TCE in soil and soil vapor above urban residential, occupational, construction and excavation exposure scenarios. The highest concentrations of soil impact have been found at the southwest corner of the building, which is the area where the dry cleaning washer was located. The primary purpose of investigation and cleanup work in 2015 was to produce safe indoor air environment for occupants of 817 & 819 North Russell Street (upstairs/downstairs addresses). With this focus, off-site data are limited and were

**CAMPBELL DRY CLEANER (FORMER) - PORTLAND (Continued)** **S111429247**

collected to support investigation of the subject property. Additional site investigations to determine appropriate cleanup alternatives were conducted. Orphan funds were applied to complete cleanup work.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D026

**CONGER NORTHWEST, INC. (Continued)** **1000222568**

Waste Description: CRESOL

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D036
Waste Description: NITROBENZENE

Waste Code: D038
Waste Description: PYRIDINE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

**CONGER NORTHWEST, INC. (Continued)** **1000222568**

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U043
Waste Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U123
Waste Description: FORMIC ACID (C,T)

Waste Code: U159
Waste Description: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Waste Code: U210
Waste Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U228
Waste Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Waste Code: U239
Waste Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

NARR ID: 5731707
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: ACOATES
Updated Date: 01/19/2017
Decode for NarcdID: Contamination
NARR Comments: Extensive petroleum and solvent contamination found in soil during the 1991 decommissioning of UST; 2800 tons of contaminated soil were removed to the St. Johns Landfill. A large volume of contaminated soil was left in place due to risk of damage to installed transfer piping that would have been undermined. The soil left in place, as well as other locations (floor and walls of excavations), were not adequately characterized for solvent contamination. Lab methods used were adequate only for screening of samples for solvents. (12/31/92 KPD/SAS) In April 1991, there was an oil spill on a nearby gravel lot that Priestly leased from ODOT to park and store empty oil trucks and tanks. Soil samples contained up to 51 ppm TPH. (AC June 2014) Chemicals of potential concern (COPCs) were determined to be primarily chlorinated hydrogenated VOCs. Petroleum hydrocarbons, fuel additives, and other non-chlorinated VOCs are also COPCs to a lesser extent. COPCs that were found to be chemicals of concern (COCs) in the risk assessment include: Soil: PCE, TCE, TPH-d, and benzo(a)pyrene. Soil Vapor: PCE; TCE; 1,2-dichloroethane; benzene; 1,2,4-trimethylbenzene; 1,4-dioxane; chloroform; and methylene chloride. Groundwater: PCE; TCE; cis-1,2-dichloroethene;

**CONGER NORTHWEST, INC. (Continued)** **1000222568**

1,1-dichloroethane; benzene; chloroform; and methylene chloride.

NARR Comments: The Facility covers the majority of the block bounded by North Russell and North Page Streets and North Borthwick and North Albina Avenues. In addition to the offices, the Facility has three warehouses, a Clean Room, a maintenance shop, and three aboveground storage tank (AST) containment areas. The Facility includes eight parcels (tax lots). The total area of the Facility is 1.49 acres. The surface coverage consists of the following: Buildings, 32 percent; Paved driveway or parking areas, 60 percent; Tank farms with secondary containment, 8 percent; and Vegetated areas, less than 1 percent.

Decode for NarcdID: Project Issues Summary
NARR Comments: Over the history of the Facility, a variety of chemicals have been handled. In general, chemical groups handled at the Facility included fuels (gasoline, diesel, and kerosene), solvents (e.g., petroleum, alcohol, ketone, chlorinated, and acetate/glycol), and lubricating oils. The features/areas where chemical storage or handling has occurred at the Facility (current or historical) include ASTs, USTs, loading racks, a card-lock dispenser, drum/tote storage, piping manifolds, blending areas, a paint booth, and maintenance areas. The function and chemical handling for each area of the Facility is

**CONGER NORTHWEST, INC. (Continued)** **1000222568**

summarized as follows: Warehouse 1 Lubricant and chemical storage in 5- to 55-gallon containers; Warehouse 2 Chemical blending and packaging; drum reconditioning (non-chlorinated solvents only during the 1990s) and packaging; historically, blending sometimes occurred outside the southwest corner of the warehouse; Warehouse 3A Lubricant and chemical storage in 5- to 550-gallon containers; Warehouse 3B Packaging and storage of lubricants in 5- to 330-gallon containers; historically included chemical blending and packaging; Clean Room Storage of isopropyl alcohol in 5- to 330-gallon containers; historically included lubricant and chemical blending and packaging; Maintenance Shop Vehicle maintenance; parts cleaning; storage of several 20- to 55-gallon containers of lubricant, non-flammable solvent, and antifreeze; Former UST Farm Storage of motor fuels and solvents, but never chlorinated solvents or lubricants; Lubricant AST Farm Storage of lubricants only; prior use as vehicle parking; Horizontal ASTs on Parcel 1 Solvent storage; historically the only location used for bulk storage of chlorinated solvents; and Solvent AST Farm on Parcels 4 and 5 Storage of motor fuels and solvents, but never chlorinated solvents.

NARR Comments: (12/31/92 KPD/SAS) Site Assessment recommends a Preliminary Assessment (PA) to more completely characterize on-site contamination. (6/3/08 AC/VCP) Tarr joined DEQ's Voluntary Cleanup Program in 2002, and completed a Phase II investigation in December 2002. On-site and off-site soil vapors were identified in 2007. On-site systems were installed in site buildings in 2007. An off-site system of soil gas vapor probes was installed in 2008. (12/20/10 AC/VCP) An expanded groundwater monitoring network was installed in summer 2010. Soil vapor extraction system is in operaton. Investigation of the extent of the groundwater plume is in progress, as is delineating the extent of off-site soil vapors. (June 2014 AC) The initial RI Report was submitted on November 15, 2011. DEQ comment letters were issued on January 19, 2012 and August 15, 2013. The second DEQ comment letter was in response to the revised risk assessment tables and calculations. the Revised Remedial Investigation Report was submitted on February 11, 2014. The Feasibility Study was completed in March 2016. The Staff Report went out for public comment on December 1, 2016.

Decode for NarcdID: Site History
NARR Comments: Property that comprises the Facility was originally developed for residential uses in the late 1800s. Residential use continued until the 1950s. Commercial/industrial development began on the northern portion of the Facility in the late 1950s. By the 1970s, the transition of the area to commercial/industrial use was essentially complete. Industrial and commercial uses predominate within the Site. Limited urban residential, entertainment, and dining uses are present in the immediate vicinity of the Facility.

Name: WIDMER BROS BREWING CO
Address: 924 N RUSSELL ST
City,State,Zip: PORTLAND, OR 97227
Facility Id: 60166
Hazardous Substance: AMMONIA
Reporting Quantities: Not reported
Quantity Units: Not reported
Physical State: Not reported
Storage 1: Above ground tank
County: MULTNOMAH
Owner-Operator Name: MATT
Direct Site Phone: 5032812437
Report Class: Annual
Report Year: 2020
Is Poisonous Gas: Yes
Is Poisonous Material: No
Is Biological Hazard: No
Is Radioactive Material: No
Is Explosive: No
Status: Not reported
Nature of Business: BREWERY
NAICS: 312120
Maximum Daily Amount Code: 10
Maximum Daily Amount Code Range: 200-499
Maximum Daily Amount Unit: gal
Is Solid State: No

Hazardous Waste Summary:

| | |
|---|---|
| Waste Code: | D001 |
| Waste Description: | IGNITABLE WASTE |

**UNION PACIFIC RAILROAD ALBINA SITE (Continued)** **1000337524**

Waste Code: D008
Waste Description: LEAD

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Updated By: MROMERO
Updated Date: 04/26/2012
Decode for NarcdID: Contamination
NARR Comments: Also see the ISUM (Project Issues Summary) category in Site Narratives. All sampling and contaminat information is summarized in the remedial Investigation and risk assessment report for the site in the site file. Soil: Contaminants detected in soil included metals, PAHs, TPH, PCBs and VOCs. Arsenic, lead, PAHs dibenzo(a,h)pyrene and benzo(a)pyrene, diesel range hydrocarbons and PCB Arochlor 1260 were identified as COIs in the RI. the risk assessment concluded that unacceptable risk was associated with dibenzo(a,h)pyrene and benzo(a)pyrene in shallow soil. Groundwater: Contaminants detected in groundwater included total and dissolved metals,PAHs and TPH. LNAPL:

**UPRR - ALBINA YARD (Continued)** **S102521605**

Free-phase petroluem hydrocarbons in the diesl and fuel oil range are present in 2 monitori wells on site and in a few soil borings. The RI concluded that it is stable and not increasing over time but the risk assessment did identify potential risk to possible future excavation workers.

NARR Comments: Remedial Investigation and Risk Assessment was completed in 2011. A Feasibility Study was completed in 2012 and a reccomendation for a Remedial Action to remove PAH contamination in shallow soil in the North Yard and institutional controls for LNAPL in the South Yard are being proposed. The Remedial Action is designed to mitigate upland human health risks at the site. A 30-day public notice and comment period will open on May 1st and a remedy will be determined after

**UPRR - ALBINA YARD (Continued)** **S102521605**

public comments are considered. The Portland Harbor Source Control Evaluation at the site is ongoing and is not addressed in the proposed Remedial Action.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soil and surface water are known to have been contaminated; shallow groundwater is also affected. Groundwater contamination and petrleum LNAPL have proven to not be migrating toward the river and LNAPL is imobile. No complete pathways for groundwater on site. Shallow soil pathway to on-site workers is complete, but risks will be mitigated by the proposed remedial (removal) action. Possible migration pathways resulting in sediment contamination include: stormwater runoff, surface soil, erosion, and historic spills discharging into the river.

NARR Comments: (GMW 7/25/96) There appear to be areas with significant soil and possibly groundwater contamination at this site. The yard should be placed on the Confirmed Release List. In addition, a preliminary assessment should be conducted to summarize historical operations, spills/releases, and facility features, as well as to evaluate potential exposure pathways. Further state action is a low-to-medium

**UPRR - ALBINA YARD (Continued)** **S102521605**

priority. (1/20/00 TBG/SAP) Based on sampling results from a river sediment quality study and from the Portland Shipyard Sediment Investigation (Port of Portland and Cascade General), the UPRR-Albina site has been identified as a potential source of contamination to the Portland Harbor. A Strategy Recommendation was completed on October 1, 1999. An Expanded Preliminary Assessment (XPA) is required to evaluate past waste management practices, potential upland site contaminant sources, and the extent of contamination in near-shore sediment (high priority). (4/20/00 RGS/VCP) DEQ is performing a PA/XPA of the UPRR - Albina Yard using one of DEQ's environmental contractors. (9/26/00 RGS/VCP) The field investigation was performed in August 2000. Results pending. (4/2/01 RGS/VCP) XPA indicated presence of hazardous substances in soil and groundwater on-site and in sediments adjacent to the site. UPRR requested to perform RI of facility. (11/21/01 RGS/VCP) UPRR signed a Voluntary Agreement to perform a RI and Source Control Measures. UPRR submitted a draft <quot>Pre-RI Work Plan<quot> in July 2001. DEQ approved the final work plan in October 2001. (12/23/02 RGS/VCP) The Pre-RI report was submitted in July 2002, and recommended a RI be performed. The RI proposal was submitted to DEQ in November 2002, and was approved by DEQ in December 2002. Final remedial investigation activities were completed at the site in 2010, and a Final Remedial Investigation/Source Control Measures Evaluation Report submitted in November 2011. The report was approved by DEQ, although a number of comments were made to carry forward into the FS. A revised FS work plan was approved by DEQ in July 2011, and a formal FS was completed in February 2012. (4/9/12 M. Romero/VCP) The Feasibility Study evaluated and recommended 4 remedial alternatives to deal with shallow soil contaminated with PAHs in the North Yard and immobile petroleum LNAPL in deepr soils and on the water-table in the South Yard. Soil removal is reccomened for shallow soil in North Yard and restricted access is recommended for imobile petroluem in the South Yard. 30-day public comment period starts May 1

| NARR Comments: | (11/27/00 GMW/SAS) According to EPA, this is one of a number of former W.R. Grace facilities nationwide that processed or handled vermiculite ore from a mine in Montana. This ore contained asbestos as a by-product. Vermiculite has several uses, such as a soil amendment for house plants. |

NARR Comments: (11/27/00 GMW/SAS) EPA Region 10 has added the site to CERCLIS as part of its nationwide investigation of former WR Grace facilities that handled asbestos-containing vermiculite. DEQ has not been involved in the investigation at this site, but will be tracking EPA's efforts to determine whether the past handling of asbestos-containing vermiculite presents any current threats to human health or the environment. (9/4/13 GMW/SAS) EPA conducted a removal action for asbestos between June and Novermber 2006.

NARR Comments: [From EPA Removal Report]: The building was built in the 1940s, and W. R. Grace operated it as Vermiculite Northwest until the early 1990s. The facility was used as a processing plant for vermiculite ore mined in Libby, Montana. W. R. Grace shipped raw vermiculite ore via rail to processing plants throughout the country, including this facility in Portland. At the facility, the raw vermiculite ore was processed for use in consumer and building products, by mixing it with hot air, whereupon it would greatly expand in size. The processed vermiculite had many useful properties; it was a lightweight material that was absorbent, fireproof, and a good insulator. W. R. Grace used the processed vermiculite in a number of consumer and building products, including a soil conditioner for gardening, as house insulation, and as a spray-applied fire-proofing.<br><br> In the late 1990s, a local businessman named Walter Pelett, Sr. bought the building, and he sold it in early 2006 to Greg Nystrom and Walter Pelett III of Priority Delivery, who are the current owners (as of 2007). As a condition for the sale of the building, Mr. Pelett, Sr. agreed to be responsible for any asbestos-related issues.

NARR Comments: During on-ramp construction and building demolition, soil and building materials (concrete) were determined to contain petroleum and polychlorinated biphenyl (PCB) contamination. Historic uses of the property include an electrical equipment service center (PacifiCorp) and a small retail/business office. PacifiCorp used the facility to service and maintain electrical transformers and other electrical equipment.

NARR Comments: In 2002, Portland Department of Transportation (PDOT) completed construction of the on-ramp and the results of the follow-up site

**TUCKER BUILDING (Continued)** **1006858623**

investigation conducted in 2003 indicated that soils were impacted sporadically with petroleum hydrocarbons (including low concentrations of petroleum constituents; polynuclear aromatic hydrocarbons or PAHs) and PCBs. Site groundwater was not significantly impacted from on-site sources. After completion of the vehicle on-ramp, the site was completely covered by either elements of the ramp or by newly placed asphalt pavement and curbing. On July 22, 2004, the City of Portland recorded an easement and equitable servitude (EES) with the property deed, which documented the site conditions and required maintenance of the on-ramp as an effective barrier to site contamination.

NARR Comments: (8/5/04 ACV/VCP) Approximately 650 tons of petroleum-impacted soil were removed from the on-ramp footing excavations and disposed of at Hillsboro Landfill. PCB-contaminated concrete, where PCB concentrations exceeded a federal PCB cleanup level of 25 parts per million (ppm), from building floors was removed and disposed of off-site. The remaining building materials and concrete (with PCB concentrations below 25 ppm) were crushed and placed in the building basement before being covered by fill soil. The new on-ramp covered the site and if left in-place adequately mitigates future potential direct contact risks. The site remedy was submitted for public comment in April 2004 with no comments received. A deed restriction (Easement and Equitable Servitude) was placed on the property in July 2004. A conditional no further action decision was provided to the City of Portland in August 2004. (10/28/05 JMW/SAP) Comment period for Confirmed Release List (CRL) and Inventory listing closed on October 17, 2005. No comments were received, and the site has been listed.

NARR Comments: The current on-ramp structure and new paved parking areas have effectively eliminated site risks, and will continue to prevent human exposure as long as the on-ramp and paving remain in-place and are maintained. There were no unacceptable ecological risks found at the site.

**TUCKER BUILDING (Continued)** **1006858623**

NARR Comments: Prior to the on-ramp redevelopment in 2001/2002, the Tucker Property covered an entire city block and included a two-story building (with basement) on half of the property and asphalt-paved parking on the other half. Significant historic uses of the property had been an electrical equipment service center (PacifiCorp); and small retail and business offices since about the 1920/s. PacifiCorp used the facility to service and maintain electrical transformers and other electrical equipment.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: December 2012. As noted elsewhere in this ECSI report, a conditional NFA was issued for the site in 2004, which is contingent on the site cap remaining in place. The restriction is necessary because the site soil contains elevated contaminants including PCBs. As property formerly owner/operated by PacifiCorp, the Tucker property was included in a source control-related preliminary assessment completed in 2009 (<quot>Preliminary Assessment Report for the Albina Area Properties<quot>; Bridgewater Group, Inc., March 2009). the PA was subsequently revised. A source control investigation and activities report was completed for the site by the City of Portland 2010 (<quot>Former Tucker Building Storm System Investigation and Source Control Activities Report<quot>; City of Portland BES, April 2010). DEQ is currently evaluating a number of Albina area properties, including the former Tucker site, from a source control perspective. A source control decision is expected in 1st Quarter 2013. Cap inspection completed 1/4/13 by City of Portland at DEQ request. Cap inspection completed by City of Portland January 2020 (see Webdocs). No problems noted.

Decode for NarcdID: Contamination
NARR Comments: Possible contamination related to historical activities including shipbulding and operation of a fuel company (with presumed storage and distribution) on-site. These could include metals, PCBs, TPH, volatile and semi-volatile organic compounds, and butyl tins. In limited sampling to date with narrow contaminant anaysis, petroluem hydrocarbons and VOCs (dichlorobenzenes) have been detected in soil, and VOCs (TCE and PCE) and phthalates in groundwater.

Decode for NarcdID: General Site Description
NARR Comments: The Glacier Northwest Portland Cement Terminal is located on the east bank of the Willamette River, approximately between RM 11.15 and 11.35. The facility is owned and operated by Glacier NW as a cement distribution facility. The site consists of two parcels (North Parcel and South Parcel) with a total area of approximately 5.1 acres, and is largely paved. Bulk cement is delivered by ship, pneumatically conveyed to on-site storage buildings, and then loaded into customer trucks and railcars for off-site delivery. There is bulk distribution only, with no manufacture or processing of cement on site. Small volumes of non-contact cooling water are discharged via a dedicated outfall under a NPDES 100J permit. Stormwater is discharged from the site via three main private outfalls. A private connection to the existing City of Portland stormwater system (discharge point OF-44) is currently being eliminated. Glacier sues common fluids/oils in hydraulic systems, and operates 3 above-ground fuel storage tanks (ASTs). There are no hazardous wastes generated on-site. Historical industrial activity on the North Parcel has included fuel storage/distribution, manufacturing of wooden shingles, and shipbuilding and repair. An aerial photo from approximately 1943 shows the site to contain at least five shipbuilding <quot>ways<quot> and associated structures. Historical activity on the south Parcel has included operation of a cement distribution facility. Some activity related to Ship construction also appears to have occurred on-site.

NARR Comments: Site is located along east bank of Willamette River within Portland Harbor Superfund site. Elevated PCBs and other contaminantss detected in sediment in site vicinity. Site currently operated as cement storage/distribution facility, but was occupied in past by large shipbuilding yard and fuel facility. DEQ has requested source control evaluation. Stormwater Source Control Screening Evaluation Work Plan submitted in February 2011. Revised plan submitted to DEQ in May 2011 and approved. Stormceptor sampling was completed at the site in summer 2011 per the approved work plan. Elevated metals, phthalates, TPH, and PAHs were detected in sediment. Total PCBs were detected to 75 ug/kg. Follow-up stormwater sampling will be completed starting in fall 2011.

Updated Date: 12/04/2021
Decode for NarcdID: Current Site Summary Statement
NARR Comments: Sampling related to Portland Harbor (RM 11E) source control is ongoing. Sediment samples fro three site stormceptors were collected in July 2011 with elevated metals, PAHs, and phthalates detected. Follow-up stormwater sampling (four events, including two <quot>first flush<quot> events) will be performed starting fall 2011. Stormwater sampling completed, and Draft Stormwater Source Control Screening Evaluation submitted to DEQ. DEQ requested additional stormwater sampling and sampling of the south end of the site riverbank. Riverbank sampling completed in fall 2012, and stormwater sampling ongoing. Source control decision expected in mid 2013. June 2013. Results of riverbank sampling and additional stormwater monitorin have been received. Under settlement with EPA 10, RM 11E PRPs have committed to additional site characterization, which is expected to include soil and groundwater sampling at Glacier site. DEQ will wait on receipt of results before completing a source control decision for site. Decision likely near the end of 2013. Revised SCE delayed by additional RM11E site investigation work. A revised Source Control Evaluation incorporating upland data from the RM11E RI/FS was submitted to DEQ at the end of october 2014. In 2015, a riverbank stabilization effort was completed in the southern site. Following additional stormwater sampling, a Source Control Measures Implementation report was submitted to DEQ in November 2016. (10/23/18). Following communication between CalPortland and DEQ regarding the need for phthalate source tracing, a source tracing investigation was completed by Glacier/CalPortland in 2018. Results are presented in a September 27, 2018 DRAFT Phthalate Source Survey

**GLACIER NORTHWEST (Continued)** **S108662246**

letter report. Phthalate issues have not been resolved as of later 2018. (12/13/19). Awaiting results of additional source tracing work by Glacier, including a proposal for addressing uncontrolled source(s) of phthalates in stormwater. (12/04.21). Dome resurfacing completed summer 2021. Performance monitoring work plan for BEHP completed December 3, 2021 and approved by DEQ. Performance monitoring including of catchbasins in dome area and subsequent stormwater sampling to occur in winter/spring 2021/2022.

**ROSS ISLAND SAND & GRAVEL - N RIVER ST. (Continued)** **S115330261**

NARR Comments: (Aug. 2011) In a letter dated August 19, 2008, DEQ asked Ross Island Sand & Gravel Co. (RIS&G) undertake a Portland Harbor Source Control Evaluation for the property at 1208 N River St. in Portland. This request was based on the detection of elevated contaminants in sediment within the Willamette River in the vicinity of this site. The evaluation was to determine whether the site was a source of ongoing or potential future contaminant releases to the Willamette River. On October 15, 2008, DEQ received a letter from Aaron Courtney of Stoel Rives on behalf of RIS&G that laid out a rationale supporting the conclusion that RIS&G is not a liable party for the contamination cited in DEQ s letter. DEQ again contacted RIS&G in September 2010 to discuss its interest in having a source control evaluation conducted at the RIS&G site. After an exchange of information, RIS&G invited DEQ to tour the site on December 17, 2010. As a result of information obtained during the site visit and a review of additional sediment data collected in the vicinity of the RIS&G site, DEQ rescinded its request for a a source control evaluation. The basis for this decision is as follows: - RIS&G presented a series of aerial photos demonstrating that sand and gravel operations have taken place at the site since the early 1900s, and that the site was never within the footprint of the former Albina Engine Works shipyard. This information significantly diminishes DEQ s concerns that polychlorinated biphenyls (PCBs) are likely to be present at the site (PCBs being the contaminant most notably elevated in river sediments in the area). - Stormwater is managed under an NPDES permit (1200A general stormwater permit for gravel mining operations). All site stormwater is collected and pre-treated by an oil/water separator prior to being discharged to the river via the City of Portland s Outfall 44A. - The site is above river level and the bank is well-armored. - Data collected in the vicinity of the site (including Outfall 44A) by the Lower Willamette Group and the City of Portland include three sediment and one bank soil samples. None had elevated PCB concentrations. nother sediment sample collected offshore from Outfall 44A had PCB concentration between 150-300 ug/kg. However, given that sediments closer to the outfall had relatively low PCB concentration, it is unlikely that the offshore PCBs are related to Outfall 44A discharges. Based upon these findings, DEQ determined that the RIS&G site is unlikely to have been a significant source of contamination to the river, or represent a current or future source provided that site operational activities do not change.

NARR Comments: [Aug. 2011] DEQ has determined that the RIS&G site is unlikely to have been a significant source of past contamination to the Willamette River. DEQ has also concluded that the RIS&G site is unlikely to be a current or future source, provided that site operational activities do not change. See documents below for more details. DEQ's evaluation was limited to considering (and ultimately not requiring) a Source Control Decision, and thus did not include a full site review.

NARR Comments: [Nov. 2014] The former Kenton Foundry is in North Portland, adjacent to the Former Westinghouse site (ECSI #4497). Under the City of Portland's ownership, the property has been redeveloped as part of the Portland Water Bureau's maintenance center. Metals, petroleum, and some PCBs detected on-site, which have largely been removed during mass excavation associated with redevelopment work. The city is completing work under an ICP with DEQ, and expects to pursue a NFA determination for the site. An ICP report has not yet been submitted to DEQ. February 2022. A source control decision and Conditional NFA for the site have been approved by DEQ. Issuance of NFA letter is pending.

NARR Comments: Phase 1 Environmental Site Assessment prepared by K&S Environmental, Inc., dated December 19, 2017 Soil samples collected from 9 direct-push borings advanced at the project site indicated that fill material present beneath the project site is impacted with metals and PAHs. Leachable lead was detected in one of the soil samples at a concentration greater than the EPA hazardous waste regulatory level, but less than applicable DEQ RBCs. Arsenic was detected at concentrations greater than DEQ Soil Ingestion, Dermal Contact, and Inhalation RBC for an occupational receptor. Groundwater samples indicated that petroleum hydrocarbons were detected at concetrations less than applicable DEQ RBCs.

NARR Comments: The property proposed for acquisition by Defendant, currently owned by Wayne B. and Rebecca A Van Raden (the Van Radens ), is an approximately 1.78 acre site located at 2100 N. Albina Street, Multnomah County, Oregon. (3) According to reports on the Property, the site has been developed since the late 1800s. Until the 1920s, uses of the Property included residential and storefront commercial. Between the 1930s and 1970s, a variety of commercial operations were conducted on the Property, including various machine shop and fabrication operators, lumber companies and concrete companies. Between the late 1970s and 1984, the Property was vacant, at which time it was purchased by the Van Radens. Since being acquired by the Van Radens, the Property has primarily been used as a welding and fabrication shop specializing in heavy haul trailer suspension repairs. The Property was divided by an overpass built by the City of Portland in the early 2000s. Presently, a large (divided) warehouse, a single story office/administrative building, a storage shed and parking are the main features on the Property. Currently, the property owner is seeking a PPA agreement to redevelop the property.

NARR Comments: The <quot>site<quot> includes several properties currently or formerly-owned/leased by PacifiCorp that are located within City Outfall Basins #44 and #44A. These outfalls discharge immediately upstream of the Fremont bridge on the east side of the river. All but one of the properties are located in the vicinity of River and Loring Streets between the bridge and Albina Ave. The other property is an operating substation located west of NE Rodney Ave, between NE Russell and NE Knott Streets. Operating PacifiCorp substations remain on Blocks 71, 81, and 82, while remaining blocks have been redeveloped and are no longer owned or used by PacifiCorp.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [Oct. 2010] This site includes a number of tax lots that PacifiCorp currently or formerly owned/leased within City of Portland Outfall Basin #44 and #44A just upstream of the Fremont Bridge. Blocks 71, 81, and 82 contain an active PacifiCorp substation. Blocks 69, 78, 79, 80, and 83 were formerly owned/used by PacifiCorp and have since been sold and redeveloped. Block 83 is known as the Former Tucker Building site (ECSI# 3036) and owned by the City of Portland. The elevated levels of PCBs in adjacent (RM 11E) Willamette River sediments prompted a DEQ source-control (SC) evaluation to determine whether these properties could be PCB sources. Pacificorp signed a source control agreement and was asked to submit a Preliminary Assessment (PA) of all of the Albina properties. Preliminary PAs for the Albina Area and Knott St. properties were submitted in March 2009, and revised reports in November 2009, based on DEQ comments. Subsequent soil sampling adjacent to the 69kV, 11kV, and 115kV operating substation sites revealed low-level PCB contamination. PacifiCorp prepared a SC work plan to address contamination; it was finalized in June 2010, with work completed in October 2010. A SC cleanup report is expected in late 2011. A separate analysis by PacifiCorp on potential PCB migration via preferential pathways (groundwater-to-surface water) is ongoing. DEQ will make a final decision on the previously submitted PAs after reviewing the two reports. (November 2012). Source control investigation, remediation, and upgrade work has been completed for the substation properties. Stormwater sampling completed by Portland BES in spring 2012 did not identify significant PCBs in stormwater downstream of the Albina Riverlots, while stormwater from the more distant Knott St. substation property discharges to outfall 44A and is being diverted to the east side CSO. (December 2012). DEQ approved the Knott St. Stormwater Source Control report on December 21, 2012. Knott St. is not considered a significant source control concern re the Willamette River. DEQ is currently reviewing the source control report for the Albina Substations, and expects to provide comments by the end of 2012. DEQ will follow with a source control determination for both sites. A source control decision for the PacifiCorp - Knott Street substation was completed on April 5, 2013. Albina Properties SCE has been delayed to due ongoing RM11E investigation work and is now scheduled for delivery to DEQ in September 2014. Revised Source Control Evaluation for the Albina Substation properties was submitted to DEQ in August 2014 has been approved. A source control decision has been completed by DEQ and will be fowarded to EPA and Portland Harbor stakeholders in November 2016 for their consideration. DEQ responded to EPA and Five Tribes comments on the source control document, along with revisions to the document, in July 2017. Both the tribes and EPA subsequently concurred with DEQ's assessment that upland sources are effectively controlled. PacifiCorp has developed

**PACIFICORP ALBINA RIVERLOTS (Continued)** **S109493957**

and will implement a Source Control Management Plan for the active Albina Substation properties (July 2017). Excepting the Tucker Property (ECSI# 3036) that comprises one block of the Albina Properties, DEQ has not issued NFA determinations. All are currently considered low priorities for further action at this time. (September 2018). Substation upgrades are planned for Block 81 (69 kV Yard) in 2018 and 2019. A draft Erosion, Sediment, and Pollutant Control Plan has been prepared, and will be revised and provided to DEQ. Early 2019 work is expected to include generation and management of soil which may contain PCBs. PacifiCorp will keep DEQ updated on site improvements.

NARR Comments: (8/23/95 SXF/SAS) There is no indication that significant spills have ever occurred at the site, nor that any kind of persistent toxic substances have ever been used at the site. The only hazardous substances that have been used at Master Chemical are sodium hydroxide (caustic), sodium hypochlorite solution (bleach), and chlorine gas (which dissipates). Therefore, no further action is required at this site.

NARR Comments: (11/27/13 DH) Attention to the RM11E area is based on the detection of elevated PCBs and other contaminants in river sediment; an Area of Potential Concern and Sediment Management Area have been identified for sediment in the area as part of Portland Harbor work. (01/12/2018) A RM11E Sediment Decision Unit is identified in the January 2017 Record of Decision issued by EPA. The primary COCs for the area, as indicated in Figure 29 of the ROD, are total PCBs and dioxin (PeCDD).

NARR Comments: (11/27/13 DJH) Investigation of in-water contamination and potential contribution from upland sources is being completed along the east bank of the Willamette River between approximately River Mile (RM) 10.9 and 11.6 for EPA by the so-called RM11E Group under a 2013 Settlement Agreement. An RI/FS work plan has been approved by EPA to better characterize the extent of contamination in the study area and

**RIVER MILE 11E STUDY AREA - PORTLAND HARBOR (Continued)** **S115330269**

prepare for early implementation under the Portland Harbor ROD. Proposed work includes collection and analysis of sediment and pore-water samples, riverbank sampling, and installation and monitoring of riverbank wells to assess potential impacts from upland sources. Work began in fall 2013 and will continued through 2014. EPA, DEQ and other parties are reviewing/overseeing site work. Work has been completed although a recontamination assessment is still outstanding. Multiple phases of work has been completed by RM11E Group participants, focusing on riverbank and in-water areas. Initial sampling results are presented in a Supplemental RI/FS Field Sampling and Data Report dated july 2014.

NARR Comments: Work is ongoing at the Portland Harbor/Willamette River River Mile 11 East (RM11E) area, under the direction of EPA Region 10, to support remedy selection and implementation in the area. Remedial action will be based on the january 2017 ROD issued for Portland Harbor by EPA. The RM11E area is an important area within the Harbor, being located at the most upstream end of the study area and containing high concentrations of contaminants, notably PCBs. It has been identified as an <quot>early action<quot> area by EPA. Important investigation work elements completed in the past few years under EPA have included: a) upland groundwater and riverbank investigation efforts; b) sediment investigation; c) porewater investigation; and d) remedy implementability analysis. In January 2018, an Administrative Steelement Agreement and Order on Conset for Supplemental RI/FS Work and Remedial Design, Amendment No. 1, was complete by EPA and the RM11E Group parties. In March 2018, a draft Basis of Design Report WP was submitted to EPA, and included DEQ review and comment. A revised document (BODR WP) was submitted to EPA. In May 2018, a Recontamination Assessment (upland and in-water) was submitted to EPA on behalf of the RM11E Group. The document is currently under review.

Decode for NarcdID: General Site Description
NARR Comments: Former Westinghouse facility currently owned by City of Portland Water Bureau. Prior to multiple cleanup actions, high levels of PCBs were detected associated with historical transformer work. Multiple investigation and cleanup activities under DEQ, including remediation of off-site contamination in City of Portland storm sewer system. As part of redevelopment, most contamination removed. Groundwater impacts modest. Site is currently capped by new buildings and related. Source control decision and conditional NFA issued by DEQ in 2019. Ongoing cap inspection and maintenance required.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Based on DEQ's request, the City of Portland has agreed to complete a source control evalution for the site to assess potential and future impacts to the Willamette River. This work will be completed in 2012. DEQ is also provide technical assistance/oversight for environmental investigation at the former Westinghouse site related to pending site redevelopment by the Water Bureau. In January 2012, DEQ reviewed and commented on a plan for additional soil sampling, and oversaw investigation and removal of a former transformer oil UST. A Removal/Remedial Action Plan for PCB cleanup was submitted to DEQ and EPA TSCA (Region 10) in April 2012. The plan discussed both removal of PCB soil hot spots, and subsequent capping of the site as part of site development. A revised RAP was subsequently approved by DEQ and EPA. In September 2012 DEQ received (and subsequently approved) a proposal by the City to complete source control work under the existing IGA and a submitted Scope of Work. The SOW outlined groundwater monitoring and additional action to complete a full

**WESTINGHOUSE (Continued)** **1001233571**

source control evaluation for the Westinghouse site. The approach and SOW were approved by DEQ. A draft CMMP for site action was submitted to DEQ in November 2012. DEQ provided comments, and a revised CMMP addressing DEQ and EPA comments dated February 2013 approved by DEQ. Hot spot removal completed in March 2013. (December 2013) PCB soil remediation work has been completed as part of site development work, and source control investigation is in progress. Four monitoring wells were installed on-site in late 2013, and will be monitored through 2014. Groundwater sampling was completed in 2014, with contamination detected in both on-site and upgradient (background) wells. A source control evaluation report was submitted to DEQ in 2015. DEQ commented on the work plan, and requested installation and sampling of additional wells to define the extent of site-related groundwater contamination. A work plan (Addendum #1) was approved in February 2016 and implemented. A Remedial Action Closure and Source Control Evaluation Report was submitted in January 2018, following extensive site cleanup and redevelopment, and approved by DEQ. DEQ recommended a source control decision and conditional NFA in January 2019. A conditional NFA was issued by DEQ on October 11, 2019.

| NARR Comments: | A fire broke out at an abandoned 1.8-acre warehouse at 1300 N River St. in Portland (the Site) on the evening of May 14, 2017. The warehouse, in a densely populated, mixed residential and commercial area, was constructed with asbestos containing materials (ACM). Airborne releases of ACM occurred during the fire and residual ACM remains at the Site in the fire s aftermath. The U.S. Environmental Protection Agency (EPA) and DEQ formed a unified command and conducted an emergency action in May/June 2017 to find, collect, and properly dispose of all wind-dispersed ACM in a three square mile area of downtown Portland. EPA is now conducting a time-critical removal of remaining ACM in the former building s debris pile. The warehouse, with a history of safety, structural, and other violations, was constructed about 30 feet above water level on the bank of the Willamette River. The structure extended over the river, supported by wooden pilings. From information provided to EPA, the warehouse was 30 to 40 feet tall, with a calculated interior volume of about 115,000 cu. yds. Based on the former building s size, age, and type of roofing material, industry experts estimated the debris pile size at about 20,000 cu. yds., all of which is considered extremely friable ACM. |

| NARR Comments: | Mr. Stan Herman, with a mailing address of 5609 NE 60th Ave., Vancouver, WA 98661, owns the former warehouse and land above the ordinary low water line for the Willamette River. In the aftermath of |

**RIVER STREET WAREHOUSE FIRE SITE (Continued)** **S114555078**

the fire, EPA determined that while he has been cooperative, Mr. Herman was unable to undertake the needed time critical work. EPA then proceeded with its time critical removal at the Site, intending to recover its expenses from the owner at a later date.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: After the fire, EPA bulk samples from the debris pile, analyzed by Polarized Light Microscopy, showed 16 layers of material, four containing chrysotile asbestos. These samples contained less asbestos (40%) than off-Site debris samples collected immediately after the fire (60% to 90%); this may be due to thermal degradation of chrysotile in the hottest part of the fire. If this is the case, higher percentages of asbestos may be present further into the debris pile where the fire burned cooler and for a shorter period. Furthermore, EPA collected samples from easily accessible on-site locations that may represent only about 20% of the total material/area. All Site debris is considered ACM, due to extreme friability in the burned roofing material and the fact that Site wastes are comingled. EPA initially used a temporary adhesive compound ( tackifier ) to mitigate additional releases of asbestos fibers, but a more permanent remedy was needed. As a result, in late September 2017, after obtaining Site access from the property owner, EPA began removing ACM from the decking of the former warehouse structure. However, inspections revealed major concerns about the stability of existing pilings and decking, which are degrading and threaten continued release of asbestos fibers. Although EPA had previously installed temporary metal pilings to support the working platform needed to safely remove remaining debris, EPA initiated construction of two trestles to enhance safety in completing the job. During trestle construction, EPA discovered that the decking contained another layer of asbestos. EPA advised DEQ that they could not remove it, because the cost to do so would exceed EPA s authorized removal funding (due largely to the additional cost of debris disposal), and go beyond what was permitted under the owner s Site access agreement. Through October 2017, EPA had removed about 30% of decking debris. In early November 2017, DEQ and EPA met to discuss options to complete ACM removal from the Site. EPA indicated that it could perform removal of the decking but lacked the funds to dispose of the removed ACM. EPA estimated disposal costs at approximately $400K - $500K.) DEQ suggested the possibility of using funds from the Orphan Site Account for ACM disposal costs. If DEQ Orphan funding is approved, completion of construction of the second trestle and subsequent debris removal could be expected by early January 2018. Once ACM debris is removed and disposed of, EPA intends to remove the trestles and temporary metal pilings, as well as demobilize all personnel and equipment. Prior to demobilization, the upland and riverbank were capped with 2 or more feet of clean rock for stability purposes. Following emergency response actions, sampling of the site bankline and beach (exposed land below the toe of the bankline during low water) were sampled by an EPA contractor. Numerous contaminants were detected at modest levels (see Webdocs for

**RIVER STREET WAREHOUSE FIRE SITE (Continued)** **S114555078**

results). EPA and DEQ have determined that the site upland and riverbank do not represent a signficant recontamination concern given the presence of cover materials.

NARR Comments: (8/1/95 KAM/SRS) The Industrial Battery building was constructed prior to 1970. The building was shared by Industrial Battery and Macro Manufacturing. The building was abandoned in 1981, when ODOT acquired a right-of-way across a portion of the property for an off-ramp from I-5 to Greeley Avenue. (The property owner would not allow the building to be torn down as part of the right-of-way acquisition, even though the right-of-way cut off access to the site). Multnomah County acquired the building in 1986 through foreclosure, and hired Pegasus Environmental Management Services (PEMS) to perform an Environmental Assessment on the property in 1989. Sampling by PEMS found hazardous levels of lead in soils at the site. The County held off investigating the site further, worried that any actions on its part might make them liable for the cleanup. Finally, in 1993, DEQ reached agreement with the County to investigate and clean up the site. DEQ would pay for the removal of contaminated materials, while Multnomah County would pay to have the building torn down and the site regraded.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located along the right-of-way for a freeway off-ramp. A steep, vegetated hillside is to the north of the site; Greeley Avenue and the Albina Rail Yards are to the southwest. The Willamette River is a quarter-mile southwest of the site. The nearest residence is 300 feet up the hill. Soils at the site are gravelly silts, grading to clayey silts at 2 feet bgs. The abandoned building was occupied by vagrants, who covered the walls with graffiti <quot>tags<quot> and spray-painted murals.

NARR Comments: (8/1/95 KAM/SRS) Resampling by DEQ's Site Response Section (SRS) found high levels of lead in a soil pile in front of the site (82,000 ppm total lead; 450 mg/l TCLP lead) and in a sump inside the building (130,000 ppm total lead; 240 mg/l TCLP lead). The soil pile was removed by Riedel in November 1993; 21 tons of contaminated concrete and soils from the sump were removed in May 1994. Multnomah County razed the building in the summer of 1994. (The north wall of the building doubled as a retaining wall for the hillside. This wall was left standing; the other concrete wall slabs were stacked up behind this wall. The concrete was covered with fill, graded and reseeded). SRS has determined that no further action is necessary at this site.

NARR Comments: [6/18/13 SAM/ICP] A Phase II evaluation of the property occured in March 2013. Three outdoor soil samples were collected near areas where rodenticide may have accumulated. Pesticides were below laboratory reporting limits for outdoor soil samples. Interior dust samples near former mixing and packaging areas were planned, but insufficient quantities of soil/dust were available on floors, overhead cabinets or exhaust fan. [7/24/13 SAM/ICP] An NFA determination is recommended for the Mammal Survey and Control Services site based on the following: Soils sampled on-site in 2013 did not find strychnine or warfarin concentrations above reporting limits and EPA Industrial soil screening values. A DEQ Inspection report during operation in 1984 indicated the site did not pose a threat to the public or environment. The site does not contain significant ecological habitat.

NARR Comments: No obvious sources related to current grain operations. Main historical source is ship-building operations in the northern portion of the site during occupancy by the Albina Engine Works. Elevated levels of PCBs have been detected in (Portland Harbor Superfund site) sediment adjacent to the site.

NARR Comments: At the request of DEQ, site owner/operator entered into an agreement to complete a Portland Harbor source control evaluation at the site. A Stormwater Assessment Workplan dated July 2011 was approved by DEQ,

**CARGILL INCORPORATED (Continued)** **S104044430**

and sampling of site catchbasins has been completed. A report is pending. DEQ also completed a bankline inspection in September 2011, which indicated that most of the site riverbank is well-armored. There is some exposed soil both above and below mean high water, in particular in the northern site. PCB sampling results from the riverbank (collected below ordinany high water) are generall below 100 ug/kg. Catchbasin sampling completed in 2011 identified elevated metals in catchbasin sediment. PCBs and pesticides were not detected. Based on this work, DEQ requested that stormwater sampling be completed under ongoing 1200Z monitoring. Monitoring results for outfalls 2 through 7 was performed in November 2012. PCBs, pesticides, and mercury were not detected; metals and PAHs in two samples were modestly elevated. DEQ will review the results of the next round of stormwater sampling and determine whether data is sufficient to complete a source control evaluation.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Source control evaluation in progress. Riverbank is generally armored and a low risk for erosion. Catchbasin sampling in 2011 identified elevated metals; no PCBs were detected. Followup stormwater sampling in progress. In November 2012 1200Z sampling, PCBs, pesticides, and mercury were not detected. Modestly elevated metals and PAHs (in two samples) were detected, but below Portland Harbor screening values. Storwmater monitoring continues, and a source control evalution is expected in mid-2013. Completion of source control work at the site was delayed pending the collection of additional data by the RM11E Group, including bankline and upland groundwater sampling. A Supplemental RI/FS Field Sampling and Data Report for the RM11E area, including Cargill, was completed in July 2014 and is currently under review. Based on data in the report, Cargill (Temco) submitted a source control evaluation report (dated July 2014) that is currently under review. August 2021. Source control decision issued by DEQ on August 13, 2021 and distributed to EPA and tribal representatives. Decision and accompanying DEQ letter issued August 23, 2021. A NFA determination has not been made by DEQ, but the upland site is considered a low priority for further action (occupational exposure or eco risk).

Created By: Not reported
Created Date: 12/17/2002
Updated By: MPUGH
Updated Date: 11/13/2019
Decode for NarcdID: Contamination
NARR Comments: MTPugh 11/13/19 Contaminated areas described below were addressed through building demolition and soil removal. (2/2/1998 SAM/VCP) A former manufacturer of industrial batteries that later functioned as a distributor of and collection facility for old industrial batteries. Old acid tanks and other manufacturing equipment were dismantled. DEQ's Northwest Region carried out a RCRA inspection in 1992, which noted potential contamination from past practices, including lead contamination of walls, floors, and other surfaces; soil contamination on the property and perhaps on adjacent properties; a surface area around a drywell that was stained yellow with dead and stressed grass; and a UST. The facility owner began excavating around the drywell in 1993, which had received sulfuric acid waste/rinsate from the inside of the building. Tests on the excavated soil indicated that it was a RCRA hazardous waste (TCLP lead > 5 mg/L).

Updated Date: 05/20/2021
Decode for NarcdID: Remedial Action
NARR Comments: 9/5/19 MTPugh Port City LLC completed a remedial action per a DEQ-approved remedial action plan. The remedial action was designed to remove residual lead and petroleum-impacted soil left in place from the former Wagstaff Battery Manufacturing Company, a former occupant of the site. It was conducted to satisfy DEQ requirements to

**WAGSTAFF BATTERY MANUFACTURING CO. (Continued)** **S103842233**

receive a No Further Action (NFA) and determination from DEQ and remove the existing Easement and Equitable Servitude (E&ES) from the property deed. Remedial actions included the demolition of former Buildings B and C , removal of the concrete floor slab, removal by excavation of areas of known contamination of contaminants of concern (COCs) above applicable DEQ risk-based concentrations (RBCs) from former sump discharge areas at Sumps 1 and 1A, Sump 2, the pocket soil area located in the north parking lot, and removal of undocumented fill material not suitable for structural fill and found to contain debris with high concentrations of lead. (2/2/1998 SAM/VCP) Once it was determined that the stockpiled soil was a hazardous waste, DEQ's RCRA Section began working with the owner/operator to ensure proper disposition of the soil. The stockpile consisted of about 130 yards, and the first attempt at on-site lead stabilization, conducted in the spring of 1995, failed. In October 1995, the owner/operator planned to conduct another treatment on the pile, and return the soil to the open excavation pit (former drywell) if tests were to show TCLP lead <5mg/L. This backfilling would require a <quot>landfill<quot> permit from DEQ's Solid Waste Section. On several occasions, the owner/operator declined participation in the Voluntary Cleanup Program. DEQ believes contaminated soil remains in the excavation pit, and there is little, if any, documentation on confirmation sampling. In addition, placement of the soil back in the hole, even after treatment, will create a low-concentration source area for lead. (6/27/05 TER/VCP) As part of site redevelopment, Port City Development Center completed investigation and soil cleanup activities with oversight by DEQ's Voluntary Cleanup Program. Port City Development Center removed lead-contaminated soil outside the building to concentrations protective of human health. The contaminated soil was trucked to a permitted landfill for disposal. Contamination under the building could not be removed without compromising the building foundation. Some contaminated soil remains in place, capped by the concrete floor of the building or by asphalt, which prevents migration of contaminated soil to adjacent properties or exposure to people working or living at the facility. An Environmental Notice and an Easement and Equitable Servitude (E&ES) are recorded with Multnomah County for the property. These documents state that the property owner cannot expose soil in the capped areas without DEQ approval, notification to workers, and appropriate management of any excavated contaminated soil. Conditions in the DEQ No Further Action determination for the site call for future compliance with the provisions of the Environment Notice and E&ES. A 61-unit affordable housing complex with landscaped resident courtyard and play area was completed in 2020.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: MTPugh 11/13/19 Based on the available information, Site conditions are protective of public health and the environment for future residential use. The Site requires no further action under the Oregon Environmental Cleanup Law, ORS 465.200 et seq. unless new or

**WAGSTAFF BATTERY MANUFACTURING CO. (Continued)** **S103842233**

previously undisclosed information becomes available, there are changes in Site development or land and water uses, or more contamination is discovered. DEQ further concludes that contamination that previously had warranted institutional and environmental controls has been addressed, such that the E&ES can be removed from the property deed. While the cleanup removed all known contamination that presented a potential risk to Site users, there is the potential for residual contamination to exist. Should contaminated soil be encountered during development it should be managed per the Contaminated Media Management Plan (CMMP) and all applicable local, County, State and Federal regulations. MTPugh 9/17/19 Port City LLC completed a cleanup of the former Wagstaff Battery Co. property located at 2140 N. Williamas Avenue (formerly identified as 2124 N. Williams) in Portland. The Oregon Department of Environmental Quality is preparing to certify that all actions required under a Consent Judgment with DEQ have been satisfactorily completed, and is proposing to issue a Certificate of Completion and a No Further Action determination. Interested parties may send comments to Mark Pugh at 700 NE Multnomah St., Suite 600, Portland, OR 97232 or pugh.mark@deq.state.or.us. Comments must be submitted by 5 p.m., Thursday, Oct. 31, 2019. Tax Lot 1000 under terms of a Prospective Purchaser Agreement with DEQ. DEQ is holding a public comment period in December 2018 to announce its proposal to issue a Certification of Completion and a No Further Action determination for that property. MTPugh 12/3/18 The Oregon Department of Environmental Quality invites comments on its proposed consent judgment amendment to a prospective purchaser agreement entered into with Port City LLC July 24, 2017 regarding real property located at 2124 N Williams Ave., Portland. The amendment is to accommodate additional time needed for acquiring the property. Comments are due by 5 p.m., January 4, 2019. RWA 2/19/2019 Oregon DEQ and BRIDGE Housing invited public comments on the Proposed Analysis of Brownfield Cleanup Alternatives (ABCA) to address contamination during site redevelopment. The public comment period closed on February 18, 2019 with no comments received.

| Site Comment: | The property owner cannot expose soil in specified areas without approval of DEQ, notification to workers of the potential presence of contamination, and management as hazardous or solid waste of any soil excavated for disposal. Excerpts of message from Tom Roick, DEQ, 2/19/13: <quot>[A] consultant contacted me by phone today. The property changed hands and the current owner apparently had little knowledge of the Easement and requirement to notify DEQ if soil was disturbed. They are sending soil samples to the lab from an area that has been excavated, and will contact us when the results come in. [This] could be an example where an IC (the Easement) by itself hasn t been enough to ensure long term controls are being maintained.<quot> |

The property changed hands and the current owner apparently had little knowledge of the Easement and requirement to notify DEQ if soil was disturbed. They are sending soil samples to the lab from an area that has been excavated, and will contact us when the results come in. [This] could be an example where an IC (the Easement) by itself hasn t been enough to ensure long term controls are being maintained.<quot> |

NARR Comments: In response to a complaint alleging improper disposal of waste solvents, it was determined that this source was an unregistered generator of hazardous waste. The DEQ inspector discovered that Williamson & Bleid was generally unaware of and not in compliance with applicable provisions of hazardous-waste management regulations. Wastes were present in unmarked and unlabeled 55-gal. drums, as well as in an undetermined number of 5-gal. pails.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Former auto repair facility operated on the southwest portion of the property. Also, 2 greenhouse buildings occupied the south-southeast portion of the property. 2 12,000-gallon USTs (gas and diesel) were decommissioned by removal prior to this becoming a cleanup site. No known release from the UST removal activities. As part of this cleanup, the former pump island area was investigated. From Phase II ESA, contaminants are mainly TPH.

NARR Comments: (7/19/95 JAK/SRS) The basement of the original building (90' X 100') is the main point of concern, as it was used as a storage area for a variety of chemicals and laboratory equipment. A fire in 1967 collapsed the concrete floor of the building and all the materials in the basement were buried under the debris. Most of the undamaged materials were reportedly salvaged. In 1969, the building was demolished, the debris bulldozed, and the area filled with soil and seeded with grass by a subsequent owner of the property. The property is currently a vacant lot. Nature and extent of contamination was evaluated during the site investigation 9/95 to 10/96.

NARR Comments: (7/3/97 JAK/SRP) DEQ's Site Response Program issued a Consent Order to Nurnberg Scientific Company and Deborah Parker, current property owner, on 11/2/94 requiring a site investigation and removal assessment. The investigation was conducted in two phases. The first phase was conducted July 1995 to October 1995 and included the installation of soil borings and a monitoring well, and collection/analysis of soil and groundwater samples. The second phase of the site investigation was conducted from February 1996 to February 1997 and included test pit explorations and the collection

**NURNBERG SCIENTIFIC CO. (Continued)** **S103841434**

and analysis of soil samples. No buried chemicals were found in the sampling locations during the site investigation. The analytical results of the soil samples were compared to the Numerical Soil Cleanup Levels. With the exception of arsenic and beryllium, none of the soil samples contained hazardous substances that exceeded the Numerical Soil Cleanup Levels. Arsenic and beryllium in some of the soil samples exceeded the Numerical Soil Cleanup Levels. However, the concentrations of arsenic and beryllium in the soils at the site are consistent with background levels found in soils throughout the Portland area. Results of the soil sampling indicate that soils at the site were not impacted by hazardous chemicals that were possibly present in the former building at the time of the fire. Groundwater was encountered at the site at 163 feet below ground surface. The analytical results of the groundwater samples were compared to the federal drinking water standards or maximum contaminant levels (MCLs). Perchloroethylene (PCE) was detected in groundwater at a concentration of 22 micrograms per liter (mg/L), which exceeded the MCL of 5 mg/L. However, groundwater at the site is not currently used as a drinking water source, so there is no present threat to human health. Due to the depth of groundwater and the absence of PCE in the soils at the site, the PCE in groundwater at the site is believed to originate from a source other than Nurnberg Scientific Company operations. Based upon the results of the site investigations, DEQ has determined that no further investigations or remedial actions are required at this site. No further action is required at this site under the Oregon Environmental Cleanup Law, ORS 465.200 et seq., unless additional information becomes available in the future that warrants further investigation and/or remedial action.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal NPL (Superfund) sites***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

***Lists of state and tribal landfills and solid waste disposal facilities***

SWF/LF: Solid Waste Facilities List

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

***Other Ascertainable Records***

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Data Release Frequency: No Update Planned

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

| Elevation: | 74 ft. above sea level |

**USGS TOPOGRAPHIC MAP**

| | |
|---|---|
| Target Property Map: | 14878142 PORTLAND, OR |
| Version Date: | 2020 |

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

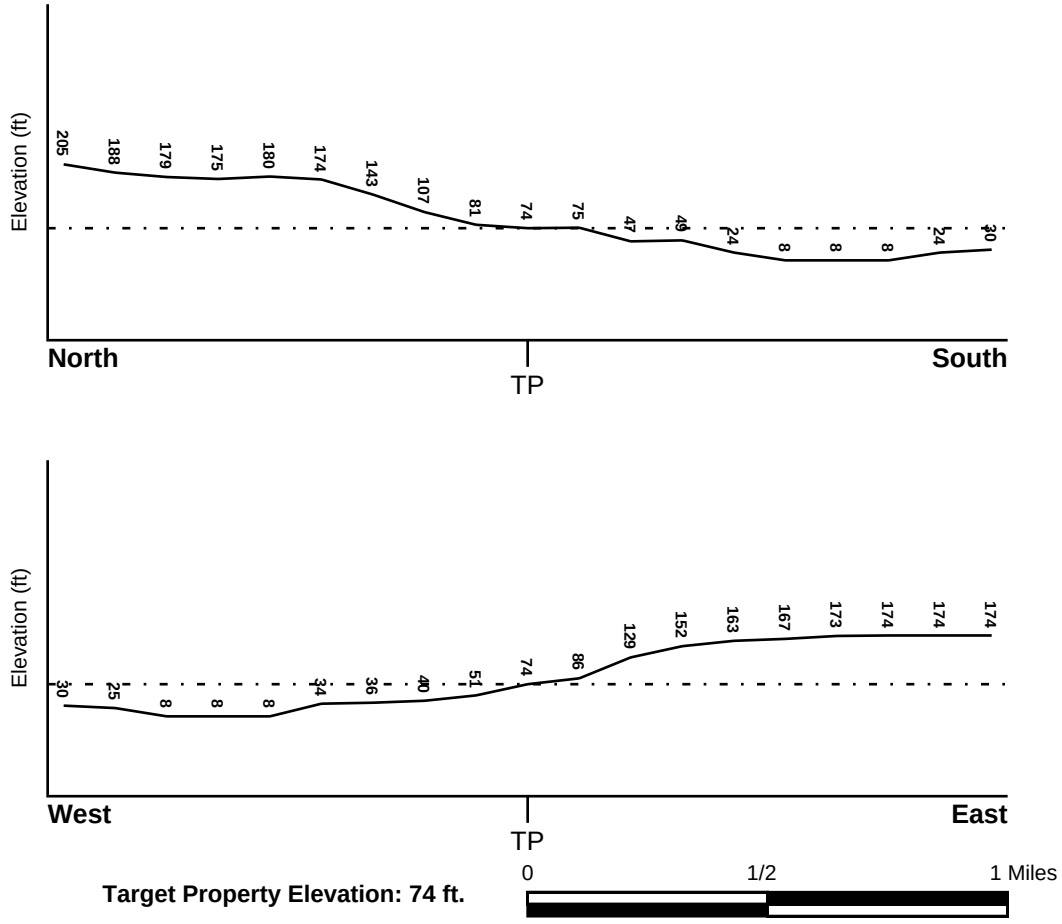

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General SW

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

**Target Property Elevation: 74 ft.**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**FEMA FLOOD ZONE**

| Flood Plain Panel at Target Property | FEMA Source Type |
|---|---|
| 4101830091E | FEMA FIRM Flood data |

| Additional Panels in search area: | FEMA Source Type |
|---|---|
| 4101830087E | FEMA FIRM Flood data |
| 4101830035D | FEMA Q3 Flood data |
| 4101830093E | FEMA FIRM Flood data |

**NATIONAL WETLAND INVENTORY**

| NWI Quad at Target Property | NWI Electronic Data Coverage |
|---|---|
| PORTLAND | YES - refer to the Overview Map and Detail Map |

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| MAP ID | LOCATION FROM TP | GENERAL DIRECTION GROUNDWATER FLOW |
|---|---|---|
| Not Reported | | |

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**ROCK STRATIGRAPHIC UNIT**

Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data
Source: Oregon Geospatial Enterprise Office
Telephone: 503-378-2166

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# EXECUTIVE SUMMARY

## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1924 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

## RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

- Embezzlement (0)
- Extortion/Blackmail (0)
- Fraud Offenses (1)
- Larceny Offenses (10)
- Motor Vehicle Theft (8)
- Robbery (0)
- Stolen Property Offenses (0)
- Vandalism (3)

- Animal Cruelty Offenses (0)
- Drug/Narcotic Offenses (0)
- Gambling Offenses (0)
- Pornography/Obscene Material (0)
- Prostitution Offenses (0)
- Weapon Law Violations (0)

Data Range: 07/10/2021 - 07/09/2022

Reported crime counts are aggregated across hexagonal 1/8 mile grid sections of the city, and do not represent the number of reported crimes on a specific tax lot. Points on the map are generalized to the midblock point and may represent the location of multiple reported crimes. The locations of certain crimes are not shown on the map due to privacy concerns, but are included in counts and averages.

The records depicted give a general picture of crime events in the surrounding area and are not official crime statistics. Some information displayed is currently under review and may change subject to record finalization. For greater detail about each record, visit Portland Police Bureau's Open Data Portal and download offense data directly from the Crime Statistics Dashboard.

These permits were generated by the Fire Bureau from 1936-1990 to inspect the installation and renovation of above ground and underground residential storage tanks

There are many areas that are within the City limits today, but were outside the city limits when the tank work was performed. We do not have any permits for those addresses (east of 92nd Avenue, south of SE Foster Rd, north of Columbia Blvd, Maywood Park, Rose City)

Even though permits were required by the Fire Bureau, we might not have one for a particular address because it was lost or the owner never filed one. We always recommend having a tank locate performed in addition to searching this database. You can access a list of ODEQ-licensed tank companies at www.deq.state.or.us . Click on "Programs", then "Heating Oil Tanks."

The permits are for installation and/or renovation, NOT decommissioning/removal. The City has never required permits to decommission/remove a tank on private property. If your tank is in the street/sidewalk, then it's in the Right-of-Way, and you would need a street/sidewalk opening permit from PDOT. If the tank has leaked, and it was reported to ODEQ, then they will have a file on it at the website listed above.

Still have questions? Contact the Oregon DEQ at 503-229-5263

### Public Safety

**Crime Statistics**

To display crime data on the map click the crime category (person, property, or society) within the circle below

Data Range: 07/10/2021 - 07/09/2022

Reported crime counts are aggregated across hexagonal 1/8 mile grid sections of the city, and do not represent the number of reported crimes on a specific tax lot. Points on the map are generalized to the midblock point and may represent the location of multiple reported crimes. The locations of certain crimes are not shown on the map due to privacy concerns, but are included in counts and averages.

The records depicted give a general picture of crime events in the surrounding area and are not official crime statistics. Some information displayed is currently under review and may change subject to record finalization. For greater detail about each record, visit Portland Police Bureau's Open Data Portal and download offense data directly from the Crime Statistics Dashboard.

These permits were generated by the Fire Bureau from 1936-1990 to inspect the installation and renovation of above ground and underground residential storage tanks

There are many areas that are within the City limits today, but were outside the city limits when the tank work was performed. We do not have any permits for those addresses (east of 92nd Avenue, south of SE Foster Rd, north of Columbia Blvd, Maywood Park, Rose City)

Even though permits were required by the Fire Bureau, we might not have one for a particular address because it was lost or the owner never filed one. We always recommend having a tank locate performed in addition to searching this database. You can access a list of ODEQ-licensed tank companies at www.deq.state.or.us . Click on "Programs", then "Heating Oil Tanks."

The permits are for installation and/or renovation, NOT decommissioning/removal. The City has never required permits to decommission/remove a tank on private property. If your tank is in the street/sidewalk, then it's in the Right-of-Way, and you would need a street/sidewalk opening permit from PDOT. If the tank has leaked, and it was reported to ODEQ, then they will have a file on it at the website listed above.

Still have questions? Contact the Oregon DEQ at 503-229-5263

- Prostitution Offenses (0)
- Weapon Law Violations (0)

Data Range: 07/10/2021 - 07/09/2022

Reported crime counts are aggregated across hexagonal 1/8 mile grid sections of the city, and do not represent the number of reported crimes on a specific tax lot. Points on the map are generalized to the midblock point and may represent the location of multiple reported crimes. The locations of certain crimes are not shown on the map due to privacy concerns, but are included in counts and averages.

The records depicted give a general picture of crime events in the surrounding area and are not official crime statistics. Some information displayed is currently under review and may change subject to record finalization. For greater detail about each record, visit Portland Police Bureau's Open Data Portal and download offense data directly from the Crime Statistics Dashboard.

These permits were generated by the Fire Bureau from 1936-1990 to inspect the installation and renovation of above ground and underground residential storage tanks

There are many areas that are within the City limits today, but were outside the city limits when the tank work was performed. We do not have any permits for those addresses (east of 92nd Avenue, south of SE Foster Rd, north of Columbia Blvd, Maywood Park, Rose City)

Even though permits were required by the Fire Bureau, we might not have one for a particular address because it was lost or the owner never filed one. We always recommend having a tank locate performed in addition to searching this database. You can access a list of ODEQ-licensed tank companies at www.deq.state.or.us . Click on "Programs", then "Heating Oil Tanks."

The permits are for installation and/or renovation, NOT decommissioning/removal. The City has never required permits to decommission/remove a tank on private property. If your tank is in the street/sidewalk, then it's in the Right-of-Way, and you would need a street/sidewalk opening permit from PDOT. If the tank has leaked, and it was reported to ODEQ, then they will have a file on it at the website listed above.

Still have questions? Contact the Oregon DEQ at 503-229-5263

Data Range: 07/10/2021 - 07/09/2022

Reported crime counts are aggregated across hexagonal 1/8 mile grid sections of the city, and do not represent the number of reported crimes on a specific tax lot. Points on the map are generalized to the midblock point and may represent the location of multiple reported crimes. The locations of certain crimes are not shown on the map due to privacy concerns, but are included in counts and averages.

The records depicted give a general picture of crime events in the surrounding area and are not official crime statistics. Some information displayed is currently under review and may change subject to record finalization. For greater detail about each record, visit Portland Police Bureau's Open Data Portal and download offense data directly from the Crime Statistics Dashboard.

### Public Safety

**Crime Statistics**

To display crime data on the map click the crime category (person, property, or society) within the circle below

Data Range: 07/10/2021 - 07/09/2022

Reported crime counts are aggregated across hexagonal 1/8 mile grid sections of the city, and do not represent the number of reported crimes on a specific tax lot. Points on the map are generalized to the midblock point and may represent the location of multiple reported crimes. The locations of certain crimes are not shown on the map due to privacy concerns, but are included in counts and averages.

The records depicted give a general picture of crime events in the surrounding area and are not official crime statistics. Some information displayed is currently under review and may change subject to record finalization. For greater detail about each record, visit Portland Police Bureau's Open Data Portal and download offense data directly from the Crime Statistics Dashboard.

These permits were generated by the Fire Bureau from 1936-1990 to inspect the installation and renovation of above ground and underground residential storage tanks

There are many areas that are within the City limits today, but were outside the city limits when the tank work was performed. We do not have any permits for those addresses (east of 92nd Avenue, south of SE Foster Rd, north of Columbia Blvd, Maywood Park, Rose City)

Even though permits were required by the Fire Bureau, we might not have one for a particular address because it was lost or the owner never filed one. We always recommend having a tank locate performed in addition to searching this database. You can access a list of ODEQ-licensed tank companies at www.deq.state.or.us . Click on "Programs", then "Heating Oil Tanks."

The permits are for installation and/or renovation, NOT decommissioning/removal. The City has never required permits to decommission/remove a tank on private property. If your tank is in the street/sidewalk, then it's in the Right-of-Way, and you would need a street/sidewalk opening permit from PDOT. If the tank has leaked, and it was reported to ODEQ, then they will have a file on it at the website listed above.

Still have questions? Contact the Oregon DEQ at 503-229-5263

### Public Safety

**Crime Statistics**

To display crime data on the map click the crime category (person, property, or society) within the circle below

Data Range: 07/10/2021 - 07/09/2022

Reported crime counts are aggregated across hexagonal 1/8 mile grid sections of the city, and do not represent the number of reported crimes on a specific tax lot. Points on the map are generalized to the midblock point and may represent the location of multiple reported crimes. The locations of certain crimes are not shown on the map due to privacy concerns, but are included in counts and averages.

The records depicted give a general picture of crime events in the surrounding area and are not official crime statistics. Some information displayed is currently under review and may change subject to record finalization. For greater detail about each record, visit Portland Police Bureau's Open Data Portal and download offense data directly from the Crime Statistics Dashboard.

- Fraud Offenses (1)
- Larceny Offenses (10)
- Motor Vehicle Theft (8)
- Robbery (0)
- Stolen Property Offenses (0)
- Vandalism (3)

- Animal Cruelty Offenses (0)
- Drug/Narcotic Offenses (0)
- Gambling Offenses (0)
- Pornography/Obscene Material (0)
- Prostitution Offenses (0)
- Weapon Law Violations (0)

Data Range: 07/10/2021 - 07/09/2022

Reported crime counts are aggregated across hexagonal 1/8 mile grid sections of the city, and do not represent the number of reported crimes on a specific tax lot. Points on the map are generalized to the midblock point and may represent the location of multiple reported crimes. The locations of certain crimes are not shown on the map due to privacy concerns, but are included in counts and averages.

The records depicted give a general picture of crime events in the surrounding area and are not official crime statistics. Some information displayed is currently under review and may change subject to record finalization. For greater detail about each record, visit Portland Police Bureau's Open Data Portal and download offense data directly from the Crime Statistics Dashboard.
