Subject: Request for Second Extension on 90-day Storage
Rhone-Poulenc-Portland Site
ECSI #155

Dear Mr. Stringfellow:

The Oregon Department of Environmental Quality (DEQ) received your electronic mail of August 25, 2026 requesting an extension to store remediation-related waste derived from implementation of the Deep Groundwater Hydraulic Control Pilot Study drilling work at the Rhone-Poulenc Site. The Rhone-Poulenc Portland site located at 6193 NW 61st Avenue in Portland, Oregon. The site is an active environmental cleanup site and StarLink is currently working with DEQ under a Consent Order.

StarLink indicates the waste consists of 46 cubic yards of drill cuttings from extraction well, monitoring well, piezometer borings stored in 4 roll-off bins and 27, 55-gallon drums of drill cuttings from borings that intersected ESCO Willbridge landfill material. The accumulation start dates range from February 23 to April 3, 2026.

These waste streams have previously been approved as corrective action management unit (CAMU) eligible for disposal at the Chemical Waste Management Subtitle C Landfill in Arlington, OR. StarLink is currently working on a CAMU eligibility request for this waste. DEQ has reviewed the extension request and approves a 90 day extension.

Please feel free to contact me at 503 229-5354 if you have any questions.

Sincerely,

David Lacey, Project Manager
DEQ NWR Cleanup Program
