EXECUTIVE SUMMARY

Point Source Solutions LLC (Point Source) was retained by Corvallis Housing First to perform a Phase I Environmental Site Assessment on the Residential Property addressed as 1480 SW 3rd Street, Corvallis, Oregon ("*subject property*").

The Phase I Environmental Site Assessment is designed to provide Corvallis Housing First with an assessment concerning environmental conditions limited to those issues identified in the report as they exist at the *subject property*. This assessment was conducted utilizing generally accepted ESA industry standards in accordance with ASTM Practice E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

The *subject property* is located on the west side of SW 3rd Street, approximately 120 feet south of SW Avery Avenue. The east portion of the *subject property* is developed with an approximately 1,680 square-foot office/residence, an approximately 660 square-foot storage building (former detached garage), and two single story motel buildings (2,436 and 4,536 square-feet). The south motel building was developed in 1940, the office/residence was built in 1953, and the north motel building was built in 1979. The west portion of the *subject property* is covered with grass. The *subject property* is identified by Benton County as tax lot 12502CC01100 totaling 1.33 acres. The *subject property* is zoned Mixed Use Community Shopping (MUCS) by the City of Corvallis.

The *subject property* is currently unoccupied, however, was formerly occupied by a motel.

The *subject property* is identified on a site location map, site plan and topographic map, all of which are located in the Figures section of the Appendices of this report.

Conor McGeehan of Point Source conducted the site investigation on May 15, 2025. No evidence of a potential recognized environmental condition as defined in ASTM Practice E1527-21 was identified at the time of the site reconnaissance.

Point Source's review of reasonably attainable documentation for the *subject property* includes Benton County/City of Corvallis records (earliest 1940), aerial photographs (earliest 1936), Sanborn Maps (no coverage), historic city directories (1955), topographic maps (earliest 1970) and interviews/prior reports. The following briefly summarizes the developmental history of the *subject property*.

YEAR	SOURCE	SUBJECT PROPERTY USE
1936	Aerial Photographs	The *subject property* appears as structurally undeveloped agricultural land. It appears to be part of a farm that includes what are now the north and south adjoining properties.
1940	County Records	Assessor records identify 1940 as the date of construction of the south motel building.
1948	Aerial Photographs	The current south motel structure is now present on the *subject property*. An additional similar structure is apparent to the north of this structure.
1953	County Records	Assessor records identify 1953 as the date of construction of the office/residence.
1955	City Directories	*Subject property* occupancy is listed as Orchard Auto Court and residential.
1955	Aerial Photographs	The current south motel building and the current office/residence are visible on the *subject property*.
1959	City Directories	*Subject property* occupancy is listed as Orchard Auto Court and residential.
1963	City Directories	*Subject property* occupancy is listed as Orchard Auto Court and residential.

YEAR	SOURCE	SUBJECT PROPERTY USE
1967	Aerial Photographs	The current south motel building and the current office/residence are visible on the *subject property*.
1968	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1973	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1978	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1979	County Records	Assessor records identify 1979 as the date of construction of the north motel building.
1982	Aerial Photographs	The *subject property* is developed with the current improvements.
1983	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1988	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1992	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1994	Aerial Photographs	The *subject property* is developed with the current improvements.
1995	City Directories	*Subject property* occupancy is listed as Corvallis Budget Motel RV.
2000	City Directories	*Subject property* occupancy is listed as Budget Inn Motel Corvallis.
2000	Aerial Photographs	The *subject property* is developed with the current improvements.
2005	City Directories	*Subject property* occupancy is listed as Corvallis Budget Inn, Motel 6 Corvallis.
2009	Aerial Photographs	The *subject property* is developed with the current improvements.
2010	City Directories	*Subject property* occupancy is listed as Budget Inn Corvallis.
2014	City Directories	*Subject property* occupancy is listed as Budget Inn Corvallis.
2016	Aerial Photographs	The *subject property* is developed with the current improvements.
2017	City Directories	*Subject property* occupancy is listed as Budget Inn.
2020	Aerial Photograph	The *subject property* is developed with the current improvements.
2025	Site Reconnaissance	The *subject property* is occupied by a former Motel.

The *subject property* is listed on the regulatory database report prepared by Environmental Data Resources, Inc. (EDR).

The *subject property* is listed as LUST Facility 02-21-0155 by the ODEQ for a release of heating oil to the subsurface discovered during decommissioning by removal of an underground heating oil tank. On February 16, 2021, Bill Goff Construction removed a 590-gallon heating oil tank. The tank was completely full of water and was pumped out, cleaned, and soil was sampled per ODEQ heating oil tank (HOT) program requirements. Two samples were collected from beneath the tank. Diesel range organics were detected in soils at a concentration of 1,100 ppm via NWTPH-Dx. The tank was recycled at Cherry City Metals of Salem, Oregon. Approximately 6.75 tons of petroleum impacted soil (PCS) was removed and disposed of at Coffin Butte Landfill. Confirmatory samples collected after excavation were non-detect, demonstrating successful removal of PCS. The excavation was then backfilled with compacted sand overlain with imported soil. On April 14, 2021, ODEQ issued a letter acknowledging receipt of certification of the decommissioning and cleanup from Bill Goff Construction.

Based on the regulatory status, and documentation of successful PCS removal, this listing does not appear to represent a risk of significant remaining adverse impact to the *subject property*.

Based on the database report, no up-gradient sites were identified as a potential concern for the *subject property*.

Conclusions

Point Source has performed a Phase I Environmental Site Assessment on the 1.33-Acre Residential Property addressed as 1480 SW 3rd Street, Corvallis, Oregon in general conformance with the scope and limitations of ASTM Practice E1527-21. Any exceptions to or deletions from this practice are described in the body of this report.

A *recognized environmental condition (REC)* refers to the (1) the presence of hazardous substances or petroleum products in, on or at the *subject property* due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the *subject property* due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the *subject property* under conditions that pose a material threat of a future release to the environment.

- **Review of historical aerial photographs revealed that the *subject property* and surrounding area was in agricultural use from sometime before 1936 until sometime before 1948. The Oregon Department of Environmental Quality (ODEQ) has published guidance for evaluating residual pesticide impact on agricultural properties that are to be redeveloped for residential use. Based on a Phase II Environmental Investigation performed by Point Source in April 2025, this REC has been adequately addressed. Details of the April Phase II investigation are presented in section 7.7.**

A *controlled recognized environmental condition (CREC)* refers to a REC affecting the *subject property* that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls.

- **No evidence of controlled recognized environmental conditions was disclosed during the course of this assessment.**

An *historical recognized environmental condition (HREC)* refers to *a* previous release of hazardous substances or petroleum products affecting the *subject property* that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities, without subjecting the *subject property* to any required controls.

- **Bill Goff Construction removed a 590-gallon heating oil tank from the *subject property* in February 2021. In accordance with ODEQ heating oil tank (HOT) program requirements. Two samples were collected from beneath the tank. Diesel range organics were detected in soils at a concentration of 1,100 ppm via NWTPH-Dx. The tank was recycled at Cherry City Metals of Salem, Oregon. Approximately 6.75 tons of petroleum impacted soil (PCS) was removed and disposed of at Coffin Butte Landfill. Confirmatory samples collected after excavation were non-detect, demonstrating successful removal of PCS. The excavation was then backfilled with compacted sand overlain with imported soil. On April 14, 2021, ODEQ issued a letter acknowledging receipt of certification of the decommissioning and cleanup from Bill Goff Construction.**

A *business environmental risk* refers to a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice.

- **No business environmental risks were disclosed a result of this assessment.**

Please refer to Appendix D of this report for copies of previously performed environmental investigations for the *subject property*.

Recommendations

Based on the findings of this assessment, no further assessment is recommended.

The following table summarizes the findings of the significant elements of this investigation:

ASSESSMENT COMPONENT	ACCEPTABLE	ROUTINE SOLUTION	PHASE II	ESTIMATED COST	REFERENCE SECTION
Historical Review	X				4.1
On-site Operations	X				3.2/3.3/3.4
Hazardous Materials	X				3.4.1
Waste Generation	X				3.4.3
PCBs	X				3.4.5
Storage Tanks	X				3.4.8
Surface Areas	X				3.2
Regulatory Database	X				6.1
Adjoining Properties	X				2.5/4.2
Other	X				NA

1.0 INTRODUCTION

1.1 General Information

At the request of Corvallis Housing First, Point Source performed a Phase I Environmental Site Assessment of the Residential Property addressed as 1480 SW 3rd Street, Corvallis, Oregon.

Conor McGeehan of Point Source conducted the site visit on May 15, 2025. Point Source was unescorted at the time of the site visit. Ms. Adrea Myhre of Corvallis Housing First (*subject property* owner representative) was identified as the Key Site Manager for the *subject property*. The Key Site Manager is defined by the ASTM Standards as a person with good knowledge of the uses of the *subject property*.

1.2 Scope of Work

The purpose of this assessment was to investigate and assess possible environmental risks associated with the *subject property*. The assessment includes inquiries into past uses of the *subject property* (and to a lesser degree, past uses of adjoining properties), assessing current uses of the *subject property* and surrounding properties, searching for indications of contamination or threatened releases of contamination (including an evaluation of releases and potential releases relative to soil, groundwater, surface water, and vapor migration pathways), searching applicable federal and state environmental records, and evaluating other available information relating to potential environmental liabilities as delineated by the scope of work.

This assessment is designed to provide a basis for an informed decision-making process relative to environmental risks and liabilities associated with the *subject property*.

The specific scope of work included the following:

Environmental Database Records Review - Reasonably ascertainable environmental databases were reviewed to determine whether the *subject property* or any neighboring properties were suspected of having or known to have environmental concerns likely to adversely impact the *subject property*. Groundwater and soil vapor migration pathways were given special consideration in evaluating the potential risk posed by nearby properties identified in the various databases. The databases reviewed and the radii chosen are based on the ASTM standard. It is important to note the scope of this investigation is limited to a visual inspection to identify areas of potential concern to the *subject property* and a review of readily accessible government databases. The inspection does not include a regulatory compliance audit of the facility. There are detailed regulations concerning the proper use, storage and disposal of hazardous and regulated material. These regulations include, but are not limited to, permitting, paper keeping and manifesting requirements, as well as community and employee right-to-know laws. It is typically the responsibility of the tenant(s) to maintain their space(s) in compliance with such regulations.

Prior Use History Review - Attempts were made to identify the prior usage of the *subject property* back to the *subject property*'s first developed use, using as many sources that were both reasonably ascertainable and likely to be useful. Record information that is reasonably ascertainable means information that is publicly available, information that is obtainable from its source within reasonable time and cost constraints, and information that is practically reviewable Standard historical sources include any or all of the following: aerial photographs, historical maps, tax information, land title records, topographic maps, local street directories, building department records, zoning/land use records, prior reports and interviews with local agencies.

Property/Site Reconnaissance - A reconnaissance of the *subject property*, consisting of a visual inspection of the *subject property* and neighboring properties as observable from the *subject property*, was conducted to identify Recognized Environmental Conditions (RECs) associated with the *subject property*, to the extent not obstructed by bodies of water, adjacent buildings or other obstacles. Observations were conducted at the *subject property* for potential RECs as well as, and including, the presence of roadways and structures, potable water supply and sewage disposal, current use of the *subject property* and adjoining properties, hazardous substances and petroleum products, storage tanks, odors, pools of liquid, drums, unidentified substance containers, PCBs, stains or corrosion, drains and sumps, pits, ponds and lagoons, stained soil or pavement, stressed vegetation, solid waste, waste water, water wells, dry wells and septic systems.

Environmental Setting - Efforts were made to determine the environmental setting of the *subject property* with respect to topography, surface water bodies, soil type, depth to groundwater and direction of groundwater flow.

UST and AST Search - Attempts were made to identify any above-ground storage tanks (ASTs) containing hazardous or regulated materials, and to identify visual indications of underground storage tanks (USTs), such as fill and vent pipes. In addition to the visual inspection, state databases of facilities with registered USTs were reviewed, and the *subject property* contact and local regulatory officials were interviewed regarding any knowledge of ASTs or USTs.

Interviews - Efforts were made to contact and interview both the *subject property* owner's representative and occupants. Point Source requested that a person with good knowledge of the uses and physical characteristics of the *subject property* be identified, such as the *subject property* manager or head maintenance person. In addition, Point Source provided the owner or owner's representative, or both, with a pre-survey questionnaire as to any information relative to past or current potential RECs at the *subject property*. Attempts were made to interview representative major occupants and/or tenants.

If readily available, Point Source reviewed the following documents and information that may be in the possession of or provided by the owner, owner's representative, and/or user: previous ESA reports, environmental audit reports, environmental permits, registrations for storage tanks, material safety data sheets, community right to know plan, safety and spill prevention plans, reports regarding hydrogeologic conditions, notices or other governmental correspondence for any past or current violations of environmental law, hazardous waste site generator notices or reports, geotechnical studies, knowledge of any pending, threatened or past litigation or administrative proceedings relevant to hazardous substances or petroleum products.

Efforts were made to contact and interview local agency officials at the local fire department, local or regional state health agency, local or regional state agency with jurisdiction over hazardous waste disposal as to any information relative to past or current potential RECs at the *subject property*.

1.3 Limitations

Although we have no reason to believe that the information provided to us by others, and subsequently included in the report, is inaccurate, we cannot be held responsible for inaccuracies that may have been reported to us.

Point Source recognizes that there may be various options for dealing with the potential Recognized Environmental Conditions identified. The options provided are not necessarily the only acceptable alternatives for dealing with a particular concern. Point Source provides these options as guidance for further action.

1.4 Data Gaps

The objective of the assessment is to gather the information required to satisfy the purpose of the assessment, rather than completion of specific tasks. Data gaps occur when the information required by the practice cannot be obtained despite good faith efforts. The practice requires consultants to comment on the impact of significant data gaps on their ability to identify recognized environmental conditions.

A significant data gap is a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

- Information concerning historical use of the *subject property* prior to 1936 was unavailable. Based upon the development pattern of the *subject property* depicted on aerial photographs, this data gap is not considered significant.
- Information concerning historical use of the *subject property* was unavailable in various 5-year intervals from 1936 through 1948. Based upon the development pattern of the *subject property* noted in various historical sources, this data gap is not considered significant.

1.5 Reason for Performing Phase I ESA

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-21) in connection with the *subject property*. This ESA was also performed to permit the *User* to satisfy one of the requirements to qualify for the *innocent landowner*, *contiguous property owner*, or *bona fide prospective purchaser* limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E-1527-21 constitutes "*all appropriate inquiry"* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

Point Source understands that the findings of this study will be used by Corvallis Housing First to evaluate a pending financial transaction in connection with the *subject property*.

1.6 Reliance

This Phase I Environmental Site Assessment is intended for the exclusive use of Corvallis Housing First or entities specified by Corvallis Housing First. This report and findings contained herein shall not, in whole or in part, be disseminated or conveyed to any other party, nor relied upon by any other party, in whole or in part without prior written consent of Point Source.

2.0 SITE DESCRIPTION

2.1 General

The Property is identified by Benton County as tax lot 12502CC01100 totaling 1.33 acres. The *subject property* is zoned Mixed Use Community Shopping (MUCS) by the City of Corvallis.

2.2 Soils, Geology and Groundwater Characteristics

The *subject property* is situated in the Willamette Valley (Orr, Orr, Baldwin, 1992). Sediments collected in this area record multiple Ice Age floods that originated in Montana, poured through the Cascades via the Columbia River, and backed up in the valley before eventually draining to the Pacific Ocean.

According to the USDA Soil Conservation Service Soil Survey of Benton County (NRCS Web Soil Survey), the *subject property* is mapped predominantly as Courtney Coburg Silty Clay Loam. The Coburg component is found in valleys and flood plains. The parent material consists of loamy and clayey alluvium. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. This soil is rarely flooded. It is not ponded. This soil does not meet hydric criteria.

According to a well log search conducted on the Oregon Water Resources Department (OWRD) website, groundwater has not been encountered in borings and wells advanced in the vicinity (same township, range, section, and quarter/quarter) of the *subject property* to depths of 10-23 feet below ground surface. Domestic water is supplied to the *subject property* by the City of Corvallis and is reportedly obtained primarily from surface water.

Irrigation well Bent 54215 was installed at the *subject property* in April of 2011. This well was tested as part of a Phase II Environmental Investigation (conducted in March of 2025) that resulted from the findings of Point Source Phase I that was completed in January of 2021. Static readings collected during the March 2025 subsurface investigation were measured at 13.85 feet bgs.

The United States Geological Survey (USGS) Corvallis, Oregon Quadrangle 7.5-minute series topographic map was reviewed for this ESA. This map was published by the USGS in 1986. According to the contour lines on the topographic map, the *subject property* elevation is approximately 220 feet above mean sea level. The contour lines in the area of the *subject property* indicate groundwater flow in the *subject property* vicinity is likely toward the confluence of the Mary's River and the Willamette River, located approximately 1,800 feet north-northeast of the *subject property* at its closest point. A local Mill Race is located approximately 300 feet southeast of the *subject property* at its closest point.

Structural development is depicted on the *subject property*. No production wells or other significant surface features are depicted on the *subject property* on the USGS map.

A copy of a portion of the USGS map is included in the Appendices.

The USEPA Ground Water Handbook, Vol.1 Ground Water and Contamination, September 1990, indicates that the water table typically conforms to surface topography. This means the direction of flow for shallow groundwater is generally from higher elevations to lower elevations. Localized flow direction may vary as a result of tide, rainfall, development, geologic characteristics, nearby surface water bodies, underground utilities such as storm drains, septic systems and sewers, or other influences such as the presence of high-volume wells.

2.3 Improvements

The east portion of the *subject property* is developed with an approximately 1,680 square-foot office/residence built in 1953, an approximately 660 square-foot storage building (former detached garage), and two single story motel buildings. The north building contains 2,436 square-feet and was built in 1979. The south building contains 4,536 square-feet and was built in 1940.

The office/residence is wood framed on a concrete block perimeter foundation with a metal roof. It is heated by a natural gas forced air furnace. The storage building is wood framed on a concrete slab foundation with a composition shingle roof. This structure is currently unheated and is reported to have previously contained a wood-burning stove. The north motel building is wood framed on a concrete perimeter foundation with a composition shingle roof. The south motel building is wood framed on a concrete perimeter foundation with a metal roof. Climate control for the motel buildings is provided by individual electric units, and domestic hot water is provided by a natural gas boiler. Finishing materials include spray applied soft ceiling texture (north motel building only), drywall, carpet and ceramic tile flooring. A former pole building, storage shed, and two attached lean-to structures were recently present at the southwest corner of the *subject property*. These structures had been demolished at the time of the site reconnaissance.

Municipal water and sewer are provided to the *subject property* vicinity by the City of Corvallis.

2.4 Current Uses of the Subject Property

At the time of the site reconnaissance for this assessment, the *subject property* was in various stages of redevelopment including partial demolition of onsite structures.

2.5 Uses of Adjoining Properties

For the purposes of this report, adjoining properties are defined as follows:

An adjoining property is any real property with a border that is contiguous or partially contiguous with the Property border. This includes those properties whose borders would be contiguous or partially contiguous with the *subject property* border if the properties were not separated by street, road or other public thoroughfare. The following is a list of the adjoining properties at the time of the site visit:

North Adjoining: Immediately by a barber shop, Beatnick's Finest, Avery Court Apartments, and a single-family residence.

East Adjoining: Immediately by SW 3rd Street, beyond which is Crystal Lake Storage.

South Adjoining: Immediately by a building occupied by Platt Electric Supply and Ironhead Roofing.

West Adjoining: Immediately by Benton County (shops for road and fleet maintenance, public works, etc.).

3.0 SITE RECONNAISSANCE

3.1 Site Reconnaissance

The *subject property* was inspected by Conor McGeehan of Point Source on May 15, 2025. The weather at the time of the site visit was overcast with temperatures in the mid-40s F. Point Source was not escorted at the time of the site visit.

No limiting conditions were encountered.

3.2 Exterior Observations

3.2.1 Solid Waste Disposal

No improper disposal of items or substances was observed during the site reconnaissance.

3.2.2 Surface Water Drainage

Stormwater from the *subject property* appears to percolate into permeable surfaces or drain to adjacent roadways.

3.2.3 Wells and Cisterns

Irrigation well BENT 54215 was identified during the site reconnaissance and is located immediately to the northwest of the residence/office building. No cisterns were identified during the site reconnaissance.

3.2.4 Wastewater

Domestic waste water is discharged to the public sanitary sewer system.

3.3 Interior Observations

The east portion of the *subject property* is developed with an approximately 1,680 square-foot office/residence built in 1953, an approximately 660 square-foot storage building (former detached garage), and two single story motel buildings. The north building contains 2,436 square-feet and was built in 1979. The south building contains 4,536 square-feet and was built in 1940.

The office/residence is wood framed on a concrete block perimeter foundation with a metal roof. It is heated by a natural gas forced air furnace. The storage building is wood framed on a concrete slab foundation with a composition shingle roof. This structure is currently unheated and is reported to have previously contained a wood-burning stove. The north motel building is wood framed on a concrete perimeter foundation with a composition shingle roof. The south motel building is wood framed on a concrete perimeter foundation with a metal roof. Climate control for the motel buildings is provided by individual electric units, and domestic hot water is provided by a natural gas boiler. Finishing materials include spray applied soft ceiling texture (north motel building only), drywall, carpet and ceramic tile flooring.

3.4 Potential Environmental Conditions

3.4.1 Hazardous Materials and Petroleum Products Used or Stored at the Site

No hazardous materials or petroleum products were observed during the site reconnaissance.

3.4.2 Unlabeled Containers and Drums

No unlabeled containers or drums were observed during the site reconnaissance.

3.4.3 Disposal Locations of Regulated/Hazardous Waste

No improper disposal of regulated/hazardous waste was observed during the site reconnaissance.

3.4.4 Evidence of Releases

No evidence of releases was observed during the site reconnaissance.

3.4.5 Polychlorinated Biphenyls (PCBs):

Electrical transformers in the *subject property* area are utility-owned. No privately owned oil filled transformers or other known PCB-containing equipment was observed.

3.4.6 Landfills

No evidence of landfills was observed or reported during this assessment.

3.4.7 Pits, Ponds, Lagoons, Sumps, and Catch Basins

No pits, ponds, lagoons, sumps or catch basins other than those used for storm water control were observed on the *subject property* during the site reconnaissance.

3.4.8 On-Site USTs and ASTs

No evidence of USTs was observed on the subject property at the time of the site visit. A heating oil Ust was previously removed from the subject property (see section 7.7 for details). No ASTs were observed.

4.0 HISTORICAL REVIEW

According to ASTM Standards, reasonably ascertainable, and likely to be useful, standard historical sources are researched back to 1940, or since the first development of the site, whichever is earlier. The source shall be cited in approximately 5-year intervals or in intervals greater than 5 years during continuous periods when the site usage has remained unchanged.

4.1 Historical Use Information on *Subject Property*

Point Source's review of reasonably attainable documentation for the *subject property* includes Benton County/City of Corvallis records (earliest 1940), aerial photographs (earliest 1936), Sanborn Maps (no coverage), historic city directories (1955), topographic maps (earliest 1970) and interviews/prior reports. The following briefly summarizes the developmental history of the *subject property*.

YEAR	SOURCE	SUBJECT PROPERTY USE
1936	Aerial Photographs	The *subject property* appears as structurally undeveloped agricultural land. It appears to be part of a farm that includes what are now the north and south adjoining properties.
1940	County Records	Assessor records identify 1940 as the date of construction of the south motel building.
1948	Aerial Photographs	The current south motel structure is now present on the *subject property*. An additional similar structure is apparent to the north of this structure.
1953	County Records	Assessor records identify 1953 as the date of construction of the office/residence.
1955	City Directories	*Subject property* occupancy is listed as Orchard Auto Court and residential.
1955	Aerial Photographs	The current south motel building and the current office/residence are visible on the *subject property*.
1959	City Directories	*Subject property* occupancy is listed as Orchard Auto Court and residential.
1963	City Directories	*Subject property* occupancy is listed as Orchard Auto Court and residential.
1967	Aerial Photographs	The current south motel building and the current office/residence are visible on the *subject property*.
1968	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1973	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1978	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1979	County Records	Assessor records identify 1979 as the date of construction of the north motel building.
1982	Aerial Photographs	The *subject property* is developed with the current improvements.
1983	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1988	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1992	City Directories	*Subject property* occupancy is listed as Model Motel and residential.
1994	Aerial Photographs	The *subject property* is developed with the current improvements.
1995	City Directories	*Subject property* occupancy is listed as Corvallis Budget Motel RV.
2000	City Directories	*Subject property* occupancy is listed as Budget Inn Motel Corvallis.
2000	Aerial Photographs	The *subject property* is developed with the current improvements.

YEAR	SOURCE	SUBJECT PROPERTY USE
2005	City Directories	*Subject property* occupancy is listed as Corvallis Budget Inn, Motel 6 Corvallis.
2009	Aerial Photographs	The *subject property* is developed with the current improvements.
2010	City Directories	*Subject property* occupancy is listed as Budget Inn Corvallis.
2014	City Directories	*Subject property* occupancy is listed as Budget Inn Corvallis.
2016	Aerial Photographs	The *subject property* is developed with the current improvements.
2017	City Directories	*Subject property* occupancy is listed as Budget Inn.
2020	Aerial Photograph	The *subject property* is developed with the current improvements.
2025	Site Reconnaissance	The *subject property* is occupied by a former Motel.

4.1.1 Historical City Directories

An historical city directory search was provided by EDR for past names and businesses that were listed for the *subject property* and adjoining properties. Listings for the *subject property* vicinity were not found prior to 1955. The address numbering system for the *subject property* area changed in the mid-1960s as noted in the table below.

YEAR	ON-SITE	ADJOINING PROPERTIES
1955	Orchard Auto Court (1280 SW 3rd), residential (1240 SW 3rd)	North – residential
		East – No listings
		South – No listings
		West – Benton County Road Dept & Machine Shop, Dog Face IBR Co, Monroe Feed Store, Three G Lumber Co Sawmill, Western Milling Company, residential
1959	Orchard Auto Court (1280 SW 3rd), residential (1240 SW 3rd)	North – residential
		East – No listings
		South – OK Gas & Oil
		West – Benton County Road Dept & Machine Shop, Oregon Seed Co, residential
1963	Orchard Auto Court (1280 SW 3rd), residential (1240 SW 3rd)	North – residential
		East – No listings
		South – OK Gas & Oil
		West – Benton County Road Dept & Machine Shop, residential
1968	Model Motel, residential (1480 SW 3rd)	North – Forest Products Sales, residential
		East – No listings
		South – Neville Crane Service
		West – Benton County Engineering & Road Dept & Machine Shop, residential
1973	Model Motel, residential (1480 SW 3rd)	North – Forest Products Sales, residential
		East – No listings

YEAR	ON-SITE	ADJOINING PROPERTIES
		South – Neville Crane Service
		West – Benton County Engineering & Public Works & Machine Shop, State Council of Governments District 4, residential
1978	Model Motel, residential (1480 SW 3rd)	North – Corvallis Christian Center, residential
		East – No listings
		South – Neville Crane Service
		West – Benton County Engineering & Public Works & Machine Shop
1983	Model Motel, residential (1480 SW 3rd)	North – Corvallis Christian Center, residential, vacant
		East – No listings
		South – Neville Crane Service
		West – Benton County Public Works
1988	Model Motel, residential (1480 SW 3rd)	North – Corvallis Christian Center, Corvallis Alliance Church, vacant
		East – No listings
		South – residential
		West – Benton County Public Works
1992	Model Motel, residential (1480 SW 3rd)	North - New Life Community Church & Family Counseling
		East – Crystal Lake Storage
		South – No listings
		West – Benton County Public Works and Benton County Parks
1995	Corvallis Budget Motel RV (1480 SW 3rd)	North - New Life Community Church & Counseling Center
		East – Crystal Lake Public Storage
		South – No listings
		West – Benton County Public Works, Benton County Parks, Benton County Development
2000	Budget Inn Motel Corvallis (1480 SW 3rd)	North – Fresh Start House Cleaning
		East – Crystal Lake Public Storage
		South – No listings
		West – Benton County Public Works, Benton County Parks, Benton County Development
2005	Corvallis Budget Inn, Motel 6 Corvallis (1480 SW 3rd)	North – Fresh Start House Cleaning, D Lynch Barber Shop, Best Friends Obedience & Agility School, Wallace Janitorial, residential
		East – Crystal Lake Public Storage
		South – Fastenal
		West – Benton County Natural Areas & Parks
2010	Budget Inn Corvallis (1480 SW 3rd)	North – Fresh Start House Cleaning, D Lynch Barber Shop
		East – Crystal Lake Public Storage

YEAR	ON-SITE	ADJOINING PROPERTIES
		South – Fastenal Co
		West – Benton County (Community Development, Parks, Public Works), Crystal Lake Cemetery
2014	Budget Inn Corvallis (1480 SW 3rd)	North – Fresh Start House Cleaning, D Lynch Barber Shop, Best Friends Obedience & Agility School, residential
		East – Crystal Lake Public Storage
		South – Fastenal
		West – Benton County
2017	Budget Inn (1480 SW 3rd)	North – D Lynch Barber Shop, Best Friends Obedience & Agility School, residential
		East – Crystal Lake Storage
		South – Fastenal
		West – Benton County

4.1.2 Historical Fire Insurance Maps

Point Source requested historical Sanborn Fire Insurance maps for the *subject property* from EDR. Point Source was informed by EDR that map coverage for the vicinity of the *subject property* was not available.

A copy of the Sanborn "Unmapped Property" letter is included in Appendix B.

4.1.3 Historical Aerial Photographs

Aerial photographs dated 1936, 1948, 1955, 1967, 1982, 1994, 2000, 2009, 2016, and 2020 provided by EDR and/or Google were reviewed for this ESA.

Date: 1936
Description: The *subject property* appears as structurally undeveloped agricultural land. It appears to be part of a farm that includes what are now the north and south adjoining properties.

Two residential and/or agricultural structures are visible on the north adjoining property. The east, south, and west adjoining properties are structurally undeveloped.

Date: 1948
Description: The current south motel structure is now present on the *subject property*. An additional similar structure is apparent to the north of this structure.

North adjoining properties are occupied by apparent residential or small commercial structures. The east adjoining property is occupied by a log pond. To the south is an orchard and apparent residential/agricultural structures. The west adjoining property is developed with a portion of the current improvements.

Date: 1955
Description: The current south motel building and the current office/residence are visible on the *subject property*.

North adjoining properties are occupied by apparent residential or small commercial structures. The east adjoining property is occupied by a log pond. To the south is an orchard and apparent residential/agricultural structures. The west adjoining property is developed with a portion of the current improvements.

Date: 1967
Description: The current south motel building and the current office/residence are visible on the *subject property*.

North adjoining properties are occupied by apparent residential or small commercial structures. The east adjoining property is structurally undeveloped (the log pond is no longer present). To the south are several apparent residential/agricultural structures. The west adjoining property is developed with a portion of the current improvements.

Date: 1982
Description: The *subject property* is developed with the current improvements.

North adjoining properties are occupied by some of the current improvements. The east adjoining property is structurally undeveloped. To the south are several apparent residential/agricultural structures. The west adjoining property is developed with a portion of the current improvements

Date: 1994
Description: The *subject property* is developed with the current improvements.

North, east, and west adjoining properties are developed with portions of the current improvements. To the south are several apparent residential/agricultural structures.

Date: 2000
Description: The *subject property* is developed with the current improvements.

The north adjoining properties are developed with some of the current improvements. East, south, and west adjoining properties are developed with the current improvements.

Date: 2009
Description: The *subject property* is developed with the current improvements.

The north adjoining properties are developed with some of the current improvements. East, south, and west adjoining properties are developed with the current improvements.

Date: 2016
Description: The *subject property* and all adjoining properties are developed with the current improvements.

Date: 2020
Description: The *subject property* and all adjoining properties are developed with the current improvements.

Copies of selected aerial photographs are included in Appendix B.

4.1.4 Historical Topographic Maps

Historical topographic maps were provided from the USGS Map Viewer online resource. Coverage of the *subject property* was available for 1970 and 1986.

- Improvements are depicted on the *subject property* including the east residence/office and north motel building (1986).
- None of the topographic maps depict features of environmental concern for the *subject property*.

4.1.5 Fire Officials

Records from the City of Corvallis Fire Department were requested for evidence indicating the presence of underground storage tanks. The City of Corvallis did not respond to the submitted records request in time for the publication of this assessment.

Additionally, Point Source reviewed documents from the Oregon Department of Environmental Quality and Oregon State Fire Marshal's Office for information regarding USTs and hazardous materials incidents.

No UST records were identified for the *subject property*.

4.1.6 Building Permit Records

Building permit records pertaining to the *subject property* were requested from the City of Corvallis via a records request submittal. The City of Corvallis did not respond in time for the publication of this assessment. Available online records reviewed included permits issued in 1992 to install a sign and a furnace with air conditioning for Budget Inn. Sewer repair was permitted in 1993. Several units were remodeled in 1996-1997.

No evidence of recognized environmental conditions was revealed in the records reviewed

4.1.7 County Assessor

Benton County Assessor records identify the south motel building as a 4,536 square-foot structure built in 1940 with four units added in 1980. The north motel building is listed as 2,436 square-foot structure built in 1979, and the office/residence is listed as a 1,682 square-foot building built in 1953. The storage building is listed as 660 square-feet (construction date unknown). The heat source for the motel is listed as a hot water system, and for the office/residence as forced air. *Subject property* ownership is listed as Corvallis Housing First.

No records regarding environmentally sensitive activities on the Property were disclosed in the assessor records reviewed by Point Source.

4.1.8 Oil and Gas Exploration

There were no oil or gas wells observed at the *subject property* and wells were not depicted on the *subject property* on the USGS Topographic Map.

4.2 Historical Use Information on Adjoining Properties

By review of the standard historical sources referenced above, the historical uses of the adjoining properties are summarized below:

North: The north adjoining properties are located in an apparent down-gradient hydrogeologic position relative to the *subject property*.

No environmentally sensitive uses of these properties anticipated as having a significant impact on the *subject property* were identified through a review of standard historical sources or regulatory records.

East: The east adjoining properties are located in an apparent cross-gradient hydrogeologic position relative to the *subject property*.

No environmentally sensitive uses of these properties anticipated as having a significant impact on the *subject property* were identified through a review of standard historical sources or regulatory records.

South: The south adjoining properties are located in an apparent up-gradient hydrogeologic position relative to the *subject property*.

No environmentally sensitive uses of these properties anticipated as having a significant impact on the *subject property* were identified through a review of standard historical sources or regulatory records.

West: The west adjoining property is located in an apparent cross-gradient hydrogeologic position relative to the *subject property*.

Point Source's Phase II Environmental Investigation addressed potential impacts from the west adjoining property. Results from that investigation concluded that significant adverse environmental impacts from the west adjoining property are not likely (see section 7.7).

5.0 INTERVIEWS

Interview information provided by the following parties is included in various sections of this report unless specifically noted below.

5.1 Interview with Owner

- Ms. Adrea Myhre, Corvallis Housing First 541.250.9479

5.2 Interview with Key Site Manager

- Ms. Adrea Myhre, Corvallis Housing First 541.250.9479

5.3 Interview with Occupants

- None

5.4 Interview with Local Government Officials

- Corvallis Fire Department 541.766.6961
- Benton County Assessor 541.766.6855
- City of Corvallis Development Services 541.766.6929

5.5 Interview with Others

- None

6.0 RECORDS REVIEW

6.1 Standard Environmental Record Sources

6.1.1 State and Federal Regulatory Review

Information from standard Federal and state environmental record sources was provided by EDR, Inc. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released.

In some cases, location information supplied by the database provider is insufficient to allow geocoded facility locations. These facilities are listed under the unmappables section within the EDR report. Where unmappable facilities are within the ASTM minimum search distance from the Property they are discussed in the appropriate section below. Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the *subject property*, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the *subject property* from the listed facilities. Regulatory agency file reviews (in office or online) were conducted for all immediately adjoining properties identified in the database search unless otherwise noted.

RADIUS REPORT DATA				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Listed**
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site (SEMS)	0.50	N	N	N
Federal CERCLIS-NFRAP Site, SEMS Archive	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators (LQG, SQG, CESQG, Non-Gen)	0.25	N	**Y**	**Y**
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	N	N
Oregon Environmental Cleanup Site Inventory Sites	1.00	N	**Y**	**Y**
Oregon Confirmed Release Sites	1.00	N	N	**Y**
Oregon/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
Oregon/Tribal Leaking Storage Tank Site	0.50	**Y**	**Y**	**Y**
Oregon/Tribal Registered Storage Tank Sites (UST/AST)	0.25	N	**Y**	**Y**
Oregon/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
Oregon Dry Cleaners	0.25	N	N	N
Federal Brownfield Sites	0.50	N	N	N
Oregon Brownfield Sites	0.50	N	N	N

Subject Property

The *subject property* is listed as LUST Facility 02-21-0155 by the ODEQ for a release of heating oil to the subsurface discovered during decommissioning by removal of an underground heating oil tank. On February 16, 2021, Bill Goff Construction removed a 590-gallon heating oil tank. The tank was completely full of water and was pumped out, cleaned, and soil was sampled per ODEQ heating oil tank (HOT) program requirements. Two samples were collected from beneath the tank. Diesel range organics were detected in soils at a concentration of 1,100 ppm via NWTPH-Dx. The tank was recycled at Cherry City Metals of Salem, Oregon. Approximately 6.75 tons of petroleum impacted soil (PCS) was removed and disposed of at Coffin Butte Landfill. Confirmatory samples collected after excavation were non-detect, demonstrating successful removal of PCS. The excavation was then backfilled with compacted sand overlain with imported soil. On April 14, 2021, ODEQ issued a letter acknowledging receipt of certification of the decommissioning and cleanup from Bill Goff Construction.

Based on the regulatory status, and documentation of successful PCS removal, this listing does not appear to represent a risk of significant remaining adverse impact to the *subject property*.

Adjacent Properties/Area of Concern Sites

Based upon guidelines presented in ASTM E2600-10 Point Source uses an "Area of Concern" designation of greater than 528 feet (0.1 mile) for petroleum hydrocarbons and 1,760 feet (0.33 mile) for all other chemicals to determine if a listed site has a high risk of impacting the *subject property* through contaminated soil, groundwater, or vapor. Unless otherwise noted (adjoining properties), sites located in a downgradient hydrogeologic position relative to the *subject property* are not considered sites of concern.

Listings within the "Area of Concern" are discussed below.

Federal RCRA Generator List

The RCRA program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste. One RCRA site is identified as an adjoining property.

Benton County Public Works (360 SW Avery Ave) is located on the west adjoining property. Benton County filed reports under the RCRA program as a Large Quantity Generator in 1992, as a Small Quantity Generator in 1993 and 1994, and as a Conditionally Exempt Small Quantity Generator from 1995 through 2003. A compliance inspection in September 2006 resulted in several violations. Compliance for all violations was achieved by December 2006. This site is also listed on the FINDS, ECHO, and Manifest databases as the result of the RCRA listing. Wastes are identified as spent solvents from traffic striping operations. This site is also listed on the Hazardous Substance Information Survey (HSIS) database and Above Ground Storage Tank (AST) database due to the use and storage of gasoline, diesel, propane (in above ground storage tanks), glass beads, motor oil, traffic paint, argon and carbon dioxide gasses, diatomaceous earth, methyl alcohol, lead-acid batteries, asphalt crack filler, and Conwed Wood/Tack. The site is served by an on-site septic system, resulting in a listing on the Underground Injection Control (UIC) database. None of the above listings indicate a release and are not expected to represent an adverse environmental impact to the *subject property*.

This site appears on the Spills database due to a release of 15 gallons of non-PCB transformer oil that occurred in 1998 when a falling tree damaged a pole-mounted electrical transformer. No further regulatory action is noted. Based upon the lack of PCBs present, and the amount of material released, this incident is not expected to have impacted the *subject property*.

This site appears on the Hazmat and CDL databases due to a response related to a clandestine drug lab in a motorhome. The Linn/Benton Hazmat Team assisted the Benton County Sherriff's office in collection of evidence. No further regulatory action is noted. Based upon the nature of the incident, it is not expected to have impacted the *subject property.*

Oregon Environmental Cleanup Site Inventory/Confirmed Release List

The ODEQ maintains a State Environmental Cleanup Site Inventory (ECSI) of sites considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Additionally, sites that are or may be contaminated and may require cleanup are found on the Confirmed Release List (CRL), and sites that have been enrolled in the Voluntary Cleanup Program (VCP) are found on the VCP database.

Eight ECSI sites are located within one-third mile of the *subject property*. One site is identified as an adjoining property. Of the remaining seven sites, three are located in a hydrogeologic downgradient position relative to the *subject property*, and four are located in an hydrogeologic upgradient position relative to the *subject property*. Of the four upgradient sites, three have received a determination of "no further action required" from ODEQ. The adjoining site and the one upgradient site that has not yet received a "no further action required" determination are discussed below.

Benton County Public Works (360 SW Avery Ave) located on the west adjoining property and is listed by the ODEQ as ECSI Site ID #3161. This status of this site is listed as "contamination suspected" and has not been assigned to an ODEQ Project Manager. This site came to ODEQ's attention in the summer of 2001 upon the discovery of TCE in groundwater in south Corvallis. This site is adjacent to residences that rely on domestic wells for drinking water; these wells were contaminated with TCE. Affected wells had activated carbon units installed to remove TCE. No release from this site has been confirmed and the file has not been updated since 2003. This site is located in a hydrogeologic cross-gradient position relative to the Property. The file for this site indicates a link with the Allen Street Study Area (ECSI Site ID #3521) discussed below.

Allen Street Study Area (1420-1540 SW Allen St) located approximately 920 feet southwest of the *subject property*, is listed by the ODEQ as ECSI Site ID #3521. This site includes a portion of Avery Park to the north, a Willamette and Pacific Railroad line and spur, the Benton County Shops and several residential properties. A plume of chlorinated solvents (TCE; trans 1,2-DCE; cis-1,2-DCE) has been found in groundwater in an area of south Corvallis where residents have depended on domestic wells for their drinking water supply. ODEQ first ensured that these residents had access to a safe water supply, and then began searching for potential sources of the contamination.

In July 2001, ODEQ sampled 13 residential wells along Allen, Hopkins, Edging, and Cummings Streets. Five of the wells were contaminated with TCE. ODEQ installed carbon-treatment units to protect people's health. ODEQ, under a cooperative agreement with EPA, is conducting a field investigation to evaluate the extent of contamination and to locate source(s). ODEQ conducted a Preliminary Assessment in April 2003. Thirteen groundwater samples and 2 soil samples were collected. TCE concentrations in groundwater ranged from 1.3 ug/l to 491 ug/l. TCE was not detected in the soil samples. The highest concentrations of TCE were found in the right-of-ways near the southwest corner of the Benton County Shops and across from the railroad line. The Preliminary Report was submitted to EPA June 2003. The report was finalized in July 2003. ODEQ determined that further action at this site is a high priority because of the impact to the drinking water wells. ODEQ continues to maintain the carbon treatment units on

the domestic wells. ODEQ installed two piezometers on Hopkins Street near the Benton County Shops. ODEQ installed monitoring wells around the site, including on the Benton County site, in city and county right of ways, and at private residences in summer 2005. Quarterly groundwater monitoring was conducted by ODEQ's contractor for a year. The results of these site investigation activities were reported in July 2006. The highest levels of contamination were located in groundwater near the southwest corner of the Benton County Shops property. Suspect sources of the contamination remain the Benton County Shops property, the Union Pacific Railroad right-of-way, and the Hopkins Avenue right-of-way south of the Benton County shops. Additional investigations are needed to determine the source of the contamination. ODEQ conducted a soil gas risk evaluation in the winter of 2007 to determine if TCE in groundwater could pose a threat to indoor air quality for residents living above the TCE plume. The results of the sampling do not indicate a current threat to residents from TCE vapors.

The groundwater and soil gas samples collected closest to the *subject property* revealed contaminants of concern at concentrations below ODEQ risk-based concentrations likely applicable to the *subject property*. These samples were collected on the western portion of the site (the *subject property* is to the east of the site, across 3rd Street). While the source of the contamination remains unidentified, it does not appear that the *subject property* would be identified as a source of the impact, as this assessment has not revealed evidence of current or past use of solvents on the *subject property*.

State Leaking Underground Storage Tank List (LUST)

ODEQ compiles lists of all leaks from underground storage tanks.

Nine Oregon LUST sites are listed within one-tenth mile of the *subject property*. One is identified as an adjoining property. The remaining eight sites (six of which have been addressed to the satisfaction of ODEQ) are located in a hydrogeologic down-gradient position relative to the *subject property*. The adjoining site is discussed below.

Benton County Public Works (360 SW Avery Ave) is identified as the west adjoining property and is listed by the ODEQ as LUST Facility #02-90-4168. Five USTs were decommissioned by removal at this site in 1990 including a 620-gallon waste oil tank (Tank #1), a 10,000-gallon diesel tank (Tank #2), a 10,000-gallon gasoline tank (Tank #3), a 12,000-gallon gasoline tank (Tank #4), and a 6,000-gallon gasoline tank (Tank #5).

Two soil samples and one groundwater sample were collected from the Tank #1 excavation. Total petroleum hydrocarbons (TPH) via method TPH-418.1 were detected up to 390 mg/kg in soil. TPH was not detected in water, and VOCs were not detected in water.

Soil impact was apparent in the Tank #2 excavation. Groundwater was not encountered. Two soil samples were collected from the excavation. TPH (Method 418.1) was detected up to 110 mg/kg in soil.

Soil and groundwater impact was apparent is the Tank #3 excavation. Two soil samples and one groundwater sample were collected from the excavation. TPH (Method 418.1) was detected up to 1100 mg/kg in soil and at 3000 ug/l in water.

Soil impact was apparent in the Tank #4 excavation. Groundwater was not encountered. Four soil samples were collected from the excavation. TPH (Method 418.1) was detected up to 130 mg/kg in soil.

Soil and groundwater impact was apparent is the Tank #5 excavation. Two soil samples and two groundwater samples were collected from the excavation. TPH (Method 418.1) was not detected in soil and was detected at 3100 ug/l in water. Benzene was detected at 54 ug/l and

xylenes were detected at 760 ug/l in water. Toluene and ethylbenzene were not detected in water.

ODEQ maintains that additional sampling and analysis is necessary to achieve regulatory closure. Benton County has taken the position that no further work is necessary relative to the decommissioned USTs. The parties have not reached an agreement. The file remains open and unresolved at ODEQ.

Based upon the reported concentrations of contaminants of concern, it does not appear likely that the releases at this site have had a significant impact upon the *subject property*, as none of the detected concentrations exceed their respective Risk-Based Concentrations for the vapor intrusion or volatilization to outdoor air pathways for residential receptors.

This site also appears on the Underground Storage Tank (UST) database which indicates that 5 decommissioned tanks are registered to this address.

Unmappable List

EDR compiles a list of sites that are not mapped due to poor or inadequate address information. Point Source reviewed this list and determined that no sites suspected of impacting the *subject property* are located within the prescribed radius for this report.

6.2 Other Environmental Records

6.2.1 Records of Emergency Release Reports

Local and state fire safety authorities keep records of previously reported spills and releases of hazardous substances and petroleum products as per the Superfund Amendments and Reauthorization Act - Title 304 and the Emergency Response Notification System. Point Source reviewed available information on the spills database maintained by the Oregon State Fire Marshal's Office. No records of spill incidents were found in association with the *subject property*.

6.2.2 Stormwater and Waste-Water Discharge Permits

No National Pollutant Discharge Elimination System (NPDES) permits or other wastewater or stormwater permits were discovered for the *subject property* during the course of this assessment.

7.0 USER & CLIENT PROVIDED INFORMATION

Point Source requested the completion of an ASTM User Questionnaire. Ms. Adrea Myhre of Corvallis Housing First (*subject property* owner representative) completed the User Questionnaire on May 8, 2025.

7.1 Title Records

Point Source was not provided with title records for the *subject property*.

7.2 Environmental Liens or Activity and Use Limitation

No knowledge of environmental liens, activity and use limitations for the *subject property* was disclosed to Point Source during the course of this assessment.

7.3 Specialized Knowledge

No specialized knowledge of environmental issues relative to the *subject property* was disclosed to Point Source during the course of this assessment.

7.4 Commonly Known or Reasonably Ascertainable Information

No additional knowledge of reasonably ascertainable information regarding environmental conditions associated with the *subject property* was disclosed to Point Source during the course of this assessment.

7.5 Valuation Reduction for Environmental Issues

No knowledge of reductions in *subject property* value due to environmental issues was disclosed to Point Source during the course of this assessment.

7.6 Owner, Property Manager and Occupant Information

7.6.1 Information Reported by the Key Site Manager

Ms. Adrea Myhre of Corvallis Housing First (*subject property* owner representative) was identified as the Key Site Manager for the *subject property*. The Key Site Manager is defined by the ASTM Standards as a person with good knowledge of the uses of the *subject property*.

Ms. Myhre completed an Environmental Questionnaire and Disclosure Statement for the *subject property* on May 8, 2025. Mr. Myhre disclosed knowledge of multiple environmental investigations and assessments related to the *subject property*.

7.6.2 Information Reported by the Property Owner

See Section 7.6.1.

7.6.3 Information Reported by Property Occupants

None.

7.7 Previous Environmental Investigations

Point Source was provided with the following previously prepared environmental report(s) for review.

Title: Phase I ESA Motel Property
Location: 1480 SW 3rd Street, Corvallis, OR
Date: January 12, 2021
Performed By: Point Source Solutions (Point Source)
Prepared For: Corvallis Housing First

Point Source did not identify recognized environmental conditions associated with the *subject property*, however, identified the following potential environmental issues and recommendations.

- Review of historical aerial photographs revealed that the *subject property* and surrounding area was in agricultural use from sometime before 1936 until sometime before 1948. The Oregon Department of Environmental Quality (ODEQ) has published guidance for evaluating residual pesticide impact on agricultural properties that are to be redeveloped for residential use. Point Source was not provided with documentation for sampling of agricultural chemicals on the *subject property*.
- A possible UST vent line was observed at the southwest corner of the office/residence during the site reconnaissance. Ms. Marty Fulford reported that an UST was confirmed at this location subsequent to the site reconnaissance. It is unknown at this time whether a release from the UST has occurred.
- Based on the age of the *subject property* structures (1940 to 1979), asbestos containing materials (ACMs) and lead-based paint may be present. Finishing materials, where observed, appeared to be in fair condition. Spray applied soft ceiling texture was observed in the north motel building.
- Based upon the findings of this assessment, Point Source recommended that the heating oil underground storage tank be decommissioned and certified by an ODEQ licensed Heating Oil Tank Service Provider.
- If the *subject property* is to be redeveloped for residential use, collection of surface and near surface soil samples is recommended. The samples should be collected and analyzed in accordance with ODEQ *Guidance for Evaluating Residual Pesticides on Lands Formerly Used for Agricultural Production, January 2006, revised June 2019*.

Title: Proposed Third Street Commons Development- Environmental Investigation
Location: 1480 SW 3rd Street, Corvallis, OR
Date: March 12, 2025
Performed By: Point Source Solutions (Point Source)
Prepared For: Corvallis Housing First

Point Source performed a Phase II ESA on the *subject property* based on environmental issues identified in the Point Source Phase I ESA and based on recommendations made by the ODEQ as part of a Work Plan developed relative to a request by HUD for lending purposes. The following conclusions were derived from the Phase II ESA.

Soil Conclusions:

- *Soil samples Comp1, Comp1a, Comp2, and Comp2a did not contain concentrations of organochlorine and organophosphorus pesticides over laboratory MRLs.*

- *Select metals were detected above laboratory MRLs, but below ODEQ residential RBCs for dermal contact and ingestion (RBCss), ODEQ regional background concentrations for the south Willamette Valley, and/or EPA RSLs for residential soil ingestion where state levels were not provided. The maximum concentrations of these select metals include Vanadium at 79 mg/kg, total chromium at 26 mg/kg, nickel at 14 mg/kg, copper at 22 mg/kg, zinc at 110 mg/kg, arsenic at 6.3 mg/kg, barium at 180 mg/kg, and lead at 81 mg/kg.*
- *Cobalt was detected in Comp2 and Comp2a at 14 mg/kg which exceeds the EPA RSL of 2.3. ODEQ does not provide screening level data or background concentrations for cobalt. Point Source reviewed available toxicology publications to establish a potential background level for cobalt. According to the CDC's Agency for Toxic Substances and Disease Registry, cobalt is commonly found in soils at concentrations of 20-25 mg/kg (average) well above the reported result in Comp2 and Comp2a of 14 mg/kg.*

Groundwater Conclusions:

- *Well Water Sample W1 did not contain concentrations of organochlorine pesticides, PAHs, and gasoline range organics over laboratory MRLs.*
- *Two VOCs were detected in well water above MRLs but below ODEQ's residential RBCs for drinking water (RBCtw) and vapor intrusion into buildings (RBCwi). This included methyl t-butyl ether (MTBE) at 1.9 ug/L and Toluene at 1.7 ug/L.*
- *Diesel range organics were detected at 58 ug/L in sample W1 below the residential RBCtw and RBCwi of 100 ug/L and 400ug/L respectively.*
- *Metals detected above MRLs but below the ODEQ residential RBCtw in sample W1 include vanadium at 1.1 ug/L, nickel at 2.4 ug/L, zinc at 65 ug/L, molybdenum, and barium. Arsenic was detected at a concentration of 3.2 ug/L which exceeds the RBCtw, however, is within normal concentrations of groundwater regionally. Furthermore, the Site is connected to municipal water for drinking water purposes. The onsite well was used solely for irrigation and plans are in place to permanently decommission the well.*

Soil Gas Conclusions:

- *None of the soil gas samples collected exceeded ODEQ residential screening levels for vapor intrusion into buildings (RBCsv). Benzene was detected at the ODEQ residential RBCsv of 12 ug/m3 in sample SG4 (detected concentration equal to the referenced screening level). Low levels of VOC constituents were detected above MRLs in all soil gas samples with SG2 having the highest concentrations out of all samples collected except for benzene in SG4. Constituent concentrations detected in SG2 include Benzene at 11 ug/m3, TCE at 1.9 ug/m3, toluene at 32 ug/m3, ethylbenzene at 8 ug/m3, total xylenes at 65 ug/m3, 1,3,5 TMB at 1.6 ug/m3, 1,2,4 TMB at 7.1 ug/m3, naphthalene at 1.3 ug/m3, and GRO at 1,000 ug/m3.*

  Based on the results of this investigation it does not appear that an unacceptable exposure risk to current or future Site occupants is present. Further investigative measures are not recommended at this time.

8.0 NON-ASTM SCOPE ITEMS AND ADDITIONAL SERVICES

8.1 Asbestos-Containing Materials

Based on *subject property* building ages (1940, 1953, and 1979), asbestos containing materials may be present. Ms. Andrea Myhre indicated on the pre-survey questionnaire that asbestos surveys have been performed. Point Source was not provided with reports related to asbestos surveys.

8.2 Lead-Based Paint

Based on *subject property* building ages (1940, 1953, and 1979), lead-based paints may be present. Ms. Andrea Myhre indicated on the pre-survey questionnaire that lead-based paint surveys have been performed. Point Source was not provided with reports related to lead-based paint surveys.

8.3 Radon

The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures. Review of the EPA Map of Radon Zones places the *subject property* in Zone 2, where average predicted radon levels are predicted to be between 2.0 and 4.0 pCi/L.

8.4 Lead in Drinking Water

The *subject property* is connected to the city water supply provided by the City of Corvallis. According to the 2024 Annual Drinking Water Quality Report prepared by the city, the lead level in the drinking water supplied to the *subject property* is within state and federal standards. In addition, Ms. Andrea Myhre indicated that lead testing in water had been performed on the *subject property*. Point Source was not provided with reports pertaining to lead concentrations in drinking water.

8.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding). Mold growths often appear as discoloration, staining, or fuzzy growth on building materials or furnishings and are varied colors of white, gray, brow, black, yellow, and green. In large quantities, molds can cause allergic symptoms when inhaled or through the toxins the molds emit.

The *subject property* is in various stages of redevelopment and demolition with exposed interior spaces.

9.0 FINDINGS & OPINIONS

9.1 Findings

9.1.1 Recognized Environmental Conditions

Review of historical aerial photographs revealed that the *subject property* and surrounding area was in agricultural use from sometime before 1936 until sometime before 1948. The Oregon Department of Environmental Quality (ODEQ) has published guidance for evaluating residual pesticide impact on agricultural properties that are to be redeveloped for residential use. Based on a Phase II Environmental Investigation performed by Point Source in April 2025, this REC has been adequately addressed. Details of the April Phase II investigation are presented in section 7.7.

9.1.2 Controlled Recognized Environmental Conditions

No evidence of *controlled recognized environmental conditions* was disclosed during the course of this assessment.

9.1.3 Historical Recognized Environmental Conditions

Bill Goff Construction removed a 590-gallon heating oil tank from the *subject property* in February 2021. In accordance with ODEQ heating oil tank (HOT) program requirements. Two samples were collected from beneath the tank. Diesel range organics were detected in soils at a concentration of 1,100 ppm via NWTPH-Dx. The tank was recycled at Cherry City Metals of Salem, Oregon. Approximately 6.75 tons of petroleum impacted soil (PCS) was removed and disposed of at Coffin Butte Landfill. Confirmatory samples collected after excavation were non-detect, demonstrating successful removal of PCS. The excavation was then backfilled with compacted sand overlain with imported soil. On April 14, 2021, ODEQ issued a letter acknowledging receipt of certification of the decommissioning and cleanup from Bill Goff Construction.

9.1.4 Business Environmental Risks

No business environmental risks were disclosed a result of this assessment.

9.2 Opinion

Conditions warranting further investigation of the *subject property* were not identified during the course of this assessment.

9.3 Deviations

This Phase I ESA substantially complies with the scope of services and ASTM E1527-21, as amended, except for exceptions and/or limiting conditions as discussed in Section 1.4.

10.0 CONCLUSIONS & RECOMMENDATIONS

Point Source has performed a Phase I Environmental Site Assessment on the *subject property* located at 1480 SW 3rd Street in Corvallis, Oregon 97333 in general conformance with the scope and limitations of ASTM Practice E1527-21. Any exceptions to or deletions from this practice are described in the body of this report.

10.1 Conclusions

This assessment has revealed no evidence of unaddressed recognized environmental conditions in connection with the *subject property*.

10.2 Recommendations

Based on the findings of this assessment, no further assessment is recommended.

11.0 ENVIRONMENTAL PROFESSIONAL STATEMENT and SIGNATURES

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312" and we have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history and setting of the *subject property*. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Pointsource Solutions were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/27/2025 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
CORVALLIS MERCURY SP	***1645 SE BETHEL STREE***	***ESE 1/4 - 1/2 (0.359 mi.)***	***49***	***325***

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/27/2025 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/17/2025 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
HOLLINGSWORTH & VOSE EPA ID:: ORD009023466	***1115 SE CRYSTAL LAKE***	***NE 1/4 - 1/2 (0.282 mi.)***	***I45***	***188***

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/17/2025 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 02/17/2025 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

EPA ID:: ORD009023466				

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 01/29/2025 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/17/2025 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/30/2024 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 17 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 5 UST FINDER sites within approximately 0.25 miles of the target property.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D018
Waste Description:	Benzene
Waste Code:	D022
Waste Description:	Chloroform
Waste Code:	D027
Waste Description:	1,4-Dichlorobenzene
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

CITY INDUSTRIAL CENTER (Continued) **1000834788**

storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Decode for NarcdID: Contamination
NARR Comments: (9/27/95 ACV/SAS) The site is adjacent to the Chevron Bulk Plant where petroleum and solvent contamination was discovered. (See ECSI #1749 for more information.) The solvent contamination may originate from the Corvallis Rental site. Corvallis Rental decommissioned an underground storage tank (UST) in 1992 and did not submit appropriate documentation, so the possibility for soil and groundwater contamination at this site has not been determined. The UST decommissioning work was performed by UST Environmental, which was indicted in 1994 for falsifying work.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory

BENTON COUNTY DEPARTMENT OF PUBLIC WORKS (Continued) **1004770065**

agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

BENTON COUNTY PUBLIC WORKS (Continued) **U000434345**

Updated Date: 09/28/2016
Decode for NarcdID: Contamination
NARR Comments: This site came to DEQ's attention in the summer of 2001 upon the discovery of TCE in groundwater in south Corvallis. This site is adjacent to residences that rely on domestic wells for drinking water; these wells were contaminated with TCE. Affected wells had activated carbon units installed to remove TCE. Also see ECSI #3521.

Updated By: MCAMARA
Updated Date: 04/11/2023
Decode for NarcdID: Current Site Summary Statement
NARR Comments: This site part of the larger Allen Street Areawide project, ECSI 3521. DEQ investigated the extent of trichloroethylene (TCE) contamination in groundwater, which has contaminated several residential water wells along Allen Street. The source of the TCE has not been determined, however this site is one of several possible sources of TCE (DEH 8/26/14)

CHEVRON BULK PLANT - CORVALLIS (FORMER) (Continued) **S105042483**

NARR Comments: (9/27/95 ACV/SAS) The site is a former bulk petroleum facility. Gasoline, diesel fuel, and chlorinated solvents were detected in soil and groundwater at the site. Over 4,000 cubic yards of soil were excavated over a period of three years (1991-1994), with some soil being treated on-site, and some disposed of at the Riverbend Landfill in Yamhill County and the Rebanco Landfill in Roosevelt, WA. Groundwater contamination exceeds federal Maximum Contaminant Levels (MCLs) for benzene, PCE, TCE, and vinyl chloride. Other breakdown products are present. The solvents may originate from the nearby Corvallis Rental property. See ECSI #1750 for more information.

NARR Comments: The former Chevron bulk facility is located at 1225 SE 3rd Street in Corvallis, Oregon. It is bordered on the north by a Southern Pacific Railroad line, on the east by Evanite Corporation and a vacant lot, on the south by Corvallis Rental, and on the west by State Highway 99W/3rd Street and another bulk petroluem facility (Oberson Oil). The former bulk plant is located on a fluvial terrace near the Willamette and Mary's Rivers. One intermittent stream exists along the east site boundary but is stagnant periodically during the year. An old <quot>Millrace<quot> is located approximately 400 feet east of the site and flows from north to south. A surface water intake pond for the Evanite facility is located approximately 500 feet east of the site and fed by the Millrace. Groundwater was encounted between 17 and 20 feet below the top-of-casing (TOC) elevations in monitoring wells on the site. The general groundwater flow direction was toward the northeast.

Decode for NarcdID: Remedial Action
NARR Comments: (9/27/95 ACV/SAS) Chevron is continuing to monitor the groundwater for BTEX constituents. The groundwater contamination needs to be addressed, as benzene and solvent levels exceed federal MCLs. The source of solvent contamination should be identified. The sufficiency of the soil cleanup should also be determined. The site priority was ranked a medium using the Site Assessment Prioritization System (SAPS). (9/13/04 M2C/VCP) Chevron is continuing to monitoring MW-4 for BTEX and solvents. In November 2003, benzene was 15 ug/L, toluene was 0.9 ug/L, ethylbenzene was 0.8 ug/L, xylenes was 1 ug/L, TCE was 1 ug/L, cis-1,2-DCE was 56 ug/L, and vinyl chloride was 24 ug/L. It appears that BTEX and solvent constituents are declining over time. However, benzene and TCE are above tap water PRGs. Additional work is required to evaluate the extent of contamination. (1/28/05 M2C/VCP) Monitoring well MW-4 was sampled on March 11, 2004 and December 2, 2004 by SECOR. BTEX and chlorinated solvents continued to be detected. (3/30/05 M2C/VCP) DEQ evaluated the site for current and future impacts to human and ecological receptors. Currently the site is vacant without buildings. There were several drinking water wells in the neighborhood to east. Due to the TCE contamination at Evanite, nearby residents with impacted drinking water wells, have been provided city water. The extent and source(s) of the TPH and solvent plume at the site have not been fully characterized. DEQ compared groundwater concentrations at the one existing on-site monitoring well to screening values for current and future exposures. Benzene, gasoline, diesel, and vinyl chloride (VC) concentrations exceed tap water screening values. Currently there are no drinking waters being used near the site. If residents or on-site occupants begin to use drinking water wells in the future, this pathway should be evaluated. VC concentrations in the one existing monitoring well exceed vapor intrusion screening values for residential, but not occupational, use. Concentrations of contaminants in groundwater could be higher in other areas of the site. Before the site is developed, additional

CHEVRON BULK PLANT - CORVALLIS (FORMER) (Continued) **S105042483**

evaluation (a Site Investigation) is needed to determine the actual concentrations of solvents and petroleum constituents in soil and groundwater, whether the source of those contaminants is on-site, and whether the contaminants would pose unacceptable risks to future on-site users and off-site receptors. Because the site is vacant and downgradient drinking water wells have been addressed by Evanite, the current priority for further action is considered by DEQ to be medium. Should the site be developed, the priority would increase to high. (7/19/05 M2C/VCP) The property owner (Ron Laux) would like to build a Honda motorcycle dealership on the vacant lot. Before that can happen the property owner wants a no further action determination from DEQ. DEQ has contacted Chevron requesting additional work to evaluate groundwater and soil contamination. The consultant, SECOR, is preparing a work plan. (12/2/05 M2C/VCP) SECOR provided a work plan on August 16, 2005. They are proposing to install four monitoring wells and collect several rounds of groundwater data to evaluate solvent and TPH contamination. They will also be collecting soil TPH data. This work is scheduled for January 2006. (12/15/06 M2C/VCP) In June 2006 SECOR installed 4 additonal monitoring wells (MW-15, -16, - 17, -18). One round of groundwater samples were collected from the new wells and MW-4 and analyzed for TPH and VOCs (8260). Benzene concentration at MW-16 (5 ppb) was above drinking water RBC of 0.35 ppb. Chloroform concentration at MW-15 (3 ppb) and at MW-18 (1 ppb) was above the drinking water RBC of 0.17 ppb. Soil samples were also collected during the installation of the monitoring wells and at two locations where jet fuel was previously detected. The samples were analyzed for TPH, VOCs (8260), and MTBE. TPH gasoline, heavy oil, toluene and xylenes were detected in one or more samples. Concentrations were below risk-based screening values. SECOR will do the following remaining tasks: 1) conduct a final groundwater monitoring event in January-April as requested by DEQ; 2) attempt to locate and sample MW-2 during this sampling event; 3) search WRD database to determine the number of residential/irrigation wells within + mile of the site determine if prohibitions are currently in place to prevent the installation of wells onsite; and 4) use BIOSCREEN to model the extent of the local of facility (LOF). (2/20/09 BET/VCS) Completed Staff Report recommending No Further Action; public comment during Jan 09; comments addressed and final report issued as ROD.

NARR Comments: As part of the ROD, the Site requires a deed restriction not allowing resdiential use on site and also not allowing a daycare or children-occupancy type of facility on site due to residual soil contamination above RBCs for residential use. Commercial use is acceptable. A deed restriction was lodged with Benton County in February 09.

NARR Comments: Chevron operated a bulk petroleum storage facility at the site from 1921 through 1981. The facility used six above-ground storage tanks (ASTs) with associated piping, and warehouse building. One underground storage tank (UST), used to contain waste oil, was located at the southeast corner of the main building. In December 1981, Chevron decommissioned the facility by removing the pipes, ASTs, UST, and building.

Decode for NarcdID: Contamination
NARR Comments: On 4/28/89, the Benton Co. Environmental Health Division was notified that a property in Corvallis might be contaminated from a former mercury-extraction operation. On 5/8/89, EPA mailed a certified letter to one of the site owners, Laurence Lyon, requesting security at the site to prevent public access, sampling to confirm presence or absence of hazardous substances at the site, a preliminary assessment (PA) if hazardous materials were found, and an RI/FS if the PA determined that remedial action was needed. On 3/19/90, Ecology & Environment's Technical Assistance Team sampled the site for EPA. Soil samples indicated the presence of mercury as high as 1,700 mg/kg. Benton Co. obtained the property through tax foreclosure in 1990 and conducted a remedial investigation/feasibility study.

NARR Comments: (5/22/96 RMD/VCS) Benton County signed a Letter Agreement with DEQ in January 1993. The County characterized the nature and extent of contamination; mercury-speciation analyses showed no organic mercury present at the site. A risk assessment was completed to evaluate toxicity and exposure risk from forms of mercury other than those specified in DEQ's Soil Cleanup Table, leading to the determination of site-specific cleanup limits. Benton County then completed a feasibility study and soil removal, and DEQ has determined that no further action is necessary at this site.

NARR Comments: (7/16/02 M2C/SAS) A plume of chlorinated solvents has been found in groundwater in an area of south Corvallis where residents have depended on domestic wells for their drinking water supply. DEQ first ensured that these residents had access to a safe water supply, and then began searching for potential sources of the contamination.

NARR Comments: Groundwater: According to the City of Corvallis, no public water lines currently serve the residents along Allen Street. Residents and excavation workers could be exposed to contaminated groundwater through ingestion or dermal contact . Surface Water: The nearest surface water to the site is the Mary's River, about 0.25 mile to the northeast. It is unknown if TCE contamination in groundwater has migrated to the river. Recreational users of the river and ecological receptors could be exposed. Soil Exposure: Shallow soil is likely contaminated at the source(s). Depending where the source of contamination is located, there is a potential for residents, commercial workers, and excavation workers to be exposed to contaminated soil through dermal contact or inhalation. Air: There is a potential for residents, commercial workers, and excavation workers to be exposed to vapors from groundwater and/or soil contamination.

NARR Comments: (1/29/03 M2C/SAS) In July 2001, DEQ sampled 13 residential wells along Allen, Hopkins, Edging, and Cummings Streets. Five of the wells were contaminated with TCE. DEQ installed carbon-treatment units to protect people's health. DEQ, under a cooperative agreement with EPA, is conducting a field investigation to evaluate the extent of contamination and to locate its source(s). DEQ will be collecting soil and groundwater samples from borings along Hopkins, Allen, and Avery Streets. (7/27/03 M2C/SAS) DEQ conducted a Preliminary Assessment in April 2003. Thirteen groundwater samples and 2 soil samples were collected. TCE concentrations in groundwater ranged from 1.3 ug/l to 491 ug/l. TCE was not detected in the soil samples. The highest concentrations of TCE were found in the right-of-ways near the southwest corner of the Benton County Shops and across from the

ALLEN STREET STUDY AREA (Continued) **S106115323**

railroad line. The Preliminary Report was submitted to EPA June 2003. The report was finalized in July 2003. DEQ will be requesting additional work on the Benton County Shops property. DEQ has requested from the railroad a inventory of chemicals shipped on that Monroe Branch line. DEQ has determined that further action at this site is a high priority because of the impact to the drinking water wells. (9/8/04 M2C/VCP) DEQ is using orphan account to investigate the possible sources of contamination. DEQ is planning on installing 7 wells on the Benton County Shop's property and in the neighborhood. Well installation is planned for June 2005. DEQ continues to maintain the carbon treatment units on the domestic wells. (1/28/05 M2C/VCP) DEQ installed two piezometers on Hopkins Street near the Benton County Shops. One piezometer was installed in the Willamette Silts and the other one was installed in the Linn Gravels. Water level indicate that the vertical gradient is consistently downward. (4/20/05 M2C/VCP) DEQ and Benton County Shops have agreed to use a sonic rig to complete the wells on the Benton County's property and in the neighborhood. (7/19/05 M2C/VCP) In August 2005, DEQ will be installing 7 monitoring wells in the area along Allen Street, Hopkins Avenue, Benton County Public Works facility and in residential properties. DEQ will be assessing the origin and extent of TCE and associated compounds (halogenated volatile organic compounds) in soil and groundwater, determining groundwater flow direction, conducting preliminary risk screening, and determining if additional work is necessary (2/5/08 DEH SRS) DEQ installed monitoring wells around the site, including on Benton County, city and County right of ways, and on private residences in summer 2005. Quarterly groundwater monitoring was conducted by DEQ's contractor for a year. The results of these site investigation activities were reported in the SI report (July 2006). The SI activities identified the highest levels of contamination in groundwater near the southwest corner of the Benton County Shops property. Suspect sources of the contamination remain the Benton County Shops property, the Union Pacific Railroad right-of-way, and the Hopkins Avenue right-of-way south of the Benton County shops. Additional investigations are needed to determine where the source of the contamination is. DEQ conducted a soil gas risk evaluation in the winter of 2007 to determine if TCE in groundwater could pose a threat to indoor air quality for residents living above the TCE plume. The results of the 2007 sampling do not indicate a current threat to residents from TCE vapors, but DEQ may conduct follow-up sampling during the dry season (summer 2008) to confirm that TCE vapors are not threatening these residents.

NARR Comments: [Dec. 2010] Groundwater at the Allen Street Study Area is contaminated with the solvent trichloroethylene (TCE). Eight residential water wells have been contaminated by the TCE. DEQ has used Orphan Site Account funds to fit the contaminated wells with filters to protect the residents. DEQ is also trying to locate the source of the contamination, so it can be cleaned up if possible. In 2008 a DEQ funded investigation found that TCE vapors from the

ALLEN STREET STUDY AREA (Continued) **S106115323**

groundwater should not pose a significant threat to residents living above the plume, but additional assessment may be necessary.

NARR Comments: Currently there are six different zoning designations within the boundary of the site. Due to the size of the site a number of different zoning designations are expected to remain in the future. Currently, along SW 3rd Street (Highway 99W) are businesses within the site. The businesses are currently zoned either neighborhood community minor or professional and administrative office. Commercial use along the highway is expected to continue into the future. The remaining area of the site contains several different zoning designations however they are all either low or medium density residential designations.

NARR Comments: The Mayberry Groundwater Plume islocated within a mixed commercial and residential area approximately 0.75 miles southeast from downtown, Corvallis, Oregon. The plume extends from the commercial properties along the east side of SE 3rd Street through residential neighborhood along the Willamette River. The study area includes Alexander, Arwood, Bridgeway, Chester, Craig, Debord, Mayberry, Lilly, Thompson, and Vera Streets in south Corvallis.

NARR Comments: All soil pathways have been deemed incomplete because there are no known soil impacts and no source or sources have been identified. Groundwater concentrations are below all RBCs for the volatilization to outdoor air, vapor intrusion, and groundwater in excavation pathways. Groundwater ingestion for residential receptors is the primary concern within the study area, however city water is available to the entire study area. There are three known wells that continue to have detectable concentrations of TCE in their water. Two of the wells have taken ownership of the treatment systems that DEQ originally installed in 2001. These property owners have been informed of the monitoring and maintenance needs of these systems. Future risk to these residents is acceptable based on historical information showing the effectiveness of the carbon filtration systems and that the residents will continue to monitor and maintain the filtrations systems themselves. The remaining impacted well is no longer used and that property is connected to the city system.

NARR Comments: In spring 2001, DEQ sampled 21 drinking and irrigation wells on

MAYBERRY STREET STUDY AREA (Continued) **S106236681**

Thompson, Alexander, Debord, Craig, Mayberry, Lilly, Bridgeway, Atwood, Chester, Vera, and Crystal Lake Streets. The groundwater contamination appears to migrate along the groundwater gradient towards the Willamette River. Six of the drinking water wells were contaminated with TCE. One resident hooked up to Corvallis city water and DEQ installed carbon-treatment units on the other five wells. in August of 2004 EPA Region 10 conducted a preliminary assessment to identify the possible source(s) of TCE contamination. EPA determined they would not take further action under CERCLA. DEQ continued to maintain carbon treatment units on impacted drinking water wells until July of 2018. In July of 2018 the remaining two drinking water wells in use with impacts ccepted ownership of the carbon treatment units.

Decode for NarcdID: Residual Risk Assessment
NARR Comments: There does not appear to be unacceptable health risk from the solvent contamination within the Mayberry Street Study Area. There are two known impacted residential wells within the study area. Additionally there is one well used for irrigation which had a historical detection of TCE. In a well survey the resident at 630 Chester Ave. indicated the well is only used for irrigation. A sample from this well in 2001 showed TCE was present in the well at a concentration of one microgram per liter (g/L or part per billion). This property is about 500 feet northeast (down gradient) of 570 Bridgeway Ave which has not had detectable levels of TCE for three of the last four years. This indicates the down gradient edge of the contaminant plume is likely up gradient of 630 Chester Ave. Given the limited exposure to potential impacted water only during irrigation and that concentrations across the apparent plume have declined, there is no unacceptable risk from groundwater exposure at this property. The two impacted residential wells owners have accepted the carbon filtration system equipment and are responsible for maintaining the systems that have proven effective at removing the COIs in the groundwater. The systems were originally installed, sampled, and maintained by DEQ. The systems have shown to effectively remove contaminants to below laboratory detection limits. DEQ sent multiple letters to the property owners that DEQ would be discontinuing the maintenance of these filters. The letters informed the owners that city water is available in front of their property and that they could connect to the city water supply, take ownership of the filters, or drink impacted groundwater. The owners chose to take ownership of the treatment systems and be responsible for monitoring and maintaining the systems which eliminate the risk of exposure.

MAYBERRY STREET STUDY AREA (Continued) **S106236681**

NARR Comments: The site is a large area south of the City of Corvallis and development has occurred over time. A 1913 topographic map indicates the site had one or two buildings present within the vicinity of the site however the land may have been used for farming or as a pasture. Topographic maps indicate that some development occurred especially at the southern end of the site between 1937 and 1942. By 1948 most of the infrastructure that currently exists had been built. Since that time topographic maps and aerials indicate that more lots have been developed and there has been an increase in residential density.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: In 2001, following a request from a resident concerned about their drinking water, their well water was sampled for TCE contamination from a nearby cleanup site. DEQ sampled a total of 23 wells in the area and determined there was another unknown source of the contamination. The exact cause of the area-wide groundwater contamination is unknown. A source of contamination was never identified following a Preliminary Assessment performed by the EPA. Only groundwater in the area is known to be impacted. No soil impacts were identified. In 2001, carbon filtration systems were installed on seven residential wells with impacts exceeding DEQ s residential risk-based concentration for tap water ingestion. Over time, five of the residences connected to municipal water. DEQ monitored and maintained the various filtration systems until 2018. At that time, the remaining two systems were given to the property owners who acknowledged their ownership and responsibility for sampling and maintaining the filtration systems. Groundwater in the area remains contaminated although concentrations have declined to near DEQ s residential screening level. The remaining TCE plume appears to be shrinking based on the available long-term sampling data. There are only two beneficial users of the impacted groundwater and they have filtration systems that remove the contamination. Properties within the study area are expected to remain primarily residential with some commercial property use along SW 3rd Street (Highway 99W). Municipal water is available to every property within the study area. There is currently little beneficial use of the groundwater, which is expected to remain the same or decline in the future. Public notice/opportunity to comment was given to all residents within the study area and the public. No comments on the proposed closure were received during the one-month comment period.

NARR Comments: (10/29/92 KPD/SAS) There are four areas where actual or potential releases have occurred. First is a wastewater treatment facility, located across the Willamette River from the main site. Treated wastewater, containing trace amounts of TCE, and phenol-formaldehyde resin, is discharged into the river. Sludge is sprayed onto two acres of adjacent fields. The discharges are regulated by a NPDES permit, and the facility itself is a registered hazardous-waste generator. Second, in 1978, 1,400 gallons of TCE spilled on-site. Soils in the spill area tested from 1,000 to 10,000 ppm TCE, while groundwater tested up to 254 ppm TCE. A hazardous waste permit to manage the spill as a landfill was issued under RCRA in 1985. Contaminated soil has since been removed and disposed of at Arlington, and the spill area paved over and used as a parking lot. Groundwater is still contaminated. Third, prior to 1972, pulp/paper wastes were discharged into a lagoon on-site under an NPDES permit. The lagoon was filled during construction of an administration building, and it is unknown whether any hazardous materials were left in place. Finally, mineral

EVANITE FIBER CORP. (Continued) **S108834069**

spirits were stored in a 10,000-gallon underground storage tank (UST). Mineral spirits were encountered in soils between the UST and the Willamette River during excavation for a city water line. It is not known if the contaminated soils were cleaned up. (10/01/07 SJS/SRS) Note - discharge of phenol-formaldehyde resin ceased in 2003 when the hardboard facility was shut down. (3/3/10 SJS/SRS) Cleanup activities concentrate on the significant quantity of TCE (and decay products) present near and underneath the former TCE process area. No other significant contamination is known at the site.

NARR Comments: The site is located at the confluence of the Willamette and Marys Rivers in Corvallis. Groundwater contaminated with TCE has reached the Willamette River, but concentrations do not pose a risk to human health or the environment. Indoor air quality could be impacted in the glass plant and submicro buildings due to residual soil and groundwater contamination. Groundwater contamination extends off-site to the South and Southeast but concentrations do not pose a risk to residents current use (all currently using city water from the municipal system).

Decode for NarcdID: Remedial Action
NARR Comments: (10/29/92 KPD/SAS) Spill site being managed as RCRA landfill. Some contaminated soil removed. Permit for post-closure corrective action and corrective action monitoring written by DEQ. The contaminant plume has been characterized and a pump-and-treat system has been installed for use on groundwater (the system was originally installed for use on the facility's wastewater). Site Assessment recommends no further Cleanup action unless the RCRA program refers the site back to the Cleanup Program. (9/19/00 WRM) RCRA program transfers the corrective action to the Cleanup program. DEQ, EPA, & Evanite agreed that the corrective action can be administered under a consent order attached to a Post-closure permit. (12/29/00 WRM) Consent Order and permit finalized and out for public comment from 1/16/01 - 3/3/01. (4/10/01 WRM) Consent Order signed by Evanite & DEQ. (12/26/01 CAW) Draft focused remedial investigation work plan has been submitted and approved by DEQ. (5/6/03 CAW) Remedial Investigation(RI) and Risk Assessment reports have been submitted and are pending DEQ review. (8/9/04 NHG) Focused RI approved by DEQ based on the following: risk assessment reviews and submittal of Focused Feasibility Study (FFS), which is to include air model and system evaluation for treatment system, pending. (9/15/04 NHG) Review of Human Health Risk Assessment initiated by DEQ. (10/15/04 NHG) DEQ reviewed and submitted comments on Ecological Risk Assessment (ERA) and Human Health Risk Assessment (HHRA). (11/4/04 NHG) DEQ PM and Toxicologist visit site for tour and meeting to discuss the ERA and HHRA. (11/23/04 NHG) DEQ received final ERA data from Evanite and approved Screening Level ERA. DEQ also recommends moving forward on the HHRA and FFS. (8/1/05 NHG) HHRA proposed strategy scheduled for submittal to DEQ in September 2005. The HHRA is a key component for assessing the current remedy and evaluating the effectiveness of the remedy, including the post-closure permit for the cement/soil cap. (1/6/06 AMO/SRS) DEQ received the HHRA on October 28, 2005. This report is currently under review by DEQ staff. (3/7/06 AMO/SRS) DEQ and Evanite are negotiating an addendum to the existing RI Order that will require a Focused FS to be completed. (3/25/08 SJS/SRS) After DEQ comments to the Draft FFS and several meetings ijn the Fall of 2007, Evanite has prepared a conceptual workplan of several pilot studies including soil vapor extraction, annitional well installation, pulsed pumping, and anaerobic dechlorination that are expected to removed significant TCE mass from the site. (1/5/09 SJS/SRS) Draft Focused Feasibility Study received by DEQ on May 31, 2007, currently under review. Second Addendum added to Consent Order, refining language related to Financial Assurance. (3/3/10 SJS/SRS) After DEQ review of draft feasibility study Evanite embarked on several pilot studies to more effectively treat TCE from the DNAPL source zone. This included installation of several new wells in the source zone, additional off-gas treatment measures, pulsed pumping in the source zone, soil vapor extraction in the source zone, and sub-slab depressurization beneath the submicro building. (4/30/15 SJS/SRS) Pilot studies and expansion of the well network have been very successful. In December, H&V (formerly Evanite) provided DEQ with an addendum to the FFS

EVANITE FIBER CORP. (Continued) **S108834069**

outlining a proposed remedy, this document was revised with DEQ comments, and DEQ has prepared a staff report outlining the remedy selection. The recommended remedial action consists of the following elements: Hydraulic containment Contaminant removal using soil vapor extraction and groundwater extraction, including treatment of both the water and vapor Contaminant removal using in-situ treatment through enhanced reductive dechlorination Engineering controls to control vapor intrusion risk in areas with shallow contamination and to prevent exposure to shallow soils Institutional controls to prohibit residential use in areas with shallow soil contamination and to address groundwater use in areas for which controls are needed Monitoring This staff report is open for public comment in May of 2015.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: (5/9/2018 CJB) Project management shift pending. Status of site provided in April 11 2018 Progress Report and call from Paul McBeth today. Draft CJ is with H&V attorneys for review. Off-gas treatment now with carbon filter is effective at removing TCE, no longer use CatOx unit. SVE and GWE still removing TCE under continuous operation less power outages. (2/22/2017 CJB) Following approval of the feasibility study and staff report, DEQ signed the Record of Decision for the site in Sept. 2015. The ROD established remedial action plans to cleanup TCE-contaminated groundwater at the site. DEQ is preparing to engage in a Consent Judgment with H&V to ensure implementation of the remedy. (9/10/07 SJS) In 1978 1,400 gallons of TCE spilled on site. Some soil was removed and in 1991 a pump-and-treat system was installed to remove TCE from the subsurface and to provide hydraulic containment so that contaminated groundwater does not migrate off-site. Work in the 1990s was under the supervision of the EPA RCRA program, and in 2000 was referred to DEQ's cleanup program. Since that time a focused remedial investigation (RI), a human health risk assessment, and a ecological risk assessment have been completed. A draft focused feasibility study has been completed and is currently under review by DEQ for selection of a final remedy. After review of the draft FFS, DEQ requested several areas of improvement. On January 31, 2008 Evanite agreed to several additional pilot studies and interim remedial actions.

Incident Id: 860111
Incident Narrative: PRODUCT (MINERAL SPIRITS) IS USED IN MANUFACTURING PROCESS. UNSPECIFIED QUANTITY ENTERED SEWAGE TRAPS AND THEN WAS FLUSHED BY RUNOFF INTO THE MILLRACE, WHERE IT WAS DISCOVERED. UPON OUR ARRIVAL A VISIBLE SHEEN WAS OBSERVED FROM CULVERT AT PLANT TO THE MARY'S RIVER, WITH STRONG ODOR OF PRODUCT PRESENT. WE CONFINED SPILLAGE AT CULVERT WITH INFLATED HOSE AND ABSORBANT BOOM, PLACED A SECONDARY BOOM APPROX 1/2 DISTANCE TO MARY'S RIVER, AND THEN PLACED INFLATED HOSELINE ACROSS MARY'S RIVER AT CONFLUENCE WITH WILLAMETTE. OARS NOTIFIED. PRODUCT BEING PUMPED OUT OF TRAPS AND DIKED AREAS BY RESPONSIBLE PARTY PRIOR TO OUR DEPARTURE. SOME PRODUCT WAS CAPTURED BY HOSELINE ACROSS MARY'S RIVER, AWAITING ON SITE VISIT BY DEQ PERSONNEL.

Environmental Interest/Information System:

THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.

Biological: False
Radiological: False

Chemical Id: 11299
Chemical Name: EVANITE GLASS MICROFIBER
Hazardous Ingredient: BOROSILICATE GLASS FIBERS
Hazardous Class 1: 9.0
Hazardous Class 2: Not reported
Hazardous Rank: 2
Case Number: 65997173
UNNA Number: Not reported
EPA Pest Reg: Not reported
EHA Chem: Not reported
PSM Chem: Not reported
CAA 112R Chem: Not reported

Method:
Method Used Id: 4782
Incident Id: 910406
Identity Method: 5

Released:
Release Behavior Id: 7252
Incident Id: 910406
Behavior: 10

Narrative:
Narrative Id: 3575
Incident Id: 910406
Incident Narrative: RESPONDED TO REPORT FROM PUBLIC WORKS OF SPILL OF 5000 GALS OF GLASS FIBER (300PPM) IN WATER. AREA CHECKED BY CFD & PW AND FOUND NO FIBER IN PUBLIC RIGHT AWAY DEQ CALLED BY EVANITE.
Incident Date: 12/17/1991

HSIS:
Name: HOLLINGSWORTH & VOSE FIBER COMPANY
Address: 1551 SE CRYSTAL LAKE DR
City,State,Zip: CORVALLIS, OR 97333
Facility ID: 005720
Department Or Division Of Company: GLASS FIBER DIVISION
Chemical Is Extremely Hazardous Substance (EHS: N
Contains 112R: N

NARR Comments: WR UST Program (log #02-91-4168) referred site to SAS due to the presence of incidental contamination in sample results (which could be attributable to lab error). Follow up has been through LUST program, see file 02-91-4168.

Decode for NarcdID: Remedial Action
NARR Comments: (9/4/96 SLM/SAS) Because the incidental contamination appears minor and may be the result of lab error, Site Assessment recommends referral of the site back to the Tanks Program. If incidental contamination is confirmed and is a potential risk to human health or the environment, Site Assessment would re-evaluate the site.

NARR Comments: (1/4/13 WCW/ICP) VERTEX identified an approximately 3,000 square foot area of petroleum impacted soil on to three feet in thickness within the boundary of the circular concrete foundation of the former railroad roundhouse to a maximum depth of approximately eight feet below grade. Between 12/15/11 and 1/9/12, VERTEX performed soil

701 SW 7TH STREET, LLC (Continued) **S111332327**

removal and approximately 1,077 tons of petroleum impacted soil was removed and managed offsite. Additionally, approximately 287-tons of petroleum impacted soil/debris was removed from the Debris Area excavation. 701 SW 7th Street, LLC entered the DEQ Voluntary Cleanup Program's Independent Cleanup Pathway (ICP) on 6/27/12. Based on DEQ's review of existing site information and a final ICP report (VERTEX, 4/30/11), DEQ determined that the facility wss eligible for an unrestricted No Further Action (NFA). DEQ provided a public opportunity to review and comment during August 2012 and received no comments. DEQ issued its NFA 9/5/12.

NARR Comments: The site was developed with a grain warehouse in the late 1800s. By 1912, the SE portion of the site was developed with several buildings associated with a construction company and the NE portion was developed with a railroad spur. The SE portion of the site was utilized as a livestock corral and railroad loading area from 1927 through the late 1940s. The central portion of the site was developed with a lumber mill from 1949 through the late 1950s. The central portion of the site was then developed with a single story warehouse, which was used by a fertilizer company in the late 1960s before being occupied by a seed cleaning and pakaging compnay from 1982 to 2000. The warehouse was then used by a lumber grading scanner company from 2006 until current site redevelopment.

Decode for NarcdID: Contamination
NARR Comments: Excavation activities in an alley crushed a lateral floor drain originating from a nearby auto-repair business. Waste oil and antifreeze contamination is likely in soil. Based on information from the City of Corvallis, the lateral line was likely crushed years ago. The current business owner sends oil to recycle, but has obtained permission from the City of Corvallis to discharge antifreeze. The excavation has been refilled.

NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: This site is approx 10 acres in size, and wastes are 30 ft deep. The site principally received clearing debris (stumps, brush, etc.), building demolition materials, and industrial wastes. Until 1973, the site was unregulated (1968-73) by DEQ. It is estimated that for about 2 months in 1975 the landfill received wastes from Teledyne Wah Chang Albany, likely including: metal production by-products such as pyrophorics and zirconium; low-level radioactive material; and other common industrial contaminants. An estimated 10,000 cubic yards of industrial materials were deposited at the site. Ecology and Environment performed a site investigation and hydrogeological characterization that included sampling of existing wells and the installation and sampling of new wells. Radiological water analyses showed contamination at less than three times the detection limit, and <quot>well below<quot> applicable drinking water standards. Most of the organic compounds detected in groundwater (benzene, toluene, and chloroform) were at levels below the contract required detection limit. Inorganic analysis revealed chromium at 0.057 ppm and arsenic at 0.050 ppm. The EPA primary drinking water standards for both are 0.050 mg/L. Iron and manganese were detected at levels above the secondary drinking water standards.

NARR Comments: Groundwater is known to be contaminated w/metals; therefore there is also the potential for soil and surface water contamination. The site is now being used (leased) by a local farmer for growing seed, grass, and grain. There is surface water and shallow groundwater in the immediate site area, neither of which are usually consumed or used for irrigation or recreation. However, people were observed swimming in the Willamette River (the surface water) and two (unused) irrigation wells exist on-site. Groundwater in deeper strata is used for irrigation and drinking. In addition, 0.5 mi north of the site a city of Corvallis well is used for drinking and process water for a

ROCHE RD DEMOLITION SITE (Continued) **1006858616**

manufacturing facility. It is known that 100' by 100' by 3' of TWCA waste is on-site. In 1975 a fire broke out and was associated with this waste. Therefore, the information in the referenced DEQ memo should be carefully considered. NOTE!! In 1977 a bulldozer moving refuse at Coffin Butte Landfill exploded and caught fire. The bulldozer was working in an area where wastes from Teledyne Wah Chang, Albany, had been dumped.

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: EPA conducted a PA/SI, incl. installation of monitoring wells, and recommended NFA through Superfund. They have suggested that the monitoring wells be turned over to DEQ for future use (possibly biannual sampling). Either the City of Corvallis or DEQ should consider continuing the monitoring. However, a Linn County Hwy ramp is planned, which will cross the property along the E border of the site. The SI indicates this is an area where disposal of wastes may have occurred. Therefore, care should be taken during the excavation because of pyrophoric materials buried at site. (12/24/97 SAN/SAS) Further monitoring of groundwater recommended at the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/27/2025

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/17/2025

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Data Release Frequency: Varies

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Re: Patel, Daxaben & Kantilal N.
File No.: 02-21-0155

Dear Daxaben Patel:

The Department of Environmental Quality has received a report and Bill Goff Construction certification concerning the heating oil underground storage tank (HOT) assessment and/or cleanup conducted at 1480 SW 3rd St, in Corvallis, Oregon.

Bill Goff Construction was licensed to provide heating oil tank services and has certified that the cleanup has met the Department's requirements. The Department has registered this report and certification and closed its file on the project.

The decision to register the report and certification and to close the Department's file will no longer apply if new or undisclosed facts show that the project does not comply with the rules governing heating oil tank cleanups.

Please note that you are required by state law (ORS 105.464) to provide potential buyers a disclosure statement that includes information regarding underground storage tanks, HOTs and the environmental conditions on your property.

Accordingly, we recommend that you keep a copy of this letter, the certification and any reports of testing or corrective actions relating to your HOT with the permanent property records.

Your efforts to comply with Oregon's environmental rules and regulations to ensure that your heating oil tank has been adequately addressed have been appreciated. Proper decommissioning and cleanup helps ensure protection of the environment from future heating oil tank leaks and ensures that the heating oil does not adversely impact human health or the environment. If you have any questions, please feel free to contact the HOT Program at (503) 229-6170.

Sincerely,

Michael H Kortenhof, Manager
DEQ Heating Oil Tank Program

Owner Mailing Address (if different):

Licensed Cleanup Service Provider Company: Bill Goff Construction

License Number: 16492 Expiration Date: 03/15/21

02/24/21 Date tank ☑ **removed** or decommissioned ☐ **in-place**. Approx. size of tank: 590 gallons

(check √ all that apply and provide requested information)

☐ If tank filled in-place:
What type of fill material was used? _____ How much? _____ gallons
Tank must be completely filled with inert solid material that is compacted and appropriate for site conditions.

☐ If tank was removed, where was it recycled or disposed of? Cherry City Metals Salem, OR 97304

☐ What national code of practice was followed during decommissioning?
API 1604

☐ Describe how the tank was cleaned as thoroughly as possible to the maximum extent practicable:
Tank was pumped, top cut off, interior was cleaned with fir chips & absorbent pads.

☐ How much product (oil) was removed? _____ gal. Sludge? 15 gal. Water? 590 gal.

☐ Where was the product/sludge/water recycled? ORRCO Disposed? _____

02/16/21 Date cleanup **started**. 02/26/21 Date cleanup **completed**.

(Check √ Yes or No)

☐ Yes ☑ No An INITIAL heating oil cleanup report form has already been submitted. ***If cleanup had not been started at the time of the initial report, include a new initial report form that has the missing information completed.***

☑ Yes ☐ No A narrative report is attached.

Complete the rest of this form. Be sure to sign and date page two after answering all questions.

1. How was the release discovered? Describe: Decommissioning

2. What initial measures were taken to control the spread of contamination? Describe:
Tank pumped, top cut off, interior cleaned with fir chips & absorbent pads. Bottom cut out to sample below both ends.

3. What was observed when the tank was removed from the pit or decommissioned in-place? Describe:
Soil had a slight odor of oil & was gray in color.

HOT Final Cleanup Report Form

4. How much contaminated soil was removed? _____ cubic yards 6.75 tons

5. What was done with the contaminated soil? (check √ all that apply)

[■] Disposed of at: Coffin Butte Landfill Corvallis, OR 97330 (name of disposal company)

[ ] Treated off-site at: _____ (name of treatment company)

[ ] Treated on-site. ATTACH copy of Solid Waste Letter Authorization permit approved by DEQ.
[ ] Yes [ ] No On-site treatment of contaminated soil is complete.

6. What actions were taken during cleanup? Describe:

Tank removed, soil dug out & disposed of at landfill. Site was sampled & backfilled after sample results were received.

(check √ one)

7. [ ] Yes [✔] No Groundwater was encountered in the tank pit. If yes, ATTACH a separate summary of the data collected and decision made by DEQ in accordance with OAR 340-122-0355(3).

8. What is the highest TPH-Dx concentration measured? 1100 mg/kg Sample ID No. N-1-78

9. Provide a summary of the concentrations measured in the FINAL round of samples from each sample location.
Note: Write in the specific unit of measurement for each contaminant. Write in "N/A" if sample was not analyzed for a contaminant. Use additional pages as necessary to summarize final results.

Sample ID	Sample Location	NWTPH-Dx Conc. (mg/kg)	B T E or X Detected?	Any PAH's Detected?	Media Soil/Water
N-2-94	North tank end 94"	Non-Detect	○Yes ○No ◉N/A	○Yes ○No ◉N/A	Soil
E-2-92	East tank side 92"	Non-Detect	○Yes ○No ◉N/A	○Yes ○No ◉N/A	Soil

W-2-91	West tank side 91"	Non-Detect	○Yes ○No ◉N/A	○Yes ○No ◉N/A	Soil

10. Check the type of remedial option selected for this cleanup project. Include any additional information necessary to satisfy the specific remedial option report requirements. **(check √ only one)**

[✔] Soil Matrix OAR 340-177-0065(1)(a) Note: *include matrix score sheet*
[ ] Risk-Based OAR 340-177-0065(1)(b)
[ ] Generic Remedy OAR 340-177-0065(1)(c)

11. The following information should be ATTACHED as part of this report (list the attachment number you assign for each one):

Attachment Number

A — Site map, drawn roughly to scale, showing the location of all buildings on the property and on adjacent properties and the location of the heating oil tank. Include distances in feet between objects.

A — Sketch of the property that clearly shows the sample locations and depths of all soil and/or water samples collected and identifies each location and sample with an unique sample identification code.

B — Copies of chain-of-custody forms for all soil and water samples collected.
Note: Chain-of-custody forms should include the date, time, and location of each sample collected; the name and company of the person collecting the samples; a description of how the samples were collected, stored, and shipped to the laboratory; and note any problems encountered during the cleanup or sampling process that may have affected sample integrity. Forms should clearly state the address of where samples were collected as a unique identifier.

B — Copies of all laboratory data reports. Test methods used, including method reporting limits, must be included.

C — Copies of all receipts or permits related to the disposal of any [ ] **oil / sludge**, [ ] **free product**, [✔] **contaminated soil**, and/or decommissioned [✔] **tank** and [✔] **piping** (check √ all that apply).

D — Photographs taken at the time of heating oil tank decommissioning and cleanup (not required, but helpful).

"By my signature below, I state that the information contained in this report is true and complete to the best of my knowledge."

✓ **Check each item as complete and correct.** By checking any of the boxes in this checklist, you are indicating that the statement applies to this project. If there are any exceptions to the statement, please note them in the comment area provided at the end of the checklist. If the statement does not apply, please do not check the box.

NOTE: TPH = Total Petroleum Hydrocarbons as diesel by method NWTPH-Dx

Note: The submittal of this checklist does not replace a final cleanup report

This checklist MUST be signed and dated on page 4

SECTION A - ALL CLEANUP PROJECTS

☑ A1. The release of petroleum was reported to DEQ (OAR 340-163-0020(4)).

☑ A2. No free product is present or was removed during initial abatement actions.

☐ A3. Water is present at the site and DEQ was notified. Please note the name of the DEQ Staff person notified and the date of notification _____

☑ A4. A site sketch, drawn approximately to scale, is included in the report (OAR 340-122-0345) which clearly shows:

- ☑ The location of all buildings and other key features, both man-made and natural;
- ☑ The names of adjacent streets and properties;
- ☑ The location of all excavations including those that were for the removal of tanks and associated piping as well as those that were strictly for the removal of contaminated soils;
- ☑ The location of all identified underground storage tanks, including those that were decommissioned as well as those that remain on the site in the vicinity of the cleanup;
- ☑ All soil and water sample locations including sample depths and analytical results; and
- ☐ Location of remaining contaminated soil (for risk-based decision making and generic remedy only).

☑ A5. All soil and/or water samples have been properly collected, coded, stored, shipped, and analyzed as required, and chain-of-custody forms have been filled out (OAR 340-122-0218, 340-122-0340 and 340-122-0345).

CHECK EITHER A6a or A6b, NOT BOTH

☑ A6a. Petroleum-contaminated soil has been removed from the property and properly handled, disposed of, or treated.

Amount of soil taken off-site for treatment/disposal: 6.75 Ton

Disposal/treatment location: Coffin Butte Landfill Corvallis, OR 97330

☐ A6b. No petroleum-contaminated soil removal occurred.

☑ A7. A report has been prepared which includes a detailed description of everything that was observed and performed at the site and contains all of the information required by (check one):

- ☑ OAR 340-122-0360 and OAR 340-177-0055
- ☐ DEQ's "Heating Oil Tank Generic Remedy Guidance Document" (January 24, 2000)
- ☐ DEQ's "Risk-Based Decision Making for the Remediation of Petroleum-Contaminated Sites" (September, 2003)

For Soil Matrix cleanup project, complete Section B.

◆

For Generic Remedy cleanup project, complete Section C.

◆

For Risk-Based cleanup project (simple, soil-only), complete Section D.

◆

Complete Section E for:
All sites where groundwater is encountered and soil matrix standards for closure are not met.
All sites where heating oil tank constituent concentrations exceed the risk based concentrations in Appendix A of the DEQ's "Risk-Based Decision Making for the Remediation of Petroleum-Contaminated Sites" (September, 2003).

SECTION B - SOIL MATRIX CLEANUP

☑ B8. No contaminated soil exceeding the soil matrix level established for this site remains onsite. If a pocket of contamination exceeding the matrix level remains, use the appropriate checklist in Section C, D, or E instead.

CHECK EITHER B9a or B9b, NOT BOTH

☑ B9a. TPH concentrations were all below 100 mg/kg.

☐ B9b. TPH concentrations greater than 100 mg/kg remain in the soil and a Matrix Score Sheet has been completed. Supporting documentation for the matrix evaluation is included in the report. This project is a (check one):

☐ Level 2 site (500 ppm TPH)
☐ Level 3 site (1,000 ppm TPH)

☐ B10. Groundwater was encountered, but no benzene, toluene, ethylbenzene, and total xylenes (BTEX) or polynuclear aromatic hydrocarbons (PAHs) were detected in water above risk-based concentrations. No BTEX was detected in soil samples collected from the soil/water interface pursuant to OAR-340-122-340.

SECTION C - GENERIC REMEDY

☐ C8. Contamination is limited to soil only, and the remaining contaminated soil is a minimum of _____ feet above the seasonal high groundwater level.

☐ C9. The magnitude and extent of contamination has been clearly delineated both horizontally and vertically to at least 500 mg/kg TPH.

☐ C10. The volume of contaminated soil remaining in the subsurface above 500 mg/kg TPH is less than 65 cubic yards. Volume calculations are included in the cleanup report.

☐ C11. Any contaminated soil left in place is deeper than 3 feet below ground surface.

☐ C12. The maximum heating oil TPH concentration remaining in the soil is less than 10,000 mg/kg. The maximum TPH concentration detected remaining in the soil is _____ (mg/kg).

☐ C13. Contaminated soil left in place is greater than 2,500 mg/kg TPH. A representative soil sample was collected from the most contaminated soil remaining at the site and analyzed for benzene, ethylbenzene and napththalene. No benzene detected in the soil in excess of 0.1 ppm, no ethylbenzene detected in soil in excess of 0.82 ppm and no naphthalene in soil in excess of 6.5 ppm.

SECTION D - SOIL ONLY RISK-BASED EVALUATIONS

☐ D8. Contamination is limited to soil only. The magnitude and extent of heating oil contamination (as TPH), has been clearly delineated vertically and horizontally (OAR 340-122-0240). *Note: It is often a site-by-site decision on the adequacy of this determination. Contact the Department if there are questions on this issue.*

☐ D9. A sample representative of the most contaminated soil remaining at the site was obtained and analyzed. No BTEX or PAHs were detected in the soil in excess of any risk-based concentration in DEQ's "Risk-Based Decision Making for the Remediation of Petroleum Contaminated Sites" (September 2003) guidance document.

SECTION E - GROUNDWATER AND COMPLEX RISK-BASED EVALUATIONS

Note: These certifications are complex and may require Department involvement. Please contact the Department for assistance as appropriate.

☐ E8. The magnitude and extent of heating oil contamination as TPH in soil, and BTEX & PAHs in groundwater, have been clearly delineated vertically and horizontally (OAR 340-122-0240). *Note: It is often a site-by-site decision on the adequacy of this determination. Contact the Department if there are questions on this issue.*

☐ E9. A mass balance calculation for vapor intrusion into the structure of benzene was performed using the air screening model posted on the Department's web page @ www.deq.state.or.us/lq/tanks/hot/screeningmodel.htm.

☐ E10. A detailed risk based evaluation has been conducted and the site has been found to be in compliance with OAR 340-122-0205 through 340-122-260. A detailed report documenting the finding has been prepared.

State of Oregon Department of Environmental Quality

OREGON DEPARTMENT OF ENVIRONMENTAL QUALITY
Underground Storage Tank Program

SOIL MATRIX CHECKLIST AND SOIL MATRIX SCORESHEET

☑ 1. The release of petroleum has been reported to the DEQ (0220).

☑ 2. The matrix score sheet has been completed for this site, unless the site is cleaned up to the most stringent cleanup level (0320).

☑ 3. The required hydrocarbon identification test (NWTPH-HCID) has been performed (0335(3)), and, if detectable levels were found, the appropriate analytical method or methods have been used to measure the levels of contamination (0218).

☑ 4. A sketch has been made of this site (0345(1)) which clearly shows:

- ☑ a. The location of all buildings and other key features, both man-made and natural;
- ☑ b. The names of adjacent streets and properties;
- ☑ c. The location of all excavations including those that were for the removal of tanks and associated piping as well as those that were strictly for the removal of contaminated soils;
- ☑ d. The location of all product storage tanks, lines and dispensers, including those that were decommissioned as well as those that remain on the site; and
- ☑ e. All soil and water sample locations.

☑ 5. If any contaminated soil exceeding matrix limits has been left on site, the reason for leaving this soil has been explained and the requirements of 0340(1)(f) and 0355(4) have been met.

☑ 6. If water was present in the tank pit, the Department was notified, the water was pumped from the pit, and the requirements of 0340(4) have been met.

☑ 7. All soil and/or water samples have been collected, coded, stored and shipped as specified in the rules, and proper chain-of-custody forms have been filled out (0345).

☑ 8. If a release from a waste oil tank was discovered, at least one sample has been analyzed by the methods specified in 0218(1)(b)(D).

☑ 9. If a tank was decommissioned in place, the Department gave prior approval for a site-specific sampling plan (0340(5)).

☑ 10. A report has been prepared which includes a detailed description of everything that was observed and performed at the site, contains all of the information required by the rules (0360), and presents findings and recommendations which are consistent with Department regulations.

SOIL MATRIX SCORE SHEET

1. Depth to Groundwater < 25 feet 25 - 50 feet 51 - 100 feet > 100 feet	(10) (7) (4) (1)	**10**

LUST #02-21-0155 Ref.Site: 1480 SW 3rd St Corvallis, OR 97333-1241

On 02/16/21 we arrived at the site to decommission one underground heating oil tank. The tank top was uncovered, the fill & vent were open with no caps or plugs. The tank was pumped of 590 gallons of water that was taken to Bill Goff's shop to be recycled at ORRCO. The top was cut off & the interior was cleaned with fir chips & absorbent pads. The tank was tilted toward the North end which was 30"BGS & on the South end it was 24"BGS. The bottom was cut out to sample the soil below both ends. Samples were collected & transported to FOI Laboratories of Vancouver WA 98665. On 02/18/21 sample results were received showing N-1-78 was 1100ppm & sample S-1-72 was 255ppm for NWTPH-Dx diesel. The owner & Oregon DEQ were notified of the results. The DEQ issued LUST #02/21/0155 & the owner agreed to remove soil to cleanup the site. We applied to Republic Services for a soil disposal permit to Coffin Butte Landfill Corvallis, OR 97330. Soil disposal permit #41252123236 was issued. On 02/24/21 we returned to the site, removed the tank, dug out contaminated soil & placed it in dump trailers for disposal. We collected soil samples & transported them to FOI lab for analysis. The trailers were placed in Bill's shop for the night. On 02/25/21 we disposed of 6.75 tons of soil at Coffin Butte Landfill. We received the lab results as shown below.

SAMPLE LEGEND

#	Date	Time	ID#	Depth	North of Office	West of Office	Results
1	02/24/21	12:14	N-2-94	94"	185"	62"	Non-Detect NWTPH Dx
2	02/24/21	12:19	E-2-92	94"	127"	40"	Non-Detect NWTPH Dx
3	02/24/21	12:25	S-2-90	90"	58"	62"	Non-Detect NWTPH Dx
4	02/24/21	12:31	W-2-91	91"	127"	102"	Non-Detect NWTPH Dx

We back filled with 9.48 tons of Fill Sand from Knife River of Corvallis, OR 97330. On 02/26/21 we backfilled with 3.0 tons of River Loam Soil over the compacted sand. The tank was recycled at Cherry City Metals Salem, OR 97304. It is Bill Goff's belief that this site should be certified with a Soil Matrix 2 Certification due to the onsite observations & soil sample results. If in the future any undisclosed facts or new information are found they will need to be investigated at that time.

Re: Kantilal Patel

Dear Bill Goff Construction

Enclosed are the results of analysis for samples received by the laboratory on 2/24/2021
Results in this report relate only to the samples included in this report.
The project was assigned a report number of 10045

If you have any questions concerning this report, please feel free to contact us.

Sincerely,

C.Y Chan

CY Chan

Report Narrative

Method: NWTHP-Dx **Report No.** 10045

Client: Bill Goff Construction **Date:** 2/24/2021

Sample Condition

4 Sample(s) were analyzed for NWTPH-Dx. Sample(s)were received in acceptable condition

Sample Temperature

Sample(s) arrived within acceptable temperature range

Sample Hold time

Sample(s) were analyzed within hold time

Initial Calibration

All criteria were within acceptable limits

Continuing Calibration Check (CCV)

All criteria were within method limits

Method Blank

Method Blank meets method limit

Laboratory Control Sample (LCS)

All criteria were within method limits

Duplicate Sample

All criteria were within method limits

Matrix Spike

All criteria were within method limits

Matrix Spike Duplicate

All criteria were within method limits

Non-Conformance

No non-conformances were associated with this request except noticed below

Third Party Signature Authorization For Special Waste Disposal

REPUBLIC SERVICES

Date: [ ]

Profile Number: [ ]

For office use only.

This Authorization is only valid for 3 years from the above date.

To Whom It May Concern:

Please be advised that the following company/individual has been appointed to work as our agent for purposes of managing waste materials that we may generate.

Name of Waste: Home Heating Fuel Contaminated Soil

Bill Goff
Name of Authorized Agent

Owner
Title

Bill Goff Construction
Name of Company

503.559.8670
Telephone Number

The above broker/individual is authorized to act as our authorized agent for the following purposes:

- [x] Complete and sign Special Waste Profile
- [x] Complete and sign Special Waste Profile-Recertification
- [x] Authorize amendments to Special Waste Profile
- [x] Sign contracts to dispose and/or transport material
- [x] Sign certifications necessary to comply with landfill requirements
- [x] Sign manifests to initiate shipment to disposal facilities

I understand that attaching an electronic signature, I am signing this document, consent to complete this transaction and receive all related communication electronically, and agree this document will be binding as though I had physically signed it. A printout of this document may be accepted with the same authority as the original.

If electronic signature is preferred, please submit completed (unsigned) form to your Special Waste Coordinator or Special Waste Sales Executive to initiate signature process.

Our authorized agent will notify us prior to any action stated above, and will provide us with copies of any documents bearing our name

I hereby certify that to the best of my knowledge and belief, the information contained herein is a true, complete and accurate description of the waste material being offered for disposal and all known or suspected hazards have been disclosed. All Analytical Results/Material Safety Data Sheets submitted are truthful and complete and are representative of the waste.

I further certify that by utilizing this profile, neither myself nor any other employee of the company will deliver for disposal or attempt to deliver for disposal any waste which is classified as toxic waste, hazardous waste or infectious waste, or any other waste material this facility is prohibited from accepting by law. I shall immediately give written notice of any change or condition pertaining to the waste not provided herein. Our company hereby agrees to fully indemnify this disposal facility against any damages resulting from this certification being inaccurate or untrue.

I understand that attaching an electronic signature, I am signing this document, consent to complete this transaction and receive all related communication electronically, and agree this document will be binding as though I had physically signed it. A printout of this document may be accepted with the same authority as the original.

If electronic signature is preferred, please submit completed (unsigned) form to your Special Waste Coordinator or Special Waste Sales Executive to initiate signature process.

I further certify that the company has not altered the form or content of this profile sheet as provided by Republic Services.

1. Soil	100%
2.	
3.	
4.	
5.	

Color:	Odor (describe):	Does Waste Contain Free Liquids?	% Solids:	pH:	Flash Point:
Brown/black	Slight	☐ Yes ☑ No	100%	NA	NA °F

Attach Laboratory Analytical Report (and/or Material Safety Data Sheet) including Chain of Custody and required parameters provided for this profile.

RCRA Regulatory Questions

1. Does this waste or generating process contain regulated concentrations of the following Pesticides and/ or Herbicides: Chlordane, Endrin, Heptachlor (and its epoxides), Lindane, Methoxychlor, Toxaphene, 2,4-D, or 2,4,5-TP Silvex as defined in 40 CFR 261.33? ☐ Yes ☑ No
2. Does this waste contain reactive sulfides (greater than 500 ppm) or reactive cyanide (greater than 250 ppm) [reference 40 CFR 261.23(a)(5)]? ☐ Yes ☑ No
3. Does this waste contain regulated concentrations of Polychlorinated Biphenyls (PCBs) as defined in 40 CFR Part 761? ☐ Yes ☑ No
4. Does this waste contain concentrations of listed hazardous wastes defined in 40 CFR 261.31, 261.32, 261.33, including RCRA F-Listed Solvents? ☐ Yes ☑ No
5. Has this waste been delisted under 40 CFR 260.20 and 260.22? If yes, attach the final decision to delist the waste as published in the Federal Register. ☐ Yes ☑ No
6. Does this waste exhibit a Hazardous Characteristic as defined by Federal and/or State regulations? If Yes, identify the applicable waste code and specify if the waste is hazardous as defined by Federal, State or both? ☐ Yes ☑ No
7. Does this waste contain regulated concentrations of 2,3,7,8-Tetrachlorodibenzodioxin (2,3,7,8-TCDD), or any other dioxin as defined in 40 CFR 261.31? ☐ Yes ☑ No
8. Is this a regulated Medical or Infectious Waste as defined by Federal and/or State regulations? ☐ Yes ☑ No
9. Is this a regulated Radioactive Waste as defined by Federal and/or State regulations? ☐ Yes ☑ No
10. Is this a solid waste that is not a hazardous waste in accordance with 40 CFR 261.4(b)? If yes, please provide the corresponding regulatory citation. ☐ Yes ☑ No

Republic Services Waste Handling Questions

1. Does this waste generate heat or react when contacted with water/moisture? ☐ Yes ☑ No
2. Does the waste contain sulfur or sulfur by-products? ☐ Yes ☑ No
3. Is this waste generated at a State or Federal Superfund cleanup site subject to regulation under CERCLA? ☐ Yes ☑ No

4a. Is this waste from a TSD facility, TSD-like facility or consolidator (i.e. multiple wastes/multiple generators)? ☐ Yes ☑ No

4b. If yes to the above question, please provide clarification.

Terms and Conditions of Agent Special Waste Service Agreement

4. This Agreement. **This agreement of the parties ("Agreement") for the disposal of Acceptable Waste shall consist of this Agreement, riders to the Agreement (if any), any Special Waste Profiles (including approved changes and re-certifications) and any Application, permit and approval that may be applicable to the disposal of such Acceptable Waste ("Acceptable Waste Documentation").**

5. Waste Accepted at Facility. Agent represents, warrants and covenants that the waste delivered to Company at its Facility hereunder will be Acceptable Waste and will not contain any unacceptable quantity of hazardous materials or substances, radioactive materials or substances, or toxic waste or substances, as defined by applicable federal, state, local or provincial laws or regulations. Any waste which does not meet these requirements shall hereinafter be referred to as "Unacceptable Waste". The Agent shall in all matters relating to the collection, transportation and disposal of the Acceptable Waste hereunder, comply with all applicable federal, state and local laws, regulations, rules and orders regarding the same (collectively, "Applicable Laws").

6. Acceptable Waste. Only waste that satisfies each of the following criteria shall be accepted for disposal at the Facility ("Acceptable Waste"): (a) the waste conforms to the description set forth in the Acceptable Waste Documentation; (b) the waste does not contain any Unacceptable Waste; (c) the waste is accurately reflected on any Special Waste Profile(s) as directed by the Company pursuant to Section 7; (d) the waste is acceptable for disposal at the Facility under all Applicable Laws; and (e) the transportation to and disposal of the waste at the Facility is otherwise in accordance with this Agreement. The parties may incorporate additional Acceptable Waste as part of this Agreement if prior to delivery of such Acceptable Waste to Company, Agent has provided an Application for such Special Waste and Company has approved disposal of such Acceptable Waste within the limitations and conditions contained in Company's written notice of approval of Special Waste. Title to and liability for any and all Acceptable Waste handled or disposed of by Company shall at all times remain with Generator and Agent.

7. Rights of Refusal/Rejection. The Agent shall inspect all Special Waste at the place(s) of collection and shall retrieve any and all Unacceptable Waste. Company has the right to refuse, or to reject after acceptance, any load(s) of waste(s) delivered to its Facility including if the Company believes: (a) the Agent has breached (or is breaching) its representations, warranties, covenants or agreements hereunder, or any Applicable Laws, or (b) that the waste contains Unacceptable Waste. The Company has the right to refuse, or to reject after acceptance, any load(s) of waste(s) delivered to its Facility if the Company has reason to believe, in its sole discretion, that the waste: (1) emits excessive odors; (2) negatively impacts operations at the Facility. The Company shall have the right to inspect all vehicles of waste haulers, including the Agent's vehicles, in order to determine whether the waste is Acceptable Waste pursuant to this Agreement and Applicable Laws. The Company's exercise, or failure to exercise, its rights hereunder shall not operate to relieve the Agent of its responsibilities or liability under this Agreement.

8. Limited License to Enter. This Agreement provides Agent with a license to enter the Facility for the limited purpose of, and only to the extent necessary for, off-loading Acceptable Waste at the Facility in the manner directed by Company. Except in an emergency, Agent's personnel shall not leave the immediate vicinity of their vehicle. After offloading the Acceptable Waste, Agent's personnel shall promptly leave the Facility. Under no circumstances shall Agent or its personnel engage in any scavenging of waste or other materials at the Facility. The Company reserves the right to make and enforce reasonable rules and regulations concerning the operation of the Facility, the conduct of the drivers and others on the Facility premises, quantities and sources of waste, and any other matters necessary or desirable for the safe, legal and efficient operation of the Facility including, but not limited to, speed limits on haul roads imposed by the Company, and the wearing of hard hats and other personal protection equipment by all individuals allowed on the Facility premises. Agent agrees to conform to such rules and regulations as they may be established and amended from time to time. Company may refuse to accept waste from and shall deny an entrance license to any of Agent's personnel whom Company believes is under the influence of alcohol or other chemical substances. Agent shall be solely responsible for its employees and subcontractors performing their obligations in a safe manner when at the facility of Company.

9. Charges and Payment. Payment shall be made by Agent within thirty (30) days after receipt of invoice from Company. If any amount is overdue, the Company may terminate this Agreement. Agent agrees to pay a finance charge equal to the maximum interest rate permitted by law. Agent shall be liable for all taxes, fees, or other charges imposed upon the disposal of the Acceptable Waste by federal, state, local or provincial laws and regulations. Company, from time to time, may modify its rates upon thirty (30) days written notice to Agent. For the purposes of this section, written notice may be provided via email, certified mail, or overnight courier. Agent hereby agrees that the Company's right to receive payments under this Agreement is unconditional and is not conditioned upon Agent first receiving payment from Generator or any other party.

10. Termination. Company shall have the right to immediately terminate and/or suspend this Agreement upon the occurrence of any of the following events of default: (a) Agent's failure to timely pay any amounts due under this Agreement to Company; (b) Agent's breach of any of its obligations, representations, warranties or covenants under this Agreement or any Acceptable Waste Documentation; or (c) the filing of a voluntary or involuntary petition for reorganization or bankruptcy against Agent. Agent shall be liable for any losses, claims, expenses and damages incurred by Company as a result of suspension or termination hereunder. Agent's obligations, representations, warranties and covenants regarding the Acceptable Waste delivered, and all indemnities contained in this Agreement shall survive expiration and termination of this Agreement. Additionally, Company shall have the right to terminate this Agreement for convenience at any time on 30 days' notice to Agent.

11. Driver's Knowledge and Authority. Agent represents, warrants and covenants that its drivers who deliver Acceptable Waste to Company's Facility have been advised by Agent of the Company's prohibition on deliveries of hazardous materials or substances, radioactive materials or substances, or toxic waste or substances or any other Unacceptable Waste to the Facility, of Company's restrictions on deliveries of Special Waste to the Facility of the definitions of "Hazardous Waste and Hazardous Substances" as provided by applicable federal, state and local law, rules and regulations and "Special Waste" as provided herein, and of the terms of this license to enter Company's Facility.

12. Indemnification. Agent shall indemnify, defend and hold harmless the Company and its subsidiaries, affiliates and parent corporations, as applicable and their respective officers, directors, lenders, employees, subcontractors and agents from and against any and all claims, suits, losses, liabilities, assessments, damages, fines, costs and expenses, including reasonable attorneys fees arising under federal, state or local laws, regulations or ordinances, or relating to the (a) the transportation to and/or disposal of any Unacceptable Waste at the Facility, whether or not Agent or Company was negligent in failing to identify the Unacceptable Waste at the Facility, whether or not Agent or Company was negligent in failing to identify the Unacceptable Waste; (b) the reloading and/or removal of Unacceptable Waste at the Facility; (c) any penalties, fines or remediation activities incurred by or imposed as the result of the transportation and/or disposal of Unacceptable Waste; (d) any increased inspection, testing, study and analysis costs, made necessary due to reasonable concerns of Company as to the content of the waste transported and/or disposed of at the Facility following discovery of potentially Unacceptable Waste; and (e) the Company's inability to use the Facility due to the presence of Unacceptable Waste including without limitation any consequential damages. Company may also, in its sole discretion, require Agent to promptly remove the Unacceptable Waste at Agent's sole expense. This indemnification and other obligations stated in this paragraph shall survive the termination of this Agreement.

13. Insurance. Agent shall maintain in full force and effect throughout the term of this Agreement the following types of insurance in at least the amounts specified below:

Coverages	Minimum Amounts of Insurance
Worker's Compensation	Statutory
Employer's Liability	$1,000,000
General Liability	$1,000,000 combined single limit
Automobile Liability (where Agent hauling)	$1,000,000 combined single limit

All insurance will be by insurers authorized to do business in the state in which the Facility is located. Agent shall deliver the Certificates of Insurance evidencing the foregoing policies to Company before Agent delivers any waste to the Facility pursuant to this Agreement. In addition, the (i) Commercial General Liability (including the Umbrella/Excess policy) policy must include Contractual Liability coverage specifically covering Agent's indemnification of Company, and (ii) The Commercial General Liability, Automobile Liability and the Umbrella/Excess Liability policies must be written on an "occurrence form". Said policies shall not thereafter be cancelled, be permitted to expire or lapse, or be changed without 30 days advance written notice has been given to Company. With the exception of workers' compensation, Company shall be shown as additional insureds under all of the insurance policies required by this Section 13. The policies required by this Section 13 shall be primary and non-contributory with respect to Company, and the insurance providers shall agree to waive their rights of subrogation against Company.

14. Failure to Perform. Except for Generator's obligation to pay amounts due to Company, neither party hereto shall be liable for its failure to perform hereunder due to circumstances not its fault and beyond its reasonable control, including, but not limited to, strikes or other labor disputes, riots, protests, civil disturbances or sabotage, changes in law, fires, floods, compliance with governmental requests, explosions, accidents, weather, loss of required natural resources, or acts of God affecting either party hereto. In the event of any of the circumstances provided for in the preceding sentence, including, but not limited, to, whether any federal, state or local court or governmental authority takes any action which would (i) cause or restrict operations at the Facility, (ii) limit the quantity or prohibit the disposal of Acceptable Waste at the Facility, or (iii) limit the ability of or prohibit Agent from delivering Acceptable Waste to the Facility, the Company shall have the right, at its option, to reduce, suspend or terminate Agent's access to the Facility immediately, without prior notice and without any additional liabilities between the parties, other than Agent's payment obligation hereunder. Neither Party is required hereunder to settle any labor dispute against its own best judgment.

15. Assignment. Agent may not assign, transfer or otherwise vest in any other Company, entity or person, in whole or in part, any of its rights or obligations under this Agreement without the prior written consent of the Company, provided, however, that the Company may without any such prior written consent, assign its rights and/or obligations under the Agreement to a subsidiary or affiliate corporation.

16. Right of Disposal. This Agreement does not grant any rights to dispose of waste other than in accordance herewith.

17. Continuing Compliance. The Agent has a continuing obligation to inform the Company of any new information, or information not previously provided to the Company by Agent and/or Generator which may affect the acceptability of the waste by the Company. Further, the Agent shall comply with all Company requests for evidence of Agent's continuing compliance with the terms of this Agreement including but not limited to the following: (i) providing new, updated Special Waste profiles on the waste(s) offered for disposal or, (ii) providing appropriate certification that the Special Waste being offered for disposal is accurately reflected by the applicable Special Waste Profile or, (iii) re-sample the waste at Agent's expense if reasonable cause exists as to its acceptability under the terms of this Agreement or, (iv) allow the Company to re-sample the waste at Agent's expense if reasonable cause exists as to its acceptability under the terms of this Agreement or any Acceptable Waste Documentation.

18. Miscellaneous.

(A) This Agreement shall be governed by the laws of the State in which the Facility is located.

(B) No waiver of a breach of any of the obligations contained in the Agreement shall be construed to be a waiver of any prior or succeeding breach of the same obligation or of any other obligation of this Agreement.

(C) Unless otherwise provided for herein, no modification, release, discharge or waiver of any provision or obligation hereof shall be of any force, or effect, unless in writing signed by all parties to this Agreement.

(D) Agent shall treat as confidential and not disclose to others during or subsequent to the terms of this Agreement, except as is necessary to perform this Agreement, or to comply with any applicable law or regulation, any information (including any technical information, experience or skills) regarding the Company's plans, programs, clients, processes, products, costs, equipment or operations which may come within the knowledge of the Agent or its employees in the performance of this Agreement, without in each instance securing the prior written consent of the other Company.

(E) If any term, phrase, obligation or provision of this Agreement shall be held to be invalid, illegal or unenforceable in any respect, this Agreement shall remain in effect and be construed without regard to such term, phrase, obligation or provision.

(F) This Agreement constitutes the entire understanding between the parties, replacing and rescinding any prior agreements between the parties, and shall be binding upon all parties hereto, their successors, heirs, representatives and assigns. Any provision, term or condition in any acknowledgement, purchase order or other response by Agent which is in addition to or different from the provisions of this Agreement shall be deemed objected to by the Company and shall be of no effect.

(G) Agent represents, warrants and covenants that it is and during the term of this Agreement, will remain in compliance with and will perform its obligations pursuant to all applicable laws and regulations and shall indemnify, defend and hold harmless the Company from any breach thereof.

(H) It is the understanding and agreement of the parties that the Company is an independent contractor, and is not an agent, nor an authorized representative of the Agent. It is the further understanding and agreement of the parties that Agent is an authorized representative of Generator.

(I) Company may provide any of the Services covered by this Agreement through any of its affiliates or subcontractors, provided that Company shall remain responsible for the performance of all such services and obligations in accordance with this Agreement.

19. Notices. Unless otherwise provided herein, all notices herein provided for shall be considered as having been given upon being placed in the mail, certified postage prepaid addressed to the Company or Agent at the address herein set forth in this Agreement or to such other address as may be given to the other party in writing.

20. Liquidated Damages. If Agent terminates this Agreement before its expiration other than as a result of a breach by Company, Agent shall pay Company an amount equal to the most recent month's monthly charges multiplied by the lesser of: (a) six months or (b) the number of months remaining in the term. Agent acknowledges that in the event of such a termination, actual damages to Company would be uncertain and difficult to ascertain, such amount is the best, reasonable and objective estimate of the actual damages to Company, such amount does not constitute a penalty, and such amount is reasonable under the circumstances. Any amount payable under this paragraph shall be in addition to amounts already owing under this Agreement.

OREGON DEPARTMENT OF ENVIRONMENTAL QUALITY
Underground Storage Tank Program

HEATING OIL TANK SERVICES
SERVICE PROVIDER REPORT CERTIFICATION

INITIAL HEATING OIL CLEANUP REPORT FORM

State of Oregon Department of Environmental Quality

If required by OAR 340-177-0055(5), complete this INITIAL report and submit it to the DEQ NWR office **as soon as possible**, but at least within 45 days from the date the release from a heating oil tank is confirmed.

Property Owner Name: Daxaben & Kantilia Patel DEQ Cleanup File No.: 02-21-0155

Property Address: 1480 SW 3rd St.

City/State/Zip Code: Corvallis, OR 97333-1241 County: Benton

Owner Phone Number: 541-752-8756 - 541-829-2556

Owner Mailing Address (if different):

02/18/21 — Date the release was originally suspected (e.g. water in tank) or confirmed (sight, smell, test).

02/18/21 — Date the release was reported to DEQ. Name of DEQ person contacted: On-Line
Note: Releases must be reported within 72-hours by owner or service provider.

Check √ One

☑ Yes ☐ No — A visual inspection of the release has been made and immediate actions taken to prevent any further release or migration of heating oil into surrounding soils or groundwater.

☑ Yes ☐ No — Any fire, explosion, and/or vapor hazards in soil or groundwater have been identified and mitigated.
☐ Yes ☐ No ☑ NA Monitoring for hazards has continued beyond initial identification.

☑ Yes ☐ No ☐ NA — As much heating oil/sludge as possible has been removed from the tank.
Gallons removed: 590
Name of oil ☑ **recycling** or ☐ **disposal** company (check √ one):
Provide Name Here: ORRCO

☑ Yes ☐ No — Hazards posed by contaminated soil that has been excavated or exposed have been remedied.
Note: Contaminated soil cannot be stored on-site for more than 30 days without a permit from DEQ.

☐ Yes ☑ No — Free product has been observed in the ☐ **tank pit** and/or ☐ **groundwater** (check √ any that apply).
Note: Any free product observed must be removed and properly treated/disposed.

☐ Yes ☑ No — Groundwater has been encountered during tank decommissioning or cleanup actions taken to-date.
Note: DEQ must be notified immediately when groundwater is encountered at any time.

☑ Yes ☐ No — Measurements for the presence of a release where contamination is most likely to be encountered have been made at the time of this report. If yes, note highest TPH sample result: 1100 mg/kg TPH-Dx.

☑ Yes ☐ No — Cleanup actions have been initiated at the time of this report. If no, include proposed schedule for cleanup and state reason for delayed cleanup on back of this form: Proposed cleanup date (mo/yr) 02/26

Re: Patel, Daxaben & Kantilal N.
File No.: 02-21-0155

Dear Daxaben Patel:

The Department of Environmental Quality has received a report and Bill Goff Construction certification concerning the heating oil underground storage tank (HOT) assessment and/or cleanup conducted at 1480 SW 3rd St, in Corvallis, Oregon.

Bill Goff Construction was licensed to provide heating oil tank services and has certified that the cleanup has met the Department's requirements. The Department has registered this report and certification and closed its file on the project.

The decision to register the report and certification and to close the Department's file will no longer apply if new or undisclosed facts show that the project does not comply with the rules governing heating oil tank cleanups.

Please note that you are required by state law (ORS 105.464) to provide potential buyers a disclosure statement that includes information regarding underground storage tanks, HOTs and the environmental conditions on your property.

Accordingly, we recommend that you keep a copy of this letter, the certification and any reports of testing or corrective actions relating to your HOT with the permanent property records.

Your efforts to comply with Oregon's environmental rules and regulations to ensure that your heating oil tank has been adequately addressed have been appreciated. Proper decommissioning and cleanup helps ensure protection of the environment from future heating oil tank leaks and ensures that the heating oil does not adversely impact human health or the environment. If you have any questions, please feel free to contact the HOT Program at (503) 229-6170.

Sincerely,

Michael H Kortenhof, Manager
DEQ Heating Oil Tank Program

This report outlines activities undertaken by Point Source Solutions, LLC (Point Source) on behalf of Corvallis Housing First at 1480 SW 3rd Street, Corvallis, Oregon 97333 ("Site") to address concerns raised by Oregon Department of Environmental Quality (ODEQ) regarding potential impact from various off-site sources as well as potential impacts from residual pesticides that may have been applied to the Site prior to the current development.

1.0 GENERAL SITE DESCRIPTION

The Site is located on the west side of SW 3rd Street, approximately 120 feet south of SW Avery Avenue. The east portion of the Site is developed with an approximately 1,680 square-foot office/residence, an approximately 660 square-foot storage building (former detached garage), and two single story motel buildings (2,436 square-feet and 4,536 square-feet). The south motel building was developed in 1940, the office/residence was built in 1953, and the north motel building was built in 1979. The Site is identified by Benton County as tax lot 12502CC01100 totaling 1.33 acres and is zoned Mixed Use Community Shopping (MUCS) by the City of Corvallis.

The Site is depicted on **Figure 1** (Site Location Map), **Figure 2** (Topographic Map), and **Figure 3** (Site Plan).

1.1 Site Hydrogeology

According to ODEQ files for nearby properties, shallow groundwater has been encountered at 10 to 23 feet below ground surface in the Site area. An irrigation well is present on the Site. Records indicate that this well was installed in 2011 to a depth of 39 feet with a recorded static water level of 15 feet. A copy of the corresponding well log is included as **Appendix A**. Plans are in place to have the well permanently decommissioned.

Municipal drinking water is supplied to the Site and all adjoining properties; therefore, groundwater is not a source of drinking water for the Site.

Based on a review of the Corvallis, Oregon Quadrangle 7.5-minute series topographic map, groundwater flow in the Site vicinity is likely toward the confluence of the Mary's River and the Willamette River, located approximately 1,800 feet north-northeast of the Site at its closest point. A local Mill Race is located approximately 300 feet southeast of the Site at its closest point.

2.0 BACKGROUND INFORMATION

Phase I Environmental Site Assessment, Motel Property, 1480 SW 3rd Street, Corvallis, Benton County, Oregon, Point Source Solutions, Project number OR201223-1, dated January 12, 2021

Below are excerpts from the 2021 Phase I ESA report.

Review of historical aerial photographs revealed that the Property and surrounding area was in agricultural use from sometime before 1936 until sometime before 1948. The Oregon Department of Environmental Quality (ODEQ) has published guidance for evaluating residual pesticide impact on agricultural properties that are to be redeveloped for residential use. Point Source was not provided with documentation for the sampling of agricultural chemicals on the Property.

A possible UST vent line was observed at the southwest corner of the office/residence during the site

5317 NE St Johns Rd, Suite D
Vancouver, WA 98661
503.236.5885

reconnaissance. Ms. Marty Fulford reported that an UST was confirmed at this location subsequent to the site reconnaissance. It is unknown at this time whether a release from the UST has occurred.

Subsequent to the above referenced Phase I ESA report, Corvallis Budget Inn retained Bill Goff Construction to address the UST observed by Point Source. Bill Goff Construction accessed the tank, removed approximately 590 gallons of water and heating oil, and collected soil samples on February 16, 2021. Laboratory analysis confirmed that a release of heating oil had occurred and the release was reported to ODEQ and assigned LUST ID 02-21-0155. Bill Goff Construction returned to the Site on February 24, 2025, and removed the tank and approximately 6.75 tons of impacted soil. Four confirmation soil samples were collected from the excavation at that time. The samples were collected at depths ranging from 90 to 94 inches below ground surface. Diesel-range petroleum hydrocarbons were not detected in any of the confirmation samples.

A copy of the Bill Goff Construction report is included in **Appendix B**.

3.0 PREPARATORY ACTIVITES

3.1 Site-Specific Health & Safety Plan (HASP)

A site-specific HASP was prepared for the drilling activities that included a pre-work, daily safety meeting conducted at the site prior to the commencement of the fieldwork and all field personnel directly involved in the field work were made aware of potential health and safety issues during the briefing. Topics included potential exposure to constituents of interest, personal protective equipment, location of first aid kit, and location/directions to closest emergency medical facility.

3.2 Utility Survey

Oregon law requires that, at least 48 hours prior to the initiation of any subsurface work (drilling, backhoe operation, etc.), a utility inspection be performed at the Site. This inspection consists of the marking of underground utility locations by authorized utility locating personnel. Relevant tasks included the following:

- A public utility locate was ordered to mark out all public utilities in the public right-of-ways and on the Site.
- A geophysical survey of the Site was performed on March 12, 2025 to locate utilities, buried objects, and/or other obstructions at each boring location.

4.0 SUBSURFACE INVESTIGATION

4.1 Soil Gas Vapor Sampling

A total of five soil gas (vapor) samples were collected across the Site.

- Soil gas sample SG1 was collected at 5.0 feet below ground surface (bgs) near the southwestern Site boundary within the location of the former orchard. A duplicate sample was collected from this location.
- Soil gas sample SG2 was collected at 5.0 feet bgs near the southwestern Site boundary within the location of the former orchard.
- Soil gas sample SG3 was collected at 5.0 feet bgs immediately west of the office building in the northeast portion of the Site, approximately 12 feet from the north property boundary of the Site.

- Soil gas sample SG4 was collected at 5.0 feet bgs immediately west of the office building in the northeast portion of the Site.
- Soil gas sample SG5 was collected at 5.0 feet bgs along the eastern Site boundary approximately 10 feet east of the onsite irrigation well and north of the main entrance.
- Soil gas sample SG6 was collected at 5.0 feet bgs in the central portion of the Site adjacent to soil boring SB5.

Soil gas samples were collected via GeoProbe PRT vapor sampling system assembly driven 5 feet below ground surface and connected to a sampling train that included approximately 7 feet of Teflon tubing, brass swage fittings, and a laboratory-provided carbon filled sorbent tube. After approximately 20-minutes of equilibration time the air volume within the Teflon tubing was purged for a minimum of three volumes using a low flow sampling pump. Paper towels saturated with 2-Propanol were placed over the equipment fittings during sample collection as a quantifiable leak check compound. Borings were filled with bentonite chips after completion and hydrated with tap water.

Sample locations are depicted on **Figures 4 and 5 (**Sample Location Diagrams).

4.2 Soil Sampling

The western portion of the Site, formerly occupied by the agricultural orchard, was divided into two approximately equal halves and identified as Decision Unit 1 and Decision Unit 2. The Decision Units were then subdivided into equally gridded cells in a map view layout where four (4) cells per Decision Unit were randomly selected as soil grab sample locations.

The soil collected from grab sample locations are described as follows:

Comp1 and Comp1a were advanced to approximately 6 inches bgs and 12 inches bgs respectively within the same borings in the western portion of the Site within Decision Unit 1 using a hand auger with a 4-inch bucket.

- Comp1 consisted of soils from each of the four randomly selected grab sample locations to a maximum explored depth of 6 inches bgs. Each grab sample was then placed in a decontaminated stainless steel mixing bowl and homogenized until all material was able to pass through a number 4 sieve excluding anomalous gravels and debris not appropriate for analytical purposes.
- Comp1a consisted of soils from each of the four randomly selected grab sample locations at sample interval 6-12 inches bgs to a maximum explored depth of 12 inches bgs. Each grab sample was then placed in a decontaminated stainless steel mixing bowl and homogenized until all material was able to pass through a number 4 sieve excluding anomalous gravels and debris not appropriate for analytical purposes.

Comp2 and Comp2a were advanced to approximately 6 inches bgs and 12 inches bgs respectively within the same borings in the western portion of the Site within Decision Unit 2 using a hand auger with a 4-inch bucket.

- Comp2 consisted of soils from each of the four randomly selected grab sample locations to a maximum explored depth of 6 inches bgs. Each grab sample was then placed in a decontaminated stainless steel mixing bowl and homogenized until all material was able to pass through a number 4 sieve excluding

anomalous gravels and debris not appropriate for analytical purposes.

- Comp2a consisted of soils from each of the four randomly selected grab sample locations at sample interval 6-12 inches bgs to a maximum explored depth of 12 inches bgs. Each grab sample was then placed in a decontaminated stainless steel mixing bowl and homogenized until all material was able to pass through a number 4 sieve excluding anomalous gravels and debris not appropriate for analytical purposes.

Soils consisted of silty loam with some gravels to a maximum explored depth of approximately 1 foot below ground surface.

Soil boring locations are depicted on **Figure 3** (Soil and Well Sample Location Diagram)**.**

4.3 Well Water Sampling

Well water sample W1 was collected directly from the onsite well using the submersible pump system already installed for onsite use. Approximately three well volumes were purged prior to collection. A multi-meter and flow through cell was utilized to ensure stabilization of parameters prior to collection. These parameters included dissolved oxygen, pH, ORP, and turbidity.

Nitrile gloves were worn whenever handling samples, equipment, or any other potentially contaminated items.

5.0 LABORATORY ANALYTICAL RESULTS

All samples were transported to Friedman and Bruya, Inc. of Seattle, Washington with organophosphorus analysis in soil subtracted to Onsite Environmental Laboratories.

- Soil samples were analyzed by EPA Method 8081 for organochlorine pesticides, EPA Method 8270/SIM for organophosphorus pesticides, and EPA Method 6020 for metals.
- Water samples were analyzed by EPA Method 8260 for Volatile Organic Compounds (VOCs), EPA Method 8270 for Polycyclic Aromatic Hydrocarbons (PAHs), NWTPH-Gx and NWTPH Dx for gasoline and diesel range organics, EPA Method 8081 for organochlorine pesticides, and EPA 6020 for metals.
- Soil-gas samples were analyzed by Method TO-17 for VOCs, gasoline and diesel range hydrocarbons, and 2-propanol (leak detection).

5.1 Soil Sample Results

Soil samples were collected on March 12, 2025.

- Soil samples Comp1, Comp1a, Comp2, and Comp2a did not report any results over Laboratory Method Reporting Limits (MRLs) for analyzed organochlorine and organophosphorus pesticides.
- Select metals were detected above MRLs but below ODEQ residential RBCs for dermal contact and ingestion (RBCss), ODEQ regional background concentrations for the south Willamette Valley, and/or EPA RSLs for residential soil ingestion where state levels were not provided. The highest concentrations of these select metals include Vanadium at 79 mg/kg, total chromium at 26 mg/kg, nickel at 14 mg/kg, copper at 22 mg/kg, zinc at 110 mg/kg, arsenic at 6.3 mg/kg, barium at 180 mg/kg, and lead at 81 mg/kg.

- Cobalt was detected at a concentration in Comp2 and Comp2a at 14 mg/kg exceeding the EPA RSL of 2.3. ODEQ does not provide screening level data or background concentrations for cobalt. Point Source reviewed available toxicology publications to establish a potential background level for cobalt. According to the CDC's Agency for Toxic Substances and Disease Registry, cobalt is commonly found in soils at concentrations of 20-25 mg/kg (average), well above the reported result in Comp2 and Comp2a of 14 mg/kg. Please see the link below for reference.

  https://www.atsdr.cdc.gov/toxprofiles/tp33-c5.pdf

5.2 Well Water Sample Results

Groundwater samples were collected on March 12, 2025.

- Well Water Sample W1 did not contain concentrations of organochlorine pesticides, PAHs, and gasoline range organics over laboratory MRLs.
- Two VOCs were detected above MRLs but below ODEQ's residential RBCs for drinking water (RBCtw) and vapor intrusion into buildings (RBCwi). This included methyl t-butyl ether (MTBE) at 1.9 ug/L and Toluene at 1.7 ug/L.
- Diesel range organics were detected at 58 ug/L in sample W1 below the residential RBCtw and RBCwi of 100 ug/L and 400ug/L respectively.
- Metals detected above MRLs but below the ODEQ residential RBCtw and/or EPA RSLs for tapwater in sample W1 include vanadium at 1.1 ug/L, nickel at 2.4 ug/L, zinc at 65 ug/L, molybdenum, and barium. Arsenic was detected at a concentration of 3.2 ug/L which exceeds the RBCtw, however, this is within normal concentrations of regional groundwater. Please see the link below for reference.

  https://pmc.ncbi.nlm.nih.gov/articles/PMC1637400/

5.3 Soil Gas Sample Results

Soil gas samples were collected on April 10, 2025.

- None of the detections in soil gas samples exceeded ODEQ residential screening levels for vapor intrusion into buildings (RBCsv).
- Benzene was detected at the ODEQ residential RBCsv of 12 ug/m3 in sample SG4.
- Low levels of VOC constituents were detected above MRLs in all soil gas samples with SG2 having the highest concentrations out of all samples collected except for benzene in SG4. Constituent concentrations detected in SG2 include Benzene at 11 ug/m3, TCE at 1.9 ug/m3, toluene at 32 ug/m3, ethylbenzene at 8 ug/m3, total xylenes at 65 ug/m3, 1,3,5 TMB at 1.6 ug/m3, 1,2,4 TMB at 7.1 ug/m3, naphthalene at 1.3 ug/m3, and GRO at 1,000 ug/m3.

Sample analytical results are summarized in the in the appendices of this report.

Laboratory reports are included as **Appendix C** of this report.

6.0 QUALITY ASSURANCE/QUALITY CONTROL REVIEW

Duplicate samples were collected for all media and results were within normal variance for laboratory error

and did not indicate QA/QC concerns regarding analytical sample integrity. Where analytical concentrations for individual chemicals were higher in the sample duplicate, those concentrations are interpreted as valid.

Duplicate sample results are presented in the data analytical tables of this report. Prior to collecting the the soil samples, the hand auger used to collect the soil samples was rinsed with distilled water. This rinsate was collected in the appropriate laboratory provided containers and was analyzed for the same constituents as the soil samples (equipment blank).

Laboratory QA/QC measures were performed through data validation of available analytical data generated as part of these sampling events. Data validation considered the following:

- Method Detection and/or Reporting Limits
- Laboratory Matrix Blanks
- Sample Holding Times
- Surrogate and Matrix Spike Recoveries, and
- Laboratory Duplicate Analysis Results

Friedman and Bruya, Inc. did not report any qualifiers for the investigation that would indicate problems with the sample results. Diesel range organics detected in water samples were flagged with an "x" indicating the hydrocarbon chains were outside normal ranges. According to the lab reports all analyses were performed with the appropriate Batch QC (including Sample Duplicates, Matrix Spike and/or Matrix Spike Duplicates) in order to meet or exceed method and regulatory requirements. Exception are qualified in the analytical report. In cases where there is insufficient sample material provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) is analyzed to demonstrate accuracy and precision of the extraction and analysis.

6.1 Deviations from the Scope

In a deviation from the scope of work, the soil gas sample proposed to be collected near the south property boundary could not be collected due to saturated soils. The static water level in this boring was observed at approximately 2.5 feet below ground surface. This data gap is not considered significant given the data collected on other portions of the Site. The trip blank for this project was erroneously excluded from the sample cooler. All other aspects of the scope of work were executed as proposed.

7.0 INVESTIGATION DERIVED WASTE

Soil cuttings from soil gas borings were transported to the Point Source shop for future disposal. Purge water from the irrigation well was placed in two 55-gallon steel drums and was left on the Site pending future disposal.

8.0 CONCLUSIONS

The conclusions contained in this report are based upon site conditions present at the time of the investigation conducted on March 12, 2025 and April 10, 2025.

8.1 Soils

- Soil samples Comp1, Comp1a, Comp2, and Comp2a did not contain concentrations of organochlorine

5317 NE St Johns Rd, Suite D
Vancouver, WA 98661
503.236.5885

and organophosphorus pesticides over laboratory MRLs.

- Select metals were detected above laboratory MRLs, but below ODEQ residential RBCs for dermal contact and ingestion (RBCss), ODEQ regional background concentrations for the south Willamette Valley, and/or EPA RSLs for residential soil ingestion where state levels were not provided. The maximum concentrations of these select metals include Vanadium at 79 mg/kg, total chromium at 26 mg/kg, nickel at 14 mg/kg, copper at 22 mg/kg, zinc at 110 mg/kg, arsenic at 6.3 mg/kg, barium at 180 mg/kg, and lead at 81 mg/kg.
- Cobalt was detected in Comp2 and Comp2a at 14 mg/kg which exceeds the EPA RSL of 2.3. ODEQ does not provide screening level data or background concentrations for cobalt. Point Source reviewed available toxicology publications to establish a potential background level for cobalt. According to the CDC's Agency for Toxic Substances and Disease Registry, cobalt is commonly found in soils at concentrations of 20-25 mg/kg (average) well above the reported result in Comp2 and Comp2a of 14 mg/kg.

8.2 Well Water

- Well Water Sample W1 did not contain concentrations of organochlorine pesticides, PAHs, and gasoline range organics over laboratory MRLs.
- Two VOCs were detected in well water above MRLs but below ODEQ's residential RBCs for drinking water (RBCtw) and vapor intrusion into buildings (RBCwi). This included methyl t-butyl ether (MTBE) at 1.9 ug/L and Toluene at 1.7 ug/L.
- Diesel range organics were detected at 58 ug/L in sample W1 below the residential RBCtw and RBCwi of 100 ug/L and 400ug/L respectively.
- Metals detected above MRLs but below the ODEQ residential RBCtw in sample W1 include vanadium at 1.1 ug/L, nickel at 2.4 ug/L, zinc at 65 ug/L, molybdenum, and barium. Arsenic was detected at a concentration of 3.2 ug/L which exceeds the RBCtw, however, is within normal concentrations of groundwater regionally. Furthermore, the Site is connected to municipal water for drinking water purposes. The onsite well was used solely for irrigation and plans are in place to permanently decommission the well.

8.3 Soil Gas

- None of the soil gas samples collected exceeded ODEQ residential screening levels for vapor intrusion into buildings (RBCsv). Benzene was detected at the ODEQ residential RBCsv of 12 ug/m3 in sample SG4 (detected concentration equal to the referenced screening level). Low levels of VOC constituents were detected above MRLs in all soil gas samples with SG2 having the highest concentrations out of all samples collected except for benzene in SG4. Constituent concentrations detected in SG2 include Benzene at 11 ug/m3, TCE at 1.9 ug/m3, toluene at 32 ug/m3, ethylbenzene at 8 ug/m3, total xylenes at 65 ug/m3, 1,3,5 TMB at 1.6 ug/m3, 1,2,4 TMB at 7.1 ug/m3, naphthalene at 1.3 ug/m3, and GRO at 1,000 ug/m3.

Based on the results of this investigation it does not appear that an unacceptable exposure risk to current or future Site occupants is present. Further investigative measures are not recommended at this time.

QUESTIONNAIRES AND CLIENT/OWNER/USER PROVIDED DOCUMENTATION

ASTM USER QUESTIONNAIRE

ASTM E-1527 PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER QUESTIONNAIRE AND DISCLOSURE STATEMENT

User: In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

1. PROPERTY INFORMATION:

Property Name: Third Street Commmons		
Property Address: 1480 SW 3rd Street		
City: Corvallis	State: Oregon	Zip: 97333
Assessor's Parcel Number: 12502CC01100		

2. COMPLETED BY

Signature: Andrea Myhre	Date: 5/8/25
Printed Name: Andrea Myhre	Title: Executive Director

3. ASTM-REQUIRED INQUIRIES

Property Owner: Name: Corvallis Housing First Phone: 541.250.9479 Email: director@corvallishousingfirst.org	
Key Site Manager (Site contact): Name: SAME Phone: Email:	
1) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25). Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law?	☐ Yes ☑ No
2) Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26). Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?	☐ Yes ☑ No
3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?	☐ Yes ☑ No

Please return completed form and any attachments via fax to:
Point Source Solutions, LLC, 5317 NE St Johns Road, Suite D, Vancouver, WA 98661
Telephone: 503-916-9254 Fax: 503-224-0449

4) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?	☑ Yes ☐ No
5) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30). Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *user*, (a.) Do you know the past uses of the *property*? (b.) Do you know of specific chemicals that are present or once were present at the *property*? (c.) Do you know of spills or other chemical releases that have taken place at the *property*? (d.) Do you know of any environmental cleanups that have taken place at the *property*?	☑ Yes ☐ No
6) The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?	☐ Yes ☑ No

Please provide an explanation of all affirmative answers or attached additional documentation.

The property backs up to the County of Benton maintenance department. There are one gas and one diesel above ground tanks that are 10,000 gallons each. There was a discharge on an adjacent property that has resulted in a plume. The tank on the subject property was decommissioned. The well has also been decommissioned.

7) Please state reason for procuring this Phase 1 ESA:

☐ Qualify for Innocent Landowner defense to CERCLA Liability.

☑ Other: (state below)

CHF will be demolishing & reconstructing a permanent supportive housing project. OHCS, a funding source for the project, is requiring an updated Phase 1.

In addition, certain information should be collected, if available, and provided to the *environmental professional*. This information is intended to assist the *environmental professional* but is not necessarily required to qualify for one of the *LLPs*. The information includes:

(a) the reason why the Phase I is required,

(b) the type of *property* and type of *property* transaction, for example, sale, purchase, exchange, etc.,

(c) the complete and correct address for the *property* (a map or other documentation showing *property* location and boundaries is helpful),

(d) the scope of services desired for the Phase I (including whether any parties to the *property* transaction may have a required standard scope of services on whether any considerations beyond the requirements of Practice E 1527 are to be considered),

(e) identification of all parties who will rely on the Phase I *report*,

(f) identification of the site contact and how the contact can be reached,

(g) any special terms and conditions which must be agreed upon by the *environmental professional*, and

(h) any other knowledge or experience with the *property* that may be pertinent to the *environmental professional* (for example, copies of any available prior *environmental site assessment reports*, documents, correspondence, etc., concerning the *property* and its environmental condition).

Please return completed form and any attachments via fax to:
Point Source Solutions LLC, 5317 NE St Johns Road, Suite D, Vancouver, WA 98661
Telephone: 503-916-9254 Fax: 503-224-0449

ENVIRONMENTAL PRE-SURVEY QUESTIONNAIRE AND DISCLOSURE STATEMENT

ASTM E-1527 PHASE I ENVIRONMENTAL SITE ASSESSMENT
PRE-SURVEY QUESTIONNAIRE AND DISCLOSURE STATEMENT

Borrower: Please complete this questionnaire before the Consultant's site visit. For those questions that are not applicable to the subject please respond with an "N/A". This document must be signed by the Owner or his/her representative (Item No. 2). If you have any questions about how to answer any of the questions please call Point Source. If additional pages for response are necessary please attach them to this form. Clearly mark all references to the appropriate question number(s). This document and your written response to same will be an exhibit in Point Source's report.

1. PROPERTY INFORMATION:

Property Name: Third Street Commmons		
Property Address: 1480 SW 3rd Street		
City: Corvallis	State: Oregon	Zip: 97333
Assesor's Parcel Number: 12502CC01100		

2. COMPLETED BY

Signature: Andrea Myhre	Date: 5/8/25
Printed Name: Andrea Myhre	Title: Executive Director

3. ASTM-REQUIRED INQUIRIES

Property Owner:
Name: Corvallis Housing First Phone: 541.250.9479 Email: director@corvallishousingfirst.org

Key Site Manager (Site contact):
Name: SAME Phone: Email:

If not residential Property, please provide list of tenants, including contact names and phone numbers.

Can you provide a Current Title Abstract for the Property, including a chain of Title? If so, please send documents along with completed questionnaire to Point Source	☑ Yes ☐ No
Do you have knowledge of any environmental liens recorded against the Property, or environmentally related Activity and Use Limitations of the Property?	☐ Yes ☑ No
Do you have any specialized knowledge that would be material in identifying recognized environmental conditions in connection with the Property?	☐ Yes ☑ No
Are you aware of a reduction in the property value due to environmental issues?	☐ Yes ☑ No

Please attach explanation of all affirmative answers.

8) Please state reason for procuring this Phase 1 ESA:

☐ Qualify for Innocent Landowner defense to CERCLA Liability.

☑ Other: (state below)

Please return completed form and any attachments to:
Point Source Solutions LLC, 5317 NE St Johns Road, Suite D, Vancouver, WA 98661
Telephone: 503.916.9254 Fax: 503.224.0449

4. PLEASE PROVIDE A GENERAL SITE DESCRIPTION BY COMPLETING THE FOLLOWING TABLE:

Legal description/ boundary survey/ plat available (please send if "yes")	☑ Yes ☐ No
Total Property Size 1.33 acres	
Total number of buildings 3 - 2 motel buildings and 1 storage building	
Total square footage of buildings 2,436 & 4,536 & 660	
Date of construction 1940	
Dates of significant renovation 1953 & 1979	
Waste water discharge ☐ Municipal Sanitary Sewer ☐ On-site septic system ☐ Other	
Potable water source ☑ Community Water Supplier ☐ On-site well ☐ Other	
Please describe prior use of property, if known: Motel	

5. PREVIOUS INVESTIGATIONS:

Have any previous environmental investigations been performed at the site? ☑ Yes ☐ No	
INVESTIGATION TYPE **If yes, please describe conclusions, and attach copy of report(s)**	
☑ Phase 1 ESA	
☑ Phase 2 ESA	
☐ Tank Tightness Testing	
☑ Asbestos Survey/ O&M	
☑ Radon	
☑ Lead-based Paint	
☑ Lead in Water	
☑ Operations & Maintenance Plan(s)	
☐ Other	

6. ON SITE OPERATIONS

Are you aware of any of the following conditions, either past or present, on the site?		
Condition	**Response**	**If yes, please describe**
1. Stored Chemicals	☐ Yes ☑ No	
2. Underground Storage Tanks	☑ Yes ☐ No	
3. Aboveground Storage Tanks	☐ Yes ☐ No	
4. Spills or Releases	☐ Yes ☑ No	There was one on an adjacent site
5. Dump Areas/ Landfills	☐ Yes ☑ No	
6. Waste Treatment Systems	☐ Yes ☑ No	
7. Clarifies/ Separators	☐ Yes ☑ No	
8. Air stacks/ Vents/ Odors	☐ Yes ☑ No	
9. Floor Drains/Sumps	☐ Yes ☐ No	
10. Stained Soil/ Impacted Vegetation	☐ Yes ☑ No	
11. On-site OWNED Electrical Transformers	☐ Yes ☑ No	
12. Hydraulic lifts/ Elevators	☐ Yes ☑ No	
13. Dry Cleaning Operations	☐ Yes ☑ No	
14. Wetlands/ Flooding	☑ Yes ☐ No	The property is in an AE flood zone
15. Oil/ Gas/ Water/ Monitoring Wells	☐ Yes ☑ No	
16. Environmental Cleanups	☐ Yes ☑ No	
17. Environmental Permits	☐ Yes ☑ No	If **yes**, please describe and ATTACH ALL COPIES of permits. Please attach last three waste manifests.
a) Industrial Discharge	☐ Yes ☐ No	
b) POTW (NPDES)	☐ Yes ☐ No	
c) Hazardous Waste Generator	☐ Yes ☐ No	
d) Air Quality	☐ Yes ☐ No	
e) Flammable Materials	☐ Yes ☐ No	
f) AST/UST	☐ Yes ☐ No	
g) Waste Manifest(s)	☐ Yes ☐ No	
h) Other	☐ Yes ☐ No	

7. OFF SITE ENVIRONMENTAL CONCERNS

Are you aware of any of the following conditions, either past or present, Adjacent to the site?		
Condition	**Response**	**If yes, please describe**
Gasoline Stations	☑ Yes ☐ No	The County maintenance compound has two gas tanks (1 gas & 1 diesel)
Dry Cleaners	☐ Yes ☑ No	
Industrial Uses	☐ Yes ☑ No	
Other	☑ Yes ☐ No	There was a discharge that resulted in a plume on a surrounding property.

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

point source solutions, llc
ENGINEERING • ENVIRONMENTAL • SAFETY

#

Gil Cobb
Licensed Geologist

CURRENT POSITION

Principal and Owner
Point Source Solutions, LLC

PAST EMPLOYMENT

PSI, Inc.
Portland, Oregon
1991-2003

Hall-Kimbrell Environmental
Honolulu, Hawaii
1985-1991

Morco Geological Services
Carlsbad, New Mexico
1982-1985

EDUCATION

B.S., Earth Sciences, New Mexico Highlands University, 1978

REGISTRATIONS

Licensed Geologist/Hydrogeologist #1594, Washington

Registered Geologist #1440, Oregon

Professional Geologist #5343149-2250, Utah

LICENSES & CERTIFICATIONS

Certified Asbestos Inspector

OSHA 40-Hour Hazardous Waste Worker

UST Site Assessor, Washington

CONTINUING EDUCATION

Wellhead Protection Planning, Oregon DEQ

Risk-Based Corrective Action, ASTM

Treatment Technology for Contaminated Soils and Ground Water, NGWA

SUMMARY OF SKILLS AND QUALIFICATIONS

Over 28 years of experience performing Phase I, Phase II, remediation design and management and other regulatory oversight and environmental site reconnaissance services.

Prior to joining Point Source in 2004, Mr. Cobb was responsible for training and the technical reporting of 35-40 staff members from the offices of a national consulting firm in Oregon, Washington, Hawaii, Utah and Colorado. His primary responsibilities included: project management; the mentoring of young professionals in environmental consulting departments in the western US; report review of environmental assessments, NEPA/SEPA documentation, subsurface site characterizations and underground storage tank closures; and regulatory interaction and negotiation on behalf of the firm's clients both in the private and public sectors.

SUMMARY OF COMPLETED PROJECTS

WA Department of Natural Resources; Lacey, WA: Project Manager/Project Geologist for the environmental site characterization of various locations within the DNR-Lacey Compound. This compound had served as a maintenance facility for DNR for over 30 years with vehicle and equipment shops as well as buried waste disposal sites.

Former Bennett Paint Site; Salt Lake City, UT: Project Manager/Project Geologist for the environmental site characterization, remediation and closure of a former paint manufacturing site. Extensive clean-up of this industrial site was required including the remediation of metals and solvents in soil and groundwater. The site has now been redeveloped for retail purposes.

Clark County, WA; Vancouver, WA: Project Manager for all technical and administrative tasks involving the decommissioning and closure of a diesel UST at the Clark County Corrections Center as well as the installation of a new emergency generator fueling system.

Town Pump; White Salmon, WA: Project Manager/Project Geologist for the environmental site characterization and soils cleanup and of three separate petroleum hydrocarbon plumes which had affected a state right-of-way and an adjacent trailer park. All work was performed under an Agreed Order with the State of Washington.

Fire Protection District #2; Graham, WA: Project Manager/ Project Geologist for all aspects of UST decommissioning, site characterization, permitting, soils cleanup, and construction of a groundwater extraction system.

SUMMARY OF SKILLS AND QUALIFICATIONS

Mr. McGeehan has over 10 years of experience conducting and supervising soil, groundwater and soil vapor investigations as well as remedial actions in Oregon, Washington and Michigan. In addition, Mr. McGeehan has worked in the Industrial Hygiene sector, performing air quality analysis, hazardous materials surveys, and abatement oversight. His certifications include Oregon DEQ HOT Supervisor, NIOSH 582 certified "sampling and evaluating airborne asbestos dust", and AHERA certified building inspector.

In addition to working in the environmental consulting industry, Mr. McGeehan has worked in the forestry industry performing inventory and wildlife habitat surveys. He has worked with the Board of Urban Forestry with the City of Sisters, Oregon performing tree inspections and contributing to the City's online database of forest resources.

SUMMARY OF COMPLETED PROJECTS

Phase I and Phase II Environmental Site Assessments:
Responsible for site investigations, database review, and report preparation for Phase I Environmental Site Assessments. Oversight of Phase II field operations including the operations of direct-push drilling equipment and report preparation.

Redmond Regional Airport; Redmond, Oregon:

Project Manager for the environmental site characterization and remediation of a former airplane hangar and associated fueling depot. The project involved soil characterization, investigation and disposal. a petroleum-contaminated soil treatment plan was created and implemented for impacted soils that were removed and/or staged at an approved location on-site. Four fueling tanks were decommissioned by removal.

MUSTA Program, Michigan:

Project Manager for facilities covered by the Michigan Underground Storage Tank Authority (MUSTA). These Sites include qualified underground tank releases that fall within the State's program to receive funding for cleanup activities. This includes soils, vapors and water resources impacted from releases and the subsequent remediation and/or risk -based cleanup per MUSTA requirements.

Hazardous Materials Survey and Abatement Oversight:

Asbestos Inspector responsible for conducting hazardous building material surveys at a variety of structures. On-site management of abatement projects, including air monitoring, visual inspections, and final clearance testing.
