EXECUTIVE SUMMARY

Point Source Solutions LLC (Point Source) was retained by Green Drop Garage to perform a Phase I Environmental Site Assessment on commercial property located at 1041 and 1109 SE Brooklyn Street and 2911 SE Milwaukie Avenue, Portland, Oregon 97202 (*subject property*").

The Phase I Environmental Site Assessment is designed to provide Green Drop Garage with an assessment concerning environmental conditions limited to those issues identified in the report as they exist at the *subject property*. This assessment was conducted utilizing generally accepted ESA industry standards in accordance with ASTM Practice E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

The *subject property* is developed with three commercial structures as follows. The western portion of the *subject property* is developed with an approximately 2,160 square-foot single story (plus mezzanine) structure built in 1931 and expanded with an addition to the south in 1953 and an addition to the east in 1971 (addressed as 1041 SE Brooklyn). The central portion of the *subject property* is developed with an approximately 3,430 square-foot single story commercial steel framed and corrugated steel clad structure on a concrete slab foundation built in 1982 (1109 SE Brooklyn). The northeast portion of the *subject property* is developed with a single story (plus mezzanine and unfinished basement) commercial building built in 1929 (2911 SE Milwaukie). Additional improvements include a large free-standing billboard and a paved parking area. Multnomah County identifies the *subject property* as tax lots 1S1E11BA10500, 1S1E11BA10600 and 1S1E11BA10700 totaling 0.34 acres. The *subject property* is zoned Central Employment (EX) by the City of Portland. Historical addresses associated with the *subject property* include 1041 through 1115 SE Brooklyn Street and 2911 through 2925 SE Milwaukie Avenue.

The *subject property* is currently unoccupied. It was most recently occupied by an automotive machine shop (1041 SE Brooklyn), a marijuana grow facility (1109 SE Brooklyn) and a carburetor service facility (2911 SE Milwaukie).

The *subject property* occupies an area that is bound to the north by Sauter Spray Equipment, Kozha Numbers, and Portland Pro Audio; to the east by SE Milwaukie Avenue beyond which is a Portland Fire Bureau facility; to the south by SE Brooklyn Street and SE Powell Boulevard (separated by undeveloped land owned by Oregon Department of Transportation) followed by two buildings occupied by Classic Pianos; and to the west by The Smythe Company.

The *subject property* is identified on a site location map, site plan and topographic map, all of which are located in the Figures section of the Appendices of this report.

Jeff Jackman of Point Source conducted the site investigation on September 5, 2025. Evidence of recognized environmental conditions as defined in ASTM Practice E1527-21 was identified at the time of the site reconnaissance.

A possible underground storage tank (UST) fill port was observed in the basement of the northeast building (2911 SE Milwaukie). The port is located in that portion of the basement that extends beneath the east adjoining sidewalk. A possible UST vent line was observed attached to the exterior wall of this building at its southeast corner.

Abandoned chimneys were observed in the west building (1041 SE Brooklyn) and the northeast building (2911 Milwaukie). Chimneys are a possible indicator of past use of oil burning appliances.

Point Source's review of reasonably attainable documentation for the *subject property* includes Multnomah County/City of Portland records (earliest 1928), aerial photographs (earliest 1936), Sanborn Maps (earliest 1901), historic city directories (earliest 1935), topographic maps (earliest 1954) and interviews. The following table briefly summarizes the developmental history of the *subject property*.

YEAR	SOURCE	SUBJECT PROPERTY USE
1901	Sanborn Map	Two dwellings, a store, and a small storage building are depicted on the south part of the *subject property*. A creek is present on the northeast portion of the *subject property.*
1909	Sanborn Map	Two dwellings, a shed, a store, and a sausage factory are depicted on the east part of the *subject property*. A creek encroaches onto the north part of the *subject property.*
1924	Sanborn Map	An L-shaped building is depicted on the east part of the *subject property*. The building is identified as containing a restaurant and two storefronts, and the western portion is labeled "open under on posts". A dwelling with a detached garage and a small smokehouse is depicted on the west portion of the *subject property.*
1928	City Records	A plumbing permit is issued for a dry cleaning facility including floor drains and fixtures, connected to sewer (addressed as 565 and 573 SE Milwaukie, currently 2911 Milwaukie).
1931	City Permit Records	A permit is issued to build a garage (addressed as 575 Brooklyn, currently 1041 Brooklyn).
1935	City Directories	Occupancy is listed as French Cleaners.
1936	Aerial Photograph	The quality of this photograph is poor. No discernable structures are visible on the *subject property.*
1940	City Directories	Occupancy is listed as Superior French Cleaners, Central Motors Auto Repair, and Mac's Sandwich Shop.
1946	City Directories	Occupancy is listed as Phillip's Lunch.
1948	Aerial Photograph	A portion of the existing structure is visible on the west part of the *subject property*. The existing structure is visible on the northeast part of the *subject property*. Additional structures are visible on the southwest part of the *subject property*.
1948	Fire Bureau Records	A permit is issued for an oil burning heater at a dry cleaner, tank size not identified (2911 Milwaukie).
1950	City Directories	Occupancy is listed as French Cleaners, Brooklyn Welding, Packard Auto Repair, and Helen's Inn Restaurant.
1950	Sanborn Map	A portion of the current structure on the west portion of the *subject property* is now present. Usage is identified as welding and auto repair. An office building, a building labeled "spotting", an auto service building (with earth floor) and a restaurant building are all depicted on the southeast portion of the *subject property*. The current structure on the northeast portion of the *subject property* is now present and is identified as dry cleaner.
1953	City Permit Records	A permit is issued to extend garage by 20 feet (1041 Brooklyn).
1954	Topo Map	The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property.*
1954	Fire Bureau Records	A permit is issued to install a 2000-gallon underground heating oil tank in the yard (1041 SE Brooklyn).

YEAR	SOURCE	SUBJECT PROPERTY USE
1955	Aerial Photograph	A portion of the existing structure is visible on the west part of the *subject property*. The existing structure is visible on the northeast part of the *subject property*. Additional structures are visible on the southwest part of the *subject property*.
1955	City Directories	Occupancy is listed as French Cleaners, Sadoff Truck Repair, The Oregonian, Helen's Inn Restaurant, and vacant.
1959	Fire Bureau Records	A permit is issued to install one 6000-gallon underground diesel tank (1041 SE Brooklyn). One fuel pump on an island is noted.
1960	Aerial Photograph	The existing structure on the west part of the *subject property* has been expanded to the south. The existing structure is visible on the northeast part of the *subject property*. No additional structures are apparent on the *subject property*.
1960	City Directories	Occupancy is listed as French Cleaners, Samack Truck Rental, and Ruth's Corner Restaurant.
1961	Topo Map	The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property.*
1965	Fire Bureau Records	A permit is issued to install one 6000-gallon motor fuel tank (1041 SE Brooklyn). Total tank capacity on premises noted as 8000 gallons (in two tanks). One fuel pump on an island is noted.
1965	City Directories	Occupancy is listed as French Cleaners, Samack Truck Rental, and Ruth's Corner Restaurant.
1969	Sanborn Map	The current structure on the west portion of the *subject property* has been expanded and usage remains identified as welding and auto repair. The current structure on the northeast portion of the subject property continues to be identified as dry cleaner. The "spotting" building and the restaurant building remain on the southeast portion of the subject property. All other buildings in this area that were observed on the 1950 map have been removed.
1969	Fire Bureau Records	A permit is issued to install one 119-gallon propane above ground storage tank (1041 SE Brooklyn).
1970	Topo Map	The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property.*
1970	Aerial Photograph	The existing structure on the west part of the *subject property* has been expanded to the south. The existing structure is visible on the northeast part of the *subject property*. No additional structures are apparent on the *subject property*.
1970	City Directories	Occupancy is listed as Cavalier Cleaners, Central Cylinder Head, and vacant.
1971	City Permit Records	Permits are issued to build a 646 square-foot addition to the east side of the existing garage for Central Cylinder Head (1041 Brooklyn).
1975	City Directories	Occupancy is listed as Assemblers Co Electronics Parts and Central Cylinder Head.
1976	Topo Map	The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property.*
1981	City Directories	Occupancy is listed as Central Cylinder Head, Carburetor Specialties, and vacant.
1981	Aerial Photograph	The *subject property* is developed with the current improvements.
1982	County Records	County Assessor records identify 1982 as the date of construction for the 3,430 square-foot warehouse building (1109 SE Brooklyn).

YEAR	SOURCE	SUBJECT PROPERTY USE
1985	City Directories	Occupancy is listed as Central Cylinder Head, Carburetor Specialties, Crankshaft City, and vacant.
1988	City Permit Records	Permits are issued to construct a 25'x45' addition to a metal building (1109 Brooklyn).
1990	Aerial Photograph	The *subject property* is developed with the current improvements.
1992	City Directories	Occupancy is listed as Central Cylinder Head, Carburetor Specialties, and Crankshaft City.
1994	Aerial Photograph	The *subject property* is developed with the current improvements.
1995	Topo Map	The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property.*
1995	City Directories	Occupancy is listed as Central Cylinder Head, Merles Carburetor, and Crankshaft City.
2000	City Directories	Occupancy is listed as Central Cylinder Head, Merles Carburetor, and Crankshaft City.
2000	Aerial Photograph	The *subject property* is developed with the current improvements.
2005	City Directories	Occupancy is listed as Central Cylinder Head, Merles Carburetor, and Crankshaft City.
2005	Aerial Photograph	The *subject property* is developed with the current improvements.
2009	Aerial Photograph	The *subject property* is developed with the current improvements.
2010	City Directories	Occupancy is listed as Central Cylinder Head, Merles Carburetor, and Crankshaft City.
2014	City Directories	Occupancy is listed as Central Cylinder Head, Locked Out of Car, Crankshaft City
2016	Aerial Photograph	The *subject property* is developed with the current improvements.
2016	City Permit Records	Permits are issued for tenant improvements for a marijuana business (1109 Brooklyn).
2017	City Directories	Occupancy is listed as Central Cylinder Head, Locked Out of Car, Crankshaft City, and NW Scuba.
2022	Aerial Photograph	The *subject property* is developed with the current improvements.
2022	City Directories	Occupancy is listed as Central Cylinder Head, Locked Out of Car, Crankshaft City, NW Scuba, RGJB Holdings, and JRM Printing & Design.
2025	Site Visit	The *subject property* is currently unoccupied.

The *subject property* is listed on the Resource Conservation and Recovery Act (RCRA), Facility Index System (FINDS), and Environmental and Compliance History Information (ECHO) databases in the database report provided by Environmental Data Resources, Inc. (EDR). The RCRA program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste. Central Cylinder Head (1041 SE Brooklyn) filed reports under the RCRA program as a Conditionally Exempt Small Quantity Generator (now known as Very Small Quantity Generator) from 2000 through 2003. No violations were found. This facility also appears on the Environmental Compliance History (ECHO) and Facility Index System (FINDS) databases relative to the RCRA listing. These listings do not indicate a release.

Based on the database report, no up-gradient sites were identified as a potential concern to the *subject property*.

Conclusions

Point Source has performed a Phase I Environmental Site Assessment on commercial property located at 1041 and 1009 SE Brooklyn Street and 2911 SE Milwaukie Avenue, Portland, Oregon 97202 in general conformance with the scope and limitations of ASTM Practice E1527-21. Any exceptions to or deletions from this practice are described in the body of this report.

A *recognized environmental condition (REC)* refers to the (1) the presence of hazardous substances or petroleum products in, on or at the *subject property* due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the *subject property* due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the *subject property* under conditions that pose a material threat of a future release to the environment.

- **A possible underground storage tank (UST) fill port was observed in the basement of the northeast building (2911 SE Milwaukie). The port is located in that portion of the basement that extends beneath the east adjoining sidewalk. A possible UST vent line was observed attached to the exterior wall of this building at its southeast corner. Abandoned chimneys were observed in the west building (1041 SE Brooklyn) and the northeast building (2911 Milwaukie). Chimneys are a possible indicator of past use of oil burning appliances. Portland Fire Bureau issued permits regarding heating oil and motor fuel USTs on the *subject property* (1041 SE Brooklyn) in 1954, 1959, and 1965. Potential releases from USTs (whether the tank is existing, abandoned, or previously removed without proper assessment) are considered a recognized environmental condition.**

- **According to City of Portland permits, historical city directories and Sanborn fire insurance maps, the building on the northeast portion of the *subject property* was occupied by dry cleaning operations from at least 1928 to at least 1970. Past occupancy by dry cleaning operations is considered a recognized environmental condition**

- **According to historical city directories and Sanborn fire insurance maps, the *subject property* was occupied by automotive repair operations from sometime prior to 1940 and until at least 2022. A large floor drain in the western building (1041 SE Brooklyn) appeared to be stained with oil. A wood covered former wash area inside this building also exhibited evidence of minor oil staining. The area beneath the wood covering was not accessible at the time of the site reconnaissance. Past occupancy by automotive repair operations coupled with the above on-site observations are considered a recognized environmental condition.**

A *controlled recognized environmental condition (CREC)* refers to a REC affecting the *subject property* that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls.

- **No evidence of controlled recognized environmental conditions was disclosed during the course of this assessment.**

An *historical recognized environmental condition (HREC)* refers to *a* previous release of hazardous substances or petroleum products affecting the *subject property* that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities, without subjecting the *subject property* to any required controls.

- **No evidence of historical recognized environmental conditions was disclosed during the course of this assessment.**

A *business environmental risk* refers to a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice.

- **Based on the age of the older *subject property* buildings (pre-1978), it is possible that asbestos containing material and lead-based paint were used in the *subject property* building construction. Finishing materials, where observed, were in fair condition.**

Recommendations

Based on the findings of this assessment, further investigation/action is recommended with respect to the recognized environmental conditions identified. The investigation should begin with a geophysical survey to identify and locate features of interest.

The following table summarizes the findings of the significant elements of this investigation:

ASSESSMENT COMPONENT	ACCEPTABLE	ROUTINE SOLUTION	PHASE II	REFERENCE SECTION
Historical Review			X	4.1
On-site Operations			X	3.2/3.3/3.4
Hazardous Materials	X			3.4.1
Waste Generation	X			3.4.3
PCBs	X			3.4.5
Storage Tanks			X	3.4.8
Surface Areas	X			3.2
Regulatory Database	X			6.1
Adjoining Properties	X			2.5/4.2

1.0 INTRODUCTION

1.1 General Information

At the request of Green Drop Garage, Point Source performed a Phase I Environmental Site Assessment on the commercial property located at 1041 and 1109 SE Brooklyn Street and 2911 SE Milwaukie Avenue, Portland, Oregon 97202.

Jeff Jackman of Point Source conducted the site visit on September 5, 2025. Point Source was escorted during the site reconnaissance by the *subject property* owner. Gerald Blinsman (*subject property* owner) was identified as the Key Site Manager for the *subject property*. The Key Site Manager is defined by the ASTM Standards as a person with good knowledge of the uses of the *subject property*.

1.2 Scope of Work

The purpose of this assessment was to investigate and assess possible environmental risks associated with the *subject property*. The assessment includes inquiries into past uses of the *subject property* (and to a lesser degree, past uses of adjoining properties), assessing current uses of the *subject property* and surrounding properties, searching for indications of contamination or threatened releases of contamination (including an evaluation of releases and potential releases relative to soil, groundwater, surface water, and vapor migration pathways), searching applicable federal and state environmental records, and evaluating other available information relating to potential environmental liabilities as delineated by the scope of work.

This assessment is designed to provide a basis for an informed decision-making process relative to environmental risks and liabilities associated with the *subject property*.

The specific scope of work included the following:

Environmental Database Records Review - Reasonably ascertainable environmental databases were reviewed to determine whether the *subject property* or any neighboring properties were suspected of having or known to have environmental concerns likely to adversely impact the *subject property*. Groundwater and soil vapor migration pathways were given special consideration in evaluating the potential risk posed by nearby properties identified in the various databases. The databases reviewed and the radii chosen are based on the ASTM standard. It is important to note the scope of this investigation is limited to a visual inspection to identify areas of potential concern to the *subject property* and a review of readily accessible government databases. The inspection does not include a regulatory compliance audit of the facility. There are detailed regulations concerning the proper use, storage and disposal of hazardous and regulated material. These regulations include, but are not limited to, permitting, paper keeping and manifesting requirements, as well as community and employee right-to-know laws. It is typically the responsibility of the tenant(s) to maintain their space(s) in compliance with such regulations.

Prior Use History Review - Attempts were made to identify the prior usage of the *subject property* back to the *subject property*'s first developed use, using as many sources that were both reasonably ascertainable and likely to be useful. Record information that is reasonably ascertainable means information that is publicly available, information that is obtainable from its source within reasonable time and cost constraints, and information that is practically reviewable Standard historical sources include any or all of the following: aerial photographs, historical maps, tax information, land title records, topographic maps, local street directories, building department records, zoning/land use

records, prior reports and interviews with local agencies.

Property/Site Reconnaissance - A reconnaissance of the *subject property*, consisting of a visual inspection of the *subject property* and neighboring properties as observable from the *subject property*, was conducted to identify Recognized Environmental Conditions (RECs) associated with the *subject property*, to the extent not obstructed by bodies of water, adjacent buildings or other obstacles. Observations were conducted at the *subject property* for potential RECs as well as, and including, the presence of roadways and structures, potable water supply and sewage disposal, current use of the *subject property* and adjoining properties, hazardous substances and petroleum products, storage tanks, odors, pools of liquid, drums, unidentified substance containers, PCBs, stains or corrosion, drains and sumps, pits, ponds and lagoons, stained soil or pavement, stressed vegetation, solid waste, waste water, water wells, dry wells and septic systems.

Environmental Setting - Efforts were made to determine the environmental setting of the *subject property* with respect to topography, surface water bodies, soil type, depth to groundwater and direction of groundwater flow.

UST and AST Search - Attempts were made to identify any above-ground storage tanks (ASTs) containing hazardous or regulated materials, and to identify visual indications of underground storage tanks (USTs), such as fill and vent pipes. In addition to the visual inspection, state databases of facilities with registered USTs were reviewed, and the *subject property* contact and local regulatory officials were interviewed regarding any knowledge of ASTs or USTs.

Interviews - Efforts were made to contact and interview both the *subject property* owner's representative and occupants. Point Source requested that a person with good knowledge of the uses and physical characteristics of the *subject property* be identified, such as the *subject property* manager or head maintenance person. In addition, Point Source provided the owner or owner's representative, or both, with a pre-survey questionnaire as to any information relative to past or current potential RECs at the *subject property*. Attempts were made to interview representative major occupants and/or tenants.

If readily available, Point Source reviewed the following documents and information that may be in the possession of or provided by the owner, owner's representative, and/or user: previous ESA reports, environmental audit reports, environmental permits, registrations for storage tanks, material safety data sheets, community right to know plan, safety and spill prevention plans, reports regarding hydrogeologic conditions, notices or other governmental correspondence for any past or current violations of environmental law, hazardous waste site generator notices or reports, geotechnical studies, knowledge of any pending, threatened or past litigation or administrative proceedings relevant to hazardous substances or petroleum products.

Efforts were made to contact and interview local agency officials at the local fire department, local or regional state health agency, local or regional state agency with jurisdiction over hazardous waste disposal as to any information relative to past or current potential RECs at the *subject property*.

1.3 Limitations

Although we have no reason to believe that the information provided to us by others, and subsequently included in the report, is inaccurate, we cannot be held responsible for inaccuracies that may have been reported to us.

Point Source recognizes that there may be various options for dealing with the potential Recognized Environmental Conditions identified. The options provided are not necessarily the only acceptable

alternatives for dealing with a particular concern. Point Source provides these options as guidance for further action.

1.4 Data Gaps

The objective of the assessment is to gather the information required to satisfy the purpose of the assessment, rather than completion of specific tasks. Data gaps occur when the information required by the practice cannot be obtained despite good faith efforts. The practice requires consultants to comment on the impact of significant data gaps on their ability to identify recognized environmental conditions.

A significant data gap is a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

- Information concerning historical use of the *subject property* prior to 1901 was unavailable. Based upon the development pattern of the *subject property* depicted on Sanborn Maps, this data gap is not considered significant.

- Information concerning historical use of the *subject property* was unavailable in various 5-year intervals from 1901 through 1924. Based upon the development pattern of the *subject property* documented in various historical sources as well as municipal records, this data gap is not considered significant.

1.5 Reason for Performing Phase I ESA

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-21) in connection with the *subject property*. This ESA was also performed to permit the *User* to satisfy one of the requirements to qualify for the *innocent landowner*, *contiguous property owner*, or *bona fide prospective purchaser* limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E-1527-21 constitutes "*all appropriate inquiry"* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

Point Source understands that the findings of this study will be used by Green Drop Garage to evaluate a pending financial transaction in connection with the *subject property*.

1.6 Reliance

This Phase I Environmental Site Assessment is intended for the exclusive use of Green Drop Garage or entities specified by Green Drop Garage. This report and findings contained herein shall not, in whole or in part, be disseminated or conveyed to any other party, nor relied upon by any other party, in whole or in part without prior written consent of Point Source.

2.0 SITE DESCRIPTION

2.1 General

Multnomah County identifies the *subject property* as tax lots 1S1E11BA10500, 1S1E11BA10600 and 1S1E11BA10700 totaling 0.34 acres. The *subject property* is zoned Central Employment (EX) by the City of Portland.

2.2 Soils, Geology and Groundwater Characteristics

The *subject property* is situated in the Willamette Valley (Orr, Orr, Baldwin, 1992). Sediments collected in this area record multiple Ice Age floods that originated in Montana, poured through the Cascades via the Columbia River, and backed up in the valley before eventually draining to the Pacific Ocean.

According to the USDA Soil Conservation Service Soil Survey of Multnomah County (NRCS Web Soil Survey), the *subject property* is mapped predominantly as Urban land. Urban Land is soil that has been disturbed and modified by streets, buildings and other structures such that characterization is impractical.

A well log search conducted on the Oregon Water Resources Department (OWRD) website revealed that groundwater has been encountered in borings advanced in close proximity to the *subject property* at depths between 8 and 28 feet below ground surface (bgs). No on-site water wells or springs were observed during the *subject property* reconnaissance.

The United States Geological Survey (USGS) Portland, Oregon Quadrangle 7.5 minute series topographic map was reviewed for this ESA. This map was published by the USGS in 2020. According to the contour lines on the topographic map, the *subject property* elevation is approximately 50 feet above mean sea level. The map indicates that groundwater flow beneath the *subject property* is likely toward the Willamette River located approximately 1,750 feet to the west at its closest point. No production wells are depicted on the *subject property* on the USGS map.

A copy of a portion of the USGS map is included in the Appendices.

The USEPA Ground Water Handbook, Vol.1 Ground Water and Contamination, September 1990, indicates that the water table typically conforms to surface topography. This means the direction of flow for shallow groundwater is generally from higher elevations to lower elevations. Localized flow direction may vary as a result of tide, rainfall, development, geologic characteristics, nearby surface water bodies, underground utilities such as storm drains, septic systems and sewers, or other influences such as the presence of high-volume wells.

2.3 Improvements

The *subject property* is developed with three commercial structures as follows. The western portion of the *subject property* is developed with an approximately 2,160 square-foot single story (plus mezzanine) structure built in 1931 and expanded with an addition to the south in 1953 and an addition to the east in 1971 (addressed as 1041 SE Brooklyn). This building consists of poured concrete and masonry block exterior walls on a concrete slab foundation with a wood framed addition. The central portion of the *subject property* is developed with an approximately 3,430 square-foot single story commercial steel framed and corrugated steel clad structure on a concrete slab foundation built in 1982 (1109 SE Brooklyn). The northeast portion of the *subject property* is developed with a single story (plus mezzanine and unfinished basement) commercial building built in 1929 (2911 SE

Milwaukie). This building consists of masonry exterior walls on a basement foundation. The basement contains a dirt floor and a portion extends beneath the east adjoining sidewalk. Finishing materials are limited and include drywall, plaster, and ceramic tile and vinyl flooring. Climate control is provided by natural-gas and electric units. Additional improvements include a large free-standing billboard and a paved parking area.

Municipal water and sewer are provided to the *subject property* by the City of Portland.

2.4 Current Uses of the Subject Property

The *subject property* is currently unoccupied. It was most recently occupied by an automotive machine shop (1041 SE Brooklyn), a marijuana grow facility (1109 SE Brooklyn) and a carburetor service facility (2911 SE Milwaukie).

2.5 Uses of Adjoining Properties

For the purposes of this report, adjoining properties are defined as follows:

An adjoining property is any real property with a border that is contiguous or partially contiguous with the *subject property* border. This includes those properties whose borders would be contiguous or partially contiguous with the *subject property* border if the properties were not separated by street, road or other public thoroughfare. The following is a list of the adjoining properties at the time of the site visit:

***North Adjoining*:** Immediately to the north by Sauter Spray Equipment, Kozha Numbers, and Portland Pro Audio.

***East Adjoining*:** Immediately to the east by SE Milwaukie Avenue beyond which is a Portland Fire Bureau facility.

***South Adjoining*:** Immediately to the south by SE Brooklyn Street and SE Powell Boulevard (separated by undeveloped land owned by Oregon Department of Transportation) followed by two buildings occupied by Classic Pianos.

***West Adjoining*:** Immediately to the west by The Smythe Company.

3.0 SITE RECONNAISSANCE

3.1 Site Reconnaissance

The *subject property* was inspected by Jeff Jackman of Point Source on September 5, 2025. The weather at the time of the site visit was overcast with temperatures in the 70s F. Point Source was escorted by the owner of the *subject property* during the site visit.

No limiting conditions were encountered.

3.2 Exterior Observations

3.2.1 Solid Waste Disposal

The *subject property* is not currently occupied. No evidence of improper solid waste disposal was observed.

3.2.2 Surface Water Drainage

Stormwater from the *subject property* flows to adjoining roadways and to a parking lot catch basin which is connected to the municipal stormwater system.

3.2.3 Wells and Cisterns

No water supply wells or cisterns were observed on the *subject property*.

3.2.4 Wastewater

Domestic wastewater generated at the *subject property* is disposed of through the municipal sewer system.

3.3 Interior Observations

The *subject property* is developed with three commercial structures as follows. The western portion of the *subject property* is developed with an approximately 2,160 square-foot single story (plus mezzanine) structure built in 1931 and later expanded with an approximately 700 square-foot addition (addressed as 1041 SE Brooklyn). This building consists of poured concrete and masonry block exterior walls on a concrete slab foundation. The central portion of the *subject property* is developed with an approximately 3,430 square-foot single story commercial steel framed and corrugated steel clad structure on a concrete slab foundation built in 1982 (1109 SE Brooklyn). The northeast portion of the *subject property* is developed with a single story (plus mezzanine and unfinished basement) commercial building built in 1929 (2911 SE Milwaukie). This building consists of masonry exterior walls on a basement foundation. The basement contains a dirt floor and a portion extends beneath the east adjoining sidewalk. Finishing materials are limited and include drywall, plaster, and ceramic tile and vinyl flooring. Climate control is provided by natural-gas and electric units.

3.4 Potential Environmental Conditions

3.4.1 Hazardous Materials and Petroleum Products Used or Stored at the Site

No significant quantities of hazardous materials or petroleum products were observed on the *subject property*.

3.4.2 Unlabeled Containers and Drums

No unlabeled containers or drums were observed on the *subject property*.

3.4.3 Disposal Locations of Regulated/Hazardous Waste

No evidence of disposal of regulated or hazardous waste was observed on the *subject property*.

3.4.4 Evidence of Releases

A large floor drain in the western building (1041 SE Brooklyn) appeared to be stained with oil. A wood covered former wash area inside this building also exhibited evidence of minor oil staining. The area beneath the wood covering was not accessible at the time of the site reconnaissance.

3.4.5 Polychlorinated Biphenyls (PCBs):

Electrical transformers in the *subject property* area are utility-owned and located on adjoining public right-of-ways. No privately owned oil-filled transformers or other known PCB-containing equipment was observed.

3.4.6 Landfills

No evidence of landfills was observed or reported during this assessment.

3.4.7 Pits, Ponds, Lagoons, Sumps, and Catch Basins

No pits, ponds, lagoons, sumps or catch basins other than those used for storm water control were observed on the *subject property* during the site reconnaissance.

3.4.8 On-Site USTs and ASTs

A possible underground storage tank (UST) fill port was observed in the basement of the northeast building (2911 SE Milwaukie). The port is located in that portion of the basement that extends beneath the east adjoining sidewalk. A possible UST vent line was observed attached to the exterior wall of this building at its southeast corner.

Abandoned chimneys were observed in the west building (1041 SE Brooklyn) and the northeast building (2911 Milwaukie). Chimneys are a possible indicator of past use of oil burning appliances.

An approximately 110-gallon propane above ground storage tank (AST) was observed immediately outside of the west building (1041 SE Brooklyn).

No other evidence of USTs or ASTs were observed on the *subject property* during the site reconnaissance.

4.0 HISTORICAL REVIEW

According to ASTM Standards, reasonably ascertainable, and likely to be useful, standard historical sources are researched back to 1940, or since the first development of the site, whichever is earlier. The source shall be cited in approximately 5-year intervals or in intervals greater than 5 years during continuous periods when the site usage has remained unchanged.

4.1 Historical Use Information on *Subject Property*

Point Source's review of reasonably attainable documentation for the *subject property* includes Multnomah County/City of Portland records (earliest 1928), aerial photographs (earliest 1936), Sanborn Maps (earliest 1901), historic city directories (earliest 1935), topographic maps (earliest 1954) and interviews. The following table briefly summarizes the developmental history of the *subject property*.

YEAR	SOURCE	SUBJECT PROPERTY USE
1901	Sanborn Map	Two dwellings, a store, and a small storage building are depicted on the south part of the *subject property*. A creek is present on the northeast portion of the *subject property.*
1909	Sanborn Map	Two dwellings, a shed, a store, and a sausage factory are depicted on the east part of the *subject property*. A creek encroaches onto the north part of the *subject property.*
1924	Sanborn Map	An L-shaped building is depicted on the east part of the *subject property*. The building is identified as containing a restaurant and two storefronts, and the western portion is labeled "open under on posts". A dwelling with a detached garage and a small smokehouse is depicted on the west portion of the *subject property.*
1928	City Records	A plumbing permit is issued for a dry cleaning facility including floor drains and fixtures, connected to sewer (addressed as 565 and 573 SE Milwaukie, currently 2911 Milwaukie).
1931	City Permit Records	A permit is issued to build a garage (addressed as 575 Brooklyn, currently 1041 Brooklyn).
1935	City Directories	Occupancy is listed as French Cleaners.
1936	Aerial Photograph	The quality of this photograph is poor. No discernable structures are visible on the *subject property.*
1940	City Directories	Occupancy is listed as Superior French Cleaners, Central Motors Auto Repair, and Mac's Sandwich Shop.
1946	City Directories	Occupancy is listed as Phillip's Lunch.
1948	Aerial Photograph	A portion of the existing structure is visible on the west part of the *subject property*. The existing structure is visible on the northeast part of the *subject property*. Additional structures are visible on the southwest part of the *subject property*.
1948	Fire Bureau Records	A permit is issued for an oil burning heater at a dry cleaner, tank size not identified (2911 Milwaukie).
1950	City Directories	Occupancy is listed as French Cleaners, Brooklyn Welding, Packard Auto Repair, and Helen's Inn Restaurant.
1950	Sanborn Map	A portion of the current structure on the west portion of the *subject property* is now present. Usage is identified as welding and auto repair. An office building, a building labeled "spotting", an auto service building (with earth floor) and a restaurant building are all depicted on the southeast portion of the *subject property*. The

YEAR	SOURCE	SUBJECT PROPERTY USE
		current structure on the northeast portion of the *subject property* is now present and is identified as dry cleaner.
1953	City Permit Records	A permit is issued to extend garage by 20 feet (1041 Brooklyn).
1954	Topo Map	The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property.*
1954	Fire Bureau Records	A permit is issued to install a 2000-gallon underground heating oil tank in the yard (1041 SE Brooklyn).
1955	Aerial Photograph	A portion of the existing structure is visible on the west part of the *subject property*. The existing structure is visible on the northeast part of the *subject property*. Additional structures are visible on the southwest part of the *subject property*.
1955	City Directories	Occupancy is listed as French Cleaners, Sadoff Truck Repair, The Oregonian, Helen's Inn Restaurant, and vacant.
1959	Fire Bureau Records	A permit is issued to install one 6000-gallon underground diesel tank (1041 SE Brooklyn). One fuel pump on an island is noted.
1960	Aerial Photograph	The existing structure on the west part of the *subject property* has been expanded to the south. The existing structure is visible on the northeast part of the *subject property*. No additional structures are apparent on the *subject property*.
1960	City Directories	Occupancy is listed as French Cleaners, Samack Truck Rental, and Ruth's Corner Restaurant.
1961	Topo Map	The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property.*
1965	Fire Bureau Records	A permit is issued to install one 6000-gallon motor fuel tank (1041 SE Brooklyn). Total tank capacity on premises noted as 8000 gallons (in two tanks). One fuel pump on an island is noted.
1965	City Directories	Occupancy is listed as French Cleaners, Samack Truck Rental, and Ruth's Corner Restaurant.
1969	Sanborn Map	The current structure on the west portion of the *subject property* has been expanded and usage remains identified as welding and auto repair. The current structure on the northeast portion of the subject property continues to be identified as dry cleaner. The "spotting" building and the restaurant building remain on the southeast portion of the subject property. All other buildings in this area that were observed on the 1950 map have been removed.
1969	Fire Bureau Records	A permit is issued to install one 119-gallon propane above ground storage tank (1041 SE Brooklyn).
1970	Topo Map	The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property.*
1970	Aerial Photograph	The existing structure on the west part of the *subject property* has been expanded to the south. The existing structure is visible on the northeast part of the *subject property*. No additional structures are apparent on the *subject property*.
1970	City Directories	Occupancy is listed as Cavalier Cleaners, Central Cylinder Head, and vacant.
1971	City Permit Records	Permits are issued to build a 646 square-foot addition to the east side of the existing garage for Central Cylinder Head (1041 Brooklyn).
1975	City Directories	Occupancy is listed as Assemblers Co Electronics Parts and Central Cylinder Head.

YEAR	SOURCE	SUBJECT PROPERTY USE
1976	Topo Map	The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property.*
1981	City Directories	Occupancy is listed as Central Cylinder Head, Carburetor Specialties, and vacant.
1981	Aerial Photograph	The *subject property* is developed with the current improvements.
1982	County Records	County Assessor records identify 1982 as the date of construction for the 3,430 square-foot warehouse building (1109 SE Brooklyn).
1985	City Directories	Occupancy is listed as Central Cylinder Head, Carburetor Specialties, Crankshaft City, and vacant.
1988	City Permit Records	Permits are issued to construct a 25'x45' addition to a metal building (1109 Brooklyn).
1990	Aerial Photograph	The *subject property* is developed with the current improvements.
1992	City Directories	Occupancy is listed as Central Cylinder Head, Carburetor Specialties, and Crankshaft City.
1994	Aerial Photograph	The *subject property* is developed with the current improvements.
1995	Topo Map	The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property.*
1995	City Directories	Occupancy is listed as Central Cylinder Head, Merles Carburetor, and Crankshaft City.
2000	City Directories	Occupancy is listed as Central Cylinder Head, Merles Carburetor, and Crankshaft City.
2000	Aerial Photograph	The *subject property* is developed with the current improvements.
2005	City Directories	Occupancy is listed as Central Cylinder Head, Merles Carburetor, and Crankshaft City.
2005	Aerial Photograph	The *subject property* is developed with the current improvements.
2009	Aerial Photograph	The *subject property* is developed with the current improvements.
2010	City Directories	Occupancy is listed as Central Cylinder Head, Merles Carburetor, and Crankshaft City.
2014	City Directories	Occupancy is listed as Central Cylinder Head, Locked Out of Car, Crankshaft City
2016	Aerial Photograph	The *subject property* is developed with the current improvements.
2016	City Permit Records	Permits are issued for tenant improvements for a marijuana business (1109 Brooklyn).
2017	City Directories	Occupancy is listed as Central Cylinder Head, Locked Out of Car, Crankshaft City, and NW Scuba.
2022	Aerial Photograph	The *subject property* is developed with the current improvements.
2022	City Directories	Occupancy is listed as Central Cylinder Head, Locked Out of Car, Crankshaft City, NW Scuba, RGJB Holdings, and JRM Printing & Design.
2025	Site Visit	The *subject property* is currently unoccupied.

4.1.1 Historical City Directories

Historical street directories obtained from EDR were reviewed for past names and businesses that were listed for the *subject property* and adjoining properties. Historical addresses associated with the *subject property* include 1041 through 1115 SE Brooklyn Street and 2911 through 2925 SE Milwaukie Avenue.

4.1.2 Historical Fire Insurance Maps

Point Source requested historical Sanborn Fire Insurance maps for the *subject property* from EDR. Coverage of the *subject property* area was available for 1901, 1909, 1924, 1950, and 1969.

Date: 1901
Description: Two dwellings, a store, and a small storage building are depicted on the south part of the *subject property*. A creek is present on the northeast portion of the *subject property*.

The north adjoining property includes vacant lots and a dwelling. A large vacant building is depicted on the east adjoining property. The south adjoining property includes vacant lots and a dwelling. The west adjoining properties are depicted as vacant lots. Milwaukie Avenue is noted as a planked road on posts.

Date: 1909
Description: Two dwellings, a shed, a store, and a sausage factory are depicted on the east part of the *subject property*. A creek encroaches onto the north part of the *subject property.*

A building with two storefronts is depicted on the north adjoining property. A building identified as City Water Department Pipe Storage is depicted on the east adjoining property. The south adjoining property is occupied by a store, a vacant warehouse, and a dwelling. A dwelling is depicted on the west adjoining property.

Date: 1924

Description: An L-shaped building is depicted on the east part of the *subject property*. The building is identified as containing a restaurant and two storefronts, and the western portion is labeled "open under on posts". A dwelling with a detached garage and a small smokehouse is depicted on the west portion of the *subject property*.

The north adjoining property is developed with a dwelling and a building containing a plumbing and tin shop and a vulcanizing shop. Public playgrounds are depicted on the east adjoining property. A building with two storefronts is depicted on the south adjoining property. The west adjoining property is occupied by a dwelling.

Date: 1950

Description: A portion of the current structure on the west portion of the *subject property* is now present. Usage is identified as welding and auto repair. An office building, a building labeled "spotting", an auto service building (with earth floor) and a restaurant building are all depicted on the southeast portion of the *subject property*. The current structure on the northeast portion of the *subject property* is now present and is identified as dry cleaner.

A dwelling and a building containing a store and restaurant are depicted on the north adjoining property. The east adjoining property is occupied by the current improvements and usage is identified as a motor vehicle inspection station for the City of Portland. A laundry and a gas station are depicted on the south adjoining property. No structures are depicted on the west adjoining property.

Date: 1969

Description: The current structure on the west portion of the *subject property* has been expanded and usage remains identified as welding and auto repair. The current structure on the northeast portion of the subject property continues to be identified as dry cleaner. The "spotting" building and the restaurant building remain on the southeast portion of the subject property. All other buildings in this area that were observed on the 1950 map have been removed.

The current improvements are depicted on the north adjoining property. The east adjoining property is occupied by the current improvements and usage is identified as a motor vehicle maintenance shop for the City of Portland. A gas station and a building with two storefronts are depicted on the south adjoining property. The west adjoining property is occupied by a store.

Copies of these maps are included in Appendix B.

4.1.3 Historical Aerial Photographs

Aerial photographs dated 1936, 1948, 1955, 1960, 1970, 1981, 1990, 1994, 2000, 2005, 2009, 2016 and 2022 from EDR were reviewed for this assessment.

Date: 1936

Description: The quality of this photograph is poor. No discernable structures are visible on the *subject property*.

Adjoining properties are depicted as follows: to the north are an apparent residence and portions of the existing improvements; to the east is structurally undeveloped land; to the south are two small structures followed by Powell Boulevard, beyond which are the current improvements; and to the west is a lot with no discernable structures.

Date: 1948

Description: A portion of the existing structure is visible on the west part of the *subject property*. The existing structure is visible on the northeast part of the *subject property*. Additional structures are visible on the southwest part of the *subject property*.

Adjoining properties are depicted as follows: to the north are an apparent residence and portions of the existing improvements; to the east are the current improvements; to the south are two small structures (including a gas station) followed by Powell Boulevard, beyond which are the current improvements; and to the west is a lot with no discernable structures.

Date: 1955

Description: A portion of the existing structure is visible on the west part of the *subject property*. The existing structure is visible on the northeast part of the *subject property*. Additional structures are visible on the southwest part of the *subject property*.

Adjoining properties are depicted as follows: to the north are an apparent residence and portions of the existing improvements; to the east are the current improvements; to the south are two small structures (including a gas station) followed by Powell Boulevard, beyond which are the current improvements; and to the west is a parking lot.

Date: 1960

Description: The existing structure on the west part of the *subject property* has been expanded to the south. The existing structure is visible on the northeast part of the *subject property*. No additional structures are apparent on the *subject property*.

Adjoining properties are depicted as follows: to the north are an apparent residence and portions of the existing improvements; to the east are the current improvements; to the south are two small structures (including a gas station) followed by Powell Boulevard, beyond which are the current improvements; and to the west is a lot with no discernable structures.

Date: 1970

Description: The existing structure on the west part of the *subject property* has been expanded to the south. The existing structure is visible on the northeast part of the *subject property*. No additional structures are apparent on the *subject property*.

Adjoining properties are depicted as follows: to the north and east are the current

improvements; to the south are two small structures (including a gas station) followed by Powell Boulevard, beyond which are the current improvements; and to the west are the current improvements.

Date: 1981
Description: The *subject property,* as well as all adjoining properties, is developed with the current improvements.

Date: 1990
Description: The *subject property,* as well as all adjoining properties, is developed with the current improvements.

Date: 1994
Description: The *subject property,* as well as all adjoining properties, is developed with the current improvements.

Date: 2000
Description: The *subject property,* as well as all adjoining properties, is developed with the current improvements.

Date: 2005
Description: The *subject property,* as well as all adjoining properties, is developed with the current improvements.

Date: 2009
Description: The *subject property,* as well as all adjoining properties, is developed with the current improvements.

Date: 2016
Description: The *subject property,* as well as all adjoining properties, is developed with the current improvements.

Date: 2022
Description: The *subject property,* as well as all adjoining properties, is developed with the current improvements.

Copies of selected aerial photographs are included in Appendix B.

4.1.4 Historical Topographic Maps

Historical topographic maps from 1954, 1961, 1970, 1976 and 1995 were provided by EDR.

The *subject property* and vicinity is shaded indicating inclusion in a densely developed urban setting on these maps. No structures are depicted on the *subject property*.

None of the topographic maps reviewed depict features of concern for the *subject property*.

4.1.5 Fire Officials

Records from Portland Fire and Rescue were requested for evidence indicating the presence of underground storage tanks (USTs). A summary of the findings is presented below.

1948: install an oil burning heater at a dry cleaner, tank size not identified (2911 Milwaukie).

1954: install 2000-gallon underground heating oil tank in yard (1041 SE Brooklyn).

1959: install one 6000-gallon underground diesel tank (1041 SE Brooklyn). One fuel pump on an island is noted.

1965: install one 6000-gallon motor fuel tank (1041 SE Brooklyn). Total tank capacity on premises noted as 8000 gallons (in two tanks). One fuel pump on an island is noted.

1969: install one 119-gallon propane above ground storage tank (1041 SE Brooklyn).

1982: install propane piping (1041 SE Brooklyn)

Copies of Portland Fire Bureau records are included at the end of Appendix D.

4.1.6 Building Permit Records

Building permit records pertaining to the *subject property* were obtained from City of Portland Bureau of Development Services and reviewed for this assessment. Selected permits are noted below.

1928: plumbing for dry cleaning facility, floor drains and fixtures, connected to sewer (addressed as 565 and 573 SE Milwaukie, currently 2911 Milwaukie)
1931: build garage (addressed as 575 Brooklyn, currently 1041 Brooklyn)
1953: extend garage 20 feet (1041 Brooklyn)
1963: reroof building (1041 Brooklyn)
1965: repair block wall damaged by crane (1041 Brooklyn)
1971: build 646 square-foot addition to east side of existing garage for Central Cylinder Head (1041 Brooklyn)
1981: install sump for Central Cylinder Head, connected to storm sewer, tied into parking lot catch basin (1109 Brooklyn)
1986: install exhaust for oven (1109 Brooklyn)
1988: construct 25'x45' addition to metal building (1109 Brooklyn)
2015: cannabis production registry (1109 Brooklyn)
2016: tenant improvements for marijuana business (1109 Brooklyn)
2017: HVAC for marijuana business (1109 Brooklyn)
2019: install 750-gallon carbon dioxide tank (1109 Brooklyn)
2022: cannabis production registry (2911 Milwaukie)
2023: cannabis production registry (2911 Milwaukie)

4.1.7 County Assessor

Multnomah County identifies the *subject property* as tax lots 1S1E11BA10500, 1S1E11BA10600 and 1S1E11BA10700 totaling 0.34 acres. *Subject property* improvements are described as a 2,160 square-foot garage building built in 1955 (date of construction conflicts with that identified in other sources), a 1,344 square-foot building (construction date not noted), and a 3,430 square-foot warehouse building built in 1982. S*ubject property* ownership is listed as Gerald Blinsman.

4.1.8 Oil and Gas Exploration

There were no oil or gas wells observed at the *subject property* and wells were not depicted on the *subject property* on the USGS Topographic Map.

4.2 Historical Use Information on Adjoining Properties

By review of the standard historical sources referenced above, the historical uses of the adjoining properties are summarized below:

North: The north adjoining properties are located in an apparent cross-gradient hydrogeologic position relative to the *subject property*.

No environmentally sensitive uses of these properties anticipated as having a significant impact on the *subject property* were identified through a review of standard historical sources or regulatory records. Underground storage tanks were removed from these sites and the work resulted in determinations of "no further action required" by Oregon DEQ (see section 6.1)

East: The east adjoining property is located in an apparent up-gradient hydrogeologic position relative to the *subject property*.

No environmentally sensitive uses of this property anticipated as having a significant impact on the *subject property* were identified through a review of standard historical sources or regulatory records.

South: The south adjoining properties are located in an apparent cross-gradient hydrogeologic position relative to the *subject property*.

No environmentally sensitive uses of these properties anticipated as having a significant impact on the *subject property* were identified through a review of standard historical sources or regulatory records. A review of Sanborn fire insurance maps revealed that this property was occupied by a gasoline station during the 1930s and into the 1970s. A search of regulatory records revealed no evidence of a release. This site is separated from the *subject property* by the SE Brooklyn Street.

West: The west adjoining property is located in an apparent down-gradient hydrogeologic position relative to the *subject property*.

No environmentally sensitive uses of this property anticipated as having a significant impact on the *subject property* were identified through a review of standard historical sources or regulatory records. A review of historical city directories revealed that this property was occupied by a gasoline station from sometime before 1925 until sometime after 1950. A search of regulatory records revealed no evidence of a release. This site is separated from the *subject property* by the SE Raymond Street right-of-way which is approximately 50 feet in width.

5.0 INTERVIEWS

Interview information provided by the following parties is included in various sections of this report unless specifically noted below.

5.1 Interview with Owner

- Mr. Gerald Blinsman

5.2 Interview with Key Site Manager

- Mr. Gerald Blinsman

5.3 Interview with Occupants

- None (unoccupied)

5.4 Interview with Local Government Officials

- Desk Clerk, Portland Fire and Rescue
- Receptionist, Multnomah County Assessor
- Records Request Center, City of Portland Bureau of Development Services

5.5 Interview with Others

- None

6.0 RECORDS REVIEW

6.1 Standard Environmental Record Sources

6.1.1 State and Federal Regulatory Review

Information from standard Federal and state environmental record sources was provided through EDR, Inc. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released.

In some cases, location information supplied by the database provider is insufficient to allow geocoded facility locations. These facilities are listed under the unmappables section within the EDR report. Where unmappable facilities are within the ASTM minimum search distance from the Property they are discussed in the appropriate section below. Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the *subject property*, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the *subject property* from the listed facilities. Regulatory agency file reviews (in office or online) were conducted for all immediately adjoining properties identified in the database search unless otherwise noted.

RADIUS REPORT DATA				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Listed**
Federal NPL or Delisted NPL Site	1.00	N	N	N

Oregon Dry Cleaners	0.25	N	N	N
Federal Brownfield Sites	0.5	N	N	**Y**
Oregon Brownfield Sites	0.5	N	N	**Y**

Subject Property

The *subject property* is listed on the Resource Conservation and Recovery Act (RCRA), Facility Index System (FINDS), and Environmental and Compliance History Information (ECHO) databases in the database report provided by Environmental Data Resources, Inc. (EDR). The RCRA program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste. Central Cylinder Head (1041 SE Brooklyn) filed reports under the RCRA program as a Conditionally Exempt Small Quantity Generator (now known as Very Small Quantity Generator) from 2000 through 2003. No violations were found. This facility also appears on the Environmental Compliance History (ECHO) and Facility Index System (FINDS) databases relative to the RCRA listing. These listings do not indicate a release.

Adjacent Properties/Area of Concern Sites

Based upon guidelines presented in ASTM E2600-10 Point Source uses an "Area of Concern" designation of greater than 528 feet (0.1 mile) for petroleum hydrocarbons and 1,760 feet (0.33 mile) for all other chemicals to determine if a listed site has a high risk of impacting the *subject property* through contaminated soil, groundwater, or vapor. Unless otherwise noted (adjoining properties), sites located in a downgradient hydrogeologic position relative to the *subject property* are not considered sites of concern.

Oregon Environmental Cleanup Site Inventory/Confirmed Release List

The ODEQ maintains a State Environmental Cleanup Site Inventory (ECSI) of sites considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Additionally, sites that are or may be contaminated and may require cleanup are found on the Confirmed Release List (CRL), and sites that have been enrolled in the Voluntary Cleanup Program (VCP) are found on the VCP database.

Eight Oregon ECSI sites are listed within one-third mile of the *subject property*. Five of these sites have received determinations of "no further action required" by ODEQ and/or are located in a hydrogeologic down-gradient position relative to the *subject property*. One site is identified as an adjoining property. The adjoining site and the two sites that have not been issued regulatory closure are discussed below.

Portland Fire Training (2856 SE Milwaukie) is identified as an east adjoining property and is listed by the ODEQ as ECSI/VCP Facility #6493. The site was added to the database as a suspect site for potential PFAS releases associated with historical fire training activities. No release has been identified.

Based on the lack of a documented release and the separation of this site from the *subject property* by SE Milwaukie Avenue no adverse environmental impacts to the *subject property* associated with this listing are anticipated.

Portland Fire Logistics Center (1300 SE Gideon) is located approximately 390 feet east-northeast of the *subject property* and is listed by the ODEQ as ECSI/VCP Facility #6454. The site was added to the database as a suspect site for potential PFAS releases associated with historical fire training activities. No release has been identified.

Based on the lack of a documented release and the separation of this site from the *subject property* by SE Milwaukie Avenue no adverse environmental impacts to the *subject property*

associated with this listing are anticipated.

Krishell Laboratories (1735 Powell) is located approximately 1700 feet east-southeast of the *subject property* and is listed by the ODEQ as ECSI Facility #1297. This facility began repackaging agricultural chemicals at the site in 1947 and ceased operations in 1963. USEPA visited the site in 1980 and found no evidence of hazardous substances. USEPA recommended closure and forwarded the file to ODEQ. In 1994 ODEQ stated that historical distribution of agricultural chemicals and pesticides at this location requires investigation, especially because such chemicals from the 1940s and 1950s can be very persistent in the environment. The ODEQ file includes no evidence of further investigation. This site also appears on the SEMS Archive database relative to the USEPA site visit.

Based on the lack of a documented release and the distance separating this site from the *subject property* no adverse environmental impacts to the *subject property* associated with this listing are anticipated

State Leaking Underground Storage Tank List (LUST)

The ODEQ compiles lists of all leaks of hazardous substances from underground storage tanks.

Twenty-two LUST listings are identified within one-tenth mile of the *subject property*. Two are associated with adjoining properties. Of the remaining 20 sites, 19 have been addressed to the satisfaction of ODEQ. The two adjoining sites and the site that has not been issued regulatory closure are discussed below. One additional site (Lakeview Chevron) is also plotted in close proximity to the *subject property*, but is actually located in Lakeview, Oregon.

Sauter Spray Equipment (2903 SE Milwaukie) is identified as a north adjoining property and is listed by the ODEQ as LUST Facility #26-96-0404. In 1996, two 1000-gallon underground storage tanks formerly containing gasoline were removed from the site. Confirmation soil samples revealed a maximum concentration of 223 mg/kg petroleum. This concentration was determined to be below cleanup levels applicable to the site (Level II Soil Matrix). The tanks were empty at the time of decommissioning. A Soil Matrix cleanup was reported to ODEQ. Groundwater was not encountered in the excavation. ODEQ issued a determination of "no further action required" for this release in May 1997. This site also appears on the ODEQ UST database which notes that the two USTs that were decommissioned were regulated tanks.

Based upon the regulatory status of this release, this release is not expected to have had a significant adverse environmental impact upon the *subject property*.

Sauter Spray Equipment (1018 SE Woodward) is identified as a north adjoining property and is listed by the ODEQ as LUST Facility #26-96-0697. In 1996, a heating oil tank was removed at this location along with 5.5 tons of petroleum-impacted soil. A small pocket (estimated at one cubic yard, with a maximum concentration of 24,000 mg/kg) was left in place due its proximity to the building's foundation. Other than the pocket of contamination, confirmation sampling indicates no concentration exceeding applicable cleanup levels. Groundwater was not encountered in the excavation. ODEQ issued a determination of "no further action required" for this release in June 1997.

Based upon the regulatory status of this release, this release is not expected to have had a significant adverse environmental impact upon the *subject property.*

Adeline Landis (1267 SE Gideon) is located approximately 460 feet east-northeast of the

subject property and is listed by the ODEQ as LUST Facility #26-02-1471. A release of heating oil to soil was reported at this site in 2002 as the result of a heating oil tank assessment. The file for this release remains open with ODEQ.

Based upon the reported "soils only" nature of this release and the distance separating this site from the *subject property*, this release is not expected to have had a significant adverse environmental impact upon the *subject property.*

US Brownfields and Oregon Brownfields

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. This database includes information reported by ODEQ Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding.

One Oregon Brownfields site is listed within one-third mile of the *subject property*. This site is located approximately 1000 feet north-northwest of the *subject property* and is also listed as an ECSI/VCP site that has been issued a determination of "no further action required" by ODEQ. Based on the regulatory status and the distance separating this site from the *subject property*, no adverse environmental impacts to the *subject property* associated with this listing are anticipated.

Unmappable List

EDR compiles a list of sites that are not mapped due to poor or inadequate address information. Point Source reviewed this list and determined that no sites suspected of impacting the *subject property* are located within the prescribed radius for this report.

6.2 Other Environmental Records

6.2.1 Records of Emergency Release Reports

Local and state fire safety authorities keep records of previously reported spills and releases of hazardous substances and petroleum products as per the Superfund Amendments and Reauthorization Act - Title 304 and the Emergency Response Notification System. Point Source reviewed available information on the spills database maintained by the Oregon State Fire Marshal's Office.

No records of spill incidents were found in association with the *subject property.*

6.2.2 Stormwater and Waste-Water Discharge Permits

No National Pollutant Discharge Elimination System (NPDES) permits, or other wastewater or stormwater permits were discovered during the course of this assessment.

7.0 USER & CLIENT PROVIDED INFORMATION

Point Source requested the completion of an ASTM User Questionnaire. Mr. Farhad Ghafarzade of Green Drop Garage completed the User Questionnaire on September 4, 2025.

7.1 Title Records

Point Source was not provided with title documentation for the *subject property*.

7.2 Environmental Liens or Activity and Use Limitation

No knowledge of environmental liens, activity and use limitations for the *subject property* was disclosed to Point Source during the course of this assessment.

7.3 Specialized Knowledge

No specialized knowledge was disclosed to Point Source during the course of this assessment.

7.4 Commonly Known or Reasonably Ascertainable Information

No knowledge of reasonably ascertainable information regarding environmental conditions associated with the *subject property* was disclosed to Point Source during the course of this assessment.

7.5 Valuation Reduction for Environmental Issues

No knowledge of reductions in *subject property* value due to environmental issues was disclosed to Point Source during the course of this assessment.

7.6 Owner, Property Manager and Occupant Information

7.6.1 Information Reported by the Key Site Manager

Mr. Gerald Blinsman (*subject property* owner), was identified as the Key Site Manager for the *subject property*. The Key Site Manager is defined by the ASTM Standards as a person with good knowledge of the uses of the *subject property*.

Mr. Blinsman completed an Environmental Questionnaire and Disclosure Statement for the *subject property* on September 7, 2025. Mr. Blinsman reported that prior use of the *subject property* includes cylinder head service (automotive machine shop), dry cleaning, and carburetor rebuilding services. Mr. Blinsman also reported that an unused heating oil underground storage tank is present on the *subject property*.

7.6.2 Information Reported by the Property Owner

See Section 7.6.1 Information Reported by the Key Site Manager.

7.6.3 Information Reported by Property Occupants

The *subject property* is unoccupied.

7.7 Previous Environmental Investigations

Point Source was not provided with previously prepared environmental reports for review.

8.0 NON-ASTM SCOPE ITEMS AND ADDITIONAL SERVICES

8.1 Asbestos-Containing Materials

Based on the age of the older *subject property* buildings (pre-1981), it is possible that asbestos containing materials were used in the *subject property* building construction. Suspect materials observed include thermal systems insulation on piping in the basement at the 2911 SE Milwaukie Avenue building.

8.2 Lead-Based Paint

Based on the age of the older *subject property* buildings (pre-1978), it is possible that lead-based paint has been used in the *subject property* building construction.

8.3 Radon

The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures. Review of the EPA Map of Radon Zones places the *subject property* in Zone 2, where average predicted radon levels are predicted to be between 2.0 and 4.0 pCi/L.

8.4 Lead in Drinking Water

The *subject property* is connected to the city water supply provided by the City of Portland. According to the 2024 Annual Drinking Water Quality Report prepared by the city, the lead level in the drinking water supplied to the *subject property* is within state and federal standards.

8.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding). Mold growths often appear as discoloration, staining, or fuzzy growth on building materials or furnishings and are varied colors of white, gray, brow, black, yellow, and green. In large quantities, molds can cause allergic symptoms when inhaled or through the toxins the molds emit.

Point Source observed accessible, interior areas for the *subject property* buildings for significant evidence of mold growth; however, this ESA should not be used as a mold survey or inspection. Additionally, this inspection was not designed to assess all areas of potential mold growth.

No water damage or mold growth was observed within the *subject property* building during Point Source's visual inspection.

9.0 FINDINGS & OPINIONS

9.1 Findings

9.1.1 Recognized Environmental Conditions

Evidence of *recognized environmental conditions* was disclosed during the course of this assessment.

A possible underground storage tank (UST) fill port was observed in the basement of the northeast building (2911 SE Milwaukie). The port is located in that portion of the basement that extends beneath the east adjoining sidewalk. A possible UST vent line was observed attached to the exterior wall of this building at its southeast corner. Abandoned chimneys were observed in the west building (1041 SE Brooklyn) and the northeast building (2911 Milwaukie). Chimneys are a possible indicator of past use of oil burning appliances. Portland Fire Bureau issued permits regarding heating oil and motor fuel USTs on the *subject property* (1041 SE Brooklyn) in 1954, 1959, and 1965. Potential releases from USTs (whether the tank is existing, abandoned, or previously removed without proper assessment) are considered a recognized environmental condition.

According to historical city directories and Sanborn fire insurance maps, the building on the northeast portion of the *subject property* was occupied by dry cleaning operations from sometime prior to 1935 and until at least 1970. Past occupancy by dry cleaning operations is considered a recognized environmental condition

According to historical city directories and Sanborn fire insurance maps, the *subject property* was occupied by automotive repair operations from sometime prior to 1940 and until at least 2022. A large floor drain in the western building (1041 SE Brooklyn) appeared to be stained with oil. A wood covered former wash area inside this building also exhibited evidence of minor oil staining. The area beneath the wood covering was not accessible at the time of the site reconnaissance. Past occupancy by automotive repair operations coupled with the above on-site observations are considered a recognized environmental condition.

9.1.2 Controlled Recognized Environmental Conditions

No evidence of *controlled recognized environmental conditions* was disclosed during the course of this assessment.

9.1.3 Historical Recognized Environmental Conditions

No evidence of *historical recognized environmental conditions* was disclosed during the course of this assessment.

9.1.4 Business Environmental Risks

Based on the age of the older *subject property* buildings (pre-1978), it is possible that asbestos containing material and lead-based paint were used in the *subject property* building construction.

9.2 Opinion

Conditions warranting further investigation of the *subject property* were disclosed during the course of this assessment.

9.3 Deviations

This Phase I ESA substantially complies with the scope of services and E1527-21, as amended, except for exceptions and/or limiting conditions as discussed in Section 1.4.

10.0 CONCLUSIONS & RECOMMENDATIONS

Point Source has performed a Phase I Environmental Site Assessment on commercial property located at 1041 and 1109 SE Brooklyn Street and 2911 SE Milwaukie Avenue, Portland, Oregon 97202 in general conformance with the scope and limitations of ASTM Practice E1527-21. Any exceptions to or deletions from this practice are described in the body of this report.

10.1 Conclusions

This assessment has revealed evidence of recognized environmental conditions in connection with the *subject property*.

10.2 Recommendations

Based on the findings of this assessment, further investigation/action is recommended with respect to the recognized environmental conditions identified. The investigation should begin with a geophysical survey to identify and locate features of interest.

11.0 ENVIRONMENTAL PROFESSIONAL STATEMENT and SIGNATURES

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312" and we have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history and setting of the *subject property*. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/26/2025 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are

7 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

OR ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the OR ECSI list, as provided by EDR, and dated 04/16/2024 has revealed that there are 89 OR ECSI sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there are 17 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 41 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 18 UST FINDER sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 06/02/2025 has revealed that there are 5 E MANIFEST sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:

The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

U.S. DOT Description: Rq,Un3432,Polychlorinated Byphenyls, Solid 9 Pgii, (Pcb Containing Lamp Ballasts)
Non-Hazardous Waste Description: Not reported
Number of Containers: 1
Container Type Code: DM
Container Type Description: Metal drums, barrels, kegs
Waste Quantity: 9
Quantity Unit of Measure Code: K
Quantity Unit of Measure Description: Kilograms
Waste Quantity, in Tons: 0.009922494
Acute Waste Quantity, in Tons: 0
Non-Acute Waste Quantity, in Tons: 0.009922494
Waste Quantity, in Kilograms: 9
Acute Waste Quantity, in Kilograms: 0
Non-Acute Waste Quantity, in Kilorgrams: 9
Management Method Code: H141
Management Method Description: STORAGE, BULKING AND/OR TRANSFER OFF SITE
Waste Residue Indicator: N
Quantity Discrepancy Indicator: N
Waste Type Discrepancy Indicator: N
Waste Density: Not reported
Waste Density Unit of Measure Code: Not reported

Decode for NarcdID: Site History
NARR Comments: [Landes/VCP 10/05/2020]: The site has operated as a metal sign and printing company since the mid-1960s. The site and vicinity have a history of industrial use daring back to at least the early 1900s. A Sanborn Fire Insurance Map from 1924 indicates the site was largely undeveloped. Early industrial tenants of the site included manufacturers of heating equiprment, operations of a foundry, <quot>factory<quot> activities, a spray-painting booth, a heat-treating room and cleaning room. The site had three boiler rooms in the basement. The site was bordered to the east by a mill company and to the north by a coal gas facility. A 153 foot industrial well (MULT 2778) was decommissioned June 2019. A leaking underground storage tank was evaluated and DEQ issued an NFA (LUST file 26-97-0130) on April 4, 2016. The site entered the DEQ Voluntary Cleanup Program in Januray 2020, after a Focused Site Investigation

THE IRWIN HODSON COMPANY (Continued) **S125995612**

and Indoor Air Assessment identified elevated concentrations of Trichloroethene (TCE) in sub-slab vapor and indoor air. A workplan was submitted for a data gaps site investigation for work in Fall 2020.

NARR Comments: 2023-June DEQ will provide guidance for active remediation of sub slab vapors that exceed hot spot levels 2023-May meeting with the Client to discuss DEQs request for additional work for sub-slab hot spot remediation [Landes/VCP 12/01/2020]: In Fall 2020, the site is conducting an indoor air assessment, subslab vapor sampling, and groundwater reconnaissance sampling in accordance with a DEQ approved workplan. This site entered the VCP program in January 2020 after a Focused Site Investigation and Indoor Air Assessment identified elevated concentrations of trichloroethene (TCE) in sub-slab vapor and indoor air. The has operated as a metal sign and printing company since the mid-1960s and consists of an industrial warehouse building that covers the entire property in an area of mixed commerical and industrial land use. Early industrial tenants of the site included manufacturers of heating equiprment, operations of a foundry, <quot>factory<quot> activities, a spray-painting booth, a heat-treating room and cleaning room. The site was bordered to the east by a mill company and to the north by a coal gas facility. TCE has been detected at concentrations above DEQ Risk-Based Concenetrations (RBCs) for occupational exposure in soil vapor and indoor air. In the past, DEQ has issued an NFA associated with the leaking underground storage tank (LUST file 26-97-0130) on April 4, 2016. A 153 foot industrial well (MULT 2778) was decommissioned June 2019. 2023-January TCE above hot spot levels in subslab vapor. DEQ will propose next steps for remediation of TCE vapors.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ

SHELTER PRODUCTS INC (Continued) **1004771537**

uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Incident Id:	010234
Incident Narrative:	PORTLAND FIRE BUREAU HAZMAT TEAM RESPONDED TO A REPORT OF A BOMB PLACED OUTSIDE THE MULTNOMAH COUNTY BUILDING ON SE 11TH & DIVISION. REPORTS INDICATED THIS SUSPICIOUS DEVICE CONTAINED A BOTTLE HAND WRITTEN AND LABELLED "BIO CHEM GAS". AFTER ARRIVING WE MET WITH SGT UNSWORTH OF THE METRO BOMB SQUAD AND ED MARSHMAN OF THE FBI WHO WERE ABLE TO SHOW US VIDEO OF THE BOMB AND IT'S LOCATION IN RELATION TO THE COUNTY BUILDING. A PLAN WAS FORMULATED TO EVACUATE THE AREA ONE-BLOCK IN ALL DIRECTIONS FROM THE LOCATION OF THE BOMB. ADJACENT RESIDENTS AND BUSINESS PERSONNEL WOULD BE SHELTERED IN PLACE AFTER NOTIFICATION. NEXT BOMB SQUAD PERSONNEL XRAYED THE BOMB TO DETERMIN ITS CONTENTS. READ THE XRAYS AND THEN DECIDED TO SEPARATE THE THREE PARTS. AFTER SEPARATION, TWO COMPONENTS SUSPECTED TO CONTAIN EXPLOSIVE POWDER WERE ROBOTICALLY SHOT AND OPENNED. SPILLING GUN POWDER ON THE SIDEWALK WITHOUT EXPLODING. THE 3RD PART OR BOTTLE LABELED "BIO CHEM GAS" WAS TAKEN BY THE FBI TO THE DEPARTMENT OF ENVIRONMENTAL QUALITY LAB AT PORTLAND STATE UNIVERSITY WHERE IT WAS DETERMINED IT CONTAINED MENERAL OIL PACKED IN COTTON. DEQ WAS NOTIFIED #01-2489. STATE FMO NOTIFIED 10-04-01. MILEAGE START 23786-23808

NARR Comments: Polynuclear aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), metals, and cyanide have been released to soils in the vicinity of the gas holding tanks. Most of the contaminated surface soils and accessible wastes from abandoned was removed from the site in 1991-92. Soil testing and soil and waste removal conducted around the two southern tank pads were largely based on visual indications of staining. Minor concentrations of petroleum (diesel fuel and heavy oil or bunker fuel) also remain in localized areas of subsurface soils where gasoline, diesel fuel, and waste oil underground storage tanks were decommissioned in 1993-95. Diesel fuel contamination was encountered during a 2004 heating oil tank decommissioning (LUST #26-97-0130) at the neighboring Irwin-Hodson Company facility, located immediately south of the site. Contaminated soils were left in place because they contained relatively low concentrations of VOCs and PAHs, and did not to represent a significant threat to groundwater or to site workers. The DEQ Heating Oil Tank program may re-examine the decision for no further action at Irwin-Hodson based on the results of additional investigation at the site.

NARR Comments: Contaminated soils and waste piles associated with the site s two southern gas holder tank pads were excavated and shipped to Chem Waste Management s hazardous waste disposal facility in Arlington for disposal in 1991-92. Most of the nearly 1,300 cubic yards of material was classified as hazardous waste due to elevated concentrations of leachable lead and cyanide. Approximately 19,000 gallons of cyanide-contaminated water within the three gas inlet vaults at the site s eastern gas holder tank pad (Pad #7) was discharged to the city sanitary sewer in August 25 to September 3, 1993. 49 tons of petroleum-contaminated soil excavated during cleanup of the site s various leaking petroleum underground storage tanks (LUSTs) was sent to Oregon Hydrocarbons in 1994 for treatment. 32 tons of contaminated soil was sent to Marion County Soil Recycling in 1995 for treatment. Thirty eight tons of petroleum contaminated soils/waste was remove

CENTRAL SERVICE CENTER (Continued) **U000432123**

from the southwest portion of the site in December 2008.

Decode for NarcdID: General Site Description
NARR Comments: Following DEQ's issuance of a conditional No Further Action determination, NW Natural plans to redeveolop this propeorty for use as the NWN Portland Resource Center. This redeveloped facility will use the address: 904 SE Division St. Portland 97202. Please note that two addresses refer to the same property, the other bding . The Site is a 5-acre property located at 2630 SE 9th Avenue in southeast Portland, and is currently owned by NW Natural. TriMet intends to purchase a .9 acre portion (Parcel 1) of the Site for use as part of the Portland-Milwaukie Light Rail Project. As planned, light rail tracks would be located on the parcel. The Site was previously used for manufactured gas storage (above ground tanks) and transmission (underground lines) from 1921 to 1956. Plant operations were discontinued in 1956. The Site is currently used by NW Natural as an operations facility, containing administrative offices and serving as a vehicle fueling and maintenance center. Two large, aboveground, 155- to 175 foot diameter, circular concrete manufactured gas storage tank holder pads are located on the southern portion of the site, and a third pad located on the north portion of the site has been buried beneath fill and covered by a paved parking lot. At least four leaking petroleum underground storage tanks (gasoline, diesel fuel, and waste oil) have been removed and stormwater drains to any of 13 on-site catchbasins and associated drywells at the site.

Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Petroleum and/or coal tar constituents (including PAHs, other semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs)), lead, and cyanide. Contamination is present in soil and groundwater. Minor/residual subsurface petroleum contamination is also present in areas where former underground petroleum storage tanks (USTs) and piping were decommissioned. Soil in the waste oil tank decommissioning location contained elevated concentrations of leachable lead. Soils beneath a 130 foot, abandoned in place long gasoline/diesel fuel transfer pipe were contaminated with heavier oil or bunker fuel, which is inconsistent with the transfer line s use. Debris encountered during the August 1995 removal of two of the sites USTs (LUST #26-95-0218), as well as soil

CENTRAL SERVICE CENTER (Continued) **U000432123**

boring lithologies from an investigation of subsurface transfer piping between the tanks and a former fuel dispensing island suggest that fill material at the site includes silt, gravel, and construction debris.

Decode for NarcdID: Project Issues Summary
NARR Comments: NNG removed contaminated waste piles, some of the contaminated debris, and some of the contaminated soils associated with the site s two southernmost concrete gas holder tank pads through an independent cleanup action in 1991-92. However, soils with lower levels of contamination, contaminated soils that were inaccessible, much of the contaminated debris and water within capped and abandoned gas transmission piping, contaminated water and debris within stormwater sumps surrounding the pads, and contaminated water within that pad s gas inlet vaults were left in place. Minor contamination also remains in subsurface soils surrounding the site s former LUST locations, and along fuel piping that was abandoned in place. Remeidal investigations are ongoing to determine that extent and nature of site contaminants. DEQ has no information to indicate that the ultimate fate of rainwater that accumulates in the depression on the southern 1/3 of the site has ever been defined. At least five stormwater sumps are located around the perimeters of the two southern tank pads. Ponded water in or near two of the sumps contained elevated concentrations of total cyanide (up to 120 ppm) and TCLP leachable lead (up to 12 ppm) when sampled in March 1991 and April 1992. Soil and groundwater samples were collected in August 2011 to decommission these sumps (data submittal to DEQ pending). A stream that historically crossed the southern 1/3 of the site (per 1909 records) was apparently directed to a sewer on the site s western property line. No ifnofrmation is available to determine if this sewer was ever fully abandoned, or if it may discharge to the existing municipal stormsewer. A monitoring well that the City of Portland constructed in the street near the site s southwest corner in March 2001 encountered groundwater at 21 feet bgs. Contamination associated with the former gas holder tank pads could easily extend into shallow groundwater. Darigold, Inc., a wholesale manufacturer of dairy products for human consumption, owns a 16-inch diameter, 450-foot deep industrial well and associated Certified Water Right Claim, located about 550-feet west of the contaminated area. The well casing is perforated beginning at 105-feet below ground surface, and appears to withdraw groundwater from the underlying Troutdale and Sandy River Mudstone formations. Groundwater contamination at the site could impact this well, and will be determined as part of the current groundwater remedial investigation.

NARR Comments: The site is likely to be used long term as industrial land. It is located in an area of mixed industrial, commercial, and residential properties. All properties immediately surrounding the site are either commercial or industrial use, as are more distant properties to the west, northwest, and southeast. However, residential areas are located south of SE Powell Boulevard, east of SE 12th Avenue, and north of SE Division Street. The nearest residential properties are located about 215 feet north, 290 feet east, and 490 feet south of the site.

NARR Comments: Stormwater to the Willamette River. An existing municipal stormsewer on the western edge of the site, constructed in 1963, is located 11- to 15-feet below SE 9th Avenue. This western stormsewer may not be deep enough to capture stormwater from the depression on the southern end of the site - at its westernmost extent, the depression is about 15 feet below the level of SE 9th Avenue. However, the western stormsewer could overlie an older sewer that once drained the creek. A municipal stormsewer, constructed in 1906, also lies along the site's southern boundary, at least 34 feet beneath SE Taggard Street. Potentially-contaminated groundwater and/or stormwater runoff from the southern third of the site could discharge to the stormsewer beneath SE Taggard Street, then discharge to the Willamette River, 0.25 mile west of the site. Subsurface contamination could represent a potential health threat to underground utility workers, or to utility trench workers. Contaminants could also discharge to the stormsewer, and contaminate Willamette River sediments. Former Creek Drainage. The former creek drainage might also provide a preferential migration pathway for contaminants to reach the river. The former creek drainage appears to parallel the southern edge of the Union Pacific Railroad mainline, and may pass beneath the Oregon Museum of Science and Industry (OMSI) building, near the eastern end of Interstate Highway 5 s Marquam Bridge. Groundwater to the Willametter River. The Irwin-Hodson Company, located immediately south of the site, has a 153-foot deep industrial well. The well log indicates that this well was deepened from its original depth of 113 feet bgs in 1967. Prior to 1967, the well appears to have withdrawn groundwater from a loose gravel formation (possibly fluviolacustrine deposits). The well may have abandoned in January 2005, however Oregon Water Resources Department (OWRD) still has no record of the well abandonment. Potentially-contaminated groundwater could also preferentially migrate to the Willamette river through the fluviolacustrine deposits, or possibly also along the nearby stormsewer s bedding.

NARR Comments: (1/5/94 GMW/SAS) Options letter sent; no further remedial action anticipated by RP. Further evaluation recommended. (9/8/06 SMF/SAS) Site priority for further investigation and cleanup was revised to high. (6/6/2007 CWH/CU) Northwest Natural entered into DEQ's Voluntary Cleanup Program to investigate suspected site contamination described in Site Assessment evaluation. (February 2008 SM/CU) Representative soil and groundwater sampling from twelve push probe borings in areas of potential contamination. Test pit samples were also collected from visually discolored soils located at the southwestern portion of the site. Sample results confirmed the presence of contaminated soil and groundwater at several locations. (December 2008 SM/CU) Thirty-eight tons of visably stained, petroleum cobntaminated soil/waste material removed from southwest portion of the site. (June 2009 SM/CU) Borings were completed at ten locations on the site. Seven shallow- and three intermediate-depth groundwater wells were constructed to determine the nature and extent of groundwater contamination. (August 2011 SM/CU) Soil and groundwater samples collected from boring locations to decommission thirteen dry wells historically used to collect stormwater at the Site. (September 2011 SM/CU) Borings completed at three locations on site and 3 locations west of the site. Groundwater wells constructed at each boring location.

Updated By: SMANZAN
Updated Date: 12/20/2011
Decode for NarcdID: Health Threats
NARR Comments: Contaminated surface and subsurface soils, and shallow groundwater contamination could be a potential inhalation, direct contact or vapor intrusion threat to on-site workers and off-site workers at nearby commercial and industrial facilities. Subsurface contamination could also be a potential threat to on-site, and nearby off-site, utility trench workers, construction workers, or to stormsewer utility workers. Groundwater contamination at the subject site could reach the nearby Darigold, Inc. production well, and possibly contaminate food products used for human consumption, or represent a potential risk for Darigold workers. It appears very unlikely that nearby residents and pedistrians would ber affected by direct contact with site contaminants. Residential neighborhoods are located as near

CENTRAL SERVICE CENTER (Continued) **U000432123**

as 215 feet to the north, 290 feet to the east, and 490 feet to the south of the site. A Buddhist temple is located about 290 feet east of the site. Abernethy Elementary School and Portland Environmental Middle School are located about 765 feet northeast of the site. The Oregon Museum of Science and Industry (OMSI) is located about 2,150 feet (0.4 mile) northwest of the site. Any contaminants reaching the Willamette River could represent a potential threat to the river s recreational users. The Willamette River is important rearing and migration habitat for coho salmon, spring and fall Chinook salmon, and winter steelhead trout. The river also provides important migratory habitat for summer steelhead, as well as habitat for searun cutthroat trout and the Pacific lamprey. Coho salmon is a state-listed Endangered Species. Chinook salmon and steelhead trout of the Lower Columbia River Estuary and Upper Willamette are federally-listed Threatened Species. Searun cutthroat trout and the Pacific lamprey are federal Species of Concern. Any contaminants reaching the Willamette River could represent a threat to the river s Threatened and Endangered fish species.

NARR Code: Water Use (Current/Reasonably Likely)
Created By: SFORTUN
Created Date: 08/29/2006
Updated By: SMANZAN
Updated Date: 12/20/2011
Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: Well records at Oregon Water Resources Department (OWRD) and the U.S. Geological Survey (USGS) indicate that groundwater within the nine survey sections (9 square mile area) surrounding the site is predominantly used for industrial purposes, although a few domestic and irrigation wells are also present. Within the nine square mile area (approximately equivalent to a 1.7 mile radius), there are 44 industrial wells (83%), 4, irrigation wells (8%), and 5 domestic wells (9%). The nearest domestic wells are three domestic wells (53- to 74 feet deep) located approximately 1.65 mile southeast of the site, in a presumed upgradient location. The nearest industrial well is a 490-foot deep well at the Darigold, Inc. facility, approximately 550 feet west of the site. The well was constructed in 1946, and penetrates fill (0-12 feet bgs), fluviolacustrine deposits (12-43 feet bgs), Troutdale formation (43-258 feet bgs), and Sandy River Mudstone (below 258 feet, bgs). The well has an associated Water Right claim, certified in 1960, which states that the well was in continuous use since it was first constructed. Although the well log for this well provides no well construction details, the associated Water Right registration form indicates it has a 16-inch diameter casing from the ground surface to 450 feet bgs; the casing is perforated from 105- to 425 feet bgs (in the Troutdale and Sandy River Mudstone formations). The Darigold facility (Darigold / Land O'Lakes / Purina / Concentrates, Inc.) is a wholesale distributor of dairy products for human consumption, and a manufacturer of livestock feeds, pet foods, and organic garden-soil amendments. OWRD also has a well log for the deepening of an industrial well at the Irwin-Hodson Company, adjacent to the subject site s southern boundary. In 2005, Cascade Environmental Services reported that this well s casing had been backfilled with concrete about 1985, although no abandonment record was ever filed with OWRD. The Willamette River, which lies about 0.25 miles (1,385 feet) west of the site, is used for

CENTRAL SERVICE CENTER (Continued) **U000432123**

recreational fishing, boating, and swimming, as well as providing critical rearing and migration habitat for Threatened and Endangered salmonid species. The river also likely provides an important food source for bald eagles.

NARR Comments: The northern 2/3 of the site is covered either by buildings or blacktop-paved parking areas. The site also has 13 active drywells beneath the parking areas that are in the process of being decommissioned. Some of the drywells are likely to intercept the shallow groundwater table, lcoated at approximatly 20 feet below ground surface. The site is securely fenced, so access to unauthorized pedestrians and potential trespassers should be negligible.

NARR Comments: A 1909 Sanborn Fire Insurance Map depicts the subject site as vacant, low-lying land with a creek flowing southeast to northwest, across the southern portion of the site, then entering a sewer at the site s western boundary along SE 9th Avenue. The site s manufactured gas holder tanks were constructed in 1921-1925. A 1924 Sanborn Fire Insurance map depicts two, 2 million cubic foot, gas holder tanks and several gas compressor houses located on a property owned by Portland Gas and Coke Company. A 1950 Sanborn Fire Insurance map shows the same tanks, plus an additional 3+ million cubic foot gas holder tank near the southwest corner of the site. The facility ceased operations (gas storage) in 1956. Subsurface gas transmission piping that was attached to the tanks had been capped and decommissioned in place within the site boundaries when the tanks were decommissioned sometime in the late 1970 s or early 1980 s.

NARR Comments: (11/26/2019 KRT) NW Natural continues to work with DEQ on site redevelopment issues such as on site stormwater percolation design and municipal easements. Periodic groundwater monitoring from on-site and off-site monitoring wells continues with results delivered to DEQ. (12/28/2016 KRT) The Site is the former location of the NW Natural Central Service Center and the Portland Gas and Coke Company (PG&C) Station E gas holder facility. The gas holders were

CENTRAL SERVICE CENTER (Continued) **U000432123**

operational between 1914 and 1956 and used for storage of manufactured gas prior to distribution to the surrounding region. Manufactured gas was a predecessor of natural gas and was distributed for uses such as heating, lighting, and cooking. A 0.9-acre portion of the 5.2-acre Site was sold by NW Natural to TriMet in 2012 and is being developed by TriMet for light rail use. DEQ issued a partial NFA determination letter for the Parcel 1 portion of the Site in 2011. Cleanup-related activities completed at the Site have included: Excavation and disposal of 250 cubic yards of lead paint-contaminated soils from the area south of Holder Pad No. 8 in 1992. Removal and disposal of 950 cubic yards of manufactured gas residue/debris contaminated with petroleum hydrocarbons, lead, and cyanide from the areas of Holder Pad Nos. 7 and 8 in 1991 and 1993. Management of water contained within the gas inlet vaults of Holder Pad Nos. 7 and 8 followed by the filling of these vaults in 1993. Removal of 38 tons of soil/manufactured gas residue material contaminated with petroleum hydrocarbons, metals, and cyanide from the southwestern corner of the Site in 2008. Decommissioning of three drywells located at the western portion of the Site within an area of shallow groundwater contamination was completed in 2013 to mitigate any effects that direct subsurface infiltration of stormwater in this area could have with regard to plume behavior. Remedial Investigaton work activities conducted at the Site involved near-surface and subsurface investigations, land and water Beneficial Use Determination (UD), human health and ecological risk assessment, and preparation of this RI report. Based on the results of the remedial investigation and risk assessment activities conducted for the Site, further active remedial measures at the Site are not warranted. Although remedial measures are not warranted, the following recommendations are presented due to the presence of contaminated media at the Site. Residual contaminated soil and groundwater are present at the subject property. If left in-place, undisturbed, no actions are necessary with respect to the impacted soils and groundwater that remain beneath the property, as long as the property continues to be utilized for non-residential purposes only. If future Site development activity encounters impacted soil and/or groundwater at the property, special management of this soil or dewatered groundwater will be necessary for removal and/or disposal purposes. If future Site development activity has the potential for Excavation Workers to come in contact with impacted groundwater then measures need to be taken to ensure workers are informed of this, and that protective measures are implemented to mitigate the potential risk of exposure to contaminated media. Drainage improvements related to future Site development will need to include best management practices and controls such that any re-establishment of stormwater discharge to the adjacent storm sewer do not contain an unacceptable contaminant load. Site data indicate that removal of total suspended solids load from stormwater will largely address this issue. It would be prudent to prepare a Contaminated Media Management Plan (CMMP) prior to conducting future subsurface work at the Site. The purpose of a CMMP is to provide guidelines for appropriate management and disposal of contaminated soil and/or groundwater that may be encountered during potential future subsurface activities at the property, as well as to outline the measures to be taken to protect site workers during subsurface work activities.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	10,000-49,999
Description Of The Avg Qnty Code:	5,000-9,999
Most Hazardous Ingridient:	FRUCTOSE
United Nations/north America 4 Digit Class Number:	0000
Hazard Rank:	1
EHS Ingredient:	NONE LISTED ON SDS
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Combustible Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.5
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N

DARIGOLD INC (Continued) **1000641935**

Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	STAR-DRI 5
Physical Description:	SOLID
Case Number:	9050366
Facility Id:	016380
Physical State Of The Substance:	1
Average Amount Possessed During The Year Code:	20
Maximum Amount Possessed During The Year Code:	30
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	J
Description:	BAG
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

NARR Comments:	(12/9/03 KJR/VCP) The site was a gasoline service station for an unknown period of time until the early 1980s when all facilities were

GULL INDUSTRIES, INC. #50 (Continued) **U000432139**

removed. As part of the MLK Jr Blvd Viaduct project, ODOT performed Phase I/Phase II site assessments at the property. During the Phase II site assessment, waste oil and gasoline contamination was identified in soil. A geophysical survey suggested the presence of a small UST, suspected to contain heating oil, and another small UST suspected to contain hydraulic oil for the hoist. Material within catch basins was sampled and found to contain contaminated sediment. Groundwater was not encountered to the total explored depth of 38 feet below grade. (9/27/05 KJR/VCP) A site investigation that included a geophysical survey, drilling and sampling was performed in November and December 2002. The geophysical survey indicated a possible UST on the east side of the building foundation (a UST was not located during later excavation activites) and a potential hydraulic oil tank near the hoist. A site map showing the former site layout and soil boring locations is included as Figure 2. A total of 18 borings were installed utilizing direct push technology (DPT) drilling equipment. Soil samples collected from 17 of the 18 soil borings were analyzed for hydrocarbon identification. Of the 24 soil samples analyzed for hydrocarbon identification, gasoline and diesel were identified in two soil samples (GPG16-S3, GPG14-S2) and gasoline, diesel, and heavy oil were identified in one soil sample (GPG3-S4). These three soil samples and six additional soil samples were analyzed for gasoline-ranged hydrocarbons and for diesel and heavy oil-ranged hydrocarbons. Concentrations of gasoline were detected in four of the nine samples analyzed at levels ranging from 11.6 milligrams per kilograms (mg/kg) to 834 mg/kg. Concentrations of diesel and heavy oil were detected in one soil sample at levels of 2,930 mg/kg and 14,800 mg/kg, respectively. Six soil samples were also analyzed for VOCs. Concentrations of one or more VOC compounds were detected in soil samples GPG3-S4 and GPG14-S2 at levels ranging from 0.146 mg/kg to 6.03 mg/kg. Two soil samples (GP14-S2, GPG15-S4) were also analyzed for total lead. Total lead was detected at 9.74 mg/kg and 6.51 mg/kg. The soil sample collected from the vicinity of the former waste oil UST (sample GPG3-S4) was analyzed for leachable cadmium, chromium, and lead. A concentration of leachable lead was detected at 12.8 mg/L. Leachable cadmium and chromium were not detected. The sample was also analyzed for PCBs. PCBs were not detected. Sediments within two catch basins were analyzed for hydrocarbon identification, diesel and heavy oil, PCBs, VOCs, and SVOCs. The sample from the southern catch basin was also analyzed for gasoline. The following compounds were detected in the southern catch basin sample: gasoline (1,720 mg/kg), diesel (22,000 mg/kg), heavy oil (58,200 mg/kg), PCBs (11.05 mg/kg), VOCs (ranging from 1.44 mg/kg to 72.1 mg/kg), and SVOCs (50.6 mg/kg, 471 mg/kg). The following compounds were detected in the northern catch basin sample: diesel (1,770 mg/kg), heavy oil (4,850 mg/kg), and PCBs (0.263 mg/kg). In February 2004, additional site investigation was performed to further define areas of concern identified previously. Following the completion of the investigation, the consultant provided DEQ with a site map showing the boring locations and a table summarizing soil analytical results. A report was not completed to document the results of the site investigation since a settlement agreement was reached between the property owner (at the time) and ODOT shortly following the completion of field work. ODOT assumed responsibility for cleanup as part of the settlement and the former property owner terminated their VCP agreement with DEQ. A review of the data tables indicated results are consistent with site conditions documented

GULL INDUSTRIES, INC. #50 (Continued) **U000432139**

during ODOT s 2002 investigation.

NARR ID: 5744415
NARR Code: Remedial Action
Created By: KROBERT
Created Date: 12/09/2003
Updated By: GWISTAR
Updated Date: 03/01/2006
Decode for NarcdID: Remedial Action
NARR Comments: (12/9/03 KJR/VCP) The RP joined the ICP. Proposed work includes additional assessment and evaluation to applicable risk standards in the pump island gasoline contamination area, soil excavation in the waste oil area, decommissioning of the heating oil and hydraulic oil USTs (if present), and cleaning of the catch basins. (9/20/04 KJR/VCP) ICP agreement terminated with RP. New agreement will be entered into with new property owner - ODOT. (9/27/05 KJR/VCP) In April 2005, ODOT excavated and transported off-site for disposal about 460 tons of PCS. During the removal action, the two catch basins and a hydraulic hoist were also excavated and removed. The removal action was performed in three distant areas; the former pump island area, the former waste oil UST area, and the hydraulic hoist removal. Groundwater was not encountered in any of the excavations. The site is scheduled to be developed into a lined storm water treatment facility in 2006. The site may also be incorporated into the City of Portland s combined sewer overflow project. Based on the current and anticipated future use, the residential pathway is not a complete pathway. Since groundwater was not encountered on-site or on nearby sites at depths less than 50 feet bgs, the leaching to groundwater pathway is not complete. The following pathways were retained for evaluation. Soil - Occupational Volatilization to Outdoor Air Soil Occupational - Ingestion, Inhalation, and Dermal Contact Soil - Construction & Excavation Worker Ingestion, Inhalation, and Dermal Contact The pump island area was excavated to a total depth of 20 feet bgs. Following the completion of the pump island excavation, 13 confirmation soil samples were collected and analyzed for gasoline, diesel, and heavy oil. Concentrations of gasoline were only detected in two confirmation samples (FL-#5-SW-13 , FL-#13-S-10) at levels of 4,440 mg/kg and 609 mg/kg, respectively. Concentrations of diesel were only detected in one confirmation sample (FL-#5-SW-13) at a level of 2,650 mg/kg. Concentrations heavy oil was not detected. Soil samples FL-#5-SW-13 and FL-#13-S-10 were also analyzed for VOCs, PAHs, and total lead. Concentrations of VOCs were detected in both samples at levels ranging from 0.753 mg/kg to 511 mg/kg. Concentrations of PAHs were also detected in both samples at levels ranging from 0.0193 to 34.6 mg/kg. Total lead was not detected in either sample. About 50 cubic yards of PCS was left in place following the completion of the pump island excavation. The PCS is located between about 9 feet and 12 feet bgs. Confirmation samples collected from the final extent of the pump island excavation, including those collected in the area of the remaining PCS, were all less than RBCs for applicable pathways. If this remaining PCS is encountered during the construction of the lined storm water treatment facility, the material will be characterized and transported off-site for disposal. Based on the leachable lead concentration (24.3 mg/L) from a pre-excavation soil sample, about 64 tons of soil characterized as a hazardous waste was excavated from the vicinity of the former waste oil UST and transported to ChemWaste

GULL INDUSTRIES, INC. #50 (Continued) **U000432139**

s facility in Arlington, Oregon. The excavation extended to an approximate depth of 7 feet bgs. Five confirmation soil samples were collected from the final extent of the excavation and analyzed for gasoline, diesel, and heavy oil. Gasoline, diesel, and heavy oil were not detected. Select confirmation samples were also analyzed for PCBs, VOCs, total metals: lead, cadmium, and chromium. No PCBs or VOCs were detected in the three samples analyzed. Total lead (11.7 mg/kg to 112 mg/kg), total cadmium (3.22 mg/kg, 3.56 mg/kg), and total chromium (19.8 mg/kg to 28.9 mg/kg) were detected in the three samples analyzed. The waste oil UST excavation was successful in removing PCS. The detected concentrations of total metals: lead, cadmium, and chromium were less than respective industrial PRGs. A hydraulic hoist was decommissioned by excavation and removal. Three confirmation soil samples were collected from the final extent of the excavation and analyzed for gasoline, diesel, and heavy oil. Diesel and heavy oil were detected in one of the confirmation samples at 94.7 mg/kg and 446 mg/kg, respectively. Gasoline was not detected in the three soil samples. Two of the confirmation samples were also analyzed for PCBs, VOCs, and total metals: lead, cadmium, and chromium. Total lead (11.3 mg/kg, 208 mg/kg) and total chromium (20.3 mg/kg, 28.2 mg/kg) were detected. No PCBs, VOCs, or total cadmium was detected. One confirmation soil sample was also analyzed for PAHs, and it contained PAH levels ranging from 0.0953 mg/kg to 2.12 mg/kg. Benzo(a)pyrene (1.46 mg/kg) and dibenzo(a,h)anthracene (0.402 mg/kg) exceeded their respective occupational RBCs for the soil ingestion, dermal contact, and inhalation pathways, but did not exceed their respective construction and excavation worker soil ingestion, dermal contact, and inhalation pathways. All other detected compounds associated with the hoist excavation were less than applicable RBCs or PRGs. The elevated concentrations of PAHs are located about 4 feet bgs, limiting the potential for contact by occupational workers. A no further action determination is proposed for the former Gull Service Station #50 site, and will be finalized after consideration of public comments. The final decision will be applicable to both the LUST and ECSI files. (12/12/05 KJR/ICP) No public comments were received. DEQ issued the No Further Action determination 12/5/05.

NARR Comments: In April 2006 construction began on the OR99E: Division Street - Ross Island Bridge Project. This project was the first phase of a larger one involving replacement of the MLK and Grand viaduct structures that cross over Division Street and the Union Pacific Railroad right-of-way near OMS1 in Portland. Environmental activities associated with this construction project include the following: - Two dry wells were cleaned out and backfilled with slurry on January 30, 2006 by ODOT's contractor (UIC #12598; 2505 SE Grand Ave, Portland) - On July 5, 2006, DEQ issued a Solid Waste Permit Exemption, under which approximately 10,300 cubic meters of soil with low levels of contamination were placed in utility trenches within the construction site. A copy of the exemption letter is attached. - On April 9, 2007, DEQ provided a letter concurring with a proposal by ODOT that soil at depths to 4 feet be disposed of at a permitted landfill. Deeper soil could be left in place because sample results indicate that contamination in this soil does not exceed safe levels for construction workers. - Dry wells were discovered on a portion of the site formerly occupied by Commercial Iron Works. These were referred to DEQ's UIC Program. - VOC contamination in soil was discovered in 2009 at a location where ODOT needed to drive piles. The concern was that the piles could drive contamination down into groundwater. One solution we considered was to require a bentonite plug at the top of the piles. However, we then learned that reinforced concrete pile caps at the top of the piles would be installed anyway, and would serve this purpose.

Environmental Interest/Information System:

The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

CENTRAL SELF STORAGE (Continued) **S122365399**

by DEQ. PFAS and PFOA identified in GW. Facility was a former fueling facility and there are diesel impacts to GW at the site and off-property. GW needs to be delineated. Due to the large amount of sawdust/wood fill, DEQ has requested methane sampling from the vapor points, a riser, the electrical room, restrooms, and one fo the garages, with door only partially open.

NARR Comments: Former manager of Krishell Laboratories informed EPA that the facility was started up around 1947 to formulate agricultural chemicals. Krishell Laboratories also repackaged concentrates. Former manager left the firm in 1951 and indicated there was no direct manufacturing of any pesticides nor was there any wastes generated by

KRISHELL LABORATORIES (Continued) **1006858995**

the facility. 30- and 55-gallon drums were re-used to package their products. The firm supposedly closed around 1963.

NARR Comments: EPA visited the facility in 1980. Found a newer building at location, which was occupied by a wholesale food-products firm. EPA Assessment Priority: None. Reason: There is no record of hazardous substances existing on-site, and therefore, it is recommended that this site be closed. EPA forwarded information to DEQ.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Name: Not reported
Address: 2611 SE 4TH AVE
City,State,Zip: PORTLAND, OR 97202
Facility ID: 2022-0477
Incident Status: Referred/Closed
Material: Sewage
Quantity: Unknown
Unit of Measure: UNK
Release Date: 02/28/2022
Description: City of Portland reported a combined sewage release with an unknown amount being released into the Willamette River. The more precise location is 475 ft East of the Ross Island Bridge. Crews are working to see if the release has been stopped. No amount and no cleanups are known at this time.

Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	500-999
Most Hazardous Ingridient:	CALCIUM NITRATE, TETRAHYDRATE
United Nations/north America 4 Digit Class Number:	Not reported
Hazard Rank:	1
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Miscellaneous Hazardous Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	9.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	CEMENT
Physical Description:	SOLID
Case Number:	65997151
Facility Id:	004700
Physical State Of The Substance:	1
Average Amount Possessed During The Year Code:	40
Maximum Amount Possessed During The Year Code:	40
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	A

TAIT PLANT (Continued) **U000432744**

NARR Comments:	(9/15/03 MTP) Earth Tech Inc. (Earth Tech) conducted a Phase I Environmental Investigation and documented the results in a draft report dated August 17, 2001. During the investigation Earth Tech advanced 3 soil borings. Chemical analysis detected total residual

GRANT STREET PROPERTY (Continued) **S105807711**

range organics (RRO; similar to total petroleum hydrocarbon (TPH) as heavy oil) at a concentration of 2,900 milligrams per kilogram (mg/kg) from a sample collected from 1 to 2 feet below ground surface (bgs) in boring B-2, advanced near an oil storage area. Residual diesel-range organics (DRO; similar to TPH as diesel) was detected at a concentration of 220 mg/kg in this sample. The sample from 5 feet bgs at this location contained RRO at 1,000 mg/kg, but did not contain detectable DRO. DRO and RRO were not detected in the other two borings. Earth Tech concluded that the TPH contamination represented approximately 10 to 15 cubic yards of soil, and was the only environmental concern at the site. Northwest Envirosearch conducted a Phase I investigation in 2002. They observed excess petroleum oils in the outside storm water catch basin, which is connected to the City of Portland sanitary sewer. Northwest Envirosearch recommended the catch basin be cleaned, but it is not clear if this occurred. DEQ did not observe petroleum in the catch basin during a site visit on April 22, 2003. Northwest Envirosearch concluded that the petroleum in the catch basin was the only environmental concern at the site. As indicated in a later report, Northwest Envirosearch was unaware that a previous Phase I investigation had been conducted, and that elevated TPH concentrations had been detected in soil. Phase II Investigation (ECS, 2003) ECS conducted A Phase II investigation in October 2002 to evaluate the extent of contamination detected in the earlier investigation. A total of six borings were advanced to total depths ranging from 8 to 12 feet bgs (ECS B-1 through ECS B-6). In borings ECS B-3 and ECS B-4, a horizon of soil from approximately 3- to 4.5 feet bgs brick fragments and charred wood was observed that appeared to be residue from a fire. The borings did not encounter groundwater at the maximum depth of 12 feet bgs. ECS submitted one sample from each boring for hydrocarbon identification analyses (HCID). Based on the HCID results, the sample collected from 4 feet bgs from ECS-B3 was further analyzed for extended range diesel (TPH-Dx). The analysis indicated TPH as heavy oil at a concentration of 180 mg/kg, and TPH as diesel (TPH-D) at a concentration of 60 mg/kg. TPH was not detected in sample ECS B-1, collected with about 1 foot of Earth Tech s boring B-2, where an elevated petroleum hydrocarbon concentration had been detected. Both samples from ECS-B-1 (2 and 4 feet) were analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX), in addition to polynuclear aromatic hydrocarbons (PAHs). BTEX were not detected, but a number of PAHs were detected. With the exception of benzo(a)pyrene (0.0713 mg/kg) in ECS B-4, all PAH concentrations were below DEQ s risk-based concentration (RBC) for direct contact with soil under a residential-use scenario. All concentrations were below the RBC for direct contact under an occupational-use scenario. Based on DEQ s comments to the ICP Report, which contained results from the previous Phase I and Limited Phase II investigations, ECS conducted additional site characterization sampling in May 2003 to better define the extent of contamination. A total of seven borings were advanced to a total depth of 8 feet bgs (ECS B-7 through ECS B-13). Groundwater was not encountered in any of the borings. Borings ECS B-9 and ECS B-13 exhibited evidence of a fire (i.e., charred debris and black staining) at a depth of 3.5 feet, similar to previous observations ECS B-3 and ECS B-4. One sample from each boring was submitted for HCID analyses. Petroleum hydrocarbons were detected in the stained interval (3 feet bgs) in ECS B-9, and follow up TPH-Dx analysis indicated the sample contained

GRANT STREET PROPERTY (Continued) **S105807711**

245 mg/kg TPH as heavy oil. TPH was not detected in a sample collected from 4 feet bgs from ECS B-9, immediately below the stained interval. The 3-foot sample was further analyzed for BTEX, in addition to PAHs. BTEX were not detected; a number of PAHs were detected. All PAH concentrations were below their respective RBCs for direct contact with soil under an occupational-use scenario. To evaluate the presence of waste oil constituents, the sample from ECS B-9 also was analyzed for cadmium, chromium and lead, and polychlorinated biphenyls (PCBs). These additional analyses are consistent with DEQ guidance for evaluation of waste oil contamination. PCBs were not found above method detection limit of 67 micrograms per kilogram (ug/kg). Reported cadmium (1.5 mg/kg) and chromium (28.6 mg/kg) concentrations appear to be within the range of naturally occurring concentrations, and are well below their respective U. S. Environmental Protection Agency Region 9 Preliminary Remediation Goals (PRGs) for industrial use soil. The lead concentration of 3,390 mg/kg in ECS B-9 is over three times its RBC of 1,000 mg/kg for industrial use soil. A Toxicity Characteristic Leaching Procedure (TCLP) analysis also was conducted, with a lead result of 0.41 milligrams per liter (mg/L). Cadmium and chromium were not detected in the TCLP leachate. At DEQ s request, ECS requested further lead analysis on soil samples that had been retained by the analytical laboratory. Additional lead analysis was conducted on four samples. Three of the samples collected from borings in the vicinity of ECS B-9 (i.e., ECS B-10, ECS B-11, ECS B-12) were within the range of expected naturally occurring lead concentrations (~17 mg/kg), and appear to define the extent of lead impacted soil in this area. The lead concentration reported for ECS B-7 was 66.8 mg/kg, and although elevated with expect to the expected background level of 17 mg/kg, is well below the RBC for direct contact with industrial soil (1,000 mg/kg).

NARR Comments:	As early as the 1920s, the site was developed as the Inman Poulsen Lumber Company and had a pier/dock structure for loading and unloading of ships. No other lumber mill operations appears to have occurred at the site. In the 1960s, the site was occupied by Willamette Sand and Gravel and Oregon Asphalt Company. The 1969 Sanborn Map shows structures related to motors, compressors, kilns, conveyors and storage facilities. At least one structure was likely used for oil and gas storage. This equipment was largely removed by the late 1990s. The western portion of the site contains fill material of unknown origin. In addition, several large stockpiles of sand and gravel, soil and asphalt are present on the site. Lastly, petroleum-contaminated soil, reportedly containing concentrations below Soil Matrix levels, was placed on the site in December 1997. Contaminants detected in soil at the site during investigations in 2012 incuded gasoline, diesel and heavy oil range hydrocarbons, metals (arsenic, barium, chromium, and lead), PCBs, and PAHs. Groundwater contaminants include PAHs and metals. Petroleum hydrocarbons, VOCs and PCBs largely not detected. (JKS 6-22-18)

NARR Comments: Creekside Environmental Consulting performed a preliminary environmental investigation (Phase I ESA)for the site in early 2012. Several RECs were noted: 1) Historical use of oil/gas in association with the asphalt plant, wood product storage, cement production and a marine dock. 2) Historical placement of fill from unknown sources on the property. 3) Placement of 30-60 tons of petroleum-contaminated soils associated with a former UST. 4) Presence of several large stockpiles of sand and gravel, asphalt and soil on the property. 5) Contaminated sediments in proximity to site. In June 2012, borings, test pits, composite sampling of the large stockpiles and discrete soil groundwater samping were performed at the site. Associated with this work, a geophysical survey was performed and magnetic anomalies were investigated. The following were detected in soil from the site: gasoline, diesel and heavy oil hydrocarbons, PAHs, and metals (primarily lead). Lead exceeded screening levels in three samples and arsenic exceeded screening levels in one sample. The following were identifed as COPCs: lead, benzo(a)pyrene and benzo(b)flouranthene. Groundwater samples from two borings detected only barium. Creekside concluded that further asessment of the stockpiles was warranted. In August 2012, samples were collected from near-site sediments. Selected VOCs and PAHs were detected in sample S1 near the down-stream part of the property. In August 2012, 12 additional borings were advanced and 22 soil trenches were excavated at the site to further characterize subsurface conditions. Three of the borings were converted to groundwater monitoring wells. Groundwater was encountered at a depths ranging from 31 to 35 feet bgs at the site. Gravimetric analysis showed that many of the petroluem hydrocarbons detected in soil within the top 15 feet were in the asphalt range. Arsenic was detected in soil samples from across the site but at levels below the naturally occurring background levels. PCBs were largely not detected in the soil or groundwater samples. Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

NARR Comments:	(GMW 8/20/96) Transformers were salvaged at the site from 1974 to about 1987. It is unknown how many transformers contained oil with

WINKLER SCRAP METAL INC. (Continued) **S111252335**

PCBs, or how (or if) that oil was disposed of. A manifest from 11/84 shows transformers with up to 26 ppm PCBs being shipped to the site. A 9/87 PA that DEQ performed for EPA recommended a medium-priority SI to sample for PCBs and related combustion compounds (dioxins and furans). Soon after the PA was completed, however, the site passed a TSCA inspection, and EPA decided that no further action under the federal Superfund program was necessary. An 8/96 DEQ site visit revealed that Winkler has not operated at the site for about 7 years, and used several neighboring buildings in addition to the 1737 Rhine address. All of these buildings were occupied by businesses, and there was no evidence of contamination on the 1737 property, nor around the other buildings.

Decode for NarcdID: Remedial Action
NARR Comments: (GMW 8/20/96) DEQ added this site to ECSI and conducted a PA due to historically poor waste-management practices among electrical equipment metal salvage operators. There is no evidence that PCB releases occurred, and EPA's 8/87 TSCA inspection did not result in any citations. In addition, DEQ found no evidence of contamination during an 8/96 site visit. However, based on DEQ's experience with other metal salvagers, it is possible that PCBs and related compounds were released, and remain in the environment. DEQ needs further information on historical operating practices, and perhaps samples from selected areas, to reach a final conclusion about the site. Further state action to research past operating practices is a low priority.

Incident Narrative: PR&R E-23 and T-1 responded to a report of an odor/smoke problem at the above listed address. On arrival, occupants informed crews that white smoke was visible in the first floor hallway. Investigation

DYO-RISAKA LLC (Continued) **S108523873**

confirmed that light smoke was present in the first floor hall and crews noticed a metallic taste as they proceeded into the first floor. A set of double doors separates the first floor hallway and as crews past through the doors the smoke increased in volume. Crews continued down the hallway to locate the source and identified a probable room on the north east corner of the building. Crews cut a padlock to gain entry and found the room charged with white smoke. An exterior door was opened to allow ventilation and location of the source. As smoke cleared, a pile of debris was located on the floor near the center of the room and crews began feeling discomfort in their nose and throat. E-23 directed crews to with draw from the area and elevated the response to a Haz Mat level II response through investigator Wong. HazMat 6 arrived and contacted an occupant of the apartment building named Thomas Gambro. Mr. Gambro explained that he was following a patented formula for the creation of an alternative fuel cell. He was attempting to create an amalgum of an alkali metal (sodium), mercury, and aluminum in an inert atmosphere (nitrogen). The mixture is heated in a controlled atmosphere and when cooled becomes a material that generates hydrogen by decomposition of water. Mr. Gambaro believed that the reaction was complete after examining the top portion of the mixture in the pressure cooker. When he dumped the material out onto his desk the remaining material ignited in air and began producing smoke. Mr. Gambaro swept the material onto the floor and attempted to control the reaction. After several minutes he left the room. After interviewing Mr. Gambaro HazMat 6 initiated resource and communications with OHSU poison control. To prevent additional exposure, E-23 crew in full firefighting turnouts with SCBA used the Entry Link Camera under the direction of HazMat 6 team members to evaluate the hot zone. Team entry occurred @ 2156 with no visible smoke or reaction taking place. Entry team evaluated Hot Zone from north entrance and team 6 members viewed make shift lab on monitor in apparatus. See plot plan for basic room layout and chemical locations. Entry team made two entries and was out of Hot Zone by 2203. Evacuation of building had taken place prior to HazMat 6 arrival and based on Hot Zone observations a recommendation was made to command to keep building secure and unoccupied until contamination evaluation could be performed by contractor. Initial information from poison control toxicologist recommended that civilian and fire service exposures be evaluated for mercury exposure. Haz Mat 6 recommended to command that members turnouts and equipment be bagged and evaluated for contamination. Haz Mat 6 assisted PF&R members with removal and bagging of clothing and preliminary clean up. A tenant contact list was established and preliminary information was provided to building occupants. Red Cross was activated for occupants unable to find shelter. Building security turned over to owner @ 0100 on 5/6/07.

Decode for NarcdID: Contamination
NARR Comments: (12/02/2015 KPD/VCP) Parametrix advanced nine borings at the site in April 2011 as part of a Phase II Environmental Site Assessment for TriMet. Diesel-range and lube oil-range hydrocarbons were detected in most of the soil samples, along with PAHs. The same contaminants were also detected in groundwater 30 feet below ground surface. Additional sampling was conducted by URS in July-August 2014. Composite surface soil samples were collected from across the site, finding diesel and oil and elevated concentrations of arsenic, lead, and PAHs. High levels of methane were also detected in two soil gas sample locations. Not reported

Created Date: 04/11/2013
Updated By: KDANA
Updated Date: 03/25/2014
Decode for NarcdID: Site Location
NARR Comments: The site occupies a city block bordered by SE Sherman Street to the north and SE Caruthers Street to the south. The site encompasses the former SE 6th Avenue right-of-way on the west, and a Union Pacific rail line runs diagonally NW to SE on the east property line. Keller Supply Company formerly bordered the site on the west. The Grand Avenue viaduct lies 200 ft west of the site. The site address has also been given as 600-604 SE Sherman Street.

Decode for NarcdID: Manner of Release
NARR Comments: The manner and time of the contaminant releases are unknown. Notably, the site was only connected to municipal water and sewer systems in 1998. How these services were provided prior to 1998 is not known. The nearest stormwater inlet (catch basin) is 175 feet west of the site and was likely installed in 2011.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site sits atop 30 feet of wood waste fill. Groundwater (approx. 20-30 ft bgs) likely flows either west toward the Willamette River (1,100 ft from the site) or northwest along the former Stephen's Slough. The site and surrounding areas are zoned General Industrial 1 (IG1) by the City of Portland.

Decode for NarcdID: Remedial Action
NARR Comments: (12/02/2015 KPD/VCP) Contractors for TriMet demolished the two on-site buildings in October 2012. In February 2013, approximately 2,500 cubic yards of soil were excavated to a depth of 4 ft bgs along the light rail alignment. The soil was shipped to the Hillsboro Landfill for disposal. The excavated area was backfilled with 2<quot> x 4<quot> cobble rock. An additional 270 cubic yards of soil was later excavated for a stormwater swale along the south edge of the alignment. The soil was also taken to the Hillsboro Landfill. Construction activities at the site were completed by the end of 2014. An Easement & Equitable Servitudes (EES) was recorded on the property deed in October 2015, requiring maintenance of the existing gravel cover and site fencing prior to redevelopment, approval by DEQ of methane engineering controls and a Contaminated Media Management Plan prior to construction, and eventual capping of the site with buildings and/or three feet of clean soil.

Decode for NarcdID: Site History
NARR Comments: Stephen's Slough, a 30-foot deep gulch, originally covered most of the site, and extended northwest to the Willamette River. Beginning around 1900, the gulch was filled in with sawdust and other wood wastes, most likely from the Inman Poulsen lumber mill two blocks west of the site. The site was identified on Sanborn maps as a wood yard in 1924 and 1950. Those same years, the Holman Fuel Company bordered the site to the south (across Caruthers Street). A small fuel warehouse was present on the SW corner of the site in the early 1950s. Balzer Pacific Equipment Company occupied the site beginning in 1964, and used it for the assembly and repair of mining and construction equipment. (Balzer manufactured the equipment at another site in Portland). Two buildings, a warehouse and a shop, were constructed in the southeast corner of the site in 1964 and 1970, respectively. TriMet obtained possession of the site through condemnation in May 2012 for construction of the Portland-Milwaukie Light Rail line, and became the site owner in July 2013. TriMet demolished the on-site structures in October 2012, and the rail alignment was constructed across the northern portion of the site in 2013-14.

Updated Date: 10/01/2019
Decode for NarcdID: Contamination
NARR Comments: (09/30/2019 KPD/ICP) A total of 25 soil borings were advanced at the site in the summer of 2016 as part of a site investigation. A single soil sample was collected near the bottom of each boring (at depths ranging from 16-20 ft bgs) and analyzed for petroleum. Gasoline was detected in three of the samples near the north end of the site, at concentrations up to 1,400 ppm. No significant contamination was observed in a soil gas sample collected from the area of maximum contamination in September 2019.

Updated Date: 10/01/2019
Decode for NarcdID: Site History
NARR Comments: The site was originally developed for single-family residential use in the late 1880s, but was vacant by 1950. The current building was constructed in 1954 and used by Pratt Mortuary Services in the 1960s and 1970s. The City of Portland permitted the installation of a 2,000-gallon gasoline UST at the site in 1973. There is no record of the tank having been decommissioned. A geophysical survey of the site in June 2016 found no evidence of a tank.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: A 2,000-gallon gasoline underground storage tank was installed at this site in 1973 and decommissioned by removal at an unknown time. Sampling in 2016 and 2019 found low concentrations of gasoline in the soil and soil gas at the north end of the parking lot at the site. The concentrations are too low to require further remedial action.

NARR Comments: [9/12/11 SAM/SA] Pathways include spills. Also three dry wells were associated with the shop, but were changed to sanitary sewer connections in approximately 1986. PGE reports in 2002 there were no dry wells, abandoned wells, or water supply wells associated with the Transformer Shop. A small sump is located in the oil room, but not used, PGE was determining best option for covering and sealing sump in 2002.

NARR Comments: The Oregon Rail Heritage Foundation is planning to build a Restoration Facility & Interpretation Center for three locomotives owned by the City of Portland. The triangular site, owned by TriMet, is bordered by a rail line to the north, SE Water Ave to the west, and the MLK Blvd / Grand Ave viaduct to the east. Environmental oversight of the project will be funded through an existing Intergovernmental Agreement between DEQ and TriMet. Construction is scheduled to begin in the fall of 2011, with completion in the summer of 2012.

NARR Comments: The Inman-Poulsen Lumber Company operated at the site for about 100 years (late 1880s to 1980) and disposed of wood wastes by filling in Stephens Slough, which extended from about Division Street to the Willamette River. The wood waste (mainly sawdust) extends from about 4 to 45 feet below ground surface at the site.

NARR Code: Remedial Action
Created By: CHARMAN
Created Date: 03/06/2013
Updated By: CHARMAN
Updated Date: 03/06/2013
Decode for NarcdID: Remedial Action
NARR Comments: (CWH/CU 3/6/13) Remedial measures undertaken at site are as follows: 1. Soil and Contaminated Media Management and Disposal During site development and construction, contaminated and uncontaminated media and soils were collected and managed to prevent unnecessary exposures. Based on the degree of contamination and in accordance with the CMMP, these materials were disposed or used as fill material at off-site location. Table 1 (attached) from the supplemental report, summarizes the amounts and locations where site media was taken. Contaminated soils were taken to the Subtitle D Hillsboro landfill. During pre-construction work, a total of 489 tons of contaminated soils from existing berms on the site were removed and taken to Hillsboro. During site development another 2,500 tons of contaminated soil was also taken to Hillsboro. As approved by DEQ, 3,000 cubic yards of soil from the site were also taken for cover at the former Shadybrook Landfill in Washington County. 2. Building Construction Due to the extent of wood waste below the site, and to prevent potential building subsidence, several deep iron beam pilings were driven down through the wood waste to native alluvial gravels that are present at depths near 90 to100 feet bgs (on average). The building foundation was attached to the pilings, supporting the building above the wood waste. 3. Methane Barrier and Venting System As part of the site construction, a spray-on low-permeability barrier was installed below the building foundation and flooring. A sub-slab gas collection system was installed below the low-permeable surface and consisted of porous base rock with horizontal perforated piping. All concrete joints, pipe fittings and electrical conduits were sealed to prevent gas escaping the collection system or entering interior building spaces. Sub-slab pipes were then connected to vertical vent riser pipes that were routed to the building roof. Together, these constitute a building vapor barrier with underlying passive vapor collection system. Any methane present below the building slab will be impeded by the barrier and routed to the vapor collection system for discharge above the building roof. During installation of the low-permeable membrane, subcontractors qualified to install the selected product (Liquid Boot), followed manufacturers specifications and practices, which included use of a carrier fabric with 6 overlapping seams, coupon sampling to ensure desired membrane thickness was applied, and smoke testing to check for leaks. Sampling ports are present in two of the vent riser pipes and in three sub-slab gas monitoring probes (SSPs) that are located at the northeast (SSP-3), east (SSP-2), and west (SSP-1) sides of the building. The piping system and monitoring points are detailed in drawing H102, provided in Appendix C of the Construction Completion Report. The methane monitoring schedule is provided in the Institutional Controls narrative.

NARR Comments: As part of March 2013 Conditional No Further Action decision, site owners and operators are required to follow two site controls - A. All construction or ground disturbing activity needs to follow measures described in the Contaminated Management Plan (CMMP) approved by DEQ in November 2011. B. The methane mitigation system installed on the site needs to be maintained and periodic measurements need to be collected and reported to DEQ for the site records, as outlined below: Schedule for Methane Monitoring 1. First Two years (Jan. 2013 Dec. 2014): Vent Risers and Sub-Slab Probes (SSPs) sampled twice yearly 2. Years 3 to 5 (Jan. 2015 Dec. 2017): Once per year sampling based on first two years results 3. Trigger Event requiring more frequent monitoring. Frequency of added monitoring to be determined by DEQ and property owners. If one or more SSPs show methane at 5 pbv or greater, combined with lower or no measurable methane in vent riser ports. Based on sampling, there may be requirements to continue methane monitoring beyond the 5-year timeframe outlined above. Alternatively, if methane measurements indicate that levels are below criteria established to prevent asphyxiation or explosive dangers in enclosed spaces, DEQ will work with owners/operators to discontinue methane controls and monitoring.

NARR Comments: (CWH/CU 3/6/13) The ORHF site sits on top of fill in a portion of what was historically referred to as Stephen s Slough, a 1,500-foot-long waterway that extended from the east bank of the river to SE Division Street in east Portland. In the late 1880s, the Inman-Poulsen Lumber Company operated a lumber mill along the south bank of Stephens Slough and soon after began to use wood waste materials from the mill to fill in the slough, also identified in Sanborn maps as Stephen s Gulch. From approximately 1890 through 1954, the Inman-Poulsen Lumber Mill was one of the largest in the United States and included operations both on and west and southwest of the site. The ORHF site area itself was used for varying purposes that included cut timber storage area. The estimated area where wood waste fill underlies the site is shown in several reports for the site. The site was reportedly used as a telephone/utility pole storage yard from the mid-1920s to the 1970s. In addition, the site was identified as a Portland General Electric right-of-way between 1924 and 1969 and more recently was used for truck and trailer parking and construction equipment storage and staging. Various environmental investigations have been conducted on surrounding sites, with indications that the wood waste and surrounding perched groundwater may contain low concentrations of petroleum hydrocarbons, polynuclear aromatic hydrocarbons (PAHs), and volatile organic compounds (VOCs). The results of various investigations in the area suggest that such impacts may be broadly distributed due to uncontaminated and contaminated fill comprising the slough backfill material, with contributing impacts from various nearby known and

suspected release sources.

NARR Comments: (03/21/2012 KPD/ICP) In September 2009, URS Corporation advanced four borings along SE Water Avenue as part of a Phase II Environmental Site Assessment. The borings were located where Bent 4 and a ramp at the south end of the viaduct would be located. Two soil samples were collected from each boring, and groundwater samples were collected from two of the borings. All of the samples were analyzed for petroleum products and petroleum constituents, as well as polychlorinated biphenyls (PCBs) and heavy metals. Diesel (at concentrations up to 154 ppm), lube oil (up to 1,280 ppm), and lead (up to 396 ppm) were detected in the soil samples. The highest

BENT 3 - PORTLAND STREETCAR EXTENSION (Continued) **S110638442**

concentrations were all collected from Bent 4. Only metals, likely at background concentrations, were detected in the groundwater. Environmental Health Management was retained to sample and dispose of contaminated soils during construction of the viaduct. Two soil samples were collected from Bent 3 in April 2010, finding up to 672 ppm lube oil. Additional samples from Bent 3 in July 2010 found elevated concentrations of diesel, lube oil, and polycyclic aromatic hydrocarbons (PAHs). A soil sample from Bent 2 in September 2010 found 609 ppm lube oil.

NARR Comments: The viaduct for the Portland Streetcar extends from SE Martin Luther King Jr. Blvd. at Harrison Street to SE Water Avenue near OMSI, crossing over Union Pacific and Oregon Pacific Railroad lines. Bent 3, the center point of the viaduct, is located roughly where SE 3rd Avenue and SE Lincoln Street would meet. Bent 3 is situated between the UPRR and OPRR lines, and appears to occupy Tax Lot 3200, owned by UPRR.

NARR Comments: (03/21/2012 KPD/ICP) In April 2010, a total of 17.19 tons of petroleum-contaminated soil (PCS) were excavated from Bent 4. This was followed by 213.59 tons of PCS from Bent 3 in July 2010, 505.72 tons of PCS from the south ramp in August 2010, and 200.51 tons of PCS from Bent 2 in September 2010. (No contaminated soil was excavated from Bent 1). In all, a total of 937.01 tons of PCS were

BENT 3 - PORTLAND STREETCAR EXTENSION (Continued) **S110638442**

excavated and shipped to the Hillsboro Landfill for disposal.

Decode for NarcdID: Contamination
NARR Comments: Ross Island Sand and Gravel began importing fill material in the early 1980s. Some of the material the company obtained from Port of Portland shipyards was determined to be unsuitable for unconfined open water disposal due to the presence of contaminants. This material was placed lawfully in depressions within the lagoon and covered with clean material creating confined aquatic disposal sites. In 1999, however, Ross Island Sand and Gravel and DEQ determined that mining activities had extended into one of the capped areas, resulting in a breach of a confined cell. Between 1999 and 2002, Ross Island Sand and Gravel and the Port of Portland conducted environmental investigations at the site, finding that the following contamination could pose unacceptable risk to human health and the environment: Elevated concentrations of zinc and arsenic in surface

ROSS ISLAND (RIVER MILE 15.4) (Continued) **S104304116**

soil samples collected in the vicinity of the processing plant. PAHs, detected in surface soil immediately adjacent to the southern portion of the lagoon at concentrations that could pose a threat to fish and wildlife within the lagoon if soil erodes into the lagoon. Contaminated material removed from lagoon disposal cell 5 during mining activities. PAHs detected at levels slightly exceeding EPA ambient water quality criteria in a grab groundwater sample collected adjacent to the southern portion of the lagoon. Elevated concentrations of PAHs, metals, and PCBs detected in a limited number of surface sediment samples collected from the southern portion of the lagoon where reclamation filling occurred and in the vicinity of the recapped breach area. Elevated pH detected at several locations along the southern shoreline of the lagoon assumed to result be from concrete waste fill. Highly contaminated material present in the five confined disposal cells for material dredged from Port of Portland facilities.

NARR Comments: (August 2011 update) Ross Island Sand and Gravel has completed the following actions in compliance with the December 2005 DEQ Record of Decision: In summer 2000, closed the eastern portion of the settling pond containing contaminated material mined from confined aquatic disposal cell 5 and covered it with clean sediments dredged from the western portion of the settling pond. In June and July 2007, removed approximately 900 cubic yards of soil contaminated with metals from the processing plant area; placed the soil in a prepared cell located within the capped former settling pond; and capped the cell with clean soil. In summer and fall 2007, installed a variety of erosion control measures in the southern shoreline areas immediately adjacent to the lagoon. Measures included: installing drainage berms, stabilizing slopes, and covering with clean fill. In May 2007, sampled groundwater in the southern shoreline area. Contaminant concentrations did not exceed conservative screening levels and DEQ determined no further action for groundwater was necessary. Between 2001 and 2010, placed approximately 2,400,000 tons of fill in the lagoon achieving a minimum three-foot cap of clean material over contaminated sediment and further stabilizing slopes adjacent to the southern bench area. Ross Island Sand and Gravel prepared a long-term monitoring/maintenance and contingency plan for the site addressing each aspect of the cleanup. In addition to regular monitoring and maintenance of cleanup components, Ross Island will inspect caps and stormwater controls after any extreme events including: seismic events of magnitude six or greater, rainfall exceeding 3.4 inches or greater in a 24-hour period, and Willamette River levels of 18 feet or greater. Based on evaluation of the actions described above, DEQ has determined that no further action, aside from monitoring, is required at the Ross Island Sand and Gravel site and that Ross Island Sand and Gravel has completed its obligations under DEQ Consent Order No. WMCVC-NWR-99-09. The completed cleanup is conditional because of the need to maintain engineering controls and conduct long-term monitoring and maintenance of cleanup measure at the site. The new

ROSS ISLAND (RIVER MILE 15.4) (Continued) **S104304116**

consent order addresses DEQ oversight of these on-going responsibilities. A memorandum describing the basis for the no further action and certificate of completion was made available for public review and comment from April 4 to May 2, 2011. No comments were received. The first annual long-term monitoring report was submitted in July 2012. It identified continued issues with elevated pH in one area and need for improving slopes adjacent to sediment caps in another area. RISG is addressing these issues with additional fill placement focused in these areas. Annual monitoring reports submitted 2013, 2014, 2015, and 2016. pH levels declined and pH monitoring was discontinued in 2015. Site gw monitoring wells were decommissioned 2014/2015.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [August 2011] The site is located at about river mile 15 of the Willamette River, a mile upstream of downtown Portland. Ross Island Sand and Gravel Co. (RISG) mined gravel from the lagoon between 1926 and 2001. Beginning in 1980 RISG was required to reclaim the mined area and therefore began importing fill to the site. Some of this fill was contaminated and was required to be capped with clean material. In the late 1990s DEQ required the Port of Portland (primary source of contaminated fill) and RISG to investigate the adequacy of the confinement of contaminated material and environmental conditions in general. A Record of Decision (ROD) was signed in 2005 laying out long-term containment, monitoring, and management protocols that RISG must adhere to. In 2011, DEQ conditionally approved environmental cleanup actions at RISG (also known as a conditional no further action decision). DEQ also issued a certificate of completion to RISG for remedial action obligations described in its consent order with DEQ. DEQ also issued a new consent order with Ross Island to cover oversight of long-term monitoring and maintenance of the completed remedy. Annual monitoring and maitenance reports are submitted to DEQ in August.

For more information about this project, see the documents posted below, as well as DEQ's Ross Island web page (site links section below).

Site Comment: RISG prepared a Long-Term Monitoring/Maintenance and Contingency Plan (February 2011) for the site addressing each aspect of the remedial action. Basic elements of the plan for each remedial action element are identified below. In addition to the regular monitoring described, inspections of caps and stormwater controls will be conducted after any extreme events including: seismic events of magnitude 6 or greater, rainfall exceeding 3.4 inches or greater in a 24-hour period, and Willamette River levels equivalent to a 100-year flood or higher.

NARR Comments: Site has a history of excessive discharge (in excess of discharge limits for hazardous compounds, particularly acids and cyanide) to city sewer. City had to replace corroded sewer pipe 3/80. A 40-foot length of 8-inch concrete pipe had been completely eaten out along its bottom. This plant is the largest source of plating wastes in the city (3/79). City initiated enforcement action to reduce facility's discharge. Site was in apparent compliance with RCRA conditions in 1984. See Strategy Recommendation in site files for more information. Beginning in 1987, TCE was found in monitoring wells downgradient of site; these wells were installed as part of PGE Station L investigation (ECSI #151). It is possible that the TCE originated from East Side Plating.

Decode for NarcdID: General Site Description
NARR Comments: A November 30, 2010 DEQ and EPA joint, unannounced Hazardous Waste Generator Compliance Inspection of this Large Quantity Hazardous Waste Generator facility noted that this is East Site Plating's oldest operating facility, operating since 1946. The facility itself is more than 60 years old. The concrete flooring is compromised by cracks and loosely-set blocks. Uncontained plating solutions were observed accumulated on the facility floors. Treated plating solutions are discharged to the municipal sanitary sewers under a permit from Portland Bureau of Environmental Services. Main Plating Room Operations: pre-plating operations (rinsate and caustic tanks), plating tanks for chromating and cadmium, copper, and zinc, and finishing rinses including a cyanide bath for copper and cadmium products. Facility also has a Specialty Plating Room, Deburring Room, Maintenance Shop, a Wastewater Treatment Room (filter press and sludge drying), and a 90-Day Waste Storage Area

NARR Comments: In response to DEQ review, RP conducted own PA with Hahn & Associates. Hahn completed the PA in June 1995, and it concluded that releases from corroded sewer piping prior to 1981 could have caused subsurface contamination. Hahn installed four soil borings beneath the replaced sewer pipe 11/95, which showed little or no metals or VOC contamination at this location. Based on this data, Site Assessment has downgraded the further-action priority to LOW. There

EAST SIDE PLATING PLANT #4 (Continued) **1000393917**

is still no information on the fate of heavy metals that were released through the break in the city sewer line, nor does the Hahn PA address other possible release areas for metals or VOCs from the site to soil/groundwater.

Decode for NarcdID: Health Threats
NARR Comments: There is a good chance that the ESP facility has released metals and solvents to soil/groundwater. If this is the case, subsurface contamination could affect downgradient industrial supply wells, water in the on-site well, and surface water in the Willamette River. As of December 2020, ESP appears to have vacated this site building. Well survey in the site vicinity (Irwin Hodson Property) indicates that water supply well onsite is screened from 158 to 170 bgs. Based on the presence of an on-site water well and evidence of past releases, DEQ recommends further investigation on a medium priority basis. Investigation should include sampling for plating-type wastes and per- and polyflouralkylated substances (PFAS). If wells are not in use they should be decommissioned per WRD requirements.

NARR Comments: November 30, 2010 DEQ and EPA conducted a joint, unannounced Hazardous Waste Generator Compliance Inspection of this Large Quantity Hazardous Waste Generator facility. Three Violations were noted: (1) failure to clean up a hazardous waste release; (2) failure to store hazardous waste in a tank or container; and (3) failure to label stored hazardous waste with an accumulation date. Plating liquids had acumulated on the building floor (1.02% liquid chromium; 0.238% liquid cadmium), and plating sludges had accumulated outside and around the facility's plating and rinsate tanks (0.57% chromium sludge;12% cadmium sludge). A Pre-Enforcement Notice (PEN-NWR-HW-11-003) was issued on February 1, 2011. A DEQ Hazardous Waste inspector had twice visited the plant in 2005. At that time, the inpector observed acumulated plating liquid on the plant floor, and accumulated plating wastes that had not been containerized.
