Remark:	HM7 WAS CALLED TO A FIRST ALARM FIRE AT EAST SIDE PLATING INC. A FIRE STARTED WHEN A OVERHEATED MOTOR IGNITED A TUMBLER MADE OF PLASTIC. THE FIRE WAS IN A ROOM WHERE MULTIPLE HAZ. MATERIALS WERE STORED IN 500 GALLON VATS. THE FIRE WAS CONTROLLED BY AN OVERHEAD SPRINKLER SYSTEM AND EXTINGUISHED COMPLETELY BY FIRST ARRIVING CREWS. THE IC ON SCENE CALLED HAZMAT TEAM 7 TO COME INVESTIGATE AND MAKE SURE THE VATS (WHICH WERE NEVER INVOLVED WITH FIRE) WERE SECURE AND MONITOR AND TEST THE AREA TO CONFIRM THE SCENE COULD BE CALLED SAFE AND THE INCIDENT RECALLED. HAZMAT 7 MONITORED THE ROOM FOR GASES AND SAMPLED RUN OFF WATER FROM THE SPRINKLER SYSTEM AND FOUND NO HAZARDS OR SIGNIFICANT ISSUES AND ADVISED THE IC THE AREA WAS CLEAR TO BE INVESTIGATED BY THE ARSON INVESTIGATOR. THE INCIDENT WAS RECALLED AND PERSONNEL FROM THE BUSINESS WERE ALLOWED TO RE-ENTER THEIR PLACE OF BUSINESS.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste

EAST SIDE PLATING PLANT #4 (Continued) **1000393917**

Waste Code: D006
Waste Description: Cadmium

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: P029
Waste Description: Copper Cyanide (Or) Copper Cyanide Cu(Cn)

EAST SIDE PLATING PLANT #4 (Continued) **1000393917**

Chemical Name:	SCRUBBER TOWER SOLUTION
Physical Description:	LIQUID
Case Number:	1310732
Facility Id:	004607
Physical State Of The Substance:	2
Average Amount Possessed During The Year Code:	11
Maximum Amount Possessed During The Year Code:	11
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	500-999
Description Of The Avg Qnty Code:	500-999
Most Hazardous Ingridient:	SODIUM HYDROXIDE
United Nations/north America 4 Digit Class Number:	1824
Hazard Rank:	2
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Corrosive Material
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	8.0
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	DI RESIN CANISTERS
Physical Description:	SOLID
Case Number:	000000
Facility Id:	004607
Physical State Of The Substance:	1
Average Amount Possessed During The Year Code:	11
Maximum Amount Possessed During The Year Code:	11
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	R

EAST SIDE PLATING PLANT #4 (Continued) **1000393917**

Description:	OTHER
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	500-999
Description Of The Avg Qnty Code:	500-999
Most Hazardous Ingridient:	RESIN
United Nations/north America 4 Digit Class Number:	0000
Hazard Rank:	2
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	MACRO BRITE C-9
Physical Description:	SOLID
Case Number:	1333820
Facility Id:	004607
Physical State Of The Substance:	1
Average Amount Possessed During The Year Code:	04
Maximum Amount Possessed During The Year Code:	04
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	D
Description:	STEEL DRUM
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported

EAST SIDE PLATING PLANT #4 (Continued) **1000393917**

Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	50-199
Description Of The Avg Qnty Code:	50-199
Most Hazardous Ingridient:	CHROMIC ACID
United Nations/north America 4 Digit Class Number:	1463
Hazard Rank:	3
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Poisonous Material
Second Hazardous Class Code For Chemical:	Oxidizers
Third Hazardous Class Code For Chemical:	Corrosive Material
Hazard Class 1 Of The Chemical:	6.1
Hazard Class 2 Of The Chemical:	5.1
Hazard Class 3 Of The Chemical:	8.0

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	ARCHITECTURAL BLACK SOLUTION
Physical Description:	LIQUID
Case Number:	7488553
Facility Id:	004607
Physical State Of The Substance:	2
Average Amount Possessed During The Year Code:	20
Maximum Amount Possessed During The Year Code:	20
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	GREATER THAN NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	5
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	351
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	STANNOUS SULFATE
United Nations/north America 4 Digit Class Number:	0000
Hazard Rank:	2
EHS Ingredient:	SULFURIC ACID
Substance Pure:	False

EAST SIDE PLATING PLANT #4 (Continued) **1000393917**

Substance Mix:	True
First Hazardous Class Code For Chemical:	Reactive Material
Second Hazardous Class Code For Chemical:	Corrosive Material
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.4
Hazard Class 2 Of The Chemical:	8.0
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	Y
Fertilizer:	N
Pesticide:	N
Contains 313:	N

NARR Comments: 1/18/2017 (PRS): Sample of accumulated solids in Drywell #1 were collected and analyzed for metals known to be currently or formerly used in Bullseye s glassmaking operations In September 2016. Based on the results of the analysis completed and subsequent sampling and analysis completed in October 2016, elevated levels of Arsenic, Cadmium, Chromium, Cobalt, Copper, Lead and Manganese, Nickel, Silver and Zinc were identified. Cadmium exceeded the Toxicity Characteristic Leachate Procedure (TCLP) threshold, and material was removed and appropriately disposed. The material is believed to have derived from deposition onto the roof and subsequent drainage into the drywell by storm water.

NARR Comments: 1/18/2017 (PRS): Bullseye Glass is a manufacturer of clear and colored glass for art and architectural uses with worldwide distribution. The Bullseye glassmaking facility is located in Multnomah County in a mixed industrial and commercial area of inner southeast Portland, Oregon. The Bullseye properties are zoned IG1 General Industrial 1 in the City of Portland s Comprehensive Plan, with surrounding properties zoned as IG1 or EG2 General Employment. Single dwelling residential areas, most typically zoned as R2.5 Residential 2,500, are within 1,200 feet to the east and southeast of Bullseye. The Site lies in the southeast + of Section 11, Township 1S, Range 1E of the Willamette Baseline and Meridian. Drywell #1 is located in the southwest corner of the Bullseye facility near the intersection of SE Bush Street and SE 21st Avenue.2 The Site is at an elevation of approximately 64 feet above mean sea level.

NARR Comments: (3/1/2019 KRT) The No Further Action Determination was signed by the DEQ Cleanup manager on March 1, 2019. This NFA letter is uploaded to this ECSI webpage. A technical Staff Report supporting a proposed No Further Action Determination or Drywell #1 was presented for public review and comment during the month of February 2019. No comments were received during this period. This Staff Report is uploaded to this ECSI webpage. (3/21/2018 KRT) DEQ received a report on well installation, development, groundwater sampling and laboratory results on March 19, 2018. This report is uploaded to Webdocs of this ECSI page. Groundwater was sampled from the five monitoring wells in January, April and August 2018, constituting three quarterly events. Five monitoring wells were installed in the area of drywell #1 during January 2018. Groundwater from the wells was sampled on January 29, 2018. Drywell #1 was removed during the weekend of October 28 and 29, 2017. Soil surrounding the drywell was removed to a depth of 15.5 feet. DEQ was present at the site during drywell removal and soil excavation work. (8/24/17) BULLSEYE GLASS DRAFT CLEANUP ACTION PLAN PUBLIC INFORMATION MEETING Date: Thursday, September 7, 2017 Time: Doors Open @ 6:30 Meeting is from 7:00pm-8:30pm Place: Taborspace, Dining Room, 5441 SE Belmont Street, Portland DEQ is holding a public meeting to provide information and answer questions on a draft drywell cleanup proposal for Bullseye Glass Company. Bullseye Glass Company is a manufacturer of clear and colored glass for art and architectural uses with worldwide distribution and uses various metals and metal compounds during the manufacture of glass.

BULLSEYE GLASS - DRYWELL SOIL CLEANUP, GROUNDWATER (Continued) **S118673967**

Previously, it was found that a portion of these metals and metal compounds were vented to the atmosphere and a portion accumulated on facility roofs. Stormwater runoff from facility roofs previously drained to drywells. DEQ is holding this meeting to provide information on a draft drywell cleanup proposal entitled Draft Underground Injection Control Facility Investigation and Closure Plan . The draft cleanup proposal is for decommissioning and remediation of Drywell #1 in accordance with Oregon Administrative Rules [OAR] 340-044-0040 and is the subject of a public comment period ongoing in August 2017. Five monitoring wells are also proposed in the work plan to evaluate groundwater conditions in the vicinity of Drywell #1. The proposed drywell cleanup work is scheduled to for late September or early October 2017. The revised deadline to submit public comments that will be considered prior to DEQ s approval of the work plan has been extended to September 15, 2017 at 5:00pm. (8/11/2017 update KRT) The document entitled: <quot>Bullseye Draft UIC Closure WP (workplan) July 2017<quot>, available for public review and comment during August 2017, is the last document (12 of 12) on the Site Documents list of the ECSI 6143 webpage. The document entitled: <quot>DEQ-UIC Facility Investigation Report (June 2017)<quot> (document 9 of 12) is uploaded in its entirety with all appendices, well logs, field data, photos and lab reports. (7/10/2017) DEQ to review and provide document: <quot>Underground injection Control Facility Investigation and Closure Plan<quot> for public review and comment during August 2017. Document uploaded to ECSI 6143. (7/10/2017) DEQ to review document: <quot>Underground injection Control Facility Investigation Report<quot>. Document uploaded to ECSI 6143 webdocs webdocs as two files: text/tables/figures and Apendices. (05/3/2017): DEQ has completed a review of the investigation report and a revised report is being prepared. A workplan for additional investigation and delineation of impacts to groundwater is required. (04/24/2017): Initial Investigation under a DEQ approved workplan has been completed and reported to DEQ. The report is under review and the approach to further investigation and resolution of findings is under consideration. (12/30/2016-PRS) DEQ has approved a workplan for investigation of the extent and magnitude of contamination from the former drywell, which will be implemented and reported in early 2017. A drywell at the facility has been determined to have been impacted by metals contamination. The material was cleaned out and disposed, and a workplan for follow-up investigation is under development.

Decode for NarcdID: Contamination
NARR Comments: [12/15/2004, RH] The contaminants from the UST systems are present and cleanup via soil removal has occurred. Confirmation soil sampling and expanded subsurface investigation has been completed. Cleanup appears complete at the gasoline UST area, although one of the confirmation samples which previously detected gasoline did not detected benzene with a 5.0 ppm detection limit. Further soil sampling did not detect gasoline in a pit sample. In the vicinity of the former bunker C oil tank, high concentrations of deisel and oil remain in the pit area (this is where the PCE was detected). The expanded soil investigation did not detect diesel or oil to 15 feet bgs, which may not be cemented gravel and sand was reported and there was geoprobe refusal. No further investigation has been completed.

NARR Comments: (6/5/2000 KGP/SRS) The owners of Master Cleaners applied for DEQ's Dry Cleaner Environmental Response program in July 1999. Master Cleaners was accepted into the program in August 1999. DEQ retained Jacobs Engineering to investigate the site. Jacobs collected soil samples from five push probe locations at the site in January 2000. Stoddard solvent was detected in three of the locations, at concentrations up to 7,000 ppm. No groundwater was encountered to a depth of 28 ft bgs.

NARR Comments: (6/5/2000 KGP/SRS) The site investigation report was completed in March 2000. Although an estimated 500 cubic yards of contaminated soil are present at the site, the contamination is 3 to 15 feet below the surface, and concentrations are too low to pose a threat to human health or the environment. No further investigation or cleanup is necessary.

NARR Comments: Phase I ESA performed in February 2018 revealed an REC associated with the adjacent East Side Plating Plant 4 facility to the south. East Side Plating performs electroplating operations and produces wastes including corrosives, metals and spent cyanide. Numerous hazardous waste violations noted between 1984 and 2014 at East Side Plating. In the early 1980s, the City had to replace a concrete sewer that failed due to corrosive wastes. The southern portion of the site property was occupied by a brass foundry from the mid-1920s to the late 1950s. A limited Phase II ESA in November 2017 revealed arsenic in soil above RBCs. Two of four soil samples also contained arsenic above regional background. Two of three soil gas samples contained TCE at concentrations above the occupational RBC for inhalatioon in soil gas. SG1 detected TCE at 5400 ug/m3 and SG2 detected TCE at 9600 ug/m3. PCE was also detected in soil gas, although not at levels above occupational RBCs. In December 2017, additional soil gas samples were collected (SG-4 through SG-8). TCE and PCE were detected in soil gas but not at concentrations exceeding RBCs. In April 2018, additional soil gas data were collected from two sumps installed for purposes of performing pilot testing and also from four permanent vapor monitoring points (VP-1 through VP-4). TCE was detected in Sump 2 at a concentration of 4500 ug/m3. In June 2018 TCE was detected in VP-4 and VP-6 at concentrations of 13,000 ug/m3 and 6500 ug/m3, respectively. Based on these findings, DEQ requested additional soil gas sampling north of VP-4. DEQ also recommended expansion of the

BYRUM MOREHOUSE BUILDING (Continued) **S121802071**

proposed SSDS system footprint on the east side of the building toward the north. In September 2018 additional permanent soil gas sampling points VP-5 through VP-7 were installed. TCE was detected in VP-6 (6500 ug/m3) above the occupational worker RBC. The sample from VP-7 detected TCE at a level (2500 ug/m3) near the occupational worker RBC. (JKS 10-31-18).

NARR Comments: Phase I ESA performed in February 2018 revealed an REC associated with the adjacent East Side Plating Plant 4 facility to the south. East Side Plating performs electroplating operations and produces wastes including corrosives, metals and spent cyanide. Numerous hazardous waste violations noted between 1984 and 2014 at East Side Plating. In the early 1980s, the City had to replace a concrete sewer that failed due to corrosive wastes. The southern portion of the site property was occupied by a brass foundry from the mid-1920s to the late 1950s. A limited Phase II ESA in November 2017 revealed arsenic in soil above RBCs. Two of four soil samples also contained arsenic above regional background. Two of three soil gas samples contained TCE at concentrations above the occupational RBC for inhalatioon in soil gas. SG1 detected TCE at 5400 ug/m3 and SG2 detected TCE at 9600 ug/m3. PCE was also detected in soil gas, although not at levels above occupational RBCs. In December 2017, additional soil gas samples were collected (SG-4 through SG-8). TCE and PCE were detected in soil gas but not at concentrations exceeding RBCs. In April 2018, additional soil gas data were collected from two sumps installed for purposes of performing pilot testing and also from four permanent vapor monitoring points (VP-1 through VP-4). TCE was detected in Sump 2 at a concentration of 4500 ug/m3. Pilot test was performed April 10-11, 2018. In May 2018, Farallon Consulting subitted a Focused RAP proposing a vapor mitigation engineering control that included sealing of the floor and points of penetration through the slab. In addition, the FRAP proposed installation of a sub-slab depressurization system consisting of horizontal 4-inch SSDS wells and conveyance piping connected to a blower. In June 2018 TCE was detected in permanent soil vapor monitoring points VP-4 and VP-6 at concentrations of 13,000 ug/m3 and 6500 ug/m3, respectively. Based on these findingsa and based on review of the FRP, DEQ requested additional soil gas sampling north of VP-4. DEQ also recommended expansion of the proposed SSDS system footprint on the east side of the building toward the north. In September 2018 additional permanent soil gas sampling points VP-5 through VP-7 were installed. TCE was

BYRUM MOREHOUSE BUILDING (Continued) **S121802071**

detected in VP-6 (6500 ug/m3) above the occupational worker RBC. The sample from VP-7 detected TCE at a level (2500 ug/m3) near the occupational worker RBC. In October Farallon consulting revised the Focused RAP to incorporate the results of additional soil gas testing. In addition, the FRAP proposed expansion of the SSDS footprint on the eastern side of the building to approximately 20 feet beyond the location of VP-7. DEQ approved the revised FRAP and expanded system footprint in October 2018. The SSDS was partially started on June 27, 2019. The sealing of construction joints was inspected and vacuum measurements taken at limited vapor monitoring points (not all were available due to construction work). Vaccum data showed that the SSDS should operate in active, not passive mode. From June 2019 to January 2020, the SSDS operated in both passive and active mode since the bulding was not continuously occupied by tenants. Starting on January 20, 2020, the building was occupied by tenants and the SSDS activated in full active mode. Performance monitoring performed in December 2020, July 2021 and December 2021. Screen 3 modeling shows that treatment of effluent is not necessary per DEQ guidance. Vapor sampling ponts VP-3, VP-4 and VP-6 continue to exhibit TCE greater than occupational worker RBCs. (J. Schatz 3-23-22).

Updated Date: 03/26/2012
Decode for NarcdID: General Site Description
NARR Comments: The CD Greenway site is located along the west bank of the Willamette River between SW Gibbs and SW Lane Streets in Portland, Oregon. The 4.35-acre site is approximately 1,300 feet long and varies in width between 130 feet to 170 feet. The site consists of tax parcels 1S1E10AC-00309 (north parcel) and 1S1E10DB-00201 (south parcel) and is located in Section 10, Township 1 South, Range 1 East, Willamette Baseline and Meridian. The northern portion of the site extends from SW Gibbs Street to SW Pennoyer Street and was formerly owned by River Campus Investors, LLC (RCI) and was previously designated as part of the US Bank site (ECSI # 4036) by DEQ s Cleanup Program. The southern portion of the site extends from SW Pennoyer Street to SW Lane Street and was formerly owned by North Macadam Investors, LLC (NMI) and designated as part of the Pacific Richland site (ECSI # 3993). A vegetated stormwater bioswale is located in the bankline area at the southern end of the site. This bioswale is not considered part of the site. The outfall to the stormwater bioswale is also located on the southern end of the site. The site is formerly comprised of the eastern portions of the RCI/US Bank and NMI/Pacific Richland sites. A separate ECSI file (#5277) has been created for the CD Greenway site following PDC s acquisition of the property in February, 2011. The property is zoned Central Commercial, with design and general river overlays that allow for public use and enjoyment of the waterfront and enhancement of the river s natural scenery. The upland portion of the site is covered with grassy areas and a paved pathway for walking and biking. The elevation of this portion of the site is approximately 30 feet City of Portland datum (COP). In 2002, the upland portion of the greenway was regraded by laying back the existing bank at a 4:1 slope from the ordinary high water (OHW) line

CENTRAL DISTRICT GREENWAY TRAIL (Continued) **S110072114**

of 18 feet COP. As part of the regrading, excavated material was screened to remove debris, and then placed again on the property in thicknesses of 1 to 2 feet. The riverbank portion of the site drops steeply to the Willamette River, with the top of bank varying throughout the site between 25 to 30 feet COP. The riverbank is armored with concrete debris and/or rocks in most areas with some debris containing metal, asphalt, and wood. The southern portion of the riverbank is covered with concrete slurry from historic disposal of waste concrete (washout). Pilings for former barge docks are present in the river along the southern portion of the site. Miscellaneous debris present in the riverbank includes metal fragments, cables, asphalt blocks, timbers, shopping carts, clothing and general household-type refuse. At the ordinary low water (OLW) level of 3 feet COP, the shoreline is composed of cobble, gravel, and sand. Non-native bushes and trees are present at the northern end, beginning at approximately 12 feet to 14 feet COP. Portions of the site are located within the 100-year flood zone; the property (including uplands) was inundated during the 1996 flood. The site and surrounding areas are located in the Central District of the North Macadam Waterfront Urban Renewal Area, also known as South Waterfront. Land use in the area is mixed, including light industrial, commercial, and urban residential use. The Meriwether and Atwater Place high-rise condominiums are located immediately west of the site between SW Curry and SW Gaines Streets. Undeveloped parcels are located to the west and south, and have been used for urban gardening by condominium residents, staging for construction equipment and supplies, and vehicle parking. Zidell Marine Corporation (ECSI# 689) is located immediately north of the site and is currently completing remedial actions for contamination of metals, petroleum hydrocarbons, PAHs, PCBs, tributyl tin, and asbestos in upland soils, riverbank soils, and Willamette River sediment. The CD Greenway site lies approximately three miles upstream of the Portland Harbor Superfund Site, while Ross Island, a former gravel mining operation and cleanup site (ECSI# 2409), lies to the east across the main channel of the Willamette River. Historically, commercial and industrial facilities occupied the site, including a shipbuilding operation during World War II in the northern Greenway. A shipway was constructed through the central portion of the site in 1942 and was filled in the mid-1960s. The PDC is planning to develop the property as a greenway park. Planned redevelopment will include extensive reworking of the riverbank, including riverbank layback, and habitat construction in the form of a shallow water beach. Bounding the site on the east, the northward-flowing Willamette River provides anadromous fish passage, salmonid fish spawning, resident fish and aquatic life, aesthetic quality, recreation, transportation, wetland areas, fishing and hunting, and wildlife habitat. The site is located between River Mile (RM) 14.0 to 14.3.

NARR Comments: Levels of contamination detected in site soil (uplands and riverbank) are associated with previous site operations, described below. Historic development and use of the site was different for the RCI/US Bank (north portion) and NMI/Pacific Richland (south portion) properties. The CD Greenway site represents only the easternmost portion of these properties abutting the river. RCI/US Bank Property ECSI # 4036, (north portion) Prior to 1936, the RCI/US Bank property was vacant. From 1936 through 1944, some commercial and industrial facilities were present including a moorage and construction company. From 1943 to 1945, a shipbuilding facility occupied the property. A shipway was also constructed into the southeastern portion of the property beginning in 1942 (it was later filled during the mid 1960s). From the late 1940s to the early 2000s, the property was occupied by commercial/ industrial facilities, including steel and metal fabricating, road construction, general construction, and electrical products manufacturing. In 2002, the property was graded in preparation for development. The Meriwether condominium tower was constructed beginning in 2004, and the current greenway path was added in 2006. NMI/Pacific Richland Property, ECSI # 3993 (south portion) The NMI/Pacific Richland property was occupied by gravel crushing and concrete production plants from the 1930s through early 1990s. Ancillary facilities included a paint operation, repair shops and offices, fueling areas, and a wet screen used for filtering rock size during gravel crushing operations . After closing the plant in 1990, the property was leased for storage and office space until September 1995. The property was then sold and the structures demolished in the late 1990s. In 2002, the property was graded in preparation for development. The previously-referenced stormwater bioswale was constructed in 2004. In 2006, construction of Atwater Place condominium tower began and the greenway path was added.

NARR Comments: A summary of groundwater conditions at former US Bank and Pacific Richland portions of the CD Greenway site was submitted by GeoDesign in August 2011. Based on the review of historical groundwater monitoring, DEQ has concluded that groundwater beneath the Central Greenway site has not been significantlyimpacted and does not pose a risk to public health or the environment. A no further action determination for groundwater is recommended. A remedial investigation and focused feasibility study for the site soils was approved by DEQ on January 20, 2012. Public comment for the proposed remedial action, consisting of a cap of varying materials and thicknesses and removal of hot spots, begins on April 1, 2012.

Decode for NarcdID: Site History
NARR Comments: Previous use of the site included shipbuilding, construction/commercial/industrial facilities that included steel and metal fabricating, gravel crushing, repair shops, paint operations, road construction, and electrical products manufacturing. In 2004 the property immediately west of the CD Greenway site was regraded and the Meriwether condominium tower constructed. In 2006 the Atwater Place condominium tower was constructed just south of the Meriwether and immediately west of the CD Greenway site. The greenway path was also constructed in 2006. Previous investigations for the CD Greenway site include: Phase I and Phase II environmental site assessments (ESAs), geophysical surveys, site characterizations, underground storage tank (UST) decommissioning, and remedial actions for the RCI/US Bank and NMI/Pacific Richland sites. In the summer of 2011, additional characterization of upland surface soil was performed for the CD Greenway site by the city of Portland, at the request of DEQ. A remedial investigation and feasibility study was approved by DEQ in January, 2012. The remedial investigation identified levels of metals in upland soils above risk levels considered protective for terrestrial ecological receptors. No excess risk for human health was identified. Public notice for the DEQ staff report proposing the preferred remedial action will be issued on April 1, 2012. The prefered remedial action includes the installation of a protective cap of various materials and thicknesses, filing of an institutional control memorializing the property as a public park and requiring regular inspection of the cap, installation of erosion monitoring devices, and removal of hot spots for metals.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: DEQ approved the RI/FS for the site in January, 2012. Metals contamination in upland soil present a risk to terrestrial ecological receptors. No excess risk to human health was identified during the RI. Public notice for the proposed remedial action staff report ran April 1 through April 30, 2012. The ROD was approved May 18, 2012. The selected remedial action for site-related soil contamination of metals, polychlorinated biphenyls (PCBs) and polycyclic aromatic hydrocarbons (PAHs) in soil is: Excavation and off-site disposal of approximately 9,000 yd3 of contaminated soil, including hot spots, from the riverbank and upland areas of the site. If soil meets appropriate standards, approximately 6,000 yd3 of soil excavated from the riverbank during site redevelopment activities will be reused on site and isolated under a protective cap. Placement of a minimum one-foot thick protective clean fill soil cover in the uplands

CENTRAL DISTRICT GREENWAY TRAIL (Continued) **S110072114**

portion of the site to protect terrestrial ecological receptors from contamination in soil. Uplands portions of the site are considered to be areas above mean high water or approximately 18 feet City of Portland (COP) datum. Re-grading and placement of a clean fill cap over the entire site bankline below mean high water to prevent the erosion of contaminated soil into the Willamette River and/or direct contact of ecological (in-water) receptors with bankline contamination. Bankline capping of varying composition will be placed from mean high water (18 feet COP) to mean low water (3 feet COP). Site work will not extend below mean low water. Cap materials will consist of a combination of gravel or rock and hardscape including concrete. For a portion of the bankline, existing concrete material will be used for capping. In another portion of the bankline, a shallow sloped gravel/cobble beach will be constructed. Rock will be underlain by a reactive core mat to protect aquatic ecological receptors and recreational fishers from contamination. Recording of an institutional control with the property deed memorializing use of the site as a park and requiring regular protective cap inspections, maintenance as necessary, and reporting to DEQ. Four monitoring wells were decommissioned in June, 2012 (MW-1, MW-2, MW2(north), and MW-10). Site redevelopment and riverbank excavation began in June, 2012. Between 2012 and 2013 excavation and off-site disposal of approximately 9,000 yd3 of contaminated soil in uplands, riverbank and beach area was performed. Some riverbank and beach area soil managed upland under a protective cap. Uplands cap combination of hardscape (walking concrete/asphalt walking paths) and at least one foot of clean fill soil. The riverbank was regraded and capped over entire bankline. Bankline capping of varying composition was placed from mean high water (18 feet COP) to mean low water (3 feet COP). Cap materials consisted of a combination of gravel or rock and hardscape including concrete vault walls and planter boxes. A minimum of 3 feet of capping material was installed in the bankline/beach area. Cleanup work within the property boundary (to 3.22 COP) was completed in 2015. The park opened to the public in June, 2015. An institutional control memorializing use of the site as a park and requiring regular protective cap inspections, maintenance as necessary and reporting to DEQ was filed with Multnomah County in August, 2017. A link to the EES is provided below. In late 2018 additional sediment delineation was completed riverward of 3.22 COP datum (conducted by Union Pacific Railroad under a Consent Order). Surface and subsurface sediment samples were collected from multiple locations within twelve sample areas and processed using incremental sampling methodology. Sediment analysis included petroleum, metals, polycyclic aromatic hydrocarbons, polychlorinated biphenyls (congeners), grain size, percent solids, and total organic carbon. Total PCBs were detected above the Portland Harbor Cleanup Level of 9 ug/kg in most of the surface samples and all of the subsurface samples. Concentrations of total PCBs in surface samples ranged from 2.41 ug/kg to 68.9 ug/kg. Concentrations of total PCBs in subsurface cores ranged from 12.6 ug/kg to 114 ug/kg. Polycyclic aromatic hydrocarbons were present in all samples. Additional sediment delineation is planned for the fall of 2019 to determine the extent of contamination. Cap maintenance work was performed in October, 2019 to address construction anomolies observed during the 2018 cap inspection. The work entailed adding cap material (cobble mix) to the existing cap to acheive a 1.5- 2-foot cover over the RCM mat, and removing exposed tail ends of the RCM mat near the property boundary.

Description: An unknown amount of oil was discovered coming from Outfall #32 Earlier today Fox 12 traffic helicopter spotted a sheen emitting from Outfall #32 (underneath the I-5 Marquam Bridge). It appears to be at least 20 gallons of used motor oil. US Coast Guard hired NRC to contain the oil at the outfall and begin cleanup. Portland BES and USCG (and possibly Portland Public Works) staff are investigating the storm drain system in the area and trying to determine the source. There is elevated press interest in this incident so I am working with

OMSI (Continued) **S105959647**

Lt Cmdr John Titchen of USCG, Cheryl Kuck of Portland BES and Marcia Danab to develop a press release. 8/30 4PM I received an update from Mark Walla, OMSI says Willamette Jet Boats was fueling at the OMSI loading dock during the week of August 19th and spilled some of on the ground near the private OMSI catch basin according to a former employee. BES believes this to be the source of the spill. Jet Boat company hired Snug's Pro Wash to clean out the catch basin but apparently they did not clean out the private line.

OMSI (Continued) **S105959647**

Narrative Id: 1435
Incident Id: 030089
Incident Narrative: AMT AT RISK 0.25. Portland Fire and Rescue Engine 1 responded to location at the request of local waste disposal co. for Picric acid. The 1 qt jar was found on Monday near a garbage can at OMSI Museum it was a brown jar with the label on the cap. The label was the only method used to ID the product. The jar was given to chemist at OMSI who in turn placed the jar into container of water. Thursday afternoon a waste disposal co was asked to dispose of product and they recommended contacting fire. E-1 notified Portland Hazmat who recommended and notified Portland Police Explosive Disposal Unit. EDU responded and took custody of the product and transported it away for disposal.

Decode for NarcdID: Contamination
NARR Comments: As part of the now completed PCB cleanup at PGE Station L (ECSI #151), which is the current location of the Oregon Museum of Science and Industry (OMSI), PGE's contractor installed two off-site and upgradient monitoring wells. Sampling of these wells in 1987 showed dissolved PCE at 73 ppb and TCE at 23 ppb. By 1990, these wells, located on property owned by the East Portland Traction Company, had disappeared, and PGE's contractor installed another upgradient well,

GROUNDWATER - SE 1ST AVE & STEPHENS ST (Continued) **1006854473**

this time on PGE/OMSI property. 1993 sampling of this well showed PCE at 41 ppb and TCE at 5.4 ppb. Groundwater locally flows towards the Willamette River. There is no known source for the VOCs found in these wells. One of the wells was thought to have been on land sold by the East Portland Traction Co. to Portland Community College (PCC); however, a 1995 survey by PCC showed that no wells had been installed on what is now PCC property.

NARR Comments: (9/29/92 RP/NWR) Diesel-contaminated soil was discovered 8/20/92

UNION STATION - TRACK #5 (Continued) **1006867351**

during reconstructive work on Track #5. (3/28/95 SS/NWR) Portland Terminal Railroad (PTRR) owns Track #5 but has an operating agreement with Amtrak. (9/26/95 TER/VCS) Amtrak is the Responsible Party for the contamination, which appears to be due to releases during refueling of trains from 1973 until 1992 at the Track # 5 site. Most likely during that time period, no effort was made to contain diesel fuel that overflowed when filling the railroad car tanks. The Portland Development Commission (PDC) is acting as Amtrak's agent for the investigation and cleanup, and is also representing PTRR. PDC is undertaking a development project at Union Station areas adjacent to Track #5.

NARR Comments: Limited soil contamination remains in place under the tracks following the '92 removal. A determination of the potential threat posed by this soil if it is to remain in place is necessary. Quarterly groundwater monitoring is ongoing. A spill of diesel fuel occurred at the Track 5 location in February 1996 during locomotive refueling. Investigation of the spill was conducted by Cascade Earth Sciences on behalf of the spiller, Blue Flame Oil Company. Additional cleanup may be warranted. Stockpiled soils from the 1992 removal were disposed of off-site after sampling confirmed elevated TPH levels. Investigation of the soil under the stockpile will be conducted.

NARR Comments: The area of the site is relatively flat and is largely covered with grass and gravel. Surrounding land use is currently commercial and industrial, although a residential development is planned for an adjacent area. Surface water most likely drains through the gravels and soil and migrates to the east toward the Willamette River. Shallow groundwater exists at approximately 10 feet below ground surface. There are no known water supply wells in the locality of the facility.

NARR Comments: (GMW/SAS) Modified options letter sent 8/30/93. (4/25/95 SS/VCS) VCS approved Workplan & Addendum for further investigation 11/22/94. Soil borings and Geoprobe water samples collected 12/7/94 through 12/9/94. Workplan for monitoring well installation received 3/23/95 and approved 4/12/95. Monitoring wells installed 4/19/95 and 4/20/95. Report on first round of groundwater monitoring received on 6/12/95. Second Quarterly Groundwater Monitoring report received 8/25/95 and comments provided. Removal Work Plan reviewed, revised and approved 10/95. Removal Completed 10/26. Report received 12/95. Third and Fourth Quarterly monitoring completed through April 1996. A report on investigation and cleanup of a fuel spill which occurred in February 1996 at the site will be submitted to DEQ the week of July 15, 1996. DEQ proposed No Further Action (NFA) with contamination in place under the railroad tracks and a hazard notice attached to the

UNION STATION - TRACK #5 (Continued) **1006867351**

property deed, 1/14/97. Notice of Hazard recorded with Multnomah county to identify residual contamination beneath the railroad tracks. Contaminated soil should be addressed if it becomes accessible in the future.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Narrative:
NARR ID: 5727735
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: SMANZAN
Updated Date: 07/01/2014
Decode for NarcdID: Contamination
NARR Comments: A comprehensive remedial investigation (RI) was conducted at the site between 1997 and 2004. Soil - Contaminants detected above the screening values protective of human and ecological receptors in upland and bankline soil include polychlorinated biphenyls (PCBs - primarily Aroclor 1254, Aroclor 1260, and total PCBs); antimony, arsenic, cadmium, chromium, copper, lead, mercury, nickel, and zinc; polycyclic aromatic hydrocarbons; volatile aromatic hydrocarbons (VOCs - primarily benzene); and petroleum hydrocarbons (diesel, gasoline, oil, grease, and other petroleum hydrocarbons). Asbestos is also prevalent in upland and bankline soil. Dibenzofuran congeners were the only compounds detected in soil above the equivalent 2,3,7,8-TCDD PRG. Groundwater - Groundwater monitoring was performed since 1995 from 15 monitoring wells prior to and as part of the RI. Groundwater monitoring results were compared to ambient water quality critera (AWQCs) for the protection of ecological receptors in freshwater established by the USEPA and DEQ s Level II ecological screening level values (SLVs) for freshwater. Antimony, arsenic, cadmium, chromium, copper, lead, mercury, nickel, zinc, PCB Aroclors 1254 and 1260, ethylbenzene, xylenes, toluene, and carbon disulfide have been detected in at least one location at levels exceeding DEQ s SLVs or the AWQC. However, contaminant transport modeling indicates groundwater contaminants will not reach the Willamette River at concentrations exceeding AWQCs or SLVs. Sediment - PCBs were generally detected only in surface sediment samples (to approximately 10 inches below mudline). Aroclors 1254 and 1260 and total PCBs were detected in concentrations exceeding toxicity SLVs. Metals concentrations exceeding SLVs include antimony, arsenic, cadmium, chromium, copper, lead, mercury nickel and zinc. HPAHs, detected in moderate concentrations include fluoranthene, pyrene, benz(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, dibenz(a,h)anthracene, dibenzofuran, and benzo(g,h,i)-perylene. LPAHs, detected in moderate concentrations include 2 methyl naphthalene, naphthalene, acenaphthylene, acenaphthene, fluorene, phenanthrene, and anthracene. TPH as lube oil, motor oil , and diesel were also found in sediment at moderate concentrations. Dibutyltin, monobutyltin, and tributyltin exceeding SLVs.

NARR Comments: Past practice of discharging oil-contaminated water onto surface soils, resulting in oil runoff into Willamette River. Reports of dozens of past oil spills in Willamette River. Past burning practices: burning of wire insulation to recover metal, ignition of oils and greases on metal by welding torches, open burning of debris. Off-site migration of airborne paint and clearing of paint spray guns on riverbank.

NARR Comments: The ROD required remedies have essentially been constructed. The ROD was issued in 2005 and is implemented through Consent Judgment executed Between Zidell and DEQ in 2006. Soil hotspot removal and soil relocation was conducted as part of constructing the upland cap remedy in 2010. The sediment cap and bankline remedies were constructed in 2011, and the Greenway soil cap was constructed along the top of the Willamette River bank in 2012. An interim 1 foot thick gravel cap was constructed on the remaining upland portion of the site in early 2013. An additional 1 foot thick cap will be placed on the interim upland cap by 2016. Zidell completed operations and maintnence plans for the upland, bankline, and in-water caps in 2012. Annual O&M reports and and quarterly activity reports are submitted to DEQ as required by the Consent Judgment.

NARR Comments: The Zidell property is located in an industrial area that is currently undergoing redevelopment to mixed residential and commercial use. Zidell is also considering redeveloping the property into a similar land use. The Willamette River forms the eastern border of the property. Prior to remedy construction during 2010-2013, soil, air, groundwater, surface water (surface runoff), and river sediments served as exposure or transport pathways for chemicals from the property to receptors. Pre-remedy exposure pathways at the property includee: direct contact (dermal contact) with contaminated soil, groundwater, surface water, or sediments; ingestion of contaminated soil, groundwater, surface water or sediments; inhalation of volatiles emanating from contaminated soil or groundwater.

NARR Comments: Zidell entered into a Voluntary Letter Agreement with DEQ on October 7, 1994. Zidell entered into a RI/FS Formal Agreement on April 13, 1995. Zidell completed the XPA in February 1996. Zidell completed field work to define the nature and extent of contamination in the upland and in-water portions of the facility, and submitted a draft RI report in September 2001, which included the human health baseline risk assessment. ROD completed in 2005 which calls for cleanup of upland, bankline and in water sediments on a phased schedule. Cleanup timelines are outlined in the 2006 Consent Judgment between DEQ and Zidell. All ROD required remedies are complete as described in the Project Activity Status Narrative.

Decode for NarcdID: Health Threats
NARR Comments: (2/7/09 KJJ) Surface and near-surface soil contaminated with metals, PCBs, PAHs, asbestos, and petroleum hydrocarbons may pose the most significant threat to human health via direct contact, ingestion or possibly inhalation. Exposure to contaminants is restricted by the current site conditions (limited access and asphalt cap over much of the site). Groundwater use in the immediate vicinity of the Zidell property appears limited. The site is adjacent to the Willamette River, which is used for recreation and fishing. Site access restrictions completed in 2008 which limit public access to site, and provide warnings to river approaches to the bankline. (7/2 SM) - Health threats no longer exist at the site because the ROD-required remedies have largely been constructed. Exposure pathways to remaining contaminants at the site have been eliminated by the containment remedies and institutional controls.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: 6/2014. The Zidell waterfront site encompasses approximately 30 acres on the west side of a heavily urbanized and modified reach of the Willamette River in the South Waterfront District (North Macadam Urban Renewal District) of Portland, Oregon. The Zidell Company conducted ship dismantling, shipbuilding, scrap metal operations, and other industrial businesses at the site from 1926 to the mid 1960s. Barge building operations began in 1968 and are ongoing. A remedial investigation of the site was completed that identified the presence of asbestos, metals (antimony, arsenic, barium, beryllium, cadmium, chromium, copper, lead, mercury, nickel, silver, and zinc), petroleum hydrocarbons and associated polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), and tributyltin (TBT) and its degradation products in contaminated soil and sediment at the site. The Record of Decision, which specifying the selected remedy, was issued by DEQ in 2005. The ROD-required remedies are mostly complete; soil removal has been completed and an interim cap has been placed on the upland portion of the site. An in-water, armored sand cap has been constructed to contain Willamette riverbed contaminants, and a vegetated soil cap has been constructed to isolate contaminants that remain within the site's reconstructed bankline.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the

ZIDELL EXPLORATIONS INC (Continued) **1000204998**

Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

NARR Comments: (1/17/1996 JAK/SRS) Several areas on the site were used for the storage of electrical equipment. PCB oils were generally used in electrical equipment from the mid-1930s to the 1970s. Soils, various structures on-site, and Willamette River sediments are known to be contaminated with PCBs. This contamination was likely to have occurred from releases of oil from transformers.

NARR Comments: (1/17/1996 JAK/SRS) River sediment remediation, including dredging and capping, was conducted from July 1990 to January 1991. Maximum residual concentration of PCBs in sediment is approximately 21 ppm, with an average concentration of 8 ppm. The multi-layer cap was constructed with sand, gravel, and riprap to a thickness of greater than 6 feet. DEQ issued a Certificate of Completion for the sediment cleanup in April 1991. Monitoring of the sediment cap ongoing through 2020. Upland investigation (Phase III) for hazardous substance releases anywhere on the 28-acre site completed. DEQ issued a Certificate of Completion for this phase in November 1993. A Record of Decision (ROD) for No Further Action at site was issued by DEQ on 9/26/94.

Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: Osborne Electric Corporation began operating at the site in 1954, and changed its name to OECO Corp. 12/61. In 1986, OECO moved to a site in Milwaukie, which has a separate ECSI file (#1119). OECO uses solvents to clean and degrease electrical parts. A copy of a 1991 e-mail found in OECO's Milwaukie site file suggested that solvent releases from a UST had occurred at this Portland site. Site Assessment obtained the 1990 UST removal report from OECO 5/96; it documented low levels of VOCs in soil beneath the decommissioned 1,000-gallon waste solvent tank (which had not been used since 1983). The tank and associated piping were in poor condition, suggesting leakage while the tank was in operation. After the hole was backfilled in 1990, a soil boring was installed to 3 feet below the fill end of the UST, reportedly encountering no VOC contamination. In 10/91, DEQ's RCRA program wrote a letter to OECO's attorney indicating that DEQ considered the tank to have been a hazardous waste generator accumulation unit, rather than a RCRA-regulated storage unit subject to permit. This letter also indicated DEQ's opinion that the tank had been closed adequately, according to RCRA regulations.

OECO CORP. - PORTLAND (Continued) **S103842609**

Updated Date: 05/25/2016
Decode for NarcdID: Remedial Action
NARR Comments: (7/5/96 GMW) Some documentation is missing from the site's DEQ files, and OECO could provide only a portion of relevant site documents following a 4/96 request for information. It appears that no further soil removal or other site investigation occurred after 11/90. Although a soil boring beneath the part of the UST that was contaminated came up non-detect for solvents, further investigation is needed to confirm that no soil contamination remains at the site. Groundwater in the vicinity of the former tank should also be sampled. Site Assessment believes these actions are necessary, because: 1) the age and condition of the UST at removal suggest that significant quantities of solvent were released; and 2) the water table is expected to be relatively shallow in this area, so that any releases, especially of chlorinated solvent, would likely have migrated to groundwater. Further state action at the site is a low-to-medium priority. (5/25/16 SG) A site investigation was performed in December 2015 beneath the former tank area where soil impacts were identified in 1989-1990. Soil samples were collected and analyzed for petroleum hydrocarbons, VOCs, and metals. Petroleum hydrocarbons and VOCs were not detected. Metals were detected at concentrations below regional background levels. The soil boring hit refusal at 27 feet below ground surface and no groundwater was encountered. Since groundwater could not be collected for laboratory analysis, a soil gas sample was collected and analyzed for VOCs. VOC concentrations in soil gas were below the urban residential risk-based concentrations. Based on these findings, DEQ determined that the site is protective of human health and the environment and that no further action is required.

Decode for NarcdID: Contamination
NARR Comments: Fire suppression water entered the City storm drain system and resulted in a sheen on the Willamette River but no free product warranting recovery efforts was present. Likely elevated metals and possible PAHs in fire debris. PGE submitted a report that indicated PCB-containing transformers were consumed in the fire. however, no environmental media have been sampled. PGE conducted a <quot>Preliminary Assessment, Outfall 33 Drainage Area<quot> (5/7/10) that included the Rexel-Taylor property, then collected fire debris samples (<quot>Data Report,<quot> 8/19/10). Fire debris, primarily located on concrete slab foundations, contained elevated levels of metals, PCBs, dioxin/furans, and PAHs. The property owner, HMB Corp., removed fire debris and disposed of it off site, and removed sediment in adjacent stoirmwater catch basins and pipelines (<quot>Environmental Assessment and Remediation Report,<quot> October 15, 2012).

NARR Comments: The Rexel/Taylor Warehouse is located in SE Portland at the corner of Clay and 3rd Street. The fire started around 10:30 PM on May 17th and involved materials stored in the warehouse (mainly wiring), but reportedly some transformers. Three transformers owned by PGE were incinerated, with an estimated release of less than 10 gallons of oil. The balance of 110 gallons is presumed to have been consumed in the fire. An associated property that was not invloved in the fire is 1709 SE 3rd St. (Associated Busness/or Owner), the block located south of the fire.

REXEL/TAYLOR ELECTRICAL SUPPLY (Continued) **S108059928**

Updated Date: 05/11/2009
Decode for NarcdID: Project Activity Status
NARR Comments: MTpugh, 7/14/06 Mr. Taylor, representing HMB corporation (owner) has indicated he would cooperate with DEQ but feels the operator should be responsible for entering the Voluntary Cleanup Program (VCP) as requested by DEQ. Rexel Inc., the tenant at the time of the fire, offered to enter the VCP to address our concerns but indicated that they do not have the authority to access the property. This has been rebutted by Mr. Taylor. Since the current circumstances do not indicate the VCP process is viable, we are referring the site to the DEQ Site Assessment Program for further evaluation. A timeline for this evaluation is uncertain. DEQ requested Rexel Inc. to provide complete information on the materials and equipment that were stored in the warehouse at the time of fire. DEQ has requested that Mr. Taylor provide information on the disposition of fire debris and any other material disposed off-site, and any subsequent environmental investigation or cleanup conducted at the site.

Decode for NarcdID: Remedial Action
NARR Comments: PGE removed their burnt transformers. Rexel hired Elder Demolition and reportedly salvageable metal has been removed from the fire debris. The property owner, HMB Corp., removed fire debris and disposed of it off site, and removed sediment in adjacent stoirmwater catch basins and pipelines (<quot>Environmental Assessment and Remediation Report,<quot> October 15, 2012). In May 2015 Coffman Excavation removed soil and fire debris to a depth of one foot in the northeast corner of the property. Concrete and wood debris was removed and disposed as construction debris. Approximately 157 tons of contaminated soil was disposed at Hillsboro Landfill. In July 2015 Coffman Excavation encountered a layer of bitumen covering approximately 200 square feet beneath the floor slab in the northwest corner of the property. Approximately 78 tons of bitumen and soil was removed in August 2015. Analysis of two discrete samples confirmed removal. In November 2015 Coffman Excavation removed PCB-impacted soil from the planned utility corridor trench in the area of the former pole-mounted transformers along the southern portion of the property. Three discrete samples were collected from the base of the trench for PCB analysis. No PCBs were detected. Based on completion

REXEL/TAYLOR ELECTRICAL SUPPLY (Continued) **S108059928**

of this work, DEQ issued a Certificate of Completion in September 2016 (JKS 11-21-17).

NARR Comments: Threat to human health may exist from fire debris. Once the fire debris is removed the risk from residual contamination will likely be low, as the soil at the site is almost completely covered with concrete. The storm drain lines and associated contaminants could present an ongoing source of residual contamination to the Willamette River, but due to the expected limited volume is not expected to present a signifcant threat to humans or wildlife.

NARR Comments: (2nd Qtr/93 MMD/VCS) Petroleum contamination was detected when the Portland Development Commission (PDC) collected soil samples to evaluate the health and safety concerns for construction workers at the site. PDC requested VCS oversight of the road construction to the extent necessary to determine whether the road would exacerbate

SW MOODY AVE. - RIGHT-OF-WAY (Continued) **S103842331**

existing contamination or would adversely impact future remedial alternatives at the site.

NARR Comments: The SW Moody Avenue Extension is on the west bank of the Willamette River and north of the Marquam Bridge. The road runs adjacent to and south of the South Waterfront Redevelopment Area (ECSI site #602) that DEQ has been investigating since 1988. The rebuilt segement of Moody addressed by a 2010 CMMP with the City of Portland Bureau of Transportation extends from approximately SW River Parkway to SW Gibbs Street in the South Waterfront area.

SW MOODY AVE. - RIGHT-OF-WAY (Continued) **S103842331**

NARR Comments: (2nd Qtr/93 MMD/VCS) Under a Letter Agreement, PDC and its consultant worked with VCS to develop a strategy for sampling soils within the right-of-way and along the length of the road extension as storm and sanitary sewer lines were placed. Because of construction schedules and contract demands, PDC determined that there was insufficient time to evaluate potential impacts to groundwater. The road design was modified to mitigate impacts of potentially contaminated soil and groundwater. Cement plugs were placed at selected intervals in the roadbed to prevent potentially contaminated groundwater from migrating along the preferential path the utility trenches were now providing. By the installation of these plugs, VCS determined that the road would not exacerbate existing contamination. Soil sampling and analysis detected the presence of elevated concentrations of petroleum product and lead in isolated pockets along the right-of-way. VCS informed PDC that this soil must be removed to health-based concentrations in order to establish that the road would not adversely impact future remedial alternatives. PDC determined that additional removal, sampling, testing, and data analysis would require more time and resources then they had for this project. PDC elected to terminate VCS oversight and retained RZA AGRA to continue investigation on a smaller scale, documenting soil conditions as the roadway construction continued.

Updated By: DHAFLEY
Updated Date: 08/20/2014
Decode for NarcdID: Current Site Summary Statement
NARR Comments: this limited segment of SW Moody Avenue is currently paved. Residual contamination beneath the street as identified by sampling in the 1990s is not a direct contact concern given the information presented above, nor utilities likely to facilitate preferential contaminant migration as cement plugs were placed within utilities to prevent contaminant migration along the utilities. Based on this information, the site is a low priority for further action under DEQ. Excavation below the roadway area may result in contaminated soil or shallow groundwater being encountered. In 2010-2011, improvements were made to SW Moody Avenue assocaited with the Portland Streetcar Gibbs Extension Project, including adjacent to the OHSU Schnitzer Campus property. A Contaminated Media Management Plan was developed for Portland Bureau of Transportation (URS, 2010) and approved by DEQ to manage contaminated soil encountered during redevelopment. Management (and) disposal of contaminated media (soil and groundwater) appears to have been completed satisfactorily. 37483 tons of contaminated soil were disposed of at Hillsboro Landfill, while 223,363 tons of material were taken to Tigard Sand and Gravel. DEQ's oversight does

SW MOODY AVE. - RIGHT-OF-WAY (Continued) **S103842331**

not constitute a NFA for the Moody Avenue segment, however any contaminated media remaining beneath the newly-constructed roadway are considered a low priority for further action. management

WESTWOOD CORP. (Continued) **S100675848**

Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (GMW 2/27/97) Foundry and scrap-metal businesses occupied the site between the early 1930s and 1984, when the property was sold to Westwood. Prior to its occupancy, Westwood renovated the site building, paved over areas formerly used by the foundry, and installed four fuel USTs on the southeastern side of the property. Several subsurface investigations were conducted between 1985 and 1994, leading to the discovery of petroleum contamination in soil and groundwater around the USTs (which were removed in 1994). Westwood's contractor prepared a limited risk assessment for the TPH contamination in this area in 1995, and DEQ's UST Section issued an NFA solely for this portion of the site in August 1996. The UST Section also referred contamination in other portions of the property to Site Assessment. Documented contamination in these other areas consist of diesel-range hydrocarbons in soil near the site's helicopter pad, and lead in soil at a depth thought to represent the surface of the former foundry/scrap yard. In addition, borings in the former foundry yard encountered stained soils, <quot>black sand,<quot> slag, and brick, which may indicate the presence of heavy metal, hydrocarbon, and PAH contamination in the shallow subsurface. Further, there is historical evidence of a bag house, as well as transformer poles, on the north side of the building, suggesting the presence of heavy metal and PCB contamination in this area.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Groundwater depth varies between about 8 and 15 feet, depending on the season. Flow gradient is relatively flat, and flow direction is influenced by the level of the Willamette River, located about 500 feet east of the site. Groundwater is likely to be the primary pathway of concern, especially to the extent that any contaminated groundwater from this site could migrate towards and enter the river. There are a number of wells within a 1-mile radius of the site, but all are used for industrial purposes or cathodic protection, and none is used to supply drinking water. Nearly all of the wells are screened below the water table aquifer.

NARR Code: Remedial Action
Created By: Not reported
Created Date: 12/17/2002
Updated By: DHAFLEY
Updated Date: 05/28/2022
Decode for NarcdID: Remedial Action
NARR Comments: (GMW 2/27/97) Westwood Corporation has conducted no removal or remedial action at the site, but did obtain a limited <quot>no further action<quot> determination from DEQ's UST Section in August 1996, for the former UST area on the southeastern side of the property. Soil boring and test pit data collected between 1985 and 1994 suggests the presence of contamination in the shallow subsurface, originating from past foundry and scrap-metal operations. Such contamination would likely consist of hydrocarbons, PAHs, PCBs, and metals, and it may have migrated to groundwater. (Lead and petroleum have already been documented.) The site should be characterized for contamination from these past property uses, which could threaten off-site receptors. According to the Site Assessment Prioritization System, further state action is a medium priority. (4/13/99 ACV/VCP) RP to submit workplan to address data gaps in Spring 1999. Field work expected in summer 1999. (4/18/00 ACV/VCP) RI report and baseline risk assessment submitted and in review. DEQ expects comments in May 2000. (12/1/00 ACV/VCP) DEQ proposed remedy based on streamlined FS in September 2000. Remedy is maintenance of existing structure and ES&E. Public comment in October 2000. ROD final in November 2000. Conditional NFA issued December 2000, which relies on maintenance of the existing structure and the Easement & Equitable Servitude. (05/28/22 DJH/VCP). City of Portland requires landscape work in perimeter berm. Sampling in May 2022 identified contaminants including metals and PCBs in shallow soil comprising berm, below occupational RBCs excepting lead. Followup discussion with site owner ZRZ Realty is planned.

Updated Date: 09/25/2014
Decode for NarcdID: Remedial Action
NARR Comments: (GMW 6/6/97) There have been several DEQ files on this site regarding subsurface contamination, including LUST log # 26-92-0320 (closed 12/2/92); LUST log # 26-94-0153 (remains open), and a Site Assessment review in August 1993. Site Assessment recommended no further action within the Cleanup Program following its review of site files in August 1993. This was based on the removal and off-site disposal of petroleum-contaminated soil in the vicinity of the soap tank, as well as confirmation sampling indicating that this area met Level 2 (UST) Matrix Standards. However, as indicated, this site is still active in DEQ's UST Section, as a result of contamination discovered during the 1994 removals of other USTs at the site. (9/25/14 GMW/SAS) DEQ made a final closure decision on LUST 26-94-0153 in December 2009; therfore, no further action is required in Cleanup.

Updated By: SMANZAN
Updated Date: 11/20/2015
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Human health for direct contact to soil is the primary exposure pathway for the site. The groundwater to surface water, and groundwater for inductrial use are not complete pathways. An interim 1 foot deep gravel cap was placed across all uncapped areas of the site in 2009 as an interim measure to prevent direct contact to contaminated soils until final development of the site is complete.

NARR Comments: Unit A: Unit A Record of Decision (ROD) complete in April 1995. Removal of surface and near-surface soils that exceeded remedial action levels and long-term management of H2S gas (Phase I) was complete in December 1995. Unit B: A no further action detemination on made by DEQ on Unit B. Unit C: Unit C ROD was complete in October 1993. Removal of on-site, near-surface soils exceeding remedial action levels (Phase I) is complete. Phase II for both Units A and C were initiated as proposed in a Draft Phase II work plan in July 1997. In 2008, an Interim Site Management Plan (ISMP) was approved by DEQ to authorize placement of a 12 inch gravel cap to prevent direct contact with exposed soil on all uncapped areas of the site until future development is complete. In 2014, OHSU completed the construction of Collaborative Life Science Building on part of Unit C, which provides a permanent cap (containment remedy) on a portion of the site. As of April 2017, construction of the Knight Cancer Research Building (KCRB) On Unit C was in progress. DEQ has approved plans for capping within the ROW of a new street - Bond Avenue - the extends across Units A, B, and C. DEQ-required capping has been completed for Bond on-site, although the City of Portland has not yet begun road construction. An extension of SW Meade Avenue over Unit C of the site will begin in June 2017. ROD-mandated capping is being completed with all development work under DEQ-approved work plans. As of December 2021, capping has been completed at: CLSB, KCRB, Bond Avenue, and Meade Street Extension portions of the site, with closure reports approved by DEQ. Ongoing cap inspection and maintenance is

OHSU - MOODY AVE. UNITS A, B, C (Continued) **S105680841**

necessary for each.

NARR Comments: Phase I (removal of hot spot soils as defined in the RODs) of remedial action for Units A and C is complete. The entire site is now capped with at least 12 inches of crushed gravel or hard cap pavement to prevent direct contact to soil. A large portion of Unit C has been permanenetly developed wwith the construction fo the TriMet Tilikum Crossing Brideg and the OHSU Collaborative Life Science Building. The remaining undeveloped port of the site is fenced. Therefore, ther are no treats due to contact with contaminated media at the site.

NARR Comments: This site is divided into 3 separate parcels; Units A, B, and C. Miller Products Company operated a pesticide and agricultural products manufacturing plant on Unit A from the 1920s to the 1960s. Unit B was used primarily as office space and structural steel storage. Unit C was occupied by Barde Steel Company (a plate and structural steel warehouse) and Alaska Junk Company (a metals salvaging, ship dismantling, and automobile shredding and baling operation), which is the primary source of the metal contamination within the Unit. Schnitzer Investment purchaced the site in 1972 and terminated metal operations in 1977. In 2004, Schnitzer gifted the site to Oregon Health Science University (OHSU).

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Redevelopment and capping of the site (Units A and C) is underway consistent with the site RODs. To date, two large buildings have been constructed on Unit C (CLSB and KCRB) and road construction (Bond Avenue) is underway. As redevelopment continues, RD/RA work plans will be developed and approved by DEQ prior to construction. Inspection and Maintenance Plans have been completed for CLSB (2015) and KCRB (2018). Submission of a completion report for the Meade Extension portion of the site is pending as of August 2018, while capping within Bond Avenue is complete. October 15, 2019. Meade Extension report submitted and approved by DEQ. cNFA issued for KCRB. Project report for SW Bond Extension submitted and approved. IMP approved by DEQ. No additional redevelopment work (and associated capping) planned at this time. A conditional NFA was issued for the Knight Cancer Research Building was issued on 1/10/2019. Ongoing cap inspection and maintenance is necessary. In the first five years, on a yearly basis.

Decode for NarcdID: Contamination
NARR Comments: Contaminants detected in soil samples include petroleum, petroleum constituents, and metals. Metals concentrations were at or below DEQ regional background values in all samples collected from the leave surface following excavation conducted for site development. PAHs were below applicable RBCs for all but one leave-surface sample, which is overlain by 3.5 feet of hardscape. Low concentrations of VOCs and total metals were detected in groundwater samples at the site. Maximum detected concentrations included PCE (13.9 ug/L), TCE (4.2 ug/L), and lead (45.3 ug/L). Contaminants were detected at both the upgradient and downgradient site boundary, and are not indicative of a significant site-related source. spose a risk to human health or ecological receptors, as they were not likely to migrate to the river, and, groundwater is not used for ingestion at or near the site. Not reported

Decode for NarcdID: General Site Description
NARR Comments: The four-block site was previously included in the Pacific Richaland property (ECSI # 3993). In 2015-2016 the 1.67-acre property was developed into a 5-story multi-use building with sub-grade parking. The majority of the site is hardscape. The presence of petroleum hydrocarbons,PAHs, and metals in soil appeared to be related to historical surface releases associated with former gravel processing and concrete manufacturing operations at the Pacific Richland property,historical placement of contaminated fill material, or a combination of the two. Relatively low levels of HVOCs and metals have been detected in groundwater throughout the South Waterfront area and the presence of HVOCs and metals in groundwater beneath the project site appear to be related to regional groundwater plume with low levels of HVOCs and/or metals from historical industrial activities in the South Waterfront area.

NARR Comments: Soil and groundwater. Petroleum hydrocarbons, PCBs, and PAHs were not

SOUTH WATERFRONT - BLOCK 37 (Continued) **S116495391**

detected at concentrations greater than the laboratory MRLs in groundwater samples collected at the project site during this investigation and/or previous investigations completed of the Pacific Richland property. Low concentrations of the HVOCs cis-1,2-DCE, PCE, and TCE were detected in two groundwater samples collected during previous investigations. There is no known on-site source of HVOCs, and the presence of HVOCs in groundwater beneath the project site appears to be related to a regional groundwater plume with low levels of HVOCs from historical industrial activities in the South Waterfront area. Total metals (including arsenic, barium, cadmium, chromium, lead, selenium, and silver) were detected in groundwater samples collected from throughout the project site during previous investigations. The lateralextent of groundwater impacted with low levels of metals has not been fully delineated. However, similar concentrations of metals have been observed in groundwater samples collected west of the project site (Block 38) and east of the project site (Central District Greenway Trail) during previous investigations of the Pacific Richland property. Therefore, it appears that the detected concentrations of total metals in groundwater beneath the project site is not related to an on-site source and are representative of total metals concentrations in groundwater beneath the South Waterfront area.

NARR Comments: In 2014, soil and groundwater samples were collected in preparation for site development that included the excavation of over 18,000 cubic yards of soil. Petroleum, polycyclic aromatic hydrocarbons, and metals were found in soil at concentrations that required disposal at a Subtitle D landfill. Confirmation samples collected following the excavation were below all applicable risk-based concentrations except for one area in the southeast-central portion of the property. This

SOUTH WATERFRONT - BLOCK 37 (Continued) **S116495391**

area is overlain by 3.5 feet of hardscape and is unlikely to be disturbed in the future. Low concentrations of VOCs and total metals were detected in groundwater samples at the site. Maximum detected concentrations included PCE (13.9 ug/L), TCE (4.2 ug/L), and lead (45.3 ug/L). Contaminants were detected at both the upgradient and downgradient site boundary, and are not indicative of a significant site-related source. DEQ issued a No Further Action determination for groundwater at the adjacent and downgradient South Waterfront Central District Trail site in October 2011. DEQ concluded that contaminants detected in groundwater did not pose a risk to human health or ecological receptors, as they were not likely to migrate to the river, and, groundwater is not used for ingestion at or near the site. DEQ issued an NFA for the site in May, 2017.

Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: Drinking water is supplied by the City of Portland. In October 2011, DEQ issued a No Further Action (NFA) determination for groundwater at the South Waterfront Central District Greenway Trail site, which is located between the Block 37 site and the Willamette River, downgradient of the site. DEQ issued the NFA after concluding that the only beneficial use of groundwater in Portland s South Waterfront was discharge to the Willamette River, and that concentrations of contaminants detected in groundwater at and near the CD Greenway Trail site were unlikely to migrate to the river and pose a risk to ecological receptors.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: The site was previously included in the Pacific Richland site (ECSI # 3993). A preliminary site investigation, conducted in February, 2014, included the collection of soil and groundwater samples from various locations and depths at the site. Levels of VOCs, metals, and petroleum in groundwater were found along with concentrations of metals, PAHs, and petroleum in soil. In 2015-2016 over 18,000 cubic yards of soil was excavated from the site and disposed of at a Subtitle D landfill as part of site development into a five-story multi-use building with subgrade parking. Soil samples collected from the leave surface of the excavation were below applicable risk-based concentrations with the exception of one area that is covered by 3.5 feet of hardscape and unlikely to be disturbed in the future. No groundwater samples exceed DEQ RBCs for either volatilization to outdoor air or intrusion into buildings. Groundwater is not used for consumption in the site vicinity, and the contaminants detected in groundwater at the site are not expected to reach or impact the Willamette River, which is approximately 170 to the east of the site. DEQ issued an No Further Action determination for the site in May, 2017.

NARR Comments: The 1928 Sanborn Map shows a gulch running through the properties that was apparently filled prior to the 1940s. Exploration of the fill shows that it extends up to 16.5 feet in depth and contains black sands similar to foundry sands. Fill material contains elevated concentrations of arsenic, copper, lead, and other metals. Two LUST sites exist on the property and have file numbers: 26-96-0187 and 26-96-0188. Additional USTs may exist on the property. RW-SRP-5/22/07 - One of these UST sites was closed with a <quot>pocket<quot> of inaccessable contamination below a building. Redevelopment plans now call for demolition of site buildings and contaminated soil is planned for removal.

NARR Comments: Testpits and borings in gulch or revine fill show that woody debris is present in the fill material. Methane generated by decaying woody debris in the fill is thought to have led to the active production of methane in the fill area.

NARR Comments: After extensive investigation metals contamination in the fill soil is too sporadic to be considered a risk for direct contact. Methane concentrations generated by the fill soil are high enough to be considered a potential explosion hazard for overlying buildings without vapor mitigation systems.

NARR Comments: Site includes 2644 & 2740 SE Powell; 3601 SE 27th; and 3605 SE 28th Initial investigation of the fill materials consisted of 16 soil borings and 6 test pits. The fill material contained brick, mortar, concrete, glass, wire, lumber, metal pipe, tree parts, and apparent foundry sands. Groundwater was encountered at depths between 16-28.5 feet. The prospective purchaser of the site plans mixed use redevelopment including residential, office, and possibly retail uses. Further investigation is planned for fill material and groundwater. Additional push probe investigation resulted in discovery of elevated methane concentrations at two points within the fill. Permanent methane monitoring points will be installed. Fill soil and groundwater below contained only minor metals and trace VOC contamination below risk screening values. RKW 8/3/06. Five permanent methane monitoring points have been installed in the central fill portion of the site. Monthly measurements show consistent methane from 0-33,000 ppm. New buildings with engineering controls (passive vapor collection system) planned for the site with ground breaking scheduled for late summer 2007. RKW 11/28/06. Building demolition completed by mid-July. Gasoline-contaminated soil remaining under the building foundation is being excavated. The source of gasoline contamination was an old UST, removed under DEQ tanks project ID #26-96-0188. (RKW 7/16/07) Foundation for new building under construction. Geovent and liquid boot seal being installed before slab cement pour. (RKW 11/14/07) Building completed and ready for occupation. Pre-occupancy monitoring for methane inside the building did not find any detections. Low levels of methane were detected in vent risers in one event. Subslab sample points were sampled for VOCs and several, largely petroleum-related VOCs were detected. Using a conservative attenuation factor of 100X (1000X more realistic for an engineered system) the benzene concentration is still an order of magnitude less than the indoor air RBC. (RKW 10/15/08) Final monitoring plan to measure methane annually in sample ports and vent risers. VOCs will not be routinely measured as low concentration combined with vapor barrier/ventilation system system judged highly protective. Conditional NFA dated 12/9/08. (RKW 12/11/08) Annual methane monitoring in the sub-slab space below the building was performed in March 2011. No methane was detected; unsafe conditions are not present. (RKW 4/4/11) After five years of annual methane monitoring with no detections, the methane monitoring will no longer be required. Engineering controls at the site will need to be maintained. (RKW 8/6/13)

NARR Comments: The three principal metals of concern -- lead, copper, and zinc -- are the same three metals identified as primary contaminants at the nearby American Bronze site (ECSI #1400) a few blocks west of the site. The American Bronze site is the presumed location of a historic foundry known as the NW Foundry and Furnace Company, which may have been the source of foundry sands found in fill at the Catholic Charities site. Twnshp/Range/Sect: T1S-R1E/Sec. 12 Tax Lots: 12700, 13100, 13200, 13800, 13900, 14000, 14100, 14600, 14700, 14800, 14900, 15000, 16000

NARR Comments: (5/16/05 HBlischke/VCP) Excavation at Blocks 25 (Tax Lot 308) and 29 (Tax Lot 307) for development was conducted between June and August, 2004, to prepare the site for development. Site investigations identified limited areas of petroleum-hydrocarbon contaminated soil near Blocks 25 and 29. These areas were removed during isolated removal actions as well as during excavation for property development. The excavation was conducted in accordance with the DEQ-approved Soil Management Plan, South Waterfront Central District, Portland, Oregon, dated February 3, 2004 and addenda to the soil management plan. Recent groundwater monitoring events showed contaminant concentrations in groundwater to be below risk-based concentrations and thus do not pose a risk to human health or the environment. Based on this information, DEQ has concluded that Blocks 25 and 29 of the US Bank site does not pose an unacceptable risk to public health or the environment. No further action is required at Blocks 25 and 29 of the US Bank site by current or future owners under Oregon Environmental Cleanup Law, ORS 465.200 et seq., unless new or previously undisclosed information becomes available. Other Blocks within this 17-acre site will be issued no further action (NFA) determinations as the excavations are completed in accordance with the Soil Management Plan and addenda (referred to above). (5/24/11 MGreenburg/ICP) DEQ has issued an NFA for Block 31, the Mirabella property.

Decode for NarcdID: Site History
NARR Comments: The larger US Bank site, currently being developed for urban residential and commercial use, had past uses including shipbuilding (1943 to 1945), steel and metal fabricating, and electrical products manufacturing. Blocks 25 (Tax Lot 308) and 29 (Tax Lot 307) were primarily used for storage of logging equipment and surplus Zidell Marine equipment, and most recently, the site was occupied by a warehouse/office building on the western portion, and associated paved parking and loading docks on the eastern portion.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: The eastern portion of the site was purchased by the Portland Development Commission (PDC) for development into the CD Greenway Trail (ECSI # 5277). The eastern portion of the US Bank site was was excised and included into the CD Greenway site. Based on a review of site data, DEQ has concluded that groundwater beneath the CD Greenway site has not been significantly impacted, and therefore does not pose a risk to public health or the environment. A no further action determination for groundwater is recommended and the decommissioning of monitoring well MW-2 has been approved.

Decode for NarcdID: General Site Description
NARR Comments: The subject properties are located in the South Waterfront District, City of Portland, Multnomah County, in Section 10, Township 1 South, Range 1 East, of the Willamette Meridian. The properties are in an industrialized and urbanized section of the city that are boarded to the east by the Willamette River at river mile (RM) 13.3; to the west by S.W. Moody Avenue; to the north by S.W. River Parkway; and to the south by Ross Island Bridge. Currently, entrance to the properties is from a gated access off of S.W. Moody Avenue. The properties are relatively flat and free from above ground structures. The basis of survey coordinate system used for legal description is North American Vertical Datum 1983 (NAVD 83), and the Oregon Coordinate System 1983.

Created Date: 02/26/2016
Updated By: SMANZAN
Updated Date: 02/26/2016
Decode for NarcdID: Remedial Action
NARR Comments: Remedial Action for this site is complete. Remedial action activities on the TriMet Fee Parcel include relocation of aproximately 10,000 cubic yards of contaminated soil exceeding ecological risk screening levels from the Zidell waterfront property to containment cells within the west side embankment structure for the Tilikum Bridge. An engineered concrete cap provides permanent containment of the relocated contaminated soil. Additional remedial action on the fee parcel consisted of the removal and management of contaminated soil necessary to construct abutments and retaining walls for the west side embankment structure (bridge ramp). These soils were managed as required by a DEQ-approved Soil Managment Plan.

Updated Date: 02/26/2016
Decode for NarcdID: Institutional Control
NARR Comments: An Easement and Equitable Servitudes completed on January 28, 2011 restricts the use of groundwater beneath the fee parcel, requires routine maintenance and monitoring of the engineered cap, and prohibits cap disturbance that results in exposure to contaminated soil without written approval from DEQ.

NARR Comments: TriMet acquired property from OHSU (ECSI #875) and ZRZ (ECSI #689) in January 2011 in order to construct a bridge ramp and transit station for the Portland-Milwaukie Light Rail line (ECSI #5610). TriMet is required to comply with soil management provisions specified in the

TRIMET WILLAMETTE RIVER BRIDGE (Continued) **S111766413**

ZRZ and OHSU RODs, and a Soil Management Plan approved by DEQ in February 2011. Soil management activities are required on the acquired property (Fee Parcel) and also on surrounding property (construction easements) in order to accomodate equipment and construction supply and material needs to construct the bridge ramp. The bridge ramp will also serve as an engineered containment cell to encapsulate ecological hot spot soil that was removed from the ZRZ property bank required by DEQ as part of remedial action on the ZRZ property. While preparing to construct the bridge abuntment and bent, TriMet removed approximately 860 cubic yards of soil from four 8-foot diameter shaft borings completed to approximately 115 feet below ground surface. These soils were removed and transported to appropriate disposal facilities as required in the Contaminated Media Management Plan approved by DEQ in February 2012.

NARR ID: 5753968
NARR Code: Contamination
Created By: KDANA
Created Date: 03/26/2012
Updated By: KDANA
Updated Date: 12/28/2016
Decode for NarcdID: Contamination
NARR Comments: (12/28/2016 KPD/ICP) Environmental Site Assessments were conducted for properties (or portions of properties) along the light rail alignment that would be acquired by TriMet. Ten Phase I ESAs were completed along the West Segment (west of the Willamette River) from January 2010 to August 2011. Potential contaminant concerns were identified at two of the properties: Alpha Broadcasting (at SW 1st & Lincoln) and Budget Rent-a-Car (at SW 4th & Lincoln). Phase II ESAs were completed for those properties in May 2010 and November 2010, respectively. No significant contamination was identified at either location. A total of 63 Properties of Interest (potentially contaminated properties) were initially identified along the East Segment of the project (east of the Willamette River). Six additional POIs were subsequently identified. Sampling found soil contamination at 39 of the properties, including 33 properties where contamination exceeded applicable risk-based concentrations. Groundwater contamination was observed at 24 of the 69 properties. Contaminated Media Management Plans were completed for the West Segment of the project by CH2M Hill in November 2011 and for the East Segment of the project by URS in August 2012. The East Segment CMMP was subsequently amended in October 2012 (Addendum I), November 2012 (Addendum II), January 2013 (Addendum III), and September 2013 (Addendum IV).

NARR Comments: From north to south, the PMLR alignment begins at the south end of the Transit Mall in downtown Portland, on SW 5th & 6th Avenues at Jackson Street. The line proceeds east down SW Lincoln Street to SW Naito Parkway, then flies over SW Harbor Drive on the <quot>Harbor Structure<quot>, turning south and landing on the west side of SW Moody Avenue immediately south of the Marquam bridge approaches. The line continues east across the Willamette River on a transit-only bridge (Tilikum Crossing) between the Marquam and Ross Island bridges, landing on the north side of the Portland Opera building. The line then runs east to an existing Union Pacific Railroad alignment, and follows the south side of the alignment southeast to SE 17th Avenue, crossing Powell Boulevard on an overpass. The line turns south on SE 17th and runs down the center of 17th to SE McLoughlin Boulevard. The PMLR alignment follows McLoughlin south to the Clackamas County line, mostly running on the west side of the Union Pacific Railroad tracks, with short bridges over Crystal Springs Creek and Johnson Creek. The alignment features a park-and-ride south of Tacoma Street, between Johnson Creek and the Springwater Corridor. South of the Corridor, the alignment crosses over the UPRR tracks on the <quot>Tillamook Branch Structure<quot>, landing near SE Mailwell Drive. The alignment then runs along the east side of the Tillamook Branch tracks into downtown Milwaukie, crossing under Highway 224 and over Spring Creek. The tracks elevate again in downtown Milwaukie, crossing SE Lake Road, Kellogg Creek, and SE McLoughlin Boulevard on an overpass before landing on the west side of McLoughlin. The line follows McLoughlin south and terminates at SE Park Avenue. The project scope also included an expansion of the Ruby Junction light rail vehicle (LRV) maintenance yard on NW Eleven Mile Avenue in Gresham.

NARR Comments: (12/28/2016 KPD/ICP) On the West Segment of the project (Lincoln Street to the west bank of the Willamette River) a total of 22,218 tons (14,806 cubic yards) of contaminated soils were excavated and shipped to the Hillsboro Landfill for disposal. A total of 33,704 tons of clean material (generally concrete and soils) were shipped to Tigard Sand & Gravel, and an additional 3,686 tons were shipped to Ironhorse Group for reuse as clean fill. A total of 107,143 gallons of groundwater and 2,060 gallons of sludge were shipped to the Shipyard Commerce Center for disposal under permit to the City of Portland's sanitary sewer system. In addition, a total of 5,778 cubic yards of contaminated media were removed from in and around the Willamette River during the construction of Tilikum Crossing. On the East Segment of the project (east bank of the Willamette River to Park Avenue) a total of 97,119 tons of contaminated materials (mostly soils) were excavated and shipped to the Hillsboro Landfill for disposal. Included in this total were 220 tons of railroad ties and 1,263 tons of invasive species (Japanese knotweed). An additional 75.30 tons of asbestos-containing materials from two demolished buildings were shipped to the Wasco County Landfill for disposal. Roughly 500,000 tons of clean materials (concrete, asphalt and base

PORTLAND-MILWAUKIE LIGHT RAIL (PMLR) PROJECT (Continued) **S111119964**

rock) were also removed from the project area and shipped to a variety of locations. Finally, a total of 4,320,500 gallons of groundwater were discharged to the City of Portland's sanitary sewer system. Through its contractors, TriMet conducted investigations and cleanups at 24 individual sites along the project alignment and at two sites adjacent to the Ruby Junction maintenance yard. DEQ reviewed and approved TriMet's work at all 26 sites.

NARR Comments: The Locally Preferred Alternative for the Portland-Milwaukie Light Rail Project (i.e., the project alignment and station locations) was selected in July 2008. The basic design of the Willamette River bridge was selected in February 2009 and finalized as a four-pier cable-stayed bridge in May 2009. Preliminary engineering (30% design) of the alignment and 10 light rail stations was completed in March 2009. The final Environmental Impact Statement was completed in October 2010, and the Record of Decision was issued November 29, 2010. The project reached 60% design in June 2011, 90% design in December 2011, and 100% design in May 2012. Full federal funding of the PMLR project (50% of the project costs) was approved on May 22, 2012. Project construction officially began on July 1, 2011 with in-water work on the Willamette River bridge supports. Coffer dams were completed around the two bridge supports in October 2011. The west bridge tower, started first, was completed by February 2013, and construction of the bridge deck began in March 2013. The east bridge tower was completed in June 2013, with deck work beginning in July 2013. Work on the Harbor Structure began in November 2011, and work on the east side structures began in February 2012. Building demolition and business relocations (the project included 196 property acquisitions and 109 business relocations) began in January 2012. Demolition and rebuilding of the rail overcrossing of SE Powell Boulevard at 17th Avenue began in June 2012. Construction of the bridge over Kellogg Creek and McLoughlin Boulevard began in July 2012. Construction of the other major east side structures (the Tillamook Structure and a bridge/flyover at Tacoma Street and Johnson Creek) began in October 2012. The project reached 50% construction completion in July 2013. The Harbor Structure (and other work on the west side of the Willamette River) was substantially completed by the end of March 2014. The Willamette River bridge was officially named <quot>Tilikum Crossing<quot> in April 2014, when the two halves of the bridge deck met in the middle. The project was completed and opened to the public as the <quot>Orange Line<quot> on September 12, 2015.

Decode for NarcdID: General Site Description
NARR Comments: Previous environmental sampling at the site identified heavy metals and PCBs in sediment collected from an on-site drywell, elevated heavy metals in shallow soil along the western perimeter, and low level petroleum hydrocarbons and associated constituents in shallow soil collected from below a removed building. Groundwater at the property was slightly impacted by leaking USTs located adjacent to the east and up gradient from the site. Groundwater remediation activities were conducted at the east-adjacent site and subsequently issued an NFA. Groundwater sampling conducted at the subject property since the cleanup has not verified if petroleum hydrocarbons were still present in groundwater.

Decode for NarcdID: Contamination
NARR Comments: (11/12/93 JLS/VCS) Discharge of solvents reported by Houston Inc. on 1/10/90. An unknown contaminant plume covers an area of about 5,600 square feet. Groundwater contaminated with chlorinated solvents was discovered at the site during the decommissioning of petroleum tanks. No remediation of the solvents has been proposed. (11/24/99 DJH/VCS) Additional soil and groundwater investigation under PPA shows contamination extending off-site to south and southwest (see also ECSI #1400 and #3009). Formal reporting not received to date; expected late 1999 or early 2000. (4/23/01 DJH/VCP) Soil and groundwater investigation had identified limited off-site migration onto Sharp Autobody and Gladstone Building properties. Monitoring will continue under PPA. (11/19/01 DJH/VCP) Both properties referred to Site Assessment Program in January 2001.

NARR Comments: Chlorinated solvents in groundwater on-site (quantity unknown), with concentrations up to 1,723 ppb total. Petroleum contamination in soil and groundwater from USTs. (11/24/99 DJH/VCS) Floating degraded gasoline (?) found on adjacent property to southwest during additional investigation by Fred Meyer in October 1999. Unclear if attributable to site at present. (11/28/07 DJH/VCS) Elevated PCE and TCE remain in on-site well MW7-17 above risk-based screening values. Site owner has determined to not pursue at this time.

NARR Comments: Shallow groundwater contains elevated chlorinated VOCs. Contamination

HOUSTON INC. (Continued) **S102082453**

has migrated to a limited extent onto adjacent properties Sharp Autobody (south) and Gladstone Building (southwest). Original source of release is not known. Work agreed to by Fred Meyer under a 1999 PPA performed at the site has included push-probe investigation off-site to determine extent of contamination, and installation of off-site (downgradient) monitoring wells. Five year groundwater monitoring under PPA has been completed. As of March 2005, PCE and TCE remained in on-site well MW-7-17 to 350 and 100 ug/l, respectively. These slighly exceed relevant risk-based screening values for more than one receptor population. Groundwater contamination extends a limited distance off-site to the southwest. The site remains a low priority for further action. Note that the Sharp Autobody (ECSI 3009) and the former American Bronze property (ECSI 1400) located to the south and southwest respectively have separate groundwater releases.

Decode for NarcdID: Remedial Action
NARR Comments: (6/21/91 LSK) Screened for PA - not appropriate for federal PA; no on-site sources; may be area-wide groundwater contamination issue. Further investigation recommended. (11/12/93 JLS/VCS) Additional monitoring underway to evaluate the solvent plume and UST impacts. UST cleanup (see UST file #26-89-200). Fred Meyer initiated Prospective Purchaser Agreement (PPA) in September 1997; PPA under development. (7/20/98 JLS/VCP) PPA on hold pending property transaction as of July 1998. (2/2/99 JLS/VCP) PPA signed. Work plan for action agreed to by Fred Meyer under PPA (investigative borings and wells) completed August 1999. (4/23/01 DJH/VCP) Additional groundwater investigation in 2000 to complete nature-and-extent determination. (11/21/01 DJH/VCP) Quarterly groundwater monitoring

HOUSTON INC. (Continued) **S102082453**

continues per PPA. PPA requrements met as of March 2005, with contaminants in on-site well MW7-17 exceeding RBCs. Site owner has requested withdrawl from VCP; site remains a low priority for further action.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [Nov. 2007] Fred Meyer initiated a Prospective Purchaser Agreement (PPA) for this site in 1997, which was completed in 1999, followed by the work agreed to by Fred Meyer under the PPA (investigative borings, wells, and groundwater monitoring through March 2005). As of March 2005, contaminants in on-site well MW7-17 exceeded acceptable risk levels; the siite owner requested withdrawal from DEQ's Voluntary Cleanup Program at that time. The site remains a low priority for further action.

NARR Comments: Excavation at Block 34 was conducted between November 2005 and March 2006 to prepare the site for development. The excavation activities were conducted in accordance with the DEQ-approved Soil Management Plan, South Waterfront Central District, Portland, Oregon, dated February 3, 2004 and addendums to the soil management plan. Field screening and analytical sampling of excavated soils was used to determine its final disposal destination. A total of approximately 2,825 tons of petroleum impacted material was disposed of at a DEQ-permitted landfill (Waste Management s Hillsboro facility). Five soil samples (Figure 2) were collected at the base of the excavation to evaluate potential to evaluate potential residual contamination. Petroleum hydrocarbons were only detected in one sample (NWTPH Oil-Range hydrocarbons at 128 mg/kg and Diesel-range hydrocarbons at 60.6 mg/kg in S-2-17-06-1 at subgrade). These concentrations are below the DEQ Risk Based Concentration (RBC) for an Urban Residential Receptor and below the RBC for Soil Leaching to Groundwater. Three of the confirmation samples were screened for the RCRA 8 metals. Arsenic was detected at concentrations between 2.83 and 5.19 mg/kg which exceed the EPA Region 9 Residential and Industrial Soil Preliminary Remediation Goals, but are below the Region 9 Soil Screening Level for Migration to Groundwater (29 mg/mg for arsenic). Arsenic concentrations at the site are within the range of background concentrations in Portland area soils (approximately 7 mg/kg as defined in DEQ Toxicology Workgroup memo dated October 28, 2002). Groundwater was evaluated as part of the larger Pacific Richland site and is described in the Pacific Richland DEQ staff report (July 2005). Concentrations of PAHs in shallow groundwater beneath the Pacific Richland site were below DEQ s Level II Screening Level Values (SLVs) and EPA Region 9 PRGs. The levels detected are considered protective of the Willamette River as summarized in the staff report for the Pacific Richland site. Thus, no further action for groundwater is required.

NARR Comments: Site also known as North Macadam Investors. Site was previously used for sand and gravel operations from approximately 1930 through 1989. A small welding shop operated on the site for a short period (unknown) afterward. Eight underground storage tanks (USTs) have been removed from the site, beginning in the early 1990s. In mid to late-1990s the site underwent several environmental investigations and removals of contaminated soils. Summary of reviewed reports indicates over 1,610 tons of contaminated soil has been removed from this property between 1994 to present.

NARR Comments: The eastern portion of the site was purchased by the Portland Development Commission (PDC) for development into the CD Greenway Trail (ECSI # 5277). The eastern portion of the Pacific Richland site was was excised and included into the CD Greenway site. Based on a review of site data, DEQ has concluded that groundwater beneath the CD Greenway site has not been significantly impacted, and therefore does not pose a risk to public health or the environment. A no further action determination for groundwater is recommended and the decommissioning of monitoring wells MW-1 and MW-2 has been approved.

NARR Comments:	(5/23/05 DB/C&LWS) Prior to construction soil samples were collected from fifteen locations on or near the project alignment (i.e., GE-1 through GE-15). Soil samples were analyzed for the chemicals of interest (COI) for the project including, polynuclear aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), cyanide, and metals (i.e., arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver). In addition, the presence of petroleum hydrocarbons was evaluated. DEQ concluded the following from review of the pre-construction soil analytical data : - Analysis of COI did not detect analytes at or above laboratory method reporting limits,

PORTLAND STREETCAR - GIBBS EXTENSION PROJECT (Continued) **S106966548**

or the detected concentrations were less than applicable human-heath risk-based criteria. - Based on consideration of current and reasonably likely future land-use, birds were identified as potential ecological receptors within the project area, and there was a risk of exposure to birds from the concentrations of lead detected in three samples collected from test pits (i.e., GE-3, GE-4, and GE-7). (9/21/05, DSB/C&LWS) Soil potentially contaminated with lead was excavated from DEQ-specified sections of the track alignment and placed beneath ballasted trackbed to prevent exposure to birds.

NARR Comments: The Gibbs Extension Project involves extending the Portland Streetcar route between SW Sheridan Street and SW Gibbs Street in southwest Portland, Oregon. For most of its 775 meter length, the Gibbs Extension Project will follow the existing alignment of the former City of Portland and Willamette Shore Trolley. During construction, fill and soil will be excavated along the streetcar track alignment to achieve project design grades. Excavated material will be used beneath the track, placed in designated fill areas, or removed for disposal at Hillsboro Landfill.

NARR Comments: (9/21/05 DSB/VCP) A total of 2,750 cubic meters of soil were excavated during the course of the project. Consistent with the approved Soil Management Plan, approximately 850 cubic meters of soil potentially contaminated with lead was excavated from DEQ-specified sections of the track alignment and placed beneath ballasted trackbed. A lesser amount of contaminated soil (about 30 cubic meters) was disposed of at the Hillsboro Landfill.

NARR Comments: A broken underground fuel line from an underground storage tank was believed to have caused the loss of approx 2000 gallons of gasoline. The leak was believed to have started on 11-24-87 and was noticed on 11-30-87. In October 1990 a diesel fuel line on another part of the site was severed, causing the release of 500 gallons. Subsequent investigation under DEQ LUST oversight (file #26-90-0440) resulted in discovery of significant hydrocarbon contamination of both soil and groundwater on-site.

NARR Comments: Following the 1987 gasoline release, tanks and lines were allegedly excavated, and the site remediated by Crowley and NW Pump. Contaminated soil was removed and gasoline contaminated groundwater was pumped out of a sump. It's not clear whether a cleanup report was ever submitted. Soon after the 1990 diesel release, Carson initiated soil excavation, which led to the discovery of additional contamination beyond the area of the diesel spill. Borings installed to define the extent of hydrocarbons in soil encountered contaminated groundwater. Following the placement of monitoring and extraction wells, a groundwater pump-and-treat system operated between 1992 and 1994. Progress reports on this remediation program have been sent to the NWR LUST program, and filed in LUST #26-90-0440. Hydrocarbon contamination appears to have originated from underground tank systems, and it is therefore appropriate that the LUST section continue to track remediation and monitoring activities at the site. Site Assessment recommends referral of the site to NWR/LUST. (3/3/99 GMW/SAS) NWR UST Section issued NFA 1/96.

NARR Comments: Site consists of property beneath the Marquam Bridge in downtown Portland owned by ODOT. A road connecting the new SW Bond Avenue on the OHSU-Schnitzer property, and extending to the existing SW River Parkway, is called the bond Avenue Extension. The road, to be constructed by the City of Portland, runs beneath the Marquam Bridge on ODOT-owned property. Investigation by OHSU for the segment of SW Bond running through their property identified lead contamination exceeding RCRA hazardous waste levels within a portion of the proposed roadway. DEQ has requested additional soil sampling to charaterize soil that will either be removed or disturbed during construction of the Bond Avenue extension. A work plan is scheduled to be submitted to DEQ in May 2017.

NARR Comments: (10/7/05 CK/ICP) Phase 1 and Phase 2 Environmental Site Assessments are complete. Additional investigation will be completed after the site structures are demolished. (2/7/07 MG/CU&ER)DEQ reviewed reports for the site and summarized findings in a File Memorandum dated December 5, 2006. Based on review of available site information, no further action is required unless additional information becomes available that warrants further investigation.

NARR Comments: (2/12/15 TG/VCP) Historical operation of the facility resulted in contamination, primarily soil beneath the parking areas, elevator shaft, and basement floor and sumps, solids in on-site stormwater catch basins and off-site City stormwater conveyance pipes, and sediment in the Willamette River at the point of stormwater discharge. Significant groundwater contamination was not observed. Primary contaminants of concern include PCBs, metals and petroleum hydrocarbons.

Decode for NarcdID: General Site Description
NARR Comments: The Site is located on approximately 0.9 acres of urban industrial land approximately 600 feet east of the Willamette River at 1510 SE Water Avenue, Portland, Multnomah County, Oregon. The Site is occupied by a 19,400 square foot, two story warehouse/office structure with a full basement. PGE vacated the Site in 2012 and initiated cleanup activities in September 2013 on behalf of Killian Pacific, as part of their Prospective Purchaser Agreement with DEQ . Following cleanup activities and adequate confirmation sampling, the building was renovated as office space.

NARR Comments: Potential receptors on-site are construction and occupational

PORTLAND GENERAL ELECTRIC HAWT (Continued) **1004770275**

workers. Potential off-site exposures to receptors in the Willamette River may occur as a result of contaminant discharge to the Willamette River through the stormwater system. Significant groundwater contamination was not observed, and potential preferential groundwater pathways to subsurface utilities and associated backfill is incomplete because the subsurface utilities are located above the depth at which groundwater is encountered.

NARR Comments: (1/14/13 TG/VCP) PGE has entered the Voluntary Cleanup Program to perform removal assessment and implementation regarding on-site PCB contamination. (2/12/15 TG/VCP) Remedial actions at the Site included removal of contaminated components of the Site, including: basement sumps, soil, two underground storage tanks, and stormwater solids in the conveyance system.

Decode for NarcdID: Residual Risk Assessment
NARR Comments: Post-remedial action confirmation samples showed contaminant concentrations were below applicable health-based screening levels. One exception was at the extent of the elevator shaft excavation where a small pocket of diesel-range petroleum-contaminated soil was left in place at 20 feet below ground surface. Future exposure to construction workers is unlikely at this depth, and an oxidant (RegenOx) was applied to treat the soil prior to backfilling. Groundwater impacts were not observed.

NARR Comments: The property had belonged to PGE or a predecessor company since 1905. The two-story building was originally constructed in 1911 by PGE predecessor companies for use as a railway depot and parking garage. Since 1935, various PGE departments occupied the building for storage and maintenance uses. Between 1935 and 2000, PGE operations in the basement included: bushing repair; automotive repair; a metal shop; a paint booth; cleaning, repair and maintenance of electrical equipment (e.g., transformers); and the storage of associated supplies and wastes. Transformer repair ceased in the mid-1980s, and transformer storage ceased in January 2011. Since 2000, PGE operations at the Property have been primarily limited to routine maintenance of on-site systems. PGE vacated the Property in 2012 leaving only office

PORTLAND GENERAL ELECTRIC HAWT (Continued) **1004770275**

equipment and miscellaneous supplies on site until the start of remedial activities in September 2013.

NARR Comments: [09/30/2020 Landes/VCP]: DEQ is requesting comments on a proposed certificate of completion for the PGE Willamette River Areas RM 13.1 and 13.5 (ECSI #5249) and the Hawthorne Building (ECSI #5779). The Staff Memorandum in support of a Certificate of Completion and a No Further Action Determination, the Request for Comments, as well as other important documents for the site can be found below. PGE removed contaminated soil from the Hawthorne Building, and DEQ issued an unconditional No Further Action, a way of deeming cleanup work complete, with no restrictions for this site in 2015. Remediation and source control actions were conducted at the Hawthorne Building between 2010 and 2014 (ECSI # 5779) under the DEQ Voluntary Cleanup Program as an IRA and is described in more detail in the Final Interim Remedial Action Workplan, Hawthorne Building (URS, 2013d) and Interim Remedial Action Report, Hawthorne Building (URS, 2014a). In addition, DEQ entered into a Prospective Purchaser Agreement (PPA) with Hawthorne Depot, LLC to complete Remedial Investigation and Remedial Action, which would be performed by PGE; Hawthorne Depot LLC purchased the building from PGE during the same period. DEQ is preparing to certify that all actions required of PGE under a Consent Judgement with DEQ have been satisfactorily completed. The proposed certificate of completion for the consent judgement and the certificate of completiong will provide PGE with a release from liability for claims by the State of Oregon under ORS 465.200 to 465.545 and 465.990, 466.640, and 468B.310 regarding existing hazardous substance releases at or from the property. The proposed certificate of completion will also provide PGE with third party liability protection.

Decode for NarcdID: Contamination
NARR Comments: 2505 and 2545 SE Gladstone St. (7/18/94 LSK/SAS) American Bronze has operated at the site since October 1989. In April 1990, OR-OSHA inspected the facility and observed wastewater being discharged through a hose into an alley behind the facility. 11 of the 16 employees were found to have elevated levels of lead in their blood. A surface soil sample from the alley (actually an overgrown, abandoned railroad right-of-way), taken in May 1990, showed high levels of lead, copper, and zinc. Over the next couple of months, neighbors reported to DEQ noxious odors coming from the facility. DEQ has since placed the facility under an Air Contaminant Discharge Permit, and declared the site a Conditionally Exempt Generator under

AMERICAN BRONZE INC. (Continued) **S105680813**

RCRA. (3/14/01 MTP/SAS) In October 1999, four direct-push borings were advanced on the Gladstone Building property, which contains the American Bronze site. The lot had been purchased by Fred Meyer Stores, Inc., in February 1999. In July 2000, three monitoring wells were installed. The borings and wells were part of the work conducted at the Houston site (ECSI #1052) located to the northeast (upgradient) of the site, to determine the extent of a solvent plume in groundwater associated with the Houston site. Unexpectedly, degraded gasoline present as light non-aqueous phase liquid (LNAPL) was discovered beneath the northeast part of building; it appeared to originate at the Gladstone Building site. The gasoline plume appears to extend off-site to the adjacent Sharp Auto Body and Paint site (ECSI #3009). (5/8/02 MTP/VCP) On March 22, 2001, Hahn and Associates submitted a report to DEQ documenting a soil removal along the former rail right-of-way. A total of 80 tons of soil were excavated and removed from the site. Although the report was not formally reviewed by DEQ, confirmation sampling appears to show that residual lead levels are protective of human health. DEQ has received no further information regarding groundwater contamination at the site.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Site located in an industrial area, within 0.5 mile of schools and

AMERICAN BRONZE INC. (Continued) **S105680813**

residences, and 0.75 mile from the Willamette River. Soils at the site are poorly sorted silts, sands, and gravels (Missoula flood deposits). Shallow groundwater is probably less than 20 feet bgs; deeper groundwater is about 170 feet bgs, and is used by the City of Milwaukie for its municipal water supply. Groundwater flow is probably away from the Milwaukie wells and towards the Willamette River. High levels of benzene, toluene, ethylbenzene, and total xylenes in shallow groundwater likely present a significant risk to Gladstone Building workers through vapor intrusion, and could pose a risk of explosion or inhalation to subsurface utility workers.

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (7/18/94 LSK/SAS) Since DEQ's initial investigation in 1990, American Bronze has mostly switched over to zinc casting, and no longer uses lead in its manufacturing processes. Additional sampling is recommended in the alley behind the facility to determine the extent of the contamination. Once the lateral and vertical extent of the contamination has been determined, removal of the contaminated soil is recommended. Because lead is no longer used at American Bronze, and because the extent of soil contamination is likely very limited, any further remedial action by DEQ should be considered a low priority. (3/14/01 MTP/SAS) Based on a review of recent groundwater data, the site appears to pose a risk to site workers in the Gladstone Building and further action is warranted. The facility should be placed on the Inventory of Hazardous Substance Sites. (2/27/02 MTP/SAS) Site risk is expected to be minimal at present; further site investigation and perhaps cleanup is necessary. Site owner, Fred Meyer, is currently considering bringing site into DEQ's Voluntary Cleanup Program.

GIBSON-HOMANS CO (Continued) **U004015005**

Decode for NarcdID: Remedial Action
NARR Comments: (December 1984) EPA file memo indicates no hazardous wastes have been generated at Gibson-Homans that could not be reused in roof-coating products. The memo concluded there is no evidence that hazardous wastes have been disposed of on the property. Mixer rinsates and dirty solvents for cleaning equipment and parts are fully used in other products, such as asphaltic roof coatings produced at the facility.

NARR Comments: EPA inspected the site 3/80 for CERCLIS eligibility and found that the company generated no wastes and used no hazardous compounds. EPA also learned that the facility had manufactured commercial sanitary and cleaning products since the mid 1930s, and had formulated 5% liquid DDT until 1948.

Decode for NarcdID: Contamination
NARR Comments: (11/5/1997 DJH/VCS) Groundwater contamination has been detected on both site parcels (on either side of SW 18th Avenue), but no source has been identified. Contamination was first detected when the storage facility was first built, although it is not clear if historic site operations could have contributed to the contamination. Recent analyses found the highest concentration of TCE in the groundwater at a downgradient push-probe location along the northwest corner of the site. Three underground storage tanks (USTs) were located at the southwest edge of the western parcel. No chlorinated compounds were detected in tank residues. In sum, the on-site groundwater contamination is believed to be originating off-site.

NARR Comments: A public storage unit facility (mini storage) located at the southeast corner of SE 17th and Holgate, and southeast of SE 18th and Holgate. Blacktopped surface with concrete pads. Approximately 1.8 acres, total. 1S/1E-14 Abab. Holgate Addition, Block 6, Lots 1 thru 5, 34 thru 37, and northern halves of Lots 6 and 33, plus Block 11, Lots 3 thru 7, and northern 14 feet of Lot 8. Relatively level site with 7 or more storm drains that feed city storm sewers. Local area is industrial/commercial/residential mix. Soils are sandy silt. Shallow perched groundwater is at 10-18 feet bgs, overlying former Willamette River channel and Troutdale Formation. Shallow groundwater flow varies north to northeast. Surface drainage is toward the south: Crystal Springs Creek (0.7 miles south-southeast). Willamette River

THE STOR-ROOM MINI STORAGE (Continued) **S103842933**

is 0.25 miles southwest. The Lynch Company is to the south-southeast, Heath Signs/Oregon Signs and PECO Manufacturing are to the south, D&H Flagging, Portland Wire and Iron Works, and PECO Manufacturing are to the southwest, Baha's Autobody Shop and residential properties are to the west, Smart Mart (convenience store and gas station), Semaphore restaurant, Holgate (business) Plaza, and residences are to the northwest, Tri-Met Maintenance Facility is to the north, and a Southern Pacific Railyard and a trailer shipping facility are to the northeast, east, and southeast.

NARR Comments: (11/5/1997 DJH/VCS) Three inactive petroleum USTs were discovered along the southwestern edge of the site's western parcel. Analyses indicated petroleum products only. The USTs were decommissioned in place in the Fall of 1997. Additional groundwater investigation, including sampling of on-site wells and collection of additional water samples from on-site Geoprobe boreholes, was completed in October 1997 at the request of DEQ's Voluntary Cleanup program. Based on the sampling results, DEQ determined that the contamination was likely attributable to off-site sources. A determination of No Further Action was made for the site in November 1997, contingent on no exacerbation of the groundwater contamination as a result of site activities.

NARR Comments: No known downgradient domestic wells. A pair of nearby industrial wells are located downgradient, but use is unclear. A shallow dug well (40 ft deep) was historically located on railroad property to the southeast, but it is unclear if this well is still in use. An upgradient industrial well 190 ft deep) is located near SE 17th and Schiller.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (4/3/00 RGS/VCP) Several areas with soil containing hazardous substances have been identified on-site, including: 1) abandoned USTs and associated piping; 2) interior building surfaces; 3) metal slag fill; 4) chemical storage areas; 5) plating area; 6) drum-storage area; 7) foundry area; 8) maintenance shop; 9) paint room; and 10) furnace room. Low levels of metals and PAHs were detected in site groundwater. Former USTs have been abandoned in place.

NARR Comments: (5/3/00 RGS/VCP) The current and past owners are working cooperatively to address outstanding site issues through the ICP. Site characterization report was submitted for DEQ review in April 2000. (2/6/01 RGS/VCP) Focused Risk Assessment and Feasibility Study were submitted to DEQ in January 2001. DEQ prepared staff report recommending the proposed remedy for the facility. The public comment period on the proposed remedy was open February 1 - March 9, 2001. Proposed remedy includes capping and institutional controls, including deed restrictions. (4/2/01 RGS/VCP) No comments received on proposed remedy. Record of Decision (ROD) being prepared. (11/25/01 RGS/VCP) The ROD was signed April 30, 2001. Deed restrictions recorded under an <quot>Easement and Equitable Servitude<quot> (EES). The EES prohibits groundwater use at the site; prohibits residential use of the property; requires maintenance of the cap, hazard communications, soil management, and DEQ approval of future site redevelopment or building demolition. The EES was signed by DEQ and the current owner, Puget Sound Casket Company, on November 7, 2001. Recording of the EES is imminent.

NARR Comments: Concentrations of toxic metals in stormwater runoff have exceeded freshwater aquatic Continuous Maximum Concentrations (CMCs) and 99th percentile levels for all DEQ Northwest Region Industrial Stormwater. Metals of concern include arsenic, cadmium, chromium, copper, lead, nickel, and zinc. Stormwater pH has ranged between 4.3 and 10.1. TOC has ranged beween non-detect and 81 ppm. COD has ranged between non-detect and 870 ppm. Site has also used cyanide solutions and chlorinated solvents (including TCE and PCE), although stormwater has never been analyzed for these potential contaminants. Contaminated stormwater is directed to the Lower Willamette River. Acidic stormwater may have corroded stormsewers.

EAST SIDE PLATING - PLANT 5 (Continued) **S106115367**

Decode for NarcdID: General Site Description
NARR Comments: Lots 1, 2, 7, and 8 of Block 53, East Portland Addition. Not to be confused with ECSI #644 (Plants#1-#3), or ECSI #1010 (Plant #4). The site occupies the northern half of the block between SE 2nd and SE 3rd Avenues, and SE Main and SE Madison Streets. The facilities include a plating shop, polish shop, warehouse, and an area for parking/shipping/receiving. Stormwater from the central parking area and downspouts is directed to Outfall #1, which feeds the city's combined sewer on SW 2nd Ave. Stormwater from the north roof downspout is directed to Outfall #2, which discharges to the city storm sewer on SW 2nd Ave. Stormwater at the northwest exterior and runoff along the north exterior is directed to Outfall #3. Outfalls #2 and #3 feed City of Portland Stormwater Outfall #35 in the Willamette River just upstream from the east end of the Morrison Bridge.

Decode for NarcdID: Project Issues Summary
NARR Comments: Sources of the site's stormwater runoff contamination have not been fully defined. Contaminated stormwater reaching Outfalls #2 and #3 eventually discharges to the Willamette River and could represent a direct toxicity threat to aquatic life, or could accumulate in river sediments. Stormwater and treated process water are discharged to the city sanitary sewer at Outfall #1. The city sanitary sewer in this area commonly overflows to the stormsewer during rainfall events. Acidic runoff could corrode stormsewers and combined sewers, exacerbating contaminant leakage into utility line beddings. Site has also used cyanide solutions and chlorinated solvents (TCA, TCE, PCE), although it is not known if these have contaminated site runoff. Because of inconsistencies in solvent usage reporting, there is concern that unreported solvent spills at the site could have contaminated underlying soils and shallow groundwater.

Decode for NarcdID: Manner of Release
NARR Comments: Unclear. Plating vapors and buffing/grinding/polishing dusts may vent at, or through, the building roofs. There could be leakage through the facility foundations or through a plugged storm sewer within the plating shop. Contaminated liquids could also escape the building through an overhead door at a wastewater treatment area at the northwest corner of the facility.

NARR Comments: Stormwater runoff. Concern that subsurface soils and shallow groundwater beneath the building, sewer line beddings, and surface water and sediments in the Lower Willamette River at City Stormwater Outfall #35 may also be contaminated. Fugitive dust or acid fume emissions could also represent a human health threat for nearby workers or pedestrians.

NARR Comments: (8/25/04 MDK/C&ER): Initial project meeting held with owner on June 18, 2004. Owner clarifying insurance coverage prior to entering into voluntary cleanup letter agreement. (6/21/05 MDK/CU&ER) Negotiations on a letter agreement continued from March 2004 until the agreement was signed on May 23, 2005. The next steps are holding a scoping meeting and developing an investigation work plan. (12/28/06 MDK/CU&ER) DEQ approved a site investigation work plan on April 13, 2006. The field work was completed in July 2006 and a site investigation report submitted on November 15, 2006. DEQ provided review comments by letter dated November 30, 2006 and indicated that additional work is required to determine extent of contamination present in groundwater. (9/12/07 MDK/CU&ER) Additional soil site characterization workplan submitted for review on 7/28/07. DEQ comments issued 9/18/07.

NARR Comments: Mostly industrial and irrigation wells within 0.5 mile downgradient of the site. Possibly four drinking water wells within 2 miles downgradient of the site, although two lie across the river, 0.8 mile from the site and are very unlikely ever to be affected. A well of unspecified use lies 0.4 mile downgradient-to-sidegradient from the site at a sporting goods store and restaurant. It is not known if the wells is used to supply drinking water or for food preparation.

Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (3/15/01 MTP/SAS) An investigation to determine the extent of groundwater contamination at the Houston site (ECSI #1052), included direct-push and monitoring well groundwater sampling at the adjacent Sharp Autobody and Paint facility and the Gladstone Building (AKA American Bronze). American Bronze has previously been evaluated by DEQ (see ECSI #1400). Results of the Houston investigation showed that a well-defined plume of halogenated hydrocarbons (e.g., perchloroethene, dichloroethenes) indicative of solvent contamination in groundwater beneath the Houston site, with the highest levels near the center of the site, and rapidly decreasing to the south toward Sharp Autobody. Groundwater samples collected from two direct-push explorations and two groundwater monitoring wells near the property boundary at Sharp Autobody and Paint Shop indicate a second halogenated hydrocarbon plume that possibly originates at the Sharp facility. Highly elevated levels of aromatic volatile compounds that indicate gasoline contamination (e.g., benzene, toluene, ethylbenzene, xylenes) also were found in these wells, but these appear to originate from the Gladstone Building property. Since Sharp appeared to be the source of the halogenated hydrocarbon contamination, the site was referred to the NWR Site Assessment Section (SAS) in February 2001.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (3/15/01 MTP/SAS) Based on a review of existing information, it appears that a solvent release has occurred in the vicinity of the Sharp Autobody and Paint facility, which has caused halogenated hydrocarbon contamination in shallow groundwater. A site investigation conducted at the adjacent facility in 1998 indicated similar contamination was present in a catch basin. Therefore, the source of the second chlorinated hydrocarbon plume is not clear. The adjacent site (Gladstone Building) is impacted by a gasoline-related plume that originates at that site, and has, in turn, impacted the Sharp facility. SAS recommends a site investigation at the Sharp facility to determine the source of halogenated contaminants in groundwater, and the full impact to groundwater, particularly downgradient from the site. SAS further recommends an evaluation of gasoline vapor intrusion into the Sharp facility, even though this plume appears to originate off-site. Groundwater contaminant information also will be updated in the American Bronze file (ECSI #1400 [AKA Gladstone Building]), with a recommendation for further work at that facility.

Updated By: GWISTAR
Updated Date: 06/25/2003
Decode for NarcdID: Health Threats
NARR Comments: (3/15/01 MTP/SAS) Direct exposure of site utility workers to contaminated subsurface and possibly surface soil. Groundwater is relatively shallow (~20 feet) at the site. With one exception, halogenated compounds diminish to non-detect by about 25 feet bgs. 1,2 Dichloroethane (1,2,DCA) however, was detected at a concentration of 8.9 parts per billion (ppb), above the EPA Maximum Contaminant Level of 5 ppb. Benzene, toluene, ethylbenzene, and xylenes have been detected at relatively high concentrations that could pose a risk to

SHARP AUTO BODY & PAINT WORKS, INC. (Continued) **1000368456**

site workers as a result of vapor intrusion into buildings. Residential properties are present across Gladstone St. to the south, and SE 26th Ave. to the east, but they do not appear to be at risk for exposure to site contamination. There are no known domestic or community use wells listed in Oregon Water Resource Department's well log database for Section 12. A number of industrial use wells are listed for the adjacent Section 11, one of which is 40 feet deep and may be within 0.25 miles of the site. The nearest domestic use wells appear to be in Section 13, and are installed at relatively shallow depths of 65 feet and 77 feet, respectively.

NARR Comments: (1/11/05 HB/ICP) Site active in DEQ's Voluntary Cleanup Independent Cleanup Pathway (ICP) program. Requested site specific technical consultation. (6/28/05 HB/ICP) In April/May 2004, approximately 1,800 tons of petroleum-impacted soil were excavated and transported off-site for disposal at a DEQ-approved landfill. Remaining contamination is below risk-based concentrations (DEQ RBCs and EPA Region 9 PRGs) and does not pose an unacceptable risk to public health or the environment.

Updated Date: 10/08/2014
Decode for NarcdID: Contamination
NARR Comments: (10/08/2014 KPD/ICP) Approximately 2.5 gallons of a solvent/water mixture spilled from a dry cleaning machine at this site on October 9, 2013. It was reported that most of the spill was captured in a spill containment tray, and that much of the rest was soaked up by rags. However, a small amount reached the subsurface through a seam at the base of a wall. Sub-slab soil sampling in December 2013 found up to 60.7 ppm PCE. Sub-slab vapor sampling conducted in April, June, and August 2014 found up to 16,000 ug/m3 PCE and 2,500 ug/m3 TCE.

NARR Comments: (10/08/2014 KPD/ICP) A soil vapor extraction (SVE) system was installed and activated at the site on December 10, 2013, discharging an estimated 8 cubic feet of sub-slab vapors per minute through a roof vent. The system operated through July 2014. Sampling found up to 16,000 ug/m3 PCE and 2,500 ug/m3 TCE, below DEQ's risk-based concentrations of 47,000 ug/m3 PCE and 2,900 ug/m3 TCE for soil gas in an occupational setting.

NARR Comments: The area of the subject investigation has historically been used as a transportion route to multiple industrial and commercial businesses in this area of southwest Portland. Historic nearby businesses included a lumber mill; a sand and gravel operation that included an asphalt plant (adjacent to east), metal plating (to west); and a 1940's era shipbuilding operation to the north. This site was evaluated in 2004-2005 by the Portland Development Commission as part of an overall evaluation of sites throughout the area known as South Waterfront (a.k.a. North Macadam). The work was funded by a Brownfields Assessment Grant awarded to PDC by the U.S. Environmental Protection Agency.

NARR Comments: (6/25/03 AC/ICP) Winter manufactured die-cast zinc furniture hardware, such as drawer pulls, knobs, strike plates, etc. Various finishes, including brass plating, antiquing, and lacquering, were applied to the die-casts. Wastewaters of acid cleaners, plating rinses, and plating baths were treated on-site using a system of cyanide destruction, metals precipitation, and pH adjustment. The treated wastewater was discharged to the City of Portland sanitary

WINTER PRODUCTS CO (Continued) **1000401584**

sewers. Solids were accumulated in an 8,000-gallon tank and pumped out once a year by Crosby & Overton. EPA investigated the site in the early 1980s and determined that no further action under the federal Superfund program was needed, because current waste disposal practices appeared to be adequate. Winter Products Company relocated in the mid-1980s. The property is currently undergoing new development by Williams and Dane Development, Inc., as part of the North Macadam Development Project. Sub grade parking is planned which will require the excavation of contaminated soil.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

HEATH OREGON SIGN COMPANY (Continued) **1006853464**

NARR Comments: Contamination to soil and groundwater. PCBs localized in parking lot beneath asphalt. Arsenic and beryllium localized in parking lot beneath asphalt. TCE in well near upgradient property boundary. Off-site source suspected. (5/99 ACV) Site investigation (soil and groundwater) in 1998 and 1999. PCB contamination of soil in parking lot not extensive but exceeds residential cleanup level of 1.2 ppm. Groundwater TCE & PCE contamination suspected to be coming from off-site (PECO), based on concentration gradient and groundwater flow direction (roughly south to north).

PGE WILLAMETTE RIVER SEDIMENT INVESTIGATION (Continued) **S110072093**

Updated Date: 09/30/2020
Decode for NarcdID: General Site Description
NARR Comments: [09/30/2020 Landes/VCP]: The PGE Willamette River Sediment Investigations consists of two study areas on the east bank of the Willamette River at River Mile 13.1 (adjacent to the Hawthorne Street Bridge) and RM 13.5 (adjacent to the Tilikum Crossing Bridge) in downtown Portland, Oregon. The eastern boundary for both Study Areas is the base of the riverbank rip-rap armoring. The RM 13.1 in-water Study Area encompasses 2.61 acres of beach and adjacent river sediment, and borders the Hawthorne Bridge to the north (Figure 1). The RM 13.5 Study Area extends over 2.17 acres and crosses under the Tilikum Bridge (Figure 2). Currently, the upland adjacent to both areas is zoned General Industrial and used for warehousing. The Study Areas are subject to the special design guidelines for the Central Eastside District of the Central City Plan for Portland, Oregon. The December 2011 Remedial Investigation (RI) defined the extent of nearshore and in-water sediment contamination in both Study Areas. The primary chemical of concern are polychlorinated biphenyls (PCBs) in surface sediment. Other environmental contaminants identified in the Study Areas during investigation activities included metals, dioxins/furans, pesticides, and polycyclic aromatic hydrocarbons (PAHs). The nature and extent of contamination is discussed in detail in the RI (URS, 2011b) for both surface sediment and subsurface sediment, as well as the indicator chemicals for total PCBs as Aroclors, total dioxin/furans, metals above background, pesticides (total DDx and heptachlor epoxide), total LPAHs and HPAHs, and diesel- and residual oil- range organics. Levels of sediment contamination that exceeded the applicable screening criteria were found in both surface and subsurface sediments located primarily within 150 feet of the shoreline. The two most significant upland sources of contamination were found to be the Rexel Taylor Building fire and the Hawthorne Building properties, both with a nexus to the RM 13.1 Study Area via City Outfall 33. The remediation and source control efforts at these sites, coupled with the abandoning of Outfall 33 performed by the City, has removed the known sources of contamination to the river. Based on the Feasibility Study evaluation of the alternatives, DEQ selcted the following remedies in a 4/8/15 Record of Decision (ROD) for RM 13.1 and RM 13.5: Alternative 2a, an isolation cap with discrete amended cap areas to address hot spots; and Alternative 2, an isolation cap, respectively. The construction of the sediment caps was completed in 2015 and 2017. Inspection and monitoring of the sediment caps is ongoing to ensure protectiveness as described in the 20180622 Final Inspection, Monitoring, and Maintenance Plan (IMMP).

NARR Comments: PGE was the owner and operator of three transformers, which housed dielectric fluids containing polychlorinated biphenyls (PCBs) and were located on a power pole at or near a property at 240 S.E. Clay Street in Portland (Rexel-Taylor Property). On May 17, 2006, a fire at the Rexel-Taylor Property breached the transformers and released dielectric fluids, some of which were washed into storm sewers during fire suppression activities. Those storm sewers discharge to the Willamette River at Outfall 33, located on the east bank of the Willamette River at River Mile (RM) 13.1. Contaminants from other sources associated with the fire may also have been washed into storm sewers and discharged. PGE maintenance and operations of Power Stations L and F the area of RM 13.5 may have created spills and other releases of hazardous substances.

NARR Comments: [09/30/2020 Landes/VCP]: Complete with long-term inspection & monitoring on-going as outlined in the 2018 River Mile 13.5 and 13.1 Cap Inspection, Monitoring and Maintenance Plan (IMMP). PGE completed

PGE WILLAMETTE RIVER SEDIMENT INVESTIGATION (Continued) **S110072093**

construction of the RM 13.5 sediment isolation cap in 2015 and the RM 13.1 sediment isolation cap in 2017. Contamination may be left in place near a break in the City Outfall 33, approximately 50 feet inland and 20 feet below ground surface. No samples have been collected near the break in the pipe due to the presence of multiple underground utilities, but PGE will remain responsible for any contamination located near the broken outfall. Any future remediation and work impacting these soils will comply with the RM 13.1 Outfall 33 Riverbank Area Contaminated Media Management Plan (AECOM, 2018g).

NARR Comments: The Remedial Investigation determined that contaminants are found in sediments at or near River Mile (RM) 13.1 at concentrations posing a risk to human health and ecological receptors that warranted remedial action. The contaminants of concern at RM 13.1 include PCBs, heavy metals, dioxins/furans, polycyclic aromatic hydrocarbons, and pesticides. The remedial investigation also determined that contaminants are found in sediments at or near RM 13.5 at concentrations posing a risk to human health and ecological receptors that warranted remedial action. The contaminants of concern at RM 13.5 include PCBs, heavy metals, dioxins/furans, polycyclic aromatic hydrocarbons, and pesticides.

Created Date: 11/14/2016
Updated By: FLANDES
Updated Date: 09/30/2020
Decode for NarcdID: Site History
NARR Comments: [09/30/2020 Landes/VCP]: PGE was an operator of upland properties near RM 13.1 (adjacent to the Hawthorne Street Bridge) and RM 13.5 (adjacent to the Tilikum Crossing Bridge). Operations included power generation at former Stations L, transformer and electrical equipment maintenance and repairs at the Hawthorne Building, electrical substations, and transmission and storage/maintenance facilities, including railroad facilities. Station L operated until 1975, at which time it was taken out of service, with the property ultimately deeded to the Oregon Museum of Science and Industry. Other PGE maintenance and operations yards in this area may have created spills and other releases of hazardous substances. During the 2008 Downtown Portland Sediment Evaluation study, DEQ discovered elevated concentrations of PCBs and at the City of Portland Stormwater Outfall 33. Sediment sampling also found elevated concentrations of other hazardous substances (including pesticides, mercury, and dioxins) at RM 13.1 and 13.5. On January 8, 2010, DEQ issued an Order Requiring Remedial Investigation. The purpose of the Remedial Investigation was to investigate the nature and extent of hazardous substance contamination at the Site.The Remedial Investigation determined that contaminants are found in sediments at or near RM 13.1 at concentrations posing a risk to human health and ecological receptors

PGE WILLAMETTE RIVER SEDIMENT INVESTIGATION (Continued) **S110072093**

that warranted remedial action. In July 2012, DEQ and Portland General Electric Company signed Order on Consent, in which PGE agreed to complete a feasibility study (FS). In November, 2014, PGE submitted the Final Feasibility to DEQ. DEQ published notice of a proposed remedial action and provided opportunity for public comment. Based on the Remedial Investigation and Feasibility Study, DEQ's Northwest Region Administrator selected the remedial action set forth in a Record of Decision dated April 8, 2015 (ROD). The remedial action selected in the ROD requires the installation of two separate isolation caps over the remaining contaminated sediments present at the Site. The caps will preclude human and ecological receptor contact with the contaminated sediments, and will thereby be protective of human health and the environment via the implementation of the required engineering controls as described in the April 8, 2015 ROD. In the fall of 2015, PGE implemented the River Mile 13.5 sediment isolation cap. In January, 2016, PGE submitted the River Mile 13.5 Sediment Isolation Cap Construction Completion Report to document completion of the RM 13.5 sediment isolation cap. In the fall of 2017, PGE completed the construction of the sediment isolation cap at RM 13.1. PGE submitted the River Mile 13.1 Sediment Isolation Cap Construction Completion Report in February 2018. PGE submitted the River Mile 13.5 and 13.1 Cap Inspection, Monitoring and Maintenance Plan (IMMP) in June 2018. This document outlines the on-going monitoring and inspection requirements and protocols for ensuring the two sediment isolation caps remain protective. In addition, a break in the City Outfall 33 pipe was found approximately 50 feet inland and estimated at least 20 feet below ground surface. No samples have been collected near the break in the pipe due to the presence of multiple underground utilities. PGE will remain responsible for any contamination located near the broken outfall. If remediation of this contamination becomes necessary in the future, PGE will perform or pay for remediation and work impacting these soils will comply with the RM 13.1 Outfall 33 Riverbank Area Contaminated Media Management Plan (AECOM, 2018g).

NARR Code: 1922
Created By: FLANDES
Created Date: 03/02/2020
Updated By: FLANDES
Updated Date: 02/10/2021
Decode for NarcdID: Current Site Summary Statement
NARR Comments: [02/10/2021 Landes/VCP]: DEQ issued a Certificate of Completion on 1/20/2021 certifying that the remedial actions required of PGE under a Consent Judgement with DEQ have been satisfactorily completed on two areas within the Willamette River, RM 13.1 and 13.5, and the Hawthorne Building. The December 2020 Staff Memorandum in support of a Certificate of Completion and a conditional No Further Action Determination, as well as other important documents for the site can be found below.

 Inspection and monitoring of the sediment caps continues under a 2018 DEQ-approved Inspection, Monitoring, and Maintenance Plan (IMMP). The next monitoring events will be in 2021 for RM 13.1 (3 year inspection) and 13.5 (5 year inspection).

   The PGE Willamette River Sediment Investigations consist of two study areas of contaminated sediment on the east bank of the Willamette River at River Mile 13.1 and 13.5. These areas were capped in October 2017 and 2015, respectively, and construction

PGE WILLAMETTE RIVER SEDIMENT INVESTIGATION (Continued) **S110072093**

completion reports can be found below. These areas were identified during the 2008 Downtown Portland Sediment Evaluation study. In January 2010, DEQ ordered PGE to conduct a remedial investigation, which determined that contaminants in sediment posed an unacceptable risk at or near RM 13.1 and RM 13.5. Contaminants included PCBs, heavy metals, dioxins/furans, polycyclic aromatic hydrocarbons and pesticides. These contaminants were likely associated with historic power generation and transformers. The remedial investigation identified certain upland areas, including PGE s Hawthorne Building, as historic and potential ongoing sources of contamination to the river via a City stormwater outfall. DEQ and PGE agreed, under two Consent Orders, to a feasibility study, source control measures, remedial design and remedial action for RM 13.1 and 13.5 as well as the Hawthorne Building. In 2017 PGE and DEQ signed a Consent Judgement which incorporates all previous work with the remedial action for the 13.1 Study Area and potentially contaminated soils located on the east riverbank near the outfall. PGE has constructed two sediment isolation caps with sand and rounded gravel: one at RM 13.5, and one at RM 13.1. In areas of higher contamination in RM 13.1, PGE added sorptive material to prevent contamination from migrating through the cap. Inspection and monitoring of the sediment caps is ongoing to ensure protectiveness as described in the 20180622 Final Inspection, Monitoring, and Maintenance Plan (IMMP). The next expected reports will be a 3 year report for RM 13.1 in April 2021 and a 5 year report for RM 13.5 in April 2021.

ODOT-CENTRAL EASTSIDE PROPERTIES (Continued) **S117365761**

NARR Comments: (B Schwarz, August 15, 2018) DEQ has been working with ODOT and Prosper Portland (formerly Portland Development Commission) in evaluating environmental conditions on this property. Prosper Portland plans to develop the property for light industrial use. Construction related to this development would not be done until 2019 or later. Based on a review of site documents, DEQ plans to propose issuing a conditional No Further Action determination. The primary conditions are recording of a deed restriction and adherence to a Contaminated Media Management Plan (CMMP), and a Remedial Action Approach Plan (RAAP). Copies of the CMMP and RAAP are attached, as well as a copy of DEQ's staff report in support of the proposed conditional No Further Action determination. On August 21, 2018, Prosper Portland contacted DEQ to request that DEQ hold off on issuing the conditional No Further Action determination.

NARR Comments: (10/19/05 TER/VCP) The project file for ECSI #602, the original South Waterfront Redevelopment Area, contains background information, actions, and narratives but has been divided into six sites in ECSI based on changes in tax lot boundaries, differences in development, ownership, and long-term management requirements. Those sites are: #4420 South Waterfront at RiverPlace, Parcel 2 Areas B&C - Stanford's restaurant, RiverPlace Square apartments, retail space and associated parking structure, Tax Lots 500, 600, and 1200. #4421 South Waterfront at RiverPlace, Parcel 2 Area A - SW River Drive and SW River Parkway roadways and associated storm drain system (no tax lot). #4422 South Waterfront Park - borders the Willamette River, originally part of Area D, Parcel 3A and 3B, Tax Lot 102. #4423 South Waterfront Parcel 3B - developed as the <quot>David Evans building<quot> or <quot>PGT building,<quot> and now occupied by other tenants; Tax Lot 300. #4424 South Waterfront RiverPlace Lot 8 - at the NE corner of the intersection of SW River Drive and SW River Parkway, formerly a part of Area D, Parcel 3B; Tax Lot 200. #4757 South Waterfront Redevelopment Area, Parcel 1 - the former Lincoln Steam Plant, orginally titled Area D, Parcel 3A. It is now The Strand condominium towers, Tax Lot 101. Also see ECSI #2232 InnVentures, (Lot 5) and ECSI #2492, South Waterfront Lot 3, for adjacent site information. In 1988, the Portland Development Commission (PDC) entered into a Voluntary Agreement with DEQ to conduct a Remedial Investigation and Feasibility Study (RI/FS) at the <quot>South Waterfront Redevelopment Area<quot> site. For purposes of the investigation, the property was divided into Parcels 2 and 3. Parcel 3A was the site of the former Lincoln Steam Plant. In October 1989, after completion of the first phase of the investigation, DEQ approved a PDC proposal that would allow roads and structures constructed on Parcel 2 to function as a protective cap. Parcel 2 Areas B&C were developed and purchased by Trammel Crow Residential in 1994. DEQ issued a No Further Action for Parcel 3B in 1994, a portion of which was developed as the <quot>PGT building.<quot> The RI/FS for Parcel 3A was completed in 1998. South Waterfront Park resulted from improvements for extension of a greenway along the waterfront. Parcel 3A (now Parcel 1) will be developed as condominium towers. PDC will address asbestos on the undeveloped portion of Parcel 3B (Lot 8) for future redevelopment.

NARR Comments: Petroleum hydrocarbons. (5/22/07 CWH/CU&ER) The Phase II investigation did detect some low levels of heavy oil-range petroleum contamination and associated polynuclear aromatic hydrocarbons (PAHs) in soil. Metals were detected, but at concentrations consistent with expected Oregon background levels. Diesel-range petroleum hydrocarbons were detected in one groundwater sample from an open boring.

NARR Comments: (5/22/07 CWH/CU&ER) A machine shop and metals manufacturer formerly operated on the subject property from about 1926 to 1955. The site has also had two different waste/disposal lagoons. This site was evaluated in 2004-2005 by the Portland Development Commission as part of an overall evaluation of sites throughout the area known as the South Waterfront District (also known as North Macadam).

NARR Comments:	(10/31/03 CWH/SAS) Site was a former asphalt manufacturing plant, the southwest corner of which was used to store trucks. Six underground storage tanks (USTs) have been removed from the property. Historic aerial photographs indicate holding lagoons on the property. The contents of these former lagoons are unknown. (5/18/04, CWH/SAS) Review of existing material shows that in 1989 some petroleum hydrocarbon soils were removed from the site. DEQ LUST program deemed that cleanup warranted an NFA. In 1991, about 1000 cubic yards of

PROMETHEUS PROPERTY - SOUTH WATERFRONT (Continued) **S106497223**

diesel contaminated soil was removed from within the <quot>pit<quot> that contained the six USTs. After this cleanup DEQ LUST program deemed that the cleanup warranted an NFA. No investigation of subsurface soils or groundwater beyond the walls of the pit has ever been done to determine if mobile contaminants moved beyond walls of UST pit. Contaminants of concern for the site are petroleum hydrocarbons, metals, polynuclear aromatic hydrocarbons (PAHs) and polychlorinated biphenyls (PCBs).

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (10/1/2001 TER/VCP) For most of its history, the site was used for storage. In the first half of the 20th century, the Portland Lumber Company stored lumber piles on the site. From the late 1950s through the 1970s, scrap steel from the neighboring Schnitzer property (ECSI #875) was stockpiled on-site. Finally, between 1994 and 1995, petroleum-contaminated soils were stockpiled on-site during construction of Moody Avenue. In September 1997, PDC (the Portland Development Commission), which had acquired the site, conducted a Phase I Environmental Site Assessment at the site. Additional site characterization and a Preliminary Endangerment Assessment were completed in May 1998. The additional site characterization included soil borings, test pits, and GeoProbe holes. The studies identified petroleum hydrocarbons, polynuclear aromatic hydrocarbons (PAHs), and heavy metals in the soil. Approximately 30 cubic yards of contaminated soil were removed from the site. PDC PDC also applied to DEQ's Voluntary Cleanup Program (VCP) in June 1998 for review and oversight of its investigation. (This site was originally designated as Lot #5 of the South Waterfront Redevelopment Area. See ECSI #602 for more information.)

NARR Comments: The site is bordered by the Marquam Bridge to the south and the Willamette River to the east. The RiverPlace development to the north and west is a mix of commercial and high-density residential properties. Groundwater has not been significantly impacted, and the hotel serves as a cap for the remaining contaminated soil.

Decode for NarcdID: Remedial Action
NARR Comments: (10/1/2001 TER/VCP) The PDC began work on a remedial investigation at the site in September 1998. As part of this investigation, three monitoring wells were installed at the site. In November 1999, InnVentures, doing business as Portland Riverplace LLP, signed a

INNVENTURES (Continued) **1006867151**

Prospective Purchaser Agreement (PPA) with DEQ. InnVentures agreed to purchase the site, complete the investigation and cleanup, distribute approximately $1 million to the City of Portland for park development, and construct a 250+ room Residence Inn by Marriott at the site. In return, DEQ would limit InnVentures' future liability for pre-existing contamination at the site. The PDC completed a draft Remedial Investigation report for the site in January 2000. DEQ determined that no additional cleanup was necessary, because groundwater was not significantly impacted, and the proposed hotel would serve as a cap for the remaining soil contamination. After ensuring that soil removed from the site during construction was properly managed and disposed of (the hotel was completed in June 2001), DEQ issued a No Further Action (NFA) letter for the site in September 2001.

NARR Comments: (8/18/04 BS/ICP) UPRR is working with DEQ's Cleanup Program on an investigation of contamination at the Brooklyn Yard in Portland. While this investigation continues, UPRR requested a No Further Action (NFA) determination for the former Superior Cartage tank site. An NFA determination for the former underground storage tanks at the Superior Cartage site was proposed for public comment. An NFA determination was issued August 11, 2004. It should be noted that an investigation of contamination at other areas of UPRR s Brooklyn Yard is still underway.

Updated By: MGREENB
Updated Date: 10/21/2015
Decode for NarcdID: Contamination
NARR Comments: (7/12/00 MTP/SAP) The release occurred at 11:00 p.m. on December 20, 1998 onto frozen ground. Relatively fine soils at 8 - 10 inches bgs (under gravel fill) were impacted. Response efforts were not initiated until the following morning, resulting in a Notice of Noncompliance (NON) from the Spill Program. A 1-foot deep trench contained several inches of free product. Approximately 300 gallons reportedly were recovered. Product also was observed in the oil/water separator. No further environmental cleanup or assessment was conducted. Significant contamination throughout the yard is likely, caused by many years' operational practices. (05/27/2004 RPS/ICP) The soil and groundwater data indicate that hazardous constituent concentrations are fairly low at this site. However, there are fairly high concentrations of petroleum and free-phase petroleum at a number of sample locations, some of which are along the property boundary. It is therefore necessary to collect samples offsite so that we can try to estimate the extent of offsite contamination. We recognize that this may be complicated by the presence of offsite contamination sources. Existing monitoring points and sample results should be used to the extent possible. 04-17-2006 <quot>Completion<quot> letter issued for northern portion of Brooklyn soil/groundwater issues. NFA not issued because of exisitng UIC contaminations/use issues.

Decode for NarcdID: Remedial Action
NARR Comments: (7/12/00 MTP/SAP) Inactive. (10/21/03 RPS/ICP) Site entered Independent Cleanup Pathway (ICP) in October 2003. (05/27/2004 RPS/ICP) Based on groundwater contours and contamination locations, additional sampling is necessary west of the site, on the Tri-Met facility (ECSI # 1434). Additional sampling should be conducted further north, along the western property boundary with the PGE property. Because the groundwater contours have a northeastern component in the vicinity of MW-07, additional sampling should also be conducted along the eastern portion of the site, to identify whether contamination affects neighboring properties along this side. (March 7, 2008, Bob Schwarz) Union Pacific Railroad (UPRR) conducted groundwater monitoring through the third quarter of 2005, after which their consultant, Kennedy/Jenks, prepared a residual risk evaluation and beneficial land and water use determination, dated December 22, 2005. DEQ agreed with Kennedy/Jenks conclusions that no additional soil or groundwater monitoring is needed. Residual soil and groundwater contamination levels do not exceed acceptable risk levels for applicable exposure pathways In April 2006, DEQ s Cleanup Program contacted other DEQ programs to determine whether there are other environmental issues at the site that need to be addressed. The Water Quality Program noted that there are at least 16 drywells on the site that do not meet current standards, as defined in OAR 340-044-0018. Therefore, DEQ notified UPRR that the railyard must connect to the City of Portland s storm sewer system and that the drywells must be decommissioned under DEQ oversight. 06-04-2015 Old buried 6<quot> piping with heavy bunker oil residue discovered during construction work. Estimated 30 gallons of oil removed/spilled from pipe during removal. Cleaned up to visual and odor standards under ER (Spill) program file # 2015-1164. Copy of report is in ECSI.

Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	50,000-99,999
Description Of The Avg Qnty Code:	50,000-99,999
Most Hazardous Ingridient:	MAGNESIUM OXIDE
United Nations/north America 4 Digit Class Number:	Not reported
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False

LA GRAND IND SUPPLY (Continued) **U000432080**

Substance Mix:	True
First Hazardous Class Code For Chemical:	Chronic Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.4
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	Not reported
EPA Pesticide Registration Number:	Not reported
Contains 112R:	Not reported
Contains EHS:	Not reported
Fertilizer:	Not reported
Pesticide:	Not reported
Contains 313:	Not reported

Chemical Name:	KALTEX 514-LADLE LINERS
Physical Description:	SOLID
Case Number:	14808607
Facility Id:	017798
Physical State Of The Substance:	1
Average Amount Possessed During The Year Code:	30
Maximum Amount Possessed During The Year Code:	31

Description Of The Avg Qnty Code:	10,000-49,999
Most Hazardous Ingridient:	ALUMINA SILICATE
United Nations/north America 4 Digit Class Number:	Not reported
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Chronic Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.4
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	UNI-RAM GR
Physical Description:	SOLID
Case Number:	1344281
Facility Id:	017798
Physical State Of The Substance:	1
Average Amount Possessed During The Year Code:	20
Maximum Amount Possessed During The Year Code:	20
Applicable Unit Of Measure Code:	1
Description Of The Unit Of Measure:	POUNDS
Type Code:	F
Description:	CAN
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	180
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999

LA GRAND IND SUPPLY (Continued) **U000432080**

Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	ALUMINUM OXIDE
United Nations/north America 4 Digit Class Number:	Not reported
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Chronic Health Hazard
Second Hazardous Class Code For Chemical:	Acute Health Hazard
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.4
Hazard Class 2 Of The Chemical:	6.3
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

PECO, INC. (Continued) **S106044977**

related daughter products have been detected in a number of locations beneath the subject site. The highest concentrations (>300 mg/l) have been detected in the West Plant located near the northwest corner of SE Schiller and SE 17th. The probable source of the contamination is historic releases from former vapor degreasers. Groundwater contamination from West Plant releases extends off-site to the west, with low levels found at SE Milwaukie Avenue. On-site, contamination extends below the water table aquifer and into the underlying intermediate groundwater zone, but does not appear to extend into the regional Troutdale Gravel aquifer. Solvents have also been detected at lower concentrations in shallow groundwater south of the West Plant, and in various East Plant locations (east of SE 17th). The source of the releases near the East Plant is not known at this time. Contamination from the West Plant extends west to the Willamette River, where low level detections have been found. PCBs have also been detected in shallow soil west of the West Plant, the source being waste hydraulic oil from die cast machines that was discharged to the ground after use, and inside the West Plant. Cleanup of PCB contamination in soil outside (west) of the West Plant was completed in 2005 with DEQ and EPA (TSCA) oversight, while remediation of concrete and soil impacted by PCBs within/below the West Plant floor was completed in November 2006. Both were performed to DEQ and EPA satisfaction. The closeout report for the interior West Plant work has been reviewed and approved by DEQ and EPA. Pilot testing of groundwater treatment beneath the West Plant Building was performed in multiple phases from 2005 to 2007, and expanded to a interim treatment system in 2008. Treatment is ongoing. Pilot testing outside of the West Plant Building (near the Walker Building) was performed October 2008 through October 2009. Sub-slab vapor extraction beneath the West Plant Building is also occurring as part of the West Plant IRM. A draft Human Health Risk Assessment (HHRA) has been reviewed by DEQ, and comments submitted. A revised document is expected in early 2010.

Decode for NarcdID: Project Issues Summary
NARR Comments: Nature and extent of contamination has been largely defined as of March 2008. PCB contamination in a parking lot west of the West Plant (soil) and within the plant itself (concrete and underlying soil) were addressed via removal actions, and the work is considered complete. Off-site wells have shown that solvent (primarily TCE) contamination from West Plant releases has migrated a significant distance off-site to the southwest, and are present at low levels at the Willamette River. In-situ treatment of groundwater contamination beneath the West Plant Building, and concurrent sub-slab vapor extraction are ongoing. Pilot testing for groundwater treatment near the Walker Building (using enhanced in-situ bioremediation) was completed in October 2009. A draft Baseline Human Health Risk Assessment was submitted to DEQ in January 2009; a revised document is due in December 2010. A final Remedial Investigation Report was submitted in May 2011 and approved by DEQ. The final HHRA is pending as of July 2011. A Supplemental IRAM Work Plan for SVE system expansion in VOC source areas, including the East Plant, was approved by DEQ in June 2011. the final RI/RA were approved by DEQ in 2001, and a draft FS submitted. A revised FS is pending. A revised analysis of stormwater conveyances on and near the West Plant where PCBs were formerly present, and the potential for PCBs to have impacted the Willamette River at connected City of Portland outfall OF-30 was completed in November 30. Upland remediation for PCBs has been completed, and no legacy sediments were found in on-site or nearby City of Portland sewers. The primary site PCB - Aroclor 1248 - was not detected in river sediments at the outfall servicing the site. Site-related impacts to the Willamette River from site PCBs is therefore considered unlikely.

Decode for NarcdID: Manner of Release
NARR Comments: Suspected source of solvents beneath the West Plant building is releases of solvents (primarily TCE) from sumps and raceways connected to the vapor degreaser in this building. Source of solvents detected south and southwest of the West Plant building, and in several locations beneath/around the East Plant is not known (isolated use and incidental release of degreasers suspected), but contribution from off-site sources is possible. Release of PCBs to soil west of the West Plant is thought to have occurred through storage of waste hydraulic oils and related spills, and historic application of waste oil in the gravel parking area for dust suppression.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Vapor intrusion to indoor air is the primary pathway associated with VOCs in soils beneath site buildings. Vapors originating from groundwater plume with subsequent transport to outdoor air or intrusion into indoor air at nearby residences considered to be a minimal threat, but is still under evaluation at this time.
Beneficial use of site and area groundwater is still under review, threat posed by use(s) of impacted groundwater yet to be determined.
Pathways of exposure associated with release of PCBs to surface soils at the West Plant parking lot and building have been eliminated through contaminant removal and engineering and institutional controls.

NARR Code: Remedial Action
Created By: GWISTAR

PECO, INC. (Continued) **S106044977**

Created Date: 11/04/2004
Updated By: DHAFLEY
Updated Date: 11/13/2015
Decode for NarcdID: Remedial Action
NARR Comments: Overview: Since February 2002, a number of phases of site investigation have been completed to document the nature and extent of site contamination. The extent of soil and groundwater contamination has generally been defined. Current RI work is focused on better definition of solvent contamination in groundwater beneath both the West and East Plant buildings, and pilot testing in the West Plant (in-situ chemicall oxidation and sub-slab vapor collection) to address the indoor air risk to building occupants. Off-site sampling has shown that contamination is present a significant distance southwest (downgradient) of the West Plant release area, but does not impact the Willamette River. Investigation and Interim Action Specifics: Based on the detection of high concentrations of PCBs in a gravel parking lot west of the West Plant, an EPA and DEQ-approved removal action was completed in 2005, and most PCB contamination removed. Some deeper contamination immediately west of the West Plant and including a drum storage shed was left in place and capped with concrete. A deed restriction has been recorded documenting the presence of the contamination and requiring inspection and maintenance of the concrete cap. A source area pilot test to address the West Plant TCE source area was initiated in July 2005 following approval of a work plan by DEQ; pilot testing has included multiple phases of oxidant injection from August 2005 to May 2006 using the Regenox product in the presume release area. A second phase of in-situ treatment was started in November 2007 using a different oxidant (ozone with peroxide) and is ongoing. To date, significant (order of magnitude) reductions in contaminant concentrations have been observed as the result of this work. Prior to and concurrent with this work, a subslab vapor collection systems hase been installed both within the source area and western (downgradient) margin of the West Plant building to reduce contaminant vapor flux into the building. Remediation of PCB contamination within the West Plant building was completed in November 2006 under DEQ direction, and included limited concrete and soil removal around the former Harvill dye casting machine, and cleaning of the entire West Plant floor. Site remedial investigation was largely completed in 2011, and documented in the Final Remedial Investigation Report (June 2011) approved by DEQ. After numerous iterations, the site human health risk assessment (HHRA) was near complete in July 2011. Supplemental IRAM work (SVE) was approved by DEQ in June 2011 and is ongoing in both the East and West Plant areas. A final Feasibility Study was approved by DEQ dated March 16, 2012. The proposed remedial action is removal of soil hot spots in the West Plant source are, ongoing SVE, and treatment of groundwater beneath selected portions of both the East and West Plant Buildings. As of April 2013, remedial action is ongoing. Removal of the West Plant soil hot spot is expected to occur in May 2013. November 2015. West Plant hot spot removal (soil) was completed, and in-situ treatment of residual VOC contamination in source area groundwater continues. East Plant treatment was completed in early 2015 with remedial action objectives achieved.

NARR ID: 5736469

Created Date: 12/17/2002
Updated By: DHAFLEY
Updated Date: 07/26/2011
Decode for NarcdID: Health Threats
NARR Comments: Primary current site threats are potential vapor intrusion into buildings, and migration of contaminated groundwater to the Willamette River. The vapor intrusion threat is largely mitigated by ongoing treatment and operation of a SVE system. At the river, site-related VOC concentrations are sufficiently low to pose little or no risk to human or ecological receptors.

Created By: DHAFLEY
Created Date: 02/27/2008
Updated By: DHAFLEY
Updated Date: 08/28/2019
Decode for NarcdID: Current Site Summary Statement
NARR Comments: [Overview] The nature and extent of contamination has been largely defined as of December 2009. PCB contamination in a parking lot west of the West Plant (soil) and within the plant itself (concrete and underlying soil) were previously remediated via removal actions, and the work is considered complete (note that a small capped area is present adjacent to West Plant building). Off-site wells have shown that solvent (primarily TCE) contamination from West Plant releases has migrated in shallow groundwater a significant distance off-site to the southwest, as far as the Willamette River. Pilot testing (in-situ chemical oxidation) to address groundwater contamination below the West Plant has been completed, and scaled-up remediation treatment is ongoing. Pilot testing (for groundwater) was completed in October 2009 near the Walker Building (using enhanced in-situ bioremediation), and in a unsaturated silt zone beneath the West Plant using SVE. In-situ treatment of groundwater contamination below the West Plant, along with soil vapor extraction, is ongoing. Concentrations of TCE below the West Plant are generally below 1 mg/L as a result of treatment. Soil gas investigation completed in 2010 below the East and West Plant buildings identified elevated HVOC vapor, suggesting both soil and groundwater vapor sources. A revised Human Health Risk Assessment was submitted to DEQ in November 2010. A Final RI Report was accepted by DEQ in 2011, and a draft FS submitted in December 2011. Based on DEQ comments, a Final Feasibility was approved by DEQ dated March 16, 2012. A staff report was completed in June 2012 identifying a final site remedy, and public notice was completed in July. No significant comment was received. The ROD was signed/approved on 8/22/12. In late 2012, Tri-Met completed a PPA with DEQ regarding their redevelopment work along SE 17th Avenue, including the easternmost portion of the West Plant contamination area. Tri-Met acquired a West Plant property, but it should not significantly impact remediation work.

 Well and treatment infrastructure decommissioning was begun in February 2013 to facilitate pending Tri-Met development. A draft Remedial Design/Remedial Action Work Plan was submitted to DEQ in March 2013. A revised Work Plan is pending. Remedial action implementation is scheduled to begin in April 2013.

 [Mar. 2014] Remediation activities in both the East and West Plant areas are ongoing, and RAOs have largely been achieved. On March 5, 2014, DEQ approved a plan for discontinuing treatment work and initiation of

PECO, INC. (Continued) **S106044977**

post-treatment monitoring to assess potential for contaminant rebound. [May 2015]. Treatment goals have been achieved in the East Plant, and a closure report is being prepared for this area and the so-called South Parcel for DEQ review and approval. Residual contaminant monitoring is continuing in the West Plant portion of the site. [September 2015]. DEQ reviewed and approved a completion report for the East Plant and South Lot portions of the site, and is proceeding with public notice on a proposed NFA determination for these parcels. The East Plant is currently vacant and sale pending. West Plant treatment and monitoring continues. [November 2015]. DEQ issued a NFA for the East Plant and South Lot portions of the site on November 5, 2015. No additional action is neccesary at these parcels beyond abandonment of monitoring wells and treatment infrastructure. [April 2016]. A work plan for in-situ treatment of remaining solvent contamination in the West Plant area (groundwater) was submitted and approved. A nutritive amendment will be injected into the contamination area to facilitate microbial degradation of residual contamination, followed by groundwater monitoring to confirm effectiveness. [March 2018]. Work was completed as proposed. Injections were completed in 2016 and 2017 and showed effectiveness. Results were presented to DEQ in March 2018, along with a proposed for final treatment and monitoring in the West Plant source area. A one-time injection of a long-lived electron donor (emulsified oil) was proposed, and a work plan is pending. May 2018. A work plan for ERD treatment in the residual contamination portion of the West Plant area was submitted in April 2018 and approved by DEQ. Following successful remediation and monitoring, DEQ approved proceeding with West Plant closure. A draft Remedial Action Completion/Closure Report was receved in December 2018. May 2019. A West Plant closure report has been reviewed and approved, and a staff memo recommending NFA decision-making. Public notice of DEQ's decision was issued in later 2018; no comment was received. A CMMP was completed for the West Plant Building area in August 2019. DEQ issued a No Further Action determination for the West Plant Building area on August 28, 2019. With issuance of the NFA, cleanup activities assocaited with all portions of the PECO site have been completed to the satisfaction of DEQ.

NARR Comments: (10/19/05 TER/VCP) The project file for ECSI #602, the original South Waterfront Redevelopment Area, contains background information, actions, and narratives but has been divided into six sites in ECSI based on changes in tax lot boundaries, differences in development, ownership, and long-term management requirements. Those sites are: #4420 South Waterfront at RiverPlace, Parcel 2 Areas B&C - Stanford's restaurant, RiverPlace Square apartments, retail space and associated parking structure, Tax Lots 500, 600, and 1200. #4421 South Waterfront at RiverPlace, Parcel 2 Area A - SW River Drive and SW River Parkway roadways and associated storm drain system (no tax lot). #4422 South Waterfront Park - borders the Willamette River, originally part of Area D, Parcel 3A and 3B, Tax Lot 102. #4423 South Waterfront Parcel 3B - developed as the <quot>PGT building,<quot> and now occupied by other tenants; Tax Lot 300. #4424 South Waterfront RiverPlace Lot 8 - at the NE corner of the intersection of SW River Drive and SW River Parkway, formerly a part of Area D, Parcel 3B; Tax Lot 200. #4757 South Waterfront Redevelopment Area, Parcel 1 - the former Lincoln Steam Plant, orginally titled Area D, Parcel 3A. It is now The Strand condominium towers, Tax Lot 101. Also see ECSI #2232 InnVentures, (Lot 5) and ECSI #2492, South Waterfront Lot 3, for adjacent site information. In 1988, the Portland Development Commission (PDC) entered into a Voluntary Agreement with DEQ to conduct a Remedial Investigation and Feasibility Study (RI/FS) at the <quot>South Waterfront Redevelopment Area<quot> site. For purposes of the investigation, the property was divided into Parcels 2 and 3. Parcel 3A was the site of the former Lincoln Steam Plant. In October 1989, after completion of the first phase of the investigation, DEQ approved a PDC proposal that would allow roads and structures constructed on Parcel 2 to function as a protective cap. Parcel 2 Areas B&C were developed and purchased by Trammel Crow Residential in 1994. DEQ issued a No Further Action for Parcel 3B in 1994, a portion of which was developed as the <quot>PGT building.<quot> The RI/FS for Parcel 3A was completed in 1998. South Waterfront Park resulted from improvements for extension of a greenway along the waterfront. Parcel 3A (now Parcel 1) will be developed as condominium towers. PDC will address asbestos on the undeveloped portion of Parcel 3B (Lot 8) for future redevelopment.

Decode for NarcdID: Project Issues Summary
NARR Comments: The South Waterfront Redevelopment Area (SWR) is located on the west bank of the Willamette River north of the Marquam Bridge in Portland. The site has a history of multiple industrial uses dating back to the late 1800s. As early as 1900, the site was used for the disposal of industrial fill, and from 1917 to 1985, a portion of the site was occupied by the PP&L Lincoln Steam Plant. In 1988, Portland Development Commission (PDC) entered into a Voluntary Agreement with DEQ to conduct a Remedial Investigation and Feasibility Study (RI/FS) at the site, to determine the significance of on-site contamination so that cleanup could occur as necessary to facilitate development of the property. For purposes of the investigation, the property was divided into two parcels (Parcels 2 and 3). The primary contaminants of concern are metals in soil on Parcel 2 and petroleum hydrocarbons and polynuclear aromatic hydrocarbons in soil and groundwater on Parcel 3, the site of the former Lincoln Steam Plant. In October 1989, after completion of the first phase of the investigation, DEQ approved a PDC proposal that would allow roads and structures constructed on Parcel 2 to function as a protective cap. The cap isolates contamination to prevent exposure. Property use restrictions and maintenance requirements were attached to the deed. Parcel 2 was purchased by TCR in 1994. By 1995, all proposed development on Parcel 2 was completed. The RI/FS for Parcel 3 was completed in 1998. The Record of Decision for approval of the selected remedial action was finalized in August 1998. Capping areas of concern, stabilization of the riverbank, and additional groundwater monitoring were selected as the remedy. Park improvements for extension of a greenway along the waterfront have been constructed to address a portion of the remedy. The Parcel 3A (now Parcel 1) has begun development. Soil in areas of concern will be removed or capped for a subsurfce parking strucutre. Monitoring wells will be sampled following site development to confirm that migration of petroleum to the Willamette River is not a future concern. Restrictions on groundwater use will be imposed to prevent exacerbation of the extent of groundwater contamination. STATUS In winter 2004/2005 mass excavation was completed for the Parcel 1 subsurface parking structure. Old steam plant timber piles were removed and new grouted piles installed for 3 condominium towers. Concrete is being poured for the parking/building foundation, and groundwater monitoring is ongoing.

Decode for NarcdID: Manner of Release
NARR Comments: Past practices associated with operation of the steam plant caused releases of petroleum products. Transfer of fuel from barges and railcars to storage tanks was the primary cause of the releases to on-site soils. Fill material, deposited to modify the site terrain since the early 1900s, may be the source of slightly elevated levels of lead and arsenic. Asbestos was a component of building construction materials. PCBs were present as a result of the transformer station formerly located at the site.

NARR Comments: PAHs and TPH have been detected in groundwater at the site. The groundwater is not currently used for drinking water. There is a potential for migration of contaminants from the groundwater to the Willamette River. On-site soil contamination may pose a direct-contact threat to humans and a threat to groundwater.

Updated By: TROICK
Updated Date: 07/07/2005
Decode for NarcdID: Remedial Action
NARR Comments: Site divided into 2 parcels for purposes of investigation in 1988 (Parcels 2 and 3). Capping is an appropriate remedy for the western portion of the site (Parcel 2), where metals were detected in soils only. DEQ approved capping and institutional controls in October 1989. As of December 1994, development of Parcel 2A (roadways), Parcel 2B (apartments and parking), and the foundation of the residential complex on Parcel 2C were complete. As of June 1995, the Steam Plant on Parcel 3 was demolished and the Parcel 3 characterization was complete. Metals have been determined to be present at insignificant concentrations on Parcel 3A, where the primary concern is the presence of petroleum hydrocarbons in soil and groundwater. Asbestos has either been removed from the site or buried under the Pacific Gas Transmission (PGT) building on Parcel 3B, with a deed notice filed in Multnomah County. No further action is required with regard to the PCBs. (11/4/98 TER/VCP) The Record of Decision for Parcel 3 was signed in July 1998. PDC is currently implementing the remedial action as part of Park improvements along the waterfront and riverbank. (7/7/05 TER/VCP) RiverPlace Partners has purchased the former Steam Plant parcel (3A, now called Parcel 1) and is redeveloping with subgrade parking. DEQ is providing oversight of the construction including removal of old timber piles beneath the steam plant, installation of new piles for building footings,

SOUTH WATERFRONT REDEVELOPMENT AREA (Continued) **S109051756**

concrete cap installation, and groundwater monitoring.

NARR Comments: South Waterfront (ECSI# 602) is closed as of December 2013 as a <quot>site<quot>. As the site has been redeveloped and subdivided, numerous individual parcels or lots have been created; each now has a separate ECSI #. As of December 2013, all but one parcel has been capped as part of site development; remaning site requirements are periodic inspection and maintenance (as necessary) of the site cap, with reporting to DEQ. Parcel 3B Lot 8, the one exception, is slated for development in 2014. WEBDOCS for this ECSI site and the individual parcels (4422, 4757, 4423, 4424, 4420, 4421, 2232, 2492, and 1401) contains a memorandum from the PDC dated December 12, 2014 that includes a map showin the location of the individual parcels comprising the original #602 site, and a summary of environmental actions at each.

Decode for NarcdID: General Site Description
NARR Comments: The Block 49 site is a 1.03-acre property located at 650 SW Lowell Street in Portland, Oregon. The property is owned by REACH B49 Partners Limited Partnership and is comprised of Multnomah County Tax Lot 102. The site is undergoing redevelopment for low-income veteran s housing, with a six-story urban residential structure with below-grade parking having been constructed on-site. Historical use of the property included commercial and industrial activities associated with shipbuilding and repair from 1900-1930, a construction material and storage facility from 1940 to 1976, and a sawmill complex between 1942 and 1965. Historical photos indicate the buildings associated with historic site operations were demolished by 1991. From 1991 to 2011, the site was used as a parking lot. Petroleum-impacted soils from historic industrial operations were identified during previous site investigations and have been removed from the property. Confirmation samples from the site show residual levels of contaminants including petroleum hydrocarbons, metals, and PAHs to be below applicable RBCs. Groundwater at the site has not been impacted.

NARR Comments: In 2006, Hart Crowser Inc. (HCI) performed a Phase I Environmental Site Assessment of the Property. The Phase I investigation included analysis of site history, and a geophysical survey of the property subsurface. A single recognized environmental condition was identified in the Phase I report. Previous site investigations had identified approximately 450 to 500 cubic yards of petroleum contaminated soil at a depth of 5 to 15 feet in the southwest corner of the property. The impacted soil was assumed to be associated with two steam boilers that were used during the shipbuilding and repair operations in the early 1900s. As part of follow-up work associated with the Phase I, HCI collected soil samples of fill material near the groundwater interface at approximately 15 feet bgs. Concentrations of heavy oil were found up to 300 mg/kg; this concentration is below the most conservative RBC for dermal contact (1,100 mg/kg). HCI concluded that petroleum-impacted soil in the fill material does not pose an unacceptable risk to human health. In 2009, HCI prepared a Contaminated Media Management Plan (CMMP) to address proper handling of potentially contaminated soil and groundwater during site redevelopment activities. DEQ reviewed and approved the CMMP in August 2009. The CMMP noted that approximately 796 tons of the petroleum-impacted soil located on the southwest corner of the property had been excavated and disposed of at Waste Management s Hillsboro Landfill as part of site redevelopment activities. Confirmation samples collected from the sidewalls and floor of the excavation were all non-detect for total petroleum hydrocarbons (TPH). Test pits completed adjacent to the excavated area showed thin, discontinuous layers of petroleum- impacted soil from 10 to 16 feet bgs, with concentrations of TPH up to 526 mg/kg detected. Soil with elevated levels of TPH was analyzed for volatile organic compounds (VOCs), metals, and polychlorinated biphenyls (PCBs). No

SOUTH WATERFRONT CENTRAL DISTRICT, BLOCK 49 (Continued) **S110280786**

VOCs or PCBs were detected, and metals concentrations were at or near background levels. The CMMP outlined the protocols associated with the profiling, management, and proper disposal of soil at the site. Soil exhibiting evidence of contamination from field screening was analyzed for contamination using hydrocarbon identification (HCID). If hydrocarbons were detected during initial analytical work, additional analysis for TPH, metals, VOCs, polycyclic aromatic hydrocarbons (PAHs), and PCBs was performed. HCI reviewed groundwater sampling data from previous investigations to determine appropriate handling of shallow groundwater if it was encountered during site redevelopment dewatering. No TPH, VOCs or PAHs were detected, and metals concentrations were at or near background levels. Although groundwater did not appear to be impacted, the CMMP required that shallow groundwater, especially in the western portion of the property, be managed as contaminated unless sampling data showed otherwise. Site redevelopment activities began in 2011 in accordance with the CMMP described above. Approximately 25,000 yd3 of soil meeting unrestricted clean fill levels, as presented in DEQ s Draft Soil/Sediment Clean Fill Screening Table for Terrestrial/Upland Uses, December 2010, were excavated from the Block 49 site and placed at Block 23, located approximately + mile to the northeast of the site. Soil exhibiting evidence of petroleum contamination was observed in the northwest corner of the property. A total of 1,796 tons of petroleum-impacted soil were over- excavated from this area and disposed of at the Waste Management Subtitle D landfill in Hillsboro, Oregon. Confirmation samples collected from the limits of the excavated areas were analyzed for TPH, metals, and PAHs. All soil samples were non-detect for TPH. Metals analyses were either below the most conservative applicable DEQ RBCs (urban residential direct contact), or at or below background levels. PAH concentrations were below applicable RBCs. Petroleum-impacted soils from historic industrial operations have been removed and properly disposed of during site redevelopment activities. Confirmation samples from the site show residual levels of contaminants including petroleum hydrocarbons, metals, and PAHs to be below applicable RBCs. Groundwater at the site has not been impacted. DEQ concludes that current environmental conditions at the site do not pose a significant risk to human health or the environment, and therefore, the property meets the requirements of the Oregon Environmental Cleanup Laws. No further action is therefore required.

NARR Comments: The Block 49 site is capped by a 6-story residential building, below-grade parking structure, sidewalks and driveways. All sample results associated with residual contamination at the site are below DEQ RBCs for urban residential, occupational, construction worker, and excavation worker exposure. Groundwater samples collected from the site did not indicate the presence of contamination and remaining levels of impacted soil are below leaching to groundwater RBCs.

Created Date: 11/05/2012
Updated By: RWELLS
Updated Date: 11/05/2012
Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: Shallow groundwater beneath the site generally occurs around 15 feet below the ground surface (bgs). Groundwater flow direction at the property is inferred to be towards the Willamette River to the east-northeast, the river being an area recharge boundary There is no use of shallow groundwater in the immediate site vicinity. There is some use of the deeper (Unconsolidated/Upper Troutdale) alluvial aquifer in the area for irrigation purposes. Due to the site s location within the Federal Emergency Management Agency-designated 100-year flood zone, the City of Portland requires that permanent basement structures extending below grade be dry-proofed and designed for uplift from hydrostatic pressure. The City of Portland provides drinking water to the site and immediate vicinity and will likely continue to do so in the future. Although the site is located approximately 550 feet from the Willamette River, surrounding land use is highly urbanized and does not support ecological habitat. The Block 49 site is covered by hardscape materials such as sidewalks, driveways, and the 6-story building.

NARR Comments: (1/28/04 RR/UST) Presene of tetrachloroethylene at levels up to 5.0 ppb detected in groundwater during petroleum release investigation. [6/17/2013 SAM/VCP] In 2005, DEQ UST program granted a no further action only for the USTs as long as commercial or industrial use occurs on site and groundwater is not used, but contamination remains. The current work will evaluate the site for potential future residential/mixed use. [6/27/16 SAM/VCP] Construction of a subsurface parking garage removed the remaining contaminated soil above applicable risk based concentrations. Five discrete soil floor samples were collected at approximately 14 ft bgs in the SE corner near the former UST area to characterize site soils for TPH before excavating below the water table. Diesel and gasoline were detected but below applicable RBCs. Four borings were advanced along SE 11th Ave and three borings advanced along SE Taylor St to determine if TPH extended outside the side walls of the excavation. Three soil samples were collected from each boring at 2ft, 5ft and approximately 12-16 ft bgs. TPH was detected at SETAY75 at 2ft bgs, but below applicable RBCs, except for Construction/Excavation RBC for Soil Vapor which slightly exceeded (552mg/kg vs 500mg/kg). The 20 other sample locations met applicable RBCs. Excavated soil was evaluated using Solid Waste Beneficial Reuse criteria. Approximately 500 tons of petroleum impacted soil in the SE corner was removed and disposed at Hillsboro Landfill. No soil samples were collected at the terminus of the excavation, or approximately 32 ft bgs. Soil conditions at 14ft bgs met applicable RBCs; as expected, all contamination was observed in the upper layers of the site. Since the excavation extends to native material with no visual contamination observed at this horizon, confirmation samples were not collected at the terminus of the excavation. A Batch Discharge Authorization Letter dated December 10, 2014 from the City of Portland authorized(with stipulations) discharge of up to 360,000 gallons per day of treated construction dewatering fluid (including groundwater) into the city sanitary/combined sewer system at manhole ABR096 at SE Yamhill and SE 10th Ave. Water treatment prior to discharge included turbidity and pH controls. Low concentrations of tetrachloroethylene found in groundwater are likely from an off-site source and may be regional contamination. See Staff report for more details.

NARR Comments: (03/20/2024 KPD) Stoddard solvent, a petroleum-based solvent used by dry cleaners from the 1930s through the 1950s, has detected in soil and groundwater samples near the center of the block since 2012. Numerous volatile organic compounds (VOCs), including chlorinated solvents and petroleum constituents, have been detected in soil, soil gas, groundwater, and sub-slab vapor samples in the same area. An estimated 7,110 cubic yards of solvent-contaminated soils are present on the block, extending to groundwater 30 feet below ground surface.

Decode for NarcdID: Remedial Action
NARR Comments: (03/20/2024 KPD) In early 2023, an extraction point was installed through the concrete floor slab in the southwest corner of the Arcoa Building and connected to a vent riser extending five feet above the building's roof. A manifold was connected to the vent riser to allow for sub-slab vapors to be vented either passively or actively. The hybrid active-passive sub-slab depressurization system is designed to minimize the infiltration of contaminated sub-slab vapors into the building.

NARR Comments: The Arcoa Building, a 3-story office building on the southeast corner of the intersection of SE Yamhill Street and Grand Avenue, was constructed in 1907. Allyn's Cleaning & Dyeing operated from a storefront near the center of the block from about 1909 to 1959. The storefront was demolished around 1960. Various auto service and repair facilities have operated on the south half of the block. A paved surface parking lot on the east side of the Arcoa Building appears to have remained relatively undeveloped.

Updated Date:	02/19/2015
Decode for NarcdID:	Contamination
NARR Comments:	Degraded diesel and gasoline range contamination Soil and shallow groundwater at the Site was impacted by petroleum hydrocarbons in the early 1900s. The fire in 1911 likely contributed to the petroleum releases. Kerosene and diesel are the primary petroleum contaminants in soil and groundwater beneath the Site. The petroleum is highly degraded and contains virtually no benzene, toluene, ethylbenzene or xylenes, and very low concentrations of polycyclic aromatic hydrocarbons (PAHs). Water samples were collected from two sumps that contained sufficient water after prolonged precipitation, and analyzed for extractable petroleum hydrocarbons (EPH) using Method NW-EPH and volatile petroleum hydrocarbons (VPH) using Method NW-VPH to evaluate if volatilization of petroleum constituents from shallow groundwater to indoor air was a pathway of concern. EPH and VPH compounds were not detected.

NARR Comments: The Pratt and Larsen Site property (the Site) is comprised of lots 1, 2, 7 and 8 of East Portland Addition Block 14 in Section 3 of Township 1 South, Range 1 East of the Willamette Meridian in Multnomah County, Oregon. The Site had former addresses of 220/224/226 East Water Street, 314 East Salmon Street, 211/225 East 1st Street, 88 S.E. Salmon Street, 1201/1215 S.E. 1st Avenue, and 1204/1216 S.E. Water Avenue. The 4 tax lots total approximately 0.5 acres and comprise the northern half of a City block. The property contains an approximately 20,000 square foot building that covers most of the property. The building has a partial second floor and full basement.

Updated By: MPUGH
Updated Date: 02/19/2015
Decode for NarcdID: Health Threats
NARR Comments: Residual contamination is above DEQ risk-based concentrations for urban residents. However, the site is zoned industrial which prohibits residential use. Contamination above applicable risk-based standards is limited to soils and shallow groundwater within the Site property boundary. Petroleum-impacted soil and shallow groundwater are present immediately beneath the basement floor. Most of the contamination occurs within the smear zone of seasonal water table fluctuation between 10 and 20 feet below local grade (from 0 to 10 feet below the basement floor). The only contaminant detected above its applicable risk-based concentration (RBC) is diesel in soil.

PRATT & LARSON TILE (Continued) **S117277437**

Diesel concentrations in soil are above the RBC for direct contact by construction workers at sample locations MW-1, MW-2 and MW-3. All other detected contaminant concentrations in groundwater, soil and water were below applicable RBCs based on occupational exposure scenarios.

NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: During a site investigation conducted in April 1996, hydrocarbons were found in soil beneath a significant portion of the site. Some of the contamination was related to USTs, which was investigated under DEQ's LUST Section (log # 26-96-337). The remainder of the contamination is located at the interface between artificial fill deposited during the 1960s and the original ground surface. This non-UST-related contamination consists of heavier, oil-range hydrocarbons that the property owner's consultant believes to have originated from biogenic sources such as wood waste from the site's former use as a lumber mill. The consultant has also indicated that some hydrocarbon detections could have resulted from the remains of a pier that burned at the site prior to the importation of fill. Groundwater at the site contains low levels of PAHs.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located along the west bank of the Willamette River, and its relatively level grade is artificial. Groundwater occurs at depths of about 8 to 15 feet, and flows into the Willamette. Groundwater-to-surface water is likely to be the primary pathway of concern.

Decode for NarcdID: Remedial Action
NARR Comments: (2/27/97 GMW/SAS) DEQ's UST Section issued an NFA for tank-related issues 10/3/96, following the excavation and treatment of approximately 150 tons of petroleum-contaminated soil. The UST NFA letter included a referral to Site Assessment, due to the presence of contamination that did not appear to have resulted from USTs. Site Assessment has concluded that a PA should be completed to document the site's industrial history and operations, and to evaluate potential exposure pathways. Due to the site's location and the low levels of contamination documented as of 11/96, further state action at the site is a low priority.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Updated By: KDANA
Updated Date: 08/12/2021
Decode for NarcdID: Contamination
NARR Comments: (08/12/2021 KPD/ICP) An investigation of the site in September 1994 determined that a 4,000- to 5,000-gallon underground storage tank had previously been present on the west side of the central storage warehouse. Sampling in the area identified diesel and heavy oils in the soil. The area was excavated in October 1994. However, a pocket of contamination with up to 12,400 ppm TPH remained beneath the warehouse floor. A second investigation of the site in the spring of 2013 identified up to 7,740 ppm diesel and 5,370 ppm heavy oils in the ravine fill soils, and methane concentrations were measured up to 4.5% by volume. Additional readings in December 2014 found concentrations of methane up to only 1.65% by volume. A third investigation was conducted from April to June 2016, to determine the extent of petroleum-contaminated soils (PCS) in the northwest portion of the site. Samples from two dozen borings found that PCS covered an area of 5,540 square feet, and extended from 6 ft bgs to 22 ft bgs, with diesel concentrations up to 18,200 ppm.

NARR Comments: The former 20-30 foot deep ravine at the site was backfilled with a mixture of soils (silts and sandy silts) and construction & demolition debris (brick, concrete, glass, metal, and vegetation). Groundwater is estimated to be about 60 feet bgs at the site. The groundwater flow direction was not determined. The nearest identified surface water bodies are Crystal Springs Creek (approx. 1 mile to the south) and the Willamette River (approx. 1 mile to the west).

Updated Date: 08/12/2021
Decode for NarcdID: Remedial Action
NARR Comments: (08/12/2021 KPD/ICP) A 4,000- to 5,000-gallon diesel UST is believed to have been removed from the west side of the central storage warehouse prior to 1994. The backfilled excavation pit was re-excavated in October 1994 to depths of 12-15 ft bgs. The volume of soil removed wasn't reported. A pocket of petroleum-contaminated soils (PCS), estimated at 20 cubic yards, remained beneath the warehouse. About 56 tons of PCS were removed from around the fill ports of two underground heating oil tanks on the Sunset Fuel Property in May 1998. The tanks, with capacities of 20,000 and 10,000 gallons, were decommissioned by removal in September 2004. Up to 43,400 ppm diesel (heating oil) was detected in the soil. At least

SUNSHINE PORTLAND APARTMENTS (Continued) **S119162009**

690 tons of PCS were excavated from around the tanks and shipped off-site for disposal. The excavation extended up to 20 ft bgs, and confirmation sampling found no residual contamination. DEQ issued an NFA letter for the cleanup in October 2005. (See LUST file #26-98-0341 for more information). DEQ issued a Conditional No Further Action determination for this site in October 2014, as the site did not pose an unacceptable risk to human health or the environment in its current condition. A deed restriction was placed on the property requiring further investigation or management of the methane risks prior to redevelopment of the property. The pocket of PCS beneath the central storage warehouse was excavated in April 2016, and 164 tons of soil were removed from the site. Confirmation sampling found additional PCS extending northwest of the excavation. Construction of the Sunshine Portland Apartments began in April 2017 and was completed in December 2018. Approximately 1,743 tons of soils were excavated and removed from the site during construction, but the PCS in the northwest corner of the site was not excavated further. Passive methane ventilation systems were installed beneath each of the four apartment buildings. The residual PCS contamination was capped with an apartment building and pavement. A revised deed restriction was placed on the property in August 2021 requiring long-term maintenance of the soil cap and passive vapor systems. No additional cleanup is necessary.

NARR Comments: A 20-30 foot deep ravine extended east to west across most of the site prior to 1950. The ravine was backfilled with soils and construction & demolition debris (brick, concrete, glass, metal, and vegetation) beginning in the early 1950s. The ravine was filled in by 1974. In 1951, an office and maintenance shop was constructed on the north side of the ravine. Engineering Construction Company, a building contracting firm, was the first owner of and operator at the property. E.J. Cole took over the business (renaming it E.J. Cole Construction Company) and acquired the property in 1958. Beginning in 1973, E.J. Cole leased the site to Sunset Fuel Company. Sunset Fuel used the property for equipment storage and maintenance until 1984. Star, Inc. purchased the property in 1986. In 1987, Star paved over the property and erected two three-sided aluminum storage warehouses atop the former ravine. From 1985 to 1988, various companies (Accurate Meter Company, Portland Tank Truck Service, and Standard Service Equipment Company) operated at the property, all of whom repaired gasoline pumps and other service station equipment. Darrell Boyer purchased the property in 1994, under the business name Terrain Tamers Land Development Company. In 2003, the property was acquired by his son, Brant Boyer, under the name BAMMA, Inc. (a member of Powell, LLC). From 1989 to 2012, a succession of companies used the property for the storage of roofing products and building materials, including Weststar Building Materials (1989-1990 and 1993-1996), ACME Building Supplies (1990-1992), Cameron Ashley Building Products (1997-2002), and ABC Supply Company (2002-2012). Beginning in 2013, Hopworks Urban Brewery began leasing the original office and

SUNSHINE PORTLAND APARTMENTS (Continued) **S119162009**

maintenance shop for equipment storage. The two aluminum storage warehouses were left vacant. Powell LLC sold the property to Wayne Laufer, under the business name Lake Enterprises LLC, in January 2015. In May 2016, Wayne Laufer transferred the southern portion of the property (the current site) to Sunshine Portland LLC. Sunset Fuel Company operated on an east-adjacent property from at least 1987 to 2005. The southern third of the Sunset Fuel Property has been incorporated into the current site.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: The Sunshine Portland Apartments were constructed atop a former ravine that was backfilled with 20-30 feet of soils and construction & demolition debris (brick, concrete, glass, metal, and vegetation) from the early 1950s to the early 1970s. The western portion of the site was generally used for equipment storage and maintenance by a number of companies beginning in the 1950s. Petroleum-contaminated soils from a former underground storage tank on the western portion of the site were excavated and removed in 1994, and the excavated area was expanded in 2016. Two large underground heating oil tanks owned by Sunset Fuel Company were removed from the eastern portion of the site in 2004. Fill soils at the site are generally impacted by diesel and heavy oils, and methane from the decomposition of buried vegetation remains a concern. Passive methane ventilation systems were installed beneath each of the four apartment buildings at the site, and the site has been capped by buildings, pavement, and several feet of clean soils.

Decode for NarcdID: Remedial Action
NARR Comments: Diesel range organic compounds (DRO), oil range organic compounds (ORO), polynuclear aromatic hydrocarbons (PAH) and volatile organic compounds (VOC) associated with petroleum fuels were identified in former pump island area. Some other organic contaminants were observed but were not widespread (observed in one sample only, etc.). None of the organic contaminants observed in soil exceeded risk-based criteria for any of the completed exposure pathways (Construction Worker Soil Direct Contact, Soil Vapor Intrusion into Buildings and Soil Volatilization to Outdoor Air). Elevated levels of lead were observed in subsurface soils throughout the site. These levels were determined to be associated with historical fill materials. The mean concentration of lead was determined to be below DEQ Risk-Based Concentrations (RBCs) for soil for occupational, construction and excavation worker direct contact exposure. DEQ has determined that these soils would be considered solid waste if excavated during maintenance or development activities at the site. Furthermore, investigation results indicate these soils could potentially fail criteria and be classified as a characteristic hazardous waste. Analysis of groundwater samples collected from beneath the pump island area indicated the presence of DRO, ORO, PAH and VOC associated with petroleum fuels. Additional investigation to the west of this area (the downgradient direction) indicated that contaminants are attenuating close to the site. The stormwater sewer located adjacent to the site and within City right-of-way is constructed above the water table and is not expected to be impacted by groundwater. Tetrachloroethene was also detected in groundwater in one sample but no source of this contaminant was identified in soil at the site indicating the contaminant is from an unidentified off-site source. Metals in groundwater were not a concern. Further investigative activities identified a 500-gallon UST (formerly used in private fleet refueling) in the southeast quarter of the site near a former loading dock. Following removal of the UST, analytical results for soil samples indicated the presence of diesel and gasoline range petroleum hydrocarbons near the western end of the tank. The UST was assigned LUST file number 26-09-0389. The LUST file indicates that the cleanup and close-out of the 500-gallon UST would

BRIGHT DAY COMMERCIAL PROPERTY (Continued) **S109051819**

occur under ECSI file number 4977. Subsequent to the removal of approximately three tons of impacted soil from the former UST location, additional soil samples indicated contamination was below detection limits.

Decode for NarcdID: Project Issues Summary
NARR Comments: South Waterfront Lot # 3 is adjacent to the RiverPlace development located at SW. Harbor Drive and River Parkway, in downtown Portland. In the early 1900s the Portland Lumber Company occupied part of Lot #3. The area has since been built up over time with undocumented fill including soil, wood waste, and other refuse. The site is currently

SOUTH WATERFRONT REDEVELOPMENT AREA 3 (Continued) **1006851219**

vacant, but is slated for development. The Portland Development Commission (PDC) joined the Voluntary cleanup Program in December 1999, and conducted soil and groundwater site investigation activities. A remedial investigation and risk assessment was completed by the PDC in October 2002 to evaluate concentrations of contaminants in soil and groundwater at the property. The main contaminants of concern are petroleum hydrocarbons, polynuclear aromatic hydrocarbons, and lead, and the highest concentrations detected are in a black-stained layer of soil 14 to 25 feet beneath the site. The risk assessment indicates that contaminants are below concentrations that pose a significant risk to human health unless contaminated soil below 10 feet is excavated during future site development. Shallow groundwater beneath the site is not used and contaminants in groundwater have not migrated significantly off-site. To address soil and groundwater concerns DEQ completed a Record of Decision January 2004 recommending an easement on the property that requires engineering and worker health and safety protections during site development, and offsite disposal at a permitted facility of any contaminated soil excavated below 10 feet. Groundwater use will be restricted through the easement. STATUS DEQ and Portland Development Commission are preparing the Easement and Equitable Servitude for the site remedy.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is currently vacant. Future development could result in construction worker exposure to contaminants in soil. The Willamette River is approximately .25 mile east of the site, but contaminants in groundwater do not appear to be migrating off-site.

NARR Comments: (2/10/00 JMW/SAP) Chose Independent Cleanup Pathway (ICP) for NFA determination. Adjacent site in the Voluntary Cleanup Program (South Waterfront, Lot 5). NFA for Lot 5 is currently under a 30-day public notice and comment process. Lot 3 will be used for construction staging by developers of Residence Inn by Marriott on Lot 5. Requested ICP to determine if additional soil/groundwater sampling and analysis is needed for NFA status. (6/12/01 TER/VCP) Based on the need for a complete remedial investigation, the project was transferred from ICP to VCP. PDC is conducting additional soil and groundwater sampling to complete the site characterization. (11/5/02 TER/VCP) A Remedial Investigation Report with Risk Assessment was submitted to DEQ in October 2002. Petroleum hydrocarbon contamination presents an unacceptable risk only if site work or redevelopment is conducted below 10 feet. DEQ is preparing a Staff Report, recommending an easement as an institutional control to ensure future development and site use address the identified exposure risks. (4/5/04 TER/VCP) DEQ signed the Record of Decision 1/28/04. An easement has been drafted for review by the Portland Development Commission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/26/2025

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/05/2025

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 12/31/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Data Range: 08/23/2024 - 08/22/2025

Reported crime counts are aggregated across hexagonal 1/8 mile grid sections of the city, and do not represent the number of reported crimes on a specific tax lot. Points on the map are generalized to the midblock point and may represent the location of multiple reported crimes. The locations of certain crimes are not shown on the map due to privacy concerns, but are included in counts and averages.

The records depicted give a general picture of crime events in the surrounding area and are not official crime statistics. Some information displayed is currently under review and may change subject to record finalization. For greater detail about each record, visit Portland Police Bureau's Open Data Portal and download offense data

directly from the Crime Statistics Dashboard.

QUESTIONNAIRES AND CLIENT/OWNER/USER PROVIDED DOCUMENTATION

ASTM USER QUESTIONNAIRE

ASTM E-1527 PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER QUESTIONNAIRE AND DISCLOSURE STATEMENT

User: In order to qualify for one of the ***Landowner Liability Protections (LLPs)*** offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "***Brownfields Amendments***"), the ***user*** must provide the following information (if available) to the ***environmental professional***. Failure to provide this information could result in a determination that "***all appropriate inquiry***" is not complete.

1. PROPERTY INFORMATION:

Property Name: Bottle Drop		
Property Address: 1041–1109 SE Brooklyn St		
City: Portland	State: Oregon	Zip: 97202
Assessor's Parcel Number: R117802,R117803,R117805		

2. COMPLETED BY

Signature	Date 9/4/2025
Printed Name: Farhad Ghafarzade	Title: Property Buyer

3. ASTM-REQUIRED INQUIRIES

Property Owner: Name: Gerald Blinsman Phone: 503-367-0516 Email: jerryb1957@yahoo.com	
Key Site Manager (Site contact): Name: Phone: Email:	
1) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25). Are you aware of any environmental cleanup liens against the ***property*** that are filed or recorded under federal, tribal, state or local law?	☐ Yes ☑ No
2) Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26). Are you aware of any AULs, such as ***engineering controls***, land use restrictions or ***institutional controls*** that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?	☐ Yes ☑ No
3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). As the ***user*** of this ***ESA*** do you have any specialized knowledge or experience related to the ***property*** or nearby properties? For example, are you involved in the same line of business as the current or former ***occupants*** of the ***property*** or an adjoining ***property*** so that you would have specialized knowledge of the chemicals and processes used by this type of business?	☐ Yes ☑ No

Please return completed form and any attachments via fax to:
Point Source Solutions, LLC, 5317 NE St Johns Road, Suite D, Vancouver, WA 98661
Telephone: 503-916-9254 Fax: 503-224-0449

4) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this ***property*** reasonably reflect the fair market value of the ***property***? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the ***property***?	☑ Yes ☐ No
5) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30). Are you aware of commonly known or ***reasonably ascertainable*** information about the ***property*** that would help the ***environmental professional*** to identify conditions indicative of releases or threatened releases? For example, as ***user***, (a.) Do you know the past uses of the ***property***? (b.) Do you know of specific chemicals that are present or once were present at the ***property***? (c.) Do you know of spills or other chemical releases that have taken place at the ***property***? (d.) Do you know of any environmental cleanups that have taken place at the ***property***?	☐ Yes ☑ No
6) The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). As the ***user*** of this ***ESA***, based on your knowledge and experience related to the ***property*** are there any ***obvious*** indicators that point to the presence or likely presence of contamination at the ***property***?	☐ Yes ☑ No

Please provide an explanation of all affirmative answers or attached additional documentation.

7) Please state reason for procuring this Phase 1 ESA:

☑ Qualify for Innocent Landowner defense to CERCLA Liability.

☐ Other: (state below)

In addition, certain information should be collected, if available, and provided to the ***environmental professional***. This information is intended to assist the ***environmental professional*** but is not necessarily required to qualify for one of the ***LLPs***. The information includes:

(a) the reason why the Phase I is required,

(b) the type of ***property*** and type of ***property*** transaction, for example, sale, purchase, exchange, etc.,

(c) the complete and correct address for the ***property*** (a map or other documentation showing ***property*** location and boundaries is helpful),

(d) the scope of services desired for the Phase I (including whether any parties to the ***property*** transaction may have a required standard scope of services on whether any considerations beyond the requirements of Practice E 1527 are to be considered),

(e) identification of all parties who will rely on the Phase I ***report***,

(f) identification of the site contact and how the contact can be reached,

(g) any special terms and conditions which must be agreed upon by the ***environmental professional***, and

(h) any other knowledge or experience with the ***property*** that may be pertinent to the ***environmental professional*** (for example, copies of any available prior ***environmental site assessment reports***, documents, correspondence, etc., concerning the ***property*** and its environmental condition).

Please return completed form and any attachments via fax to:
Point Source Solutions LLC, 5317 NE St Johns Road, Suite D, Vancouver, WA 98661
Telephone: 503-916-9254 Fax: 503-224-0449

ENVIRONMENTAL PRE-SURVEY QUESTIONNAIRE AND DISCLOSURE STATEMENT

PRE-SURVEY QUESTIONNAIRE AND DISCLOSURE STATEMENT

Borrower: Please complete this questionnaire before the Consultant's site visit. For those questions that are not applicable to the subject please respond with an "N/A". This document must be signed by the Owner or his/her representative (Item No. 2). If you have any questions about how to answer any of the questions please call Point Source. If additional pages for response are necessary please attach them to this form. Clearly mark all references to the appropriate question number(s). This document and your written response to same will be an exhibit in Point Source's report.

SUMMARY OF SKILLS AND QUALIFICATIONS

Over 24 years of experience performing Phase I, Phase II, remediation design and management and other regulatory oversight and environmental site reconnaissance services.

Prior to joining Point Source Solutions, Mr. Jackman was the National Environmental Program Manager for a consulting firm with offices nationwide. Mr. Jackman was responsible for oversight and review of all Phase I and Phase II environmental site assessment projects for national clients. Project experience includes several hundred Phase I and Phase II Environmental Site Assessments, underground storage tank project oversight, asbestos and lead paint surveys, hazardous materials management, installation and monitoring of soil and groundwater remediation systems, and administration of site closure per various regulatory agencies.

SUMMARY OF COMPLETED PROJECTS

Active Service Station; Portland, Oregon: Project Manager for the cleanup of an impacted operating service station. The project involved extensive exploratory assessment followed by the removal of several hundred tons of petroleum-impacted soils and a detailed risk assessment of remaining contamination. The work was performed under a not-to exceed contract which allowed the purchaser to obtain financing prior to completion of the project. The site was subsequently granted regulatory closure by the Oregon DEQ and the facility remains in operation.

Former Truck Repair Facility; Eagle Creek, Oregon: Project Manager for the cleanup of a foreclosed bank property impacted by significant releases of waste-oil. The project involved removal of impacted soils and a detailed assessment of groundwater impact. The site was subsequently granted regulatory closure by the Oregon DEQ, allowing the lender to sell the property.

Former Service Station Properties; Portland, Oregon: Project Manager for the environmental site characterization and risk-based cleanup of two historical service station operations on two adjoining properties under the same ownership. The site was subsequently granted regulatory closure by the Oregon DEQ.

Active Dry Cleaner Site; Vancouver, Washington: Project Manager for the environmental site characterization and remediation regarding a release of dry cleaner chemicals to the subsurface. The site is located within an area of widespread groundwater impact by VOCs. Groundwater in the area is over 100 feet below the surface. The Project involved soil sampling and preparation of a work plan under the guidance of Washington Department of Ecology (WDOE). The work plan was accepted and includes soil removal, storm water infrastructure removal and replacement, and assessment of groundwater.

SUMMARY OF SKILLS AND QUALIFICATIONS

Over 28 years of experience performing Phase I, Phase II, remediation design and management and other regulatory oversight and environmental site reconnaissance services.

Prior to joining Point Source in 2004, Mr. Cobb was responsible for training and the technical reporting of 35-40 staff members from the offices of a national consulting firm in Oregon, Washington, Hawaii, Utah and Colorado. His primary responsibilities included: project management; the mentoring of young professionals in environmental consulting departments in the western US; report review of environmental assessments, NEPA/SEPA documentation, subsurface site characterizations and underground storage tank closures; and regulatory interaction and negotiation on behalf of the firm's clients both in the private and public sectors.

SUMMARY OF COMPLETED PROJECTS

WA Department of Natural Resources; Lacey, WA: Project Manager/Project Geologist for the environmental site characterization of various locations within the DNR-Lacey Compound. This compound had served as a maintenance facility for DNR for over 30 years with vehicle and equipment shops as well as buried waste disposal sites.

Former Bennett Paint Site; Salt Lake City, UT: Project Manager/Project Geologist for the environmental site characterization, remediation and closure of a former paint manufacturing site. Extensive clean-up of this industrial site was required including the remediation of metals and solvents in soil and groundwater. The site has now been redeveloped for retail purposes.

Clark County, WA; Vancouver, WA: Project Manager for all technical and administrative tasks involving the decommissioning and closure of a diesel UST at the Clark County Corrections Center as well as the installation of a new emergency generator fueling system.

Town Pump; White Salmon, WA: Project Manager/Project Geologist for the environmental site characterization and soils cleanup and of three separate petroleum hydrocarbon plumes which had affected a state right-of-way and an adjacent trailer park. All work was performed under an Agreed Order with the State of Washington.

Fire Protection District #2; Graham, WA: Project Manager/ Project Geologist for all aspects of UST decommissioning, site characterization, permitting, soils cleanup, and construction of a groundwater extraction system.
